As stated above, we recognize that there are factors in the process of developing quality measure specifications beyond CMS' control, which may in turn delay the publication of the Adult Immunization Status eCQM specification on the eCQI resource center and, ultimately, availability of the collection type for MIPS quality measures. We want to clarify that for the Adult Immunization Status measure to be incorporated into the APP Plus quality measure set in the CY 2028 performance period, the eCQM specification must be published on the eCQI resource center by May 2027. If, however, the eCQM specification is published later, for example in May 2028, then the Adult Immunization measure will be incorporated into the APP Plus quality measure set in the CY 2029 performance period. Similarly, if the eCQM specification is published in May 2029, then the Adult Immunization Status measure will be incorporated into the APP Plus quality measure set in the CY 2030 performance period, and so on.

Comment: A few commenters suggested that we incorporate into the APP Plus quality measure set the measures from Universal Foundation of measures but with modifications. Several commenters suggested substitute or alternate measures for incorporation into the APP Plus quality measure set. Yet a few other commenters suggested that we incorporate additional measures into the APP Plus quality measure set including a cardiac care measure, a kidney health evaluation measure, an HIV screening measure, and any new setting- and population-specific ''add-on'' measures later added to the Universal Foundation of measures.

Response: When we proposed to leverage the Universal Foundation of measures to create the APP Plus quality measure set, we did so with the goal of aligning quality programs across CMS. It was never our intent to create a new or iterative quality measure set as doing so would not streamline quality measure reporting across CMS. While each of the measures suggested may have specific merits, as we stated in the CY 25 PFS proposed rule, ''alignment of quality measures across CMS programs allows practitioners to better focus their quality efforts, reduces administrative burden, and drives digital transformation and stratification of a focused quality measure set to assess impact on disparities'' (89 FR 62023). We believe that incorporating the Universal Foundation of measures into the APP Plus quality measure set as is best supports our goal of alignment.

Comment: Several commenters observed that the APP Plus quality measure set is primary-care focused and stated that it should include more specialty measures.

Response: When we proposed to establish the APP Plus quality measure set in the CY 2025 PFS proposed rule and shared our plans to incorporate the Universal Foundation of measures into the APP Plus quality measure set, we acknowledged that the Universal Foundation emphasizes primary and preventive care. We also recognized that ''while the Adult Universal Foundation quality measures are relevant to a significant portion of clinicians who are eligible to report the APP, they are not relevant for all such clinicians'' and that ''there are specialists for whom few, if any, of these measures may be relevant'' (89 FR 62024). We want to reiterate that the APP's primary goal is to offer an opportunity for MIPS APM participants to align with quality programs across CMS. As CMS continues to develop new and innovative APM offerings for specialists, and the proportion of specialists in APMs increases, we are considering how the MIPS quality performance category as it is reported and scored within the APP might better reflect the practice and needs of specialists. As such, we continue to explore ways in which we may be able to offer specialists participating in MIPS APMs opportunities to report more relevant measures within the APP, including considering methods for collecting input from interested parties on this point.

Comment: One commenter questioned why eligible clinicians, groups, and APM Entities that report the APP Plus quality measure set for a performance period would be required to report all measures in the APP Plus quality measure set instead of selecting six measures, as required for other MIPS reporting pathways.

Response: The APP Plus quality measure set was designed to align with other quality programs across CMS and leverages the Universal Foundation of measures to do that. If APP reporters could each choose from the APP Plus quality measure set a subset of six measures to report for a performance period, many unique combinations of measures could result. Such variability would not allow for meaningful quality comparisons between or among APP reporters, which is essential for many of the APMs, including the Shared Savings Program, that use the APP. True alignment across CMS quality programs cannot be achieved if those reporting the APP Plus quality measure set do not report substantially the same measures as participants of other quality programs. Additionally, because our regulations already establish with respect to the APP that all measures in the original APP quality measure set are required to be reported and scored, if applicable, CMS' operational process for scoring the APP would need to be changed to reflect a top-six approach for the APP Plus quality measure set, increasing operational cost and complexity year after year with the incremental adoption of each measure into the APP Plus quality measure set. Without a strong programmatic benefit for doing so, it would not be prudent to take on the added burden and commensurate cost to the public. Finally, while it may seem counterintuitive that reporting more measures has a burden reduction component, there is administrative simplicity in knowing exactly what to report and which measures will be scored without having to examine and choose individual measures each year, when reporters have incentives to switch measures to maximize scoring. When we proposed to establish the APP for the CY 2021 performance period, we proposed to require that MIPS eligible clinicians who reported the APP would be scored on all measures in the APP quality measure set (85 FR 50285).[822] We finalized this proposal in the CY 2021 final rule (85 FR 84472–85377) so that MIPS APM participants that reported under the APP would know exactly what measures to report and would not have to expend effort poring over measure options and making individual measure choices. Therefore, we are now similarly finalizing the requirement that MIPS eligible clinicians scored under the APP Plus APP Plus quality measure set to report all measures in the measure set.

Comment: One commenter believed our proposal would ''open up the APP (and APP Plus) measure sets'' to MIPS eligible clinicians and groups not in a MIPS APM.

Response: In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APP at § 414.1367 beginning in CY 2021 performance period/2023 MIPS payment year as an optional streamlined reporting and

[822] But note, ''[f]or those MIPS eligible clinicians, groups, or APM Entities for whom a measure is unavailable due to the size of the available patient population or who are otherwise unable to meet the minimum case threshold for a measure, we [ ] propos[ed] to remove such measure from the quality performance category score for such MIPS eligible clinician, group or APM Entity.'' 85 FR 50286.

scoring pathway for MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity. When we proposed to create the APP Plus quality measure set, we noted that we were not proposing to modify the existing APP framework for the APP as a reporting and scoring pathway and stated ''the APP will continue to be available to MIPS eligible clinicians, groups, and APM Entities participating in MIPS APMs, meaning that only these clinician types will be able to report and be scored on the APP Plus quality measure set'' (89 FR 62023). We regret that this statement may have caused confusion. However, because the APP is only available to MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity, and the APP is the only reporting pathway that offers the APP Plus quality measure set, it is our intent that only MIPS eligible clinicians, groups, and APM Entities that participate in a MIPS APM and are otherwise eligible to report the APP, and do report the APP, may choose to report the APP Plus quality measure set.

After consideration of public comments, we are finalizing our proposal to amend § 414.1367(c)(1) to establish the APP Plus quality measure set and provide MIPS eligible clinicians, groups, and APM Entities the option to report the APP quality measure set or the APP Plus quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year. However, we are finalizing with modification the phase-in schedule for incorporating measures into the APP Plus quality measure set.

(3) Measures for Use in the APP Quality Measure Set and APP Plus Quality Measure Set

In the CY 2021 PFS final rule, we adopted the current APP quality measure set (85 FR 84860 and 84861). Table 66 contains the current APP quality measure set. We did not propose any changes to the existing APP quality measure set for the CY 2025 performance period/2027 MIPS payment year or successive years.

In the CY 2025 PFS propose rule, we proposed a phased approach to establish the APP Plus quality measure set over four years (89 FR 62024). As early as the CY 2028 performance period/2030 MIPS payment year, the APP Plus quality measure set will consist of the measures currently contained in the APP quality measure set and five additional quality measures from the Universal Foundation measure set. We proposed to phase in the new measures over time to allow for both the eCQM and, for Shared Savings ACOs, Medicare CQM collection types to be developed and become available. Specifically, we proposed that the APP Plus quality measure set will consist of the six measures currently contained in the APP quality measure set and the following five new measures described below, which will be added incrementally. However, as described in the comment responses, we are finalizing a modified timeline for incorporating quality measures into the APP Plus quality measure set.

- Beginning with the CY 2025 performance period/2027 MIPS payment year and subsequent performance periods: The Breast Cancer Screening (Quality ID #112) measure. This measure is currently available with the eCQM, MIPS CQM, and Medicare Part B Claims measure collection types. We will make the Medicare CQM collection type available for this measure prior to the start of performance year 2025 only for Shared Savings Program ACOs.
- Beginning with the CY 2026 performance period/2028 MIPS payment year and subsequent performance periods: The Colorectal Cancer Screening (Quality ID #113) measure. This measure is currently available with the eCQM, MIPS CQM, and Medicare Part B Claims measure collection types. We will make the Medicare CQM collection type available for this measure prior to the start of performance year 2026 only for Shared Savings Program ACOs. Beginning with the CY 2026 performance period/2028 MIPS payment year, we will also incorporate the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) measure. The MCC measure is an administrative claims-based measure.
- Beginning with the CY 2027 performance period/MIPS payment year 2029 and subsequent performance periods: The Initiation and Engagement of Substance Use Disorder Treatment (Quality ID #305) measure. This measure is currently available with the eCQM collection type. We will make the Medicare CQM collection type available for this measure prior to the start of performance year 2027 and only for Shared Savings Program ACOs.
- Beginning no earlier than the CY 2028 performance period/2030 MIPS payment year and continuing for subsequent performance periods: The Screening for Social Drivers of Health (Quality ID #487) and Adult Immunization Status (Quality ID #493) measures. These measures are currently available with the MIPS CQM collection type but are not currently available with the eCQM or Medicare CQM collection types. Because developing an eCQM specification typically takes three years, we will add these measures to the APP Plus quality measure set in the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specification becomes available for each respective measure, whichever is later. We will make these measure specifications available prior to the first year that each measure is incorporated into the APP Plus quality measure set.

As discussed earlier, we intend to incorporate the Adult Universal Foundation measures in the APP Plus quality measure set. We note that the additional Universal Foundation measures that we proposed to include in the APP Plus quality measure set align with national condition-specific initiatives and CMS priorities. In this section, we briefly discuss each new Universal Foundation measure that will be added to the APP Plus quality measure set and that is not already included in the APP quality measure set: Breast Cancer Screening and Colorectal Cancer Screening Measures.

(a) Breast Cancer Screening Measure and Colorectal Cancer Screening Measure

Our addition of the Breast Cancer Screening (Quality ID #112) and Colorectal Cancer Screening (Quality ID #113) measures to the APP Plus quality measure set starting with the CY 2025 performance period and the CY 2026 performance period, respectively, aligns with the President and First Lady's Cancer Moonshot initiative, of which a key objective is to ''make sure everyone has access to cancer screenings—so more Americans can catch cancer early, when outcomes are best.'' [823] Breast cancer and colorectal cancer are two of the most common types of cancers, accounting for an estimated 23 percent of all new cancer diagnoses in the United States in 2023.[824] Because the risk of developing these types of cancers increases with age, the Breast Cancer Screening measure focuses on mammogram screening for breast cancer every 24 months starting at age 50 and the Colorectal Cancer Screening measure focuses on appropriate screening for colorectal cancer once per

[823] The White House (n.d.). The President and First Lady's Cancer Moonshot. Accessed March 28, 2024. *https://www.whitehouse.gov/cancermoonshot/.*

[824] Siegel, R.L., Miller, K.D., Wagle, N.S., & Jemal, A. (2023). Cancer statistics, 2023. *CA: a cancer journal for clinicians, 73*(1), 17–48. *https://doi.org/10.3322/caac.21763.*

performance period, also starting at age 50. Additionally, the February 2024 preliminary measure specifications for the eCQM version of Colorectal Cancer Screening lower the starting age for screenings to 45, an update that aligns with United States Preventive Services Task Force recommendation that colorectal cancer screening begin at age 45 to reduce risk of death.[825]

(b) Initiation and Engagement of Substance Use Disorder Treatment Measure

We described in the CY 2025 PFS proposed rule that an estimated 48.7 million Americans aged 12 or older (17.3 percent of the population) were classified as having had a substance use disorder (SUD) in the past year in 2022 (89 FR 62025).[826] These individuals are at an increased risk for having major medical conditions, injury, overdose, and death.[827] Outcomes for individuals with SUDs are improved through early and regular treatment.[828] Initiation and Engagement of Substance Use Disorder Treatment (Quality ID #305) measure ensures patients 13 years of age and older with a new SUD episode have the initiation of intervention or medication within 14 days of the new SUD episode or engage in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication within 34 days of the initiation of treatment. This measure also supports CMS efforts to reduce deaths related to opioid overdoses, which have significantly increased in recent years,[829] and the CMS Behavioral Health Strategy.[830]

(c) Screening for Social Drivers of Health Measure

We described in the CY 2025 PFS proposed rule (89 FR 62025) that in the CY 2023 PFS proposed rule (87 FR 46154 through 46155) we had sought comment on the potential future inclusion of the Screening for Social Drivers of Health (Quality ID #487) measure in the APP quality measure set. While the majority of commenters were generally supportive of adding the Screening for Social Drivers of Health measure, several raised concerns related to the undue burden on collection, cost and resources of implementation, and holding providers accountable for the collection of data which could be beyond their scope or ability. Some supportive commenters appreciated that the Screening for Social Drivers of Health measure could drive the standardization of measures that examine social drivers of health in Federal health care quality and payment systems, and that this would ultimately drive the health of our patients and our Nation, maximize the use of limited Government resources to support vulnerable patients, and achieve quality improvement and equity in health outcomes. Commenters further stated that the Screening for Social Drivers of Health measure is crucial in recognizing the impact of health-related social needs issues on patients and providers, in laying the foundation to invest in those communities, and in avoiding fragmentation and provider/patient burden by supporting alignment across public and private quality and payment programs. Some commenters opposed the addition of the measure and cautioned CMS to test it before it would be required. Other opposed commenters voiced their concern about the undue burden on data collection among patients and providers and the costs and resources associated with implementing new Social Drivers of Health measures, and that gathering health related social needs data would lead to holding providers accountable for addressing social needs of patients that is beyond a provider's scope or ability.

The benefits of adding the Screening for Social Drivers of Health measure to the APP Plus quality measure set outweigh these concerns. For example, while the challenges and concerns noted previously in this section associated with implementing screening for Social Drivers of Health are voiced by family medicine clinicians, social workers, and clinical staff, including the potential negative impact screening could have on the patient-clinician relationship, screening for social drivers of health uncovers patient needs, allows clinicians to provide their patients with resources or referrals, results in appropriately adapting patient care, and prioritizes patient safety.[831] The addition of the Screening for Social Drivers of Health measure also is consistent with our priorities to advance health equity and move toward whole-person care throughout our various programs, including the MIPS and the Hospital Inpatient Quality Reporting (HICR) programs. This measure addresses five social and economic determinants—namely, food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety[832]—that are central to the Health Equity strategic plan pillar (*https://www.cms.gov/pillar/health-equity*) and have been identified as both a measurement priority and a performance gap among CMS programs.

The movement to address socioeconomic, environmental, and behavioral health factors (referred to as drivers of health) has gained traction after a study estimated that only 20 percent of a person's health outcomes are linked to their medical care with the remaining 80 percent attributable to drivers of health.[833] Because of the strong relationship between Social Drivers of Health and physical health outcome, screening for Social Drivers of Health will support the goals of improving health outcomes by providing clinicians with a more comprehensive understanding of each patient's circumstances to inform clinical decision making and ensure high-quality care.

In addition, many of these drivers of health are not only linked to poorer health, but disproportionately impact

communities of color and underserved populations. Through screening, once per performance period, of patients 18 years and older for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety, screening for Social Drivers of Health and appropriate referrals can potentially improve health outcomes and reduce health disparities. As we indicated when we proposed to adopt Screening for Social Drivers of Health in MIPS in the CY 2023 PFS proposed rule, we believe that consistently addressing drivers of health will have two significant benefits. First, because drivers of health disproportionately impact individuals and communities that are disadvantaged and/or underserved by the healthcare system, the promotion of screening for these factors will support clinician practices and health systems in actualizing an expressed commitment to address disparities in care, implementing associated equity measures to track progress, and improving overall health equity.[834] Second, patient-level driver of health data through screening is essential in the long-term to encourage meaningful collaboration among clinicians and community-based organizations, and implement and evaluate related innovations in healthcare and social service delivery. (87 FR 46280)

(d) Adult Immunization Status Measure

We described in the CY 2025 PFS proposed rule that the Adult Immunization Status measure (Quality ID #493) ensures that adults are up to date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal (89 FR 62026). We also stated that this robust measure supports the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease (89 FR 62026).

(e) Maintaining the Use of the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients With Multiple Chronic Conditions Measure in the APP Quality Measure Set and Including It in the APP Plus Quality Measure Set

We noted in the CY 2025 PFS proposed rule (87 FR 46154 through 46155) that Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) is an administrative claims-based measure that is in the APP quality measure set for the MIPS CY performance period 2025/2027 payment year under policies finalized in the CY 2024 PFS final rule (88 FR 79113 and 79114) but is not one of the ten Adult Universal Foundation measures. Our proposal would continue to maintain this measure in the APP quality measure set, but the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) would be withheld from the APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year before being incorporated in the CY 2026 performance period/2028 MIPS payment year and subsequent performance periods. We continue to believe that hospital admission rates are an effective marker of ambulatory care quality. As noted in our rationale for adopting the measure in the measure specifications, ''Hospital admissions from the outpatient setting reflect a deterioration in patients' clinical status and as such reflect an outcome that is meaningful to both patients and providers.[835] Patients receiving optimal, coordinated high-quality care should use fewer inpatient services than patients receiving fragmented, low-quality care. Thus, high population rates of hospitalization may signal poor quality of care or inefficiency in health system performance. Furthermore, these effects may be exacerbated in disadvantaged areas.[836] Patients with multiple chronic conditions are at high risk for hospital admission, often for potentially preventable causes, such as exacerbation of pulmonary disease.'' [837] Maintaining this measure in the APP quality measure set and, as a consequence, including it in the APP Plus quality measure set also is consistent with our previously stated goals in the CY 2021 PFS final rule to align the APP with the Meaningful Measures framework, an initiative to remove lower value quality measures across CMS programs while keeping measures that have less burden and are the most meaningful with the greatest impact on patient outcomes. This measure supports the framework's goals as it is identified among the highest priorities for quality measurement and improvement while also reducing burden, promoting alignment, moving payment toward value, and identifying key quality performance metrics for consumers (85 FR 84726).

(f) The APP and APP Plus Quality Measure Sets Beginning With the CY 2025 Performance Period/2027 MIPS Payment Year

Table 67 identifies the measures in the Adult Universal Foundation measure set, crosswalks them to corresponding MIPS measures, and lists the timeline for their incorporation into the APP Plus quality measure set between the CY 2025 and 2028 performance periods/2027 and 2030 MIPS payment years as they become available for both the eCQM and Medicare CQM collection types. We note that Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) is not one of the ten Adult Universal Foundation measures and is not listed in Table 23; however, we are maintaining reporting of this measure in the APP quality measure set, and, as such, also proposed to include it in the APP Plus quality measure set. We note we are finalizing incorporation Quality ID #484 into the APP Plus quality measure set with a one-year delay to the CY 2026 performance period/2028 MIPS payment year and subsequent performance periods, as discussed above.

* Indicates this measure will be incorporated into the APP Plus quality measure set in the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specification becomes available, whichever is later.

Scoring for the APP quality performance category scoring methodology at § 414.1367(c)(1) will continue to be performed in accordance with § 414.1380(b)(1). For the APP quality measure set, this means that the scoring methodology will not change. For the APP Plus quality measure set, we proposed to calculate the MIPS quality performance category score for a MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set via the APP by summing the scores for all of the measures, as applicable, included in the APP Plus quality measure set for a given year. Scoring clinicians on all measures, as applicable, in the APP Plus quality measure set will promote the best, safest, and most equitable care and provide a comprehensive assessment of the performance of those who choose to report the measure set.

Because we proposed that a MIPS eligible clinician, group, or APM Entity that chooses to report the APP Plus quality measure set will be scored on all of the measures in that set, we also proposed a conforming change to MIPS data submission requirements in § 414.1335(b) to require that a MIPS eligible clinician, group, or APM Entity that reports the APP Plus quality measure set via the APP will be required to report on all measures included in the APP Plus quality measure set, except for administrative claims-based measures, which are calculated using data from claims submissions. We solicited comment on this proposal. For further discussion on the data submission proposal for the APP Plus quality measure set, see section IV.A.4.e.(1)(b) of this final rule.

d. Data Submission for the Performance Categories

(1) Overview

For previously established policies relevant to data submission for the MIPS performance categories, we refer readers to § 414.1325 and the CY 2017 Quality Payment Program final rule (81 FR 77087 through 77097), CY 2018 Quality Payment Program final rule (82 FR 53619 through 53626), CY 2023 PFS final rule (86 FR 65438 through 65441) and CY 2024 PFS final rule (88 FR 79330 through 79332). Specifically, we finalized at § 414.1325(a)(1) that individual MIPS eligible clinicians, groups, virtual groups, subgroups, and Alternative Payment Model (APM) Entities must submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability performance categories in accordance with § 414.1325. We note, that under the current policies described at § 414.1325(a)(2), there are no data submission requirements for the cost performance category or administrative claims-based quality measures.

In the CY 2025 PFS proposed rule (89 FR 62031 through 62036), we proposed to adopt minimum criteria for a qualifying data submission for a MIPS performance period for the quality, improvement activities, and Promoting Interoperability performance categories at § 414.1325(a)(1)(i) through (iii). We also proposed to codify our existing policies governing our treatment of multiple data submissions received for the quality and improvement activities performance categories at § 414.1325(f)(1). We also proposed to modify our existing policy governing our treatment of multiple data submissions received for the Promoting Interoperability performance category at § 414.1325(f)(2).

Policies in this section of this final rule are intended to eliminate certain issues with the scoring of an unintended data submission affecting payment adjustments for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. We proposed these changes to be effective beginning with the CY 2024 performance period/2026 MIPS payment year for the data submission period in CY 2025.

(2) Minimum Criteria for a Qualifying Data Submission for the MIPS Quality, Improvement Activities, and Promoting Interoperability Performance Categories

(a) Background

CMS uses the data submitted by (or on behalf of) individual MIPS eligible clinicians, groups, virtual groups, subgroups, or APM Entities in the quality, improvement activities, and Promoting Interoperability performance categories to assess their performance on the measures and activities in these three categories and to determine their MIPS payment adjustments. Under the previously established data submission policies at § 414.1325, individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities generally submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability performance categories in accordance with the data submission deadlines at § 414.1325(e)(1). Under our current policies, we consider any submission of data received for a MIPS performance category during the designated data submission period for a MIPS performance period in accordance with § 414.1325(e)(1) to be a data submission for the corresponding MIPS performance period and assign a score for the submission.

For the quality and improvement activities performance categories, under the current reweighting policies at § 414.1380(c)(2)(i)(A)(*6*) through (*8*) for an extreme and uncontrollable circumstance (EUC) or other type of exception based on certain circumstances, we score any data submitted by (or on behalf of) a MIPS eligible clinician with an approved reweighting application. This includes MIPS eligible clinicians with an approved application-based EUC reweighting or an approved reweighting for a clinician identified in a CMS-designated region affected by an automatic EUC event. Under this current policy, in the event that a MIPS eligible clinician submits any data for the quality or improvement activities performance category, such submission overrides the approved reweighting for the applicable performance category and we score the performance categories for which data was submitted, and include the performance category scores in the MIPS eligible clinician's final score as otherwise provided in § 414.1380(c).

Similarly, for the Promoting Interoperability performance category, under the current reweighting policies at § 414.1380(c)(2)(i)(C) for a significant hardship or other type of exception based on certain circumstances, we score any data submitted by (or on behalf of) a MIPS eligible clinician with an approved reweighting application, except as provided in § 414.1380(c)(2)(i)(C)(*10*) and (*11*). Under this current policy, in the event that a MIPS eligible clinician submits any data for the Promoting Interoperability performance category, such submission overrides the approved reweighting for the performance category and we will score the Promoting Interoperability performance category and include the category score in the MIPS eligible clinician's final score as otherwise provided in § 414.1380(c).

We have received inquiries from MIPS eligible clinicians that highlight unintended consequences associated with our current data submission requirements. Several MIPS eligible clinicians have notified us that there have been instances where they unintentionally submitted non-scorable data for a MIPS performance category, which overrode an approved reweighting or a previously scorable data submission for the MIPS quality, improvement activities, or Promoting Interoperability performance categories. Data submissions without any scorable data (non-scorable data submissions) generally only include limited data that cannot be scored, such as a practice ID, date, activity ID, measure ID, or CMS Electronic Health Record (EHR) Certification ID (CEHRT ID). MIPS eligible clinicians have also notified us that, in some instances, the data submission overriding the prior approved reweighting or prior scorable submission was performed by a third-party intermediary or a practice representative.

The MIPS eligible clinician, group, virtual group, subgroup, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, APM Entity, as applicable, that submits data on measures and activities under MIPS is defined at § 414.1305 as the submitter type.

The mechanism by which a submitter type submits data to CMS (including, as applicable: Direct, log in and upload, log in and attest, Medicare Part B claims, and the CMS Web Interface) is defined at § 414.1305 as the submission type. The direct submission type allows users to transmit data through a computer-to-computer interaction, such as an API. The log in and upload submission type allows users to upload and submit data in the form and manner specified by CMS with a set of authenticated credentials. The log in and attest submission type allows users to manually attest that certain measures and activities were performed in the form and manner specified by CMS with a set of authenticated credentials. We refer readers to § 414.1325(b) and (c) for available data submission types that individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities may utilize to submit data for the quality, improvement activities, and Promoting Interoperability performance categories.

To submit data, a submitter must gain access to the Quality Payment Program website (*https://qpp.cms.gov/login*) for submitting or viewing data for the associated individual MIPS eligible clinician, group, subgroup, virtual group, or APM Entity. We refer readers to the Quality Payment Program Resource Library (*https://qpp.cms.gov/resources/resource-library*) for additional information on the MIPS data submission process and obtaining access to submit data during the designated submission period under § 414.1325(e)(1).

After gaining access to the Quality Payment Program website for the associated individual MIPS eligible clinician, group, subgroup, virtual group, or APM entity, a submitter can navigate to the ''Eligibility and Reporting'' tab and view whether there is any reweighting applied for one or more of the MIPS performance categories for the associated individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity. In addition, at the time of submission, the system generates warnings to the submitter (for all the available submission types) if there is an existing approved reweighting for the performance category in which the data is being submitted or an existing data submission for an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity. For example, if a group has an approved reweighting for the Promoting Interoperability performance category, the system alerts the submitter prior to completing the data submission with a message stating: ''This Action Will Impact Your Category Weights. Currently, Promoting Interoperability does not count towards your final score. By choosing to report Promoting Interoperability data, your score for this category will be included in your final score. This action cannot be undone.'' The submitter must check the ''Yes, I agree'' box prior to confirming the data submission in the performance category. We refer readers to the Quality Payment Program Resource Library (*https://qpp.cms.gov/resources/resource-library*) for additional details on the process to

submit MIPS data for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities.

Under the current policy and process, we assign a score for any submission received from an individual MIPS eligible clinician, group, virtual group, subgroup or APM Entity for a performance period during the designated MIPS submission period regardless of whether the submission included data on the MIPS measures and activities. We implemented the policy and process to recognize any data submitted as an extension of the policy that submission of any data overrides reweighting of the MIPS performance categories as described at § 414.1380(c)(2). We assign a score for submissions with data on MIPS measures and activities, and also for submissions that only include non-scorable data, such that they do not include any data that allows us to measure a clinician's performance on the applicable measures and activities. For example, if we receive a submission for a MIPS performance category without any measure or activity data (for example, without numerator and denominator data for any quality measures, without a response of ''yes'' for any improvement activities, without a ''yes'' or ''no'' response for an attestation, or responses for the required objectives and associated measures and attestation statements for the Promoting Interoperability performance category), and the data submission includes only non-scorable data (such as the practice ID, measure ID and TIN/NPI information), we assign a zero score for the applicable MIPS performance category in the event we do not receive a subsequent submission with measure or activity data.

Despite implementing these system warnings to alert the submitter of a potential impact of their entry on the reweighting status or existing data submission, we continue to receive non-scorable data submissions, which override an approved reweighting or a previously scored data submission, for the MIPS quality, improvement activities, or Promoting Interoperability performance categories. To help address the unintentional overriding of an existing scorable data submission or an approved reweighting for the MIPS performance categories, we proposed a narrower set of minimum criteria of what would qualify as a data submission under our existing policies. We note that we did not propose to change our existing policies to assign a score for a data submission (meeting the proposed narrower minimum criteria) for the applicable MIPS performance categories, including our policy governing data submissions from a third-party intermediary, even if the submission overrides an approved reweighting or a prior scorable submission for the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity.

We have identified that we could potentially avoid submissions without any scorable data on MIPS measures or activities from overriding previously approved reweighting or a prior submission for the MIPS performance categories if we require a submission to include certain data on measures or activities in the MIPS quality, improvement activities, or Promoting Interoperability performance categories to assign a score. Therefore, we proposed to adopt minimum criteria for what we would consider to be a qualifying data submission for which CMS can assign a score.

Specifically, we proposed to consider a submission valid and scorable (including, potentially, a score of zero) for the applicable MIPS performance category only if the data submission includes: numerator and denominator data for at least one MIPS quality measure in the quality performance category; a response of ''yes'' for at least one improvement activity in the improvement activities performance category; and all required elements to report objectives and associated measures and attestation statements for the Promoting Interoperability performance category.[838] We describe the details of these data submission criteria for each performance category in sections IV.A.4.d.(2)(b), IV.A.4.d.(2)(c), and IV.A.4.d.(2)(d) of this final rule. As further described in these sections, we are finalizing these data submission criteria for each performance category as proposed.

As discussed in the CY 2025 PFS proposed rule (89 FR 62033), we note that we did not propose any changes to the existing scoring or reweighting policies described under § 414.1380 for the MIPS performance categories. If the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity does not have an approved reweighting for one or more of the MIPS performance categories and we do not receive a data submission for a performance category that has not been reweighted, we will assign a score of zero for the applicable performance category.

(b) Quality Performance Category

We refer readers to §§ 414.1325 and 414.1330 through 414.1340 and the CY 2017 Quality Payment program final rule (81 FR 77097 through 77162) and CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641), the CY 2019 PFS final rule (83 FR 59754 through 59765), CY 2020 PFS final rule (84 FR 63949 through 62959), CY 2021 PFS final rule (85 FR 84866 through 84877), CY 2022 PFS final rule (86 FR 65431 through 65445), CY 2023 PFS final rule (87 FR 70047 through 70057), and CY 2024 PFS final rule (88 FR 79329 through 79338) for a description of previously established policies related to the quality performance category. The data submitted from the final list of MIPS quality measures are used to assess the performance of an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for the quality performance category, to contribute to their overall score, and to help determine the payment adjustment for MIPS eligible clinicians.

In the CY 2025 PFS proposed rule (89 FR 62033), we proposed that a data submission in the quality performance category must include numerator and denominator data for at least one quality measure from the list of MIPS quality measures to be assigned a score in the quality performance category. We previously finalized data submission types for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities as described at § 414.1325. In the CY 2018 Quality Payment Program final rule (82 FR 53780), we stated that we will determine a quality performance category percent score whenever a MIPS eligible clinician has submitted at least one quality measure. As described in the CY 2025 PFS proposed rule (89 FR 62033), we currently assign a score for any data submitted for the MIPS performance categories and have implemented operational measures to limit unintentional overriding of an approved reweighting or existing scorable data submitted for a MIPS performance category. However, we continue to receive unintentional submissions without data that can be scored resulting in the overriding of an approved reweighting application or a prior data submission that can be scored for the quality performance category. We noted that we did not propose any

[838] Attestation is one possible way to for MIPS eligible clinicians participating in APMs to earn credit in the improvement activities performance category but is not required to earn credit. Consistent with our regulation at § 414.1380(b)(3)(i), we automatically award 50 percent credit for the improvement activities performance category to MIPS eligible clinicians participating in APMs when they attest to having completed an improvement activity or submit data for the quality or Promoting Interoperability performance categories. We did not propose to change this.

changes to the current scoring policies described under § 414.1380(b)(1) for the quality performance category. Therefore, we will still assign a score of zero for the quality performance category if an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity does not submit at least one available quality measure unless the performance category has been reweighted as defined at § 414.1380(c)(2).

We proposed to specify what we consider to be a data submission at § 414.1325(a)(1)(i) to state that, for the quality performance category, a data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures (89 FR 62033). We anticipate the change will potentially avoid unintentional overriding of an approved reweighting or a prior data submission for the quality performance category due to submissions without any quality measure data. We did not propose any changes to the data submission requirements, data submission criteria, data completeness criteria, and scoring for the quality performance category described under §§ 414.1325, 414.1335, 414.1440, and 414.1380(b)(1) respectively. We requested public comments on this proposal.

We received public comments on this proposal.

Comment: Many commenters supported the proposal to adopt minimum criteria for data submissions in the quality performance category that would require numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures. A few commenters expressed appreciation that this proposal will mitigate negative scoring impacts on clinicians when data submission is unintended. A few other commenters appreciated CMS' efforts to align data submission requirements across all performance categories because it can help standardize reporting. Other commenters also expressed belief that the proposal will help solve problems with the current data submission process by ensuring accuracy and completeness in performance reporting, reducing ambiguity, and preventing incomplete submissions from being scored.

Response: We thank the commenters for their support.

Comment: A few commenters expressed concern or did not support the proposal to adopt minimum criteria for data submissions in the quality performance category. One commenter shared their belief that constant tweaks and changes to the program can be detrimental to and complicated for practices, especially for those with limited resources. Another commenter expressed concern that the requirement to provide detailed performance data and attestation statements for the MIPS performance categories could increase administrative burden, particularly for smaller practices with limited resources.

Response: While we acknowledge the commenters' concerns, the proposed minimum criteria for a qualifying data submission will prevent submissions without any scorable data from unintentionally overriding an existing scorable data submission or an approved reweighting for the MIPS performance categories without increasing reporting burden for providers. We note the proposed minimum criteria for a qualifying data submission do not require practices to change how they submit data and will benefit practices by preventing unintended consequences due to submissions without any scorable data.

Comment: One commenter requested clarification regarding whether submission of a single quality data code (QDC) for a single Medicare Part B Claims measure would satisfy the proposed minimum criteria of numerator and denominator data for a data submission in the quality performance category and noted that in the past, practices have reported unintentional overriding of an approved extreme and uncontrollable circumstance (EUC) due to accidental submission of QDCs.

Response: Under the proposed minimum criteria for a quality data submission, a data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures. Therefore, a submission of a single QDC for a single Medicare Part B Claims measure would be considered a qualifying data submission and under the current reweighting policies at § 414.1380(c)(2)(i)(A)(6) through (8) for an EUC or other type of exception based on certain circumstances, this submission will override an approved reweighting of the quality performance category.

Comment: One commenter recommended that in addition to the proposed minimum criteria for a data submission in the quality performance category, CMS should allow a practice to submit a targeted review request to indicate accidental data submitted on behalf of the practice and to allow for the scoring to be corrected.

Response: At the time of submission, the system on the Quality Payment Program website generates warnings for the submitter (for all the available submission types) if there is an existing approved reweighting for the performance category in which the data is being submitted or an existing data submission for an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity. The existing system warnings, combined with the proposed minimum criteria for a data submission, should be sufficient to warn practices against and prevent the accidental submission of data that overrides a previous data submission or an approved reweighting. We encourage group practices and clinicians to continue collaborating with their data submission representatives (third party intermediaries or practice administrators) to avoid unintended submissions.

The targeted review policy established under section 1848(q)(13)(A) of the Act is limited to informal review of our calculation of the MIPS adjustment factor applicable to the MIPS eligible clinician. This includes requests for targeted review of errors in our application of policies governing calculation of scores for measures and activities, performance category scores, and MIPS final scores (81 FR 77353). We proposed minimum criteria for qualifying data submission for the quality, improvement activities, and Promoting Interoperability performance categories to identify where non-scoreable data submissions may have been inadvertent or in error. Adopting these standards will establish clear, objective criteria to assess whether we received a qualifying data submission that we will score for the performance category. If a MIPS eligible clinician submits a targeted review request alleging an accidental data submission, we will apply this qualifying data submission policy, as finalized, to determine whether we calculated the performance category score appropriately, or in error.

After consideration of public comments, we are finalizing the policy as proposed to codify at § 414.1325(a)(1)(i) that for the quality performance category, a data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures.

(c) Improvement Activities Performance Category

We refer readers to §§ 414.1355 and 414.1360 and the CY 2017 Quality Payment Program final rule (81 FR

77177 and 77178), CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), CY 2019 PFS final rule (83 FR 59776 and 59777), CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2022 PFS final rule (86 FR 65462) and the CY 2024 PFS final rule (88 FR 79328) for a description of previously established policies related to the improvement activities performance category.

We previously finalized at § 414.1360(a)(2) that MIPS eligible clinicians, groups, virtual groups, or subgroups must submit a ''yes'' response for each improvement activity that is performed for at least a continuous 90-day period during the applicable performance period to receive points in the improvement activities performance category described under § 414.1360(b)(3). We currently assign a score for any submission or attestation received in the improvement activities performance category via the submission types described under § 414.1325(a)(1) regardless of whether the submission or attestation included a ''yes'' response or not. In the event of a submission without ''yes'' responses, we currently assign a score of zero.

Data submitted in the improvement activities performance category is used to assess the performance of an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on the attestation or data submission for the improvement activities and to determine the payment adjustment for MIPS eligible clinicians. In the CY 2025 PFS proposed rule (89 FR 62033 through 62034), we proposed to specify for clinicians what we consider to be a data submission and that we will score a data submission only if the submission includes a response of ''yes'' for at least one improvement activity included in the improvement activities inventory for the MIPS performance period. We anticipate the change will potentially avoid unintentional overriding of an approved reweighting or a prior data submission for the improvement activities performance category due to submissions or attestations without a response of ''yes'' for any of the improvement activities.

Specifically, we proposed that for the improvement activities performance category, a data submission must include a response of ''yes'' for at least one activity in the MIPS improvement activities inventory (89 FR 62033 and 62034). We note that we did not propose any changes to the data submission criteria and scoring for the improvement activities performance category described under §§ 414.1360 and 414.1380(b)(3) respectively.

We received public comments on this proposal.

Comment: Many commenters supported the proposal to adopt minimum criteria for data submissions in the improvement activities performance category which would require a response of ''yes'' for at least one activity in the MIPS improvement activities Inventory. A few commenters expressed appreciation that this proposal will mitigate negative scoring impacts on clinicians when data submission was unintended. A few other commenters appreciated CMS' efforts to align data submission requirements across all performance categories because it can help standardize reporting. Other commenters also expressed the belief that this proposal will help solve problems with the current data submission process by ensuring accuracy and completeness in performance reporting, reducing ambiguity, and preventing incomplete submissions from being scored.

Response: We thank the commenters for their support.

Comment: A few commenters provided recommendations about the proposal to adopt minimum criteria for data submissions in the improvement activities performance category. One commenter recommended that CMS adopt an alternative policy to score and reweight the improvement activities category and uses the higher of those two scores because the commenter believes this to be the simplest solution that would also avoid unintended consequences for clinicians that qualify for automatic credit within the improvement activities category, such as not receiving credit for participating in an eligible MIPS APM or patient-centered medical home. Another commenter recommended that CMS should ensure that any policy finalized does not override an approved reweighting request for the improvement activities performance category. Another commenter recommended that in addition to the proposed minimum criteria for a data submission in the improvement activities performance category, CMS should allow the practice to submit a targeted review request to indicate accidental data submitted on behalf of the practice and to allow for the scoring to be corrected.

Response: We did not propose this policy to maximize a MIPS eligible clinician's score. The reweighting policy is for clinicians that have been affected by ''extreme and uncontrollable circumstances'' that prevented the clinician from performing functions essential to reporting completion of the activity or in other circumstances such that there are not sufficient measures and activities applicable and available as described in § 414.1380(c)(2)(i)(A)(3) and (6) through (9). If a clinician receives reweighting or otherwise qualifies for the reweighting policy, subsequent affirmative reporting that the clinician completed the improvement activity is clear evidence that the clinician was in fact able to complete the functions necessary to complete reporting of the activity. The proposed policy is therefore most appropriate as it accounts for blank, inadvertent non-scorable submissions, while still permitting clinicians who were approved for reweighting and were able to complete at least one activity to override the reweighting and be scored.

This proposed policy will not interfere with awarding due credit for clinicians that qualify for automatic credit within the improvement activities category, such as those that participate in an eligible MIPS APM or patient-centered medical home as these clinicians automatically receive credit for the category as described under § 414.1380(b)(3)(i) and (ii). We refer readers to section *IV.A.4.e.(3)(b)(iv)* of this final rule for additional details on the changes to the scoring and reporting requirements for the improvement activities performance category.

While we understand the commenter's recommendation to use the targeted review policy for indicating accidental submissions and allow scoring corrections, we note that at the time of submission, the system on the Quality Payment Program website generates warnings to the submitter (for all the available submission types) if there is an existing approved reweighting for the performance category in which the data is being submitted or an existing data submission for an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity. The existing system warnings, combined with the proposed minimum criteria for a data submission, will prevent occurrences of accidental data submission resulting in overriding a previous intended data submission or an approved reweighting. We encourage group practices and clinicians to continue collaborating with their data submission representatives (third party intermediaries or practice administrators) to avoid unintended consequences.

Comment: One commenter expressed concern that the requirement to provide detailed performance data and

attestation statements for the MIPS performance categories could increase administrative burden, particularly for smaller practices with limited resources.

Response: We acknowledge the commenter's concerns; however, the proposed minimum criteria for a qualifying data submission will prevent submissions without any scorable data from unintentionally overriding an existing scorable data submission or an approved reweighting for the MIPS performance categories without increasing reporting burden. We note the proposed minimum criteria for a qualifying data submission do not require practices to change the way they already submit data and will benefit practices by preventing unintended consequences due to submissions without any scorable data.

After consideration of public comments, we are finalizing the policy as proposed and codify at § 414.1325(a)(1)(ii) that for the improvement activities performance category, a data submission must include a response of ''yes'' for at least one activity in the MIPS improvement activities inventory.

(d) Promoting Interoperability Performance Category

We refer readers to § 414.1375 for our previously established policies regarding reporting for the Promoting Interoperability performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1325 for data submission requirements, and § 414.1380(b)(4) for Promoting Interoperability performance category scoring. We refer readers to § 414.1380(c)(2)(i)(C) for our previously finalized policies regarding scoring of data submission in the Promoting Interoperability performance category after an approved reweighting for the performance category. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 59785 through 59820, 84 FR 62991 through 63006, 85 FR 84886 through 84895, 86 FR 65466 through 65490, 87 FR 70060 through 70087, and 88 FR 79351 through 79365, respectively) for a description of previously established policies related to the Promoting Interoperability performance category.

Under our current policy, we consider any information received for the Promoting Interoperability performance category in the Quality Payment Program Submission environment a data submission and assign a performance category score based on the submission. We assign a score of zero for incomplete submissions in the Promoting Interoperability performance category, for example, submissions that include only a date and CMS EHR Certification ID (CEHRT ID) without any data that can be scored with respect to the required objectives, measures, or attestations, as specified by CMS. Under § 414.1375, if we receive a complete data submission for the Promoting Interoperability performance category with responses included for all the required Promoting Interoperability objectives, associated measures, and attestation statements as specified by CMS and utilizing the CEHRT (meeting the definition at § 414.1305) as required, we score the data submission under our established scoring policies for the performance category.

We previously finalized at § 414.1380(c)(2)(i)(C) that, if a MIPS eligible clinician with an approved reweighting for the Promoting Interoperability performance category submits data, they will be scored in this performance category and the reweighting will not be applied, except as provided in § 414.1380(c)(2)(i)(C)(*10*) and (*11*). We also included in the educational materials available on the Quality Payment Program resource library (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2602/2023MIPSSubmissionGuide.pdf*) that a MIPS eligible clinician will be scored in this performance category if they attest to any data, such as selecting performance period dates or responding to attestation statements during the submission period. As set forth under § 414.1380(c)(2)(i)(C), submission of any data for the Promoting Interoperability performance category overrides reweighting, including reweighting due an approved significant hardship exception and automatic reweighting for clinicians that are Ambulatory Surgical Center (ASC)-based, hospital-based, non-patient facing, and small practices. Similarly, under § 414.1380(c)(2)(i)(A)(*4*)(*iii*), submission of any data also overrides our automatic reweighting of the Promoting Interoperability performance category for clinical social workers.[839]

Furthermore, to earn a performance category score for the Promoting Interoperability performance category, we established at § 414.1375 that, for the performance period established at § 414.1320, individual MIPS eligible clinicians, groups, virtual groups, subgroups, or APM Entities must use CEHRT as defined at § 414.1305, report on objectives and associated measures as specified by CMS, and submit attestations as specified by CMS. Under § 414.1325(b) and (c), individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities (or authorized representatives submitting on their behalf) can submit data for the Promoting Interoperability performance category using the direct, login and attest, or login and upload submission types. Specifically, to submit data for the Promoting Interoperability performance category, individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities (or authorized representatives submitting on their behalf) must use CEHRT as required (meeting the definition at § 414.1305) for the continuous 180-day performance period (§ 414.1320(i)) to report the applicable objectives, measures, and attestations. We refer readers to section IV.A.4.e.(4) of this final rule for additional details on CEHRT requirements (including applicable ONC health IT certification criteria set forth under 45 CFR 170.315) and objectives, measures, and attestations required for the Promoting Interoperability performance category.

Under our current policy, we receive submissions in the Promoting Interoperability performance category without completed responses for all the required objectives, measures, and attestations. For example, if a submission for the Promoting Interoperability performance category includes only a date, practice ID, and/or a CEHRT ID, or the submission does not include all of the required objectives, measures, and attestations, then we consider these to be incomplete data submissions. Currently, an incomplete data submission would void an approved reweighting of the Promoting Interoperability performance category in accordance with § 414.1380(c)(2)(i)(C), except as provided in § 414.1380(c)(2)(i)(C)(*10*) and (*11*). As described in the proposed rule and this section of this final rule, we believe that we should not consider data submissions for the Promoting Interoperability performance category if the submission is incomplete, and does not include all necessary required data. We proposed that the minimum criteria for a qualifying data submission for the Promoting Interoperability performance category must include all required reporting elements for the performance category, as specified in this section.

We considered whether CMS should accept incomplete submissions for the

[839] We note that this automatic reweighting policy for clinical social workers only applies through the CY 2024 performance period/2026 MIPS payment year.

Promoting Interoperability performance category. If CEHRT is utilized as required to collect and report measure data and submit attestation statements and other requirements, it would generally result in only complete submissions for the Promoting Interoperability performance category. We recognize that some of the measures in the Promoting Interoperability performance category (such as the SAFER Guides measure and security risk analysis) do not directly require the use of CEHRT, whereas some measures (such as e-prescribing) directly require the use of CEHRT. However, all the requirements for the Promoting Interoperability performance category are directly related to a MIPS eligible clinician demonstrating whether they are a meaningful user of CEHRT in accordance with sections 1848(q)(2)(A)(iv), (B)(iv) and 1848(o)(2)(A) of the Act. Further, section 1848(o)(2)(A) requires that all requirements set forth therein (meaningful use of CEHRT, electronic exchange of health information, and reporting on clinical quality and other measures using CEHRT) be met for a MIPS eligible clinician to be treated as a meaningful EHR user for the applicable performance period. Therefore, accepting an incomplete data submission for the Promoting Interoperability performance category would be counterintuitive to a MIPS eligible clinician demonstrating whether they are a meaningful user of CEHRT in accordance with sections 1848(q)(2)(A)(iv), (B)(iv) and 1848(o)(2)(A) of the Act.

In the CY 2025 PFS proposed rule (89 FR 62034 through 62035), we proposed to adopt minimum criteria for a qualifying data submission for the Promoting Interoperability performance category submission to include all of the required reporting elements for the category, including data on all required measures (including any claim of an applicable exclusion), required attestation statements, the CEHRT ID, and the start and end date for the applicable performance period. This proposal will clarify what counts as a data submission for MIPS eligible clinicians and it will potentially avoid partial data submissions from overriding an approved reweighting or a previously scored submission for the Promoting Interoperability performance category.

Specifically, we proposed to specify minimum criteria as a qualifying data submission for the Promoting Interoperability performance category at § 414.1325(a)(1)(iii) to provide that a data submission must include all of the following elements:

- Performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS;
- Required attestation statements, as specified by CMS;
- CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and
- The start date and end date for the applicable performance period as set forth in § 414.1320.

As discussed previously, we did not propose any changes to the existing scoring or reweighting policies described under § 414.1380 for the MIPS performance categories in this section of this final rule. If the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity does not have an approved reweighting for one or more of the MIPS performance categories and we do not receive a data submission meeting the proposed minimum criteria for a performance category that has not been reweighted, we will assign a score of zero for the applicable performance category. If we receive a qualifying data submission meeting the minimum criteria for reporting, then we will review the data submission and score the Promoting Interoperability performance category in accordance with our applicable scoring policies.

We refer readers to section IV.A.4.e.(4) of this final rule for additional details on the reporting requirements and scoring of the objectives, measures, and attestations the Promoting Interoperability performance category.

We received public comments on this proposal.

Comment: Many commenters supported the proposal to adopt minimum criteria for data submissions in the Promoting Interoperability performance category. A few commenters expressed appreciation that this proposal will mitigate negative scoring impacts on clinicians when data submission was unintended. A few other commenters appreciated CMS' efforts to align data submission requirements across all performance categories because it can help standardize reporting. Other commenters also expressed their belief that this proposal will help solve problems with the current data submission process by ensuring accuracy and completeness in performance reporting, reducing ambiguity, and preventing incomplete submissions from being scored.

Response: We thank the commenters for their support. We intend to standardize data submission requirements for MIPS to the extent feasible. To this end, while we proposed to establish minimum criteria for a qualifying data submission for all three performance categories for which we require data submission under § 414.1325(a), we note that the specific minimum criteria we proposed for each performance category varies. This variation is by necessity as these criteria reflect the differences in the requirements of, and the individual measures and activities specified for, each performance category.

Comment: A few commenters expressed concern or did not support the proposal to adopt minimum criteria for data submissions in the Promoting Interoperability performance category. One commenter expressed concern about increasing complexity in the Promoting Interoperability performance category. Another commenter expressed concern that the requirement to provide detailed performance data and attestation statements for the MIPS performance categories could increase administrative burden, particularly for smaller practices with limited resources. A few commenters expressed concern about using an ''all-or-nothing'' approach for minimum criteria for data submission for the Promoting Interoperability performance category because they believe the policy is overly punitive and penalizes clinicians for administrative errors. One commenter recommended that CMS instead require performance data on one reporting option within the Health Information Exchange (HIE) objective and not each measure within the objective. Another commenter recommended that CMS instead score all Promoting Interoperability measures that include a numerator and denominator.

Response: We believe that the proposed minimum criteria for what would qualify as a data submission will prevent submissions without any scorable data from unintentionally overriding an existing scorable data submission or an approved reweighting for the Promoting Interoperability performance category. The proposed minimum criteria for a qualifying data submission do not require practices to change the way they already submit data and will benefit practices by preventing unintended consequences due to submissions without any scorable data. We did not propose any changes to existing scoring or reweighting policies described under § 414.1380 with respect to these proposed data submission policies (89 FR 62033). The data submission policies discussed in this section IV.A.4.d.(2) of the final rule will establish clear

minimum criteria so we may identify when we have received a qualifying data submission for a performance category, and thus apply our existing scoring policies or override an approved reweighting in accordance with § 414.1380(c)(2)(i).

For example, as described in § 414.1380(c)(2)(i)(C)(*9*), we automatically reweight the Promoting Interoperability performance category to zero percent for MIPS eligible clinician(s) in a small practice as defined at § 414.1305. Therefore, MIPS eligible clinician(s) in a small practice are not required to submit data for the Promoting Interoperability performance category. However, if MIPS eligible clinician(s) in the small practice submit data meeting the minimum criteria of a qualifying data submission for the Promoting Interoperability performance category as finalized in this rule, then we will override the automatic reweighting and score the Promoting Interoperability performance category, as specified in § 414.1380(c)(2)(i)(C).

In response to the commenter's concerns about using an ''all-or-nothing'' approach for the minimum criteria for a qualifying data submission for the Promoting Interoperability performance category, if CEHRT is utilized as required to collect and report measure data and submit attestation statements and other requirements, it will generally result in only complete submissions for the Promoting Interoperability performance category. Additionally, we believe that accepting an incomplete data submission for the Promoting Interoperability performance category would be counterintuitive to a MIPS eligible clinician demonstrating whether they are a meaningful user of CEHRT in accordance with sections 1848(q)(2)(A)(iv), (B)(iv) and 1848(o)(2)(A) of the Act. The proposed minimum criteria for a qualifying data submission for the Promoting Interoperability performance category are intended to prevent penalties and errors that may occur due to unintentional submissions without data on measures overriding prior data submissions or reweighting. Only scoring data submissions with all elements required for reporting in the Promoting Interoperability performance category should minimize the chance of MIPS eligible clinicians receiving a score of zero due to unintentional submissions.

Regarding the commenters' recommendations to use one reporting option under the HIE objective or score all measures within the category that require a numerator and denominator, we note that we did not propose any changes to the existing reporting and scoring requirements in the Promoting Interoperability performance category in relation to this qualifying data submission policy. This qualifying data submission policy does not alter our reporting requirements for the Promoting Interoperability performance category, including what measure(s) fulfill the HIE objective. We refer readers to § 414.1375(b) and section *IV.A.4.e.(4)(f)* of this final rule for details on the requirements for the Promoting Interoperability performance category. As previously noted, once we receive a qualifying data submission for the Promoting Interoperability performance category, we will score it in accordance with our existing policies.

After consideration of public comments, we are finalizing the policy as proposed and codify at § 414.1325(a)(1)(iii) that a data submission in the Promoting Interoperability performance category must include all of the following elements:

- Performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS;
- Required attestation statements, as specified by CMS;
- CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and
- The start date and end date for the applicable performance period as set forth in § 414.1320.

(3) Treatment of Multiple Data Submissions

(a) Background

Under the current policies described at § 414.1325(d), individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities may submit their MIPS data using multiple data submission types for any performance category in accordance with § 414.1325(a)(1), as applicable; provided, however, that the individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity uses the same identifier for all performance categories and all data submissions. We established the policy to offer flexibility for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities with reporting, as it provides more options for submission of data for the applicable performance categories. We refer readers to the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77094 and 77095 and 82 FR 53619 through 53626, respectively) for additional details on the use of multiple data submission mechanisms for any MIPS performance category.

As described in this section of this final rule, at § 414.1305, we define a submitter type as a MIPS eligible clinician, group, virtual group, subgroup, APM Entity, or third-party intermediary acting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, APM Entity, as applicable, that submits data on measures and activities under MIPS. During a submission period, a submitter associated with an organization (for example, registry, practice administrator, or EHR vendor) could submit data for a MIPS eligible clinician, group, subgroup, virtual group, or APM Entity. If needed, the submitter could also review and correct the data submission resulting in multiple data submissions for the MIPS performance categories. Additionally, there could be instances when a submitter unintentionally submits data multiple times. There could also be instances when we receive data for a MIPS eligible clinician, group, subgroup, virtual group, or an APM Entity from multiple organizations. For example, both a qualified registry and a qualified clinical data registry (QCDR) could submit MIPS data on behalf of a group practice for a performance period. Individual MIPS eligible clinicians, groups, practice representatives, and third-party intermediaries benefit from the flexibility to submit data multiple times as it provides opportunities to correct errors in a prior submission and allows clinicians to submit data from multiple sources (for example, qualified registry and group submission) to increase their chances to provide the most clinically relevant data.

For the quality, improvement activities, and Promoting Interoperability performance categories, there is an established policy governing our treatment of multiple data submissions received for a performance period. However, we have not codified this policy in prior rules. We provided additional guidance on how we process and score multiple submissions received in the MIPS performance categories via educational and outreach materials is available on the Quality Payment Program Resource Library (*https://qpp.cms.gov/resources/resource-library*.)

We proposed to codify at § 414.1325(f)(1) our existing policies governing our treatment of multiple data submissions received for the quality and improvement activities performance categories. We also proposed to modify our policy governing our treatment of multiple data submissions received for

the Promoting Interoperability performance category, which we also proposed to codify at § 414.1325(f)(2). As further described in these sections, we are finalizing these multiple data submission policies for each performance category as proposed.

(b) Quality and Improvement Activities Performance Categories

In the CY 2018 Quality Payment Program final rule (82 FR 53619 through 53626), we discussed scoring policies for multiple submissions received in the MIPS performance categories. Specifically, we stated that if an individual MIPS eligible clinician or group submits the same measure through two different mechanisms, each submission would be calculated and scored separately and that we do not have the ability to aggregate data on the same measure across submission mechanisms. We would only count the submission that gives the clinician the higher score, thereby avoiding double counting (82 FR 53620). We refer readers to CY 2019 PFS final rule (83 FR59747 through 59749) for our discussion of previously finalized policies related to the use of the term ''submission mechanism.''

Under the existing policy for the quality and improvement performance categories, if we receive multiple submissions for an individual clinician, group, subgroup, or virtual group from submitters from separate organizations (for example, registry, practice administrator, or EHR vendor), we score each submission and assign the highest of the scores for the performance category. If we receive multiple submissions for an individual clinician, group, subgroup, or virtual group from a submitter or submitters from the same organization, we will use the most recent submission. For example, if a qualified registry submits improvement activities for a group on Tuesday and a practice administrator submits improvement activities data for the same group on Wednesday, we will score all the data submissions and assign the highest of the scores. If the practice administrator from a group practice submits improvement activities data for the group on Tuesday and either the practice administrator or another submitter employed by the group practice submits improvement activities data for the group again on Wednesday, we will score only the data submission received on Wednesday because a new data submission received from the same organization on Wednesday will override the prior data submission on Tuesday.

In the CY 2025 PFS proposed rule (89 FR 62035 through 62036), we proposed to codify the existing process for multiple data submissions for the quality and improvement activities performance categories, we proposed to add at § 414.1325(f)(1) that for multiple data submissions received in the quality and improvement activities performance categories in accordance with paragraphs (a)(1)(i) and (ii) for an individual MIPS eligible clinician, group, subgroup, or virtual group from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor), CMS will calculate and score each submission received and assign the highest of the scores. We also proposed to codify our policy governing our treatment of multiple data submissions for the quality and improvement activities performance category received for an individual MIPS eligible clinician, group, subgroup, or virtual group from one or multiple submitters in the same organization to score the most recent submission (89 FR 62036).[840] We requested public comments on this proposal.

We received public comments on these proposals.

Comment: Several commenters supported the proposal to codify the current process for the treatment of multiple data submissions for a clinician from separate organizations in the quality and improvement activities performance categories, which uses the highest score when multiple data submissions are received from separate organizations. The commenters shared their belief that this approach allows clinicians to submit data from multiple sources and be assessed based on their best performance without being penalized.

Response: We thank the commenters for their support.

Comment: Many commenters did not support the proposal to codify the current policy for the treatment of multiple data submissions from the same organization in the quality and improvement activities performance categories, which uses the most recent submission when multiple data submissions are received from submitters in the same organization. The commenters shared their belief that this approach is inconsistent with the current policy for CMS assigning the highest score for multiple submissions received from separate organizations. The commenters recommended that CMS maintain the same policy for all multiple submissions, regardless of whether the submissions are from the same or multiple organizations, as they believe this would avoid confusion and would be consistent with other multiple submissions policies in the quality, improvement activities, and Promoting Interoperability performance categories. The commenters also shared their concerns that using only the most recent submission would result in unintended consequences for clinicians as the Quality Payment Program submission system does not allow making corrections to a completed data submission. A few commenters expressed concern that the proposed approach would prevent a practice's ability to submit data multiple times if the clinicians in the practice submitted MIPS and MVP data via different participation options (for example, as a group, individual and APM Entity). Another commenter recommended that CMS provide an option for submitters to indicate whether a previous submission should be overridden.

Response: Separate approaches for multiple submissions based on whether the submitter is from the same organization or multiple organizations are appropriate as these are not equivalent circumstances. Individual MIPS eligible clinicians, groups, practice representatives, and third-party intermediaries use multiple sources (for example, a QCDR and qualified registry) to submit data, resulting in multiple submissions. This offers flexibility for clinicians to submit data from multiple sources (for example, qualified registry and group submission) and increases their ability to provide the most clinically relevant data. For example, a small practice may report three measures via claims and upload a QRDA III file with three eCQMs to meet the requirement of submitting 6 measures.

On the other hand, we expect a submitter from a single organization would generally submit data multiple times to update a previous submission with additional information or to fix data errors in a previous submission. When a single submitter or multiple submitters from the same organization submit data multiple times, the new submission overrides a previous submission only if the new quality or improvement activity data submission is for the same participation type (individual eligible clinician, group, subgroup, or virtual group) under the same reporting option (traditional MIPS

[840] In the CY 2025 proposed rule (89 FR 62036), we inadvertently stated that we were proposing to modify the policy governing our treatment of multiple submissions received for the quality and improvement activities performance categories from the same organization. We intended to state that we are proposing to codify the existing policy.

or MVP) for the MIPS performance period. For example, if a group practice submitted traditional MIPS data for an individual eligible clinician in January 2024 and the practice administrator from the same group submitted MVP data at the group level in March 2024, we will accept and score both the individual MIPS submission and the group's MVP submission and assign the highest score for the MIPS eligible clinicians in the group. However, if the practice administrator from a group practice submits quality data for the group on Tuesday and either the practice administrator or another submitter employed by the group practice submits quality data for the group again on Wednesday, we will score only the data submission received on Wednesday because a new data submission received from the same organization on Wednesday will override the prior data submission on Tuesday. We acknowledge the Quality Payment Program submission system does not allow making changes to an existing submission, however, the flexibility to submit data multiple times provides the opportunity for submitters to override a previous submission to fix data errors. We note that we are not changing the current policy for multiple data submissions received for the quality and improvement activities performance categories. We are only codifying the existing policies as described previously.

While we understand the commenter's recommendation to add an option for submitters to indicate whether they would want to keep or delete a prior submission, we note that at the time of submission, the system generates warnings to the submitter (for all the available submission types) if there is an existing data submission for an individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity. We refer readers to the Quality Payment Program Resource Library (*https://qpp.cms.gov/resources/resource-library*) for additional details on the process to submit MIPS data for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities.

Comment: Several commenters supported the proposal to codify the current process to use only the most recent submission when multiple data submissions are received in the quality and improvement activities performance categories from the same organization. One commenter shared their belief that this approach allows overriding of a previous submission from the same organization and would eliminate confusion for submitters.

Response: We thank the commenters for their support.

Comment: One commenter acknowledged the technical complexity for CMS to accept all submissions from a single organization and recommended that CMS explore the feasibility of accepting and scoring multiple submissions from the same organization.

Response: We appreciate the commenter's recommendation to explore operational feasibility for us to accept and score all submissions from the same organization. Technical feasibility is not the only reason for using the most recent submission when we receive multiple submissions from the same organization. We expect that a submitter associated with an organization (for example, registry, practice administrator, or EHR vendor) would coordinate with the individual clinician, group, subgroup, virtual group, or APM Entity to submit relevant data appropriately and avoid multiple submissions for the same reporting option. There could be instances when a submitter would need to resubmit data. For example, a submitter may resubmit quality data to review and correct the data submission or to update the quality data submission with additional information, resulting in multiple data submissions for the quality performance category. Overriding a previous submission in such instances would eliminate confusion and allow the clinicians to be scored appropriately on the updated most recent submission. We will continue to monitor for any potential issues or concerns with using the most recent submission for multiple submissions from the same organization and will revisit the policy in the future, as needed.

After consideration of public comments, we are finalizing the proposal as proposed to codify at § 414.1325(f)(1) that for multiple data submissions received in the quality and improvement activities performance categories in accordance with paragraphs (a)(1)(i) and (ii) for an individual MIPS eligible clinician, group, subgroup, or virtual group from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor), CMS will calculate and score each submission received and assign the highest of the scores. Additionally, we are finalizing the proposal to codify that for multiple data submissions for the quality and improvement activities performance categories received for an individual MIPS eligible clinician, group, subgroup, or virtual group from one or multiple submitters in the same organization, CMS will calculate a score for the most recent submission.

(c) Promoting Interoperability Performance Category

For the Promoting Interoperability performance category, we explained in the educational materials published on the Quality Payment Program Resource Library (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2602/2023MIPSSubmissionGuide.pdf*.) that any data submitted through multiple submission types or multiple submissions submitted through the same submission type will result in a score of zero for the Promoting Interoperability performance category. Additionally, we recommended using a single submission type (file upload, API, or attestation by an individual MIPS eligible clinician, group, virtual group, subgroup or a third-party intermediary) to submit data for the Promoting Interoperability performance category. As described in section IV.A.4.d.(2)(d) of this final rule, the utilization of the CEHRT should not generate conflicting data for measures and objectives in the Promoting Interoperability performance category. However, we have received inquiries from MIPS eligible clinicians that were impacted by the existing policy to assign a score of zero for multiple submissions in the Promoting Interoperability performance category. Specifically, we identified scenarios when a complete submission from an individual MIPS eligible clinician or group followed by an incomplete submission resulted in a score of zero, either overriding a previous score greater than zero or voiding an approved reweighting for the performance category.

In the CY 2025 PFS proposed rule (89 FR 62036), we proposed to amend our policy for treatment of multiple data submissions for the Promoting Interoperability performance category. We proposed that, for multiple data submissions received, CMS will calculate a score for each data submission received and assign the highest of the scores. We also proposed to codify this proposal at § 414.1325(f)(2).

We believe this proposed change is consistent with our existing policy for treatment of multiple data submissions received in the quality and improvement activities performance categories, as discussed previously. Implementing a similar policy for allowing multiple data submissions in the Promoting Interoperability performance category may provide flexibility for individual MIPS eligible

clinicians, groups, virtual groups, subgroups, and APM Entities to fix errors in a prior data submission. Additionally, we recognize there may be instances when a practice switches EHR vendors during a performance period, potentially resulting in separate data submissions for the Promoting Interoperability performance category. This policy also aligns with our intent to maintain consistency in data submission requirements across all MIPS performance categories, to the extent possible, as it significantly reduces the complexity for MIPS eligible clinicians participating in MIPS.

We received public comments on this proposal.

Comment: Many commenters supported CMS' proposal to modify the policy for handling multiple data submissions in the Promoting Interoperability performance category as this change would not penalize clinicians who inadvertently submitted data multiple times and is consistent with the scoring policy for other MIPS performance categories.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that CMS implement the revised policy for the CY 2023 performance period/2025 MIPS payment year to mitigate negative impacts to MIPS eligible clinicians who received a zero score in the Promoting Interoperability performance category due to multiple submissions. Specifically, the commenters suggested that CMS should allow targeted review requests beyond the deadline for the CY 2023 performance period to implement the amended policy.

Response: We acknowledge the commenters' recommendation to implement the proposed modified policy for scoring multiple data submissions in the Promoting Interoperability performance category beginning in the CY 2023 performance period/2025 MIPS payment year to mitigate zero scores for multiple submissions in this performance category. Section 1848(q)(7) of the Act requires that we finalize and notify all MIPS eligible clinicians of their final MIPS payment adjustment factors for the 2025 MIPS payment year no later than 30 days prior to January 1, 2025, which occurs prior to the effective date of this final rule. Applying new, modified scoring policies after we have finalized our calculations for the performance period/MIPS payment years, even as we identify and seek to apply improvements for future MIPS payment years, is not feasible. Further, MIPS eligible clinicians generally rely on the finality of our calculation and application of MIPS payment adjustment factors to their Medicare Part B claims during the MIPS payment year. We proposed that these modified data submission policies be effective as soon as feasible: beginning with the CY 2024 performance period/2026 MIPS payment year for the data submission period in CY 2025 (January 1, 2025 through March 31, 2025) (89 FR 62031).

Comment: One commenter recommended that CMS implement a process to ensure that the submission used for the highest score is accurately reflective of the performance and to resolve any potential issues with discrepancies in data from multiple sources.

Response: We understand the commenter's concern regarding potential issues with the accuracy of discrepancies in data from multiple data submissions in the Promoting Interoperability performance category. We have an established policy for validating and auditing MIPS data submissions as described under § 414.1390. We will continue monitoring multiple submissions in the Promoting Interoperability performance category for this issue and consider revisiting the policy in the future, as needed.

We also note that individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities (or authorized representatives submitting on their behalf) have the flexibility to submit data using multiple submission types (the direct, login and attest, or login and upload) as established under § 414.1325(b) and (c). However, the submitters do not have the ability to use multiple data sources. Regardless of the submission type, data submission for the Promoting Interoperability performance category requires the use of CEHRT (meeting the definition at § 414.1305) as the single data source to report the applicable objectives, measures, and attestations. We expect that the use of CEHRT combined with the proposed minimum criteria for a qualifying data submission in the Promoting Interoperability performance category will minimize potential issues with accuracy of the data being submitted.

After consideration of public comments, we are finalizing our policy as proposed and codify the proposal at § 414.1325(f)(2) providing that, for multiple data submissions received for the Promoting Interoperability performance category, CMS will calculate a score for each data submission received and assign the highest of the scores.

f. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, to provide for a final score for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act provides that the Secretary must use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures that must be specified under the quality performance category.

We refer readers to §§ 414.1330 through 414.1340 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77097 through 77162 and 82 FR 53626 through 53641, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (83 FR 59754 through 59765, 84 FR 63949 through 62959, 85 FR 84866 through 84877, 86 FR 65431 through 65445, 87 FR 70047 through 70055, and 88 FR 79329 through 79338, respectively) for a description of previously established policies and statutory basis for policies regarding the quality performance category.

In the CY 2025 PFS proposed rule (89 FR 62037 through 62042), we proposed to:

- Establish the data submission criteria for the Alternative Payment Model (APM) Performance Pathway (APP) quality measure set.
- Maintain the data completeness criteria threshold of at least 75 percent for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years.
- Codify previously established criteria pertaining to the removal of MIPS quality measures.
- Modify the MIPS quality measure set as described in Appendix 1 of the CY 2025 PFS proposed rule, including the addition of new measures, updates to specialty sets, removal of existing measures, and substantive changes to existing measures.

(b) Data Submission Criteria

(i) Data Submission Criteria for the Quality Performance Category

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we established the APP in § 414.1367 as an available reporting option starting with the CY

2021 performance period/2023 MIPS payment year, which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation. Additionally, we finalized a quality measure set (85 FR 84860 through 84861) for purposes of the quality performance category scoring for the APP.

The APP and the APP quality measure set were designed to reduce the reporting burden and create new scoring opportunities for MIPS APMs by having a stable, streamlined pathway for reporting and scoring in MIPS while recognizing the reporting burden and performance scoring that MIPS eligible clinicians, groups, and APM Entities already experience in their respective MIPS APMs. We believed that using a broadly applicable population health-based measure set would enable MIPS APM participants to focus on the quality measures being reported through their APMs, while relying on a consistent measure set within the APP from year to year. (85 FR 84862).

In section IV.A.4.c.(2) of the CY 2025 PFS proposed rule (89 FR 62023 through 62024), we proposed to create a second quality measure set as an available option under the APP, specifically the APP Plus quality measure set, which is a set of measures that leverages the Adult Universal Foundation measure set. Of the ten Adult Universal Foundation measures, five of the measures are already included in the APP quality measure set for the CY 2025 performance period/2027 MIPS payment year (88 FR 79113 through 79114). As originally proposed, the APP Plus quality measure set would initially consist of all the measures currently within the APP quality measure set (five Adult Universal Foundation measures and a separate quality measure) plus two additional measures from the Adult Universal Foundation measure set. The set would incrementally add the remaining three Adult Universal Foundation measures by the CY 2028 performance period/2030 MIPS payment year. (We refer readers to section IV.A.4.c.(3) of the CY 2025 PFS proposed rule (89 FR 62024 through 62031) for further discussion regarding the APP Plus quality measure set proposal.) Leveraging the APP Plus quality measure set with the Adult Universal Foundation measure set serves to advance Medicare's overall value-based care strategy and maintain alignment within and across CMS's quality programs. The alignment of quality measures across CMS programs allows clinicians to better focus their quality efforts, reduce administrative burden, and drive digital transformation and stratification of a focused quality measure set to assess the impact on disparities.[841] For further discussion on the quality measures included in the APP Plus quality measure set and the timeline for incorporating such quality measures, please see section IV.A.4.c.(3) of this final rule.

For the APP Plus quality measure set, we proposed in § 414.1335(b) to require MIPS eligible clinicians, groups, and APM Entities, including Medicare Shared Saving Program (Shared Savings Program) Accountable Care Organizations (ACOs), reporting the APP Plus measure set to report on all measures in the APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS) for the applicable performance period. As discussed further in section IV.A.4.c.(3) of this final rule, the APP Plus quality measure set would be optional for MIPS eligible clinicians, groups, and APM Entities (not including Shared Savings Program ACOs) meeting the reporting requirements under the APP starting with the CY 2025 performance period/2027 MIPS payment year. However, Shared Savings Program ACOs would be required to report the APP Plus quality measure set to meet the reporting requirements of the Medicare Shared Savings Program's quality performance standard as outlined in section IV.A.4.c.(2) of this final rule. Under the proposal in § 414.1335(b), the requirement to report all measures within the APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS) would be the same regardless of whether a MIPS eligible clinician, group or APM Entity is reporting the APP Plus quality measure set on a mandatory or optional basis. We proposed conforming amendments in § 414.1335(a).

Lastly, we note that the existing reporting requirements and scoring policies established in § 414.1367(c)(1) would continue to be applicable to the APP quality measure set. Similarly, the existing scoring policies established in § 414.1367(c)(1) would be applicable to the APP Plus quality measure set. As described in more detail in section IV.A.4.c.(3) of this final rule, all measures in the APP Plus quality measure set would be scored, unless a quality measure does not have a benchmark or meet the case minimum requirements. If a measure within the APP Plus quality measure set does not have a benchmark or meet the case minimum requirements, the measure would still be required to be reported in order to meet the reporting requirements of the APP and for the measure to be excluded from scoring (such measure would not contribute to the quality performance category score as long as the measure is reported). If such a measure is not reported, then the measure would fail to meet the reporting requirements of the APP and as a result, it would receive 0 achievement points.

We solicited public comment on the proposal to establish the data submission criteria for the APP Plus quality measure set, specifically the proposal to require the reporting of all measures within the APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS). The following is a summary of the public comments received.

Comment: Some commenters supported the fundamental establishment of the APP Plus quality measure set. However, many commenters did not support the mandatory reporting requirements for the Shared Savings Program ACOs associated with the APP Plus quality measure set or the number of quality measures required to be reported. Also, many commenters did not support the limitation of collection types to only include Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs) and electronic clinical quality measures (eCQMs).

Response: We appreciate the support from commenters regarding the fundamental establishment of the APP Plus quality measure set. For all comments and responses pertaining to the measure composition of the APP Plus quality measure set, specific measures within the APP Plus quality measure set, the reporting requirements of the APP Plus quality measure set, and the timeline for increasing the number of measures associated with the APP Plus quality measure set, we refer readers to section IV.A.4.c. of this final rule.

After consideration of public comments, we are finalizing, as proposed, the proposal in § 414.1335(b) to establish the data submission criteria for the APP Plus quality measure set, specifically the proposal to require the reporting of all measures within the

[841] Update On The Medicare Value-Based Care Strategy: Alignment, Growth, Equity'', Health Affairs Forefront, March 14, 2024. *DOI: 10.1377/forefront.20240311.141546.*

APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS). MIPS eligible clinicians, groups, and APM Entities reporting the APP Plus quality measure set will be scored based on data submitted for eCQMs, MIPS CQMs and/or Medicare CQMs (available only to Shared Savings Program ACOs), and data automatically calculated for administrative claims-based quality measures, which includes the following number of quality measures: 6 quality measures for the CY 2025 performance period/2027 MIPS payment year; 8 quality measures for the CY 2026 performance period/2028 MIPS payment year; 9 quality measures for the CY 2027 performance period/2029 MIPS payment year; and 11 quality measures for the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specifications become available for each respective measure, whichever is later. For the reporting requirements pertaining to the APP Plus quality measure set, we refer readers to section IV.A.4.c.(2) of this final rule.

(c) Data Completeness Criteria

(i) Data Completeness Criteria for the Quality Performance Category

As described in the CY 2017 Quality Payment Program final rule (81 FR 77125 through 77126), to ensure that data submitted on quality measures are complete enough to accurately assess each MIPS eligible clinician's quality performance, we established a data completeness requirement. Section 1848(q)(5)(H) of the Act provides that analysis of the quality performance category may include quality measure data from other payers, specifically, data submitted by MIPS eligible clinicians with respect to items and services furnished to individuals who are not entitled to benefits under Part A or enrolled under Part B of Medicare. For the CY 2017 performance period/2019 MIPS payment year (first year of the implementation of MIPS), we established the data completeness criteria threshold to reflect a threshold of at least 50 percent (81 FR 77125). The data completeness criteria threshold means the following: an individual MIPS eligible clinician, group, virtual group, or APM Entity submitting measure data on qualified clinical data registry (QCDR) measures, MIPS clinical quality measures (CQMs), or eCQMs must submit data on at least a specific percent (that is, 50 percent as specified above and 60 percent, 70 percent, and 75 percent as specified in the following paragraphs) of their patients that meet the measure's denominator criteria, regardless of payer; an individual MIPS eligible clinician, group, virtual group, or APM Entity submitting quality measure data on Medicare Part B claims measures must submit data on at least a specified percent (that is, 50 percent as specified above and 60 percent, 70 percent, and 75 percent as specified in the following paragraphs) of their Medicare Part B patients seen during the corresponding performance period; and an APM Entity, specifically a Shared Savings ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least a specified percent (that is, 70 percent and 75 percent as specified in the following paragraphs) of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria.

In the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2020 PFS final rule, we noted that we would increase the data completeness criteria threshold over time (81 FR 77121, 82 FR 53632, and 84 FR 62951). We increased the data completeness criteria threshold from at least 50 percent to at least 60 percent for the CY 2018 performance period/2020 MIPS payment year (81 FR 77125 and 82 FR 53633) and maintained a threshold of at least 60 percent for the CY 2019 performance period/2021 MIPS payment year (82 FR 53633 and 53634). For the CY 2020 performance period/2022 MIPS payment year, we increased the data completeness criteria threshold from at least 60 percent to at least 70 percent (84 FR 62952). We maintained data completeness criteria threshold of at least 70 percent for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years (86 FR 65435 through 65438). For the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, we increased the data completeness criteria threshold from at least 70 percent to at least 75 percent (87 FR 70049 through 70052). Lastly, we maintained the data completeness criteria threshold of at least 75 percent for the CY 2026 performance period/2028 MIPS payment year (88 FR 79334 through 79337).

We continue to believe that it is important to incrementally increase the data completeness criteria threshold as MIPS eligible clinicians, groups, virtual groups, subgroups, and Alternative Payment Model (APM) Entities gain experience with MIPS. The incorporation of higher data completeness criteria thresholds in future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevents selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, 86 FR 65436, 87 FR 70049, and 88 FR 79334). To improve compliance with the data completeness threshold, we have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients (82 FR 53632, 86 FR 65436, 87 FR 70049, and 88 FR 79334) such that all applicable cases may be used when calculating a measure. The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure.

Increasing the data completeness criteria threshold provides for a more accurate assessment of performance. We want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the CY 2017 performance period,[842] it is generally feasible for eligible clinicians and groups to achieve a higher data completeness criteria threshold without jeopardizing their ability to successfully participate and perform well in MIPS. Our approach for increasing the data completeness criteria threshold slowly and incrementally over time enhances the ability for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to meet the data completeness criteria threshold as it increases and consequently, enables successful participation under MIPS. Thus, a data completeness criteria threshold of less than 100 percent may reduce clinician burden and accommodate operational issues that may arise during data collection during the initial years of the program (82 FR 53632, 86 FR 65436, 87 FR 70049, and 88 FR 79334).

As MIPS eligible clinicians, groups, virtual groups, and APM Entities have gained experience participating in MIPS, particularly meeting the data completeness criteria threshold over the last 8 years (from the CY 2017 performance period to the CY 2024 performance period), such experience has prepared MIPS eligible clinicians, groups, virtual groups, subgroups

[842] As described in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76.

(participation option available starting with the CY 2024 performance period), and APM Entities to meet incremental increases in the data completeness criteria threshold. We have maintained a data completeness criteria threshold of at least 70 percent for 4 years from the CY 2020 performance period through the CY 2023 performance period and as a result, individual MIPS eligible clinicians, groups, virtual groups, and APM Entities had 4 years of a maintained data completeness criteria threshold of at least 70 percent before transitioning to an increased data completeness criteria threshold of at least 75 percent starting with the CY 2024 performance period. We believed that maintaining the data completeness criteria threshold of at least 70 percent for 4 years provided adequate time for individual MIPS eligible clinicians, groups, virtual groups, and APM Entities to adjust to the increase that went into effect at the onset of the COVID–19 public health emergency and account for the implications the COVID–19 pandemic had on the healthcare system.

As we assessed the timeframe for a potential future increase to the data completeness criteria threshold, we determined that maintaining the data completeness criteria threshold of at least 75 percent for a total of 5 years would provide sufficient time for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to adjust to the data completeness criteria threshold of at least 75 percent. In response to the proposal in the CY 2023 PFS proposed rule to increase the data completeness criteria threshold to at least 80 percent starting with the CY 2026 performance period/2028 MIPS payment year, interested parties indicated in the public comments that increasing the data completeness threshold from 75 to 80 percent within two years of increasing the threshold from 70 to 75 percent would present various challenges such as the following, which would make it more difficult to meet the data completeness criteria threshold: increased burden (in particular, disproportionately increase burden for smaller and rural practices due to limited resources and staff, and some practices that are continuing to recover from the COVID–19 Public Health Emergency); and exacerbated technical and interoperability challenges pertaining to data aggregation across multiple EHRs, systems (utilizing different registries, and EHR developers and vendors), and sites (including multiple TINs participating in the Shared Savings Program as an ACO) (88 FR 79337). We accept these concerns, and we thus believe that MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities require more time to adjust and prepare for an increase. We previously established that for the CY 2024 performance period through the CY 2026 performance period/2026 MIPS payment year through the 2028 MIPS payment year, we will establish and maintain the data completeness threshold of at least 75 percent (87 FR 70049 through 70052, 88 FR 79334 through 79337). To maintain such threshold for a total of 5 years, we proposed in the CY 2025 PFS proposed rule, to maintain the data completeness criteria threshold of at least 75 percent for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years. It is advantageous to delineate the expectations for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities in advance of an applicable performance period as it provides sufficient notice of the expectation and subsequently allows such MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to prepare for a potential increase in future years.

In the CY 2025 PFS proposed rule, we proposed to maintain the data completeness criteria threshold of at least 75 percent for 2 additional years. Specifically, in § 414.1340(a), we proposed the following data completeness criteria thresholds pertaining to QCDR measures, MIPS CQMs, and eCQMs:

- At paragraph (a)(4), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's denominator criteria, regardless of payer.

Similarly, in § 414.1340(b), respectively, we proposed the following data completeness criteria thresholds pertaining to Medicare Part B claims measures:

- At paragraph (b)(4), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.

Additionally, in § 414.1340(d), respectively, we proposed the following data completeness criteria thresholds pertaining to Medicare CQMs:

- At paragraph (d)(1), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, an APM Entity, specifically a Shared Savings Program ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 75 percent of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria.

Lastly, for the data completeness criteria pertaining to the quality performance category, we proposed a conforming amendment to recognize that an APM Entity, specifically a Shared Savings Program ACO that meets the reporting requirements under the APP, must meet the data completeness criteria requirements established at § 414.1340(d)(1).

We solicited public comment on these proposals. The following is a summary of the public comments received.

Comment: Many commenters supported the data completeness criteria threshold to be maintained at 75 percent and appreciated that CMS took into consideration the challenges and burden associated with raising the threshold. Many commenters expressed that the threshold is achievable and provides an accurate picture of quality without placing undue burden on clinicians. A few commenters noted that maintaining the threshold will provide stability to clinicians, especially small practices and solo practitioners who have fewer resources and staff to handle increased reporting requirements. One commenter noted that such consistency would allow clinicians to focus on delivering high-quality care without the added pressure of changing reporting requirements on top of other capacity issues such as staffing shortages.

Response: We appreciate the support from commenters.

Comment: Many commenters requested for CMS to maintain the data completeness criteria threshold of at least 75 percent permanently or indefinitely. Many commenters expressed concerns regarding any future increases to the data completeness criteria threshold and requested for CMS to consider barriers or burden associated with meeting the data completeness criteria threshold. Commenters indicated that future increases to the data completeness criteria threshold would exacerbate the

technical challenges associated with data aggregation, data integration, and interoperability across multiple EHR systems, particularly for clinicians providing care across multiple sites under the same Taxpayer Identification Number (TIN) and Shared Savings Program ACOs with multiple TINs that utilize several different EHR systems and vendors. A few commenters indicated that technical limitations, data privacy concerns, patient misidentification and varying interpretations of data completeness requirements may lead to inaccurate reporting and difficulty in meeting the threshold. A few commenters noted that higher data completeness criteria thresholds have a disparate impact on practices that manually extract and report quality data. Some commenters requested for CMS to consider the impact of increasing the data completeness criteria threshold would have on small and rural practices. A few of such commenters indicated that an increased data completeness criteria threshold would result in a disproportionate burden for many small or rural practices without improving data accuracy. One commenter asserted that current health IT standards are insufficient for seamless data aggregation from EHRs or registries, particularly for clinicians and Shared Savings Program ACOs operating across multiple sites and EHR systems. The commenter requested for CMS to collaborate with clinicians, Shared Savings Program ACOs, and EHR vendors to address such issues before increasing the data completeness criteria threshold.

Response: We recognize that there are technical challenges associated with data aggregation across multiple sites and EHR systems. We previously noted concerns raised by interested parties regarding the unintended consequences of accelerating the data completeness thresholds too quickly, which may jeopardize a MIPS eligible clinician's ability to participate and perform well under MIPS (81 FR 77121, 82 FR 53632, 84 FR 62951, and 87 FR 70049). However, the adoption of higher data completeness criteria thresholds in future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevents selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, 86 FR 65436, and 87 FR 70049). It is therefore important to incrementally increase the data completeness criteria threshold as MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities gain experience with MIPS. Thus, we want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS. Prior to determining whether or not to increase the data completeness criteria threshold in the future, we will analyze data completeness rates from data submission and assess if it is feasible for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to achieve a higher data completeness criteria threshold without jeopardizing their ability to successfully participate and perform in MIPS.

Comment: A few commenters requested for CMS to provide the following if the data completeness criteria threshold is increased in future years: offer CMS-facilitated quality data aggregation, allow the direct reporting of quality data from multiple EHR systems, and shorten the performance period for the quality performance category for cases involving the switching of EHR systems during a performance period.

Response: We recognize there are some concerns with the potential increase in the data completeness threshold in future years and appreciate the commenters' suggestions on how we could mitigate these concerns. We will take this feedback into account when considering future increases in the data completeness threshold.

Comment: Some commenters did not support the proposal to maintain the data completeness criteria threshold of at least 75 percent. A few commenters requested for CMS to lower the data completeness criteria threshold to at least 70 percent while one commenter requested for CMS to lower the data completeness criteria threshold to at least 60 percent. A few commenters expressed their belief that the threshold should be lowered to 60 percent while one commenter recommended 70 percent due to administrative burden and technical challenges associated with data aggregation, data integration, and interoperability across multiple EHR systems as experienced by Shared Savings Program ACOs.

Response: We disagree with commenters regarding their request to lower the data completeness criteria threshold from its current threshold of at least 75 percent. Based on our analysis of data completeness rates from data submission for the CY 2017 performance period,[843] it is feasible for eligible clinicians and groups to achieve a higher data completeness criteria threshold above 60 percent and 70 percent without jeopardizing their ability to successfully participate and perform in MIPS. The adoption of higher data completeness criteria thresholds in future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevents selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, 86 FR 65436, and 87 FR 70049). It is therefore important to incrementally increase the data completeness criteria threshold as MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities gain experience with MIPS. Thus, we want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS.

Also, due to the complex technical challenges that Shared Savings Program ACOs encounter as they prepare for the reporting of eCQMs and/or MIPS CQMs, we established the Medicare CQMs collection type to serve as a transition collection type under the APP quality measure set starting with the CY 2024 performance period (88 FR 79329 through 79330 and 79332) and under the APP Plus quality measure set starting with the CY 2025 performance period (as discussed in section IV.A.4.c.(3) of this final rule). The reporting of eCQMs and/or MIPS CQMs is new for some Shared Savings Program ACOs under the APP quality measure set and the APP Plus quality measure set due to the CMS Web Interface sunsetting and no longer being available starting with the CY 2025 performance period. In order to facilitate the transition to the reporting of eCQMs and/or MIPS CQMs, the availability of the Medicare CQMs as a collection type assists with the transition of reporting eCQMs and/or MIPS CQMs as the complex technical challenges specific to Shared Savings Program ACOs are mitigated and addressed. For the Medicare CQMs collection type, Shared Savings Program ACOs report quality data on a subset of Medicare beneficiaries (beneficiaries eligible for Medicare CQMs as defined at § 425.20) instead of the reporting of quality data on all-payers as required for eCQMs and MIPS CQMs. We note that the Medicare CQMs collection type, serving as a transition collection type for Shared Savings Program ACOs, is not an available collection type for MIPS eligible clinicians, groups, virtual groups, subgroups, and other APM Entities participating in MIPS.

Comment: A few commenters requested for CMS to include exceptions

[843] As described in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76.

for meeting the data completeness criteria threshold due to unforeseen circumstances such as patient self-discharges, interruptions to an episode of care, and practices switching EHR technology or systems.

Response: We disagree with commenters regarding the establishment of exclusions for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities not able to meet the data completeness criteria threshold for circumstances pertaining to patient self-discharges, interruptions to an episode of care, and practices switching EHR technology or systems. Cases pertaining to patient self-discharges and interruptions to an episode of care are items that would be more appropriately addressed in a measure specification. We encourage interested parties to contact measure stewards to discuss revisions for possible implementation in future years. Also, switching of EHR technology or systems does not warrant an exception to meeting the reporting requirements for the quality performance category as it relates to meeting the data completeness criteria threshold. We recognize that there are certain circumstances outside the control of clinicians, but we believe that the reporting requirements can be met even when EHR technology or systems are switched during a performance period. However, we recognize the importance of not penalizing clinicians for certain circumstances outside their control. For example, many of our policies, including the extreme and uncontrollable circumstances exception and the reweighting policy discussed in section IV.A.4.i.(2) of this final rule relating to the reweighting of the quality, improvement activities, and Promoting Interoperability performance categories when contractually-obligated third party intermediaries do not submit MIPS data, are aimed at ensuring that a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity is not unfairly penalized due to unforeseen circumstances outside their control.

Comment: A few commenters requested for CMS to consider establishing different data completeness thresholds for each measure type and collection type. The commenters indicated that while a 75 percent data completeness criteria threshold may be reasonable for process measures, it is significantly more challenging to meet such threshold for patient-reported outcome measures; therefore, the commenters requested for CMS to apply a lower threshold for patient-reported outcome measures to encourage broader adoption of these measures. One commenter recommended that CMS offer an alternative data completeness criteria threshold for Shared Savings Program ACOs reporting eCQMs due to the technical challenges with such measures such as data aggregation across multiple EHR systems and de-duplicating patient data.

Response: To provide consistency regarding the data completeness criteria threshold across measure types (that is, process and outcome quality measures) and collection types, and prevent confusion regarding the expectations concerning the data completeness criteria threshold, it is imperative to establish the same data completeness criteria threshold requirements for QCDR measures, eCQMs, MIPS CQMs, Medicare Part B claims measures, and Medicare CQMs. In regard to patient-reported outcome measures, we note that the CAHPS for MIPS Survey measure, which is a patient-reported outcome measure, has different data completeness criteria requirements from QCDR measures, eCQMs, MIPS CQMs, Medicare Part B claims measures, and Medicare CQMs. For the CAHPS for MIPS survey measure, groups, virtual groups, subgroups, and APM Entities report data on a sample of Medicare Part B patients provided by CMS.

We recognize that there are technical challenges for Shared Savings Program ACOs as they prepare to report eCQMs under the APP Plus quality measure set. As a result of the aforementioned technical challenges, we are finalizing, with modification, the proposed policy pertaining to collection types available for the newly established APP Plus quality measure set, which excluded MIPS CQMs as an available collection type from the newly established APP Plus quality measure set. Particularly, we are finalizing, with modification, the proposed policy by including the availability of MIPS CQMs as a collection type within the APP Plus quality measure set for a two-year period from CY 2025 performance period/2027 MIPS payment year through CY 2026 performance period/2028 MIPS payment year in order to provide another option for meeting the reporting requirements under the APP Plus quality measure set. We refer readers to section IV.A.4.c.(3) of this final rule for further discussion regarding the extension of the availability of MIPS CQMs as a collection type under the newly established APP Plus quality measure set. Lastly, we note that we will continue to engage in conversations with interested parties as we mitigate the complex technical challenges.

Comment: Some commenters requested for CMS to consider other methodologies and approaches for data completeness. One commenter expressed concerns that the data completeness percentage received by CMS does not accurately capture the eligible population for each TIN due to vendors or practices only capturing the cases within a single EHR site and do not include the eligible encounters from other sites of service. A few commenters requested for CMS to consider the data completeness criteria threshold based on sample size. One commenter noted that smaller sample sizes are considered sufficient for Medicare Part C and D Star Ratings, as well as clinical data for hospitals to report on care measures. Another commenter indicated that a higher data completeness criteria threshold amounts to a census of available patient data, as opposed to a sample, which can be prone to error and as a result, higher data completeness thresholds do not always yield more accurate depictions of quality performance. As another option for CMS to explore, one commenter suggested that CMS consider a data completeness criteria threshold that meets a minimum reliability score of 0.80, which would increase the reliability and confidence of quality measure performance scores.

Response: We established the data completeness criteria with the intention of ensuring that more quality data is reported (compared to the previous reporting program, Physician Quality Reporting System (PQRS)) and the data submitted for quality measures are complete enough to accurately assess each MIPS eligible clinician's quality performance. With regard to some commenters' suggestion to consider the data completeness criteria threshold based on sample size, we are concerned that having MIPS eligible clinicians report on a fixed number of patients may not necessarily be a representative sample of the MIPS eligible clinician's patient population and, therefore, may not allow for accurate assessment of each MIPS eligible clinician's quality performance. The establishment of the data completeness criteria threshold and the adoption of higher data completeness criteria thresholds ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures (81 FR 77120, 82 FR 53632, 83 FR 59758, 86 FR 65436, and 87 FR 70049).

After consideration of public comments, we are finalizing, as proposed, to maintain the data completeness criteria threshold of at least 75 percent for the CY 2027 and CY 2028 performance periods/2029 and

2030 MIPS payment years. Specifically, we are finalizing, as proposed, the proposals in § 414.1340(a), (b), and (d):

- At paragraph (a)(4), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's denominator criteria, regardless of payer.
- At paragraph (b)(4), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.
- At paragraph (d)(1), for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years, an APM Entity, specifically a Shared Savings Program ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 75 percent of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria.

(d) Selection of Quality Measures

(i) Addition of New Quality Measures

(A) Pre-Rulemaking Process

Prior to introducing a new MIPS quality measure in a proposed rule, CMS receives public input on measures through the pre-rulemaking process (referred to as the Pre-Rulemaking Measure Review (PRMR)) established in accordance with section 1890A of the Act. Although section 1848(q)(2)(D)(viii) of the Act provides that the pre-rulemaking process under section 1890A of the Act is not required to apply to the selection of MIPS quality measures, we have found that the pre-rulemaking process provides a comprehensive review of measures from multi-stakeholder workgroups and have accordingly elected for such measures to be reviewed utilizing the PRMR process (87 FR 70048). Pursuant to the established PRMR process (additional information regarding the PRMR process is available at *https://p4qm.org/PRMR*), CMS has contracted with a Consensus-Based Entity (CBE), which is responsible for convening a multi-stakeholder panel comprised of clinicians, patients, measure experts, and health information technology specialists to provide input on measures CMS is considering for use in Medicare.

The pre-rulemaking process begins with CMS's publication of measures under consideration for use in Medicare (the MUC List). Each measure on the MUC List is reviewed by one of several committees convened by the PQM for the purpose of providing multi-stakeholder input to the Secretary. The PRMR process includes opportunities for public comment through a 21-day public comment period, as well as public listening sessions. The PQM posts the compiled comments and listening session inputs received during the public comment period and the listening sessions within 5 days of the close of the public comment period. More details regarding the PRMR process may be found in the PQM Guidebook of Policies and Procedures for Pre-Rulemaking Measure Review and Measure Set Review.

The final vote of a multistakeholder committee convened by the CBE may result in the following disposition of a measure: recommended, recommended with conditions, do not recommend, or no consensus. A ''no consensus'' recommendation signals continued disagreement among the committee despite being presented with perspectives from public comment, committee member feedback and discussion, and highlights the multi-faceted assessments of quality measures. Quality measures that are considered for potential implementation in MIPS starting with the CY 2025 performance period were included on the 2023 Measures Under Consideration (MUC) List (available at *https://mmshub.cms.gov/sites/default/files/2023-MUC-List.xlsx*). The new MIPS quality measures finalized, as proposed, are described in Table Group A of Appendix 1 of this final rule. There may be cases in which the CBE does not recommend for a measure to move forward to the rulemaking process and eventual implementation due to a measure not being endorsed by the CBE or other CBE, but we go forth with proposing a measure. We note that section 1848(q)(2)(D)(iii)(v)(III) of the Act does not preclude the Secretary from proposing and implementing measures that are not endorsed by a CBE as long as the measure is evidence-based.

(ii) Removal of Quality Measures

In the CY 2025 PFS proposed rule, we proposed to codify previously established criteria for the removal of MIPS quality measures from the MIPS quality measure inventory. In the CY 2017 Quality Payment Program final rule (81 FR 77136 through 77137), we established the following criteria for measure removal to include: If the Secretary determines that the MIPS quality measure is no longer meaningful, such as MIPS quality measures that are topped out; and, if a measure steward is no longer able to maintain the quality measure. In the CY 2019 PFS final rule (83 FR 59763), we expanded the criteria for measure removal to include MIPS quality measures that reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range); the MIPS quality measure may be proposed for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped-out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors.

Also, in the CY 2019 PFS final rule (83 FR 59764), we established other criteria for measure removal, specifically MIPS quality measures that are: duplicative; not maintained or updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice; and low-bar, standard of care process measures. As described in the CY 2019 PFS final rule (83 FR 59765), we established an approach to incrementally remove process measures where prior to removal, consideration will be given to, but will not be limited to the following:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the MIPS quality measure addresses a priority area highlighted in the Measure Development Plan: *https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measuredevelopment.html*.
- Whether the MIPS quality measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the MIPS quality measure is designated as high priority or not.
- Whether the MIPS quality measure has reached extremely topped out status within the 98th to 100th percentile range, due to the extremely high and unvarying performance where meaningful distinctions and

improvement in performance can no longer be made.

Lastly, in the CY 2020 PFS final rule (84 FR 62958 through 62959), we expanded the criteria for measure removal to include MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods and not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians. For MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods, we noted that we will factor in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcome; and consideration of the MIPS quality measure in developing MVPs) prior to determining whether to remove the MIPS quality measure.

We are finalizing, as proposed, the codification of the aforementioned criteria established for the removal of MIPS quality measures from the MIPS quality measure inventory in § 414.1330(c), respectively.

(iii) Inventory of Quality Measures

Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list by removing measures from the list, as appropriate; adding new measures to the list, as appropriate; and determining whether measures that have undergone substantive changes should be included on the updated list.

Previously finalized MIPS quality measures can be found in the CY 2024 PFS final rule (88 FR 79556 through 79964), CY 2023 PFS final rule (87 FR 70250 through 70633), CY 2022 PFS final rule (86 FR 65687 through 65968), CY 2021 PFS final rule (85 FR 85045 through 85377), CY 2020 PFS final rule (84 FR 63205 through 63513), CY 2019 PFS final rule (83 FR 60097 through 60285), CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174), and CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). We proposed changes to the MIPS quality measure inventory, as set forth in Appendix 1 of the CY 2025 PFS proposed rule, including the following: the addition of new measures; updates to specialty sets (that is, creation of new specialty sets; addition and/or removal of measures; and substantive changes to existing measures within specialty sets); removal of existing measures; and substantive changes to existing measures. For the CY 2025 performance period, we proposed an inventory of 196 MIPS quality measures.

The new MIPS quality measures that we proposed to include in MIPS for the CY 2025 performance period and future years can be found in Table Group A of Appendix 1 of the CY 2025 PFS proposed rule. For the CY 2025 performance period, we proposed 9 new MIPS quality measures, which includes 5 high priority measures, of which 2 are also patient-reported outcome measures.

On January 3, 2024, we announced that we will be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 9 (CY 2017 performance period/2019 MIPS payment year through CY 2025 performance period/2027 MIPS payment year) of MIPS under the Quality Payment Program.[844] The recommendations we received were based on the MIPS quality measures finalized in the CY 2024 PFS final rule and the 2023 MUC List; the recommendations include the addition or removal of current MIPS quality measures from existing specialty sets, and/or the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with are proposed in this proposed rule. We proposed the addition of a new specialty set and additionally proposed modifications to existing specialty sets as described in Table Group B of Appendix 1 of the CY 2025 PFS proposed rule. Modifications to specialty sets include the addition of new measures and/or existing measures within the MIPS quality measure inventory, removal of measures, and/or substantive changes to previously finalized measures (we referred readers to Table Group D of Appendix 1 in the CY 2025 PFS proposed rule). Specialty and subspecialty sets are not inclusive of every specialty or subspecialty. We develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice.

In addition to establishing new individual MIPS quality measures, modifying existing specialty sets, and creating new specialty sets as described in Tables Group A and Group B of Appendix 1 of the CY 2025 PFS proposed rule, we referred readers to Table Group C of Appendix 1 of the CY 2025 PFS proposed rule for a list of MIPS quality measures proposed for removal and applicable rationale for each measure. We have previously specified certain criteria that will be used when we are considering the removal of a measure (81 FR 77136 and 77137; 83 FR 59763 through 59765; 84 FR 62957 through 62959); and such criteria is outlined in the proposed § 414.1330(c) (as further discussed in section IV.A.4.e.(1)(d)(ii) of the CY 2025 PFS proposed rule (89 FR 62040)). For the CY 2025 performance period, we proposed to remove 11 MIPS quality measures based on the previously established criteria. Of the 11 MIPS quality measures proposed for removal, 2 MIPS quality measures are duplicative to a proposed new MIPS quality measure; 3 MIPS quality measures are duplicative of current measures; 1 MIPS quality measure has reached the topped out lifecycle; 2 MIPS quality measures are extremely topped out; 1 MIPS quality measure is no longer owned/maintained; and 2 MIPS quality measures have limited adoption and consequently, have not been able to establish benchmarks to provide a meaningful impact to quality improvement. We have continuously communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set (*see,* for example, 83 FR 59763 through 59765). Seven of the MIPS quality measures proposed for removal are process measures that would not provide granular information related to disparities. The proposal to remove the MIPS quality measures described in Table Group C of Appendix 1 of the CY 2025 PFS proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the MIPS quality measures to determine whether they meet our removal criteria.

Also, we proposed substantive changes to several MIPS quality measures, which can be found in Table Group D of Appendix 1 of the CY 2025 PFS proposed rule. We have previously established criteria that would apply when we are considering making

[844] Message to the Quality Payment Program listserv on January 3, 2024, entitled ''The Centers for Medicare & Medicaid Services (CMS) is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2025 Performance Year of the Merit-based Incentive Payment System (MIPS).''

substantive changes to a quality measure (81 FR 77137, and 86 FR 65441 through 65442). We proposed substantive changes to 66 MIPS quality measures, which includes 2 MIPS quality measures previously retained for utilization only in MVPs (we referred readers to Table Group DD of Appendix 1 of the CY 2025 PFS proposed rule for such measures). On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive. The aforementioned proposed inventory of 196 MIPS quality measures includes 193 MIPS quality measure available for utilization in traditional MIPS and MVPs, and 3 MIPS quality measures available only for utilization in MVPs (as finalized in the CY 2024 PFS final rule (88 FR 79897 through 77902)). In the CY 2024 PFS final rule, we removed the following 3 MIPS quality measures from traditional MIPS, but retained for utilization in MVPs: Quality #112: Breast Cancer Screening; Quality #113: Colorectal Cancer Screening; and Quality #128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (88 FR 79338 and 79897 through 79902). As noted in the CY 2025 PFS proposed rule, some MIPS quality measures available in traditional MIPS and/or MVPs are measures adopted by the Shared Savings Program for utilization under the APP, specifically the APP quality measure set and the newly established APP Plus quality measure set, as discussed in section IV.A.4.c.(3) of the CY 2025 PFS proposed rule. For the MIPS quality measures available in the APP quality measure set and APP Plus quality measure set for the CY 2025 performance period, we refer readers to section IV.A.4.c.(1) and section IV.A.4.c.(3) of this final rule.

Lastly, as described in the CY 2025 PFS proposed rule, we proposed a substantive change to the following administrative claims measure, Quality #492: Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System (we refer readers to Table Group D of Appendix 1 of this final rule), that would be applied retroactively starting with the CY 2023 performance period/2025 MIPS payment year (89 FR 62042). In the CY 2023 PFS final rule, we inadvertently specified the measure was available at the individual clinician level. The inclusion of the availability of the measure at the individual clinician level is a misrepresentation and erroneously conveys to MIPS eligible clinicians reporting at the individual clinician level that the measure is available to meet the minimum required number of measures to report under traditional MIPS or an MVP. The measure was tested and developed for implementation at the group, virtual group, subgroup via an MVP, and APM Entity levels. Thus, the measure is limited to groups, virtual groups, subgroups via an MVP, and APM Entities participating in MIPS. We believe that a failure to apply this substantive change retroactively would be contrary to the public interest.

Prior to the finalization of this measure as a new measure available within the MIPS quality measure inventory in the CY 2023 PFS final rule, the measure was initially proposed as a new measure in the CY 2022 PFS proposed rule. Based on the public comments received in response to the initial proposal of this measure in the CY 2022 PFS proposed rule, there were concerns regarding the attribution of certain patients to clinicians, particularly the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. As a result, the measure was not finalized as part of the CY 2022 PFS final rule; however, we noted that we would continue to consider how to implement condition-specific measures such as this measure under MIPS (86 FR 65692 through 65694).

In the CY 2023 PFS proposed rule, we re-proposed this measure, which mitigated the concerns regarding the attribution of such patients to clinicians by excluding patients at advanced stages of heart failure and requiring that a group, virtual group, subgroup via an MVP, and APM Entity to include at least 1 cardiologist (and a 21-patient case minimum); and subsequently, the measure was finalized in the CY 2023 PFS final rule (87 FR 70266 through 70271). The intent of the measure is for assessment of performance to be conducted at the group, virtual group, subgroup via an MVP, and APM Entity levels. The measure was not tested, developed, or implemented at the individual clinician level. For this measure to be available at the individual clinician level, the measure would need to be tested at the individual clinician level to establish validity, reliability, and risk adjustments at the individual clinician level (89 FR 62042). It is not appropriate for the measure to be available at the individual clinician level without further testing. Consequently, any assessment of data for this measure at the individual clinician level would produce invalid and unreliable results. By retroactively applying the substantive change to this measure (modifying the measure to remove the individual clinician level as an option) effective starting with the CY 2023 performance period/2025 MIPS payment year, the level of reporting available for the measure will align with the intent, implementation, and operationalization of the measure, and clarify that the measure is not available at the individual clinician level.

We solicited public comment on the proposals to modify the quality performance category measure inventory, a set of 196 MIPS quality measures for the CY 2025 performance period, which includes the following:

- Implementation of 9 new MIPS quality measures: 5 high priority measures, of which 2 are also patient-reported outcome measures;
- Removal of 11 MIPS quality measures: 2 MIPS quality measure are duplicative to a proposed new quality measure; 3 MIPS quality measures are duplicative to current quality measures; 1 MIPS quality measure has reached the topped-out lifecycle; 2 MIPS quality measures are extremely topped out; 1 MIPS quality measure is no longer owned/maintained; and 2 MIPS quality measures have limited adoption and consequently, have not been able to establish benchmarks to provide a meaningful impact to quality improvement; and
- Substantive changes to 66 MIPS quality measures.

We refer readers to Table Groups A through DD of Appendix 1 of this final rule for a summary of the public comments received regarding the proposed modifications to the MIPS quality measure inventory for the CY 2025 performance period and the discussion regarding final decisions.

After consideration of public comments, and for the reasons stated in the aforementioned Table Groups A through DD of Appendix 1 of this final rule and the CY 2025 PFS proposed rule (89 FR 62251 through 62570), we are finalizing, with modification, a measure set of 195 MIPS quality measures (192 MIPS quality measures are available in traditional MIPS and 3 MIPS quality measures are available only in MVPs) in the inventory for the CY 2025 performance period, which includes the following:

- Implementation of seven new MIPS quality measures of which three are high priority measures;
- Removal of 10 MIPS quality measures: 2 MIPS quality measure are duplicative to a proposed new quality measure; 2 MIPS quality measures are

duplicative to current quality measures; 1 MIPS quality measure has reached the topped-out lifecycle; 2 MIPS quality measures are extremely topped out; 1 MIPS quality measure is no longer owned/maintained; and 2 MIPS quality measures have limited adoption and consequently, have not been able to establish benchmarks to provide a meaningful impact to quality improvement; and

- Substantive changes to 66 MIPS quality measures.

(e) Quality Performance Category Requests for Information

In the CY 2025 PFS proposed rule, we included the following Requests for Information (RFIs) (89 FR 62042 through 62044).

(i) Survey Modes for the Administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey Request for Information

We solicited public comment on the potential expansion of the survey modes of the CAHPS for MIPS Survey from a mail-phone protocol to a web-mail-phone protocol. During the 2023 CAHPS for MIPS Web Mode Field Test, we found that adding the web-based survey mode to the current mail-phone protocol of CAHPS for MIPS survey administration resulted in an increased response rate. We specifically requested comment on (1) whether the increase in response rate would outweigh a possible increase in the cost of survey administration associated with the addition of a web-based survey mode to the current mail-phone survey protocol, and (2) if providing email addresses to vendors would be feasible for groups, virtual groups, subgroups, and APM Entities (including Shared Savings Program ACOs).

We thank commenters for their feedback on this RFI, which may be considered in future rulemaking.

(ii) Guiding Principles for Patient-Reported Outcome Measures in Federal Models, and Quality Reporting and Payment Programs Request for Information

We are committed to elevating the patient voice in healthcare. One critical approach to elevating the patient voice that is aligned with the CMS National Quality Strategy and strategy of the CMS Innovation Center is to include more Patient-Reported Outcome Measures (PROMs) and Patient-Reported Outcome Performance Measures (PRO–PMs) in CMS quality reporting and payment programs and CMS Innovation Center Models. As we move forward with including more PROMs and PRO–PMs in CMS quality reporting and payment programs and CMS Innovation Center Models, it is important to develop a set of guiding principles and considerations for the selection and implementation of PROMs or PRO–PMs. Through this RFI, we sought comment regarding the overarching principles and considerations related to data infrastructure, selection, feasible implementation, and patient engagement of PROMs and PRO–PMs.

We thank commenters for their feedback on this RFI, which may be considered in future rulemaking.

(2) Cost Performance Category

Section 1848(q)(2)(A) of the Act includes resource use as a performance category under MIPS. We refer to this performance category as the cost performance category. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of MIPS are used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians are evaluated under all four of the MIPS performance categories, including the cost performance category.

We proposed to add six new episode-based measures to the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year. These six measures include:

- Chronic Kidney Disease (CKD), which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for patients who receive care to manage and treat CKD stages 4 and 5;
- End-Stage Renal Disease (ESRD), which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for patients who receive medical care to manage ESRD;
- Kidney Transplant Management, which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for ongoing kidney transplant-related care and management starting at least 90 days after transplant surgery;
- Prostate Cancer, which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for the management and treatment of prostate cancer;
- Rheumatoid Arthritis, which assesses MIPS eligible clinicians on the risk-adjusted and specialty-adjusted cost to Medicare for the management and treatment of rheumatoid arthritis; and
- Respiratory Infection Hospitalization, which assesses MIPS eligible clinicians on the risk-adjusted cost to Medicare for the inpatient treatment of respiratory infection.

We proposed modifications to two existing episode-based measures so that their specifications reflect modified versions beginning with the CY 2025 performance period/2027 MIPS payment year. These two measures are:

- Cataract Removal with Intraocular Lens (IOL) Implantation,[845] which assesses MIPS eligible clinicians on the risk-adjusted cost to Medicare for cataract removal procedures; and
- Inpatient (IP) Percutaneous Coronary Intervention (PCI),[846] which assesses MIPS eligible clinicians on the risk-adjusted cost to Medicare for the inpatient PCI treatment of patients who present with a cardiac event.

We proposed that MIPS eligible clinicians must be attributed a minimum of 20 cases for each of the proposed six new measures. In addition, we proposed to maintain the existing case minimums for the two measures we proposed to modify in this rulemaking, which are a 20-episode case minimum for the IP PCI measure and a 10-episode case minimum for the Cataract Removal with IOL Implantation measure. We also proposed to update the operational list of care episode and patient condition groups and codes to reflect these new and modified measures.

Finally, we proposed to adopt criteria to specify objective bases for the removal of any cost measures from the MIPS cost performance category, which we also proposed to codify at § 414.1350(e).

For a description of the statutory authority for and existing policies pertaining to the cost performance category, we refer readers to § 414.1350 and the CY 2017 Quality Payment Program final rule (81 FR 77162 through 77177), CY 2018 Quality Payment Program final rule (82 FR 53641 through 53648), CY 2019 PFS final rule (83 FR 59765 through 59776), CY 2020 PFS final rule (84 FR 62959 through 62979), CY 2021 PFS final rule (85 FR 84877 through 84881), CY 2022 PFS final rule (86 FR 65445 through 65461), CY 2023 PFS final rule (87 FR 70055 through 70057), and CY 2024 PFS final rule (88 FR 79339 through 79349).

For more details on the proposals in this section on which we invited comments, we refer readers to the CY

[845] The current title of this measure is the Routine Cataract Removal with Intraocular Lens (IOL) Implantation measure, which we proposed this retitled, modified measure would replace.

[846] The current title of this measure is the ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) measure, which we proposed this retitled, modified measure would replace.

2025 PFS proposed rule (89 FR 62044 through 62055).

(a) Updates to MIPS Cost Measure Inventory

(i) Background on Episode-Based Cost Measure Development, Reevaluation, and Pre-Rulemaking Review

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. There are currently 29 cost measures in the cost performance category for the CY 2024 performance period/2026 MIPS payment year, comprising of 27 episode-based measures covering a range of conditions and procedures and 2 population-based measures.

We worked with the measure development contractor to identify the proposed six new episode-based measures through empirical analyses and public comment. These measures cover clinical topics and MIPS eligible clinicians practicing in certain specialties for whom there are currently limited or no applicable cost measures. As such, these measures will help fill gaps in the cost performance category's measure set and support the transition from traditional MIPS to MVPs by allowing new MVPs to be created and enhancing existing MVPs. They also address interested parties' feedback about the need for more clinically refined episode-based measures in the cost performance category. Finally, they increase the cost coverage of care episode and patient condition groups, moving closer towards the statutory goal of covering 50 percent of expenditures under Medicare Parts A and B, as specified under section 1848(r)(2)(i)(I) of the Act.

The measure development contractor also conducts comprehensive reevaluation every 3 years after a measure is implemented in MIPS to ensure that measures continue to meet criteria for importance, scientific acceptability, and usability in line with the CMS Measures Management System Blueprint (*https://mmshub.cms.gov/blueprint-measure-lifecycle-overview*). As a result of this process, we proposed to modify two episode-based measures currently in use (the Routine Cataract Removal with Intraocular Lens (IOL) Implantation and ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) measures), and proposed the modified Respiratory Infection Hospitalization as a new measure, replacing the Simple Pneumonia with Hospitalization measure previously removed from the cost performance category.

We refer readers to the CY 2025 PFS proposed rule (89 FR 62045 through 62046; 89 FR 62048 through 62050) for more detailed information on the development and reevaluation of episode-based measures, particularly the episode-based measures we proposed to adopt and modify in the proposed rule.

Following development and reevaluation processes, the episode-based measures were submitted to the Measures Under Consideration (MUC) List and evaluated for potential use in MIPS by the Pre-Rulemaking Measure Review (PRMR) process. This process involved reviews by the PRMR Clinician Committee Advisory and Recommendation Groups, as well as 2 public comment periods. The PRMR Clinician Committee Advisory and Recommendation Groups review the measure information, a preliminary analysis of the measures and their testing information developed by the consensus-based entity (CBE) (contracted in accordance with section 1890 of the Act), and public comments. The PRMR Clinician Committee Recommendation Group met in January 2024 to discuss in more detail the measures we proposed to adopt and modify and voted on their recommendations for the appropriateness of these measures' use in MIPS. We refer readers to the CY 2025 PFS proposed rule (89 FR 62051 through 62053) for more detailed information regarding the PRMR process and the PRMR groups' discussions, voting results, and recommendations for the measures we proposed to adopt and modify.

Although we may pursue endorsement by the CBE, contracted in accordance with section 1890 of the Act, for the proposed measures at a later time, we are not required to use only CBE endorsed measures in MIPS. We emphasize that cost measures undergo extensive review and testing before they are implemented in MIPS. We continue to believe in the strength of the episode-based measures proposed for adoption and modification in this rulemaking, based on valid and reliable testing results and extensive review from interested parties as part of the measure development and PRMR process. We refer readers to our discussion in the CY 2025 PFS proposed rule (89 FR 62051) for more information regarding this testing and review process.

In section IV.A.4.e.(2)(a)(ii) of this final rule, we describe our proposal to adopt six new measures in the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year. In section IV.A.4.e.(2)(a)(iii) of this final rule, we describe our proposal to modify two existing measures in the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year. In section IV.A.4.e.(2)(b)of this final rule, we describe our proposal that MIPS eligible clinicians must be attributed a minimum number of cases for each of these measures to be assessed and scored on such measure.

(ii) Proposals to Adopt Six New Episode-Based Measures Beginning with the CY 2025 Performance Period/2027 MIPS Payment Year

In this section of this final rule, we describe generally the six new episode-based measures, which we proposed to add to the cost performance category beginning with the CY 2025 performance period/2027 MIPS payment year. While we generally describe these six episode-based measures in this section of this final rule, we refer readers to our description of these measures in the CY 2025 PFS proposed rule (89 FR 62046 through 62048) for more detailed information.

In conjunction with our measure development contractor, we developed these measures with consideration of the common standards that are described in the CY 2022 PFS final rule (86 FR 65455 through 65459) to ensure consistency across episode-based measures being developed. The six new episode-based measures we proposed met all the requirements described in the CY 2022 PFS final rule, including the following: (1) episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service assignment; (4) exclusions; and (5) risk adjustment. Generally, for all episode-based measures, we exclude episodes where costs cannot be fairly compared to the costs for the whole cohort in the episode-based measure. These exclusions, like other features of each episode-based measure, are developed with extensive clinician and interested parties' engagement. We have specified exclusions for all six proposed episode-based measures. We also apply a risk adjustment model to each episode-based measure in the cost performance category. All six proposed episode-based measures have been risk-adjusted in accordance with the measure's risk adjustment model. We refer readers to our description of the risk adjustment model applied to each of the proposed measures in the CY 2025 PFS proposed rule (89 FR 62047).

More information on the episode-based measure development requirements, which were outlined so that external interested parties could develop measures in the future, are available in the Blueprint for the CMS Measures Management System (*https://mmshub.cms.gov/blueprint-measure-lifecycle-overview*) and the Meaningful Measures Initiative (*https://www.cms.gov/medicare/quality/meaningful-measures-initiative*).

The episode-based measures that we proposed for adoption beginning with the CY 2025 performance period/2027 MIPS payment year are set forth in Table 72.

TABLE 72: Episode-Based Measures Beginning with CY 2025 Performance Period/2027 MIPS Payment Year

Measure Name	Episode Type
Chronic Kidney Disease (CKD)	Chronic condition
End-Stage Renal Disease (ESRD)	Chronic condition
Kidney Transplant Management	Chronic condition
Prostate Cancer	Chronic condition
Rheumatoid Arthritis	Chronic condition
Respiratory Infection Hospitalization	Acute inpatient medical condition

The five chronic condition episode-based measures assess outpatient treatment and ongoing management of the following chronic conditions: CKD, ESRD, kidney transplant management, prostate cancer, and rheumatoid arthritis. These measures assess the costs of services related to these conditions, such as physician services, imaging or diagnostic services, emergency room care or hospitalizations, medications, or other services related to ongoing management or post-acute care. The measure construction for these proposed measures follows the approach described in the CY 2022 PFS final rule (86 FR 65445 through 65461), which also includes detailed discussion of the attribution methodology and examples of how episodes are attributed.

We refer readers to our description of our overall attribution methodology for cost measures in the CY 2025 proposed rule (89 FR 62047 and 62048). More information about the chronic condition episode-based measures attribution methodology, including a one-page summary and a Frequently Asked Questions (FAQ) document, is available at *https://www.cms.gov/files/zip/mips-chrcondition-episode-based-cost-measures-attribution-methodology-2023-zip.zip*. More general information about the overall chronic condition cost measure framework is available at *https://www.cms.gov/files/document/chronic-condition-cost-measure-framework-poster.pdf*.

The Respiratory Infection Hospitalization measure is an acute inpatient medical condition episode-based measure, which focuses on the inpatient treatment of respiratory infection and is attributed to clinicians and clinician groups treating a patient during the hospitalization. It includes the cost of services related to the inpatient treatment of a respiratory infection, such as initial inpatient services, subsequent outpatient physician visits, and emergency room care or hospitalizations for related complications. As described further in the CY 2025 PFS proposed rule (89 FR 62049), the Respiratory Infection Hospitalization measure is the reevaluated version of the Simple Pneumonia with Hospitalization measure, adopted for MIPS in the CY 2019 PFS final rule (83 FR 59767 through 59773) and removed from MIPS in the CY 2024 PFS final rule (88 FR 79348 and 79349). This new, modified measure addresses the concerns with the previous version of the measure by expanding the patient cohort to include beneficiaries hospitalized for pneumonia and related respiratory infections, reflecting the coding changes as described in the CY 2024 PFS final rule (*88 FR 79348* and *79349*). The modified measure also incorporates feedback we received from interested parties about appropriate risk adjustment and exclusions during the reevaluation process of the prior Simple Pneumonia with Hospitalization measure.

The specifications for all six episode-based measures we proposed for adoption in this rulemaking are available at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures*. The specifications documents for each measure consist of a methods document that describes the steps for constructing the measure and a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides detailed methodology describing each step to construct the measure, including: identifying patients receiving care; defining an episode-based measure; attributing episodes to MIPS eligible clinicians and clinician groups; assigning costs; defining exclusions; risk adjusting; and calculating measure score. Second, the measure codes list file contains the codes used in the measure specifications, including the episode triggers, attribution, stratification, assigned items and services, exclusions, and risk adjustors.

More information about the episode-based measures is available in the Measure Justification Forms, which were posted to support PRMR discussions. These documents provide a comprehensive characterization of the measures, their justification, and testing results of the measures' specifications at this time. These documents are available through the QPP Cost Measure Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures*.

We invited comments on the proposals in this section.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters shared their support of our proposal to adopt and implement the six new episode-based measures and also shared support generally for our development of additional episode-based measures. One commenter stated that they appreciate that cost measurement can reduce healthcare costs. Another commenter supported CMS's efforts to expand the set of available episode-based measures so that all specialists and sub-specialists have adequate measures available for

scoring in the MIPS cost performance category.

Response: We appreciate the commenters' support of our proposal to adopt the six new episode-based measures in the MIPS cost performance category and our efforts to develop additional episode-based measures in the future.

Comment: One commenter supported the adoption and implementation of the proposed Chronic Kidney Disease and End-Stage Renal Disease episode-based measures. The commenter noted the adoption of these measures would further support the idea that early identification is essential and beneficial for both patients and providers, and emphasized the importance of kidney health evaluation screening in chronic kidney disease and high-risk populations.

Response: We thank the commenter for their support for the adoption and implementation of the Chronic Kidney Disease and End-Stage Renal Disease episode-based measures in MIPS, and we agree with the importance of measuring performance related to the management and treatment of kidney health.

Comment: One commenter did not support the inclusion of the Kidney Transplant Management episode-based measure. The commenter raised concerns that the measure may create unintended consequences for the care outcomes of kidney transplant patients and potentially impact incentives for clinicians to use hard-to-place organs in kidney transplants, which may result in higher costs of care for kidney transplant management. The commenter stated that there is not enough information available on optimal post-renal transplant patient care and that an episode-based measure could lead to the possibility of patient harm and decreased survival of transplant organs. Another commenter urged CMS to monitor for impacts of implementation of this measure on access to appropriate transplantation care and to ensure the measure does not disincentivize referrals of medically appropriate patients for transplant evaluation or the use of breakthrough pharmaceuticals.

Response: We disagree that the Kidney Transplant Management episode-based measure would create unintended consequences for the care outcomes of patients or that it would disincentivize the use of hard-to-place organs, which are organs that are accepted and transplanted later in the donor organ matching process.[847] This is the process where a donor kidney is matched with a transplant recipient, ranked in order of need and likelihood of survival. In our testing, we understood hard-to-place organs as typically organs from a deceased donor kidney with a high Kidney Donor Profile Index (KDPI). A higher value indicates that the donor kidneys will be less likely to function.[848] The measure uses risk adjustment to neutralize the impact of kidney transplant organ characteristics and other factors on clinician performance. The risk adjustment model includes variables related to the transplanted organ, such as whether the donor is living or deceased, and whether the kidney was from a blood type incompatible donor. Deceased donors or donors with incompatible blood types are examples of how a kidney organ may be accepted later in the ranked list of transplant recipients requiring a kidney, and therefore, harder to place. The measure also risk adjusts for patient-level factors, including comorbidities, demographics, disability status, recent use of long-term care, and dual enrollment in Medicare and Medicaid. These risk adjustment variables help ensure that the measure is accounting for higher complexity and higher cost patients, and reduces the likelihood of unintended consequences, such as clinicians choosing not to provide care to higher complexity patients. We will monitor the impact of the Kidney Transplant Management episode-based measure for any unintended consequences that may be identified through public comment or empiric testing during the measure maintenance process.

Comment: A few commenters expressed support for the proposal to adopt and implement the Respiratory Infection Hospitalization episode-based measure. One commenter noted that this measure covers more conditions that can cause a respiratory hospitalization than the original Simple Pneumonia with Hospitalization episode-based measure.

Response: We thank the commenters for their support. We agree that the Respiratory Infection Hospitalization episode-based measure includes a larger patient cohort than the Simple Pneumonia with Hospitalization episode-based measure did, which will allow for more comprehensive assessment of the costs of care related to inpatient hospitalizations for respiratory infections. By expanding the patient cohort, the measure will capture additional MIPS eligible clinicians and patients, resulting in the measure having greater potential impact on the value of care.

Comment: One commenter did not support implementation of the Respiratory Infection Hospitalization episode-based measure in MIPS due to overarching concerns they had with the attribution methodology and actionability of episode-based measures. They stated that the measure may be more appropriate at a systems-level, and that they could support the measure's adoption and use in other Medicare programs instead of MIPS. More specifically, they raised concerns that the measure included services that occur within 30 days of the trigger event and questioned whether hospitalists, who may be attributed the measure, have control over these costs. They also stated that hospital costs are typically fixed by the MS–DRG associated with the hospital stay, so the measure may have limited actionability for MIPS eligible clinicians.

Response: We disagree with the commenters' concerns about the attribution methodology of the Respiratory Infection Hospitalization episode-based measure. As we described in the CY 2025 PFS proposed rule (89 FR 62047 and 62048), the attribution methodology for this measure was developed with input from a TEP, a Clinician Expert Workgroup, and patients, families, and caregivers. The measure only includes the costs of services clinically related to respiratory infection hospitalizations; MIPS eligible clinicians are not assessed on clinically unrelated costs that may occur during the 30-day episode window. We determined that a 30-day episode window is appropriate based on empirical data presented by the measure developer and based on input from the Clinician Expert Workgroup on reasonable timelines for clinicians to influence clinically related costs, such as respiratory infection-specific complications, antibiotic-related complications, and post-acute care. Additionally, while the assigned costs of inpatient hospitalizations that trigger episodes are standardized by MS–DRG, the measure can assess variation in costs based on the additional clinically related services provided during the 30-day episode window, such as the cost of post-discharge care and potential complications or rehospitalization. This

[847] Ashiku L, Dagli C. Identify Hard-to-Place Kidneys for Early Engagement in Accelerated Placement With a Deep Learning Optimization Approach. Transplant Proc. 2023 Jan-Feb;55(1):38–48. doi: *10.1016/j.transproceed.2022.12.005.* Epub 2023 Jan 12. PMID: 36641350.

[848] Organ Procurement & Transplantation Network, Accelerated placement of hard-to-place kidneys. *https://optn.transplant.hrsa.gov/professionals/improvement/improving-organ-usage-and-placement-efficiency/protocols-for-expedited-placement-variance/accelerated-placement-of-hard-to-place-kidneys/.*

measure is attributed to individual MIPS eligible clinicians and groups that provide inpatient E/M services for patients hospitalized for respiratory infections. However, the care that MIPS eligible clinicians provide during and following an inpatient hospitalization can influence the occurrence, frequency, and intensity of services that patients receive during the episode and impact costs of care. For example, appropriate reduction in antibiotic use can reduce costly readmissions for respiratory infections.[849] For more discussion on the potential for reduction in readmissions and appropriate use of antibiotics, we refer readers to the measure rationale available in the Measure Justification Form available for download at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior.*

Comment: Commenters expressed concerns with implementing the Rheumatoid Arthritis episode-based measure, noting that the PRMR Recommendation Group voted ''do not recommend'' when considering its implementation in MIPS. Commenters were concerned that this may set a precedent or undermine the PRMR evaluation process.

Response: Each measure that we propose for use in MIPS is considered on a case-by-case basis. We weigh the PRMR recommendations in any decision to propose measures for adoption in MIPS; however, PRMR support is not required for a cost measure to be adopted and implemented into MIPS. As noted previously, cost measures undergo extensive review and testing before we propose to adopt them in MIPS. We proposed the adoption and modification of these cost measures in the CY 2025 PFS proposed rule based on testing results and extensive review from interested parties as part of the measure development and PRMR process. We refer readers to our discussion in the CY 2025 PFS proposed rule (89 FR 62051) for more information regarding this testing and review process.

For the Rheumatoid Arthritis measure, we do not agree with the PRMR Recommendation Group's recommendation as we described in detail in the CY 2025 PFS proposed rule (89 FR 62051 through 62053). Testing conducted during and after measure development demonstrates that the Rheumatoid Arthritis measure is reliable and valid. Additionally, the Rheumatoid Arthritis measure represents a high priority and high-cost area of care with potential for individual MIPS eligible clinicians and groups to improve their performance on the measure.

Finally, we do not agree that a decision to adopt and implement the Rheumatoid Arthritis measure would set a precedent or undermine the PRMR process. The role of the PRMR process is to review potential measures for their use in a CMS program and provide a recommendation to CMS for consideration. We have reviewed the PRMR discussions and recommendations on the Rheumatoid Arthritis measure and considered this feedback in our decision to propose the measure. As previously stated, we consider each measure on a case-by-case basis when determining whether to adopt and implement a measure in MIPS.

Comment: Commenters also reiterated concerns raised during the PRMR public comment period on the Rheumatoid Arthritis measure that current Medicare coverage guidelines, such as fail-first medication requirements and Self-Administered Drug exclusions, limit the types of care that clinicians can provide to rheumatoid arthritis patients, which could also impact cost measurement. One commenter requested that these limiting coverage guidelines be addressed before the episode-based measure can be a successful measurement of rheumatoid arthritis related care. Another commenter more generally requested that CMS review and address specialty society comments made during the PRMR public comment period before adopting the Rheumatoid Arthritis measure.

Response: While we appreciate the commenters' recommendations on broader Medicare coverage guidelines, the measure includes patients who are continually enrolled in Medicare and is stratified by episodes with and without Part D enrollment, so all MIPS eligible clinicians are being assessed on a population with similar Medicare coverage guidelines. These concerns were also raised during the PRMR public comment period, and we do not have concerns about these Medicare coverage guidelines negatively impacting MIPS eligible clinicians' performance on the measure. These guidelines may influence MIPS eligible clinician's practice patterns; however, the measure assesses each MIPS eligible clinician compared to the national average of all other MIPS eligible clinicians attributed the same measure for the same performance period. As such, all MIPS eligible clinicians are being assessed based on similar factors influencing clinicians' practice decisions. As a result, we do not believe that these Medicare coverage guidelines prevent the Rheumatoid Arthritis episode-based measure from successfully measuring cost performance related to the treatment and management of rheumatoid arthritis. We refer readers to section IV.A.4.f.(1)(d) of this final rule for more detailed discussion regarding our scoring methodology for cost measures.

The public comments we received during the PRMR process raised concerns that the measure holds rheumatologists accountable for costs outside of their control, in particular for costly medications that are used in good standards of care. The measure developer and Clinician Expert Workgroup considered what services to include in the measure that would be within the reasonable influence of attributed clinicians. Based on clinical input and empiric analysis, we include Part D drugs in the measure as they are important aspects of care provided for rheumatoid arthritis. The Clinician Expert Workgroup believed that any additional complexity by including Part D was outweighed by the need to capture these costs to appropriately assess clinician performance. The Clinician Expert Workgroup's discussions are available for review in meeting summaries posted on the Cost Measures Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior.* Part D costs are standardized to remove price variation from non-clinical factors, such as drug manufacturers and plans. Additionally, the measure sub-groups for episodes for patients with and without Part D enrollment to account for expected differences in cost, such that episodes for patients with Part D enrollment are only directly compared with other episodes for patients with Part D enrollment.

We disagree with the public comments received during the PRMR process stating that the measure will not produce actionable results for MIPS eligible clinicians. Individual MIPS eligible clinicians and groups receive MIPS Performance Feedback for measures on which they are assessed, which they can review to identify potential opportunities to improve future cost performance. For example, MIPS eligible clinicians can review supplemental data reports to help identify differences between the characteristics of the national average episode for the measure and their

[849] Mauro, James, Saman Kannangara, Joanne Peterson, David Livert, and Roman A. Tuma. ''Rigorous Antibiotic Stewardship in the Hospitalized Elderly Population: Saving Lives and Decreasing Cost of Inpatient Care.'' JACAntimicrobial Resistance 3, no. 3 (09, 2021): 1. *https://doi.org/10.1093/jacamr/dlab118.*

attributed episodes, such as whether their episodes have higher than average costs associated with hospitalizations. Additionally, for the Rheumatoid Arthritis measure, there are a number of actions that clinicians can take to provide more efficient care. For instance, the Rheumatoid Arthritis measure includes the cost of hospitalizations and other complications of care, so by reducing the occurrence of potentially avoidable adverse events, clinicians can improve performance on the measure. In addition, peer-reviewed literature notes opportunities to improve the value of care provided to rheumatoid arthritis patients by carefully considering the use of disease-modifying anti-rheumatic drugs (DMARDs).[850] [851] Peer-reviewed literature also indicates that while patients are often prescribed corticosteroids for 6 months or more, guidelines indicate that corticosteroid use should be limited.[852] Chronic glucocorticoid use among rheumatoid arthritis patients is associated with a higher health care costs due to increased occurrence of adverse events (for example, developing diabetes or osteoporosis, cardiovascular events such as thrombotic stroke, myocardial infarction, or death).[853] [854] [855]

Comment: One commenter raised concerns that biosimilar medications are not included in the Rheumatoid Arthritis episode-based measure and the potential implications this would have on the measure's validity.

Response: We thank the commenter for raising these concerns. We agree that biosimilar medications are clinically relevant to rheumatoid arthritis management and believe the costs of biologic and biosimilar disease-modifying anti-rheumatic medications should be included in the Rheumatoid Arthritis episode-based measure. We modified the final specifications for the Rheumatoid Arthritis episode-based measure to include biosimilar medications in addition to biologic medications. For the full list of medications included in the measure, we refer readers to the measure codes list that is available for download at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/about*.

Comment: A few commenters recommended that CMS use a specialty attribution exclusion to exclude both ophthalmologists and optometrists from the Rheumatoid Arthritis measure to avoid attributing ophthalmic practices. One commenter stated concerns that the inclusion of ophthalmic medications within the Rheumatoid Arthritis measure could results in clinicians being attributed Rheumatoid Arthritis episodes based on the treatment of ophthalmic complications, rather than treatment of Rheumatoid Arthritis. One commenter further recommended excluding dermatologists.

Response: We thank the commenters for their suggestions; however, we do not believe it is appropriate to apply a specialty attribution exclusion to the Rheumatoid Arthritis episode-based measure for all ophthalmologists, optometrists, and dermatologists. Episode-based measures use care patterns identified in claims data to attribute MIPS eligible clinicians rather than relying on clinician specialties. Input from a TEP and Clinician Expert Workgroup informed the attribution methodology that we proposed for the Rheumatoid Arthritis measure. The Clinician Expert Workgroup advised ophthalmic medications may be used to treat symptoms related to rheumatoid arthritis, and therefore, recommended including these medications as clinically related service costs. However, we agree with the commenter's concerns that the inclusion of ophthalmic medications could result in Rheumatoid Arthritis episodes being attributed to MIPS eligible clinicians prescribing ophthalmic medications for other purposes, but who are not providing broader treatment and management for rheumatoid arthritis. Based on the public comments we received, we have removed ophthalmic medications from the measure specifications prior to implementation of this measure for the CY 2025 performance period/2027 MIPS payment year. We refer readers to the revised measure specifications, which are available here; *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures.*

Comment: One commenter raised concerns about the Rheumatoid Arthritis episode-based measure, stating that the measure does not offer actionable insights for improving costs of care and that it does not differentiate the appropriateness of costs in relation to quality and patient outcomes. They requested CMS reconvene the Clinician Expert Workgroup to reevaluate the validity of the measure, given concerns with cost scoring methodology.

Response: We disagree that the Rheumatoid Arthritis episode-based measure does not offer actionable insights for MIPS eligible clinicians. We have identified many clinical actions that can improve performance on this cost measure based on peer-reviewed literature and discussions with persons and families with lived experiences. These include early diagnosis of rheumatoid arthritis, improving treatment through appropriate use of monitoring tests, appropriate use of medications and reducing medication non-adherence, and improved care coordination to reduce treatment complications. We provide annual MIPS Performance Feedback and patient-level reports, which include information on the services that a MIPS eligible clinician provides and the costs of those services to help inform their care decisions. In response to requests for more information, beginning for the CY 2023 performance period/2025 MIPS payment year, we have also introduced a new supplemental cost report that provides more information for MIPS eligible clinicians to review about their cost measure scores. These reports are a new set of reports that compare a MIPS eligible clinician's costs to the national observed costs for certain types of services. The cost measure assesses costs directly related to treatment choices and the costs of other services, such as clinically related adverse outcomes or complications. With these supplemental cost reports, MIPS eligible clinicians can review differences between the characteristics of the national average episode for a measure and their attributed episodes to determine if there are any billing or care patterns that warrant additional investigation. For example, if MIPS eligible clinicians have higher than average costs associated with hospitalizations, MIPS eligible

[854] Wilson, J.C. et al., ''Incidence and Risk of Glucocorticoid-Associated Adverse Effects in Patients With Rheumatoid Arthritis,'' *Arthritis Care & Research,* 71, no. 4, (April 2019): 498–511, *https://doi.org/10.1002/acr.23611*.

[855] Best, J.H. et al., ''Association Between Glucocorticoid Exposure and Healthcare Expenditures for Potential Glucocorticoid-related Adverse Events in Patients with Rheumatoid Arthritis,'' *Journal of Rheumatology* 45, no. 3 (March 2018): 320–328, *https://doi.org/10.3899/jrheum.170418*.

clinicians could consider practice improvements to reduce the rates of potentially avoidable hospitalizations.

Additionally, MIPS is designed to assess MIPS eligible clinicians' performance on their quality and cost of care (each performance category score generally constituting 30 percent of a MIPS eligible clinician's final score), as well as improvement activities and meaningful use of CEHRT (see section 1848(q)(2)(A), (B) and (q)(5)(E) of the Act). MIPS thereby holistically assesses MIPS eligible clinicians' performance across various aspects of their practice, including both the quality and cost of their care in generally equal measure.

Before proposing the measure for use in MIPS, we tested the measure validity. Testing indicated that the Rheumatoid Arthritis measure reflects the cost directly related to treatment choices and the cost of related adverse outcomes such as downstream emergency department visits, hospitalizations, or post-acute care. For more information on validity testing, we refer readers to the Measure Justification Form available for download here: *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior.* These testing results were made publicly available during the PRMR process in 2023.

Finally, we do not expect that the modifications we proposed for our cost scoring methodology will have any impact on the integrity of the Rheumatoid Arthritis episode-based measure. The cost performance category scoring changes we proposed in the CY 2025 PFS proposed rule (89 FR 62085 through 62088) do not impact the calculation of the Rheumatoid Arthritis episode-based measure or clinicians' average risk-adjusted costs per episode for this measure. Instead, the proposed modifications to the cost performance category's scoring methodology would affect how clinicians' average risk-adjusted costs per episode for all cost measures are benchmarked for MIPS scoring, and assignment of achievement points for each benchmark. We refer readers to section IV.A.4.f.(1)(d) of this final rule for further discussion regarding our proposals to modify scoring of measures in the cost performance category.

Comment: Some commenters expressed concerns about the Prostate Cancer episode-based measure, stating that the highly heterogenous nature of prostate cancer makes it inappropriate for cost measurement. Two commenters stated that the measure does not sufficiently account for the range of severity in prostate cancer patients and significant variation in treatment costs. One of the commenters stated that claims data is insufficient to address disease severity.

Response: We disagree with commenters that the Prostate Cancer measure does not account for prostate cancer severity. The Prostate Cancer measure accounts for severity using several claims-based risk adjustment variables (that is, Androgen Deprivation Therapy (ADT) drugs, chemotherapy, immunotherapy, prostatectomy, Prostate-Specific Antigen (PSA) tests, and radiation). Furthermore, the measure also stratifies (that is, sub-groups) episodes based on whether the patient had a metastatic cancer diagnosis or metastatic cancer drug usage in the year prior to the episode start. This is detailed in the measure specifications available on the Cost Measures Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/.* Testing showed that indicators of high-resource use (for example, chemotherapy and immunotherapy) were strong predictors of episode cost and the sub-groups, in conjunction with the risk adjustment model, adequately account for cost variation. These results are available in the Measure Justification Form available on the Cost Measure Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/.*

While the treatment for prostate cancer can vary substantially, we disagree that this was not accounted for during the development of the measure. The Clinician Expert Workgroup identified that prostate cancer severity can influence the type of treatment and its associated episode costs. As stated previously, the measure risk adjusts and stratifies by metastatic cancer to account for the impact of prostate cancer severity on variation in treatment costs. Furthermore, the current services assigned to the measure are those the Clinician Expert Workgroup determined to be clinically related to the treatment and management of prostate cancer and associated with the attributed clinician's role in managing the patient's care.

The measure's specifications reflect the Clinician Expert Workgroup's consensus on the best approach for accounting for cancer severity given information available in claims. The Clinician Expert Workgroup considered the use of prostate cancer staging information from other sources, such as electronic health records (EHRs) or registries, but these sources lacked current and complete staging information. Ultimately, these methods would not capture the full population of patients included in the measure, making a claims-based approach more feasible and meaningful. If more granular cancer staging information becomes available via claims, we may consider changes to the measure's construction in the future. The Clinician Expert Workgroup's discussions are available for review in meeting summaries posted on the Cost Measures Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior.*

Comment: One commenter raised concerns that the majority of the PRMR panel did not support the Prostate Cancer measure. Another commenter raised concerns that the measure was not adequately tested following post-field-testing adjustments and requested CMS refrain from implementing the cost measure until the Clinician Expert Workgroup has been reconvened and testing has been completed on the refined measure that involves the broader oncology community.

Response: We disagree with commenters that the Prostate Cancer measure performance was not adequately tested following post-field-testing adjustments. The Prostate Cancer measure was tested extensively on its importance, scientific acceptability, feasibility, usability, and harmonization following the completion of its development and this testing information was included in the 2023 MUC List [856] and PRMR materials and publicly posted in the Measure Justification Form during PRMR discussions. These results were also noted for readers of the CY 2025 PFS proposed rule (89 FR 62045 through 62049) to reference.

The commenter's statement to involve the broader oncology community was unclear. However, we understand the commenter's reference to a broader oncology community to mean other interested parties involved in oncology care who were not members of the Prostate Cancer Clinician Expert Workgroup. We solicited broad input on the development and refinement of the measure from interested parties though a public comment period, Clinician Expert Workgroups, a TEP, and patients, families, and caregivers as discussed in the CY 2025 proposed rule (89 FR 62044 through 62055). While the PRMR committee did not reach consensus to support the Prostate Cancer measure, the measure testing results support the use of the measure. For example, testing found opportunities for MIPS eligible clinicians to improve cost performance,

[856] Overview of the List of Measures Under Consideration for December 1, 2023, *https://mmshub.cms.gov/sites/default/files/2023-MUC-List-Overview.pdf.*

such as substantial variation in performance scores. We calculated the distribution of the measure score for MIPS eligible clinicians that meet the case minimum to determine if there are large gaps in measure scores, and therefore, performance. The 90th percentile score was more than double the 10th percentile score at the TIN level and more than triple at the TIN–NPI level. Clinicians who were in the 90th percentile had much higher average episode costs compared to clinicians who were in the 10th percentile. This suggests there is an opportunity for improving clinician cost performance by closing the gap between the most and least efficient providers.

Testing also showed that the measure far exceeded the 0.4 threshold for mean reliability, which we reaffirmed as the threshold for reliability in the CY 2022 PFS final rule (86 FR 64996). As noted in the CY 2025 PFS proposed rule (89 FR 62052 through 62053), the Prostate Cancer measure had a mean reliability of 0.68 at the TIN level and 0.62 at the TIN–NPI level. This is considered moderate to high reliability. Furthermore, the measure captures a high-cost clinical area, fills a gap in cancer care measurement in MIPS, and enhances the Advancing Cancer Care MVP.

Comment: One commenter expressed concerns regarding potential adverse consequences related to five of the newly proposed episode-based measures affecting clinicians who treat patients from specific backgrounds, particularly Black patients. The commenter stated that the ESRD, CKD, and Kidney Transplant Management measures do not adequately account for differences in disease presentation due to the previous inclusion of race in kidney function calculations, stating that Black patients may have previously received late diagnoses of kidney disease and therefore have higher treatment costs. The commenter raised similar concerns for the Prostate Cancer measure, stating that due to existing differences in disease presentation for Black patients, clinicians could potentially discriminate against Black patients who have more costly, advanced disease with the aim to improve their MIPS score. The commenter also raised equity concerns regarding the Rheumatoid Arthritis measure, suggesting that differences in disease severity and pain level for Black patients compared to other demographics could lead to lower MIPS scores for providers who care for these patients, particularly with the inclusion of Part D medication costs in the measure. Other commenters more generally requested that CMS appropriately accounts for social drivers of health (SDOH) in the episode-based measures.

Response: We thank the commenters for their feedback and agree that it is important to consider SDOH in cost measurement. The 5 new episode-based measures referenced by the commenter include dual Medicare and Medicaid enrollment status in the risk adjustment methodology.

When considering risk adjusting for SDOH, we aim to balance the tension between fairness in performance measurement for clinicians treating vulnerable patients and the risk of perpetuating disparities for these patients if clinicians are held to different standards for different populations. Throughout cost measure development, we have considered several variables to risk adjust for SDOH, including dual Medicare and Medicaid enrollment status, Race/Ethnicity, ICD–10 Z codes, and American Community Survey indices such as Agency for Healthcare Research and Quality (AHRQ) Socioeconomic Status (SES) index and deprivation index. We considered whether these variables are available for all patients and can be reliably used in risk adjustment, which have been barriers in the past to expanding risk adjustment for SDOH. We determined that dual Medicare and Medicaid enrollment status is still the most appropriate variable to consider for risk adjustment.

We selected this approach in consideration of current peer-reviewed literature on the topic and input from the measure developer, TEP, and Clinician Expert Workgroups. This analysis did consider race/ethnicity factors, however research shows that information found in claims lacks granularity to describe the diversity of the U.S. population, with only five categories available.[857] [858] In addition, the National Quality Forum stated race as ''qualitatively different from other social risk factors because the race variable often reflects a broad range of influences.'' [859] Research also shows that social risk driven by race is often correlated with and partially captured by dual enrollment status, and that dual enrollment status is a powerful predictor of poor outcomes.[860] [861] Given this finding, we are moving forward with using dual Medicare and Medicaid enrollment status as the most appropriate variable to consider for risk adjustment.

However, we recognize the importance of the concerns raised by this commenter and will continue to monitor the episode-based measures for any unintended consequences for Black patients or other vulnerable populations.

Comment: Commenters expressed concern for and opposed the inclusion of Part D prescription drug costs in Medicare cost measures. One commenter explained that the addition of prescription drugs in cost measures would exacerbate current inequities in the Medicare program by unnecessarily penalizing physicians for factors outside of their control (including coverage, formularies, out-of-pocket costs, and transactions outside of physician negotiation). This commenter also stated they were unable to determine the impact of adding Part D drugs to the new episode-based measures due to a lack of information from CMS.

Response: We include Part D costs in many cost measures because they are important drivers of cost. We have included the Part D costs based on input from the TEP and Clinician Expert Workgroup. Per the TEP's guidance, we include Part D costs in measures after considering the following factors: whether we can assess performance without Part D, the amount of cost this represents, and whether there is a sufficient sample size to sub-group by Part D enrollment. The Clinician Expert Workgroups then provide input on which medications to include in the measure that are clinically relevant and within the reasonable influence of attributed MIPS eligible clinicians. Finally, the Part D costs are adjusted to account for expected cost differences. Specifically, Part D costs are standardized so that non-clinical cost variation (such as drug manufacturers and plans) is removed. Additionally, the measure stratifies episodes into distinct sub-groups based on whether a patient

[861] Ibid.

is enrolled in Part D to account for expected differences in costs, and a separate risk adjustment model is run for each sub-group. This results in episodes with and without Part D enrollment having similar risk-adjusted episode costs and measure scores and neutralizes the expected differences in observed episode costs.

Measure testing information on the sub-grouping of episodes with and without Part D enrollment, as well as the impact of medication costs on episodes costs are available in the Measure Justification Form available for download at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior*.

Comment: Commenters recommended CMS add specialty exclusions to the chronic condition episode-based measures to prevent inappropriate attribution to clinicians who are providing care to patients with CKD, ESRD, or rheumatoid arthritis but are not managing the patient's chronic condition. One commenter acknowledged CMS's actions to improve attribution of measures but remained concerned that the issues are ongoing and continue to penalize physicians for care outside of their control. Another commenter recommended that new, proposed cost measures should exclude nurse practitioners and physician assistants from attribution where most other MIPS eligible clinicians in their TIN are excluded from the cost measure.

Response: Generally, MIPS eligible clinicians are not excluded from episode-based measure attribution based on specialty; instead, cost measures are attributed to individual MIPS eligible clinicians and groups based on care patterns observable in claims data. Episode-based measures focus on a specific condition or procedure and are constructed so that we only include the costs of services clinically related to that care. The attribution methodology intends to capture MIPS eligible clinicians that influence the care a patient receives for this specific condition or procedure. Clinicians from multiple specialties may contribute to this care, and so the current attribution methodology for episode-based measures does not include specialty exclusions.

As described in the CY 2025 PFS proposed rule (89 FR 62048 through 62050), we continually monitor and reevaluate cost measures adopted into MIPS. However, based on the input that we received from the TEP and Clinician Expert Workgroups and from empiric analyses presented by the measure developer, the measures we proposed in the CY 2025 PFS proposed rule are appropriately specified. Clinician Expert Workgroup discussions and Measure Justification Forms with measure testing results are available for review at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior*.

Comment: Several commenters stated the importance of frequent (for example, quarterly) and actionable performance feedback and raised concerns that this was not yet available for cost measures. Commenters were concerned that MIPS eligible clinicians do not know in real time which cost measures are being attributed to them, which patients are being assigned to them, and what costs outside of their practice they are being held accountable for until after the performance period is over. They stated that, without frequent and actionable data, MIPS eligible clinicians cannot make changes to their care.

Response: We currently provide annual MIPS Performance Feedback that includes information on MIPS eligible clinicians' performance for the previous performance period. This feedback typically becomes available during the summer in between the performance period and the MIPS payment year. We provide these reports on an annual basis, as we calculate cost measures following the end of the performance period. We calculate and score the cost measures following the end of the performance period because we need to review all claims that fall within the scope of a cost measure for a given performance period. Specifically, we will score each cost measure attributed to a MIPS eligible clinician (meeting or exceeding the minimum case volume) by assigning achievement points between one and ten based on the MIPS eligible clinician's performance on the cost measure during the performance period compared to the measure's benchmark (§ 414.1380(b)(2)). Each cost measure's benchmark is based on the national averages of all other MIPS eligible clinicians attributed the same measure for the same performance period. These benchmarks are derived from cost data from all individual MIPS eligible clinicians, groups, and virtual groups that met the measure's case minimum for that performance period. MIPS eligible clinicians have episodes of care that begin and end at various times throughout the performance period, so to calculate an accurate comparison across MIPS eligible clinicians, we have historically calculated all scores following the end of the performance period. Calculating the MIPS cost measures during the performance period may provide an incomplete indication of how a MIPS eligible clinician is performing. We refer readers to section IV.A.4.f.(1)(d) of this final rule for more detailed discussion regarding our scoring methodology for cost measures.

Additionally, we post detailed measure specifications that describe the attribution methodology and a list of included services so that MIPS eligible clinicians can anticipate when their Medicare claims for treating a Medicare patient may be captured by a MIPS cost measure.

Finally, we would like to note that MIPS eligible clinicians could be rewarded for improving on their performance on a cost measure in future years based on the improvement scoring methodology, as described in § 414.1380(b)(2)(v).

We are continuing to work towards providing meaningful and timely information on cost measures generally and we recognize the importance of providing this information for measures implemented in MIPS.

Comment: Many commenters recommended that CMS introduce the proposed episode-based measures on an information-only or optional basis to allow for sufficient feedback about the measures and to assess if there are unintended consequences for the measures. Several commenters suggested 2 years as an appropriate minimum length of time. These commenters stated that, in order to fully assess any unintended consequences of the proposed episode-based measures and to evaluate CMS's methodological decisions regarding issues such as health equity, attribution, and inclusion of Part D medication costs, CMS should implement the proposed measures on an informational-only basis.

Response: For cost measures we develop, the cost measure development process (currently 18 months long) provides significant time for testing and public feedback on measure specifications, which we post publicly. As previously stated in the CY 2025 PFS proposed rule (89 FR 62051), cost measures undergo extensive review by clinicians participating in Clinician Expert Workgroups in addition to the multiple opportunities provided for public comment. The measure developer convenes Clinician Expert Workgroups to advise on measure specifications, based on iterative empiric analyses on frequency and impact of related services, patient conditions, and other risk factors. After the measure specifications are drafted, we host a national field testing period, where there is a robust public comment opportunity. Once the measures are fully developed, they undergo the pre-

rulemaking and rulemaking processes, which includes additional testing on the final measure specifications and opportunities for public comment. We strive to balance the development and testing timeline with the importance of being able to develop, adopt, and implement measures to assess cost of care in a timely manner. As we previously stated in the CY 2025 PFS proposed rule (89 FR 62045), we are striving to develop more cost measures to move closer towards the statutory goal of covering 50 percent of expenditures under Medicare Parts A and B, as specified under section 1848(r)(2)(i)(I) of the Act. In addition, as discussed in the CY 2025 PFS proposed rule (89 FR 62045), we seek to develop more cost measures to support our development of MVPs. We need to assess the impact adding a 2-year informational period could have on this policy goal and development process. We will consider the recommendation for an informational-only period for future rulemaking.

Comment: A few commenters expressed concerns about post-field testing transparency in pre-rulemaking cost measure development. These commenters stated there were significant methodological changes made to cost measures after the field testing period. These commenters requested that CMS clearly communicate these post-field testing measure specifications updates to interested parties. The commenters also expressed concern about a lack of available testing on final measure specifications and suggested that CMS publish additional testing results prior to measure proposal. A few commenters also suggested that CMS hold an additional field testing period before the rulemaking process.

Response: We disagree that final measure specifications and testing information is unavailable or that the pre-rulemaking process is not transparent. Following field testing, we reconvene the Clinician Expert Workgroups to discuss the public feedback and additional testing as we work to refine draft measure specifications. A summary of this discussion and the Clinician Expert Workgroups' recommendations are posted publicly on the Cost Measures Information page here: *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior*. Based on the field testing, public comments, Clinician Expert Workgroup feedback, and extensive empirical testing from the measure developer, we finalize any refinements to the measure specifications. We then work with the measure developer to conduct thorough testing on the final measures' performance, reliability, and validity. This testing supports submission of the measure for consideration for inclusion in the MUC List. If accepted, the measure and its specifications are shared with the PRMR members to discuss their recommendations for including these measures in MIPS. The testing results, which reflect post-field testing changes to the measure, are posted publicly in the Measure Justification Forms for each measure. In addition, if we propose to adopt the measure via rulemaking, we publish the final specifications for the proposed measures concurrently with the proposed rule. We encourage interested parties to review all measure specifications documents along with the Measure Justification Form for each proposed measure and to provide their feedback via public comment. These materials are published on the Cost Measures Information page for the public's reference: *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/*. Interested parties are welcome to provide feedback on any post-field testing measure specifications updates through the rulemaking process.

While we acknowledge that transparency regarding cost measure development is important, additional field testing periods, beyond those described above, would delay measure implementation beyond the current 18-month process, preventing us from implementing cost measures on a timely basis. We understand that more frequent testing information would be useful, and we will consider this feedback as part of future rulemaking.

Comment: Some commenters requested that CMS ensure close alignment between cost and quality measures to avoid disincentivizing appropriate care.

Response: During episode-based measure development, we consider ways to align cost and quality goals. For example, we may align a cost measure's episode window length or align the overall measure scope with existing quality measures. We work with the Clinician Expert Workgroups and review empirical data from the measure developers on the most appropriate way to do this in the specifications for each cost measure.

Additionally, MIPS is designed to assess MIPS eligible clinicians' performance on their quality and cost of care (each performance category score generally constituting 30 percent of a MIPS eligible clinician's final score), as well as improvement activities and meaningful use of CEHRT (see section 1848(q)(2)(A), (B) and (q)(5)(E) of the Act). Cost measures are used in MIPS alongside quality measures so that MIPS eligible clinicians can be assessed on the value of their care. MIPS thereby holistically assesses MIPS eligible clinicians' performance across various aspects of their practice, including both the quality and cost efficiency of their care in generally equal measure. This goal of assessing value is furthered with the transition to MVPs, which connect measures and activities across MIPS categories on sets of measures relevant to certain types of care. Measures are monitored after implementation for potential unintended consequences, such as evidence of care stinting. However, the measures already safeguard against potential care stinting by including the costs of adverse outcomes.

Comment: Some commenters urged CMS to pursue CBE endorsement for the episode-based measures.

Response: We thank the commenters for their recommendations. We will consider whether to pursue CBE endorsement for the six new episode-based measures in future evaluation cycles. As we discussed in the CY 2025 PFS proposed rule (89 FR 62051) and section IV.A.4.e.(2)(i) of this final rule, we are not required to use only CBE-endorsed measures in MIPS. Additionally, the measures undergo a robust 18-month development cycle, where feedback from public comments, persons with lived experiences, clinician experts, and other interested parties are incorporated into the measure's specifications. The measures undergo an iterative testing process, including empiric analyses to inform measure specification decisions and national field testing where extensive information on measure performance is posted publicly for feedback on potential revisions. As a result, the measure has undergone a high level of scrutiny and received varied input throughout its development, despite not having undergone the CBE endorsement process yet.

After consideration of public comments, we are finalizing the implementation of the six new episode-based measures into MIPS beginning with the CY 2025 performance period/2027 MIPS payment year. The six new episode-based measures are CKD, ESRD, Kidney Transplant Management, Prostate Cancer, Rheumatoid Arthritis, and Respiratory Infection Hospitalization. For the Rheumatoid Arthritis episode-based measure, we are finalizing measures specifications with modifications to the assigned Part D

services: to include biosimilar medications and not include ophthalmic medications. We are finalizing the other new episode-based measures (CKD, ESRD, Kidney Transplant Management, Prostate Cancer, and Respiratory Infection Hospitalization) as proposed.

(iii) Summary of Proposals To Modify Two Episode-Based Measures Beginning With the CY 2025 Performance Period/2027 MIPS Payment Year

In this section, we summarize our proposal to modify two episode-based measures currently in use in MIPS beginning with the CY 2025 performance period/2027 MIPS payment year. The episode-based measures that we proposed to modify beginning with the CY 2025 performance period/2027 MIPS payment year are listed in the Table 73, including both the original measure names and the modified measure names we proposed.

TABLE 73: Reevaluated Episode-Based Measure Modifications Beginning with CY 2025 Performance Period/2027 MIPS Payment Year

Original Measure Name	Proposed Modified Measure Name	Episode Type
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural
ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI)	Inpatient (IP) Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition

For the purpose of assessing performance of MIPS eligible clinicians in the cost performance category, we finalized, in the CY 2019 PFS final rule (83 FR 59767 through 59773), the Routine Cataract Removal with Intraocular Lens (IOL) Implantation and ST-Elevation Myocardial Infarction (STEMI) Percutaneous Coronary Intervention (PCI) episode-based measures to be included in MIPS beginning with the CY 2019 performance period/2021 MIPS payment year. In the CY 2025 PFS proposed rule (89 FR 62049 through 60253), we proposed to modify the Routine Cataract Removal with IOL Implantation and STEMI PCI measures based on input from interested parties from prior public comment periods and recommendations from Clinician Expert Workgroups.

In addition to new measure titles as set forth in Table 73, we proposed substantive modifications to these measures. While we generally describe the modifications we proposed to these two episode-based measures in this section of this final rule, we refer readers to our discussion in the CY 2025 PFS proposed rule (89 FR 62050 and 62051) for more detailed information regarding the modifications we proposed for each of these measures, and our rationale for these modifications.

We proposed modifications for the modified Cataract Removal with IOL Implantation measure (replacing the Routine Cataract Removal with IOL Implantation Measure) beginning with the CY 2025 performance period/2027 MIPS payment year as follows.

First, we proposed to modify this cost measure by expanding the patient cohort based on changes to the exclusion criteria. Testing has shown that many episodes excluded due to ocular conditions had similar cost profiles, compared to episodes included in the measure, and represented a significant portion of triggered episodes. The measure-specific expert workgroup discussed the appropriateness of the original exclusion criteria and recommended potential revisions. The modified measure includes patients with certain previously excluded ocular conditions, such as glaucoma and macular degeneration, in the measure cohort because of their similar cost profiles. In response to expanding the measure cohort, we also proposed updates to the risk adjustment model to risk adjust for ocular conditions that are no longer excluded but may still impact case complexity and episode costs. These changes are appropriate as they further account for patient heterogeneity in the more clinically diverse patient cohort. However, the modified measure continues to exclude episodes for patients with significant ocular conditions impacting surgical complication rate or visual outcomes because testing did not suggest they had similar enough cost profiles for any expected cost differences to be accounted for through risk adjustment.

Second, we proposed to modify this cost measure's service assignment specifications in two ways, to include: (1) certain clinically related telehealth services, pre-operative testing, emergency department (ED) visits for ocular complaints, and postoperative durable medical equipment (DME); and (2) certain additional clinically related Medicare Part B medication costs that were not initially included in the measure. The previous version of the measure included a smaller subset of these services. However, testing showed that additional clinically related services within these categories occur during Cataract Removal episodes and exclusion of these services from the measure could result in failure to capture important costs. We proposed to include the additional services because this change will retain the original intent of the measure while capturing a more complete picture of cost performance variation. Additionally, we proposed to expand the types of Part B medications assigned to the measure because it will be appropriate to use similar service assignment rules for all clinically related Part B medications.

Further details about the modified Cataract Removal with IOL Implantation measure are available in the measure specifications documents, which are available at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures.*

We proposed modifications for the modified IP PCI measure (replacing the STEMI PCI measure) beginning with the CY 2025 performance period/2027 MIPS payment year as follows.

First, we proposed to modify this cost measure by expanding the patient cohort based on changes to the triggering logic. The previous version of

the measure narrowly defined a subset of STEMI PCI patients to promote homogeneity of the patient cohort. However, testing demonstrated that PCI episodes with and without STEMI appear to have similar cost profiles and involve similar clinician types. Therefore, it is appropriate to expand the patient cohort in the modified measure to include episodes beyond those with STEMI diagnoses, such as PCI for non-STEMI diagnoses and PCI without either STEMI or non-STEMI diagnoses. As such, we will no longer use ICD–10 diagnosis information to restrict assessment of costs under this measure to only inpatient PCI procedures with a STEMI diagnosis. This change will increase the number of MIPS eligible clinicians and beneficiaries for whom this cost measure will be applicable.

Second, we proposed to modify this cost measure to include additional subgroups to stratify the patient cohort based on diagnosis to account for variations in cost and treatment pathways for inpatient procedures. While there are overall similarities between the diagnosis for inpatient PCI episodes (that is, STEMI, non-STEMI, and other inpatient PCI episodes), there are still expected differences in observed costs between these cohorts. This modification will allow us to assess variation in clinician cost performance rather than expected cost differences due to patient diagnoses. We believe this is appropriate because testing shows differences in observed episode costs among STEMI, non-STEMI, and other inpatient PCI episodes are neutralized via subgrouping and risk adjustment.

Third, we proposed that the modified measure excludes episodes with cardiac arrest and risk adjusts for patients with a history of tobacco use to further address heterogeneity in the patient cohort, as these cases can result in more complex treatment and higher observed costs for reasons outside of the control of the attributed clinician. This was supported by testing on the expanded patient cohort.

Further detail about the modified IP PCI measure is included in the measure specifications documents, which are available at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures.*

We invited comments on the proposals in this section.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter expressed support for the trigger codes used in the current Routine Cataract Removal with IOL Implantation measure, which we have retained for the modified Cataract Removal with IOL Implantation measure, and urged CMS not to make any additional changes to the trigger logic for routine cataract procedures, given the name change.

Response: We agree that the measure should maintain its current trigger logic methodology, based on extensive discussions with the Clinician Expert Workgroup who similarly recommended not expanding the measure to include additional procedure trigger codes. As a result, we did not propose modifications to the trigger logic for the modified Cataract Removal with IOL Implantation measure. The updated measure name reflects changes to the patient cohort based on revisions to the measure exclusions and risk adjustment methodology.

Comment: Several commenters did not support the updates to the Cataract Removal with IOL Implantation episode-based measure. They raised concerns with the expansion of the measure to include more patients with significant ocular comorbidities and opposed the removal of certain diagnosis codes from the measure's list of exclusions. A couple commenters recommended acute angle-closure glaucoma, capsular glaucoma, glaucoma secondary to eye inflammation or trauma, and other glaucoma codes classified as severe, moderate, or indeterminate severity remain exclusions. Another commenter recommended to continue to exclude diagnoses for pseudoexfoliation glaucoma and syndrome, other age-related cataracts, mature cataracts, and atrophic and exudative Age-Related Macular Degeneration (AMD).

Response: We thank the commenters for their recommendations. We determined that it is appropriate to include these patients within the measure based on empirical analyses and input from the Clinician Expert Workgroup during our reevaluation of the Routine Cataract Removal with IOL Implantation measure.

As part of the initial measure development and the comprehensive reevaluation process, we worked with the clinician experts, including the Clinical Subcommittee during Wave 1 of measure development and the Clinician Expert Workgroup during the comprehensive reevaluation, to review relevant services and patient conditions that may influence the care for the specific condition or procedure. The measure developer and clinician experts considered exclusions for episodes in which there are small patient or case cohorts that demonstrate extreme variability due to clinical heterogeneity, are not feasible for performance improvement, and cannot be mitigated via risk adjustment or service assignment. During reevaluation of the Routine Cataract Removal with IOL Implantation measure, testing showed that nearly half of the episodes meeting the trigger logic were excluded based on the original measure's exclusion criteria, despite excluded episodes for complex eye conditions having very similar observed and risk-adjusted episode cost distributions compared to the episodes include in the measure. Previous analyses also showed that the use of Hierarchical Condition Category (HCC) codes in the measure's standard risk adjustment model successfully accounted for complexity amongst patients with significant ocular comorbidities, further minimizing the need for continuing to exclude them. These testing results do not indicate that the measure will have unintended consequences as a result of no longer excluding episodes for certain ocular conditions. Taking these considerations into account, we agreed with the input from the Clinician Expert Workgroup during the reevaluation of this measure to include episodes with certain ocular conditions (for example, macular degeneration, glaucoma, and Type 2 Diabetes Mellitus with ophthalmic complications) in the measure without adjustment beyond the standard risk adjustment model, while also adding a measure-specific risk adjustor for ocular conditions that impact case complexity. Finally, episodes with significant ocular conditions impacting surgical complication rate and/or visual outcomes remain excluded in the modified measure specifications.

Comment: For the Cataract Removal with IOL Implantation measure we proposed, one commenter recommended excluding episodes for patients with a history of herpes and zoster virus, retinal degeneration, anterior scleritis, posterior polar cataracts, recurrent corneal erosions, punctate keratitis, neurotrophic keratitis, exposure keratoconjunctivitis, filamentary keratitis, lagophthalmos, and exophthalmic conditions to account for high-cost conditions that could be outside a clinician's control.

Response: We thank the commenter for their recommendations, but we do not agree that additional diagnoses should be used to exclude episodes from measure calculation at this time. We will monitor the impact of these diagnosis codes on the Cataract Removal with IOL Implantation measure. Additionally, the measure uses several

methods to minimize the impact of outlier episode costs on measure scores. For more information on how the measure accounts for outlier costs, we refer readers to the Measure Information Form published on the QPP Cost Measures Information page at *https://www.cms.gov/files/zip/2024-06-cy25-pfs-cost-measure-methods.zip.*

Comment: One commenter expressed general support for the inclusion of clinically related services in the Cataract Removal with IOL Implantation measure. However, they recommended exclusion of the costs of lenses and frames, which they consider to be outside of a clinician's control.

Response: We thank the commenters for their support of the assigned services proposed for this modified measure and their recommendation not to include lenses and frames. We continue to believe it is appropriate to include the costs of durable medical equipment (DME) in this measure based on input from the Clinician Expert Workgroup. The Clinician Expert Workgroup supported the inclusion of postoperative DME costs in the Cataract Removal with IOL Implantation measure, as MIPS eligible clinicians may prescribe these for patients after the cataract removal procedure. The Clinician Expert Workgroup's discussions are available for review in meeting summaries posted on the Cost Measures Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior.*

Comment: One commenter urged CMS to risk adjust for ICD–10 Z codes for SDOH in the Cataract Removal with IOL Implantation measure.

Response: These codes are not currently available to incorporate into cost measures because of concerns that they are not routinely and consistently coded on Medicare claims. We will continue to monitor ICD–10 Z codes for potential future use in cost measures.

We considered additional risk adjustment for SDOH during the reevaluation of the Routine Cataract Removal with IOL Implantation measure. While ICD–10 Z codes are not a viable option at this time, we tested whether it would be appropriate to risk adjust for dual Medicare and Medicaid enrollment status. We examined the associations between a patient's dual enrollment status and provider performance. Testing demonstrated that most clinicians perform equally well or even significantly better on episodes for patients with dual enrollment status compared to other episodes, which suggests that it is possible for clinicians to mitigate the effect of social risk factors. Additionally, risk adjusting for dual enrollment status does not appear to substantially change the performance ranking for many clinicians. These results support not including a risk adjustment variable for dual enrollment status in the Cataract Removal with IOL Implantation measure at this time. More information about this testing is included in the Measure Justification Form available on the QPP Cost Measures Information page at *https://www.cms.gov/files/zip/2023-wave-1-reevaluated-measure-justification-forms.zip.*

Comment: One commenter expressed support for risk adjusting for certain patient conditions and use of services in the modified Cataract Removal with IOL Implantation measure that were excluded in the original measure. They stated this modification could broaden patient eligibility and help mitigate the impact of outlier cases that skew performance scores.

Response: We agree that the risk adjustment variables added to the Cataract Removal with IOL Implantation measure result in broader eligibility while still accounting for potential differences in cost due to patient-level factors.

Comment: Commenters had mixed feedback on the inclusion of Part B drugs with separate payment status, including non-opioid pain management drugs and drugs with pass-through payment statuses, in the Cataract Removal with IOL Implantation measure. One commenter supported the inclusion of Part B medications with separate payment statuses, when clinically relevant. However, many commenters raised concerns about their inclusion and recommended that Omidria, Dextenza, and IHEEZO not be included in the measure. These commenters stated that their inclusion could disincentivize use of drugs, discourage medication innovation, and bias drug data collected during the pass-through period. Some commenters opposed the inclusion of Part B medications altogether from the measure as to not inadvertently incentivize the use of opioids in routine procedures.

Response: We disagree with the comment that including costs of clinically related Part B medications would necessarily disincentivize their use. Part B medications are included in the original Routine Cataract Removal with IOL Implantation measure, which was reviewed and endorsed by a CBE in Spring 2019.[862] The Clinician Expert Workgroup for the modified Cataract Removal with IOL Implantation measure closely reviewed service assignment rules to determine whether assignment of service categories contributes to the measure's ability to differentiate between clinician performance and is within a clinician's reasonable influence. Once a clinically related service is assigned to an episode, its ability to reduce complications or improve quality of care can be captured in the measure through a reduction in downstream costs of care. In the same way, the inclusion of clinically related Part B costs does not incentivize the use of inappropriately administered medications, as the practice would be reflected in the measure as higher downstream costs of care.

During reevaluation, the Clinician Expert Workgroup for the Cataract Removal with IOL Implantation measure carefully evaluated Part B medication costs and agreed that it is important to have similar service assignment rules for all clinically related drugs with separate payment statuses, including those under pass-through status, as selective inclusion could have unintended consequences. This sentiment was also echoed by public comments received prior to and during the reevaluation process. While clinically related Part B medications can be indicated for use in cataract procedures and result in better quality care and outcomes, clinician experts noted that they could also represent low value care if not used appropriately. The Clinician Expert Workgroup's discussions are available for review in meeting summaries posted on the Cost Measures Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/prior.* Not including these medications would result in important costs not being captured when looking at overall costs of a cataract removal episode.

Comment: One commenter supported the proposed modifications to the STEMI PCI measure under the newly titled IP PCI measure because the modifications intend to provide a more comprehensive, fair, and accurate assessment of costs associated with PCI procedures. The commenter did caution that the expanded patient cohort could introduce added complexity in the measure calculation and that ongoing feedback should be available to monitor the impact of the changes.

Response: We thank the commenter for their support of the IP PCI episode-based measure, reflecting modifications

[862] National Quality Forum, *Cost and Efficiency, Spring 2019 Cycle: CDP Report https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=92292.*

to the STEMI PCI measure. As we explained in the CY 2025 PFS proposed rule (89 FR 62051), we decided to expand the patient cohort for the IP PCI measure beyond STEMI diagnoses based on the empirical data presented by the measure developer and input from the Clinician Expert Workgroup members. To account for the expanded patient cohort and the expected differences in observed costs, the measure is stratified into three sub-groups based on diagnosis and each sub-group uses a separate risk adjustment model. The Clinician Expert Workgroup agreed with using this approach to account for variations in treatment pathways and costs for STEMI and non-STEMI diagnoses.

We also thank the commenter for their recommendation for ongoing feedback to monitor the impact of measure changes. In addition to publicly posting measure specifications that describe each cost measure's scope and stratification, we also release annual QPP Feedback Reports that will include feedback on the modified episode-based measure and publish Public Use Files (PUF) with additional data available for clinicians to review. Additionally, interested parties can contact the Quality Payment Program Service Center to request additional clarifications on the measure specifications. We will continue to monitor the impact of these changes on MIPS eligible clinicians and consider making available additional data about the measure.

Comment: One commenter did not support the proposal to include non-STEMI PCI patients in the modified IP PCI episode-based measure because of the differences between PCI procedures performed for STEMI versus other diagnoses. The commenter recommended developing separate measures for the 2 conditions.

Response: We disagree that it is inappropriate to include diagnoses for both STEMI and non-STEMI conditions in the IP PCI measure. The IP PCI's measure specifications account for expected cost differences between PCI procedures performed for a wider set of diagnoses by creating sub-groups for episodes where there is a diagnosis for STEMI, non-STEMI, or neither STEMI nor non-STEMI. During the reevaluation process, the measure developer and Clinician Expert Workgroup reviewed testing results that showed risk adjustment effectively mitigated cost differences between the three subgroup populations, which is expected based on the design of the risk adjustment model. This approach stratifies episodes into distinct sub-groups, and a separate risk adjustment model is run for each sub-group, resulting in an average observed cost to expected cost ratio that is centered around 1.0 for each subgroup. The observed cost to expected cost ratio is used to calculate the dollar value score for each episode, so the average dollar value score for episodes across each subgroup will be similar. This results in PCI episodes for each diagnosis type having similar risk-adjusted episode costs and measure scores, and neutralizes the expected differences in observed episode costs.

After consideration of public comments, we are finalizing the modifications to two existing episode-based measures in MIPS beginning with the CY 2025 performance period/2027 MIPS payment year, as proposed.

(b) Reliability and Case Minimum

In this section of this final rule, we describe the case minima we proposed for the episode-based measures we proposed to adopt and modify in the CY 2025 PFS proposed rule and are finalizing in section IV.A.4.e.(2) of this final rule, as discussed previously.

Reliability is a metric that evaluates the extent that variation in a measure comes from clinician performance (''signal'') rather than random variation (''noise''). Higher reliability suggests that a measure is effectively capturing meaningful differences between clinicians' performance. However, we continued to caution against using reliability as the sole metric to evaluate a measure because of the tradeoffs between accuracy and reliability, and the role of service assignment in reducing noise. These and other considerations are detailed in the CY 2022 PFS final rule (86 FR 65453 through 65455). We also noted that increasing case minima necessarily reduces the number of clinicians who meet the case minimum for a given measure. Because these are clinically refined measures, we aim to have as many MIPS eligible clinicians as possible to be able to have their costs evaluated by them. Therefore, we considered that a mean reliability of 0.4 represents moderate reliability because it accounts for these considerations and is a sufficient threshold to ensure that the measure is performing as intended when assessed in conjunction with other testing.

We previously established at § 414.1350(c)(5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures and at § 414.1350(c)(4) a case minimum of 10 episodes for procedural episode-based measures in the CY 2019 PFS final rule (83 FR 59773 through 59774). We also established at § 414.1350(c)(6) a case minimum of 20 episodes for chronic condition episode-based measures in the CY 2022 final rule (86 FR 65453 through 65455).

As we described in the CY 2025 PFS proposed rule, we examined the reliability of the eight episode-based measures (six new and two modified) we proposed in this rulemaking, and Table 74 presents the percentage of tax identification numbers (TINs) and TIN/National Provider Identifiers (NPIs) that meet the 0.4 reliability threshold and the mean reliability for TINs and TIN/NPIs at our case minimum of 20 for each of the chronic condition and acute inpatient medical condition episode-based measures. At a 20-episode case minimum, the mean reliability for the measures exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. For the procedural measure, Cataract Removal with Intraocular Lens (IOL) Implantation, we applied the case minimum of 10 episodes. At a 10-episode case minimum, the mean reliability for the measure exceeds 0.4 for both groups and individual clinicians, and all groups and individual clinicians meet the 0.4 reliability threshold.

TABLE 74: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold and TIN and TIN/NPI Mean Reliability

Measure name	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Prostate Cancer	87.4%	0.68	84.1%	0.62
Rheumatoid Arthritis	95.0%	0.74	97.3%	0.76
Chronic Kidney Disease	88.8%	0.63	82.3%	0.57
End-Stage Renal Disease	92.5%	0.65	90.0%	0.59
Kidney Transplant Management	91.2%	0.64	95.8%	0.68
Respiratory Infection Hospitalization	100.0%	0.74	100.0%	0.53
Cataract Removal with Intraocular Lens (IOL) Implantation	100.0%	0.97	100.0%	0.96
Inpatient (IP) Percutaneous Coronary Intervention (PCI)	100.0%	0.63	100.0%	0.52

Calculating these episode-based measures with these case minimums will accurately and reliably assess the performance of clinicians and clinician group practices. Therefore, we proposed to adopt a case minimum of 20 episodes for the chronic condition (CKD, ESRD, Kidney Transplant Management, Prostate Cancer, Rheumatoid Arthritis) and acute inpatient medical condition (Respiratory Infection Hospitalization and IP PCI) measures and a case minimum of 10 episodes for the procedural measure (Cataract Removal with IOL Implantation) listed in Table 74. For the IP PCI and Cataract Removal with IOL Implantation, these case minimums remain consistent with the case minimums for the original measures (that is, STEMI PCI and Routine Cataract Removal with IOL Implantation) that are currently in use. These proposals are also consistent with our regulation at § 414.1350(c)(4) through (6). We did not propose to modify these regulations establishing the case minima for these types of cost measures.

We invited comments on the proposals in this section.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for the 20-episode case minimum for the new episode-based measures while encouraging CMS to monitor administrative burdens.

Response: We appreciate the commenters' support and agree that this is an appropriate case minimum. We will continue to monitor the impact the episode-based measure case minima may have on MIPS eligible clinicians.

After consideration of public comments, we are finalizing our proposals to adopt a case minimum of 20 episodes for the chronic condition (CKD, ESRD, Kidney Transplant Management, Prostate Cancer, Rheumatoid Arthritis) and acute inpatient medical condition (Respiratory Infection Hospitalization and IP PCI) measures and a case minimum of 10 episodes for the procedural measure (Cataract Removal with IOL Implantation), as proposed.

(c) Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

In accordance with section 1848(r)(2)(H) of the Act, we proposed to revise the operational list beginning with the CY 2025 performance period/2027 MIPS payment year to include 6 new care episode and patient condition groups, based on input from clinician specialty societies and other interested parties, to reflect the new episode-based measures we are finalizing as described in section IV.A.4.e.(2)(ii) of this final rule. We proposed including Respiratory Infection Hospitalization as a care episode group and CKD, ESRD, Kidney Transplant Management, Prostate Cancer, and Rheumatoid Arthritis as patient condition groups. These care episode and patient condition groups serve as the basis for the six new episode-based measures that we are finalizing as described in section IV.A.4.e.(2)(ii) of this final rule for the cost performance category. The codes that define these six care episode and patient condition groups align with the trigger codes of the episode-based measures in section IV.A.4.e.(2)(ii)of this final rule. These specifications are developed with extensive input from interested parties.

Additionally, we proposed to revise the care episode group codes listed to align with the modifications proposed for Cataract Removal with Intraocular Lens (IOL) Implantation and Inpatient (IP) Percutaneous Coronary Intervention (PCI) measures in section IV.A.4.e.(2)(iii) of this final rule.

For context on the statutory requirements for care episode and patient condition groups and changes to the operational list, we refer readers to the CY 2025 PFS proposed rule (89 FR 62054 through 62055).

Our revisions to the operational list are available on our QPP Cost Measure Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/about*.

We invited public comment on our proposals in this section.

We did not receive public comments on these proposals. We are finalizing the revisions to the operational list to include care episode group codes that align with the new and modified episode-based measures, as proposed, beginning with the CY 2025 performance period/2027 MIPS payment year.

(d) Removal Criteria for MIPS Cost Measures

Once adopted, cost measures are retained in the cost performance category measure inventory, except when we specifically proposed to remove a measure. We have identified a need to establish and codify objective criteria that can be used to inform the removal of a cost measure from the MIPS cost performance category. Specifically, when removing the Simple Pneumonia with Hospitalization episode-based measure from the CY 2024 PFS final rule (88 FR 79348 through 79349), we confirmed that, unlike the MIPS quality performance category, the MIPS cost performance category did not have clear guidelines for removing a measure established through the notice-and-comment rulemaking process. Establishing such criteria will allow for more consistency in our evaluation of the cost measures and our decision on whether to propose that a cost measure be removed from the MIPS cost performance category.

Therefore, we proposed to adopt the following factors that can be used to guide the removal of a cost measure:

- Factor 1: It is not feasible to implement the measure specifications.
- Factor 2: A measure steward is no longer able to maintain the cost measure.
- Factor 3: The implementation costs or negative unintended consequences associated with a cost measure outweigh the benefit of its continued use in the MIPS cost performance category.
- Factor 4: The measure specifications do not reflect current clinical practice or guidelines.
- Factor 5: The availability of a more applicable measure, including a measure that applies across settings, applies across populations, or is more proximal in time to desired patient outcomes for the particular topic.

We selected these factors for our proposal because they address instances that we anticipate, based on previous experience, where a cost measure may not be appropriate to maintain in a program, but not limited to these instances. We also worked to align these criteria with the MIPS quality removal considerations and criteria set forth in the CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959), where possible, and, in part, the Hospital Value-Based Purchasing (HVBP) Program's removal factors that are codified in our regulations at 42 CFR 412.164(c)(3). We proposed these specific criteria to encourage a degree of alignment between existing measure removal policies within MIPS and across Medicare programs, where appropriate, for cost measures. For more information on our considerations when determining these removal criteria, we refer readers to the CY 2025 PFS proposed rule (89 FR 62055).

We note that these factors are criteria that will be used as guidance when considering whether to propose to remove a measure, rather than firm requirements. Specifically, there could be instances when a measure meets one or multiple measure removal factors, but will be retained in the cost performance category regardless, if we determine that the benefit of keeping the measure in the cost performance category will outweigh the benefit of removing it. Prior to proposing a measure for removal in accordance with this policy, we will carefully review the specifications of the cost measures by conducting necessary literature reviews, empirical testing, or other information gathering.

Additionally, we proposed to codify this measure removal policy by amending § 414.1350 by adding the cost removal criteria in paragraph (e). Specifically, we proposed at § 414.1350(e) that we may remove a cost measure from MIPS based on one or more of the following factors, provided however that we may retain a cost measure that meets one or more of the following factors if we determine the benefit of retaining the measure outweighs the benefit of removing it.

- It is not feasible to implement the measure specifications.
- A measure steward is no longer able to maintain the cost measure.
- The implementation costs or negative unintended consequences associated with a cost measure outweigh the benefit of its continued use in the MIPS cost performance category.
- The measure specifications do not reflect current clinical practice or guidelines.
- The availability of a more applicable measure, including a measure that applies across settings, applies across populations, or is more proximal in time to desired patient outcomes for the particular topic.

We invited comments on this proposal.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters supported the proposal and agreed with the proposed criteria for removing a cost measure from the program. One commenter stated that these criteria were straightforward and reasonable. One commenter expressed the belief that feasibility should be a pre-requisite to the cost measure removal process.

Response: We thank the commenters for their support and agree that these are reasonable guidelines for removing a cost measure from use.

Comment: Several commenters requested that CMS remove the TPCC measure based on these criteria.

Response: We thank the commenters for their feedback. We will consider the cost measure removal criteria in future years to determine whether the TPCC measure, or any other cost measures, should be proposed for removal.

After consideration of public comments, we are finalizing the cost measure removal criteria as proposed and are finalizing our proposal to codify this cost measure removal policy at § 414.1350(e) as proposed.

(e) Summary of Measures Specified for the Cost Performance Category Beginning With the CY 2025 Performance Period/2027 MIPS Payment Year

The previously established measures for the cost performance category, and those measures being finalized in this rule, specified for the CY 2025 performance period/2027 MIPS payment year and future periods are summarized in Table 75.

BILLING CODE 4120–01–P

TABLE 75: Summary Table of Previously Established and Finalized Cost Measures for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Performance Periods

Measure Topic	Measure Type	Case Minima	Measure Status
Acute Kidney Injury Requiring New Inpatient Dialysis	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural episode-based	10 episodes	As modified in this rule for use for the CY 2025 Performance Period and beyond
Colon and Rectal Resection	Procedural episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Elective Outpatient Percutaneous Coronary Intervention (PCI)	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Elective Primary Hip Arthroplasty	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Femoral or Inguinal Hernia Repair	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and
Hemodialysis Access Creation	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Knee Arthroplasty	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Lumpectomy, Partial Mastectomy, Simple Mastectomy	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Melanoma Resection	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Non-Emergent Coronary Artery Bypass Graft (CABG)	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Renal or Ureteral Stone Surgical Treatment	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Screening/Surveillance Colonoscopy	Procedural episode-based	10 episodes	Currently in use for the CY 2025 Performance Period and beyond
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	Acute inpatient medical condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Inpatient (IP) Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition episode-based	20 episodes	As modified in this rule for use for the CY 2025

Measure Topic	Measure Type	Case Minima	Measure Status
			Performance Period and beyond
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Lower Gastrointestinal Hemorrhage *(at group level only)*	Acute inpatient medical condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Psychoses and Related Conditions	Acute inpatient medical condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Respiratory Infection Hospitalization	Acute inpatient medical condition episode-based	20 episodes	As finalized in this rule for use for the CY 2025 Performance Period and beyond
Sepsis	Acute inpatient medical condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Asthma/Chronic Obstructive Pulmonary Disease (COPD)	Chronic condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Chronic Kidney Disease (CKD)	Chronic condition episode-based	20 episodes	As finalized in this rule for use for the CY 2025 Performance Period and beyond
Depression	Chronic condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Diabetes	Chronic condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
End-Stage Renal Disease (ESRD)	Chronic condition episode-based	20 episodes	As finalized in this rule for use for the CY 2025 Performance Period and beyond
Heart Failure	Chronic condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Kidney Transplant Management	Chronic condition episode-based	20 episodes	As finalized in this rule for use for the CY 2025 Performance Period and beyond
Low Back Pain	Chronic condition episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Prostate Cancer	Chronic condition episode-based	20 episodes	As finalized in this rule for use for the CY 2025 Performance Period and beyond
Rheumatoid Arthritis	Chronic condition episode-based	20 episodes	As finalized in this rule for use for the CY 2025 Performance Period and beyond

BILLING CODE 4120–01–C

Measure Topic	Measure Type	Case Minima	Measure Status
Emergency Medicine	Care Setting episode-based	20 episodes	Currently in use for the CY 2025 Performance Period and beyond
Medicare Spending Per Beneficiary Clinician	Population-based	35 episodes	Currently in use for the CY 2025 Performance Period and beyond
Total Per Capita Cost	Population-based	20 beneficiary months	Currently in use for the CY 2025 Performance Period and beyond

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 Physician Fee Schedule (PFS) final rule (83 FR 59776 and 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2021 PFS final rule (85 FR 84881 through 84886), the CY 2022 PFS final rule (86 FR 65462 through 65466), the CY 2023 PFS final rule (87 FR 70057 through 70061), and the CY 2024 PFS final rule (88 FR 79350 and 88 FR 79351). We also refer readers to § 414.1305 for the definitions of improvement activities and attestation, § 414.1320 for standards establishing the performance period, § 414.1325 for the data submission requirements, § 414.1355 for standards related to the improvement activity performance category generally, § 414.1360 for data submission criteria for the improvement activity performance category, and § 414.1380(b)(3) for improvement activities performance category scoring.

In the CY 2025 PFS proposed rule (89 FR 62055 through 62059) we proposed two changes to the traditional Merit-based Incentive Payment System (MIPS) and the MIPS Value Pathways (MVPs) improvement activities policies for the CY 2025 performance period/2027 MIPS payment year. First, we proposed to eliminate the weighting of improvement activities. Second, we proposed to reduce the number of activities to which clinicians are required to attest to achieve a full score in the improvement activities performance category. We also proposed to codify at § 414.1355 the seven improvement activity removal factors, which were adopted in the CY 2020 PFS final rule (FR 84 62988 through 62990) to establish the criteria used to identify improvement activities for potential modification or removal from the improvement activities Inventory. In addition, we proposed changes to the improvement activities Inventory for the CY 2025 performance period/2027 MIPS payment year and future years as follows: adding two new improvement activities; modifying two existing improvement activities; and removing eight previously adopted improvement activities.

(b) Improvement Activities Inventory

(i) Annual Call for Activities Background

We refer readers to the CY 2025 PFS proposed rule (89 FR 62056) for details about the annual Call for Improvement Activities.

(ii) Codification of Improvement Activity Removal Factors

In the CY 2018 Quality Payment Program proposed rule (82 FR 30056), we solicited comments on the criteria that may be used to identify improvement activities for potential removal from the improvement activities Inventory, citing that, over time, certain improvement activities should be considered for removal to ensure the Inventory is robust and relevant (84 FR 40764). In the CY 2020 PFS final rule (84 FR 62988 through 62990), we established seven removal factors to identify improvement activities for potential modification or removal from the improvement activities Inventory. In the CY 2025 Quality Payment Program proposed rule (89 FR 62056),We proposed to codify at § 414.1355 the following existing seven improvement activity removal factors:

- Factor 1: Activity is duplicative of another activity.
- Factor 2: There is an alternative activity with a stronger relationship to quality care or improvements in clinical practice.
- Factor 3: Activity does not align with current clinical guidelines or practice.
- Factor 4: Activity does not align with at least one meaningful measure area.
- Factor 5: Activity does not align with the quality, cost, or Promoting Interoperability performance categories.
- Factor 6: There have been no attestations of the activity for 3 consecutive years.
- Factor 7: Activity is obsolete.

We note that these factors are criteria that are used as guidance in determining removal of an activity, but their use is at our discretion. For example, there may be instances when an activity meets one or multiple activity removal factors but may be retained in the improvement activities performance category Inventory, because the benefit of retaining the improvement activity outweighs the benefit of removing it. We believe that codifying these removal factors will provide transparency and consistency with removals of improvement activities from the Inventory by requiring that elements of each activity are objectively reviewed and justification for removal is clearly identified.

We received comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed support for our proposal to codify these seven improvement activity removal factors, citing that this would provide clarity when providing justification for changes to the Inventory. A few commenters requested that CMS provide a detailed rationale for why certain improvement activities are removed.

Response: We appreciate commenters' support. For detailed information about the rationale for activity removals, we refer commenters to Table C of Appendix 2 of this final rule.

Comment: Multiple commenters requested that CMS follow a policy of retaining activities when the benefits of retaining the activity outweigh the benefits of removing them. They recommended that we err on the side of

retaining activities if they continue to offer clinical relevance and benefit to their patient populations. One commenter asked CMS to consider clinical professional society guidelines and practices as well as quality measurement standards when creating removal factors so that all types of practitioners have improvement activities available to them.

Response: We appreciate these suggestions. In our efforts to streamline and refine the improvement activities Inventory, we have and will continue to fully examine each activity for clinical relevance and applicability prior to proposing to remove the improvement activity. The removal or modification of an improvement activity from the Inventory will occur through notice-and-comment rulemaking. Commenters will have an opportunity to provide their input during the notice-and-comment rulemaking process.

Comment: A few commenters had concerns regarding Activity Removal Factor 7 (activity is obsolete) and its consideration of activities that are commonly reported and are thus ''overutilized'' and ''achieved.'' One commenter argued that an activity that is frequently reported by clinicians demonstrates the activity's importance to improving patient care. Another commenter requested that we clearly define ''obsolete'' and clarify how the value of the activity across varying specialties is evaluated.

Response: For Activity Removal Factor 7, we consider an activity ''obsolete'' when it is no longer available or can no longer be completed by eligible clinicians as an improvement activity. In vetting and establishing this Removal Factor, we employed a commonly used definition of ''obsolete'' as in 'out of date.' In the context of the Quality Payment Program, this means an activity that no longer reflects current clinical best practices, that is no longer available for implementation (*e.g.,* when a program or initiative upon which an activity depends has been ended or closed), and/or that, because of the nature of the activity, cannot be attested to year after year with a reasonable expectation of clinical quality improvement year after year. For example, in Appendix 2 of the CY 2024 PFS final rule, we finalized the removal of ''Consulting Appropriate Use Criteria (AUC) Using Clinical Decision Support (CDS) when Ordering Advanced Diagnostic Imaging'' (IA_PSPA_29) under removal factor 7 because the AUC CDS program ended and it was no longer possible to attest to this activity. This criterion also applies to activities for which the required actions are completed once or a finite number of times and that, because of the nature of the activity, cannot be repeated year after year to improve clinical care. Once the requirements of an activity are met, continuing to attest to the activity that has already been completed is not considered meeting the intent of improving clinical care. For example, in Appendix 2 of this final rule, we are finalizing the removal of ''Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record'' (IA_EPA_1) under Removal Factor 7. A clinician or group practice meets the requirements of this activity if they complete the establishment of expanded hours of access to the patient medical record, alternative methods for accessing patient information, and/or a process for providing rapid access to patient information during urgent care or transition management. However, continuing to maintain this access year after year does not significantly improve care year after year. This improvement activity is obsolete because EHR systems that provide 24/7 access and health exchange of patient data by clinicians and groups have largely been adopted and, therefore, the goal of this improvement activity has largely been achieved.

Comment: One commenter expressed concern over Activity Removal Factor 1 (activity is duplicative of another activity), indicating that they disagree with a removal criterion that indicates that activities are duplicative of quality measures.

Response: We agree with the commenter that alignment between the various MIPS performance categories is often a benefit, not a weakness, as it promotes harmonization around key care improvement goals while reducing burden. Activity Removal Factor 1 identifies when multiple improvement activities in the Inventory overlap in their requirements, goals and/or clinical scope and can justifiably be removed or modified. This removal factor is beneficial in streamlining the Inventory so that all activities are unique and clinically relevant without being redundant.

Comment: One commenter requested additional clarification regarding how activities will be identified for removal under Activity Removal Factor 2 (there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice). Specifically, the commenter expressed concern that ''stronger relationship to quality care'' is not clearly defined and therefore could have unintended consequences of removing activities that are critical to certain specialties. The commenter also asked how this removal factor differs from Activity Removal Factor 1 (activity is duplicative of another activity). If the activity considered for removal is not duplicative of an existing activity, it may have an important role.

Response: For Activity Removal Factor 1, we evaluate and identify two or more improvement activities that require the same or similar actions to be completed in order to achieve clinical practice improvement in the same clinical area. For Activity Removal Factor 2, we evaluate activities within each subcategory and activities that pertain to similar clinical areas to identify whether one activity may yield a stronger relationship to clinical practice improvement. Even when activities are not duplicative, some activities may promote a higher level of clinical practice improvement in a clinical area than others. Over the last several performance years, we have observed that some activities have not remained aligned with the latest clinical practice standards, have not incorporated the latest national priorities, and/or have activity requirements that are no longer substantive enough to promote a sufficient level of clinical practice improvement in today's health care environment. As we review activities and refine the Inventory, this removal factor will enable us to retain the most robust and clinically meaningful improvement activities.

After consideration of comments, we are finalizing the codification of seven improvement activity removal factors at§ 414.1355, as proposed.

(iii) Changes to the Improvement Activities Inventory

We refer readers to the CY 2025 PFS proposed rule (89 FR 62056 through 62057) for details about proposed changes to the improvement activities Inventory.

We also refer readers to the Quality Payment Program website under Explore Measures and Activities at *https://qpp.cms.gov/mips/explore-measures?tab=improvement Activities&py=2023#measures* for a complete list of the current improvement activities.

We proposed to add two new improvement activities, modify two existing improvement activities, and remove eight previously adopted improvement activities for the CY 2025 performance period/2027 MIPS payment year and future years. We refer readers to Appendix 2 of the CY 2025

PFS proposed rule (89 FR 62571) for more details.

In response to stakeholder feedback, we are making efforts to streamline the Inventory over the coming rulemaking cycles to include only the most robust and clinically meaningful improvement activities. The removal and modification of 10 total activities is an initial step toward our goal of reducing the size of the Inventory and helping to ensure that it includes only the most meaningful activities that have a clear path to clinical practice improvement, while the two proposed new activities would help fill gaps we have identified in the Inventory.

We proposed two new improvement activities in the Population Management subcategory (89 FR 62057). One new activity, IA_PM_24, titled ''Implementation of Protocols and Provision of Resources to Increase Lung Cancer Screening Uptake'' will allow MIPS eligible clinicians to receive credit for establishing a process or procedure to increase rates of lung cancer screening. While lung cancer is a leading cause of cancer-related deaths in the U.S., lung cancer screening is under-utilized.[863] [864] [865] [866] This activity aims to increase this screening and improve associated outcomes. Another activity, IA_PM_25, titled ''Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk'' will allow MIPS eligible clinicians to receive credit for implementing a standardized, evidence-based cardiovascular disease risk assessment and care management plan in their practices. This activity is informed by the results of the CMS Innovation Center Million Hearts Model, which included initial atherosclerotic cardiovascular disease (ASCVD) assessment as well as cardiovascular care management. ASCVD assessment and care management were shown to contribute to improved identification and treatment of patients at risk for ASCVD;[867] this activity expands on the work of the Million Hearts Model by (1) increasing flexibility in requirements, allowing more clinician specialties to participate; increased flexibility in risk assessment will fit the needs of attesting clinicians and their patient populations; and (2) requiring the use of structured documentation of risk factors and associated treatment plans with the aim of addressing all risk factors directly.

We proposed two modifications to improvement activities focused on strengthening the activities to better promote more meaningful clinical practice improvement (89 FR 62057). We proposed to modify IA_PM_26 (formerly IA–ERP_6), titled ''Vaccine Achievement for Practice Staff—COVID–19, Influenza, and Hepatitis B,'' and its validation criteria to revise its target goals, and to expand its focus and promote the vaccination of staff for COVID–19 as well as Influenza and Hepatitis B. Adjusting the target goals for this activity aligns with the latest Centers for Disease Control and Prevention (CDC) recommendations,[868] and feedback received over the last 2 years indicates that this could increase its utilization. Additionally, we proposed to expand the focus of this activity to include influenza and hepatitis B to highlight the importance of staff vaccination for vaccine-preventable diseases prevalent today. We also proposed to change the activity's subcategory, from Emergency Response & Preparedness to Population Management, to emphasize that staff vaccination is a long-term strategy in reducing morbidity and mortality rates for these diseases.

We proposed to modify IA_BE_4, currently titled ''Engagement of patients through implementation of improvements in patient portal,'' and its validation criteria to limit the activity to new implementations of a patient/caregiver portal and encourage the measure's adoption by clinicians who do not currently utilize this health information exchange technology. We proposed to modify this activity's name, description, and its validation criteria to better align with current practices. This activity was originally created during a time of transition to EHRs to encourage electronic information exchange. It has become standard practice to use patient portals; therefore, the activity is no longer driving improvement among clinicians who have already implemented patient portals.

We separately proposed to remove eight existing activities, presented in Table 76:

TABLE 76: Improvement Activities Inventory: Proposed Removals

Proposed Removals Titles	*Removal Criteria (Factor)*
EPA_1 Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record	Factor 7, activity is obsolete
PM_12 Population empanelment	Factor 7, activity is obsolete
CC_1 Implementation of use of specialist reports back to referring clinician or group to close referral loop	Factor 1, activity is duplicative; Factor 5, activity does not align with quality, cost, or promoting interoperability performance categories
CC_2 Implementation of improvements that contribute to more timely communication of test results	Factor 7, activity is obsolete
ERP_4 Implementation of a Personal Protective Equipment (PPE) Plan	Factor 7, activity is obsolete
ERP_5 Implementation of a Laboratory Preparedness Plan	Factor 7, activity is obsolete
BMH_8 Electronic Health Record Enhancements for BH data capture	Factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice
PSPA_27 Invasive Procedure or Surgery Anticoagulation Medication Management	Factor 1, activity is duplicative

We refer readers to Appendix 2 to this final rule for details on the proposed revisions to the improvement activities Inventory, the comments we received on these activities, our responses to those comments, and the final disposition of each proposal.

In addition to the comments on individual activities we received, which are addressed in Appendix 2 to this final rule, we received comments on our reporting and scoring proposals as well as policies around the maintenance of the improvement activities Inventory. The following is a summary of these comments and our responses.

Comment: One commenter recommended that CMS consider the relative effort of activities when evaluating the IA inventory as a whole. Another commenter asked that we continue to add new activities when appropriate to ensure that a diversity of activities with a manageable effort level are available for all clinicians.

Response: We appreciate commenters' suggestions on ways to maintain an Inventory of activities that are diverse, robust, and meaningful. We agree with this approach to review and assess each activity on a regular basis for relevance and effectiveness in promoting clinical practice improvement while adding new activities that incorporate varying aspects of clinical care that may not already be addressed. As we work to streamline the Inventory, the overall number of improvement activities from which MIPS eligible clinicians can choose is reduced; however, each retained activity highlights a unique and vital aspect of clinical practice improvement, and therefore every activity remaining in the Inventory would be considered a high priority activity.

Comment: Several commenters requested that CMS give a one-year notice before removing an activity so that practices have enough time to plan for changes. For example, activities proposed for removal in the CY 2025 PFS proposed rule should not be removed from the program until the 2026 performance year. Since the final rule does not come out until roughly a month before the start of the applicable performance year, and practices need ample time to plan for any changes, particularly when reporting a different activity would require a financial investment or increased resource allocation.

Response: We appreciate this comment. A blanket delay of the removal of all eight activities as proposed would not be necessary. At least four of the eight proposed activity removals still offer a significant opportunity to streamline the Inventory by eliminating activities that have been determined to be less substantive. We also believe that the reduction in the number of activities to report offsets any burden on clinicians to select alternate activities to report for CY 2025.

After consideration of comments, we are finalizing as proposed the addition of two new activities, the modification of one activity, and the removal of four activities in the improvement activities Inventory for the CY 2025 performance year/2027 MIPS payment year and subsequent years. We are also finalizing the delay removal of four activities and modification of one activity until the CY 2026 performance year/2028 MIPS payment year to allow clinicians time to plan and budget for selecting alternate activities to report. We refer readers to Appendix 2 of this final rule for details on the finalized revisions to the improvement activities Inventory.

(iv) Improvement Activity Scoring and Reporting Policies

In the CY 2025 Quality Payment Program proposed rule (89 FR 62059), We proposed two scoring and reporting policy changes for the improvement activities performance category effective for the CY 2025 performance period/

2027 MIPS payment year and subsequent years. First, we proposed to eliminate the weighting of improvement activities in order to simplify scoring of the category, as well as complement our ongoing efforts to refine and improve the Inventory. In the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), we codified at § 414.1380(b)(3) the scoring policies for the improvement activities performance category. We established there that clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic health professional shortage areas (HPSAs)) receive 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity. Non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity. We established a differentially weighted model for the improvement activities performance category with two categories, medium and high, to provide flexible scoring and because there are no nationally recognized standards or definitions for these activities (81 FR 28210). Weights were assigned based on the level of effort and resources needed to complete each activity, as well as alignment with current national public health priorities and programs such as the Quality Innovation Network-Quality Improvement Organization (QIN/QIO).

We have subsequently determined that the benefit to categorizing activities as high or medium weighted has greatly diminished. Over the last several years of the Quality Payment Program, we have made refinements and enhancements to the improvement activities Inventory by adding new activities to incorporate newly identified opportunities for clinical improvement and by modifying existing activities to support changes in practice standards, while also eliminating activities that are duplicative or that no longer promote a sufficient level of clinical improvement. In this and subsequent rulemaking cycles, we are focusing our efforts on streamlining the Inventory to retain the highest priority activities that offer the strongest promotion of clinical practice improvement. As the Inventory is streamlined, each retained activity highlights a unique and vital aspect of clinical practice improvement, and therefore every activity remaining in the Inventory would be considered a high priority activity.

Second, we proposed to further simplify improvement activity reporting requirements by reducing the number of activities to which clinicians are required to attest to achieve a full score in the improvement activities performance category. We proposed that MIPS eligible clinicians who participate in traditional MIPS would be required to report two activities. In addition, we proposed that MIPS eligible clinicians who are categorized as small practice, rural, in a provider-shortage area, or non-patient facing would now be required to report one activity. We proposed that these policies would be effective for the CY 2025 performance period/2027 MIPS payment year and subsequent years.

We also proposed that MVP participants would be required to report one activity. In the CY 2022 PFS final rule (86 FR 65412 through 65413), we established that MVP Participants submitting MVPs report fewer improvement activities than eligible clinicians reporting traditional MIPS to incentivize and support MVP adoption. As we stated in the CY 2022 PFS final rule (86 FR 65412), we continue to believe that reduced reporting requirements are necessary to support the adoption of and reduce the burden for implementation of MVPs.

We proposed to lower the number of activities that MIPS eligible clinicians are required to complete in order to obtain a full score to adjust for the ongoing reduction of activities in the Inventory as well as to support eligible clinicians with simplified reporting as they engage in fewer but more demanding activities. While our efforts to streamline the Inventory may result in a lower overall number of improvement activities MIPS eligible clinicians can choose from, the retained activities in the Inventory would be the highest priority activities that offer the strongest promotion of clinical practice improvement. This proposal is also responsive to commenters who, in the past, have requested that the number of required activities be reduced and that more activities be highly weighted (81 FR 77182). The activity removals and modifications being proposed would result in an Inventory of activities that are meaningful, timely, and rigorous. While decreasing the number of required activities would simplify reporting, MIPS eligible clinicians would still be required to participate in meaningful activities that yield significant practice improvement.

We requested comments on our proposals to remove weighting and reduce the number of activities that clinicians are required to attest to achieve a full score in the improvement activities performance category.

Specifically, we requested comments on our proposal to revise § 414.1380(b)(3) to read that, beginning with the CY 2025 performance period/2027 MIPS payment year, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) receive 20 points for each improvement activity, while non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 40 points for each improvement activity. Therefore, to receive a score of 40 points, or full credit, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) must report two improvement activities, while non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs must report one improvement activity.

We also requested comments on our proposal to revise § 414.1365(c)(3) to state that, beginning with the CY 2025 performance period/2027 MIPS payment year, MVP participants receive 40 points for each improvement activity. Therefore, to receive a score of 40 points, or full credit, MVP participants would be required to report one improvement activity.

We received comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed support for our proposal to eliminate improvement activity weights. Many believed that this change would simplify reporting and greatly reduce administrative burden and complexity of scoring. Other commenters found activity weights were not beneficial, indicating that in some cases, the activity weight does not necessarily correlate with the activity's value to clinicians or to patient care. A few commenters praised this change of weighting all improvement activities equally because it promotes fairness across different practice settings and aligns with our efforts to make the Quality Payment Program more accessible. One commenter encouraged CMS to identify additional simplifications to make the process of reporting even less burdensome.

Response: We appreciate commenters' support.

Comment: A few commenters recommended that CMS balance the

need for reduced reporting burden with the continued goal of driving meaningful quality improvements and not overlooking critical aspects of care. One commenter highlighted that improvement activities which are weighted as high typically reflect more significant or innovative improvements than activities that are weighted as medium, and, if weighting is eliminated, it may be more challenging to distinguish between practices making substantial improvements and those meeting only minimal requirements. Another commenter believed that incentivizing clinicians for choosing to report high value activities may drive clinical improvements more effectively. One commenter stated that removing the distinction between medium and high-weighted activities may reduce the motivation for clinicians to engage in activities with the highest impact as well as reduce the robustness of the improvement activities performance category.

Response: We appreciate these comments and will continue to assess and take such concerns into consideration as we refine the Inventory. As we streamline the Inventory, each retained activity highlights a unique and vital aspect of care and will offer a meaningful level of clinical practice improvement. We believe that, with the elimination of activity weighting, clinicians will invariably be participating in activities that offer the highest level of clinical improvement, as every retained activity in the Inventory will ultimately be considered a high-priority activity. As we move forward, we will continue to explore ways to incentivize clinicians to engage in actions that yield the highest level of practice improvement.

Comment: Many commenters expressed support for the reduction in the number of activities to which clinicians must report. A few commenters also commended CMS for continuing to alleviate the reporting burden for small practice, rural, in a provider-shortage area, or non-patient facing clinicians by reducing the number of required activities.

Response: We appreciate commenters' support of our changes to simplify reporting as well as our commitment to reducing reporting burden for eligible clinicians who are categorized as small practice, rural, in a provider-shortage area, or non-patient facing.

Comment: One commenter requested that CMS award bonus points to clinicians that report additional improvement activities in a performance year to encourage pursuit of more than the minimum. Another commenter requested that CMS consider ways to provide cross-category credit for investments in quality that are captured through both quality measures and improvement activities.

Response: We appreciate these comments. Our current policy focus is to consider reporting changes that align with both MIPS and MVP. We noted in the CY 2019 PFS final rule (83 FR 59851) that bonus points were created as transition policies, which were not meant to continue through the life of the program. As we move to MVPs, we are simplifying our scoring by ending transition policies that were established in the initial years of the program. As we are in the eighth year of the Quality Payment Program and we are reducing (not increasing) the reporting requirements for the improvement activities performance category, we are not able to provide bonus points for improvement activities at this time. As we consider policies that support MVP adoption by current MIPS participants, we will continue to assess and explore ways to incorporate incentives via future rulemaking. We will continue to identify cross-category efficiencies as we refine the Inventory for both MIPS and MVP.

Comment: One commenter recommended that the requirements for improvement activity reporting be aligned across MIPS and MVPs to reduce complexity, enhance consistency across the program, and ensure fairness for participants.

Response: We appreciate this comment and will continue to consider reporting changes that align with both MIPS and MVPs. At this time, we continue to believe that reduced reporting requirements are necessary to support the adoption of and reduce the burden for implementation of MVPs. Finalizing the policy that MVP participants may report fewer improvement activities than eligible clinicians reporting traditional MIPS will incentivize and support MVP adoption. We will also continue to seek ways to further simplify reporting across both MIPS and MVPs.

Comment: A few commenters requested that CMS require clinicians to report only one improvement activity instead of two. Those commenters argued that even practices that don't qualify as small practices, especially those in multispecialty settings, struggle to find two appropriate improvement activities that apply to the majority of the group, and, as the improvement activity Inventory continues to be streamlined, large multi-specialty groups may be forced to implement improvement activities that are not meaningful. One commenter expressed the belief that there should be parity in reporting requirements regardless of whether or not a clinician is patient-facing in order to remove complexity. Another commenter argued that participants may still face challenges in meeting these new reduced requirements, especially compared to MVP participants who will only need to report one improvement activity.

Response: As we consider policies that support MVP adoption by current MIPS participants, we will assess and explore ways to incorporate incentives via future rulemaking. At this time, we continue to believe that reduced reporting requirements for MVP participants are necessary to support the adoption of and reduce the burden for implementation of MVPs. We do not believe that the current and future Inventory is not sufficient and MIPS participants should be able to identify two activities to implement that will be both meaningful and not overly burdensome. We also note that flexibilities for special statuses such as Non-patient facing are a feature of the Quality Payment Program overall. Section 1848(q)(2)(C)(iv) of the Act requires the Secretary, in specifying improvement activities, to give consideration to the circumstances of professional types who typically furnish services that do not involve face-to-face interaction with a patient. In the CY 2017 Quality Payment Program final rule (81 FR 77041 through 77049), we discuss the definition of a non-patient facing MIPS eligible clinician as well as the establishment of exceptions due to many non-patient facing MIPS eligible clinicians not having sufficient improvement activities applicable and available to report under MIPS. We will continue to identify opportunities to reduce reporting burden for both MIPS and MVPs, particularly for multispecialty practices and clinicians in other settings who do not classify as a small practice, rural practice, or Non-patient facing.

After consideration of comments, we are finalizing these scoring and reporting policy changes as proposed.

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record (EHR) technology (CEHRT) as a performance category under MIPS. We refer to this performance category as the Promoting Interoperability performance category (and in past rulemaking, we referred to

it as the advancing care information performance category).

For our previously established policies regarding the Promoting Interoperability performance category, we refer readers to the regulation at 42 CFR 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019 PFS final rule (83 FR 59785 through 59820), CY 2020 PFS final rule (84 FR 62991 through 63006), CY 2021 PFS final rule (85 FR 84886 through 84895), CY 2022 PFS final rule (86 FR 65466 through 65490), CY 2023 PFS final rule (87 FR 70060 through 70087), and CY 2024 PFS final rule (88 FR 79308 through 79312 and 88 FR 79351 through 79365).

(b) Current Definition of CEHRT for the Quality Payment Program

In the CY 2024 PFS final rule (88 FR 79307 through 79312), we finalized revisions to the definition of CEHRT for the Quality Payment Program at 42 CFR 414.1305. In the CY 2024 PFS final rule (88 FR 79309 and 79310), we amended the definition of CEHRT to be more flexible in response to changes proposed by the Office of the National Coordinator for Health Information Technology (ONC) [869] in the ''Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing'' (HTI–1) proposed rule (88 FR 23746 through 23917). Specifically, we amended our definition of CEHRT at § 414.1305 to ensure references to ONC's definition of Base EHR at 45 CFR 170.102 and its health IT certification criteria at 45 CFR 170.315 were responsive to any changes ONC makes to its definition and criteria at any time. Instead of requiring that CEHRT meet only the ''2015 Edition Base EHR definition,'' we added that it also may meet the ''subsequent Base EHR definition'' as defined at 45 CFR 170.102. We also amended our definition of CEHRT to provide that the CEHRT must also be certified to the ONC health IT certification criteria ''as adopted and updated'' in 45 CFR 170.315. This approach is consistent with the policies subsequently finalized in the HTI–1 final rule (89 FR 1205 through 1210). For additional background and information on this update, we refer readers to the discussion in the CY 2024 PFS final rule on this topic (88 FR 79307 through 79312).

In consideration of the updates finalized in the CY 2024 PFS final rule and the HTI–1 final rule, we refer to ''ONC health IT certification criteria'' throughout this final rule where we previously would have referred to ''2015 Edition health IT certification criteria.'' These revisions to the definition of CEHRT in § 414.1305 ensure that updates to the definition of Base EHR in 45 CFR 170.102, and updates to applicable ONC health IT certification criteria in 45 CFR 170.315, are incorporated into the CEHRT definition without additional regulatory action by CMS. For ease of reference, Table 80 sets forth the ONC health IT certification criteria required to meet the Promoting Interoperability performance category objectives and measures.

In the CY 2024 PFS final rule (88 FR 79408 through 79414), we also finalized changes to the CEHRT definition at § 414.1305 for Advanced APMs requiring use of EHR technology certified under the ONC Health IT Certification Program that meets the ONC Base EHR definition at 45 CFR 170.102 and any such ONC health IT certification criteria adopted or updated in 45 CFR 170.315 that are determined applicable for the APM, for the year, considering factors such as clinical practice area, promotion of interoperability, relevance to reporting on applicable quality measures, clinical care delivery objectives of the APM, or any other factor relevant to documenting and communicating clinical care to patients or their health care providers in the APM. This CEHRT definition affords Advanced APMs the ability to tailor additional CEHRT use requirements to those features or capabilities that are clinically relevant to the APM and its participants, rather than referring to the same criteria associated with measures in the Promoting Interoperability performance category of MIPS (88 FR 79413).

We highlight certain updates to ONC health IT certification criteria finalized in the ONC HTI–1 final rule that impact certification criteria referenced under the CEHRT definition. ONC adopted the certification criterion ''Decision support interventions'' (DSI) in 45 CFR 170.315(b)(11) to ultimately replace the ''Clinical decision support (CDS)'' certification criterion in 45 CFR 170.315(a)(9) included in the Base EHR definition (89 FR 1236). The finalized DSI criterion ensures that Health IT Modules certified to 45 CFR 170.315(b)(11) must, among other functions, enable a limited set of identified users to select (that is, activate) certain evidence-based decision support interventions and Predictive DSI (as the latter term is defined in 45 CFR 170.102) (89 FR 1241) and support user access to specified ''source attributes''—categories of technical performance and quality information—for both evidence-based and Predictive DSI (89 FR 1236). ONC further finalized that a Health IT Module may meet the Base EHR definition by either being certified to the existing CDS certification criterion in 45 CFR 170.315(a)(9) or being certified to the revised DSI criterion in 45 CFR 170.315(b)(11), for the period up to, and including, December 31, 2024. On and after January 1, 2025, ONC finalized that a Health IT Module must be certified to the DSI certification criterion in 45 CFR 170.315(b)(11) in order to meet the Base EHR definition, and the adoption of the CDS certification criterion in 45 CFR 170.315(a)(9) will expire on January 1, 2025 (89 FR 1281).

In the HTI–1 final rule, ONC also finalized other updates related to ONC health IT certification criteria referenced in the CEHRT definition. ONC finalized January 1, 2026, as the date when updates discussed below would take effect; accordingly, health IT developers must update and provide certified Health IT Modules to their customers consistent with the Maintenance of Certification requirements in 45 CFR 170.402(b)(3) by this date, including the following updates:

- ONC updated the ''Transmission to public health agencies—electronic case reporting'' criterion in 45 CFR 170.315(f)(5) to specify the use of consensus-based, industry-developed electronic standards and implementation guides (IGs) to replace functional, descriptive requirements in the existing criterion on and after January 1, 2026 (89 FR 1228).
- ONC adopted the United States Core Data for Interoperability (USCDI) version 3 in 45 CFR 170.213(b) and finalized that USCDI version 1 in 45 CFR 170.213(a) will expire on January 1, 2026 (89 FR 1211 and 1224). This change impacts ONC health IT certification criteria that reference the USCDI, including the ''Transitions of care'' certification criteria (45 CFR 170.315(b)(1)(iii)(A)(*1*) and (*2*)), ''Clinical information reconciliation and incorporation—Reconciliation'' (45 CFR 170.315(b)(2)(iii)(D)(*1*) through (*3*)); and ''View, download, and transmit to 3rd party'' (45 CFR 170.315(e)(1)(i)(A)(*1*)) (89 FR 1214).
- ONC updated the ''Demographics'' certification criterion (45 CFR 170.315(a)(5)), including renaming the

[869] On July 29, 2024, notice was posted in the **Federal Register** that the Office of the National Coordinator for Health IT would be dually titled to the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (89 FR 60903).

criterion to ''Patient demographics and observations'' (89 FR 1295 and 1296).

• ONC updated the ''Standardized API for patient and population services'' certification criterion in 45 CFR 170.315(g)(10) including finalizing references to newer versions of standards referenced in the criterion, such as the US Core IG 6.1.0 (89 FR 1285) and the SMART App Launch Implementation Guide Release 2.0.0 (89 FR 1292).

For complete information about the updates to ONC health IT certification criteria finalized in the HTI–1 final rule, we refer readers to the text of the final rule (89 FR 1192) as well as resources available on ONC's website.[870]

(c) Potential Future Update of the SAFER Guides Measure

(i) Background

ONC developed the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) in 2014, and later updated them in 2016. ONC provided the SAFER Guides, including the High Priority Practices SAFER Guide, as a tool to help organizations at all levels conduct self-assessments to optimize the safety and use of EHRs.[871] In the CY 2022 PFS final rule (86 FR 65475 through 65477), we adopted the SAFER Guides measure under the Protect Patient Health Information objective beginning with the CY 2022 performance period/2024 MIPS payment year. For the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians were required to attest to whether they have conducted an annual self-assessment using the High Priority Practices SAFER Guide[872] at any point during the calendar year in which the performance period occurs, with one ''yes/no'' attestation statement. MIPS eligible clinicians were not scored based on their answer to the attestation, or their level of implementation of each of the practices. However, failure to attest to this measure would result in earning a score of zero for the Promoting Interoperability performance category for failing to meet the minimum reporting requirements.

In the CY 2024 PFS final rule (88 FR 79354 through 79356), we modified the SAFER Guides measure. Beginning with the CY 2024 performance period/2026 MIPS payment year, this modified measure requires MIPS eligible clinicians to conduct, and attest ''yes'' to having completed, an annual self-assessment of their CEHRT, using the High Priority Practices SAFER Guide. We remind readers that the SAFER Guides measure only requires completion of a self-assessment and does not require MIPS eligible clinicians to implement fully each of the practices identified in their self-assessment.

(ii) Status of Updates to SAFER Guides

As summarized in the CY 2024 PFS final rule (88 FR 79354 through 79356), we received comments in response to our proposal to modify the SAFER Guides measure, including many comments recommending that we collaborate with ONC to update the SAFER Guides, noting that the SAFER Guides were last updated in 2016 (88 FR 59264). In response to these comments, we noted that, while the current SAFER Guides reflect relevant and valuable guidelines for safe practices with respect to current EHR systems, we would consider exploring updates in collaboration with ONC. We reminded readers to visit the CMS resource library website at *https://www.cms.gov/regulations-guidance/promoting-interoperability/resource-library* and the ONC website at *https://www.healthit.gov/topic/safety/safer-guides* for resources on the content and appropriate use of the SAFER Guides (88 FR 59262). We also noted that future updates to the SAFER Guides would be provided with accompanying educational and promotional materials to notify participants, in collaboration with ONC, when available (88 FR 59265).

In the proposed rule and this final rule, we seek to make readers aware that efforts to update the SAFER Guides are currently underway. We anticipate that updated versions of the SAFER Guides may become available as early as CY 2025. We would consider proposing a change to the SAFER Guides measure, as soon as feasible, potentially beginning in the CY 2026 performance period/2028 MIPS payment year to permit use of updated versions of the SAFER Guides at that time. We encourage MIPS eligible clinicians to become familiar with the updated versions of the SAFER Guides when they become available and consider them as they implement appropriate EHR safety practices.

(d) Modification of the Definition of Meaningful EHR User for Healthcare Providers That Have Committed Information Blocking

The Department of Health and Human Services (HHS) final rule ''21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking'' (hereafter referred to as the Disincentives final rule), was displayed for public inspection by the Office of the Federal Register on June 26, 2024, and appeared in the **Federal Register** on July 1, 2024 (89 FR 54662 through 54718). The final rule implements the provision of the 21st Century Cures Act specifying that a healthcare provider, determined by the HHS Office of the Inspector General (OIG) to have committed information blocking, shall be referred to the appropriate agency to be subject to appropriate disincentives set forth through notice and comment rulemaking. In the Disincentives final rule, we finalized that a MIPS eligible clinician (other than a qualified audiologist) will not be considered a meaningful EHR user in a performance period if the OIG refers, during the calendar year of the performance period, a determination that the MIPS eligible clinician committed information blocking as defined at 45 CFR 171.103. Information blocking, in the case of a health care provider, as defined in 45 CFR 171.102, is a practice that is likely to interfere with the access, exchange, or use of electronic health information, except as required by law or specified in an information blocking exception in 45 CFR part 171, subpart B, C, or D, and that the health care provider knows is unreasonable and is likely to interfere with access, exchange, or use of electronic health information. Furthermore, we finalized amendments to the definition of ''meaningful EHR User for MIPS'' at § 414.1305 to state that a MIPS eligible clinician (other than a qualified audiologist) is not a meaningful EHR user for a performance period if the OIG refers a determination that the MIPS eligible clinician committed information blocking, as defined at § 171.103, during the calendar year of the performance period (89 FR 54699). We also finalized amending the requirements at § 414.1375(b) to specify that a MIPS eligible clinician must be a meaningful EHR user for MIPS (as defined at § 414.1305) to earn a score for MIPS Promoting Interoperability performance category (89 FR 54695 through 54699). Under the final policies, a MIPS eligible clinician that OIG determines has committed information blocking would

[870] For more information, see *https://www.healthit.gov/topic/laws-regulation-and-policy/health-data-technology-and-interoperability-certification-program.*

[871] *https://www.healthit.gov/topic/safety/safer-guides.*

[872] *https://www.healthit.gov/sites/default/files/safer/guides/safer_high_priority_practices.pdf.*

not be a meaningful EHR user, and therefore would be unable to earn a score (instead earning a score of zero) for the Promoting Interoperability performance category.

Additional regulatory provisions were finalized at 45 CFR part 171, subpart J, related to the application of disincentives (89 FR 54675).

We note that, as finalized, the revised definition of ''meaningful EHR user for MIPS'' at § 414.1305 and the revisions to § 414.1375(b) became effective when the final rule took effect on July 31, 2024. For additional background and information, we refer readers to the discussion in the ''21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking'' proposed rule (88 FR 74957 through 74962), as well as the Disincentives final rule.

(e) Future Goals of the Promoting Interoperability Performance Category

(i) Future Goals with Respect to Fast Healthcare Interoperability Resources® (FHIR) APIs for Patient Access

In partnership with ONC, we envision a future where patients have timely, secure, and easy access to their health information through the health application of their choice. We are working with ONC to enable this type of access to health information by requiring the use of APIs that utilize the Health Level Seven International® (HL7) FHIR standard. We are working with ONC and other Federal partners to improve timely and accurate data exchange, partner with industry to enhance digital capabilities, advance adoption of FHIR, support enterprise transformation efforts that increase our technological capabilities, and promote interoperability.

In the CY 2021 PFS proposed rule (85 FR 50303), we described our future vision for the Promoting Interoperability performance category and stated that we will continue to consider changes that support a variety of HHS goals, including supporting alignment with the 21st Century Cures Act, advancing interoperability and the exchange of health information, and promoting innovative uses of health IT. We also described plans to continue to align the Promoting Interoperability performance category with policies finalized in the ''21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program'' final rule (85 FR 25642), including finalization of a new certification criterion for a standards-based API using FHIR, among other health IT topics.

ONC finalized the HTI–1 final rule (89 FR 1192), effective March 11, 2024, to further implement the 21st Century Cures Act, among other policy goals. ONC finalized revisions to the ''Standardized API for patient and population services'' certification criterion at 45 CFR 170.315(g)(10). It also adopted the HL7 FHIR US Core Implementation Guide (IG) Standard for Trial Use version 6.1.0 at 45 CFR 170.215(b)(1)(ii), which provides the latest consensus-based capabilities aligned with the USCDI Version 3 [873] data elements for FHIR APIs. The HTI–1 final rule also created the Insights Condition and Maintenance of Certification requirements (Insights Condition) within the ONC Health IT Certification Program to provide transparent reporting on certified health IT (89 FR 1199). This Insights Condition will require developers of certified health IT subject to the requirements to report on measures that provide information about the use of specific certified health IT functionalities by end users. One such measure calculates the number of unique individuals who access their electronic health information overall and by different methods such as through a standardized API for patient and population services (89 FR 1313 and 1314).

By adopting these new and updated standards, implementation specifications, certification criteria, and conditions of certification, provisions in the HTI–1 final rule advance interoperability, improve transparency, and support the access, exchange, and use of electronic health information. We aim to further advance the use of FHIR APIs through policies in the Promoting Interoperability performance category to advance interoperability, encourage the exchange of health information, and promote innovative uses of health IT. We also hope to gain insights into the adoption and use of FHIR APIs by MIPS eligible clinicians due to the ONC Health IT Certification Program's Insights Condition. We believe maintaining our focus on promoting interoperability, alignment, and simplification would reduce healthcare provider burden while allowing flexibility to pursue innovative applications that improve care delivery. For additional background and information, we refer readers to the discussion in the HTI–1 final rule on this topic (89 FR 1192).

[873] *https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi#uscdi-v3.*

(ii) Improving Cybersecurity Practices

The Promoting Interoperability performance category encourages the advancement of EHR safety by promoting appropriate cybersecurity practices through the Security Risk Analysis and SAFER Guides measures. On February 14, 2023, the National Institute of Standards and Technology (NIST) published updated guidance for health care entities implementing requirements of the Health Insurance Portability and Accountability of 1996 (HIPAA) Security Rule (45 CFR part 160 and subparts A and C of 45 CFR part 164). The guidance, NIST SP 800–66r2, provides information and resources to HIPAA-covered entities to improve their cybersecurity risk practices.[874] We also wish to alert readers of additional HHS resources and activities regarding cybersecurity best practices as recently summarized in an HHS strategy document that provides an overview of HHS recommendations to help the health care sector address cyber threats.[875] HHS has also recently published a website detailing recommended cybersecurity performance goals.[876] We intend to consider how the Promoting Interoperability performance can promote cybersecurity best practices for MIPS eligible clinicians in the future.

(iii) Improving Prior Authorization Processes

We recently released the CMS Interoperability and Prior Authorization final rule, which appeared in the **Federal Register** on February 8, 2024 (89 FR 8758). The final rule aims to enhance health information exchange and access to health records for patients, healthcare providers, and payers, and improve prior authorization processes. In the final rule, we finalized the addition of a new measure, the ''Electronic Prior Authorization'' measure, under the HIE objective for the MIPS Promoting Interoperability performance category beginning with the CY 2027 performance period/2029 MIPS payment year (89 FR 8909 through 8927).

(f) Requirements for the Promoting Interoperability Performance Category for the CY 2025 Performance Period/ 2027 MIPS Payment Year

(i) Objectives and Measures for the CY 2025 Performance Period/2027 MIPS Payment Year

For ease of reference, Table 77 lists the objectives and measures for the Promoting Interoperability performance category required for the CY 2025 performance period/2027 MIPS payment year. We note that we did not propose any changes to previously established objectives, measures, and other requirements for the Promoting Interoperability performance category in the proposed rule.

BILLING CODE 4120–01–P

TABLE 77: Objectives and Measures for the Promoting Interoperability Performance Category for the CY 2025 Performance Period/2027 MIPS Payment Year

Objective	Measure	Numerator	Denominator	Exclusion
Electronic Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
Electronic Prescribing	Query of PDMP: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; or 2. Any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period.
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other healthcare providers into their EHR using the functions of CEHRT	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or healthcare provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

Objective	Measure	Numerator	Denominator	Exclusion
Health Information Exchange	Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, mediation allergy, and current problem list.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.
Health Information Exchange	HIE Bi-Directional Exchange: Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy. Statement 2: The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	engaging in exclusionary behavior when determining exchange partners. Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE.			
Health Information Exchange	Enabling Exchange Under TEFCA MIPS eligible clinicians would attest to the following: ● Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ONC's website) in good standing (i.e. not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy. ● Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	N/A
Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic	Provide Patients Electronic Access to Their Health Information: For at least one unique patient seen by the MIPS eligible clinician:	Number of patients in the denominator (or patient authorized representative) who are provided timely access to health	Number of unique patients seen by the MIPS eligible clinician during the performance period.	N/A

Objective	Measure	Numerator	Denominator	Exclusion
access to their health information.	1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT.	information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT.		
Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.	Immunization Registry Reporting: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	N/A (measure is Yes/No and requires an affirmative attestation to fulfill)	The MIPS eligible clinician: 1. Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2. Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.
Public Health and	Electronic Case	N/A (measure is	N/A (measure is	The MIPS eligible clinician:

BILLING CODE 4120–01–C

(ii) Scoring Methodology for the CY 2025 Performance Period/2027 MIPS Payment Year

Table 78 reflects the scoring methodology for the Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year.

TABLE 78: Scoring Methodology for the CY 2025 Performance Period/2027 MIPS Payment Year

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician's choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange under TEFCA	30 points	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: • Immunization Registry Reporting • Electronic Case Reporting	25 points	Required
	Report one of the following measures: • Public Health Registry Reporting • Clinical Data Registry Reporting • Syndromic Surveillance Reporting	5 points (*bonus*)	Optional

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required but will not be assigned points. Failure to submit an affirmative ("yes") attestation for these two measures will result in a zero score for the Promoting Interoperability performance category.
In addition, MIPS eligible clinicians must submit an affirmative ("yes") attestation regarding ONC direct review, and an affirmative ("yes") attestation that they did not knowingly and willfully take action to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3). Failure to submit an affirmative ("yes") attestation to fulfill these requirements will result in a zero score for the Promoting Interoperability performance category.

(iii) Exclusion Redistribution

Many required measures have exclusions associated with them as shown in Table 77. If a MIPS eligible clinician believes that an exclusion for a particular measure applies to them, they may claim it when they submit their data. The maximum points available in Table 78 do not include the points that will be redistributed if a MIPS eligible clinician claims an exclusion for a specific measure. For ease of reference, Table 79 shows how points will be redistributed among the objectives and measures specified for the Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year in the event a MIPS eligible clinician claims an exclusion for a given measure.

TABLE 79: Exclusion Redistribution for CY 2025 Performance Period/2027 MIPS Payment Year

Objective	Measure	Redistribution if exclusion is claimed
Electronic Prescribing	e-Prescribing	10 points to HIE objective
	Query of PDMP	10 points to e-Prescribing measure
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points to Provide Patients Electronic Access to Their Health Information measure
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points to the Support Electronic Referral Loops by Sending Health Information measure
	-OR-	
	Health Information Exchange Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange under TEFCA	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following two measures: • Electronic Case Reporting • Immunization Registry Reporting	If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required but will not be assigned points. Failure to submit an affirmative ("yes") attestation for these two measures will result in a zero score for the Promoting Interoperability performance category.
In addition, MIPS eligible clinicians must submit an affirmative ("yes") attestation regarding ONC direct review, and an affirmative ("yes") attestation that they did not knowingly and willfully take action to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3). Failure to submit an affirmative ("yes") attestation to fulfill these requirements will result in a zero score for the Promoting Interoperability performance category.

(iv) ONC Health IT Certification Criteria

For ease of reference, Table 80 lists the objectives and measures for the Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year and the associated ONC health IT certification criteria set forth at 45 CFR 170.315, as is currently applicable. We refer readers to the CY 2024 PFS final rule (88 FR 79307 through 79312) for our discussion of and amendments to the definition of CEHRT at § 414.1305.

BILLING CODE 4120–01–P

TABLE 80: Promoting Interoperability Performance Category Objectives and Measures and ONC Health IT Certification Criteria

Objective	Measure	Certification Criteria (CY 2025 Performance Period/2027 MIPS Payment Year) in Title 45 of the CFR
Electronic Prescribing	e-Prescribing	§ 170.315(b)(3) Electronic prescribing

(g) Request for Information (RFI) Regarding Public Health Reporting and Data Exchange

In the CY 2025 PFS proposed rule (89 FR 62072 through 62075), we sought comment on a series of goals and principles for the Promoting Interoperability performance category's Public Health and Clinical Data Exchange objective, particularly to support timely sharing of information with public health agencies that also reduces administrative burden for MIPS eligible clinicians.

We received many comments on this RFI regarding public health reporting and data exchange, and we thank the commenters for responding to our request for information. Although we will not be addressing in this final rule the comments received in response to this RFI, we value the input received and will take the comments into consideration to help us consider potential future policies to enhance public health reporting and data exchange. We will continue to collaborate with the CDC and ONC to explore how the Promoting Interoperability performance category could advance public health infrastructure through more advanced use of health IT and data exchange standards and consider the feedback received for future rulemaking.

f. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

Sections 1848(q)(1)(A)(i) and (ii) and (5)(A) of the Act provide, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, provide for a final score for each MIPS eligible clinician. Section 1848(q)(6)(A) of the Act specifies that, to then determine a MIPS payment adjustment factor for each MIPS eligible clinician for an applicable MIPS payment year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. We refer readers to section IV.A.4.g.(2) of this final rule for further discussion of the performance threshold, and our calculation of MIPS payment adjustment factors, and our proposals with respect thereto.

Section 1848(q)(2)(A) of the Act provides that the Secretary must assess each MIPS eligible clinician with respect to four performance categories in determining each MIPS eligible clinician's final score: quality, resource use (referred to as ''cost''), clinical practice improvement activities (referred to as ''improvement activities''), and meaningful use of certified EHR technology (referred to as ''Promoting Interoperability''). Section 1848(q)(2)(B) of the Act describes the measures and activities that must be specified under each performance category, including the quality performance category and cost performance category. Section 1848(q)(3) of the Act provides that we must establish performance standards with respect to the measures and activities specified under the four performance categories for a performance period, considering historical performance standards, improvement, and the opportunity for continued improvement. To calculate a final score for each MIPS eligible clinician for the performance period of an applicable MIPS payment year, section 1848(q)(5)(A) of the Act provides that we must develop a methodology for assessing the total performance of each MIPS eligible clinician according to the performance standards we have established with respect to applicable measures and activities specified for each performance category, using a scoring scale of 0 to 100.

In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight pursuant to these exceptions, for the CY 2025 performance period/2027 MIPS payment year, the scoring weights for each performance category are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

For the CY 2025 performance period/2027 MIPS payment year, we proposed in the CY 2025 PFS proposed rule to update our scoring methodologies to respond to statutory requirements and impacts observed in performance data. Specifically, we proposed to—

- Establish defined topped out benchmarks for certain topped out measures for clinicians impacted by limited measure choice;
- Establish Complex Organization Adjustment for eCQMs reported by Virtual Groups and APM Entities.
- Score Medicare CQMs using flat benchmarks for their first two performance periods in the program.
- Modify the benchmarking methodology for scoring measures in the cost performance category;
- Adopt a new cost measure exclusion policy;
- Eliminate the weighting of activities in the improvement activities performance category; and
- Reduce the number of activities to which clinicians are required to attest.

We did not propose any changes to scoring policies for the Promoting Interoperability performance category.

We refer readers to section IV.A.4.e.(3)(b)(iv) of this final rule for discussion of scoring proposals in the Improvement Activities performance category.

We refer readers to section IV.A.4.f.(1)(d) of this final rule for discussion of proposals for scoring the cost performance category.

(b) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2020, CY

2021, CY 2022, and CY 2023 PFS final rules, and § 414.1380(b)(1) for our current policies regarding, among other things, quality measure benchmarks, calculating total measure achievement points, calculating the quality performance category score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913, 86 FR65490 through 65509, and 87 FR 70088 through 70091). In the CY 2024 PFS final rule, we finalized updates to our scoring flexibilities policy at § 414.1380(b)(1)(vii)(A) (88 FR 79368 through 79369).

(i) Scoring for Topped Out Measures in Specialty Measure Sets With Limited Measure Choice

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2023 PFS final rule (81 FR 77282 through 77287, 82 FR 53721 through 53727, 83 FR 59761 through 59765, and 88 FR 70090 through 70091), and § 414.1380(b)(1)(iv) for our established topped out measure scoring policies.

Topped out measures are measures for which measure performance is considered so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (81 FR 77136). We define topped out measures in § 414.1305 differently for process measures and non-process measures. A topped out process measure means a measure with a median performance rate of 95 percent or higher. A topped out non-process measure means a measure where the Truncated Coefficient of Variation is less than 0.01 and the 75th and 90th percentile are with 2 standard errors. For MIPS eligible clinicians electing to report on measures where they expect to perform well, we anticipated many measures would have performance distributions clustered near the top. (81 FR 77282). Section 1848(q)(3)(B) of the Act requires that in establishing performance standards with respect to measures and activities, we consider, among other things, the opportunity for continued improvement. Topped out measures do not provide an opportunity for continued improvement nor, more broadly, do payment adjustments based on topped out measures incentivize clinicians to improve their care. As a result, we finalized policies to identify and cap the scoring potential of such measures. Additionally, we established practices for the removal of such measures, such as establishing the topped out measure lifecycle, to continue to drive quality improvement in areas where such improvement is possible and necessary.

The topped out measure lifecycle is described in the CY 2018 PFS final rule (82 FR 53721 and 53727). We established at § 414.1380(b)(1)(iv)(B) that we would cap scoring for topped out measures at 7 points in the second consecutive year that it is identified as topped out. If a measure has been identified as topped out for 3 consecutive years after being originally identified through the benchmarks, such measure may then be proposed for removal through notice-and-comment rulemaking (83 FR 59761). This timeline, however, is not fixed. We noted our concern where removal of topped out measures would leave clinicians with fewer than 6 applicable measures to report and that such removal in those instances would impact some specialties more than others (82 FR 53721). We stated that consideration for ensuring available applicable measures would be made when considering measure removals (83 FR 59763).

The topped out scoring cap and the topped out measure lifecycle were established with the intention to drive continued quality improvement by providing clinicians with the ability to plan for optimal quality measurement and reporting and by providing measure developers time to develop and submit alternative measures for use in the program (82 FR 53727). However, the pace of measure development has not matched the rate at which topped out measures would ideally be removed under the established topped out lifecycle policy. Since the CY 2017 performance period/2019 MIPS payment year, the MIPS final list of quality measures has decreased from 271 to 198 including the removal of 34 topped out measures that had reached the end of the topped out measure lifecycle.

We have received feedback from interested parties and independently verified that clinicians reporting specialty sets in which there is high presence of topped out measures receiving the 7-point cap are often facing both limited measure choice and limited scoring opportunities. Analysis of data from the CY 2022 performance period/2024 MIPS payment year showed that only 7 percent of quality measure submissions were for topped out measures. However, of those submissions, clinicians representing five specialties accounted for 54 percent of the submissions of topped out measures that contributed to the final score. When we analyzed the data from the CY2022 performance period/2024 MIPS payment year, we found that clinicians in these specialties were facing limited measure choice, with an overrepresentation of topped out measures among their measure selection. Some such topped out measures have been retained in the program to ensure specialists will have applicable measures in the absence of more robust measure development.

We acknowledge that certain clinician specialists have limited measure choice and that their opportunities to maximize their MIPS performance score may be particularly affected by the current topped out measure scoring policy. We appreciate that, as the performance threshold increases, it may become more difficult for these clinician specialists to maximize their MIPS performance score and secure positive payment adjustments for reasons entirely outside of their control, primarily the topped-out measure scoring cap. To determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a ''prior period'' specified by the Secretary. In the CY 2024 PFS final rule, we finalized the performance threshold at a score of 75 points for the CY 2024 performance period/2026 MIPS payment year at § 414.1405(b)(9)(iii) (88 FR 79319). We have finalized in section IV.A.4.g.(2)(c) of this final rule to maintain the performance threshold at 75 points for the CY 2025 performance year/2027 MIPS payment year. As the number of topped out measures a clinician reports increases, a clinician who must report topped out measures will see their maximum potential quality performance category score decrease, and the clinician must score as close to perfect as possible on the topped out measures to mitigate the effect of the 7-point cap on the clinician's final score. Affected clinicians face additional difficulty should they be subject to additional scoring policies, including reweighting of performance categories and reporting quality measures that lack benchmarks. Reweighting of the Promoting

Interoperability, cost, or both performance categories increases the weighting of the quality performance category in the final score from 30 percent to 55 or 85 percent.

We want to address scoring scenarios in which limited measure choice compels clinicians to report topped out measures with scoring caps consistent with our desire to facilitate fairer scoring of all specialties. For this reason, we proposed in the CY 2025 PFS proposed rule that beginning with the CY 2025 performance period/2027 MIPS payment year CMS could remove the 7-point cap for certain topped out measures that we would select based on the methodology discussed below. This will allow clinicians who practice in specialties impacted by limited measure choice to be scored according to defined topped out measure benchmarks that do not cap scores at 7 measure achievement points. Table 81 is an illustrative example of the proposed defined topped out measure benchmark.

TABLE 81: Example Proposed Defined Topped Out Measure Benchmark

Measure Achievement Points	Performance Rate
1-1.9	84-85.9%
2- 2.9	86-87.9%
3-3.9	88-89.9%
4-4.9	90-91.9%
5-5.9	92-93.9%
6-6.9	94-95.9%
7-7.9	96-97.9%
8-8.9	98-99.9%
10	100%

As discussed above, given that clinicians reporting specialty measure sets with limited measure choice are disproportionately hindered by the 7-point topped out measure scoring cap, we would, in accordance with the methodology proposed in the CY 2025 PFS proposed rule (89 FR 62079) focus on identifying the topped out measures within specialty measure sets which clinicians with limited measure choice report. We proposed to identify the measures for which we would apply the defined topped out measure benchmark on a yearly basis. Measures receiving the defined topped out measure benchmarks would be proposed and adopted through notice-and-comment rulemaking concurrent with our adoption of the MIPS final list of quality measures.

This proposed performance standard would aim, for clinicians with limited measure availability, to continue to require high performance, but would not cap scoring potential for exceptional performers and would offer better scoring opportunities for those performing below the median in the distribution than under our current policy. Under the proposed topped out measure benchmarking methodology, those achieving high performance rates would be rewarded for high performance. Scores between 9–9.9 were intentionally left out. We considered inclusion of scores in the 9th decile, but ultimately excluded them to necessitate exceptional clinical quality performance to achieve maximum scores. As originally proposed, we believed this approach would ameliorate the challenge of reporting on measures with a scoring cap while maintaining a high performance standard for topped out measures.

In addition to addressing the scoring limit of the cap, we also proposed to address the scoring limits caused by the heavily skewed distribution of topped out measures. Previously, because median clinician performance was heavily skewed towards the top of distribution for many topped out measures the second highest achievable decile after the 7th decile may be the 3rd or 4th decile. We therefore proposed to specify a topped out measure benchmark that would set an even performance standard. Such a benchmark policy would facilitate clinician efforts to improve clinical quality among clinicians for whom improvement is still possible. The proposed distribution would allow those performing at or above the 97th percent to achieve a score of 7.5 measure achievement points or greater to reward high performance and encourage clinical quality improvement for those who perform below the median.

We proposed a methodology that would be used to conduct an analysis annually to determine which specialty measure sets are impacted by limited measure choice and which measures should be subject to the scoring cap exemption. Our analysis would evaluate all specialty measure sets by collection type to assess the impact of limited measure choice considering the influence of several scoring considerations including the number of capped topped out measures, the number of measures in the specialty set without historical benchmarks, and the scoring potential to meet or exceed the performance threshold. We would then consider each capped topped out measure in the corresponding specialty measure sets on a case-by-case basis for application of the defined topped out measure benchmark. Additionally, annual consideration of which measures would have the defined topped out measure benchmark applied would consider any changes to the availability of applicable measures and changes in the topped out status of measures that previously had the defined topped out measure applied. A measure would not have a defined topped out measure benchmark applied until it was identified as topped out for 2 consecutive performance periods, the point at which point the 7-point cap would be applied. If suppression of a measure or removal of a benchmark impacts a measure scored according to the defined topped out measure benchmark, it would not be proposed again for the application of the defined topped out measure benchmark and the performance standard would return to the standard scoring policy at § 414.1380(b)(1)(i).

Measures that are identified as topped out for 3 consecutive performance periods may still be proposed for

removal through notice-and-comment rulemaking and extremely topped out measures, those with an average mean performance within the 98th to 100th percentile range, could also still be proposed for removal in the next rulemaking cycle, regardless of whether or not they are in the midst of the topped out measure lifecycle (83 FR 59763). If a measure that is scored according to a defined topped out measure benchmark later shows extremely topped out status, it would be subject to this policy. Any such measure removal would continue to occur through notice-and-comment rulemaking. While we aim to be responsive to those facing limited measure choice, we do not believe that measures with topped out performance have the same value in the program as measures that are not topped out, and they should be scored accordingly in instances where doing so does not unfairly limit a clinician's scoring opportunity. We believe these parameters identify those most impacted by limited measure choice while continuing to encourage high clinical quality measure performance.

This proposal is consistent with our current topped out measure lifecycle, program goals, and historical approaches to scoring scenarios with limited measure choice. In the CY 2017 Quality Payment Program final rule, we exempted measures reported via the CMS Web Interface from the 7-point measure cap. The CMS Web Interface requires that MIPS eligible clinicians submitting via the CMS Web Interface must submit all measures included in the CMS Web Interface (81 FR 77116). Their lack of ability to select alternative measures made the application of the 7-point measure cap inappropriate. Instead, we finalized a proposal at § 414.1380(b)(1)(ii)(A) to use benchmarks from the corresponding year of the Shared Saving Program as the Shared Savings Program incorporates a methodology for measures with high performance into the benchmark (82 FR 53721). The defined topped out measure benchmark similarly aims to score clinicians facing limited measure choice on topped out measures using a methodology that adjusts for high performance.

We considered several policy options to address topped out measure scoring for clinicians facing limited measure choice. These included removing all topped out measures at the end of the topped out measure lifecycle, exempting all topped out measures in specialty measure sets from application of the 7-point cap, applying a denominator reduction for those scoring 7 out of 10 measure achievement points on topped out measures in specialty measure sets, and adopting a new reweighting policy for the quality performance category for clinicians impacted by limited measure choice that score below the performance threshold. These approaches would not appropriately address the barriers to fair scoring posed by limited measure choice, nor would they incentivize and reward improvement in clinical quality measure performance. Additionally, these alternatives would introduce additional scoring complexity and in one case, require clinicians' additional submission of a reweighting application to access potential benefits. The proposed approach of applying defined topped out measure benchmarks for certain topped out measures selected in accordance with the methodology set forth above avoids the additional complexity of the other approaches by building on historical and current quality measure scoring policies to topped out measures that does not require additional steps to access and is applicable as we transition to MVPs.

For the reasons stated above, we proposed in the CY 2025 PFS proposed rule to add § 414.1380(b)(1)(iv)(C) to state that beginning with the CY 2025 performance period/2027 MIPS payment year, measures impacted by limited measure choice as specified in paragraph (b)(1)(ii)(E) are not subject to the 7 measure achievement point cap specified in paragraph (b)(1)(iv)(B). We proposed a conforming change to § 414.1380(b)(1)(iv)(B).

We also proposed to add § 414.1380(b)(1)(ii)(E) to state that, beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice. Measures included in the list would be scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 7.5 measure achievement points. Accordingly, we also proposed to update § 414.1380(b)(1)(ii) to state that except as provided in paragraphs (b)(1)(ii)(B) through (F), benchmarks will be based on performance by collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period. We also proposed to make conforming changes to this section to include a previous inadvertent omission of paragraph (b)(1)(ii)(D) in addition to the proposed new exceptions in paragraphs (b)(1)(ii)(E) and (F) corresponding to policies discussed in sections IV.A.4.f.(1)(b)(i) and IV.A.4.f.(1)(c)(i) respectively.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to remove the 7-point cap for topped out measures that have been impacted by limited measure choice. These commenters believed that this proposal would expand clinicians' and specialists' ability to participate in the program and not penalize them for factors outside of their control. Several commenters also stated this proposal will help level the playing field for specialists and help them achieve a quality score that is more representative of the care they provide. Further, several commenters noted that the proposal would provide fairer and more accurate performance assessments, support consistent high-quality care, encourage continuous quality improvement, and address challenges posed by high-performing measures. Further, several commenters stated that this proposal would be advantageous for certain specialties, such as anesthesiology, oncology, pathology, and radiology. A few commenters also appreciated CMS' willingness to recognize the challenges faced by specialties, especially given the fact that the pace of measure development has been slower than anticipated.

Response: We thank commenters for their support.

Comment: Several commenters offered suggestions on how to clarify or improve on the proposed Topped Out Measure Benchmark and methodology. A few commenters requested that CMS clarify why it chose to tie a performance rate in the 97th percentile to 7.5 measure achievement points. These commenters further questioned if 7.5 points represent 10 percent of the current year's performance threshold, similar to CMS' cost measure scoring proposal. They also noted that CMS should align this proposal with the cost category proposal and assign a point value that increases over time in alignment with any increases to the MIPS performance threshold. Additionally, a few commenters offered recommendations on the proposed Topped Out Measure Benchmark. A few commenters recommended that CMS allow for 9–9.9 measure achievement points for a performance rate of 99–99.9 percent. One commenter recommended that CMS omit the first decile rather than the ninth and did not believe CMS

adequately justified why it removed the ninth percentile. Another believed that the benchmarking methodology should be modified to a lower limit of 25 percent, instead of 84 percent.

Response: At § 414.1305 we define topped out measures. A topped out process measure is a measure with a median performance rate of 95 percent or higher. A topped out non-process is a measure where the Truncated Coefficient of Variation is less than 0.01 and the 75th and 90th percentile are with 2 standard errors. Extremely topped out measures are defined as measures where the mean performance rate is between 98 and 100 percent. We tied a performance rate of 97 percent to 7.5 points to assure that clinicians reporting measures for which the defined topped out measure benchmark is applied could meet the performance threshold which is similar to the cost measure benchmarking methodology discussed in section IV.A.4.f.(1)(d)(ii)(B) of this final rule. We will continue to align the defined topped out measure benchmark with the performance threshold as updates are made.

We agree that CMS should include the 9th decile. Originally, we thought exclusion would emphasize the importance of high performance to achieve high scores. After further consideration, we have determined that the omission of the 9th decile would unnecessarily penalize clinicians facing limited measures choice. Assigning clinicians with a performance rate of 84 percent to the lowest decile holds clinicians to the higher performance standards necessary to perform well on a topped out measure. Omitting the 9th decile would doubly penalize clinicians, which is unnecessary due to the aforementioned abbreviated higher performance standard. Therefore, we are finalizing the define topped out measure benchmark to include the 9th decile corresponding to a performance rate from 99 to 99.9 percent. The defined topped out measure benchmarks seek to alleviate concerns that clinicians with limited measure choice forced to report on a high proportion of topped out measures cannot meet the performance threshold, while still requiring high performance to score well on measures with topped out performance. Therefore, it is not appropriate to lower the first decile to a performance rate of 25 percent.

Comment: A few commenters requested clarification from CMS on the proposal. One commenter sought guidance on whether the proposal would apply to quality measures in an MVP. Another commenter sought clarification on how broadly the proposal would be applied, especially for specialties that have greater weight placed on their quality score and may be exempt from the Promoting Interoperability and Cost categories. One commenter inquired about how CMS would define ''limited measure sets'' and if it is solely based on CQM/eCQM availability or if it also is inclusive of QCDR measures.

Response: To identify measures subject to this proposal, we would review each specialty measure set by collection type and identify if the prevalence of topped out measures within such a set hinders a clinician's ability to successfully participate in the MIPS quality performance category. For discussion on our approach for determining topped out measures impacted by limited measure choice and subject to the defined topped out measure benchmark, please see section IV.A.4.f.(1)(b)(ii) of this final rule. As discussed in section IV.A.4.f.(1)(b)(ii), those reporting specialty measure sets are those most likely to be impacted by limited measure choice. If a measure is identified for application of the defined topped out measure benchmark, that benchmark would be used across MIPS. If it is in use in an MVP, the defined topped out measure benchmark would be applied there as well. Additionally, reporters reporting the measure outside of the entire specialty measure set as part of their six required quality measures would be scored according to the defined topped out measure benchmark. The policy is designed to help those most impacted by limited measure choice, but application of the benchmark applies to all who report it. QCDR measures were not included in this scope as they are governed by another policy at § 414.1400(b)(4)(iii)(C) stating that CMS may revoke a measure's second year approval if identified as topped out.

Comment: Several commenters expressed concern with the proposal to remove the 7-point cap for topped out measures that have been impacted by limited measure choice and recommended CMS remove the cap on all topped out measures. A few commenters believed that the proposal falls short of addressing the overall challenges with the way benchmarks for all measures are currently established. A few commenters also stated that universal application of this policy would ensure that no clinicians are negatively impacted by the current scoring cap while also avoiding challenges related to accurately identifying which measures should be subject to this policy. For example, one commenter specifically mentioned that specialties like podiatry would be disadvantaged as they have more than 10 measures in their specialty set, the majority of which are cross-cutting measures. One commenter encouraged CMS to think more broadly about ''limited measure choice,'' recognizing that many specialists and subspecialists also experience limited choice and there is an inadequate selection of measures for multispecialty TINs. One commenter believed that limiting the proposal to a select set of measures is confusing and arbitrary. One commenter raised concerns that the proposal restricts the number of achievable measures for physicians, which could lead to fewer scoring opportunities and a higher likelihood of penalties. Another commenter noted that the proposal may place unrealistic expectations and pressure on providers, because they may find it challenging to consistently meet such high performance thresholds. Further, one commenter suggested that when selecting measures under this proposal, CMS should view performance rates for traditional MIPS independently from MVPs while another commenter requested that CMS remove the 7-point cap for a specified timeframe to ensure stability for clinicians. One commenter encouraged CMS to identify ways to evaluate topped out measures more granularly, highlighting that they may represent an opportunity for improvement among clinicians who do not currently report them. Another commenter suggested that CMS should monitor the impact of the proposal to address any complexity or unintended consequences.

Response: We thank commenters for their feedback. As the program evolves, we will continue to evaluate our scoring methodology to support fair and equitable scoring that promotes clinical quality improvement. Our current topped out measure policy at § 414.1380(b)(1)(iv) was established to incentivize clinicians to strive to for continued improvement taking into consideration areas where continued improvement is still needed. The topped out measure scoring cap has been a useful tool in communicating that there is limited opportunity for continued improvement. Measures with topped out performance, indicate that there is already reasonable expectation of high clinical quality performance. Clinicians not facing limited measure availability can choose to report on measures for which there is opportunity to score above seven points. Clinicians facing the most limited measure choice, do not have this option. For the CY 2025 performance period/2027 MIPS

payment year, the defined topped out measure policy provides relief for the clinicians most impacted by limited measure choice. Our methodology seeks to identify those most impacted by limited measure choice that current topped out measure policies would leave unable to avoid negative adjustments and includes instances where reweighting of other performance categories would result in a higher weight of the quality performance category. This policy looks at specialty measure sets to identify measures because reporters often have fewer than 6 measures from which to choose. Specialties, such as podiatry, have specialty measure sets that include topped out measures, but have an opportunity to reach the performance threshold based on the available measures in the specialty measure set and avoid harsh negative payment adjustments. We will monitor the impact of this proposal. Additionally, we will evaluate our larger benchmarking policy and consider scoring alternatives that do not include scoring caps.

This proposal does not restrict the number of achievable measures for clinicians but rather provides those with a limited availability of quality measures relevant to their practice the ability to avoid significant negative payment adjustments solely based on the limited availability. It is important to maintain high performance standards for the topped out measures identified under this policy as historical data shows that there is a reasonable expectation of high performance. The defined topped out measure benchmark will score those already performing well accordingly and provides those below the median performance rates the opportunities to receive scores not impacted by the large performance skews in the distribution that typically omits deciles in the middle ranges. Our benchmarking methodology does not distinguish the performance rates between traditional MIPS and MVPs. Therefore we would not distinguish between traditional MIPS and MVPs for application of the defined topped out measure benchmarks. We will not remove the cap for a specified timeframe. Measure performance can change year over year and a measure that shows topped out performance in one year can change in the next. Therefore, application of the topped out measure policies including the defined topped out measure benchmark will be done on a yearly basis. We will continue to find ways to evaluate topped out measures to ensure we provide clinicians with fair scoring opportunities on measures meaningful to their practices. We will continue to monitor the impact of this policy and the status of topped out measures and amend them through notice and comment rulemaking in the future, if necessary.

Comment: Several commenters offered general recommendations to CMS concerning topped out measures. One commenter stressed the importance of developing new measures to drive improvements in care while another recommended that CMS work with interested parties to identify ways to maintain topped out measures in the program so that CMS can continue to track performance. Another commenter noted that topped out measures should not be removed in specialty measure sets, because it penalizes specialties with limited reporting options and discourages them from investing in the development of new measures. Further, one commenter recommended that CMS consider a process for revisiting topped out measures that have been removed from the quality inventory, as it could encourage renewed focus on patient outcomes that have been deprioritized in prior years.

Response: We agree that development of new measures is essential to resolving the problem of limited measure choice. We encourage clinicians to engage in the measure development process. For more information on how to get involved in the measure development process, we direct stakeholders to visit *https://mmshub.cms.gov/*. Where necessary, we maintain topped out measures in MIPS beyond the four-year timeline for removal described in the CY 2018 PFS final rule (83 FR 59761), often to ensure that specialty clinicians have appropriate measures to report. We encourage clinicians to participate in our notice-and-comment rulemaking measure inventory process to ensure we maintain measures that are meaningful to their practices. For measures that are topped out, we encourage measure stewards to revise the measures to add more stringent or next-step criteria to make the measure more robust, thereby building on the original quality measure assessment to drive further quality care and likely changing the measure's topped out status. Additionally, whether a clinician or a group is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. Once quality actions have become a standard of care, the focus of quality assessment shifts to areas where a gap exists. We do not believe it would be appropriate to reintroduce quality measures that have been removed from the program.

After consideration of public comments, we are finalizing our proposal with modification. We are modifying the language at § 414.1380(b)(1)(ii)(E) to state, beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice on a yearly basis. Measures included in the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year. Unlike our proposal, this revised language will include the 9th decile in the scoring range to corresponding scores with a performance rate of 99 percent.

(ii) Approach for Determining Topped Out Measures Impacted by Limited Measure Choice and Subject to the Defined Topped Out Measure Benchmark and the List of Measures That Will Be Subject to the Defined Topped Out Measure Benchmark for the CY 2025 Performance Period/2027 MIPS Payment Year

In the CY 2025 PFS proposed rule, we proposed that we would annually determine and publish a list of topped out measures that will have the 7-point cap removed and be subject to the proposed defined topped out measure benchmark. To identify which topped out measures would be added to the list, we proposed that we would review each specialty measure set by collection type and identify if the prevalence of topped out measures within such a set hinders a clinician's ability to successfully participate in the MIPS quality performance category. To make such a determination, we would analyze the ability of clinicians reporting the specialty measure sets under review to reasonably achieve 75 percent of available quality achievement points based upon the measures available to them and program requirements. As stated, the analysis would be conducted for each specialty measure set and will be further broken down by collection type. At the collection type level, each measure will be assigned points based upon the current benchmarking data: new measures receive 7 or 5 points based on year in the program, measures with benchmarks are given points based upon the highest decile achievable with a less than perfect score (less than 100

percent or greater than 0 percent for inverse measures), and measures with no available historic benchmark are given 0 points. All measure set points would be added together to get an output of scoring potential; the Medicare Part B claims collection type measure sets have an additional 6 points added to the output to account for the small practice bonus. The sum of quality achievement points for each measure set would be compared to the analysis threshold, which is currently 75 percent of available quality achievement points, based upon number of available measures. Any measure sets that are not able to meet or exceed the threshold will be flagged as 'at-risk.' Additional factors that we will take into consideration would include whether:

- A measure within the specialty measure set is considered a cross cutting measure;
- A measure within the specialty measure set is a broadly applicable measure, which we would consider to be a measure included in three or more specialty sets; and
- There are more than ten measures, by collection type, available in the specialty set.

Table 82 contains the list of measures that meet the criteria specified above and for which we proposed to apply the defined topped out measure benchmark for the CY 2025 performance period/2027 MIPS payment year. Specialty measure sets impacted by limited measure choice include those for Pathology, Anesthesiology, Diagnostic Radiology, and Radiation Oncology.

TABLE 82: Proposed topped out measures impacted by limited measure choice and subject to defined topped out measure benchmark for the CY 2025 performance period/2027 MIPS Payment Year

Measure ID	Collection Type	Measure Title
143	eCQM, MIPS CQM	Oncology: Medical and Radiation – Pain Intensity Quantified
249	Medicare Part B Claims, MIPS CQM	Barret's Esophagus
250	Medicare Part B, MIPS CQM	Radical Prostatectomy Pathology Reporting
360	MIPS CQM	Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medical Studies
364	MIPS CQM	Optimized Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines
395	Medicare Part B, MIPS CQM	Lung Cancer Reporting (Biopsy/Cytology Specimens)
396	MIPS CQM	Lung Cancer Reporting (Resection Specimens
397	Medicare Part B, MIPS CQM	Melanoma Reporting
405	MIPS CQM	Appropriate Follow-up Imaging for Incidental Abdominal Lesions
406	MIPS CQM	Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients
424	MIPS CQM	Perioperative Temperature Management
430	MIPS CQM	Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy
436	MIPS CQM	Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques
440	MIPS CQM	Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician
463	MIPS CQM	Prevention of Post-Operative (POV) – Combination Therapy (Pediatrics)
477	MIPS CQM	Multimodal Pain Management

We solicited comment on the proposed approach that we would use each year to identify the list of measures subject to the defined topped out measure benchmark, as well as the proposed list of topped out measures impacted by limited measure choice and subject to defined topped out measure benchmark for CY 2025 performance period/2027 MIPS payment year.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed approach for determining topped out measures that would not be subject to the 7-point cap. Commenters noted that the proposed approach would address concerns that providers are being unfairly penalized for MIPS scoring due to a dearth of measures to report.

Response: We thank commenters for their support.

Comment: Several commenters expressed concern or did not support the proposed approach for determining topped out measures, citing limited quality or specialty-specific measure choice as a result of measures being topped out and putting specialists, particularly subspecialists, at a disadvantage due to limited measure availability. One commenter did not

support the topped out measure methodology, because they believed that the proposed quantitative level does not consider clinical relevance of the measure or volume of Medicare services it impacts.

Response: For the CY 2025 performance period/2027 MIPS payment year, we set 75 percent as the quantitative level according to the performance threshold of 75 points discussed in section IV.A.4.g.(2)(c) of this final rule. We will continue to set the quantitative level for identifying topped out measures subject to the defined topped out measure benchmark in relation to the performance threshold to ensure clinicians with limited choice will not be penalized as it rises. This is an effective first step in addressing the scoring constraints of limited measure choice. Additionally, we consider clinical relevance in the maintenance of the quality measure inventory and regularly maintain topped out measure in MIPS based on their relevance to participants. We encourage interested parties to engage in the development of measures that are meaningful to their practice. For more information, see visit *https://mmshub.cms.gov/*. Additionally, we will continue to revisit our scoring policies and propose policies that alleviate concerns about scoring and measure selection constraints.

Comment: Many commenters offered recommendations to CMS on additional topped out measures that CMS should include in the proposed list of topped out measures that would be subject to the topped out measure benchmark. Several commenters recommended that CMS include all the measures in the MIPS Hospitalist Specialty Set in the list of proposed topped out measures for the CY 2025 performance period. These commenters believed that the hospitalist specialty measure set should be included, because out of four measures in the set, three of them are capped at 7 points. A few commenters recommend that CMS remove the 7-point cap for QCDR measures that are topped out, citing that the 7-point cap for QCDR measures will disproportionately impact specialists and subspecialists. One commenter specifically recommended the topped out measure policy should extend to QCDR measures, such as anesthesiologist measure sets that are approaching or have approached topped out measure status. A few commenters recommended developing new measures for radiology given the lack of other measures and current gaps. Further, a few commenters requested that CMS reevaluate the occupational therapy (OT) and physical therapy (PT) specialty set measures, citing that these measures are increasingly being topped out.

Response: Topped out measures in the Hospitalist and occupational therapy (OT) and physical therapy (PT) specialty sets were not proposed for application of the defined topped out measure benchmark because they are cross-cutting or broadly applicable. QCDR measures were not included in the scope of this policy because they are governed by policy at § 414.1400(b)(4)(iii)(C) stating that CMS may revoke a measure's second year approval if identified as topped out. We encourage interested parties to engage in the development of measures that are meaningful to their practice. For more information, see visit *https://mmshub.cms.gov/*.

(iii) Complex Organization Adjustment for Virtual Groups and APM Entities

Section 1848(q)(5)(B)(ii)(I) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of Certified Electronic Health Record Technology (CEHRT) and qualified clinical data registries. Section 1848(q)(5)(B)(ii)(II) of the Act provides that the Secretary shall treat such clinicians as satisfying the clinical quality measures reporting requirement described in section 1848(o)(2)(A)(iii) of the Act if they report such measures through the use of such EHR technology for a given performance period.[877] In the CY 2017 Quality Payment Program final rule (81 FR 77297), we established the measure bonus point and bonus cap for using CEHRT for end-to-end electronic reporting. We refer readers to § 414.1380(b)(1)(v)(B) for our previously finalized policies regarding measure bonus points for end-to-end electronic reporting.

In the CY 2022 PFS final rule, we finalized our proposal to end measure bonus points for end-to-end electronic reporting. We noted that as we move to MVPs we are simplifying scoring by removing many of the transition policies that we established in the early years of the program in order to develop a stronger MVP program and promote alignment between MIPS and MVPs. As stated in previous rulemaking, we are working to develop ways to encourage the use of CEHRT for electronic reporting without offering measure bonus points. We stated that we believed that we could fulfill the statutory requirement at section 1848(q)(5)(B)(ii)(I) of the Act to encourage the usage of CEHRT, through other means. Accordingly, over the past few years, we have reduced the availability and limited who can submit data for the Medicare Part B claims collection type to only small practices noting that the Medicare Part B claims collection type is not an electronic means of submission.

Satisfying quality reporting requirements is not equally attainable for each MIPS eligible clinician or entity in the Quality Payment Program. As the Quality Payment Program and its components (MIPS and Advanced APMs) has matured, reliance on and subsequent requirements necessitating the use of CEHRT have increased (88 FR 79331). Virtual groups and APM Entities may experience administrative and technological barriers to electronic reporting, including challenges aggregating patient data from multiple TINs, data deduplication, and interoperability between different health IT/EHR systems. In the CY 2018 Quality Payment Program final rule, commenters indicated that data aggregation across multiple TINs for virtual groups would be burdensome for rural and small practices and that this burden could be prohibitive for virtual groups' successful participation in MIPS (82 FR 53610). Commenters stated that the requirement for virtual groups to aggregate data from individual clinicians could be a potential barrier for virtual group participation and would likely be error prone (82 FR 53610). Commenters noted that the potential penalty for failure to overcome technical challenges in data aggregation was, at that time, a 5 percent decrease to the payment adjustment for TINs that are already operating on small margins (82 FR 53610). Commenters noted that the aggregation of data across various TINs using health IT systems may be logistically difficult and complex, as groups and health IT systems have different ways of collecting and storing data and stated that data aggregation across various systems for measures and activities under each performance category may not be possible if qualified registries do not have the option to assist virtual groups (82 FR 53610). Additionally, commenters stated that practices already have an issue of not being able to deduplicate patient data across different health IT systems/multiple EHRs and indicated that virtual groups need clear guidelines regarding how to achieve accurate reporting (82 FR 53613).

[877] Section 1848(o)(2)(A)(iii) of the Act requires a meaningful EHR user to demonstrate to the satisfaction of the Secretary that the eligible professional, among other things, has not knowingly and willfully taken action to limit or restrict the compatibility or interoperability of the certified EHR technology.

Furthermore, commenters expressed concerns that registries supporting virtual group reporting would be opening themselves to potential penalties as a result of technical challenges in data aggregation across multiple EHR systems (82 FR 53610). The commenters indicated that registries may not be able to support virtual group reporting due to legal and operational complexity. Certain registries have internal data governance standards, including patient safety organization requirements, that they must follow when contracting with single TIN participants that may complicate their ability to support virtual group reporting due to necessary legal agreements between solo practitioners and small groups within a virtual group (82 FR 53611). Commenters requested that CMS provide guidance to registries regarding how to handle data sharing among virtual groups with respect to patient safety organization requirements and provide guidance regarding the expectations for registries supporting virtual group reporting (82 FR 53611).

APM Entities are organizations that participate in CMS's various APMs, including the Medicare Shared Savings Program and CMS Innovation Center models. APM Entities face similar organizational challenges reporting eCQMs because of their complex structures, new and innovative partnerships under their respective APMs, and utilization of multiple EHR technologies across participants (88 FR 79097). For ACOs in the Shared Savings Program, and ACOs and other large organizations in CMS Innovation Center models, these issues are further exacerbated by scale and patient volume, as discussed in more detail further in this section. In the CY 2023 PFS proposed rule, commenters noted for ACOs participating in the Shared Savings Program reporting all payer/all patient eCQMs/MIPS CQMs there are issues related to meeting all-payer data requirements, data completeness requirements, and data aggregation (87 FR 69837). ACOs also noted the financial burden of aggregating, deduplicating, and exporting eCQM data across multiple TINs and EHRs (88 FR 79097). In addition, as summarized in the CY 2024 PFS final rule, commenters noted that the current state of data standards and interoperability do not yet fully enable Shared Saving Programs ACOs to meet the eCQM reporting requirements successfully and encouraged CMS to continue working with providers to facilitate the transition to all-payer/all-patient measures even as/if the provider or ACO chooses to report Medicare CQMs (88 FR 79107). In the CY 2024 PFS final rule (88 FR 79098), we stated that our long-term goal continues to be to support Shared Savings Program ACOs in the adoption of all payer/all patient measures and transition to digital quality measurement reporting. These challenges also can be faced by other large APM Entities participating in CMS Innovation Center models.

Additionally, APM Entities in CMS Innovation Center models, regardless of size, are participating in innovative payment and delivery designs through which they may forging new partnerships among different providers and provider types to provide care to attributed beneficiaries to meet the APM's care delivery requirements. For example, the Making Care Primary (MCP) Model includes several payment innovations to support participants in delivering advanced primary care and aims to strengthen coordination between patients' primary care clinicians, specialists, social service providers, and behavioral health clinicians, ultimately leading to chronic disease prevention, fewer emergency room visits, and better health outcomes. The model will operate through three progressive tracks, with the first track being designed for organizations with no prior value-based care experience. Additionally, the model includes State partnerships and multi-payer alignment objectives. Participation in this model will involve forming new relationships to provide whole-person care to beneficiaries, which is likely to necessitate bridging data across multiple technologies and involve new and complex administrative burdens in the provision of this advanced primary care.

Based on our assessment and understanding over the past 2 years, we have learned that there are complexities and challenges for virtual groups and APM Entities in adopting all-payer/all-patient collection types, and as a result, the widespread adoption of the all-payer/all patient collection types requires further time and support. We have come to understand that further support is needed for complex organizations. As an example, Shared Saving Program ACOs provide a high volume of services, particularly those related to preventative screening measures. An internal analysis of performance year 2022 submission data indicates that Shared Savings Program ACOs reported on 33 times more denominator eligible patients for eCQM 001—Diabetes: HbA1c Poor Control (≤9 percent), 53 times more denominator eligible patients for eCQM 134—Preventative Care and Screening: Screening for Depression and Follow-Up Plan, and 25 times more denominator eligible patients for eCQM 236—Controlling High Blood Pressure than other MIPS reporters. In performance year 2022, one ACO reported on over 700,000 denominator eligible beneficiaries for a single eCQM.

The requirement to aggregate patient data collected across multiple health records into a single data stream before sending to CMS poses administrative challenges and the need for additional resources for virtual groups and APM Entities, including Shared Savings Program ACOs. Additionally, data deduplication is resource intensive and requires the development of new workflows to ensure accuracy. Stakeholders have also noted that patient files exist in multiple, disparate EHRs since each EHR system may collect and store data differently. This is important as moving to reporting eCQMs requires building new processes to fill data gaps and ensure data accuracy and causes participants often to customize workflows for data processing, such as using Quality Reporting Document Architecture (QRDA) I (individual patient) and QRDA III (measured entity's aggregate) data submission approaches for quality reporting. EHR vendors have also expressed concerns regarding the need for more time to develop new features that can facilitate eCQM reporting processes. Some interested parties have also voiced concerns that clinician specialty or patient population could yield lower quality scores when reporting eCQMs and create resistance to switching to this collection type.

We noted in the CY 2024 PFS final rule that a few commenters agreed that Medicare CQMs would address most of ACOs' concerns regarding all payer/all patient reporting in the Shared Saving Program, such as difficulties reporting for those ACOs with a higher proportion of specialty practices or groups with multiple EHRs, beneficiaries with no primary care relationship, and shouldering a greater burden when matching and deduplicating patient records (88 FR 79101). Other commenters noted Medicare CQMs reduce concerns about specialists reporting on primary care focused measures. Commenters shared that Medicare CQMs were responsive to several key concerns raised by Shared Savings Program ACOs regarding feasibility of implementing eCQMs/MIPS CQMs, including equity concerns (88 FR 79101). However, we maintain that consistent with section 1848(q)(5)(B)(ii)(I) of the Act we support

and encourage providers as they perform any necessary bridging of data across multiple technologies, which can involve new and complex administrative burdens.

To account for the organizational complexities faced by Virtual Groups and APM Entities, including ACOs in the Shared Savings Program, we proposed to establish a Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS Payment Year. Virtual Group and APM Entities would receive 1 measure achievement point for each submitted eCQM that meets the data completeness at § 414.1380(b)(1)(iii) and case minimum requirements at § 414.1340. Each reported eCQM may not receive more than 10 measure achievement points and the total achievement points (numerator) may not exceed the total available measure achievement points (denominator) for the quality performance category. The Complex Organization Adjustment for a Virtual Group or APM Entity may not exceed 10 percent of the total available measure achievement points in the quality performance category. The adjustment would be added for each eCQM measure submitted at the individual measure level.

Adding one point for each eCQM would help complex organizations to overcome barriers to reporting eCQMs while not masking overall quality performance. By limiting the Complex Organization Adjustment to Virtual Groups and APM Entities, we can limit scoring inflation and target this intervention to those facing challenges to eCQM implementation. Moreover, while acknowledging the Complex Organization Adjustment is a recognition of current challenges to eCQM reporting we believe that adoption of approaches to the exchange and aggregation of quality data enabled by Fast Healthcare Interoperability Resources (FHIR) Application Programing Interfaces (APIs) will reduce or eliminate the barriers posed by organizational complexities to eCQM reporting and will revisit and end this Adjustment as uptake of capabilities for quality data aggregation and exchange using FHIR APIs increases, requirements surrounding the use of FHIR APIs for quality data change are established, or other barriers posed by organizational complexity are otherwise reduced. This adjustment differs from the previous end-to-end electronic reporting bonus in that it does not merely award measure achievement points for reporting but provides an adjustment for clinicians facing complex organizational barriers for adopting the eCQM collection type.

We proposed to add § 414.1380(b)(1)(vii)(C) to provide that, beginning in the CY 2025 performance period/2027 payment year, a virtual group and an APM Entity receives one measure achievement point for each eCQM submitted that meets the case minimum requirement at paragraph (b)(1)(iii) and the data completeness requirement at § 414.1340. Each measure may not to exceed 10 measure achievement points. The total adjustment to the Virtual Group or APM Entity's quality performance category score under this paragraph may not exceed 10 percent of the total available measure achievement points. Accordingly, we proposed to update § 414.1380(b)(1)(vii) to state a MIPS eligible clinician's quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) and Complex Organization Adjustment in paragraph (b)(1)(vii)(C). The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) is added to that result. The quality performance category score cannot exceed 100 percentage points.

We solicited comment on our proposal to implement a Complex Organization Adjustment for virtual groups and APM Entities, including ACOs in the Shared Savings Program.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed complex organization adjustment for virtual groups and APM entities. These commenters believed that this would promote eCQM adoption and address the unique challenges that virtual groups and APM entities experience in reporting eCQMs. One commenter also believed that the proposal would help ease the transition for ACOs as they familiarize themselves with eCQM reporting tools and implement new processes to improve performance on eCQMs. Another commenter supported the proposal on the condition that CMS maintain the option to report Medicare CQMs.

Response: We thank commenters for their support.

Comment: Many commenters recommended that CMS expand the complex organization adjustment to all MIPS participants reporting eCQMs and any clinician or practice that uses multiple EHRs or practices at multiple sites rather than restricting the policy to virtual groups and APM entities. These commenters noted that individual clinicians and group practices also face challenges in reporting eCQMs and aggregating data across disparate EHR platforms. Therefore, these commenters believed that these entities should also receive the adjustment. One commenter requested clarification on the proposed complex organization adjustment, specifically requesting that CMS provide a transparent definition of ''complex organization'' and information on how an organization is determined to be a complex organization. A few commenters specifically discussed the proposal's potential impacts on small practices. These commenters recommended that CMS expand the adjustment to small practices as they face disproportionate barriers to reporting of eCQMs. Another commenter encouraged CMS to ensure that the costs of complying with the requirements are not disproportionately borne by APM participants in small practices who may struggle to cover the costs associated with aggregating patient data across systems. A few commenters recommended that the proposed complex organization adjustment should be broadened beyond eCQM reporting and also offered to entities reporting Medicare CQMs and MIPS CQMs.

Response: At this time, we are defining complex organizations as virtual groups and APM Entities including Shared Saving Program ACOs. In order to facilitate their participation in the Quality Payment Program, these organizations' compositions require structures that are complex or are participating in innovative payment models that require flexibility in forming their structures, posing the challenges to data aggregation, deduplication and interoperability across multiple EHRs/health IT vendors. This differs from other types of organizations that do not by nature necessitate these complex, innovative compositions. This adjustment is to offset the challenges associated with adoption of eCQMs because of the organizational complexity required by definition of virtual groups and APM Entities and is therefore not appropriate for other types of participants or collection types such as MIPS CQMs or Medicare CQMs. Small practices in MIPS currently receive a small practice bonus of 6 measure achievement points added to the quality performance category if they submit at least one

measure in the performance category. Small practices that are APM Entities or virtual groups would receive the small practice bonus in addition to the Complex Organization Adjustment. We will continue to monitor the interaction of these policies as well their impacts on small practices.

Comment: A few commenters expressed concern about the proposed complex organization adjustment. These commenters believed that the complex organization adjustment is insufficient to offset the significant challenges that APM entities, specifically ACOs, continue to face. Additionally, commenters expressed skepticism that the proposal would increase eCQM reporting since it does not address underlying concerns related to data interoperability and aggregation. A few commenters recommended that CMS address the underlying technology infrastructure and interoperability concerns that virtual groups, ACOs, and other entities experience. Further, a few commenters stated that scoring adjustments do not address barriers to aggregating and reporting data across multiple EHRs nor do they solve concerns with data validity and reliability when reporting eCQMs. These commenters also stated that adding bonus points to quality scores makes it difficult to track and improve quality over time. Another commenter had concerns that the adjustment would not fully address difficulties encountered by large physician groups, particularly if the 10-point cap per measure is too limiting.

Response: We thank commenters for their feedback. In response to comments that the proposal does not solve the underlying concerns with data validity and reliability when reporting eCQMs we acknowledged in our proposal that the requirement to aggregate patient data collected across multiple health records into a single data stream before sending to CMS poses administrative challenges and the need for additional resources for virtual groups and APM Entities, including Shared Savings Program ACOs. We also acknowledged that data deduplication is resource intensive and requires the development of new workflows to ensure accuracy. We will continue to work with interested parties to resolve this issue. In adding one point for each eCQM would help complex organizations to overcome structural barriers to reporting eCQMs. In limiting the application to virtual groups and APM Entities and capping the adjustment to 10 percent of the total achievable points in the quality performance category, the Complex Organization Adjustment will serve to help these participants overcome barriers to eCQM reporting while reducing scoring inflation. We will monitor the impact of this policy and make amendments where necessary. Additionally, MIPS CQMs will be available to report in the APP Plus measure set for an additional two years as discussed in section III.G.4.b.(2)(b). of this final rule. Furthermore, we believe that the adoption of approaches leveraging FHIR APIs for quality data aggregation and exchange will reduce or eliminate the barriers posed by organizational complexities to eCQM reporting and will revisit and end this Adjustment as uptake of FHIR APIs for these purposes increases, requirements surrounding the use of FHIR APIs are established, or other barriers posed by organizational complexities are otherwise reduced.

After consideration of public comments, we are finalizing our proposal to add § 414.1380(b)(1)(vii)(C) to provide that, beginning in the CY 2025 performance period/2027 payment year, a virtual group and an APM Entity receives one measure achievement point for each eCQM submitted that meets the case minimum requirement at paragraph (b)(1)(iii) and the data completeness requirement at § 414.1340. Each measure may not to exceed 10 measure achievement points. The total adjustment to the virtual group or APM Entity's quality performance category score under this paragraph may not exceed 10 percent of the total available measure achievement points. Additionally, we are finalizing our proposal to update § 414.1380(b)(1)(vii) to state a MIPS eligible clinician's quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) and Complex Organization Adjustment in paragraph (b)(1)(vii)(C). The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) is added to that result. The quality performance category score cannot exceed 100 percentage points

(c) Scoring the Quality Performance Category Through MIPS for ACOs in the Shared Saving Program

(i) Score for Shared Savings Program ACOs Reporting Medicare CQMs Using Flat Benchmarks

In section III.G.4.c.(2)(c) of this final rule we proposed to score Shared Savings Program ACOs reporting Medicare CQMs in the APP Plus quality measure set using flat benchmarks for their first 2 performance periods in MIPS. Consistent with this discussion, we proposed to add § 414.1380(b)(1)(ii)(F) to state that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type will be scored using flat benchmarks for their first 2 performance periods in MIPS. We solicited comment on our proposal to score Medicare CQMs using flat benchmarks for their first two performance periods in MIPS.

We received public comments on this proposal. The following is a summary of the comments we received and our responses. We refer readers to section III.G.4.c.(2)(c) of this final rule for a summary of comments and our responses.

After consideration of public comments, we are finalizing the addition of § 414.1380(b)(1)(ii)(F) to state that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type will be scored using flat benchmarks for their first 2 performance periods in MIPS.

(d) Cost Performance Category Score

(i) Scoring the Cost Performance Category Background

As discussed previously, to calculate a final score for each MIPS eligible clinician for the performance period of an applicable MIPS payment year, section 1848(q)(5)(A) of the Act requires that we must develop a methodology for assessment of the total performance of each MIPS eligible clinician, according to the performance standards we have established in accordance with section 1848(q)(3) of the Act, with respect to applicable measures and activities specified for each performance category. For the final score, we must use a scoring scale of 0 to 100.

We refer readers to § 414.1380(b)(2) for our policies regarding scoring for the cost performance category and to previous rules where these policies were finalized, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), the CY 2019 PFS final rule (83 FR 59856), the CY 2021 PFS final rule (85 FR 84877 through 84880), the CY 2022 PFS final rule (86 FR 65507 through 65509), the CY 2023 PFS final rule (87 FR 70091 through 70093), and the CY 2024 PFS final rule (88 FR 79369 through 79373).

In the CY 2025 PFS proposed rule (89 FR 62083 through 62088), we proposed to: (1) modify the benchmark

methodology for scoring measures specified for the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year; and (2) adopt a new cost measure exclusion policy beginning with the CY 2025 performance period/2027 MIPS payment year.

(ii) Benchmark Methodology for Scoring the Cost Performance Category

(A) Background on Methodology for Scoring the Cost Performance Category

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. Under § 414.1380(b)(2), we score each MIPS eligible clinician [878] on each cost measure attributed to them in accordance with § 414.1350(b) so long as the MIPS eligible clinician meets the minimum case volume specified under § 414.1350(c) to be scored on that cost measure. Cost performance category measures are attributed to MIPS eligible clinicians through, and scored based on, claims data; we do not require MIPS eligible clinicians to submit any additional data on cost measures to CMS (§ 414.1325(a)). We have codified our cost performance category scoring policies at § 414.1380(b)(2).

Specifically, we finalized at § 414.1380(b)(2) that we will score each cost measure attributed to a MIPS eligible clinician (meeting or exceeding the minimum case volume) by assigning achievement points between one and ten based on the MIPS eligible clinician's performance on the cost measure during the performance period compared to the measure's benchmark. We award the achievement points (including partial points) based on which benchmark decile range the MIPS eligible clinician's performance on the measure is between. The MIPS eligible clinician's cost performance category score (to be added to the final score) is the sum (not to exceed 100 percent) of: (1) the total number of achievement points earned by the MIPS eligible clinician divided by the total number of available achievement points; and (2) the cost improvement score, as determined under § 414.1380(b)(2)(iv) (§ 414.1380(b)(2)(iii)). We will not calculate a cost performance category score if the MIPS eligible clinician is not attributed any cost measures for the performance period because the MIPS eligible clinician has not met the minimum case volume as specified at § 414.1350(c) for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the MIPS eligible clinician (§ 414.1380(b)(2)(v)).

As set forth at § 414.1380(b)(2)(i), we determine cost measure benchmark ranges based on all MIPS eligible clinicians' performance on each attributed cost measure during the performance period. We determine a benchmark for a cost measure only if at least 20 MIPS eligible clinicians are attributed and meet the minimum case volume for that measure, as specified at § 414.1350(c). If we cannot determine a benchmark for a cost measure because an insufficient number of MIPS eligible clinicians had the measure attributed to them (that is, less than 20 MIPS eligible clinicians meet the minimum case volume), then we will not assign any score for the measure for any MIPS eligible clinician (§ 414.1380(b)(2)(i) and (v)). We refer readers to our prior rulemakings, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), for a detailed discussion of our previously finalized policies for determining a benchmark for each cost measure and then assignment of achievement points based on comparison of a MIPS eligible clinician's performance to that established benchmark.

Specifically, under our current scoring policy at § 414.1380(b)(2) and benchmark methodology, MIPS eligible clinicians with the lowest average cost per episode or beneficiary would be in the top decile (Decile 10) and receive the highest number of available achievement points (10). On the other end of the spectrum, MIPS eligible clinicians with the highest average cost per episode or beneficiary would be in the bottom decile (Decile 1) and receive the lowest number of achievement points (1). More information about how average cost per beneficiary or per episode are calculated and translated to MIPS achievement points is available in the 2023 MIPS Cost User Guide.[879]

Table 83 provides an example of using benchmark deciles along with partial achievement points to assign achievement points for a sample cost measure under our current methodology. The following formula is used to determine the number of partial points awarded to the MIPS eligible clinician:

Benchmark Decile # + [(measure score, expressed as a dollar amount—bottom of benchmark decile range)/(top of benchmark decile range—bottom of benchmark decile range)] = Cost Measure Achievement Points.[880]

[878] The term MIPS eligible clinician is defined in § 414.1305 as including a group of at least one MIPS eligible clinician billing under a single tax identification number. A cost measure therefore may be attributed to a group that includes at least one MIPS eligible clinician and the group may therefore be scored on the cost performance category as a whole. We refer readers to our policies governing group reporting and scoring under MIPS as set forth at § 414.1310(e).

TABLE 83: Example of Using Benchmark Deciles and Partial Points to Assign Achievement Points for Performance on the Screening/Surveillance Colonoscopy Cost Measure

Benchmark Decile	Cost per Episode	Percentile	Possible Points
Benchmark Decile 1	$1330.65-$1126.35	99th	1.0–1.9
Benchmark Decile 2	$1126.34-$1062.93	90th	2.0-2.9
Benchmark Decile 3	$1062.92-$1025.75	80th	3.0-3.9
Benchmark Decile 4	$1025.74-$997.78	70th	4.0-4.9
Benchmark Decile 5	$997.77-$969.73	60th	5.0-5.9
Benchmark Decile 6	$969.72-$940.03	50th	6.0-6.9
Benchmark Decile 7	$940.02-$904.83	40th	7.0-7.9
Benchmark Decile 8	$904.82-$860.44	30th	8.0-8.9
Benchmark Decile 9	$860.43-$779.69	20th	9.0-9.9
Benchmark Decile 10	$779.68 and lower	10th	10

In the CY 2021 PFS final rule (85 FR 84877 through 84880), we finalized at § 414.1350(d)(4) the weight of the cost performance category to be 20 percent of the MIPS final score for the 2023 MIPS payment year and at § 414.1350(d)(5) the weight of the cost performance category to be 30 percent of the MIPS final score for the 2024 MIPS payment year and each subsequent MIPS payment year. We noted that such an approach would allow us to reach the statutorily required weight of 30 percent by the 2024 MIPS payment year (see section 1848(q)(5)(E)(i)(II) of the Act) while reducing the impact of experiencing an increase in the weight of the cost performance category too much in any single year and providing clinicians with an eased gradual and incremental transition starting with the 2023 MIPS payment year. Since then, MIPS eligible clinicians have raised concerns about cost performance category scoring having a negative impact on their final MIPS score. Multiple factors have likely contributed to clinician concerns. First, there has been an increase in weight for the cost performance category over time. Specifically, due to the COVID–19 Public Health Emergency (COVID–19 PHE) which ended on May 11, 2023, we reweighted the cost performance category's score to zero percent of the final score for many MIPS eligible clinicians. We announced on April 6, 2020 that, due to the COVID–19 PHE, we would apply our extreme and uncontrollable circumstances reweighting policies described at § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide and extend the deadline to submit an application for reweighting the quality, cost, improvement activities or Promoting Interoperability reporting categories for the CY 2019 performance period/2021 MIPS payment year (85 FR 19277 and 19278). Also, for the CY 2020 performance period/2022 MIPS payment year and the CY 2021 performance period/2023 MIPS payment year, we extensively applied our reweighting policies, described under § 414.1380(c)(2)(i), to MIPS eligible clinicians nationwide due to the COVID–19 PHE.[881] [882] As a result, the CY 2022 performance period/2024 MIPS payment year was the first MIPS payment year that the cost performance category score generally constituted 30 percent of MIPS eligible clinicians' final scores (section 1848(q)(5)(E)(i)(II) of the Act). Second, the number of cost measures has increased over time, and therefore, more MIPS eligible clinicians are being measured on the cost performance category and on new measures.

Additionally, based on our calculation of cost performance category scores for the CY 2022 performance period/2024 MIPS payment year, we observed lower scores for the cost performance category than for the quality performance category, even though they each generally constitute 30 percent of the final score. Recent analyses of CY 2022 performance period/2024 MIPS payment year data have identified the unweighted mean cost performance category score was 59 out of 100, while the unweighted mean score for the quality performance category was 74 out of 100. We also note that the unweighted mean scores were 95 out of 100 for the improvement activities performance category and 94 out of 100 for the Promoting Interoperability performance category.

There are several factors that may have contributed to a significantly lower score in the cost performance category, compared to the other categories. First, measures in the cost performance category are scored against a benchmark determined based on average performance of all MIPS eligible clinicians during that same performance period (§ 414.1380(b)(2) introductory text and (b)(2)(i)) rather than a benchmark determined based on historical data, which is used, wherever possible, for non-administrative claims-based quality measures in the quality performance category. Benchmarks determined based on historical data for the quality performance category provide MIPS eligible clinicians with helpful performance targets in advance of or during the performance period. Meanwhile, the performance period benchmarks for the cost performance category do not provide MIPS eligible clinicians with information about performance targets before or during the performance period. However, in the CY 2025 PFS proposed rule, we stated that using benchmarks based in the performance period is a better approach for the cost performance category than using benchmarks based on historical data because different payment policies may apply during the historical period than during the performance period, which may affect the cost of care for patients treated by MIPS eligible clinicians.

Second, in traditional MIPS (compared to MVP reporting), MIPS eligible clinicians are scored on each cost measure for which they are attributed and meet the established case minimum and a benchmark can be calculated. In the quality performance category, if a MIPS eligible clinician

[881] *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/816/2020%20Cost%20Quick%20Start%20Guide.pdf.*

[882] *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1298/2021%20MIPS%20Cost%20Quick%20Start%20Guide.pdf.*

reports more than the required number of quality measures, we use the highest scored outcome measure and then the next highest scored measures to reach a total of 6 scored quality measures to calculate the clinician's MIPS quality performance category score. The current cost benchmark methodology uses a decile range based on linear percentile distributions and assigns 5.0 to 6.9 achievement points to clinicians with cost measure scores within the 50th to 60th percentiles (Table 83).

For the example cost measure presented in Table 83, the cost measure median, the 50th percentile, is $969.72. If a MIPS eligible clinician's average cost per episode for the measure is $1,104 (about $135 above the median), the MIPS eligible clinician's cost falls within Benchmark Decile 2, for which the MIPS eligible clinician may receive between 2.0 and 2.9 achievement points. We then use the following formula to determine the number of partial points awarded to the MIPS eligible clinician:

Benchmark Decile # + [(measure score, expressed as a dollar amount—bottom of benchmark decile range)/(top of benchmark decile range—bottom of benchmark decile range)] = Cost Measure Achievement Points.[883]

Based on this partial points calculation formula, the clinician would receive 0.3 partial points, resulting in a cost measure score of 2.3 out of 10 achievement points for the Screening/Surveillance Colonoscopy cost measure under this example.

This score may have the effect of lowering the MIPS eligible clinician's final score, as discussed previously. If the MIPS eligible clinician is only attributed and scored on this single cost measure and does not receive a cost improvement score, then their score for the cost performance category would be based on the cost measure's score of 2.3 out of 10 achievement points. Their score for the cost performance category would be 0.23 (2.3/10 = 0.23), equal to the total number of achievement points earned by the MIPS eligible clinician divided by the total number of available achievement points under § 414.1380(b)(2)(iii)(A). Based on the final score calculation under § 414.1380(c), the contribution of the cost performance category score to the final score for this MIPS eligible clinician would be equal to the cost performance category score multiplied by the cost performance category weight (30 percent if the MIPS eligible clinician has not received any reweighting).

To illustrate how this cost performance category score could lower the final score, if this MIPS eligible clinician received perfect scores in each of the other three performance categories, based on the final score calculation under § 414.1380(c) and the respective performance category weights when all four performance categories are scored without reweighting, we would use the formula as described below. For this example, we have not included the complex patient bonus.

MIPS Final score = [(60/60 × 30 percent for quality) + (2.3/10 × 30 percent for cost) + (40/40 × 15 percent for improvement activities) + (100/100 × 25 percent for Promoting Interoperability)] × 100 = 76.9.[884]

In this example, a MIPS final score of 76.9 for the MIPS eligible clinician is just above the 2024 MIPS payment year performance threshold of 75. Therefore, under the current cost scoring methodology, a MIPS eligible clinician scoring near the median on a cost measure would need to score perfectly (or nearly perfectly) within the other three performance categories to receive a final score slightly above the performance threshold and to avoid a negative payment adjustment. The unweighted cost performance category score of 23 out of 100 noticeably lowers the MIPS eligible clinician's MIPS final score.

(B) Modification to Scoring Methodology for the Cost Performance Category Beginning with CY 2024 Performance Period/2026 MIPS Payment Year

In light of the concerns identified with our current cost scoring policies, we proposed to modify the methodology for scoring the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year (89 FR 62085 through 62087). The proposed cost scoring methodology would be based on standard deviation, median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose average costs attributed under a cost measure would be equal to the median cost for all MIPS eligible clinicians that had the measure attributed them, we would assign an achievement point value equal to 10 percent of the performance threshold. For example, for the CY 2024 performance period/2026 MIPS payment year, the median would have an achievement point value of 7.5, based on a performance threshold of 75 as finalized at § 414.1405(b)(9)(iii). For each cost measure, the cut-offs for benchmark ranges would be calculated based on standard deviations, expressed in dollars, from the median.

The benchmark ranges, the median, and the performance threshold-derived achievement point values aligned with the median would be dynamic and responsive to changes in average costs per episode or beneficiary assessed by cost measures and performance thresholds for each CY performance period/MIPS payment year. The performance threshold-derived point values could change based on the performance threshold established for each performance period/MIPS payment year. The standard deviations from the median used to determine cutoffs for benchmark ranges for each year would be reviewed for any necessary updates on an annual basis based on performance across MIPS eligible clinicians within the cost performance category and the performance threshold established for the performance period/MIPS payment year. We would perform analyses when the performance threshold changes to set the benchmark ranges. To determine the benchmark ranges, we would adhere to the following principles: (1) center the majority of average costs per episode or beneficiary around the performance threshold-derived point value; (2) determine benchmark ranges according to the statistical distribution curve of the average cost per episode or beneficiary; and (3) distribution of achievement points for cost measures should be reflective of overall program performance. We refer readers to Table 84 for an example of how the proposed cost scoring methodology could be implemented for a specific cost measure when the performance threshold is set to 75.

[883] *https://qpp.cms.gov/resources/document/fac61617-20ef-4d31-9f0f-4a0e76620ca3.*

[884] In simplified terms, the MIPS Final score = (30 points for quality) + (6.9 points for cost) + (15 points for improvement activities) + (25 points for Promoting Interoperability) = 76.9 final score points.

TABLE 84: Example of Implementation of the Proposed Cost Scoring Methodology for Assignment of Achievement Points for Performance on the Screening/Surveillance Colonoscopy cost measure

Benchmark Range	Points	Proposed Methodology for Bottom of Benchmark Range ($)	Example Benchmark Ranges
Benchmark Range 1	1 - 1.9	Median cost + (2.75 x standard deviation)	$1341.93 - $1308.10
Benchmark Range 2	2 - 2.9	Median cost + (2.5 x standard deviation)	$1308.09 - $1.274.26
Benchmark Range 3	3 - 3.9	Median cost + (2.25 x standard deviation)	$1274.25 - $1240.43
Benchmark Range 4	4 - 4.9	Median cost + (2 x standard deviation)	$1240.42 - $1172.75
Benchmark Range 5	5 - 5.9	Median cost + (1.5 x standard deviation)	$1172.74 - $1105.08
Benchmark Range 6	6 – 6.9	Median cost + (1 standard deviation)	$1105.07 - $1037.40
Benchmark Range 7	7 - 7.9	Median cost + (0.5 x standard deviation)	$1037.39 - $902.05
Benchmark Range 8	8 - 8.9	Median cost - (0.5 x standard deviation)	$902.04 - $834.38
Benchmark Range 9	9 - 9.9	Median cost - (1 x standard deviation)	$834.37 - $766.70
Benchmark Range 10	10	Median cost - (1.5 x standard deviation)	$766.69 and below

Continuing with the example of the Screening/Surveillance Colonoscopy cost measure, now presented in Table 84 as an example of implementation of the proposed cost scoring methodology, the median (50th percentile) cost would remain $969.72. Under the proposed cost scoring methodology, for the CY 2024 performance period/2026 MIPS payment year, a MIPS eligible clinician with a cost per episode equal to the median cost of all cases attributed to all MIPS eligible clinicians would receive 7.5 achievement points out of 10 possible achievement points.

Using the same example as previously presented in section IV.A.4.f.(1)(d)(ii)(A) of this final rule, we would apply the proposed cost scoring benchmark methodology as shown in Table 84 to a MIPS eligible clinician with an average cost per episode for this measure that is $1,104 (about $135 above the median). Based on the analysis of data in this example, the standard deviation for the Screening/Surveillance Colonoscopy cost measure would be $135.35. This value for the standard deviation would then be used to calculate the benchmark ranges in Table 69 by plugging in this value for the standard deviation for each benchmark range. For example, ''Median cost + (1 × $135.35)'' would be calculated for ''Median cost + (1 standard deviation)'' for the bottom of Benchmark range 6. As shown with the example in Table 84, under our proposed cost scoring methodology, the MIPS eligible clinician's average cost per episode of $1,104 would fall within Benchmark Range 6 for the Screening/Surveillance Colonoscopy cost measure, for which the MIPS eligible clinician may receive between 6.0 and 6.9 achievement points.

Under our proposal to modify the cost performance category's scoring methodology for individual cost measures, we would continue to use our established formula to assign partial achievement points:

Benchmark Range # + [(measure score, expressed as a dollar amount—bottom of benchmark range)/(top of benchmark range—bottom of benchmark range)] = Cost Measure Achievement Points.

As a result, using the example shown in Table 84, under our proposed cost scoring methodology, the MIPS clinician would receive 6.02 cost measure achievement points (6 + [($1,104—$1,105.07)/($1,037.40—$1,105.07)] = 6.02). The assignment of 6.02 achievement points under the proposed cost scoring methodology would be closer to the performance threshold equivalent of 7.5 than the assignment of 2.3 achievement points under the current cost scoring methodology, as discussed in our previous example in section IV.A.4.f.(1)(d)(ii)(A) of this final rule.

In this example, the MIPS eligible clinician's score for the cost performance category would be 0.602 (6.02/10 = 0.602), equal to the total number of achievement points earned by the MIPS eligible clinician divided by the total number of available achievement points at § 414.1380(b)(2)(iii)(A). Based on the final score calculation at § 414.1380(c), the contribution of the cost performance category score to the final score for this MIPS eligible clinician would be equal to the cost performance category score multiplied by the cost performance category weight (30 percent if the MIPS eligible clinician has not received any reweighting).

If this MIPS eligible clinician received perfect scores in each of the other three performance categories, based on the final score calculation at § 414.1380(c) and the respective performance category weights when all four performance categories are scored without reweighting, we would use the formula as described below. For this example, we have not included the complex patient bonus.

MIPS Final score = [(60/60 × 30 percent for quality) + (6.02/10 × 30 percent for cost) + (40/40 × 15 percent for improvement activities) + (100/100 × 25 percent for Promoting Interoperability)] × 100 = 88.06.[885]

This MIPS final score of 88.06 for the MIPS eligible clinician would be well above the 2024 MIPS payment year performance threshold of 75. The cost performance category score of 60.2 out of 100 would not noticeably lower the MIPS eligible clinician's MIPS final score.

This proposed modification in our scoring methodology for cost measures would align the assignment of achievement points for cost measures so that clinicians with costs near the measure's 50th percentile (median) would not receive a disproportionately low score. Based on our analyses utilizing data from the CY 2022 performance period/2024 MIPS payment year, this proposed methodology would increase the mean cost performance category score (unweighted) for clinicians with a cost performance category score from 59 out of 100 to 72 out of 100 (an increase of

[885] In simplified terms, the MIPS Final score = (30 points for quality) + (18.06 points for cost) + (15 points for improvement activities) + (25 points for Promoting Interoperability) = 88.06 final score points.

13 points).[886] Further, this proposed cost scoring methodology would increase the means for each cost measure score by amounts ranging from 0.04 to 2.52 points. Our analysis showed that, under our proposed methodology, with this increase to the mean cost performance category score, the mean final score would increase by 3.89 points for MIPS eligible clinicians assessed on at least one cost measure and receiving a cost performance category score. Under our analysis, our scoring methodology would not negatively impact MIPS eligible clinicians whose average costs for a specific cost measure are around the median.

Specifically, our analysis supports our intended goal for the proposed modification to the scoring methodology: MIPS eligible clinicians who deliver care at an average cost near the median costs for all MIPS eligible clinicians attributed the measure would receive scores at, or very close to, the performance threshold-derived score. Additionally, this proposed modification would address MIPS eligible clinicians' concerns that cost measure scoring negatively impacts their final scores more than other performance categories, including disparate negative effects for MIPS eligible clinicians who are scored on the cost performance category compared to clinicians not scored on the cost performance category.

To codify this policy, we proposed to modify § 414.1380(b)(2) to specify that achievement points are awarded based on which benchmark range the MIPS eligible clinician's performance on the measure is in (89 FR 62087). We also proposed to specify that CMS assigns partial points based on where the MIPS eligible clinician's performance falls between the top and the bottom of the benchmark ranges. The terms ''decile'' and ''percentile distribution'' are currently used at § 414.1380(b)(2) to describe the scoring methodology used to award achievement points and assign partial points. However, under the proposed methodology, the term ''decile'' no longer accurately describes how the benchmark ranges would be constructed. The more general term ''benchmark range'' accurately describes both the current and the proposed cost scoring methodology, and we therefore proposed to modify § 414.1380(b)(2) to use ''benchmark range'' in lieu of ''decile'' and ''percentile distribution.'' We did not propose any modifications to the remainder of the language currently at § 414.1380(b)(2), which provides that, for each cost measure attributed to a MIPS eligible clinician, the clinician receives one to ten achievement points based on the clinician's performance on the measure during the performance period compared to the measure's benchmark.

We also did not propose any modifications to the language currently at § 414.1380(b)(2)(i), generally governing if and how CMS determines a cost measure's benchmark. However, we proposed to codify our current cost scoring policy, previously finalized in the CY 2017 QPP final rule (81 FR 77308 through 77311), with modification by adding language at § 414.1380(b)(2)(i)(A). We proposed to specify at § 414.1380(b)(2)(i)(A) that, for the 2019 through 2025 MIPS payment years, CMS determines cost measure benchmark ranges based on linear percentile distributions (89 FR 62087).

We also proposed to codify our proposed benchmarking methodology at § 414.1380(b)(2)(i)(B) (89 FR 62087). We proposed to specify at § 414.1380(b)(2)(i)(B) that, beginning with the 2026 MIPS payment year, for each cost measure, CMS determines 10 benchmark ranges based on the median cost of all MIPS eligible clinicians attributed the measure, plus or minus standard deviations and that CMS awards achievement points based on which benchmark range a MIPS eligible clinician's average cost for a cost measure corresponds. We also proposed to codify at § 414.1380(b)(2)(i)(B) that, beginning with the 2026 MIPS payment year, CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose average cost attributed under a cost measure is equal to the median cost for all MIPS eligible clinicians attributed the measure.

We received public comments on this proposal. The following is a summary of the comments we received on the proposed modification to the cost scoring methodology and our responses.

Comment: Many commenters supported the proposal to modify the cost scoring methodology starting with the CY 2024 performance period/2026 MIPS payment year. These commenters stated their belief that the modifications will improve fairness, help address cost performance category scoring transparency and predictability, mitigate significant variations in cost scores for minimal differences in performance, ensure the performance category remains focused on lowering costs, and result in a positive impact on cost scores. A few commenters agreed that setting the median performance period cost for each measure at 10 percent of the performance threshold (7.5 points for the CY 2024 performance period/2026 MIPS payment year) will result in cost measure scores more closely aligning with actual and expected MIPS performance without negatively impacting final MIPS scores. A few commenters stated that the proposed modification would ensure fairer comparison, allowing for more accurate and equitable performance assessment across diverse health care settings. A few commenters expressed appreciation that the proposed modification would better align cost and quality performance category scores, prevent the cost performance category from more negatively impacting final MIPS scores than the other performance categories, and prevent disproportionate negative impacts on those who receive cost performance category scores. One commenter stated their belief that the proposed scoring changes will help address the difficulties associated with parsing out cost data for improvement efforts. One commenter stated their belief that the use of standard deviations from the median to determine benchmark ranges should better align measure scores with statistically significant differences.

Response: We thank the commenters for their support.

Comment: While many commenters supported the proposed modifications to our cost scoring methodology, many of these commenters requested that CMS implement the cost scoring methodology modification starting with an earlier performance period than we proposed (before the CY 2024 performance period/2026 MIPS payment year). The commenters believed the current cost scoring methodology to be problematic and therefore recommended applying the proposed cost scoring methodology to earlier MIPS payment years to prevent low cost performance category scores from leading to lower MIPS final scores in those previous MIPS payment years. Several commenters stated their belief that problems with the cost performance category started with the CY 2022 performance period/2024 MIPS payment year, when CMS began to score the category once again following the COVID–19 pandemic and the cost performance category weight increased

[886] In the CY 2025 PFS proposed rule (89 FR 62086), we stated that this proposed methodology would increase the mean cost performance category score (unweighted) for clinicians with a cost performance category score from 59 out of 100 to 71 out of 100 (an increase of 11.9 points). In between the publishing of the CY 2025 PFS proposed rule (89 FR 62086) and this final rule, updated modeling for our regulatory impact analysis (RIA) was performed, and we have revised to 72 out of 100 (an increase of 13 points) in this final rule to align with the updated RIA modeling.

to 30 percent. These commenters recommended that CMS should therefore apply this policy retroactively starting with the CY 2022 performance period/2024 MIPS payment year or the CY 2023 performance period/2025 MIPS payment year. The commenters stated their belief that retroactive application of this policy is necessary because MIPS eligible clinicians scored in the cost performance category for previous years are at a disadvantage compared to clinicians not scored on cost measures, such as certain specialties or those participating through MIPS APMs. One commenter expressed their belief that applying the policy retroactively is consistent with section 1871(e)(1)(A)(ii) of the Act that provides statutory authority to retroactively apply a substantive change in regulation when failure to do so would be contrary to the public interest.

Response: We acknowledge the commenters' recommendation to implement the proposed modified policy for scoring cost measures earlier than we proposed, beginning with the CY 2022 performance period/2024 MIPS payment year or CY 2023 performance period/2025 MIPS payment year. Understanding MIPS eligible clinicians' concerns with our cost measure scoring policy as previously discussed, we proposed to apply modifications to our scoring policy as soon as feasible, beginning with the CY 2024 performance period/2026 MIPS payment year (89 FR 62085 through 62087).

In the interest of finality in our MIPS payment adjustment factor determinations (especially given the budget neutrality requirement for our calculations in aggregate in section 1848(q)(6)(F) of the Act), we are unable to reopen determinations for the 2024 MIPS payment year or 2025 MIPS payment year after this final rule becomes effective. For the CY 2022 performance period/2024 MIPS payment year, we have finalized our calculation of, and are currently applying to Medicare Part B payments, the MIPS payment adjustment factors for each MIPS eligible clinician. Changing those payment rates to apply our proposed modified cost measure scoring policy would require extensive reprocessing of claims, which is not feasible. For the CY 2023 performance period/2025 MIPS payment year, we already completed our initial calculations of MIPS final scores and payment adjustment factors based on our MIPS policies in effect for that performance period/MIPS payment year. Section 1848(q)(7) of the Act requires that we finalize and notify all MIPS eligible clinicians of their final MIPS payment adjustment factors for the 2025 MIPS payment year no later than 30 days prior to January 1, 2025, prior to the effective date of this final rule. Applying new, modified scoring policies after we have finalized our calculations for the performance period/MIPS payment years, even as we identify and seek to apply improvements for future MIPS payment years, is not feasible.

While some MIPS eligible clinicians may benefit from application of this modified cost measure scoring policy to earlier MIPS payment years, others may not. Further, MIPS eligible clinicians generally rely on the finality of our calculation and application of MIPS payment adjustment factors to their Medicare Part B claims during the MIPS payment year.

Comment: Several commenters requested that, if the proposed scoring policy cannot be applied retroactively, CMS reweight the cost performance category for the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year. One commenter stated their belief that CMS has statutory authority (section 1848(q)(5)(F) of the Act) and regulatory authority (§ 414.1380(c)(2)(i)(A)(2) and § 414.1380(c)(2)(i)(A)(9)) to reweight the cost performance category when there are not sufficient measures or flaws in the cost scoring methodology that make it impossible to reliably calculate a score for measures to adequately capture and reflect performance.

Response: We decline this request to reweight the cost performance category on these bases for the CY 2022 performance period/2024 MIPS payment year or the CY 2023 performance period/2025 MIPS payment year. In the CY2025 PFS proposed rule (89 FR 62085 through 62087), we proposed to modify our methodology for assigning achievement points for a MIPS eligible clinician's performance on cost measures relative to the measure's benchmark (that is, the average performance of all MIPS eligible clinicians attributed the same cost measure during the same performance period) to better align the achievement points with our performance threshold. We did not note any issues with individual cost measures, their respective specifications, or the reliability of the cost measure data that would warrant reweighting under these statutory and regulatory authorities on the basis of this proposed modification to our cost measure scoring policy.

We did previously conduct an empirical analysis of all cost measures for the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year to determine if any of the cost measures had been significantly impacted by the COVID–19 PHE to warrant individual measure exclusion or reweighting of the cost performance category. Our empirical analysis identified that only the Simple Pneumonia with Hospitalization measure warranted exclusion from our calculation of MIPS eligible clinicians' scores under the cost performance category. We otherwise did not identify a basis for reweighting the cost performance category for all MIPS eligible clinicians for the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year. We refer readers to our fact sheets for more information about these analyses and our findings at: *https://qpp.cms.gov/resources/document/b0889301-2116-4844-99f7-3f56f8a3de22* (for the CY 2022 performance period/2024 MIPS payment year) and *https://qpp.cms.gov/resources/document/689a740a-5b23-47e6-8b7d-c448d6d68085* (for the CY 2023 performance period/2025 MIPS payment year). Based on our analysis, it would not be appropriate to reweight the cost performance category.

Comment: A few commenters encouraged CMS to ensure that there are adequate risk adjustments made for high-risk cases and flexibility for specialties with inherent cost challenges. Specifically, one commenter suggested using states or regions, specialty status, and practice size to inform peer groups and consider geographical variability and specialty practice differences that are not addressed by using the national cost averages.

Response: We thank the commenters for their recommendation to include risk adjustments in cost scoring. We agree that it is important for cost measures to include adequate risk adjustment. All MIPS cost measures include risk adjustment for patient-level factors and other variables. We refer readers to the QPP Explore Measures page (*https://qpp.cms.gov/mips/explore-measures?tab=costMeasures*) for more information about the cost measures currently in use in MIPS, including the risk adjustment methodology for each measure. We will continue to risk adjust at the specific cost measure level as discussed in the CY 2025 PFS proposed rule (89 FR 62047) and in section IV.A.4.e.(2)of this final rule. At this time, we will not make additional adjustments as part of cost performance

category scoring. The measures used within the cost performance category are constructed to identify the differences in clinician services provided and specialties as much as possible.

Comment: A few commenters urged CMS to evaluate and publish the results of CMS' future analyses of the impact of the cost scoring modification as they are concerned that not every cost measure has a normal distribution which could lead to unexpected and undesirable results and to ensure equity. One commenter requested that CMS offer robust support for physicians adapting to the new cost scoring methodology.

Response: We thank the commenters for their recommendation to monitor and publish the impact of the cost scoring methodology modification. Our analysis supports our intended goal for the proposed modification to the scoring methodology: MIPS eligible clinicians who deliver care at an average cost near the median costs for all MIPS eligible clinicians attributed the measure would receive scores at, or very close to, the performance threshold-derived score. Additionally, this proposed modification would address MIPS eligible clinicians' concerns that cost measure scoring negatively impacts their final scores more than other performance categories, including disparate negative effects for MIPS eligible clinicians who are scored on the cost performance category compared to clinicians not scored on the cost performance category. We release annual QPP Feedback Reports that include feedback and publish Public Use Files with additional data available for clinicians to review. We would continue to monitor the impact of these scoring changes on MIPS eligible clinicians and consider making available additional data.

In response to the request that CMS offer support for adjusting to the new cost scoring methodology, we note that clinicians would not need to do anything different under this new cost scoring methodology since CMS automatically scores cost measures using claims data. Additionally, we will make available educational materials to inform MIPS eligible clinicians about the new cost scoring methodology modifications and their anticipated impact.

Comment: A few commenters, while supportive of the proposal, expressed their belief that it does not resolve core issues of the cost performance category, which they believe are: lack of clinical relevancy to many clinicians; lack of timely feedback for improving performance; the lengthy process for developing new measures; and the need for changes to the attribution logic of certain measures. A few commenters requested that CMS provide timely and detailed performance feedback throughout the performance period (quarterly or at a minimum bi-annually) for cost measures to allow clinicians to track and improve performance during the performance period.

Response: We note that the proposed modifications to the cost scoring methodology are intended to address cost scoring concerns, as previously discussed. While we appreciate the additional feedback, the other issues raised are outside of the scope of our proposals for this rulemaking. We will consider this feedback as we continue to work to improve the cost performance category overall.

Regarding the commenters' request for timely and detailed feedback for MIPS eligible clinicians on their performance in the cost performance category, we currently provide annual MIPS Performance Feedback that includes information on MIPS eligible clinicians' performance for the previous performance period. This feedback typically becomes available during the summer in between the performance period and the MIPS payment year, which is as soon as feasible. We provide these reports on an annual basis, as we calculate cost measures following the end of the performance period. This is because MIPS cost measure scores are based on national averages and are calculated using benchmarks that are derived from cost data from all MIPS eligible clinicians, groups, and virtual groups that met the measure's case minimum for that performance period. MIPS eligible clinicians have episodes of care that begin and end at various times throughout the performance period, so to calculate an accurate comparison across clinicians, CMS has historically calculated all scores following the end of the performance period. Calculating the MIPS cost measures during the performance period may provide an incomplete indication of how a MIPS eligible clinician is performing. We are continuing to work towards providing meaningful and timely information on cost measures generally and we recognize the importance of providing this information for measures implemented in MIPS.

Additionally, we post detailed measure specifications that describe the attribution methodology and a list of included services so that MIPS eligible clinicians can anticipate when they are treating a Medicare patient that may be captured by a MIPS cost measure.

Finally, we note that MIPS eligible clinicians could be rewarded for improving on their performance on a cost measure in future years based on the improvement scoring methodology, as described in § 414.1380(b)(2)(iv).

Comment: One commenter did not support the proposed modification to the cost scoring methodology and stated their belief that keeping the current cost scoring methodology is a better option to ensure half of MIPS eligible clinicians perform well and the other half of clinicians perform poorly on the cost performance category. The commenter stated that it was their understanding that, in order to create meaningful incentives, the goal of MIPS is for roughly half of the industry to pass and the other half to fail.

Response: The proposed cost scoring methodology is intended to prevent MIPS eligible clinicians delivering care at an average cost near the median cost for all MIPS eligible clinicians attributed a measure from being negatively impacted and to address concerns that the current cost measure scoring methodology disproportionately lowers final scores for clinicians more than other performance categories, creating disparate negative impacts for those scored on the cost performance category compared to those who are not.

Since the proposed methodology utilizes the median, around half of the clinicians would receive cost measure scores at or above the performance threshold equivalent. Both the current and proposed methodologies calculate the range of national average costs for all MIPS eligible clinicians attributed the cost measure and assign achievement points based on how the individual MIPS eligible clinician's attributed costs compare to that national range. The proposed methodology modifies the assignment of those achievement points such that MIPS eligible clinicians performing near the median for a cost measure would be more likely to receive a neutral score consistent with the performance threshold than a negative score, which they would be more likely to receive under the current scoring methodology. Some MIPS eligible clinicians will still perform well while other MIPS eligible clinicians will still perform poorly on the cost performance category. However, under the proposed methodology, the MIPS eligible clinicians performing near the median for a cost measure will be treated more neutrally, rather than grouped together with those performing poorly. This proposal likewise would not impact the budget neutrality of the MIPS payment adjustments; it would only address issues with the cost

performance category scoring so that those scored on cost are not disadvantaged compared to those not scored on cost.

After consideration of public comments, we are finalizing our proposals to modify our scoring methodology for the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year, as proposed. Specifically, we are finalizing that, beginning with the 2026 MIPS payment year, for each cost measure, we will determine 10 benchmark ranges based on the median cost of all MIPS eligible clinicians attributed the measure, plus or minus standard deviations, and we will award achievement points based on which benchmark range a MIPS eligible clinician's average cost for a cost measure corresponds. We also are finalizing as proposed that, beginning with the 2026 MIPS payment year, we will award achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose average cost attributed under a cost measure is equal to the median cost for all MIPS eligible clinicians attributed the measure. We are also finalizing as proposed that achievement points are awarded based on which benchmark range the MIPS eligible clinician's performance on the measure is in and that we will assign partial points based on where the MIPS eligible clinician's performance falls between the top and the bottom of the benchmark ranges.

We are also codifying this modified scoring policy as proposed at § 414.1380(b)(2) and 414.1380(b)(2)(i)(B). We are also finalizing our proposed amendment to the regulation text at § 414.1380(b)(2) to use the term ''benchmark range'' in lieu of ''decile'' and ''percentile distribution.'' We did not propose any modifications to the remainder of the language currently at § 414.1380(b)(2), which provides that, for each cost measure attributed to a MIPS eligible clinician, the clinician receives one to ten achievement points based on the clinician's performance on the measure during the performance period compared to the measure's benchmark. We are also finalizing as proposed to codify our current cost scoring policy by adding at § 414.1380(b)(2)(i)(A) that, for the 2019 through 2025 MIPS payment years, we determine cost measure benchmark ranges based on linear percentile distributions.

(iii) Adoption of Additional Cost Measure Exclusion Policy

(A) Background on Cost Measure Exclusion Policy

We refer readers to § 414.1380(b)(2)(v)(A) and the CY 2022 PFS final rule (86 FR 65507 through 65509) for our previously established policy for excluding a single cost measure from a MIPS eligible clinician's score for the cost performance category. As described at § 414.1380(b)(2)(v)(A), we established that, beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician's or group's cost performance category score. We also established at § 414.1380(b)(2)(v)(A) that ''significant changes'' are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. We specified at § 414.1380(b)(2)(v)(A) that significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

As described in the CY 2022 PFS final rule (86 FR 65507 through 65509), we finalized the policy at § 414.1380(b)(2)(v)(A) to provide scoring flexibility in instances where changes during a performance period impede the effective measurement of cost. We identified that there is a need for additional flexibility in calculating the scores for cost measures to account for the impact of changing conditions that are beyond the control of individual MIPS eligible clinicians and groups. We noted that this flexibility would allow us to ensure that clinicians are not impacted negatively when performance is affected not due to the care provided, but due to external factors. We noted that we would determine whether such external changes impede the effective measurement of cost by considering factors including: The extent and duration of the changes, and the conceptual and empirically tested relationship between the changes and each measure's ability to accurately capture clinician cost performance (86 FR 65508). Empirical testing could include assessing whether there are rapid or unprecedented changes to patient case volume or case mix, and the extent to which this could lead to misleading or inaccurate results (86 FR 65508).

(B) Permit Exclusion of a Cost Measure When Impacted by Errors and When Significant Changes Occur Outside of the Performance Period

In the CY 2022 PFS final rule, for the quality performance category, we modified the quality measure exclusion policy at § 414.1380(b)(1)(vii)(A) to change ''significant changes'' to ''significant changes or errors'' (86 FR 65492) and to include the omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. Currently, for the cost performance category, we do not include ''errors'' in addition to ''significant changes'' within our cost measure exclusion policy at § 414.1380(b)(2)(v)(A). To provide CMS with greater flexibilities to be responsive to any errors or significant changes outside of the control of MIPS eligible clinicians that negatively impact the ability of specific cost measure(s) to assess clinician performance, we proposed in the CY 2025 PFS proposed rule (89 FR 62087 and 62088) to add a new cost measure exclusion policy at § 414.1380(b)(2)(v)(B) similar to the quality measure exclusion policy. Additionally, to further align our measure exclusion policies among the performance categories, we proposed to include ''errors'' for the cost performance category. Specifically, we proposed that, beginning with the 2027 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the individual MIPS eligible clinician's or group's cost performance category score.

For purposes of this cost measure exclusion policy at § 414.1380(b)(2)(v)(B), we proposed to define ''significant changes or errors'' as changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance (89 FR 62088). While we proposed to include ''errors'' within this policy for the cost performance category, as the quality performance category already

does, the list of what ''significant changes or errors'' includes would differ by performance category to capture differences in how cost measures and quality measures are calculated and measured. For instance, unlike quality measures for which MIPS eligible clinicians generally must submit data to CMS, cost measures are calculated by CMS solely based on administrative claims data; and, therefore, should not be impacted by reporting errors. However, cost measures could be impacted by CMS calculation errors. Further, under our proposed cost measure exclusion policy, errors would be external to the care provided, and such that CMS determines may lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. Under our proposed exclusion policy for cost measures, significant changes or errors would include, but not limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. Additionally, the proposed exclusion policy would not automatically result in cost measure exclusion. Instead, we would determine whether there is a negative impact from the significant change or error when deciding if a cost measure would be excluded.

Specifically, we proposed that, before applying the proposed cost measure exclusion policy, we would empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. It is important to clarify that a change or error would not automatically result in measure exclusion, but instead, that we would need to determine whether there is a negative impact from the change or error that would affect cost measure scoring.

Because significant changes or errors can have an ongoing impact on a measure beyond a single performance period, we proposed that the new cost measure exclusion policy at § 414.1380(b)(2)(v)(B) would allow us to exclude cost measures when such changes and errors occur outside of the performance period, but otherwise affect the performance period. For example, if a cost measure is impacted by a coding change or guidance that requires substantive changes to a measure, we may not be able to modify the measure within one performance period. In such circumstances, we may want to exclude the cost measure for the affected performance periods due to the ongoing impact on the measure. We would ensure that if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting one or more performance periods delivering misleading or inaccurate results, then the affected cost measure could be excluded from the individual MIPS eligible clinician's or group's cost performance category score. The cost measure should be able to be excluded regardless of when we become aware of the issue, when the significant change came into effect, or when the error first occurred. Therefore, we proposed that this cost measure exclusion policy would address data used to calculate a score for a cost measure being impacted by significant changes and errors affecting a performance period, even if they do not occur during the performance period and also to codify this policy at § 414.1380(b)(2)(v)(B) (89 FR 62088).

We proposed that this cost measure exclusion policy would be effective beginning with the CY 2025 performance period/2027 MIPS payment year so this policy would be in place as soon as feasible.

This proposal would specify that, beginning with the 2027 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure would be excluded from the MIPS eligible clinician's or group's cost performance category score. We proposed to specify that ''significant changes or errors'' are changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. We also proposed to specify that significant changes or errors would include, but are not limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. We proposed that CMS would empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. We also proposed to codify this new cost measure exclusion policy at § 414.1380(b)(2)(v)(B).

We received public comments on this proposal. The following is a summary of the comments we received on the proposal to adopt a new cost measure exclusion policy and our responses.

Comment: A few commenters supported the proposed cost measure exclusion policy as they believe it will prevent unfair cost performance category scores. One commenter appreciated that CMS's proposed cost measure exclusion policy recognizes the inherent difficulties in attribution for cost in the MIPS program, especially for lower volume Medicare specialists such as obstetrics.

Response: We thank the commenters for their support. In the CY 2025 PFS proposed rule (89 FR 62087 and 62088), we proposed the new cost measure exclusion policy to provide greater flexibilities to be responsive to any errors or significant changes outside of the control of MIPS eligible clinicians that negatively impact the ability of specific cost measure(s) to assess clinician performance. This cost measure exclusion policy would not address any potential concerns with attribution of cost measures in MIPS.

Comment: A few commenters supported the new cost measure exclusion policy but requested that CMS finalize and apply the policy earlier than we proposed, beginning with the CY 2023 performance period/2025 MIPS payment year or the CY 2024 performance period/2026 MIPS payment year. A few commenters expressed their belief that there are cost measures in use for the CY 2023 performance period/2025 MIPS payment year for which this exclusion policy should be applied because they have concerns about the data and measure specifications used to calculate these measures.

Response: We acknowledge the commenters' recommendation to implement the proposed cost measure exclusion policy earlier than we proposed. As previously discussed, we proposed to adopt and apply this cost measure exclusion policy as soon as feasible, beginning with the CY 2025 performance period/2027 MIPS payment year. We will not apply this policy for the CY 2023 performance period/2025 MIPS payment year. In the interest of finality in our MIPS payment adjustment factor determinations (especially given the budget neutrality requirement for our calculations in aggregate in section 1848(q)(6)(F) of the Act), we are unable to reopen determinations for the CY 2023 performance period/2025 MIPS

payment year after this final rule becomes effective. We have completed our initial calculations of MIPS final scores and payment adjustment factors based on our MIPS policies in effect for that performance period/MIPS payment year. Section 1848(q)(7) of the Act requires that we finalize and notify all MIPS eligible clinicians of their final MIPS payment adjustment factors for the 2025 MIPS payment year no later than 30 days prior to January 1, 2025, prior to the effective date of this final rule. Applying new, modified policies after we have finalized our calculations for the performance period/MIPS payment year, even as we identify and seek to apply improvements for future MIPS payment years, is not feasible. The CY 2024 performance period/2026 MIPS payment year is not impacted by these same barriers as the measures have not yet been scored. Therefore, this policy can be implemented beginning in the CY 2024 performance period/2026 MIPS payment year. Regarding comments about specific cost measures, we note that we would analyze cost measures and implement this new cost measure exclusion policy on a case-by-case basis beginning with the CY 2024 performance period/2026 MIPS payment year.

Comment: One commenter recommended that if a cost measure meets the cost measure exclusion policy criteria, CMS replace the cost measure or remove it from MIPS for the following performance period. The commenter specifically referenced cost measures that the measure steward cannot maintain, for which they stated that updates would not be made to the specifications to account for changes in billing, coding practices, and other influences on the measure.

Response: We thank the commenter for their recommendation. The proposed cost measure exclusion policy only addresses cost measure exclusion and is not intended to be used for cost measure removal, for which there are separate defined criteria. As discussed further in section IV.A.4.e.(2)(d)of this final rule, we are finalizing the cost measure removal criteria as proposed and have codified this measure removal policy by amending § 414.1350 by adding the cost removal criteria in paragraph (e). CMS may remove a cost measure from MIPS based on one or more of the factors, which include that a measure steward is no longer able to maintain the cost measure. Under the cost measure removal policy, if a cost measure is excluded under the proposed cost measure exclusion policy and the measure steward can no longer maintain the measure, CMS may consider the cost measure for removal in future years.

After consideration of public comments, we are finalizing our proposal to adopt a new cost measure exclusion policy, with modification. Specifically, we are finalizing that, beginning with the 2026 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the performance period, such that calculating the cost measure score leads to misleading or inaccurate results, then the affected cost measure will be excluded from the MIPS eligible clinician's or group's cost performance category score. We are also finalizing as proposed to specify that ''significant changes or errors'' are changes or errors external to the care provided. We are also finalizing as proposed to specify that CMS will determine whether ''Significant changes and errors'' lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. We are also finalizing as proposed to specify that significant changes or errors will include, but are not limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. We are also finalizing as proposed that CMS will empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score will lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. Lastly, we are finalizing our proposal to codify the new cost measure exclusion policy at § 414.1380(b)(2)(v)(B), with the modification above.

g. MIPS Payment Adjustments

(1) Background

Section 1848(q)(6)(A) of the Act requires that we specify a MIPS payment adjustment factor for each MIPS eligible clinician for a year. This MIPS payment adjustment factor is a percentage determined by comparing the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. The MIPS payment adjustment factors specified for a year must result in differential payments such that MIPS eligible clinicians with final scores above the performance threshold receive a positive MIPS payment adjustment factor, those with final scores at the performance threshold receive a neutral MIPS payment adjustment factor, and those with final scores below the performance threshold receive a negative MIPS payment adjustment factor.

For previously established policies regarding our determination and application of MIPS payment adjustment factors to each MIPS eligible clinician, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2022 PFS final rule (86 FR 65527 through 65537), CY 2023 PFS final rule (87 FR 70096 through 70102), and CY 2024 PFS final rule (88 FR 79373 through 79380).

(2) Establishing the Performance Threshold

(a) Statutory Authority and Background

As discussed above, to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Section 1848(q)(6)(D)(i) of the Act also provides that the Secretary may reassess the selection of the mean or median every 3 years.

Sections 1848(q)(6)(D)(ii) through (iv) of the Act provided special rules, applicable only for certain initial years of MIPS, for our computation and application of the performance threshold for our determination of MIPS payment adjustment factors. These special rules are no longer applicable for establishing the performance threshold for the CY 2025 performance period/2027 MIPS payment year. We refer readers to the CY 2024 PFS proposed rule (88 FR 52596) for further information on these previously applicable requirements as they explain our prior computations of the performance threshold.

In the CY 2022 PFS final rule (86 FR 65527 through 65532), we selected the mean as the methodology for

determining the performance threshold for the CY 2022 performance period/2024 MIPS payment year through CY 2024 performance period/2026 MIPS payment year. We also established regulation at § 414.1405(g) that, for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold would be the mean of the final scores for all MIPS eligible clinicians from a prior period. As discussed under section IV.A.4.g.(2)(b) of this final rule, we are finalizing our proposal to continue using the mean as the methodology for determining the performance threshold for the 2027, 2028, and 2029 MIPS payment years.

In the CY 2024 PFS final rule (88 FR 79373 through 79380), we established the performance threshold for the CY 2024 performance period/2026 MIPS payment year by calculating the mean of the final scores for all MIPS eligible clinicians using CY 2017 performance period/2019 MIPS payment year data. As further discussed under section IV.A.4.g.(2)(c) of this final rule, we are finalizing our proposal to continue using the mean of the final scores for all MIPS eligible clinicians from the CY 2017 performance period/2019 MIPS payment year to establish the performance threshold as 75 points for the CY 2025 performance period/2027 MIPS payment year.

For further information on our current performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53792), CY 2019 PFS final rule (83 FR 59879 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), CY 2022 PFS final rule (86 FR 65527 through 65532), CY 2023 PFS final rule (87 FR 70096 through 70100), and CY 2024 PFS final rule (88 FR 79373 through 79380).

We codified the performance thresholds for each of the first 8 years of MIPS at § 414.1405(b)(4) through (9). These performance thresholds are shown in Table 85.

TABLE 85: Performance Thresholds for the CY 2017 Performance Period/2019 MIPS Payment Year through the CY 2024 Performance Period/ 2026 MIPS Payment Years

MIPS Performance Period	2017 MIPS Performance Period	2018 MIPS Performance Period	2019 MIPS Performance Period	2020 MIPS Performance Period	2021 MIPS Performance Period	2022 MIPS Performance Period	2023 MIPS Performance Period	2024 MIPS Performance Period
Year of MIPS	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**	**Year 6**	**Year 7**	**Year 8**
Performance Threshold	3 points	15 points	30 points	45 points	60 points	75 points	75 Points	75 Points
Change from prior year	N/A	12 points	15 points	15 points	15 points	15 points	0 points	0 points

(b) Establishing the Performance Threshold Methodology for the 2027, 2028, and 2029 MIPS Payment Years

Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. That section also provides that the Secretary may reassess the selection of the mean or median every 3 years. In accordance with section 1848(q)(6)(D)(i) of the Act, we proposed in the CY 2025 PFS proposed rule to continue using the mean of the final scores for all MIPS eligible clinicians to compute the performance threshold for the 2027, 2028, and 2029 MIPS payment years (89 FR 62089 through 62091).

In the CY 2022 PFS final rule (86 FR 65527 through 65532), we selected the mean (rather than the median) as the methodology for determining the performance threshold for the 2024, 2025, and 2026 MIPS payment years. For the CY 2019 performance period/CY 2021 MIPS payment year through CY 2021 performance period/2023 MIPS payment year, section 1848(q)(6)(D)(iv) of the Act required that we methodically increase the performance threshold each year to ''ensure a gradual and incremental transition'' to the performance threshold we estimated would be applicable in the CY 2022 performance period/2024 MIPS payment year. Although sections 1848(q)(6)(D)(ii) through (iv) of the Act were no longer applicable for establishing the performance threshold for the CY 2024 performance period/ 2026 MIPS payment year, these previously applicable statutory requirements explained prior computations of the performance threshold that impacted our policy considerations for establishing the performance threshold for MIPS going forward. Based on our review of possible values for the CY 2022 performance period/2024 MIPS payment year, using the mean as our methodology for setting the performance threshold for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year would continue the ''gradual and incremental transition'' that was previously required under section 1848(q)(6)(D)(iv) of the Act, as well as to provide consistency to our stakeholders. Therefore, we finalized the proposal to use the mean as our methodology for setting the performance threshold for that 3-year period. We also codified this methodology in regulation at § 414.1405(g), providing that, for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold will be the mean of the final scores for all MIPS eligible clinicians from a prior period as specified.

At the time of the CY2025 PFS proposed rule, we had data available on MIPS eligible clinicians' final scores from the CY 2017 performance period/ 2019 MIPS payment year through CY 2022 performance period/2024 MIPS payment year, as shown in Table 86. These values represent all available computations of mean and median final scores for those performance periods/ MIPS payment years. As discussed in this section of the final rule, we may use

either the mean or median of the final scores from a prior period for computing the performance threshold for the next 3 years, beginning with the CY 2025 performance period/2027 MIPS payment year. As discussed in the CY 2025 PFS proposed rule, we did not have MIPS eligible clinicians' final scores available from performance periods after the CY 2022 performance period/2024 MIPS payment year, which may inform the performance thresholds for the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year (89 FR 62090). Therefore, we did not include the mean and median final scores for the CY 2023 performance period/2025 MIPS payment year for consideration as potential performance threshold values for the CY 2025 performance period/2027 MIPS payment year. As provided in section 1848(q)(6)(D)(i) of the Act, we must select whether we will use the mean or median of MIPS eligible clinicians' final scores from a prior period, which we may reassess after 3 years. We assessed these selection options based on the data we had available.

TABLE 86: Possible Values for the 2027 MIPS Payment Year Performance Threshold

MIPS Payment Years	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year	2024 MIPS Payment Year
Mean	74.65	87.00	85.65	89.47	89.22	82.71
Median	89.71	99.63	92.32	96.82	97.22	85.17

As shown in Table 86, using the median final score gives a possible range of performance thresholds from 85.17 points to 99.63 points (rounded to 85 points and 100 points, respectively). Given our performance threshold of 75 points for the CY 2024 performance period/2026 MIPS payment year, these values would result in an increase of 10 points to 25 points for the CY 2025 performance period/2027 MIPS payment year, and potentially the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year. Selecting the median of final scores as our methodology would, at a minimum, result in a 13 percent increase in the performance threshold of 75 points, which we had established for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year. Further, as shown in Table 85, 75 points is the highest performance threshold we have established for any MIPS payment year to date.

As shown in Table 86, using the mean final score as the methodology would yield a possible range of performance thresholds from 74.65 points to 89.47 points (rounded to 75 points and 89 points, respectively). Given our performance threshold of 75 points in the CY 2024 performance period/2026 MIPS payment year, these values would result in an increase of zero to 14 points for the CY 2025 performance period/2027 MIPS payment year, and potentially the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year. Selecting the mean of final scores as our methodology would, at a maximum, result in a 19 percent increase in the performance threshold of 75 points, which we had established for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year.

We aim to incentivize performance improvement while also ensuring that it is reflective of true clinician performance. Moreover, where possible, it is important to offer stability and consistency for MIPS eligible clinicians. After evaluating the possible values for mean and median shown in Table 86 and our prior policies for consistently selecting a performance threshold value of 75 points for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year, we have determined that using the mean as our methodology for the 2027 through 2029 MIPS payment years would offer the most consistent and predictable approach for MIPS eligible clinicians. On this basis, we proposed in the CY 2025 PFS proposed rule to continue using the mean of the final scores for all MIPS eligible clinicians from a prior period as specified to compute the performance threshold for each of the 2027 through 2029 MIPS payment years (89 FR 62089 through 62091).

We also proposed to codify this proposal by amending our regulation at § 414.1405. We proposed to amend § 414.1405 by: (1) revising paragraph (g) to read only ''Performance Threshold Methodology''; (2) redesignating, with minor technical modification, the substantive provision at paragraph (g) as a new paragraph (g)(1) to reflect the performance threshold methodology we established and used to specify the performance threshold for the 2024, 2025 and 2026 MIPS payment years under § 414.1405(b)(9); and (3) adding paragraph (g)(2) to provide that, for each of the 2027, 2028, and 2029 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b)(10).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed their support for establishing the performance threshold by continuing to use the mean as the methodology for calculating the performance threshold for the 2027, 2028, and 2029 MIPS payment years. A few commenters stated their appreciation for continued stability in the requirements determining payment adjustments under the MIPS program.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that CMS remain flexible on whether to use the mean or median to compute the performance threshold in future years in case of unforeseen circumstances.

Response: We note that, in accordance with section 1848(q)(6)(D)(i) of the Act, we may reassess whether to use the mean or median to compute the performance threshold every three years. In the CY 2028 PFS proposed rule, we plan to reassess whether to select using the mean or median to

compute the performance threshold using the data available at that time to determine whether to use the mean or median for purposes of computing the performance threshold in future years, specifically the 2030 through 2032 MIPS payment years.

Comment: One commenter expressed concern with CMS using the mean of a prior period to calculate the performance threshold as CMS sunsets traditional MIPS and moves toward MVP reporting.

Response: We note that, in accordance with section 1848(q)(6)(D)(i) of the Act, we are required to choose between the mean or median of a prior period to calculate the performance threshold by which we compare MIPS final scores to determine the MIPS payment adjustment factors for each MIPS eligible clinician (see section 1848(q)(6)(A) of the Act). These statutory requirements apply regardless of whether a MIPS eligible clinician reports MIPS data under traditional MIPS or MVPs. As we continue to move toward MVP reporting, we intend to evaluate the final score data as it becomes available to determine a performance threshold that is most reflective of a MIPS eligible clinician's performance in addition to ensuring that we incentivize providing high quality and value of care without unfairly penalizing clinicians. Moreover, using the mean to calculate the performance threshold may provide consistency and stability as more MIPS eligible clinicians begin to report MVPs over traditional MIPS.

After consideration of public comments, we are finalizing our proposal to continue using the mean of the final scores for all MIPS eligible clinicians from a prior period as specified to compute the performance threshold for each of the 2027 through 2029 MIPS payment years, as proposed. We are also finalizing our proposal to amend our regulation at § 414.1405, as proposed. We amend § 414.1405 by: (1) revising paragraph (g) to read only ''Performance Threshold Methodology''; (2) redesignating, with minor technical modification, the substantive provision at paragraph (g) as a new paragraph (g)(1) to reflect the performance threshold methodology we established and used to specify the performance threshold for the 2024, 2025 and 2026 MIPS payment years under § 414.1405(b)(9); and (3) adding paragraph (g)(2) to provide that, for each of the 2027, 2028, and 2029 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b)(10).

(c) Establishing the Performance Threshold for the CY 2025 Performance Period/2027 MIPS Payment Year

Using the mean of 75 points from the CY 2017 performance period/2019 MIPS payment year continues to be the most appropriate option for establishing the performance threshold for the CY 2025 performance period/2027 MIPS payment year for various reasons described in this section, including: providing consistency for MIPS eligible clinicians while allowing additional time for more recent data to become available, continuing to provide opportunities for MIPS eligible clinicians to gain experience with cost measure scoring (particularly the methodology we are finalizing in section IV.A.4.f.(1)(d)(ii)(B) of this final rule), and ensuring that we do not inadvertently disadvantage certain clinician types, such as small practices and solo practitioners, as we increase the performance threshold.

As shown in Table 86, we calculated the mean values for the CY 2017 performance period/2019 MIPS payment year through the CY 2022 performance period/2024 MIPS payment year, and determined that the mean of 75 points from the CY 2017 performance period/CY 2019 MIPS payment year continues to be the most appropriate option that would provide stability for MIPS eligible clinicians while still encouraging high quality of care. The final scores for the CY 2023 performance period/2025 MIPS payment year were not finalized in time for the proposed rule and, therefore, the mean final score for the CY 2023 performance period/2025 MIPS payment year was not included for consideration as a potential performance threshold value for the CY 2025 performance period/2027 MIPS payment year.

Though we did consider the mean of 87 points from the CY 2018 performance period/2020 MIPS payment year, a substantial increase of 12 points could unfairly impact clinicians as they continue to recover from the COVID–19 public health emergency (COVID–19 PHE), which ended on May 11, 2023. We also considered using the means of the final scores from the CY 2019 performance period/2021 MIPS payment year through the CY 2022 performance period/2024 MIPS payment year for establishing the CY 2025 performance period/2027 MIPS payment year performance threshold. However, we decided they would not be appropriate for measuring future clinician performance given the impact of the COVID–19 PHE on data for MIPS, as described below.

Given issues with underlying data in prior periods due to the COVID–19 PHE, it would be beneficial to wait for more recent data that better reflects clinicians' performance and continue to rely on data from the CY 2017 performance period/2019 MIPS payment year, which predated the COVID–19 PHE. Due to the timing of the COVID–19 PHE and our announcement on March 22, 2020, extending the deadline for MIPS data submission,[887] we are still evaluating the usability of data from the CY 2019 performance period/2021 MIPS payment year. While data collection occurred during the CY 2019 performance period prior to the start of the COVID–19 PHE, data submission for the CY 2019 performance period (occurring during the first quarter of CY 2020) was impacted. Specifically, in addition to extending the deadline for submitting MIPS data, we announced on April 6, 2020, that, due to the COVID–19 PHE, we would apply our extreme and uncontrollable circumstances reweighting policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide and extend the deadline to submit an application for reweighting the quality, cost, improvement activities or Promoting Interoperability performance categories for the CY 2019 performance period/2021 MIPS payment year (85 FR 19277 and 19278). These flexibilities for the submission of MIPS data occurring in the first quarter of CY 2020 were intended to alleviate the reporting burden on clinicians that were responding to the onset of the COVID–19 pandemic. The geographic differences of COVID–19 incidence rates along with different impacts resulting from Federal, State, and local laws and policy changes implemented in response to COVID–19 may have affected which MIPS eligible clinicians were able to submit data for the CY 2019 performance period. This may have led to final scores that were not wholly representative of performance for all MIPS eligible clinicians. Also, for the CY 2020 performance period/2022 MIPS payment year and the CY 2021 performance period/2023 MIPS payment year, we extensively applied our reweighting policies, described under § 414.1380(c)(2)(i), to MIPS eligible clinicians nationwide due to the COVID–19 PHE. Inherently, these

[887] *https://www.cms.gov/newsroom/press-releases/cms-announces-relief-clinicians-providers-hospitals-and-facilities-participating-quality-reporting.*

actions, particularly reweighting the performance categories, skewed the final scores from those years such that they are not an appropriate indicator for future performance of MIPS eligible clinicians. Specifically, we are concerned that the final scores during the COVID–19 PHE reflect the performance of only MIPS eligible clinicians that may have been less impacted by the pandemic, and do not accurately represent MIPS eligible clinician performance overall during this period.

As discussed further in the CY 2025 PFS proposed rule (89 FR 62083 through 62085) and section IV.A.4.f.(1)(d)(ii) of this final rule, MIPS eligible clinicians have expressed concern that the cost performance category scoring has a negative impact on their MIPS final score. The CY 2022 performance period/2024 MIPS payment year was the first MIPS payment year that the cost performance category score generally constituted 30 percent of MIPS eligible clinicians' final scores (section 1848(q)(5)(E)(i)(II) of the Act). We have observed lower category scores for the cost performance category as compared to the quality performance category. In light of these concerns, which are supported by our analysis of cost performance category scores as discussed in the CY 2025 PFS proposed rule (89 FR 62083 through 62087) and section IV.A.4.f.(1)(d)(ii) of this final rule, we stated that maintaining a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year would provide stability for MIPS eligible clinicians as they become acquainted with the cost performance category (particularly the scoring methodology we proposed and are finalizing in section IV.A.4.f.(1)(d)(ii)(B) of this final rule) without unfairly and negatively impacting their final scores and MIPS payment adjustments. We also stated that maintaining the performance threshold at 75 points for the 2027 MIPS payment year would provide us time to incorporate the impacts of this cost performance category scoring methodology as we establish future performance thresholds (89 FR 62091 and 62092).

As discussed in the CY 2025 PFS proposed rule (89 FR 62083 through 62087) and section IV.A.4.f.(1)(d)(ii) of this final rule, we stated that multiple factors have likely contributed to MIPS eligible clinicians' concerns, including increases in the weight for the cost performance category over time (see section 1848(q)(5)(E)(i)(II) of the Act), the number of cost measures, and the number of MIPS eligible clinicians that are being attributed new cost measures and receiving a score for the cost performance category. This increase in weight for the cost performance category over time has been particularly notable because, as discussed previously, due to the application of our reweighting policies described under § 414.1380(c)(2)(i) for the COVID–19 PHE, many MIPS eligible clinicians were not scored on the cost performance category for the CY 2019 performance period/2021 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year (85 FR 19277 through 19278).[888] [889] In the CY 2025 PFS proposed rule, we stated our belief that our proposal to maintain a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year may help alleviate some of MIPS eligible clinicians' concerns related to the cost performance category and its impact on their MIPS final score (89 FR 62091 through 62092).

In the CY 2025 PFS proposed rule (89 FR 62092), we also stated our concern that any increase in the performance threshold may inadvertently and unfairly disadvantage certain clinician types, specifically small practices and solo practitioners. As we stated in the CY 2024 PFS final rule (88 FR 79377), we want to consider the impacts of the performance threshold and its related policies on small practices. We received feedback that many small practices and solo practitioners face challenges in their ability to participate in MIPS, including the costs to implement and maintain certified electronic health record (EHR) technology (CEHRT), staff and training costs, and limited staff capacity to manage the complexity of the program. We also heard that increases in the performance threshold add administrative and financial burden for small practices that discourage their participation in MIPS. Though we have several policies within MIPS that continue to support small and solo practices, including scoring and reweighting policies, we are interested in understanding how to best support small practices and enhance their ability to successfully participate in MIPS as MIPS continues to evolve. As such, we performed qualitative analysis through engagement with small practices, third party intermediaries, and other interested parties to gather information about the experience of small practices participating in the program. We also reached out to small practices and solo practitioners in CY 2024 to gather additional information about barriers for actively engaging with MIPS. On this basis, we stated that we anticipate establishing a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year will allow us time to gather additional data on the impacts of new policies on small and rural practices, and to develop strategies to reduce barriers for small practices and solo practitioners participating in MIPS (89 FR 62092).

We refer readers to the Regulatory Impact Analysis in the CY 2025 PFS proposed rule (89 FR 62152) and section VII.E.18.d.(4) of this final rule for an estimate of the percent of MIPS eligible clinicians that will receive a negative payment adjustment for the CY 2025 performance period/2027 MIPS payment year with the finalized policies in this final rule and the performance threshold we are finalizing at 75 points.

As discussed in the CY 2025 PFS proposed rule (89 FR 62092) and this section IV.A.4.g.(2)(c) of this final rule, maintaining a performance threshold of 75 points allows additional time for more data to become available, continues to provide opportunities for clinicians to become familiar with the cost measure scoring, and ensures that we do not inadvertently disadvantage certain clinician types, such as small practices and solo practitioners. Therefore, we proposed to establish a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year, and to codify this performance threshold by adding paragraphs at § 414.1405(b)(10) introductory text and (b)(10)(i) (89 FR 62091 and 62092).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported CMS's proposal to use the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year (equal to 75 points) for the purposes of establishing the performance threshold for the CY 2025 MIPS performance period/2027 MIPS payment year.

Several commenters supported this proposal because they believed that this would continue to provide consistency and stability to MIPS while allowing some time to gather data that is unaffected by the COVID–19 PHE.

[888] *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1198/2020%20MIPS%20Automatic%20EUC%20Fact%20Sheet.pdf.*

[889] *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1437/2021%20MIPS%20Automatic%20EUC%20Fact%20Sheet.pdf.*

Commenters also agreed that this proposal provides consistency while clinicians continue gaining familiarity with cost measures and the changes to the cost measure scoring methodology. One commenter stated that changes to the performance threshold may discourage clinicians wishing to report MVPs.

Many commenters requested that we continue to maintain the performance threshold at 75 points in future years.

Response: We thank commenters for their support. We will continue to assess the data on MIPS final scores as they become available in future years to establish the performance threshold for each performance period/MIPS payment year in accordance with section 1848(q)(6)(D)(i) of the Act, and as we transition to MVPs.

Comment: A few commenters noted that it has become increasingly difficult for their specialty (for example, orthopedic physicians) to meet the 75-point performance threshold. More specifically, a few commenters expressed concerns that there were not enough quality measures within MIPS for certain specialties to successfully achieve the performance threshold of 75 points. Another few commenters stated their concerns that certain specialties only have topped out measures to report.

Response: We note that section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold for a year such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Hence, we have limited flexibility in establishing the performance threshold since we are restricted to the data we have available from the prior period.

We also understand that some MIPS eligible clinicians may not have six measures to select in the quality performance category that are relevant to their practice or may have several measures in the quality performance category that are topped out measures. To address this, we established an eligible measure applicability policy within the quality performance category to reduce the denominator of required measures for the collection type used by a clinician if the clinician has fewer than six applicable measures to report in that collection type. This allows clinicians to be scored on the quality measures that are relevant to their scope of practice. For more information on the eligible measure applicability policy please see the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77290 through 77291, 82 FR 53730 through 53732). We also refer readers to section IV.A.4.f.(1)(b) of this final rule in which we are finalizing our proposal regarding scoring topped out measures to allow certain clinicians who practice in specialties impacted by limited measure choice to be scored according to defined topped out measure benchmarks that do not cap scores at 7 measure achievement points. The policy is intended to address scoring scenarios in which limited measure choice compels clinicians to report topped out measures with scoring caps and aims to facilitate fairer scoring of all specialties.

With respect to the commenters' concerns on the specialty measures available, we solicit commenter recommendations for new specialty measure sets and revisions to existing specialty measure sets on an annual basis. We encourage interested parties to provide recommendations during the specialty measure set solicitation process (for more information please see the QPP resource library at *http://www.qpp.cms.gov*). We also encourage clinicians that lack sufficient quality measures relevant to their scope of practice to work with groups or organizations that represent clinicians to provide recommendations during the specialty measure set solicitation process and to consider reporting a relevant MVP when one becomes available.

Comment: A few commenters supported CMS's proposal to establish the performance threshold at 75 points for the CY 2025 MIPS performance period/2027 MIPS payment year but expressed concerns that this policy may continue to inadvertently harm small and rural practices, creating further challenges for them to successfully participating in MIPS.

Response: We have several policies within MIPS that continue to support small and rural practices, including scoring and reweighting policies set forth in § 414.1380. For example, under § 414.1380(c)(2)(i)(C)(*9*), we automatically reweight the Promoting Interoperability performance category to zero percent of the MIPS final score for MIPS eligible clinicians that are in a small practice as defined in § 414.1305. Under this reweighting policy, MIPS eligible clinicians in small practices are not required to adopt or meaningfully use CEHRT to report the Promoting Interoperability performance category. As we consider the performance threshold and its related policies in future years, we will continue to consider the impact on small and rural practices, particularly as we transition to MVPs.

Comment: A few commenters advocated for legislative changes, including transitioning to an alternative performance payment system that would allow for a performance threshold of 60 points that would be in effect for at least 3 years. A few commenters stated this freeze would particularly benefit small practices that continue to face challenges in meeting the performance threshold. Additionally, a few commenters also said adapting an alternative performance system would eliminate the current tournament model.

Response: As discussed in detail in the CY 2025 PFS proposed rule (89 FR 62088 through 62092), our proposed performance threshold policy is based on current statutory requirements.

After consideration of public comments, we are finalizing our proposal to establish a performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year, and to codify this performance threshold by adding paragraphs at § 414.1405(b)(10) introductory text and (b)(10)(i).

(3) Example of Adjustment Factors

Figure 4 provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor using the statutory formula and based on our finalized policies for the CY 2025 performance period/2027 MIPS payment year. In Figure 4, the performance threshold is set at 75 points, as we have finalized in section IV.A.4.g.(2)(c) of this final rule.

For purposes of determining the maximum and minimum range of potential MIPS payment adjustment factors, section 1848(q)(6)(B) of the Act defines the applicable percentage as 9 percent for the CY 2025 performance period/2027 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment.

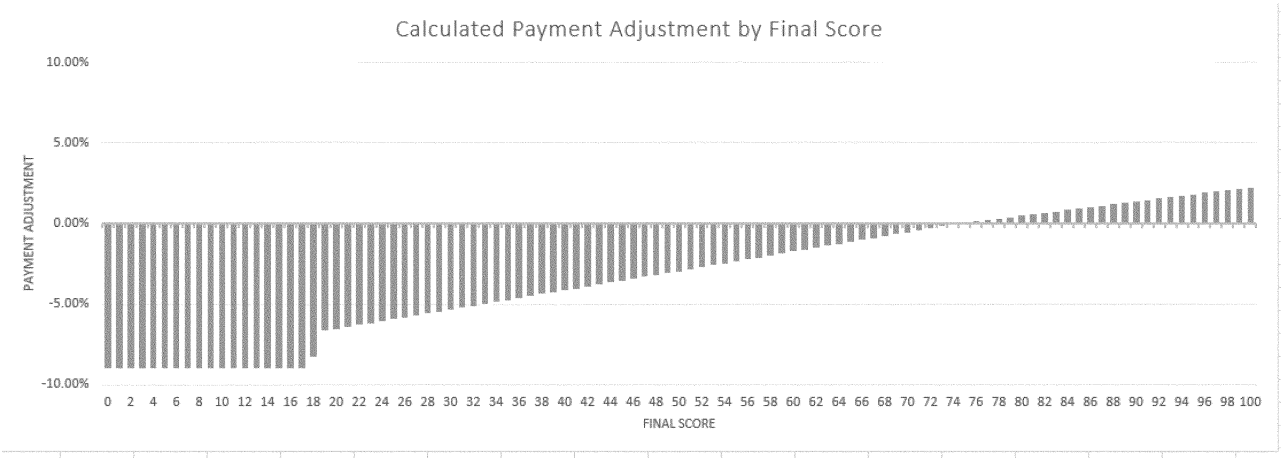
However, there are two modifications to this linear sliding scale. First, as specified in section 1848(q)(6)(A)(iv)(II) of the Act, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the finalized

performance threshold of 75 points for the CY 2025 performance period/2027 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive a negative MIPS payment adjustment factor equal to 9 percent (the applicable percentage). Second, the linear sliding scale for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0, as required by section 1848(q)(6)(F)(i) of the Act.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent (the applicable percentage). If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent. Only those MIPS eligible clinicians with a final score equal to 75 points (the performance threshold proposed for the CY 2025 performance period/2027 MIPS payment year) will receive a neutral MIPS payment adjustment.

Beginning with the CY 2023 performance period/2025 MIPS payment year, the additional MIPS payment adjustment for exceptional performance described in section 1848(q)(6)(C) of the Act is no longer available. For this reason, Figure 4 does not illustrate an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

FIGURE 4: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold for the CY 2025 performance period/2027 MIPS Payment Year



Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN) but cannot be higher than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 87 illustrates the changes in payment adjustment based on the final policies from the CY 2024 PFS final rule (88 FR 52599 through 56001) for the CY 2024 performance period/2026 MIPS payment year and the finalized policies for the CY 2025 performance period/2027 MIPS payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

BILLING CODE 4120–01–P

TABLE 87: Illustration of Point System and Associated Adjustments Comparison between the CY 2024 Performance Period/2026 MIPS Payment Year and the CY 2025 Performance Period/2027 MIPS Payment Year

2024 Performance Period Final Score Points	MIPS Adjustment for 2024 Performance Period	2025 Performance Period Final Score Points	MIPS Adjustment for 2025 Performance Period
0.0-18.75	Negative 9%	0.0-18.75	Negative 9%
18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
75.00	0% adjustment	75.00	0% adjustment
75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 9% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 9% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.

h. Review and Correction of MIPS Final Score—Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called Promoting Interoperability) performance categories.

We made performance feedback available for the CY 2019 performance period/2021 MIPS payment year on August 5, 2020; for the CY 2020 performance period/2022 MIPS payment year on August 2 and September 27, 2021; for the CY 2021 performance period/2023 MIPS payment year on August 22, 2022; CY 2022 performance period/2024 MIPS payment year on August 10, 2023; and for the CY 2023 performance period/2025 MIPS payment year on August 12, 2024. We direct readers to *qpp.cms.gov* for more information.

i. Calculating the Final Score

For a description of the statutory basis and our previously finalized policies for calculating the final score for each MIPS eligible clinician, including performance category weights and reweighting the performance categories, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917, 86 FR 65509 through 65527, and 87 FR 70093 through 70096, respectively).

As described in more detail in the following sections, in the CY 2025 PFS proposed rule (89 FR 62094 through 62096), we proposed to supplement our current policies for reweighting one or more performance categories (that is, quality, improvement activities, and Promoting Interoperability) to permit reweighting in circumstances where we determine that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines.

In the CY 2025 PFS proposed rule (89 FR 62095 through 62096), we proposed that this reweighting policy only be available for the quality, improvement activities, and Promoting Interoperability performance categories because a MIPS eligible clinician may delegate data submission to a third party

intermediary for these three performance categories, and not the cost performance category. MIPS eligible clinicians do not submit data separately for measures for the cost performance category; we score cost measures based solely on administrative claims data.

(1) Background

Section 1848(q)(5)(A) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to the performance standards for the applicable measures and activities for each performance category applicable to such clinician for a performance period and, using the methodology, provide for a final score (using a scoring scale of 0 to 100) for each MIPS eligible clinician for the performance period.

Additionally, section 1848(q)(5)(E) of the Act specifies how we must weigh the scores for each performance category in our calculation of the MIPS eligible clinician's final score. We have codified these weights at § 414.1380(c)(1). Meanwhile, section 1848(q)(5)(F) of the Act provides that, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of 0). We previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, they will receive a final score equal to the performance threshold (81 FR 77326 through 77328 and 82 FR 53778 and 53779).

We also finalized at § 414.1380(c)(2) several policies addressing on what basis we may reweight one or more performance categories, and how those weights will be redistributed to the remaining performance categories. For example, in the CY 2020 PFS final rule (84 FR 63023 through 63026), we finalized a reweighting policy at § 414.1380(c)(2)(i)(A)(*9*) and (c)(2)(i)(C)(*10*) for the four MIPS performance categories. Under this policy, we may reweight one or more of the performance categories for a MIPS eligible clinician if we determine, based on information known to us prior to the beginning of the relevant MIPS payment year, that data for a MIPS eligible clinician for the applicable performance category(ies) are inaccurate, unusable, or otherwise compromised due to circumstances outside of the control of the clinician and its agents. Under this policy, we are able to address circumstances where submitted data are inaccurate, unusable, or otherwise compromised.

However, we have found this policy, and our other reweighting policies at § 414.1380(c)(2), do not address circumstances where data are inaccessible or unable to be submitted due to circumstances outside of the control of the MIPS eligible clinician, particularly where the clinician has delegated submission of the data to a third party intermediary and that third party intermediary does not submit the data in accordance with applicable deadlines. In accordance with our regulations governing third party intermediaries at § 414.1400(a)(3)(iv) and (e)(1), we may take remedial action in the event a third party intermediary fails to meet the criteria necessary for their approval as a third party intermediary, fails to comply with other requirements applicable to third party intermediaries, has submitted a false certification, or discontinues their services and do not assist MIPS eligible clinicians in connecting with a different third party intermediary. However, our regulations do not address the impact of a third party intermediary's action or inaction resulting in failure to submit the MIPS eligible clinician's data as required, over which the MIPS eligible clinician has little to no control, on a MIPS eligible clinician's final score.

Currently, if we determine that data for a MIPS eligible clinician were not submitted during the MIPS data submission period for reasons outside the clinician's control, we assign the clinician a score of zero for the performance category or categories for which data were not submitted.[890] Because an excusable failure to submit data is not currently a basis for reweighting, the lack of data may reduce the MIPS eligible clinician's final score and therefore may reduce the clinician's MIPS payment adjustment. However, we believe that reweighting of the applicable performance categories may be appropriate in these rare cases as described in section IV.A.4.i. of this final rule.

Specifically, we believe that a MIPS eligible clinician should not be penalized in cases where the MIPS eligible clinician enters into an agreement with a third party intermediary to submit data on their behalf, and the data are not submitted due to reasons outside of the control of the MIPS eligible clinician. While we encourage the impacted MIPS eligible clinician to take steps to ensure data submission for subsequent years, by, for example, selecting an alternate third party intermediary, there may be cases where there is insufficient time for the MIPS eligible clinician to submit the data through an alternative mechanism in time for the data to be considered for the relevant performance period. For instance, the MIPS eligible clinician may become aware that their third party intermediary did not submit data on their behalf after the data submission period closes. In these cases, we believe it is appropriate to provide relief to the MIPS eligible clinician so that they are not unfairly penalized for their third party intermediary's inaction.

(2) Reweighting Performance Category(ies) Policy When a Third Party Intermediary Did Not Submit Data Due to Reasons Outside the MIPS Eligible Clinician's Control

In the CY 2025 PFS proposed rule (89 FR 62094 through 62096), we proposed to adopt a new reweighting policy at § 414.1380(c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*) to address this circumstance. Specifically, beginning with the CY 2024 performance period/2026 MIPS payment year, we proposed that we may reweight one or more of the quality, improvement activities, and Promoting Interoperability performance categories where we determine, based on documentation submitted to us through a reweighting request on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of their data to a third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and the third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. We also proposed that, to determine whether to apply reweighting to the affected performance category(ies), we would consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible

[890] As set forth in § 414.1325(a), data is only required to be submitted for certain measures and activities as specified for certain performance categories. For example, MIPS eligible clinicians are not required to submit data for the cost performance category to receive a score for that category because cost measures are scored based on Medicare claims data. We refer readers to our data submission requirements at § 414.1325 and our proposals to modify these requirements in the CY 2025 PFS proposed rule (89 FR 62031 through 62036). As previously discussed in section IV.A.4.e.(1)(b)(i) of this final rule, we are finalizing our proposals to modify the data submission requirements at § 414.1325.

clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines. We believe these factors are necessary to ensure we are only granting these requests in circumstances where MIPS eligible clinicians would otherwise be unfairly penalized due to the actions or inactions of a third party intermediary. MIPS eligible clinicians could request reweighting under this policy in circumstances where no data was submitted on their behalf by their third party intermediary through the help desk at *QPP@cms.hhs.gov*.

Under this policy, MIPS eligible clinicians would be able to request reweighting for each performance category for which their third party intermediary, to which the MIPS eligible clinician delegated submission of their data, did not submit data for reasons outside of the control of the MIPS eligible clinician. We note that we only proposed that this reweighting policy be available for the quality, improvement activities, and Promoting Interoperability performance categories because a MIPS eligible clinician may delegate data submission to a third party intermediary only with respect to these three performance categories, and not the cost performance category. MIPS eligible clinicians do not submit data separately for measures for the cost performance category; we score cost measures based solely on Medicare claims data.

Under this proposed reweighting policy, the MIPS eligible clinician must submit reweighting requests beginning with the close of a relevant performance period's data submission period, only after it is confirmed that no data has been submitted in accordance with applicable deadlines. MIPS eligible clinicians would be able to submit reweighting requests on or before November 1st of the year preceding the associated MIPS payment year to allow time for CMS to re-calculate their final score and MIPS payment adjustment factor.

We would only approve reweighting requests with evidence of a written agreement between the MIPS eligible clinician and a third party intermediary. Such written agreement must provide that the MIPS eligible clinician delegated submission of their data to the third party intermediary, and that the third party intermediary agreed to submit data on their behalf in accordance with applicable deadlines, for the performance category or performance categories in question.

In the CY 2025 PFS proposed rule, we proposed that we would review requests and make determinations to reweight based on our assessment that data were not submitted outside the control of the MIPS eligible clinician. We proposed that we would determine whether to apply reweighting to the affected performance category(ies) under this policy based on our consideration of the following criteria: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines. These criteria would inform whether we would grant reweighting requests under our policy at § 414.1380(c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*). Circumstances resulting in a clinician's data being inaccessible or unable to be submitted that would merit reweighting could include, but are not limited to, a critical systems failure, the third party intermediary going out of business, the third party intermediary having collected data on a MIPS eligible clinician's behalf and refusing to hand it over for the MIPS eligible clinician to submit, or other circumstances CMS determines to be outside the control of the MIPS eligible clinician.

This reweighting policy is solely intended to mitigate the potentially adverse financial impact of no data being submitted during the MIPS data submission period for one or more performance categories on behalf of the MIPS eligible clinician due to the failure of a third party intermediary to fulfill its contractual responsibilities. Our determination to grant a reweighting request under this policy does not indicate, and should not be interpreted to suggest, that the third party intermediary could not be held liable for the failure to perform the task as delegated, that is, to submit data on the performance category(ies) on behalf of the MIPS eligible clinician. In these circumstances where we determine that a third party intermediary failed to fulfill its agreement with the MIPS eligible clinician to submit their data, we believe it is appropriate to give the MIPS eligible clinician the opportunity to request reweighting of the affected performance category(ies), provided that all elements of our policy are met.

In the CY 2025 PFS proposed rule, we proposed to apply reweighting only in cases when we receive documentation of a third party intermediary's failure to submit data on behalf of a MIPS eligible clinician demonstrating that all elements of our policy are met.

In the CY 2025 PFS proposed rule, we proposed that this policy would be effective beginning with CY 2024 performance period/2026 MIPS payment year. This policy change would become effective prospectively, prior to the beginning of the data submission period for the CY 2024 performance period/2026 MIPS payment year, which will occur January 2, 2025, through March 31, 2025. We proposed this effective date to provide relief to MIPS eligible clinicians, whose circumstances meet all requirements set forth in this reweighting policy, as soon as feasible.

In the CY 2025 PFS proposed rule, we also proposed to codify this new reweighting policy, including all proposed elements, at § 414.1380(c)(2)(i)(A)(*10*) for the quality and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(*12*) for the Promoting Interoperability performance category.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed policy stating it provided appropriate relief for MIPS eligible clinicians impacted by a third party intermediary's failure to submit data on their behalf. One commenter further applauded CMS for proposing to make this policy effective for the CY 2024 performance period/2026 MIPS payment year so that clinicians can receive relief as soon as possible.

Response: We thank the commenters for their support.

Comment: A few commenters requested that CMS ensure reweighting is available across scenarios where complete data is not submitted due to reasons outside of a clinician's control. A few commenters asked that CMS consider additional circumstances for this policy, including instances when a third party intermediary submitted inaccurate or incomplete data (rather than no data), technical limitations by the electronic health record vendor to supply necessary data for aggregation, cybersecurity events experienced by third party intermediaries, failure of a clinician to provide complete data to a third party intermediary, and termination of a third party intermediary.

Response: We acknowledge commenters' recommendation to provide reweighting in additional scenarios. We note that we previously finalized reweighting policies for several scenarios outside of the control of the clinician, as set forth in § 414.1380(c)(2)(i). These circumstances include extreme and uncontrollable circumstances, insufficient internet access, and cases where submitted data are inaccurate, unusable, or otherwise compromised. In CY 2020 PFS final rule (84 FR 63025), we acknowledged certain scenarios that, depending on the specific circumstances, could be covered under the policy we finalized at § 414.1380(c)(2)(i)(A)(*9*) and (c)(2)(i)(C)(*10*) for reweighting when data that are inaccurate, unusable, or otherwise compromised for reasons outside the control both of a clinician and its agents. As discussed further in the CY 2020 PFS final rule, such scenarios may include the third party intermediary going out of business or experiencing a loss of data, including instances where data is impacted by a cyberattack (84 FR 63025).

As we proposed, we similarly would consider certain factors when making reweighting determinations under this new reweighting policy, including whether the MIPS eligible clinician knew, or had reason to know, of any data submission issues prior to the deadline for data submission and the MPS eligible clinician took reasonable efforts to correct the issue. For example, this policy would not apply to instances where a third party intermediary terminates a contract mid-year as we would anticipate that clinicians would take reasonable efforts to replace their party intermediary.

In proposing this new reweighting policy, we intended solely to mitigate the potential adverse financial impact on MIPS eligible clinicians' final scores and MIPS payment adjustments because no data was submitted due to the failure of a third party intermediary to fulfill its contractual responsibilities (89 FR 62096). We also proposed that such circumstances must be outside of the control of the MIPS eligible clinician to make reasonable efforts to remedy. Scenarios in which a MIPS eligible clinician does not provide complete data to a third party intermediary would not be covered by this new reweighting policy we proposed. We clarify that this new reweighting policy would only apply to situations in which data was not submitted on behalf of the MIPS eligible clinician due to circumstances outside of the control of the clinician. A MIPS eligible clinician's failure to submit complete data to the third party intermediary would be at least partially within the control of the MIPS eligible clinician.

We encourage MIPS eligible clinicians and their agents experiencing these types of circumstances to communicate with us as early as possible to provide details about the circumstances surrounding these events. Additionally, we may consider commenters' recommendations for additional scenarios for reweighting via future rulemaking.

Comment: One commenter expressed the belief that we should use existing processes, including the extreme and uncontrollable application and the targeted review process, for this policy. Commenters expressed the belief that creating a new process would be confusing to MIPS eligible clinicians.

Response: The CMS help desk is the proper forum for MIPS eligible clinicians to submit reweighting requests under this new policy. As we proposed, MIPS eligible clinicians would only be able to begin submitting reweighting requests under this new policy beginning with the close of a relevant performance period's data submission period, only after it is confirmed that no data has been submitted in accordance with applicable deadlines (89 FR 62096). Further, we proposed they could submit such requests from the expiration of the data submission period through November 1st (89 FR 62096). This timeframe does not align with the timeframe for MIPS eligible clinicians to request reweighting under our other policies, such as our extreme and uncontrollable circumstances policy, which typically occur prior to the start of data submission period. Further, as we noted in the proposed rule, this policy addresses rare cases where a MIPS eligible clinician should not be penalized for a third party intermediary's failure to submit their data as promised in a written agreement (89 FR 62095). We do not expect the volume of these requests to be exceptional. Given these distinctions, the CMS help desk presents the best mechanism for MIPS eligible clinicians to submit their requests under this new reweighting policy as soon as feasible for the CY 2024 performance period/ 2026 MIPS payment year. We may reassess this process if the volume exceeds our expectations.

Similarly, MIPS eligible clinicians currently submit reweighting requests through the CMS help desk for our existing reweighting policy for when data are inaccurate, unusable, or otherwise compromised (84 FR 63023). This process for submitting certain reweighting requests is not wholly new or unfamiliar to MIPS eligible clinicians.

Further, the targeted review process established under section 1848(q)(13)(A) of the Act is limited to informal review of our calculation of the MIPS adjustment factor applicable to the MIPS eligible clinician. This includes requests for targeted review of errors in our application of policies, such as our reweighting policies, governing calculation of scores for measures and activities, performance category scores, and MIPS final scores (81 FR 77353). A MIPS eligible clinician should not be submitting a reweighting request for the first time during the targeted review process as such request is outside of the scope and purpose of targeted review.

Comment: One commenter requested that any requests for reweighting under this policy be kept confidential and that third party intermediaries not automatically be put on probation if a MIPS eligible clinician submits an application for reweighting.

Response: Similar to our existing policy for reweighting when data are inaccurate, unusable, or otherwise compromised (84 FR 63023), we intend for this policy to provide flexibility for MIPS eligible clinicians whose data are not submitted due to circumstances outside of their control. We did not develop this policy to hold harmless third party intermediaries or other agents for any role they play in data inaccuracies. We do not have authority to waive liability as it relates to fraud, waste, and abuse laws or to alter the certification requirements of health information technology. We also note that third party intermediaries that submit data that are inaccurate, unusable or otherwise compromised may be subject to remedial action or termination in accordance with § 414.1400(f).

Comment: A few commenters requested that CMS provide additional guidance on what constitutes reasonable efforts on the part of the clinician to correct the issue for their reweighting request to be approved. Similarly, a few comments asked that CMS be mindful of the potential for added administrative burden that may come with reweighting requests.

Response: In general, we expect the circumstances for which this policy applies to occur infrequently. In such cases, we expect that MIPS eligible clinicians, upon realizing that their third party intermediary did not submit data on their behalf, will reach out to their third party intermediary to try to identify the issue. If potential issues with data submission are discovered

before the close of the data submission period, we will consider whether the MIPS eligible made reasonable efforts to obtain data for submission or otherwise made efforts to ensure that data submission would be completed. If it is discovered that data submission was not completed after the close of the data submission period, we will consider if a clinician knew, or had reason to know, of any data submission issues prior to the deadline and whether the MPS eligible clinician took reasonable efforts to correct the issue.

Under our proposed policy, we would consider evidence of the MIPS eligible clinician attempting to select an alternate third party intermediary, any communication between the MIPS eligible clinician and their third party intermediary, and any documentation signifying that a clinician's data was not submitted due to reasons that could include, but are not limited to, a critical systems failure, the third party intermediary going out of business, the third party intermediary having collected data on a MIPS eligible clinician's behalf and refusing to transmit it to the MIPS eligible clinician to submit, or other circumstances CMS determines to be outside the control of the MIPS eligible clinician. As these actions, and any accompanying documentation, are ones we anticipate MIPS eligible clinicians would reasonably undertake and collect in circumstances where they unexpectedly discover that the third party intermediary may not submit their data on their behalf in accordance with applicable deadlines, we do not expect that our reweighting request requirements will be overly burdensome. We will review the documentation and make determinations for reweighting requests through the CMS help desk.

After consideration of public comments, we are finalizing as proposed adoption of the new reweighting policy for the quality, improvement activities, and Promoting Interoperability performance categories in circumstances in which third party intermediaries do not submit data on behalf of clinicians who have delegated the submission of this data to them beginning with the CY 2024 performance period/2026 MIPS payment year. We are also finalizing to codify this policy as proposed at § 414.1380(c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*).

j. Third Party Intermediaries General Requirements

(1) Requirements for CMS-approved Survey Vendors

(a) Background

As codified at § 414.1305, a CMS-approved survey vendor means a survey vendor that is approved by CMS for a particular performance period to administer the Consumer Assessment of Healthcare Providers & Systems (CAHPS) for MIPS survey and to transmit survey measures data to CMS.

We refer readers to § 414.1400(d), the CY 2017 Quality Payment Program final rule (81 FR 77386), the CY 2018 Quality Payment Program final rule (82 FR 53818 and 53819), the CY 2019 PFS final rule (83 FR 59907 and 59908), and the CY 2022 PFS final rule (86 FR 65538 and 65539) for previously finalized standards and criteria for CMS-approved survey vendors.

(b) Requirement To Submit Cost of Services

In the CY 2017 Quality Payment Program final rule (81 FR 77386 and 77387), we established that CMS-approved survey vendors may transmit data collected from the CAHPS for MIPS survey to CMS for use in MIPS. Section 414.1400(d)(2) requires that CMS-approved survey vendors submit a survey vendor application to CMS in a form and manner specified by CMS for each MIPS performance period for which it wishes to transmit such data. We implemented this requirement through the Vendor Participation Form, which is available at *https://qpp.cms.gov/resources/resource-library*.

The CY 2017 Quality Payment Program final rule contained requirements applicable to other types of third party intermediaries, which varied based on whether the third party intermediary was a Qualified Clinical Data Registry (QCDR) or qualified registry. For example, we established requirements for QCDRs and qualified registries to ''sign a document verifying the QCDR's name, contact information, cost for MIPS eligible clinicians or groups to use the QCDR or qualified registry'' (81 FR 77368 and 77369; 81 FR 77385 and 77386). If QCDRs and qualified registries do not provide this information, CMS may exclude them from MIPS in a subsequent year. This requirement helps eligible clinicians determine which vendors to use prior to registration and provides transparency on the cost of program participation. Currently, CMS-approved survey vendors are not required to provide cost information even though other third party intermediaries (QCDRs and qualified registries) are required to do so.

We proposed under the current application submission requirement at § 414.1400(d)(2) that beginning with the CY 2026 performance period/2028 MIPS payment year, a survey vendor must include on its application the range of costs of its third party intermediary services. Ranges of cost estimates would vary based on different levels of service (that is, number of survey respondents, languages provided, etc.). With respect to a third party intermediary that is solely a CMS-approved survey vendor, the publishable costs would be limited to the cost of services related to the CAHPS for MIPS survey (89 FR 62097). CMS has received inquiries from MIPS participants regarding survey vendor costs but has not been able to provide any specific information in response to those requests. The cost information from survey vendors is not easily available to the MIPS eligible clinicians who are considering contracting for services. Having such information in the publicly accessible QPP Resource Library (as part of the list of approved vendors) would make it easier for MIPS eligible clinicians to contract for services and educate themselves about the cost of using a third party intermediary survey vendor. In recent years, some participants who registered for the CAHPS for MIPS survey later withdrew their participation once they learned the costs of survey administration. Providing information on the cost of CMS-approved CAHPS for MIPS survey vendor services may support MIPS participants who are interested in the CAHPS for MIPS Survey but want to know what the costs of administering the survey will be, thus allowing them to make more informed decisions about whether to participate in the CAHPS for MIPS survey. This would also increase the consistency in requirements across different types of third party intermediaries.

With this proposal, the CAHPS for MIPS Survey Vendor Participation Form [891] and the CAHPS for MIPS Survey Minimum Business Requirements [892] in the QPP Resource Library would be updated to detail the required survey vendor cost estimate information. The CAHPS for MIPS Survey Vendor Participation Form submitted by vendors seeking CMS

[891] 2024 CAHPS for MIPS Survey Vendor Participation Form, March 25, 2024. *https://qpp.cms.gov/resources/document/6386fe4b-49b9-42c8-9a2b-a1149f7b142a.*

[892] 2024 CAHPS for MIPS Survey Vendor Minimum Business Requirements, March 11, 2024. *https://qpp.cms.gov/resources/document/02e6e596-51de-4336-a6a6-ab63fc639dbc.*

approval would be updated to include fields to report the cost information. The vendor-specific cost information would then be published in the list of CAHPS for MIPS Survey Approved Vendors which is also posted in the Resource Library.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the requirement that survey vendors must include on their application the range of costs of their third party intermediary services. One commenter stated that the proposal will make requirements consistent across third party intermediary types. Another commenter agreed that the proposal will increase transparency regarding costs for Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Surveys and overall participation in MIPS, which would help participants be more successful when choosing a third party vendor.

Response: We thank the commenters for their support.

Comment: One commenter expressed their view that pricing models are proprietary business information and that they are concerned that the public disclosure of pricing information to competitors could have unintended negative effects on the market. While the commenter did not support the proposal, they recommended the following guidelines for its implementation: do not require strict standardization of pricing information as survey vendors have unique offerings that make comparing options challenging, allow survey vendors to clearly communicate the details of their offerings (for example, service tiers, or packages), and provide survey vendors flexibility to explain pricing models (for example, the factors that influence their pricing).

Response: The public disclosure of pricing information will be beneficial to MIPS participants and to survey vendors as it will minimize the risk of late withdrawals by survey registrants given that MIPS participants will understand the cost of services in advance. We understand that the cost of services can change over time and may differ based on a variety of factors including survey mode, language, sample size, etc. Cost estimates will be collected annually, to capture changes in cost over time, for a common set of factors including survey mode, language, and sample size, so the cost ranges (as provided by the survey vendor) will be displayed in the list of CAHPS for MIPS Survey Approved Vendors. The factors used for collecting cost information through the CAHPS for MIPS Survey Vendor Participation Form and how the cost information is displayed in the list of CAHPS for MIPS Survey Approved Vendors may be updated on a periodic basis due to changing survey requirements and survey vendor feedback.

Comment: One commenter requested clarification on CMS' review and approval process for cost information, including if the information submitted will be edited and whether vendors will have the opportunity to review the presentation of their cost information in the QPP Resource Library before it goes live. The commenter also requested clarification on whether there will be a process for vendors to correct any inaccurate cost information or make updates when pricing structures change.

Response: We will generally not make any edits to the information vendors submit, but we may ask the vendor to provide clarifying edits if information is lacking from the original submission. Survey vendors will have the opportunity to review the presentation of their cost information before it is released to the public in the QPP Resource Library. We will add a step to the current review process for the final list of CMS-approved vendors in which a vendor will be sent their ''row'' of information. The vendor will be asked to (a) confirm receipt and (b) provide any corrections by a specific date prior to the list going live. We already encourage survey vendors to provide updates to their information included in the final list of CAHPS for MIPS Survey Approved Vendors once it is published through the vendor technical assistance mailbox. Updates to cost information will be included in this existing process, and we will provide instructions for vendors regarding communicating updates and corrections to the information posted in the final approved vendor list.

After consideration of public comments, we are finalizing our proposal that beginning with the CY 2026 performance period/2028 MIPS payment year survey vendors are required to include on their application the range of costs of their third party intermediary services.

k. Overview of QP Determinations and the APM Incentive

(1) Overview

The Quality Payment Program provides incentives for eligible clinicians to engage in value-based, patient-centered care under Medicare Part B via MIPS and Advanced APMs. The structure of the Quality Payment Program enables the Department to advance accountability and encourage improvements in care. The Secretary also has adopted the closely related goal that all people with Original Medicare be in an accountable care relationship by 2030, so that their needs can be holistically assessed, and their care is coordinated within a broader total cost of care system. Our vision for increased participation among clinicians in Advanced APMs is driven by the belief that integrating individuals' clinical needs across a spectrum of clinicians and settings will improve patient care and population health.

As we continue to make improvements to the Quality Payment Program, we seek to develop, propose, and implement policies that encourage broad and meaningful clinician participation, including by specialists, in Advanced APMs.

In the CY 2017 Quality Payment Program final rule (81 FR 77450 through 77457), we finalized the payment amount method and patient count method for calculation of Threshold Scores used for QP determinations under the Medicare option and codified these methods at § 414.1435(a) and (b), respectively. The payment amount method is based on payments for Medicare Part B covered professional services, including certain supplemental service payments, while the patient count method is based on numbers of patients. Both methods use the ratio of ''Attributed beneficiaries'' to ''Attribution-eligible beneficiaries,'' as defined at § 414.1305.

An attributed beneficiary is a beneficiary attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. An attribution-eligible beneficiary is a beneficiary who:

- Is not enrolled in Medicare Advantage or a Medicare cost plan;
- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of:

++ One claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period.

++ Or, for an Advanced APM that does not base attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to

have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and/or other services.

In this section, we proposed to modify the definition of ''attribution-eligible beneficiary'' to include any beneficiary who has received a covered professional service (section 1833(z)(3)(A) of the Act; 42 CFR 414.1305; section 1848(k)(3)(A) of the Act) furnished by the eligible clinician (NPI) for whom we are making the QP determination. By no longer specifying E/M services as the default attribution basis, the QP determination methodology would better be able to account for Advanced APMs that do not use E/M services as the basis for beneficiary attribution or that use a combination of E/M and other services.

(2) Payment Amount and Patient Count Methods

The payment amount method for calculating Threshold Scores is based on payments for Medicare Part B covered professional services, including certain supplemental service payments, while the patient count method is based on numbers of patients. Both methods use the ratio of ''attributed beneficiaries'' to ''attribution-eligible beneficiaries,'' as defined at § 414.1305.[893]

Attributed beneficiaries are those who are attributed to the APM Entity (or individual eligible clinician) under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. Attribution-eligible beneficiaries generally are those who, during the QP Performance Period, meet six criteria (listed in this section) specified in the definition of that term at § 414.1305 and described in section IV.A.4.m.(3) of this final rule.

When making QP determinations, we begin by calculating Threshold Scores using the payment amount and patient count methodologies. These Threshold Scores are percentages based on the ratio of the payment amounts or patient counts for attributed beneficiaries to the payment amounts or patient counts for attribution-eligible beneficiaries during the QP performance period. If the Threshold Score (using either the payment amount or patient count method) calculated at the APM Entity or individual eligible clinician level, as applicable, meets or exceeds the relevant QP threshold described at § 414.1430(a), the relevant eligible clinician or clinicians (either the individual eligible clinician or all those on the APM Entity's Participation List) achieve QP status for such year.

FIGURE C-N1: QP Determination Calculation

$$\frac{\text{Attributed beneficiaries}}{\text{Attribution-eligible beneficiaries}}$$

Our regulation at § 414.1435(b)(3) provides that a beneficiary may be counted only once in the numerator and denominator for a single APM Entity group, and at § 414.1435(b)(4) provides that a beneficiary may be counted multiple times in the numerator and denominator for multiple different APM Entity groups. In the CY 2021 PFS final rule (85 FR 84951 through 84952), we amended § 414.1435(c)(1)(i) to specify that beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list. This means that beneficiaries who have been attributed to one APM Entity and are thus barred under the terms of an Advanced APM from attribution to another APM Entity are removed from the denominator of both the payment amount method and patient count method in QP Threshold Score calculations for the APM Entity to which they cannot be attributed. In other words, we do not penalize an APM Entity in the QP Threshold Score calculation by including a beneficiary in its denominator when the terms of an Advanced APM do not permit such beneficiary to be attributed to such APM Entity.

(a) Attributed Beneficiary

An attributed beneficiary is a beneficiary attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. There may be beneficiaries on the most recent available list who do not meet the criteria to be attribution-eligible beneficiaries because the QP performance period does not align with the Advanced APM's performance period or attribution period, or for other reasons. There may also be cases where a beneficiary's status changes, for example by enrolling in a Medicare Advantage Plan. We exclude these beneficiaries from our Threshold Score calculations because they do not meet criteria to be attribution-eligible beneficiaries. Although APMs may have reconciliation processes in place to address changes in beneficiary status at various intervals, those processes do not necessarily coincide with the timeframe of QP determinations. Therefore, when calculating Threshold Scores for QP determinations, we exclude from the list of attributed beneficiaries any beneficiaries who do not meet the criteria to be attribution-eligible beneficiaries at that point in time.

(b) Attribution-Eligible Beneficiary

Under our regulation at § 414.1305, we define an attribution-eligible beneficiary as a beneficiary who:

- Is not enrolled in Medicare Advantage or a Medicare cost plan;

[893] For technical information on the QP calculation methodology, see the ''QP Methodology Fact Sheet'' that we publish annually, which can be found as part of the ''2024 Learning Resources for QP Status and APM Incentive Payment'' materials on the Quality Payment Program Resource Library at *qpp.cms.com*.

- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base beneficiary attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and/or other services.

Our stated intent when we finalized the definition of attribution-eligible beneficiary (81 FR 77451 through 77452) was to have a definition that would, for purposes of QP determinations, allow us to be consistent across Advanced APMs in how we consider the population of beneficiaries served by an APM Entity. The criteria we used to define attribution-eligible beneficiary were aligned with the attribution methodologies and rules for our contemporaneous Advanced APMs. The first five criteria are conditions that are required for a beneficiary to be attributed to any Advanced APM. The sixth criterion identifies beneficiaries who have received certain services from an eligible clinician who is associated with an APM Entity for any period during the QP Performance Period. We chose to refer to E/M services as the primary basis for purposes of attribution-eligibility because many of the Advanced APMs CMS offered at that time used E/M claims to attribute beneficiaries to their APM Entity groups. Over time, we have updated the list of services that are considered to be E/M services for purposes of identifying attribution-eligible beneficiaries and have published this list as part of the ''2024 Learning Resources for QP Status and APM Incentive Payment'' materials on the Quality Payment Program Resource Library at *qpp.cms.gov.*

We also included an exception in this sixth criterion to allow us to use an alternative approach for Advanced APMs that do not base beneficiary attribution on any E/M services, and thus for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for an E/M service. To date, we have implemented this alternative approach for four Advanced APMs:

- Bundled Payments for Care Improvement Advanced Model.
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track).
- Comprehensive ESRD Care Model (LDO arrangement and Non LDO Two Sided Risk Arrangement).
- Maryland Total Cost of Care Model (Care Redesign Program).

We have published links to the methodologies we use to identify attribution-eligible beneficiaries for these Advanced APMs in the ''2024 Learning Resources for QP Status and APM Incentive Payment'' materials on the Quality Payment Program Resource Library at *qpp.cms.gov*.

We adopted the general rule with flexibility to apply alternative methods for this criterion to ensure that, for the Advanced APMs for which beneficiary attribution is based on services other than E/M services, the attributed beneficiary population is truly a subset of such Advanced APMs' attribution-eligible beneficiary populations and, ultimately, so that our way of identifying beneficiaries for purposes of Threshold Score calculations for QP determinations would be appropriate for such Advanced APMs. That said, our thinking when we developed these approaches was shaped by the form and nature of the Advanced APMs that existed at that time. We believed that, by affording sufficient flexibility within the program, we could both foster innovation in Advanced APMs and simplify our execution of the program. However, with our more narrowly defined default approach to beneficiary attribution (relying on claims for E/M services), we have increasingly needed to exercise the flexibility to identify an alternative approach to attribution eligibility for Advanced APMs that fell into the exception, which meant that we identified several individually tailored ways of performing the beneficiary attribution methodology for specific Advanced APMs. We anticipate that Advanced APMs will continue to evolve and use novel approaches to value-based care that may emphasize a broad range of covered professional services, and in that event the application of our current regulations may result in increased variability among the ways we define attribution-eligible beneficiary when making QP determinations.

We proposed to modify the sixth criterion of the definition of ''attribution-eligible beneficiary'' at § 414.1305 to include any beneficiary who has received a covered professional service furnished by the eligible clinician for whom we are making the QP determination, beginning with the 2025 QP Performance Period. By no longer specifying a claim for E/M services as the default attribution basis in the sixth criterion, and instead making the default attribution based on covered professional services, we had aimed to eliminate the need to create unique attribution bases that are tied to a specific Advanced APM's attribution methodology.

We proposed to consider all covered professional services for purposes of attribution, and not solely the limited range of E/M services currently used for attribution. This approach would include as attributed beneficiaries those who are receiving any services within the entire range of covered professional services through the Advanced APM. We believed that this proposal would result in a QP calculation that, by including beneficiaries receiving any covered professional service, more accurately reflects eligible clinicians' actual participation in Advanced APMs and would be consistent across all Advanced APMs, thereby improving transparency and predictability of the determinations as well as being more operationally efficient than the current policy. Further, we believed that the proposal better aligned the QP determination methodology with the universe of services to which the Quality Payment Program (including MIPS and APMs) applies, noting that the statutory provisions governing the Quality Payment Program generally pertain to covered professional services (for example, financial incentives for both MIPS eligible clinicians and QPs are applied to, and based on, payments for covered professional services) and that the statutory definition of qualifying APM participant (QP) refers to covered professional services.

In the 2025 Physician Fee Schedule proposed rule, we also acknowledged that, while this proposal would represent significant progress toward rationalizing attribution for the broader range of Advanced APMs, our continued analysis suggested that there may be more work to be done in this area. We have found that our proposed approach makes the above-described improvements to QP determinations, but we also see situations in which QP scores remain low in certain Advanced APMs, particularly where an Advanced APM is focused on a limited set of services, diseases, or conditions. As we describe further in this section, a few of our commenters also modeled this

effect. We recognize the need to provide, consistent with statutory requirements, equitable opportunities to achieve QP status for participants in Advanced APMs that have different focus areas, goals, scopes, and design features. Further, in the case of CMS Innovation Center models, we recognize that there will be ongoing evolution and innovation in the model tests that are Advanced APMs, including the development of new approaches to attribution that apply within the models.

We solicited comment on this proposal to revise the sixth criterion of the definition of ''attribution-eligible beneficiary'' at § 414.1305 to include a beneficiary who has at least one claim for a covered professional service furnished by an eligible clinician who is on the Participation List for the APM Entity (or by the individual eligible clinician, as applicable) at any determination date during the QP Performance Period. We also invited comment more generally on potential approaches we could consider to make QP determinations in the most equitable, rational, transparent, and meaningful way for eligible clinicians across the broad range of Advanced APMs, including Advanced APMs that are focused on a limited set of services. Based on the results of our ongoing analysis and feedback from commenters, we are not finalizing the proposed change to the definition of ''attribution-eligible beneficiary'' at § 414.1305.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal. Of these, several commenters also requested additional information and analysis on the impact of our proposal on QP determinations for eligible clinicians that participate in each Advanced APM.

Response: We thank the commenters for their support. Further, we appreciate commenters' desire for more information on our analysis regarding the proposal. We agree that information is critical, and one of the reasons we made the proposal was that we believed having a more consistent QP determination methodology to apply across Advanced APMs would offer greater transparency that in turn could foster understanding by eligible clinicians as to how we quantify their Advanced APM participation.

Qualitatively, our analysis showed that the proposed policy appeared to have a significant positive effect on eligible clinicians in the Innovation Center's kidney care models, specifically by allowing for more of the non-E/M covered professional services that clinicians furnish to contribute to attribution. The effects of the proposed policy within other Advanced APMs were more mixed and clustered closer to neutral. We note that our projections of future QP performance periods, which use available data from prior QP performance period, have historically yielded lower QP counts than the actual results for a performance period. We have observed that changes to an APM Entity's Participation List, services furnished, and attributed beneficiaries all have significant impacts on the number of QPs projected for future QP performance periods. But updates to an APM Entity's Participation List may be due to a variety of factors not limited to changes to the composition of a participating provider organization or changes in Advanced APM benchmarking methodology otherwise unknown to us. We further note that changes such as our proposed policy can lead to varied QP Threshold Scores for APM Entities within the same Advanced APM. In other words, the net change in the total number of QPs produced by the proposed policy may not be reflective of uniform directional shifts of the APM Entity scores within the same Advanced APM. For example, APM Entities vary not only in composition but also in size, so an estimated change in scores that puts just one large APM Entity above or below a QP or Partial QP threshold can appear to be a major change to the entire Advanced APM. Finally, because QP status is determined based on specific QP payment amount and QP patient count thresholds, only those changes in scores that result in an eligible clinician meeting or exceeding a QP threshold will contribute to the net estimated change in QP counts. While these are important endpoints, a focus on the outcome may mean we overstate important gains or losses in Threshold Scores.

Comment: One commenter specifically opposed our proposal as it relates to the Enhancing Oncology Model (EOM), citing the low number of cancer types included in this model as the reason eligible clinicians on an EOM Participation List will not achieve QP status. The same commenter also suggested that CMS create specialty-specific QP thresholds. QP determinations

Response: We noted in the proposed rule and earlier in this final rule that our proposal did not solve all of the problems we had identified with the current methodology, in particular when the Advanced APM is focused on a limited set of services. EOM is an Advanced APM for which this is true. We recognize that the design of some Advanced APMs, particularly those with a focus on specific services, diseases, or conditions, may limit the extent to which eligible clinicians are able to increase their participation in the Advanced APM when they have a broader practice outside the APM. We also understand that it may be difficult for certain specialists to increase participation in the available Advanced APMs. We agree with the commenter's concern that the EOM's focus on a subset of cancer types is a limiting factor with respect to the attribution of beneficiaries to participating eligible clinicians for purposes of QP determinations, and while our quantitative results were not identical to those that the commenter shared, we did see the same trend in the effects of the proposal that the commenter did. We are continuing to pursue an approach to QP determinations that can be applied consistently across Advanced APMs that would account for the limitation EOM participants face. We believe that all eligible clinicians that participate in an Advanced APM should have access to a fair QP calculation.

We also noted in the proposed rule and earlier in this final rule that we anticipate that Innovation Center models will continue to identify novel approaches to attribution as the Innovation Center implements its specialty care strategy.[894] While we intended for our proposal to better capture the universe of services these future Advanced APMs will focus on, we are continuing to analyze the effects of our current or proposed policy on future models. As we stated earlier in this final rule, we developed our current policy several years ago based on contemporaneous Advanced APMs, and we made our proposal in large part because we believe that that policy no longer serves the Advanced APMs that have come since. We continue to believe that our proposal is a better approach than the status quo, and we believe that it is likely to be part of a comprehensive approach to QP determinations that will better reflect the current and future state of Advanced APMs. In response to public comments, we believe that, even if, as we anticipate, our proposal will be part of the evolution of QP determination methodologies, we should come back with one or more proposals that reflect a complete

[894] *https://www.cms.gov/blog/cms-innovation-centers-strategy-support-person-centered-value-based-specialty-care.*

package of QP determination methodologies.

After consideration of public comments, we are not finalizing our proposal to revise the sixth criterion of the definition of ''attribution-eligible beneficiary'' at § 414.1305. We anticipate that we will propose a comprehensive approach to QP determination in future rulemaking, including a strategy to address the needs of condition-specific models, which may include this proposal as one element.

(3) QP Thresholds and Partial QP Thresholds

Section 1833(z)(2) of the Act specifies the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019 (performance period 2017). The All-Payer Combination Option, through which QP status is calculated using the Medicare Option in addition to an eligible clinician's participation in Other Payer Advanced APMs, has been applicable since payment year 2021 (performance period 2019). In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439), we finalized our policy for QP and Partial QP Thresholds for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Combination Option at § 414.1430(b).

Section 304(a)(2) of Division G, Title I, Subtitle C, of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42, March 9, 2024) amended section 1833(z)(2) of the Act by extending for payment years 2025 and 2026 (performance periods 2023 and 2024) the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. Specifically, section 304(a)(2) of the CAA, 2024, amended section 1833(z)(2) of the Act to continue the QP payment amount thresholds that applied in payment year 2025 (performance period 2023) to payment year 2026 (performance period 2024). Additionally, section 304(a)(2) of the CAA, 2024, amended section 1833(z)(2) of the Act to require that, for payment year 2026, the Secretary use the same percentage criteria for the QP patient count threshold that applied in payment year 2022. As such, the Medicare Option QP thresholds for payment year 2026 will remain at 50 percent for the payment amount method and 35 percent for the patient count method. Section 304(b) of the CAA, 2024, also amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2026 the Partial QP thresholds that were established beginning for payment year 2021 under the Medicare Option. Therefore, the Partial QP thresholds for payment year 2026 (performance period 2024) will remain at 40 percent for the payment amount method and 25 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for payment year 2026 (performance period 2025) will remain at 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for payment year 2026 (performance period 2024) will continue at 40 percent for the payment amount method and 25 percent for the patient count method. To become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain minimum threshold percentages under the Medicare Option. For payment year 2026 (performance period 2024), the minimum Medicare Option threshold an eligible clinician must meet to be eligible for the All-Payer Combination Option is 25 percent for the payment amount method or 20 percent for the patient count method. For Partial QP status, the minimum Medicare Option threshold an eligible clinician must meet to be eligible for the All-Payer Combination Option is 20 percent for the payment amount method or 10 percent for the patient count method.

To conform our regulation with the amendments made by the CAA, 2024, we proposed to amend § 414.1430 by revising paragraphs (a) and (b) to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count under the Medicare Option and the All-Payer Option with respect to payment year 2026 (performance period 2024)

The revisions to § 414.1430(a) and (b) for the Medicare Option and All-Payer Combination Option QP and Partial QP thresholds are as follows:

- Paragraph (a)(1)(v) to state that for 2026 the amount is 50 percent, and a new paragraph (a)(1)(vi) to state that for 2027and later, the amount is 75 percent.
- Paragraph (a)(2)(v) to state that for 2026 the amount is 40 percent, and a new paragraph (a)(2)(vi) to state that for 2027 and later, the amount is 50 percent.
- Paragraph (a)(3)(v) to state that for 2026 the amount is 35 percent, and a new paragraph (a)(3)(vi) to state that for 2027 and later, the amount is 50 percent.
- Paragraph (a)(4)(v) to state that for 2026 the amount is 25 percent, and a new paragraph (a)(4)(vi) to state that for 2027 and later, the amount is 35 percent.
- Paragraph (b)(1)(i)(A) to state that for 2021 through 2026 the amount is 50 percent, and paragraph (b)(1)(i)(B) to state that for 2027 and later, the amount is 75 percent.
- Paragraph (b)(2)(i)(A) to state that for 2021 through 2026 the amount is 40 percent and paragraph (b)(2)(i)(B) to state that for 2027 and later, the amount is 50 percent.
- Paragraph (b)(3)(i)(A) to state that for 2021 through 2026 the amount is 35 percent, and paragraph (b)(3)(i)(B) to state that for 2027 and later, the amount is 50 percent.
- Paragraph (b)(4)(i)(A) to state that for 2021 through 2026 the amount is 25 percent, and paragraph (b)(4)(i)(B) to state that for 2027 and later, the amount is 35 percent.

As these changes are specified by statute, as described above, we are finalizing the extensions of these thresholds as proposed.

(4) APM Incentive Payment

Prior to amendments made by section 304(a)(1) of the CAA, 2024, section 1833(z)(1) of the Act provided for APM Incentive Payments for eligible clinicians who are QPs with respect to a year in each of payment years 2019 through 2025. Specifically, for each of the specified payment years, in addition to the amount of payment that will otherwise be made for covered professional services furnished by an eligible clinician who is determined to be a QP for such year, an additional lump sum APM Incentive Payment will be made equal to 5 percent of the eligible clinician's estimated aggregate payment amounts for such covered professional services for the preceding year (which we defined as the ''base year'') in each of payment years 2019 through 2024, and 3.5 percent of such amounts in payment year 2025. Covered professional services are defined at § 414.1305, with reference to the statutory definition at section 1848(k)(3) of the Act, as services for which payment is made under, or based on, the PFS and which are furnished by an eligible clinician (physician; practitioner as defined in section 1842(b)(18)(C) of the Act; PT, OT, or speech-language pathologist; or qualified audiologist as defined under section 1861(ll)(4)(B) of the Act).

Section 304(a) of the CAA, 2024 amended section 1833(z)(1) of the Act to provide that eligible clinicians who are QPs with respect to payment year 2026 (performance period 2024) will receive an APM Incentive Payment equal to 1.88 percent of their estimated aggregate payment amounts for Medicare Part B covered professional services in the preceding year. In effect, this statutory change extends the APM Incentive Payment for one additional year, at 1.88 percent.

Accordingly, we proposed to incorporate the change made by the CAA, 2024, by amending the regulation text at § 414.1450 to add the payment year 2026 APM Incentive Payment amount of 1.88 percent of covered professional services payments. We proposed to amend paragraph (b)(1) to state that the amount of the APM Incentive Payment for payment years 2019 through 2024 is equal to 5 percent, for payment year 2025, 3.5 percent, and for payment year 2026, 1.88 percent of the estimated aggregate payments for

covered professional services furnished during the calendar year immediately preceding the payment year.

Beginning with the 2026 payment year, which relates to the 2024 QP Performance Period, section 1848(d)(1)(A) of the Act specifies that there shall be two separate PFS conversion factors, one for items and services furnished by an eligible clinician who is a QP for the year (the qualifying APM conversion factor), and the other for other items and services not furnished by a QP (the non-qualifying APM conversion factor). Each conversion factor will be equal to the conversion factor for the previous year multiplied by the applicable update for the year specified in section 1848(d)(20) of the Act. The update specified for the qualifying APM conversion factor for CY 2025 is 0.75 percent, while the update for the nonqualifying APM conversion factor is 0.25 percent.

As the establishment of a 1.88 percent APM Incentive Payment for payment year 2026 is established by statute, we are finalizing as proposed our incorporation of this change into § 414.1450(b)(1).

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a ''collection of information'' requirement (as defined under 5 CFR 1320.3(c) of the PRA's implementing regulations) is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether a collection of information should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the CY 2025 PFS proposed rule (89 FR 61596), we solicited public comment on each of the aforementioned issues for the following sections of the rule that contained information collection requirements (ICRs). We did not receive such comments, and therefore, we are finalizing them in this rule as proposed.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates for all salary estimates (*https://www.bls.gov/oes/2023/may/oes_nat.htm*). In this regard, Tables 89 and 90 presents BLS' mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Therefore, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

We note that the May 2023 BLS data does not include median hourly wage rates for a number of the physician occupation types listed in Table 90; in these cases, the BLS identifies that the median wage rate is equal to or greater than $115.00/hr or $239,200 per year. BLS data for prior years, such as the May 2021 and May 2022 data, provide similar notes for median wage rates for occupations that are above a given threshold ($100.00/hr or $208.000 per year for the May 2021 BLS data (*https://www.bls.gov/oes/2021/may/oes_nat.htm*), and $115.00/hr or $239,200 per year for the May 2022 BLS data (*https://www.bls.gov/oes/2022/may/oes_nat.htm*). Therefore, for consistency with previous years for estimating physician wage rates, we have continued to use mean hourly wage rates across our wage estimates.

TABLE 89: National Occupational Employment and Wage Estimates (Excluding Physicians)

Occupation Title	Occupation Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs ($/hr)	Adjusted Hourly Wage ($/hr)
Billing and Posting Clerks	43-3021	22.66	22.66	45.32
Business Operations Specialists	13-1000	42.33	42.33	84.66
Chief Executives	11-1011	124.47	124.47	248.94
Computer System Analysts	15-1211	53.27	53.27	106.54
Lawyers	23-1011	84.84	84.84	169.68
Licensed Practical and Licensed Vocational Nurses	29-2061	29.23	29.23	58.46
Medical and Health Services Managers	11-9111	64.64	64.64	129.28
Pharmacists	29-1051	64.81	64.81	129.62

For our purposes, BLS' May 2023 National Occupational Employment and Wage Estimates does not provide an occupation that we could use for ''Physician'' wage data. To estimate a Physician's costs, we used an average conglomerate wage of $291.64/hr as demonstrated below in Table 90.

TABLE 90: National Occupational Employment and Wage Estimates (Physicians)

Occupation Title	Occupation Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs ($/hr)	Adjusted Hourly Wage ($/hr)
Anesthesiologists	29-1211	163.21	163.21	326.42
Family Medicine Physicians	29-1215	115.77	115.77	231.54
General Internal Medicine Physicians	29-1216	118.01	118.01	236.02
Obstetricians and Gynecologists	29-1218	133.97	133.97	267.94
Orthopedic Surgeons, Except Pediatric	29-1242	181.85	181.85	363.7
Pediatric Surgeons	29-1243	216.02	216.02	432.04
Pediatricians, General	29-1221	98.97	98.97	197.94
Physicians, All Other	29-1229	119.54	119.54	239.08
Psychiatrists	29-1223	123.53	123.53	247.06
Surgeons	29-1240	167.74	167.74	335.48
Surgeons, All Other	29-1249	165.38	165.38	330.76
Total				3,207.98
Average Physician Wage (3,207.98/11)				291.64

B. Information Collection Requirements (ICRs)

1. ICRs Regarding Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-In of Payment Reductions (§ 414.504)

On November 17, 2023, section 502 of the Further Continuing Appropriations and Other Extensions Act, 2024 (Pub. L. 118–22) (FCAOEA, 2024) was passed and delayed data reporting requirements for CDLTs that are not ADLTs, and it also delayed the phase-in of payment reductions under the Clinical Laboratory Fee Schedule (CLFS) from private payor rate implementation under section 1834A of the Act. After the publication of the proposed rule (CMS–1807–P) and the close of the comment period, however, the data reporting period and phase-in of payment reductions were further delayed. On September 26, 2024, section 221 of the Continuing Appropriations and Extensions Act, 2025 (Pub. L. 118–83) was passed and delayed CLFS data reporting requirements for CDLTs that are not ADLTs, as well as the phase-in of payment reductions under the CLFS from private payor rate implementation under section 1834A of the Act. As stated in section 1834A(h)(2) of the Act, chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, does not apply to information collected under section 1834A of the Act. Consequently, we are not setting out any burden estimates under this section of this final rule. Please refer to section VII.E.8. of this final rule for a discussion of the impacts associated with the changes described in section III.D. of this final rule.

2. ICRs Regarding the Updates to the Medicare Diabetes Prevention Program (§§ 410.79, 414.84, and 424.205)

In section § 410.79(b), we are finalizing our proposal to make conforming changes to our regulation Conditions of Coverage to align with the 2024 Centers for Disease Control and Prevention (CDC) Diabetes Prevention Recognition Program (DPRP) Standards.[895] We are finalizing our proposal to amend § 410.79(b) to add a new term for MDPP, ''in-person with a distance learning component.'' The ''in-person with a distance learning component'' code will reduce administrative burden and allow MDPP suppliers to streamline data reporting to CDC because they will only have to maintain one code if they are providing in-person and distance learning delivery. To further align with 2024 CDC DPRP Standards, we also added the term ''combination with an online component'' and revised the current ''online'' definition. We also clarified in § 410.79(d)(1) that MDPP make-up sessions can only be furnished using distance learning and in-person delivery modes, in alignment with the Extended flexibilities as defined in the CY 2024 PFS final rule (88 FR 79528). We also finalized our proposal to amend § 410.79(e)(3)(iii)(C) in response to comments that beneficiaries are unable to take a picture while standing on their home scales due to risk of injury and physical health limitations (88 FR 79249). We finalized our proposal to revise language to specify that a beneficiary can self-report their weight for an MDPP distance learning session by sending two (2) date-stamped photos: one with their weight on the digital scale and one of the beneficiary visible in their home. Additionally, at § 414.84(c), to make it possible for Medicare Administrative Contractors (MACs) to process claims for same day make-up sessions in MDPP, we finalized our proposal d that MDPP suppliers be required to append an existing claim modifier (Current Procedural Terminology (CPT) Modifier 79) to any claim for G9886 or G9887 to indicate a make-up session that was held on the same day as a regularly scheduled MDPP session. We finalized our proposal to remove the MDPP bridge payment in § 414.84(a), (d), and (e). This payment is no longer necessary in

[895] Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. *https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures.*

MDPP's CY 2024 fee for service payment structure and could introduce the potential for fraud, waste, or abuse. Finally, we finalized our proposal to make minor edits throughout §§ 410.79, 424.205, and 414.84 to update outdated references and align with previous rulemaking pertaining to MDPP terminology, payment structure, and requirements. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions, including the collection of weights, per the CY 2024 PFS final rule.

3. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out Shared Savings Program burden estimates under this section of the preamble. Please refer to section VI.E.11. of this final rule for a discussion of the impacts associated with the changes to the Shared Savings Program as described in section III.G. of this final rule.

4. ICRs Regarding Rebate Reduction Requests Submitted Under Sections 11101 and 11102 of the Inflation Reduction Act (CMS–10858, OMB 0938–1474) (§§ 427.402, 428.302, and 428.303)

The following changes will be submitted to OMB for approval under control number 0938–INSERT (CMS–INSERT).

In sections III.I. of this final rule, we are finalizing the proposed policy that to receive consideration for an inflation rebate reduction for a specific rebatable drug when the manufacturer believes there is a severe supply chain disruption or likely shortage, a manufacturer must submit to CMS a rebate reduction request form along with supporting documentation. As stated in the proposed rule (89 FR 62104), we proposed this because manufacturers hold some of the information and documentation that is needed to determine whether the rebate amount for a Part B or Part D rebatable drug should be reduced due to either a severe supply chain disruption or a likely shortage as required by sections 1847A(i)(3)(G)(ii), 1860D–14B(b)(1)(C)(ii), and 1860D–14B(b)(1)(C)(iii) of the Act.

At §§ 427.402(c)(4) and 428.302(c)(4), we proposed the criteria that a Part B or Part D rebatable drug must meet for CMS to grant a severe supply chain disruption rebate reduction request. At §§ 427.402(c)(5) and 428.302(c)(5), we proposed that if a manufacturer believes a severe supply chain disruption continues into a fifth consecutive calendar quarter for a Part B rebatable biosimilar biological product, or a second applicable period for a generic Part D rebatable drug or biosimilar after the start of the natural disaster or other unique or unexpected event, the manufacturer may request an extension of the rebate reduction one time by submitting a rebate reduction extension request and supporting documentation. At § 428.303(c)(4), we proposed criteria that a generic Part D rebatable drug must meet for CMS to grant a rebate reduction request because the generic Part D rebatable drug is likely to be in shortage, including the requirements for a one-time extension of a rebate reduction. At § 428.303(c)(5), we proposed that if a manufacturer believes a generic Part D rebatable drug that was granted a reduction of the rebate amount and continues to be affected by the potential drug shortage continuing into 1 additional consecutive applicable period, the manufacturer may request an extension of the rebate reduction one time by submitting a rebate reduction extension request and supporting documentation.

We did not receive any public comments on the collection of information requirements for the rebate reduction requests provisions, and we are finalizing as proposed.

Additional instructions for submitting rebate reduction requests are provided in the collection of information that was approved on July 22, 2024, under OMB control number 0938–1474 and can be found on *reginfo.gov* (*https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202407-0938-012*). The approved collection of information includes the rebate reduction request forms that must be submitted to CMS for consideration for a rebate reduction.

As stated in the proposed rule (89 FR 62104), we believe that few manufacturers will submit a rebate reduction request form due to the statutory specifications regarding eligible drugs, as well as the policy criteria finalized in this rule. Using the wage rates in Table 89 of this final rule, we anticipate collecting a total of 10 rebate reduction request forms per year. We estimate a total annual burden of 3,100 hours (310 hr per form * 10 forms) at a cost of $37,378 [(160 hr × $84.66/hr for a Business Operations Specialist collect information and provide brief explanations detailing the specifics of the severe supply chain disruption or likely shortage, including determining changes in drug production and distribution and when supply is expected to meet demand, submit information on how the manufacturer plans to resolve or mitigate the severe supply chain disruption or likely shortage, compile supporting documentation providing evidence of the severe supply chain disruption and likely shortage, and submit such information as part of their request to CMS) + (80 hr × $129.62/hr for a Pharmacist to evaluate the impact and duration of a severe supply chain disruption or determine the likelihood of shortage and anticipated duration of the potential shortage T) + (50 hr × $169.68/hr for a Lawyer to review the submission and determine which information, if any, on the form or in the supporting documentation is considered proprietary and protected under Exemption 3 and/or Exemption 4 of the Freedom of Information Act) + (20 hr × $248.94/hr for a Chief Executive to review the Rebate Reduction Request Form and supporting documentation and certify the submission; certification must be done by the (1) CEO, (2) CFO, (3) an individual other than a CEO or CFO, who has authority equivalent to a CEO or a CFO, or (4) an individual with the directly delegated authority to perform the certification on behalf of one of the individuals mentioned in (1) through (3))].

Using the wage rates in Table 89 of this final rule, we also anticipate collecting a total of 10 rebate reduction extension request forms per year, and a total annual burden estimate of 3,100 hours (310 hr per form * 10 forms) at a cost of $37,378 [(160 hr × $84.66/hr for a Business Operations Specialist to collect information and provide brief explanations detailing the specifics of the continued severe supply chain disruption or likely shortage, including determining changes in drug production and distribution and when supply is expected to meet demand, submit information on how the manufacturer plans to resolve or mitigate the severe supply chain disruption or likely shortage, compile supporting documentation providing evidence of the severe supply chain disruption and likely shortage continuation, and submit such information as part of their request to CMS) + (80 hr × $129.62/hr for a Pharmacist to to evaluate the continued impact and duration of a severe supply chain disruption or determine the

continued likelihood of shortage and anticipated duration of the potential shortage) + (50 hr × $169.68/hr for a Lawyer to review the submission and determine which information, if any, on the form or in the supporting documentation is considered proprietary and protected under Exemption 3 and/or Exemption 4 of the Freedom of Information Act) + (20 hr × $248.94/hr for a Chief Executive to review the Rebate Reduction Request Form and supporting documentation and certify the submission; certification must be done by the (1) CEO, (2) CFO, (3) an individual other than a CEO or CFO, who has authority equivalent to a CEO or a CFO, or (4) an individual with the directly delegated authority to perform the certification on behalf of one of the individuals mentioned in (1) through (3)))].

CMS approximates that the burden estimates for the rebate reduction request form and the rebate reduction extension request form will be similar due to the questions on the forms requiring about the same amount of time for a manufacturer to collect and submit the information on the applicable form.

We did not receive any public comments on the collection of information requirements and burden estimates for the rebate reduction requests provisions, and we are finalizing as proposed.

5. ICRs Regarding Medicare Parts A and B Overpayment Provisions of the Affordable Care Act (§ 401.305(a)(2) and (b)(1), (2), and (3))

Section W of the December 2022 Overpayments Proposed Rule proposed amendments to § 401.305(a)(2) to change the standard for an ''identified overpayment'' for Medicare Parts A and B and include by reference, the knowledge standard set forth in the False Claims Act at 31 U.S.C. 3729(b)(1). The proposed amendments for Medicare Parts A and B are associated with OMB control number 0938–1323 (CMS–10405); however, we did not make any revisions to the currently approved requirements and burden under this control number. We were not able to predict if there will be any change in the number of overpayments identified or reported under the proposed amendments to the rule; however, we solicited comment on this assumption.

Section III.O. of this final rule discusses existing § 401.305(b)(1), which specifies when a person who has received an overpayment must report and return an overpayment. We proposed to amend § 401.305(b)(1) by referencing revised § 401.305(b)(2) and new § 401.305(b)(3). We proposed a technical modification to the introductory language in § 401.305(b)(2) to acknowledge that this paragraph may be applicable after the suspension described in new § 401.305(b)(3) is complete. New § 401.305(b)(3) identifies circumstances under which the deadline for reporting and returning overpayments will be suspended to allow time for providers to investigate and calculate overpayments. Again, the amendments for Medicare Parts A and B are associated with OMB control number 0938–1323 (CMS–10405); however, we did not make any revisions to the currently approved requirements and burden under this control number since we could not predict if there will be any change to the number of overpayments identified or reported based on this rulemaking's changes. We solicited comment on this assumption.

We did not receive public comments on the provisions and assumptions, and therefore, we are finalizing them as proposed.

6. The Quality Payment Program (42 CFR Part 414 and Section IV. of This Final Rule)

The following Quality Payment Program-specific ICRs reflect changes to our currently approved burden (that is, burden that is currently approved by OMB via an active collection of information request) to capture policy changes in this CY 2025 final rule.

In the CY 2025 PFS proposed rule (89 FR 62104 through 62152), we presented detailed burden updates that reflected the impact of proposed policy provisions as well as updated data and assumptions that were independent of policy proposals. We also solicited public comment on our approach to presenting burden such estimates, but we did not receive any comment.

In this final rule, we only present detailed burden estimates for Quality Payment Program ICRs that are new or revised and based on policies finalized in this rule. We also continue our discussions of policy provisions for which we did not propose burden updates. Non-rulemaking adjustments, due to updated data and assumptions, and the changes due to provisions of this rule, will be submitted to OMB for approval under the associated control numbers.

Outside of previous physician fee schedule payment policy rules which included adjustment-only burden, this follows our long-standing process for setting out PRA-related burden in the vast majority of our proposed and final rules. It is intended to focus our PRA score on the impact of the rulemaking document.

a. Background

(1) ICRs Associated With Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)

In section V.B.6. of this final rule, we discuss a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The following sections describe the changes in the estimated burden for the information collections relevant to the policy provisions finalized in the CY 2025 PFS final rule for MIPS and Advanced APM ICRs. These changes, as well as non-rulemaking adjustments, will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). The updated information collections for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey outlined in section IV.A.4.j.(1)(b) of this final rule will be submitted to OMB for review under control number 0938–1222 (CMS–10450), to be a requirement for CAHPS for MIPS survey vendors beginning with the CY 2026 performance period/2028 MIPS payment year. We have received approval for the collection of information associated with the virtual group election process under OMB control number 0938–1343 (CMS–10652).

(a) Summary of Annual Quality Payment Program Burden Estimates

Table 91 summarizes this rule's total burden estimates for the Quality Payment Program for the CY 2025 performance period/2027 MIPS payment year. For the Quality Payment Program, we provide estimates only for ICRs that have policy provisions finalized in this final rule that impact our burden estimates.

In the CY 2024 PFS final rule (87 FR 70169), the total estimated burden for the CY 2024 performance period/2026 MIPS payment year was 724,212 hours at a cost of $81,322,556 (see Table 91, row a). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs outlined in this section of this final rule compared to the CY 2024 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2024 PFS final rule into the CY 2025 performance period/2027 MIPS payment year is 635,303 hours at a cost of $75,919,246 (see Table 91, row b). These represent a decrease of 88,909 hours and $5,403,307. To understand the burden implications of the policies finalized in this rule, we provide an estimate of the total burden associated

with continuing the policies and ICRs currently approved by OMB and set forth in the CY 2024 PFS final rule into the CY 2025 performance period/2027 MIPS payment year. The estimated burden of 594,447 hours at a cost of $71,079,848 (see Table 91, row c) reflects the availability of more accurate data to account for all potential respondents and submissions across the ICRs with burden changes detailed in this section of the final rule and represents a decrease of 40,856 hours and $4,839,401 (see Table 91, row d).

Our total burden estimate for the CY 2025 performance period/2027 MIPS payment year, for ICRs that include changes due to provisions finalized in this final rule, is 586,877 hours and $70,166,672 (see Table 91, row e), which represents a decrease of 48,426 hours and $5,752,577 (see Table 91, row f) from the CY 2024 PFS final rule estimate with updated wage rates and ICRs. From these estimates, updated data and assumptions not related to policies in this final rule will reduce burden by 40,856 hours and $4,839,401 (see Table 91, row d). We estimate that the policies in this final rule will further reduce burden by 7,570 hours (−48,426 hours− −40,856 hours) and $913,176 (−$5,752,577− −$4,839,401) (see Table 91, row g) for the CY 2025 performance period/2027 MIPS payment year; this estimate is unchanged from the CY 2025 PFS proposed rule (89 FR 62105 and 62106). In Table 92, we identify the expected change in total hours and total responses for the included ICRs.

TABLE 91: Summary of Burden Estimates and Requirements from the CY 2025 PFS Final Rule

Burden Estimate Description	Time (Hours)	Cost
Currently Approved Burden in CY 2024 PFS Final Rule (a)	724,212	$81,322,556
CY 2024 PFS Final Rule w/ Updated Wage Rates and ICRs (b)	635,303	$75,919,249
CY 2024 PFS Final Rule w/ Updated Data and Assumptions (c)	594,447	$71,079,848
Change in Burden Due to Updated Data and Assumptions (d) = (c) – (b)	**-40,856**	**-$4,839,401**
CY 2025 PFS Final Rule Total Burden (e)	586,877	$70,166,672
Total Change in Burden (f) = (e) – (b)	-48,426	-$5,752,577
Change in Burden Associated with Policies (g) = (f) – (d)	**-7,570**	**-$913,176**

TABLE 92: Summary of Quality Payment Program Burden Estimates and Requirements CMS-10621 (OMB 0938-1314)

Requirement	Currently Approved Responses	CMS-1807-F Responses	Change in Responses	Currently Approved Total Time (Hours)	CMS-1807-F Total Time (Hours)	Change in Total Time (Hours)
§§ 414.1325 and 414.1335 Quality Performance Category: Medicare Part B Claims Collection Type (see Tables 97 and 98)	13,413	12,197	-1,216	190,465	173,197	-17,268
§§ 414.1325 and 414.1335 Quality Performance Category: QCDR/MIPS Clinical Quality Measure CQM Collection Type (see Tables 99 and 100)	16,632	17,008	+376	151,068	154,484	+3,416
§§ 414.1325 and 414.1335 Quality Performance Category: electronic Clinical Quality Measure eCQM Collection Type (see Tables 102 and 102)	28,714	27,179	-1,535	229,712	217,432	-12,280
§414.1365 MVP Registration (see Tables 103 and 104)	9,585	6,285	-3,300	2,396	1,571	-825
MVP Quality Submission (see Tables 105 and 106)	9,585	6,285	-3,300	61,662	40,193	-21,469
TOTAL	**77,929**	**68,954**	**-8,975**	**635,303**	**586,877**	**-48,426**

Table 93 provides the reasons for changes in the estimated burden for the CY 2025 performance period/2027 MIPS payment year for information collections in the Quality Payment Program section (IV.A) of this final rule. As with Tables 91 and 92, we updated Table 93 from the CY 2025 PFS proposed rule (89 FR 62108 through 62440) to only include ICRs for which policy provisions finalized in this rulemaking impact our burden estimates. We divided the reasons for our change in burden into those related to finalized policies in the CY 2025 PFS final rule and those related to adjustments in burden continued from the CY 2024 PFS final rule policies and as currently approved under CMS–10621 (OMB 0938–1314) that reflect updated data and revised methods.

TABLE 93: Reasons for Change in Burden Compared to The Currently Approved Information Collection Burden

ICR Title	Changes in Burden Due to CY 2025 Final Rule Policies	Adjustments in Burden Continued from CY 2024 PFS Final Rule Policies Due to Revised Methods or Updated Data
Quality Performance Category: Medicare Part B Claims Collection Type (see Table 98)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the claims collection type due to the addition of 6 new MVPs.	Decrease in the number of respondents due to updated data.
Quality Performance Category: QCDR/MIPS CQM Collection Type (see Table 100)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the QCDR and MIPS CQM collection type due to the addition of 6 new MVPs.	Increase in the number of respondents due to updated data.
Quality Performance Category: eCQM Collection Type (see Table 102)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the eCQM collection type due to the addition of 6 new MVPs.	Decrease in the number of respondents due to updated data.
MVP Registration (see Table 104)	Increase in number of respondents due to the addition of 6 new MVPs.	Decrease in the number of respondents due to updated data.
MVP Quality Submission (see Table 106)	Increase in number of respondents due to the addition of 6 new MVPs.	Decrease in the number of respondents due to updated data.

(2) Summary of Changes for the Quality Payment Program: MIPS

(a) MIPS ICRs With Changes Due to Policy Provisions

As identified in Tables 92 and 93, the following five MIPS ICRs under control number 0938–1314 (CMS–10621) show changes in burden due to the policies finalized in this final rule:

- Quality Performance Category Data Submission by Medicare Part B Claims Collection Type.
- Quality Performance Category Data Submission by Qualified Clinical Data Registry (QCDR) and MIPS Clinical Quality Measure (CQM) Collection Type.
- Quality Performance Category Data Submission by Electronic Clinical Quality Measure (eCQM) Collection Type.
- MIPS Value Pathways (MVP) Quality Performance Category Submission.
- MVP Registration.

In aggregate, we estimate policy provisions will result in a net decrease in burden of 7,570 hours and $913,176 for the CY 2025 performance period/2027 MIPS payment year (see Table 91). We detail changes to our currently approved estimates for these ICRs under control number 0938–1314 (CMS–10621) based on policy provisions as well as revised burden assumptions based on the updated data available at the time of preparation of this final rule; these discussions begin in section V.B.6.b. of this final rule.

As detailed in section V.B.6.b. of this final rule, updates to the information collections for the CAHPS for MIPS Survey will be submitted to OMB for review under control number 0938–1222 (CMS–10450). We did not propose updates to the burden estimates because of the forthcoming changes.

(b) MIPS ICRs With No Changes to Currently Approved Estimates

We did not propose adjustments to our burden estimates for the following ICRs in the CY 2025 PFS proposed rule. We are finalizing not to make any changes to these ICRs from our currently approved estimates under the control

numbers listed below. This includes the following ICRs:

- Beneficiary Responses to CAHPS for MIPS Survey Burden (0938–1222) (89 FR 62139).
- Group Registration for the CAHPS Survey (0938–1222) (89 FR 62139).
- Registration for Virtual Groups (0938–1343) (89 FR 62115).
- Nomination of Improvement Activities (0938–1314) (89 FR 62147).
- Open Authorization (OAuth) Credentialing and Token Request Process (0938–1314) (89 FR 62123).
- Opt-out of Performance Data Display on Compare Tools for Voluntary Participants (0938–1314) (89 FR 62151).
- Nomination of MVPs (0938–1314) (89 FR 62147).

Notably, we discuss related policy provisions for the following ICRs in this final rule, and why we believe they do not impact our current burden estimates, in sections V.B.6.c.(5).(a).(ii) and V.B.6.b.:

- Subgroup Registration (0938–1314) (89 FR 62136).
- CAHPS for MIPS Survey Vendor Requirements (0938–1222) (89 FR 62122).

(c) MIPS ICRs With Changes Due to Available Data

We proposed updates to the following ICRs for the CY 2025 performance period/2027 MIPS payment year due to the availability of updated data and assumptions that are not associated with policy provisions in this final rule. These burden updates, as presented in the CY 2025 PFS proposed rule, will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). We did not receive public comment on our estimates for these ICRs provided in the CY 2025 PFS proposed rule.

- Call for Quality Measures (89 FR 62139 and 62140).
- Quality Payment Program Identity Management Application Process (89 FR 62127).

Notably, in sections V.B.6.d. and V.B.6.e. of this final rule, we discuss related policy provisions for the following ICRs and why we believe they do not impact our current burden estimates.

- Reweighting Applications for Promoting Interoperability and Other Performance Categories (89 FR 62140 through 62142).
- Data Submission for the Promoting Interoperability Performance Category (89 FR 62142 through 62145).
- Data Submission for the Improvement Activities Performance Category (89 FR 62145 through 62147).

In the CY 2025 PFS proposed rule, we proposed updates to the following ICRs for the CY 2025 performance period/2027 MIPS payment year due to the availability of updated data and assumptions that are not associated with policy provisions. We are further revising these estimates due to the availability of updated data and assumptions and will submit them to OMB under control number 0938–1314 (CMS–10621).

- QCDR Simplified Self-Nomination and other Requirements (89 FR 62115 and 62116).
- QCDR Full Self-Nomination and other Requirements (89 FR 62116 and 62117).
- Qualified Registry Simplified Self-Nomination and other Requirements (89 FR 62118 and 62119).
- Qualified Registry Full Self-Nomination and other Requirements (89 FR 62119 and 62120).
- Third Party Intermediary Plan Audits (89 FR 62120 through 62122).

(d) Data Considerations for MIPS Submissions

As noted in the CY 2025 PFS proposed rule (89 FR 62111), we incorporated submission data from CY 2022 performance period/2024 MIPS payment year to calculate the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories. The accuracy of our estimates of the total burden for data submission for those performance categories may be impacted by several primary factors. First, we are unable to predict with certainty who will be a Qualifying APM Participant (QP) for the CY 2025 performance period/2027 MIPS payment year. Second, it is difficult to predict whether Partial QPs, who can elect to report to MIPS, will choose to participate in the CY 2025 performance period/2027 MIPS payment year compared to the CY 2022 performance period/2024 MIPS payment year. Therefore, the actual number of Advanced APM participants and how they elect to submit data may differ from our estimates. However, we believe our estimates are the most appropriate given the available data.

(3) Summary of Quality Payment Program Changes: Advanced APMs

In the CY2025 PFS proposed rule, we proposed updates to the following ICRs for the CY 2025 performance period/2027 MIPS payment year due to the availability of updated data and assumptions that are not associated with policy provisions. These burden updates, as presented in the CY 2025 PFS proposed rule, will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). This includes the following ICRs:

- Partial QP Elections (89 FR 62148).
- Other Payer Advanced APM Determinations: Payer-Initiated Process (89 FR 62149).
- Other Payer Advanced APM Determinations: Eligible Clinician-Initiated Process (89 FR 62149 and 62150).
- Submission of Data for QP Determinations under the All-Payer Combination Option (89 FR 62150 and 62151).

(4) Framework for Understanding the Burden of MIPS Data Submission

We refer readers to the CY 2024 PFS final rule (88 FR 79422 through 79424) for a framework on how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section, unless otherwise noted.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. We previously finalized in the CY 2021 PFS final rule (85 FR 84859 through 84866) that the APM Performance Pathway (APP) is available for clinicians who participate in a MIPS APM for both ACO participants and non-ACO participants to submit quality data. Due to data limitations and our inability to determine who will use the APP versus the traditional MIPS submission mechanism for the CY 2025 performance period/2027 MIPS payment year, we continue to assume Shared Savings Program ACO APM Entities will submit quality data through the APP as required. Additionally, we assume MIPS eligible clinicians in non-Shared Savings Program ACO APM Entities will participate through traditional MIPS or MVPs, submitting as an individual or group rather than as an APM Entity. Per section 1899(e) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Accordingly, this burden is not included in Quality Payment Program burden estimates.

In section IV.A.4.c.(2) of this final rule, we are finalizing our proposal to create the APP Plus quality measure set that will allow for alignment of the APP with the Adult Universal Foundation measures. Shared Savings Program ACOs will be required to report the APP Plus quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year. We did not propose to modify the existing APP quality measure set; instead, we are finalizing our proposal to create the APP Plus quality measure set that will be optional for MIPS eligible clinicians, groups, and APM Entities (not including Medicare Shared Savings Program ACOs) meeting the reporting requirements under the APP starting with the CY 2025 performance period/2027 MIPS payment year. However, for Medicare Shared Savings Program ACOs, they will be required to report the APP Plus quality measure set to meet the reporting requirements of the Medicare Shared Savings Program's quality performance standard. As finalized, each MIPS eligible clinician, group, or APM Entity that elects to report the APP may choose to report either the APP quality measure set or the APP Plus quality measure set. MIPS APM participants may also elect to report via traditional MIPS or MVPs.

We are finalizing, with modification, the proposed APP Plus quality measure set, which will include the five quality measures from the APP quality measure set that are also Adult Universal Foundation measures (Quality #001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control; Quality #134: Preventive Care and Screening: Screening for Depression and Follow-up Plan; Quality #236: Controlling High Blood Pressure; Quality #321: CAHPS for MIPS; and Quality #479: Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible MIPS Clinician Groups) as well as Quality #112: Breast Cancer Screening for a total of six measures for the CY 2025 performance period/2027 MIPS payment year. The number of quality measures within the APP Plus quality measure set will incrementally increase each performance period between CY 2026 and CY 2028, as described in section IV.A.4.c.(3) two new quality measures (including Quality #484: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions) for the CY 2026 performance period/2028 MIPS payment year; one new quality measure for the CY 2027 performance period/2029 MIPS payment year; and two new quality measures for the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specifications become available for each respective measure, whichever is later.

We refer readers to section IV.A.4.c.(3)(f) of this final rule for additional details. As described in section IV.A.4.e.(1)(b)(i) of this final rule, we are finalizing our proposal to require the reporting of all measures in the APP Plus quality measure set (with the exception of the administrative claims-based quality measures automatically calculated by CMS) for the applicable performance period.

The APP quality measure set for performance year 2024 and subsequent years was finalized in the CY 2024 PFS final rule (88 FR 79112 through 79114) and consists of six measures: two administrative claims measures, the CAHPS for MIPS survey, and three measures that MIPS eligible clinicians, groups, and APM Entities reporting the APP must actively report to CMS via the Medicare CQM (available only to Shared Savings Program ACOs), eCQM, MIPS CQM, or Medicare Part B claims collection types (available only to individual MIPS eligible clinicians, groups, and APM Entities (excluding Shared Savings Program ACOs) that are considered small practices), as available per measure. MIPS eligible clinicians, groups, or APM Entities reporting the APP Plus quality measure set will be scored on data submitted via the available collection types described in section IV.A.4.c.(3)(f) of this final rule: six measures for the CY 2025 performance period/2027 MIPS payment year; eight measures for the CY 2026 performance period/2028 MIPS payment year; and nine measures for the CY 2027 performance period/2029 MIPS payment year. Two additional quality measures will be added to the APP Plus quality measure set for the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specifications become available for each respective measure, whichever is later.

The quality performance category burden for MIPS eligible clinicians who elect to report the APP Plus quality measure set varies compared to the APP quality measure set, traditional MIPs, and MVPs. We assume MIPS eligible clinicians incur no burden for reporting the two administrative claims quality measures (Quality #479 and Quality #484) required under the APP quality measure set, as similar to cost measures, we automatically calculate scores from administrative claims reporting. In the APP Plus quality measure set, Quality #479 will be automatically calculated beginning in the CY 2025 performance period/2027 MIPS payment year, and Quality #484 will be automatically calculated beginning in the CY 2026 performance period/2028 MIPS payment year. Additionally, burden estimates for the CAHPS for MIPS registration and beneficiary reporting are provided in the CAHPS for MIPS PRA package under OMB control number 0938–1222 (CMS–10450); we do not assume that MIPS eligible clinicians incur additional reporting burden for reporting this measure under the APP quality measure set, or the APP Plus quality measure set beginning with the CY 2025 MIPS performance period/2027 MIPS payment year. Therefore, we assume that MIPS eligible clinicians, groups, and APM Entities reporting the APP Plus quality measure set will incur burden for actively submitting their quality performance category data via the available collection types—eCQM and MIPS CQM. MIPS eligible clinicians, groups, and APM Entities reporting the APP, traditional MIPS, and MVPs may incur burden for actively submitting the quality performance category data via the available collection types—eCQM, MIPS CQM, and Medicare Part B Claims. We note these assumptions for actively submitting to assess clinician reporting burden may differ from MIPS scoring policy.

This active submission of quality performance data for the APP Plus quality measure set will include four of the six quality measures for the CY 2025 performance period/2027 MIPS payment year, five of the seven quality measures for the CY 2026 performance period/2028 MIPS payment year, and six of the nine measures for the CY 2027 performance period/2029 MIPS payment year. Once the additional two quality measures are added to the APP Plus quality measure set (for the CY 2028 performance period/2030 MIPS payment year or the performance period that is one year after the eCQM specifications become available for each respective measure, whichever is later), active submission of quality performance data will include eight of the 11 quality measures.

Continuing this burden comparison for MIPS eligible clinicians reporting the APP Plus quality measure set for the CY 2025 performance period/2027 MIPS payment year, clinicians will need to actively submit quality performance category data for two fewer quality measures than clinicians participating in traditional MIPS (six measures), one more quality measure than clinicians participating via the APP (three measures), and the same number of

quality measures as clinicians participating via MVPs (four measures). For the CY 2026 performance period/2028 MIPS payment year, clinicians reporting the APP Plus quality measure set will need to actively submit quality performance category data for one less quality measure than clinicians participating in traditional MIPS (six measures); they will need to report two more quality measures than clinicians participating via the APP (three measures), and one more quality measure than clinicians participating via MVPs (four measures). For the CY 2027 MIPS performance period/2029 MIPS payment per, clinicians reporting the APP Plus quality measure set will need to actively submit quality performance category data for the same number of quality measures as clinicians participating in traditional MIPS (six measures); they will need to report three more quality measures than clinicians participating via the APP (three measures), and two more quality measures than clinicians participating via MVPs (four measures). Once the additional two quality measures are added to the APP Plus measure set, for the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specifications become available for each respective measure, whichever is later, clinicians reporting the APP Plus quality measure set will need to actively submit quality performance category data for two more quality measures than clinicians reporting via traditional MIPS (six measures), five more quality measures than clinicians participating via the APP (three measures), and four more measures than clinicians participating via MVPs (four measures). For this comparison of MIPS reporting requirements, we assume that clinicians reporting via traditional MIPS and MVPs will report eCQM, MIPS CQM, and Medicare Part B Claims collection types and will not elect to report the CAHPS for MIPS survey.

As finalized in section III.G.4.b.(2)(a) of this final rule, all Shared Savings Program ACOs will be required to report the APP Plus measure set for the CY 2025 performance period/2027 MIPS payment year. Per section 1899(e) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. As the APP Plus quality measure set is new and optional for individual MIPS eligible clinicians, groups, and APM Entities (excluding Shared Savings Program ACOs), we are unable to estimate how many MIPS eligible clinicians, groups, and APM Entities (excluding Shared Savings Program ACOs) will submit quality measures via the APP Plus at this time via individual, group, or APM Entity (excluding a Shared Savings Program ACO) reporting. We continue to assume that MIPS eligible clinicians will report MIPS via traditional MIPS or MVPs. We will update these estimates as additional data are available. We refer readers to section VII.E.18.e.(2)(h) of this final rule for additional discussion.

b. ICRs Regarding Survey Vendor Requirements

The following changes (associated with CAHPS survey vendors to submit data for eligible clinicians) will be submitted to OMB for approval under control number 0938–1222 (CMS–10450). We will make the revised files available for public review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices which are expected to publish in the CY 2025 performance period/2027 MIPS payment year.

We refer readers to § 414.1400(d) for the requirements for CMS-approved survey vendors that may submit data on the CAHPS for MIPS Survey.

As discussed in section IV.A.4.j.(1)(b) of this final rule, we are finalizing our proposal that beginning with the CY 2026 performance period/2028 MIPS payment year, a survey vendor must include on its application the range of cost of its third party intermediary services (cost estimates would vary based on the level of services provided). With respect to a third party intermediary that is solely a CMS-approved survey vendor, the publishable costs will be limited to the cost of services related to the CAHPS for MIPS survey. We refer readers to section IV.A.4.j.(1)(b) of this final rule for additional detail on this policy.

In the CY 2025 PFS proposed rule (89 FR 62122 and 62123), we anticipated that the fields for cost information will request cost information that is readily available to survey vendors. Therefore, we did not propose any adjustments in burden because we assumed the additional cost requirement will not add significant burden to the currently approved 10 hour per application burden estimate. We also assumed this change will not affect survey vendor participation. We did not receive any public comment on our proposed burden assumptions and are finalizing as proposed.

This finalized policy will require CMS updates to the CAHPS for MIPS survey vendor application and the CAHPS for MIPS Survey Minimum Business Requirements as a requirement for CAHPS for MIPS survey vendors beginning in the CY 2026 performance year/2028 MIPS payment year. As mentioned, the updated files will be made available for public review through the stand-alone non-rule PRA process.

c. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Changes and Adjustments to Quality Performance Category Respondents

To estimate QPs that are excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot for the 2022 QP Performance period and the QP thresholds applied to the regulatory impact analysis, as detailed in section VII.E.18.a.(1) of this final rule. As presented in the CY 2025 PFS proposed rule (89 FR 62123 through 62126), we used updated submissions data from the CY 2022 performance period/2024 MIPS payment year to estimate the number of respondents that will submit data for the CY 2025 performance period/2027 MIPS payment year. These estimates are for MIPS eligible clinicians for reporting at the individual, group, virtual group, or subgroup level (as applicable for MVP reporting).

We assumed 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional quality reporting for ACO APM entities, consistent with assumptions used in the CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules (85 FR 84972, 86 FR 65567, 87 FR 70145, and 88 FR 79434, respectively), we included all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As stated in section V.B.6.a.(4) of this final rule, we assumed non-Shared Savings Program ACO APM Entities will participate through traditional MIPS or MVPs and submit as an individual or group rather than as an entity. Our burden estimates for the quality performance category did not include the burden for the quality data that Shared Savings Program APM Entities submit to fulfill the requirements of their APMs. The associated burden is excluded from this Collection of Information section of this final rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C.

1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA. The regulatory impact analysis discusses impacts to the Shared Savings Program from provisions finalized in this final rule.

For the CY 2025 performance period/2027 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types. We estimated the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, and eCQMs. We did not estimate burden for administrative claims quality measures; similar to cost measures, we automatically calculate scores for individuals, groups, virtual groups, or APM Entities that meet requirements to be scored on individual measures due to their administrative claims reporting. Additionally, we captured the burden for clinicians who choose to submit via these collection types for the quality performance category of MVPs. Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected and submitted data via multiple collection types during the CY 2022 performance period/2024 MIPS payment year.

There are no changes to the estimated quality performance category submission burden per response due to the policies finalized in section IV.A.4. of this final rule. We discuss in this section these policies and our reasons for not changing the currently approved per response burden for the ICRs related to submitting quality performance category data.

In section IV.A.4.d.(2)(b) of this final rule, we are finalizing our proposal to update § 414.1325(a)(1)(i) to state that a data submission for the quality performance category must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures. Additionally, we are finalizing our proposal to codify our existing policies governing our treatment of multiple data submissions received for the quality performance category at § 414.1325(f)(1) in section IV.A.4.d.(3)(b) of this final rule. We refer readers to these sections for details. The finalized policies intend to eliminate certain issues with the scoring of an unintended data submission affecting MIPS payment adjustments. We do not expect that these policies will affect the number of quality submissions or the time to complete a submission, and there are no changes to our currently approved estimated burden for this ICR.

In section IV.A.4.e.(1)(c)(i) of this final rule, we are finalizing, as proposed, the proposal to maintain the data completeness criteria threshold of at least 75 percent for the CY 2027 and CY 2028 performance periods/2029 and 2030 MIPS payment years. As the data completeness criteria threshold policy extends the data completeness criteria previously established in rulemaking for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, 2028 MIPS payment years (87 FR 70049 through 70052; and 88 FR 79334 through 79337), this policy will not increase burden for the applicable interested parties. We refer readers to section IV.A.4.e.(1)(c)(i) of this final rule for additional information on this policy.

Several factors drove our proposed updates to the number of responses for the Medicare Part B claims data, QCDR and MIPS CQMs, and eCQMs in the CY 2025 PFS proposed rule (89 FR 62123 through 62134). First, we incorporated updated submission data available for the CY 2022 performance period/2024 MIPS payment year as outlined in section V.B.6.c.(1) of this final rule. These changes reflect updated submission counts to traditional MIPS per collection type, which create a new baseline to which we apply our estimates our MVP participation estimates. Second, our updated estimates for MVP participation impact the number of estimated clinicians submitting quality data using each collection type. We adjusted our estimates for the number of participants in previously finalized MVPs to account for both the availability of updated data and updated assumptions for MVP participation (from 14 percent to 6 percent). Changes due to updated data and assumptions are identified as non-policy adjustments. We also updated our estimates to account for our expected increase in MVP participation of 4 percentage points due to the addition of six new MVPs; we associate this incremental effect, all else equal, with policy provisions. With this approach, any increase to our expected MVP participation rate reduces the number of estimated submissions for each quality performance category collection type via traditional MIPS, all else equal. Similarly, any decrease to our estimated MVP participation rate will increase the number of estimated submissions for each quality performance category collection type via traditional MIPS, all else equal.

Medicare Part B claims, MIPS CQM/QCDR, eCQM Collection Type: Individuals. Table 94 of this final rule identifies our methods to estimate the number of MIPS eligible clinicians that will submit data as individual clinicians via each collection type in the CY 2025 performance period/2027 MIPS payment year. We continue our estimates for the total number of clinicians from the CY 2025 PFS proposed rule (89 FR 62125) and have added additional rows to this table to distinguish the impact of policies vs adjustments. We identify estimated individual-clinician submissions per collection type from CY 2022 performance period/2024 MIPS payment year data (row a). We first estimated that 10 percent of clinicians who reported MIPS as individuals in CY 2022 performance period/2024 MIPS payment year may move to MVP reporting for the CY 2025 performance period/2027 MIPS payment year (row b). This 10 percent encompasses our estimate that 6 percent of clinicians will report the MVPs previously finalized in the CY 2024 rulemaking (row c), and that 4 percent of clinicians will submit MVPs due to the six new MVPs finalized in this rule (row d). The basis for these estimates is discussed in section V.B.6.c.(5).(a) of this final rule. The following paragraphs provide our estimates for the number of clinicians submitting traditional MIPS as individuals, per Medicare Part B claims, CQM/QCDR, and eCQM collection types. In this section, we estimate the number of individual and group respondents per collection type. We estimate the impact of the six newly finalized MVPs. We also aggregate the impact of both the updated submission data and our updated assumption that only 6 percent of MIPS submissions from CY 2022 performance period/2024 MIPS payment year will move to MVP submissions due to the MVPs finalized in the CY 2024 PFS final rule (88 FR 79981 through 80047), rather than 14 percent as established in the CY 2024 PFS final rule (88 FR 79443) and applied in our currently approved estimates.

Medicare Part B Claims Collection Type: Individual Clinicians. We estimate that approximately 12,197 clinicians will submit data as individuals using the Medicare Part B claims collection type for the CY 2025 performance period/2027 MIPS

payment year. This estimate of 12,197 clinicians equates to 12,197 respondents, as we assume each clinician per collection type completes one submission. From our currently approved estimate of 13,413 respondents, we estimate that updated submission data and assumptions will result in 674 fewer clinicians reporting traditional MIPS for this collection type. Additionally, we estimate that the six new MVPs finalized in section IV.A.4.a(1) of this final rule will result in 542 fewer clinicians reporting traditional MIPS. Together, we estimate a total decrease of 1,216 individual clinicians reporting this collection type (674 clinicians + 542 clinicians or 13,413 current estimate − 12,197 revised estimate) (see Table 94).

MIPS CQM and QCDR Collection Type: Individual Clinicians: We estimate that approximately 10,850 clinicians will submit data as individuals using the MIPS CQM and QCDR collection types for the CY 2025 performance period/2027 MIPS payment year. This estimate of 10,850 clinicians equates to 10,850 respondents, as we assume each clinician per collection type completes one submission. Our currently approved estimate of 16,632 combined individual, group, and virtual group respondents (reflected in Table 100) for this collection type via traditional MIPS included 10,682 individual submissions. For individual clinician submitters, we estimate that the updated submission data and assumptions will result in an increase of 651 clinicians reporting traditional MIPS as individuals. Additionally, we estimate that the six new MVPs finalized in section IV.A.4.a(1) of this final rule will result in 483 fewer clinicians reporting traditional MIPS as individuals. Together, we estimate a total increase of 168 individual clinicians reporting this collection type (651 clinicians − 483 clinicians or 10,850 revised estimate − 10,682 current estimate) (see Table 94).

eCQM Collection Type: Individual Clinicians: We estimate that approximately 21,240 clinicians will submit data as individuals using the eCQM collection type for the CY 2025 performance period/2027 MIPS payment year. This estimate of 21,240 clinicians equates to 21,240 respondents, as we assume each clinician per collection type completes one submission. Our currently approved estimate of 28,714 combined individual, group, and virtual group respondents (reflected in Table 102) includes 22,897 individual submissions. We estimate that the updated submission data and assumptions will result in 713 fewer clinicians reporting traditional MIPS as individuals. Additionally, we estimate that the six new MVPs finalized in section IV.A.4.a(1) of this final rule will result in 944 fewer clinicians reporting traditional MIPS as individuals. Together, we estimate a total decrease of 1,657 individual clinicians reporting this collection type (713 clinicians + 944 clinicians or 21,240 revised estimate − 22,897 current estimate) (see Table 94).

TABLE 94: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

Burden and Respondent Description	Medicare Part B Claims	QCDR/MIPS CQM	eCQM
2025 MIPS Performance Period (Excludes QPs) Prior to Adjustments (a)	13,552	12,056	23,600
Total Adjustment for MVPs (10%) (b) = (a) × - 0.10 or (c) + (d)	*-1,355*	*-1,206*	*-2,360*
Adjustment for CY 2024 Approved MVPs (6%) (c)= (a) x -0.06	-813	-723	-1,416
Adjustment for MVPs Finalized in the CY 2025 Final Rule (4%) (d) = (b) - (c)	-542	-483	-944
2025 MIPS Performance Period (Excludes QPs and Adjusted for MVPs) (e) = (a) - (b)	12,197	10,850	21,240
Currently Approved 2024 MIPS Performance Period (Excludes QPs) (f)	13,413	10,682	22,897
Difference in Number of Individuals (g) = (e) − (f)	-1,216 clinicians	+168 clinicians	-1,657 clinicians
Change Due to Policies Finalized in the CY 2025 Final Rule (h) = (d)	-542	-483	-944
Change Due to Updated Data Adjustments (i) = (g) – (h)	-674	+651	-713

Medicare Part B claims, MIPS CQM/QCDR, eCQM Collection Type: Groups. Table 95 of this final rule provides our estimates for the number of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the CY 2025 performance periods/2027 MIPS payment year. We identify estimated group and virtual group level submissions from CY 2022 performance period/2024 MIPS payment year submissions (row (a)). We assume clinicians who submitted quality data as groups or virtual groups in the CY 2022 performance period/2024 MIPS payment year will continue to submit data for the quality performance category using the same participation and collection types for the CY 2025 performance period/2027 MIPS payment years. We applied the same methodology described in the CY 2022 PFS final rule (86 FR 65577) on our

assumptions related to the use of an alternate collection type for groups that submitted data via the CMS Web Interface collection type for the CY 2022 performance period/2024 MIPS payment year. The following paragraphs provide our estimates for the number of group and virtual group submissions for traditional MIPS, per Medicare Part B claims, MIPS CQM/QCDR, and eCQM collection types. We continue our estimates for the total number of groups from the CY 2025 PFS proposed rule (89 FR 62125 and 62126) and have added additional rows to this table to distinguish the impact of policies vs adjustments, as described under Medicare Part B claims, MIPS CQM/QCDR, eCQM Collection Type: Individuals in section V.B.6.c.(1) of this final rule.

Medicare Part B Claims Collection Type: Groups and Virtual Groups: Not applicable (see Table 95).

QCDR and MIPS CQM Collection Types: Groups and Virtual Groups: We estimate that approximately 6,158 groups and virtual groups will submit data for the MIPS CQM and QCDR collection types for the CY 2025 performance period/2027 MIPS payment year. This estimate of 6,158 groups and virtual groups equates to 6,158 respondents, as we assume each group or virtual group per collection type completes one submission. Our currently approved estimate of 16,632 combined individual, group, and virtual group respondents (reflected in Table 100) includes 5,950 groups and virtual groups. We estimate that the updated submission data and assumptions on reporting will result in 481 more groups and virtual groups reporting traditional MIPS. Additionally, we estimate that the six new MVPs finalized in this rule will result in 273 fewer groups and virtual groups reporting traditional MIPS. Together, we estimate a total increase of 208 groups and virtual groups reporting this collection type (481 groups − 273 groups or 6,158 revised estimate − 5,950 current estimate) (see Table 95).

eCQM Collection Type: Groups and Virtual Groups: We estimate that approximately 5,939 groups and virtual groups will submit data for the eCQM collection type for the CY 2025 performance period/2027 MIPS payment year. This estimate of 5,939 groups and virtual groups equates to 5,939 respondents, as we assume each group or virtual group per collection type completes one submission. Our currently approved estimate of 28,714 combined individual, group, and virtual group respondents (reflected in Table 102) includes 5,817 groups and virtual groups. We estimate that the updated submission data and assumptions will result in 386 more groups and virtual groups reporting traditional MIPS. Additionally, we estimate that the six new MVPs finalized in this rule will result in 264 fewer groups and virtual groups reporting traditional MIPS. Together, we estimate a total increase of 122 groups and virtual groups reporting this collection type (386 groups − 264 groups or 5,939 revised estimate − 5,817 current estimate) (see Table 95).

TABLE 95: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type

Burden and Respondent Description	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM
2025 MIPS Performance Period (Excludes QPs) Prior to Adjustments (a)	n/a	6,842	6,599
Total Adjustment for MVPs (10%) (b) = (a) × -0.10 or (c) + (d)	*n/a*	*-684*	*-660*
Adjustment for CY 2024 Approved MVPs (6%) (c)= (a) × -0.06	n/a	-411	-396
Adjustment for MVPs Finalized in the CY 2025 Final Rule (4%) (d) = (b) – (c)	n/a	-273	-264
2025 MIPS Performance Period (Excludes QPs and Adjusted for MVPs) (e) = (a) – (b)	**n/a**	**6,158**	**5,939**
Currently Approved 2024 MIPS Performance Period (Excludes QPs) (f)	n/a	5,950	5,817
Difference in Number of Groups and Virtual Groups (g) = (e) − (f)	n/a	+208	+122
Change Due to Policies Finalized in the CY 2025 Final Rule (h) = (d)	n/a	-273	-264
Change Due to Updated Data Adjustments (i) = (g) – (h)	**n/a**	**+481**	**+386**

The burden associated with the submission of quality performance category data has some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type.

We also believe that the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third party. As such,

we separately estimate the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we assume that, on average, each clinician, group, third party or subgroup will submit six quality measures to align with the number of required quality measures for which traditional MIPS data must be submitted. See § 414.1315 for definitions for each of these participation and submission types.

As finalized in the CY 2022 PFS final rule (86 FR 65394 through 65397), group tax identification numbers (TINs) could also choose to participate as subgroups for MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to the CY 2022 PFS final rule for details on MVP quality reporting requirements (86 FR 65411 through 65412).

We proposed a MIPS quality measure inventory of 196 MIPS quality measures for the CY 2025 performance period/2027 MIPS payment year (89 FR 62042). As shown in Table 96, we are finalizing, with modification, the MIPS quality measure inventory to include 195 MIPS quality measures for the CY 2025 performance period/2027 MIPS payment year.

As discussed in section IV.A.4.e.(1)(d)(iii) of this final rule, we are finalizing, with modification, our proposal to add seven new MIPS quality measures (instead of nine MIPS quality measures as proposed). Also, we are finalizing, with modification, our proposal to remove 10 MIPS quality measures (instead of 11 MIPS quality measures as proposed). This is a net decrease of one MIPS quality measure from the current MIPS quality measure inventory of 197 measures (198 current + 9 new measures − 10 removed measures). Lastly, we are finalizing, as proposed, our proposal to make substantive changes to 66 MIPS quality measures.

We do not anticipate that the provision to remove 10 MIPS quality measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for a minimum of six MIPS quality measures in traditional MIPS reporting or submit quality data for four MIPS quality measures in an MVP. The new MIPS quality measures finalized for inclusion in MIPS for the CY 2025 performance period/2027 MIPS payment year and future years are found in Table Group A of Appendix 1 of this final rule; the MIPS quality measures finalized, with modification, for removal are found in Table Group C of Appendix 1 of this final rule; and the MIPS quality measures with substantive changes are found in Table Group D of Appendix 1 of this final rule.

TABLE 96: Summary of Quality Measure Inventory Finalized for the CY 2025 Performance Period/2027 MIPS Payment Year

Collection Type	# Measures Proposed as New*	# Measures Finalized for Removal*	# Measures Finalized with a Substantive Change*	# Measures Finalized for CY 2025*
Medicare Part B Claims	0	-2	10	25
MIPS CQMs Specifications	+6	-11	60	169
eCQM Specifications	+1	-1	16	47
Survey – CSV	0	0	0	1
Administrative Claims	0	0	1	4
Total*	**+7****	**-10****	**66**	**195*****

*A measure may be specified under multiple collection types but is only counted once in the total.
**Note that one new measure and one measure removal included above were finalized in the CY 2024 PFS final rule with a 1-year delay to the CY 2025 performance period/2027 MIPS payment year.
***Three of the 195 quality measures are only available in MVPs.

(2) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2025 PFS proposed rule (89 FR 62128 through 62130), we proposed updates to the estimated burden for the Quality Data Submission by Individuals and Groups Using Medicare Part B Claims-Based Collection Type. As noted in Table 93 of this final rule, the changes in burden reflect adjustments for updated data and assumptions, and as well as the finalized of six new MVPs as outlined in section IV.A.4.a.(1) of this final rule. We refer readers to sections V.B.6.c.(1) and V.B.6.c.(5).(a) of this final rule for the factors affecting the proposed changes and adjustments for each quality measure collection type. We are finalizing our overall burden estimates as proposed; however, we have provided additional detail on the impact of policy provisions and updated data and adjustments on our burden changes.

We estimated that 12,197 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. From our currently approved estimate of 13,413 clinicians, we estimate that updated data will result in a decrease of 674 respondents, and that the six new MVPs finalized in this rule will result in an additional decrease of 542 respondents (see Table 94). Taken together, we estimate a total decrease of 1,216 respondents (674 clinicians + 542 clinicians or 13,413 current estimate − 12,197 revised estimate). For this collection type, we assume one response (or submission) per respondent per year.

Consistent with our currently approved per response time figures and using the wage rates in Tables 89 and 90 of this final rule, we continue to estimate the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) at a cost of $15.98 (0.15 hr × $106.54/hr) to 7.2 hours at a cost of

$767.09 (7.2 hr × $106.54/hr) for a computer systems analyst.

We believe that the aggregate start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of: 3 hours for a medical and health services manager at $129.28/hr, 1 hour for a computer systems analyst at $106.54/hr, 1 hour for a Licensed Practical Nurse (LPN) at $58.46/hr, 1 hour for a billing and posting clerk at $45.32/hr, and 1 hour for a physician at $291.64/hr. Consequently, we are finalizing our approach to continue our currently approved estimate of time per response.

Considering both data submission and start-up requirements, the estimated time (per clinician using the Medicare Part B claims collection type) ranges from a minimum of 7.15 hours (0.15 hr data submission + 7 hr start up) to a maximum of 14.2 hours (7.2 hr data submission + 7 hr start up) (see Table 97). In aggregate, the estimated total annual time for the CY 2025 performance period/2027 MIPS payment year ranges from 87,209 hours (7.15 hr/response × 12,197 responses) to 173,197 hours (14.2 hr/response × 12,197 responses). The associated total annual cost ranges from a minimum of $11,047,799 (12,197 responses × $905.78/response) to a maximum of $20,209,087 (12,197 responses × $1,656.89/response). These estimates combine changes to the number of responses due to policies finalized in this rule and updated data to our currently approved figures.

BILLING CODE 4120–01–P

TABLE 97: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

Burden and Respondent Descriptions	Minimum Burden Estimate	Median Burden Estimate	Maximum Burden Estimate
# of Clinicians (a) (equal to number of submissions)	12,197	12,197	12,197
Hours Per Computer Systems Analyst to Submit Quality Data (b)	0.15	1.05	7.2
# of Hours Medical and Health Services Manager Review Measure Specifications (c)	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2
Total Annual Hours (i) = (a) × (h)	**87,209**	**98,186**	**173,197**
Cost to Submit Quality Data (Computer Systems Analyst's Labor Rate of $106.54/hr at varying times) (j)	$15.98	$111.87	$767.09
Cost to Review Measure Specifications (Medical and Health Services Manager's Labor Rate of $129.28/hr for 3 hr) (k)	$387.84	$387.84	$387.84
Cost to Review Measure Specifications (Computer Systems Analyst's Labor Rate of $106.54/hr for 1 hr) (l)	$106.54	$106.54	$106.54
Cost to Review Measure Specifications (LPN's Labor Rate of $58.46/hr for 1 hr) (m)	$58.46	$58.46	$58.46
Cost to Review Measure Specifications (Billing Clerk's Labor Rate of $45.32/hr) (n)	$45.32	$45.32	$45.32
Cost to Review Measure Specifications (Physician's Labor Rate of $291.64/hr) (o)	$291.64	$291.64	$291.64
Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	$905.78	$1,001.67	$1,656.89
Total Annual Cost (q) = (a) × (p)	**$11,047,799**	**$12,217,369**	**$20,209,087**

BILLING CODE 4120–01–C

In Table 98, we calculate the net change in estimated burden for quality data submissions from clinicians using the Medicare Part B Claims-based collection type using the burden currently approved under control number 0938–1314 (CMS–10621) and described in the CY 2024 PFS final rule

(88 FR 79438 and 79439). The decrease of 1,216 responses will result in a total maximum change of −17,268 hours at a cost of −$2,014,779 for the CY 2025 performance period/2027 MIPS payment year. For purposes of calculating total burden, only the maximum burden is used. The total time and cost estimate includes the burden associated with this rule's finalized policies provisions and availability of more up-to-date data and assumptions. In Table 128 (section VII.E.18.e.(1) of this final rule), we identify the estimated change in burden due to policies finalized in this rule.

TABLE 98: Change in Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	190,465
Total Annual Hours for Respondents in CY 2025 PFS Final Rule (b) (see Table 97, row (i))	173,197
Difference in Annual Hours (c) = (b) − (a)	**-17,268**
Total Currently Approved Annual Cost (d)	$22,223,866
Total Annual Cost for Respondents in CY 2025 PFS Final Rule (e) (see Table 97, row (q))	$20,209,087
Difference in Annual Cost (f) = (e) − (f)	**-$2,014,779**
Total Currently Approved Annual Responses (g)	13,413
Total Annual Responses in CY 2025 PFS Final Rule (h) (see Table 97, row (a))	12,197
Difference in Total Annual Responses (i) = (h) – (g)	**-1,216**

We did not receive any comments on our proposed requirements and burden estimates for the estimated burden on the requirements for the Medicare Part B Claims Collection Type. We are finalizing our burden estimates as proposed.

(3) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2025 PFS proposed rule (89 FR 62130 through 62132), we proposed to update burden for the Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types. As noted in Table 93 of this final rule, the change in burden reflects adjustments for updated data and assumptions, as well as finalizing our proposal for additional MVPs outlined in section IV.A.4.a(1) of this final rule. We refer readers to sections V.B.6.c.(1) and V.B.6.c.(5).(a) of this final rule for the factors affecting the proposed changes and adjustments for each quality measure collection type. We are finalizing our overall burden estimates as proposed; however, we have provided additional detail on the impact of policy provisions and updated data and adjustments on our burden changes.

As noted in Tables 94 and 95, we estimate that 17,008 clinicians (10,850 individuals and 6,158 groups and virtual groups) will submit quality data as individuals or groups using MIPS CQM or QCDR collection types for the CY 2025 performance period/2027 MIPS payment year. We estimate that updated data will result in an increase in 1,132 respondents (651 individuals and 481 groups), and that the six new MVPs finalized in this final rule will result in a decrease of 756 respondents (−483 individuals and −273 groups). In aggregate, this is an increase of 376 respondents from the currently approved estimate of 16,632 under control number 0938–1314 (CMS–10621) and provided in the CY 2024 PFS final rule (88 FR 79439 through 79441). Given the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group. For this collection type, we assume one response (or submission) per respondent per year.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both collection types together. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe the burden for an individual clinician or group to review measure specifications and submit quality data is a total of 9 hours at a cost of $1,088.98 per response. This consists of 3 hours at $106.54/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at $129.28/hr for a medical and health services manager, 1 hour at $106.54/hr for a computer systems analyst, 1 hour at $58.46/hr for a LPN, 1 hour at $45.32/

hr for a billing clerk, and 1 hour at $291.64/hr for a physician to review measure specifications.

Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hr) at $106.54/hr for a computer systems analyst at a cost of $8.84 (0.083 hr × $106.54/hr).

Overall, we estimate 9.083 hr/response at a cost of $1,088.98/response (see Table 99). In aggregate, we estimate a burden of 154,484 hours (9.083 hr/response × 17,008 responses) at a cost of $18,521,372 for the CY 2025 performance period/2027 MIPS payment year (17,008 responses × $1,088.98/response). These estimates combine burden changes due to policies finalized in this rule and updated data.

BILLING CODE 4120–01–P

TABLE 99: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

Burden and Respondent Descriptions	Burden Estimate
# of Clinicians Submitting as Individuals (a)	10,850
# of Groups Submitting via QCDR or MIPS CQM on Behalf of Individual Clinicians (b)	6,158
Total # of Respondents (c) = (a) + (b) (Equal to Total Number of Responses)	**17,008**
# of Hours Per Respondent to Report Quality Data (d)	3
# of Hours per Medical and Health Services Manager to Review Measure Specifications (e)	2
# of Hours for Computer Systems Analyst to Review Measure Specifications (f)	1
# of Hours for LPN to Review Measure Specifications (g)	1
# of Hours for Billing Clerk to Review Measure Specifications (h)	1
# of Hours for Physician to Review Measure Specifications (i)	1
# of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)	0.083
Annual Hours Per Respondent (k)= (d) + (e) + (f) + (g) + (h) + (i) + (j)	9.083
Total Annual Hours (l) = (c)×(k)	**154,484**
Cost Per Respondent to Submit Quality Data (at Computer Systems Analyst's Labor Rate of $106.54/hr) (m) = $106.54/hr × (d)	$319.62
Cost to Review Measure Specifications (at Medical and Health Services Manager's Labor Rate of $129.28/hr) (n) = $129.28/hr × (e)	$258.56
Cost per Computer System's Analyst Review of Measure Specifications (at Computer Systems Analyst's Labor Rate of $106.54/hr) (o) = $106.54/hr × (f)	$106.54
Cost per LPN to Review Measure Specifications (at LPN's Labor Rate of $58.46/hr) (p) = $58.46/hr × (g)	$58.46
Cost per Billing Clerk to Review Measure Specifications at Clerk's Labor Rate of $45.32/hr) (q) = $45.32/hr × (h)	$45.32
Cost for Physician to Review Measure Specifications (at Physician's Labor Rate of $291.64/hr) (r) = $291.64/hr × (i)	$291.64
Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (at Computer Systems Analyst's Labor Rate of $106.54/hr) (s) = $106.54/hr × (j)	$8.84
Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	$1,088.98
Total Annual Cost (u) = (c) × (t)	**$18,521,372**

BILLING CODE 4120–01–C

In Table 100, we calculated the net change in estimated burden for quality performance category submissions using the MIPS CQM and QCDR collection type by using the currently approved burden described in the CY 2024 PFS final rule (88 FR 79439 through 79441) and approved under control number 0938–1314 (CMS–10621). In aggregate, using the unchanged currently approved time per response estimate, the overall increase of 376 respondents from 16,632 to 17,008 for the CY 2025 performance period/2027 MIPS payment year results in an increase of 3,416 hours at a cost of +$409,457. The total time and cost estimate includes the burden associated with this rule's finalized policies provisions and availability of more up-to-date data and assumptions. In Table 128 and section VII.E.18.e.(1) of this final rule, we identify the changes in burden to this ICR due to policy provisions.

TABLE 100: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	151,068
Total Annual Hours for Respondents in CY 2025 PFS Final Rule (b) (see Table 99, row (l))	154,484
Difference in Annual Hours (c) = (b) − (a)	**+3,416**
Total Currently Approved Annual Cost (d)	$18,111,915
Total Annual Cost for Respondents in CY 2025 PFS Final Rule (e) (see Table 99, row (u))	$18,521,372
Difference in Annual Cost (f) = (e) − (d)	**+$409,457**
Total Currently Approved Annual Responses (g)	16,632
Total Annual Responses in CY 2025 PFS Final Rule (h) (see Table 99, row (c))	17,008
Difference in Total Annual Responses (i) = (h) − (g)	**+376**

We did not receive any comments on our proposed requirements and burden estimates for the estimated burden on the requirements for MIPS CQM and QCDR collection types. We are finalizing our burden estimates as proposed.

(4) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). These changes reflect the impact of the six MVPs finalized in section IV.A.4.a(1) of this final rule and the availability of more up-to-date data and assumptions.

In the CY 2025 PFS proposed rule (89 FR 62132 and 62133), we proposed to update the number of currently approved respondents for the eCQM Collection Type. As noted in Table 93 of this final rule, this change in burden reflects adjustments for updated data and assumptions, as well as the finalizing our proposal for additional MVPs as outlined in section IV.A.4.a(1) of this final rule. We refer readers to sections V.B.6.c.(1) and V.B.6.c.(5).(a) of this final rule for the factors affecting the proposed changes and adjustments for each quality measure collection type. We are finalizing our overall burden estimates as proposed; however, we have provided additional detail on the impact of policy provisions and updated data and adjustments on our burden changes.

We estimated that 27,179 clinicians (21,240 individual clinicians and 5,939 groups) will submit quality data using the eCQM collection type for the CY 2025 performance period/2027 MIPS payment year. As identified in Tables 94 and 95, we estimate that updated data will result in a decrease of 327 respondents (−713 individuals and +386 groups), and that the new MVPs will result in a decrease of 1,208 respondents (−944 individuals and −264 groups). Taken together, this is a decrease of 1,535 respondents from the currently approved estimate of 28,714 under control number 0938–1314 and described in the CY 2024 PFS final rule (88 FR 78818). We assume clinicians incur the same burden whether participating in MIPS as an individual or group. For this collection type, we assume one response (or submission) per respondent per year.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third party intermediary to derive data from their certified electronic health record technology (CEHRT) and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a QCDR or qualified registry to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry. We note that the CY 2024 PFS final rule eliminated the category of health IT vendors for the Quality Payment Program beginning in the CY 2025 performance period/2027 MIPS payment year (88 FR 79390 and 79391).

We estimated that it will take no more than 2 hours at $106.54/hr for a computer systems analyst or their equivalent to submit the data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimated it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimated 2 hours at $129.28/hr for a medical and health services manager, 1 hour at $291.64/hr for a physician, 1 hour at $106.54/hr for a computer systems analyst, 1 hour at $58.46/hr for an LPN, and 1 hour at $45.32/hr for a billing clerk. Overall, we estimated a cost of $973.60/response (see Table 101). For the CY 2025 performance period/2027 MIPS payment year, in aggregate, we estimate a burden of 217,432 hours (8 hr × 27,179 responses) at a cost of $26,461,474 (27,179 responses × $973.60/response). These estimates combine burden changes due to policies finalized in this rule and updated data.

BILLING CODE 4120–01–P

TABLE 101: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	Burden Estimate
# of Clinicians Submitting as Individuals (a)	21,240
# of Groups Submitting via EHR on Behalf of Individual Clinicians (b)	5,939
Total # of Respondents (c)=(a)+(b) (Equal to Number of Responses)	**27,179**
# of Hours Per Respondent to Submit MIPS Quality Data File (d)	2
# of Hours Per Medical and Health Services Manager to Review Measure Specifications (e)	2
# of Hours Per Computer Systems Analyst to Review Measure Specifications (f)	1
# of Hours Per LPN to Review Measure Specifications (g)	1
# of Hours Per Billing Clerk to Review Measure Specifications (h)	1
# of Hours Per Physician to Review Measure Specifications (i)	1
Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i)	8
Total Annual Hours (k) = (c) × (j)	**217,432**
Cost Per Respondent to Submit Quality Data (at Computer Systems Analyst's Labor Rate of $106.54/hr) (l) = $106.54/hr × (d)	$213.08
Cost to Review Measure Specifications (at Medical and Health Services Manager's Labor Rate of $129.28/hr) (m) = $129.28/hr × (e)	$258.56
Cost to Review Measure Specifications (at Computer System's Analyst's Labor Rate of $106.54/hr) (n) = $106.54/hr × (f)	$106.54
Cost to Review Measure Specifications (at LPN's Labor Rate of $58.46/hr) (o) = $58.46/hr × (g)	$58.46
Cost to Review Measure Specifications (at Clerk's Labor Rate of $45.32/hr) (p) = $45.32/hr) × (h)	$45.32
Cost to Review Measure Specifications (at Physician's Labor Rate of $291.64/hr) (q) = $291.64/hr × (i)	$291.64
Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	$973.60
Total Annual Cost (s) = (c) × (r)	**$26,461,474**

BILLING CODE 4120–01–C

In Table 102, we illustrate the net change in burden for submissions in the quality performance category using the eCQM collection type from the currently approved burden in the CY 2024 PFS final rule (88 FR 79441 and 79442). In aggregate, using our currently approved time per response burden estimate, the decrease of 1,535 respondents from 28,714 to 27,179 for the CY 2025 performance period/2027 MIPS payment year results in a decrease of 12,280 hours (1,535 responses × 8 hr/response) at a cost of −$1,494,476 (−1,535 responses × $973.60/response). The total time and cost estimate includes the burden associated with this rule's finalized policies provisions and availability of more up-to-date data and assumptions. In Table 128 and section VII.E.18.e.(1) of this final rule, we identify the changes in burden to this ICR due to policy provisions.

TABLE 102: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	229,712
Total Annual Hours for Respondents in CY 2025 PFS Final Rule (b) (see Table 101, row (k))	217,432
Difference in Annual Hours (c) = (b) − (a)	**-12,280**
Total Currently Approved Annual Cost (d)	$27,955,950
Total Annual Cost for Respondents in CY 2025 PFS Final Rule (e) (see Table 101, row (s))	$26,461,474
Difference in Annual Cost (f) = (e) − (d)	**-$1,494,476**
Total Currently Annual Approved Responses (g)	28,714
Total Annual Responses in CY 2025 PFS Final Rule (h) (see Table 101, row (c))	27,179
Difference in Annual Responses (i) = (h) − (g)	**-1,535**

We did not receive any comments on our burden estimates for the eCQM collection type. We are finalizing our burden estimates as proposed.

(5) ICRs Regarding Burden for MVP Reporting

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). We are finalizing our overall burden estimates as proposed; however, we have provided additional detail on the impact of policy provisions and updated data and adjustments on our burden changes.

(a) Burden for MVP Reporting Requirements

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022, CY 2023, and CY 2024 PFS final rules for our previously finalized burden assumptions and requirements for submission data for the MVP performance category, and for the estimated number of clinicians participating as subgroups in the CY 2024 performance period/2026 MIPS payment year (86 FR 65590 through 65592, 87 FR 70155, and 88 FR 79443).

Advanced Primary Care Management (APCM) payment finalized in section II.G.2.b. of this final rule incorporates several specific, existing care management and communication technology-based services into a bundle and includes performance measurement requirements that, for MIPS eligible clinicians, could be met by reporting the Value in Primary Care MVP beginning in the CY 2025 performance period/2027 MIPS payment year. Billing practitioners who are not MIPS eligible clinicians (as defined at § 414.1305) will not have to report the MVP in order to furnish and bill for APCM services. Billing practitioners who are not MIPS eligible clinicians (as defined at § 414.1305) will not have to report the MVP in order to furnish and bill for APCM services. We estimate MVP reporting as a percentage of previous traditional MIPS quality submissions, as outlined in section V.B.6.c.(5).(a) of this final rule. In line with this approach, we are unable to determine how many additional clinicians or practices will report the Value in Primary Care MVP above our current MVP submission estimates due to the finalized APCM requirements. Similarly, we cannot assess what participation levels clinicians or practices who may use these APCM codes have reported MIPS in the past (for example, eligibility requirements and special statuses, participation at the individual, group, virtual group, or APM Entity level, or reporting via traditional MIPS, the APP, or MVPs), or if they will be MIPS eligible clinicians in future years. We refer readers to section II.G.2.b. of this final rule for details on this policy, and section VII.E.18.e.(2)(f) for additional discussion on burden impacts to the Quality Payment Program.

In the CY 2024 PFS final rule (88 FR 79442), we calculated the average quality measure submission rate for each newly finalized MVP for the CY 2024 performance period/2026 MIPS payment year. For this analysis, we assessed measures submissions in the CY 2021 performance period/2023 MIPS payment year for clinicians with relevant clinical specialties for each proposed MVP. The total of these average quality measure submissions for each MVP was equivalent to about 2 percent of total quality measure submissions in the CY 2021 performance period/2023 MIPS payment year. We added this incremental increase of 2 percentage points to the previously approved estimate in the CY 2023 PFS final rule that 12 percent of clinicians who participated in MIPS for the CY 2021 performance period/2023 MIPS payment year will submit data for the quality performance category through MVP reporting in the CY 2023 performance period/2025 MIPS payment year (88 FR 79443).

In the CY 2025 PFS proposed rule (89 FR 62134 and 62135), we conducted the analysis identified in the preceding paragraph for the 16 MVPs approved for the CY 2024 performance period/2026 MIPS payment year (88 FR 79978 through 80047) using updated submission data available for the CY 2022 performance period/2024 MIPs payment year. The total of these average quality measure submissions for each approved MVP was equivalent to 6 percent of the total quality measure submissions in the CY 2022 performance period/2024 MIPS payment year. This is a decrease from the 14 percent estimate provided in the CY 2024 PFS final rule (88 FR 79443).

As detailed in section IV.A.4.a(3) of this final rule, we are finalizing modifications to 16 MVPs approved for the CY 2024 performance period/2026 MIPS payment year reporting with the addition and removal of measures and improvement activities based on the MVP development criteria (85 FR 84849 through 84854). We are also finalizing our proposals to consolidate the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP and Supportive Care

for Neurodegenerative Conditions MVP into a consolidated neurological MVP titled Quality Care for Patients with Neurological Conditions, and to add six new MVPs to the MVP inventory.

For each new MVP finalized in this rule, we similarly calculated the average quality measure submission rate across the measures available in each MVP for the CY 2022 performance period/2024 MIPS payment year (89 FR 62134 and 62135). The total of these average quality measure submissions for each MVP was equivalent to about 4 percent of total quality measure submissions. We assumed the consolidation of the measures in the Optimal Care for Patients with Episodic Neurological Conditions MVP and Supportive Care for Neurodegenerative Conditions MVP into the Quality Care for Patients with Neurological Conditions MVP will not affect the number of MVP submissions. We assumed clinicians who may have submitted the Optimal Care for Patients with Episodic Neurological Conditions MVP or the Supportive Care for Neurodegenerative Conditions MVP will instead submit the Quality Care for Patients with Neurological Conditions MVP. Therefore, we estimated the changes to the MVP inventory in this final rule will result in an additional 4 percent of MIPS clinicians moving from traditional MIPS to MVP reporting.

We estimated that a total of 10 percent of the clinicians will participate in MVP reporting in the CY 2025 performance period/2027 MIPS payment year. This estimate takes together the aforementioned analyses where we assessed the MVP participation rate for the 16 established MVPs at 6 percent using updated quality measure submission data from the CY 2022 performance period/2024 MIPS payment year, and where we assessed that 4 percent of MIPS clinicians may move to the 6 proposed MVPs due to quality measure submission trends for the CY 2022 performance period/2024 MIPS payment year. This is a decrease of 4 percentage points from the currently approved estimate of 14 percent in the CY 2024 PFS final rule (88 FR 79443) and currently approved under control number 0938–1314 (CMS–10621).

Continuing our approach from the CY 2022, CY 2023, and CY 2024 PFS final rules (86 FR 65589 and 65590, 87 FR 70155 and 701566, and 88 FR 79443 and 79444, respectively), we assume that the number of MVP registrations will equal our estimated MVP quality submissions.

(i) Burden for MVP Registration: Individuals, Groups, and Subgroups

In the CY 2022 PFS final rule (86 FR 65417), we finalized at § 414.1365(b)(2)(i) that MVP Participants are required to select one population health measure at the time of MVP registration. Since the MVP population health measures are administrative claims-based, they do not require data submission from clinicians and do not contribute to reporting burden. In section IV.A.4.b.(1) of this final rule, we are finalizing our proposal to update the registration process and scoring policies for population health measures. These changes include revising § 414.1365(d)(3)(i)(A) to state that we would use the highest score of all available population health measures beginning in the CY 2025 performance period/2027 MIPS payment year. We refer readers to section IV.A.4.b.(1) of this rulemaking for details on this policy and scoring implications. This policy will remove the requirement for MVP Participants to select a population health measure during MVP registration, which is currently completed via a drop-down selection. We assume the associated reduction in burden per application will be minimal. Therefore, we did not adjust the burden per MVP registration from the currently approved registration time of 15 minutes (0.25 hr) under CMS–10621 (OMB 0938–1314) (88 FR 79443 and 79444).

In the CY 2025 PFS proposed rule (89 FR 62134 through 62136), we estimated that approximately 10 percent of the clinicians that currently participate in MIPS will submit data for the measures and activities in an MVP. For the CY 2025 performance period/2027 MIPS payment year, we assumed that the total number of individual clinicians, groups, and subgroups that will complete the MVP registration process is 6,285 (4,921 individuals (Table 94, sum of row b), 1,344 groups (Table 95, sum of row b), and 20 subgroups (as currently approved under control number 0938–1314)). We estimate that the six new MVPs finalized in this rule will result in an increase of 2,506 MVP registrants (1,969 individuals (Table 94, sum of row (d) and 537 groups (Table 95, sum of row (d)). We estimate that updated data and assumptions will result in a decrease of 5,806 respondents. Taken together, this is a decrease of 3,300 respondents from the currently approved estimate of 9,585 under control number 0938–1314 and described in the CY 2024 PFS final rule (88 FR 79443 and 79444). In Table 103, we estimate that it will take 1,571 hours (6,285 responses × 0.25 hr/response) at a cost of $167,432 (6,285 registrations × $26.64/registration) for individual clinicians, groups, and subgroups to register for MVP reporting in the CY 2025 performance period/2027 MIPS payment year. For this collection type, we assume one response (or submission) per respondent per year. There are no changes to the estimated submission burden per response due to the policies finalized in section IV.A.4. of this final rule.

TABLE 103: Estimated Burden for MVP Registration (Individuals, Groups, and Subgroups)

Burden and Respondent Descriptions	Burden Estimate
Estimated # of Individual Clinicians, Groups, Subgroups and APM Entities Registering (a) (Equal to Number of Responses)	6,285
Estimated Time Per Registration (hr) (b)	0.25
Estimated Total Annual Time for MVP Registration (c) = (a) × (b)	**1,571**
Computer Systems Analyst's Labor Rate (d)	$106.54/hr
Estimated Cost Per Registration (e) = (d) × (b)	$26.64
Estimated Total Annual Cost for MVP Registration (f) = (a) × (e)	**$167,432**

In Table 104, we illustrate the net change in estimated burden for MVP registration using the currently approved burden. The change in responses will result in a decrease of 825 hours (−3,300 responses × 0.25 hr/

response) at a cost of −$87,912 (−3,300 responses × $26.64/response). The total time and cost estimate includes the burden associated with this rule's finalized policies provisions and availability of more up-to-date data and assumptions. In Table 128 and section VII.E.18.e.(1) of this final rule, we identify the changes in burden to this ICR due to policy provisions.

TABLE 104: Change in Estimated Burden for MVP Registration (Individuals, Groups, Subgroups, and APM Entities)

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	2,396
Total Annual Hours for Respondents in CY 2025 PFS Final Rule (b) (See Table 103, row (c))	1,571
Difference in Annual Hours (c) = (b) – (a)	**-825**
Total Currently Approved Annual Cost (d)	$255,344
Total Annual Cost for Respondents in CY 2025 PFS Final Rule (e) (See Table 103, row (e))	$167,432
Difference in Annual Cost (f) = (e) − (d)	**-$87,912**
Total Currently Approved Annual Responses (g)	9,585
Total Annual Responses in CY 2025 PFS Final Rule (h) (See Table 103, row (a))	6,285
Difference in Annual Responses (i) = (h) – (g)	**-3,300**

We did not receive any comments on our proposed requirements and burden estimates for the estimated burden on the requirements for MVP registration. We are finalizing our burden estimates as proposed.

(ii) Burden for Subgroup Registration

We did not propose any revised burden for subgroup registration for the CY 2025 performance period/2027 MIPS payment year. As identified in section V.B.6.a.(2)(b) of this final rule, we note that the subgroup policies do not impact the currently approved burden for subgroup registration. As discussed later in this section, we discuss the policies and our reasons for not changing the currently approved burden for subgroup registration. The burden relevant to the subgroup registration requirement is currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes pertaining to subgroup registration under that control number.

As outlined in section IV.A.4.b.(1) of this final rule, we are finalizing our proposal to remove the selection of a population health measure at the time of registration. As detailed in section V.B.6.c.(5).(a) of this final rule, we believe this modification will not significantly impact the currently approved burden for MVP registration. We continued this assumption to subgroup registration. We did not propose any adjustments to our previously finalized estimate in the CY 2022 PFS final rule (86 FR 65590) that 20 subgroups will participate in MVP reporting per year.

We previously finalized a mandatory subgroup reporting requirement for multispecialty groups choosing to report as an MVP Participant beginning in the CY 2026 performance period/2028 MIPS payment year (§ 414.1305; 86 FR 65394 through 65397). In CY 2025 PFS proposed rule, we sought feedback back via Request for Information (RFI on what guidance/parameters are needed for multispecialty groups to place clinicians into subgroups for reporting an MVP relevant to the scope of care provided. Absent available submission data on MVP reporting with the available CY 2022 performance period/2024 MIPS payment year data, we were unable to estimate the effect of this established policy on reporting for the CY 2026 performance period/2028 MIPS payment year at this time. Data for MVP and subgroup submissions will be available in the CY 2023 performance period/2025 MIPS payment year data that will be available for the CY 2026 rulemaking cycle. We refer readers to section VII.E.18.e.(2)(g) of this final rule for additional discussion on burden impacts of this established policy to the Quality Payment Program.

(iii) Burden for MVP Quality Performance Category Submission

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i).

In sections IV.A.4.d.(2)(b) and IV.A.4.d.(3)(b) of this final rule, we are finalizing our proposals to adopt minimum criteria for a qualifying data submission for a MIPS performance period for the quality performance category and to codify our existing policies governing our treatment of multiple submissions received for the quality performance category. In accordance with our discussion of this policy relevant to traditional MIPS quality reporting in section V.B.6.c.(1) of this final rule, these policies will not introduce new requirements to submit data for the quality performance category of MVPs. Therefore, we will continue our currently approved per response time estimates for submitting the MVP quality performance category data per collection type.

In the CY 2025 PFS proposed rule (89 FR 62136 through 62139), we estimated that 10 percent of the clinicians who submitted MIPS quality performance data in the CY 2022 performance period/2024 MIPS payment year will submit data for the quality performance category through an MVP in the CY 2025 performance period/2027 MIPS payment year. We also estimated there will be 20 subgroup reporters in the CY 2025 performance period/2027 MIPS payment year, split across the eCQM and CQM collection types. In the following paragraphs, we detail the estimated changes from our currently approved estimates. For each collection type, we assume one response (or submission) per respondent per year. We are finalizing our overall burden

estimates as proposed; however, we have provided additional detail on the impact of policy provisions and updated data and adjustments on our burden changes.

We estimated 3,030 respondents for the eCQM collection type (see Table 105, line c). From our currently approved estimate of 4,684 respondents, we estimate that the six new MVPs finalized in this rule will result in approximately 1,208 respondents moving from traditional MIPS to MVPs (944 for individuals + 264 for groups; see Tables 94 and 95, row (d)). We also estimate that updated data and assumptions discussed in sections V.B.6.c.(1) and V.B.6.c.(5).(a). of this final rule will result in a decrease of 2,862 respondents. Taken together, we estimate a net decrease of 1,654 respondents.

We estimated 1,900 respondents for the MIPS CQM and QCDR collection types (see Table 105, line c). From our currently approved estimate of 2,717 respondents, we estimate that the six new MVPs finalized in this rule will result in approximately 756 respondents moving from traditional MIPS to MVPs (483 for individuals + 273 for groups; see Tables 94 and 95, row (d)). We also estimate that updated data and assumptions discussed in sections V.B.6.c.(1) and V.B.6.c.(5).(a). of this final rule will result in a decrease of 1,573 respondents. Taken together, we estimate a net decrease of 817 respondents.

We estimated 1,355 respondents for the Medicare Part B collection type (see Table 105, line c). From our currently approved estimate of 2,184 respondents, we estimate that the six new MVPs finalized in this rule will result in approximately 542 individual respondents moving from traditional MIPS to MVPs (see Table 94, row (d)). We also estimate that updated data and assumptions discussed in sections V.B.6.c.(1) and V.B.6.c.(5).(a). of this final rule will result in a decrease of 1,371 respondents. Taken together, we estimate a net decrease of 829 respondents.

For the CY 2025 performance period/2027 MIPS payment year, using our currently approved per response time estimates for the clinicians and subgroups submitting data for the MVP quality performance category, we estimated a burden of 16,059 hours [5.3 hr × 3,030 (3,020 +10) responses] at a cost of $1,954,138 (3,030 responses × $644.93/response) for the eCQM collection type, 11,343 hours [5.97 hr × 1,900 (1,890 +10 responses)] at a cost of $1,360,989 (1,900 responses × $716.31/response) for the MIPS CQM and QCDR collection type, and 12,791 hours (9.44 hr × 1,355 responses) at a cost of $1,492,180 (1,355 responses × $1,101.24/response) for the Medicare Part B claims collection type.

TABLE 105: Estimated Burden for MVP Quality Performance Category Submission

Burden and Respondent Descriptions	eCQM Collection Type	MIPS CQM and QCDR Collection Type	Medicare Part B Claims Collection Type
# of Submissions from Pre-existing collection types (a)	3,020	1,890	1,355
# of Subgroup Reporters (b)	10	10	0
Total MVP Participants (c) = (a) + (b) (Equal to Number of Responses)	**3,030**	**1,900**	**1,355**
Hours Per Computer Systems Analyst to Submit Quality Data (d)	1.33	2	4.8
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	1.33	1.33	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	0.66	0.66	0.66
# of Hours LPN Review Measure Specifications (g)	0.66	0.66	0.66
# of Hours Billing Clerk Review Measure Specifications (h)	0.66	0.66	0.66
# of Hours Physician Review Measure Specifications (i)	0.66	0.66	0.66
Annual Hours per Clinician Submitting Data for MVPs (j) = (d) + (e) + (f) + (g) + (h) + (i)	5.3	5.97	9.44
Total Annual Hours (k) = (c) × (j)	**16,059**	**11,343**	**12,791**
Cost to Submit Quality Data (at Computer Systems Analyst's Labor Rate of $106.54/hr) (l) = $106.54/hr × (d) varying times	$141.70	$213.08	$511.39
Cost to Review Measure Specifications (at Medical and Health Services Manager's Labor Rate of $129.28/hr) (m) = $129.28/hr × (e) varying times	$171.94	$171.94	$258.56

Burden and Respondent Descriptions	eCQM Collection Type	MIPS CQM and QCDR Collection Type	Medicare Part B Claims Collection Type
Cost to Review Measure Specifications (at Computer Systems Analyst's Labor Rate of $106.54/hr) (n) = $106.54/hr × (f)	$70.32	$70.32	$70.32
Cost to Review Measure Specifications (at LPN's Labor Rate of $58.46/hr) (o) = $58.46/hr × (g)	$38.58	$38.58	$38.58
Cost to Review Measure Specifications (at Billing Clerk's Labor Rate of $45.32/hr) (p) = $45.32/hr × (h)	$29.91	$29.91	$29.91
Cost to Review Measure Specifications (at Physician's Labor Rate of $291.64/hr) (q) = $291.64/hr × (i)	$192.48	$192.48	$192.48
Total Annual Cost Per Submission (r) = (l) + (m) + (n) + (o) + (p) + (q)	$644.93	$716.31	$1,101.24
Total Cost (s) = (c) × (r)	**$1,954,138**	**$1,360,989**	**$1,492,180**

Table 106 illustrates the changes in estimated burden for clinicians who will submit the MVP quality performance category utilizing the eCQM, MIPS CQM and QCDR, and Medicare Part B claims collection types in the CY 2025 performance period/2027 MIPS payment year. We used the currently approved burden under control number 0938–1314 (CMS–10621), as described in the CY 2024 PFS final rule (88 FR 79444 through 79446) as the baseline to determine the net change in burden. In aggregate, when combined with our currently approved per response time estimate, the decrease in 3,300 respondents who will submit data for the MVP quality performance category will result in a change of -8,766 hours and -$1,066,714 for the eCQM collection type, -4,877 hours and -$585,225 for the CQM and QCDR collection type, and -7,826 hours and -$912,928 for the Medicare Part B claims collection type. The total time and cost estimate increase combines the burden associated with this rule's policy change along with the changes associated with having more up-to-date data and assumptions. In Table 128 (section VII.E.18.e.(1) of this final rule), we identify the changes in burden to this ICR due to policy provisions.

TABLE 106: Change in Estimated Burden for MVP Quality Performance Category Submission

Burden and Respondent Descriptions	eCQM Collection Type	MIPS CQM and QCDR Collection Type	Medicare Part B Claims Collection Type
Total Currently Approved Annual Hours (a)	24,825	16,220	20,617
Total Annual Hours for Respondents in CY 2025 PFS Final Rule (b) (See Table 105, row (k))	16,059	11,343	12,791
Difference in Annual Hours (c) = (b) − (a)	**-8,766**	**-4,877**	**-7,826**
Total Currently Approved Annual Cost (d)	$3,020,852	$1,946,214	$2,405,108
Total Annual Cost for Respondents in CY 2025 PFS Final Rule (e) (See Table 105, row (s))	$1,954,138	$1,360,989	$1,492,180
Difference in Annual Cost (f) = (e) − (d)	**-$1,066,714**	**-$585,225**	**-$912,928**
Total Currently Approved Annual Responses (g)	4,684	2,717	2,184
Total Annual Responses in CY 2025 PFS Final Rule (h) (See Table 105, row (c))	3,030	1,900	1,355
Difference in Annual Responses (i) = (h) – (g)	**-1,654**	**-817**	**-829**

d. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

We refer readers to CY 2025 PFS proposed rule (89 FR 62140) for requirements for details and assumptions on the methods by which MIPS eligible clinicians, groups, subgroups, and APM Entities can submit Promoting Interoperability performance category data.

(2) Reweighting Applications for MIPS Performance Categories

In the CY 2025 PFS proposed rule (89 FR 62140 through 62142), we proposed to update our currently approved burden estimates due to updated reweighting application data for the CY 2024 performance period/2024 MIPS payment year. We proposed to revise the number of responses due to this update data. These adjustments will be submitted to OMB for approval under control number 0938–1314 (CMS–10621) via the standard non-rule PRA process. We are not setting out such burden in this collection of information section since the change is unrelated to policies finalized in this final rule. In the following paragraphs, we outline these policies and our rationale for not changing the currently approved burden for reweighting applications due to these policies.

As detailed in section IV.A.4.i.(2) of this final rule, we are finalizing our proposal to adopt a new reweighting performance category(ies) policy at § 414.1380(c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*) for occurrences where we determine that a third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. We believe these occurrences will be rare based on our experience with related requests for reweighting, and the extent and source of documentation provided to us for each event may vary considerably. Therefore, we did not propose any changes to our currently approved burden estimates. We refer readers to section VII.E.18.e.(2)(e) of this final rule for additional discussion on these burden assumptions.

We did not receive any comments on our assumptions for reweighting applications for MIPS Performance Categories. We are finalizing our changes as proposed.

(3) Submitting Promoting Interoperability Data

We did not propose to update our currently approved burden for submitting Promoting Interoperability data as a result of policies finalized in section IV.A.(4) of this final rule. In the following paragraphs, we outline these policies and our rationale for not changing the currently approved burden for submitting Promoting Interoperability data due to these policies. Independent of policies finalized in this final rule, we proposed to update our currently approved burden estimates due to the availability of updated submission data for the CY 2022 performance period/2024 MIPS payment year, which reflect updated estimates for the number of respondents. These adjustments, detailed in the CY 2025 proposed rule (89 FR 62142 through 62145), will be submitted to OMB for approval under control number 0938–1314 (CMS–10621) via the standard non-rule PRA process. We are not setting out such burden in this collection of information section since the change is unrelated to the provisions that are being finalized in this rule.

We refer readers to § 414.1375 for our previously established policies regarding reporting for the Promoting Interoperability performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1325 for data submission requirements, and § 414.1380(b)(4) for Promoting Interoperability performance category scoring. We refer readers to § 414.1380(c)(2)(i)(C) for our previously finalized policies regarding scoring of data submission in the Promoting Interoperability performance category after an approved reweighting for the performance category.

In section IV.A.4.d.(2)(d) of this final rule, we are finalizing our proposal to adopt minimum criteria for a qualifying data submission for the Promoting Interoperability performance category at § 414.1325(a)(1)(iii). This policy will clarify what counts as a data submission for MIPS eligible clinicians and it would potentially avoid partial data submissions from overriding an approved reweighting or a previously scored submission for the Promoting Interoperability performance category. As described in section IV.A.4.d.(2)(d), we did not revise existing scoring or reweighting policies described under § 414.1380; therefore, we did not adjust our currently approved per response time estimate.

In section IV.A.4.d.(3)(c) of this final rule, we are finalizing our proposal to modify our policy governing our treatment of multiple data submissions received for the Promoting Interoperability performance category. Specifically, we are finalizing our proposal that, in cases where we receive multiple submissions for the Promoting Interoperability performance category, we will calculate a score for each data submission received and assign the highest of the scores. In our analysis of the information collection and reporting burden, we did not adjust our estimated number of respondents submitting Promoting Interoperability data. These policies intend to reduce certain issues with the scoring of unintended data submissions affecting MIPS payment adjustments for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. Our currently approved per response estimate incorporates our historical approach to estimate the required measures and attestations and other required data elements identified in sections IV.A.4.d.(2)(d) and IV.A.4.d.(3)(c) of this final rule.

In the CY 2022 PFS final rule (86 FR 65413 and 65414), we finalized the Promoting Interoperability performance category's reporting requirements for a subgroup participating in MVP reporting at § 414.1365(c)(4)(i)(A). In section IV.A.4.b.(4) of this final rule, we are finalizing our proposal to modify § 414.1365(c)(4)(i)(A) to allow a subgroup to submit the affiliated group's data for the MVP Promoting Interoperability performance category for the CY 2025 performance period/2027 MIPS payment year and beyond. As this policy will not create new reporting requirements, there are no burden implications.

The Department of Health and Human Services (HHS) final rule, 21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking (hereafter referred to as the Disincentives final rule) was released on June 24, 2024 (89 FR 54662). Section IV.A.4.e.(4)(d) of this final rule summarizes several policies in the Disincentives final rule under which a MIPS eligible clinician that the Office of Inspector General determines has committed information blocking will not be a meaningful EHR user, and therefore will be unable to earn a score (instead earning a score of zero) for the Promoting Interoperability performance category. The Disincentives final rule described in section IV.A.4.e.(4)(d) of this final rule will not create any additional reporting, recordkeeping, or third party disclosure requirements (89 FR 54715) or burden. Consequently, we did not propose any burden updates for the Quality Payment Program.

In the CY 2025 PFS proposed rule (89 FR 8757 and 8758), we noted the CMS Interoperability and Prior Authorization

final rule (89 FR 8758). In the CMS Interoperability and Prior Authorization final rule, we finalized the addition of the ''Electronic Prior Authorization'' measure, under the Health Information Exchange (HIE) objective for the MIPS Promoting Interoperability performance category beginning with the CY 2027 performance period/2029 MIPS payment year (89 FR 8909 through 8927). The burden estimate for MIPS clinicians to report the ''Electronic Prior Authorization measure'' was provided in the CMS Interoperability and Prior Authorization final rule (89 FR 8953 through 8956). In the CMS Interoperability and Prior Authorization final rule, we identified that this measure will be included in a PRA package related to the CMS Interoperability and Prior Authorization final rule (89 FR 8946). Consequently, we did not propose any burden updates in the CY 2025 PFS proposed rule.

We did not receive any comments on our proposed assumptions for the submission of Promoting Interoperability data. We are finalizing our provisions as proposed.

e. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

We did not propose to update our currently approved burden for improvement activities submissions as a result of policy provisions finalized in section IV.A.4.e.(3) of this final rule. In the following paragraphs, we outline these policies and our rationale for not changing our currently approved burden due to these policies. Separate from policy provisions finalized in this rule, we proposed to update our currently approved burden estimates due to the availability of updated submission data for the CY 2022 performance period/2024 MIPS payment year, which reflect updated estimates for the number of respondents. These adjustments, detailed in the CY 2025 PFS proposed rule (89 FR 62145 through 62147), will be submitted to OMB for approval under control number 0938–1314 (CMS–10621) via the standard non-rule PRA process. We are not setting out such burden in this collection of information section since the change is unrelated to the provisions that are being finalized in this rule.

As detailed in section IV.A.4.e.(3)(b)(iv) of this final rule, we are finalizing as proposed two scoring and reporting policy changes for the improvement activities performance category beginning in the CY 2025 performance period/2027 MIPS payment year. First, we are finalizing our proposal to eliminate the weighting of improvement activities established in the CY 2017 Quality Payment Program final rule (81 FR 28210) and codified at § 414.1380(b)(3) (81 FR 77177 and 77178). Second, we are finalizing our proposal to further simplify improvement activity reporting requirements by reducing the number of activities to which clinicians are required to attest in order to achieve a score for the improvement activities performance category. We are finalizing our proposal that MIPS eligible clinicians who participate in traditional MIPS will be required to report two activities and MVP Participants will be required to report one activity to achieve 40 points, or full credit. In addition, we are finalizing our proposal that MIPS eligible clinicians who are categorized as small practice, rural, in a provider-shortage area, or non-patient facing will be required to report one activity (for either traditional MIPS or MVPs). We refer readers to section IV.A.4.e.(3)(b)(iv) of this final rule for details on these policies.

In the CY 2019 PFS final rule (83 FR 60016), we established our currently approved estimate that it takes five minutes for a computer analyst to log in and manually attest that improvement activities were completed. We believe the removal of weighting for improvement activities will decrease burden for MIPS eligible clinicians who previously reported medium-weighted activities. As MIPS eligible clinicians who previously only reported high-weighted activities will have the same attestation burden under this proposal, we did not propose a change to our currently estimated per response burden. We refer readers to section VII.E.18.e.(2)(c) of this final rule where we outline our burden impact analysis for this policy.

In section IV.A.4.e.(3)(b)(iii) of this final rule, we are finalizing our proposed changes to the improvement activities inventory for the CY 2025 performance period/2027 MIPS payment year and future years: adding two new improvement activities; modifying one existing improvement activity; and removing four previously adopted improvement activities. We are also finalizing, with modification, our proposed changes to the improvement activities inventory for the CY 2026 performance period/2028 MIPS payment year: removing four improvement activities; and modifying one improvement activity. In the CY 2023 PFS final rule (87 FR 70211) and the 2024 PFS final rule (88 FR 79519), we anticipated that most clinicians performing improvement activities, to comply with existing MIPS policies, will continue to perform the same activities because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). We believe these changes will not significantly affect burden because the majority of activities are not revised. We refer readers to section VII.E.18.e.(2)(b) of this final rule where we outline our burden impact analysis.

In section IV.A.4.d.(2)(c) of this final rule, we are finalizing our proposal to adopt minimum criteria for a qualifying data submission for a performance period for the improvement activities performance category. We are finalizing our proposal to specify that a data submission for the improvement activities performance category must include a response of ''yes'' for at least one activity in the MIPS improvement activities inventory. Additionally, we are finalizing our proposal to codify existing policies governing multiple data submissions received for the improvement activities performance category at § 414.1325(f)(1) in section IV.A.4.d.(3)(b). We assume these policies will not affect the number of improvement activities submissions, as the intent is to eliminate certain issues with the scoring of an unintended data submission affecting payment adjustments for individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. Therefore, we did not propose any updates to our currently approved estimated burden due to these policies.

We did not receive any comments on our proposed requirements and assumptions for the submission of improvement activities. We are finalizing our burden estimates due to updated data as proposed.

f. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the following finalized policies in section IV.A.4.e.(2) of this final rule will not result in the need to add or revise or delete any claims data fields: (1) add six new episode-based measures; (2) modify two existing episode-based measures; (3) update the operational list of care episode and patient condition groups and codes to

reflect new and modified measures; (4) and adopt criteria to specify objective bases for the removal of any cost measures from the MIPS cost performance category. Consequently, we did not propose any changes under the aforementioned control number.

C. Summary of Annual Burden Estimates

Table 107 sets out the burden for this rulemaking's finalized provisions that are subject to the PRA. It does not score burden adjustments that are strictly based on updated data and are unrelated to any of the provisions.

TABLE 107: Annual Requirements and Burden Estimates

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.1325, 414.1335, 414.1365 Quality Payment Program	0938-1314 (CMS-10621)	41,195 Clinicians 10,765 Group TINs 20 Subgroups 6 Virtual Groups Total: 51,986	68,954	Varies	586,877	Varies	70,166,672
§§ 427.402(c)(4) and (5), 428.302(c)(4) and (5), and 428.303(c)(4) and (5) (Regarding Rebate Reduction Requests Submitted Under Sections 11101 and 11102 of the Inflation Reduction Act)	0938-1474 (CMS-10858)	20	20	31	620	Varies	74,756
TOTAL		**57,267**	**(35,337)**	**Varies**	**(77,746)**	**Varies**	**(8,926,078)**

VI. Regulatory Impact Analysis

A. Statement of Need

In this final rule, we finalized payment and policy changes under the Medicare PFS and changes to implement amendments made under the section 502 of the Further Continuing Appropriations and Other Extensions Act, 2024 (Pub. L. 118–22) (FCAOEA, 2024). Our policies in this rulemaking specifically address: changes to the PFS; and other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; updates and refinements to Medicare Shared Savings Program (Shared Savings Program) requirements; updates to the Quality Payment Program (MIPS and Advanced APMs); changes to payment policies for drugs and biologicals products paid under Medicare Part B, changes to the Clinical Laboratory Fee Schedule requirements, other changes to Medicare Part B payment policies for Rural Health Clinics and Federally Qualified Health Centers, the Medicare coverage of opioid use disorder services furnished by opioid treatment programs and coverage and payment for certain preventive services; updates to electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA–PD plan (section 2003 of the SUPPORT Act); and changes to the regulations associated with the Ambulance Fee Schedule. The policies reflect CMS' stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

1. Statutory Provisions

a. Clinical Laboratory Fee Schedule (CLFS)—Revisions Consistent With Recent Statutory Changes

As discussed in section III.D. of this final rule, we proposed conforming regulations text changes for CLFS data reporting requirements due to the enactment of section 502 of the Further Continuing Appropriations and Other Extensions Act, 2024 (Pub. L. 118–22) (FCAOEA, 2024). For clinical diagnostic laboratory tests (CDLTs) that are not advanced diagnostic laboratory tests (ADLTs), section 502(b) of the FCAOEA, 2024 delayed the next data reporting period by one year. Instead of taking place from January 1, 2024, through March 31, 2024, the FCAOEA, 2024 stated that data reporting would take place from January 1, 2025, through March 31, 2025, based on the original data collection period of January 1, 2019, through June 30, 2019. Additionally, section 502(a) of the FCAOEA, 2024 amended the statutory provisions for the phase-in of payment reductions resulting from private payor rate implementation to specify that the applicable percent for CY 2024 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2024 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2023. Section 502(a) of the FCAOEA, 2024 further amended the statutory phase-in provisions to provide that for CYs 2025 through 2027, the payment amount for a CDLT may not be reduced by more than 15 percent as compared to the payment amount for that test established in the preceding year. After the publication of the CY 2025 PFS proposed rule and the close of the comment period, however, the data reporting period and phase in reductions were further delayed. On September 26, 2024, section 221 of the Continuing Appropriations and Extensions Act, 2025 (Pub. L. 118–83) was passed and delayed data reporting requirements for CDLTs that are not ADLTs, as well as the phase-in of payment reductions under the CLFS from private payor rate implementation under section 1834A of the Act. Specifically, as amended by section

221(b), section 1834A(1)(B) of the Act now provides that, in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that: (i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2025; (ii) reporting is required during the period beginning January 1, 2026, and ending March 31, 2026; and (iii) reporting is required every 3 years after the period described in subparagraph (ii). Essentially, data reporting will now be required during the period of January 1, 2026, through March 31, 2026, instead of January 1, 2025, through March 31, 2025. The 3-year data reporting cycle for CDLTs that are not ADLTs will resume after that data reporting period.

Section 221 of the Continuing Appropriations and Extensions Act, 2025 does not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, the next data reporting period for CDLTs that are not ADLTs (January 1, 2026, through March 31, 2026) will continue to be based on the data collection period of January 1, 2019, through June 30, 2019.

Section 221(a) of the Continuing Appropriations and Extensions Act, 2025 further amends provisions in section 1834A(b)(3) of the Act pertaining to the phase-in of payment reductions under the CLFS. First, it extends the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2028. It further amends section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2025 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2025 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2024. Finally, section 221(a) further amends section 1834A(b)(3)(B)(iii) of the Act to specify that the applicable percent of 15 percent will apply for CYs 2026 through 2028.

b. Medicare Prescription Drug Inflation Rebate Program

Section III.I. of this rule finalizes regulations to implement provisions of the Inflation Reduction Act (IRA) that establish the Medicare Prescription Drug Inflation Rebate Program. Section 11101 of the IRA adds new section 1847A(i) to the Act, which establishes a requirement for manufacturers to pay Medicare Part B rebates for certain single source drugs and biological products with prices that increase faster than the rate of inflation, beginning on January 1, 2023. Section 11102 of the IRA adds new section 1860D–14B to the Act, which established a requirement for manufacturers to pay Medicare Part D rebates for certain Part D drugs and biological products with prices that increase faster than the rate of inflation, beginning on October 1, 2022.

c. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan

In section III.L. of this rulemaking, we finalized two changes to the electronic prescribing for controlled substances (EPCS) requirement specified in § 423.160(a)(5) (referred to as the CMS EPCS Program). In section III.L. of this final rule, we finalized revisions to § 423.160(a)(5) to specify that prescriptions written for a beneficiary in a long-term care (LTC) facility will not be included in determining CMS EPCS Program compliance until January 1, 2028, and that compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility will commence on or after January 1, 2028.

d. Quality Payment Program

This final rule is also necessary to make changes to the Quality Payment Program to move the program forward to focus more on measurement efforts, refine how clinicians would be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and highlight the value of participating in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. Currently, reporting for traditional MIPS is seen as siloed across the performance categories. These policy proposals are intended to promote better quality reporting to improve patient health outcomes by coordinating reporting for MIPS across performance categories and make changes to scoring that would provide a better picture of clinicians' performance.

2. Discretionary Provisions

a. Drugs and Biological Products Paid Under Medicare Part B

In section III.A.1. of this final rule, as part of our continued implementation of section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) (IIJA), which amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug (hereinafter, refundable drug), we are finalizing a clarification on how we will identify certain drugs that are excluded from the definition of refundable drug for those which payment has been made under Part B for fewer than 18 months; how we identify drugs from a single-dose container; and the requirement to use the JW modifier if a billing supplier is not administering a drug, but there are discarded amounts during the preparation process before supplying the drug to the patient. We also discuss an application received for increased applicable percentage.

In section III.A.2 of this final rule, we finalized how payment limits will be calculated when manufacturers report negative or zero ASP data to CMS. Generally, we finalized that negative and zero ASP data be considered ''not available'' under section 1847A(c)(5)(B) of the Act and that positive ASP data be considered available. In circumstances in which negative or zero ASP data is reported for some, but not all National Drug Codes (NDCs) associated with a billing and payment code for a drug, we are finalizing to calculate the payment limit using only NDCs with positive ASP data. In certain circumstances, we are finalizing to carryover the most recent positive ASP data for the drug to calculate a payment limit when the manufacturer's ASP is negative or zero. For biosimilars with negative or zero ASP data for all NDCs, we are finalizing to use positive ASP data from the most recent available positive manufacturer's ASP data from a previous quarter.

In section III.A.3. of this final rule, we finalized a clarification to how Medicare Administrative Contractors (MACs) pay for radiopharmaceuticals that are furnished in the physician's office. We are finalizing to codify in regulations at § 414.904(e)(6) that, for radiopharmaceuticals furnished in a setting other than the hospital outpatient department, MACs shall determine payment limits for radiopharmaceuticals based on any methodology used to determine payment limits for radiopharmaceuticals in place on or

prior to November 2003. Such methodology may include, but is not limited to, the use of invoice-based pricing.

In section III.A.4. of this final rule, we finalized policies to reduce barriers faced by beneficiaries receiving immunosuppressive drugs under the Medicare Part B immunosuppressive drug benefit. That is, we finalized at § 410.30 to include orally and enterally administered compounded formulations with active ingredients derived only from FDA-approved drugs that have approved immunosuppressive indications or FDA-approved drugs that have been determined by a MAC to be reasonable and necessary for a specific purpose in immunosuppressive treatment included in the immunosuppressive drug benefit. In addition, we are finalizing changes regarding supplying fees and refills for immunosuppressive drugs. These proposals include allowing payment of a supply fee for a prescription of a supply of up to 90 days and allowing prescriptions for immunosuppressive drugs to be refillable.

In section III.A.5. of this final rule, we are finalizing to update § 410.63(b) to clarify existing CMS policy that blood clotting factors must be self-administered to be considered clotting factors for which the furnishing fee applies. We are also clarifying in § 410.63(b) that therapies that enable the body to produce clotting factor and do not directly integrate into the coagulation cascade are not themselves clotting factors for which the furnishing fee applies. Additionally, we are finalizing to clarify at § 410.63(c) that the furnishing fee is only available to entities that furnish blood clotting factors, unless the costs associated with furnishing the clotting factor are paid though another payment system, including the PFS. That is, we are finalizing to clarify through revisions to § 410.63 that clotting factors (as specified in section 1861(s)(2)(I) of the Act) and those eligible to receive the clotting factor furnishing fee (as specified in section 1842(o)(5) of the Act) are the same subset of products.

b. RHCs and FQHCs

In section III.B.2. of this final rule, we are finalizing several changes to the furnishing of care coordination services in RHCs and FQHCs. We are finalizing with a modification that starting in 2025, RHCs and FQHCs will report the individual CPT and HCPCS codes that describe care coordination services instead of the single HCPCS code G0511. We are also allowing for a delayed compliance of 6 months until July 1, 2025, to enable RHCs and FQHCs to be able to update their billing systems. We are also finalizing to permit billing of the add-on codes associated with these services. In addition, beginning in CY 2025, we are finalizing to adopt the coding and policies regarding Advanced Primary Care Management (APCM) services, as discussed in section II.G of this final rule.

For all of the care coordination services, we are finalizing to allow separate payment at the national non-facility PFS payment rate when the individual code is on an RHC or FQHC claim, either alone or with other payable services. Payment rates will be updated annually. We also solicited comment on how we can improve the transparency and predictability regarding which HCPCS codes are considered care coordination services to automate processes downstream for RHCs and FQHCs and plan to evaluate the comments received for potential future rulemaking.

In section III.B.3. of this final rule, we are finalizing the policy to continue to adopt the definition ''immediate availability'' as including real-time audio and visual interactive telecommunications for the direct supervision of services and supplies furnished incident to a physician's service through December 31, 2025, for RHCs and FQHCs. We are also finalizing, on a temporary basis, to allow payment for medical care non-behavioral health visits furnished via telecommunication technology in a manner that is similar to the payment mechanisms mandated by statute through December 31, 2024, RHCs and FQHCs will continue to bill for RHC and FQHC services furnished using telecommunication technology services by reporting HCPCS code G2025 on the claim through December 31, 2025. In addition, we are finalizing our policy to continue to delay the in-person visit requirement for mental health services furnished via communication technology by RHCs and FQHCs to beneficiaries in their homes until January 1, 2026.

In section III.B.4. of this final rule, we are finalizing a payment rate for IOP services in RHCs and FQHCs when there are 4 or more services per day in the RHC and FQHC setting.

In section III.B.5. of this rulemaking, we are finalizing our proposal to allow RHCs and FQHCs to bill for Part B preventive vaccines and the administration at the time of service. Therefore, payments for RHC and FQHC vaccine claims will be made according to Part B preventive vaccine payment rates in other settings, to be annually reconciled with the facilities' actual vaccine costs on their cost reports. Due to the operational systems changes needed to facilitate payment through claims, we explain that RHCs and FQHCs can begin billing for preventive vaccines and their administration at the time of service effective for dates of service on or after July 1, 2025.

In section III.B.6. of this final rule, we are finalizing our proposal to remove productivity standards for RHCs effective for cost reporting periods beginning on or after January 1, 2025.

In section III.B.7. of this final rule, we are finalizing to rebase the FQHC PPS market basket from a 2017 base year to a 2022 base year. We are finalizing the use of the 2022-based FQHC market basket update effective for annual payment updates to the FQHC PPS base rate effective beginning with CY 2025.

In section III.B.8. of this final rule, we clarified that when RHCs and FQHCs furnish dental services that align with the inextricably linked policies and operational requirements in the physician setting, we will consider those services to be a qualifying visit and the RHC will be paid at the RHC AIR and the FQHC will be paid under the FQHC PPS.

c. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

In section III.F.2 of this final rule, we finalized telecommunication flexibilities related to periodic assessments and initiation of treatment with methadone. We finalized to allow periodic assessments to be furnished via audio-only communications when two-way audio-video communications technology is not available to the beneficiary on a permanent basis, to the extent that this flexibility is authorized by SAMHSA and DEA at the time the service is furnished, and all other applicable requirements are met. We believe that making this current flexibility permanent is appropriate, as it will allow a beneficiary to decide with their provider the best modality for receiving care, and evidence has shown that audio-only visits produce many of the same benefits as video-based visits.[896] Additionally, permanently extending the flexibility to allow periodic assessments to be furnished via audio-only communications will further contribute towards health equity, especially among Medicare beneficiaries who are from underserved

[896] *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9446840.*

populations.[897] We also are finalizing to allow OTPs to use audio-visual telecommunications for initiation of treatment with methadone for any new patient who will be treated by the OTP with methadone if the OTP determines that an adequate evaluation of the patient can be accomplished via an audio-visual telehealth platform. We will allow the OTP intake add-on code (HCPCS code G2076) to be paid for two-way audio-video communications technology when it is billed for the initiation of treatment with methadone to the extent that the use of audio-video telecommunications technology to initiate treatment with methadone is authorized by DEA and SAMHSA at the time the service is furnished, and all other applicable requirements are met. We believe this flexibility is needed to align with new policy amendments finalized by SAMHSA for initiation of treatment with methadone at § 8.12(f)(2)(v)(A), and it will help reduce barriers for many individuals beginning treatment with methadone who often experience at least one barrier to accessing treatment (for example, reliable transportation, work schedule conflicts, distance to treatment, etc.).[898]

In section III.F.3 of this final rule, we are finalizing several payment updates to the Medicare OTP benefit in response to recent regulatory reforms finalized by SAMHSA at 42 CFR part 8 that aim to recognize more patient-centered and evidence-based paradigms of care for OUD treatment (for example, harm reduction interventions, recovery support services, etc.). Specifically, we are finalizing our proposal to update the payment for intake activities (HCPCS code G2076) to include payment for social determinants of health risk assessments (HCPCS code G0136) in order to adequately reflect additional effort for OTPs to identify a patient's unmet health-related social needs (HRSNs), or the need and interest for harm reduction interventions and recovery support services that are critical to the treatment of an OUD. These will be consistent with new revisions to standards for initial assessment service activities required by SAMHSA under § 8.12(f)(4)(i). In addition, CMS is also finalizing an update in payment for periodic assessments (HCPCS code G2077) to include payment for social determinants of health risk assessments (HCPCS code G0136) after being persuaded by comments in response to the proposed rule. This update would reflect additional reassessments of unmet HRSNs, and harm reduction intervention and recovery support service needs that OTPs may need to conduct throughout the duration of MOUD treatment. We believe these refinements are necessary to help OTPs address key issues during initial and periodic assessments that may increase the risk of a patient leaving OUD treatment prematurely or that pose as barriers to treatment engagement. For example, patients with an OUD are more likely to have lower educational attainment, be food insecure, encounter financial hardship, and housing instability, and they often report financial and logistical barriers (for example, lack of access to transportation) as reasons for not receiving treatment.[899] In the proposed rule, CMS included a request for information to understand how OTPs currently coordinate care and make referrals to community-based organizations (CBOs) that address unmet HRSNs, provide harm reduction services, and/or offer recovery support services. Providers (including SUD treatment facilities) who coordinate care with CBOs, including peer support organizations, housing agencies, and educational and employment agencies, to address unmet HRSNs (for example, housing, transportation, etc.) identified during assessments can positively influence health outcomes and better support a patient's engagement in SUD treatment.[900] In response to the proposed rule, commenters highlighted these coordinated care and referral activities are routinely provided at OTPs and integral to MOUD treatment and recovery. Accordingly, CMS finalized to create new add-on codes to describe coordinated care and referral services (G0534), patient navigational services (G0535), and peer recovery support services (G0536) that can be billed in addition to the bundled payments under the OTP benefit. Payment for these services would reflect additional efforts required by OTPs to link patients with adequate community resources to address unmet health-related social needs, including harm reduction interventions and recovery support services a patient needs and wishes to pursue, along with services to assist Medicare beneficiaries with an OUD in navigating multiple settings of care and achieving patient-driven treatment and recovery goals.

Furthermore, in section III.F.4 of this final rule, we finalized to establish payment for new opioid agonist and antagonist medications that were recently approved by the FDA. We will create a new add-on code (HCPCS code G0532) to the bundled payment to reflect take-home supplies for nalmefene hydrochloride (nalmefene) nasal spray, which is indicated for the emergency treatment of known or suspected opioid overdose induced by natural or synthetic opioids. The add-on code will include payment for a carton of two 2.7 mg nasal sprays of nalmefene and overdose education furnished in conjunction with distributing nalmefene. We also are finalizing payment for a new extended-release injectable buprenorphine product (Brixadi®), indicated to treat moderate to severe OUD and that comes in a weekly (8 mg, 16 mg, 24 mg, 32 mg) and monthly formulation (64 mg, 96 mg, and 128 mg). We will create a new weekly bundled payment code (including both a non-drug and drug component) for weekly injectable buprenorphine to reflect the weekly formulation of Brixadi® described by HCPCS code G0533. In addition, we will update payment for the drug component of the existing bundled payment under the Medicare OTP benefit for monthly injectable buprenorphine (HCPCS G2069) in order to reflect payment for the monthly formulation of Brixadi®. We believe these proposals are consistent with our statutory authority under sections 1861(jjj)(1)(A) and 1834(w) of the Act, which allow the Secretary to establish Medicare bundled payment for opioid agonist and antagonist treatment medications that are approved by the FDA. These proposals will expand access to new opioid agonist and antagonist medications that are important to help prevent additional opioid overdose deaths, reduce illicit opioid use, and retain more individuals with an OUD in treatment.[901]

Lastly, in section III.F.5 of this final rule, we clarified a billing requirement that an OUD diagnosis code is required on claims submitted under the Medicare OTP benefit for OUD treatment services. This clarification is needed to ensure payments made to OTPs are in

alignment with statutory requirements under sections 1861(s)(2)(HH), 1861(jjj)(1), and 1834(w) of the Act, which all specify that services paid to OTPs under Medicare Part B must be for the treatment of opioid use disorder.

d. Medicare Shared Savings Program

In section III.G. of this final rule, we are finalizing modifications to the Shared Savings Program to further advance Medicare's value-based care strategy of growth, alignment, and equity, and to allow for timely improvements to program policies and operations.

The changes to the Shared Savings Program include the following:

Changes to the quality performance standard and other quality reporting requirements, including to (1) require Shared Savings Program ACOs to report the APP Plus quality measure set that will incrementally grow to comprise of 11 measures, consisting of the 6 measures in the existing APP quality measure set and 5 new measures from the Adult Universal Foundation measure set that will be incrementally incorporated into the APP Plus quality measure set over performance years 2025 through 2028 or the performance year that is one year after eCQM specifications become available for Quality ID: 487 Screening for Social Drivers of Health and Quality ID: 493 Adult Immunization Status, whichever is later, (2) focus the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set to all payer/all patient eCQMs and Medicare CQMs by performance year 2027 and include MIPS CQMs for performance years 2025 and 2026, before they are removed in performance year 2027, to provide ACOs with more time before the sunsetting of this collection type given that ACOs may have already contracted with vendors for this collection type, (3) require Shared Savings Program ACOs that report the APP Plus quality measure set to report on all measures in the APP Plus quality measure set, as applicable, (4) establish a Complex Organization Adjustment for Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs, (5) score Medicare CQMs using flat benchmarks in their first 2 performance periods in MIPS, and (6) extend the eCQM reporting incentive in order to promote the adoption of eCQMs and also extend the reporting incentive to ACOs reporting MIPS CQMs in performance years 2025 and 2026 to support ACOs in meeting the Shared Savings Program quality performance standard.

Changes to establish a new ''prepaid shared savings'' option for eligible ACOs with a history of earning shared savings, to assist these ACOs with cash flow and encourage investments that will aid beneficiaries such as investments in direct beneficiary services, staffing, and healthcare infrastructure, and refinements to recently-established advance investment policies.

Modifications to the Shared Savings Program's financial methodology including to (1) ensure the benchmarking methodology includes sufficient incentive for ACOs serving underserved communities to enter and remain in the program through the application of a health equity benchmark adjustment, (2) specify a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a), (3) establish a methodology for excluding payment amounts for HCPCS and CPT codes exhibiting significant, anomalous, and highly suspect (SAHS) billing activity during CY 2024 or subsequent calendar years that warrant adjustment, and (4) make technical changes in provisions of the Shared Savings Program regulations on financial calculations, to align and clarify the language used to describe weights applied to the growth in ACO and regional risk scores for each Medicare enrollment type, as part of the calculation for capping ACO and regional risk score growth, respectively.

Changes to other programmatic areas, including: to sunset a requirement under which CMS would be required to terminate an ACO's participation agreement, under certain circumstances, if it failed to maintain at least 5,000 assigned beneficiaries during an agreement period in connection with the Shared Savings Program compliance requirements; updates to provisions of the Shared Savings Program regulations on application procedures to reflect the latest approach Antitrust Agencies use to evaluate ACOs and enforce the antitrust laws; updates to the beneficiary assignment methodology including to (1) revise the definition of primary care services to align with payment policy changes and include, among other services for the purposes of beneficiary assignment, Safety Planning Interventions, Post-Discharge Telephonic Follow-up Contacts Intervention, Virtual Check-in Service, Advanced Primary Care Management Services, Cardiovascular Risk Assessment and Risk Management Services, Interprofessional Consultation Service, Direct Care Caregiver Training Services, and Individual Behavior Management/Modification Caregiver Training Services, and (2) broaden the existing exception to the program's voluntary alignment policy to allow for beneficiaries to be claims-based assigned to entities participating in certain disease- or condition-specific CMS Innovation Center ACO models; notwithstanding their voluntary alignment to a Shared Savings Program ACO; and modifications to the beneficiary information notification requirements.

e. Medicare Part B Payment for Preventive Services

Section III.H.1 of this final rule outlines the implementation of policies that impact the payment amount for administration of preventive vaccines paid under the Part B vaccine benefit, as well COVID–19 monoclonal antibodies and the in-home additional payment for Part B vaccine administration. These provisions are necessary to provide stable payment for preventive vaccine administration and related policies, and to allow predictability for providers and suppliers to rely on for building and sustaining robust vaccination programs.

Section III.H.2 of this final rule addresses two items related to payment for hepatitis B vaccine administration under Part B. In section III.M. of this rule, we are finalizing an expansion of hepatitis B vaccine coverage by revising existing regulations. In this section of the rule, we clarify that a physician's order is no longer required for the administration of a hepatitis B vaccine in Part B, which will facilitate roster billing by mass immunizers for hepatitis B vaccine administration. We are also finalizing a policy to set payment for hepatitis B vaccines and their administration at 100 percent of reasonable cost in RHCs and FQHCs, separate from the FQHC PPS or the RHC All-Inclusive Rate (AIR) methodology, to streamline payment for all Part B vaccines in those settings.

In section III.H.3. of this final rule, we are finalizing a fee schedule for Drugs Covered as Additional Preventive Services (DCAPS), per section 1833(a)(1)(W)(ii) of the Act. We will determine payment limits for DCAPS drugs based on the ASP payment methodology set forth under section 1847A of the Act if possible, and we provide alternative payment mechanisms for calculating payment limits for DCAPS drugs if ASP data is not available. We are also finalizing payment limits for supplying and administration fees for DCAPS drugs

that are similar to those fees for drugs paid under the ASP payment methodology set forth under section 1847A of the Act. Finally, we will determine payment limits for DCAPS drugs in RHCs and FQHCs, and any supply and administration fee, using this same fee schedule, and we will pay for DCAPS drugs and their administration on a claim-by-claim basis.

f. Modifications to Coverage of Colorectal Cancer Screening

In section III.K. of this rulemaking, we are finalizing regulatory changes, as proposed, that update and expand coverage for CRC screening by (1) removing coverage for the barium enema procedure in regulations at § 410.37, (2) adding coverage for the computed tomography colonography (CTC) procedure in regulations at § 410.37, and (3) expanding a ''complete colorectal cancer screening'' in § 410.37(k) to include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3) returns a positive result. The U.S. Centers for Disease Control and Prevention (CDC) describes CRC as ''a disease in which cells in the colon or rectum grow out of control. Sometimes abnormal growths, called polyps, form in the colon or rectum. Over time, some polyps may turn into cancer. Screening tests can find polyps so they can be removed before turning into cancer. Screening also helps find colorectal cancer at an early stage, when treatment works best.'' [902] The National Cancer Institute reports that CRC is the fourth most common type of cancer and estimates that the United States experienced 153,020 new cases and 52,550 new deaths from CRC in 2023. In addition, the rate of new cases and new deaths from CRC is higher in men than women and significantly greater for those of African American and Non-Hispanic American Indian/Alaska Native descent compared to all races.[903] See the impact analysis later in this section at VII.E.14.

g. Expand Hepatitis B Vaccine Coverage

In section III.M. of this rulemaking, we are finalizing our proposal to expand Hepatitis B vaccine coverage by revising our regulatory definition for intermediate risk groups by adding a new paragraph to include individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown (§ 410.63(a)(2)). Hepatitis B is a vaccine-preventable liver disease caused by the hepatitis B virus.[904] The vaccine consists of a series of typically 2–3 doses delivered at various intervals.[905] Hepatitis B virus is transmitted when body fluid (blood, semen, or other) from a person infected with the virus enters the body of someone who is uninfected.[906] This can happen through sexual contact; sharing needles, syringes, or other drug-injection equipment; transmission from the gestational parent to baby during pregnancy or at birth; direct contact with blood or open sores; or sharing contaminated items such as toothbrushes, razors or medical equipment (such as a glucose monitor) of a person who has hepatitis B.[907] Hepatitis B can be an acute, short-term illness and it can develop into a long-term, chronic infection. Chronic hepatitis B can lead to serious health problems, including cirrhosis, liver cancer, and death. Treatments for hepatitis B are available but no cure exists. There are currently an estimated 2.4 million individuals in the U.S. living with hepatitis B virus and an estimated 20,000 new infections every year.[908] We believe our proposal will help protect Medicare beneficiaries from acquiring hepatitis B infection, contribute to eliminating viral hepatitis as a public health threat in the United States and is in the best interest of the Medicare program and its beneficiaries. We are finalizing our proposals to expand access to the hepatitis B vaccine. Please see section III.M. of this final rule for additional discussion on the policy and regulatory changes and see section VII.E.16, below to read the impact analysis related to this provision.

h. Medicare Parts A and B Overpayment Provisions of the Affordable Care Act ((§§ 401.305(a)(2), 401.305(b)(1), (2), and (3))

Section W of the December 2022 Overpayments Proposed Rule proposed amendments to § 401.305(a)(2) to change the standard for an ''identified overpayment'' for Medicare Parts A and B and adopt by reference, the knowledge standard set forth in the False Claims Act at 31 U.S.C. 3729(b)(1). We do not have a basis for estimating the impact associated with this amendment. We solicited comment on the analysis and conclusions provided in the RIA.

Section III.O. of this final rule discusses existing § 401.305(b)(1), which specifies when a person who has received an overpayment must report and return an overpayment. We proposed to amend this regulation to reference revised § 401.305(b)(2) and new § 401.305(b)(3). We proposed a technical modification to the introductory language in § 401.305(b)(2) to acknowledge that this paragraph might be applicable after the suspension described in new § 401.305(b)(3) is complete. New § 401.305(b)(3) identifies circumstances under which the deadline for reporting and returning overpayments will be suspended to allow time for providers to investigate and calculate overpayments. We do not have a basis for estimating the impact associated with this amendment. We solicited comment on the analysis and conclusions provided in the RIA.

We did not receive public comments on the provisions, and therefore, we are finalizing as proposed.

B. Overall Impact

We have examined the impacts of this final rule as required by Executive Order 12866, Regulatory Planning and Review (September 30, 1993), Executive Order 13563, Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094, ''Modernizing Regulatory Review'' (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), and Executive Order 13132, Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic,

environmental, public health and safety effects, distributive impacts, and equity).

A regulatory impact analysis (RIA) must be prepared regulatory action that are significant under section 3(f)(1) ($200 million or more in any 1 year). Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1)). Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at *https://www.sba.gov/document/support-table-size-standards* (refer to the 620000 series).) Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other suppliers, and providers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, Medicare payment is made under the PFS for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this rulemaking will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2024, that threshold is approximately $183 million. This rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this rulemaking does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which, together with the information provided in the rest of this rule, meets all assessment requirements. The analysis explains the rationale for and purposes of this rule; details the costs and benefits of this rulemaking; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this rule, we discussed various changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services and to implement provisions of the statute. We provide information for each policy change in the relevant sections of this final rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this rule. The relevant sections of this rulemaking describe significant alternatives we considered, if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2024 with payment rates for CY 2025 using CY 2023 Medicare utilization. The payment impacts described in this rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS). The PFS update adjustment factor for CY 2025, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments.

To calculate the estimated CY 2025 PFS conversion factor (CF), we took the CY 2024 conversion factor without the payment increase of 1.25 percent provided by the CAA, 2023 that applied to services furnished from January 1, 2024 through March 8, 2024, and the 2.93 percent payment increase provided by the CAA, 2024 that replaced the previous 1.25 percent increase and applies to services furnished from March 9, 2024 through December 31, 2024 and multiplied it by the budget neutrality adjustment required as described in the preceding paragraphs. We estimate the CY 2025 PFS CF to be 32.3465 which reflects a 0.02 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the removal of the temporary 2.93 percent payment

increase for services furnished from March 9, 2024 through December 31, 2024, as provided in the CAA, 2024. We estimate the CY 2025 anesthesia CF to be 20.3178, reflecting the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 108: Calculation of the CY 2025 PFS Conversion Factor

CY 2024 Conversion Factor		33.2875
Conversion Factor without the CAA, 2024 (2.93 Percent Increase for CY 2024)		32.3400
CY 2025 Statutory Update Factor	0.00 percent (1.0000)	
CY 2025 RVU Budget Neutrality Adjustment	0.02 percent (1.0002)	
CY 2025 Conversion Factor		**32.3465**

TABLE 109: Calculation of the CY 2025 Anesthesia Conversion Factor

CY 2024 National Average Anesthesia Conversion Factor		20.7739
Conversion Factor without the CAA, 2024 (2.93 Percent Increase for CY 2024)		20.1826
CY 2025 Statutory Update Factor	0.00 percent (1.0000)	
CY 2025 RVU Budget Neutrality Adjustment	0.02 percent (1.0002)	
CY 2025 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.65 percent (1.0065)	
CY 2025 Conversion Factor		**20.3178**

Table 110 shows the impact on PFS payment for physicians' services based on the policies included in this rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 110 (CY 2025 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 110.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2023 utilization and CY 2024 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column C (Impact of Work RVU Changes): This column shows the estimated CY 2025 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- Column D (Impact of PE RVU Changes): This column shows the estimated CY 2025 impact on total allowed charges of the changes in the PE RVUs.
- Column E (Impact of MP RVU Changes): This column shows the estimated CY 2025 impact on total allowed charges of the changes in the MP RVUs.
- Column F (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

In recent years, we have received requests from interested parties to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented us with high-level information suggesting that Medicare payment policies are directly responsible for consolidating privately owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in healthcare delivery, especially concerning independent versus facility-based practices. We published an RFI in the CY 2023 PFS proposed rule to gather feedback on this issue and refer readers to the discussion in the CY 2023 PFS final rule (87 FR 69429 through 69438). As part of our holistic review of how best to update our data and offer interested parties additional information that addresses some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under downloads for the CY 2025 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

We provided an additional impact table for this rulemaking cycle that includes a facility/non-facility breakout of payment changes. The following is an explanation of the information represented in Table 111.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Setting): Identifies the facility or nonfacility setting for which data are shown.
- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2023 utilization and CY 2024 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column D (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges.

BILLING CODE 4120–01–C

2. CY 2025 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty-level impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including clinical social workers and clinical psychologists, anesthesiology and nurse anesthetists, psychiatry, geriatrics, chiropractic, and endocrinology, reflect increases relative to other specialties. These increases can largely be attributed to the Year 4 update to clinical labor pricing and/or the proposed adjustments to transfer of post-operative care for global surgical procedures. These increases are also due to increases in values for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, the second year of our 4 year transition of work increases for timed behavioral health services, and increased payments resulting from supply and equipment pricing updates.

The estimated impacts for several specialties, including vascular surgery, diagnostic testing facilities, interventional radiology, ophthalmology and optometry, hand surgery, and orthopedic surgery, reflect decreases in payments relative to payment to other specialties, largely resulting from the redistributive effects of the implementation of the Year 4 update to clinical labor pricing and/or the proposed adjustments to transfer of post-operative care for global surgical procedures. The services furnished by these specialties were negatively affected by the redistributive effects of increases in work RVUs for other codes, and/or rely primarily on supply/equipment items for their practice expense costs and, therefore, were affected negatively by the updated Year 4 clinical labor pricing under budget neutrality. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized supply and equipment pricing updates. The estimated impacts also reflect decreases due to the continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 110), including comments received in response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level, typically, the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 110 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages and may not necessarily represent what is happening to the particular services furnished by a single practitioner within any given specialty.

As discussed previously, we have reviewed our suite of public use files

and have worked on new ways to offer interested parties additional information that addresses concerns about the lack of granularity in our impact tables. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2023 utilization data, Total RVUs change between −1 percent and 1 percent for more than 80 percent of practitioners, representing approximately 75 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Specialties, such as gastroenterology, exhibit little variation in changes in total RVUs per practitioner. Table 110 (CY 2025 PFS Estimated Impact on Total Allowed Charges by Specialty) indicates an overall change of 0 percent for this specialty, and the practitioner-level distribution shows that 98 percent of these practitioners will experience a change in Total RVUs between -1 percent and 1 percent. The specific service mix within a specialty may vary by practitioner, so individual practitioners may experience different changes in total RVUs. For example, Table 110 indicates a 1 percent increase in RVUs for the physical/occupational therapy specialty as a whole; however, 24 percent of physical/occupational therapy specialty practitioners—representing over 21 percent of Total RVUs for the specialty—will experience a 1 percent or more increase in Total RVUs. Meanwhile, 13 percent of physical/occupational therapy specialty practitioners will experience 1 percent or more decreases in Total RVUs, and these practitioners account for 14 percent of Total RVUs for this specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule (see *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*).

The specialty impacts displayed in Table 110 reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from finalized policies that are subject to the statutory budget neutrality requirement at section 1848(c)(2)(B)(ii)(II) (such as the updated proposals associated with the transfer of post-operative care for global surgical procedures in CY 2025 or the clinical labor pricing update phase-in that began in CY 2022) but does not include any changes in spending which result from finalized policies that are not subject to the statutory budget neutrality adjustment, and therefore, have a neutral impact across all specialties. The 2.50 percent temporary payment increase for CY 2023 and the 1.25 and 2.93 percent temporary payment increases that applied for portions of CY 2024 are statutory changes that take place outside of BN, and therefore, are not captured in the specialty impacts displayed in Table 110. Section 1848(t)(2)(C) specifies that these temporary payment increases are not to be taken into account in determining fee schedules for physicians' services furnished in years after the respective increases end. As such, these temporary increases are not subject to the PFS budget neutrality adjustment.

b. Impact

Column F of Table 110 displays the estimated CY 2025 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under ''downloads'' on the CY 2025 PFS final rule website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/.* We selected these procedures for the sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/.*

D. Impact of Changes Related to Telehealth Services

We are finalizing the addition of several codes to the Medicare Telehealth Services List on a provisional basis, including HCPCS codes G0541–G0543, and G0539–G0540, and CPT Codes 97550, 97551, 97552, 96202, and 96203. We are also finalizing the addition of several codes to the Medicare Telehealth Services List on a permanent basis, including HCPCS codes G0011, G0013, and G0560. We are finalizing maintaining certain Telecommunications technology-related flexibilities through 2025, including that we will continue to use a definition of direct supervision that allows ''immediate availability'' of the supervising practitioner using real-time audio and video interactive telecommunications. We are also finalizing delaying implementation of the telehealth frequency limitations for subsequent nursing facility and inpatient hospital visits for an additional year, to include two-way, real-time audio-only communication technology for any telehealth service furnished to a beneficiary in their home, and to continue to permit the distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home. While we note that certain other Medicare telehealth flexibilities related to the PHE for COVID–19 are expiring, including the removal of statutory geographic and location limitations for most Medicare telehealth services, the beneficiary's home continues to be a permissible originating site for certain types of services including those furnished for the diagnosis, evaluation, or treatment of a mental health disorder, including a Substance Use Disorder (SUD), and for monthly End Stage Renal Disease (ESRD) related clinical assessments described in section 1881(b)(3)(B). However, expiration of certain flexibilities for Medicare telehealth services is not expected to impact broader utilization of these services because reasonable and necessary services for the diagnosis or treatment of an illness or injury continue to be covered. Despite the fact that some services will no longer be furnished under telehealth, we expect that they will continue to be furnished in-person. We therefore anticipate that our provisions will result in continued utilization of services that can be furnished as Medicare telehealth services during CY 2025 at levels comparable to observed utilization of these services during CY 2024.

E. Other Provisions of the Regulation

1. Impact of Provisions for Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Medical Services

In section II.J.2. of this final rule, we are adding to the list in § 411.15(i)(3)(i) of clinical scenarios under which FFS Medicare payment may be made for dental services inextricably linked to covered services to now include certain dental services associated with dialysis services for beneficiaries with end-stage renal disease (ESRD). Specifically, payment is permitted under Medicare Parts A and B for dental or oral examination performed as part of a comprehensive workup prior to, or contemporaneously with, Medicare-covered dialysis services when used in the treatment of ESRD; and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with covered dialysis services in the

treatment of ESRD. We do not anticipate any significant increase in utilization or payment impact for additional dental services given the historically low utilization of these therapies.

Based on the Renal Management Information System (REMIS) and Enrollment Data Base (EDB) gathered from the Integrated Data Repository (IDR) we estimate Fee-For-Service (FFS) Part B ESRD enrollment to have averaged roughly 240,000 enrollees during CY 2023. Based on United States Renal Data System (USRDS) from the NIH, we estimate that roughly 40,000 of these enrollees are on the kidney transplant waitlist in any given year and that roughly 10,000 of these patients on the waitlist would typically receive a transplant. Since we already include dental services associated with kidney transplant patients in § 411.15(i)(3)(i)(A) as an example of services for which payment can be made for certain dental services, we removed these patients from the estimate, which left roughly 30,000 FFS beneficiaries.

For a variety of reasons outlined previously, we have historically observed low FFS dental utilization in instances when coverage could apply (<1 percent of potential users). FFS dental billing patterns have shown a cost per covered utilizer of about $525 in recent years. To illustrate the potential cost of the payment for dental services inextricably linked to dialysis services for beneficiaries with ESRD we applied three scenarios of utilization (0.1 percent, 1 percent, 3 percent) and cost per patient of approximately $525 to the 30,000 patients. Under all of these scenarios the policy is projected to represent a negligible cost to the Medicare program (<$1,000,000) in any given year.

Therefore, we do not anticipate a significant payment impact for these provisions. It is important to note that there is some uncertainty in these take-up rate assumptions, but they are consistent with the current utilization of dental services, including after the regulation changes made in the CYs 2023 and 2024 PFS final rules. Additionally, given that our addition to the list of clinical scenarios under which payment may be made for dental services inextricably linked to covered services is not a change in coverage or payment policy, the cost impact of this provision is negligible and therefore it is not necessary to adjust the conversion factor under the PFS budget neutrality requirement.

2. Impact of Changes Related to Supervision of Outpatient Therapy Services in Private Practices

As outlined in section II.H. of this final rule, we proposed to change our regulatory requirements for OTs and PTs who are enrolled as suppliers in Medicare as OTs and PTs in private practice (OTPPs and PTPPs, respectively) to allow for general supervision of their occupational therapy assistants (OTAs) and physical therapist assistants (PTAs) to the extent permitted under State law. The requirement for OTPPs and PTPPs to provide direct supervision of OTAs and PTAs, which has been in place since 2005, requires the OTPP/PTPP to be present in the office suite or in the patient's home, and immediately available to furnish assistance and direction throughout the performance of the procedure performed by the OTA/PTA (or by an OT or PT they are supervising who is not enrolled in Medicare as a supplier). In contrast, the proposal to allow for general supervision will mean that the procedure is furnished under the OTPP's/PTPP's overall direction and control, but the OTPP/PTPP need not be present in the treatment location or immediately available.

As discussed in section II.H. of this final rule, we are finalizing our proposal, as proposed, because we continue to believe that the change to allow for general supervision of OTAs/PTAs by OTPPs and PTPPs will have a positive impact on patient access to outpatient therapy services; and will align with the currently required general supervision of PTAs/OTAs by PTs and OTs who work for Medicare institutional providers, such as rehabilitation agencies, outpatient hospitals, and SNFs. It will also reflect the supervision level specified in 44 State physical therapy practice acts [909] and all but one State occupational therapy practice act.

The financial impact of changing the supervision level in private practices from direct to general is difficult to estimate. While it is generally agreed that direct supervision of support personnel generally creates more access issues for patients compared to general supervision, the reverse is also true, that general supervision allows more access to services since the supervising therapist, in this case, does not have to be present onsite when the therapy services occur. We heard from several commenters that stated by changing the supervision level to from direct to general in private practices of PTs and OTs, that Medicare would save up to an estimated $271 million over a 10-year period.[910] The basis for this projected savings, as one commenter believes, even if the supervision change resulted in a modest increase in therapy service, is that some services of the therapist would shift to the therapy assistant. This would result in a greater number of claims for services furnished by OTAs/PTAs being paid at 85% of what we otherwise make to the therapist under the PFS when those services are furnished in whole or in part by a PTA/OTA; and depending on the amount of such services, along with the workforce shortage of both therapists and assistants, there may be a small percentage of costs or savings resulting from our finalized policy.

3. Impacts of Changes Related to Advanced Primary Care Management Services

In section II.G.2 of this final rule, ''Advanced Primary Care Management (APCM) Services,'' we proposed to create three HCPCS codes to use for reporting the APCM services (HCPCS codes G0556, G0557, and G0558) to recognize the resources involved in furnishing services using an advanced primary care delivery model under the PFS. As described in sections II.G.2.b and II.G.2.c of this final rule, the APCM services incorporate elements of existing services with the understanding that some patients will require more resources and some fewer based on variability in patient complexity and needs. As we ordinarily do, we proposed to base the PFS valuation for APCM codes on the resources involved in furnishing the typical case of the service which may not necessarily reflect the actual resources involved in furnishing every individual service. To value APCM, we compared the service elements described by the APCM codes to the values we have established for the specific care management services and communication technology-based services (CTBS) codes on which we modeled the service elements of the APCM codes and which we built into the service descriptors for G0556, G0557, and G0558 (see also Table 111

[909] Federation of State Boards of Physical Therapy Jurisdiction Licensure Reference Guide, *https://www.fsbpt.net/lrg/Home/SupervisionRequirementLevelsBySetting.*

[910] September 2022 report by Dobson DaVanzo & Associates commissioned by 8 therapy organizations to evaluate the financial impact and medical consequences of various provisions included in the Stabilizing Medicare Access to Rehabilitation and Therapy or SMART Act, (H.R. 5536) at: *https://www.dobsondavanzo.com/index.php?src=directory&view=Publications&submenu=_pubs&category=Cost%20Estimation&srctype=Publications_lister_redesign.*

and sections II.G.2.b. through II.G.2.d. of this final rule). Specifically, the APCM services incorporate elements of chronic care management (CPT codes 99487, 99489, 99490, 99491, 99439, 99437), principal care management (CPT codes 99424, 99425, 99426, 99427)), transitional care management (CPT codes 99495 and 99496), interprofessional internet consultation (CPT code 99446, 99447, 99448, 99449, 99451, 99452), remote evaluation of patient videos/images (HCPCS code G2250), virtual check-ins (HCPCS code G2251 and G2252), and online digital E/M or e-visits (CPT codes 98970, 98971, 98972, 99421, 99422, 99423) into this new bundled PFS payment beginning for CY 2025.

As outlined throughout section II.G.2 of this final rule, the elements of APCM services reflect the comprehensive approach to care management involved in care delivery using the advanced primary care model. This is a model of primary care that is being integrated into current medical practice. As such, we stated that it would be appropriate to use the current valuation and uptake of the codes on which we modeled the APCM codes to inform our valuation of APCM services. Using Medicare FFS claims data and evidence from the CMS Innovation Center's testing of a series of advanced primary care models (see section II.G.2.a.(1) of this final rule), we sought to understand how these different services have been used historically and relate that information to the way we think about the service elements for APCM and the valuation of the three APCM code levels. We know that for Medicare beneficiaries who receive care management services during a year, the non-complex CCM base code is billed on average for five months and with three add-on codes during those five months. We also know that initial information from practitioner interviews conducted as part of our CCM evaluation efforts indicates that practitioners overwhelmingly meet and exceed the 20-minute threshold time for billing the non-complex CCM base code; typically, these practitioners reported spending between 45 minutes and an hour per month on CCM services for each patient, with times ranging between 20 minutes and several hours per month (81 FR 80244). However, this does not account for the care management services that are provided beyond one time-based billing interval and without reaching the next; nor does it account for the resources involved in maintaining certain advanced primary care practice capabilities and continuous readiness and monitoring activities, including patient population monitoring and care needs assessment, to fully furnish and bill APCM services as is medically reasonable and necessary for any individual patient during any calendar month. Finally, this does not account for changes to utilization of APCM that may occur as a result of the billing and documentation requirements for APCM services when compared to the current coding and payment for care management and CTBS services.

We are estimating a utilization of approximately 300,000 claims for the HCPCS code G0556, 1.3 million claims for the HCPCS code G0557, and 400,000 claims for the HCPCS code G0558, and solicited comment on our assumptions. To estimate utilization for G0556, we first calculated an eligible G0556 population by estimating the number of Medicare beneficiaries without multiple chronic conditions who have an established relationship with a primary care provider using Welcome to Medicare and Annual Wellness Visit claims and estimating the uptake of APCM Level 1 based on average uptake of CCM/PCM/TCM in CY 2022 claims data; then, we adjusted this estimate to account for increased frequency of billing (multiplied by 12 to account for 12 months of assumed practitioner billing for the APCM service). To estimate utilization for G0557, we first calculated estimated ratios to represent the average utilization of CCM/PCM/TCM services in the first year of policy implementation compared to CY 2022 claims; then, we applied a reduced utilization ratio to CY 2022 claims for CPT codes 99490 and 99487 (10.4 percent) and multiplied by the eligible G0557 population of Medicare beneficiaries with multiple chronic conditions who are non-QMB; finally, as described for G0556, we adjusted this estimate to account for increased frequency of billing (increase from an average of five months of CCM claims per beneficiary to 12 months of assumed practitioner billing for the APCM service, or 237.3 percent). To estimate utilization for G0558, we took the estimated number of G0557 claims for CPT codes 99490 and 99487 and multiplied by the eligible G0558 population of Medicare beneficiaries with multiple chronic conditions who are QMB; again, we adjusted this estimate to account for increased frequency of billing (same percentage applied to G0557).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

A few commenters were concerned about an inconsistency between the assumptions underlying valuation and those underlying CMS' utilization estimates for the services. For purposes of estimating utilization, CMS assumed that beneficiaries who receive APCM services will do so for 12 months each year; however, the valuation methodology assumed beneficiaries receive only a fraction of that—for example, CMS' proposed inputs for HCPCS code G0557 were based on CPT code 99490 multiplied by 5/12, CPT add-on code 99439 multiplied by 1/6, CPT add-on code 99489 multiplied by 1/12, and CPT code 99487 multiplied by 1/12. From the commenters' perspective, it seemed unreasonable to expect practices to maintain APCM capabilities and provide APCM services for 12 months per year while setting the value of those capabilities and services at a fraction of that time.

Response: We continue to reiterate that because the APCM codes are a bundle of existing care management and other services and the estimates of utilization of services are divided across the span of 12 months, we feel that this valuation reference is one way to estimate the work, time, and intensity of HCPCS code G0557. We also reiterate our assumption that beneficiaries receiving APCM may not require any services one month and may have increased utilization the next month. We are attempting to account for the varying care needs of the beneficiary, with an understanding that needs often ebb and flow. As discussed previously, we appreciate that APCM services require different practice capabilities as compared to other care management services and may revisit valuation of all APCM services in future rulemaking.

Comment: A few commenters commented on our predicted reduction in utilization for existing service codes. One commenter was concerned that the reduction in utilization for existing codes will not be sufficient to offset the significant cost increase. Another commenter asked whether CMS intended that the reduction in utilization of communication technology-based services (CTBS) will impact the value and payment for CTBS codes when separately reported by nonphysician qualified health care professionals. This commenter pointed out that, in Addendum B, the non-facility and facility PE RVUs for HCPCS code G2251 show a significant reduction from 0.15 to 0.00, and asked CMS to clarify whether this is a data entry error or an intentional change related to the proposed APCM codes. This commenter believes that the PE

RVU for HCPCS code G2251 should be restored to the original value of 0.15, as it should remain separately reportable when a virtual check-in is not associated with APCM services.

Response: We thank commenters for pointing out the error in Addendum B. The error has been corrected in this final rule.

After consideration of public comments, we are finalizing the impacts of APCM services as proposed. We look forward to continuing to engage with interested parties as these codes are billed.

We anticipate that these coding and payment policies for APCM services will result in slight reductions in utilization of existing care management and CTBS services during CY 2025 when compared to observed utilization of these services during CY 2024. Specifically, we estimated an approximate 11.4 percent reduction in utilization from CY 2024 across the 20 service codes which are incorporated into the APCM services (see previously). The estimated total net increase is approximately 700,000 claims, and we do not anticipate a significant payment impact for these provisions. We believe that the cost impact of this proposal is negligible and therefore it is not necessary to adjust the conversion factor under the PFS budget neutrality requirement.

4. Impact of Changes Related to Strategies for Improving Global Surgery Payment Accuracy

As discussed in section II.L. of this final rule, beginning for services furnished in 2025, we are finalizing our proposal to broaden the applicability of transfer of care modifier -54 for 90-day global packages as proposed. Beginning with services furnished in CY 2025, modifier -54 is required for all 90-day global surgical packages in any case when a practitioner plans to furnish only the surgical procedure portion of the global package (including both formal and other transfers of care). We are not finalizing any changes regarding the use of modifier -55 and modifier -56 for CY 2025. Modifiers -55 and -56 will continue to be billed exclusively in cases where there is a documented formal transfer of care.

Since we believe that this will result in expanded use of the transfer of care modifier -54, which will have a corresponding effect on the payment for the affected services, we have reflected this in our utilization estimates accordingly (see download file for this final rule titled CY 2025 PFS final rule 2023 Utilization Data Crosswalked to 2025 at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices?DLSort=2&DLEntries=10&DLPage=1&DLSortDir=descending*) and anticipate more global surgical packages to be billed separately using modifier -54, which could have payment consequences for a selection of high-volume global surgery codes. We assume that the same number of global surgery codes will be billed; however, we anticipate more codes will be billed using transfer of care modifier -54. We do not expect that the utilization of separately billable post-operative E/M services will change. Rather than modify our utilization estimates for these codes, our utilization estimate includes only 90-day high volume and/or high-cost procedure codes where reporting post-operative visits with CPT code 99024 (*Postoperative follow-up visit, normally included in the surgical package, to indicate that an evaluation and management service was performed during a postoperative period for a reason(s) related to the original procedure*) is required. This is a relatively small set of codes (approximately 180) versus the full range of approximately 4,000 global surgical codes; however, this subset of codes accounts for about 73 percent of total Medicare 90-day procedure volume. The full list of affected codes is available in the file titled ''CY 2024 Analytic Crosswalk to CY 2025'' on the CMS website under downloads for the CY 2025 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

For this select list of global surgical codes, we are estimating that the transfer of care modifier, modifier -54, will be employed 20 percent of the time. We believe that this is a conservative estimate given the frequency with which these global surgical services involve a transfer of post-operative care. RAND's research has indicated that a post-operative transfer of care is common for 90-day global surgical procedures but that these transfers of care are almost never reported with the appropriate modifier. Then, for the 20 percent of cases where we believe the transfer of care modifier will be employed, we proposed to apply the payment reduction associated with the modifier -54 for post-operative care and apply it to the utilization estimate for the associated procedures billed using the transfer of care modifiers. These percentages can be found in the PFS Relative Value Files under the columns labeled ''pre op, intra op, post op'' at *https://www.cms.gov/medicare/payment/fee-schedules/physician/pfs-relative-value-files.* For example, CPT code 27447 (*Arthroplasty, knee, condyle and plateau; medial AND lateral compartments with or without patella resurfacing (total knee arthroplasty)*) is a high-volume knee replacement procedure where the post-operative portion of the total payment is 21 percent. We estimated that there will be a post-operative transfer of care 20 percent of the time for CPT code 27447, and in those 20 percent of cases, there will be a corresponding 21 percent decrease in payment. This is reflected in a utilization crosswalk of 0.958 for CPT code 27447 as a result of this 4.2 percent reduction (20 percent times 21 percent) to capture this estimated reduction in spending associated with our proposal to require the use of the transfer of care modifier (modifier -54).

We note that for purposes of estimating the utilization of the transfer of care modifier, our estimates include increased reporting of the transfer of care modifier for codes that are subject to the RAND data collection exercise, with the exception of cases where the modifier is already used 5 percent of the time or more. We recognize that this policy will apply more broadly and solicited comment on this.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter said the reference to ''expected'' in the CMS proposal should have no impact on the utilization rates of Modifier -55 because Modifier -55 should not be appended to a claim unless post-operative management of patient care has actually occurred. Commenters expressed general concern about the ability of CMS to extrapolate any meaningful data for purposes of updating global code values based on changes in utilization of the transfer-of-care modifiers if this policy is finalized.

Response: We appreciate the commenter noting the appropriate use of modifier -55 and agree that our utilization assumptions focused on the use of modifier -54. We understand the concerns surrounding the data and want to reiterate that modifier -54 and its use is an iterative step in the process of accurately valuing the global surgical packages.

After consideration of public comments, we are finalizing as proposed. We note that the impact of this estimated reduction in spending associated with this policy is redistributed across the PFS via an

increase in the budget neutrality adjustment to the conversion factor.

We also proposed and are finalizing a new HCPCS code, G0559, to capture the additional practitioner time and resources spent in providing follow up post-operative care by a practitioner who did not perform the surgical procedure. Additionally, we expect the global surgical add-on code, HCPCS code G0559, will be billed during the post-operative period of 90 days following the procedure. We expect that this code will be billed once during the global period when the patient is seen for an office/outpatient (O/O) evaluation and management (E/M) visit that is related to the recent surgical procedure. We believe that this code will be billed by a physician or other practitioner (other than the proceduralist or another practitioner in the same practice) who is seeing the patient for a visit during the post-operative period and did not furnish the surgical procedure. We believe that there is additional time, resources, and complexity involved in the first O/O E/M visit following a procedure that should be captured during the post-operative period and may be billed in certain instances when a transfer of care modifier was not appended to the claim.

We estimated a utilization of approximately 40,000 total claims in the first year for the add-on code, HCPCS code G0559. We calculated this utilization estimate based on claims data for procedure codes with a post-operative diagnosis code and an observed to expected ratio (that is the ratio of visits that are included in the global surgical package compared to the number of visits actually furnished) of less than 25 percent. We anticipate that uptake of HCPCS code G0559 will be low initially, consistent with initial uptake of other new services we have finalized under the PFS. We solicited comment on these assumptions and welcomed input from the public.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter asked about the impact on budget neutrality regarding the new proposed add-on code, HCPCS code G0559. Another commenter was also concerned about the unbalanced impact this would have on budget neutrality, negatively affecting those who have no opportunity to bill for this code.

Response: We appreciate the commenters question on budget neutrality and note that HCPCS code G0559, as finalized, does affect budget neutrality since we are adding a new service with utilization and work RVUs, but that the impact is relatively small.

Comment: A few commenters stated that they anticipated uptake and utilization of the new add-on code will be slow.

Response: We appreciate commenters noting that uptake and utilization of the new add-on code may be slow. We would like to reiterate that improving global surgery payment accuracy is an iterative process and we believe that use of the add-on code, as well as the transfer of care modifiers, are an important first step in that process.

After consideration of public comments, we are finalizing as proposed.

5. Drugs and Biological Products Paid Under Medicare Part B

a. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs To Provide Refunds With Respect to Discarded Amounts

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological or as noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In the CY 2023 and 2024 final rules, we finalized several policies to implement the provision. These policies are described in section III.A.1 of this final rule.

In section III.A.1 of this final rule, we are finalizing additional clarifications for implementing the provision, including: a change in how we will identify certain drugs that are excluded from the definition of refundable drug for those which payment has been made under Part B for fewer than 18 months; how we identify drugs from a single-dose container; the requirement to use the JW modifier if a billing supplier is not administering a drug, but there are discarded amounts during the preparation process before supplying the drug to the patient. We also discuss an application (CMS 10835, OMB 0938–1435) for increased applicable percentage.

In the CY 2024 PFS final rule (88 FR 79485 through 79490), we analyzed JW modifier data from 2021 as if the data represented dates of service on or after the effective date of section 90004 of the Infrastructure Act (that is, January 1, 2023).[911] Similar to our regulatory impact analysis in the CY 2023 PFS final rule (87 FR 70187 through 70188), we used the 2021 JW modifier data to estimate refund amounts as described in section 1847A(h)(3) of the Act. In this final rule, we performed the same analysis on the 2022 JW modifier data. First, we subtracted the percent units discarded by 10 percent (the applicable percentage for most refundable drugs), except for drugs with an increased applicable percentage as described in § 414.940(d). We note that since the data indicating which drugs will have an increased applicable percentage of 26 percent for the unique circumstances of rarely utilized orphan drugs (§ 414.940(d)(5)) will not be available until the data is analyzed for the initial report, we entered 26 percent for orphan drugs furnished to fewer than 100 beneficiaries in CY 2022 based on data on the CMS website.[912] Therefore, the drugs with increased applicable percentage under § 414.940(d)(5) may change each year based on claims data; it is applied in this analysis for estimation purposes only. Then, we multiplied that percentage by the CY 2022 total allowed amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the annual estimate by 4. This analysis remains appropriate for this final rule because we are applying the finalized policies from the CY 2023 and 2024 PFS final rules to the most recent publicly available data for the JW modifier data from CY 2022.

Overall, according to data on the CMS website [913] for Medicare Part B discarded drug units in the 2022 calendar year, Medicare paid over $800 million for discarded amounts of drugs from a single-dose container or single-use package paid under Part B. In that year, there were 55 billing and payment codes with 10 percent or more discarded units based on JW modifier data. Of these, 10 did not meet the definition of refundable single-dose container or single-use package drug in section 1847A(h)(8) of the Act because they are not single source drugs or

[911] *https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units.*

[912] *https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-spending-by-drug.*

[913] *https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units.*

biologicals; 5 were excluded from the definition of refundable single-dose container or single-use package drug (as specified in section 1847A(h)(8)(B) of the Act) because they are identified as radiopharmaceuticals or imaging agents in FDA-approved labeling; and 3 are products referred to as skin substitutes, which were removed because we anticipate making changes to coding and payment policies regarding those products in future rulemaking. After these exclusions, there were 35 billing and payment codes that met the definition of refundable single-dose container or single-use package drug. Of these, 29 codes have discarded units above the relevant finalized applicable percentage, and 6 codes have discarded units that would fall below increased applicable percentages in this final rule.

We estimated refund amounts as described in section 1847A(h)(3) of the Act based on this data by subtracting the percent units discarded by 10 percent (the applicable percentage), except for drugs with higher applicable percentages finalized in the CY 2023 or 2024 final rules. Then, we multiplied the appropriate percentage by the CY 2022 total allowed amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the annual estimate by 4. Based on this data, there will be approximately $98.7 million in refunds due from manufacturers for the calendar year of 2022 ($24.7 million each calendar quarter).

There are several limitations to this analysis that could substantially affect the total quarterly refund. Since new drugs are continually being approved, this estimate does not consider newer drugs that will meet the definition of refundable single-dose container or single-use package drug on or after the effective date of January 1, 2023. Since section 1847A(h)(8)(B)(iii) of the Act excludes drugs approved by FDA on or after November 15, 2021, and for which payment has been made under Part B for fewer than 18 months from this definition, we expect an impact on refund amounts after the 18-month exclusion has ended if the drug otherwise meets the definition. We also note that this estimate is based on CY 2022 data for discarded drug amounts, which, for reasons discussed in the CY 2023 PFS final rule (87 FR 69716), we believe to be an underestimate due to the frequent omission of the JW modifier. Claims edits for both the JW and JZ modifiers will likely increase accurate reporting of discarded drug amounts. Other substantial changes to this estimate may occur if a billing and payment code no longer meets this definition. For example, if a generic version of one of these drugs is marketed, the billing and payment code will become a multiple source drug code and will no longer meet the definition of refundable single-dose container or single-use package drug. Subsequently, the manufacturers will not be responsible for refunds under this provision. There may be changes in the percent discarded units for a given refundable single-dose container or single-use package drug if the manufacturer introduces additional vial sizes or modifies the vial size to reduce the amount discarded. Lastly, since data from the CMS website only includes billing and payment codes on the ASP drug pricing file[914] and implementation of section 90004 of the Infrastructure Act is not restricted to billing and payment codes included on the file, there may be other applicable data that were not assessed as part of this estimate.

b. Impacts Related to the Payment Limit Calculation When Manufacturers Report Negative or Zero Average Sales

In section III.A.2 of this final rule, CMS is finalizing how payment limits will be calculated when manufacturers report negative or zero ASP data for a drug to CMS, beginning with the payment limits included in the January 2025 ASP Drug Pricing file. We are revising § 414.904(i) to reflect CMS' approach to setting a payment limit for circumstances in which negative or zero ASP data is reported by a manufacturer for a drug.

Specifically, we are codifying that in cases where negative or zero ASP data is reported for some, but not all, NDCs of a multiple source drug, we will calculate the payment limit using the positive ASP data reported for the drug, except for the existing carryover policy for multiple source drugs that we will apply when missing data results in a significant change in the ASP payment limit. We are finalizing to move this carryover policy for multiple source drugs within § 414.904(i) to fit within the structure of the new set of payment limit methodologies. We are also codifying that in the case of a multiple source drug for which negative or zero ASP data is reported for all NDCs, we will set the payment limit using the most recently available positive ASP data from a previous quarter until at least one NDC for the drug has positive ASP data for a quarter.

We are codifying that in cases where negative or zero ASP data is reported for some, but not all, NDCs of a single source drug that is not a biosimilar, we will calculate the payment limit using the positive ASP data reported for the drug. We are codifying that for single source drugs that are not biosimilars with all negative or zero ASP data for a given quarter, the payment limit will be, until at least one NDC for the drug has positive manufacturer ASP data for a quarter, the lesser of 106 percent of the volume-weighted average of the most recently available positive manufacturer ASP data for at least one NDC from a previous quarter and 106 percent of the WAC, and we will use 106 percent of the lowest WAC per billing unit if there is more than one WAC per billing unit.

We are also finalizing our proposal to codify that in cases where negative or zero manufacturer's ASP data is reported for some, but not all, NDCs of a biosimilar, we will calculate the payment limit using the positive manufacturer's ASP data reported for the biosimilar. Lastly, we are finalizing a modification to our proposal to codify a methodology for calculating payment limits when the manufacturer reports negative or zero manufacturer's ASP for all NDCs for a biosimilar for a given quarter. We are adopting the approach proposed for circumstances when no other biosimilars have been approved for the same reference product or no other biosimilars with the same reference product report positive manufacturer's ASP data for the given quarter for all circumstances, regardless of whether positive ASP data is reported for other biosimilars that reference the same reference product. In other words, we are finalizing for all biosimilars with all negative or zero manufacturer's ASP data that we will set the payment limit equal to the sum of the volume-weighted average of the most recently available positive manufacturer's ASP data from a previous quarter plus 6 percent (or 8 percent for a qualifying biosimilar biological) of the amount determined under section 1847A(b)(4) of the Act for the reference biological product for the given quarter.

With regard to estimating changes in expenditures for CY 2025, because drugs and biologicals that report negative or zero ASP data vary by quarter and we cannot predict those that will report such data, we used historic claims data to perform an illustrative analysis of how program spending would have changed had the proposed policies been in place in CY 2023. In the analysis, we identified single source and multiple source billing and payment codes associated with negative or zero

[914] *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice.*

ASP data for which we published payment limits based on other applicable pricing data (that is, the manufacturer or published wholesale acquisition cost) in the four calendar quarters of 2023. For each such billing and payment code, we used claims data to identify: (1) the number of allowed billing units in a calendar quarter (that is, the number of billing units of a drug or biological paid for by Medicare); (2) the payment limit per billing unit we applied to that drug or biological under our current policies; and (3) the payment limit per billing unit our finalized policy would apply to the billing and payment code. We then subtracted the product of the allowed billing units for the payment limit under current policy by the product of the allowed billing units and the payment limit under our finalized policy, and the difference between the two is what the difference between what Medicare spending on the billing and payment codes would have been if our proposed payment limit methodologies were used in that calendar quarter of 2023 and what Medicare actually spent. These data and net reductions (or increases) in program spending are illustrated in Table 112.

BILLING CODE 4120–01–C

As illustrated in Table 112, the application of the payment limit calculation approaches will have reduced program spending for all but three drugs that reported negative or zero ASP data in calendar quarters in 2023 and reduced spending by a total of $10,779,535.60 over the year.

We separately analyzed theoretical changes in program spending for one biosimilar product (ZIEXTENZO®, Q5120) that has reported negative ASP data for all NDCs for four consecutive quarters beginning with the second calendar quarter of 2022, and calculated the payment limit under our method for biosimilars with negative or zero ASP data and changes in program spending for the four impacted quarters had our proposed payment approach been applied, as well as payment limits and theoretical changes in program spending under the two alternatives considered under the rule. Under the first alternative, we would include the ASP data and billing units sold of the reference biological for a given quarter along with those of the other biosimilars in the volume-weighted average calculation. Under the second alternative, which we finalized in section III.A.2 of this rule, we will set the payment limit for a given quarter using the biosimilar's most recently available positive ASP data and either 6 percent (or 8 percent for qualifying biosimilar biologicals) of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902) for the given quarter. The calculated payment limits under the proposal and the two alternatives, as well as the estimated reductions in program expenditures, are illustrated in Table 113.

TABLE 113: Theoretical Changes in Medicare Spending on Q5120 for 4Q 2023 through 2Q 2024

Ziextenzo (Q5120)	Allowed Billing Units	Current Policy (WAC+6)	Payment limit: Proposal	Payment limit: First Alternative	Payment limit: Second Alternative (Finalized Policy)
4Q2023	2,359	$346.755	$118.369	$95.267	$29.24
1Q2024	1,299	$346.755	$117.313	$86.053	$27.40
2Q2024	750	$346.755	$149.574	$127.623	$31.86
3Q2024	207	$346.755	$144.007	$119.946	$27.74
			Spending Δ: Proposal	Spending Δ: First Alternative	Spending Δ: Second Alternative (Finalized Policy)
4Q2023			$538,762.136	$593,260.72	$749,026.64
1Q2024			$298,045.708	$338,651.29	$414,835.93
2Q2024			$147,885.610	$164,348.76	$236,168.86
3Q2024			$41,968.943	$46,949.41	$66,036.05
Total Savings			**$984,693.455**	**$1,096,260.775**	**$1,400,031.436**

We note that the spending change estimates reflect preliminary claims data. Providers and suppliers have a 12-month period to submit Medicare Part B claims, including claims for drugs payable under Part B, so a lag exists between the date of service when a drug is administered and when the claim is submitted and adjudicated. An evaluation of July 2010 Medicare Part B claims in the Physician/Supplier-Carrier setting showed that 91.68, 96.84, and 98.32, and 99.13 percent of claims were final at 3, 6, 9, and 12 months, respectively, following the date of service. At 24 and 48 months, 99.83 and 100 percent of the claims, respectively, were considered to be final. Therefore, for the allowed billing units and estimated program expenditure reduction for the first 3 calendar quarters of CY 2024 are significantly lower than we would expect after claims mature for a full year. Over the 4

calendar quarters (4Q2023, 1Q2024, 2Q2024, and 3Q2024), our proposed approach for calculating the payment limit for biosimilars with only negative or zero manufacture's ASP data, our first alternative approach, and our finalized policy would have reduced program expenditures by at least $984,693.455, $1,096,260.775, and $1,400,031.436, respectively.

After assessing the effect of applying the proposed alternative payment limit calculation approaches to recent Medicare FFS claims experience over 2023 and 2024, we estimate an average annual gross Part B effect of $12.2 million dollars in reduced program spending for 2025 and approximately $122 million over 2025 to 2034, as shown in Table 114. Historically we have observed that negative or zero ASP pricing data may occasionally occur for a drug when it is discontinued or substituted away for another product and assume this to occur in the future. Moreover, given the infrequency of negative or zero ASP data, we do not expect in all years that alternative pricing approaches will be necessary or to affect payment amounts for drugs with material levels of utilization. Therefore, for a low estimate we project the policy to have a negligible effect on program spending for the projection window. To illustrate a potential high impact estimate scenario, the affected utilization from 2023 was doubled relative to the observed data. Please note that the actual effect of the policy will be specific to the affected drugs in any given year and considerations that affect their utilization and pricing, therefore actual experience may deviate considerably from these projections.

TABLE 114: Projected Impacts Related to Proposed Payment Limit Methodologies in Circumstance in which Manufacturers Report Negative or Zero Average Sales Price Data

	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	Total
Impact Estimate	-12.2	-12.2	-12.2	-12.2	-12.2	-12.2	-12.2	-12.2	-12.2	-12.2	**-122**
Estimate Range:											
Low Estimate	0	0	0	0	0	0	0	0	0	0	**0**
High Estimate	-24.4	-24.4	-24.4	-24.4	-24.4	-24.4	-24.4	-24.4	-24.4	-24.4	**-244**

c. Impacts Related to the Payment of Radiopharmaceuticals in the Physician Office

In section III.A.3. of this final rule, we are finalizing to codify in regulations at § 414.904(e)(6) that, for radiopharmaceuticals furnished in a setting other than the hospital outpatient department, MACs shall determine payment limits for radiopharmaceuticals based on any methodology used to determine payment limits for radiopharmaceuticals in place on or prior to November 2003. Such methodology may include, but is not limited to, the use of invoice-based pricing. The clarification does not necessarily change the payment methodology in place for a MAC but rather clarifies that any payment methodology that was being used by any MAC prior to the enactment of the MMA can continue to be used by any MAC. Therefore, we believe that this clarification will have no impact on Medicare spending.

d. Impacts Related to Immunosuppressive Therapy

In section III.A.4 of this final rule, we are finalizing modifications to regulations to include orally and enterally administered compounded formulations with active ingredients derived only from FDA-approved drugs where approved labeling includes an indication for preventing or treating the rejection of a transplanted organ or tissue, or for use in conjunction with immunosuppressive drugs to prevent or treat rejection of a transplanted organ or tissue, or that have been determined by a Medicare Administrative Contractor (MAC) to be reasonable and necessary for a specific purpose in immunosuppressive treatment included in the immunosuppressive drug benefit. In addition, we are finalizing two changes regarding supplies of immunosuppressive drugs to align with current standards of practice and reduce barriers to medication adherence: to allow payment of a supply fee for a prescription of a supply of up to 90 days and to allow prescriptions for these immunosuppressive drugs to be refillable.

CMS has limited insight into how many patients who are currently prescribed compounded immunosuppressive drugs will have their immunosuppressive medication paid for under Part B as a result of the finalized changes to the immunosuppressive drug benefit. Medicare Part D claims data for CY 2023 indicates there were 2,662 prescriptions filled that year for compounded immunosuppressive drugs that could have been administered through oral or enteral routes (that is, that would likely be paid under Part B if the immunosuppressive drug benefit revision is finalized as proposed). We estimate that this number of prescriptions correlates to up to 2,000 Part D enrollees that were prescribed compounded immunosuppressive drugs that will be covered under the finalized policy. However, we do not know how many Part B beneficiaries currently have their compounded immunosuppressive drugs paid for by means other than a Part D policy. And finally, and perhaps most importantly, compounded drugs are priced by each A/B and DME MAC and have no estimable payment limit. Thus, we are unable to estimate the cost shift from Part D and other plans to Part B that will result from the finalization of the immunosuppressive drug benefit policies, including allowing payment of supply fees for prescriptions fills for supplies of up to 90 days and for immunosuppressive drugs to be refillable.

e. Impacts Related to Clotting Factors

In section III.A.5. of this final rule, we are finalizing to update § 410.63(b) to clarify existing CMS policy that blood clotting factors must be self-administered to be considered clotting factors for which the furnishing fee

applies. We are also clarifying that therapies that enable the body to produce clotting factor and do not directly integrate into the coagulation cascade are not themselves clotting factors for which the furnishing fee applies. Additionally, we are finalizing to clarify at § 410.63(c) that the furnishing fee is only available to entities that furnish blood clotting factors, unless the costs associated with furnishing the clotting factor are paid though another payment system, including the PFS. That is, we are finalizing to clarify through revisions to § 410.63 that clotting factors (as specified in section 1861(s)(2)(I) of the Act) and those eligible to receive the clotting factor furnishing fee (as specified in section 1842(o)(5) of the Act) are the same subset of products. Accordingly, the clarification will not be adding a furnishing fee to any new products. Therefore, we believe that this clarification will have no impact on Medicare spending.

6. Impacts Related to Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this final rule, we are finalizing with a modification that starting in 2025, RHCs and FQHCs will report the individual CPT and HCPCS that describe care coordination services instead of the single HCPCS code G0511. We are also allowing RHCs and FQHCs to come into compliance by at least until July 1, 2025, to enable those RHCs and FQHCs to be able to update their billing systems. We are also finalizing a policy that permits billing of the add-on codes associated with these services. In addition, beginning in CY 2025, we finalizing the coding and policies regarding Advanced Primary Care Management (APCM) services, as outlined in section II.G of this final rule. In terms of estimated impacts to the Medicare program, we believe that the proposals discussed in section III.B.2 of this final rule will have no impact on Medicare spending.

In section III.B.3. of this final rule, we are finalizing the policy to continue to adopt the definition ''immediate availability'' as including real-time audio and visual interactive telecommunications for the direct supervision of services and supplies furnished incident to a physician's service through December 31, 2025, for RHCs and FQHCs. We also finalizing, on a temporary basis, a policy allowing payment for medical care non-behavioral health visits furnished via telecommunication technology in a manner similar to with the payment mechanisms mandated by statute through December 31, 2024. RHCs and FQHCs will continue to bill for RHC and FQHC services furnished using telecommunication technology services by reporting HCPCS code G2025 on the claim through December 31, 2025. In addition, we are finalizing a policy which extends the delay the in-person visit requirement for mental health services furnished via communication technology by RHCs and FQHCs to beneficiaries in their homes until January 1, 2026. We believe these RHC/FQHC proposals related to telecommunication technology will have a negligible impact on Medicare spending.

In section III.B.4. of this final rule, we are finalizing a payment rate when four or more IOP services per day are provided in the RHC and FQHC setting. We are also finalizing to aligning with the four or more services per day payment rate for hospital outpatient departments, which will be updated annually. In terms of impact, we believe that this proposal will have negligible impact on Medicare spending.

In section III.B.5. of this rulemaking, we are finalizing our proposal to allow RHCs and FQHCs to bill for Part B preventive vaccines and the administration at the time of service. We state that payments for these claims will initially be made according to Part B preventive vaccine payment rates in other settings, but that they will be annually reconciled with the facilities' actual vaccine costs on their cost reports, which is current practice and statutorily mandated. Therefore, we believe that this proposal will have no impact on Medicare spending.

In section III.B.6. of this final rule, we outline our proposal relating to RHC productivity standards. We are finalizing our proposal to remove productivity standards for RHCs effective for cost reporting periods beginning on or after January 1, 2025, and believe that this will have no impact on Medicare spending.

In section III.B.7 of this final rule, we are finalizing the rebasing of the FQHC market basket to reflect a 2022-base year. The CY 2025 FQHC market basket update is 0.1 percentage point lower using the 2022-based FQHC market basket (3.4 percent) compared to the 2017-based FQHC market basket (3.5 percent). Therefore, the economic impact of finalizing the FQHC market basket rebasing for CY 2025 is approximately $1 million and we consider this impact to be negligible. We determined this amount by applying a factor of -0.001 to the FQHC baseline, which was approximately $1,000 million in calendar year 2024. Over the next 10 years the rebasing methodology results in the same estimated market basket percentage increase for every year except CY 2034 when it is expected to be 0.1 percentage point lower compared to the 2017-based FQHC market basket update. Therefore, the estimated impact of the rebasing of the FQHC market basket over the next 10 years is negligible.

In section III.B.8. of this final rule, we clarified that when RHCs and FQHCs furnish dental services that align with the inextricably linked policies and operational requirements in the physician setting, we will consider those services to be a qualifying visit and the RHC will be paid at the RHC AIR and the FQHC will be paid under the FQHC PPS. We believe this clarification related to dental services furnished in RHCs and FQHCs will have a negligible impact on Medicare spending. Even though this policy expands payment under Medicare Part B, it will only cover dental services inextricably linked to specific medical services as described in section II.J. of this final rule.

7. Changes in the RHC and FQHC CfCs: Provision of Services (§ 491.9(a)(3) and (c)(2)(ii) and (vi))

Provision of Services (§ 491.9)

At § 491.9(a), we proposed to explicitly require RHCs and FQHCs to provide primary care services and to codify the statutory requirement that RHCs cannot be a rehabilitation agency or a facility primarily for the care and treatment of mental diseases. After consideration of public comments, we are finalizing our proposal to require RHCs to provide primary care services. However, we are not finalizing this requirement for FQHCs. We are also withdrawing the proposed requirement at § 491.9(a)(2)(ii) to codify the statutory requirement that RHCs cannot be a rehabilitation agency or a facility primarily for the care and treatment of mental diseases. We believe that finalizing the proposal to require RHCs to provide primary care services supports our goal of clarifying the services that RHCs may provide and safeguarding access to primary care services while avoiding unintended consequences that may create barriers to accessing care. We believe the requirement at § 491.9(a)(3) (finalized in this rule) to require RHCs to provide primary care services will result in real, but difficult to estimate, long-term benefits to patients receiving services at RHCs, as well as economic benefits to the clinic. Regarding the estimated impacts on the Medicare program, the

provisions discussed in section III.C.2 of this final rule will have no impact on Medicare spending.

This change will provide RHCs with additional flexibility to provide outpatient specialty services on-site or hire additional providers with specialized expertise to meet the needs of their community, including specialized areas of internal medicine, pediatrics, geriatrics, obstetrics and gynecology, dermatology, cardiology, neurology, endocrinology, and ear, nose and throat. As a result, RHCs will be able to improve access to care by serving more patients in communities served by RHCs, including rural communities, and not requiring patients to travel longer distances to receive specialty services. Patients could have access to specialists within their own communities, improving overall access for Medicare beneficiaries. Moreover, CMS will no longer determine or enforce the standard of RHCs ''being primarily engaged in furnishing primary care services.'' [915] which has been enforced via the sub-regulatory guidance contained in the *State Operations Manual Appendix G—Guidance for Surveyors: Rural Health Clinics (RHCs).* Resources that clinics are currently using to evaluate if they are meeting this requirement could be devoted to other administrative tasks. Therefore, we believe that there will be no burden imposed on RHCs related to this proposal.

We also proposed to remove hemoglobin and hematocrit (H&H) lab tests from the list of specific tests RHCs must provide, as well as update the language regarding the primary culturing requirement to reflect current standards of practice at § 491.9(c)(2)(ii) and newly designated (vi), respectively. We are finalizing these provisions as proposed. Additionally, based on a comment citing that 82 percent of RHCs indicate that the lab requirement for the ''Examination of stool specimens for occult blood'' at § 491.9(c)(2)(iv) is no longer frequently ordered or considered the best clinical practice. Therefore, we are finalizing the removal of this requirement from the list of laboratory services RHCs must provide.

As stated in section III.C.2.b of this final rule, RHCs report that the H&H lab requirement and the examination of stool specimens for occult blood (these specific tests) are particularly burdensome and costly for clinics due to purchasing and maintaining the equipment that is seldom or never used.

This change will reduce the overall burden for RHCs by reducing the number of diagnostic tests they must provide. RHCs will no longer be required to purchase or maintain H&H lab tests or stool examination equipment or supplies, freeing up resources for other essential services. H&H lab tests are most often ordered as part of a larger panel of labs that is not provided at the RHC. When this is the case, patients will receive the H&H as part of that larger panel at an outside lab that offers the larger panel of labs. These patients may be inconvenienced by having to travel to another laboratory, but this limits the number of specimens they must provide for the laboratory tests, reducing the number of times a patient's veins must be accessed for blood draws. RHCs report that when laboratory tests are ordered that are not provided by the RHC, such as a comprehensive blood count (CBC), their patients are often sent to the nearest hospital that would have a full-service laboratory available to perform the test. A CBC test looks at a patient's overall health and can detect a wide range of conditions that the hemoglobin and hematocrit tests cannot. This ensures comprehensive patient care and may result in a decreased need for follow-up testing and decreased patient turnaround time.[916]

Examination of stool specimens for occult blood, frequently referred to as fecal occult blood tests (FOBTs), are used to detect gastrointestinal bleeding as an indicator for colorectal cancer. FOBTs that are performed in the outpatient setting are typically self-administered at home and submitted to a laboratory.[917] The national guidelines, including those of the US Preventive Services Task Force and American Cancer Society, explicitly specify that colorectal cancer (CRC) screening using FOBT should be done at home.[918] [919] The patient may be inconvenienced by having to mail the test themselves, but at-home tests provide the patient the ability to collect more samples, which may limit the chances of false test results.[920]

Currently, there are approximately 5,462 Medicare-certified RHCs. Applying the most recent data from 2021, 66 percent (3,605) of RHCs are designated as ''provider-based,'' which are owned and operated as an integral part of a hospital, nursing home, or home health agency. The remaining 34 percent (1,857) of RHCs are ''independent clinics'' and, though uncommon, may be owned and/or operated by a healthcare system. Therefore, we assume that, at most, half of the independent clinics, for a total of 929 RHCs, will continue to provide H&H tests because it is less likely that they are a part of a healthcare system. As a result, we assume that 4,534 (3,605 provider-based RHCs + 929 independent clinics) RHCs will continue to refer patients to a fully certified laboratory rather than directly provide the H&H test or examine stool specimens for occult blood on site. Because the regulatory requirements at § 491.9 states that RHCs must provide these tests on-site, RHCs must have and maintain the appropriate equipment to perform these tests, even if the equipment is not utilized. There are variations in the H&H testing equipment RHCs may use; however, we note that the average cost of an H&H meter or analyzer costs approximately $1,200 for the system and is replaced on average every 3 years. The systems also have an approximate $100 annual maintenance fee. We estimate that over the next 3 years, 4,534 RHCs will each save approximately $1,500. This would result in a total annual savings of $2,267,000 ((4,534 RHCs that typically refer patients to a fully certified laboratory × $1,500)/3). After 3 years, the RHC program will save a total of $6,801,000 (4,534 × $1,500).

Likewise, there are various FOBTs used to screen for colorectal cancer. One study reviewed a hospital's medical records over a 4-year period and found

that the laboratory cost for an FOBT is approximately $5 per test.[921] We have received the following Medicare statistical information from CY2021—CY2023 Medicare claims. The annual average number of Medicare beneficiaries who received a colorectal cancer screening using FOBT from an RHC is 264. Therefore, the annual savings removing the ''Examination of stool specimens for occult blood'' requirement will save RHCs $1,320 (264 tests × $5).

8. Clinical Laboratory Fee Schedule

In section III.D. of this final rule, we outline statutory revisions to the data reporting period and phase-in of payment reductions under the CLFS. In accordance with section 502 of the FCAOEA, 2024, we proposed certain conforming changes to the data reporting and payment requirements in our regulations at 42 CFR part 414, subpart G. Specifically, for CDLTs that are not ADLTs, we proposed to update certain definitions and revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January 2025. Section 502(b) of the FCAOEA, 2024 delayed the next data reporting period under the CLFS for CDLTs that are not ADLTs by 1 year, that is, it required the next data reporting period for these tests to take place during the period of January 1, 2025, through March 31, 2025. Subsequently, the next private payor rate-based CLFS update for these tests would be effective January 1, 2026, instead of January 1, 2025. In addition, we proposed conforming changes to our requirements for the phase-in of payment reductions to reflect section 502(a) of the FCAOEA, 2024. Specifically, we proposed to revise § 414.507(d) to indicate that for CY 2024, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2023, and for CYs 2025 through 2027, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

However, CAEA, 2025 (Pub. L. 118–83) was passed on September 26, 2024, after the publication of the proposed rule and close of the comment period. Section 221 of that law delayed data reporting requirements for CDLTs that are not ADLTs, as well as the phase-in of payment reductions under the CLFS from private payor rate implementation under section 1834A of the Act. Specifically, as amended by section 221(b), section 1834A(1)(B) of the Act now provides that, in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that: (i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2025; (ii) reporting is required during the period beginning January 1, 2026, and ending March 31, 2026; and (iii) reporting is required every 3 years after the period described in subparagraph (ii). Essentially, data reporting will now be required during the period of January 1, 2026, through March 31, 2026, instead of January 1, 2025, through March 31, 2025. The 3-year data reporting cycle for CDLTs that are not ADLTs will resume after that data reporting period.

Section 221 of the CAEA, 2025 does not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, the next data reporting period for CDLTs that are not ADLTs (January 1, 2026, through March 31, 2026) will continue to be based on the data collection period of January 1, 2019, through June 30, 2019.

Section 221(a) of the CAEA, 2025 further amends the provisions in section 1834A(b)(3) of the Act pertaining to the phase-in of payment reductions under the CLFS. First, it extends the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2028. It further amends section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2025 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2025 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2024. Finally, section 221(a) further amends section 1834A(b)(3)(B)(iii) of the Act to specify that the applicable percent of 15 percent will apply for CYs 2026 through 2028.We are finalizing the self-implementing conforming changes to the data reporting and phase-in of payment reductions at 42 CFR part 414, subpart G in accordance with section 221 of the CAEA, 2025.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates for the CLFS payment rates, have changed since the first data collection period (January 1, 2016, through June 30, 2016) and data reporting period (January 1, 2017, through March 31, 2017). In addition, as outlined in section III.D. of this final rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS–1450 14x Type of Bill. As such, the FCAOEA, 2024 and CAEA, 2025 amendments to the data reporting period will delay using updated private payor rate data to set revised CLFS payment rates for CDLTs that are not ADLTs.

Due to unforeseen changes in private payor rates due to shifts in market-based pricing for laboratory tests and the unpredictable nature of test volumes and their impact on calculating updated CLFS payment rates based on the weighted median of private payor rates, it is uncertain whether the delay in data reporting will result in a measurable budgetary impact. In other words, to assess the impact of delayed reporting and subsequent implementation of updated CLFS rates, we will need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the impact of the delays in data reporting after collecting actual updated applicable information from applicable laboratories and calculating the updated CLFS rates.

Regarding the conforming changes to our requirements for the phase-in of payment reductions, we note that for CYs 2026 through 2028, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. Based on data reported in the 2017 data collection period, we estimated 14.8 percent (191) of tests on the CLFS may be subject to the full 15 percent phase-in reduction in CY 2026.

9. Effects of Proposals Being Finalized Relating to the Medicare Diabetes Prevention Program Expanded Model

a. Effects on Beneficiaries

We proposed to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) align MDPP terminology and definitions with the proposed 2024 Centers for Disease Control and Prevention (CDC) Diabetes Prevention Recognition Program (DPRP) Standard [922] definitions

[921] Gupta, A., Tang, Z., & Agrawal, D. (2018). Eliminating In-Hospital Fecal Occult Blood Testing: Our Experience with Disinvestment. *The American journal of medicine, 131*(7), 760–763. *https://doi.org/10.1016/j.amjmed.2018.03.002.*

[922] Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. *https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures.*

for ''in-person with a distance learning component,'' ''combination with an online component,'' and ''online''; (2) remove the MDPP bridge payment; (3) provide a more effective option for a beneficiary to self-report their weight in an MDPP distance learning session, by submitting 2 photos; (4) facilitate Medicare Administrative Contractors (MACs) in processing claims for a MDPP make-up session held on the same day as a regularly scheduled session by requiring use of an existing HCPCS modifier; and (5) align current rule language with previous rulemaking.

MDPP is a non-pharmacological behavioral intervention consisting of up to 22 sessions using a CDC approved National Diabetes Prevention Program (National DPP) curriculum.[923] CDC administers a national quality assurance program recognizing eligible organizations that furnish the National DPP through its evidence based DPRP Standards, which are updated every three years. The 2024 CDC DPRP Standards replace the 2021 CDC DPRP Standards in June 2024.[924]

The Calendar Year (CY) 2021 PFS final rule allowed virtual delivery of MDPP during the COVID–19 Public Health Emergency (PHE) (85 FR 84830). Improvements to MDPP in the Calendar Year 2024 final rule included a simplified payment structure to allow for fee-for-service (FFS) payments for beneficiary attendance, while retaining the performance-based payments for diabetes risk reduction (that is, weight loss) (88 FR 79241). This policy also extended certain PHE flexibilities including the option to deliver some or all MDPP sessions via distance learning, until December 31, 2027 (88 FR 79241). Another PHE flexibility extended through December 31, 2027, at 42 CFR 410.79(e)(3)(iii), is for MDPP suppliers to obtain weight measurements for beneficiaries using one of the following options: (1) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or (2) via self-reported weight measurements from the at-home digital scale of the MDPP beneficiary.

The 2024 CDC DPRP Standards were proposed after the CY 2024 PFS was finalized. To align with 2024 CDC DPRP Standards, we proposed to update the MDPP definition for ''online'' delivery to align with the proposed 2024 CDC DPRP definition. We also proposed to add terms and definitions for CDC's new modalities including ''in-person with a distance learning component'' and ''combination with an online component'' and to remove the existing ''combination'' term and definition. Lastly, we specified that MDPP make-up sessions must be provided in-person or via distance learning delivery, as required by the CY 2024 PFS final rule.[4]

Furthermore, the MDPP bridge payment (G9880), which is a payment made to the subsequent supplier for the first session when a beneficiary switches MDPP suppliers, is no longer necessary in MDPP's CY 2024 FFS payment structure and may increase risk for fraud, waste, or abuse. We proposed to remove the bridge payment from the MDPP CY 2025 Fee Schedule. In addition, we have identified a more effective option for a beneficiary to self-report their weight in an MDPP distance learning session. We have also identified the need to require suppliers to use Current Procedural Terminology (CPT) Modifier 76 to allow Medicare Administrative Contractors (MACs) to identify a claim for an MDPP make-up session held on the same day as a regularly scheduled session. Finally, we proposed to align current rule language with previous rulemaking pertaining to MDPP terminology, requirements, and payment structure.

All the changes finalized for MDPP in CY 2025 are conforming or administrative and expected to have a modest impact on beneficiaries' access to MDPP services. Aligning with 2024 CDC DPRP Standards for MDPP delivery modes may help expand beneficiary access by streamlining data submission for MDPP suppliers and increasing the number of MDPP eligible organizations that enroll in Medicare as MDPP suppliers. Additionally, allowing for MDPP make-up sessions to be scheduled on the same day as regularly scheduled sessions will increase flexibility for both MDPP suppliers and beneficiaries and may help expand access for beneficiaries with transportation and other scheduling issues that prevent scheduling sessions more than one day a week or month. Increased flexibility in scheduling MDPP sessions may help to address a lack of MDPP suppliers in certain communities and challenges related to beneficiary logistics concerning course attendance.

Additionally, we proposed to provide a more effective option to beneficiaries to self-report weight for a MDPP distance learning session, by allowing beneficiaries to submit two (2) photos to capture both the beneficiary weight on the digital scale and the beneficiary visible in their home. Current MDPP supplier standards at § 424.205 require beneficiary weight to be reported at each MDPP session attended. This change will help to address concerns voiced by MDPP suppliers who have reported that many of their beneficiaries are unable to take a picture while standing on their home scales due to risk of injury and physical health limitations. This new flexibility may promote more consistent collection of weight for MDPP sessions.

Lastly, we do not expect removing the MDPP bridge payment to have an impact on beneficiary access. This payment for the first session attended with a new supplier when a beneficiary switches MDPP suppliers is not necessary in MDPP's CY 2024 FFS payment structure that includes payment for every session attended and historically has been submitted by few MDPP suppliers.

Overall, these modifications address MDPP supplier and beneficiary needs based upon available monitoring and evaluation data received to date, feedback from Medicare Advantage plans and existing MDPP suppliers, and feedback from beneficiary focus groups. The changes are also in response to comments from interested parties made through public comments in response to prior rulemaking.

b. Effects on the Market

We anticipate that the conforming and administrative changes proposed in this rulemaking are likely to result in modest increases of MDPP suppliers and beneficiary access to the set of MDPP services. We anticipate that this will assist in contributing to a reduction of the incidence of diabetes among eligible Medicare beneficiaries. As of April 2024, there are approximately 810 in-person organizations nationally that are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes DPRP status. However, only 36 percent of these eligible in-person organizations are participating in MDPP.[925] Aligning with CDC DPRP delivery modes, particularly adding the new ''in-person with a distance learning component'' mode, is expected to help increase recruitment of new DPRP organization as MDPP suppliers, who currently would need to obtain both in-person and distance learning CDC DPRP recognition to deliver sessions via both modalities. Furthermore, only about one-third of MDPP suppliers have

[923] *https://www.cdc.gov/diabetes/prevention/resources/curriculum.html.*

[924] Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. *https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures.*

[925] Centers for Disease Control and Prevention. Diabetes Prevention Recognition Program Application. Registry of All Recognized Organizations. *https://dprp.cdc.gov/Registry.*

submitted MDPP-related claims.[926] Our proposed change to remove the MDPP bridge payment will help to further simplify the payment structure, which is expected to have a positive impact on supplier claim submissions. While requiring MDPP suppliers to add a modifier to indicate that a claim is for a MDPP same day make-up session does add complexity because we proposed to use an existing CPT modifier in use and recognized by the MACs, we expect this addition to require minimal changes in claim processing systems. Additionally, this modifier is only to be used for same day make-up sessions, which are only allowed once per week, and, while an important tool to increase access for beneficiaries with barriers to participation in MDPP, are not expected to be used for most session attendance claims. In summary, we believe that having more flexibility in how the set of MDPP services are delivered will make MDPP more accessible to beneficiaries, particularly those who live in rural areas or in communities with gaps in MDPP supplier locations.

c. Payment for MDPP Services

Regulations at § 414.84 specify that MDPP suppliers may be eligible to receive payments for furnishing MDPP services and meeting performance targets related to beneficiary weight loss and attendance. We anticipate that the change to the MDPP payment structure will have minimal impact on total payment for MDPP services. A smaller proportion of MDPP suppliers, only 9.8 percent since the start of the program through April 2024, have submitted claims for the MDPP bridge payment, with an even smaller proportion of 2.7 percent having received payment for a bridge payment claim. According to CDC DPRP data, less than 1 percent of MDPP sessions are same day make-up sessions.[927] The total maximum payment per beneficiary for MDPP of $768 will remain unchanged by our finalized proposals.

d. Effects on the Medicare Program

(a) Estimated 10-Year Impact of MDPP

The changes this year for implementation in the CY PFS 2025 are expected to have no impact on Medicare spending.

[926] Unpublished MDPP monitoring data. 2023.

[927] Diabetes Prevention Recognition Program. Unpublished data. April 2024.

10. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As outlined in section III.F.2 of this final rule, we are finalizing to permanently allow periodic assessments to be furnished via audio-only communication when two-way audio-video communications technology is not available to the beneficiary, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and all other applicable requirements are met. We also are finalizing to allow the OTP intake add-on code to be furnished via two-way audio-video communications technology when billed for the initiation of treatment with methadone to the extent that the use of audio-video telecommunications technology to initiate treatment with methadone is authorized by DEA and SAMHSA at the time the service is furnished, an OTP determines that an adequate evaluation of the patient can be accomplished via an audio-visual telehealth platform, and all other applicable requirements are met. We believe the Part B cost impact of these flexibilities for the use of telecommunications will be minimal because we do not expect that these flexibilities will significantly increase the frequency with which medically necessary intake activities and periodic assessments are furnished, and since the payment rate for these services will be the same regardless of if an OTP furnishes these services via telecommunications or in-person.

In section III.F.3 of this final rule, CMS finalized to update the payment rate for both intake activities (HCPCS code G2076) and periodic assessments (HCPCS code G2076) by adding in the value of the non-facility rate for SDOH risk assessments described by HCPCS code G0136 (*Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment, 5–15 minutes, not more often than every 6 months*). We believe updating the payment amount for intake activities with an addition of HCPCS code G0136 will serve as a reasonable proxy to reflect the value and resources required by new SAMHSA standards for initial assessment service activities at § 8.12(f)(4)(i) that OTPs are required to provide, including an assessment to identify a patient's unmet HRSNs or the need for harm reduction intervention and recovery support services that are critical to the treatment of an OUD. Similarly, an update in the payment amount for periodic assessments will support OTPs in continuing to assess any changes in unmet HRSN, or harm reduction intervention and recovery support services needs throughout the duration of MOUD treatment. Currently, the CY 2024 payment rate for the intake add-on code (G2076) is $201.73 and adding the value of a crosswalk to the CY 2024 non-facility rate of $18.97 will result in a payment rate of approximately $220.70. The CY 2024 payment rate for periodic assessments (G2077) is $123.96 and adding the value of $18.97 will result in a payment rate of approximately of $142.93. These payment rates will continue to be updated annually by the percentage increase in the Medicare Economic Index (MEI) and the Geographic Adjustment Factor (GAF) as codified in § 410.67(d)(4)(ii) through (iii). According to historical claims data for intake activities (HCPCS code G2076) and periodic assessments (HCPCS code G2077) furnished by OTPs from the beginning of CY 2020 through the end of CY 2023, the number of claims for intake activities and periodic assessments are low. Due to low utilization of the intake activities and periodic assessments add-on codes, CMS estimates that an increase in the add-on payment amount to HCPCS codes G2076 and G2077 by $18.97 per claim will still result in a negligible cost to the Medicare program. Furthermore, we are finalizing new add-on codes for coordinated care and referral services (G0534), patient navigational services (G0535), and peer recovery support services (G0536). Coordinated care and/or referral services are based on a crosswalk to the CY 2024 PFS non-facility rate of the community health integration base HCPCS code G0019 and divided by two; patient navigational services are based on a crosswalk to the CY 2024 PFS non-facility rate of the principal illness navigation base HCPCS code G0023 and divided by two; and peer recovery support services are based on a crosswalk to the CY 2024 PFS non-facility rate of the principal illness navigation—peer support base code HCPCS code G0140 divided by two. All these codes are based on at least 30 minutes of services provided and will be updated annually by the percentage increase in the Medicare Economic Index (MEI) and the Geographic Adjustment Factor (GAF) as codified in § 410.67(d)(4)(ii) through (iii). Since there is not yet sufficient utilization data available on the frequency of which coordinated care and referral services (HCPCS codes G0534), patient navigational services (HCPCS codes G0535), and peer recovery support services (HCPCS codes G0536) are

furnished by an OTP, and since CMS is still collecting utilization data on the new CHI, PIN, and PIN–PS codes established in CY 2024 which HCPCS codes G0534, G0535, and G0536 are based on, we cannot estimate the financial impact of these new codes on the Medicare program.

Lastly, in section III.F.4 of this final rule, we finalized to establish payment for new opioid agonist and antagonist medications that were recently approved by the FDA. We finalized to include a new add-on code to the bundled payment for a new opioid overdose reversal product, nalmefene hydrochloride nasal spray product (Opvee®), which includes one carton of two, 2.7 mg nasal sprays of nalmefene. We will price the drug component of this add-on code for nalmefene according to the ASP payment methodology set forth in section 1847A, except that the payment amount shall be ASP+0. The non-drug component of this add-on code will also include overdose education furnished in conjunction with nalmefene, and it will be updated annually by the percentage increase in the MEI and GAFs consistent with other opioid antagonist medications in § 410.67(d)(4)(ii) through (iii). We are limiting Medicare payment to OTPs for nalmefene to one add-on code every 30 days; however, we will allow exceptions to this limit in the case where the beneficiary overdoses and uses the initial supply of nalmefene dispensed by the OTP, to the extent that it is medically reasonable and necessary to furnish additional doses of nalmefene. We also finalized payment for the weekly formulation of the new extended-release injectable buprenorphine product Brixadi®, via a new weekly bundled payment code that includes a drug and non-drug component. We finalized to price the drug component consistent with our payment methodology for implantable and injectable medications codified § 410.67(d)(2)(i)(A), and we finalized to limit the payment amount to 100-percent of ASP and to use a crosswalk to the weekly Brixadi® formulation described by HCPCS code J0577 (*Injection, buprenorphine extended release (brixadi), less than or equal to 7 days of therapy*). The non-drug component (individual and group therapy, SUD counseling, toxicology testing) will also include administration of an injection based on CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*); updated annually by the percentage increase in MEI and GAFs. CMS further finalized to update the drug-component of the existing HCPCS code (G2069) for monthly injectable buprenorphine to include the monthly formulation of Brixadi® based on a crosswalk to HCPCS code J0578 *(Injection, buprenorphine extended release (brixadi), greater than 7 days and up to 28 days of therapy*). We are finalizing to continue using the existing payment methodology for the non-drug component of G2069, but we will instead calculate the drug component by volume-weighting the ASP for all the NDCs crosswalked to HCPCS codes for monthly Brixadi® and Sublocade®. Since the payment methodology for the new add-on code for Opvee® (G0532), the weekly bundled payment for weekly Brixadi® (G0533), and the update to the monthly bundled payment for injectable buprenorphine (HCPCS code G2069) is based on comparable and existing drugs billed under the Medicare OTP benefit, and assuming an OTP may provide these new drugs to a Medicare beneficiary in lieu of the comparable and existing drugs under the Medicare OTP benefit (e.g, Opvee® instead of Narcan® or Kloxxado®, or the weekly or monthly formulation of Brixadi® instead of Sublocade®), then CMS estimates the financial impacts of these new drugs would be negligible.

11. Medicare Shared Savings Program

a. General Impacts

As of January 1, 2024, 10.8 million Medicare beneficiaries receive care from a health care provider in one of the 480 ACOs participating in the Shared Savings Program, one of the largest value-based care programs in the country. The modifications to Shared Savings Program policies we are finalizing with this final rule advance Medicare's value-based care strategy of growth, alignment, and equity, with many provisions supporting more than one of these goals. The policies in this final rule are designed, in part, to further improve the quality of care furnished by ACOs by revising the quality performance standard and reporting requirements, broaden program participation, particularly by ACOs in and providing care to underserved communities, and promote the continued integrity and fairness of Shared Savings Program financial calculations.

As described in section III.G.7.b of this final rule, under the benchmarking methodology for agreement periods beginning on January 1, 2024, and in subsequent years, established in earlier rulemaking, CMS calculates two adjustments in establishing the historical benchmark, a regional adjustment (refer to § 425.656) and a prior savings adjustment (refer to § 425.658). Under this approach, we determine which adjustment is applied to the benchmark, either the regional adjustment, prior savings adjustment, or no adjustment (refer to § 425.652(a)(8) and (c)). One of the changes to the Shared Savings Program financial methodology finalized with the CY 2024 PFS final rule (see 88 FR 79185 through 79195, see also 88 FR 79494 and 79495) was to mitigate the impact of the negative regional adjustment on the benchmark for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years. We explained our belief that this change would further encourage continued participation among high-cost ACOs that serve medically complex beneficiaries by eliminating the potential of a lower benchmark due to an overall negative regional adjustment, and may also encourage ACOs serving such populations that may have otherwise been discouraged from participating in the Shared Savings Program by the prospect of a lower benchmark to join (see 88 FR 79188, see also 88 FR 79494 and 79495). Under this approach, an ACO with an overall negative regional adjustment that was not eligible for a prior savings adjustment would ultimately receive no adjustment, upward or downward, to its benchmark (see § 425.652(a)(8)(iii) and see also 88 FR 79190). The Health Equity Benchmark Adjustment (HEBA) we are finalizing with modifications, described in section III.G.7.b of this final rule, will add a third avenue for ACOs to receive a positive adjustment to their historical benchmark, and will be most impactful for new ACOs serving medically complex, high-cost populations in underserved communities.

We combined an analysis of the impact of the HEBA on currently participating ACOs with the projected impact of HEBA on new ACOs not yet participating in the Shared Savings Program, to generate an overall impact estimate of the HEBA. The HEBA would likely have a limited impact on currently participating ACOs. Only about 34 percent of the 456 ACOs participating in performance year 2023 were estimated to have a proportion of assigned beneficiaries who were enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid equal to or greater than 15 percent, which is the new HEBA eligibility threshold that is being finalized in this final rule. The 15 percent threshold will have to be met

for an ACO to be eligible for the HEBA under the final policies (as discussed in section III.G.7.b. of this final rule, and specified in § 425.662(b)(3) as finalized by this final rule). Of the 34 percent of ACOs participating in performance year 2023 that were estimated to have a proportion of assigned beneficiaries who were enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid equal to or greater than 15 percent, only about one-in-five of such ACOs were estimated to not already be eligible for a higher benchmark adjustment from either a positive regional adjustment or a prior savings adjustment. That is, about 7 percent of ACOs participating in performance year 2023 were estimated to benefit from the HEBA policy at rebasing (with a median effect of about a 1 percent increase to the benchmark), because an ACO would receive the HEBA only if the HEBA were higher than the existing ''higher of'' adjustment method (see discussion in section III.G.7.b of this final rule, and see § 425.652(a)(8)(ii)(B)(*1*) as revised by this final rule, and § 425.662(c) as added by this final rule). This represents roughly a 60 percent increase in the number of existing ACOs estimated to benefit from the HEBA under an eligibility threshold of 15 percent, compared to the 20 percent threshold originally proposed in the CY 2025 PFS proposed rule. Although the HEBA is projected to increase program spending for existing ACOs by about $140 million over 10 years, an overall net savings is projected after also including the impact estimated from new ACOs, as detailed in the following discussion.

The number of ACOs that would be incentivized to participate in the Shared Savings Program by the HEBA is uncertain. Changes to the Shared Savings Program finalized in the CY 2023 and CY 2024 PFS final rules were already projected to increase program participation among ACOs with higher spending and provide more opportunities for improving care and reducing spending (see 87 FR 70191 through 70196, and 88 FR 79494 and 79495). Therefore, we can reasonably estimate that at least some new ACOs may join and succeed in the Shared Savings Program regardless of the benefit afforded to them by the HEBA. Savings to the Shared Savings Program are expected to grow to the extent that the HEBA were to cause new, high-spending ACOs to participate—that is, ACOs whose assigned beneficiary populations have risk-adjusted spending that is significantly higher than corresponding regional benchmark spending at baseline. We project in the 2034 performance year, the HEBA would likely increase program participation by 25 additional ACOs (but our estimates of increased program participation range from 0 to 100 additional ACOs), as compared to program participation today, and on net increase Federal Medicare program savings by $400 million over the 2025–2034 period because of this increased program participation.

The estimated impact of the HEBA, accounting for both its impact on currently participating ACOs that are assumed to renew their participation in the Shared Savings Program over the next 5 years and new ACOs that are expected to participate in the program for the first time over the next 10 years, is shown in Table 115. Mean Shared Savings Program spending is expected to be reduced by $260 million over the next 10 years as a result of the HEBA. However, uncertainty regarding the number of high spending ACOs that will participate in light of a HEBA, combined with uncertainty regarding high spending ACOs' savings potential, results in a wide range of potential impacts in total over that 10 year period, from $2.2 billion in net savings at the 10th percentile (that is, only 10 percent of stochastic trials reduced Federal spending by a greater magnitude than $2.2 billion) to $1.2 billion in net spending at the 90th percentile.

TABLE 115: Projected Impact of Health Equity Benchmark Adjustment ($ Millions; Negative Values Represent Savings to the Program)

	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	Total
Impact Estimate	20	30	30	20	10	-20	-60	-80	-100	-110	**-260**
Estimate Range:											
Low Estimate (10th Percentile)	-10	-20	-40	-80	-140	-220	-310	-390	-450	-500	**-2,160**
High Estimate (90th Percentile)	50	70	90	120	140	140	140	150	160	180	**1,240**

For the calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations, upon reopening a payment determination pursuant to § 425.315(a) (described in section III.G.7.c of this final rule), some ACOs will selectively elect to request reopening for a prior performance year. As a result, we project at least some degree of higher program spending for increased shared savings payments (or reduced loss recoupments) in cases for which CMS decides to reopen the payment determination and issue a revised initial determination to account for the impact of improper payments. However, because reopening will not be limited to adjusting performance year and benchmark year expenditures for ACO assigned beneficiaries but will also impact other potentially offsetting calculations including regional and national expenditure trends used to update ACO benchmarks, and because, in addition to the reopening, CMS will also adjust the historical benchmark calculated for a potential subsequent

agreement period, the frequency of requests, and the net impact of any given request, are likely to be limited. The reopening policy is projected to increase program spending by $60 million in total over the 2025 to 2034 period, ranging from $30 million at the 10th percentile to $90 million at the 90th percentile, as shown in Table 116.

TABLE 116: Projected Impact for Modifications to Specify the Calculation Methodology to Account for Improper Payments in Recalculating Expenditures and Payment Amounts used in Financial Calculations, Upon Reopening a Payment Determination ($ Millions; Negative Values Represent Savings to the Program)

	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	Total
Impact Estimate	10	0	0	0	0	10	10	10	10	10	**60**
Estimate Range:											
Low Estimate (10th Percentile)											**30**
High Estimate (90th Percentile)											**90**

Note: Projections at the 10th and 90th percentile are shown in aggregate but not at the annual level because scenarios contributing to the high estimate projection generally involve elevated spending in a limited number of years rather than consistently higher spending across the projection period.

The methodology for excluding payment amounts for HCPCS and CPT codes exhibiting SAHS billing activity, as described in section III.G.7.d of this final rule, is anticipated to be utilized only in rare and extreme cases where a number of criteria are satisfied, including that the level of billing represents a significant claims increase representing a deviation from historical utilization trends that is unexpected and not clearly attributable to reasonably explained changes in policy or the supply or demand for covered items or services during a limited time period. Even in cases where CMS may apply the adjustment to Shared Savings Program calculations for SAHS billing activity, for CY 2024 or subsequent calendar years, there is no expectation that it will necessarily increase or decrease overall shared savings or shared losses because the policy will be applied systematically across all ACOs in the Shared Savings Program in a method that adjusts both performance year and benchmark year expenditures for ACO assigned beneficiaries and regional and national expenditures used in benchmark calculations. However, this policy would have the benefit of reducing potential costs generated by selective reopening requests under the reopening policy, because it would prevent extreme cases of SAHS billing activity from injecting variation in the distribution of ACO shared savings and loss calculations which could lead to an elevated number of selective reopening requests from ACOs predicting that reopening would improve their financial outcome. For this reason, without the policy to adjust Shared Savings Program calculations for SAHS billing activity during CY 2024 or subsequent calendar years, the estimated impact shown in Table 116 would have included between $100 to $300 million in additional projected spending from selective reopening requests.

We estimate that there would be no additional program expenditures stemming from the implementation of the prepaid shared savings payment option, which will provide eligible ACOs with additional cash flow to encourage their investment in activities that could potentially reduce costs for the Medicare program and beneficiaries and improve the quality of care furnished to their assigned beneficiaries. Any risk of higher program spending as a result of finalization of our prepaid shared savings policy would be fully mitigated by the fact that eligibility will be limited to ACOs that CMS estimates are most likely to earn shared savings, and any prepaid shared savings payments an ACO receives will have to be repaid to CMS. CMS will be protected by the ACOs' repayment mechanisms in the event that an ACO does not earn shared savings or cannot otherwise repay the amount owed to CMS. On the other hand, there is a high degree of uncertainty regarding whether (a) a meaningful number of ACOs will choose this option given the requirements for how prepayments must be spent, and (b) the potential impact (if any) that participation in this option will have on the cost of care.

As to this uncertainty, our analysis assumed that up to 30 ACOs would opt to receive prepaid shared savings per year (with the probability distribution skewed toward zero participants), with a 33 percent chance that ACOs receiving prepaid shared savings would respond by reducing spending for assigned beneficiaries by between 0 to 2 percentage points (with the probability distribution skewed toward zero impact) as compared to their current spending on assigned beneficiaries.[928] This projection accounts for annual prepaid shared savings (offset by eventual recoupments and/or repayments) of

[928] The assumptions allow for a limited possibility that performance by ACOs receiving prepaid shared savings could generate shared savings comparable to the savings generated by certain ACOs in the ACO Investment Model. Abt Associates, Evaluation of the Accountable Care Organization Investment Model, Final Report (September 2020), available at *https://www.cms.gov/priorities/innovation/data-and-reports/2020/aim-final-annrpt.*

roughly $2 million per ACO participating in the payment option. The associated impact on ACO spending was projected to be nominal. Both at the mean and at the 90th percentile the projected net impacts on Medicare spending round to zero. At the 10th percentile (the optimistic end of the range), we project small net savings of $20 million in total to the Medicare Program over 10 years, as shown in Table 117.

TABLE 117: Projected Impact for the Prepaid Shared Savings Option ($ Millions; Negative Values Represent Savings to the Program)

	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	Total
Impact Estimate	0	0	0	0	0	0	0	0	0	0	**0**
Estimate Range:											
Low Estimate (10th Percentile)											**-20**
High Estimate (90th Percentile)											**0**

Note: Projections at the 10th and 90th percentiles are shown in aggregate but not at the annual level because scenarios contributing to the $20 million savings at the 10th percentile are too small to round above zero in any given year.

The remaining changes to the Shared Savings Program regulations are not estimated to have an impact on program spending at the aggregate level. These changes include requiring Shared Savings Program ACOs to report the APP Plus quality measure set beginning in performance year 2025, that will incrementally grow to comprise of 11 measures, consisting of the 6 measures in the existing APP quality measure set and 5 new measures from the Adult Universal Foundation measure set that will be incrementally incorporated into the APP Plus quality measure set over performance years 2025 through 2028 or the performance year that is one year after eCQM specifications become available for Quality ID: 487 Screening for Social Drivers of Health and Quality ID: 493 Adult Immunization Status, whichever is later; focusing the collection types available to Shared Savings Program ACOs for reporting the APP Plus quality measure set in performance years 2025 and 2026 to include eCQM/MIPS CQM/Medicare CQM collection types, and in 2027 and subsequent performance years, to include eCQM/Medicare CQM collection types; requiring Shared Savings Program ACOs that report the APP Plus quality measure set to report on all required measures in the APP Plus quality measure set, as applicable; establishing a Complex Organization Adjustment for Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs; scoring Medicare CQMs using flat benchmarks in their first 2 performance periods in MIPS; and extending the eCQM reporting incentive in order to promote the adoption of eCQMs and also extending the reporting incentive to ACOs reporting MIPS CQMs in performance years 2025 and 2026 to support ACOs in meeting the Shared Savings Program quality performance standard. Additional changes include permitting continued participation by ACOs whose number of assigned beneficiaries falls below 5,000 during their agreement period; ensuring clarity of provisions on application procedures; revisions to the definition of primary care services under § 425.400(c) for purposes of beneficiary assignment; refining advance investment payment policies; providing clarity and consistency in provisions of the Shared Savings Program regulations on calculation of the ACO risk score growth cap in risk adjusting the benchmark each performance year and the regional risk score growth cap in calculating the regional component of the three-way blended benchmark update factor; and modifying beneficiary notification requirements.

The combined impacts for all Shared Savings Program provisions are shown in Table 118.

TABLE 118: Projected Impact of Medicare Shared Savings Program Provisions (Individually Shown in Tables 115, 116 and 117) ($ Millions; Negative Values Represent Savings to the Program)

	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	Total
Impact Estimate	30	30	30	20	10	-10	-50	-70	-90	-100	**-200**
Estimate Range:

High Estimate (90th Percentile)	60	70	90	120	140	150	150	160	170	190	1,300

b. Compliance With Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and new policies adopted in section III.G. of this final rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following policies require the use of our authority under section 1899(i) of the Act: allowing eligible ACOs to receive prepaid shared savings, as described in section III.G.5 of this final rule; using a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts for certain Shared Savings Program financial calculations, upon reopening an ACO's payment determination and issuing a revised initial determination pursuant to § 425.315(a), as described in section III.G.7.c of this final rule; using a methodology for certain Shared Savings Program financial calculations to mitigate the impact of SAHS billing activity occurring in CY 2024 or subsequent calendar years, as described in section III.G.7.d of this final rule; and making technical changes to the provision describing how we calculate the weights applied when capping growth in regional risk scores as part of the regional component of the three-way blended benchmark update factor, as described in section III.G.7.f of this final rule. When considered together these changes to the Shared Savings Program's payment methodology are expected to improve the quality and efficiency of items and services furnished under the Medicare program by improving the ability for ACOs to sustain effective participation particularly in serving medically complex, high-cost populations in underserved communities, and promoting integrity and fairness and ensuring the accuracy of Shared Savings Program financial calculations. These changes are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

In the CY 2023 PFS final rule, we estimated that the projected impact of the payment methodology that incorporates all policies finalized by that final rule would result in $4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excluded the policies that required section 1899(i)(3) of the Act authority (see 87 FR 70195 and 70196). The marginal impact of the proposed changes in the CY 2024 PFS final rule were estimated to lower net spending by $330 million over the subsequent 10-year period for all new policies combined, including the cap an ACO's regional service area risk score growth, the addition of a new third step to the beneficiary assignment methodology, and the revised approach to identify the assignable beneficiary population (88 FR 79496). The marginal impact of the changes in this final rule are estimated to lower net spending by an additional $200 million in total through 2034. Although the provisions in this final rule that require section 1899(i) of the Act authority are estimated to increase spending by only $60 million over 10 years, the cumulative impact of all policies (including those in this final rule) are estimated to result in more than $4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excludes the policies that require section 1899(i)(3) of the Act authority. Therefore, we estimate that program expenditures associated with the implementation of the implementation of the provisions in this final rule would not be greater than those that would result under the statutory payment model, consistent with the requirements of section 1899(i)(3)(B) of the Act.

We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. Additional Shared Savings Program data beginning to accumulate after the end of the COVID–19 public health emergency, along with emerging information on the characteristics of new entrants in the Shared Savings Program for agreement periods beginning on January 1, 2024 and January 1, 2025, are anticipated to gradually improve our ability to reevaluate program impacts in a comprehensive fashion. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

12. Medicare Part B Payment for Preventive Services

In section III.H.2. of this final rule, based on the proposals in section III.M of this final rule, we clarify that a physician's order is no longer required for the administration of a hepatitis B vaccine in Part B, which will facilitate roster billing by mass immunizers for hepatitis B vaccine administration. We also finalize a policy that payment for hepatitis B vaccines and their administration be made at 100 percent of reasonable cost in RHCs and FQHCs, separate from the FQHC PPS or the RHC All-Inclusive Rate (AIR) methodology, in order to streamline payment for all Part B vaccines in those settings. We believe that Medicare spending impacts from both of these proposals will be negligible, as hepatitis B vaccines are already available to all Medicare enrollees under either Part B or Part D. While we believe that there will be an uptake of hepatitis B vaccines under Part B as shifted from Part D, we believe that this impact on the Part B program will be negligible for several reasons, including the fact that a portion of current beneficiaries have already received the hepatitis B vaccine through either Part B or Part D, and since a significant number of individuals will likely receive this vaccine by the time they are Medicare age due to current CDC recommendations (please see section III.M of this final rule for more information).

In section III.H.3. of this final rule, we finalize a fee schedule for Drugs Covered as Additional Preventive Services (DCAPS), per section 1833(a)(1)(W)(ii) of the Act. We also set payment limits for supply and administration fees for DCAPS drugs that are similar to those fees for drugs paid under the ASP payment methodology set forth in section 1847A of the Act, and we set payment limits for DCAPS drugs and any supply and administration fees in RHCs and FQHCs according to this same fee schedule. We believe impacts from these policies will be minimal as well. While no drugs are currently covered as DCAPS, DCAPS drugs are likely to be covered under Part D before coverage under the Part B additional preventive services benefit would commence.

13. Impact of Provisions for Medicare Prescription Drug Inflation Rebate Program

In this final rule, we are codifying existing policies established in program guidance as well as revised and new policies to implement the Medicare Part B Drug Inflation Rebate Program, including the requirement for manufacturers to pay rebates for certain single source drugs and biological products with prices that increase faster than the rate of inflation; criteria for the identification of Part B rebatable drugs; computation of the beneficiary coinsurance adjustment for Part B rebatable drugs; determination of the rebate amount for Part B rebatable drugs; reduction of the rebate amount for Part B rebatable drugs in shortage and when there is a severe supply chain disruption; removal of units subject to discarded drugs; provision of rebate reports to each manufacturer of a Part B rebatable drug; reconciliation; and establishment of enforcement provisions via civil money penalties.

Additionally, we are codifying existing policies established in program guidance as well as revised and new policies to implement the Medicare Part D Drug Inflation Rebate Program, including the requirement for manufacturers to pay rebates for certain Part D drugs and biological products; covered under Part D; criteria for the identification of Part D rebatable drugs; determination of the rebate amount for Part D rebatable drugs; reduction of the rebate amount for shortages and when there is a severe supply chain disruption or likely shortage; provision of rebate reports to each manufacturer of a Part D rebatable drug; reconciliation; and establishment of enforcement provisions via civil money penalties.

We do not expect these policies to have a material impact on inflation rebates, as the majority of these policies codify existing guidance. New policies or changes to existing policies in guidance are technical provisions that we do not expect to have a material impact on the calculation of total rebates in aggregate. Additionally, no data is available at this time to estimate the amount of billing units that will be subject to discarded drug refunds.

As outlined in section III.I. of this final rule, for Part D drug inflation rebates, we will implement at § 428.203(b)(2) section 1860D–14B (b)(1)(B) of the Act, which requires the Secretary to exclude 340B units from the total number of units used to calculate the total rebate amount owed by a manufacturer, beginning on January 1, 2026. Because this requirement starts after the first quarter of the applicable period that begins on October 1, 2025, the exclusion of 340B units will only apply for the last three quarters of this applicable period. That is, CMS will exclude 340B units starting on January 1, 2026.

In the proposed rule (89 FR 61969), we proposed to use an estimation methodology to remove a percentage of units from the total number of units used to calculate the total rebate amount to remove 340B units from Part D drug inflation rebate calculations. That percentage would be equal to the total number of units purchased under the 340B Drug Pricing Program for an NDC–9, divided by the number of total units sold of that NDC–9. After further consideration and taking into account the comments received on the proposed estimation methodology, we did not finalize the estimation policy for the applicable period that begins on October 1,2025. Instead, we plan to explore the establishment of a Medicare Part D claims data repository to use for removal of 340B units from the calculation of Part D inflation rebates starting January 1, 2026. We plan to continue exploring the development of detailed policies and requirements related to any such repository for future rulemaking related to this topic and the exclusion of 340B units starting January 1, 2026.

CMS does not currently have data on 340B claims for the Part D program or at the drug level in general, which prevents CMS from quantifying the impact of this provision. While we expect that the exclusion of 340B units from Part D inflation rebates will reduce the amount of rebates collected through this program, the magnitude of this reduction is unknown due to the lack of data on 340B claims for the Part D program.

14. Modifications to Coverage of Colorectal Cancer Screening

In section III.K. of this rulemaking we discuss that we are finalizing as proposed, provisions to update and expand coverage for CRC screening by (1) removing coverage for the barium enema procedure in regulations at § 410.37, (2) adding coverage for the computed tomography colonography (CTC) procedure in regulations at § 410.37, and (3) expanding a ''complete colorectal cancer screening'' in § 410.37(k) to include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test (described and authorized in NCD 210.3) returns a positive result.

We do not anticipate our provision removing coverage for the barium enema procedure will result in a significant financial impact on the Medicare program. An internal claims analysis found that Medicare Fee for Service only paid 62 claims for the screening barium enema procedure in calendar year 2021 and only 72 claims for the screening barium enema procedure in calendar year 2022.

We do not anticipate our provision adding coverage for the CTC procedure for CRC screening will result in a significant financial impact on the Medicare program. CTC could be an appropriate option for patients and clinicians who seek a visualization procedure as a first step in CRC screening that is less invasive and less burdensome on the patient (including those who are medically fragile or have complex or usual anatomy) compared to optical colonoscopy. We expect that patients will often choose CTC as an alternative to colonoscopy for CRC screening and that future increased utilization of CTC will be balanced, in part, by avoided screening colonoscopies. Our goal is that the patient and their clinician make the most appropriate choice in CRC screening, which includes considerations of the risks, burdens and tradeoffs for each covered test or procedure. We expect that utilization of CTC for CRC screening will be modest, especially considering that CTC requires bowel preparation and travel to an outpatient clinical services site (similar to a colonoscopy) and also considering the availability of non-invasive stool-based tests that can be administered at home and mailed to a lab. A 2015 study titled ''Medicare cost of colorectal cancer screening: CT colonography vs. optical colonoscopy'' concluded that CTC is 29 percent less expensive than colonoscopy (accounting for related procedures) for the Medicare population in the base scenario. Although the CTC cost advantage is increased or reduced under alternative scenarios, it is always positive.[929]

We do not anticipate our provision expanding a ''complete colorectal cancer screening'' in § 410.37(k) to include a follow-on screening colonoscopy after a Medicare covered blood-based biomarker CRC screening test returns a positive result will produce a significant financial impact on the Medicare program. We expect that patients will choose either a stool-based test or a blood-based biomarker test for a non-invasive first option in CRC screening and that patients who choose a blood-based biomarker test within the context of a complete colorectal cancer screening under our proposal will be offset, in part, by the avoided utilization of a stool-based test.

In conclusion, we anticipate that updating and expanding coverage for CRC screening will result in some additional utilization, but that additional utilization will be balanced, in part or in whole, by avoided utilization of alternative types of tests as well as benefits and savings resulting from increased prevention and early detection (allowing for less invasive and more effective treatment). We did not receive public comments on this impact analysis.

15. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA–PD Plan

In section III.L of this final rule, we finalized two updates to the CMS EPCS Program. We finalized that prescriptions written for a beneficiary in a LTC facility will not be included in determining compliance under the CMS EPCS Program until January 1, 2028. We also finalized that compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility will commence on or after January 1, 2028. Without these changes, if we keep the existing date of January 1, 2025, as the beginning date for which these prescriptions will be considered for compliance purposes for the CMS EPCS Program and on which we would begin to take compliance actions based on these prescriptions, we estimate at least 6,800 prescribers would become non-compliant due to CMS including prescriptions written for beneficiaries in LTC in the CMS EPCS Program compliance threshold calculation. This estimate is based on data from calendar year 2022 and is prior to considering emergency and disaster exceptions and waivers, which could reduce these numbers. This policy change allows prescribers additional time to adopt the new e-prescribing standard, NCPDP SCRIPT standard version 2023011, and utilize EPCS. Additionally, this policy will prevent an increased number of prescribers from potentially applying for a waiver for circumstances beyond their control due to difficulty of reliably conducting EPCS for beneficiaries in LTC facilities by the current deadline of January 1, 2025.

We do not believe this proposal will cause additional costs as we are only extending the deadline by which we will include prescriptions written for beneficiaries in LTC facilities in the CMS EPCS Program compliance threshold calculation and not modifying the requirement to become compliant. We also note that beneficiaries in LTC facilities may not receive the full benefits of EPCS, which we describe in the CY 2022 PFS final (86 FR 65362), until a later date, but we believe the delay is necessary due to the logistical challenges of prescribers electronically prescribing controlled substances prescriptions for beneficiaries in LTC facilities.

We solicited public comments on our impact assumptions.

We did not receive public comments on our assumptions, and therefore, we are finalizing our impact assumptions without modification.

16. Expand Hepatitis B Vaccine Coverage

In section III.M. of this rulemaking, we are finalizing our proposal to expand Hepatitis B vaccine coverage by revising our regulatory definition for intermediate risk groups by adding a new paragraph to include individuals who have not previously received a completed hepatitis B vaccination series or whose vaccination history is unknown (§ 410.63(a)(2)).

Hepatitis B vaccine is currently covered under Medicare Part B for enrollees who are at intermediate or high risk of contracting hepatitis B virus, and, for Part D enrollees who do not fall into those categories the vaccine may be covered under Medicare Part D.[930] In 2021, about 51 million of 65 million Medicare beneficiaries were enrolled in Part D and 21,629 received the vaccine. In 2019, Part B covered 300,000 doses of hepatitis B vaccine for beneficiaries who were at high or intermediate risk for the disease.[931] Since the vaccine has been available for several decades, we are not able to determine how many Medicare beneficiaries have already received the vaccine.

Overall vaccination rates among adults, including older adults, are generally low.[932] [933] A Centers for Disease Control and Prevention (CDC) analysis of data from the National Health Interview Survey found that fewer than half of all adults (less than 45 percent) received age-appropriate recommended vaccinations in 2019.[934] An estimated 20 percent of adults aged ≥60 years have been vaccinated against hepatitis B; and approximately 34 percent of adults aged ≥19 years have been vaccinated against hepatitis B.[935] We do not anticipate our proposal to result in significant economic impact on the Medicare program.

As of January 1, 2023, the Inflation Reduction Act (IRA) eliminated out-of-pocket costs for vaccines covered under Medicare Part D that are recommended by the Advisory Committee on Immunization Practices (ACIP).[936] Before the IRA, beneficiaries incurred out of pocket costs for Part D vaccines. While we would expect that after the IRA, more beneficiaries will receive covered vaccines because of eliminating out of pocket costs, existing research shows that cost-sharing is only one factor among other determinants. Trust in vaccines, access to health care, health literacy, perceived risk, socio-demographic factors and awareness of vaccine recommendations, all shape whether individuals obtain a recommended vaccine.[937] If the number of people receiving the hepatitis B vaccine under Part D is any indication, we assume that even by increasing access, there will not be immediate or significant change in the number of covered hepatitis B vaccines paid under Medicare Part B. For these reasons, we do not anticipate that expanding the definition of intermediate risk for hepatitis B vaccine will result in a significant financial impact to the Medicare Program. We did not receive any public comments on our impact analysis.

17. Low Titer O+ Whole Blood Transfusion Therapy During Ground Ambulance Transport

As outlined in section III.N of this final rule, we are finalizing our proposal to modify the definition of ALS2 at § 414.605 by adding the administration of low titer O+ whole blood transfusion. In addition, we are also modifying the definition of ALS2 at § 414.605 by adding the administration of low titer O-whole blood transfusion therapy, packed red blood cells (PRBCs), plasma, or a combination of PRBCs and plasma, collectively termed prehospital blood transfusion (PHBT) as a new number 8.

We would also reflect this change in the Medicare Benefit Policy Manual, Chapter 10, Ambulance Services, section 30.1.1, Definition of Ground Ambulance Services. Under this proposal, a ground ambulance transport that provides one of the PHBT will itself constitute an ALS2-level transport.

We believe that many ground ambulance transports providing PHBT already qualify for ALS2 payment, given that patients requiring such transfusions are generally critically injured or ill and often suffering from cardio-respiratory failure and/or shock and are therefore likely to receive one or more procedures currently listed as ALS procedures in the definition of ALS2, such as endotracheal intubation, central venous line, chest decompression, and placement of an intraosseous line. For impact analysis, for ground ambulance transports that provide PHBT only and currently do not qualify for ALS2 payment, we assume that these transports are reported as ALS1 (advanced life support, level 1) emergencies.

In order to help identify the number of ground ambulance transports that could potentially be affected by this proposal, we analyzed inpatient hospital claims related to multiple-trauma that started with an ALS1 emergency ambulance transport and also included a blood transfusion done in the hospital. The inpatient admissions were identified by DRG code ''813'' and diagnosis code of ''24,'' the ambulance transport is identified by HCPCS ''A0427,'' and the blood transfusion administered to these patients in the hospital setting is identified by the presence of covered charges, patient liability amounts, and replacement units for blood.

Since payments vary for urban, rural, and super-rural ground ambulance transports, we calculated the average Medicare payment amount for ALS2 (HCPCS A0433) and ALS1 (HCPCS A0427) over the last several years. The average payment differential over calendar years 2019 and 2023 is estimated to be roughly $162 per transport. It is difficult to make an assumption for the number of transports that will be impacted by this proposal, but the potential number over the last several years, based on an analysis of actual experience, is very few. Even if all of these ALS1 emergency transports shifted to being ALS2 transports, which is very unlikely, the impact would be negligible.

We did not receive any public comment on our impact analysis and therefore, we are finalizing our proposal to modify the definition of ALS2 at § 414.605 by adding the administration of low titer O+ whole blood transfusion. In addition, we are also modifying the definition of ALS2 at § 414.605 by adding the administration of low titer O-whole blood transfusion therapy, packed red blood cells (PRBCs), plasma, or a combination of PRBCs and plasma, collectively termed prehospital blood transfusion (PHBT) as a new number 8.

18. Updates to the Quality Payment Program

In this section of this final rule, we estimated the overall and incremental impacts of the Quality Payment Program policies. We estimated participation, final scores, and payment adjustment for eligible clinicians participating through traditional MIPS, MVPs, and the Advanced APMs. We also presented the incremental impacts to the number of expected Qualified Participants (QPs) and associated APM Incentive Payments that result from our policies relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

A. Overall MIPS Modeling Approach and Data Assessment

(1) MIPS Modeling Approach

For this final rule, we used a similar modeling approach as the CY 2024 PFS final rule (88 FR 79504 through 79506). We created two MIPS RIA models: a baseline and policy model. Our baseline model includes previously finalized policies that will be in effect for the CY 2024 performance period/2026 MIPS payment year in the absence of any of the new policies in this final rule. Examples of previously finalized policies included in the baseline model include: updated QP and partial QP thresholds, and the previously finalized list of MVPs.

The policies model builds off the baseline model and incorporates the MIPS policies for the CY 2025 performance period/2027 MIPS payment year included in this final rule. By comparing the baseline model to the policies model, we are able to estimate the incremental impact of the specific policies in this final rule.

Our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This modeling approach enables our model to align as much as possible with actual MIPS scoring and minimizes differences between our projections and policy implementation. These limitations of our model are outlined later in this RIA.

(2) Data Used To Estimate Future MIPS Performance

In the CY 2024 PFS final rule (88 FR 79504), we explained our decision to use CY 2022 performance period submissions data. We noted that using CY 2022 performance data presents the most current data and aligns our participation, final scoring, and payment adjustment analysis around the same common data set. CY 2022 performance data were the most recently available data in time for us to construct our simulation model for this final rule and for the same reasons discussed in the CY 2024 PFS final rule (88 FR 79504), we are considering it to construct the baseline and policies model in this final rule. As more data becomes available, we will assess the feasibility and validity of that data for use in RIA simulations.

b. APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

Beginning in payment year 2019, through the Medicare, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs for the applicable QP Performance Period for a year and the corresponding payment year. In payment years 2019 through 2024 these QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the calendar year immediately preceding the payment year. In payment year 2025, QPs will receive a lump-sum APM Incentive Payment equal to 3.5 percent payment of their estimated aggregate paid amounts for covered professional services furnished during CY 2024. In payment year 2026, QPs will receive a lump-sum APM Incentive Payment equal to 1.88 percent payment of their estimated aggregate paid amounts for covered professional services furnished during CY 2025. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year may elect to report to MIPS and, if they elect to report, will then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, there are two separate PFS CFs—one for eligible clinicians who are QPs for the year (the qualifying APM CF), and the other for all non-QP eligible clinicians and other suppliers paid under the PFS (the non-qualifying APM CF). The update to the qualifying APM CF for a year is 0.75 percent, while the update to the non-qualifying APM CF for a year is 0.25 percent.

In addition, the thresholds to achieve QP status beginning in the 2025 QP Performance Period will increase to 75 percent for the payment amount method, and 50 percent for the patient count method. Overall, we estimated that for the 2025 QP Performance Period between 380,100 and 488,700 eligible clinicians will become QPs, and therefore be excluded from MIPS reporting requirements and payment adjustments.

In section IV.A.4.m.(2) of the CY2025 PFS proposed rule, we proposed to modify the definition of ''attribution-eligible beneficiary'' to include any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination. However, we are not finalizing this proposal and therefore no impact of this policy is included in the estimated number of QPs provided above.

We projected the number of eligible clinicians who will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2025 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2025 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that will attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2025 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track); and
- Enhancing Oncology Model (EOM); and
- Primary Care First (PCF) Model.

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see § 414.1425(a) for information on the APM Participant Lists and QP determinations) for the 2023 QP performance period third snapshot QP determination date to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM

Incentive Payments for the 2025 QP Performance Period. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries were attribution eligible through the APM Entity.

c. Estimated Number of MIPS Eligible Clinicians in the CY 2025 Performance Period/2027 MIPS Payment Year

(1) Initial Population of Clinicians Included in the RIA Baseline and Proposed Policies Models

For this final rule, we applied the same assumptions as in the CY 2024 PFS final rule (88 FR 79505) to estimate our initial population of clinicians based on CY 2022 performance period/ 2024 MIPS payment year data.

We used the same CY 2022 final reconciled eligibility determination file described in the CY 2024 PFS final rule (88 FR 79505). This file reconciles eligibility from two determination periods and aligns with the CY 2022 performance period submissions data on which we based this model. Our analysis included 1,820,899 clinicians with PFS claims in this initial population. This initial population of clinicians was used to determine eligibility using the methodology described in the following sections.

(2) Estimated Number of MIPS Eligible Clinicians After Applying Eligibility Assumptions

(a) Methods and Assumptions Used To Estimate Eligibility

After identifying the clinician population with PFS claims we applied the same eligibility assumptions and determination process described in the CY 2024 PFS final rule (88 FR 79505). We did not propose any modifications to MIPS eligibility requirements and the same eligibility assumptions apply to both the baseline and final policies model.

For our RIA model, we established the ''required eligibility'' category, which means the clinician exceeds the low-volume threshold in all 3 criteria and is subject to a MIPS payment adjustment. We based this estimate on the CY 2022 performance period data described in this section of this final rule, which includes the three low volume criteria. Within this category we divide clinicians into two groups- clinicians who report data and clinicians who do not report data.

Our next two eligibility assumptions concern clinicians and groups who may participate in MIPS but are not required to participate. First, we estimate group eligibility. These are the clinicians who have a group submission, and their group exceeds the low-volume threshold in all 3 criteria. Next, we apply our opt-in eligibility assumptions. Individuals or groups who exceed the low-volume threshold in 1 criterion but not all 3 may elect to opt-in. Based on the CY2022 data we determine which individuals opted-in to MIPS and for the purposes of our model estimate that these clinicians will continue to opt-in to MIPS.

After applying the process outlined in this section of this final rule, we next estimated the number of ''Potentially MIPS Eligible'' clinicians. These clinicians are not included in our total number of MIPS eligible clinicians. These are clinicians who are not MIPS eligible individually but who may either opt-in because they exceed the low volume threshold in at least one criterion but not all three or who could report as part of a group which exceeds all three low volume criteria.

Finally, we estimated the number of clinicians who are neither MIPS eligible nor potentially MIPS eligible. First, we estimated the number of MIPS eligible clinicians who are below all three low-volume criteria (both as an individual and as a group) again using the CY 2022 performance period data as outlined in this section of this final rule.

Next, we estimated the number of QPs (not MIPS eligible). In section VII.E.17.b. of this final rule, we estimated a range of QPs. For the purposes of our RIA population, we estimated a specific number of QPs. This is because it is necessary to establish a specific population of clinicians to use to simulate the impacts of our final policies on participation, final scores, and payment adjustments. Finally, we estimated the number of clinicians who are excluded for other reasons including that they are a non-eligible clinician type or newly enrolled in Medicare.

After applying these assumptions to our initial population, we estimated 686,645 MIPS eligible clinicians with $5.5 billion in allowed charges. However, this number may be as high as 1,270,806 MIPS eligible clinicians and $7 billion allowed charges if *all potentially* MIPS eligible [938] clinicians either opt-in or report as a group. This is an unlikely scenario, but it establishes the full range of possible MIPS eligible clinicians in our initial population.

(b) MIPS Eligibility Estimates

Eligibility among many clinicians is contingent on submission to MIPS as a group or election to opt-in: therefore, we will not know the number of MIPS eligible clinicians who submit until the submission period for the CY 2023 performance period is closed. For the remaining analysis, we used the estimated population of 686,645 MIPS eligible clinicians described previously in this section of this final rule. Table 119 summarizes our eligibility estimates for the policies model after applying our assumptions outlined in this section of this final rule.

[938] We define potentially MIPS eligible clinicians as those clinicians who are not required to participate in 13MIPS but *may* either opt-in or join a group that exceeds the low-volume threshold in all three criteria.

TABLE 119: Description of MIPS Eligibility Status for CY 2025 Performance Period/2027 MIPS Payment Year Using the CY 2025 PFS Proposed Rule Assumptions**

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians *	Number of Clinicians	PFS allowed charges ($ in mil)**
MIPS Eligible Clinicians			
MIPS eligible (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Reported to MIPS	105,843	$29,530
MIPS eligible	Did not Report to MIPS	40,813	$11,951
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)	Had a group submission	533,473	$13,108
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS)	Opted-in To MIPS	6,516	$350
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		**686,645**	**$54,564**
Not MIPS Eligible Clinicians			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Opt-in Eligible; Do not opt-in	178,216	$5,517
Potentially MIPS Eligible	Group Eligible; Did not Report	405,945	$9,502
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	129,806	$795
Excluded for other reasons (Non-eligible clinician type, newly enrolled)	Not applicable	60,471	$501
Qualified Participant (QP)***	Not applicable	359,816	$17,602
Total Number of Clinicians Not MIPS Eligible		1,134,254	**$33,916**
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,820,899	**$88,481**

* Participation excludes facility-based clinicians who do not have scores in the 2022 MIPS submission data.
** Allowed charges estimated in 2022 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.
*** Our QP estimate differs from that reported in section VII.E.17.b of this final rule because, for purposes of establishing the population used in our modeling, we estimate an absolute number of QPs rather than a range.

d. Modeling Approach and Methods for MIPs Value Pathways (MVPs) and Traditional MIPS

(1) Summary of Approach

In this final rule, we present several proposals which impact the measures and activities, the performance category scores, final score calculation, and the MIPS payment adjustment of MIPS eligible clinicians. We outlined these changes in more detail in section VII.E.17.d.(3). of this final rule as we described our methodology to estimate MIPS payment adjustments for the CY 2025 performance period/2027 MIPS payment year. We then presented the impact of the policies in the CY 2025 performance period/2027 MIPS payment year and compared select metrics to the baseline model. By comparing the baseline model to the policies model, we are able to estimate the incremental impact of the policies

for the CY 2025 performance period/2027 MIPS payment year.

MIPS eligible clinician's final scores are calculated based on the clinician's performance on measures and activities under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate in the four MIPS performance categories as an individual, group, virtual group, APM Entity, clinicians participating in MIPS through the APM Performance Pathway (APP), or through an MVP. MIPS APM participants can participate in the APP as an individual, group, virtual group, APM Entity and are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability. Our simulation applies the proposed and previously finalized policies to the existing MIPS scoring engine.

In the CY 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MIPS Value Pathways beginning in the CY 2023 performance period/2025 MIPS payment year. We incorporated MVP participation and scoring rules in this RIA where applicable as described in the following section.

(2) Methodology To Assess Impact for MIPS Value Pathways

(a) MVP Participant Assumptions

At § 414.1365(b), we required MVP Participants (which can be a group, individual, subgroup, or APM entity) to register prior to submitting an MVP. We assessed whether to use CY 2024 MVP registration data to estimate MVP participation but elected to again use the approach described in the CY 2024 PFS final rule (88 FR 79507) for two reasons. First, we do not presently have MVP scoring data, thus do not know the information of MVP registrants that may submit MVP data to MIPS. Secondly, our model is based on CY 2022 performance data. This data does not contain MVP scores and reconciliation between multiple years introduces uncertainty and complexity into our model. As MVP scoring data becomes available in the future, we will reassess our methodology for estimating MVP participation and final scores.

We assumed for purposes of this model, that MVP Participants are MIPS eligible individual clinicians or groups that submit the required MVP measures. For the baseline model, we used the measures from the 16 MVPs finalized in the CY 2024 PFS final rule Appendix 3 (88 FR 79978 through 80047).

In section IV.A.4.a. and Appendix 3 of this final rule, we proposed modifications to all 16 existing MVPs and 6 new MVPs. The 6 new MVPs are:

- Complete Ophthalmologic Care
- Dermatological Care
- Gastroenterology Care
- Optimal Care for Patients with Urologic Conditions
- Pulmonology Care
- Surgical Care

For the policies model, we incorporated the measure revisions for the existing MVPs described in Appendix 3 of this final rule. Due to data availability, we are unable to simulate scores for the following measures and improvement activity: ABG44, PIMSH13, UREQA10, 485, 486, 487, 488, 489, 490, 492, 493, 495, 496, 497, 499, 500, 501, 502, 503, 504, 505, AAD16, AAD17, AAD18, ABG44, GIQIC26, IA_PM_XX, IRIS61, MSK6, MSK7,MSK8,MSK9,MUC2023–141, MUC2023–161, MUC2023–162, MUC2023–190, MUC2023–211.

For these MVP Participants, we calculated both an MVP and a traditional MIPS score and took the highest score consistent with the existing scoring hierarchy which was finalized in the CY 2023 PFS final rule (86 FR 65537).

Our MVP Participant assumptions have limitations: the measure list used to simulate MVP participation does not align completely with what is finalized in section IV.A.4.a. of this final rule, we are not incorporating subgroups due to a lack of data, not all of the assumed participants may elect to register for an MVP, and we may have additional clinicians or groups register for an MVP. However, we believe this is a reasonable approach to simulate the impact of MVPs and we sought comment on this assumption but did not receive any feedback.

(b) MVP Scoring Methods and Assumptions

We simulate an MVP score using the same data sources as we did for traditional MIPS. We scored according to § 414.1365(d) and (e) using the MVP reporting requirements listed in § 414.1365(c) with one exception. We did not restrict the improvement activities to the activities listed in the MVP inventory. We believed this would lower our estimated MVP score as clinicians and groups were not required to select from a limited inventory in the CY 2022 performance period (upon which our model is based). Therefore, we scored any improvement activities the MVP Participants submitted in 2022 as if those improvement activities are in the MVP inventory. Additionally, in section IV.A.4.b.(1)(b) of this final rule, we are finalizing to score all available population health measures for a clinician participating in an MVP and select the highest scoring of those measures for use in determining their category score. We incorporated this policy into our simulation.

(3) Methodology To Assess Impact for Traditional MIPS

To estimate the impact of the policies on MIPS eligible clinicians, we generally used the CY 2022 performance period's data, including data submitted or calculated for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the CY 2025 performance period/2027 MIPS payment year for the baseline and policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, and the application of our final scoring policies.

(a) Methodology To Estimate the Quality Performance Category Score

We used the CY 2024 PFS final rule final policies model as the starting point of our baseline model. Since there are no previously finalized policies impacting the quality performance category that were not already included in the CY 2024 PFS final rule policies model, we did not make any modifications to the quality performance category and the baseline model is identical to the CY 2024 PFS final rules policies model with respect to the quality category.

Our policies model incorporates the following policies from this final rule as outlined in section IV.A.4.e.(1) of this final rule:

In section IV.A.4.f.(1)(b)(i) of this final rule, to facilitate fairer scoring, we are finalizing to remove the scoring cap and change the benchmarking approach for certain topped out measures applicable to clinicians facing both limited measure choice and limited scoring opportunities. We did not simulate the addition of quality measures described in section IV.A.4.e.(1)(d)(i) since we use existing quality measure data from the CY 2022 performance period which does not include new measures. We did not simulate the removal of quality

measures described in section IV.A.4.e.(1)(d)(ii) since we cannot predict how clinician behavior and measure selection will change in response.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a methodology similar to the methodology described in the CY 2024 PFS final rule (88 FR 79508) for the baseline and the proposed policies RIA models with the modifications described below.

For this final rule, the baseline policies RIA model used the same methodology as the final policies RIA model in the CY 2024 PFS final rule (88 FR 79508). The policies RIA model incorporated and implemented the following changes:

- In section IV.A.4.e.(2)(a) of this final rule, we are adopting 6 new episode-based cost measures and modify 2 existing episode-based cost measures. We incorporated measure test data with the specifications for the new and modified measures.
- In section IV.A.4.f.(1)(d) of this final rule, we are modifying our cost scoring methodology. The median cost for a measure will be assigned achievement points equal to 10 percent of the performance threshold (7.5 in the CY 2024 performance period/CY 2026 payment year). The cut-offs for benchmark ranges will be calculated as standard deviations from the median. This policy is incorporated into our model based on the specifications explained in section IV.A.4.f.(1)(d)(ii)(B) of this final rule.

(c) Methodology To Estimate the Promoting Interoperability Performance Category Score

We estimated Promoting Interoperability performance category score by using the same methodology that we used in the CY 2024 PFS final rule (88 FR 79508). We did not incorporate any changes to this category in our model. In section IV.A.4.e.(4)(f) of this final rule, we are finalizing minimum criteria for a qualifying data submission for the Promoting Interoperability performance category. We conducted an analysis of this policy and determined that the impact on final scores and payment adjustments was negligible and therefore did not incorporate it into our model.

(d) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline and policies model we used the same method to estimate the improvement activities performance category score as described in the CY 2024 PFS final rule (88 FR 79508) including alignment with the clarification provided regarding IA automatic weighting for APM participants (88 FR 79366).

In section IV.A.4.e.(3)(b)(IV) of this final rule, we are removing weighting of improvement activities. We conducted an analysis of this policy and determined that the impact on final scores and payment adjustments was negligible and therefore did not incorporate it into our model.

(e) Methodology To Estimate the Complex Patient Bonus Points

For the baseline and policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(f) Methodology To Estimate the Final Score

We did not make any changes for how we calculated the MIPS final score. Our baseline and policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

For the purposes of this model, if a MIPS eligible clinician was approved for reweighting of one or more performance category to zero percent of their final score, and the category's weight redistributed to other performance category(ies), for the CY 2022 performance period/2024 MIPS payment year (which was the data source used in our model) in accordance with our reweighting policies under § 414.1380(c)(2), then we continue to apply that reweighting in our model by assigning them a neutral score equal to the performance threshold if all categories were reweighted or assigning the applicable weights to the categories which were reweighted. Although it is unlikely (but possible) that the exact same clinicians will apply for and receive reweighting in both the CY 2022 performance period/2024 MIPS payment year (which our data is based on) and the CY 2025 performance period/2027 MIPS payment year (which we are simulating), we believe that this assumption accurately reflects future clinician behavior for two reasons. First, while the exact same clinicians may not receive reweighting 2 years in a row, we believe that this assumption allows us to quantify the impact of the reweighting on a population level. In other words, even if the same clinicians do not apply for and receive reweighting 2 years in a row, the absolute number of reweighting and the characteristic of practices who receive reweighting is likely to remain similar. Secondly, if we were to not assign reweighting to those clinicians, many of them will receive a very low final score because they did not submit data for one or more performance categories during the year in which they received reweighting. We do not believe that it is realistic to assume that, in the absence of reweighting, those clinicians will continue to not submit data. For these reasons, clinicians who received reweighting in the CY 2022 performance period/2024 MIPS payment year also are approved for reweighting in the CY 2025 performance period/2027 MIPS payment year. These clinicians are assigned a score of the performance threshold (75) in our model because this corresponds with a neutral (0 percent) payment adjustment.

(g) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and final policies RIA models, we applied the hierarchy as finalized in the CY 2022 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we applied the performance threshold of 75 points finalized in the CY 2024 PFS final rule (88 FR 79373). In section IV.A.4.g.(2)(c) of this final rule, we are finalizing to again set the performance threshold at 75. Therefore, for both the baseline and final policies models we used a performance threshold of 75 to calculate the exchange function used for MIPS payment adjustments. We note that the results of this exchange are not identical between the baseline and final policies model. This is due to the scaling factor used to determine positive adjustments

is dependent on the total dollar amount of negative payment adjustments and those adjustments differ as final scores are not identical between both models.

For both the baseline and policies models, we used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Simulation Results and Projected Impact to MIPS Eligible Clinicians

Based on the methodology described in this section of the final rule, we created a baseline and policies simulation. Using this simulation, we estimated the impact of the policies of this final rule.

(a) Impact to Clinician Eligibility

In section VII.E.17.c.(2) of this final rule, we noted that we did not modify clinician eligibility and therefore there is no difference in the total number of MIPS eligible clinicians between our models.

(b) Impact to Clinician's Final Scores

TABLE 120: CY 2025 Final Score Estimates by Practice Size

Practice Size*	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate**	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
			Baseline		
1) Solo	18,867	75.00	31.05%	22.00%	46.95%
2) 2-15	71,908	81.79	60.47%	14.97%	24.56%
3) 16-99	150,377	81.76	64.79%	10.32%	24.89%
4) 100+	445,493	82.80	74.84%	4.32%	20.84%
Overall	686,645	82.20	69.93%	7.23%	22.84%
			Final Policies		
1) Solo	18,867	75.00	32.41%	21.94%	45.65%
2) 2-15	71,908	86.02	64.29%	14.78%	20.93%
3) 16-99	150,377	85.87	72.41%	9.98%	17.61%
4) 100+	445,493	87.19	83.28%	4.13%	12.59%
Overall	686,545	86.42	77.51%	7.02%	15.47%

*Practice size is defined as the number of NPIs in a TIN

** The median final score includes clinicians who receive reweighting for all MIPS performance categories our policies at § 414.1380(c)(2). These clinicians who have all performance categories reweighted are assigned a score of 75 (neutral payment adjustment) in our model.

The median final score is 82.20 in our baseline model and 86.42 in our policies model. There is an increase in the number of clinicians receiving a positive payment adjustment for all practice sizes and an increase in the median final score for all practice sizes except for solo practitioners.[939] We project that 69.93 percent of MIPS eligible clinicians will receive a positive adjustment in our baseline model and 77.51 percent of MIPS eligible clinicians will receive a positive adjustment in our policies model. This increase is largely due to our change to the cost scoring methodology discussed in section IV.A.4.f.(1)(d)(ii)(B) of this final rule. Table 121 shows the median cost score for MIPS eligible clinicians who are scored on the cost performance category for our baseline and final policies model. There is a substantial difference in median cost scores between our two models. This is true across all practice sizes. The median cost category score is 59.16 in our baseline model and 73.85 in our policies model.

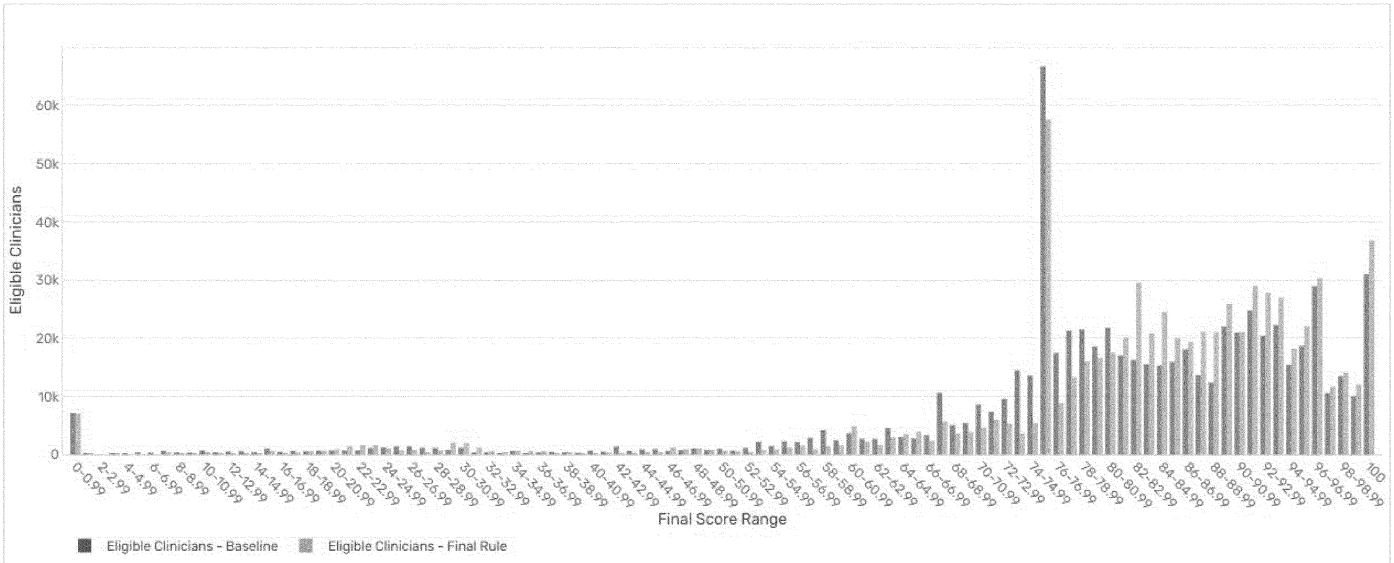
[939] See section VII.E.17.d.(b)(b)(i) of this final rule for a discussion of the performance of solo practitioners specifically.

TABLE 121: CY 2025 Cost Score Estimates by Practice Size

Practice Size	MIPS Eligible Clinicians Receiving Cost Score	Total Number of MIPS Eligible Clinicians	Proportion of MIPS Eligible Clinicians Receiving Cost Score	Median Cost Score Estimate
		Baseline		
1) Solo	7,380	18,867	39.12%	62.15
2) 2-15	32,476	71,908	45.16%	59.89
3) 16-99	65,428	150,377	43.51%	60.30
4) 100+	226,035	445,493	50.74%	59.02
Overall	331,319	686,645	48.25%	59.16
		Final Policies		
1) Solo	7,636	18,867	40.47%	75.24
2) 2-15	33,242	71,908	46.23%	74.34
3) 16-99	66,311	150,377	44.10%	74.35
4) 100+	227,601	445,493	51.09%	73.78
Overall	334,790	686,545	48.76%	73.85

Figure D–B1 shows the distribution of final scores for all MIPS eligible clinicians. Note that there are a relatively large number of MIPS eligible clinicians with a final score of 75. As stated in section VII.E.17.d.(3)(f) of this final rule MIPS eligible clinicians whom we approved for reweighting of all MIPS performance categories in accordance with our reweighting policies at § 414.1380(c)(2) are assigned a final score of exactly the performance threshold (75). Overall, the distribution is skewed to the right indicating that clinicians tend to receive final scores on the higher end of the distribution with many final scores clustered near the performance threshold of 75. Our policies have the effect of shifting final scores to the right. Many clinicians with final scores just below the performance threshold in the baseline model see their scores increased to a value just above the performance threshold in the policies model.

FIGURE D-B1: Count of MIPS Eligibles Clinicians by Final Score



(i) Impact to Small and Solo Practices

18,867 MIPS eligible clinicians or 2.7 percent of all MIPS eligible clinicians are solo practitioners in both the baseline and final policies models. The median final score for solo practitioners is exactly equal to the performance threshold in both the baseline and final policies model although the portion of solo practitioners receiving a positive adjustment is higher in the final policies model than in the baseline model. As stated in section VII.E.17.d.(3)(f) of this final rule, clinicians receiving reweighting under our current policies at § 414.1380(c)(2) are assigned a final score exactly equal to the performance threshold if we approved for reweighting of all MIPS performance categories.

As discussed in section VII.E.17.d.(3)(f) of this final rule, clinicians receiving reweighting under our current policies at § 414.1380(c)(2) are assigned a final score exactly equal to the performance threshold if we

approved for reweighting of all MIPS performance categories.

These practitioners have a lower median final score than other practice sizes. This is largely due to the fact that many of these solo practitioners do not submit data to MIPS despite being MIPS eligible clinicians. Our analysis indicates that 49.45 percent of solo practitioners submit data to MIPS compared to 93.68 percent of all clinicians. The median final score in our baseline and final policies model is 75.00 for all solo practitioners, but for solo practitioners who submit data the median final score is 84.35 in the baseline and 87.03 in the final policies model. These findings indicate that the lower final scores among solo practitioners is likely due to not reporting data to MIPS. Figure D–B2 shows the distribution of final scores for solo practitioners as a box plot. While the median final score is 75 in both models, the bottom quartile increases from 17.52 to 22.33 between the baseline and proposed policies model. Figure D–B3 shows the final score distribution for all practice sizes. The first quartile of final scores is 75 in the baseline model and 77.45 in the final policies model. The range between Q1 and Q3 is significantly narrower for all practice sizes than it is for solo practitioners. Figure D–B4 shows the distribution of final scores for solo practitioners who submit data to MIPS. This distribution is much closer to the distribution of final scores in the overall population with the first quartile at 73.45 in the baseline and 75.00 in the final policies model. This is similar to the median final score for all practice sizes which is 86.42. This indicates that, while many solo practitioners do not submit data to MIPS, those who do submit data perform similarly or better than the overall population of MIPS eligible clinicians. This is further evidence that the main factor causing low final scores among solo practitioners is the high proportion who do not submit data.

BILLING CODE 4120–01–P

FIGURE D-B2: Distribution of Final Scores for Solo Practitioners

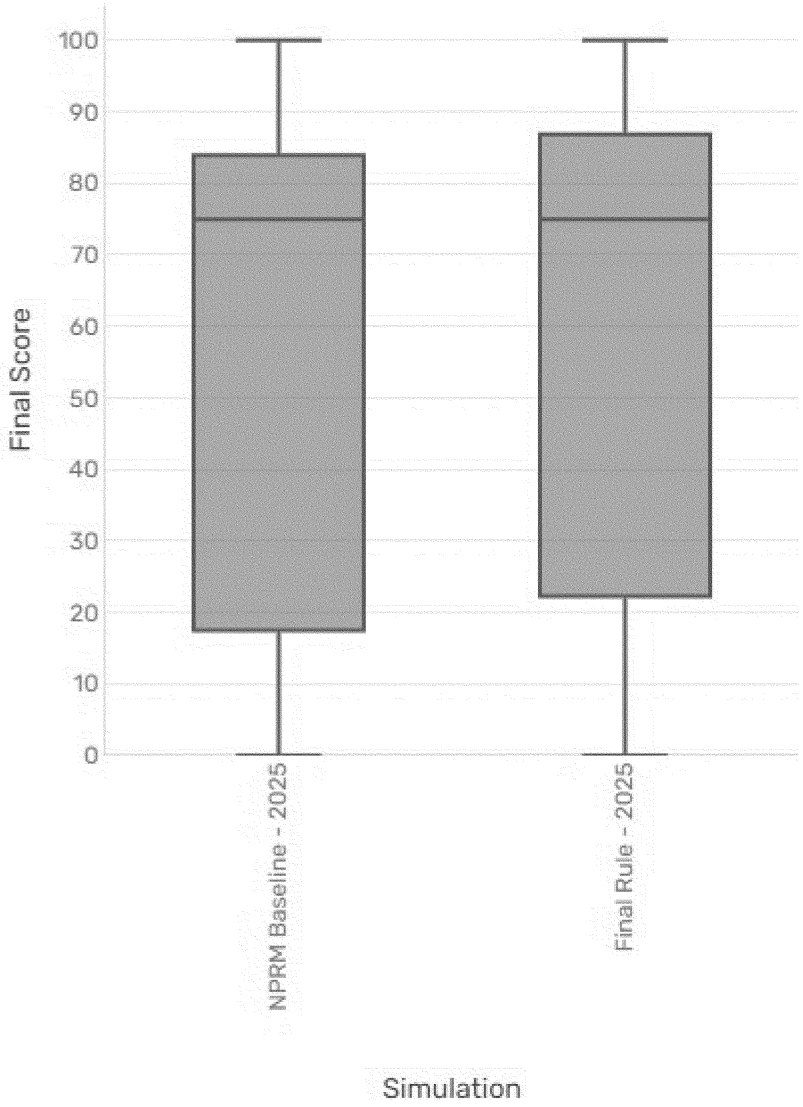


FIGURE D-B3: Distribution of Final Scores for All Practice Sizes

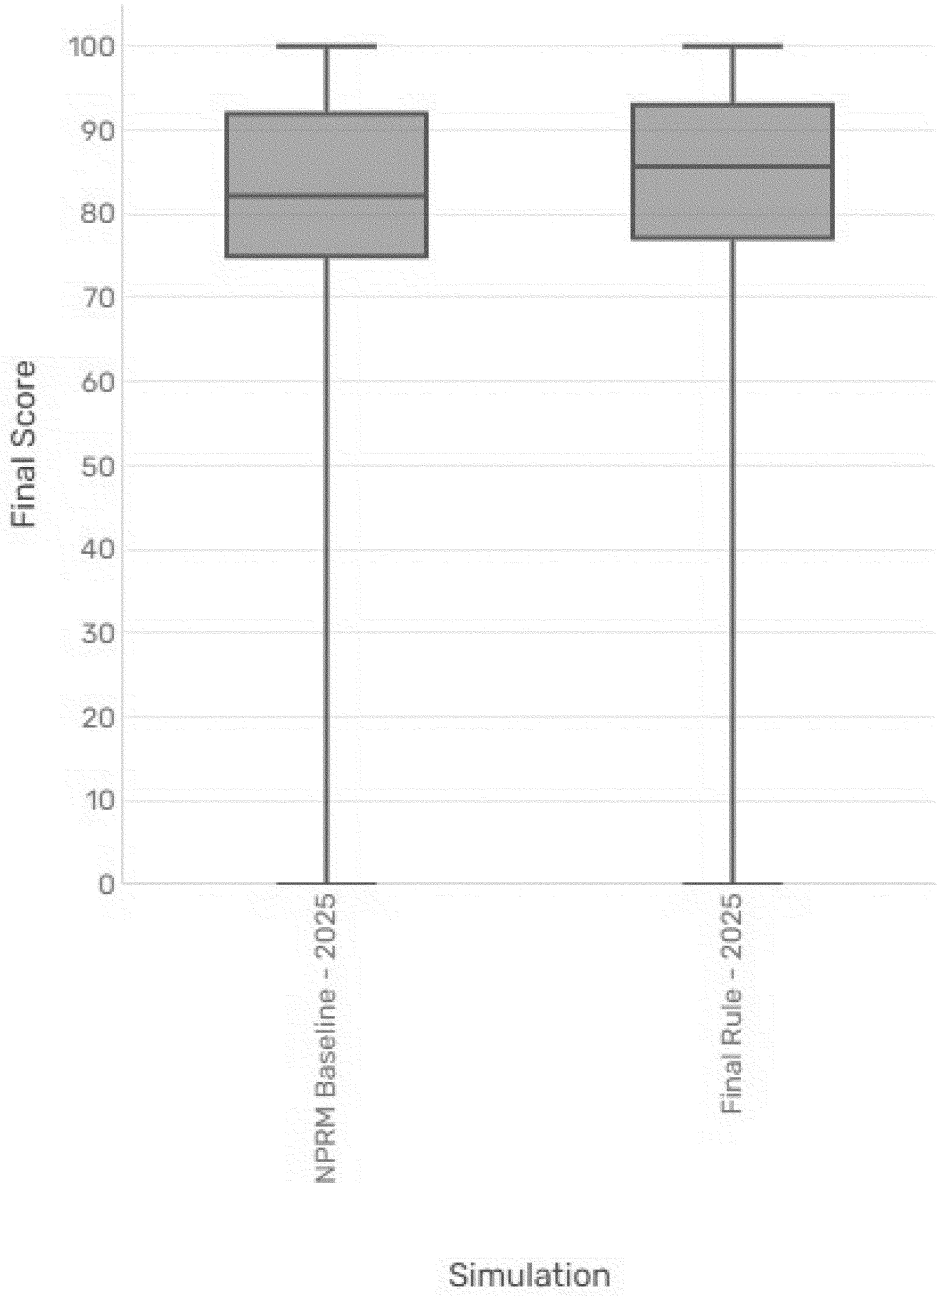

FIGURE D-B4: Distribution of Final Scores for Solo Practitioners who Submit Data

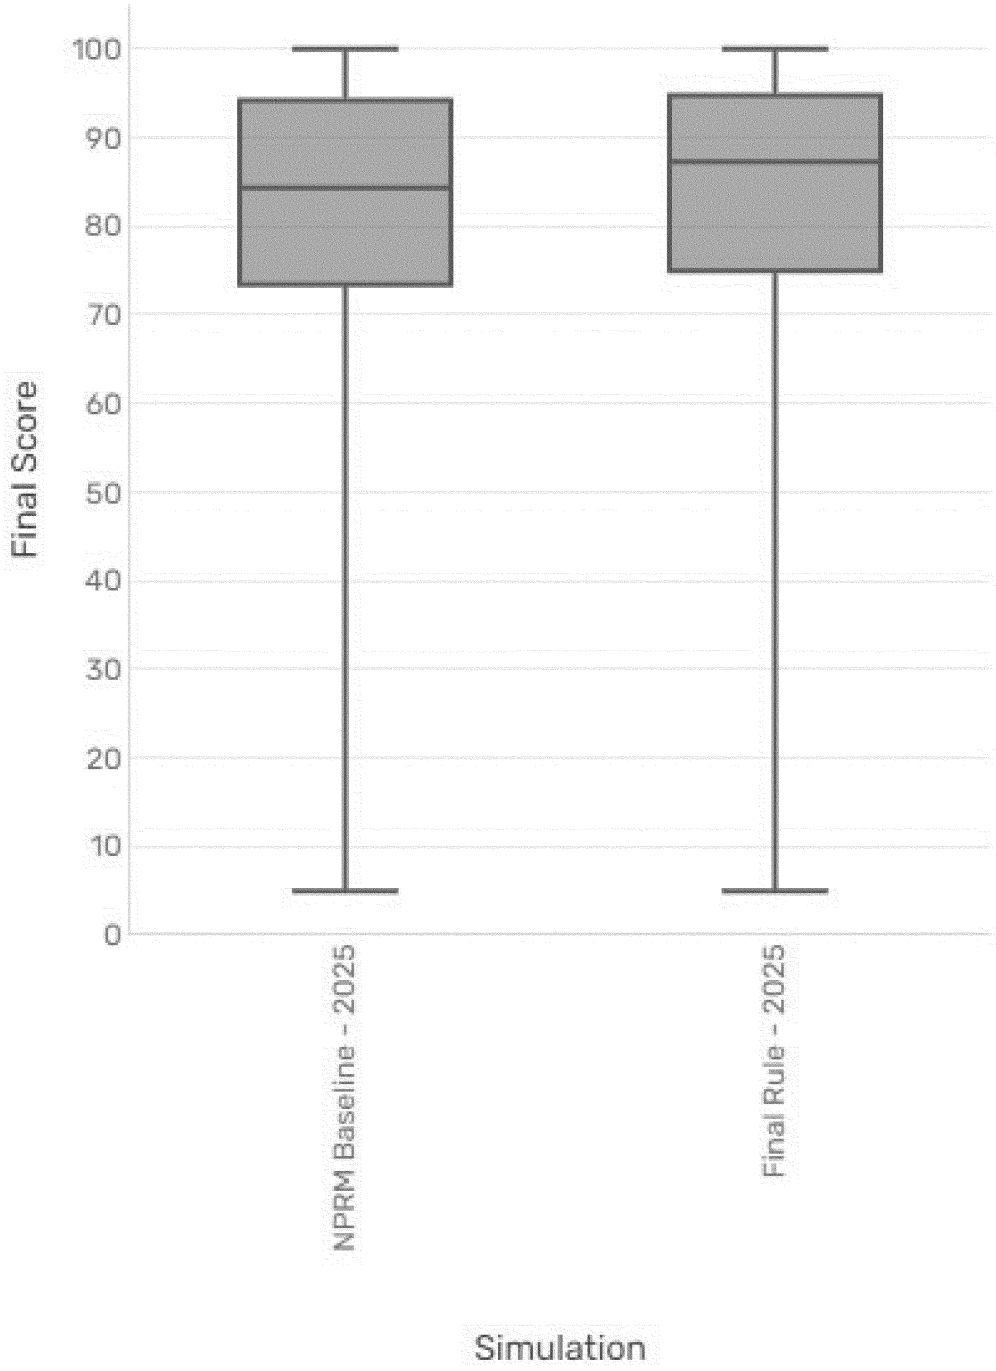

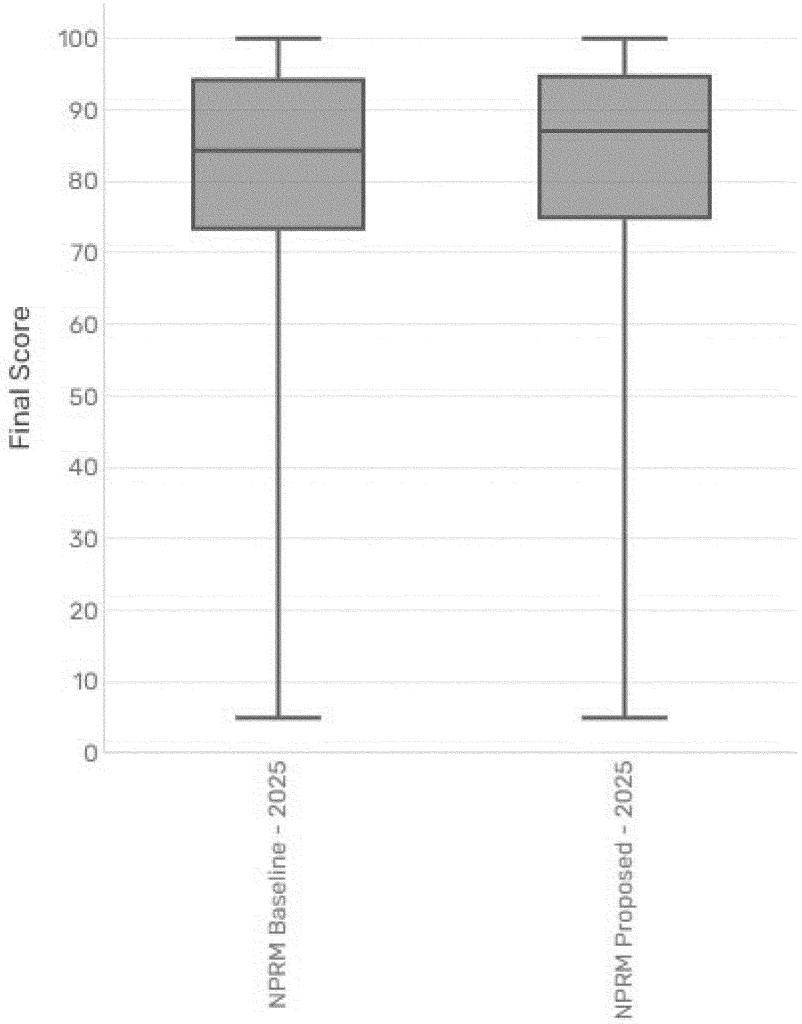

BILLING CODE 4120–01–C

Small practices, defined as groups with a range between 2 and 15 clinicians, have a median final score of 81.79 in the baseline and 86.02 in the policies model. This is similar but slightly lower than the median final score for all practice sizes of 86.42. Among small practices who submit data the median final score is 89.81 in the policies model (and 86.83 in the baseline). This is significantly higher than the median final score for all clinicians who submit data which is 87.53. This indicates that small practices perform similarly to other practice sizes although a slightly larger proportion of small practices do not submit data. Table 124 shows the percentage of clinicians by practice size who either do or do not submit data to MIPS and the corresponding median final score. Note that the median final score for clinicians who do not submit data is 75 for all practice sizes except for solo practitioners. This indicates that many clinicians belonging to small, medium, or large practices (but not solo practitioners) who do not submit data to MIPS have been approved for reweighting of all of their MIPS performance categories under our policies at § 414.1380(c)(2). In contrast, many solo practitioners who do not submit data do so despite not being eligible for application of our reweighting policies or not applying for reweighting under those policies.

A large majority of all practice sizes except solo practitioners submit data to MIPS. It is possible that the small percentage of MIPS eligible clinicians in those practice sizes who do not submit data to MIPS are primarily MIPS eligible clinicians who have received reweighting under our policies at § 414.1380(c)(2). It should be noted that median final scores increase for solo and small practitioners between our baseline and policies model indicating that the net effect of our policies is an increase in their final scores.

TABLE 122: Percentage of MIPS Eligible Clinicians who Submit Data and Median Final Score

	Percentage **of MIPS** Eligible Clinicians who Submit Data (by practice size)	Median Final Score of MIPS Eligible Clinicians who Submit Data	**Median Final Score of MIPS Eligible Clinicians who Do not submit data.**
		Baseline	
1) Solo	49.39%	84.35	19.35
2) Small (2-15)	79.32%	86.83	75
3) Medium (16-99)	91.69%	83.42	75
4) Large(100+)	98.23%	83.15	75
Overall	93.47%	83.46	75
		Final Policies	
1) Solo	49.45%	87.03	22.89
2) Small (2-15)	79.46%	89.81	75
3) Medium (16-99)	92.03%	87.27	75
4) Large(100+)	98.41%	87.31	75
Overall	93.68%	87.53	75

(ii) Impact to Rural Providers

In our data we assign rural practitioners a special status. Analysis of this group of clinicians indicates that their final scores are similar to the overall population of MIPS Eligible Clinicians across all practice sizes. Table 123 shows the median final score and the percentage of eligible clinicians with a positive or neutral or negative adjustment by practice size.

TABLE 123: CY 2025 Final Score Estimates by Practice Size for *Rural Practitioners Only*

Practice Size	**Total Number of MIPS Eligible Clinicians**	**Median Final Score Estimate**	**Percent Eligible Clinicians with Positive Payment Adjustment**	**Percent Eligible Clinicians with Neutral Payment Adjustment**	**Percent Eligible Clinicians with Negative Payment Adjustment**
			Baseline		
1) Solo	2,694	75.00	34.89%	17.37%	47.74%
2) 2-15	11,760	83.89	65.94%	10.48%	23.58%
3) 16-99	30,444	85.05	71.38%	6.80%	21.82%
4) 100+	43,286	80.43	69.02%	5.08%	25.90%
Overall	88,184	81.29	68.38%	6.77%	24.85%
			Final Policies		
1) Solo	2,694	75.00	36.53%	17.33%	46.14%
2) 2-15	11,762	87.34	69.82%	10.42%	19.76%
3) 16-99	30,409	87.53	76.90%	6.37%	16.73%
4) 100+	43,281	84.27	81.78%	4.94%	13.28%
Overall	88,146	85.41	77.12%	6.54%	16.34%

The median final score for all rural practitioners is 81.29 in our baseline model and 85.41 in our policies model. This is slightly lower than the median final score for all practitioners which is 82.20 in our baseline model and 86.42 in our policies model. However, the median final score is identical for solo practitioners and higher for small and medium practices. Large rural providers have a slightly lower median final score compared to large practices generally. The lower overall median final scores for rural practitioners are driven by large rural practices who perform slightly worse than other practice sizes and when compared to large practices generally. It should be noted that median final scores increase for rural providers of all practice sizes between our baseline and proposed policies model indicating that the net effect of our proposed policies is an increase in their final scores.

(iii) Impact to Safety Net Providers

(a) Updated Definition of Safety Net Providers

In the CY 2023 PFS final rule (87 FR 70094), we finalized our complex patient bonus methodology. This bonus is composed of two distinct calculations which are added together: Medical Complexity and Social Risk. Medical Complexity is determined based on a MIPS eligible clinicians Hierarchical Conditions Categories risk score and social risk is determined based on the proportion of a MIPS eligible clinicians Medicare patient population who are dually eligible for both Medicare and Medicaid.

In the CY 2024 PFS final rule (88 FR 79513), we compared the performance of clinicians who received the complex patient bonus with our overall population. As we further developed our model, we decided to adopt a more precise definition of safety net providers. We believe that by narrowing our definition of safety net providers to the top 20 percent (80th percentile) of social risk we can identify the providers who are caring for the largest proportion of low-income or otherwise socially vulnerable individuals.

Table 126 shows the final score estimates for safety net providers under this new definition. Safety net provers have higher median final scores than the overall population of MIPS eligible clinicians across all practice sizes with the exception of small and solo practitioners. When our analysis is restricted to providers who submit data to MIPS this discrepancy disappears and small and solo safety net providers who submit data have higher median final scores than the overall population of small and solo MIPS eligible clinicians who submit data. However, only 43.65 percent of solo and 72.90 percent of small safety net providers submit data compared to 49.45 percent and 79.46 percent of the overall population of solo and small MIPS eligible clinicians respectively. These results are shown in Table 124. This indicates that the lower scores among small and solo safety net practitioners is likely due to a larger number of these practitioners not submitting data. It should be noted that median final scores increase for solo and small safety net providers between our baseline and policies model indicating that the net effect of our policies is an increase in their final scores.

TABLE 124: CY 2025 Final Score Estimates by Practice Size for *Safety Net Practitioners Only*

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
			Baseline		
1) Solo	5,347	62.31	26.95%	20.07%	52.98%
2) 2-15	14,202	80.84	55.01%	15.56%	29.43%
3) 16-99	37,246	85.12	66.77%	12.97%	20.26%
4) 100+	82,916	86.18	83.59%	5.64%	10.77%

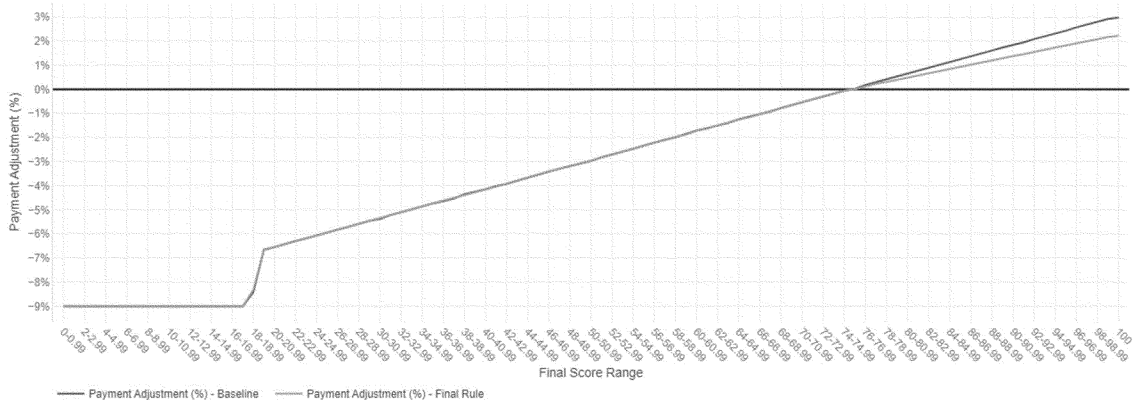
4) 100+	98.58%	89.31	88.35%	4.45%	7.20%
Overall	92.08%	89.57	83.99%	5.83%	10.18%

(c) Impact to MIPS Eligible Clinicians' Payment Adjustments

We did not increase in the performance threshold in this final rule. However, payment adjustments differ between the baseline and final policies model. This is because our policies increase final scores of MIPS eligible clinicians [940] and therefore a larger proportion of MIPS eligible clinicians receive a final score greater than the performance threshold and thus a positive payment adjustment. The parameters of the exchange function used to determine payment adjustments depends on the final score distribution of MIPS eligible clinicians. As the proportion of MIPS eligible clinicians receiving a negative payment adjustment decreases the budget neutral funds available for redistribution also decrease. In the baseline model we project redistributing $517 million and in the policies model we project redistributing $458 million. This decrease means that the scaling factor for positive adjustments is reduced.

FIGURE D-B5: Payment Adjustment Function



We also report the median positive and negative payment adjustments by practice size in Table 126.

[940] This increase is largely due to the change in our cost performance category scoring policies discussed in section IV.A.4.f.(1)(d)(ii)(B) of this final rule.

TABLE 126: CY 2025 Median Positive and Negative Payment Adjustment Estimates by Practice Size

Practice Size	Median Positive Payment Adjustment*	Median Negative Payment Adjustment*
Baseline		
Solo (1)	2.06%	-9.00%
Small (2-15)	1.82%	-4.69%
Medium (16-99)	1.65%	-1.25%
Large (>99)	1.59%	-0.88%
Overall	1.65%	-1.10%
Final Policies Model		
Solo (1)	1.55%	-6.42%
Small (2-15)	1.46%	-5.88%
Medium (16-99)	1.35%	-1.44%
Large (>99)	1.28%	-1.08%
Overall	1.31%	-1.48%

*The median positive payment adjustment is defined as the medium payment adjustment among clinicians with a final score above the performance threshold. The median negative adjustment is defined as the medium payment adjustment among clinicians with a final score below the performance threshold. Neither median includes clinicians with a final score equal the performance threshold.

For all practices sizes except for solo practitioners the median negative payment adjustment increases in magnitude. This is because many MIPS eligible clinician's final scores are clustered near the performance threshold. An increase in median final scores will cause many of those clinicians who have a minor negative adjustment to meet or exceed the performance threshold and therefore be removed from the population of clinicians with a negative adjustment. The remaining population of MIPS eligible clinicians with negative adjustments are more likely to have negative payment adjustments higher in magnitude. In contrast to other practice sizes. fewer solo practitioners with negative payment adjustments have a final score near the performance threshold and an increase in the final score of these MIPS eligible clinicians will reduce the size of their negative payment adjustment but is less likely to shift their final scores above the performance threshold in the manner described earlier. As discussed in section VII.E.17.d.(4)(b)(i) of this final rule, this is largely because many of these solo practitioners do not submit data to MIPS despite being MIPS eligible clinicians. Our analysis indicates that 49.45 percent of solo practitioners submit data to MIPS in our policies model compared to 93.70 percent of all MIPS eligible clinicians. In Table 127, we report the proportion of MIPS eligible clinicians who either did or did not submit data with the maximum negative adjustment (−9 percent).

TABLE 127: CY 2024 CY 2024 Clinicians with The Maximum Negative Adjustment

Practice Size	Percent of **Clinicians who Did NOT Submit Data** with Maximum Negative Adjustment	Percent of **Clinicians Who Submit Data** With Maximum Negative Adjustment
Baseline (-9%)		
Solo (1)	48.94%	2.90%
Small (2-15)	35.75%	0.84%
Medium (16-99)	17.88%	0.37%
Large (>99)	11.71%	0.12%
Overall	29.35%	0.28%
Final Policies Model (-9%)		
Solo (1)	35.57%	2.26%
Small (2-15)	25.23%	0.72%
Medium (16-99)	12.52%	0.35%
Large (>99)	5.50%	0.10%
Overall	20.77%	0.24%

Across all practice sizes the proportion of clinicians who do not submit data who receive the max negative payment adjustment decreased between the baseline and proposed policies model. A larger proportion of solo practitioners (2.26 percent) who submit data receive the maximum negative adjustment.

The median positive adjustment for solo practitioners is 1.55 percent which is higher than the median positive adjustment for all practice sizes overall. This indicates that, while many solo practitioners do not submit data to MIPS, those solo practitioners who do report data to MIPS and receive a positive adjustment receive a similar median adjustment to other practice sizes.

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting payment adjustments, we are finalizing several policies that impact burden for the CY 2025 performance period/2027 MIPS payment year. In section V.B.6. of this final rule, we outline estimated costs to MIPS eligible clinicians for Quality Payment Program ICRs that have updated estimates due to policy provisions in section IV.A. of this final rule. In section V.B.6. of this final rule, we applied the impacts of both policy provisions and updated data sources when estimating burden. In Table 128, we summarize the incremental burden of the policy provisions for these ICRs.

BILLING CODE 4120–01–P

TABLE 128: Incremental Estimated Burden from Associated Finalized Policies
(Asterisks refer to paragraph directly following table)

Burden Description and Associated Provisions	Burden Hours	Burden Dollars
Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2024 PFS final rule into the CY 2025 performance period/2027 MIPS payment year with updated data and assumptions (outlined in section V.B.6.a.(1)(a) of this final rule).	594,447	$71,079,848
Burden change for MVP registration ICR due to the provision of additional MVPs (outlined in section V.B.6.c.(5).(a).(i) of this final rule). *	+626	+$66,759
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (outlined in section V.B.6.c.(2) of this final rule). *	-7,697	-$898,035
Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (outlined in section V.B.6.c.(3) of this final rule). *	-6,866	-$823,269
Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (outlined in section V.B.6.c.(4) of this final rule). *	-9,664	-$1,176,109
Burden change for MVP Quality Submission ICR submissions due to the provision of additional MVPs (outlined in section V.B.6.c.(5).(a).(iii) of this final rule). *	+16,031	+$1,917,478
Total change in burden due to policy for CY 2025 performance period/2027 MIPS payment year	-7,570	-$913,176
Total burden set forth in the CY 2025 PFS final rule	586,877	70,166,672
Burden Description and Associated Provisions	**Burden Hours**	**Burden Dollars**
Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2024 PFS final rule into the CY 2025 performance period/2027 MIPS payment year with updated data and assumptions (outlined in section V.B.8. of this final rule).	594,447	$71,079,848
Burden change for MVP registration ICR due to the provision of additional MVPs (outlined in section V.B.8.e.(7)(a)(i). of this final rule). *	+626	+$66,759
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (outlined in section V.B.8.e.(4). of this final rule). *	-7,697	-$898,035
Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (outlined in section V.B.8.e.(5) of this final rule). *	-6,866	-$823,269
Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (outlined in section V.B.8.e.(6). of this final rule). *	-9,664	-$1,176,109
Burden change for MVP Quality Submission ICR submissions due to the provision of additional MVPs (outlined in section V.B.8.e.(7)(a)(iii). of this final rule). *	+16,031	+$1,917,478
Total change in burden due to policy for CY 2025 performance period/2027 MIPS payment year	-7,570	-$913,176

Burden Description and Associated Provisions	Burden Hours	Burden Dollars
Total burden set forth in the CY 2025 PFS final rule	586,877	70,166,672

The total change in burden due to this policy provision includes an increase in burden due to an anticipated increase in the number of respondents that will participate in MVP reporting based on the addition of six new MVPs. Therefore, there is a decrease in burden in the MIPS CQM and QCDR, eCQM, and Medicare Part B ICRs due to respondents who previously submitted MIPS through those collection types submitting data with reduced quality submission requirements as an MVP Participant. Total change in burden also reflects an increase in submission burden due to the additional MVP registrants. See section V.B.6.c.(2) of this final rule for additional detail.

BILLING CODE 4120–01–C

(2) Additional Impacts to Clinicians

We provide additional burden discussions for policy provisions that we are not able to quantify.

(a) Impact on Third Party Intermediaries

In section IV.A.4.j.(1)(b) of this rulemaking, we are finalizing our proposal that Consumer Assessment of Healthcare Providers & Systems (CAHPS) vendors will provide information on the range of costs for their services as part of CAHPS vendor registration process, beginning with the CY 2026 performance period/2028 MIPS payment year. This policy is in addition to the previously established registration requirements. We recognize that there may be additional minimal burden associated with the cost information requirement for the CAHPS vendor registration. However, we assume that this information is brief and readily available to vendors completing the registration process. We are unable to quantify the additional impact for the CAHPS vendor cost requirement.

(b) Modifications to the Improvement Activities Inventory

As outlined in section IV.A.4.e.(3)(b)(iii) of this final rule, we are finalizing our proposed changes to the improvement activities inventory for the CY 2025 performance period/2027 MIPS payment year and future years as follows: adding two new improvement activities; modifying one existing improvement activity; and removing four previously adopted improvement activities. We are also finalizing, with modification, our proposed changes to the improvement activities inventory for the CY 2026 performance period/2028 MIPS payment year: removing four improvement activities; and modifying one improvement activity. We do not expect these changes to the improvement activities inventory to affect our currently approved information collection burden for the number of estimated respondents or response time. Most of the improvement activities in the Inventory remain unchanged for the CY 2025 performance period/2027 MIPS payment year. We refer readers to section IV.A.4.e.(3)(b)(iii). of this final rule for additional information on changes to the improvement activities inventory.

(c) Modifications to Improvement Activities Scoring and Reporting Policies

As discussed in section IV.A.4.e.(3)(b)(iv), we are finalizing two scoring and reporting policy changes for the improvement activities performance category effective for the CY 2025 performance period/2027 MIPS payment year and subsequent years. As noted in section V.B.6.e. of this final rule, we established our currently approved estimate that it will take a computer analyst 5 minutes to log in and manually attest that improvement activities were completed in the CY 2019 PFS final rule (83 FR 60016). In the CY 2024 PFS final rule (88 FR 79454 and 79455), this estimate included scenarios where MIPS eligible clinicians might submit 1, 2, 3, or 4 activities for the improvement activities category, based on medium- or high-weighted activities and any additional scoring scenarios such as for MIPs Value Pathways (MVP) participants. We believe this policy will decrease burden for MIPS eligible clinicians who previously reported medium-weighted activities. As MIPS eligible clinicians who previously only reported high-weighted activities will have the same attestation requirements under this policy, we will continue our currently approve estimates of 5 minutes per response. We expect reduced reporting burden for clinicians who previously reported at least one medium-weighted activity; however, we are unable to estimate the aggregated impact of this policy given the current weighting and scoring rules that affect the number of activities each clinician submits to receive full credit for the improvement activities performance category.

(d) MVP Maintenance Process

In section IV.A.4.a of this final rule, we are finalizing a modification to the public-facing MVP maintenance webinar process previously established in the CY 2022 PFS final rule (86 FR 65410) and modified in the CY 2023 PFS final rule (87 FR 70037). We had communicated in the CY 2023 PFS final rule that if we identified any potentially feasible and appropriate submitted maintenance recommendations that we would host a public facing webinar open to interested parties and the general public through which they could offer their feedback on the potential maintenance updates we have identified.

Due to the low volume of submitted maintenance recommendations in past years, we are finalizing changes to provide us more flexibility in how we communicate maintenance recommendations prior to proposing them in rulemaking. Allowing flexibility in communicating recommendations through alternative webinar formats or other public communication channels will offer similar opportunities for public review and feedback as a live public webinar. For example, in lieu of a live webinar, we may choose to communicate submitted maintenance recommendations via a pre-recorded webinar, which will encourage interested parties to submit their feedback on the submitted recommendations in writing by email before maintenance updates are formally proposed in rulemaking.

As with the CY 2023 PFS final rule (87 FR 70210 through 70211), we acknowledge that there is administrative burden associated with the monitoring and review of the candidate MVPs. We are uncertain on the number of interested parties and members of the general public that will submit their recommendations for potential revisions to established MVPs for an applicable performance period. We are also uncertain if we will host a public webinar, webinar alternative, or other communications based on the review of the recommendations. In summary, we are unable to quantify the impact associated with these finalized changes.

(e) Reweighting Performance Categories When Data Is Not Submitted Due to Reasons Outside the Clinician's Control

As detailed in section IV.A.4.i.(2) of this final rule, we are finalizing our proposal to adopt a new reweighting performance category(ies) policy at

§ 414.1380(c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*) for occurrences where we determine that a third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. For more details on this proposal and the considerations when determining whether to apply reweighting to the affected performance category(ies), please see section IV.A.4.i.(2) of this final rule.

Because this is a new policy and we believe these occurrences will be rare based on our experience, we are unable to estimate the number of clinicians, groups, or third party intermediaries that may apply for reweighting based on this policy. Similarly, the extent and source of documentation provided to us for each event may vary considerably. Therefore, we did not make any changes to our currently approved burden estimates as a result of this policy.

(f) Advanced Primary Care Management

Advanced Primary Care Management (APCM) payment finalized in section II.G.2 of this final rule incorporates several specific, existing care management and communication technology-based services into a bundle and includes performance measurement requirements that, for MIPS eligible clinicians, could be met by reporting the Value in Primary Care MVP beginning in the CY 2025 performance period/2027 MIPS payment year. Billing practitioners who are not MIPS eligible clinicians (as defined at § 414.1305) will not have to report the MVP in order to furnish and bill for APCM services. Billing practitioners who are not MIPS eligible clinicians (as defined at § 414.1305) will not have to report the MVP in order to furnish and bill for APCM services. For details on this policy, we refer readers to section II.G.2. of this final rule.

Absent data on these codes, we are unable to estimate the effect of this policy on MVP submissions and registrations for the CY 2025 performance period/2027 MIPS payment year. As outlined in section V.B.6.c.5.(a) of this final rule, we are unable to determine how many additional clinicians or practices will submit the Value in Primary Care MVP measures for the CY 2025 performance period/2027 MIPS payment year above our current estimates. Similarly, we cannot assess what participation levels clinicians or practices who might use these APCM codes have reported MIPS in the past (for example, eligibility requirements and special statuses, participation at the individual, group, virtual group, or Alternative Payment Model (APM) Entity level, or reporting via traditional MIPS, the APM Performance Pathway (APP), or MVPs), or if they will be MIPS eligible clinicians in future years. For MIPS eligible clinicians who move from reporting traditional MIPS to MVPs, we expect a decrease in overall program burden due to the reduced number of measures required for reporting the quality performance category. We will update these assumptions for MVP quality performance category reporting and MVP registration as more information is available.

(g) Mandatory Subgroup Registration

As summarized in section IV.A.3. of this final rule, we previously established a voluntary subgroup participation option for clinicians choosing to report an MVP beginning in the CY 2023 performance period/2025 MIPS payment year. We finalized a mandatory subgroup reporting requirement for multispecialty groups choosing to report as an MVP Participant beginning in the CY 2026 performance period/2028 MIPS payment year (§ 414.1305; 86 FR 65394 through 65397). The CY 2025 PFS proposed rule (89 FR 62016) included a Request for Information (RFI) to obtain feedback on what guidance/parameters are needed for multispecialty groups to place clinicians into subgroups for reporting an MVP relevant to the scope of care provided. Absent available submission data on MVP and subgroup reporting as outlined in section V.B.6.c.(5)(a)(ii), we are unable to estimate the effect of this established policy on reporting for the CY 2026 performance period/2028 MIPS payment year.

(h) APM Performance Pathway Plus Quality Measure Set

In section IV.A.4.c.(2) of this final rule, we are finalizing, with modification, the proposal to establish the quality measures included in APP Plus quality measure set beginning in the CY 2025 performance period/2027 MIPS payment year. MIPS eligible clinicians, groups, and APM Entities reporting the APP Plus quality measure set will report via one of the available collection types per measure: six quality measures for the CY 2025 performance period/2027 MIPS payment year; eight quality measures for the CY 2026 performance period/2028 MIPS payment year; and nine quality measures for the CY 2027 performance period/2029 MIPS payment year. Two additional measures will be added for the CY 2028 performance period/2030 MIPS payment year or the next performance period following the availability of the eCQM specifications, whichever is later. For the available collection types per measure, please see section IV.A.4.c.(3)(f) of this final rule.

In section V.B.6.a.(4) of this final rule, we compared the quality performance category burden for MIPS eligible clinicians who elect to report the APP Plus quality measure set compared to the APP quality measure set, traditional MIPS, and MVPs. We focused these analyses on quality measures required for MIPS eligible clinicians, groups, and APM Entities under the eCQM, MIPS CQMQCDR, and Medicare Part B claims collection types, as available for each participation option. We note these assumptions for actively submitting to assess clinician burden may differ from MIPS scoring policy. In this comparison, we assumed MIPS eligible clinicians incur no burden for administrative claims quality measures, specifically the two administrative claims quality measures required under the APP quality measure set (Quality #479 and #484), and that will be incrementally added to the APP Plus quality measure set (Quality #479 in CY 2025 performance period/2027 MIPS payment year and Quality #484 in CY 2026 performance period/2028 MIPS payment year). Additionally, burden estimates for the CAHPS for MIPS registration and patient reporting are provided in the CAHPS for MIPS PRA package under OMB control number 0938–1222 (CMS–10450); we do not assume that MIPS eligible clinicians, groups, and APM Entities incur additional reporting burden for reporting the CAHPS for MIPS quality measure under the APP quality measure set or as required under the APP Plus quality measure set beginning in the CY 2025 performance period/2027 MIPS payment year. Therefore, MIPS eligible clinicians, groups, and APM Entities reporting the APP Plus quality measure set, beginning in the CY 2025 performance period/2027 MIPS payment year, will need to actively submit performance data for more MIPS quality measures than MIPS eligible clinicians, groups, and APM Entities reporting via the APP quality measure set. Compared to MVP reporting, MIPS eligible clinicians, groups, and APM Entities reporting the APP Plus quality measure set will need to actively submit performance data for the same number of quality measures for the CY 2025 performance period/2027 MIPS payment year, and more quality measures beginning with the CY 2026 performance period/2028 MIPS

payment year. Compared to traditional MIPS reporting, MIPS eligible clinicians, groups, and APM Entities reporting the APP Plus quality measure set will need to actively submit performance data for fewer quality measures for the CY 2025 and the 2026 performance periods/2027 and 2028 MIPS payment years, and the same number of quality measures for the CY 2027 performance period/2029 MIPS payment year. Once the final two quality measures are added to the APP Plus, for the CY 2028 performance period/2030 MIPS payment year or the next performance period following the availability of the eCQM specifications, whichever is later, MIPS eligible clinicians, groups, and APM Entities reporting the APP Plus will actively submit performance data for more quality measures than MIPS eligible clinicians, groups, and APM Entities reporting traditional MIPS.

As noted in the CY 2021 PFS final rule, one goal of the APP quality measure set was to reduce the burden of reporting quality measures twice: once to MIPS and once to their APMs. Therefore, clinicians reporting the APP quality measure set and APP Plus quality measure set who are required by their APMs to submit the same measure sets incur limited additional burden (88 FR 84862). We assume that all Shared Savings Program ACOs will report the APP via the APP Plus measure set for the CY 2025 performance period/2027 MIPS payment year. Per section 1899(e) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. As the APP Plus is a new and optional quality measure set for MIPS eligible clinicians, groups, and APM Entities (excluding Shared Savings Program ACOs) with greater reporting burden than the APP quality measure set and APM specific requirements may vary, we are unable to estimate how many individual MIPS eligible clinicians, groups, or APM Entities will submit quality measures via the APP Plus at this time. Our burden estimates currently assume MIPS eligible clinicians in APM Entities (excluding Shared Savings Program ACOs) will participate through traditional MIPS or MVPs, submitting as an individual or group rather than as an APM Entity. We will update these estimates and assumptions as additional data are available.

i. Assumptions & Limitations

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in for the CY 2022 Quality Payment Program and submitted data will continue to elect to opt-in for the CY 2025 performance period/2027 MIPS payment year.

As discussed in section V.B.8. of this final rule, we are unable to predict which specific MIPS eligible clinicians will receive reweighting for one or more performance categories under policies at § 414.1380(c)(2) in the CY 2025 performance period/2027 MIPS payment rear. On this basis, we assumed that those MIPS eligible clinicians for whom we approved reweighting of one or more performance categories under our policies are representative of the number and attributes of MIPS eligible clinicians who will receive reweighting under these policies in the future.

In addition to the limitations described throughout the methodology sections, to the extent that there are year-to-year changes in the data submission, volume, and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 120.

F. Alternatives Considered

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we exercise agency discretion, presents rationale for our policies, and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we presented above the estimated impact on total allowed charges by specialty.

1. Alternatives Considered Related to Strategies for Improving Global Surgery Payment Accuracy

As discussed previously and in section II.L. of this final rule, beginning for services furnished in 2025, we are finalizing our proposal to broaden the applicability of transfer of care modifier -54 for 90-day global packages as proposed. Beginning with services furnished in CY 2025, modifier -54 is required for all 90-day global surgical packages in any case when a practitioner plans to furnish only the surgical procedure portion of the global package (including both formal and other transfers of care). We are not finalizing any changes regarding the use of modifier -55 and modifier -56 for CY 2025. Modifiers -55 and -56 will continue to be billed exclusively in cases where there is a documented formal transfer of care.

Practitioners billing for a global package procedure code with modifier -54 and other practitioners in the same group practice as that practitioner will still be able to bill during the global period for any separately identifiable E/M services they furnish to the patient that are unrelated to the global package procedure. Additionally, we are finalizing a global surgical add-on code, HCPCS code G0559, which we expect will be billed during the post-operative period of 90 days following the procedure. We expect that this code will be billed once during that timeframe when the patient is seen for an office/outpatient (O/O) evaluation and management (E/M) visit that is related to the recent surgical procedure. We believe that this code will be billed by a physician or practitioner who is seeing the patient for a visit during the post-operative period and did not furnish the surgical procedure.

As we were developing this proposal, we analyzed a few different policy options to best achieve our goal of improving the payment accuracy of the global packages. We considered whether to propose to revalue the 10 and 90-day global packages on the PFS utilizing our findings and data under the MACRA requirement to improve payment accuracy on the fee schedule, however we are precluded from doing so under MACRA. We also considered revaluing services specifically included in the RAND study,[941] which looked at claims for which reporting of follow up visits was requested. We also considered proposing requiring separate billing, which would result in separate payments for the procedures and post operative visits in global packages, based on our current research and analysis of how practitioners may be furnishing care described by global packages. We considered this alternative policy as an initial step towards more accurately paying for global packages, specifically for services including high utilization global packages discussed in the RAND study. We also considered proposing revisions to all global surgical packages in a phased approach starting with the subset of packages described above and gradually revising other global packages over time, to manage

[941] Using Claims-Based Estimates of Post-Operative Visits to Revalue Procedures with 10- and 90-Day Global Periods; Updated Results Using Calendar Year 2019 Data.

payment predictability and stability within the PFS, rec.

2. Alternatives Considered Related to the Supervision of Outpatient Therapy Services in Private Practices

As discussed in section II.H of this final rule, we proposed to allow for the general supervision of occupational therapy assistants (OTAs) and physical therapist assistants (PTAs), by OT's and PT's in private practice (OTPPs and PTPPs, respectively) who are enrolled as suppliers in Medicare. Currently, and since 2005, OTPPs and PTPPs are required to provide direct supervision of their OTAs and PTAs which requires the OTPP/PTPP to be immediately available to furnish assistance and direction throughout the performance of the procedure in the office suite or in the patient's home when Medicare patients are treated in order to bill for therapy services furnished by their supervised OTAs and PTAs.

In developing our proposal to allow for general supervision in these private practice settings, we considered the possibility of allowing for virtual direct supervision by the OTPP/PTPP instead, as we have included OTPPs/PTPPs as ''supervising practitioners'' in the application of our virtual direct supervision policy since October 6, 2021, which is now extended through CY 2024. Due to the private practice direct supervision regulatory requirement, when using virtual direct supervision, this means (per our clarification in the CY 2021 PFS final rule (85 FR 84539)) that the OTPP or PTPP could meet the virtual direct supervision requirement by being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the service.

However, if this alternative policy were selected, it will leave the direct supervision requirement in place for OTPPs and PTPPs and they will still have to be immediately available to engage via audio/video technology and ensure their availability to do so. On the other hand, with general supervision, the OTPP's/PTPP's physical or virtual presence is not required when the OTA/PTA furnishes services, although the services continue to be furnished under their overall direction and control allowing the OTPP/PTPP, for example, to provide an evaluative service in the office while the OTA/PTA is off-site furnishing therapy services in a patient's home.

3. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. In section IV.A.4.g.(2)(c) of this final rule, we propose to set the performance threshold to 75 points for the CY 2025 MIPS performance period/CY 2027 MIPS payment year. Eighty-six (86) is a possible alternative value (mean of the CY 2019 performance period/2021 MIPS payment year) which we did not propose. To assess this alternative value, we ran a separate RIA model with a performance threshold of 86. This model has the same mean and median final score as our policies RIA model since the alternative performance threshold which we are assessing in this model does not change the final score. In our analysis of the alternative performance threshold of 86, which we considered but did not propose, 55.98 percent of MIPS eligible clinicians who submitted data will receive a negative payment adjustment in the baseline and 45.08 percent of MIPS eligible clinicians who submit data will receive a negative adjustment in the policies model.

We also reported the findings for the baseline RIA model which describes the impact for the CY 2025 performance period/2027 MIPS payment year if this proposal is not finalized. The baseline RIA model has a median final score of 82.20. We estimated that $517 million will be redistributed based on the budget neutrality requirement in the baseline model. The baseline includes a maximum payment adjustment of 2.98 percent and 22.84 percent of MIPS eligible clinicians will receive a negative payment adjustment.

G. Impact on Beneficiaries

1. Medicare Shared Savings Program Provisions

As noted previously in this final rule, the HEBA will mainly provide upwards adjustments to benchmarks for—and likely draw increased participation from—new ACOs with particular focus on coordinating care for beneficiaries in underserved communities. New ACOs of this type are therefore projected to ultimately increase assignment to the Shared Savings Program by roughly 500,000 beneficiaries per year, ranging from 50,000 to 1.0 million at the low and high ends of this projection range.

ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in the MIPS. In performance year 2023, ACOs scored better than comparable MIPS groups on all 3 eCQMs, and the difference was statistically significant for the Controlling High Blood Pressure measure ($p < .001$). ACOs also performed better than comparable MIPS groups on 8 of 10 patient experience survey measures that contribute to the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS measure, and for 3 measures the difference was statistically significant ($p < .05$): Getting Timely Care, Appointments, and Information; How Well Providers Communicate; and Patient's Rating of Provider. ACOs showed statistically significant improvement relative to PY 2022 for 7 of 10 CMS Web Interface measures. We anticipate that ACOs will continue to improve the quality of care for their Medicare fee-for-service beneficiaries through the reporting of Medicare CQMs, and that ACOs will continue to improve the quality of care for their all payer/all patient population through the reporting of eCQMs.

Increased participation in the Shared Savings Program will extend ACO care coordination and quality improvement to segments of the beneficiary population that potentially have more to benefit from care management.

2. Quality Payment Program

There are several changes in this final rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, if finalized, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate the policies in this final rule will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new quality measures include patient-reported outcome-based measures, which could be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and could also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which would not otherwise be available through routine clinical data collection. Patient-reported outcome-based measured are factors

frequently of interest to patients when making decisions about treatment.

H. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rulemaking, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's rule will be the number of reviewers of this year's proposed rule. We acknowledged that this assumption may understate or overstate the costs of reviewing this rulemaking. It is possible that not all commenters will review this year's rule in detail, and it is also possible that some reviewers will choose not to comment on the final rule. For these reasons, we believe that the number of commenters will be a fair estimate of the number of reviewers of this year's final rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this final rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rulemaking.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimated that the cost of reviewing this rulemaking is $129.28, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm*. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this final rule. For each facility that reviews the rule, the estimated cost is $1,034.24 (8.0 hours × $129.28). Therefore, we estimated that the total cost of reviewing this regulation is $7,218,995 ($1,034.24 × 6,980 reviewers on this year's final rule).

As for the Medicare Diabetes Prevention Program, given that we tried to align this rulemaking as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rulemaking impacts only enrolled MDPP suppliers and eligible beneficiaries who have started MDPP or are interested in enrolling in MDPP.

I. Accounting Statement

As required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), in Tables 129 through 131 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2024 to CY 2025 based on the FY 2025 President's Budget baseline.

TABLE 129: Accounting Statement: Classification of Estimated Expenditures

CATEGORY	TRANSFERS
CY 2025 Annualized Monetized Transfers	Estimated decrease in expenditures of $1.8 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 130: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

CATEGORY	TRANSFER
CY 2025 Annualized Monetized Transfers of beneficiary cost coinsurance.	-$0.4 billion
From Whom to Whom?	Beneficiaries to Federal Government.

TABLE 131: Accounting Statement for Provisions for Medicare Shared Savings Program (CYs 2025-2034) ($ Millions)

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
BENEFITS				
Annualized monetized: Discount rate: 2%	-$17.3 million	-$200.4 million	$127.7 million	Tables 115 through 117; summarized in total in Table 118

Notes: Negative values reflect reduction in Federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

J. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 28, 2024.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 427

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 428

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 491

Grant programs-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements, Rural areas.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 401—GENERAL ADMINISTRATIVE REQUIREMENTS

■ 1. The authority citation for part 401 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, 1395w–5, and 1395kk–2.

■ 2. Section 401.305 is amended by revising paragraphs (a)(2), (b)(1) introductory text and (b)(2) introductory text and adding paragraph (b)(3) to read as follows:

§ 401.305 Requirements for reporting and returning of overpayments.

(a) * * *

(2) A person has identified an overpayment when the person knowingly receives or retains an overpayment. The term ''knowingly'' has the meaning set forth in 31 U.S.C. 3729(b)(1)(A).

(b) * * *

(1) Except as provided in paragraphs (b)(2) and (3) of this section, a person who has received an overpayment must report and return the overpayment by the later of either of the following:

* * * * *

(2) The deadline for returning overpayments will be suspended (or will continue to be suspended following the completion of a timely, good faith investigation in accordance with paragraph (b)(3) of this section) when any of the following occurs:

* * * * *

(3)(i) The deadline for reporting and returning overpayments will be suspended when both of the following occurs:

(A) A person has identified an overpayment but has not yet completed a good-faith investigation to determine the existence of related overpayments that may arise from the same or similar cause or reason as the initially identified overpayment; and

(B) The person conducts a timely, good-faith investigation to determine whether related overpayments exist.

(ii) If the conditions of paragraph (b)(3)(i) of this section are satisfied, the deadline for reporting and returning the initially identified overpayment and related overpayments that arise from the same or similar cause or reason as the initially identified overpayment will remain suspended until the earlier of:

(A) The date that the investigation of related overpayments has concluded and the aggregate amount of the initially identified overpayments and related overpayments is calculated; or

(B) The date that is 180 days after the date on which the initial identified overpayment was identified.

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 3. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 4. Section 405.2410 is amended by revising paragraphs (c)(1) and (2) to read as follows:

§ 405.2410 Application of Part B deductible and coinsurance.

* * * * *

(c) * * *

(1) For RHCs, the coinsurance amount is determined as described in paragraph (b)(1) of this section; or

(2) For FQHCs, the coinsurance amount is 20 percent of the lesser of—

(i) The FQHC's actual charge; or

(ii) The payment determined under § 405.2462(j)(2).

■ 5. Section 405.2462 is amended by—

■ a. In paragraphs (f) heading, (f)(1) introductory text, (f)(2), and (g)(1)(ii), removing ''grandfathered'' and adding in its place ''historically excepted''; and

■ b. Revising and republishing paragraph (j).

The revisions and republications read as follows:

§ 405.2462 Payment for RHC and FQHC services.

* * * * *

(j) *Payment amount for intensive outpatient services.* (1) An RHC is paid the payment rate determined under § 419.21(a) of this chapter for services described under § 410.44 of this chapter. There are no adjustments to this rate.

(i) If the deductible has been fully met by the beneficiary prior to the RHC service, Medicare pays eighty (80) percent of the payment amount determined under this paragraph (j)(1).

(ii) If the deductible has not been fully met by the beneficiary prior to the RHC service, Medicare pays eighty (80) percent of the difference between the remaining deductible and the payment amount determined under this paragraph (j)(1); or

(iii) If the deductible has not been fully met by the beneficiary prior to the RHC service, no payment is made to the RHC if the deductible is equal to or exceeds the payment amount determined under this paragraph (j)(1).

(2) FQHCs are paid the payment rate determined under § 419.21(a) of this chapter for services described under § 410.44 of this chapter. There are no adjustments to this rate, except that historically excepted tribal FQHCs are paid pursuant to paragraph (j)(2)(ii) of this section.

(i) Medicare pays eighty (80) percent of the lesser of the FQHC's actual charge or the payment rate determined under paragraph (j)(1)(ii) of this section; or

(ii) Medicare pays eighty (80) percent of the lesser of a historically excepted tribal FQHC's actual charge or the amount described under paragraphs (f)(2) and (3) of this section.

(iii) No deductible is applicable to FQHC services.

■ 6. Section 405.2463 is amended by revising paragraphs (b)(3) introductory text and paragraph (c)(4) introductory text to read as follows:

§ 405.2463 What constitutes a visit.

* * * * *

(b) * * *

(3) *Visit-Mental health.* A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service, beginning January 1, 2026, furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record, between an RHC or FQHC patient and one of the following:

* * * * *

(c) * * *

(4) For FQHCs billing under PPS, and historically excepted tribal FQHCs that are authorized to bill as a FQHC at the outpatient per visit rate for Medicare as set annually by the Indian Health Service—

* * * * *

■ 7. Section 405.2464 is amended by revising paragraphs (c) and (d) and adding paragraphs (g) and (h) to read as follows:

§ 405.2464 Payment rate.

* * * * *

(c) *Payment for care coordination services.* RHCs and FQHCs are paid for the non-face-to-face care management work involved in coordinating care.

(1) For Chronic Care Management (CCM) services furnished between January 1, 2016, and December 31, 2017, payment to RHCs and FQHCs is based on the physician fee schedule national non-facility payment rate.

(2) For psychiatric collaborative care model (CoCM) services furnished on or after January 1, 2018, payment is based on the average of the national non-facility PFS payment rate set for each psychiatric CoCM service and updated annually based on the PFS amounts.

(3) For CCM and general Behavioral Health Integration (BHI) services furnished between January 1, 2018, and December 31, 2020, payment is based on the average of the national non-facility PFS payment rate set for each CCM and general BHI service and updated annually based on the PFS amounts.

(4) For CCM, general BHI, and Principal Care Management (PCM) services furnished between January 1, 2021, and December 31, 2022, payment is based on the average of the national non-facility PFS payment rate set for each CCM, general BHI, and PCM service and updated annually based on the PFS amounts.

(5) For CCM, general BHI, PCM, Chronic Pain Management (CPM) services furnished between January 1, 2023, and December 31, 2023, payment is based on the average of the national non-facility PFS payment rate set for each CCM, general BHI, PCM and CPM service and updated annually based on the PFS amounts.

(6) For CCM, general BHI, PCM, CPM, Remote Physiologic Monitoring (RPM), Remote Therapeutic Monitoring (RTM), Community Health Integration (CHI), Principal Illness Navigation (PIN), and PIN—Peer Support services furnished between January 1, 2024, and December 31, 2024, the payment amount is based on a weighted average of each CCM, general BHI, PCM, CPM, RPM, RTM, CHI, PIN, and PIN—Peer Support service using the most recently available PFS utilization data.

(7) For CCM, general BHI, PCM, CPM, RPM, RTM, CHI, PIN, PIN—Peer Support, and Advance Primary Care Management services furnished on or after January 1, 2025, payment is based on the PFS national non-facility payment rate.

(d) *Payment for FQHCs that are authorized to bill as historically excepted tribal FQHCs.* Historically excepted tribal FQHCs are paid at the outpatient per visit rate for Medicare as set annually by the Indian Health Service for each beneficiary visit for covered services. There are no adjustments to this rate.

* * * * *

(g) *Payment for non-behavioral health telecommunication technology services.* For an encounter furnished using interactive, real-time, audio and video telecommunications technology or for certain audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology services that are not described in § 405.2463(b)(3), payment to RHCs and FQHCs are subject to the national average payment rates for comparable services under the physician fee schedule (PFS) and costs associated with these services shall not be used in determining payments under the RHC all-inclusive rate or the FQHC prospective payment system.

(h) *Payment for drugs covered as additional preventive services (DCAPS).* For drugs covered as additional preventive services, as defined at § 410.64 of this subchapter, and for the administration and supplying fees for those drugs, payment to RHCs or FQHCs is 100 percent of the Medicare payment amount per § 405.2410(b) and § 410.152(l)(11) of this chapter, subject to the payment limitations described at § 410.152(o) of this chapter.

■ 8. Section 405.2466 is amended by revising paragraph (b)(1)(iv) to read as follows:

§ 405.2466 Annual reconciliation.

* * * * *

(b) * * *

(1) * * *

(iv) For RHCs and FQHCs, payment for pneumococcal, influenza, hepatitis B

and COVID–19 vaccine and their administration is 100 percent of Medicare reasonable cost.

* * * * *

§ 405.2469 [Amended]

■ 9. Section 405.2469 is amended in paragraph (a)(2) by removing ''grandfathered'' and adding in its place ''historically excepted''.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 10. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 11. Section 410.26 is amended by revising paragraph (a)(2) to read as follows:

§ 410.26 Services and supplies incident to a physician's professional services: Conditions.

(a) * * *

(2) *Direct supervision* means, except as provided in paragraphs (a)(2)(i) and (ii) of this section, the level of supervision by the physician (or other practitioner) of auxiliary personnel as defined in § 410.32(b)(3)(ii). For the following services furnished after December 31, 2025, the presence of the physician (or other practitioner) required for direct supervision may include virtual presence through audio/video real-time communications technology (excluding audio-only):

(i) Services furnished incident to the services of a physician or other practitioner when provided by auxiliary personnel employed by the billing practitioner and working under their direct supervision and for which the underlying Healthcare Common Procedure Coding System (HCPCS) code has been assigned a PC/TC indicator of '5'.

(ii) Office or other outpatient visits for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care practitioner.

* * * * *

■ 12. Section 410.30 is amended by revising paragraph (a) to read as follows:

§ 410.30 Prescription drugs used in immunosuppressive therapy.

(a) *Scope.* Payment may be made for prescription drugs used in immunosuppressive therapy that meet one of the following conditions:

(1) The drug has been approved for marketing by the FDA and—

(i) The approved labeling includes an indication for preventing or treating the rejection of a transplanted organ or tissue; or

(ii) The approved labeling includes the indication for use in conjunction with immunosuppressive drugs to prevent or treat rejection of a transplanted organ or tissue.

(2) The drug has been approved for marketing by FDA and determined by a Medicare Administrative Contractor (MAC) (in accordance with part 421, subpart C, of this chapter), in processing a Medicare claim, to be reasonable and necessary for the specific purpose of preventing or treating the rejection of a patient's transplanted organ or tissue, or for use in conjunction with immunosuppressive drugs for the purpose of preventing or treating the rejection of a patient's transplanted organ or tissue. (In making these determinations, the MACs may consider factors such as authoritative drug compendia, current medical literature, recognized standards of medical practice, and professional medical publications.)

(3) The drug is a compounded formulation with active ingredients derived only from a drug described in paragraph (a)(1) or (2) of this section and is orally or enterally administered.

* * * * *

■ 13. Section 410.32 is amended by revising paragraph (b)(3)(ii) to read as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests: Conditions.

* * * * *

(b) * * *

(3) * * *

(ii) *Direct supervision* in the office setting means that the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. Through December 31, 2025, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

* * * * *

■ 14. Section 410.37 is amended by—

■ a. In paragraph (a)(1)(iv), removing the text ''barium enemas'' and adding in its place ''computed tomography colonography'';

■ b. Revising paragraph (a)(4);

■ c. In paragraph (e)(2), removing the text ''barium enema'' and adding in its place ''computed tomography colonography'';

■ d. In paragraph (g)(2), removing the text ''barium enema'' and adding in its place ''computed tomography colonography'';

■ e. Revising paragraphs (h), (i), and (k).

The revisions read as follows:

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.

* * * * *

(a) * * *

(4) *Screening computed tomography colonography* means a test that uses X-rays and computers to produce images of the entire colon (including image processing and a physician's interpretation of the results of the procedure).

* * * * *

(h) *Conditions for coverage of screening computed tomography colonography.* Medicare Part B pays for a screening computed tomography colonography if it is ordered in writing by the beneficiary's attending physician who is a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Act); or by a physician assistant, nurse practitioner, or clinical nurse specialist (as defined in section 1861(aa)(5) of the Act).

(i) *Limitations on coverage of screening computed tomography colonography.* (1) In the case of an individual age 45 or over who is not at high risk of colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 59 months have passed following the month in which the last screening computed tomography colonography was performed or 47 months have passed following the month in which the last screening flexible sigmoidoscopy or screening colonoscopy was performed.

(2) In the case of an individual who is at high risk for colorectal cancer, payment may be made for a screening computed tomography colonography performed after at least 23 months have passed following the month in which the last screening computed tomography colonography or the last screening colonoscopy was performed.

* * * * *

(k) *A complete colorectal cancer screening.* Effective January 1, 2025, colorectal cancer screening tests include a follow-on screening colonoscopy after a Medicare covered non-invasive stool-based colorectal cancer screening test or blood-based biomarker colorectal cancer screening test returns a positive result. A follow-on screening colonoscopy in the context of a complete colorectal

cancer screening is not subject to the frequency limitations for colorectal cancer screening in paragraphs (g)(2) or (3) of this section.

■ 15. Section 410.59 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

(a) * * *

(3) * * *

(ii) By, or under the general supervision (or as specified otherwise) of, an occupational therapist in private practice as described in paragraph (c) of this section; or

* * * * *

(c) * * *

(2) *Supervision of occupational therapy services.* Except as otherwise provided in this paragraph (c)(2), occupational therapy services are performed by, or under the general supervision of, an occupational therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, generally supervised by the therapist, and included in the fee for the therapist's services. Occupational therapy services may be performed by an occupational therapy assistant under the general supervision of the occupational therapist in private practice; services performed by an unenrolled occupational therapist must be under the direct supervision of the occupational therapist.

* * * * *

■ 16. Section 410.60 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

(a) * * *

(3) * * *

(ii) By, or under the general supervision (or as specified otherwise) of, a physical therapist in private practice as described in paragraph (c) of this section; or

* * * * *

(c) * * *

(2) *Supervision of physical therapy services.* Except as otherwise provided in this paragraph (c)(2), physical therapy services are performed by, or under the general supervision of, a physical therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, generally supervised by the therapist, and included in the fee for the therapist's services. Physical therapy services may be performed by a physical therapist assistant under the general supervision of the physical therapist in private practice; services performed by an unenrolled physical therapist must be under the direct supervision of the physical therapist.

* * * * *

■ 17. Section 410.63 is amended by—

■ a. Revising paragraph (a) introductory text;

■ b. Removing the word ''and'' at the end of paragraph (a)(2)(ii);

■ c. Removing the period at the end of paragraph (a)(2)(iii) and adding in its place ''; and'';

■ d. Adding paragraph (a)(2)(iv); and

■ e. Revising paragraphs (b) and (c)(1).

The revisions and addition read as follows:

§ 410.63 Hepatitis B vaccine and blood clotting factors: Conditions.

* * * * *

(a) *Hepatitis B vaccine: Conditions.* Effective January 1, 2025, hepatitis B vaccinations are reasonable and necessary for the prevention of illness for those individuals who are at high or intermediate risk of contracting hepatitis B as listed in paragraphs (a)(1) through (3) of this section:

* * * * *

(2) * * *

(iv) Individuals who have not previously received a completed hepatitis B vaccination series or whose previous vaccination history is unknown.

* * * * *

(b) *Blood clotting factors: Conditions.* Effective July 18, 1984, blood clotting factors that are self-administered and control bleeding for hemophilia patients competent to use these factors without medical or other supervision, and items related to the administration of those factors. Therapies that enable the body to produce clotting factor and do not directly integrate into the coagulation cascade are not themselves clotting factors. The amount of clotting factors covered under this provision is determined by the carrier based on the historical utilization pattern or profile developed by the carrier for each patient, and based on consideration of the need for a reasonable reserve supply to be kept in the home in the event of emergency or unforeseen circumstance.

(c) * * *

(1) Effective January 1, 2005, a furnishing fee of $0.14 per unit of clotting factor is paid to entities that furnish blood clotting factors, as described in paragraph (b) of this section, unless the costs associated with furnishing the clotting factor are paid through another payment system, for example, hospitals that furnish clotting factor to patients during a Part A covered inpatient hospital stay, or practitioners that furnish clotting factor to patients in an outpatient setting and are paid for under the Physician Fee Schedule.

* * * * *

■ 18. Section 410.67 is amended by—

■ a. In paragraph (b), in the definition of ''Opioid use disorder treatment service,'' by:

■ (i) Revising paragraphs (vi) and (vii); and

■ (ii) Adding paragraphs (x) and (xi);

■ b. Adding paragraphs (d)(4)(i)(G) and (H); and

■ c. Revising paragraphs (d)(4)(ii) and (iii).

The revisions and additions read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * * * *

(b) * * *

Opioid use disorder treatment service

* * *

(vi) Intake activities, including initial medical examination services required under § 8.12(f)(2) of this title and initial assessment services required under § 8.12(f)(4) of this title.

(A) For intake activities furnished via communications technology, the following flexibilities apply:

(*1*) Services to initiate treatment with buprenorphine may be furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. In cases where audio-video communications technology is not available to the beneficiary, services to initiate treatment with buprenorphine may be furnished using audio-only telephone calls if all other applicable requirements are met.

(*2*) Services to initiate treatment with methadone may be furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements, if the OTP practitioner determines that an adequate evaluation of the patient can be accomplished through audio-video communication technology.

(B) [Reserved]

(vii) Periodic assessment services required under § 8.12(f)(4) of this title, that are furnished during a face-to-face encounter, including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all

applicable requirements. In cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met.

* * * * *

(x) Coordinated care and/or referral services, provided by an OTP to link a beneficiary with community resources to address unmet health-related social needs or the need and interest for harm reduction interventions and recovery support services that significantly limit the ability to diagnose or treat a patient's opioid use disorder.

(xi) Patient navigational services and/or peer recovery support services, when provided directly by an OTP or through referral, in order to assist patients with an OUD in navigating the health system and accessing supportive services, and/or to provide support in meeting patient-driven OUD treatment and recovery goals.

* * * * *

(d) * * *

(4) * * *

(i) * * *

(G) Coordinated care and/or referral services described in paragraph (x) of the definition of opioid use disorder treatment service in paragraph (b) of this section, an adjustment will be made when each additional 30 minutes of these services are furnished.

(H) Patient navigational services and/or peer recovery support services described in paragraph (xi) of the definition of opioid use disorder treatment service in paragraph (b) of this section, an adjustment will be made when each additional 30 minutes of these services are furnished.

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, OTP intensive outpatient services, coordinated care and/or referral services, patient navigational services and/or peer recovery support services, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be geographically adjusted using the Geographic Adjustment Factor described in § 414.26 of this subchapter. For purposes of this adjustment, OUD treatment services that are furnished via an OTP mobile unit will be treated as if they were furnished at the physical location of the OTP registered with the Drug Enforcement Administration (DEA) and certified by SAMHSA.

(iii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, OTP intensive outpatient services, coordinated care and/or referral services, patient navigational services and/or peer recovery support services, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be updated annually using the Medicare Economic Index described in § 405.504(d) of this subchapter.

* * * * *

■ 19. Section 410.78 is amended by revising paragraph (a)(3) read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) *Interactive telecommunications system* means, except as otherwise provided in this paragraph (a)(3), multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. Interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a patient in their home if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of, or does not consent to, the use of video technology. The following modifiers must be appended to a claim for telehealth services furnished using two-way, real-time audio-only communication technology to verify that the conditions set forth in the prior sentence have been met:

(i) Current Procedural Terminology (CPT) modifier ''93''; and

(ii) For rural health clinics (RHCs) and federally qualified health centers (FQHCs), Medicare modifier ''FQ''.

* * * * *

■ 20. Section 410.79 is amended by—

■ a. In paragraph (b):

■ i. Removing the definition of ''Combination delivery'';

■ ii. Adding the definitions of ''Combination with an online component,'' ''In-person with a distance learning component,'' and ''Online'' in alphabetical order;

■ iii. Removing the definition of ''Online delivery''; and

■ iv. Revising the definition of ''Set of MDPP services''; and

■ b. Revising paragraphs (d)(1) introductory text, (e)(3)(iii)(C), (e)(3)(iv)(F)(*3*), and (e)(3)(v)(F)(*2*).

The additions and revisions read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(b) * * *

Combination with an online component refers to sessions that are delivered as a combination of online (non-live) with in-person or distance learning.

* * * * *

In-person with a distance learning component refers to DPP sessions that are delivered in person by trained Coaches where participants have the option of attending sessions via MDPP distance learning.

* * * * *

Online means sessions that are delivered 100 percent through the internet via phone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence (AI)) Coach teaching the content. These sessions must be furnished in a manner consistent with the DPRP Standards for online sessions. Live Coach interaction must be offered to each participant during weeks when the participant has engaged with content. Emails and text messages can count toward the requirement for live Coach interaction if there is bi-directional communication between the Coach and participant. Chat bots and AI forums do not count as live Coach interaction.

* * * * *

Set of MDPP services means the series of MDPP sessions, composed of core sessions and core maintenance sessions, and subject to paragraph (c)(3) of this section offered over the course of the MDPP services period.

* * * * *

(d) * * *

(1) An MDPP supplier may offer a make-up session to an MDPP beneficiary who missed a regularly scheduled session. MDPP make-up sessions may only use in-person or distance learning delivery. If an MDPP supplier offers one or more make-up sessions to an MDPP beneficiary, each such session must be furnished in accordance with the following requirements:

* * * * *

(e) * * *

(3) * * *

(iii) * * *

(C) Self-reported weight measurements from the at-home digital scale of the MDPP beneficiary. Self-reported weights must be obtained during live, synchronous online video technology, such as video chatting or

video conferencing, where in the MDPP Coach observes the beneficiary weighing themselves and views the weight indicated on the at-home digital scale, or the MDPP supplier receives one (1) or two (2) date-stamped photo(s) or a video recording of the beneficiary's weight, with the beneficiary visible on the scale, submitted by the MDPP beneficiary to the MDPP supplier. Photo or video must clearly document the weight of the MDPP beneficiary as it appears on their digital scale on the date associated with the billable MDPP session. If choosing to submit one photo, this photo must show the beneficiary's weight on the scale with the beneficiary visible in their home. If choosing to submit 2 photos, one photo must show the beneficiary's weight on the digital scale, and a second photo must show the beneficiary visible in their home. All photos must be date-stamped.

* * * * *

(iv) * * *

(F) * * *

(*3*) No more than 12 virtual sessions offered monthly during the ongoing maintenance session intervals, months 13 through 24 for beneficiaries enrolled before January 1, 2022.

* * * * *

(v) * * *

(F) * * *

(*2*) For an MDPP beneficiary who began receiving the Set of MDPP services on or after January 1, 2021, has suspended services during an applicable 1135 waiver event, the MDPP supplier must use the baseline weight recorded at the beneficiary's first core session.

* * * * *

■ 21. Section 410.152 is amended by adding paragraph (o) to read as follows:

§ 410.152 Amounts of payment.

* * * * *

(o) *Amount of payment: Drugs covered as additional preventive services (DCAPS).* For a drug covered as an additional preventive service, as defined at § 410.64, payment must be made as follows:

(1) Payment for a drug covered as an additional preventive service, per section 1861(a)(1)(W)(ii) of the Act and paragraphs (l)(11) of this section and § 410.160(b)(13), is 100 percent of the lesser of—

(i) The actual charge on the claim for program benefits; or

(ii) The amount determined under the fee schedule as described in paragraph (o)(3) of this section.

(2) Payment for the supplying or administration of a drug covered as an additional preventive service per section 1861(a)(1)(W)(ii) of the Act and paragraphs (l)(11) of this section and § 410.160(b)(13), is 100 percent of the lesser of—

(i) The actual charge on the claim for program benefits; or

(ii) The amount determined under the fee schedule as described in paragraph (o)(4) of this section.

(3) The payment limit for a drug covered as an additional preventive service, as defined at § 410.64, appears on the DCAPS fee schedule and is determined as follows:

(i) If Average Sales Price (ASP) data is available for the drug, consistent with part 414, subpart J, of this chapter, then the payment limit is determined using the methodology set forth in section 1847A of the Act and according to the provisions in part 414, subpart K, of this chapter.

(ii) If ASP data is not available, then the payment limit is determined according to the most recently published National Average Drug Acquisition Cost (NADAC) prices for the drug and is the lesser of the median NADAC price of all generic forms of the drug or the lowest NADAC price brand name product.

(iii) If ASP data and NADAC prices are not available, then the payment limit is determined according to the most recently published pharmaceutical pricing data for the drug as included in the Federal Supply Schedule (FSS), as managed by the Department of Veterans Affairs per 48 CFR part 38, and is the lesser of the median FSS price of all generic forms of the drug or the lowest FSS price brand name product.

(iv) If ASP data, NADAC prices, and FSS pharmaceutical prices are not available, then the payment limit is the invoice price determined by the MAC.

(4) The payment limits for supplying and administering a drug covered as an additional preventive service, as defined at § 410.64, appear on the DCAPS fee schedule and are determined as follows:

(i) For a drug that is supplied by a pharmacy, the payment limit for a supplying fee is as follows:

(A) For the first prescription that the pharmacy provides to a beneficiary in a 30-day period for a drug covered as an additional preventive service, $24.

(B) For all subsequent prescriptions that the pharmacy provides to a beneficiary in a 30-day period for a drug covered as an additional preventive service, $16.

(ii) For a drug that is administered by a physician or a non-physician practitioner, the payment limit for administration is set in accordance with part 414, subpart B, of this chapter. This fee is not subject to the Part B deductible, per § 410.160(b)(13). This fee is equal to 100 percent of the Medicare payment amount established under the applicable payment methodology, per paragraph (l)(11) of this section.

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 22. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn.

■ 23. Section 411.15 is amended by adding paragraph (i)(3)(i)(F) to read as follows:

§ 411.15 Particular services excluded from coverage.

* * * * *

(i) * * *

(3) * * *

(i) * * *

(F) Dental or oral examination performed as part of a comprehensive workup prior to, or contemporaneously with, Medicare-covered dialysis services when used in the treatment of end stage renal disease (ESRD); and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, Medicare-covered dialysis services when used in the treatment of ESRD.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 24. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 25. Section 414.84 is amended by—

■ a. In paragraph (a), removing the definition of ''Bridge payment'';

■ b. Revising paragraphs (b)(1) introductory text and (b)(2) introductory text;

■ c. Adding paragraph (c)(4);

■ d. Revising paragraph (d); and

■ e. Removing paragraph (e).

The revisions and addition read as follows:

§ 414.84 Payment for MDPP services.

* * * * *

(b) * * *

(1) *Performance Goal 1: Achieves the required minimum 5-percent weight loss.* CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves the required minimum weight loss as measured in-person or during a distance learning session during a core session or

core maintenance session furnished by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(2) *Performance Goal 2: Achieves 9-percent weight loss.* CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves at least a 9-percent weight loss as measured in-person or in a distance learning session during a core session or core maintenance session furnished by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(c) * * *

(4) Current Procedural Terminology (CPT) Modifier 76 (repeat services by same physician) must be appended to any claim for G9886 or G9887 to identify a MDPP make-up session that was held on the same day as a regularly scheduled MDPP session.

(d) *Updating performance payments and attendance payments.* The performance payments and attendance payments will be adjusted each calendar year by the percent change in the Consumer Price Index for All Urban Consumers (CPI–U) (U.S. city average) for the 12-month period ending June 30th of the year preceding the update year. The percent change update will be calculated based on the level of precision of the index as published by the Bureau of Labor Statistics (BLS) and applied based on one decimal place of precision. The annual MDPP services payment update will be published by CMS transmittal.

■ 26. Section 414.502 is amended by revising the definitions of ''Data collection period'' and ''Data reporting period'' to read as follows:

§ 414.502 Definitions.

* * * * *

Data collection period is the 6 months from January 1 through June 30, during which applicable information is collected and that precedes the data reporting period, except that for the data reporting period of January 1, 2026, through March 31, 2026, the data collection period is January 1, 2019, through June 30, 2019.

Data reporting period is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019, through June 30, 2019, the data reporting period is January 1, 2026, through March 31, 2026.

* * * * *

§ 414.504 [Amended]

■ 27. Section 414.504 is amended in paragraph (a)(1) by removing the reference ''January 1, 2024'' and adding in its place the reference ''January 1, 2026''.

■ 28. Section 414.507 is amended by revising paragraphs (d) introductory text and paragraphs (d)(7) and (8), and adding paragraphs (d)(10) and (11) to read as follows:

§ 414.507 Payment for clinical diagnostic laboratory tests.

* * * * *

(d) *Phase-in of payment reductions.* For years 2018 through 2028, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

* * * * *

(7) 2024—0.0 percent of the payment rate established in 2023.

(8) 2025—0.0 percent of the payment rate established in 2024.

* * * * *

(10) 2027—15 percent of the payment rate established in 2026.

(11) 2028—15 percent of the payment rate established in 2027.

* * * * *

■ 29. In § 414.605 amend the definition of ''Advanced life support, level 2 (ALS2)'' by adding paragraph (8) to read as follows:

§ 414.605 Definitions.

* * * * *

Advanced life support, level 2 (ALS2)

* * *

(8) Prehospital blood transfusion which includes:

(i) Administration of low titer O+ and O− whole blood (WBT);

(ii) Administration of packed red blood cells (PRBCs);

(iii) Administration of plasma; or

(iv) Administration of a combination of PRBCs and plasma.

* * * * *

■ 30. Section 414.902 is amended by revising the definition ''Refundable single-dose container or single-use package drug'' to read as follows:

§ 414.902 Definitions.

* * * * *

Refundable single-dose container or single-use package drug means:

(1) A single source drug or biological or a biosimilar biological product for which payment is made under this part and that is—

(i) Furnished from a single-dose container or single-use package based on FDA-approved labeling or product information; or

(ii) Furnished from an ampule for which product labeling does not have discard statement or language indicating if the container is single-dose container, single-use package, multiple-dose container, or single-patient-use container; or

(iii) Furnished from a container with a total labeled volume of 2 mL or less for which product labeling does not have language indicating if the container is single-dose container, single-use package, multiple-dose container, or single-patient-use container.

(2) Excludes—

(i) A drug that is a therapeutic radiopharmaceutical, a diagnostic radiopharmaceutical, or an imaging agent as identified in the drug's FDA-approved labeling.

(ii) A drug for which the FDA-approved labeling for any National Drug Code assigned to a billing and payment code of such drug requires filtration during the drug preparation process, prior to dilution and administration and that any unused portion of such drug after the filtration process be discarded after the completion of such filtration process.

(iii) A drug approved or licensed by the FDA on or after November 15, 2021, until the last day of the sixth full quarter for which the drug has been marketed (as reported to CMS) for the first National Drug Code assigned to the billing and payment code of such drug.

(iv) A drug approved or licensed by FDA on or after November 15, 2021 and for which the date the drug was first marketed (as reported to CMS) does not adequately approximate the date of first payment under Part B due to an applicable national coverage determination, until the last day of the sixth full quarter for which the drug has been covered and paid under Medicare Part B for the first National Drug Code assigned to the billing and payment code of such drug.

* * * * *

■ 31. Section 414.904 is amended by adding paragraph (e)(6) and revising paragraph (i) to read as follows:

§ 414.904 Average sales price as the basis for payment.

* * * * *

(e) * * *

(6) *Radiopharmaceuticals furnished in settings other than the hospital outpatient department.* Medicare administrative contractors must determine payment limits for

radiopharmaceuticals based on any methodology used to determine payment limits for radiopharmaceuticals in place on or prior to November 2003. Such methodology may include, but is not limited to, the use of invoice-based pricing.

* * * * *

(i) *Manufacturer's average sales price (ASP) data not available prior to the publication deadline for quarterly payment limits.* For circumstances in which manufacturer's ASP data is not available prior to the publication deadline for quarterly payment limits as described in this section, payment limit must be determined as follows:

(1) For a multiple source drug (as defined in § 414.902)—

(i) In circumstances in which negative or zero manufacturer's ASP data is reported for one or more, but not all, NDCs associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is calculated using only NDCs for that drug with positive manufacturer's ASP data, except in circumstances described in paragraph (i)(1)(iii) of this section.

(ii) In circumstances in which negative or zero manufacturer's ASP data is reported for all NDCs associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is calculated by carrying over all positive manufacturer's ASP data from the most recently available previous quarter with positive manufacturer's ASP data for at least one NDC until at least one NDC for the drug has positive manufacturer's ASP data for a quarter.

(iii) In circumstances in which manufacturer's ASP data is not available and the unavailability of the manufacturer's ASP data results in a significant change in the ASP payment limit compared to the previous quarter, the payment limit is calculated by carrying over the most recently available ASP data for the individual NDC(s), adjusted by the weighted average of the change in the manufacturer's ASP data for the NDCs that were reported for both the most recently available previous quarter and the current quarter.

(2) For a single source drug, excluding biosimilar biological products (both as defined in § 414.902)—

(i) In circumstances in which negative or zero manufacturer's ASP data is reported for one or more, but not all, NDCs associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is calculated using only NDCs for that drug with positive manufacturer's ASP data.

(ii) In circumstances in which negative or zero manufacturer's ASP data is reported for all NDCs associated with a billing and payment code for that drug for a given quarter, the payment limit for the given quarter is the lesser of the following until at least one NDC for the drug has positive manufacturer's ASP data for a quarter:

(A) 106 percent of the volume-weighted average of the most recently available positive manufacturer's ASP data from a previous quarter in which at least one NDC for the drug has positive manufacturer's ASP data for the quarter. If the payment limit from such quarter was based on 106 percent of the wholesale acquisition cost because of the application of paragraph (d)(1) of this section, that payment limit is carried over; or

(B) 106 percent of the wholesale acquisition cost. If there is more than one WAC per billing unit for the drug, the payment limit is set using the lowest WAC per billing unit.

(3) For a biosimilar biological product (as defined in § 414.902)—

(i) In circumstances in which negative or zero manufacturer's ASP data is reported for one or more, but not all, NDCs for a given quarter, the payment limit for the given quarter is calculated using only NDCs with positive manufacturer's ASP data.

(ii) In circumstances in which negative or zero manufacturer's ASP data is reported for all NDCs for a given quarter, the payment limit for the given quarter is the sum of the following until at least one NDC for the drug has positive manufacturer's ASP data for a quarter:

(A) The volume-weighted average of the most recently available positive manufacturer's ASP data from a previous quarter; and

(B) Either:

(*1*) If the biosimilar is not a qualifying biosimilar (as both are defined at § 414.902), 6 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902) for the given quarter; or

(*2*) If the biosimilar is a qualifying biosimilar (as both are defined at § 414.902), 8 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902) for the given quarter.

* * * * *

■ 32. Section 414.1001 is amended by—

■ a. Revising paragraph (a);

■ b. Removing paragraph (b);

■ c. Redesignating paragraphs (c) and (d) as paragraphs (b) and (c), respectively;

■ d. In newly redesignated paragraph (b)(2), removing ''(c)(1)'' and adding in its place ''(b)(1)''.

The revision reads as follows:

§ 414.1001 Basis of payment.

(a) *Supplying fees.* Beginning in CY 2006—

(1) A supplying fee of $24 is paid to a pharmacy (no more often than once every 30 days) for the first prescription of drugs and biologicals described in sections 1861(s)(2)(J), 1861(s)(2)(Q), and 1861(s)(2)(T) of the Act, that the pharmacy provided to a beneficiary, except as provided in paragraph (a)(2) of this section.

(2) A supplying fee of $50 is paid to pharmacy for the initial supplied prescription of drugs and biologicals described in section 1861(s)(2)(J) of the Act, that the pharmacy provided to a patient during the first 30-day period following a transplant.

(3) A supplying fee of $16 is paid to a pharmacy (no more often than once every 30 days) for each prescription following the first prescription (as specified in paragraphs (a)(1) and (2) of this section) of drugs and biologicals described in sections 1861(s)(2)(J), 1861(s)(2)(Q), and 1861(s)(2)(T) of the Act, that the pharmacy provided to a beneficiary.

(4) A separate supplying fee is paid to a pharmacy for each prescription of drugs and biologicals described in sections 1861(s)(2)(J), 1861(s)(2)(Q), and 1861(s)(2)(T) of the Act.

* * * * *

■ 33. Section 414.1325 is amended by adding paragraphs (a)(1)(i) through (iii) and (f) to read as follows:

§ 414.1325 Data submission requirements.

(a) * * *

(1) * * *

(i) For the quality performance category, a data submission must include numerator and denominator data for at least one MIPS quality measure from the final list of MIPS quality measures.

(ii) For the improvement activities performance category, a data submission must include a response of ''yes'' for at least one activity in the MIPS improvement activities inventory.

(iii) For the Promoting Interoperability performance category, a data submission must include all of the following elements:

(A) Performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS;

(B) Required attestation statements, as specified by CMS;

(C) CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL); and

(D) The start date and end date for the applicable performance period as set forth in § 414.1320.

* * * * *

(f) *Treatment of multiple data submissions.* (1) For multiple data submissions received in the quality and improvement activities performance categories in accordance with paragraphs (a)(1)(i) and (ii) of this section for an individual MIPS eligible clinician, group, subgroup, or virtual group from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor), CMS will calculate and score each submission received and assign the highest of the scores. For multiple data submissions received for an individual MIPS eligible clinician, group, subgroup, or virtual group from one or multiple submitters in the same organization, CMS will score the most recent submission.

(2) For multiple data submissions received for the Promoting Interoperability performance category, CMS will calculate a score for each data submission received and assign the highest of the scores.

■ 34. Section 414.1330 is amended by adding paragraph (c) to read as follows.

§ 414.1330 Quality performance category.

* * * * *

(c)(1) CMS uses the following criteria to determine the removal of a quality measure:

(i) If the Secretary determines that the quality measure is no longer meaningful, such as measures that are topped out.

(ii) If a measure steward is no longer able to maintain the quality measure.

(iii) If the quality measure reached extremely topped out status.

(iv) If the quality measure does not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.

(v) If the quality measure is duplicative.

(vi) If the quality measure is not updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice.

(vii) If the quality measure is a process measure.

(viii) If the quality measure addresses a measurement gap.

(ix) If the quality measure is a patient-reported outcome.

(x) If the quality measure is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians.

(xi) The robustness of the quality measure.

(xii) Consideration of the quality measure in developing MIPS Value Pathways (MVPs).

(2) A quality measure that otherwise meets the criteria for removal in paragraph (c)(1) of this section may nonetheless be retained based on the following considerations:

(i) Whether the removal of the process measure impacts the number of measures available for a specific specialty.

(ii) Whether the quality measure addresses a priority area.

(iii) Whether the quality measure promotes positive outcomes in patients.

(iv) Whether the quality measure is designated as high priority or not.

(v) Whether the quality measure has reached extremely topped out status.

(vi) Evaluation of the quality measure's performance data.

■ 35. Section 414.1335 is amended by revising paragraph (a) introductory text and adding paragraph (b) to read as follows.

§ 414.1335 Data submission criteria for the quality performance category.

(a) *Criteria.* Except as provided in paragraph (b) of this section, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must submit data on MIPS quality measures in one of the following manners, as applicable:

* * * * *

(b) *Special rule for the APM Performance Pathway (APP) Plus measure set.* A MIPS eligible clinician, group, or APM Entity that reports the APP Plus measure set via the APP must report on all measures included in the APP Plus measure set, except for administrative claims-based quality measures as provided in § 414.1325(a)(2)(i).

■ 36. Section 414.1340 is amended by revising paragraphs (a)(4), (b)(4), (d) introductory text, and (d)(1) to read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) * * *

(4) At least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, and APM Entity's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2026, 2027, 2028, 2029, and 2030.

(b) * * *

(4) At least 75 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2026, 2027, 2028, 2029, and 2030.

* * * * *

(d) APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations that meet reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20 of this chapter, who meet the measure's denominator criteria for MIPS payment years 2026, 2027, 2028, 2029, and 2030.

* * * * *

■ 37. Section 414.1350 is amended by adding paragraph (e) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(e) *Cost measure removal criteria.* CMS may remove a cost measure from MIPS based on one or more of the following factors, provided however CMS may retain a cost measure that meets one or more of the following factors if CMS determines the benefit of retaining the measure outweighs the benefit of removing it.

(1) It is not feasible to implement the measure specifications.

(2) A measure steward is no longer able to maintain the cost measure.

(3) The implementation costs or negative unintended consequences associated with a cost measure outweigh the benefit of its continued use in the MIPS cost performance category.

(4) The measure specifications do not reflect current clinical practice or guidelines.

(5) The availability of a more applicable measure, including a measure that applies across settings, applies across populations, or is more proximal in time to desired patient outcomes for the particular topic.

■ 38. Section 414.1355 is amended by adding paragraph (d) to read as follows:

§ 414.1355 Improvement activities performance category.

* * * * *

(d) CMS may remove an improvement activity from MIPS based on one or more of the following factors, provided however CMS may retain an improvement activity that meets one or more of the following factors if CMS determines the benefit of retaining the activity outweighs the benefit of removing it:

(1) *Factor 1:* Activity is duplicative of another activity.

(2) *Factor 2:* There is an alternative activity with a stronger relationship to

quality care or improvements in clinical practice.

(3) *Factor 3:* Activity does not align with current clinical guidelines or practice.

(4) *Factor 4:* Activity does not align with at least one meaningful measures area.

(5) *Factor 5:* Activity does not align with the quality, cost, or Promoting Interoperability performance categories.

(6) *Factor 6:* There have been no attestations of the activity for 3 consecutive years.

(7) *Factor 7:* Activity is obsolete.

■ 39. Section 414.1365 is amended by revising paragraphs (b)(2)(i), (c)(3)(i) and (ii), (c)(4)(i)(A), (d)(3)(i)(A) introductory text, (d)(3)(i)(A)(*1*), (d)(3)(ii) introductory text, (d)(3)(ii)(A), and (d)(3)(iii) to read as follows:

§ 414.1365 MIPS Value Pathways.

* * * * *

(b) * * *

(2) * * *

(i) For the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, each MVP Participant must select an MVP, one population health measure included in the MVP, and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored. Beginning in the CY 2025 performance period/2027 MIPS payment year, each MVP Participant must select an MVP and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored.

* * * * *

(c) * * *

(3) * * *

(i) For the CY 2023 and 2024 performance periods/2025 through 2026 MIPS payment years:

(A) Two medium-weighted improvement activities.

(B) One high-weighted improvement activity.

(C) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(ii) Beginning in the CY 2025 performance period/2027 MIPS payment year:

(A) One improvement activity.

(B) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

* * * * *

(4) * * *

(i) * * *

(A) An MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category.

* * * * *

(d) * * *

(3) * * *

(i) * * *

(A) *Population health measures.* Except as provided in paragraph (d)(3)(i)(A)(*1*) of this section, for the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, each selected population health measure that does not have a benchmark or meet the case minimum requirement is excluded from the MVP participant's total measure achievement points and total available measure achievement points. Beginning in the CY 2025 performance period/2027 MIPS payment year, except as provided in paragraph (d)(3)(i)(A)(*1*) of this section, the highest score of all applicable and available population health measures will be used. If no population health measure has a benchmark or meets the case minimum requirement, each such measure is excluded from the MVP participant's total measure achievement points and total available measure achievement points.

(*1*) For the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, a subgroup is scored on each selected population health measure based on its affiliated group score, if available. Beginning in the CY 2025 performance period/2027 MIPS payment year, a subgroup is scored on the highest scoring of all available population health measures based on its affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

* * * * *

(ii) *Cost performance category.* The cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2) and the cost measures included in the MVP that they select and report.

(A) A subgroup is scored on each cost measure included in the MVP that it selects and reports based on its affiliated group score for each such measure, if available. If the subgroup's affiliated group score is not available for a measure, the measure is excluded from the subgroup's total measure achievement points and total available measure achievement points, as described under § 414.1380(b)(2).

* * * * *

(iii) *Improvement activities performance category.* In the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, the improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii). Beginning in the CY 2025 performance period/2027 MIPS payment year, MVP Participants will receive 40 points for each improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized PCMH or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

* * * * *

■ 40. Section 414.1367 is amended by revising paragraph (c)(1) introductory text and adding paragraph (c)(1)(iii) to read as follows:

§ 414.1367 APM performance pathway.

* * * * *

(c) * * *

(1) *Quality.* Except as provided in paragraphs (c)(1)(i) and (ii) of this section, the quality performance category score is calculated for a MIPS eligible clinician, group, or APM Entity group in accordance with § 414.1380(b)(1) based on the quality measure set applicable to the MIPS eligible clinician, group, or APM Entity group under paragraph (c)(1)(iii) of this section and established by CMS through rulemaking for a MIPS payment year.

* * * * *

(iii)(A) For performance periods beginning prior to CY 2025 and MIPS payment years beginning prior to 2027, a MIPS eligible clinician, group, or APM Entity group must report the APM Performance Pathway quality measure set.

(B) Beginning with the CY 2025 performance period/2027 MIPS payment year, a MIPS eligible clinician, group, or APM Entity group may choose to report either the APM Performance Pathway quality measure set or the APP Plus quality measure set.

* * * * *

■ 41. Section 414.1380 is amended by—

■ a. Revising paragraph (b)(1)(ii) introductory text;

■ b. Adding paragraphs (b)(1)(ii)(E) and (F);
■ c. Revising paragraph (b)(1)(iv)(B);
■ d. Adding paragraph (b)(1)(iv)(C);
■ e. Revising paragraph (b)(1)(vii) introductory text;
■ f. Adding paragraph (b)(1)(vii)(C);
■ g. Revising paragraph (b)(2) introductory text;
■ h. Adding paragraphs (b)(2)(i)(A) and (B) and (b)(2)(v)(B);
■ i. Revising paragraph (b)(3) introductory text; and
■ j. Adding paragraphs (c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(ii) *Benchmarks.* Except as provided in paragraphs (b)(1)(ii)(B) through (F) of this section, benchmarks will be based on performance by collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

* * * * *

(E) Beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice on a yearly basis. Measures included in the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

(F) Beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type use flat benchmarks for their first two performance periods in MIPS.

* * * * *

(iv) * * *

(B) Beginning with the 2021 MIPS payment year, except as provided for in paragraph (b)(1)(iv)(C) of this section, each measure (except for measures in the CMS Web Interface) for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years receives no more than 7 measure achievement points in the second consecutive year it is identified as topped out, and beyond.

(C) Beginning with the CY 2025 performance period/2027 MIPS payment year, measures impacted by limited measure choice as specified in paragraph (b)(1)(ii)(E) of this section are not subject to the 7 measure achievement point cap specified in paragraph (b)(1)(iv)(B) of this section.

* * * * *

(vii) *Quality performance category score.* A MIPS eligible clinician's quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) of this section and Complex Organization Adjustment in paragraph (b)(1)(vii)(C) of this section. The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) of this section is added to that result. The quality performance category score cannot exceed 100 percentage points.

* * * * *

(C) Beginning in the CY 2025 performance period/2027 MIPS payment year, a Virtual Group and an APM Entity receives one measure achievement point for each eCQM submitted that meets the case minimum requirement at paragraph (b)(1)(iii) of this section and the data completeness requirement at § 414.1340. Each measure may not exceed 10 measure achievement points. The total adjustment to the Virtual Group or APM Entity's quality performance category score under this paragraph (b)(1)(vii)(C) may not exceed 10 percent of the total available measure achievement points.

(2) *Cost performance category.* For each cost measure attributed to a MIPS eligible clinician, the clinician receives one to ten achievement points based on the clinician's performance on the measure during the performance period compared to the measure's benchmark. Achievement points are awarded based on which benchmark range the MIPS eligible clinician's performance on the measure is in. CMS assigns partial points based on where the MIPS eligible clinician's performance falls between the top and bottom of the benchmark ranges.

(i) * * *

(A) For the 2019 through 2025 MIPS payment years, CMS determines cost measure benchmark ranges based on linear percentile distributions.

(B) Beginning with the 2026 MIPS payment year, for each cost measure, CMS determines 10 benchmark ranges based on the median cost of all MIPS eligible clinicians attributed the measure, plus or minus standard deviations. CMS awards achievement points based on which benchmark range a MIPS eligible clinician's average cost for a cost measure corresponds. Additionally, CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose average cost attributed under a cost measure is equal to the median cost for all MIPS eligible clinicians attributed the measure.

* * * * *

(v) * * *

(B) Beginning with the 2026 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician's or group's cost performance category score. For purposes of this paragraph (b)(2)(v)(B), ''significant changes or errors'' are changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. Significant changes or errors include, but are not limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. CMS will empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance.

(3) *Improvement activities performance category.* Subject to paragraphs (b)(3)(i) and (ii) of this section, the improvement activities performance category score equals the total points for all submitted improvement activities divided by 40 points, multiplied by 100 percent. In the CY 2023 through 2024 performance periods/2025 through 2026 MIPS payment years, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) receive 10 points for each medium-weighted improvement activity and 20 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325. Non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and

geographic HPSAs receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325. Beginning in the CY 2025 performance period/2027 MIPS payment year, MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) receive 20 points for each improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325. Non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 40 points for each improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325.

* * * * *

(c) * * *

(2) * * *

(i) * * *

(A) * * *

(*10*) Beginning with the 2026 MIPS payment year, for the quality and improvement activities performance categories, CMS determines, based on documentation provided to the agency on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the affected performance category(ies), CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines.

* * * * *

(C) * * *

(*12*) Beginning with the 2026 MIPS payment year, CMS determines, based on documentation provided to the agency on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third party intermediary, and the third party intermediary did not submit the data for the performance category on behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the Promoting Interoperability performance category, CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third party intermediary's submission of the clinician's data for the performance category; whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third party intermediary caused no data to be submitted for the performance category in accordance with applicable deadlines.

* * * * *

■ 42. Section 414.1405 is amended by adding paragraph (b)(10) and revising paragraph (g) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(10) Pursuant to the methodology established at paragraph (g)(2) of this section:

(i) The performance threshold for the 2027 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

(ii) [Reserved]

* * * * *

(g) *Performance threshold methodology.* (1) For each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b)(9) of this section.

(2) For each of the 2027, 2028, and 2029 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b)(10) of this section.

■ 43. Section 414.1430 is amended by—

■ a. Revising paragraph (a)(1)(v);

■ b. Adding paragraph (a)(1)(vi);

■ c. Revising paragraph (a)(2)(v);

■ d. Adding paragraph (a)(2)(vi);

■ e. Revising paragraph (a)(3)(v);

■ f. Adding paragraph (a)(3)(vi);

■ g. Revising paragraph (a)(4)(v);

■ h. Adding paragraph (a)(4)(vi); and

■ i. Revising paragraphs (b)(1)(i)(A) and (B), (b)(2)(i)(A) and (B), (b)(3)(i)(A) and (B), and (b)(4)(i)(A) and (B).

The revisions and additions read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) * * *

(v) 2026: 50 percent.

(vi) 2027 and later: 75 percent.

(2) * * *

(v) 2026: 40 percent.

(vi) 2027 and later: 50 percent.

(3) * * *

(v) 2026: 35 percent.

(vi) 2027 and later: 50 percent.

(4) * * *

(v) 2026: 25 percent.

(vi) 2027 and later: 35 percent.

(b) * * *

(1) * * *

(i) * * *

(A) 2021 through 2026: 50 percent.

(B) 2027 and later: 75 percent.

* * * * *

(2) * * *

(i) * * *

(A) 2021 through 2026: 40 percent.

(B) 2027 and later: 50 percent.

* * * * *

(3) * * *

(i) * * *

(A) 2021 through 2026: 35 percent.

(B) 2027 and later: 50 percent.

* * * * *

(4) * * *

(i) * * *

(A) 2021 through 2026: 25 percent.

(B) 2027 and later: 35 percent.

* * * * *

■ 44. Section 414.1450 is amended by revising paragraph (a)(1)(i) and the first sentence of paragraph (b)(1) to read as follows:

§ 414.1450 APM incentive payment.

(a) * * *

(1) * * *

(i) For payment years 2019 through 2026, CMS makes a lump sum payment to QPs in the amount described in paragraph (b) of this section in the manner described in paragraphs (d) and (e) of this section.

* * * * *

(b) * * *

(1) For payment years 2019 through 2024, the amount of the APM Incentive Payment is equal to 5 percent, with respect to payment year 2025, 3.5 percent, or with respect to payment year 2026, 1.88 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. * * *

* * * * *

PART 422—MEDICARE ADVANTAGE PROGRAM

■ 45. The authority citation for part 422 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–21 through 1395w–28, and 1395hh.

■ 46. Section 422.326 is amended by revising paragraph (c) to read as follows:

§ 422.326 Reporting and returning of overpayments.

* * * * *

(c) *Identified overpayment.* The MA organization has identified an overpayment when the MA organization knowingly receives or retains an overpayment. The term ''knowingly'' has the meaning set forth in 31 U.S.C. 3729(b)(1)(A).

* * * * *

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

■ 47. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

■ 48. Section 423.160 is amended by revising paragraph (a)(5) introductory text to read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) Beginning on January 1, 2021, prescribers must, except in the circumstances described in paragraphs (a)(5)(i) through (iii) of this section, conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of this section, subject to the exemption in paragraph (a)(3)(iii) of this section. Prescriptions written for a beneficiary in a long-term care facility will not be included in determining compliance until January 1, 2028. Compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care facility will commence on or after January 1, 2028. Compliance actions against prescribers who do not meet the compliance threshold based on other prescriptions will commence on or after January 1, 2023. Prescribers will be exempt from this requirement in the following situations:

* * * * *

■ 49. Section 423.360 is amended by revising paragraph (c) to read as follows:

§ 423.360 Reporting and returning of overpayments.

* * * * *

(c) *Identified overpayment.* The Part D sponsor has identified an overpayment when the Part D sponsor knowingly receives or retains an overpayment. The term ''knowingly'' has the meaning set forth in 31 U.S.C. 3729(b)(1)(A).

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 50. The authority citation for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 51. Section 424.24 is amended by revising paragraphs (c) heading, (c)(1)(i), and (c)(3)(ii) and adding paragraph (c)(5) to read as follows:

§ 424.24 Requirements for medical and other health services furnished by providers under Medicare Part B.

* * * * *

(c) *Outpatient physical therapy, occupational therapy, and speech-language pathology services*—

(1) * * *

(i) The individual needs, or needed, physical therapy, occupational therapy, or speech-language pathology services.

* * * * *

(3) * * *

(ii) If the plan of treatment is established by a physical therapist, occupational therapist, or speech-language pathologist, the certification must be signed by a physician or by a nurse practitioner, clinical nurse specialist, or physician assistant who has knowledge of the case, except as specified in paragraph (c)(5) of this section.

* * * * *

(5) *Treatment plan.* If the plan of treatment is established by a physical therapist, occupational therapist, or speech-language pathologist, and there is a written order or referral from the individual's physician, nurse practitioner (NP), physician assistant (PA), or clinical nurse specialist (CNS) in the patient's record and the therapist has documented evidence that the plan of treatment has been delivered to the physician, NP, PA, or CNS within 30 days of completion of the initial evaluation, the certification does not need to be signed by a physician, NP, CNS, or PA who has knowledge of the case. If there is no written order or referral from the individual's physician, NP, CNS, or PA, in the patient's record, the therapist must obtain the signature of the physician, NP, PA, or CNS on the plan of treatment in accordance with paragraph (c)(3) of this section. No references to an order or referral in this subsection shall be construed to require an order or referral for outpatient physical therapy, occupational therapy, or speech-language pathology services.

* * * * *

■ 52. Section 424.205 is amended by revising paragraphs (c)(10), (f)(1)(ii), (f)(2)(i), and (f)(5) to read as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(c) * * *

(10) Except as allowed under paragraph (d)(8) of this section, the MDPP supplier must offer an MDPP beneficiary no fewer than all of the following:

(i) 16 in-person or distance learning core sessions no more frequently than weekly for the first 6 months of the MDPP services period, which begins on the date of attendance at the first such core session.

(ii) 1 in-person or distance learning core maintenance session each month during months 7 through 12 (6 months total) of the MDPP services period.

* * * * *

(f) * * *

(1) * * *

(ii) Basic beneficiary information for each MDPP beneficiary in attendance, including but not limited to beneficiary name, Medicare Beneficiary Identifier (MBI), and age.

* * * * *

(2) * * *

(i) Documentation of the type of session (in-person or distance learning).

* * * * *

(5) The MDPP supplier's records must include an attestation from the MDPP supplier that, as applicable, the MDPP beneficiary for which it is submitting a claim—

(i) Has achieved the required minimum 5-percent weight loss as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(ii) Has achieved the required minimum 5-percent weight loss as measured in-person during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(iii) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

(iv) Has achieved at least a 9-percent weight loss percentage as measured in-person during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 53. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 54. Section 425.100 is amended by adding paragraph (e) to read as follows:

§ 425.100 General.

* * * * *

(e) An ACO is eligible to receive prepaid shared savings if it meets the criteria under § 425.640(b).

■ 55. Section 425.110 is amended by revising paragraph (b)(2) to read as follows:

§ 425.110 Number of ACO professionals and beneficiaries.

* * * * *

(b) * * *

(2) For performance years starting before January 1, 2025, if the ACO's assigned population is not at least 5,000 by the end of the performance year specified by CMS in its request for a corrective action plan (CAP), CMS terminates the participation agreement and the ACO is not eligible to share in savings for that performance year.

* * * * *

■ 56. Section 425.202 is amended by revising paragraph (a)(3) to read as follows:

§ 425.202 Application procedures.

(a) * * *

(3) An ACO that seeks to participate in the Shared Savings Program must agree that CMS can share a copy of their application with the Antitrust Agencies.

* * * * *

■ 57. Section 425.204 is amended by—

■ a. Revising paragraphs (f)(1) and (f)(3) introductory text;

■ b. In paragraphs (f)(3)(iv), (f)(4)(iv)(A), and (f)(6)(ii) introductory text, removing the phrase ''any shared losses incurred'' and adding in its place the phrase ''any shared losses incurred and prepaid shared savings determined to be owed'';

■ c. In paragraphs (f)(5) and (f)(6)(iv)(A), removing the phrase ''shared losses owed'' and adding in its place the phrase ''shared losses owed or prepaid shared savings determined to be owed'';

■ d. In paragraph (f)(6)(iii), removing the phrase ''shared losses'' and adding in its place the phrase ''shared losses or prepaid shared savings determined to be owed''; and

■ e. In paragraph (f)(6)(iv)(C), removing the phrase ''owe any shared losses'' and adding in its place the phrase ''owe any shared losses or prepaid shared savings''.

The revisions read as follows:

§ 425.204 Content of the application.

* * * * *

(f) * * *

(1) An ACO must have the ability to repay all shared losses for which it may be liable under a two-sided model and any prepaid shared savings determined to be owed.

* * * * *

(3) An ACO that will participate under a two-sided model of the Shared Savings Program must submit for CMS approval documentation that it is capable of repaying shared losses that it may incur during its agreement period, including details supporting the adequacy of the repayment mechanism. If the ACO will receive prepaid shared savings, the repayment mechanism must also support repayment of prepaid shared savings in accordance with § 425.640.

* * * * *

■ 58. Section 425.224 is amended by revising paragraph (a)(3) to read as follows:

§ 425.224 Application procedures for renewing ACOs and re-entering ACOs.

(a) * * *

(3) An ACO that seeks to enter a new participation agreement under the Shared Savings Program must agree that CMS can share a copy of its application with the Antitrust Agencies.

* * * * *

■ 59. Section 425.304 is amended by adding paragraph (d) to read as follows:

§ 425.304 Beneficiary incentives.

* * * * *

(d) *Application of the CMS-sponsored model patient incentives safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (§ 1001.952(ii)(2) of this title) is available to protect remuneration furnished in the prepaid shared savings option of the Shared Savings Program in the form of direct beneficiary services that meets all safe harbor requirements set forth in § 1001.952(ii) of this title.

■ 60. Section 425.308 is amended by adding paragraph (b)(10) to read as follows:

§ 425.308 Public reporting and transparency.

* * * * *

(b) * * *

(10) Information updated annually about the ACO's use of prepaid shared savings under § 425.640, for each performance year, including the following:

(i) Total amount of any prepaid shared savings received from CMS.

(ii) The ACO's spend plan.

(iii) An itemization of how prepaid shared savings were spent during the year, including expenditure categories, the dollar amounts spent on the various categories, information about which groups of beneficiaries received direct beneficiary services that were purchased with prepaid shared savings and investments that were made in the ACO with prepaid shared savings, how these direct beneficiary services were provided to beneficiaries and how the direct beneficiary services and investments supported the care of beneficiaries, any changes to the spend plan as submitted under § 425.640(d)(2) (if applicable), and such other information as may be specified by CMS.

* * * * *

■ 61. Section 425.312 is amended by revising paragraphs (a)(2)(iii) and (a)(2)(v)(A) to read as follows:

§ 425.312 Beneficiary notifications.

(a) * * *

(2) * * *

(iii) In the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, by the ACO or ACO participant providing each beneficiary who received at least one primary care service during the assignment window or applicable expanded window for assignment (as defined in § 425.20) from a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in § 425.402(c), a FQHC or RHC that is part of the ACO, or an ACO professional in the ACO

whom the beneficiary designated as responsible for coordinating their overall care under § 425.402(e) with a standardized written notice at least once during an agreement period in the form and manner specified by CMS. The standardized written notice must be furnished to all of these beneficiaries prior to or at the first primary care service visit during the first performance year in which the beneficiary receives a primary care service from an ACO participant.

* * * * *

(v) * * *

(A) The follow-up communication must occur no later than 180 days from the date the standardized written notice was provided.

* * * * *

■ 62. Section 425.315 is amended by revising paragraph (a)(4) and adding paragraph (b) to read as follows:

§ 425.315 Reopening determinations of ACO shared savings or shared losses to correct financial reconciliation calculations.

(a) * * *

(4) CMS has the sole discretion to determine whether to reopen a payment determination under this section.

(b) *Reopening requests.* An ACO may request a reopening in a form and manner specified by CMS and consistent with the timeframes for a reopening specified in paragraphs (a)(1)(i) and (ii) of this section.

■ 63. Section 425.316 is amended by adding paragraph (f) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * * *

(f) *Monitoring ACO eligibility for and use of prepaid shared savings.* (1) CMS monitors an ACO that receives prepaid shared savings pursuant to § 425.640 to ensure ACO compliance with § 425.640(e) and to determine whether it would be appropriate to withhold or terminate an ACO's prepaid shared savings under § 425.640(h).

(2) If CMS determines that an ACO receiving prepaid shared savings is using the funds for a prohibited use under § 425.640(e)(2), fails to spend the funding in accordance with § 425.640(e)(1)(i) and (ii), or spends more than 50 percent of the estimated annual payment amount on staffing and healthcare infrastructure CMS:

(i) Will require the ACO to reallocate the funding as permitted by § 425.640(e) and submit an updated spend plan demonstrating the reallocation by a deadline specified by CMS.

(ii) May take compliance action as specified in §§ 425.216, 425.218, and 425.640(h)(1).

(3) If an ACO fails to reallocate prepaid shared savings it received as described in paragraph (f)(2)(i) of this section by a deadline specified by CMS, the ACO must repay all prepaid shared savings it received and may be subject to compliance action as specified in §§ 425.216 and 425.218. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

■ 64. Section 425.400 is amended by revising paragraph (c)(1)(viii) introductory text and adding paragraph (c)(1)(ix) to read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(viii) For the performance year starting on January 1, 2024, as follows:

* * * * *

(ix) For the performance year starting on January 1, 2025, and subsequent performance years as follows:

(A) CPT codes:

(*1*) 96160 and 96161 (codes for administration of health risk assessment).

(*2*) 96202 and 96203 (codes for caregiver behavior management training).

(*3*) 97550, 97551, and 97552 (codes for caregiver training services).

(*4*) 98016 (code for virtual check-in).

(*5*) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(*6*) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a skilled nursing facility (SNF)).

(*7*) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(*8*) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(*9*) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(ix)).

(*10*) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(*11*) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(*12*) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(*13*) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(*14*) 99439 (code for non-complex chronic care management).

(*15*) 99452 (code for interprofessional consultation service).

(*16*) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(*17*) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(*18*) 99495 and 99496 (codes for transitional care management services).

(*19*) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(*1*) G0019 and G0022 (codes for community health integration services).

(*2*) G0023 and G0024 (codes for principal illness navigation services).

(*3*) G0101 (code for cervical or vaginal cancer screening).

(*4*) G0136 (code for social determinants of health risk assessment services).

(*5*) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(*6*) G0402 (code for the Welcome to Medicare visit).

(*7*) G0438 and G0439 (codes for the annual wellness visits).

(*8*) G0442 (code for alcohol misuse screening service).

(*9*) G0443 (code for alcohol misuse counseling service).

(*10*) G0444 (code for annual depression screening service).

(*11*) G0463 (code for services furnished in electing teaching amendment (ETA) hospitals).

(*12*) G0506 (code for chronic care management).

(*13*) G0537 and G0538 (codes for cardiovascular risk assessment and risk management services).

(*14*) G0539 and G0540 (codes for individual behavior management/modification caregiver training services).

(*15*) G0541, G0542, and G0543 (codes for direct care caregiver training services).

(*16*) G0544 (code for post-discharge telephonic follow-up contacts intervention).

(*17*) G0556, G0557, and G0558 (codes for advanced primary care management services).

(*18*) G0560 (code for safety planning interventions).

(*19*) G2010 (code for the remote evaluation of patient video/images).

(*20*) G2012 and G2252 (codes for virtual check-in).

(*21*) G2058 (code for non-complex chronic care management).

(*22*) G2064 and G2065 (codes for principal care management services).

(*23*) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).

(*24*) G2211 (code for visit complexity inherent to evaluation and management services add-on).

(*25*) G2214 (code for psychiatric collaborative care model).

(*26*) G3002 and G3003 (codes for chronic pain management).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(ix)(A) of this section or a HCPCS code specified in paragraph (c)(1)(ix)(B) of this section, when the assignment window or expanded window for assignment (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

* * * * *

■ 65. Section 425.402 is amended by revising paragraph (e)(2)(ii) introductory text and adding paragraph (e)(2)(iii) to read as follows:

§ 425.402 Basic assignment methodology.

* * * * *

(e) * * *

(2) * * *

(ii) For performance years starting on January 1, 2019, through 2024:

* * * * *

(iii) For performance year 2025 and subsequent performance years:

(A) The beneficiary meets the eligibility criteria established at § 425.401(a) and must not be excluded by the criteria at § 425.401(b). The exclusion criteria at § 425.401(b) apply for purposes of determining beneficiary eligibility for alignment to an ACO based on the beneficiary's designation of an ACO professional as responsible for coordinating their overall care under paragraph (e) of this section, regardless of the ACO's assignment methodology selection under § 425.226(a)(1).

(B) The beneficiary must have designated an ACO professional as responsible for coordinating their overall care.

(C) If a beneficiary has designated a provider or supplier outside the ACO as responsible for coordinating their overall care, the beneficiary is not added under the assignment methodology in paragraph (b) of this section to the ACO's list of assigned beneficiaries for a 12-month performance year.

(D) The beneficiary is not assigned to an entity participating in a model tested or expanded under section 1115A of the Act that meets the following conditions—

(*1*) Claims-based assignment for the model is based solely on either—

(*i*) Claims for primary care and/or other services related to treatment of one or more specific diseases or conditions targeted by the model; or

(*ii*) Claims for services other than primary care services; and

(*2*) There has been a determination by the Secretary that waiver of the requirement in section 1899(c)(2)(B) of the Act is necessary solely for purposes of testing the model.

* * * * *

■ 66. Section 425.508 is amended by revising paragraph (b) and adding paragraph (c) to read as follows:

§ 425.508 Incorporating quality reporting requirements related to the Quality Payment Program.

* * * * *

(b) *For performance years beginning in 2021–2024.* ACOs must submit the quality data via the APM Performance Pathway (APP) established under § 414.1367 of this chapter to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.

(c) *For performance years beginning on or after January 1, 2025.* ACOs must submit the quality data via the APM Performance Pathway (APP) on the quality measures contained in the APP Plus quality measure set established under § 414.1367 of this chapter to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.

■ 67. Section 425.510 is amended by revising the section heading and paragraph (b) to read as follows:

§ 425.510 Application of the APM Performance Pathway (APP) quality measure set or the APP Plus quality measure set (as applicable) to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021.

* * * * *

(b) *Quality reporting.* (1) For performance years beginning in 2021–2024, ACOs must report quality data on the APP quality measure set established under § 414.1367 of this chapter, according to the method of submission established by CMS.

(2) For performance years beginning on or after January 1, 2025, ACOs must report quality data on the APP Plus quality measure set established under § 414.1367 of this chapter, according to the method of submission established by CMS.

* * * * *

■ 68. Section 425.512 is amended by—

■ a. Revising paragraph (a)(2)(iii);

■ b. Adding paragraph (a)(2)(iv);

■ c. Revising paragraphs (a)(5)(i) introductory text, (a)(5)(i)(A) introductory text, (a)(5)(i)(B);

■ d. Adding paragraph (a)(5)(i)(C);

■ e. Revising paragraphs (a)(5)(ii) and (a)(5)(iii)(B);

■ f. Adding paragraph (a)(5)(iii)(C);

■ g. Revising paragraph (a)(7);

■ h. Revising and republishing paragraph (b);

■ i. In paragraph (c)(3) introductory text, removing the phrase ''via the APP'' and adding in its place the phrase ''on the APP quality measure set or the APP Plus quality measure set (as applicable)'';

■ j. In paragraph (c)(3)(iii), removing the phrase ''and subsequent performance years'' after ''For performance year 2024''; and

■ k. Adding paragraph (c)(3)(iv).

The revisions, republication, and additions read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(2) * * *

(iii) For performance years 2025 and 2026. If the ACO reports the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 of this subchapter on all eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

(iv) For performance year 2027 and subsequent performance years. If the ACO reports the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 of this subchapter on all eCQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this

subchapter, for the applicable performance year.

* * * * *

(5) * * *

(i) Except as specified in paragraphs (a)(2) and (7) of this section, CMS designates the quality performance standard as:

(A) For performance year 2024, the ACO reporting quality data on the APP quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—

* * * * *

(B) For performance years 2025 and 2026, the ACO reporting quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—

(*1*) Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring; or

(*2*) If the ACO reports all of the eCQMs/MIPS CQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 of this subchapter for all eCQMs/MIPS CQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the outcome measures in the APP Plus quality measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

(C) For performance year 2027 and subsequent performance years, the ACO reporting quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter, according to the method of submission established by CMS and—

(*1*) Achieving a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring; or

(*2*) If the ACO reports all of the eCQMs in the APP Plus quality measure set applicable for a performance year, meeting the data completeness requirement at § 414.1340 of this subchapter for all eCQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP Plus quality measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set.

(ii) CMS designates an alternative quality performance standard for an ACO that does not meet the criteria described in paragraph (a)(2) or (a)(5)(i) of this section as the following:

(A) For performance year 2024, the ACO reports quality data on the APP quality measure set established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP quality measure set.

(B) For performance year 2025 and subsequent performance years, the ACO reports quality data on the APP Plus quality measure set established under § 414.1367 of this subchapter according to the method of submission established by CMS and achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the outcome measures in the APP Plus quality measure set.

(iii) * * *

(B) For performance years 2025 and 2026, the ACO does not report any of the eCQMs/MIPS CQMs/Medicare CQMs in the APP Plus quality measure set and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter).

(C) For performance year 2027 and subsequent performance years, the ACO does not report any of the eCQMs/Medicare CQMs in the APP Plus quality measure set and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter).

* * * * *

(7) CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year when—

(i) For performance year 2024, if an ACO reports all of the required measures, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP quality measure set and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter and the ACO meets either of the following:

(A) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(B) At least one of the eCQMs/MIPS CQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A) of this subchapter.

(ii) For performance year 2025 and subsequent performance years, if an ACO reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP Plus quality measure set, and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter, for the relevant performance year, and the ACO meets either of the following:

(A) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(B) At least one of the required measures in the APP Plus quality measure set does not have a benchmark as described at § 414.1380(b)(1)(i)(A) of this subchapter.

(b) *Calculation of ACO's health equity adjusted quality performance score for performance year 2023 and subsequent performance years*—(1) *For performance year 2023.* For an ACO that reports the three eCQMs/MIPS CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and administers the CAHPS for MIPS survey, CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP quality measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(2) *For performance year 2024.* For an ACO that reports the three eCQMs/MIPS CQMs/Medicare CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this

subchapter), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP quality measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(3) *For performance year 2025 and subsequent performance years.* For an ACO that reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all of the required measures in the APP Plus quality measure set, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP Plus quality measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(4) *Calculation of ACO's health equity adjustment bonus points.* CMS calculates the ACO's health equity adjustment bonus points as follows:

(i) For each measure that an ACO is required to report for the applicable performance year, CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism.

(ii) CMS assigns values to the ACO for its performance on each measure as follows:

(A) Values of four, two, or zero for each measure for which the ACO's performance places it in the top, middle, or bottom third of ACO measure performers, respectively.

(B) Values of zero for each measure that CMS does not evaluate because the measure is unscored or the ACO does not meet the case minimum or the minimum sample size for the measure.

(iii) CMS sums the values assigned to the ACO according to paragraph (b)(4)(ii) of this section, to calculate the ACO's measure performance scaler.

(iv) CMS calculates an underserved multiplier for the ACO.

(A)(*1*) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year that is considered underserved based on the highest of either of the following:

(*i*) The proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85. An ACO's assigned beneficiaries without an available numeric ADI national percentile rank are excluded from the calculation of the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85.

(*ii*) The proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D low-income subsidy (LIS); or are dually eligible for Medicare and Medicaid.

(*2*) CMS calculates the proportions specified in paragraph (b)(4)(iv)(A)(*1*)(*ii*) of this section as follows:

(*i*) For performance year 2023, the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries' person years.

(*ii*) For performance year 2024 and subsequent performance years, the proportion of the ACO's assigned beneficiaries with any months enrolled in LIS or dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries.

(B) If the proportion determined in accordance with paragraph (b)(4)(iv)(A) of this section is lower than 20 percent, the ACO is ineligible for health equity adjustment bonus points.

(v) Except as specified in paragraph (b)(4)(iv)(B) of this section, CMS calculates the ACO's health equity adjustment bonus points as the product of the measure performance scaler determined under paragraph (b)(4)(iii) of this section and the underserved multiplier determined under paragraph (b)(4)(iv) of this section. If the product of these values is greater than 10, the value of the ACO's health equity adjustment bonus points is set equal to 10.

(5) *Use of ACO's health equity adjusted quality performance score.* The ACO's health equity adjusted quality performance score, determined in accordance with paragraphs (b)(1) through (4) of this section, is used as follows:

(i) In determining whether the ACO meets the quality performance standard as specified under paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(*1*), (a)(5)(i)(B), and (a)(7) of this section.

(ii) In determining the final sharing rate for calculating shared savings payments under the BASIC track in accordance with § 425.605(d), and under the ENHANCED track in accordance with § 425.610(d), for an ACO that meets the alternative quality performance standard by meeting the criteria specified in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iii) In determining the shared loss rate for calculating shared losses under the ENHANCED track in accordance with § 425.610(f), for an ACO that meets the quality performance standard established in paragraphs (a)(2), (a)(4)(i), and (a)(5)(i) of this section or the alternative quality performance standard established in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iv) In determining the quality performance score for an ACO affected by extreme and uncontrollable circumstances as described in paragraphs (c)(3)(ii) through (iv) of this section.

(c) * * *

(3) * * *

(iv) For performance year 2025 and subsequent performance years, if the ACO reports the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 of this subchapter and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

* * * * *

■ 69. Section 425.601 is amended by revising paragraph (a)(9) introductory text and adding paragraphs (a)(9)(iii) and (iv) to read as follows:

§ 425.601 Establishing, adjusting, and updating the benchmark for agreement periods beginning on or after July 1, 2019, and before January 1, 2024.

(a) * * *

(9) For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, for changes in values used in benchmark calculations as a result of issuance of a revised initial determination under § 425.315, and for changes in values used in benchmark calculations as a result of the

performance year being affected by significant, anomalous, and highly suspect billing under § 425.672. To adjust the benchmark, CMS does the following:

* * * * *

(iii) Recalculates benchmark year expenditures to account for the impact of improper payments, for the benchmark year corresponding to a performance year for which CMS issued a revised initial determination under § 425.315. In recalculating expenditures for the benchmark year, CMS applies the calculation methodology applied in recalculating expenditures for the corresponding performance year in accordance with § 425.674.

(iv) Recalculates expenditures used in Shared Savings Program benchmark calculations under this section, to exclude the same HCPCS or CPT codes identified as displaying significant, anomalous, and highly suspect billing patterns in calculation of performance year expenditures, in accordance with § 425.672.

* * * * *

■ 70. Section 425.605 is amended by revising paragraph (a)(1)(ii)(C) to read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

(a) * * *

(1) * * *

(ii) * * *

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(1)(ii)(A) of this section and the aggregate growth in prospective hierarchical condition category (HCC) risk scores for purposes of paragraph (a)(1)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or prospective HCC risk scores, as applicable, across the populations described in paragraph (a)(2) of this section. When calculating the weighted average growth in demographic risk scores or prospective HCC risk scores, as applicable, the weight applied to the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each Medicare enrollment type is equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

* * * * *

■ 71. Section 425.610 is amended by revising paragraph (a)(2)(ii)(C) to read as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

(a) * * *

(2) * * *

(ii) * * *

(C) The aggregate growth in demographic risk scores for purposes of paragraph (a)(2)(ii)(A) of this section and the aggregate growth in prospective HCC risk scores for purposes of paragraph (a)(2)(ii)(B) of this section is calculated by taking a weighted average of the growth in demographic risk scores or prospective HCC risk scores, as applicable, across the populations described in paragraph (a)(3) of this section. When calculating the weighted average growth in demographic risk scores or prospective HCC risk scores, as applicable, the weight applied to the growth in risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for each Medicare enrollment type is equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

* * * * *

■ 72. Section 425.630 is amended by—

■ a. In paragraph (g)(3), removing the phrase ''paragraphs (g)(4) of this section'' and adding in its place the phrase ''paragraphs (g)(4) through (6) of this section'';

■ b. Redesignating paragraph (g)(5) as paragraph (g)(7);

■ c. Adding new paragraphs (g)(5) and (6);

■ d. In paragraph (h)(1)(ii), removing ''or'' at the end of the paragraph;

■ e. In paragraph (h)(1)(iii), removing the period at the end of paragraph and adding ''; or'' in its place; and

■ f. Adding paragraph (h)(1)(iv).

The additions read as follows:

§ 425.630 Option to receive advance investment payments.

* * * * *

(g) * * *

(5) If an ACO notifies CMS that it no longer wants to participate in the advance investment payment option but does want to continue its participation in the Shared Savings Program, the ACO must repay all outstanding advance investment payments it received. CMS will provide written notice to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

(6) If CMS terminates the participation agreement of an ACO that has an outstanding balance of advance investment payments owed to CMS, the ACO must repay any outstanding advance investment payments it received. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

* * * * *

(h) * * *

(1) * * *

(iv) Voluntarily terminates payments of advance investment payments but continues its participation in the Shared Savings Program.

* * * * *

■ 73. Section 425.640 is added to read as follows:

§ 425.640 Option to receive prepaid shared savings.

(a) *Purpose.* Prepaid shared savings provide an additional cash flow option to ACOs with a history of earning shared savings that will encourage their investment in activities that reduce costs for the Medicare program and beneficiaries and improve the quality of care provided to their assigned beneficiaries.

(b) *Eligibility.* An ACO is eligible to receive prepaid shared savings in an agreement period as specified in this section if CMS determines that all of the following criteria are met:

(1) The ACO meets either of the following conditions:

(i) The ACO is a renewing ACO as defined under § 425.20 entering an agreement period beginning on January 1, 2026, or in subsequent years.

(ii) The ACO was a renewing ACO as defined under § 425.20 entering an agreement period beginning on January 1, 2025, and applied to receive prepaid shared savings in accordance with paragraph (c)(2) of this section starting with the performance year beginning on January 1, 2026.

(2) The ACO must have received a shared savings payment for the most recent performance year that:

(i) Occurred prior to the agreement period for which the ACO has applied to receive prepaid shared savings; and

(ii) CMS has conducted financial reconciliation.

(3) The ACO must have a positive prior savings adjustment for the agreement period for which the ACO has applied to receive prepaid shared savings as calculated pursuant to § 425.658.

(4) The ACO does not have any outstanding shared losses or advance investment payments that have not yet been repaid to CMS after reconciliation for the most recent performance year for which CMS completed financial reconciliation.

(5) If the ACO received prepaid shared savings in the current agreement period or a prior agreement period, the ACO must have fully repaid the amount of prepaid shared savings received through the most recent performance year for which CMS has completed financial reconciliation.

(6) The ACO is participating in Levels C through E of the BASIC track or the ENHANCED track during the agreement period in which it would receive prepaid shared savings.

(7) The ACO has in place an adequate repayment mechanism in accordance with § 425.204(f) that can be used to recoup outstanding prepaid shared savings.

(8) During the agreement period immediately preceding the agreement period in which the ACO would receive prepaid shared savings, the ACO:

(i) Met the quality performance standard as specified under § 425.512; and

(ii) Has not been determined by CMS to have avoided at-risk beneficiaries as specified under § 425.316(b)(2).

(c) *Application procedure.* (1) For an ACO renewing to enter an agreement period beginning on January 1, 2026, or in subsequent years, to obtain a determination regarding whether the ACO may receive prepaid shared savings, the ACO must submit to CMS a complete supplemental application with its application to renew for a new agreement period in the Shared Savings Program (submitted pursuant to § 425.224) in the form and manner and by a deadline specified by CMS.

(2) For an ACO that renewed to enter an agreement period beginning on January 1, 2025, to obtain a determination regarding whether the ACO may receive prepaid shared savings, the ACO must submit to CMS a complete supplemental application for prepaid shared savings prior to the start of the performance year beginning on January 1, 2026, in the form and manner and by a deadline specified by CMS.

(d) *Application contents and review*—(1) *General.* An ACO must submit to CMS supplemental application information sufficient for CMS to determine whether the ACO is eligible to receive prepaid shared savings. In addition, the ACO must submit a proposed spend plan as part of the supplemental application information.

(2) *Spend plan.* The ACO's spend plan must:

(i) Describe how an ACO receiving prepaid shared savings will spend the payments during the first performance year in which it will receive prepaid shared savings. The spend plan must be updated annually for each performance year of the agreement period during which the ACO receives prepaid shared savings.

(ii) Identify the categories of items and services that will be purchased and investments that will be made in the ACO with prepaid shared savings (consistent with the allowable uses under paragraph (e) of this section), the dollar amounts to be spent on such categories, information about which groups of beneficiaries the ACO expects to receive direct beneficiary services that will be purchased with prepaid shared savings, how direct beneficiary services will be distributed to beneficiaries and how such services support the care of beneficiaries, descriptions of the investments that will be made in the ACO with prepaid shared savings, and such other information as may be specified by CMS.

(iii) Include an attestation that the ACO will not discriminate on the basis of race, color, religion, sex, national origin, disability, or age with respect to their use of prepaid shared savings.

(iv) Include the ACO's communication strategy for notifying CMS and any impacted beneficiaries if an ACO will no longer be providing any direct beneficiary services that had previously been provided by the ACO using prepaid shared savings.

(3) *CMS review.* CMS will review the supplemental application information to determine whether an ACO meets the eligibility criteria and other requirements necessary to receive prepaid shared savings and will approve or deny the ACO's prepaid shared savings application accordingly. CMS may review an ACO's spend plan at any time and require the ACO to modify its spend plan to comply with the requirements of this paragraph (d) and paragraph (e) of this section.

(e) *Use and management of prepaid shared savings*—(1) *Allowable uses.* An ACO must use prepaid shared savings to improve the quality and efficiency of items and services furnished to beneficiaries by investing in staffing, healthcare infrastructure, and direct beneficiary services. Expenditures of prepaid shared savings must comply with paragraph (e)(2) of this section, the beneficiary incentive provision at § 425.304(a), (b), and (d), and all other applicable laws and regulations.

(i) An ACO may spend up to 50 percent of its estimated annual prepaid shared savings on staffing and healthcare infrastructure in each performance year.

(ii) An ACO may spend up to 100 percent, but not less than 50 percent, of its estimated annual prepaid shared savings on direct beneficiary services in each performance year.

(2) *Prohibited uses.* An ACO may not use prepaid shared savings for any expense other than those allowed under paragraph (e)(1) of this section. Prohibited uses include the following—

(i) Management company or parent company profit;

(ii) Performance bonuses;

(iii) Provision of medical services covered by Medicare;

(iv) Cash or cash equivalent payments to patients;

(v) Items or activities unrelated to ACO operations or care of beneficiaries; and

(vi) In the case of an ACO participating in Levels C through E of the BASIC track or the ENHANCED track, the repayment of any shared losses incurred as specified in a written notice in accordance with § 425.605(e)(2) or § 425.610(h)(2), respectively.

(3) *Duration for spending payments.* An ACO must spend all prepaid shared savings in the agreement period in which they are received. An ACO must repay to CMS any unspent funds remaining at the end of each agreement period. Any unspent funds received for a performance year must be reallocated in the spend plan for the ACO's next performance year. When reallocated in the spend plan for the next performance year, the total unspent funds in each category must be reallocated within their originally indicated category specified in accordance with paragraph (d)(2) of this section. If an ACO fails to spend a majority of the prepaid shared savings they receive in a performance year, CMS may withhold future quarterly payments until the ACO spends the funding they have already received and reports this spending to CMS through an updated spend plan.

(f) *Payment & payment methodology.* An ACO determined eligible pursuant to paragraph (b) of this section receives quarterly prepaid shared savings payments equal to the maximum quarterly payment amount calculated pursuant to the methodology specified in paragraphs (f)(2) through (4) of this section unless the ACO elects to receive a lesser amount pursuant to paragraph (f)(6) of this section. CMS notifies in writing each ACO of its determination of the amount of prepaid shared savings and the notice will inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part. If CMS does not make any prepaid shared savings payment, the notice will specify the reason(s) why and inform the ACO of its right to request

reconsideration review in accordance with the procedures specified in subpart I.

(1) *Frequency of payments.* (i) An eligible ACO entering an agreement period beginning on January 1, 2026, or in subsequent years will receive quarterly prepaid shared savings payments for the entirety of the ACO's agreement period unless the payment is withheld or terminated pursuant to paragraph (h) of this section.

(ii) An eligible ACO participating in an agreement period beginning on January 1, 2025, will receive quarterly prepaid shared savings payments starting with the performance year beginning on January 1, 2026, and for the remainder of its agreement period, unless the payment is withheld or terminated pursuant to paragraph (h) of this section. The ACO will not receive additional or catch-up payments for performance year 2025.

(iii) If an ACO's quarterly payment is withheld or terminated pursuant to paragraph (h) of this section, the ACO will not receive additional or catch-up payments if quarterly prepaid shared savings payments are later resumed.

(2) *Calculating the prepaid shared savings multiplier.* (i) Calculate total per capita savings or losses for each performance year that constitutes BY1 and BY2 of the agreement period in which the ACO receives prepaid shared savings. Per capita savings or losses will be set to zero for a performance year if the ACO was not reconciled for the performance year.

(ii) Take the simple average of the per capita savings or losses calculated in paragraph (f)(2)(i) of this section, including values of zero, if applicable.

(iii) Apply a proration factor to account for any upward growth in the ACO's assigned population in BY1 and BY2 of the agreement period in which the ACO receives prepaid shared savings as compared to the size of the assigned population when the ACO was reconciled for the corresponding performance years in its prior agreement period.

(iv) Adjust the pro-rated average per capita amount computed in paragraph (f)(2)(iii) of this section by multiplying by 50 percent.

(v) The prepaid shared savings multiplier is the lesser of the following:

(A) Two-thirds of the pro-rated, adjusted average per capita amount computed in paragraph (f)(2)(iv) of this section.

(B) 5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY2 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY2 using data from the CMS Office of the Actuary and expressed as a single value by taking a person-year weighted average of the Medicare enrollment type-specific values.

(3) *Recalculation of the prepaid shared savings multiplier during an agreement period.* For the first performance year during the term of the agreement period in which the ACO receives prepaid shared savings, the ACO's prepaid shared savings multiplier is recalculated for changes in per capita shared savings or losses for the performance years used in the calculation of the prepaid shared savings multiplier as a result of issuance of a revised initial determination under § 425.315. For the second and each subsequent performance year during the term of the agreement period in which the ACO receives prepaid shared savings, the ACO's prepaid shared savings multiplier is recalculated for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, and for changes in per capita shared savings or losses for the performance years used in the calculation of the prepaid shared savings multiplier as a result of issuance of a revised initial determination under § 425.315. To recalculate the prepaid shared savings multiplier, CMS does the following:

(i) Takes into account changes to the ACO's savings or losses for a performance year for either of the 2 years that constitute BY1 and BY2 of the agreement period for which the ACO receives prepaid shared savings under paragraph (f)(2)(i) of this section, including values of zero, if applicable, as a result of issuance of a revised initial determination under § 425.315, when calculating the simple average of the per capita savings or losses calculated in paragraph (f)(2)(ii) of this section.

(ii) Redetermines the proration factor used in calculating the prepaid shared savings multiplier under paragraph (f)(2)(iii) of this section to account for changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's agreement period in which the ACO receives prepaid shared savings due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), or changes to the beneficiary assignment methodology under subpart E of this part.

(4) *Calculating the maximum quarterly payment amount.* For each quarter for each performance year, the maximum quarterly prepaid shared savings amount is equal to the product of one-fourth of the prepaid shared savings multiplier calculated in paragraph (f)(2)(v) of this section or recalculated according to paragraph (f)(3) of this section and the ACO's performance year assigned beneficiary person years calculated from the ACO's most recent assignment list.

(5) *Estimated annual payment amount calculation methodology.* For the purposes of determining the amount of prepaid shared savings permitted to be allocated to the uses specified in paragraph (e) of this section during each performance year, the estimated annual prepaid shared savings amount can be calculated by multiplying the first quarterly payment amount the ACO receives in each performance year by four. If an ACO's maximum quarterly payments decrease over the performance year, the ACO will not be subject to compliance action solely because it spent more than 50 percent of the actual annual amount of prepaid shared savings it received during that PY on staffing and healthcare infrastructure, as long as it did not spend more than 50 percent of the originally estimated annual maximum prepaid shared savings amount on staffing and healthcare infrastructure.

(6) *ACO selection of quarterly payment amount.* An ACO may request a smaller quarterly payment amount from CMS in a form and manner and by a deadline specified by CMS.

(g) *Recoupment and recovery of prepaid shared savings; notice of bankruptcy.* (1) CMS will recoup prepaid shared savings made to an ACO from any shared savings the ACO earns until CMS has recouped in full the amount of prepaid shared savings made to the ACO. CMS will carry forward any remaining balance owed to subsequent performance year(s) in which the ACO achieves shared savings.

(2) If the amount of shared savings earned by the ACO is revised upward by CMS for any reason, CMS will reduce the redetermined amount of shared savings by the amount of prepaid shared savings made to the ACO as of the date of the redetermination. If the amount of shared savings earned by the ACO is revised downward by CMS for any reason, the ACO will not receive a refund of any portion of the prepaid shared savings previously recouped or otherwise repaid, and any prepaid

shared savings that are now outstanding due to the revision in earned shared savings must be repaid to CMS upon request.

(3) If an ACO has an outstanding balance of prepaid shared savings after the calculation of shared savings or losses for the final performance year of an agreement period in which an ACO receives prepaid shared savings, the ACO must repay any outstanding amount of prepaid shared savings it received in full upon request from CMS. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of notification. If the ACO fails to repay any outstanding amount of prepaid shared savings within 90 days of that written notification, CMS will recoup any outstanding balance of prepaid shared savings from the ACO's repayment mechanism established under § 425.204(f). CMS may also recover any outstanding amount of prepaid shared savings owed by recouping from any future shared savings the ACO may be eligible to receive in a subsequent agreement period.

(4) Except as provided in paragraph (g)(4)(ii) of this section, if an ACO or CMS terminates the ACOs participation agreement during the agreement period in which it received prepaid shared savings, the ACO must repay all outstanding prepaid shared savings it received in full upon request from CMS.

(i) CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of notification. If the ACO fails to repay within 90 days, CMS will recoup any outstanding balance from the ACO's repayment mechanism established under § 425.204(f).

(ii) If the ACO terminates its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program, CMS may recover the amount owed by recouping from any future shared savings the ACO may be eligible to receive in subsequent agreement periods.

(5)(i) If an ACO has filed a bankruptcy petition, whether voluntary or involuntary, the ACO must provide written notice of the bankruptcy to CMS and to the U.S. Attorney's Office in the district where the bankruptcy was filed, unless final payment for the agreement period has been made by either CMS or the ACO and all administrative or judicial review proceedings relating to any payments under the Shared Savings Program have been fully and finally resolved.

(ii) The notice of bankruptcy must be sent by certified mail no later than 5 days after the petition has been filed and must contain a copy of the filed bankruptcy petition (including its docket number). The notice to CMS must be addressed to the CMS Office of Financial Management at 7500 Security Boulevard, Mailstop C3–01–24, Baltimore, MD 21244 or such other address as may be specified on the CMS website for purposes of receiving such notices.

(h) *Withholding or termination of prepaid shared savings*—(1) *General.* Except as provided in paragraph (h)(2) of this section, CMS may withhold or terminate an ACO's prepaid shared savings during an agreement period if—

(i) The ACO fails to comply with the requirements of this section;

(ii) The ACO meets any of the grounds for ACO termination set forth in § 425.218(b);

(iii) The ACO fails to earn sufficient shared savings in a performance year to repay the prepaid shared savings they received during that performance year;

(iv) CMS determines that the ACO is not expected to earn shared savings in a performance year during the agreement period in which the ACO received prepaid shared savings based on a rolling 12-month window of beneficiary claims data or year to date beneficiary claims data;

(v) The ACO falls below 5,000 assigned beneficiaries;

(vi) The ACO fails to spend the majority of prepaid shared savings they receive in a performance year; or

(vii) The ACO requests that CMS withhold a future quarterly prepaid shared savings payment.

(2) *Eligibility sanction.* CMS must terminate an ACO's prepaid shared savings if—

(i) The ACO fails to maintain an adequate repayment mechanism in accordance with § 425.204(f); or

(ii) The ACO fails to meet the quality performance standard as specified under § 425.512 or is subject to a pre-termination action after CMS determined the ACO avoided at-risk beneficiaries as specified under § 425.316(b)(2).

(3) *No additional payments.* If CMS withholds or terminates a quarterly payment pursuant to this paragraph (h), the ACO will not receive additional or catch-up payments if quarterly payments of prepaid shared savings are later resumed.

(4) *No pre-termination actions.* CMS may immediately terminate an ACO's prepaid shared savings under paragraphs (h)(1) and (2) of this section without taking any of the pre-termination actions set forth in § 425.216.

(i) *Reporting information on prepaid shared savings.* The ACO must report information on its receipt of and use of prepaid shared savings, as follows:

(1) The ACO must publicly report information about the ACO's use of prepaid shared savings for each performance year, in accordance with § 425.308(b)(10).

(2) In a form and manner and by a deadline specified by CMS, the ACO must report to CMS the same information it is required to publicly report under § 425.308(b)(10).

§ 425.650 [Amended]

■ 74. Section 425.650 is amended in paragraph (a) by removing the reference ''425.660'' and adding in its place the reference ''425.662''.

■ 75. Section 425.652 is amended by revising paragraph (a)(8) and revising and republishing paragraph (a)(9) to read as follows:

§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.

(a) * * *

(8) Adjusts the historical benchmark, if applicable:

(i) For agreement periods beginning on January 1, 2024, except as provided in paragraph (a)(8)(i)(C) of this section, CMS adjusts the historical benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), or for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period (as specified under § 425.658). CMS does all of the following to determine the adjustment, if any, applied to the historical benchmark:

(A) Computes the regional adjustment in accordance with § 425.656 and the prior savings adjustment in accordance with § 425.658.

(B) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(C) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will not receive an adjustment to its benchmark.

(D) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the higher of the following:

(*1*) The positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(*2*) The prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(E) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will receive an adjustment to its benchmark equal to the prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(ii) For agreement periods beginning on January 1, 2025, and in subsequent years, except as provided in paragraph (a)(8)(ii)(B)(*2*) of this section, CMS adjusts the historical benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period (as specified under § 425.658), or to account for the ACO serving higher proportions of underserved beneficiaries (as specified in § 425.662). CMS does all of the following to determine the adjustment, if any, applied to the historical benchmark:

(A) Computes the regional adjustment in accordance with § 425.656, the prior savings adjustment in accordance with § 425.658, and the health equity benchmark adjustment (HEBA) in accordance with § 425.662.

(B) Compares the regional adjustment, expressed as a single value as described in § 425.656(d), the per capita prior savings adjustment determined in § 425.658(c), if any, and the HEBA determined in § 425.662(b), if any, to determine the adjustment applied to the historical benchmark.

(*1*) The ACO will receive the highest of the positive adjustments for which it is eligible. The adjustment will be calculated as described in § 425.656(c), § 425.658(c), or § 425.662(b), respectively, and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(*2*) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i) or the HEBA under § 425.662(b)(3), and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will not receive an adjustment to its benchmark.

(9) For the first performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315, and for changes in values used in benchmark calculations as a result of the performance year being affected by significant, anomalous, and highly suspect billing under § 425.672. For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, for a change in the CMS–HCC risk adjustment methodology used to calculate prospective HCC risk scores under § 425.659, for changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315, and for changes in values used in benchmark calculations as a result of the performance year being affected by significant, anomalous, and highly suspect billing under § 425.672. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures of beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

(ii) Redetermines the regional adjustment amount under § 425.656 according to the ACO's assigned beneficiaries for BY3, and based on the assignable population of beneficiaries identified for BY3 using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(iii) Redetermines the offset factor used in determining the negative regional adjustment amount under § 425.656(c)(4) and (5).

(iv) Redetermines the proration factor used in calculating the prior savings adjustment under § 425.658(b)(3)(ii) to account for changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), or changes to the beneficiary assignment methodology under subpart E of this part.

(v) Redetermines the HEBA scaler used in calculating the HEBA under § 425.662(b)(2) to account for changes in the ACO's regional adjustment or prior savings adjustment in accordance with paragraphs (a)(9)(ii) through (iv) of this section.

(vi) In accordance with paragraph (a)(8) of this section, CMS redetermines the adjustment to the historical benchmark based on the redetermined regional adjustment (as specified under § 425.656), the prior savings adjustment (as specified under § 425.658), or the HEBA (as specified under § 425.662) if applicable.

(vii) Redetermines factors based on prospective HCC risk scores calculated for benchmark years by calculating the prospective HCC risk scores using the CMS–HCC risk adjustment methodology that applies for the calendar year corresponding to the applicable performance year in accordance with § 425.659(b)(1).

(viii) Recalculates benchmark year expenditures to account for the impact of improper payments, for the benchmark year corresponding to a

performance year for which CMS issued a revised initial determination under § 425.315. In recalculating expenditures for the benchmark year, CMS applies the calculation methodology applied in recalculating expenditures for the corresponding performance year in accordance with § 425.674.

(ix) Recalculates expenditures used in Shared Savings Program benchmark calculations under this section, and as applicable under §§ 425.654 through 425.662, to exclude the same HCPCS or CPT codes identified as displaying significant, anomalous, and highly suspect billing patterns in calculation of performance year expenditures, in accordance with § 425.672.

* * * * *

■ 76. Section 425.655 is amended by revising paragraph (d)(2) to read as follows:

§ 425.655 Calculating the regional risk score growth cap adjustment factor.

* * * * *

(d) * * *

(2) Determines the aggregate growth in regional risk scores by calculating a weighted average of the growth in regional prospective HCC risk scores or demographic risk scores, as applicable, across the populations described in paragraph (d)(1) of this section. When calculating the weighted average growth in prospective HCC risk scores or demographic risk scores, as applicable, the weight applied to the growth in risk scores for each Medicare enrollment type is equal to the product of the ACO's historical benchmark expenditures, adjusted in accordance with § 425.652(a)(8), for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

* * * * *

■ 77. Section 425.658 is amended by revising paragraph (d) to read as follows:

§ 425.658 Calculating the prior savings adjustment to the historical benchmark.

* * * * *

(d) *Applicability of the prior savings adjustment.* CMS compares the per capita prior savings adjustment determined in paragraph (c)(1) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), and the HEBA as determined in § 425.662(b), if any, to determine the adjustment, if any, that will be applied to the ACO's benchmark in accordance with § 425.652(a)(8).

* * * * *

■ 78. Section 425.662 is added to read as follows:

§ 425.662 Calculating the health equity adjustment to the historical benchmark.

(a) *General.* For agreement periods beginning on January 1, 2025, and in subsequent years, CMS calculates a health equity adjustment to the historical benchmark (HEBA) to account for ACOs serving higher proportions of underserved beneficiaries.

(b) *Calculation of the health equity benchmark adjustment.* To calculate the adjustment described in paragraph (a) of this section, CMS does all of the following:

(1) Calculates the weighted average of the ACO's third benchmark year (BY3) national per capita expenditure amounts across the following populations of beneficiaries, where the weights are the ACO's BY3 proportion of assigned beneficiaries for that enrollment type:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Calculates the HEBA scaler as the difference between 5 percent of the national per capita expenditure amount, expressed as single value as calculated in paragraph (b)(1) of this section, and the higher of: the regional adjustment, expressed as a single value as described in § 425.656(d); the per capita prior savings adjustment determined in § 425.658(c); or no adjustment, in the case where the regional adjustment is negative and the ACO is not eligible for the prior savings adjustment under § 425.658(b)(3)(i).

(3) Determines the ACO's eligibility for the HEBA based on the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D low-income subsidy (LIS) or dually eligible for Medicare and Medicaid. An ACO is only eligible for the HEBA if this proportion is greater than or equal to 15 percent. An ACO with a proportion less than 15 percent is ineligible to receive a HEBA.

(4) Calculates the HEBA. If the ACO is eligible for the HEBA as determined in paragraph (b)(3) of this section, the HEBA is equal to the product of the HEBA scaler calculated in paragraph (b)(2) of this section and the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.

(c) *Applicability of the HEBA.* CMS compares the HEBA determined in paragraph (b)(4) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), and the per capita prior savings adjustment determined in § 425.658(c), if any, to determine the adjustment, if any, that will be applied to the ACO's benchmark in accordance with § 425.652(a)(8)(ii).

■ 79. Section 425.672 is added to read as follows:

§ 425.672 Adjustments to mitigate the impact of significant, anomalous, and highly suspect billing activity on Shared Savings Program financial calculations involving calendar year 2024 or subsequent calendar years.

(a) *General.* This section describes adjustments CMS may make to Shared Savings Program calculations to mitigate the impact of significant, anomalous, and highly suspect billing activity occurring in calendar year 2024 or subsequent calendar years.

(b) *Significant, anomalous, and highly suspect billing activity for a HCPCS or CPT code impacting Shared Savings Program calculations.* CMS, at its sole discretion, may determine that the billing of one or more specified HCPCS or CPT codes represents significant, anomalous, and highly suspect billing activity for a calendar year that warrants adjustment to calculations made under this part.

(c) *Applicability of adjustments to performance year and benchmark year calculations.* Notwithstanding any other provision in this part, CMS adjusts the following Shared Savings Program calculations, as applicable, to exclude all Medicare Parts A and B fee-for-service payment amounts on claims for the specified claim types associated with a HCPCS or CPT code identified pursuant to paragraph (b) of this section for the periods identified in paragraph (d) of this section:

(1) Calculation of Medicare Parts A and B fee-for-service expenditures for an ACO's assigned beneficiaries for all purposes including the following: Establishing, adjusting, updating, and resetting the ACO's historical benchmark and determining performance year expenditures.

(2) Calculation of fee-for-service expenditures for assignable beneficiaries as used in determining county-level fee-for-service expenditures and national Medicare fee-for-service expenditures, including the following calculations:

(i) Determining average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area according to §§ 425.601(c) and 425.654(a) for purposes of calculating the ACO's regional fee-for-service expenditures.

(ii) Determining the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries for purposes of the following:

(A) Truncating assigned beneficiary expenditures used in calculating benchmark expenditures under §§ 425.601(a)(4) and 425.652(a)(4), and performance year expenditures under §§ 425.605(a)(3) and 425.610(a)(4).

(B) Truncating expenditures for assignable beneficiaries in each county for purposes of determining county fee-for-service expenditures according to §§ 425.601(c)(3) and 425.654(a)(3).

(C) Truncating expenditures for assignable beneficiaries for purposes of determining truncated national per capita fee-for service expenditures for purposes of calculating the ACPT according to § 425.660(b)(3).

(iii) Determining truncated national per capita fee-for-service Medicare expenditures for assignable beneficiaries for purposes of calculating the ACPT according to § 425.660(b)(3).

(iv) Determining national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3), capping the prior savings adjustment according to § 425.658(c)(1)(ii), capping the prepaid shared savings multiplier according to § 425.640(f)(2)(v), and calculating the HEBA scaler according to § 425.662(b)(2).

(v) Determining national growth rates that are used as part of the blended growth rates used to trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii) and as part of the blended growth rates used to update the benchmark according to §§ 425.601(b)(2) and 425.652(b)(2)(i).

(3) Calculation of Medicare Parts A and B fee-for-service revenue of ACO participants for purposes of calculating the ACO's loss recoupment limit under the BASIC track as specified in § 425.605(d).

(4) Calculation of total Medicare Parts A and B fee-for-service revenue of ACO participants and total Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries for purposes of identifying whether an ACO is a high revenue ACO or low revenue ACO, as defined under § 425.20, determining an ACO's eligibility to receive advance investment payments according to § 425.630, and determining whether an ACO qualifies for a shared savings payment under § 425.605(h).

(5) Calculation or recalculation of the amount of the ACO's repayment mechanism arrangement according to § 425.204(f)(4).

(d) *Periods of adjustment.* CMS adjusts the Shared Savings Program calculations identified in paragraph (c) of this section for significant, anomalous, and highly suspect billing activity identified for calendar year 2024 or subsequent calendar years as follows:

(1) The calendar year for which the significant, anomalous, and highly suspect billing activity was identified pursuant to paragraph (b) of this section, when it is either a performance year or a benchmark year.

(2) The 3 most recent years prior to the start of the ACO's agreement period used in establishing the historical benchmark, when such a benchmark is used to reconcile the ACO for a performance year adjusted in accordance with paragraph (d)(1) of this section.

(e) *Adjustments for growth rates used in calculating the ACPT.* In addition to adjustments described in paragraph (c) of this section, CMS makes adjustments for payments associated with a HCPCS or CPT code identified pursuant to paragraph (b) of this section for any calendar year corresponding to BY3 in projecting per capita growth in Parts A and B fee-for-service expenditures, according to § 425.660(b)(1), for purposes of calculating the ACPT for agreement periods beginning on January 1, 2024, and in subsequent years.

■ 80. Section 425.674 is added to read as follows:

§ 425.674 Accounting for the impact of improper payments on Shared Savings Program financial calculations.

(a) *General rule.* Upon the reopening of an initial determination pursuant to § 425.315(a)(4), CMS will use the methodology specified in this section to account for the impact of improper payments when:

(1) Determining savings or losses for the relevant performance year in accordance with § 425.315 in order to issue a revised initial determination.

(2) Adjusting the benchmark by recalculating benchmark year expenditures under §§ 425.601(a)(9)(iii) and 425.652(a)(9)(viii) in the event that CMS recalculates a payment determination and issues a revised initial determination for the corresponding performance year in a prior agreement period, in accordance with paragraph (a)(1) of this section.

(b) *Improper payment.* For the purpose of this section, improper payment includes:

(1) An amount associated with a demanded overpayment determination.

(2) An amount identified in a settlement agreement or judgment, pursuant to conduct by individuals or entities performing functions or services related to an ACO's activities, less any penalties or damages.

(c) *Accounting for improper payments.* To adjust Medicare Parts A and B fee-for-service expenditures for improper payments CMS does the following:

(1) Identify each Shared Savings Program expenditure calculation for a performance year or benchmark year, as calculated according to the standard methodology described in this subpart and expressed as a per capita dollar amount, that will be adjusted for the impact of improper payments.

(2) Determine each specific population of Medicare fee-for-service beneficiaries used to calculate the expenditure amount identified in paragraph (c)(1) of this section. The populations relevant for a specific expenditure calculation may include:

(i) The population of beneficiaries assigned to the ACO for calculating the ACO's performance year or benchmark year expenditures.

(ii) The population of assignable beneficiaries in each county in the ACO's regional service area for calculating county-level expenditures.

(iii) The national population of assignable beneficiaries for calculating national assignable expenditures.

(iv) The national population of Medicare fee-for-service beneficiaries for calculating national expenditures.

(3) Determine the per capita amount of improper payments for the performance year or benchmark year included in the per capita Medicare Parts A and B fee-for-service expenditure amount for a population identified in paragraph (c)(2) of this section in accordance with paragraph (d) of this section for all providers or suppliers with identified improper payments.

(4) Subtract the per capita amount determined in paragraph (c)(3) of this section from the expenditure calculation identified in paragraph (c)(1) of this section for the population identified in paragraph (c)(2) of this section for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(5) If applicable, CMS will do the following to adjust regional expenditures for improper payments:

(i) Adjust county-level fee-for-service expenditures determined under paragraph (c)(4) of this section, for each county in the ACO's regional service area, for severity and case mix of assignable beneficiaries in the county using prospective HCC risk scores. This calculation is made for each of the populations of beneficiaries identified in paragraphs (c)(4)(i) through (iv) of this section.

(ii) Weight the risk adjusted county-level fee-for-service expenditures determined under paragraph (c)(5)(i) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined in accordance with § 425.601(d)(1), § 425.603(f)(1), or § 425.654(b)(1), as applicable, for each of the populations of beneficiaries identified in paragraphs (c)(4)(i) through (iv) of this section.

(iii) Aggregate the values determined in paragraph (c)(5)(ii) of this section for each of the populations of beneficiaries identified in paragraphs (c)(4)(i) through (iv) of this section across all counties within the ACO's regional service area.

(d) *Determining the per capita amount of improper payments.* CMS may use one or more of the following approaches to determine the per capita amount that will be used to adjust expenditure calculations identified in paragraph (c)(1) of this section:

(1) Calculate aggregate improper payments attributable to a population identified in paragraph (c)(2) of this section for each provider or supplier that had improper payments.

(i) For improper payments associated with specific claims, CMS will do the following:

(A) For improper payments to a provider or supplier that correspond to payment amounts on claims or line items that were used in a Shared Savings Program calculation identified in paragraph (c)(1) of this section, and subsequently adjusted after the 3-month claims run out period, CMS will sum the improper payment amounts across all such claims or line items with dates of service during the period used to calculate performance year or benchmark year expenditures for the population identified in paragraph (c)(2) of this section.

(B) In the event CMS determines it is necessary to account for the impact of improper payments on Shared Savings Program financial calculations by adjusting the payment amounts for a specific HCPCS or CPT code billed by the provider or supplier for the population identified in paragraph (c)(2) of this section, CMS will do the following—

(*1*) Identify the applicable claims or line items with dates of service during the period used to calculate performance year or benchmark year expenditures processed before the end of the applicable 3-month claims run out period;

(*2*) Sum the claim or line item payment amounts, on the claims or line items identified in paragraph (d)(1)(i)(B)(*1*) of this section; and

(*3*) If applicable, multiply the sum calculated in paragraph (d)(1)(i)(B)(*2*) of this section by a scaling factor to compute the payment differential between the HCPCS or CPT code that was improperly billed and a CMS-identified alternate code.

(ii) For aggregate improper payment amounts that are not linked to specific claims or line items, CMS will calculate the amount attributable to the population identified in paragraph (c)(2) of this section by applying a proration factor to the aggregate improper payment amount identified for that provider or supplier. CMS calculates the proration factor as follows:

(A) The denominator of the proration factor is total Medicare Parts A and B claim or line item payment amounts to the provider or supplier for all fee-for-service beneficiaries on claims of specified claim types for the time period associated with the aggregate improper payment amount identified for the provider or supplier that were made before the end of the applicable 3-month claims run out period.

(B) The numerator of the proration factor is the portion of the total from the denominator, in paragraph (d)(1)(ii)(A) of this section, that CMS determines is attributable to the population identified in paragraph (c)(2) of this section with dates of service during the period used to calculate expenditures for the applicable performance year or benchmark year.

(2) Sum the amounts calculated pursuant to paragraph (d)(1) of this section attributable to a population identified in paragraph (c)(2) of this section across all providers or suppliers that had identified improper payments.

(3) Take the lesser of the following two values—

(i) The sum from paragraph (d)(2) of this section; or

(ii) Total Medicare Parts A and B claim or line item payment amounts to all providers or suppliers that had improper payments for the population identified in paragraph (c)(2) of this section on claims of specified claim types with dates of service within the performance year or benchmark year made before the end of the applicable 3-month claims run out period.

(4) Express the lesser-of amount from paragraph (d)(3) of this section as a per capita value by dividing by the total beneficiary person years in the population identified in paragraph (c)(2) of this section for the applicable performance year or the benchmark year.

■ 81. Part 427 is added to read as follows:

PART 427—MEDICARE PART B DRUG INFLATION REBATE PROGRAM

Sec.

Subpart G—Enforcement of Manufacturer Payment of Rebate Amounts 427.600 Civil money penalty notice and appeals procedures.

Authority: 42 U.S.C. 1395w–3a(i), 1302, and 1395hh.

Subpart A—General Provisions

§ 427.10 Basis and scope.

(a) *Basis.* This part implements section 1847A(i) of the Social Security Act (''the Act'').

(b) *Scope.* This part sets forth the requirements of the Medicare Part B Drug Inflation Rebate Program, which requires, for each calendar quarter, manufacturers to pay rebates for certain single source drugs and biological products with prices that increase faster than the rate of inflation.

(c) *Severability.* Were any provision of this part to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from this part and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances.

§ 427.20 Definitions.

As used in this part, the following definitions apply:

Allowed charges means the amount that is inclusive of the beneficiary coinsurance and Medicare payment for the covered Part B item or service.

Applicable calendar quarter means a calendar quarter (January 1 to March 31, April 1 to June 30, July 1 to September 30, or October 1 to December 31), starting with January 1, 2023.

Applicable threshold means the amount determined under § 427.101(c)(2).

Average sales price (ASP) means the manufacturer's price for a quarter for a drug represented by a particular 11-digit National Drug Code (NDC–11) determined under § 414.804 of this chapter.

Benchmark period Consumer Price Index for All Urban Consumers (CPI–U) means the CPI–U as set forth in § 427.302(e).

Billing and payment code means the specific code used to classify and report a drug or biological for purposes of Medicare Part B payment. A Healthcare Common Procedure Coding System (HCPCS) code, as established by CMS, is an example of a billing and payment code used to describe a drug or biological and for which CMS may publish a payment amount.

Billing and payment code FDA approval or licensure date means the earliest approval or licensure date for any FDA application number associated with any NDC ever assigned to the billing and payment code.

Billing unit means the identifiable quantity of a drug or biological product associated with a billing and payment code (for example, a HCPCS code), as established by CMS.

Biosimilar biological product has the meaning set forth in section 1847A(c)(6)(H) of the Act.

CPI–U means the monthly Consumer Price Index for All Urban Consumers (United States city average) index level for all items from the Bureau of Labor Statistics.

Food and Drug Administration (FDA) application means, for the purposes of calculating the Part B rebate amount, a New Drug Application (NDA) or Biologics License Application (BLA) approved by the FDA.

Final action claim means a non-rejected claim for which a Medicare payment has been made, and for which all disputes and adjustments have been resolved.

First marketed date means the earliest date of first sale of any NDC–11 within a billing and payment code among all products and package sizes under the same FDA application. The first marketed date will be identified using ASP data reported by NDC–11 to CMS by a manufacturer as required under sections 1927(b)(3)(A)(iii)(I) and 1847A(f)(2) of the Act, if available.

Grouped billing and payment code, for the purposes of Part B rebate calculations, means a billing and payment code, such as a HCPCS code, other than a Not Otherwise Classified (NOC) code, that typically contains multiple drug products approved under multiple NDAs or BLAs and may be inclusive of, but are not limited to, multiple source billing codes.

Inflation-adjusted payment amount means the amount determined under § 427.302(g).

Manufacturer has the meaning set forth in section 1847A(c)(6)(A) of the Act.

National Drug Code (NDC) means the unique identifying prescription drug product number that is listed with FDA identifying the product and package size and type.

Not Otherwise Classified (NOC) code means a billing and payment code, including an unclassified, unspecified, or unlisted code, for drugs and biological products for which no specific billing and payment code is assigned.

Part B rebatable drug means, subject to the exclusions set forth in § 427.101(b), a single source drug or biological product, including a biosimilar biological product but excluding a qualifying biosimilar biological product, for which payment is made under Part B.

Payment amount benchmark quarter means the calendar quarter set forth in § 427.302(c).

Payment amount in the payment amount benchmark quarter means the amount set forth in § 427.302(d).

Rebate period CPI–U means the CPI–U set forth in § 427.302(f).

Single source drug or biological product has the meaning set forth in section 1847A(c)(6)(D) of the Act.

Sold or marketed means, with respect to an NDC, that the NDC has either a date of first sale identified using ASP data reported by NDC–11 to CMS by a manufacturer as required under sections 1927(b)(3)(A)(iii)(I) and 1847A(f)(2) of the Act, or an NDC Directory start marketing date prior to or during the applicable calendar quarter and meets any of the following criteria:

(1) The NDC has units reported for the rebate quarter;

(2) The end marketing date is during the rebate quarter;

(3) The end marketing date is after the rebate quarter; or

(4) The end marketing date is missing.

Specified amount means the amount set forth in § 427.302(b).

Subsequently approved drug means a drug first approved or licensed by the FDA after December 1, 2020.

Unit means, with respect to a Part B rebatable drug, with respect to each National Drug Code (including package size) associated with a drug or biological, the lowest identifiable quantity (such as a capsule or tablet, milligram of molecules, or grams) of the drug or biological that is dispensed, exclusive of any diluent without reference to volume measures pertaining to liquids as reported under section 1847A(b)(2)(B) of the Act.

Subpart B—Determination of Part B Rebatable Drugs

§ 427.100 Definitions.

As used in this subpart, the following definitions apply:

EUA Declaration means the March 27, 2020, Emergency Use Authorization (EUA) Declaration for Drugs and Biological Products under section 564 of the Food, Drug, and Cosmetic (FD&C) Act.

Individual who uses such a drug or biological means a unique Medicare Part B beneficiary who was furnished the

Part B drug or biological that was covered under Part B during the applicable calendar quarter, identified using final action claims data with dates of service during the calendar year set forth in § 427.101(b)(6) and with allowed charges greater than zero.

§ 427.101 Identification of Part B rebatable drugs.

(a) *Determination of Part B rebatable drugs.* (1) For each applicable calendar quarter, CMS will:

(i) Identify single source drugs or biological products, including biosimilar biological products, covered under Part B; and

(ii) Identify the applicable billing and payment code for each drug or biological product set forth in paragraph (a)(1)(i) of this section.

(2) For a drug or biological product identified under paragraph (a)(1) of this section, CMS will determine whether the drug or biological product meets the exclusion criteria set forth in paragraph (b) or (c) of this section as of the first day of the applicable calendar quarter.

(3) To determine whether a drug or biological product is a Part B rebatable drug under this section, CMS will use the most recent available data submitted to CMS by manufacturers pursuant to section 1927(b)(3)(A)(iii) of the Act or section 1847A(f)(2), as applicable, and other available data, including but not limited to information available at FDA.gov and information in drug pricing compendia, as applicable.

(b) *Excluded product categories.* The following categories of products are not considered Part B rebatable drugs:

(1) *Qualifying biosimilar biological products.* Biological products as defined under section 1847A(b)(8)(B)(iii) of the Act.

(2) *Products with historically excepted grouped billing and payment codes.* Single source drugs or biological products that were within the same billing and payment code as of October 1, 2003, and which, as required under section 1847A(c)(6)(C)(ii) of the Act, are treated as multiple source drugs.

(3) *Products billed under a NOC code.* A drug or biological product billed under a NOC code.

(4) *Radiopharmaceutical drugs and biological products.* A separately payable radiopharmaceutical drug or biological product not paid under section 1847A of the Act.

(5) *Skin substitutes.* A product included within the suite of cellular- and tissue-based products that aid wound healing.

(6) *Drugs with average total allowed charges under the applicable threshold.* Drugs and biological products for which the Medicare Part B average total allowed charges for a year per individual that uses such drug or biological are below the applicable threshold, as set forth in paragraph (c) of this section.

(7) *Certain vaccines and other products.* The following products:

(i) The vaccines as set forth in section 1861(s)(10) of the Act, which includes the influenza, pneumococcal, hepatitis B, and COVID–19 vaccines.

(ii) Monoclonal antibodies used for treatment or post-exposure prophylaxis of COVID–19 that are covered and paid for under section 1861(s)(10) of the Act. This exclusion will apply to applicable quarters until the end of the calendar year in which the EUA Declaration ends.

(iii) Monoclonal antibodies that are used for pre-exposure prophylaxis of COVID–19 that are covered and paid for under section 1861(s)(10) of the Act. This exclusion will apply to applicable calendar quarters even after the year in which the EUA Declaration ends, as long as after the EUA Declaration is terminated, these products have an FDA-approved application or license.

(8) *Generic drugs.* Part B drugs approved under an Abbreviated New Drug Application (ANDA) submitted under section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act).

(c) *Drugs and biological products with average total allowed charges below the applicable threshold.* For each applicable calendar quarter, CMS will identify drugs and biological products with Part B average total allowed charges for a year per individual that uses such a drug or biological product that are below the applicable threshold determined under the calculations set forth in this section. Such drugs and biological products are not considered Part B rebatable drugs and will be excluded from the identification of Part B rebatable drugs in paragraph (a) of this section.

(1) *Average total allowed charges for a year per individual.* For each drug or biological that is identified as set forth in paragraph (a) of this section, CMS will calculate average total allowed charges for a year per individual as follows:

(i) For single source drugs and biological products assigned to only one billing and payment code, CMS will sum the allowed charges from final action claims greater than $0 and divide the summed amount by the number of individuals who use such a drug or biological with allowed charges for this billing and payment code.

(ii) For single source drugs and biological products assigned to more than one billing and payment code, CMS will sum the allowed charges from final action claims greater than $0 for all billing and payment codes and divide the summed amount by the number of individuals who use such a drug or biological with allowed charges for these billing and payment codes.

(iii) For single source drugs and biological products previously crosswalked to a grouped billing and payment code:

(A) If crosswalked to a grouped billing and payment code during the full year, CMS will calculate the average total allowed charges per individual per year for the drug using allowed charges and the number of individuals who used the drug or biological product based on claims for the previously grouped billing and payment code during the year.

(B) If crosswalked to a grouped billing and payment code and later assigned to a unique billing and payment code for part of the year, CMS will calculate average total allowed charges per individual per year by:

(*1*) Summing the total allowed charges billed under the unique billing and payment code for the drug with dates of service on or after the Medicare effective date for this unique billing and payment code and identifying the individuals on those claims.

(*2*) Summing the total allowed charges on claims billed under the previously grouped billing and payment code and identifying individuals with claims prior to the unique billing and payment code's effective date.

(*3*) Summing the total allowed charges as determined in paragraphs (c)(1)(iii)(B)(*1*) and (*2*) of this section and dividing by the total number of individuals, de-duplicated for individuals determined under paragraphs (c)(1)(iii)(B)(*1*) and (*2*).

(2) *Applicable threshold.* CMS will calculate the applicable threshold for an applicable calendar quarter as follows:

(i) For applicable calendar quarters in 2023, the applicable threshold is equal to $100.

(ii) For applicable calendar quarters in 2024, the applicable threshold is equal to $100 increased by the percentage increase in the CPI–U for the 12-month period ending with June of 2023.

(iii) For applicable calendar quarters in each subsequent calendar year, the applicable threshold is equal to the unrounded applicable threshold calculated for the prior calendar year increased by the percentage increase in the CPI–U for the 12-month period ending with June of the previous year.

(iv) If the resulting amount under paragraphs (c)(2)(i) through (iii) of this

section is not a multiple of $10, CMS will round that amount to the nearest multiple of $10.

(3) *Application of the* applicable *threshold at the billing and payment code level.* For each applicable calendar quarter, CMS will apply the exclusion of drugs and biological products identified in paragraph (c)(1) of this section, with average total allowed charges for a year per individual less than the applicable threshold set forth in paragraph (c)(2) of this section, to applicable billing and payment codes as follows:

(i) For single source drugs or biological products assigned to a unique billing and payment code, CMS will exclude the assigned billing and payment code for an applicable calendar quarter if the average total allowed charges for a year per individual are less than the applicable threshold.

(ii) For a single source drug or biological product that is assigned to more than one billing and payment code during a year, CMS will exclude all such assigned billing and payment codes for an applicable calendar quarter.

(4) *Definition of year.* For purposes of the calculations set forth in this section, a year is defined as the 4 consecutive calendar quarters beginning 6 calendar quarters before the applicable calendar quarter. CMS will use final action claims from the Medicare fee-for-service claims repository where separate payment was allowed for the applicable billing and payment code for dates of service within a year to calculate Part B average total allowed charges for that year.

Subpart C—Coinsurance Adjustment and Adjusted Medicare Payment for Part B Rebatable Drugs With Price Increases Faster Than Inflation

§ 427.200 Definitions.

As used in this subpart, *inflation-adjusted beneficiary coinsurance* means the coinsurance adjustment as determined under this subpart.

§ 427.201 Computation of beneficiary coinsurance and adjusted Medicare payment for Part B rebatable drugs with price increases faster than inflation.

(a) *Methodology.* CMS must use the methodology set forth in this section to calculate the inflation-adjusted beneficiary coinsurance and associated adjusted Medicare payment percentage for Part B rebatable drugs as set forth in §§ 410.152(m), 419.41(e), and 489.30(b)(6) of this chapter.

(b) *Calculation of inflation-adjusted beneficiary coinsurance.* To calculate the inflation-adjusted beneficiary coinsurance for Part B rebatable drugs with respect to a calendar quarter, CMS compares the payment amount, as set forth in paragraph (b)(3) of this section, to the inflation-adjusted payment amount for the applicable calendar quarter.

(1) If the payment amount exceeds the inflation-adjusted payment amount, the inflation-adjusted beneficiary coinsurance is calculated by multiplying the inflation-adjusted payment amount by 0.20.

(2) If the inflation-adjusted payment amount does not exceed the payment amount, the adjustment to the beneficiary coinsurance set forth in paragraph (b)(1) of this section is not applied.

(3) CMS will use the published payment amount in quarterly pricing files published by CMS as the payment amount in this determination.

(c) *Exclusions.* Any drug that is excluded from Part B rebatable drugs as set forth in § 427.101(b) is not subject to inflation-adjusted beneficiary coinsurance.

Subpart D—Determination of the Rebate Amount for Part B Rebatable Drugs

§ 427.300 Definitions.

As used in this subpart, the following definitions apply:

340B Program is the program under section 340B of the Public Health Service (PHS) Act.

Refundable single-dose container or *single-use package drug* has the meaning set forth in § 414.902 of this chapter.

§ 427.301 Calculation of the total Part B rebate amount to be paid by manufacturers.

(a) *Total rebate.* Subject to paragraph (b) of this section, the total rebate amount to be paid for a Part B rebatable drug, as identified under § 427.101, for an applicable calendar quarter is equal to the product of the per unit Part B rebate amount of such drug, as determined under § 427.302, and the billing units of the Part B rebatable drug furnished during the applicable calendar quarter, as identified as set forth in § 427.303. The rebate amount may be reduced as set forth in subpart E of this part or adjusted as set forth in subpart F of this part.

(b) *Apportionment of the Part B rebate amount.* CMS will identify billing and payment codes for which multiple manufacturers report ASP, as set forth in sections 1927(b)(3) and 1847A(f) of the Act, for NDCs assigned to the billing and payment code. CMS will calculate the rebate amount owed by each manufacturer by:

(1) Determining the total billing units sold for each NDC assigned to the billing and payment code, by multiplying the number of units reported by a manufacturer in ASP data submissions at the NDC–11 package level by the number of billing units per NDC–11 reporting unit.

(2) Summing the individual manufacturer's total billing units sold during the applicable calendar quarter (for all NDCs of the manufacturer assigned to the billing and payment code).

(3) Summing all manufacturers' total billing units sold during the applicable calendar quarter for all NDCs of the Part B rebatable drug assigned to the billing and payment code.

(4) Dividing the resulting amount from paragraph (b)(2) of this section by the resulting amount from paragraph (b)(3) of this section.

(5) Multiplying the resulting amount from paragraph (b)(4) of this section by the total rebate amount as determined under paragraph (a) of this section.

(c) *Apportionment of the Part B rebate amount when reported units for NDCs within a billing and payment code are missing, negative, or equal to zero.*

(1) When there are multiple NDCs in a grouped billing and payment code and the manufacturer-reported ASP units for all NDCs are either missing, negative, or equal to zero but there is a positive rebate amount calculated under § 427.302(a), CMS will:

(i) With respect to NDCs that were sold or marketed during the applicable calendar quarter and for which all NDCs assigned to the grouped billing and payment code lack manufacturer-reported ASP data for the applicable calendar quarter, equally apportion a positive rebate amount to NDCs with missing ASP units that were sold or marketed during the applicable calendar quarter by dividing the total rebate amount for the grouped billing and payment code by the total number of NDCs sold or marketed during the applicable calendar quarter within the billing and payment code; and

(ii) With respect to NDCs that were not sold or marketed during the applicable calendar quarter and lack manufacturer-reported ASP units for the applicable calendar quarter, NDCs with negative manufacturer-reported ASP units for the applicable calendar quarter, and NDCs with manufacturer-reported ASP units equal to zero for the applicable calendar quarter, apportion a $0 rebate amount to each respective NDC. If all NDCs assigned to the grouped billing and payment code are determined under this subparagraph, no rebate will be assessed for that billing and payment code.

(2) When there are multiple NDCs in a grouped billing and payment code and the manufacturer-reported ASP units for some but not all NDCs assigned to the grouped billing and payment code are either missing, negative, or equal to zero but there is a positive rebate amount calculated under § 427.302(a), CMS will:

(i) With respect to NDCs that were not sold or marketed during the applicable calendar quarter and lack manufacturer-reported ASP units for the applicable calendar quarter, NDCs with negative manufacturer-reported ASP units for the applicable calendar quarter, and NDCs with manufacturer-reported ASP units equal to zero for the applicable calendar quarter, apportion a $0 rebate amount to each respective NDC;

(ii) With respect to NDCs that were sold or marketed during the applicable calendar quarter and lack manufacturer-reported ASP units for the applicable calendar quarter, and NDCs that were sold or marketed during the applicable calendar quarter and for which respective NDCs have positive manufacturer-reported units by, apportion rebate amounts as follows:

(A) Solely for purposes of the calculation determined under this paragraph (c)(2)(ii) of this section, assign to NDCs that were sold or marketed during the applicable calendar quarter and lack manufacturer-reported ASP units for the applicable calendar quarter the number of ASP units that is equal to the lowest positive number of manufacturer reported ASP units for any NDC in the grouped billing and payment code;

(B) Determine the total billing units sold for each NDC assigned to the billing and payment code, by multiplying the number of units reported by a manufacturer in ASP data submissions at the NDC–11 package level by the number of billing units per NDC–11 reporting unit;

(C) With respect to all NDCs of each individual manufacturer assigned to the billing and payment code, sum the total billing units for such NDCs sold during the applicable calendar quarter;

(D) Sum the total billing units sold during the applicable calendar quarter for all NDCs of the Part B rebatable drug assigned to the billing and payment code, including those assigned a ASP unit value as set forth in paragraph (c)(2)(ii)(A) of this section;

(E) Divide the resulting amount from paragraph (c)(2)(ii)(C) of this section by the resulting amount from paragraph (c)(2)(ii)(D) of this section; and

(F) Multiply the resulting amount from paragraph (c)(2)(ii)(E) of this section by the total rebate amount as determined under paragraph (a) of this section.

§ 427.302 Calculation of the per unit Part B drug rebate amount.

(a) *Formula for calculating the per unit Part B rebate amount.* CMS will calculate the per unit Part B rebate amount for a Part B rebatable drug and applicable calendar quarter by determining the amount by which the specified amount, as determined under paragraph (b) of this section, exceeds the inflation-adjusted payment amount, as determined under paragraph (g) of this section.

(b) *Identification of the specified amount for the applicable calendar quarter.* For each applicable calendar quarter, subject to paragraph (b)(3) of this section, the specified amount is equal to the amount determined under section 1847A(i)(3)(A)(ii)(I)(aa) or (bb) of the Act, as applicable, for the calendar quarter.

(1) Subject to paragraph (b)(2) of this section, the first applicable calendar quarter for a Part B rebatable drug shall be no earlier than the calendar quarter beginning January 1, 2023 and shall be the later of one of the following:

(i) The first full calendar quarter that is at least the third calendar quarter after the payment amount benchmark quarter identified in paragraphs (c)(1) through (5) of this section.

(ii) The calendar quarter beginning January 1, 2023.

(2) Notwithstanding paragraph (b)(1) of this section, for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after the effective date of the drug's assigned billing and payment code other than a NOC code, whichever is later, the first applicable calendar quarter is the first full calendar quarter that follows the payment amount benchmark quarter identified in paragraphs (c)(1) through (5) of this section.

(3) If all NDCs in the billing and payment code have neither manufacturer-reported ASP nor Wholesale Acquisition Cost (WAC) price data available for the applicable calendar quarter, CMS will use WAC price data from other public sources, if available, to calculate 106 percent of WAC, which will serve as the specified amount.

(c) *Identification of the payment amount benchmark quarter.* For each Part B rebatable drug, CMS will identify the applicable payment amount benchmark quarter as set forth in paragraphs (c)(1) through (3) of this section, as applicable, subject to paragraphs (c)(4) and (5) of this section, using the earliest first marketed date of any NDC ever marketed under any FDA application under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have been marketed, and using the earliest approval or licensure date of any FDA application under which any NDCs that have ever been assigned to the billing and payment as of the applicable calendar quarter have been marketed:

(1) For a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, the payment amount benchmark quarter is the calendar quarter beginning July 1, 2021.

(2) For a Part B rebatable drug first approved or licensed by the FDA after December 1, 2020, the payment amount benchmark quarter is the third full calendar quarter after a drug's first marketed date.

(3) For a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020, but with a first marketed date after December 1, 2020, the payment amount benchmark quarter is the third full calendar quarter after a drug's first marketed date.

(4) Notwithstanding paragraph (c)(3) of this section, for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, the payment amount benchmark quarter is the third full calendar quarter after the Part B rebatable drug is assigned a billing and payment code other than a NOC code.

(5) For a Part B rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part B rebatable drug is no longer considered to be a selected drug, for each applicable quarter beginning after the price applicability period with respect to such drug, the payment amount benchmark quarter is the calendar quarter beginning January 1 of the last year during such price applicability period with respect to such selected drug.

(d) *Identification of the payment amount in the payment amount benchmark quarter.* CMS will identify the payment amount in the payment amount benchmark quarter using the published payment limit for the billing and payment code for the applicable payment amount benchmark quarter identified as set forth in paragraph (c) of this section.

(1) For a Part B rebatable drug, subject to paragraphs (d)(1)(i) and (ii) of this section and except as provided in paragraph (d)(2) of this section, CMS will identify the payment amount in the payment amount benchmark quarter using the published payment limit for the billing and payment code for the applicable payment amount benchmark quarter determined under section 1847A of the Act.

(i) If a published payment limit is not available for the applicable payment amount benchmark quarter, CMS will use the lower of 106 percent of manufacturer-reported ASP or 106 percent of manufacturer-reported WAC.

(ii) If neither a published payment limit nor manufacturer-reported ASP or WAC data are available, CMS will use WAC data from other public sources to calculate 106 percent of WAC, which, solely for the purposes of this section, CMS will consider to be the payment amount for the payment amount benchmark quarter.

(2) For a Part B rebatable drug previously billed under a grouped billing and payment code during the payment amount benchmark quarter and later billed under a unique billing and payment code, CMS will use the grouped billing and payment code payment limit as the payment amount in the payment amount benchmark quarter.

(e) *Identification of the benchmark period CPI–U.* For each Part B rebatable drug, CMS will identify the applicable benchmark period CPI–U at the billing and payment code level as set forth in paragraphs (e)(1) and (2) of this section, subject to paragraphs (e)(3) through (5) of this section:

(1) For a Part B rebatable drug first approved or licensed by the FDA on or before December 1, 2020, and with a first marketed date on or before December 1, 2020, the benchmark period CPI–U is the CPI–U for January 2021.

(2) For a Part B rebatable drug first approved or licensed by the FDA after December 1, 2020, the benchmark period CPI–U is the CPI–U for the first month of the first full calendar quarter after a drug's first marketed date.

(3) Notwithstanding paragraph (e)(2) of this section, for a Part B rebatable drug first approved or licensed by FDA on or before December 1, 2020, and with a first marketed date after December 1, 2020, the benchmark period CPI–U is the CPI–U for the first month of the first full calendar quarter after a drug's first marketed date.

(4) Notwithstanding paragraph (e)(3) of this section, for a Part B rebatable drug that was billed under a NOC code during the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, the benchmark period CPI–U is the CPI–U for the first month of the first full calendar quarter after the Part B rebatable drug is assigned a billing and payment code other than a NOC code.

(5) Notwithstanding paragraph (e)(4) of this section, for a Part B rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part B rebatable drug is no longer considered to be a selected drug, the benchmark period CPI–U is the CPI–U for the July of the year preceding the last year during such price applicability period.

(f) *Identification of the rebate period CPI–U.* For each Part B rebatable drug by billing and payment code, CMS will identify and use the greater of the benchmark period CPI–U index level or the CPI–U index level for the first month of the calendar quarter that is two calendar quarters before the applicable calendar quarter in which the Part B rebatable drug is furnished.

(g) *Determination of inflation-adjusted payment amount.* For each applicable calendar quarter and for each Part B rebatable drug by billing and payment code, CMS will calculate the inflation-adjusted payment amount by dividing the rebate period CPI–U by the benchmark period CPI–U and then multiplying the quotient by the payment amount in the payment amount benchmark quarter, determined under paragraph (d) of this section.

§ 427.303 Determination of total number of billing units.

(a) *General.* For each Part B rebatable drug, CMS will determine the total number of billing units of the billing and payment code subject to a rebate in the applicable calendar quarter using final action Medicare fee-for-service claims for which Medicare payment was allowed and greater than zero.

(b) *Total billing units.* Using final action claims in the Medicare fee-for-service claims repository, at least 3 months after the end of the applicable calendar quarter, CMS will determine the total number of billing units for a Part B rebatable drug in an applicable calendar quarter by identifying separately payable claim lines for the billing and payment code for dates of service in that applicable calendar quarter and excluding the following billing units in claim lines as applicable:

(1) *Billing units of drugs acquired through the 340B Program.* CMS will exclude billing units acquired under the 340B Program as identified through—

(i) Separately payable units in all professional claim lines for dates of service during 2023 and 2024 that were billed with the ''JG'' or ''TB'' modifiers and separately payable billing units in claim lines for professional claims with dates of service during 2023 and 2024 from suppliers that are associated with covered entities listed by the Health Resources and Services Administration (HRSA) 340B Office of Pharmacy Affairs Information System (OPAIS) as participating in the 340B Program. CMS will use National Provider Identifiers (NPI) and/or Medicare Provider Numbers (MPN), or other fields in the OPAIS database (such as name and address) if NPI or MPN is not available, to identify these suppliers and the claims submitted with such identifiers;

(ii) Separately payable billing units in claim lines for institutional claims that are billed with the ''JG'' or ''TB'' modifiers and units in institutional claims from covered entities that are critical access hospitals and Maryland waiver hospitals with dates of service from January 1, 2023 through December 31, 2023. CMS will use NPIs and MPNs, or other fields in the OPAIS database (such as name and address) if NPI or MPN are not available, to identify these suppliers and the claims submitted with such identifiers;

(iii) Separately payable billing units in claim lines for institutional claims that are billed with the ''JG'' or ''TB'' modifiers for claims with dates of service from January 1, 2024 through December 31, 2024; and

(iv) Separately payable billing units in claim lines billed with the ''TB'' modifier for claims with dates of service on or after January 1, 2025.

(2) *Billing units with a rebate under section 1927 of the Social Security Act.* Subject to paragraph (b)(2)(i) of this section, CMS will exclude billing units from claims with dates of service during a month within an applicable calendar quarter if the units are furnished to a dually eligible Medicare beneficiary who has Medicaid coverage that may provide cost-sharing assistance.

(i) CMS will not exclude billing units from claims when the Medicare beneficiary has Medicaid coverage that does not include cost-sharing assistance, including Specified Low-Income Medicare Beneficiaries (SLMB), Qualified Disabled and Working Individuals (QDWI), and Qualifying Individuals (QI) beneficiaries.

(ii) [Reserved]

(3) *Billing units that are packaged into the payment amount for an item or service and are not separately payable.* CMS will exclude billing units that are packaged into the payment amount for an item or service and are not separately payable.

(4) *Billing units when a drug is no longer a Part B rebatable drug.* In situations where a Part B rebatable drug that is a single source drug becomes a multiple source drug during an applicable calendar quarter, CMS will:

(i) Determine if such drug has become a multiple source drug by reviewing FDA's most recent publication of ''Approved Drug Products with Therapeutic Equivalence Evaluations'' (commonly known as the Orange Book) for a drug that is that is rated as therapeutically equivalent to such drug; and,

(ii) If a therapeutically equivalent drug is identified as set forth in paragraph (b)(4)(i) of this section, determine if the therapeutically equivalent drug was sold or marketed during the applicable calendar quarter; and

(iii) Exclude billing units of such drug furnished on and after the first day of the calendar month in which the therapeutically equivalent drug was first sold or marketed during the applicable calendar quarter.

(5) *Billing units subject to discarded drug refunds.* CMS will exclude billing units of discarded refundable single-dose container or single-use package drugs for which a refund is owed as set forth in § 414.940 of this chapter from the calculation of rebate amounts. For applicable calendar quarters beginning on or after January 1, 2024, these billing units will be excluded as part of the reconciliation process described at § 427.501(d).

§ 427.304 Adjustments for changes to billing and payment codes.

(a) *Changes in billing unit dose description.* If there has been a change to the dose description for a Part B rebatable drug (causing a new billing and payment code to be assigned), CMS will calculate a conversion factor based on the ratio of the billing unit dose description for the current billing and payment code to the billing unit dose description for the prior billing and payment code. CMS will apply the conversion factor to the payment amount in the payment amount benchmark quarter, as set forth in § 427.302(d), before applying the percentage by which the rebate period CPI–U for the calendar quarter exceeds the benchmark period CPI–U.

(b) *Instances when a new billing and payment code is assigned.* If a new billing and payment code is assigned for a Part B rebatable drug, CMS will use the payment amount in the payment amount benchmark quarter, the payment amount benchmark quarter, and the benchmark quarter CPI–U of the prior billing and payment code to calculate the per unit Part B rebate amount under § 427.302.

(c) *Documentation.* CMS will maintain a crosswalk reflecting the changes in billing and payment codes and dose descriptions as applicable.

Subpart E—Reducing the Rebate Amount for Part B Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption

§ 427.400 Definitions.

As used in this subpart, the following definitions apply:

Currently in shortage means that at least one NDC–10 assigned to the billing and payment code of a Part B rebatable drug with the status ''currently in shortage'' is on a shortage list maintained by the FDA under section 506E of the FD&C Act.

Drug shortage or *shortage* means a period of time when the demand or projected demand for the drug within the United States exceeds the supply of the drug (see section 506C(h)(2) of the FD&C Act).

Natural disaster means any natural catastrophe, including, but not limited to any of the following: hurricane, tornado, storm, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, or drought, or regardless of cause, any fire, flood, or explosion.

Other unique or unexpected event means any exogenous, unpredictable event outside of a manufacturer's control, including, but not limited to, a geopolitical disruption, pandemic, or act of terror.

Plasma-derived product means a licensed biological product that is derived from human whole blood or plasma, as indicated on the approved product labeling.

Severe supply chain disruption means a change in production or distribution that is reasonably likely to lead to a significant reduction in the U.S. supply of a Part B rebatable biosimilar biological product by a manufacturer and significantly affects the ability of the manufacturer of the biosimilar biological product to fill orders or meet expected demand for its product in the United States for at least 90 days. This definition does not include interruptions in manufacturing due to matters such as routine maintenance, manufacturing quality issues, or insignificant changes made in the manufacturing process for the drug.

§ 427.401 Reducing the rebate amount for Part B rebatable drugs currently in shortage.

(a) *General.* As required under section 1847A(i)(3)(G)(i) of the Act, CMS will reduce the total rebate amount determined under § 427.301(a), if any is owed, for a Part B rebatable drug that is currently in shortage, as set forth in § 427.400, at any point during the applicable calendar quarter.

(b) *Calculation of the reduced rebate amount.* (1) For each applicable calendar quarter beginning on or after January 1, 2023, the reduced total rebate amount for a Part B rebatable drug currently in shortage will be calculated using the following formula:

Equation 1 to Paragraph (b)(1)

Reduced Total Rebate Amount = the total rebate amount multiplied by (1 *minus* applicable percent reduction) multiplied by (percentage of time drug was currently in shortage during the applicable calendar quarter) added to the total rebate amount multiplied by (1 *minus* percentage of time drug was currently in shortage during the applicable calendar quarter)

(2) For purposes of paragraph (b)(1) of this section, the applicable percent reduction is:

(i) For a Part B rebatable drug that is a plasma-derived product:

(A) 75 percent for the first 4 consecutive applicable calendar quarters such drug is currently in shortage.

(B) 50 percent for the second 4 consecutive applicable calendar quarters such drug is currently in shortage.

(C) 25 percent for each subsequent applicable calendar quarter such drug is currently in shortage.

(ii) For a Part B rebatable drug that is not a plasma-derived product:

(A) 25 percent for the first 4 consecutive applicable calendar quarters such drug is currently in shortage.

(B) 10 percent for the second 4 consecutive applicable calendar quarters such drug is currently in shortage.

(C) 2 percent for each subsequent applicable calendar quarter such drug is currently in shortage.

(iii) Except as provided in paragraph (b)(iv) of this section, CMS will apply the greatest applicable percent reduction as set forth in paragraph (b)(2)(i)(A) or (b)(2)(ii)(A) of this section

starting with the first applicable calendar quarter that a Part B drug or biological product is described as currently in shortage regardless of whether the drug or biological product meets the definition of a Part B rebatable drug or whether a rebate amount is owed for that calendar quarter, starting with the calendar quarter that begins January 1, 2023.

(iv) If any applicable calendar quarter for which a rebate reduction determined under § 427.402 has been granted would be the first of the four consecutive applicable calendar quarters set forth in paragraph (b)(2)(i)(A) or (b)(2)(ii)(A) of this section and the Part B rebatable drug or biological product continues to be currently in shortage after the rebate reduction period set forth in § 427.402, CMS will treat the quarter following the final quarter in which the rebate reduction determined under § 427.402 applies as the first of the four consecutive applicable calendar quarters so described.

(3) For purposes of paragraph (b)(1) of this section, the percentage of time the drug is currently in shortage during the applicable calendar quarter is equal to the number of days such drug is currently in shortage in an applicable calendar quarter, divided by the total number of days in the applicable calendar quarter.

(c) *Application of reduction.* CMS will apply a reduction of the rebate amount as determined under paragraph (b) of this section to all the NDCs under the relevant billing and payment code.

§ 427.402 Reducing the rebate amount for certain Part B rebatable drugs when there is a severe supply chain disruption.

(a) *General.* As required under section 1847A(i)(3)(G)(ii) of the Act, CMS will reduce the total rebate amount determined under § 427.301(a), if any is owed, for a Part B rebatable biosimilar biological product when CMS determines there is a severe supply chain disruption during the applicable calendar quarter such as that caused by a natural disaster or other unique or unexpected event.

(b) *Calculation of the reduced rebate amount*—(1) *Initial reduction.* If CMS determines the criteria set forth in paragraph (c)(4) of this section are met, then CMS will reduce the total rebate amount determined under § 427.301(a), if any is owed, for a Part B rebatable biosimilar biological product by 75 percent for the applicable calendar quarter in which the event occurred or began, or the following applicable calendar quarter if the request is submitted less than 60 calendar days before the end of an applicable calendar quarter, and the 3 subsequent applicable calendar quarters.

(2) *Extension of reduction.* If CMS determines a severe supply chain disruption continues into a fifth applicable calendar quarter as set forth in paragraph (c)(5) of this section, then CMS will reduce the total rebate amount determined under § 427.301(a), if any is owed, for a Part B rebatable biosimilar biological product by 75 percent for that fifth applicable calendar quarter and an additional 3 consecutive applicable calendar quarters.

(3) *Application of reduction.* If CMS determines there is a severe supply chain disruption for an NDC–11 assigned to a billing and payment code, CMS will apply any reduction of the rebate amount as determined under paragraphs (b)(1) and (2) of this section to all the NDCs under the relevant billing and payment code.

(4) *Limitation on rebate reductions.* CMS will not apply multiple rebate reductions for the same Part B rebatable drug and applicable calendar quarter.

(i) If a manufacturer believes there are multiple events causing severe supply chain disruptions during the same 4 applicable calendar quarters for the same Part B rebatable biosimilar biological product and submits multiple rebate reduction requests for the same product, CMS will grant no more than 1 rebate reduction determined under paragraph (b)(1) or (2) of this section for that product for those consecutive applicable calendar quarters.

(ii) If CMS grants a rebate reduction request under this section, and the Part B rebatable biosimilar biological product subject to the reduction appears as currently in shortage during any of the 4 applicable calendar quarters as the ones for which the severe supply chain disruption reduction request was granted, CMS will reduce the rebate amount as determined under paragraph (b)(1) of this section and will not grant a reduction determined under § 427.401 during those applicable calendar quarters.

(iii) If a Part B rebatable biosimilar biological product that is currently in shortage experiences a severe supply chain disruption, CMS will reduce the rebate amount as determined under paragraph (b)(1) of this section and will not grant a reduction determined under § 427.401 during those applicable calendar quarters.

(c) *Eligibility for a rebate reduction*—(1) *Eligible drug.* Subject to paragraph (b)(3) of this section, eligibility for a rebate reduction under this section is limited to Part B rebatable biosimilar biological products for which a manufacturer submits a rebate reduction request under this section.

(2) *Timing.* For a natural disaster or other unique or unexpected event occurring on or after August 2, 2024, that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began in order to receive consideration for a reduction in the rebate amount owed as set forth in paragraph (b)(1) of this section.

(3) *Required elements of a rebate reduction request.* To receive consideration for a reduction in the rebate amount owed determined under paragraph (b)(1) of this section, the manufacturer must submit to CMS information and supporting documentation to substantiate the evaluation criteria set forth in paragraph (c)(4) of this section. Such information and supporting documentation include the following:

(i) Evidence that the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer, or a method of shipping or distribution that the manufacturer uses to make or distribute the Part B rebatable biosimilar biological product(s), such as a change in the production or distribution of the Part B rebatable biosimilar biological product(s) that is reasonably likely to lead to a significant reduction in the U.S. supply of product and significantly affects the manufacturer's ability to fill orders or meet expected demand for the Part B rebatable biosimilar biological product(s) for at least 90 days;

(ii) Information about when the manufacturer expects supply of the Part B rebatable biosimilar biological product(s) to meet expected demand;

(iii) Evidence that the natural disaster or other unique or unexpected event caused the severe supply chain disruption, including when the natural disaster or other unique or unexpected event occurred or began occurring, and the expected or actual duration of the severe supply chain disruption; and

(iv) Evidence of the manufacturer's physical presence related to manufacturing the Part B rebatable biosimilar biological product(s) in a geographic area where a natural disaster or other unique or unexpected event occurred. If the manufacturer is not physically present in a geographic area where a natural disaster or other unique or unexpected event occurred, but believes there is a severe supply chain disruption caused by a natural disaster

or other unique or unexpected event that affects the manufacturer's Part B rebatable biosimilar biological product(s), the information and supporting documentation may include evidence of the impact of the natural disaster or other unique or unexpected event on the supply chain of the Part B rebatable drug or biosimilar, on a supplier of an ingredient or packaging, or method of shipping or distribution that the manufacturer uses.

(4) *Evaluation criteria.* In accordance with paragraph (b)(1) of this section, CMS will grant a reduction in the rebate amount determined under § 427.301(a), if any is owed, if a manufacturer submits to CMS a request in writing for an eligible drug, in accordance with the timing set forth in paragraph (c)(2) of this section, demonstrating that:

(i) A severe supply chain disruption has occurred during the applicable calendar quarter;

(ii) The severe supply chain disruption directly affects the manufacturer itself, a contract manufacturer, a supplier of an ingredient or packaging, or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the Part B rebatable biosimilar biological product; and

(iii) The severe supply chain disruption was caused by a natural disaster or other unique or unexpected event.

(5) *Rebate reduction extensions.* If CMS determines that a Part B rebatable biosimilar biological product that received a reduction of the rebate amount as determined under paragraph (b)(1) of this section continues to be affected by a severe supply chain disruption, CMS will grant a single extension of the reduction for 4 additional consecutive applicable calendar quarters and reduce the rebate amount calculated at § 427.301(a), if any is owed as determined under paragraph (b)(2) of this section.

(i) To receive consideration for a rebate reduction extension, a manufacturer must submit a request with updated or new information and supporting documentation on why the Part B rebatable biosimilar biological product continues to be affected by the severe supply chain disruption during the fifth through eighth applicable calendar quarters.

(ii) A manufacturer must submit the rebate reduction extension request at least 60 calendar days before the start of the fifth applicable calendar quarter to receive consideration for a reduction in the rebate amount owed, if any, as determined under paragraph (b)(2) of this section.

(6) *Decision to grant or deny a request.* CMS will review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable calendar quarter that begins on October 1, 2024.

(i) CMS will deny a rebate reduction request that does not meet the criteria set forth in paragraph (c)(4) of this section or that is incomplete or untimely based on the requirements set forth in this paragraph (c).

(ii) CMS will deny a rebate reduction extension request that does not meet the criteria set forth in paragraph (c)(5) of this section, that is incomplete or untimely based on the requirements set forth in paragraph (c)(5), or if a reduction determined under paragraph (b)(1) of this section was not granted for such biosimilar biological product.

(iii) CMS' decisions to deny a request are final and will not be subject to an appeals process.

(7) *Public disclosure of information.* CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. Information provided as part of a request for a rebate reduction that the submitter indicates is a trade secret or confidential commercial or financial information will be protected from disclosure if CMS determines the information meets the requirements set forth under Exemptions 3 and/or 4 in 5 U.S.C. 552.

Subpart F—Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments

§ 427.500 Definitions.

As used in this subpart, *date of receipt* is the calendar day following the day on which a report of a rebate amount (as set forth in §§ 427.501(b) through (d) and 427.502(b) and (c) is made available to the manufacturer of a Part B rebatable drug by CMS.

§ 427.501 Rebate Reports and reconciliation.

(a) *General.* This section applies to Part B rebatable drugs for all applicable calendar quarters except as otherwise set forth in § 427.502 regarding the applicable calendar quarters in calendar years 2023 and 2024.

(b) *Preliminary Rebate Report.* A Preliminary Rebate Report will be provided to each manufacturer of a Part B rebatable drug at least 1 month prior to the issuance of the Rebate Report as set forth in paragraph (c) of this section for an applicable calendar quarter.

(1) The Preliminary Rebate Report for each Part B rebatable drug will include the following information:

(i) The NDC(s) and billing and payment codes identified for the Part B rebatable drug set forth in § 427.20.

(ii) Total number of billing units as determined under § 427.303.

(iii) Payment amount benchmark quarter and payment amount in the payment amount benchmark quarter as determined under § 427.302(c) and (d).

(iv) Applicable calendar quarter specified amount as determined under § 427.302(b).

(v) Applicable benchmark period and rebate period CPI–Us as set forth in § 427.302(e) and (f).

(vi) Inflation-adjusted payment amount as determined under § 427.302(g).

(vii) The amount, if any, by which the specified amount as determined under § 427.302(b) exceeds the inflation-adjusted payment amount as determined under § 427.302(g) for the Part B rebatable drug for the applicable calendar quarter as set forth in § 427.302.

(viii) Any applied reductions as determined under §§ 427.401 and 427.402.

(ix) Rebate amount due as determined under § 427.301(a).

(2) [Reserved]

(c) *Rebate Report.* A Rebate Report will be provided to each manufacturer of a Part B rebatable drug no later than 6 months after the end of each applicable calendar quarter.

(1) The Rebate Report will include the information specified in paragraph (b)(1) of this section, with the inclusion of any revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 427.503, if applicable, and any CMS-determined recalculations from paragraph (d)(2) of this section.

(2) The Rebate Report is the invoice of a manufacturer's rebate amount due as determined under § 427.301, if any, for a Part B rebatable drug for an applicable calendar quarter.

(d) *Reconciliation of the rebate amount.* CMS will perform reconciliation of a rebate amount provided in a Rebate Report specified in paragraph (c) of this section for an applicable calendar quarter in the following circumstances:

(1) *Regular reconciliation.* Except as otherwise set forth in § 427.502, CMS will perform one regular reconciliation of the rebate amount within 12 months of the date of receipt of the Rebate Report for each applicable calendar

quarter to include revisions to the information used to calculate the rebate amount set forth in paragraph (c)(1) of this section.

(i) *Preliminary reconciliation.* At least 1 month prior to the issuance of a report with the reconciled rebate amount determined under paragraph (d)(1)(ii) of this section, CMS will conduct a preliminary reconciliation of a rebate amount for an applicable calendar quarter determined under paragraph (d)(3) of this section based on the information set forth in this paragraph (b)(1)(i) and paragraphs (d)(1)(ii) through (ix) of this section and provide the information specified in this paragraph (b)(1)(i) and paragraphs (d)(1)(ii) through (ix) to the manufacturer of a Part B rebatable drug for the applicable calendar quarter, if applicable:

(A) Updated total number of rebatable units, as determined under § 427.303.

(B) Updated payment amount benchmark quarter and payment amount in the payment amount benchmark quarter, as determined under § 427.302(c) and (d) if any inputs are restated within the reconciliation run-out period.

(C) Applicable calendar quarter specified amount as determined under § 427.302(b), if any inputs are restated within the reconciliation run-out period.

(D) The excess amount by which the specified amount exceeds the inflation-adjusted payment amount as determined under § 427.302, if any inputs are restated within the reconciliation run-out period.

(E) Reconciled total rebate amount as determined under § 427.301(a).

(F) The difference between the total rebate amount due as specified on the Rebate Report set forth in paragraph (c) of this section and the reconciled rebate amount as set forth in this paragraph (d)(1)(i).

(ii) *Report with reconciled rebate amount.* With the inclusion of any additional revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 427.503, if applicable, a report with the reconciled rebate amount will be provided to each manufacturer of a Part B rebatable drug within 12 months after the issuance of the Rebate Report described in paragraph (c) of this section.

(2) *CMS identification of error and manufacturer misreporting.* CMS may recalculate a rebate amount and provide the manufacturer of a Part B rebatable drug a report with a reconciled rebate amount when:

(i) CMS identifies an agency error in the information specified in paragraphs (c) and (d)(1) of this section, including reporting system or coding errors, not later than 3 years from the date of receipt by a manufacturer of a reconciled rebate amount for the applicable calendar quarter; or

(ii) CMS determines at any time that the information used by CMS to calculate the rebate amount was inaccurate due to manufacturer misreporting.

(3) *Impact of reconciliation on rebate amount.* A reconciliation as set forth in this paragraph (d) could result in an increase, decrease, or no change to the rebate amount, as determined under § 427.301, owed by a manufacturer for the applicable calendar quarter for the Part B rebatable drug compared to the amount described in the Rebate Report described in paragraph (c) of this section or an amount described in a previous reconciliation.

(i) A report with a reconciled rebate amount that is an increase to the rebate amount is the invoice for such additional amount due on the manufacturer's rebate amount as determined under § 427.301 for a Part B rebatable drug for an applicable calendar quarter.

(ii) [Reserved]

(4) *Drugs included in a reconciliation.* A drug covered under Part B that does not meet the requirements of a rebatable drug specified in subpart B for an applicable calendar quarter will not be included in a reconciliation under this paragraph (d).

§ 427.502 Rebate Reports for applicable calendar quarters in calendar years 2023 and 2024.

(a) *Transition rule for reporting.* Section 1847A(i)(1)(C) of the Act allows CMS to delay the timeframe for reporting the information and rebate amount described in § 427.501(c) for applicable calendar quarters in calendar years 2023 and 2024 until not later than September 30, 2025.

(b) *Rebate Report information for applicable calendar quarters in calendar years 2023 and 2024.* The Rebate Reports for applicable calendar quarters in calendar years 2023 and 2024 will include the information set forth in § 427.501(b)(1).

(c) *Rebate Report procedures for applicable calendar quarters in calendar years 2023 and 2024.* Rebate amounts for the applicable calendar quarters in calendar year 2023 and 2024 will be reported as follows:

(1) The 4 applicable calendar quarters in calendar year 2023 will be consolidated into a single report and manufacturers will receive a single Preliminary Rebate Report followed by a single Rebate Report.

(i) Discarded drug units for which a refund is owed will be removed from the total number of billing units in the single Preliminary Rebate Report for the applicable calendar quarters in calendar year 2023.

(ii) For this single Preliminary Rebate Report for the applicable calendar quarters in calendar year 2023, the Suggestion of Error period as set forth in § 427.503 will be 30 calendar days.

(iii) No regular reconciliation of the rebate amount as set forth in § 427.501(d)(1) will be conducted for the rebate amount in the single Rebate Report for the applicable calendar quarters in calendar year 2023.

(2) The four applicable calendar quarters in calendar year 2024 will be consolidated into a single report and manufacturers will receive a single Preliminary Rebate Report followed by a single Rebate Report.

(i) For this single Preliminary Rebate Report for the applicable calendar quarters in calendar year 2024, the Suggestion of Error period as set forth in § 427.503 will be 30 calendar days.

(ii) Nine months after issuance of the single Rebate Report, CMS will perform one regular reconciliation for the applicable calendar quarters in calendar year 2024 in order to include revisions to the information used, determined under § 427.501(b)(1), to calculate the rebate amount. Such reconciliation will be as determined under § 427.501(d) inclusive of a preliminary reconciliation and a report with the reconciled rebate amount.

(iii) The Suggestion of Error period for the preliminary reconciliation for the applicable calendar quarters in calendar year 2024 will be 10 calendar days.

§ 427.503 Suggestion of Error.

(a) *General.* The manufacturer of a Part B rebatable drug may submit a Suggestion of Error about the information in their Preliminary Rebate Report and the report detailing the preliminary reconciliation of the rebate amount to CMS, for its discretionary consideration, if the manufacturer believes that there is a mathematical error or errors to be corrected before the Rebate Report or a subsequent reconciliation of the rebate amount, as applicable, is finalized.

(1) Section 1847A(i)(8) of the Act precludes administrative or judicial review on the determination of units as set forth in § 427.303, the determination of whether a drug is a Part B rebatable drug as set forth in § 427.101, and the calculation of the rebate amount as set

forth in § 427.301, inclusive of any reconciled rebate amount.

(2) [Reserved]

(b) *Process of submission.* Subject to the scope and timing requirements specified in paragraphs (a) and (c) of this section, manufacturers may submit the Suggestion of Error and provide supporting documentation (if applicable).

(c) *Timing.* Except as set forth in § 427.502 for applicable calendar quarters in calendar year 2023 and 2024, a manufacturer must submit its Suggestion of Error for the applicable calendar quarter within 10 calendar days from the date of receipt of a Preliminary Rebate Report or a preliminary reconciliation of a rebate amount using the method and process established by CMS in paragraph (b) of this section.

(d) *Notice.* (1) CMS will include any revisions to the calculation of the rebate amount, if determined necessary by CMS based on the Suggestion of Error submitted under this section prior to issuance of the Rebate Report as set forth in § 427.501(c) or § 427.502(c) as well as any report of reconciled rebate amount as set forth in § 427.501(d) or § 427.502(c)(2)(ii).

(2) CMS will notify the manufacturer whether CMS revised its calculation of the rebate amount based on the Suggestion of Error.

§ 427.504 Manufacturer access to Rebate Reports.

(a) *General.* CMS will establish a method and process for a manufacturer of the Part B rebatable drug to:

(1) Access the manufacturer's Rebate Report as set forth in §§ 427.501 and 427.502, including any report of reconciled rebate amount as set forth in §§ 427.501(d) and 427.502(c)(2)(ii);

(2) Submit a Suggestion of Error as set forth in §§ 427.502(c)(1)(ii) and (c)(2)(i) and 427.503; and

(3) Pay a rebate amount as set forth in § 427.505.

(b) [Reserved]

§ 427.505 Deadline and process for payment of rebate amount.

(a) *Rebate amounts owed by a manufacturer.* For a rebate amount owed by a manufacturer, payment is due no later than 11:59 p.m. Pacific Time (PT) on the 30th calendar day after the date of receipt of information regarding the rebate amount on—

(1) A Rebate Report as set forth in § 427.501(c) or § 427.502(c)(1) or (2); or

(2) A report of a reconciled rebate amount as set forth in § 427.501(d) or § 427.502(c)(2)(ii).

(b) *Failure to pay a rebate amount.* Failure to pay a rebate amount due timely and in full may result in an enforcement action as described in subpart G of this part.

(c) *Refund to the manufacturer.* If a reconciled rebate amount for an applicable calendar quarter as set forth in § 427.501(d) or § 427.502(c)(2)(ii) is less than what the manufacturer paid for that applicable calendar quarter, CMS will initiate the process to provide a refund equal to the excess amount paid within 60 days of the date of receipt of the report with such reconciled rebate amount.

Subpart G—Enforcement of Manufacturer Payment of Rebate Amounts

§ 427.600 Civil money penalty notice and appeals procedures.

(a) *General.* CMS may impose a civil money penalty on a manufacturer that fails to pay the rebate amount determined in § 427.301(a) on a Part B rebatable drug as set forth in § 427.101, by the payment deadline as set forth in § 427.505(a) for such drug for such applicable calendar quarter.

(b) *Determination of the civil money penalty amount.* CMS may impose a civil money penalty for each failure by a manufacturer to provide an inflation rebate for an applicable calendar quarter equal to 125 percent of the rebate amount determined in § 427.301(a).

(1) The civil money penalty is in addition to the rebate amount due.

(2) If a reconciled rebate amount as determined in § 427.501(d) or § 427.502(c)(2)(ii) results in an increase to the rebate amount due, a separate civil money penalty may be imposed for the failure by a manufacturer to provide an inflation rebate for the applicable quarter for the increase to the rebate amount due.

(c) *Notice of imposition of civil money penalties.* If CMS makes a determination to impose a civil money penalty described in paragraph (b) of this section, CMS will send a written notice of its decision to impose a civil money penalty that includes the following:

(1) A description of the basis for the determination.

(2) The basis for the penalty.

(3) The amount of the penalty.

(4) The date the penalty is due.

(5) The manufacturer's right to a hearing as set forth in paragraph (e)(3) of this section.

(6) Information about where to file the request for a hearing.

(d) *Collection.* (1) A manufacturer must pay the civil money penalty in full within 60 calendar days after the date of the notice of imposition of a civil money penalty from CMS under paragraph (c) of this section.

(2) In the event a manufacturer requests a hearing, pursuant to 42 CFR part 423, subpart T, the manufacturer must pay the amount in full within 60 calendar days after the date of a final decision by the Departmental Appeal Board, to uphold, in whole or in part, the civil money penalty.

(3) If the 60th calendar day described in paragraphs (d)(1) and (2) of this section is a weekend or a Federal holiday, then the timeframe is extended until the end of the next business day.

(e) *Appeal procedures for civil money penalties.* Section 1128A(c)(2) of the Act provides that CMS may not collect a civil money penalty until the affected party has had notice and the opportunity for a hearing.

(1) Manufacturers may appeal the following determinations:

(i) A CMS determination that the rebate amount was not paid by the applicable payment deadline as set forth in § 427.505.

(ii) The calculation of the amount of the civil money penalty.

(2) If CMS decides to impose a civil money penalty, CMS will provide the manufacturer with notice pursuant to the process set forth in paragraph (c) of this section.

(3) A manufacturer has a right to a hearing following a decision by CMS to impose a civil money penalty following the administrative appeal process and procedures established in 42 CFR part 423, subpart T.

(f) *Other applicable provisions.* The provisions of section 1128A of the Act (except subsections (a) and (b) of section 1128A of the Act) apply to civil money penalties under this section to the same extent that they apply to a civil money penalty or procedures under section 1128A of the Act.

(g) *Bankruptcy.* In the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil money penalties imposed, the Government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid amount of the rebates and civil money penalties owed by the manufacturer.

■ 82. Part 428 is added to read as follows:

PART 428—MEDICARE PART D DRUG INFLATION REBATE PROGRAM

Subpart A—General Provisions

Sec.

Authority: 42 U.S.C. 1395w–114b, 1302, and 1395hh.

Subpart A—General Provisions

§ 428.10 Basis and scope.

(a) *Basis.* This part implements section 1860D–14B of the Social Security Act (''the Act'').

(b) *Scope.* This part sets forth the requirements of the Medicare Part D Drug Inflation Rebate Program, which requires, for each 12-month applicable period, manufacturers to pay rebates for certain drugs and biological products with prices that increase faster than the rate of inflation.

(c) *Severability.* Were any provision of this part to be held invalid or unenforceable by its terms, or as applied to any person or circumstance, such provisions would be severable from this part and the invalidity or unenforceability would not affect the remainder thereof or any other part of this subchapter or the application of such provision to other persons not similarly situated or to other, dissimilar circumstances.

§ 428.20 Definitions.

As used in this part, the following definitions apply:

Annual manufacturer price (AnMP) means the amount determined under § 428.202(b).

Applicable period means a 12-month period beginning with October 1 of a year (beginning with October 1, 2022).

Applicable period Consumer Price Index for All Urban Consumers (CPI–U) means, with respect to an applicable period, the CPI–U for the first month of such applicable period (that is, October).

Applicable threshold means the amount determined under § 428.101(b)(2).

Average manufacturer price (AMP) means the average price paid to the manufacturer for the drug by wholesalers for drugs distributed to retail community pharmacies and retail community pharmacies that purchase drugs directly from the manufacturer, determined under § 447.504 of this chapter.

Benchmark period CPI–U means the CPI–U identified as set forth in § 428.202(e).

Benchmark period manufacturer price means the amount determined under § 428.202(d).

Covered Part D Drug has the meaning set forth in section 1860D–2(e) of the Act and § 423.100 of this chapter.

CPI–U means the monthly Consumer Price Index for All Urban Consumers (United States city average) index level for all items from the Bureau of Labor Statistics.

First marketed date means the date that a manufacturer is required to report for a Part D rebatable drug as its ''market date'' under section 1927(b)(3)(A)(v) of the Act.

Inflation-adjusted payment amount means the amount determined under § 428.202(f).

Manufacturer has the meaning set forth in section 1927(k)(5) of the Act.

National Drug Code (NDC) means the unique identifying prescription drug product number that is listed with FDA identifying the product.

Part D rebatable drug means, subject to the exclusion set forth in § 428.101(b), a drug or biological that is a covered Part D drug that, as of the first day of the applicable period, is:

(1) A drug approved under a New Drug Application (NDA) under section 505(c) of the Federal Food, Drug, and Cosmetic (FD&C) Act;

(2) A generic drug approved under an Abbreviated New Drug Application (ANDA) under section 505(j) of the FD&C Act (''section 505(j) ANDA''), in the case where:

(i) The reference listed drug approved under an NDA under section 505(c) of the FD&C Act, including any authorized generic drug as defined in section 505(t)(3) of the FD&C Act, is not being marketed, as identified in the Food and Drug Administration's (FDA) NDC Directory;

(ii) There is no other drug approved under section 505(j) of the FD&C Act that is rated as therapeutically equivalent in FDA's most recent publication of ''Approved Drug Products with Therapeutic Equivalence Evaluations'' (commonly known as the Orange Book), and that is being marketed, as identified in FDA's NDC Directory;

(iii) The manufacturer is not a ''first applicant'' during the ''180-day exclusivity period,'' as those terms are defined in section 505(j)(5)(B)(iv) of the FD&C Act; and

(iv) The manufacturer is not a ''first approved applicant'' for a competitive generic therapy, as that term is defined in section 505(j)(5)(B)(v) of the FD&C Act; or

(3) A biological licensed under section 351 of the Public Health Service (PHS) Act, including a biosimilar.

Payment amount benchmark period means the period identified as set forth in § 428.202(c).

Subsequently approved drug means a Part D rebatable drug first approved or licensed by the FDA after October 1, 2021.

Unit means, with respect to a Part D rebatable drug, the lowest dispensable amount (such as a capsule or tablet, milligram of molecules, or grams) of the Part D rebatable drug, as reported under section 1927 of the Act.

Subpart B—Determination of Part D Rebatable Drugs

§ 428.100 Definitions.

As used in this subpart, the following definitions apply:

Individual who uses such a drug or biological means a unique Medicare Part D beneficiary who was dispensed the Part D drug or biological that was covered by their Part D plan sponsor during the applicable period, identified using Prescription Drug Event (PDE) data with dates of service during the applicable period and with gross covered prescription drug costs greater than zero.

Gross covered prescription drug costs has the meaning set forth in § 423.308 of this chapter.

§ 428.101 Identification of Part D rebatable drugs.

(a) *Determination of Part D rebatable drugs.* (1) For each applicable period, CMS will use PDE data to identify all covered Part D drugs.

(2) CMS will match the covered Part D drugs identified in the PDE data with application numbers using FDA sources to determine whether each covered Part D drug is a drug or biological approved under an NDA under section 505(c) of the FD&C Act, approved under an ANDA under section 505(j) of the FD&C Act, or licensed under a Biologics License Application (BLA) under section 351 of the PHS Act, as of the first day of the applicable period.

(3) For a covered Part D drug identified in the PDE that is approved under an ANDA under section 505(j) of the FD&C Act, CMS will determine whether such drug meets the criteria in section 1860D–14B(g)(1)(C)(ii) of the Act as of the first day of the applicable period as follows:

(i) To determine whether the reference listed drug or an authorized generic of the reference listed drug is being marketed, as required under section 1860D–14B(g)(1)(C)(ii)(I) of the Act, CMS will use FDA's NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings, provided by the FDA or published on the FDA website.

(ii) To determine whether another drug has been approved under an ANDA that is therapeutically equivalent to the Part D rebatable drug identified as set forth in this paragraph (a)(3), CMS will use FDA's Orange Book. To determine if this therapeutically equivalent drug is being marketed, as required under section 1860D–14B(g)(1)(C)(ii)(II) of the Act, CMS will use FDA's NDC Directory, including historical information from NDC Directory files, such as discontinued, delisted, and expired listings, provided by the FDA or published on the FDA website.

(iii) To determine whether the manufacturer of the drug identified as set forth in this paragraph (a)(3) is a first applicant during the 180-day exclusivity period, or whether the manufacturer of this drug is a first approved applicant for a competitive generic drug therapy, CMS will refer to publicly available FDA sources such as the Orange Book and may consult with FDA for technical assistance as needed.

(b) *Drugs and biologicals with average annual total cost below the applicable threshold.* For each applicable period, CMS will identify drugs and biologicals with average annual total costs under Part D for such applicable period, per individual who uses such drug or biological, that are below the applicable threshold in accordance with the steps described in this paragraph (b). Such drugs and biologicals are not considered Part D rebatable drugs and will be excluded from the identification of Part D rebatable drugs set forth in paragraph (a) of this section.

(1) *Average annual total cost.* For each drug or biological that is identified as set forth in paragraph (a) of this section, CMS will calculate average annual total costs under Part D per individual who uses such drug or biological by dividing the gross covered prescription drug costs for the drug or biological by the number of individuals who use such drug or biological in the applicable period. When calculating the gross covered prescription drug costs for the drug or biological, CMS will exclude PDE records indicating the drug or biological was billed as a compound.

(2) *Applicable threshold.* CMS will calculate the applicable threshold for an applicable period as follows:

(i) For the applicable period beginning October 1, 2022, the applicable threshold is equal to $100.

(ii) For the applicable period beginning October 1, 2023, the applicable threshold is equal to $100 increased by the percentage increase in CPI–U for the 12-month period beginning October 1, 2023.

(iii) For subsequent applicable periods, the applicable threshold is equal to the applicable threshold for the prior applicable period increased by the percentage increase in the CPI–U for the 12-month period beginning with October of the previous period.

(iv) If the resulting amount determined under paragraph (b)(2)(ii) or (iii) of this section is not a multiple of $10, CMS will round that amount to the nearest multiple of $10.

Subpart C—Determination of the Rebate Amount for Part D Rebatable Drugs

§ 428.200 Definitions.

As used in this subpart, the following definitions apply:

340B Program is the program under section 340B of the PHS Act.

Line extension has the meaning set forth in § 447.502 of this chapter.

New formulation has the meaning set forth in § 447.502 of this chapter.

Oral solid dosage form has the meaning set forth in § 447.502 of this chapter.

§ 428.201 Calculation of the total rebate amount to be paid by manufacturers.

(a) *Total rebate.* (1) Subject to paragraph (b) of this section, the total rebate amount to be paid by a manufacturer for a Part D rebatable drug, identified as set forth in § 428.101, for an applicable period is equal to:

(i) The product of the per unit Part D rebate amount of such drug, as determined under § 428.202(a), and the total number of units dispensed of such drug under Part D, as determined under § 428.203; or

(ii) In the case of a Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form, the amount determined under § 428.204.

(2) The rebate amount may be reduced in accordance with subpart D of this part or adjusted in accordance with subpart E of this part.

(b) *Drugs and biologicals excluded from Part D rebate calculations.* CMS will exclude from the Part D drug inflation rebate calculations described in this subpart—

(1) Drugs and biologicals that meet the definition of a Part D rebatable drug but whose manufacturers do not have an agreement in effect with the HHS Secretary under section 1927 of the Act at any point during the applicable period, as determined by CMS through consultation with Medicaid Drug Rebate Program staff and review of the Medicaid Drug Programs system.

(2) Drugs and biologicals that meet the definition of a Part D rebatable drug but, for the entire duration of the applicable period, are excluded from the definition of covered outpatient drugs as defined in section 1927(k)(2)–(4) of the Act and § 447.502 of this chapter, as determined by CMS through consultation with Medicaid Drug Rebate Program staff and review of the Medicaid Drug Programs system.

§ 428.202 Calculation of the per unit Part D drug rebate amount.

(a) *Formula for calculating the per unit Part D rebate amount.* CMS will calculate the per unit Part D drug inflation rebate amount for a Part D rebatable drug and applicable period by determining the amount by which the AnMP for the Part D rebatable drug, as calculated in accordance with paragraph (b) of this section, exceeds the inflation-adjusted payment amount, as calculated in accordance with paragraph (f) of this section.

(b) *Calculation of the AnMP for the applicable period.* Subject to paragraph

(g) of this section, CMS will calculate the AnMP for a Part D rebatable drug using the AMP reported by a manufacturer under sections 1927(b)(3)(A)(i)(I) and (ii) of the Act for each calendar quarter of the applicable period and units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act for each month of the applicable period.

(1) CMS will calculate the AnMP for a Part D rebatable drug as the sum of the following:

(i) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning October of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning October of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(ii) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning January of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning January of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(iii) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning April of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning April of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(iv) The product of—

(A) The AMP for the Part D rebatable drug reported for the calendar quarter beginning July of the applicable period; and

(B) The sum of the monthly units reported for the calendar quarter beginning July of the applicable period divided by the sum of the monthly units reported for the 4 calendar quarters in the applicable period.

(2) The first applicable period for a Part D rebatable drug will be the earliest applicable period that follows the payment amount benchmark period identified as set forth in paragraphs (c)(1) through (4) of this section.

(c) *Identification of the payment amount benchmark period.* As applicable under this paragraph, CMS will use information reported by a manufacturer under section 1927(b)(3) of the Act, including without limitation the date of FDA approval or licensure and the first marketed date, to identify the payment amount benchmark period as set forth in paragraphs (c)(1) and (2) of this section, subject to paragraphs (c)(3) through (5) of this section:

(1) For a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, the payment amount benchmark period is the period beginning on January 1, 2021, and ending on September 30, 2021;

(2) For a subsequently approved drug, the payment amount benchmark period is the first calendar year beginning after the drug's first marketed date;

(3) Notwithstanding paragraph (c)(1) of this section, for a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under section 1927(b)(3) of the Act for the NDC–9, including information as set forth in paragraph (d)(3), the payment amount benchmark period is the first calendar year no earlier than calendar year 2021 in which such NDC–9 has at least 1 quarter of AMP reported;

(4) Notwithstanding paragraph (c)(2) of this section, for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3) of the Act for the NDC–9, including information as set forth in paragraph (d)(3) of this section, the payment amount benchmark period is the first calendar year in which such NDC–9 has at least 1 quarter of AMP reported; and

(5) Notwithstanding paragraphs (c)(1) through (4) of this section, for a Part D rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part D rebatable drug is no longer considered to be a selected drug, for each applicable period beginning after the price applicability period with respect to such drug, the payment amount benchmark period is the last calendar year of such price applicability period with respect to such selected drug.

(d) *Calculation of benchmark period manufacturer price.* Subject to paragraphs (d)(3) and (g) of this section, CMS will calculate the benchmark period manufacturer price for a Part D rebatable drug using the AMP reported by a manufacturer under sections 1927(b)(3)(A)(i)(I) and (ii) of the Act for each calendar quarter of the payment amount benchmark period and the monthly units reported by a manufacturer under section 1927(b)(3)(A)(iv) of the Act during the payment amount benchmark period.

(1) For a Part D rebatable drug with a payment amount benchmark period identified as set forth in paragraph (c)(1) of this section, CMS will calculate the benchmark period manufacturer price as the sum of the following:

(i) The product of—

(A) The AMP reported for the calendar quarter beginning January 2021; and

(B) The sum of the monthly units reported for the calendar quarter beginning January 2021 divided by the sum of the monthly units reported for the 3 quarters of the payment amount benchmark period.

(ii) The product of—

(A) The AMP reported for the calendar quarter beginning April 2021; and

(B) The sum of the monthly units reported for the calendar quarter beginning April 2021 divided by the sum of the monthly units reported for the 3 quarters of the payment amount benchmark period.

(iii) The product of—

(A) The AMP reported for the calendar quarter beginning July 2021; and

(B) The sum of the monthly units reported for the calendar quarter beginning July 2021 divided by the sum of the units reported for the 3 quarters of the payment amount benchmark period.

(2) For a Part D rebatable drug with a payment amount benchmark period identified under paragraphs (c)(2) through (5) of this section, CMS will calculate the benchmark period manufacturer price as the sum of the following:

(i) The product of—

(A) The AMP reported for the calendar quarter beginning January of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning January of the payment amount benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(ii) The product of—

(A) The AMP reported for the calendar quarter beginning April of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning April of the payment amount

benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(iii) The product of—

(A) The AMP reported for the calendar quarter beginning July of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning July of the payment amount benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(iv) The product of—

(A) The AMP reported for the calendar quarter beginning in October of the payment amount benchmark period; and

(B) The sum of the monthly units reported for the calendar quarter beginning October of the payment amount benchmark period divided by the sum of the monthly units reported for the 4 quarters of the payment amount benchmark period.

(3) To the extent that a new NDC–9 of a Part D rebatable drug is reported under section 1927 of the Act and AMP has not been reported for such NDC–9 under section 1927(b)(3)(A)(i)(I) or (ii) of the Act during the period set forth in paragraph (c)(1) or (2) of this section, as applicable, CMS will identify the payment amount benchmark period and calculate the benchmark period manufacturer price for such NDC–9 using other information reported by a manufacturer under section 1927(b)(3) of the Act for the Part D rebatable drug, as available, such as the base date AMP if such base date AMP is reported for a calendar quarter that overlaps with the period set forth in paragraph (c)(1) or (2) of this section. Base date AMP has the meaning set forth in § 447.509(a)(7)(ii)(B) of this title.

(e) *Identification of the benchmark period CPI–U.* For each Part D rebatable drug, CMS will identify the benchmark period CPI–U as set forth in paragraphs (e)(1) and (2) of this section, subject to paragraphs (e)(3) through (5) of this section:

(1) For a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, the benchmark period CPI–U is the CPI–U for January 2021.

(2) For a subsequently approved drug, the benchmark period CPI–U is the CPI–U for January of the first calendar year beginning after a drug's first marketed date.

(3) Notwithstanding paragraph (e)(1) of this section, for a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under section 1927(b)(3) of the Act for the NDC–9, including information as set forth in paragraph (d)(3) of this section, the benchmark period CPI–U is the CPI–U for January of the payment amount benchmark period identified under paragraph (c)(3) of this section.

(4) Notwithstanding paragraph (e)(2) of this section, for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3) of the Act for the NDC–9, including information as set forth in paragraph (d)(3) of this section, the benchmark period CPI–U is the CPI–U for January of the payment amount benchmark period identified as set forth in paragraph (c)(4) of this section.

(5) Notwithstanding paragraphs (e)(1) through (4) of this section, for a drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part D rebatable drug is no longer considered to be a selected drug, the benchmark period CPI–U is the CPI–U for January of the last calendar year of such price applicability period.

(f) *Calculation of inflation-adjusted payment amount.* For an applicable period for each Part D rebatable drug, CMS will calculate the inflation-adjusted payment amount by dividing the applicable period CPI–U by the benchmark period CPI–U and then multiplying the quotient by the benchmark period manufacturer price.

(g) *Situations in which manufacturers do not report units under section 1927(b)(3)(A)(iv) of the Act.* For the purpose of calculating the AnMP as determined under paragraph (b) of this section and the benchmark period manufacturer price as determined under paragraph (d) of this section—

(1) If there is 1 or more quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act but has reported AMP under sections 1927(b)(3)(A)(i)(I) and (ii) of the Act, CMS will calculate the benchmark period manufacturer price or AnMP, as applicable, using data only from quarter(s) with units. Quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act will be excluded from the calculation.

(2) If there are no quarters of the payment amount benchmark period or applicable period for which a manufacturer has reported units under section 1927(b)(3)(A)(iv) of the Act, but the manufacturer has reported AMP under sections 1927(b)(3)(A)(i)(I) and (ii) of the Act for at least 1 quarter of such period or, with respect to paragraph (d)(3), there exists other information reported by a manufacturer under section 1927(b)(3) of the Act for the Part D rebatable drug to identify the payment amount benchmark period, CMS will use the AMP or other information as applicable as set forth in paragraph (d)(3) reported for 1 quarter to calculate the benchmark period manufacturer price or AnMP, respectively. If AMP is reported for more than 1 quarter, CMS will use the average of the AMP over the calendar quarters of the payment amount benchmark period or applicable period for which AMP is reported to calculate the benchmark period manufacturer price or AnMP, respectively.

§ 428.203 Determination of the total number of units dispensed under Part D.

(a) *General.* For each Part D rebatable drug, CMS will determine the total number of units as follows:

(1) *Use of PDE data to determine total units dispensed.* To determine the total number of units of each Part D rebatable drug dispensed under Part D and covered by Part D plan sponsors during an applicable period, CMS will use the quantity dispensed reported on the PDE record for each Part D rebatable drug with gross covered prescription drug costs greater than zero.

(2) *Crosswalk to AMP units.* CMS will crosswalk the information from the PDE record to database(s) that includes the unit type (for example, each, capsule) for the Part D rebatable drug, matching on the NDC of the Part D rebatable drug. If the unit type obtained from such database does not match the AMP unit type reported by a manufacturer to the Medicaid Drug Programs system, CMS will convert the total units reported on the PDE to the AMP units reported.

(b) *Removal of certain units.* CMS will exclude certain units from the total number of units dispensed of a Part D rebatable drug, with respect to an applicable period, as follows:

(1) *Removal of units when a generic drug is no longer a Part D rebatable drug.* To determine whether a generic drug that meets the definition of a Part D rebatable drug on the first day of an applicable period ceases to meet such

definition later in the applicable period, CMS will—

(i) Review FDA's NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings provided by the FDA or published on the FDA website to determine whether the reference listed drug or an authorized generic of the reference listed drug is being marketed;

(ii) Review the most recent version of the downloadable FDA Orange Book to determine whether another drug has been approved under a section 505(j) ANDA that is therapeutically equivalent to such generic drug. If CMS determines that FDA has approved such a therapeutically equivalent drug under a section 505(j) ANDA, CMS will then: use the FDA's NDC Directory, including historical information from NDC Directory files such as discontinued, delisted, and expired listings provided by the FDA or published on the FDA website to determine the marketing status of such therapeutically equivalent drug and whether, during the applicable period, the therapeutically equivalent drug was marketed; and

(iii) Exclude from the total number of units determined under paragraph (a) of this section any units dispensed on or after the first day of the calendar month that a generic drug no longer meets the definition of a Part D rebatable drug.

(2) *Exclusion of units acquired through the 340B Program.* (i) For the applicable period beginning October 1, 2025, and subsequent applicable periods, CMS will exclude from the total number of units determined under paragraph (a) of this section units for which a manufacturer provided a discount under the 340B Program (''340B units'') as follows:

(A) For the applicable period beginning October 1, 2025, 340B units will be excluded from the total number of units dispensed for claims with a date of service on or after January 1, 2026.

(B) For the applicable period beginning October 1, 2026, and applicable periods thereafter, 340B units will be excluded from the total number of units dispensed.

(ii) To determine the total number of such units for which a manufacturer provided a discount under the 340B Program, CMS will use data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period.

(3) *Exclusion of compounded drug units.* CMS will exclude units from the total number of units dispensed of a Part D rebatable drug when those units are associated with a Part D rebatable drug that has been billed as compounded.

§ 428.204 Treatment of new formulations of Part D rebatable drugs.

In the case of a Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form, the rebate amount for an applicable period is equal to the amount determined under § 428.201(a) for such new drug or, if greater, the alternative total rebate amount. CMS will determine the alternative total rebate amount for such new formulations according to the following:

(a) *Identification* of the *initial drug.* The initial drug that CMS will use to calculate the inflation rebate amount ratio is the initial drug identified in accordance with § 447.509(a)(4)(iii)(B) of this chapter for the last quarter of the applicable period or, if an initial drug was not identified in the last quarter, the initial drug identified for a quarter most recently in that applicable period.

(b) *Calculation of the inflation rebate amount ratio.* The inflation rebate amount ratio is equal to the per unit Part D drug inflation rebate amount for the initial drug, as determined under § 428.202(a), divided by the AnMP for that initial drug for the applicable period.

(c) *Calculation of the alternative total rebate amount.* The alternative total rebate amount is equal to the product of all of the following:

(1) The AnMP for the applicable period, as determined under § 428.202(b), of the Part D rebatable drug that is a line extension of a Part D rebatable drug that is an oral solid dosage form.

(2) The inflation rebate amount ratio as determined under paragraph (b) of this section.

(3) The total number of units dispensed under Part D identified as set forth in § 428.203.

Subpart D—Reducing the Rebate Amount for Part D Rebatable Drugs in Shortage and When There Is a Severe Supply Chain Disruption or Likely Shortage

§ 428.300 Definitions.

As used in this subpart, the following definitions apply:

Biosimilar has the meaning set forth in section 351(i) of the PHS Act.

Currently in shortage means that at least one NDC–10 of a Part D rebatable drug with the status ''currently in shortage'' is on a shortage list maintained by the FDA under section 506E of the FD&C Act.

Drug shortage or *shortage* means a period of time when the demand or projected demand for the drug within the United States exceeds the supply of the drug (see section 506C(h)(2) of the FD&C Act).

Generic Part D rebatable drug means a generic drug approved under an ANDA under section 505(j) of the FD&C Act that meets the sole source criteria specified in § 428.101(a)(3).

Likely to be in shortage means that a generic Part D rebatable drug is likely to be described as currently in shortage during a subsequent applicable period without such rebate reduction.

Natural disaster means any natural catastrophe, including, but not limited to any of the following: hurricane, tornado, storm, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, or drought, or regardless of cause, any fire, flood, or explosion.

Other unique or unexpected event means any exogenous, unpredictable event outside of a manufacturer's control, including, but not limited to, a geopolitical disruption, pandemic, or act of terror.

Plasma-derived product means a licensed biological product that is derived from human whole blood or plasma, as indicated on the approved product labeling.

Severe supply chain disruption means a change in production or distribution that is reasonably likely to lead to a significant reduction in the U.S. supply of a generic Part D rebatable drug or biosimilar by a manufacturer and significantly affects the ability of the manufacturer of the generic drug or biosimilar to fill orders or meet expected demand for its product in the United States for at least 90 days. This definition does not include interruptions in manufacturing due to matters such as routine maintenance, manufacturing quality issues, or insignificant changes made in the manufacturing process for the drug.

§ 428.301 Reducing the rebate amount for Part D rebatable drugs currently in shortage.

(a) *General.* As required under section 1860D–14B(b)(1)(C)(i) of the Act, CMS will reduce the total rebate amount determined under § 428.201(a), if any is owed, for a Part D rebatable drug that is currently in shortage, as set forth in § 428.300, at any point during the applicable period.

(b) *Calculation of the reduced rebate amount.* (1) For each applicable period beginning on or after October 1, 2022, the reduced total rebate amount for a Part D rebatable drug currently in shortage will be calculated using the following formula:

Equation 1 to Paragraph (b)(1)

Reduced *Total* Rebate Amount = the total rebate amount *multiplied by* (1 *minus* applicable percent reduction) *multiplied by* (percentage of time drug was currently in shortage during the applicable period) *added to* the total rebate amount *multiplied by* (1 *minus* percentage of time drug was currently in shortage during the applicable period)

(2) For purposes of paragraph (b)(1) of this section, the applicable percent reduction is:

(i) For a Part D rebatable drug that is a generic drug or plasma-derived product:

(A) 75 percent for the first applicable period such drug is currently in shortage.

(B) 50 percent for the second applicable period such drug is currently in shortage.

(C) 25 percent for each subsequent period such drug is currently in shortage.

(ii) For a Part D rebatable drug that is not a generic drug or plasma-derived product:

(A) 25 percent for the first applicable period such drug is currently in shortage.

(B) 10 percent for the second applicable period such drug is currently in shortage.

(C) 2 percent for each subsequent applicable period such drug is currently in shortage.

(iii) Except as provided in paragraph (b)(iv) of this section, CMS will apply the greatest applicable percent reduction as set forth in paragraph (b)(2)(i)(A) or (b)(2)(ii)(A) of this section starting with the first applicable period that a Part D drug or biological is described as currently in shortage, regardless of whether the drug or biological meets the definition of a Part D rebatable drug or whether a rebate amount is owed for that applicable period, starting with the applicable period that begins October 1, 2022.

(iv) If an applicable period for which a rebate reduction determined under § 428.302 or 428.303 has been granted would be the first applicable period set forth in paragraph (b)(2)(i)(A) or (b)(2)(ii)(A) of this section and the Part D rebatable drug or biosimilar continues to be in shortage after the rebate reduction period set forth in § 428.302 or 428.303, as applicable, CMS will treat the applicable period following the applicable period in which the rebate reduction determined under § 428.302 or 428.303 applies as the first applicable period so described.

(3) For purposes of paragraph (b)(1) of this section, the percentage of time the drug is currently in shortage during the applicable period is equal to the number of days such drug is currently in shortage in an applicable period, divided by the total number of days in the applicable period.

(c) *Application of reduction.* CMS will apply a reduction of the rebate amount as determined under paragraph (b) of this section to the Part D rebatable drug at the NDC–9 level.

§ 428.302 Reducing the rebate amount for certain Part D rebatable drugs when there is a severe supply chain disruption.

(a) *General.* As required under section 1860D–14B(b)(1)(C)(ii) of the Act, CMS will reduce the total rebate amount determined under § 428.201(a), if any is owed, for a generic Part D rebatable drug or biosimilar when CMS determines there is a severe supply chain disruption during the applicable period such as that caused by a natural disaster or other unique or unexpected event.

(b) *Calculation of the reduced rebate amount*—(1) *Initial reduction.* If CMS determines the criteria set forth in paragraph (c)(4) of this section are met, then CMS will reduce the total rebate amount determined under § 428.201(a), if any is owed, for a generic Part D rebatable drug or biosimilar by 75 percent for the applicable period in which the event occurred or began or, the following applicable period if the request is submitted less than 60 calendar days before the end of an applicable period.

(2) *Extension of reduction.* If CMS determines a severe supply chain disruption continues into a second consecutive applicable period as set forth in paragraph (c)(5) of this section, then CMS will reduce the total rebate amount determined under § 428.201(a), if any is owed, for a generic Part D rebatable drug or biosimilar by 75 percent for that second applicable period.

(3) *Application of reduction.* If CMS determines there is a severe supply chain disruption for an NDC–11, CMS will apply any reduction of the rebate amount as determined under paragraphs (b)(1) and (2) of this section to a Part D rebatable drug at the NDC–9 level.

(4) *Limitation on rebate reductions.* CMS will not apply multiple rebate reductions for the same Part D rebatable drug and applicable period.

(i) If a manufacturer believes there are multiple events causing severe supply chain disruptions during the same applicable period for the same generic Part D rebatable drug or biosimilar and submits multiple rebate reduction requests for the same drug or biosimilar, CMS will grant no more than 1 rebate reduction determined under paragraph (b)(1) or (2) of this section for that product for the applicable period.

(ii) If CMS grants a rebate reduction request under this section and the generic Part D rebatable drug or biosimilar subject to the reduction appears as currently in shortage during the same applicable period as the one for which the severe supply chain disruption reduction request was granted, CMS will reduce the rebate amount as determined under paragraph (b)(1) of this section and will not grant a reduction as set forth in § 428.301 during that applicable period.

(iii) If a generic Part D rebatable drug or biosimilar that is currently in shortage experiences a severe supply chain disruption, CMS will reduce the rebate amount as determined under paragraph (b)(1) of this section, and will not grant a reduction as set forth in § 428.301 during that applicable period.

(c) *Eligibility for a rebate reduction*—(1) *Eligible drug.* Subject to paragraph (b)(3) of this section, eligibility for a rebate reduction under this section is limited to generic Part D rebatable drugs and biosimilars for which a manufacturer submits a rebate reduction request under this section.

(2) *Timing.* For a natural disaster or other unique or unexpected event occurring on or after August 2, 2024 that the manufacturer believes caused a severe supply chain disruption, the manufacturer must submit the rebate reduction request within 60 calendar days from the first day that the natural disaster or other unique or unexpected event occurred or began to receive consideration for a reduction in the rebate amount owed determined under paragraph (b)(1) of this section.

(3) *Required elements of a rebate reduction request.* To receive consideration for a reduction in the rebate amount owed as determined under paragraph (b)(1) of this section, the manufacturer must submit to CMS information and supporting documentation to substantiate the evaluation criteria set forth in paragraph (c)(4) of this section. Such information and supporting documentation include the following:

(i) Evidence that the severe supply chain disruption directly affects the manufacturer itself, a supplier of an ingredient or packaging, a contract manufacturer, or a method of shipping or distribution that the manufacturer uses to make or distribute the generic Part D rebatable drug(s) or biosimilar(s), such as a change in the production or distribution of the generic Part D

rebatable drug(s) or biosimilar(s) that is reasonably likely to lead to a significant reduction in the U.S. supply of product and significantly affects the manufacturer's ability to fill orders or meet expected demand for the generic Part D rebatable drug(s) or biosimilar(s) for at least 90 days;

(ii) Information about when the manufacturer expects supply of the generic Part D rebatable drug(s) or biosimilar(s) to meet expected demand;

(iii) Evidence that the natural disaster or other unique or unexpected event caused the severe supply chain disruption, including when the natural disaster or other unique or unexpected event occurred or began occurring, and the expected or actual duration of the severe supply chain disruption; and

(iv) Evidence of the manufacturer's physical presence related to manufacturing the generic Part D rebatable drug(s) or biosimilar(s) in a geographic area where a natural disaster or other unique or unexpected event occurred. If the manufacturer is not physically present in a geographic area where a natural disaster or other unique or unexpected event occurred, but believes there is a severe supply chain disruption caused by a natural disaster or other unique or unexpected event that affects the manufacturer's generic Part D rebatable drug(s) or biosimilar(s), the information and supporting documentation may include evidence of the impact of the natural disaster or other unique or unexpected event on the supply chain of the generic Part D rebatable drug or biosimilar, on a supplier of an ingredient or packaging, or method of shipping or distribution that the manufacturer uses.

(4) *Evaluation criteria.* In accordance with paragraph (b)(1) of this section, CMS will grant a reduction in the total rebate amount determined under § 428.201, if any is owed, if a manufacturer submits to CMS a request in writing for an eligible drug, in accordance with the timing set forth in paragraph (c)(2) of this section, demonstrating that:

(i) A severe supply chain disruption has occurred during the applicable period;

(ii) The severe supply chain disruption directly affects the manufacturer itself, a contract manufacturer, a supplier of an ingredient or packaging, or a method of shipping or distribution that the manufacturer uses in a significant capacity to make or distribute the generic Part D rebatable drug or biosimilar; and

(iii) The severe supply chain disruption was caused by a natural disaster or other unique or unexpected event.

(5) *Rebate reduction extensions.* If CMS determines that a generic Part D rebatable drug or biosimilar that received a reduction of the rebate amount as determined under paragraph (b)(1) of this section continues to be affected by the severe supply chain disruption, CMS will grant a single extension of the reduction for 1 additional consecutive applicable period and reduce the total rebate amount determined under § 428.201, if any is owed, as set forth in paragraph (b)(2) of this section.

(i) To receive consideration for a rebate reduction extension, a manufacturer must submit a request with updated or new information and supporting documentation on why the generic Part D rebatable drug or biosimilar continues to be affected by the severe supply chain disruption during the second applicable period.

(ii) A manufacturer must submit the rebate reduction extension request at least 60 calendar days before the start of the second consecutive applicable period to receive consideration for a reduction in the rebate amount owed, if any, determined under paragraph (b)(2) of this section, except for when the initial request is made less than 60 calendar days before the end of an applicable period such that the initial rebate reduction is applied to the next applicable period rather than the applicable period in which the event that caused the severe supply chain disruption occurred or began. In these cases, the rebate reduction extension request must be submitted at least 60 calendar days prior to the end of the applicable period in which the initial reduction determined under paragraph (b)(1) of this section is applied.

(6) *Decision to grant or deny a request.* CMS will review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024.

(i) CMS will deny a rebate reduction request that does not meet the criteria set forth in paragraph (c)(4) of this section or that is incomplete or untimely based on the requirements set forth in this paragraph (c).

(ii) CMS will deny a rebate reduction extension request that does not meet the criteria set forth in paragraph (c)(5) of this section, that is incomplete or untimely based on the requirements set forth in paragraph (c)(5) of this section, or if a reduction determined under paragraph (b)(1) of this section was not granted for such generic Part D rebatable drug or biosimilar.

(iii) CMS' decisions to deny a request are final and will not be subject to an appeals process.

(7) *Public disclosure of information.* CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. Information provided as part of a request for a rebate reduction request that the submitter indicates is a trade secret or confidential commercial or financial information will be protected from disclosure if CMS determines the information meets the requirements set forth under Exemption 3 or Exemption 4 in 5 U.S.C. 552.

§ 428.303 Reducing the rebate amount for generic Part D rebatable drugs likely to be in shortage.

(a) *General.* As required under section 1860D–14B(b)(1)(C)(iii) of the Act, CMS will reduce the total rebate amount determined under § 428.201, if any is owed, for a generic Part D rebatable drug when CMS determines that the generic Part D rebatable drug is likely to be in shortage, as set forth in § 428.300.

(b) *Calculation of the reduced rebate amount*—(1) *Initial reduction.* If CMS determines the criteria set forth in paragraph (c)(4) of this section are met, then CMS will reduce the total rebate amount owed by the manufacturer for a generic Part D rebatable drug by 75 percent for the applicable period in which the request was submitted or the following applicable period, depending on the timing of the submission of the request.

(2) *Extension of reduction.* If CMS determines the generic Part D rebatable drug is likely to be in shortage in a second applicable period as set forth in paragraph (c)(5) of this section, then CMS will reduce the total rebate amount owed by the manufacturer for a generic Part D rebatable drug by 75 percent for a second consecutive applicable period.

(3) *Application of reduction.* If CMS determines that an NDC–11 is likely to be in shortage, CMS will apply any reduction of the rebate amount as determined under paragraphs (b)(1) and (2) of this section to the generic Part D rebatable drug at the NDC–9 level.

(4) *Limitation on rebate reductions.* If CMS grants a rebate reduction request under this section, and the generic Part D rebatable drug subject to the reduction is currently in shortage during the same applicable period as the one for which the request was granted, CMS will reduce the rebate amount as determined under paragraph (b)(1) of this section and will not grant a reduction

determined under § 428.301 during that applicable period.

(c) *Eligibility for a rebate reduction*—(1) *Eligible drug.* Subject to paragraph (b)(3) of this section, eligibility for a rebate reduction under this section is limited to generic Part D rebatable drugs for which a manufacturer submits a rebate reduction request under this section.

(2) *Timing.* The manufacturer must submit the rebate reduction request before the start of the next applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage to receive consideration for a reduction in the rebate amount owed determined under paragraph (b)(1) of this section.

(3) *Required elements of a rebate reduction request.* To receive consideration for a reduction in the rebate amount owed determined under paragraph (b)(1) of this section, the manufacturer must submit to CMS information and supporting documentation to substantiate the evaluation criteria set forth in paragraph (c)(4) of this section. Such information and supporting documentation include the following:

(i) Evidence that demonstrates a generic Part D rebatable drug is likely to be in shortage, including anticipated cause(s) of the shortage and information about why the manufacturer believes the generic Part D rebatable drug is likely to be in shortage; and

(ii) Evidence of the anticipated start date and duration of the potential drug shortage, the actions the manufacturer is taking to avoid the potential drug shortage, and how the reduction of the rebate amount would reduce the likelihood of the drug appearing on an FDA shortage list.

(4) *Evaluation criteria.* In accordance with paragraph (b)(1) of this section, CMS will grant a reduction in the rebate amount owed if a manufacturer submits to CMS a request in writing for an eligible drug, in accordance with the timing set forth in paragraph (c)(2) of this section, demonstrating that:

(i) The generic Part D rebatable drug is likely to be in shortage;

(ii) The manufacturer is taking actions to avoid the potential drug shortage; and

(iii) The reduction of the rebate amount would reduce the likelihood of the drug appearing on an FDA shortage list.

(5) *Rebate reduction extensions.* If CMS determines that a generic Part D rebatable drug that received a reduction of the rebate amount as determined under paragraph (b)(1) of this section continues to be affected by the potential drug shortage, CMS will grant a single extension of the reduction for 1 additional consecutive applicable period and reduce the total rebate amount determined under § 428.201, if any is owed, as determined under paragraph (b)(2) of this section.

(i) To receive consideration for a rebate reduction extension, a manufacturer must submit a request with updated or new information and supporting documentation on why the generic Part D rebatable drug continues to be affected by the potential drug shortage during the second applicable period.

(ii) A manufacturer must submit the rebate reduction extension request at least 60 calendar days before the start of the second consecutive applicable period in which the manufacturer believes the generic Part D rebatable drug is likely to be in shortage to receive consideration for a reduction in the rebate amount owed, if any, in accordance with paragraph (b)(2) of this section.

(6) *Decision to grant or deny a request.* CMS will review rebate reduction requests and rebate reduction extension requests within 60 calendar days of receipt of all documentation, if feasible, beginning with the applicable period that begins on October 1, 2024.

(i) CMS will deny a rebate reduction request that does not meet the criteria set forth in paragraph (c)(4) of this section or that is incomplete or untimely based on the requirements set forth in this paragraph (c).

(ii) CMS will deny a rebate reduction extension request that does not meet the criteria set forth in paragraph (c)(5) of this section, that is incomplete or untimely based on the requirements set forth in paragraph (c)(5) of this section, or if a reduction determined under paragraph (b)(1) of this section was not granted for such generic Part D rebatable drug.

(iii) CMS' decisions to deny a request are final and will not be subject to an appeals process.

(7) *Public disclosure of information.* CMS will keep confidential, to the extent allowable under law, any requests for a rebate reduction, including supporting documentation. Information provided as part of a request for a rebate reduction that the submitter indicates is a trade secret or confidential commercial or financial information will be protected from disclosure if CMS determines the information meets the requirements set forth under Exemption 3 or Exemption 4 in 5 U.S.C. 552.

Subpart E—Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments

§ 428.400 Definitions.

For the purposes of this subpart, *date of receipt* is the calendar day following the day in which a report of a rebate amount (as set forth in §§ 428.401(b), (c), and (d) and 428.402(b) and (c)) is made available to the manufacturer of a Part D rebatable drug by CMS.

§ 428.401 Rebate Reports and reconciliation.

(a) *General.* This section applies to Part D rebatable drugs for all applicable periods except as otherwise set forth in § 428.402 for the applicable periods beginning October 1, 2022, and October 1, 2023.

(b) *Preliminary Rebate Report.* A Preliminary Rebate Report will be provided to each manufacturer of a Part D rebatable drug at least 1 month prior to the issuance of the Rebate Report as set forth in paragraph (c) of this section for an applicable period.

(1) The Preliminary Rebate Report for each Part D rebatable drug will include the following information:

(i) The NDC(s) identified for the Part D rebatable drug as set forth in § 428.20;

(ii) The total number of units dispensed under Part D for the Part D rebatable drug for the applicable period as determined under § 428.203;

(iii) The payment amount benchmark period and benchmark period manufacturer price as set forth in §§ 428.202(c) and (d);

(iv) The AnMP for the Part D rebatable drug for the applicable period as determined under § 428.202(b);

(v) The amount, if any, of the excess AnMP for the Part D rebatable drug for the applicable period as set forth in § 428.202(a);

(vi) The benchmark period and applicable period CPI-Us as set forth in §§ 428.202(e) and 428.20, respectively;

(vii) The inflation-adjusted payment amount as set forth in § 428.202(f);

(viii) Any applied reductions determined under §§ 428.301, 428.302, and 428.303; and

(ix) The rebate amount due as set forth in § 428.201(a).

(2) If the Part D rebatable drug is a line extension, the Preliminary Rebate Report will also include the following information as set forth in § 428.204:

(i) The NDC for the initial drug;

(ii) The inflation rebate amount ratio for the initial drug; and

(iii) The alternative total rebate amount.

(c) *Rebate Report.* A Rebate Report will be provided to each manufacturer

of a Part D rebatable drug no later than 9 months after the end of each applicable period.

(1) The Rebate Report will include the information described in paragraphs (b)(1) and (2) of this section, if applicable, with the inclusion of any revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 428.403, if applicable, and any CMS-determined recalculations from paragraph (d)(2) of this section.

(2) The Rebate Report is the invoice of a manufacturer's rebate amount due as determined in § 428.201(a), if any, for a Part D rebatable drug for an applicable period.

(d) *Reconciliation of the rebate amount.* CMS will perform reconciliation of the rebate amount provided in a Rebate Report as determined in paragraph (c) of this section for an applicable period in the following circumstances:

(1) *Regular reconciliation.* Except as otherwise described in § 428.402, CMS will perform a reconciliation of the rebate amount within 12 months of the date of receipt of the Rebate Report for an applicable period and a second reconciliation approximately 24 months thereafter to include revisions to the information used to calculate the rebate amount as set forth in paragraph (c)(1) of this section.

(i) *Preliminary reconciliation.* At least 1 month prior to the issuance of a report with the reconciled rebate amount for an applicable period as set forth in paragraph (d)(1)(ii) of this section, CMS will conduct a preliminary reconciliation of the rebate amount for an applicable period based on the information specified in paragraphs (d)(1)(i)(A) through (G) of this section, and CMS will provide the information specified in paragraphs (d)(1)(i)(A) through (G) to the manufacturer of a Part D rebatable drug for the applicable period, if applicable:

(A) Updated total number of rebatable units, including updates submitted by a prescription drug plan (PDP) or Medicare Advantage Prescription Drug (MA–PD) plan sponsor and updates to 340B units (as applicable to the dates of service and applicable periods set forth in § 428.203(b)(2)(i)(A) and (B)), or units otherwise excluded as determined under § 428.203(b);

(B) The inflation-adjusted payment amount as determined under § 428.202(f) if any inputs are restated or newly reported within the reconciliation run-out period;

(C) Updated payment amount benchmark period and benchmark period manufacturer price as set forth in § 428.202(c) and (d) if any inputs are restated or newly reported;

(D) The excess amount by which the AnMP exceeds the inflation-adjusted payment amount for the applicable period as determined under § 428.202(a), using the most recent AMP (if any inputs are restated or newly reported within the reconciliation run-out period);

(E) Updated data on line extension calculations, including the initial drug identified as set forth in § 447.509(a)(4)(iii)(B) of this chapter, the inflation rebate amount ratio, and the alternative total rebate amount as determined under § 428.204 if any inputs are restated or newly reported within the reconciliation run-out period;

(F) The reconciled rebate amount as determined under § 428.201(a); and

(G) The difference between the total rebate amount due as specified on the Rebate Report set forth in paragraph (c) of this section and the reconciled rebate amount as set forth in this paragraph (d)(1)(i).

(ii) *Report with a reconciled rebate amount.* With the inclusion of any additional revisions to such information resulting from CMS' review of a Suggestion of Error as set forth in § 428.403, if applicable, a report with the reconciled rebate amount will be provided to each manufacturer of a Part D rebatable drug within 12 months and 36 months after the issuance of the Rebate Report set forth in paragraph (c) of this section.

(2) *CMS identification of an error or manufacturer misreporting.* CMS may recalculate a rebate amount and provide the manufacturer of a Part D rebatable drug a report with a reconciled rebate amount when:

(i) CMS identifies an error in the information specified in paragraphs (c) and (d)(1) of this section, including reporting system or coding errors, not later than 5 years from the date of receipt by a manufacturer of a reconciled rebate amount for the applicable period; or

(ii) CMS determines at any time that the information used by CMS to calculate the rebate amount was inaccurate due to manufacturer misreporting.

(3) *Impact of reconciliation on rebate amount.* A reconciliation as determined under this paragraph (d) could result in an increase, decrease, or no change to the rebate amount as determined under § 428.201(a) owed by a manufacturer for the applicable period for the Part D rebatable drug compared to the amount described in the Rebate Report set forth in paragraph (c) of this section or an amount described in a previous reconciliation.

(i) A report with a reconciled rebate amount that is an increase to the rebate amount is the invoice for such additional amount due on the manufacturer's rebate amount as set forth in § 428.201 for a Part D rebatable drug for an applicable period.

(ii) [Reserved]

(4) *Drugs included in a reconciliation.* A drug covered under Part D that does not meet the requirements of a rebatable drug set forth in § 428.101 for an applicable period will not be included in a reconciliation as determined under this paragraph (d).

§ 428.402 Rebate Reports for applicable periods beginning October 1, 2022, and October 1, 2023.

(a) *Transition rule for reporting.* Section 1860D–14B(a)(3) of the Act allows CMS to delay the timeframe for reporting the information and rebate amount set forth in § 428.401 for the applicable periods beginning October 1, 2022, and October 1, 2023, until not later than December 31, 2025.

(b) *Rebate Report information for applicable periods beginning October 1, 2022, and October 1, 2023.* The Rebate Reports for the applicable periods beginning October 1, 2022, and October 1, 2023, will include the information set forth in § 428.401(b)(1).

(c) *Rebate Report procedures for applicable periods beginning October 1, 2022, and October 1, 2023.* Rebate amounts for the applicable periods beginning October 1, 2022, and October 1, 2023, will be reported as follows:

(1) The Rebate Report for the applicable period beginning October 1, 2022, will be issued no later than December 31, 2025. The Preliminary Rebate Report for such applicable period will be issued at least 1 month prior to the Rebate Report.

(i) For this single Preliminary Rebate Report for the applicable period, the Suggestion of Error period as set forth in § 428.403 will be 30 calendar days.

(ii) The rebate amount will be reconciled 21 months after the Rebate Report set forth in paragraph (c)(1) of this section is issued to include the information set forth in § 428.401(d)(1)(i)(A) through (G).

(iii) The Suggestion of Error period for the reconciliation set forth in paragraph (c)(1)(ii) of this section will be 10 calendar days.

(2) The Rebate Report for the applicable period beginning October 1, 2023, will be issued no later than December 31, 2025. The Preliminary Rebate Report for such applicable period will be issued at least 1 month prior to the Rebate Report.

(i) For this single Preliminary Rebate Report for the applicable period, the Suggestion of Error period as set forth in § 428.403 will be 30 calendar days.

(ii) The rebate amount will be reconciled 9 months after the Rebate Report and 33 months after the Rebate Report specified in paragraph (b)(2) of this section is issued to include the information determined under § 428.401(d)(1)(i)(A) through (G).

§ 428.403 Suggestion of Error.

(a) *General.* Manufacturers of Part D rebatable drugs may submit a Suggestion of Error about the information in their Preliminary Rebate Report and the report detailing the preliminary reconciliation of the rebate amount to CMS, for its discretionary consideration, if the manufacturer believes that there is a mathematical error or errors to be corrected before the Rebate Report or a subsequent reconciliation, as applicable, is finalized.

(1) Section 1860D–14B(f) of the Act precludes administrative or judicial review on the determination of units as set forth in § 428.203, the determination of whether a drug is a Part D rebatable drug as set forth in § 428.101, and the calculation of the rebate amount as set forth in § 428.201(a) inclusive of any reconciled rebate amount.

(2) [Reserved]

(b) *Process of submission.* Subject to the scope and timing requirements specified in paragraphs (a) and (c) of this section, manufacturers may submit the Suggestion of Error and provide supporting documentation (if applicable).

(c) *Timing.* Except as set forth in § 428.402 for the applicable periods beginning on October 1, 2022, and October 1, 2023, a manufacturer must submit its Suggestion of Error for the applicable period within 10 calendar days from the date of receipt of a Preliminary Rebate Report or a preliminary reconciliation of a rebate amount using the method and process set forth by CMS in paragraph (b) of this section.

(d) *Notice.* (1) CMS will include any revisions to the calculation of the rebate amount, if determined necessary by CMS based on the Suggestion of Error submitted under this section prior to issuance of the Rebate Report as set forth in § 428.401(c) or § 428.402(c) as well as any report of a reconciled rebate amount as set forth in § 428.401(d) or § 428.402(c)(1)(ii) and (c)(2)(ii).

(2) CMS will notify the manufacturer whether CMS revised its calculation of the rebate amount based on the Suggestion of Error.

§ 428.404 Manufacturer access to Rebate Reports.

(a) *General.* CMS will establish a method and process for a manufacturer of the Part D rebatable drug to:

(1) Access the Rebate Report as set forth in §§ 428.401 and 428.402, including any report of a reconciled rebate amount as set forth in §§ 428.401 and 428.402;

(2) Submit a Suggestion of Error as set forth in §§ 428.402(c) and 428.403; and

(3) Pay a rebate amount as set forth in § 428.405.

(b) [Reserved]

§ 428.405 Deadline and process for payment of rebate amount.

(a) *Rebate amounts owed by a manufacturer.* For payment of a rebate amount owed by a manufacturer:

(1) Upon receipt of a rebate amount, payment is due no later than 11:59 p.m. Pacific Time (PT) on the 30 calendar days after the date of receipt of information regarding the rebate amount on—

(i) A Rebate Report as set forth in § 428.401(c) or § 428.402; or

(ii) A report of a reconciled rebate amount as set forth in § 428.401(d) or § 428.402.

(2) Failure to pay a rebate amount due timely and in full may result in an enforcement action as described in subpart F of this part.

(b) *Refund to the manufacturer.* If a reconciled rebate amount for an applicable period as set forth in § 428.401(d) or § 428.402 is less than what the manufacturer paid for that applicable period, CMS will initiate the process to provide a refund equal to the excess amount paid within 60 days of the date of receipt of the report with such reconciled rebate amount.

Subpart F—Enforcement of Manufacturer Payment of Rebate Amounts

§ 428.500 Civil money penalty notice and appeals procedures.

(a) *General.* CMS may impose a civil money penalty on a manufacturer that fails to pay the rebate amount set forth in § 428.201(a) on a Part D rebatable drug set forth in § 428.20, by the payment deadline as set forth in section § 428.405(a) for such drug for such applicable period.

(b) *Determination of the civil money penalty amount.* CMS may impose a civil money penalty for each failure by a manufacturer to provide an applicable inflation rebate equal to 125 percent of the rebate amount determined in § 428.201(a).

(1) The civil money penalty is in addition to the rebate amount due.

(2) If a reconciled rebate amount as determined in § 428.401(d) or § 428.402(c)(1)(ii) or (c)(2)(ii) results in an increase to the rebate amount due, a separate civil money penalty may be imposed for the failure by a manufacturer to provide an inflation rebate for the applicable period for the increase to the rebate amount due.

(c) *Notice of imposition of civil money penalties.* If CMS makes a determination to impose a civil money penalty set forth in paragraph (b) of this section, CMS will send a written notice of its decision to impose a civil money penalty that includes the following:

(1) A description of the basis for the determination.

(2) The basis for the penalty.

(3) The amount of the penalty.

(4) The date the penalty is due.

(5) The manufacturer's right to a hearing as set forth in paragraph (e) of this section.

(6) Information about where to file the request for a hearing.

(d) *Collection.* (1) A manufacturer must pay the civil money penalty in full within 60 calendar days after the date of the notice of imposition of a civil money penalty from CMS as set forth in paragraph (c) of this section.

(2) In the event a manufacturer requests a hearing, pursuant to 42 CFR part 423, subpart T, the manufacturer must pay the amount in full within 60 calendar days after the date of a final decision by the Departmental Appeal Board, to uphold, in whole or in part, the civil money penalty.

(3) If the 60th calendar day described in paragraphs (d)(1) and (2) of this section is a weekend or a Federal holiday, then the timeframe is extended until the end of the next business day.

(e) *Appeal procedures for civil money penalties.* Section 1128A(c)(2) of the Act provides that CMS may not collect a civil money penalty until the affected party has had notice and the opportunity for a hearing.

(1) Manufacturers may appeal the following determinations:

(i) A CMS determination that the rebate amount was not paid by the applicable payment deadline as set forth in § 428.405.

(ii) The calculation of the amount of the civil money penalty.

(2) If CMS decides to impose a civil money penalty, CMS will provide the manufacturer with notice pursuant to the process set forth in paragraph (c) of this section.

(3) A manufacturer has a right to a hearing following a decision by CMS to impose a civil money penalty following the administrative appeal process and procedures established in 42 CFR part 423, subpart T.

(f) *Other applicable provisions.* The provisions of section 1128A of the Act (except subsections (a) and (b) of section 1128A of the Act) apply to civil money penalties under this section to the same extent that they apply to a civil money penalty or procedures under section 1128A of the Act.

(g) *Bankruptcy.* In the event that a manufacturer declares bankruptcy, as described in title 11 of the United States Code, and as a result of the bankruptcy, fails to pay either the full rebate amount owed or the total sum of civil money penalties imposed, the government reserves the right to file a proof of claim with the bankruptcy court to recover the unpaid amount of the rebates and civil money penalties owed by the manufacturer.

PART 491—CERTIFICATION OF CERTAIN HEALTH FACILITIES

■ 83. The authority citation for part 491 continues to read as follows:

Authority: 42 U.S.C. 263a and 1302.

■ 84. Section 491.9 by—
■ a. Redesignating paragraph (a)(3) as paragraph (a)(4);
■ b. Adding new paragraph (a)(3);
■ c. Removing paragraphs (c)(2)(ii) and (iv);
■ d. Redesignating paragraphs (c)(2)(iii), (v), and (vi) as paragraphs (c)(2)(ii) through (iv); and
■ e. Revising newly designated paragraph (c)(2)(iv).

The additions and revisions read as follows:

§ 491.9 Provision of services.

(a) * * *

(3) The RHC must provide primary care services.

* * * * *

(c) * * *

(2) * * *

(iv) Collection of patient specimens for transmittal to a certified laboratory for culturing.

* * * * *

Xavier Becerra,

Secretary, Department of Health and Human Services.

Note: The following Appendices will not appear in the Code of Federal Regulations.

Appendix 1: MIPS Quality Measures

Note: Except as otherwise noted in this final rule, previously finalized measures and specialty measure sets will continue to apply for the CY 2025 performance period/2027 MIPS payment year and future years. Previously finalized measures and specialty sets are in the CY 2017 through CY 2024 PFS final rules: 81 FR 77558 through 77816, 82 FR 53966 through 54174, 83 FR 60097 through 60285, 84 FR 63205 through 63513, 85 FR 85045 through 85369, 86 FR 65687 through 65968, 87 FR 70250 through 70633, and 88 FR 79556 through 79964. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a Consensus-Based Entity (CBE) are shown in Table A of this Appendix as follows: CBE #/eCQM CBE #.

Table Group A: New MIPS Quality Measures Finalized and Not Finalized for the CY 2025 Performance Period/ 2027 MIPS Payment Year and Future Years

Note: In the CY 2024 PFS final rule, measure Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level), was finalized with a 1-year delay to the CY 2025 performance period (88 FR 79556 through 79560) and does not have a new measure table in this final rule.

BILLING CODE 4120–01–P

A.1. Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	506
Description:	Percentage of patients, aged 18 years and older, with a diagnosis of metastatic non-small cell lung cancer (NSCLC) or squamous cell carcinoma of head and neck (HNSCC) on first-line immune checkpoint inhibitor (ICI) therapy, who had a positive PD-L1 biomarker expression test result prior to giving ICI therapy.
Measure Steward:	Society for Immunotherapy of Cancer (SITC)
Numerator:	Patients who had a positive PD-L1 biomarker expression test result prior to the initiation of first-line immune checkpoint inhibitor therapy.
Denominator:	Patients aged 18 years and older with a diagnosis of metastatic non-small cell lung cancer (NSCLC) or squamous cell carcinoma of head and neck (HNSCC) and on first-line immune checkpoint inhibitors without chemotherapy.
Exclusions:	Patients with NSCLC with epidermal growth factor receptor (EGFR) mutations, ALK genomic tumor aberrations, or other targetable genomic abnormalities with approved first-line targeted therapy, such as NSCLC with ROS1 rearrangement, BRAF V600E mutation, NTRK 1/2/3 gene fusion, MET ex14 skipping mutation, and RET rearrangement.
Measure Type:	Process
High Priority Measure:	Yes
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure.

Category	Description
Rationale:	We proposed this process measure because it addresses timely biomarker testing, which impacts treatment decisions for patients with a diagnosis of metastatic NSCLC cancer or squamous cell carcinoma of the head and neck. This measure aligns with CMS priorities of improving patient outcomes and safety and promotes improved efficacy through timely treatment. Appropriate intervention and timeliness of PD-L1 biomarker expression testing prior to initiation of first-line treatment for metastatic NSCLC cancer or squamous cell carcinoma of the head and neck can lead to improvements in mortality and morbidity rates.[942] Untimely biomarker testing could lead to negative clinical implications or outcomes, including delayed care and treatment and/or ineffective or incorrect prescribed therapies leading to chemotherapy toxicity, decreased quality of life, and unnecessary healthcare costs.[943] [944] Immunotherapy remains a new realm for oncology and health care clinicians; therefore, opportunities exist to improve care for patients receiving immune checkpoint inhibitor therapy. In 2017, a survey conducted by the Association of Community Cancer Centers (ACCC) indicated only 24 percent of respondents reported they had a deep familiarity with checkpoint inhibitors, 32 percent with monoclonal antibody therapy, and only 17 percent with combination treatment regimens.[945] This measure is predicated on two evidence-based clinical guidelines that address the measure's quality actions of a positive PD-L1 biomarker expression test prior to giving first-line immune checkpoint inhibitor therapy in the metastatic NSCLC cancer or squamous cell carcinoma of the head and neck population.[946] [947] The measure will enhance compliance with the clinical guidelines by incentivizing clinicians to address timely biomarker testing, therein positively influencing treatment decisions and improving patient outcomes. The Pre-Rulemaking Measure Review (PRMR) Clinician Recommendation Committee conditionally supported this measure and requested additional testing examining measure performance and feasibility. This measure has been fully developed and tested at the clinician level with high reliability based upon signal-to-noise scores, and adequate face validity. As a part of the MERIT submission, the measure developer reported adequate reliability testing of the individual data elements via Cohen's kappa coefficient, which substantiates the feasibility for implementation in MIPS. Testing of measure performance indicated a large gap in care for conducting timely biomarker testing, with an average performance rate of 19.6 percent, which allows significant room for improvement among clinicians treating this patient population and conducting the biomarker testing for this measure. This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This measure aligns with the National Comprehensive Cancer Network (NCCN) Clinical Practice Guidelines.[948] [949] We recognized that not all measures within MIPS are applicable or appropriate for all clinicians due to the nuances for each clinician specialization, scope of care, or regional location. However, this measure fills a gap in MIPS quality measures for treatment of patients with NSCLC cancer and squamous cell carcinoma of the head and neck. In addition, it will provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix. Furthermore, this measure could be added to the Advancing Cancer Care MVP in the future and will fill a current quality measure inventory gap within the oncologic clinical topic. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx*.

J., Dowell, J., Gettinger, S., Grotz, T. E., Gubens, M. A., Hegde, A., Lackner, R. P., Lanuti, M., Lin, J., … Hughes, M. (2022). Non-Small Cell Lung Cancer, Version 3.2022, NCCN Clinical Practice Guidelines in Oncology. Journal of the National Comprehensive Cancer Network: JNCCN, 20(5), 497–530. https://doi.org/10.6004/jnccn.2022.0025.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy measure. Two of these commenters indicated the measure is guideline-concordant and fills a gap in care that can significantly improve patient outcomes. Current evidence-based NCCN Clinical Practice Guidelines in Oncology: NSCLC and NCCN Clinical Practice Guidelines in Oncology: Head and Neck Cancer[950] address the measure's quality actions of a positive PD-L1 biomarker expression test prior to giving first-line immune checkpoint inhibitor therapy in the metastatic NSCLC or squamous cell carcinoma of head and neck populations. The measure is also in concordance with the FDA indications for these therapies and will help to ensure compliance when providing them to patients. Through the development and testing of this measure, it was shown there was a significant gap in patients receiving timely biomarker testing for this indication, and this measure will help to address this gap improving clinician decision making as well as patient outcomes. Another commenter stated this new measure will help better inform treatment decisions and outcomes for beneficiaries.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62251 through 62253), we are finalizing the *Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

A.2. Appropriate Germline Testing for Ovarian Cancer Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	507
Description:	Percentage of patients aged 18 and older diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of diagnosis.
Measure Steward:	American Society of Clinical Oncology
Numerator:	Patients who receive germline genetic testing for BRCA1 and BRCA2 (ideally within the context of a multigene panel) or who have genetic counseling completed within 6 months of diagnosis.
Denominator:	All patients, aged 18 and older, with epithelial ovarian, fallopian tube, or primary peritoneal cancer newly diagnosed between July 1st of the previous calendar year through June 30th of the current performance period with two encounters during the performance period.
Exclusions:	Patients who have germline BRCA testing completed before diagnosis of epithelial ovarian, fallopian tube, or primary peritoneal cancer.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure

Category	Description
Rationale:	We proposed this process measure because it helps guide the most appropriate treatment for patients diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of their diagnosis. Additionally, this measure addresses the CMS priority of promoting more personalized diagnostic, predictive, prognostic, and therapeutic options for the patient. According to the American Cancer Society, estimates indicate that in the U.S in 2024 there will be about 19,680 new cases of ovarian cancer diagnoses and an estimated 12,740 women will die of the disease.[951] "Knowledge about underlying molecular alterations in ovarian cancer could allow for more personalized diagnostic, predictive, prognostic, and therapeutic strategies for the patient but also have clinical implications for her family members."[952] Despite current recommendations for all women diagnosed with ovarian cancer to receive genetic testing, only approximately 30 percent of those women undergo any genetic testing.[953] Germline mutations in BRCA1 and BRCA2 have been identified in 13 to 15 percent of women diagnosed with ovarian cancer, with somatic mutations found in an additional 7 percent of women. The high incidence of these mutations, in conjunction with the advent of therapy targeting BRCA mutations, warrants testing in all individuals diagnosed with ovarian cancer.[954] This testing serves multiple purposes, including determination of appropriate and best treatment recommendations, risk of other cancers, and need for cascade testing of family members. "Testing for germline mutations should be performed at the time of initial diagnosis. Presence of a germline mutation in a woman with advanced cancer designates her as eligible for maintenance therapy with a poly (ADP-ribose) polymerase (PARP) inhibitor (Olaparib) after response to initial chemotherapy."[955] Although the FDA recently approved frontline maintenance therapy for patients independent of mutation status following the publication of the ASCO evidence-based guidelines, emerging evidence is expected to indicate an overall survival benefit in ovarian cancer patients with germline mutations, based upon prognostic information from these patients. Germline mutations testing allows for more personalized therapeutic strategies, therefore ovarian cancer patients with germline mutations are expected to derive greater benefit from therapy, thereby increasing the survival rate in this patient population.[956] Additionally, germline testing informs potential clinical implications for the relatives of ovarian cancer patients with germline mutations who should be offered individualized genetic risk evaluation, counseling, and genetic testing as reflected in Recommendation 1.5 in the ASCO germline testing guidelines.[957] Furthermore, National Comprehensive Cancer Network (NCCN) evidence-based guidelines[958] indicate all patients with histologically confirmed ovarian, fallopian tube, or primary peritoneal cancer should undergo genetic risk evaluation as well as germline and somatic testing if not previously performed due to germline and/or somatic BRCA1 and BRCA2 statuses delineating future options for maintenance therapy. This measure could be added to the Advancing Cancer Care MVP in the future and will fill a current quality measure inventory gap within the oncologic clinical topic. Additionally, it will provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix. The PRMR Clinician Recommendation Committee conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As mentioned above, this measure aligns with ASCO and NCCN evidence-based clinical guidelines.[959] [960] Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx*.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Appropriate Germline Testing for Ovarian Cancer Patients measure. One commenter stated that germline genetic testing can be used to identify patients with cancer predisposition syndromes, for whom targeted therapeutic interventions, additional screenings, and testing of family members may be indicated. Rates of germline testing in these patients remain suboptimal and the inclusion of this measure may improve utilization. Another commenter indicated it is important that patients who are diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer have genetic counseling services within 6 months of diagnosis and are assisted in an evaluation of available options, including germline genetic testing of BRCA1 and BRCA2, and a discussion of genetic predispositions. Another commenter stated this new measure would help inform treatment decisions and outcomes for beneficiaries.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: Two commenters supported this new measure and encouraged CMS to expand the measure in accordance with evidence-based guidelines to include germline genetic testing for additional cancers related to BRCA1 and BRCA2 genes, such as prostate, pancreatic, melanoma, gastric, colorectal, uterine and breast cancer. One commenter also recommended removing the genetic counseling numerator criteria as genetic counseling does not replace the need for germline testing and is not consistent with applicable guidelines that do not reference genetic counseling (for example, patients with a personal history of these cancers should have germline testing).

Response: We thank the commenters for these suggestions and encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62253 through 62254), we are finalizing the *Appropriate Germline Testing for Ovarian Cancer Patients* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

A.3. Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer

Category	Description
CBE # / eCQM CBE #:	CBE 3718 / N/A
Quality #:	N/A
Description:	The PRO-PM will assess pain interference following chemotherapy administered with curative intent to adult female patients with breast cancer.
Measure Steward:	Purchaser Business Group on Health
Numerator:	The mean of the patient-level PROMIS Pain Interference scores at the follow-up survey.
Denominator:	Adult patients with stages I-III female breast cancer receiving an initial chemotherapy regimen.
Exclusions:	● Patients on a therapeutic clinical trial ● Patients with recurrence/disease progression ● Patients who leave the practice during the follow-up period ● Patients who died during the follow-up period
Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
High Priority Measure:	Yes
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure

Category	Description
Rationale:	We proposed this measure because it addresses a CMS high priority as a PRO-PM and fills a gap in providing the patient's experience of care related to breakthrough pain after chemotherapy for breast cancer lending to performance improvement. Common persistent symptoms following chemotherapy include pain, fatigue, and detriments to health-related quality of life. Data from this measure will provide insight into the effectiveness of minimizing the persistent symptoms following treatment(s), thereby driving quality improvement leading to practice changes and better patient outcomes. This oncology PRO-PM's conceptual development is grounded in the evidence-based premise that medical oncologists who provide the highest quality care (including medical and non-medical support services) to patients receiving curative-intent cytotoxic therapy can reduce longer-term symptom burden, thus improving a patient's transition into the cancer survivorship period.[961] [962] [963] Additionally, research suggests collecting and using patient-reported symptoms during cancer care can improve patient outcomes, such as increased survival, reduced symptom burden and improved patient experience.[964] [965] Using a standardized symptom assessment process will facilitate appropriate follow-up to ensure patient needs are addressed, while supporting and improving patient-provider communication. This measure could be added to the Advancing Cancer Care MVP in the future and will fill a current quality measure inventory gap within the oncologic clinical topic. In addition, it will provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix. This will be the first outcome specialty specific oncology measure to address the patient experience of care. There is potential consideration for adding broader cancer diagnoses, such as colon and lung cancer, to this measure in the future. The PRMR Clinician Recommendation Committee conditionally supported this measure for rulemaking with the condition of implementation at the group level. This measure was endorsed by the CBE as CBE 3718. We proposed this measure for implementation at the individual clinician level in addition to the group level. As part of the MERIT submission, testing was completed at the clinician level with a small sample size due to accessibility to data. However, the measure steward estimated that measure score reliability given an average sample size of 26 yielded a reliability of 0.7. The measure was found during the MERIT submission to be feasible at the clinician level and data element testing was completed showing exact agreement values between 71.63 and 100 percent, with the lowest sensitivity variable being 'recurrence,' which correlated to a small subset of the patient population. The requirements for quality measure scoring include a case minimum threshold. Therefore, we proposed to allow this measure for group and clinician level implementation as it is an important concept and meets all testing and development criteria for MIPS quality measures. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx*.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer measure. Another commenter supported this new measure and supported the use of patient-reported outcomes (PROs) in provider quality reporting and value-based purchasing programs. Additionally, this

[965] Papageorgiou, L., Le Provost, J. B., Di Palma, M., Langlois, M., Salma, I., Lopes, M., Minvielle, E., Abbas, M., & Scotté, F. (2024). Supportive Care Needs of Newly Diagnosed Cancer Patients in a Comprehensive Cancer Center: Identifying Care Profiles and Future Perspectives. Cancers, 16(5), 1017. https://doi.org/10.3390/cancers16051017.

measure could play an important role in improving quality of life for patients with cancer and ensuring symptoms and side effects are effectively managed. The commenter requested this measure receive CBE endorsement to ensure it can be feasibly implemented.

Response: We thank the commenters for supporting this new measure in MIPS. This measure received CBE endorsement in July 2023 as CBE 3718.

Comment: One commenter supported PRO measures as they provide a patient-centered approach to assessing healthcare quality. However, this measure and the Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer measure under Table A.4 of this Appendix are currently limited to one tool for data collection (PROMIS). The commenter recommended the measure steward broaden the measure numerator to include other validated screening tools so more clinicians can report on the measures.

Response: We thank the commenter for supporting this new measure in MIPS.

Comment: One commenter was generally supportive of PRO-PMs due to value in understanding the patient's clinical experience through their treatment regimen. However, the commenter stated it is difficult to control patient responses and is concerned with any required completion percentages of patient surveys. The commenter was particularly concerned with any required response rates for measures involving cancer patients as the survey response may be a low priority for patients who are navigating the challenges of chemotherapy. The commenter supported this measure and the measure under Table A.4 of this Appendix but strongly recommended CMS not install survey completion requirements due to the fragile nature of the population in question.

Response: We thank the commenter for supporting this new measure in MIPS. We acknowledge the patient is required to complete the surveys; however, the measure requires completion of an index and follow up survey for the clinician to be assessed for the numerator. Patients who do not complete both surveys for any reason are not included in the denominator. As there is no minimum threshold requirement for survey completion for this measure, the clinician will not be penalized if the patient refuses or is unable to complete both surveys. This measure will still be subject to MIPS reporting requirements including case minimum and data completeness.

We appreciate the public comments on this proposed new measure. However, because the measure steward is no longer able to maintain the quality measure, we are not finalizing the *Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

A.4. Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer

Category	Description
CBE # / eCQM CBE #:	CBE 3720 / N/A
Quality #:	N/A
Description:	The PRO-PM will assess fatigue following chemotherapy administered with curative intent to adult female patients with breast cancer.
Measure Steward:	Purchaser Business Group on Health
Numerator:	The mean of the patient-level PROMIS Fatigue scores at the follow-up survey.
Denominator:	Adult patients with stages I-III female breast cancer receiving an initial chemotherapy regimen.
Exclusions:	● Patients on a therapeutic clinical trial ● Patients with recurrence/disease progression ● Patients who leave the practice during the follow-up period ● Patients who died during the follow-up period
Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
High Priority Measure:	Yes
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure

Category	Description
Rationale:	We proposed this measure because it addresses a CMS high priority as a PRO-PM and fills a gap in providing the patient reported symptom of fatigue experienced following chemotherapy for breast cancer, lending to performance improvement. This measure is an important addition to MIPS for those patients diagnosed with and receiving treatment for breast cancer. Based on a recent study, interested parties generated recommendations for performance measures on how adults with cancer feel and function included depression/anxiety, pain, and fatigue as top priorities.[966] This oncology PRO-PM's conceptual development is grounded in the evidence-based premise that medical oncologists who provide the highest quality care (including medical and non-medical support services) to patients receiving curative-intent cytotoxic therapy can reduce longer-term symptom burden, thus improving a patient's transition into the cancer survivorship period.[967] [968] [969] Additionally, research suggests collecting and using patient-reported symptoms during cancer care can improve patient outcomes, such as increased survival, reduced symptom burden and improved patient experience.[970] Using a standardized symptom assessment process will facilitate appropriate follow-up to ensure patient needs are addressed, while supporting and improving patient-provider communication. Evidence from one study indicated 30 to 50 percent of breast cancer patients reported not discussing, nor receiving advice or desired help for three common symptoms, pain, fatigue, and emotional distress.[971] Fatigue was the most common symptom reported in the study (74 percent); of those patients who had fatigue as a symptom, many reported they discussed the symptom (78 percent).[972] However, patients who experienced fatigue were also least likely to report receiving the desired help for it (40 percent).[973] Appropriate use of patient-reported outcome measures (PROMs), which measure cancer symptoms and patients' perceptions of their care, can improve the collection of clinically actionable data, supporting clinical improvement in the treatment of common symptoms and the overall care of patients with cancer, ultimately improving their quality of life.[974] This measure could be added to the Advancing Cancer Care MVP in the future and will fill a current quality measure inventory gap within the oncologic clinical topic. In addition, it will provide a specialty specific measure for the MIPS Oncology/Hematology specialty set under Table B.27a of this Appendix. This measure will address the patient voice/experience of care for those with breast cancer with fatigue experienced following chemotherapy. There is potential consideration for adding broader cancer diagnoses, such as colon and lung cancer, to this measure in the future. The PRMR Clinician Recommendation Committee did not reach consensus for this measure. This measure was endorsed by the CBE as CBE 3720. While concerns were discussed regarding electronic health record implementation, patient survey fatigue and low response impact, this measure is an important clinical topic for oncology clinicians in conjunction with the pain PRO-PM. More specifically, the measure provides a means to capture the patient voice while driving quality of care and improving patient outcomes. We proposed this measure for implementation at the individual clinician level in addition to the group level. Testing was completed at the clinician level with a small sample size due to accessibility to data. The measure was found during the MERIT submission process to be feasible at the clinician level and data element testing was completed showing exact agreement values between 71.63 and 100 percent, with the lowest sensitivity variable being 'recurrence,' which correlated to a small subset of the patient population. The requirements for quality measure scoring include a case minimum threshold. Therefore, we proposed to allow this measure for group and clinician level implementation as it is an important concept and meets all testing and development criteria for MIPS quality measures. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx*.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer measure. As mentioned above under Table A.3, commenters supported PRO-PMs as there is value in understanding the patient's clinical experience through their treatment regimen, and these measures provide a patient-centered approach to assessing healthcare quality.

[974] See footnote Smith et al., 2019 in Table A.3 of this Appendix.

Response: We thank the commenters for supporting this new measure in MIPS.

We appreciate the public comments on this proposed new measure. However, because the measure steward is no longer able to maintain the quality measure, we are not finalizing the *Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

A.5. Adult COVID-19 Vaccination Status

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	508
Description:	Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Patients that are up to date on their COVID-19 vaccinations as defined by CDC recommendations on current vaccination as of the date of the encounter.
Denominator:	All patients aged 18 years and older seen for a visit during the performance period.
Exclusions:	Patient received hospice services any time during the performance period.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure

Rationale:	We proposed this process measure because it represents an important clinical topic following the recently ended Public Health Emergency (PHE) for COVID-19. This process measure represents a CMS high priority clinical topic and fills a gap in MIPS by addressing COVID-19 vaccination status for all patients and ensuring clinician vaccination efforts at the point of care (for example, care for wellness and prevention against COVID-19). Widespread vaccination to prevent a severe COVID-19 infection is critically important to stemming the morbidity and mortality caused by this virus. The CDC reports millions of cases and deaths caused by COVID-19.[975] In 2020 and 2021, COVID-19 was the third leading cause of death in the U.S., exceeded only by cancer and heart disease.[976] The percent of the population reporting receipt of the updated 2023-24 COVID-19 vaccine is 13.1 percent (95 percent confidence interval: 12.5-13.7) for children and 22.5 percent (21.7-22.7) for adults 18 years and older, including 41.5 percent (40.2-42.9) among adults age 65 years and older.[977] [978] This recent data suggests a considerable gap in care for patients in the measure population and allows clinicians the opportunity to positively affect vaccination rates. Additionally, during measure testing, the measure developer found even the 75th percentile of performance yielded only 58 percent of a clinician's patient load being vaccinated with one booster. The measure was initially submitted to the CY 2022 Call for Quality Measures and included on the Measures under Consideration (MUC) list for review. During the 2022 cycle, the Measure Applications Partnership (MAP) recommended not to support the measure and requested the measure be revised before resubmitting for consideration to, among other things, include the most recent CDC recommendations for the numerator and use the current CDC definition of "up to date" for assessment of the quality action for each denominator eligible patient. These requests were addressed, and the measure was resubmitted to the CY 2023 Call for Quality Measures. We acknowledged the recommendations for boosters have continued to evolve; however, the quality action in this measure is aligned with current and potential future recommendations. Since December 2020, there have been more than 19 ACIP recommendations relating to COVID-19 vaccination. On September 12, 2023, ACIP recommended all persons aged 6 months and older receive an updated COVID-19 vaccine.[979] Updated COVID-19 vaccines are considered the 2023-2024 formula developed by the pharmaceutical and biotechnology companies Moderna, Pfizer-BioNTech, and Novavax. Because this measure uses the CDC's definition of "up to date," please refer to the CDC's website[980] to confirm the current definition of "up to date." We note that this definition may change in the future as new updated versions of the vaccine are created and recommended. Based on clinical recommendations and systemic reviews, there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[981] [982] [983] While this measure does not meet the definition of a fully developed measure as outlined in the Measures Management System (MMS),[984] MIPS currently includes several quality measures that assess for vaccine administration, which have been implemented for multiple years.[985] We request interested parties consider whether the measure is "beyond the measure concept phase of development and [has] started testing, at a minimum, with strong encouragement and preference for measures that have completed or are near completion of reliability and validity testing" when submitting a quality measure for possible inclusion (83 FR 53636; 84 FR 62954). While we take under consideration whether a measure is fully tested, it is not the only relevant standard for MIPS. Nevertheless, this consideration reinforces the importance of all clinicians actively addressing vaccination against the COVID-19 virus. According to the World Health Organization (WHO), getting vaccinated is one of the most important steps an individual can take to not only to protect oneself, but to help end the pandemic and stop the emergence of new variants.[986] The PRMR Clinician Recommendation Committee did not reach consensus on this measure for rulemaking, expressing concerns about data collection for vaccines administered through off-site locations (for example, pharmacies), as well as vaccine hesitancy that may vary across geography, political affiliation, ethnicity, and income. The committee considered the measure's importance to patients, with emphasis on those at higher risk for complications from COVID-19. ACIP recommendations support the measure, all of which are evidence-based.[987] This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The CDC COVID-19 Immunization Schedule, based on ACIP recommendations, can be referenced at the following webpage: *https://www.cdc.gov/vaccines/hcp/imz-schedules/index.html*. Clinical recommendations are in universal agreement that COVID-19 vaccines are safe, effective, and may prevent costly and harmful hospitalizations. The MIPS quality measure set includes several vaccine administration quality measures that have been implemented for several years; however, such measures do not include the COVID-19 vaccination.[988] This measure could also be considered for potential inclusion in the Primary Care MVP as it will fill a current quality measure inventory gap within the vaccination clinical topic for primary care settings. This measure, along with other activities, are a part of a larger Federal effort to promote and track vaccine uptake.[989] Since vaccine uptake is partially driven by patients requesting the vaccine followed by clinicians administering it to eligible patients, the patient/clinician relationship is a vital aspect for ensuring patients are vaccinated. This clinician-level measure will provide useful information regarding the success of vaccination efforts at the point of care, and, again, represents a priority topic to engage clinicians in quality improvements that drive positive health outcomes for their patients. We acknowledged this measure may not be selected by all clinicians, but this factor aligns with MIPS providing clinician choice in choosing quality measures that best represent their scope of care. Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination. As with all quality measures within MIPS, we continue to monitor all updates to the clinical recommendations and guidelines and address changes as needed utilizing the current annual revision cycle.

Category	Description
	Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx*.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Adult COVID-19 Vaccination Status measure. One commenter stated this measure will continue to build resilience for the next PHE. Data has proven to be critical for public health nurses and the entire nursing workforce when responding to rapidly evolving infectious diseases. The commenter was committed to utilizing vaccines to eliminate preventable diseases and urging all individuals to receive vaccines in accordance with the best and most current evidence. Another commenter agreed this measure fills a critical measurement gap in MIPS and can serve to support COVID-19 vaccination in all adult populations. An additional commenter supported CMS' efforts to increase adult vaccination rates while filling an important measurement gap in MIPS and including this measure in various specialty sets.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: One commenter encouraged CMS to clarify the measure numerator as to whether a patient is up to date on his or her COVID-19 vaccinations as defined by the CDC. Because this definition may change throughout the performance year, the commenter stated it is inappropriate to hold physicians accountable for COVID-19 vaccination rates when the recommendations keep changing. The commenter indicated no other measure within MIPS relies on clinical recommendations that are known to change frequently, which increases complexity and could negatively impact the reliability and validity of the measure. It is also

difficult to track this measure because a large percentage of patients do not receive their COVID-19 vaccinations from their primary care clinician.

A second commenter stated that measurement programs, particularly MIPS, include static measures, making it impossible to modify a measure once new evidence becomes available. Although the numerator defines "up to date" as determined by the CDC recommendations, this definition cannot account for changing recommendations nor the patient's willingness to get a booster, which was the CDC's recommendation for the fall of 2023/winter of 2024.

Response: We recognize the COVID-19 PHE was an unprecedented event that contributed to the frequency of recent vaccine guideline changes necessary for supporting public health. The measure therefore holds a clinician accountable for the most current guidelines on the date of the denominator eligible encounter. The measure does not judge clinicians by standards that are not known to the clinician and not applicable at the time of the encounter.

While we appreciate the commenter's preference for static guidelines during the performance year—and we have not traditionally adopted measures specified in this manner—the proposed approach is necessary for the creation of a COVID-19 vaccination measure to ensure all clinicians are held accountable for the care recommended at the time of the encounter. The measure's specifications were revised during the 2023 Annual Call for MIPS Quality Measures in response to the 2022 MAP feedback to track to the most current CDC guidelines. We understand COVID-19 vaccination guidelines have changed and may continue to change. Specifying the measure by referring to "up to date" guidelines ensures the measure remains current and valid despite future guidelines updates.

The measure, like all MIPS measures, will undergo an annual maintenance process to ensure alignment with the most current evidence; guidelines, if they have changed in a way that requires the measure to be respecified; and clinical practices around COVID-19 vaccination. The measure may also undergo additional reliability and validity testing as determined necessary. The measure accepts patient self-reports of vaccine receipt, particularly since many COVID-19 vaccinations are administered outside of clinician offices. Current vaccination status can also often be determined through accessing the jurisdiction's Immunization Information System.

Comment: Several commenters noted regional variation in vaccine hesitancy. The lack of exclusion for patient choice and the ability of clinicians to choose which measures to report in MIPS may lead to skewed results and data that is not reflective of performance as only clinicians with high vaccination rates in their patient population will choose to report the measure. One commenter requested that CMS consider an exclusion criterion to address patient refusal and ensure appropriate benchmarks for the measure so that clinicians are not unfairly penalized for factors outside their control. Another commenter noted while it is the primary care physician's responsibility to combat misinformation from social media, a physician cannot force a patient to get the vaccine.

Response: MIPS provides clinician choice in which measures clinicians select to report. This ensures clinicians choose measures that are most meaningful to their scope of care and clinical practice. Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination. As discussed in the proposal, clinical evidence supports widespread vaccination to prevent a severe COVID-19 infection. The measure encourages clinicians to explore relationships with their patients, which is important for ensuring patients are vaccinated and providing useful information about the success of vaccination efforts at the point of care. While research related to COVID-19 vaccination hesitancy is still needed, existing evidence indicates that clinician counseling can lead to vaccination uptake by vaccine-hesitant patients.[990] [991] [992] Excluding patients who refuse the vaccine would conflict with the measure's purpose of incentivizing clinicians to educate and encourage their patients to get vaccinated. Additionally, this approach aligns with other current MIPS quality measures assessing vaccination administration.

Comment: One commenter highlighted the well-documented vaccine hesitancy throughout the U.S., particularly among communities of color and in rural areas. Another commenter requested that the measure be risk-adjusted to account for the geographic and racial/ethnic disparities, or it will lead to misclassifications of a clinician's performance. The commenter stated that COVID-19 vaccination statistics from CDC in 2022 show that only eight States with 25 percent or higher of residents have proper vaccination. If a State with extremely low COVID-19 vaccination rates improves, its score would still reflect poorly compared to the national mean score.

Response: Currently, due to evolving evidence related to vaccination uptake by subpopulations, we have not included measure stratifications or risk-adjustments. However, we may consider stratifying or risk-adjusting future versions of the measure by race

and ethnicity, age, and/or other risk factors to account for and allow clinicians to monitor different subpopulations. While risk-adjustment is not a MIPS quality measurement requirement, clinicians may stratify results within their own patient population to identify trends and targeting subpopulations of need. The measure may provide an opportunity for clinicians to address health disparities and equity issues by monitoring trends and intervening to improve care opportunities for at-risk subpopulations. This is an important assessment and drives quality outcomes for community and population health, making this measure appropriate for inclusion within MIPS. However, clinicians can select which MIPS quality measures to report and determine if the measure is the most meaningful to their practice.

Comment: Several commenters expressed concerns about the lack of measure testing and validation of the measure. One commenter stated the measure has not established validity, reliability, and risk adjustments at the individual clinician level, and consequently, any assessment of data for this measure at the individual clinician level would produce invalid and unreliable results. Until testing of the measure with precise specifications is completed, the commenters stated this measure should not be implemented in MIPS.

Response: The measure did undergo testing and validation. Clinician-level measure score reliability was assessed using a signal-to-noise approach. Measure reliability was high for the measure, with a median clinician-level reliability of 0.99, indicating the measure can be used to identify meaningful differences in performance among clinicians. Face validity is also sufficient as this is a new MIPS measure (*https://mmshub.cms.gov/measure-lifecycle/measure-testing/evaluation-criteria/scientific-acceptability/validity*). Fifty percent of clinicians agreed that better performance on the measure indicates that a clinician is providing better care. As discussed in the response to the preceding comment, MIPS measures need not be risk adjusted.

Comment: Several commenters stated this measure was not supported by the MAP in 2022 and during the most recent review by the PRMR Clinician Committee, the measure did not achieve consensus on a recommendation.

Response: We acknowledge the measure was not supported by the MAP and did not reach consensus on a recommendation by the PRMR; however, we are not limited to adopting only such recommended measures. Section 1890A(a)(2) and (4) of the Act requires that we publish a list of measures we are considering for Medicare and take into consideration input on the measures from specified multi-stakeholder groups. Here, we have taken into consideration the 2022 MAP feedback by revising the measure specifications for the 2023 Annual Call for MIPS Quality Measures. As discussed in the proposal, the MAP advised that the measure allow for up to date vaccination with the most current CDC guidelines. We included this advice, as well as other MAP recommendations, into the revised measure specifications. Measures considered in the PRMR process have been tested and undergone evaluation for impact and scientific evidence.

Comment: One commenter noted that all the proposed new quality measures are MIPS CQM collection type only and relevant to a small number of specialist clinicians. The commenter cited CMS' Digital Quality Measurement Strategic Roadmap and its work with measure stewards to encourage development of new eCQMs (*https://ecqi.healthit.gov/sites/default/files/CMSdQMStrategicRoadmap_032822.pdf*). However, CMS, as the measure steward, has not proposed the measure as an eCQM. Due to retirement of eCQMs that are now part of the comprehensive Q493: Adult Immunization Status measure (that is not available as an eCQM), the commenter questioned whether the Adult COVID-19 Vaccination Status measure should be included into measure Q493 rather than staying as a separate measure.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, MIPS CQMs are considered dQMs under the current definition. Separately, we note that the Call for Measures does not currently require that each submitted measure include the eCQM collection type. For this measure, we opted to develop a MIPS CQM instead of an eCQM to allow for greater flexibility in measure development and respecification, if necessary, given the rapidly evolving COVID-19 PHE and given the narrative form of the CQM specification versus the more intensive coding and logic of an eCQM. Development of an eCQM would have taken substantially more time and effort, and we wanted a measure sooner to meet the Measures Under Consideration (MUC) List deadline and follow the appropriate rulemaking process. This faster timeline also did not allow for collaboration on potential incorporation of a COVID-19 vaccination rate in measure Q493, which is stewarded by NCQA and not CMS. We encourage the commenter to reach out to NCQA to discuss revisions to measure Q493 for possible implementation in future years. We are open to considering future updates to measure Q493 to include a COVID-19 vaccination rate.

Comment: One commenter expressed concern about the feasibility of implementing the measure. The commenter indicated that many electronic health records (EHRs) do not have discrete fields or options for each of the vaccine manufacturers. As the required vaccination course varies based on whether a patient received a single- or two-dose regimen for their initial vaccination course, it would be difficult to determine if a patient is up to date. The commenter recommended CMS use one of the following strategies to allow this measure to be accurately operationalized: ensure EHR systems are capable of recording the specific COVID-19 vaccination product administered prior to finalizing this measure; allow patient attestations for recipients of the original COVID-19 vaccine series as sufficient data; or focus the measure's requirements only on vaccine doses given subsequent to the original series.

Response: We clarify that the measure accepts patient self-reports of vaccine receipt. We determined this measure is feasible and implementable in MIPS as a MIPS CQM collection type, which allows for the utilization of a variety of data sources to collect the measure information and can include EHR discrete data fields where available or alternate mapping methodologies that align with the measure specification. It is at the clinician's discretion to choose this measure based upon its appropriateness to their

scope of care and case-mix, and the ability to integrate within their current workflows and systems as specified. Feasibility testing indicated that test sites were able to capture data needed to report the measure and registries can support submission to MIPS; therefore, it is feasible to report the measure utilizing the MIPS CQM collection type.

Comment: One commenter agreed with the intent of the measure but stated it may not be "attributable" to specialists as many do not have the COVID-19 inventory to administer the vaccine, which will impact their compliance with the measure. Although specialists will advise their patients to update their vaccination status, they may not receive notifications or follow-up reminders to complete this update.

Response: No clinician is required to report this measure. Clinicians, including specialists, have the choice to select which measures they report. This ensures clinicians choose measures that are most meaningful to their scope of care and clinical practice.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62259 through 62261), we are finalizing the *Adult COVID-19 Vaccination Status* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

A.6. Melanoma: Tracking and Evaluation of Recurrence

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	509
Description:	Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II, in the past 5 years in which the operating clinician examines and/or diagnoses the patient for recurrence of melanoma.
Measure Steward:	American Academy of Dermatology
Numerator:	NUMERATOR CRITERIA 1: Documentation by the clinician who performed the surgery that an exam for recurrence of melanoma was performed on the patient within the performance period. NUMERATOR CRITERIA 2: All patients that were diagnosed with a recurrent melanoma in the current performance period.
Denominator:	DENOMINATOR CRITERIA 1 & 2: All patients that the clinician has performed a type of excisional surgery for melanoma or melanoma in situ in the past 5 years with an initial AJCC staging of 0, I, or II.
Exclusions:	Patients who died during the performance period
Measure Type:	Process
High Priority Measure:	Yes
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure

Category	Description
Rationale:	We proposed this measure because it evaluates the frequency and type of recurrence for melanoma after an excisional procedure, in addition to driving communication regarding the recurrence status of melanoma patients. Additionally, the measure addresses a CMS high priority process measure for care coordination on the clinical topic as miscommunication between the excising clinician and the clinician continuing care has been identified as a gap. This measure allows for and promotes the development of a system in which melanomas can be accurately tracked to increase the effectiveness of understanding melanoma recurrence and follow-up care. Melanoma recurrence requires precise evaluation. As indicated by one study, patients who have undergone treatment of primary melanoma, early detection of a local recurrence has important implications. An isolated local recurrence in a patient with favorable features can be treated with repeat wide local excision, with good oncologic outcomes. For these patients, long-term prognosis is not adversely affected by the local recurrence if it is detected and treated early, and 5-year survival continues to be a function of primary tumor thickness.[993] [994] [995] [996] Regular clinical examination offers the highest diagnostic yield in detecting melanoma recurrences.[997] Common follow-up recommendations for all patients indicate the follow-up schedule is influenced by risk of recurrence, prior primary melanoma, and family history of melanoma. It also includes other factors such as atypical moles/dysplastic nevi.[998] For patients who present with stage I-II melanoma and are rendered free of disease after initial treatment, recurrence rates are distributed as follows: approximately 15 to 20 percent are local or in transit.[999] Data suggests the time between the risk of recurrence to reach its low plateau depends on the stage of disease at first presentation.[1000] In a retrospective study of patients who initially presented with stage I melanoma (N = 1568), 80 percent of the 293 recurrences developed within the first 3 years, but some recurrences (<8 percent) were detected 5 to 10 years after the initial treatment.[1001] A prospective study found that for patients with stage I or II at initial presentation, the risk of recurrence reached a low level by 4.4 years after initial diagnosis.[1002] Therefore, we proposed this measure to incentivize clinicians who treat patients with melanoma to perform these potentially lifesaving exams. The PRMR Clinician Recommendation Committee did not reach consensus in recommending the measure for inclusion in MIPS. The committee agreed with the importance of the measure's intent. There was significant concern raised about the burden of tracking and reporting, reliability of the measure and interpretation of testing results, and the impact of lower reliability on clinician compensation. However, the measure was fully tested at the clinician level and has been determined to be implementable in MIPS. The measure has been available for MIPS reporting as a QCDR measure since 2022, which attests to its feasibility as no implementation issues have been identified. This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This measure aligns with National Comprehensive Cancer Network (NCCN) guidelines. This measure fills a gap in MIPS within the dermatologic clinical topic, as there are no other dermatology measures related to the outcome of melanoma recurrence. This more robust outcome measure will replace current structure measure Q137: Melanoma: Continuity of Care as indicated in Table C.2 of this Appendix. While the MIPS Dermatology specialty set includes 13 measures, only 6 are specialty specific. This measure is relevant to specialty clinicians and will provide a new measure option for a specialty area that currently encompasses many topped-out measures, while also potentially aiding in the development of a meaningful MVP. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2024-02/PRMR-Final-MUC-Recommendation-Spreadsheet%20%283%29.xlsx*.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Melanoma: Tracking and Evaluation of Recurrence measure.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: One commenter did not support the addition of the new melanoma measure. The commenter indicated this new measure would replace measure Q137: Melanoma: Continuity of Care – Recall System, which the commenter believed provides "an effective and comprehensive system for tracking the follow-up of patients with a history of melanoma." The commenter noted the proposed measure does not include exclusions for other scenarios in which a clinician may be unable to conduct follow-up, such as patients who relocate, begin care with a different dermatologist, exhibit noncompliance, or enter hospice care.

Response: We thank the commenter for their feedback. The intent of this measure overlaps with measure Q137, leading to the positive outcome of determining recurrence in a timely manner. It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive better quality of care provided and continue to drive quality, which is achieved by offering measures with more robust evaluation methods. This measure is more robust because it requires a quality action of documentation that a follow up exam was completed. We recognize this measure represents an important component in early identification of recurrence for melanoma that will drive timely and appropriate care. We also recognize that due to nuances in clinician specialization, scope of care, or regional location, not all measures within MIPS will be applicable or appropriate to all clinicians within that specialty. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: One commenter, in opposing the removal of measure Q137 under Table C.2 of this Appendix, stated this new measure would require practices to conduct a retrospective review of records spanning 5 years, specifically identifying cases of melanoma and melanoma *in situ* with completed excisions and appropriate grading. According to the commenter, this requirement would impose a substantial burden on smaller practices, which may lack the necessary time, resources, and infrastructure to fulfill this obligation. According to the commenter, the process of running standard reports to identify melanoma cases based on diagnosis codes is "far more feasible and practical for these practices, ensuring that patients continue to receive timely and appropriate follow-up care." Another commenter indicated the proposed measure lacked sufficient detail concerning the timing of the initial melanoma surgery and the subsequent follow-up period.

Response: We thank the commenters for their feedback. We recognize that due to nuances in clinician specialization, scope of care, or regional location, not all measures within MIPS will be applicable or appropriate to all clinicians within that specialty, so smaller practices may not choose this measure. We acknowledge this measure may require the review of additional information for clinicians to successfully report it. This is inextricably part of the adoption of a more robust measure that we think better evaluates care than measure Q137. For practices that do elect to participate in this measure, coding within the measure specification will allow clinicians to map their system to identify the appropriate patient population which includes patients with an excisional surgery for melanoma or melanoma *in situ* in the past 5 years with an initial AJCC Staging of 0, I, or II. Removal of measure Q137 does not preclude clinicians from continued use of a recall system which enables providers to ensure that patients receive follow-up appointments in accordance with their individual needs.

Comment: One commenter was concerned about the implications of the proposed measure on patients who undergo melanoma evaluations but do not have excisional surgeries. By specifically identifying the "operating clinician," the measure excludes general dermatologists who often refer out for melanoma excisions, particularly for surgeries on sensitive areas such as the face or neck. In such cases, the operating clinician may not be responsible for ongoing follow-up, which is typically conducted by the referring dermatologist. This division of responsibilities is common even in larger practices, where surgeons perform excisions, and general dermatologists manage follow-up care. The proposed measure, as currently drafted, would limit the scope of patients and clinicians being evaluated for performance, leading to incomplete and potentially misleading assessments of care quality. The commenter urged CMS to reconsider the proposed changes and work with the dermatology community to develop a more feasible and inclusive measure that accurately reflects the realities of melanoma care.

Similarly, a second commenter expressed concerns that the proposed measure does not reflect clinical practice. For example, in many cases, the surgeon who performed the procedure may not be available for subsequent follow-ups, or the patient may have

---

been referred to a specialist for the initial surgery. It is common practice for patients to return to their primary dermatologist for ongoing care.

Response: We acknowledge that in many cases the clinician who follows up with a patient who has had excisional surgery may not be the same clinician who performed the procedure. The measure does allow for the surgeon to utilize medical record documentation to determine numerator compliance and measure performance. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years that would specifically address general dermatologists who refer out for melanoma excisions.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62262 through 62264), we are finalizing the *Melanoma: Tracking and Evaluation of Recurrence* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

A.7. First Year Standardized Waitlist Ratio (FYSWR)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	510
Description:	The number of newly initiated patients on dialysis in a practitioner group who are under the age of 75 and were either listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio-observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Numerator 1. Patients who initiated dialysis and had documentation of status at the end of the first year after initiating dialysis. Numerator 2. The ratio of the observed number of waitlist events in a practitioner group to the model-based expected number of waitlist events.
Denominator:	Denominator 1. Patients aged 75 years of age or less who have initiated dialysis during January 1st – December 31st of the previous performance period. Denominator 2. The denominator for the First Year Standardized Waitlist Ratio (FYSWR) is the total number of patients under the age of 75 in the practitioner group according to each patient's treatment history for patients within the first year following initiation of dialysis.
Exclusions:	Patients admitted to a skilled nursing facility (SNF). Patients in hospice on their initiation of dialysis date or during the month of evaluation. Patients that were on the kidney or kidney-pancreas waitlist prior to initiation of dialysis. Patients who had a transplant prior to initiation of dialysis.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	If a dialysis practitioner group has fewer than 11 patients or 2 expected events, then the dialysis practitioner group is excluded from reporting outcomes.

Category	Description
Rationale:	This measure was originally proposed in the CY 2024 PFS proposed rule (88 FR 52771 through 52772) but was not finalized in the CY 2024 PFS final rule (88 FR 79565 through 88 FR 79566) due to implementation issues within MIPS regarding timing and application of the risk adjustment methodology. Additionally, we proposed this measure again because it addresses a CMS high priority clinical topic: patients with end-stage renal disease (ESRD). We indicated we will allow further refinement and streamlining of the measure analytic for future MIPS implementation. The measure and measure analytic have been revised to include two submission criteria, allowing for determination of data completeness and the full utilization of the risk-adjusted model in the second submission criterion to create a continuous variable analytic, assessing the ratio of observed to expected waitlist events. ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures.[1003] While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant.[1004] This measure assesses whether patients who are in their first year of dialysis, and are found to be an expected waitlist event based upon the Cox model, were placed on either the kidney or kidney-pancreas transplant waitlist or received a living donor kidney transplant. Data submitted by the measure developer indicates a performance gap for a process that can be directly linked to improved patient outcomes. This measure is separate from the other transplant waitlist measure, finalized under Table A.8 of this Appendix, as it is limited to assessing the first year after initiation of dialysis and the timely addition of those patients to the transplant waitlist—a crucial step in driving positive outcomes in the patient population. National and large regional studies provide strong empirical support for the association between processes within the clinical scope and control of dialysis practitioners followed by subsequent patient transplant wait listing. For example, the clinical assessments, provisions and/or referrals made by a dialysis practitioner are contributing factors for consideration in patient transplant wait listing. In one large regional study conducted on facilities in the State of Georgia, a standardized dialysis facility referral ratio was developed, adjusted for age, demographics, and comorbidities.[1005] There was substantial variability across dialysis facilities in referral rates, and a Spearman correlation performed between ranking on the referral ratio and dialysis facility waitlist rates was highly significant ($r=0.35$, $p<0.001$).[1006] A national study using registry data (United States Renal Data System) from 2005-2007 examined the association between whether patients were informed about kidney transplantation based on reporting on the Medical Evidence Form 2728 *(https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS2728.pdf*) and subsequent access to kidney transplantation (wait listing or receipt of a live donor transplant).[1007] Approximately 30 percent of patients were uninformed about kidney transplantation, which was associated with half the rate of access to transplantation compared to patients who were informed.[1008] In a related survey study of 388 hemodialysis patients, whether provision of information about transplantation by nephrologists or dialysis staff occurred was directly confirmed with patients.[1009] The provision of such information was associated with a near threefold increase in likelihood of wait listing.[1010] The intent of this measure is to track the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant within the first year after dialysis initiation, with the objective of improving the overall health of patients on dialysis. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health condition conducive to kidney transplantation. Waitlisting is a direct step in the process of transplantation which drives quality by progressing patients towards the goal of transplantation and better health outcomes. Being waitlisted for kidney transplantation is the culmination of a variety of preceding preparatory activities, which may include providing education to patients about the option(s) of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. These efforts depend heavily and, in many cases, primarily, on dialysis practitioner groups. Aspects that are not directly in the clinician/groups control can be influenced through coordination of care, strong communication with transplant centers, and advocacy for patients. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible. The PRMR (formerly the MAP), did not support this measure for rulemaking with the potential for mitigation to update the measure and address the concern from the Renal Standing Committee regarding the evidence base and specifications, and thus recommended this measure be resubmitted for endorsement by a CBE. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As discussed above, studies suggest a significant positive correlation between the clinician activities and the addition of patients to a transplant waitlist, which are necessary for patients to receive the improved outcomes associated with kidney transplant. Note: Refer to the 2022 MUC List-Final Recommendations to CMS and HHS at *https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fmmshub.cms.gov%2Fsites%2Fdefault%2Ffiles%2F2022-MUC-List.xlsx&wdOrigin=BROWSELINK*.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the First Year Standardized Waitlist Ratio (FYSWR) measure. A second commenter supported both waitlist measures under Tables A.7 and A.8 of this Appendix. Nephrology nurses are dedicated to their patients and to ending the disparities in transplant access for their patients with ESRD. The commenter supported addressing these disparities by collecting transplant waitlist data. The commenter indicated that CMS must work directly with nephrology nurses who have on the ground knowledge of these impacts on their patients. Data collection will be coming from these nurses but there must be follow up to collect their feedback on solutions or disparities will remain.

Another commenter strongly supported adding both waitlist measures and stated these measures will help payers understand if providers are connecting patients who have ESRD with the additional care and support they need to prepare for organ transplant. Measures are needed to understand if patients are being referred to transplantation and if they are being appropriately supported while they are on the waiting list for an organ. These measures could help ensure clinicians are working with patients to help them access transplant waitlists and if facilities are proactively reaching out to patients on the waitlist.

Response: We thank the commenters for supporting this new measure in MIPS and value the experience of all clinicians supporting patients. These measures were proposed for the MIPS CQM collection type, and data should be reported as outlined within the measure specification, however, the measure does not dictate workflow for data collection. We agree that continued dialogue is important to ensure high quality care and sustained meaningful implementation of quality measures. We encourage interested parties to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: One commenter supported this new measure and the measure under Table A.8 of this Appendix as an important quality measurement tool in the effort to ensure that all patients are evaluated and waitlisted in a timely fashion. Nephrologists play a significant role in referral to transplant centers, which is a necessary, but not a sufficient step in eventual waitlisting. The commenter stated that timely referral of every appropriate patient for transplant evaluation will result in more equitable access to the transplant waitlist and that nephrologists do have control over this initial referral and there should be accountability. Furthermore, these measures maintain consistency with other CMS programs including the ESRD Quality Incentive Program (*https://www.cms.gov/medicare/quality/end-stage-renal-disease-esrd-quality-incentive-program*) and the ESRD Treatment Choices Model (*https://www.cms.gov/priorities/innovation/innovation-models/esrd-treatment-choices-model)*. However, the commenter indicated that some aspects of waitlisting are out of a nephrologist's control. Transplant centers are variable in the rates at which they place patients on the waitlist. The ultimate decision to waitlist lies with the transplant center and transplant surgeon, not the nephrologist. The nephrologist often has little to no access to a transplant center's waitlist. These are all valid arguments, and the commenter recommended that performance on these measures be closely monitored so that physicians are not unfairly penalized for behavior of other individuals.

Response: We thank the commenter for supporting this new measure in MIPS. We acknowledge the commenter's concern and reaffirm that all MIPS measures are evaluated annually for performance and any updates that may be required to ensure the measure specification aligns with the measure's intent and current clinical guidelines. Additionally, while we acknowledge there are aspects of this measure that are not directly in the clinician/group's control, the outcome can be influenced through coordination of care, strong communication with transplant centers and advocacy for patients, and optimization of a patient's health and comorbid conditions.[1011] While determining transplantation candidacy is complex and multidisciplinary, the referring nephrologist remains cardinal to this process, as the most significant barrier to pre-emptive kidney transplantation is timely

The Importance of Transplant Nephrology to a Successful Kidney Transplant Program. *Clinical Journal of the American Society of Nephrology : CJASN*, *17*(9), 1403–1406. https://doi.org/10.2215/CJN.02000222.

referral to the transplantation program.[1012] It is incumbent on all caregivers responsible for the patient to work towards this goal.

Comment: One commenter recognized the critical importance of improving kidney transplantation rates, and that inequities exist among regions and patient populations. The commenter was concerned that the measures do not reflect patient-centered care as they do not account for patient choice. There is no exclusion from the denominators for patients who chose not to consider transplantation. Instead, the measures inappropriately assume all patients should be referred and waitlisted, regardless of the patients' wishes or their medical status.

A second commenter stated that the waitlist measures are largely outside of nephrologist's ability to influence as well as outside the scope of the dialysis facility's sphere of influence. While patients can be referred, being waitlisted is under the control of the transplant center. The commenter believed this measure does not appropriately address factors within a nephrologist's control – neither in the determination to waitlist by a transplant facility or to perform a living donor transplant as determined by a transplant surgeon.

Response: Being waitlisted for kidney transplantation is the culmination of a variety of preceding preparatory activities and may include education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. There is a significant association between the clinician activities described in this measure and the addition of patients to a transplant waitlist, which is necessary for patients to receive the improved health outcomes associated with kidney transplant.[1013] As stated in the above rationale, aspects that are not directly in the clinician/groups control can be influenced through coordination of care, strong communication with transplant centers, and advocacy for patients. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible. In regard to an exclusion for patients who chose not to consider transplantation, we recognize the decision to pursue kidney transplant as a kidney replacement modality is a multifaceted, individual decision; however, it is difficult to account for patient choice in the measure given the measure's construction and risk adjustment methodology. Based on the literature, we expect this to be a small number of patients that may be found across dialysis centers, thus affecting each at a similar rate and this is an area of great interest for future work.[1014]

Comment: Two commenters were concerned about the lack of CBE endorsement for this measure. One commenter indicated this measure was not endorsed by the CBE Renal Standing Committee during the Spring 2022 measure cycle, citing concerns regarding exclusions and attribution. In particular, the Renal Standing Committee raised concerns about how the measure developer identified the physician caring for the patient. The CBE Consensus Standards Approval Committee (CSAC) upheld the decisions of the Renal Standing Committee during their review and voted not to reconsider this measure during the appeals process. Therefore, the commenters stated this measure is not appropriate for inclusion in MIPS.

Response: While we agree CBE endorsement is preferred, this measure should nonetheless be added to MIPS as it meets the statutory standard for inclusion as a non-endorsed measure Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. Being waitlisted for kidney transplantation is the culmination of a variety of preceding preparatory activities and may include education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. There is a significant association between the clinician activities described in this measure and the addition of patients to a transplant waitlist, which is necessary for patients to receive the improved health outcomes associated with kidney transplant.[1015] Inclusion of this measure in MIPS also aligns with the ESRD Quality Incentive Program as indicated in a prior response.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62264 through 62266), we are finalizing the *First Year Standardized Waitlist Ratio (FYSWR)* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

A.8. Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	511
Description:	The measure tracks dialysis patients who are under the age of 75 in a practitioner group and on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). This measure is a risk-adjusted percentage of waitlist events among dialysis patients**.**
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Numerator 1: Percentage of Prevalent Patients Waitlisted (PPPW): Patients in the practitioner group's denominator with observed months on the waitlist for each month. Numerator 2: Percentage of Prevalent Patients Waitlisted in Active (aPPPW): Patients in the practitioner group's denominator with observed months on the waitlist in active status for each month.
Denominator:	Denominator 1 and 2: All risk-adjusted patient-months for patients who are under the age of 75 in the reporting month and who are assigned to a dialysis practitioner or practitioner group practice according to each patient's treatment history on the last day of each reporting month during the performance year.
Exclusions:	Patients who were admitted to a skilled nursing facility (SNF) during the month of evaluation were excluded from that month. Patients who were admitted to a skilled nursing facility (SNF) within one year of dialysis initiation according to the CMS-2728 form. Patients determined to be in hospice were excluded from month of evaluation and the remainder of reporting period. Patients with dementia at any time prior to or during the month.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQM Specifications
Measure-Specific Case Minimum/Performance Period:	If a dialysis practitioner group has fewer than 11 patients during the performance year, the dialysis practitioner group is excluded from reporting outcomes.

Category	Description
Rationale:	This measure was originally proposed in the CY 2024 PFS proposed rule (88 FR 52773 through 52774) but was not finalized in the CY 2024 PFS final rule (88 FR 79567 through 79568) due to implementation issues within MIPS regarding timing and application of the risk adjustment methodology. Additionally, we proposed this measure again because it addresses a CMS high priority clinical topic: patients with ESRD. We indicated we will allow further refinement and streamlining of the measure analytic for future MIPS implementation. The measure, including component calculations, was revised to allow for a proportional analytic to be used for the purposes of determining measure performance, while still incorporating the risk-adjusted model to ensure the appropriate denominator eligible patient population for numerator assessment. ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures.[1016] While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant.[1017] This measure will capture the adjusted count of patient months on the kidney and kidney-pancreas transplant waitlists for all dialysis patients in a dialysis practitioner or group practice by assessing patient status on the last day of each month during the reporting year, and those on the transplant waitlist in active status as of the last day of the month during the reporting year. This process measure is directly linked to driving positive outcomes and measure data indicates a performance gap. Most ESRD patients have to wait for access to a deceased donor transplant, with the national median being roughly 4 years.[1018] Maintenance of 'active status' on the transplant list requires ongoing collaboration between dialysis practitioners, transplant centers, and transplant networks, thereby ensuring sustained suitability for a transplant while optimizing the health of patients.[1019] This maintenance process is associated with higher transplantation rates and lowered mortality rates while on the waitlist.[1020] Additionally, the maintenance of 'active status' is an important health equity issue. Research has found disparities in access to kidney transplant by race.[1021] Race-neutral efforts by clinicians to encourage maintenance of patients on the waitlist may reduce such disparities while improving their performance on this measure.[1022] This measure and the finalized measure under Table A.7, the First Year Standardized Waitlist Ratio measure, work in tandem to assess initial and on-going care. This measure will assess monthly wait listing in active status of patients. It also will evaluate and encourage maintenance of patients on the waitlist. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. In contrast to this measure, the First Year Standardized Waitlist Ratio measure will focus solely on new wait listings and living donor kidney transplants to incentivize early action, rather than ongoing maintenance on the waitlist, which this measure assesses. The PRMR conditionally supported this measure for rulemaking pending an update of the measure's specifications to include only the PPPW (CBE 3695) rate that was recommended for endorsement by the CBE's Renal Standing Committee. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The CBE recommended endorsement for the PPPW subset of this measure. It is important to include the aPPPW rate in this measure as well to capture patients in active waitlist status, and the full scope of the transplant list with movement of patients between active and inactive status. The studies cited above provide the evidentiary basis for the adoption of this measure. After review, it was determined that the testing provided by the measure steward demonstrated statistically sufficient results for the reliability and validity of each of the numerator actions, meeting requirements described within the CMS MMS Hub (*https://mmshub.cms.gov/*) regarding quality measure testing. Note: Refer to the 2022 MUC List-Final Recommendations to CMS and HHS at *https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fmmshub.cms.gov%2Fsites%2Fdefault%2Ffiles%2F2022-MUC-List.xlsx&wdOrigin=BROWSELINK*.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure. As mentioned above under Table A.7, one commenter noted nephrology nurses are dedicated to their patients and to ending the disparities in transplant access for their patients with ESRD. The commenter supported addressing these disparities by collecting transplant waitlist data. The commenter indicated that CMS must work directly with nephrology nurses who have on the ground knowledge of these impacts on their patients. Data collection will be coming from these nurses but there must be follow up to collect their feedback on solutions or disparities will remain.

Another commenter strongly supported adding both waitlist measures and stated these measures will help payers understand if providers are connecting patients who have ESRD with the additional care and support they need to prepare for organ transplant. Measures are needed to understand if patients are being referred to transplantation and if they are being appropriately supported while they are on the waiting list for an organ. These measures could help ensure clinicians are working with patients to help them access transplant waitlists and if facilities are proactively reaching out to patients on the waitlist.

Response: We thank the commenters for supporting this new measure in MIPS and value the experience of all clinicians supporting patients who have ESRD, such as nephrology nurses. These measures were proposed for the MIPS CQM collection type, and data should be reported as outlined within the measure specification, however, the measure does not dictate workflow for data collection. We agree that continued dialogue is important to ensure high quality care and sustained meaningful implementation of quality measures. We encourage interested parties to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: One commenter indicated this measure was previously two separate measures: Percentage of Prevalent Patients Waitlisted (PPPW), which received CBE endorsement in Spring 2022, and the Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW), which was not endorsed by the CBE Renal Standing Committee during the Spring 2022 measure cycle. A second commenter was concerned this measure was only conditionally supported by the PRMR. Concerns with the testing data, which showed extreme variation in the transplant center practice, are real and foster disparities among potential transplant candidates. The commenter stated that these measures make it even harder for smaller transplant programs to risk listing more complicated patients. The commenter was concerned that the two waitlist measures have been combined with no evidence of review or testing as a composite measure for feasibility and validity, and therefore, it is inappropriate to include this measure in MIPS. Another commenter stated there is substantial variability in listing rates among transplant centers, with standardized waitlisting rates differing widely, which further undermines the validity of this measure.

Response: While we agree CBE endorsement is preferred, this measure should nonetheless be added to MIPS, as it meets the statutory standard for inclusion as a non-endorsed measure because it has a focus that is evidenced-based. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As stated above, this measure is in part CBE endorsed (the PPPW (CBE 3695)) and this rate was recommended for endorsement by the CBE's Renal Standing Committee. The testing provided by the measure steward was reviewed and demonstrated statistically sufficient results for the reliability and validity of each of the numerator actions, meeting requirements described within the CMS MMS Hub (*mmshub.cms.gov*) regarding quality measure testing. This measure also demonstrated feasibility through data elements being generated via the care process and being electronically available. The measure will utilize two submission criteria to assess performance across dialysis clinician groups, creating a robust quality measure driving positive outcomes for ESRD patients. Additionally, this measure utilizes a risk adjustment model so that clinicians are not unfairly penalized for listing more complex patients.

Comment: One commenter stated that nephrologists play a crucial role in referring patients for transplantation; however, they have no influence over the selection process for waitlisting. Most nephrologists are unable to access and navigate the transplant center's waitlist even for patients they referred. Furthermore, it is unfair to tie physician practices success to a patient's active status when they lack any control or input regarding a patient's status as active or inactive, as reflected in the proposed Increasing Organ Transplant Access Model (*https://www.cms.gov/priorities/innovation/innovation-models/iota*) and organ offer metrics. The commenter stated that active or inactive status is completely controlled by the transplant center – not the practicing nephrologist. The commenter indicated that both waitlist measures in their current proposed forms underscore the need for measures that align incentives across the entire continuum of care. The commenter believed the current proposed measures fall short of achieving this alignment. The commenter urged CMS to implement measures that more accurately reflect the role of nephrologists in the transplantation process and promote high-quality care for patients. Another commenter did not support the waitlist measures as written, as they imply that the nephrologist can control both the management of the active wait list, and the movement to and from active status by the transplant team. In reality, transplant facilities have their own metrics and decision algorithms, which are not public, transparent, or harmonized. The nephrologist does not control the transplant team's decision to place a patient on the active wait list and usually is not involved in and often not aware of the decision to reclassify their waitlist status.

Response: We acknowledged that patient selection from the waitlist for transplantation is not determined by the nephrologist and as such, this measure is not assessing this aspect of the transplant workflow. This is an important area to which nephrologists leading a team of dialysis practitioners, including but not limited to dialysis nurses and physician assistants, are responsible for care of patients during dialysis treatments, and can contribute by ensuring patients remain healthy and completing any ongoing testing activities required to remain active on the waitlist. Maintenance of active status requires ongoing attention by dialysis practitioners to optimize the health of patients and to ensure sustained suitability for transplant waitlisting. Maintenance of active

status on the waitlist is additionally important given demonstrated disparities[1023] and positive association with subsequent transplantation.[1024]

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62266 through 62267), we are finalizing the *Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW)* measure as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1023] See footnote Kulkarni et al., 2019.
[1024] See footnote Grams et al., 2013.

Table Group B: New Specialty Measure Sets Finalized for Addition and Modifications to Previously Finalized Specialty Measure Sets Finalized for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

In the CY 2025 PFS proposed rule (89 FR 62268), we proposed to add one new specialty measure set: Optometry. In the CY 2023 PFS final rule, we finalized a combined Ophthalmology/Optometry specialty set (87 FR 70275 and 87 FR 70434 through 70439). Based on interested parties' request, we proposed to revert this combined specialty set to "Ophthalmology" under Table B.28 of this Appendix with all measures retained as finalized under the CY 2024 PFS final rule (88 FR 79777 through 79784). We simultaneously proposed to create a separate Optometry specialty set with a more limited number of quality measures based on differences in scope of practice to ophthalmology. The Optometry specialty set is finalized under Table B.29 of this Appendix.

In the CY 2025 PFS proposed rule (89 FR 62268), we also proposed to modify the below previously finalized specialty measure sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures had proposed substantive changes in Table Group D of this Appendix. In the first column, existing measures with substantive changes described in Table Group D of this Appendix are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). The Indicator column includes a "high priority type" in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. Additionally, eCQMs that are endorsed by a CBE are shown in Table Group B of this Appendix as follows: CBE # / eCQM CBE #.

Under § 414.1305, a high priority measure means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure. Further details of these types of measures may be found in the CMS Measures Management System Hub (*https://mmshub.cms.gov/*).

NOTE:

- Updates to measure titles and/or measure descriptions under Table Group B in this final rule may or may not be considered substantive in nature, therefore may not be proposed or updated under Table Group D. If the change was considered substantive in nature, it was finalized under Table Group D.
- Under Table Group B, we responded to comments related to new measures that were proposed for addition to measure sets, as well as measures proposed for removal. Any comments received on previously finalized measures that have no substantive changes are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- Measures that were not finalized for removal in this final rule have been added back into the applicable previously finalized specialty set(s) under Table Group B and have been removed from the applicable Removal table. The reason for their retention was addressed under Table Group C. For some specialty sets, this resulted in the Removal Table being removed in its entirety in this final rule if no measures proposed for removal were finalized for removal. As a result, the Removal Table was removed for the following specialty set: Radiation Oncology due to the retention of measure Q144: Oncology: Medical and Radiation – Plan of Care for Pain that was not finalized for removal under Table C.3 of this Appendix.
- For each specialty set, measures in the Previously Finalized tables and any new measures finalized under applicable Addition tables will be available for reporting in CY 2025.

The following specialty sets had no measures added, no measures removed, and no substantive changes for the CY 2025 performance period/2027 MIPS payment year: Anesthesiology and Dentistry.

The following specialty sets had no measures added and no measures removed, but had substantive changes as addressed under Table Group D: Audiology, Electrophysiology Cardiac Specialist, Certified Nurse Midwife, Chiropractic Medicine, Diagnostic Radiology, General Surgery, Hospitalists, Mental/Behavioral Health and Psychiatry, Neurology, Nutrition/Dietician, Ophthalmology, Orthopedic Surgery, Pathology, Pediatrics, Physical Medicine, Physical Therapy/Occupational Therapy, Plastic Surgery, Podiatry, and Thoracic Surgery.

Note: In the CY 2024 PFS final rule, new measure Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) was finalized with a 1-year delay to the 2025 performance period (88 FR 79556 through 79560). As a result, measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques was finalized for removal with a 1-year delay to the 2025 performance period (88 FR 79896). These decisions are reflected within table B.10 Diagnostic Radiology specialty set of this Appendix.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure

tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.1. Allergy/Immunology

PREVIOUSLY FINALIZED MEASURES IN THE ALLERGY/IMMUNOLOGY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**
* § ! (Patient Safety)	N/A / N/A	130	CMS68 v14	eCQM Specifications, MIPS CQM Specifications	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
§	N/A / N/A	226	CMS13 8v13	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications	Process	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the 6 months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance
* ! (Patient Safety)	0022 / N/A	238	CMS15 6v13	eCQM Specifications, MIPS CQM Specifications	Process	**Use of High-Risk Medications in Older Adults:** Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.	National Committee for Quality Assurance
*	N/A / N/A	317	CMS22 v13	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications	Process	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services
* ! (Appropriate Use)	N/A / N/A	331	N/A	MIPS CQM Specifications	Process	**Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse):** Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.	American Academy of Otolaryngology – Head and Neck Surgery Foundation
! (Appropriate Use)	N/A / N/A	332	N/A	MIPS CQM Specifications	Process	**Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use):** Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.	American Academy of Otolaryngology – Head and Neck Surgery Foundation
§ ! (Outcome)	N/A / N/A	338	CMS31 4v2	eCQM Specifications, MIPS CQM Specifications	Outcome	**HIV Viral Suppression:** Percentage of patients, regardless of age, diagnosed with HIV prior to or during the first 90 days of the performance period, with an eligible encounter in the first 240 days of the performance period, whose last HIV viral load test result was less than 200 copies/mL during the performance period.	Health Resources and Services Administration

(Outcome)	2483 / N/A	503	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.1. Allergy/Immunology

MEASURES FINALIZED FOR **ADDITION** TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Allergy/Immunology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1025] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1026] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the

[1025] Ikeokwu, A. E., Lawrence, R., Osieme, E. D., Gidado, K. M., Guy, C., & Dolapo, O. (2023). Unveiling the Impact of COVID-19 Vaccines: A Meta-Analysis of Survival Rates Among Patients in the United States Based on Vaccination Status. *Cureus*, *15*(8), e43282. https://doi.org/10.7759/cureus.43282.

MEASURES FINALIZED FOR **ADDITION** TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the Adult COVID-19 Vaccination Status measures to this specialty set.

Response: We thank the commenter for supporting the addition of this measure to the Allergy/Immunology specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62271 through 62272), we are finalizing the above measure(s) for addition to the *Allergy/Immunology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, as applicable. This specialty set had no proposed changes.

B.2. Anesthesiology

! (Outcome)	3665 / N/A	495	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We proposed to include this measure in the Cardiology specialty set as it will be clinically relevant to this clinician type. This PRO-PM will help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with the clinician. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. Allowing patients to feel heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. As more patients are living longer with multiple comorbidities, especially true for the advanced heart disease patient population, early emergence of palliative care into the overall care of cardiac patients can notably improve their quality of life, patient satisfaction, and reduction in symptoms.[1027] This measure is predicated on existing guidelines and conceptual models[1028] and can facilitate and improve effective patient-clinician communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. Through the benefits of enhanced patient-provider communication, this measure will improve the quality of care received and outcomes for patients receiving palliative care. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure

								would not have been finalized for inclusion within this specialty measure set.
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Cardiology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1029] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1030] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical

MEASURES FINALIZED FOR **ADDITION** TO THE CARDIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of measure Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this specialty set. Commenters supported the expanded use of this palliative care-developed measure. One commenter indicated that this measure will help ensure patient care is holistic, patient-centered, responsive to the needs of those with serious illnesses in ambulatory settings.

Response: We thank the commenters for supporting the addition of measure Q495 to the Cardiology specialty set.

Comment: One commenter supported the proposed addition of measure Q495 as it aligns with patient-centered care, crucial in areas such as heart failure, advanced cardiovascular disease, and end-of-life care. The commenter indicated it is important to evaluate if this measure overlaps with existing ones or adds redundant reporting requirements, which could dilute the focus on more specific cardiovascular quality metrics. Potential challenges include resource allocation, as small practices or those with limited resources may struggle to implement this measure without additional support. It is also important to ensure the measure is applicable to most patients and does not disproportionately affect subspecialties where it might be less relevant.

Response: We acknowledge the concerns left by the commenter; however, MIPS eligible clinicians will not be required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice. This measure provides clinicians an opportunity to review current workflows and determine potential changes clinicians can make to positively assess the need for patient centered palliative care that will improve patient outcomes. Each year we review the MIPS quality measure inventory to determine if there is duplication between measures, however, we found measure Q495 does not add redundant reporting requirements as it is the only measure specific to a patient's experience with palliative care, in addition to being diagnosis agnostic. Furthermore, this measure does not add redundant reporting requirements, because it is not required and therefore, the clinician can choose whether it is appropriate and applicable to them.

Comment: One commenter supported the proposed addition of the Adult COVID-19 Vaccination Status measure to this specialty set but requested that CMS consider adding measures that are subspecialty-specific.

Response: We thank the commenter for supporting the addition of the Adult COVID-19 Vaccination status measure to the Cardiology specialty set. We acknowledge that due to nuances in clinician specialization and subsequent scope of care, not all measures will be applicable or appropriate to all clinicians. The goal is to ensure we have a comprehensive set of measures that drive positive health outcomes while also providing clinician choice when determining the appropriateness of each measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62284 through 62285), we are finalizing the above measure(s) for addition to the *Cardiology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

American Psychiatric Association

B.7. Clinical Social Work

MEASURES FINALIZED FOR ADDITION TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM ®) Scores at 12 Months**: The Patient Activation Measure® (PAM ®) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Clinical Social Work specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized in research within the U.S. and internationally and has also been shown to be valid and reliable in different clinical settings and under different payment models.[1031] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposed addition of measure Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months to this specialty set. One of the commenters indicated that challenges may arise in terms of the resources required to administer and score the PAM® questionnaire consistently across different settings. To address these challenges, the commenter encouraged CMS to provide training and support for social workers to effectively implement and interpret the measure. For example, integrating this measure into existing EHR systems could streamline data collection and enhance feasibility.

Response: We thank the commenter for their feedback. We encourage the commenter to reach out to the measure steward to determining if there are any trainings available now or in future years to ensure proper implementation of this measure. Additionally, we encourage specific feedback to help ensure measure specifications are clearly written to support consistent implementation. Clinicians have the flexibility to choose which measures to report based upon the appropriateness of the measure to their scope of care and resources available to help clinicians understand and prepare for measure implementation and reporting. Accordingly, this measure is not required for reporting; however, the addition of this measure enhances clinician choice on which measures to report.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62298), we are finalizing the above measure(s) for addition to the *Clinical Social Work Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.8. Dentistry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. This specialty set has no proposed changes.

B.9. Dermatology

MEASURES FINALIZED FOR **ADDITION** TO THE DERMATOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Care Coordination)	N/A / N/A	509	N/A	MIPS CQM Specifications	Process	**Melanoma: Tracking and Evaluation of Recurrence:** Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II in the past 5 years in which the operating provider examines and/or diagnoses the patient for recurrence of melanoma.	American Academy of Dermatology	We proposed to include this measure in the Dermatology specialty set as it will be clinically relevant to this clinician type. Clinicians within this specialty care for patients diagnosed with melanoma and are most likely to be the clinician to evaluate the frequency of melanoma recurrence following excisional procedures for this patient population.[1032] This measure addresses the CMS high priority outcome for care coordination, as a lack of communication has been recognized between the excising clinician and clinician continuing care. This measure will allow for the development of a system in which melanomas can be accurately tracked to increase the understanding of the effectiveness of care. The incorporation of this measure in this specialty set will help promote communications between the dermatologist treating the melanoma and the clinicians continuing care. Melanoma recurrence is an outcome that needs precise evaluation.[1033] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the Melanoma: Tracking and Evaluation of Recurrence measure to this specialty set.

Response: We thank the commenter for supporting the addition of this measure to the Dermatology specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62303), we are finalizing the above measure(s) for addition to the *Dermatology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.9. Dermatology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE DERMATOLOGY SPECIALTY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	137	N/A	MIPS CQM Specifications	Structure	**Melanoma: Continuity of Care – Recall System:** Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12-month period, into a recall system that includes: • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment.	American Academy of Dermatology	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62304), we are finalizing the above measure(s) for removal from the *Dermatology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D. As indicated in the Table Group B introduction, measure Q494 has been added to the previously finalized measure set below and measure Q436 has been removed from the measure set as previously finalized through the CY 2024 PFS final rule (88 FR 79556 through 79560 and 88 FR 79896).

American College of Emergency Physicians
! (Equity)	N/A / N/A	487	N/A	MIPS CQM Specifications	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services

B.11. Emergency Medicine

PREVIOUSLY FINALIZED MEASURES IN THE EMERGENCY MEDICINE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
* ! (Equity)	N/A / N/A	498	N/A	MIPS CQM Specifications	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN

B.11. Emergency Medicine

MEASURES FINALIZED FOR **ADDITION** TO THE EMERGENCY MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Patient Safety)	N/A / N/A	181	N/A	Medicare Part B Claims Measure Specifications, MIPS CQM Specifications	Process	**Elder Maltreatment Screen and Follow-Up Plan:** Percentage of patients aged 60 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Emergency Medicine specialty set as it will be clinically relevant to this clinician type. "Emergency departments (EDs) are a potentially important setting for elder mistreatment identification because they provide care for a large number of older adults who may be elder mistreatment victims especially given that the ED is sometimes the only clinical setting that the patient may visit."[1034] The process of standardized screening using one or a combination of validated assessment(s) and/or instrument(s) should be done to ensure that signs of abuse or neglect are not overlooked.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of measure Q181: Elder Maltreatment Screen and Follow up Plan because hospitals are increasingly faced with older patients who have complex medical, physiological, and psychosocial needs that are often inadequately addressed by the current health care infrastructure to this specialty set. The commenter is encouraged that CMS recognizes the benefits of having EDs that focus on the care and needs of the geriatric population.

Response: We thank the commenter for supporting the addition of this measure to the Emergency Medicine specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62311), we are finalizing the above measure(s) for addition to the *Emergency Medicine Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1034] Rosen, T., Platts-Mills, T. F., & Fulmer, T. (2020). Screening for Elder Mistreatment in Emergency Departments: Current Progress and Recommendations for Next Steps. *Journal of Elder Abuse & Neglect*, *32*(3), 295–315. https://doi.org/10.1080/08946566.2020.1768997.

B.11. Emergency Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE EMERGENCY MEDICINE SPECIALTY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	134	CMS2v14	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications	Process	**Preventive Care and Screening: Screening for Depression and Follow-Up Plan:** Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to 2 days after the date of the qualifying encounter.	Centers for Medicare & Medicaid Services	We proposed to remove this measure from the Emergency Medicine specialty set beginning with the CY 2025 performance period/2027 MIPS payment year. Complete emergency medicine applicable coding is not available within this quality measure. Therefore, this measure has minimal eligibility for this clinician type.
N/A / N/A	254	N/A	MIPS CQM Specifications	Process	**Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain:** Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.	American College of Emergency Physicians	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received public comments on the measure(s) proposed for removal from this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan and agreed this measure is not clinically relevant to the practice of emergency medicine because emergency medicine clinicians do not typically conduct this comprehensive screening in the emergency department. The commenter also supported the removal of measure Q254: Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain as topped out from this specialty set.

Response: We thank the commenter for supporting the removal of these two measures from the Emergency Medicine specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62312), we are finalizing the above measure(s) for removal from the *Emergency Medicine Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.12. Endocrinology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Endocrinology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.12. Endocrinology

PREVIOUSLY FINALIZED MEASURES IN THE ENDOCRINOLOGY SPECIALTY SET

(Outcome)	2483 / N/A	503	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.12. Endocrinology

MEASURES FINALIZED FOR **ADDITION** TO THE ENDOCRINOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Endocrinology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1035] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1036] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62317), we are finalizing the above measure(s) for addition to the *Endocrinology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1035] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1036] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

American Psychiatric Association

B.13. Family Medicine

MEASURES FINALIZED FOR **ADDITION** TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Family Medicine specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1037] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1038] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

[1037] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.
[1038] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62333), we are finalizing the above measure(s) for addition to the *Family Medicine Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / 3475e	472	CMS249v7	eCQM Specifications	Process	**Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture:** Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62334), we are finalizing the above measure(s) for removal from the *Family Medicine Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.14. Gastroenterology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GASTROENTEROLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	439	N/A	MIPS CQM Specifications	Efficiency	**Age Appropriate Screening Colonoscopy:** The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31.	American Gastroenterological Association	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62338), we are finalizing the above measure(s) for removal from the *Gastroenterology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.15. General Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	3665 / N/A	495	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We proposed to include this measure in the Geriatrics specialty set as it will be clinically relevant to this clinician type. This PRO-PM will help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with the clinician. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. Allowing patients to feel heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. As more patients are living longer with multiple comorbidities, especially true for the advanced heart disease patient population, early emergence of palliative care into the overall care of cardiac patients can notably improve their quality of life, patient satisfaction, and reduction in symptoms.[1039] This measure is predicated on existing guidelines and conceptual models[1040] and can facilitate and improve effective patient-clinician communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. Through the benefits of enhanced patient-provider communication, this measure will improve the quality of care received and outcomes for patients receiving palliative care. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

[1039] See footnote Kilic et al., 2020 in Table B.4a of this Appendix.
[1040] See footnote National Consensus Project for Quality Palliative Care, 2018 in Table B.4a of this Appendix.

B.16. Geriatrics

MEASURES FINALIZED FOR **ADDITION** TO THE GERIATRICS SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Geriatrics specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized in research within the U.S. and internationally and has also been shown to be valid and reliable in different clinical settings and under different payment models.[1041] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

[1041] See footnote Phreesia, 2024 in Table B.7 of this Appendix.

B.16. Geriatrics

MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Geriatrics specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1042] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1043] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of measure Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood being added to this specialty set. Commenters supported the expanded use of this palliative care-developed measure. One commenter indicated that this measure would help ensure patient care is holistic, patient-centered, responsive to the needs of those with serious illnesses in ambulatory settings. One commenter supported measure Q503:

[1042] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1043] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

Gains in PAM® Scores at 12 Months being added to this specialty set as it will offer a high value, cross cutting and clinically significant patient-reported measure to participating clinicians.

Response: We thank the commenters for supporting the addition of these measures to the Geriatrics specialty set.

Comment: One commenter stated the exclusions for measure Q495 should include diagnoses of cognitive impairment, dementia, and Alzheimer's disease before finalizing the measure to take into consideration the limitations with patients who are not as engaged in their own decision-making as they may not be able to appropriately respond to the survey administered that determines the top-box score for this measure.

Response: We thank the commenter for their feedback. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Per the measure steward, the measure applies a person-centered approach that recognizes the person beyond the disease and prioritizes peoples' health concerns as they see them. The measure includes an exclusion for surveys filled out by proxy as well as an exception for patient who did not respond to the questions.[1044]

Comment: One commenter expressed concerns about the addition of measure Q503 to this specialty set, stating that the measure may pose challenges for use by geriatricians, who treat older adults with medical complexities and living with multiple chronic conditions. Due to the comprehensive approach needed in addressing and individualizing care in older adults with multimorbidity and the potential accumulation of disease states and medications, it may be difficult for patients to keep track of and build ability to manage their own health and health care. The commenter encouraged CMS to reconsider the inclusion of measure Q503 in the Geriatrics specialty set.

Response: The MIPS quality measure inventory does not currently include a measure with an alternate activation survey, and, as such, we are including this measure to fill a gap in care within the Geriatrics specialty set. Because clinicians have the flexibility to choose which measures to report, the adoption of this measure is not a requirement for clinicians. Instead, the addition of this measure enhances clinician choice when they select which measures to report. The PAM® is a disease-agnostic measure meant to provide meaningful information about changes in activation across many patient populations and aligns with CMS health priorities of capturing the patient voice and ensuring the patients can be partners in healthcare decisions with their clinicians. This will be a valuable tool for all patients within this scope of practice. This measure does contain exclusions for dementia and cognitive impairment to maintain an appropriate patient population for the measure's assessment.

Comment: One commenter agreed with CMS that vaccination is important to reduce morbidity and mortality caused by COVID-19 and recommends vaccination for older adults particularly those who are at higher risk of poor outcomes but was concerned that the Adult COVID-19 Vaccination Status measure will add burden to clinicians without meaningful improvements in care, quality, or vaccination rates. Given the fluctuating landscape of COVID-19 and related interim guidelines, the commenter believed that complying with the CDC recommendations that are not yet final would be difficult. If finalized, the commenter recommended CMS explore qualifiers that take into consideration these challenges as well as that the evidence is based on retrospective data that reflects the experience during a PHE when the disease was more deadly.

Response: MIPS eligible clinicians will not be required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice. This measure provides an opportunity to discuss vaccines with the patient. This measure represents an important clinical topic following the recently ended PHE for COVID-19. This process measure represents a CMS high priority clinical topic and fills a gap in MIPS by addressing COVID-19 vaccination status for all patients and ensuring clinician vaccination efforts at the point of care (for example, care for wellness and prevention against COVID-19). Due to the measure being new, there are not yet any benchmarks for MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62347 through 62349), we are finalizing the above measure(s) for addition to the *Geriatrics Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1044] American Academy of Hospice and Palliative Medicine. (2024). Palliative Care Quality Measures Project: Implementation Guide. https://aahpm.org/wp-content/uploads/2024/03/AAHPM22_PRO-PM_IMPLEMENTATION_GUIDE.pdf.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

B.17. Hospitalists

§	N/A / N/A	394	N/A	MIPS CQM Specifications	Process	**Immunizations for Adolescents:** The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the Human Papillomavirus (HPV) vaccine series by their 13th birthday.	National Committee for Quality Assurance
§	N/A / N/A	475	CMS349v7	eCQM Specifications	Process	**HIV Screening:** Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for Human Immunodeficiency Virus (HIV).	Centers for Disease Control and Prevention
! (Equity)	N/A / N/A	487	N/A	MIPS CQM Specifications	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services
*	3620 / N/A	493	N/A	MIPS CQM Specifications	Process	**Adult Immunization Status**: Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance
* ! (Equity)	N/A / N/A	498	N/A	MIPS CQM Specifications	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN

B.18. Infectious Disease

MEASURES FINALIZED FOR **ADDITION** TO THE INFECTIOUS DISEASE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Infectious Disease specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized in research within the U.S. and internationally and has also been shown to be valid and reliable in different clinical settings and under different payment models.[1045] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

[1045] See footnote Phreesia, 2024 in Table B.7 of this Appendix.

B.18. Infectious Disease

MEASURES FINALIZED FOR **ADDITION** TO THE INFECTIOUS DISEASE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Infectious Disease specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1046] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1047] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposed addition of measure Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months to this specialty set. One of these commenters noted that the inclusion of this measure in the specialty set will offer a high value, cross cutting and clinically significant patient-reported measure to participating clinicians.

[1046] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1047] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

Response: We thank the commenters for supporting the addition of this measure to the Infectious Disease specialty set.

Comment: One commenter did not support the addition of the Adult COVID-19 Vaccination Status measure to this specialty set. The commenter stated that given the unique concerns surrounding COVID-19 immunization, it may be difficult to achieve high-quality benchmarks. Many patients will accept other vaccines but will not accept the COVID-19 vaccine. If clinicians are benchmarked against a national average for this measure, the regional variation of views toward COVID-19 immunizations will cause a disadvantage for infectious disease clinicians in certain geographic regions of the country.

Response: We acknowledge commenters' concerns; however, MIPS eligible clinicians will not be required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice. This measure provides an opportunity to discuss vaccines with the patient. This measure represents an important clinical topic following the recently ended PHE for COVID-19. This process measure represents a CMS high priority clinical topic and fills a gap in MIPS by addressing COVID-19 vaccination status for all patients and ensuring clinician vaccination efforts at the point of care (for example, care for wellness and prevention against COVID-19). Due to the measure being new, there are not yet any benchmarks for MIPS.

For the reasons stated above and in the proposed rule (89 FR 62355 through 62356), we are finalizing the above measure(s) for addition to the *Infectious Disease Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

American Psychiatric Association

B.19. Internal Medicine

MEASURES FINALIZED FOR **ADDITION** TO THE INTERNAL MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Internal Medicine specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1048] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the (ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1049] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62373), we are finalizing the above measure(s) for addition to the *Internal Medicine Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1048] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1049] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / 3475e	472	CMS249v7	eCQM Specifications	Process	**Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture:** Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62374), we are finalizing the above measure(s) for removal from the *Internal Medicine Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

American Psychiatric Association

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.22. Nephrology

MEASURES FINALIZED FOR **ADDITION** TO THE NEPHROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	3665 / N/A	495	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We proposed to include this measure in the Nephrology specialty set as it will be clinically relevant to this clinician type. This PRO-PM will help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with the clinician. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. Allowing patients to feel heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. As more patients are living longer with multiple comorbidities, especially true for the advanced heart disease patient population, early emergence of palliative care into the overall care of cardiac patients can notably improve their quality of life, patient satisfaction, and reduction in symptoms.[1050] This measure is predicated on existing guidelines and conceptual models[1051] and can facilitate and improve effective patient-clinician communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. Through the benefits of enhanced patient-provider communication, this measure will improve the quality of care received and outcomes for patients receiving palliative care. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

[1050] See footnote Kilic et al., 2020 in Table B.4a of this Appendix.
[1051] See footnote National Consensus Project for Quality Palliative Care, 2018 in Table B.4a of this Appendix.

B.22. Nephrology

MEASURES FINALIZED FOR **ADDITION** TO THE NEPHROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Nephrology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1052] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1053] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

[1052] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.
[1053] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.22. Nephrology

MEASURES FINALIZED FOR **ADDITION** TO THE NEPHROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	510	N/A	MIPS CQM Specifications	Process	**First Year Standardized Waitlist Ratio (FYSWR):** The number of newly initiated patients on dialysis in a practitioner group who are under the age of 75 and were either listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio-observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Nephrology specialty set as it will be clinically relevant to this clinician type. The measure's intended objective consists of improving the overall health of patients on dialysis, with nephrologists at the forefront of caring for this patient population. Clinicians within this specialty are responsible for the education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.22. Nephrology

MEASURES FINALIZED FOR **ADDITION** TO THE NEPHROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	511	N/A	MIPS CQM Specifications	Process	**Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW):** The measure tracks dialysis patients who are under the age of 75 in a practitioner group and on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). This measure is a risk-adjusted percentage of waitlist events among dialysis patients.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Nephrology specialty set as will be clinically relevant to this clinician type. The maintenance of end stage renal disease patients on active status on the waitlist is additionally important given demonstrated disparities and positive association with subsequent transplantation. These practices are important for nephrologists who are at the forefront of caring for this patient population. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set. See Table A.8 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of measure Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this specialty set. Commenters supported the expanded use of this palliative care-developed measure. One commenter indicated that this measure would help ensure patient care is holistic, patient-centered, and responsive to the needs of those with serious illnesses in ambulatory settings.

Response: We thank the commenters for supporting the addition of this measure to the Nephrology specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62386 through 62389), we are finalizing the above measure(s) for addition to the *Nephrology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

B.24. Neurosurgical

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.24. Neurosurgical

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NEUROSURGICAL SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
NA / NA	260	N/A	MIPS CQM Specifications	Outcome	**Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2):** Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2.	Society for Vascular Surgery	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.
N/A / N/A	409	N/A	MIPS CQM Specifications	Outcome	**Clinical Outcome Post Endovascular Stroke Treatment:** Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62397), we are finalizing the above measure(s) for removal from the *Neurosurgical Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.25. Nutrition/Dietician

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

(Outcome)	N/A / N/A	505	N/A	MIPS CQM Specifications	Patient-Reported Outcome-Based Performance Measure	**Reduction in Suicidal Ideation or Behavior Symptoms:** The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' or 'Since Last Visit' within 120 days after an index assessment.	American Psychiatric Association

B.26. Obstetrics/Gynecology

MEASURES FINALIZED FOR **ADDITION** TO THE OBSTRETRICS/GYNECOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Obstetrics/Gynecology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1054] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1055] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62407), we are finalizing the above measure(s) for addition to the *Obstetrics/Gynecology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1054] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1055] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.26. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR **REMOVAL** FROM THE OBSTRETRICS/GYNECOLOGY SPECIALTY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	433	N/A	MIPS CQM Specifications	Outcome	**Proportion of Patients Sustaining a Bowel Injury at the time of any Pelvic Organ Prolapse Repair:** Percentage of patients undergoing surgical repair of pelvic organ prolapse that is complicated by a bowel injury at the time of index surgery that is recognized intraoperatively or within 30 days after surgery.	American Urogyneco-logic Society	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.
N/A / 3475e	472	CMS249v7	eCQM Specifications	Process	**Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture:** Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62408), we are finalizing the above measure(s) for removal from the *Obstetrics/Gynecology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.27a. Oncology/Hematology

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.27a. Oncology/Hematology

MEASURES FINALIZED AND NOT FINALIZED FOR **ADDITION** TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Appropriate Use)	N/A / N/A	506	N/A	MIPS CQM Specifications	Process	**Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy:** Percentage of patients, aged 18 years and older, with a diagnosis of metastatic non-small cell lung cancer (NSCLC) or squamous cell carcinoma of head and neck (HNSCC) on first-line immune checkpoint inhibitor (ICI) therapy, who had a positive PD-L1 biomarker expression test result prior to giving ICI therapy.	Society for Immunotherapy of Cancer (SITC)	We proposed to include this measure in the Oncology/ Hematology specialty set as it will be clinically relevant to this clinician type. Immunotherapy is a rapidly developing and changing subspecialty in the realm of oncology, and this measure will fill a gap within the oncologic clinical topic. The incorporation of this measure in this specialty set will help promote appropriate intervention and timeliness of PD-L1 biomarker expression testing prior to initiation of first-line treatment for the metastatic non-small cell lung cancer or squamous cell carcinoma of head and neck. This timeliness of treatment initiation can lead to improvements in patient mortality and morbidity.[1056] It's important to address the proper diagnosis of metastatic non-small cell lung cancer or squamous cell carcinoma that may impact treatment decisions so that appropriate treatment delivery is not delayed, nor ineffective therapies prescribed which could both result in poor clinical outcomes and unnecessary healthcare costs.[1057] See Table A.1 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

[1056] See footnote Pai et al., 2020 in Table A.1 of this Appendix

[1057] See footnotes Lim et al., 2015 and Pai et al., 2020 in Table A.1 of this Appendix.

B.27a. Oncology/Hematology

MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	507	N/A	MIPS CQM Specifications	Process	**Appropriate Germline Testing for Ovarian Cancer Patients:** Percentage of patients, aged 18 and older, diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of diagnosis.	American Society of Clinical Oncology	We proposed to include this measure in the Oncology/ Hematology specialty set as it will be clinically relevant to this clinician type and will fill a gap within the oncologic clinical topic. This measure addresses patients diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of their diagnosis and is predicated on existing clinical guidelines and recommendations. It also addresses a CMS priority that could allow for more personalized diagnostic, predictive, prognostic, and therapeutic strategies for the patient. Current recommendations for all women diagnosed with ovarian cancer is to receive genetic testing, however, only approximately 30 percent of women undergo any genetic testing.[1058] The high incidence of these mutations and the advent of therapy targeted toward BRCA mutations warrant testing in all individuals diagnosed with ovarian cancer for the purpose of determining treatment recommendations, risk of other cancers, and need for cascade testing of family members. See Table A.2 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

[1058] See footnote Konstantinopoulos et al., 2020 in Table A.2 of this Appendix.

B.27a. Oncology/Hematology

MEASURES FINALIZED AND NOT FINALIZED FOR **ADDITION** TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	CBE 3718 / N/A	N/A	N/A	MIPS CQM Specifications	Patient-Reported Outcome-based Performance Measure (PRO-PM)	**Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer:** The PRO-PM will assess pain interference following chemotherapy administered with curative intent to adult patients with breast cancer.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Oncology/ Hematology specialty set as it will be clinically relevant to this clinician type and will fill a gap within the oncologic clinical topic. This measure addresses a CMS high priority as a patient-reported outcome-based performance quality measure accounting for patient experience of care for this patient population. It is predicated on existing clinical guidelines and recommendations.[1059] For the breast cancer patient population, it's important to routinely assess pain to properly identify barriers to acceptable pain management and to intervene appropriately, which can improve the patient's health outcome and quality of life.[1060] See Table A.3 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
! (Outcome)	CBE 3720 / N/A	N/A	N/A	MIPS CQM Specifications	Patient-Reported Outcome-based Performance Measure (PRO-PM)	**Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer:** The PRO-PM will assess fatigue following chemotherapy administered with curative intent to adult patients with breast cancer.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Oncology/ Hematology specialty set as it will be clinically relevant to this clinician type, addresses a CMS high priority as a PRO-PM, and will fill a gap within the oncologic clinical topic. It takes into consideration the patient voice/experience of care for those patients with breast cancer with fatigue experienced following chemotherapy. PRO assessment in routine care remains underutilized, and very few PRO-PMs have been validated for the cancer population. By taking into consideration patient voice, necessary interventions can be completed to help improve their quality of life during cancer treatment. See Table A.4 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.27a. Oncology/Hematology

MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Oncology/ Hematology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1061] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1062] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported proposed addition of the Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy and the Appropriate Germline Testing for Ovarian Cancer Patients measures to this

[1061] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1062] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

specialty set. One of these commenters also supported the Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer and Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer measures being added to this specialty set.

Response: We thank the commenters for supporting these measures being added to the Oncology/Hematology specialty set.

Comment: One commenter supported the addition of the Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer and Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer measures to this specialty set. However, the commenter noted that these measures are currently limited to one tool for data collection (PROMIS). The commenter indicated licensing and fees are required to use the screening tool, which creates a barrier to adoption when there are additional screening tools available that are equally useful to manage patient care. The commenter recommended that the measure developers broaden the measure numerators to include other validated screening tools so that more clinicians can report on the measures. There are additional validated tools that are widely used in oncologic care.

Response: We acknowledge the commenter's concerns; however, MIPS eligible clinicians will not be required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice. This measure addresses a CMS high priority as a patient-reported outcome-based performance quality measure accounting for patient experience of care for this patient population. The current measure has been fully developed and tested utilizing the PROMIS tool for data collection, showing it is a reliable and valid tool for the purposes of reporting this measure. We recognize that the measures are limited to one tool for data collection; however, the tool is publicly available at no cost in paper form. Licensing fees may be applicable for permissions to integrate into electronic platforms but are not required for use for measure reporting. As performance for these measures is based upon the outcome of the assessment, it is important the same tool is being utilized across submissions to ensure continuity in data and allowing for appropriate comparisons. However, because the measure steward is no longer able to maintain the quality measures, we are not finalizing these measures under Tables A.3 and A.4 of this Appendix.

Comment: Two commenters did not support the proposed addition of the Adult COVID-19 Vaccination measure to this specialty set. Recommendations for vaccinations and boosters are changing frequently, and therefore, measure specifications need to be updated accordingly to comport with this frequently changing landscape. Lastly, the commenters stated that measures within this specialty set should align with those in the Advancing Cancer Care MVP.

Response: We acknowledge the commenters' concerns; however, MIPS eligible clinicians will not be required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice. This measure provides an opportunity to discuss vaccines with the patient. This measure represents an important clinical topic following the recently ended PHE for COVID-19. This process measure represents a CMS high priority clinical topic and fills a gap in MIPS by addressing COVID-19 vaccination status for all patients and ensuring clinician vaccination efforts at the point of care (for example, care for wellness and prevention against COVID-19). We also note that while there is generally measure alignment between the specialty measure sets and MVPs, this is not a requirement, and the MVP is not meant to be a copy of the specialty measure set. We understand COVID-19 vaccination guidelines have changed and may continue to change. Specifying the measure by referring to "up to date" guidelines ensures the measure remains current and valid despite future guideline updates. As specified, the measure holds a clinician accountable for the most current guidelines on the date of the denominator eligible encounter. We consider this to be a fair approach as it does not judge clinicians by standards that are not known to the clinician and not applicable at the time of the encounter.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62415 through 62418), we are finalizing measures Q506: Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy, Q507: Appropriate Germline Testing for Ovarian Cancer Patients, and Q508: Adult COVID-19 Vaccination Status for addition to the *Oncology/Hematology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. However, we are not finalizing the Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer and Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer measures for addition to this specialty set because the measure steward is no longer able to maintain the quality measures. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.27a. Oncology/Hematology

PREVIOUSLY FINALIZED MEASURES FINALIZED AND NOT FINALIZED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SPECIALTY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
1860 / N/A	452	N/A	MIPS CQM Specifications	Process	**Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies:** Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer and RAS (KRAS or NRAS) gene mutation spared treatment with anti-EGFR monoclonal antibodies.	American Society of Clinical Oncology	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62419), we are finalizing the above measure(s) for removal from the *Oncology/Hematology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years: measure Q452. As indicated under Table C.3 of this Appendix, measure Q144: Oncology: Medical and Radiation – Plan of Care for Pain was not finalized for removal from MIPS. Measure Q144 has been removed from this removal table and added back to the previously finalized measures table. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. Measure Q144: Oncology: Medical and Radiation – Plan of Care for Pain was not finalized for removal under Table C.3 of this Appendix. Therefore, the measure has been added back into the previously finalized specialty set and removed from the Removal table, which resulted in the Removal table being removed in its entirety in this final rule. The reason for retaining measure Q144 was addressed under Table Group C.

B.27b. Radiation Oncology

PREVIOUSLY FINALIZED MEASURES IN THE RADIATION ONCOLOGY SPECIALTY SET

National Committee for Quality Assurance

B.28. Ophthalmology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Ophthalmology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D. As indicated in the Table Group B Introduction, we proposed to rename this specialty set from "Ophthalmology/ Optometry" to "Ophthalmology" under the CY 2025 PFS proposed rule (89 FR 62422). We also proposed a new Optometry specialty set under Table B.29 of this Appendix.

American Society of Retina Specialists

B.29. Optometry

As indicated in the introductory language of Table Group B of this Appendix to this final rule, we proposed to add a new Optometry specialty set. In addition to the considerations discussed in the introductory language of Table Group B, the Optometry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we proposed to add to this specialty set.

B.29. Optometry

MEASURES FINALIZED FOR ADDITION TO THE OPTOMETRY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Care Coordination)	N/A / N/A	019	CMS 142v13	eCQM Specifications	Process	**Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care:** Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the performance period.	American Academy of Ophthalmology	We proposed to include this measure in the Optometry specialty set as it will be clinically relevant to this clinician type. An Optometrist is needed to inform a primary care clinician about a particular patient's retinopathy severity, possible diabetic macular edema, or other ocular co-morbidities. Retinopathy serves as a strong predictor of other serious medical conditions such as heart attack, stroke, kidney failure, amputation, and others.[1063] Without regular reporting from the optometrist on this issue, the primary care clinician lacks valuable information key to the overall management of the patient. This measure is essential to patient safety and completes the feedback essential for treating a deadly, common disease.[1064] Better communication between eye specialists and primary care clinicians can play a critical role in patient care, as it's an important mechanism for clinicians to communicate with one another about a patients' disease symptoms, adherence to care plan, and treatment plans.[1065] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure

B.29. Optometry

MEASURES FINALIZED FOR ADDITION TO THE OPTOMETRY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								would not have been finalized for inclusion within this specialty measure set.
* §	0055 / N/A	117	CMS 131v13	eCQM Specifications, MIPS CQM Specifications	Process	**Diabetes: Eye Exam:** Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.	National Committee for Quality Assurance	We proposed to include this measure in the Optometry specialty set as it will be clinically relevant to this clinician type. This measure could help accurately assess a clinician's ability to diagnose and treat patients safely and efficiently. The numerator options give more granular data that can be captured to discern between patients with and without evidence of retinopathy. This information could give insight into those patients with controlled blood sugar and those with uncontrolled blood sugar. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
* § ! (Patient Safety)	N/A / N/A	130	CMS 68v14	eCQM Specifications, MIPS CQM Specifications	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Optometry specialty set as it is clinically relevant to this clinician type. Documentation of current medications in the medical record facilitates the process of medication review and reconciliation by the clinician, which is necessary for reducing ADEs and promoting medication safety. The need for clinician-to-clinician coordination regarding medication records, and the existing gap in implementation, is highlighted in the American Medical Association's Physician's Role in Medication Reconciliation, which states that "critical patient information, including medical and medication histories, current medications

B.29. Optometry

MEASURES FINALIZED FOR ADDITION TO THE OPTOMETRY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								the patient is receiving and taking, and sources of medications, is essential to the delivery of safe medical care."[1066] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
§	N/A / N/A	226	CMS 138v13	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications	Process	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention**: Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance	We proposed to include this measure in the Optometry specialty set as it is clinically relevant to this clinician type. Tobacco use is the leading preventable cause of disease, disability, and death in the U.S. cigarette smoking results in more than 480,000 premature deaths each year and accounts for approximately 1 in every 5 deaths.[1067] Due to the harmful effect tobacco use can have on patients' health, clinicians should engage with their patients to screen for tobacco use and, if positive, provide tobacco cessation counseling annually. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
* ! (Patient Safety)	0022 / N/A	238	CMS 156v13	eCQM Specifications, MIPS CQM Specifications	Process	**Use of High-Risk Medications in Older Adults:** Percentage of patients 65 years of age and older who were ordered	National Committee for Quality Assurance	We proposed to include this measure in the Optometry specialty set as it is clinically relevant to this clinician type. Treating patients with high-risk medications such as anti-depressants or pain medications, may be associated with increased risk of harm from drug side-

B.29. Optometry

MEASURES FINALIZED FOR ADDITION TO THE OPTOMETRY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
						at least two high-risk medications from the same drug class.		effects and toxicity.[1068] Medication errors can occur anywhere throughout the many steps in the medication management process, with one of the most common error sources being poor interprofessional communication resulting in poor collaborative medication management.[1069] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
* ! (Care Coordination)	N/A / N/A	374	CMS 50v13	eCQM Specifications, MIPS CQM Specifications	Process	**Closing the Referral Loop: Receipt of Specialist Report:** Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Optometry specialty set as it is clinically relevant to this clinician type. Including this measure will ensure patients referred to Optometrist for a consultation complete the encounter with a consult report being returned to the referring physician. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the creation of separate specialty sets for ophthalmology and optometry. The commenter thanked CMS for addressing their concerns that including optometry in the Ophthalmology specialty set could encourage providers to report on treatments outside their expertise, licensure, or experience.

Response: We thank the commenter for supporting this update in the specialty sets.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62428 through 62431), we are finalizing the above measure(s) for addition to the *Optometry Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.30. Orthopedic Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

B.31. Otolaryngology

MEASURES FINALIZED FOR ADDITION TO THE OTOLARYNGOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Otolaryngology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1070] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1071] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62446), we are finalizing the above measure(s) for addition to the *Otolaryngology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1070] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1071] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.32. Pathology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

						Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both.	

B.33. Pediatrics

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

B.38. Preventive Medicine

MEASURES FINALIZED FOR **ADDITION** TO THE PREVENTIVE MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Preventive Medicine specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1072] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1073] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62473), we are finalizing the above measure(s) for addition to the *Preventive Medicine Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1072] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1073] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.39. Pulmonology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.39. Pulmonology

MEASURES FINALIZED FOR **ADDITION** TO THE PULMONOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Pulmonology Medicine specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1074] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1075] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62477), we are finalizing the above measure(s) for addition to the *Pulmonology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

[1074] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1075] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

B.40. Rheumatology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Rheumatology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.40. Rheumatology

MEASURES FINALIZED FOR ADDITION TO THE RHEUMATOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Rheumatology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1076] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1077] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the Adult COVID-19 Vaccination Status measure to this specialty set.

Response: We thank the commenter for supporting the addition of this measure to the Rheumatology specialty set.

[1076] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1077] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62482), we are finalizing the above measure(s) for addition to the *Rheumatology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.41. Skilled Nursing Facility

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.42. Speech Language Pathology

MEASURES FINALIZED AND NOT FINALIZED FOR **ADDITION** TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
*	N/A / 2872e	281	CMS149v13	eCQM Specifications	Process	**Dementia: Cognitive Assessment:** Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.	American Academy of Neurology	We proposed to include this measure in the Speech Language Pathology specialty set as it would be clinically relevant to this clinician type. Speech language pathologists (SLPs) utilize standardized instruments with demonstrated reliability for dementia screening. These instruments typically assess orientation to time, place, and person.[1080] Other tests (for example, story recall/story retelling) assess episodic memory and can be useful for screening early dementia.[1081] If screening reveals cognitive impairment, the individual is referred to an SLP for a comprehensive evaluation of communicative function. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. Appropriate coding was not included in the final specification; therefore, this measure is not being finalized for addition to this specialty measure set.

Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
*	N/A / N/A	282	N/A	MIPS CQM Specifications	Process	**Dementia: Functional Status Assessment:** Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	We proposed to include this measure in the Speech Language Pathology specialty set as it will be clinically relevant to this clinician type. SLPs play a critical role in diagnosis and management of dysphagia in patients with dementia through comprehensive assessment, diet consistency modifications, educating their caregiver on the use of compensatory strategies, prescribing exercise programs, and referring them to other professionals as needed. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

B.42. Speech Language Pathology

MEASURES FINALIZED AND NOT FINALIZED FOR **ADDITION** TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Patient Safety)	N/A / N/A	286	N/A	MIPS CQM Specifications	Process	**Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia:** Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: (1) dangerousness to self or others and (2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources.	American Psychiatric Association / American Academy of Neurology	We proposed to include this measure in the Speech Language Pathology specialty set as it will be clinically relevant to this clinician type. Dementia patients are at high risk for safety concerns due to underlying cognitive communication impairment which may impact judgment, reasoning, and memory as well as physical weakness resulting from other medical conditions.[1082] SLPs work directly with individuals with dementia and their caregivers to screen, assess, and establish care plans to address these issues through cognitive-communication exercises, use of compensatory strategies, environmental modifications, referrals to other professionals, and providing caregiver training. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

[1082] Thyrian, J. R., Hertel, J., Wucherer, D., Eichler, T., Michalowsky, B., Dreier-Wolfgramm, A., Zwingmann, I., Kilimann, I., Teipel, S., & Hoffmann, W. (2017). Effectiveness and Safety of Dementia Care Management in Primary Care: A Randomized Clinical Trial. *JAMA Psychiatry*, *74*(10), 996–1004. https://doi.org/10.1001/jamapsychiatry.2017.2124.

B.42. Speech Language Pathology

MEASURES FINALIZED AND NOT FINALIZED FOR **ADDITION** TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Care Coordination)	N/A / N/A	288	N/A	MIPS CQM Specifications	Process	**Dementia: Education and Support of Caregivers for Patients with Dementia:** Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.	American Academy of Neurology / American Psychiatric Association	We proposed to include this measure in the Speech Language Pathology specialty set as it will be clinically relevant to this clinician type. SLPs provide information about the nature of dementia and its course of progression. SLPs make recommendations for environmental modifications, such as using alarms and pill boxes for medication reminders, visual aids, and provide education on communication strategies and modifications to caregiver behaviors to ensure the safety of the patient and compliance with the plan of care. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
* ! (Patient Experience)	N/A / N/A	386	N/A	MIPS CQM Specifications	Process	**Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences:** Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, lawful physician-hastened death, or hospice) or whose existing end of life plan was reviewed or updated at least once annually or more frequency as clinically indicated (i.e., rapid progression).	American Academy of Neurology	We proposed to include this measure in the Speech Language Pathology specialty set as it will be clinically relevant to this clinician type. Over the course of the disease, individuals with ALS exhibit difficulty producing intelligible speech to communicate basic needs and wants.[1083] SLPs are trained to address communication deficits via exercise programs, use of communication strategies, and introducing augmentative and alternative communication (AAC) methods. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

[1083] National Institute of Neurological Disorders and Stroke. (2024). Amyotrophic Lateral Sclerosis. https://www.ninds.nih.gov/health-information/disorders/amyotrophic-lateral-sclerosis-als.

Comment: One commenter supported the proposed addition of measure Q281: Dementia: Cognitive Assessment, measure Q282: Dementia: Functional Status Assessment, measure Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia, measure Q288: Dementia: Education and Support of Caregivers for Patients with Dementia, and measure Q386: Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences to this specialty set.

Response: We thank the commenter for supporting the addition of these measures to the Rheumatology specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 624 62488 through 62490), we are finalizing the above measure(s) for addition to the *Speech Language Pathology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years: measures Q282, Q286, Q288, and Q386. Measure Q281 was not finalized for addition to this specialty set because applicable coding was not added for the measure to be reported by this specialty. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.43. Thoracic Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Thoracic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

B.44. Urgent Care

MEASURES FINALIZED FOR **ADDITION** TO THE URGENT CARE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
*	N/A / N/A	488	CMS95 1v3	eCQM Specifications, MIPS CQM Specifications	Process	**Kidney Health Evaluation:** Percentage of patients aged 18-85 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the performance period.	National Kidney Foundation	We proposed to include this measure in the Urgent Care specialty set as it will be clinically relevant to this clinician type. This measure encourages an estimated glomerular filtration rate (eGFR) and urinary albumin-to-creatinine ratio (uACR) evaluation annually for patients diagnosed with diabetes. The measure aims for early detection which can reduce associated health risk of the co-morbidities of diabetes and CKD. Having an established source of care is important in this high-risk population, however, in the general US population, approximately 15 percent of adults do not have a primary care physician.[1084] According to the American Diabetes Association annual assessment of glomerular filtration rate (GFR) in adolescents, in addition to adults, with diabetes is necessary to appropriately screen for early diabetic nephropathy, and the assessment of GFR is essential to accurately diagnose diabetic kidney disease early in the disease process.[1085] Including this measure in this specialty set could assist in capturing at-risk patients who may lack a primary care physician.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (89 FR 62497), we are finalizing the above measure(s) for addition to the *Urgent Care Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.45. Urology

MEASURES FINALIZED FOR **ADDITION** TO THE UROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	508	N/A	MIPS CQM Specifications	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Urology specialty set as it will be clinically relevant to this clinician type. Widespread vaccination against SARS-CoV-2, the virus that causes COVID-19, is critically important to stemming the morbidity and mortality caused by this disease.[1086] Clinicians are uniquely positioned to encourage uptake of COVID-19 vaccination, and clinicians are still a major driving force in promoting patient vaccination. The addition of this quality measure in this specialty set will help strengthen compliance with recommended COVID-19 vaccination, leading to improvement in the quality of patient care and prevention of disease for the general population. This quality measure aligns with clinical guidelines and the evidence-based recommendations of the ACIP, where there is general agreement about the safety and efficacy of the COVID-19 vaccine, preventing costly and potentially harmful hospitalizations.[1087] Broadening vaccination status awareness to this clinician type is valuable as it can help drive an increase in the adult vaccination rates. The COVID-19 vaccination included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty set. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed the proposed addition of the Adult COVID-19 Vaccination Status measure to the Urology specialty set as it is not clear why this vaccination status measure has been proposed for inclusion when other vaccination-focused measures have not.

[1086] See footnote Ikeokwu et al., 2023 in Table B.1 of this Appendix.

[1087] See footnotes Fitzpatrick et al., 2022; Polack et al., 2020; and Graña et al., 2022 in Table A.5 of this Appendix.

Response: We acknowledge the commenters concerns; however, MIPS eligible clinicians will not be required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice. This measure provides an opportunity to discuss vaccines with the patient. This measure represents an important clinical topic following the recently ended PHE for COVID-19. This process measure represents a CMS high priority clinical topic and fills a gap in MIPS by addressing COVID-19 vaccination status for all patients and ensuring clinician vaccination efforts at the point of care (for example, care for wellness and prevention against COVID-19). The COVID-19 vaccination is relevant for inclusion to the Urology specialty set because it is recommended for everyone 6 months and older including cancer patients who are at an increased risk for severe COVID-19. As a urologist's case mix may include cancer patients (for example, prostate and bladder cancers), it is in alignment with other measures within the specialty set. We acknowledge that other vaccinations are recommended for this patient population; however, cancer patients may be more vulnerable to COVID-19 related illness. Given the vaccination rate for COVID-19 is lower than the vaccination rate for other viruses, such as the vaccination rate for influenza, it is important to continue to drive administration, especially within the "at-risk" population.

For the reasons stated above and in the proposed rule (89 FR 62504), we are finalizing the above measure(s) for addition to the *Urology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.45. Urology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR **REMOVAL** FROM THE UROLOGY SPECIALTY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	104	N/A	MIPS CQM Specifications	Process	**Prostate Cancer: Combination Androgen Deprivation Therapy for High Risk or Very High Risk Prostate Cancer**: Percentage of patients, regardless of age, with a diagnosis of prostate cancer at high or very high risk of recurrence receiving external beam radiotherapy to the prostate who were prescribed androgen deprivation therapy in combination with external beam radiotherapy to the prostate.	American Urological Association Education and Research	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.
N/A / N/A	433	N/A	MIPS CQM Specifications	Outcome	**Proportion of Patients Sustaining a Bowel Injury at the time of any Pelvic Organ Prolapse Repair:** Percentage of patients undergoing surgical repair of pelvic organ prolapse that is complicated by a bowel injury at the time of index surgery that is recognized intraoperatively or within 30 days after surgery.	American Urogynecologic Society	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received public comments on the measure(s) proposed for removal from this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed the proposed removal of measure Q104 from the Urology specialty set and disagreed that the measure covers a limited patient population.

Response: We acknowledge the concerns expressed by the commenter. While we agree the concept is important to quality care, the removal of the measure does not preclude the quality action from continuing. Whether the clinician/group is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. As mentioned in Table C.1 of this Appendix, the low adoption of this quality measure due to the complexity of reporting, resulting in a limited denominator eligible patient population, has not allowed for the creation of a benchmark. Additionally, when the measure was able to produce a benchmark in past performance periods it showed continued high performance, establishing this measure as a standard of care. By removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the benchmark files.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62505), we are finalizing the above measure(s) for removal from the *Urology Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.46. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

OCHIN

B.46. Vascular Surgery

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR **REMOVAL** FROM THE VASCULAR SURGERY SPECIALTY SET Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
NA / NA	260	N/A	MIPS CQM Specifications	Outcome	**Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2):** Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2.	Society for Vascular Surgery	This measure was proposed for removal beginning with the CY 2025 performance period/2027 MIPS payment year. See Table Group C for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (89 FR 62509), we are finalizing the above measure(s) for removal from the *Vascular Surgery Specialty Set* as proposed for the CY 2025 performance period/2027 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

Table Group C: Previously Finalized Quality Measures Finalized and Not Finalized for Removal for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

In this final rule, we are removing 10 of the 11 previously finalized MIPS quality measures proposed for removal for the CY 2025 performance period/2027 MIPS payment year and future years. These measures are discussed in detail in the removal tables below. We note measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques was already finalized for removal with a 1-year delay to the CY 2025 performance period as noted in the Table Group B introduction (89 FR 62268); therefore, measure Q436 does not have a removal table in this final rule and there are 10 removal tables under Table Group C.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discusses our incremental approach to removing process measures. Under section IV.A.4.e.(1)(d)(ii)of this final rule, removal criteria are being finalized at 414.1330(c).

NOTE: Since publication of the measures in Table Group C in the CY 2025 PFS proposed rule (89 FR 62509 through 62515), we have determined the following measure will be retained in the CY 2025 performance period/2027 MIPS payment year: Q144 as detailed under Table C.3 of this Appendix.

As noted in the introduction to Table Group B, measures that were not finalized for removal under Table Group C have been added back to the Previously Finalized tables, where applicable, and removed from the Removal tables, under the appropriate specialty set in Table Group B.

C.1. Prostate Cancer: Combination Androgen Deprivation Therapy for High Risk or Very High Risk Prostate Cancer

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	104
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at high or very high risk of recurrence receiving external beam radiotherapy to the prostate who were prescribed androgen deprivation therapy in combination with external beam radiotherapy to the prostate.
Measure Steward:	American Urological Association Education and Research
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the limited patient population as well as adoption of this quality measure does not allow for the creation of a benchmark. For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide *https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf*. The current 2024 MIPS benchmarking data is located at *https://qpp.cms.gov/benchmarks.*
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q104: Prostate Cancer: Combination Androgen Deprivation Therapy for High Risk or Very High Risk Prostate Cancer.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: One commenter opposed removal of measure Q104 because it focuses on a "must-do" clinical process linked to overall survival over many years, as supported by multiple randomized controlled trials. While the commenter acknowledged the low uptake of the measure, they disagreed with CMS that it covers a limited patient population and noted the American Cancer Society recently reported an increase in incidence of advanced-stage disease for prostate cancer (*https://pressroom.cancer.org/FactsandFigures23*), making this measure even more relevant for urologists and others who provide care to those with prostate cancer. A second commenter did not support the removal of measure Q104.

Response: While we agree the measure concept is important to quality care, the removal of the measure does not preclude the quality action from continuing. Whether the clinician/group is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. As mentioned above, the low adoption of this quality measure due to complexity of reporting, resulting in a limited denominator eligible patient population, has not allowed for the creation of a benchmark. Additionally, when the measure was able to produce a benchmark in past performance periods it showed continued high performance, establishing this as a standard of care. By removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the benchmark files.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62510), we are finalizing the removal of measure Q104 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

C.2. Melanoma: Continuity of Care – Recall System

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	137
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12 month period, into a recall system that includes: • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Structure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure is duplicative of the Melanoma: Tracking and Evaluation of Recurrence measure being proposed in Table A.6 of this Appendix. Measure Q137 establishes a recall system linked to the process of notifying patients, with a current diagnosis or history of melanoma, when their next physical exam is due, as well as to follow up with patients who did not make an appointment within the specified timeframe or who missed a scheduled appointment. It does not assess whether the patient completed an annual skin exam nor if the process to follow up for those patients who missed an appointment is effective. The new measure proposed in Table A.6 of this Appendix is a process measure that not only assesses a significantly similar patient population, but also assesses patients who had excisional surgery for melanoma or melanoma in situ in the past 5 years for completion of an exam and/or diagnosed for recurrence of melanoma. The new measure provides a more meaningful impact to quality improvement for this patient population.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q137: Melanoma: Continuity of Care – Recall System.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: One commenter did not support the removal of measure Q137 because the new measure Melanoma: Tracking and Evaluation of Recurrence under Table A.6 of this Appendix seemed more in-depth and complex. The commenter indicated the new measure is limited to the operating clinician who completes the excisional surgery, which in many cases is not the clinician who follows up with the patients for regular skin exams and had concerns of who would be responsible for tracking and reporting the new measure. The commenter requested clarification on whether CMS would use numerator criteria 1 or numerator criteria 2 for the scoring of the new measure, stating their concern that data completeness would be hard to meet as they do not want to diagnose 20+ melanoma recurrences for each MIPS eligible clinician annually. The commenter suggested instead of removing measure Q137 that CMS drop measure Q137 to the 7-point threshold for topped-out measures so it can still be reported.

Response: We thank the commenter for their feedback and acknowledge that this measure addresses a critical element in ensuring patients receive annual follow-up appointments. We agree that in many cases the clinician who follows up with a patient who has had excisional surgery may not be the same clinician who performed the procedure. The measure does allow for the surgeon to utilize medical record documentation to determine numerator compliance and measure performance. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Based on the comments received, we recognize that this measure represents an important component in early identification of recurrence for melanoma that will drive timely and appropriate care. The Dermatology specialty set does not meet the threshold, which is 75 percent of available quality achievement points, to be considered 'at-risk'; therefore, this measure does not meet the criteria to be reviewed for possible 7-point cap removal (89 FR 62079). As such, the measure will not allow clinicians to reach maximum points for their quality score.

Comment: One commenter stated the new measure is not duplicative of measure Q137. Measure Q137 ensures the necessary infrastructure is in place for scheduling follow-up exams for melanoma patients, complementing the new measure that tracks the occurrence of these exams. Retaining measure Q137 addresses different aspects of patient care and supports dermatologists in participating in MIPS with a relevant, specialty-specific measure that is not topped out, enhancing quality improvement and positive patient outcomes.

Response: Both the new measure proposed in Table A.6 of this Appendix and measure Q137 assess a similar patient population with a diagnosis or history of melanoma. As noted earlier, while measure Q137 establishes a recall system linked to the process of notifying patients, when their next physical exam is due, as well as follows up with patients who did not make an appointment within the specified timeframe or who missed a scheduled appointment, it does not assess whether the patient completed an annual skin exam. In addition, the new proposed measure assesses patients who had excisional surgery for melanoma or melanoma in situ in the past 5 years for completion of an exam and if they're diagnosed for recurrence of melanoma. It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care.

Comment: One commenter opposed removal of measure Q137 due to the complexity and potential unintended consequences of the proposed measure. The proposed measure introduces a level of depth and complexity that may prove prohibitive for many clinicians, potentially leading to a reduction in the quality of care for the melanoma patient population. Without the existing structured recall system in place, there is a considerable risk that patients may experience a higher incidence of melanoma recurrence due to lapses in follow-up care. To address this concern, the commenter requested that CMS consider lowering the threshold for measure Q137 to the 7-point threshold for topped-out measures.

Response: It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care. This measure was previously included within MIPS as a QCDR measure and was shown to be implementable. We encourage clinicians to provide care as they determine best supports all patients during their healthcare journey even if the patient population is not included within the targeted denominator of a given measure specification. This measure does not meet the criteria to have the 7-point cap removed and as such, will not allow for clinicians to reach maximum allowed points for their quality score.

Comment: One commenter opposed removal of measure Q137, stating that the type of data currently being used by practices to satisfy this measure is difficult to translate to the new proposed measure. The American Joint Committee on Cancer (AJCC) staging references (*https://www.facs.org/quality-programs/cancer-programs/american-joint-committee-on-cancer/cancer-staging-systems/)* are usually documented in PDF files, rather than in structured text that can be easily mapped to EHR fields. As a result, identifying the appropriate denominator population for the new proposed measure would be very challenging for practices. In addition, the commenter indicated that the 5-year lookback period for the new Melanoma: Tracking and Evaluation of Recurrence measure could further complicate accurate denominator calculations due to transitions between EHR systems. When practices switch to new EHR systems, historical data from the previous EHR is often retained as PDF attachments rather than as structured data fields. The commenter also noted that dermatology has limited benchmarked quality measures and urged CMS to take this into account and maintain sufficient specialty-specific MIPS quality measures.

Response: We thank the commenter for their feedback. The intent of this measure overlaps with the new measure proposed in Table A.6 of this Appendix, leading to the positive outcome of determining recurrence in a timely manner. Coding within the new measure specification would allow clinicians to map their system to identify the appropriate patient population which includes patients with an excisional surgery for melanoma or melanoma in situ in the past 5 years with an initial AJCC Staging of 0, I, or II. Removal of measure Q137 does not preclude clinicians from continued use of a recall system which enables providers to ensure that patients receive follow-up appointments in accordance with their individual needs. We recognize that due to nuances in clinician specialization, scope of care, or regional location, not all measures within MIPS will be applicable or appropriate to all clinicians within that specialty.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62510), we are finalizing the removal of measure Q137 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

C.3. Oncology: Medical and Radiation – Plan of Care for Pain

Category	Description
CBE# / eCQM CBE #:	0383 / N/A
Quality #:	144
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure is duplicative of measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. Measure Q143 specifically questions cancer patients, currently receiving chemotherapy or radiation therapy, to quantify their pain intensity at each visit using a standardized tool. This measure is more robust than measure Q144 as it encourages the clinician to initiate a discussion regarding pain intensity with the patient at every denominator eligible visit. Measure Q144 is narrower in scope focusing on cancer patients identified with pain. To identify this patient population, a clinician will still need to screen their patients. Measure Q143 promotes screening of a broader patient population for pain, which still allows clinicians to administer care if pain is present. Additionally, measure Q143 is available for reporting within the eCQM collection type, allowing clinicians more measure options if reporting via eCQMs.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q144: Oncology: Medical and Radiation – Plan of Care for Pain.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: A number of commenters opposed the removal of measure Q144 from MIPS. Key opposition to removing the measure was that measure Q144 is not duplicative of, but rather paired with, Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. Commenters indicated the measures should be implemented sequentially to achieve a comprehensive clinical quality outcome, with measure Q143 confirming that the patient's pain was evaluated and measure Q144 validating that a patient care plan for pain was developed based on that assessment. The intent is for clinicians to report on both measures as a unit, while resulting in individual measure scores.

Commenters also indicated that both measures were recently re-endorsed by the CBE as part of its Fall 2023 Endorsement and Maintenance cycle, and the observed performance rates of measure Q144 from the 2019-2021 performance periods indicate opportunity for improvement at both the individual clinician and practice level. One commenter recommended that measures Q143 and Q144 be combined into one combined measure. Additional reasons that commenters cited for opposing the removal of measure Q144 included: it would cause misalignment with CMMI's Enhancing Oncology Model *(https://www.cms.gov/priorities/innovation/innovation-models/enhancing-oncology-model);* the measure strengthens the Advancing Cancer Care MVP under Appendix 3, Table B.2; it would be difficult to meet MIPS reporting requirements under traditional MIPS or MVPs for practices limited by their EHR's quality measure selection; practices would need to train staff on new workflows for quality measures; and pain management and improvement in pain are top health care priorities.

Response: The measure steward is currently evaluating respecifying measures Q143 and Q144 into a single, combined measure and requested that both measures be retained at this time. We encourage the commenters to work with the measure steward as these measures are considered for revision.

Based on the potential for revision to these measures in future rulemaking, and after consideration of public comments, we are not finalizing the removal of measure Q144 as proposed for the CY 2025 performance period/2027 MIPS payment year. Therefore, the measure has been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix. If the measure is not combined for CY2026, we will revisit the removal of measure Q144 for the CY2026 performance period/2028 MIPS payment year and future years.

C.4. Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	254
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.
Measure Steward:	American College of Emergency Physicians
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81 FR 77286).[1088] This measure's continued topped-out status is based on the current 2024 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide at *https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf*.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q254: Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: One commenter requested that CMS retain topped out measures proposed for removal, such as measure Q254. The commenter urged CMS to work with interested parties to come up with a reasonable solution for maintaining measures with a median performance rate of 95 percent or higher, whether it is (a) subjecting them to the newly proposed defined topped out measure benchmark; (b) maintaining them as pay-for-reporting measures (which would allow a clinician to continue to earn points and track performance even if they are not being scored on performance); or, (c) some other innovative solution to ensure high performance on these measures is monitored and maintained over time.

Response: We thank the commenter for their feedback. However, the data shows the measure has reached the end of its topped-out life cycle, which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2024 Benchmark File. Under the finalized methodology for determining which specialty measure sets may be considered 'at-risk', the Emergency Medicine specialty set does not meet the 'at-risk' threshold, which is 75 percent of available quality achievement points; therefore, this measure does not meet the criteria to be reviewed for possible 7-point cap removal (89 FR 62079).

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62511), we are finalizing the removal of measure Q254 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1088] See the 2024 MIPS Call for Measures Fact Set: https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2711/2024-MIPS-Call-for-Measures-and-Activities.zip.

C.5. Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2):

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	260
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) who are discharged to home no later than post-operative day #2.
Measure Steward:	Society for Vascular Surgery
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure will be duplicative of measure Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) if the proposed changes to the measure are finalized. We proposed in Table D.34 of this Appendix substantive changes to measure Q344, which describe the inclusion of the measure concept represented in Q260. Measure Q260 is focused on performing CEA on asymptomatic patients who are at low risk for morbidity and therefore are expected to have very low complication rates as indicated by patients being discharged to home by post-operative day #2. As a result, we proposed to maintain measure Q344 and remove measure Q260 from MIPS.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q260: Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2).

Response: We thank the commenter for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62511 through 62512), we are finalizing the removal of measure Q260 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

C.6. Clinical Outcome Post Endovascular Stroke Treatment

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	409
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention.
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) at the measure steward's request as it is no longer being maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q409: Clinical Outcome Post Endovascular Stroke Treatment.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62512), we are finalizing the removal of measure Q409 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

C.7. Proportion of Patients Sustaining a Bowel Injury at the time of any Pelvic Organ Prolapse Repair

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	433
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percentage of patients undergoing surgical repair of pelvic organ prolapse that is complicated by a bowel injury at the time of index surgery that is recognized intraoperatively or within 30 days after surgery.
Measure Steward:	American Urogynecologic Society
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure will be duplicative of measure Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair, if the proposed changes to the measure are finalized. We proposed in Table D.46 of this Appendix substantive changes to measure Q432, which describe the inclusion of the measure concept represented in measure Q433. In addition, we proposed to update the measure title and description for measure Q432 to include patients who sustain a bowel injury at the time of any pelvic organ prolapse repair.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q433: Proportion of Patients Sustaining a Bowel Injury at the time of any Pelvic Organ Prolapse Repair.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62513), we are finalizing the removal of measure Q433 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

C.8. Age Appropriate Screening Colonoscopy

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	439
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.15 percent for the MIPS CQM collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQM collection type is considered extremely topped out. The average performance rate is based on the current 2024 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks.* For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide at *https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q439: Age Appropriate Screening Colonoscopy.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: Two commenters opposed removal of measure Q439. The commenters did not believe MIPS performance data is an accurate assessment to determine whether this measure was topped out and stated that CMS' analysis was insufficient to make the determination. CMS' analysis was based on one year of benchmarking data following the substantive changes made to the measure specification in PY2022. The amount of time to verify the extremely topped-out status should be based on multiple years, not one performance year cycle, and no other multi-year data was used to validate the topped-out status or extremely topped-out status, which typically occurs over multiple performance year cycles. Furthermore, the commenters stated that measure Q439 has been designated by CMS as a high-priority measure and as the only colorectal cancer screening measure that specifically addresses the vulnerable population of older adults.

The commenters indicated that measure Q439 is one of six measures included in the GIQuIC qualified clinical data registry (QCDR) measure set, three of which are QPP measures and three of which are GIQuIC QCDR measures. It is the six quality measures that make up the GIQuIC QCDR measure set that balance the only specialty-specific cost measure included in the candidate GI Care MVP, the Screening/Surveillance Colonoscopy episode-based cost measure. The commenters requested that this measure be given an appropriate glidepath for removal, so gastroenterologists have time to determine an alternative meaningful measure on which to assess their practice and report.

Response: While we agree that the intent of measure Q439 is to encourage age-appropriate colonoscopy screenings, this measure is extremely topped out which further demonstrates that age-appropriate colonoscopies have become a standard of care. Our analysis was sufficient in determining that this measure was topped out because both a historical benchmark for PY2024 and a performance period benchmark for PY2023 was produced showing extremely topped out performance in both instances. Additionally, removal of this measure leaves a sufficient number of measures available, 13, within the gastroenterology specialty set. This measure was previously proposed for removal for the CY 2023 performance period/2025 MIPS payment year due to low adoption, however, we did not remove it at that time based on comments received including the request to maintain the measure for two years to ascertain performance based upon the measure revisions requested (see 87 FR 70541). The updated measure specification has been available for use in MIPS for multiple years and has continued to demonstrate extremely high performance. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2024 Benchmark File. While this measure was updated for PY2022, both an historical benchmark for PY2024 and a performance period benchmark for PY2023 was produced showing extremely topped out performance in both instances. We encourage the GIQuIC QCDR to adopt alternate quality measures or develop new quality measures to ensure a robust offering for their clients.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62513), we are finalizing the removal of measure Q439 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

C.9. Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies

Category	Description
CBE# / eCQM CBE #:	1860 / N/A
Quality #:	452
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM Specifications
Measure Description:	Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer and RAS (KRAS or NRAS) gene mutation spared treatment with anti-EGFR monoclonal antibodies.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure is duplicative of measure Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who Receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy. Measures Q451 and Q452 ask the same clinical question but approach questioning from different clinical perspectives. Measure Q451 assesses patients who have already received anti-EGFR monoclonal therapy to determine if they received RAS gene mutation testing prior to initiation of therapy, while measure Q452 is a standard-of-care measure, as well as the counter clinical perspective to measure Q451. Measure Q452 only evaluates for patients who received anti-EGFR monoclonal treatment. Therefore, measure Q452 is a component of the quality action within measure Q451. The molecular biomarkers for the evaluation of colorectal cancer guidelines[1089] strongly recommend "Patients with colorectal carcinoma being considered for anti-EGFR therapy must receive RAS mutational testing," which is the standard of care being evaluated by this measure. Measure Q451 provides an opportunity for a retrospective review and has the potential to improve clinical outcomes. For example, if the performance rates show there is a gap in medical care or high incidence of initiating therapy without first testing for the RAS gene mutation, clinical processes can be revised to improve practice. "Clinical care review is the process of retrospectively examining potential errors or gaps in medical care, with a goal of future practice improvement." [1090]
In the Circumstance the Measure Was Retained:	If the measure was not finalized for removal in the CY 2025 PFS final rule, we proposed to apply the following substantive changes to the measure specifications: (1) add denominator instructions to clarify the denominator eligible timeframe for diagnosis and (2) only patients who have been newly diagnosed with Stage IV colorectal cancer, or patients who have distant metastases at the time of colon cancer diagnosis, are to be included in the denominator of the measure to ensure the appropriate patient population is assessed for the numerator action. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for its retention would have been addressed under Table Group C. The substantive changes outlined above will be applied to the measure specifications.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed removal of measure Q452: Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

[1089] Sepulveda, A. R., Hamilton, S. R., Allegra, C. J., Grody, W., Cushman-Vokoun, A. M., Funkhouser, W. K., Kopetz, S. E., Lieu, C., Lindor, N. M., Minsky, B. D., Monzon, F. A., Sargent, D. J., Singh, V. M., Willis, J., Clark, J., Colasacco, C., Rumble, R. B., Temple-Smolkin, R., Ventura, C. B., & Nowak, J. A. (2017). Molecular Biomarkers for the Evaluation of Colorectal Cancer: Guideline From the American Society for Clinical Pathology, College of American Pathologists, Association for Molecular Pathology, and the American Society of Clinical Oncology. *Journal of Clinical Oncology: Official Journal of the American Society of Clinical Oncology, 35(13)*, 1453–1486. https://doi.org/10.1200/JCO.2016.71.9807.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62514), we are finalizing the removal of measure Q452 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

C.10. Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

Category	Description
CBE# / eCQM CBE #:	N/A / 3475e
Quality #:	472
CMS eCQM ID:	CMS249v7
Collection Type:	eCQM Specifications
Measure Description:	Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized in 83 FR 60104 through 60105) because the quality action being measured has become standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 1.1 percent for the eCQM collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the eCQM collection type is considered extremely topped out. The average performance rate is based on the current 2024 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks.* For more information on benchmarks, see the MIPS 2024 Quality Benchmarks User Guide at *https://www.cms.gov/files/document/2024-quality-benchmarks-user-guide-scoring-examples-pdf.pdf*.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed removal of measure Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture. One of these commenters agreed with the proposed removal of this measure, particularly given that it is topped out.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

Comment: One commenter did not support the removal of measure Q472. The commenter was concerned about the significant number of measure removals from certain specialties and urged CMS to be mindful when removing multiple measures from specialties so as to ensure sufficient measures remain in MIPS that are pertinent to those specialties

Response: We acknowledge that removal of this measure decreases the number of available measures for certain specialists; however, there are policies in place, such as Eligible Measure Applicability (EMA) and denominator reduction to account for this when working to meet MIPS quality performance category requirements. Additionally, these nuances are considered when reviewing the MIPS quality measure inventory.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62515), we are finalizing the removal of measure Q472 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

Table Group D: Finalized Substantive Changes to Previously Finalized MIPS Quality Measures for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

The D Tables within this final rule provide the substantive changes finalized for the MIPS quality measures in CY 2025. We note that some MIPS quality measures available in traditional MIPS and MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as finalized in section IV.A.4.c.(3) of this final rule. For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group D.

The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2025 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2025 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2026. The 2025 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at *https://qpp.cms.gov*. In addition, eCQMs that are endorsed by a CBE are shown in Table D of this Appendix as follows: CBE # / eCQM CBE #.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2025 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2025 quality measure specifications, in the form of an 'Instructions Note' to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only where telehealth encounters previously were not allowed as denominator eligible will the D table corresponding to a measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the finalized substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

D.1. Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
CBE # / eCQM CBE #:	0059 / N/A
Quality #:	001
CMS eCQM ID:	CMS122v13
Current Collection Type:	Medicare Part B Claims Measure Specifications/ eCQM Specifications/ MIPS CQM Specifications/ Medicare CQM Specifications (collection type available only in the APP and/or APP Plus)
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
Substantive Change:	**The measure title is revised from "Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)" to:** Diabetes: Glycemic Status Assessment Greater Than 9%. **The measure description is revised to read: For all collection types:** Percentage of patients 18-75 years of age with diabetes who had a glycemic status assessment (hemoglobin A1c [HbA1c] or glucose management indicator [GMI]) > 9.0% during the measurement period. **Updated denominator exclusion: For all collection types: Removed:** specific encounter requirements from the frailty/advanced illness exclusion. **The measure numerator is revised to read: For all collection types:** Patients whose most recent glycemic status assessment (HbA1c or GMI) (performed during the measurement period) is > 9.0% or is missing, or was not performed during the measurement period. **Updated guidance: For the eCQM Specifications collection type: Revised:** If the glycemic status assessment (HbA1c or GMI) is in the medical record, the test can be used to determine numerator compliance. **Added:** Glycemic status assessment (HbA1c or GMI) must be reported as a percentage (%). If multiple glycemic status assessments were recorded for a single date, use the lowest result. **Updated numerator instructions: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:** GMI as an assessment option. **Updated numerator options: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:** GMI as an assessment option. **Updated numerator note: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added**: If multiple glycemic status assessments were recorded for a single date, use the lowest result.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale	We proposed to revise this measure to include glucose management indicators (GMI) to broaden the acceptable methods for monitoring the glycemic status of patients with diabetes. This measure revision supports those clinicians that are using this monitoring method to ensure management of persons with diabetes using continuous glucose monitoring.[1091] We also proposed to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision will update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q001. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the frailty exclusion criteria to measure Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%). The removal of the encounter criteria will reduce reporting burden while still following through with the intent of the exclusion for patients with an indication of frailty. A second commenter appreciated the proposed substantive changes proposed to this measure.

[1091] ElSayed, N. A., Aleppo, G., Aroda, V. R., Bannuru, R. R., Brown, F. M., Bruemmer, D., Collins, B. S., Hilliard, M. E., Isaacs, D., Johnson, E. L., Kahan, S., Khunti, K., Leon, J., Lyons, S. K., Perry, M. L., Prahalad, P., Pratley, R. E., Seley, J. J., Stanton, R. C., Gabbay, R. A., … on behalf of the American Diabetes Association (2023). 7. Diabetes Technology: Standards of Care in Diabetes-2023. *Diabetes Care*, *46*(Suppl 1), S111–S127. https://doi.org/10.2337/dc23-S007.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: One commenter supported the proposed substantive changes exclusion because aggressive glycemic control may not be appropriate for all older adults, especially those with advanced illness. A second commenter appreciated the proposed substantive changes to update the measure title and specifications, per revised HEDIS specifications, so that it now includes glycemic status indicator (GMI). However, the commenter requested clarification regarding how the exclusions for frailty and/or advanced illness will work at an operational level in medical clinics. The commenter questioned whether these exclusions occur automatically based on claims, and if so, how will CMS communicate the exclusions back to each patient's clinician?

Response: To meet the exclusion for frailty and/or advanced illness, the measure still requires patients 66 years of age and older to have at least one claim/encounter for frailty during the measurement period AND an advanced illness diagnosis during the measurement period or the year prior to the measurement period. As noted above, removal of the additional requirement for patients to have had either one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. When submitting this measure, the clinician would report on patients based upon the information within the medical record in accordance with the current measure specification. The update to the denominator exclusion does not change how the measure data may be captured and reported only the criteria to determine whether a patient is appropriate for the quality action assessment.

If reporting via the Medicare Part B Claims Measure collection type, the exclusion is factored into the calculation of the measure based upon the information submitted on the claim(s) forms in accordance with the measure specification. However, if reporting via MIPS CQM or eCQM collection types, the MIPS eligible clinician would be required to meet the measure requirements as posted and ensure the patient's medical record substantiates all data submitted. While eCQM collection type is specific to data abstraction from the electronic health record as a data source, MIPS CQM collection type is constructed to be instructional for use within any data source available, and how a system is mapped to pull the information, as specified, is at the discretion of the reporting clinician/group.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62517), we are finalizing the changes to measure Q001 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.2. Anti-Depressant Medication Management

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	009
CMS eCQM ID:	CMS128v13
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported. a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks). b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).
Substantive Change:	**The measure initial patient population is revised to read:** Patients 18 years of age and older as of the IPSD who were dispensed antidepressant medications during the Intake Period, and were diagnosed with major depression 60 days prior to, or 60 days after the dispensing event and had a visit 60 days prior to, or 60 days after the dispensing event. **Updated logic and logic definition: Revised:** logic to base it on age and IPSD.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to revise the initial patient population look-back window to evaluate the age of the patient when medication is dispensed during the intake period. The updated timeframe distinguishes between a new prescription and a continuing prescription to ensure the measure logic is more accurate in determining the antidepressant treatment has met the numerator's quality action. We also proposed to update the logic to look at the age and IPSD so that the look-back window allows all patients to be assessed for the exclusion criteria related to previous anti-depression medication.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62518), we are finalizing the changes to measure Q009 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.3. Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

Category	Description
CBE # / eCQM CBE #:	N/A/ N/A
Quality #:	019
CMS eCQM ID:	CMS142v13
Current Collection Type:	eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the performance period.
Substantive Change:	**Modified collection type**: eCQM Specifications collection type. **Updated Guidance: Revised:** The communication of results, including the level of severity of diabetic retinopathy and presence or absence of macular edema to the primary care physician providing ongoing care of a patient's diabetes should be completed soon after the dilated exam is performed.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to remove the MIPS CQM collection type as it has reached the end of the topped-out lifecycle (82 FR 53640). The average performance rate and topped-out status is based on the current MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*. However, the benchmarking data continues to show a gap for the eCQM collection type and as such, we proposed to retain that collection type. Additionally, we proposed to revise the measure guidance to define required information to be included within the report for the purposes of numerator compliance. This ensures all appropriate information is being communicated for patient care coordination.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed the proposed substantive changes to remove the MIPS CQM collection type to measure Q019: Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care.

Response: We acknowledge the commenter's concerns; however, the MIPS CQM collection type has not only reached the end of the topped-out life cycle, but it also showed an average performance rate of 100 percent which does not allow for meaningful benchmarks to be established.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62518), we are finalizing the changes to measure Q019 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.4. Advance Care Plan

Category	Description
CBE # / eCQM CBE #:	0326 / N/A
Quality #:	047
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Spcifications, MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.
Substantive Change:	**Updated the denominator criteria: For the MIPS CQM Specifications and the Medicare Part B Specifications collection types: Added:** coding for neuropsychology.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update denominator criteria to include coding for neuropsychology as this measure is applicable to their scope of care.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q047: Advance Care Plan but requested clarification regarding whether these revisions apply only for MIPS or whether they apply across all payers and programs. The commenter indicated that measure specification changes and reporting mechanisms should align across all payers and programs.

Response: We thank the commenter for their supporting the substantive changes to this measure. The revisions in this final rule apply only to MIPS; however, we strive to align measures across programs where possible.

After considerations of public comments, and for the reasons stated above and in the proposed rule (89 FR 62519), we are finalizing the changes to measure Q047 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.5. Diabetes: Eye Exam

Category	Description
CBE # / eCQM CBE #:	0055 / N/A
Quality #:	117
CMS eCQM ID:	CMS131v13
Current Collection Type:	eCQM Specifications/ MIPS CQM Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	**Updated denominator exclusion: For all collection types: Removed:** specific encounter requirements from the frailty/advanced illness exclusion.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision will update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q117. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive changes to update to the frailty exclusion to measure Q117: Diabetes: Eye Exam. The commenters agreed this update will make it easier and less burdensome to capture the intended patient population for this measure.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: One commenter supported the proposed substantive changes to this measure but requested clarification regarding how the clinician will know when their patient went somewhere else and obtained a frailty and/or advanced illness diagnosis which then removes them from the clinician's denominator.

Response: We thank the commenter for supporting the substantive changes to this measure. As noted above, removal of the additional requirement for patients to have had either one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. We encourage clinicians to provide care as they determine best supports all patients during their healthcare journey. When submitting this measure, the clinician would report on patients based upon the information within the medical record in accordance with the current measure specification. The update to the denominator exclusion does not change how the measure data may be captured and reported only the criteria to determine whether a patient is appropriate for the quality action assessment.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62519), we are finalizing the changes to measure Q117 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.6. Documentation of Current Medications in the Medical Record

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	130
CMS eCQM ID:	CMS68v14
Current Collection Type:	eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.
Substantive Change:	**The measure description is revised to read: For all collection types:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. **Updated guidance: For the eCQM specifications collection type: Revised**: allows for documentation to be completed on the day of the encounter. **Updated initial patient population: For the eCQM specifications collection type: Removed**: age criteria. **Updated denominator: For the MIPS CQM Specifications collection type: Removed:** age criteria. **Updated denominator criteria: For the MIPS CQM Specifications collection type: Removed:** age criteria. **Added:** coding for pediatric audiology services. **Updated numerator note: For the MIPS CQM Specifications collection type: Revised:** allows for documentation to be completed on the day of the encounter.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update multiple components of the measure to remove the age criteria so that all patients, regardless of age, are assessed for having a list of their current medications documented in their medical record. This revision broadens the denominator, supporting assessment of current medications for all patient age ranges. Assessing for missing information about the dosage, route, or frequency of a medication supports clinical communication and may assist in avoiding patient harm.[1092] Additionally, we proposed to update the measure to allow for the quality action to occur on the day of the encounter rather than limiting to during the encounter. This will allow for flexibility to align with the clinician's workflows and systems. We also proposed to update the denominator criteria to include coding for pediatric audiology services as this measure is applicable to their scope of care.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed substantive changes to measure Q130: Documentation of Current Medications in the Medical Record. One commenter supported the proposed modification to the timing of the numerator action to allow practices to perform quality actions on the encounter day rather than solely during the encounter itself. If finalized, the commenter requested that CMS ensure qualified registries can map to a date stamp, thereby verifying that the quality action took place on the encounter day.

Response: We thank the commenters for supporting the substantive changes to this measure. Prior to selecting or using any third party intermediary or its products, the individual clinician, group, virtual group, subgroup, and/or APM Entity should perform their own due diligence on the intermediary and its products to ensure congruency in workflow and data transfer. It is incumbent upon MIPS eligible clinicians to ensure the accuracy of their data.

Comment: One commenter appreciated the proposed substantive changes to measure Q130 but requested clarification regarding whether a nurse can complete the documentation. Additionally, the commenter encouraged CMS to consider scenarios such as when a clinician may complete a medication reconciliation the day after an encounter (rather than same day), as often occurs when clinicians work to catch up on their documentation. With this scenario in mind, the commenter encouraged CMS to expand the timeframe so that the documentation may occur beyond the actual day of the encounter. The commenter also acknowledged that this measure is a "check box" measure.

[1092] Owen, M. C., Chang, N. M., Chong, D. H., & Vawdrey, D. K. (2011). Evaluation of Medication List Completeness, Safety, and Annotations. *AMIA Annual Symposium Proceedings. AMIA Symposium*, *2011*, 1055–1061. https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3243276/.

Response: We thank the commenter for their feedback. The measure does not dictate a clinician's workflow and which clinical staff, such as a nurse, may complete the documentation of current medications. However, the MIPS eligible clinician must attest to documenting, updating, or reviewing the patient's current medications to meet the measures quality action. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62520), we are finalizing the changes to measure Q130 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.7. Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
CBE # / eCQM CBE #:	0384 / 0384e
Quality #:	143
CMS eCQM ID:	CMS157v13
Current Collection Type:	eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Substantive Change:	**Updated initial patient population: For the eCQM Specifications collection type: Revised:** Population 1: All patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy. Population 2: All patient visits, regardless of patient age, with a diagnosis of cancer currently receiving radiation therapy.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to revise this measure to split the initial patient population to delineate between patients who are receiving radiation therapy and are assessed for pain intensity and their pain level quantified. This additional patient population will allow clinicians reporting this measure the ability to distinguish their performance between patients receiving chemotherapy and those receiving radiation services. It will also align the measure across all collection types.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters opposed the proposed substantive changes to measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified to split the initial population to distinguish between patients who receive chemotherapy and patients who receive radiation therapy. The commenters sought clarification from CMS on whether the intent of this proposed change is to have a multi strata measure or two separate measures. This measure is comprised of two patient populations, but it is intended to result in one reporting rate. Pain is one of the most common and debilitating symptoms reported amongst cancer patients, and both chemotherapy and radiation specifically are associated with several distinct pain syndromes. Splitting this patient population into two populations resulting in two performance rates would essentially create two different measures, and the intent of the measure is to encompass both therapies into one rate to comprehensively assess pain in cancer patients. The commenters believed the division of one measure into two contradicts CMS policy, which seeks to restrict the number of measures pertaining to specific subjects and populations.

Response: As noted, the split in the initial population is intended to allow clinicians the ability to distinguish their performance between patients receiving chemotherapy and those receiving radiation therapy. This is not a change in how the measure is implemented, but rather a clarification that allows the logic in the eCQM collection type to better identify the patients who are receiving either chemotherapy or radiation. The measure will remain a single measure with a single performance rate for the purposes of benchmarking. This also better aligns the eCQM and MIPS CQM collection types.

As noted under Table C.3 of this Appendix, the measure steward is currently evaluating a proposal to respecify measures Q143 and Q144: Oncology: Medical and Radiation – Plan of Care for Pain into a single, combined measure. The measure steward can evaluate whether it would be appropriate to split the measure into separate medical oncology and radiation oncology measures. The request was to keep two separate measures pending their revision.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62521), we are finalizing the changes to measure Q143 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.8. Falls: Plan of Care

Category	Description
CBE # / eCQM CBE #:	0101 / N/A
Quality #:	155
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.
Substantive Change:	**Modified collection type:** MIPS CQM Specifications collection type.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to revise this measure by removing the Medicare Part B Claims Measure collection type for this measure as it has reached the end of the topped-out lifecycle (82 FR 53640). The average performance rate is based on the current 2024 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed substantive changes to measure Q155: Falls: Plan of Care.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62521), we are finalizing the changes to measure Q155 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.9. Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration

Category	Description
CBE # / eCQM CBE #:	0115 / N/A
Quality #:	168
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require a return to the operating room (OR) during the current hospitalization for mediastinal bleeding with or without tamponade, graft occlusion, valve dysfunction, or other cardiac reason.
Substantive Change:	**The measure description is revised to read:** Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require a return to the operating room (OR) for mediastinal bleeding with or without tamponade, unplanned coronary artery intervention (native vessel, graft or both), valve dysfunction, aortic reintervention or other cardiac reason during the current hospitalization. **The measure numerator is revised to read:** Patients undergoing isolated CABG surgery who require a return to the OR for mediastinal bleeding with or without tamponade, unplanned coronary artery intervention (native vessel, graft or both), valve dysfunction, aortic reintervention or other cardiac reason during the current hospitalization. **Updated numerator options: Added:** unplanned coronary artery intervention (native vessel, graft, or both) and aortic reintervention
Measure Steward:	Society of Thoracic Surgeons
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale	We proposed to revise this measure to broaden the scope of cardiac complications that may require a return to the operating room following isolated CABG surgery. These revisions support the measure to decrease surgical re-exploration following CABG surgery, which is a serious complication and impacts length of stay, efficient use of resources, and increases risk for additional injury and death.[1093] Although rates of re-exploration after cardiac surgery have significantly declined recently, it has been linked to much higher complications, mortality, and hospitalizations.[1094]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q168: Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration that broaden the scope of cardiac complications that may require a return to the operating room following isolated CABG surgery. The commenter supported these revisions aiming to decrease surgical re-exploration following CABG surgery. Surgical re-exploration following a CABG surgery is a serious complication and impacts risk of mortality, new-onset renal failure, and increased blood use, which may adversely affect long-term survival. Although rates of re-exploration after cardiac surgery have significantly declined recently, it has been linked to much higher complications, mortality, and hospitalizations.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62522), we are finalizing the changes to measure Q168 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1093] Tran, Z., Williamson, C., Hadaya, J., Verma, A., Sanaiha, Y., Chervu, N., Gandjian, M., & Benharash, P. (2022). Trends and Outcomes of Surgical Reexploration After Cardiac Operations in the United States. *The Annals of Thoracic Surgery*, *113*(3), 783–792. https://doi.org/10.1016/j.athoracsur.2021.04.011.

[1094] See footnote Tran et al., 2022.

D.10. Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	176
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.
Substantive Change:	**Updated denominator instructions: Added:** new biosimilar medications.
Measure Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the list of medications by adding new biosimilar medications to the existing list in the denominator instructions. This expansion will provide an up-to-date list of appropriate biologics and/or immune response modifiers that clinicians may have prescribed for their patients, thereby ensuring that the right patients are identified in the denominator of this measure. These targeted immunotherapies are associated with a high risk of progression to active TB infection, therefore screening for latent TB prior to initiating first course therapy is highly recommended since it has been shown to effectively reduce the incidence of progression in patients with latent TB.[1095]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to include new biosimilar medications to measure Q176: Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy as requested. A second commenter also supported the substantive changes to this measure and requested that CMS clearly communicate a comprehensive list of the additional biosimilar medications that will be added to this measure by December 2024. The commenter noted this information was not included in this proposed rule and practices will need time to implement these changes.

Response: We thank the commenters for supporting the substantive changes to this measure. The list of additional biosimilar medications is included in the measure specifications that will be posted mid December 2024.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62523), we are finalizing the changes to measure Q176 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1095] CDC. (2020). Latent Tuberculosis Infection – A Guide for Primary Health Care Providers. https://www.cdc.gov/tb/media/pdfs/Latent-TB-Infection-A-Guide-for-Primary-Health-Care-Providers.pdf.

D.11. Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity

Category	Description
CBE # / eCQM CBE #:	2523 / N/A
Quality #:	177
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment of disease activity using an ACR-preferred RA disease activity assessment tool at ≥50% of encounters for RA for each patient during the measurement year.
Substantive Change:	**The measure description is revised to read:** Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart who have an assessment of disease activity using an ACR-preferred RA disease activity assessment tool at ≥50% of encounters for RA for each patient during the performance period. **The measure denominator is revised to read:** Patients aged 18 years and older with two or more RA diagnoses documented at least 90 days apart with at least one encounter with an RA diagnosis occurring during the performance period and an additional encounter with an RA diagnosis occurring in the performance period or prior performance period. **Updated denominator definition: Added:** Encounter – An encounter during the performance period where one of the CPT or HCPCS codes listed in the patient encounter criteria is used without a telehealth modifier (i.e., only non-telehealth visits are to be considered for this measure). Additional encounter - An additional encounter during the performance period or prior performance period where one of the CPT or HCPCS codes listed in the patient encounter is used to confirm an RA diagnosis with ICD-10-CM diagnosis codes as listed in the Denominator criteria. **Updated denominator criteria: Added:** An additional encounter with an RA diagnosis during the performance period or prior performance period that is at least 90 days before or after an encounter with an RA diagnosis during the performance period. **Updated numerator definition: Revised:** A result within the valid range of the selected tool qualifies for meeting numerator performance as long as a result is captured at ≥50% of each patient's qualified encounters. If the result of a recorded disease activity assessment is outside the valid range of scores for the tool (e.g., a CDAI score of 101 when the maximum possible score is 76.0) or is only recorded as a disease activity level (e.g., low, moderate, or high) in place of a calculated numerical score, this score should not be included in the count to meet the ≥50% requirement in the numerator.
Measure Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to revise the denominator to provide greater specificity on the timeframe and criteria for denominator coding and how it should be captured to ensure the appropriate patients are being identified for this measure. Diagnosing RA requires "a combination of physical exams, blood tests for inflammatory markers, and imaging tests (like X-rays and MRIs), in addition to patient-reported symptoms," which can take multiple visits to determine an accurate assessment of RA disease activity.[1096] Therefore, this change will align more closely with the workflow of clinicians and allows the assessment of a patient for RA disease activity during more than one clinical visit. These changes support a comprehensive perspective of the patient's disease activity level and should promote optimal treatment outcomes. We proposed to revise the definition for 'Assessment of Disease Activity' to confirm that only those assessments where the disease activity is correctly recorded are included in the numerator quality action for the purposes of meeting performance. Not only do the results need to be within the range of the selected validated qualifying tool, but also a calculated numeric score and not simply a disease activity level. This will ensure that all assessment information is correctly captured to drive appropriate care.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the numerator and denominator to measure Q177: Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity.

[1096] Brody, B. (2020). The American College of Rheumatology Updated Its Approved Disease Activity Measures for Rheumatoid Arthritis — Here's What That Means. https://creakyjoints.org/living-with-arthritis/symptoms/approved-disease-activity-measures-for-rheumatoid-arthritis/.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62524), we are finalizing the changes to measure Q177 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.12. Rheumatoid Arthritis (RA): Functional Status Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	178
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.
Substantive Change:	**The measure description is revised to read:** Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart for whom a functional status assessment was performed at least once during the performance period. **The measure denominator is revised to read:** Patients aged 18 years and older with two or more RA diagnoses documented at least 90 days apart with at least one encounter with an RA diagnosis occurring during the performance period and an additional encounter with an RA diagnosis occurring in the performance period or prior performance period. **Updated denominator definition: Added:** Encounter – An encounter during the performance period where one of the CPT or HCPCS codes listed in the patient encounter criteria is used. Additional encounter – An additional encounter during the performance period or prior performance period where one of the CPT or HCPCS codes listed in the patient encounter is used to confirm an RA diagnosis with ICD-10-CM diagnosis codes as listed in the Denominator criteria. **Updated denominator criteria: Added:** an additional encounter with an RA diagnosis during the performance period or prior performance period that is at least 90 days before or after an encounter with an RA diagnosis during the performance period.
Measure Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to revise the denominator to provide greater specificity on the timeframe and criteria for denominator coding and how it should be captured to ensure the appropriate patients are being identified for this measure. Diagnosing RA requires "a combination of physical exams, blood tests for inflammatory markers, and imaging tests (like X-rays and MRIs), in addition to patient-reported symptoms," which can take multiple visits to determine an accurate assessment of RA disease activity.[1097] Therefore, this change will align more closely with the workflow of clinicians and allows assessment of a patient for RA disease activity during more than one clinical visit. These changes support a comprehensive perspective of the patient's disease activity level and should promote optimal treatment outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the denominator to measure Q178: Rheumatoid Arthritis (RA): Functional Status Assessment.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62525), we are finalizing the changes to measure Q178 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1097] See footnote Brody, 2020 in Table D.11 of this Appendix.

D.13. Rheumatoid Arthritis (RA): Glucocorticoid Management

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	180
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone > 5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.
Substantive Change:	**The measure description is revised to read:** Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone >5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan during the performance period. **The measure denominator is revised to read:** Patients aged 18 years and older with two or more RA diagnoses documented at least 90 days apart with at least one encounter with an RA diagnosis occurring during the performance period and an additional encounter with an RA diagnosis occurring in the performance period or prior performance period. **Updated denominator definition: Added:** Encounter – An encounter during the performance period where one of the CPT or HCPCS codes listed in the patient encounter criteria is used. Additional encounter -– An additional encounter during the performance period or prior performance period where one of the CPT or HCPCS codes listed in the patient encounter is used to confirm an RA diagnosis with ICD-10-CM diagnosis codes as listed in the Denominator criteria. **Updated denominator criteria: Added:** An additional encounter with an RA diagnosis during the performance period or prior performance period that is at least 90 days before or after an encounter with an RA diagnosis during the performance period.
Measure Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to revise the denominator to provide greater specificity on the timeframe and criteria for denominator coding and how it should be captured to ensure the appropriate patients are being identified for this measure. Diagnosing RA requires "a combination of physical exams, blood tests for inflammatory markers, and imaging tests (like X-rays and MRIs), in addition to patient-reported symptoms," which can take multiple visits to determine an accurate assessment of RA disease activity.[1098] Therefore, this change will align more closely with the workflow of clinicians and allows assessment of a patient for RA disease activity during more than one clinical visit. These changes support a comprehensive perspective of the patient's disease activity level and should promote optimal treatment outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the denominator to measure Q180: Rheumatoid Arthritis (RA): Glucocorticoid Management.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62526), we are finalizing the changes to measure Q180 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1098] See footnote Brody, 2020 in Table D.11 of this Appendix.

D.14. Elder Maltreatment Screen and Follow-Up Plan

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	181
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 60 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.
Substantive Change:	**Updated denominator criteria: For all collection types: Added:** coding for emergency department.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to add encounter codes for emergency department (ED) visits to the denominator criteria as the emergency department is an appropriate setting for screening for elder maltreatment. "EDs are a potentially important setting for elder mistreatment identification because they provide care for a large number of older adults who may be elder mistreatment victims" especially given that the ED is sometimes the only clinical setting that the patient may visit.[1099] Expanding the denominator to include ED visits ensures a more complete denominator patient population and provides support and delivery of interventions that could prevent actual abuse.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed substantive changes for measure Q181: Elder Maltreatment Screen and Follow-up Plan. One commenter supported adding encounter codes for ED visits to the denominator. The commenter agreed that the ED is a prime setting for elder maltreatment identification and follow-up planning.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62527), we are finalizing the changes to measure Q181 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1099] See footnote Rosen et al., 2020 in Table B.11 of this Appendix.

D.15. Functional Outcome Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	182
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies.
Substantive Change:	**Updated numerator definition: Revised:** Functional Outcome Assessment: Patient completed questionnaires designed to measure a patient's limitations in performing the usual human tasks of living and to directly quantify functional and behavioral symptoms. If a patient is unable to complete a questionnaire, a standardized clinical assessment tool may be used to measure a patient's limitations. **Added:** To Table 1. Definitions for Magnitude of Effects, Based on Mean Between-Group Differences – Modified*: clarification that list of standardized tools is not exhaustive.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the numerator definition to clarify that clinicians may use a standardized clinical assessment tool to measure a patient's limitation if they are unable to complete a questionnaire. This change will allow flexibility in performing the quality action and clarify that the list of standardized tools named in the measure are only examples, not an exhaustive list. The National Institute of Health indicates that it supports the use of standardized tools, stating they offer a clinician-designed approach to promoting care standardization that accommodates patients' individual differences, respects clinicians' clinical judgement, and keeps pace with the rapid growth of medical knowledge.[1100]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed substantive changes to measure Q182: Functional Outcome Assessment.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62528), we are finalizing the changes to measure Q182 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1100] Farias, M., Jenkins, K., Lock, J., Rathod, R., Newburger, J., Bates, D. W., Safran, D. G., Friedman, K., & Greenberg, J. (2013). Standardized Clinical Assessment and Management Plans (SCAMPs) Provide a Better Alternative to Clinical Practice Guidelines. *Health Affairs (Project Hope)*, *32*(5), 911–920. https://doi.org/10.1377/hlthaff.2012.0667.

D.16. Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	185
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older receiving a surveillance colonoscopy, with a history of prior adenomatous polyp(s) in previous colonoscopy findings, which had an interval of 3 or more years since their last colonoscopy.
Substantive Change:	**Updated denominator exception: Added:** To the 'Documentation of system reasons(s): patient cannot provide precise date or details from previous colonoscopy.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the denominator exception to exclude patients that are unable to provide the precise date or details from a previous colonoscopy. This addition will assist with data collection when a patient with a history of adenomatous polyps is unable to provide information regarding their last colonoscopy.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62529), we are finalizing the changes to measure Q185 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.17. Controlling High Blood Pressure

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	236
CMS eCQM ID:	CMS165v13
Current Collection Type:	Medicare Part B Claims Measure Specifications / eCQM Specifications/ MIPS CQM Specifications/ Medicare CQM Specifications (collection type available only in the APP and/or APP Plus)
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	**Updated denominator exclusion: For all collection types: Removed:** specific encounter requirements from the frailty/advanced illness exclusion.
Measure Steward:	National Committtee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale	We proposed to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision will update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q236. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q236: Controlling High Blood Pressure. Two commenters supported the proposed update to the frailty exclusion criteria. One of these commenters requested clarification regarding how the clinician will know when their patient saw a different clinician at a different medical practice and obtained a frailty and/or advanced illness diagnosis, which then removes them from the clinician's denominator.

Response: We thank the commenter for supporting the substantive changes to this measure. As noted above, removal of the additional requirement for patients to have had either one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. We encourage clinicians to provide care as they determine best supports all patients during their healthcare journey. When submitting this measure, the clinician would report on patients based upon the information within the medical record in accordance with the current measure specification. The update to the denominator exclusion does not change how the measure data may be captured and reported only the criteria to determine whether a patient is appropriate for the quality action assessment.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62529), we are finalizing the changes to measure Q236 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.18. Use of High-Risk Medications in Older Adults

Category	Description
CBE # / eCQM CBE #:	0022 / N/A
Quality #:	238
CMS eCQM ID:	CMS156v13
Current Collection Type:	eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.
Substantive Change:	**Updated numerator definition: For the MIPS CQM Specifications collection type:** Numerator (Submission Criteria 1): Table 1 - High-Risk Medications at any Dose or Duration **Removed:** From Anticholinergics, first-generation antihistamines: Carbinoxamine, Clemastine, Dexbrompheniramine, Dexchlorpheniramine, Pyrilamine From Antispasmodics: Belladonna alkaloids, Methscopolamine, Propantheline From Cardiovascular, alpha agonists, central: Methyldopa From Cardiovascular, other: Disopyramide From Central nervous system, antidepressants: Protriptyline Trimipramine From Central nervous system, barbiturates: Amobarbital, Butabarbital, Pentobarbital, Secobarbital From Central nervous system, vasodilators: Isoxsuprine From Endocrine system, sulfonylureas, long-duration: Chlorpropamide From Endocrine system, other: Megestrol From Pain medications, other: Meperidine **Added:** A row with one medication is considered a group (or drug class) of one; therefore, two orders of that same medication are numerator compliant. **Added:** To Central nervous system, barbiturates: Primidone Endocrine system, megestrol: Megestrol Pain medications, meperidine: Meperidine To Pain medications, other: Ketorolac, includes parenteral and oral Table 3 – High-Risk Medications With Average Daily Dose Criteria **Removed:** Alpha agonists, central: Reserpine >0.1 mg per day Numerator (Submission Criteria 2): Table 4 – High-Risk Medications **Removed:** From Benzodiazepines, long, short and intermediate acting: Flurazepam, Quazepam **Added:** To Benzodiazepines, long, short and intermediate acting: Clobazam
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the list of high-risk medications to align with 2023 AGS Beers Criteria[1101] and ensure that older adults are not prescribed inappropriate medications. This change will also align with PY 2025 eCQM version (CMS156v13), which supports alignment between the collection types. We also proposed to add clarification that the medications found within a single row of table one, within the specification, represent a unique group or drug class. Therefore, two orders from that group or drug class will be consider numerator compliant for this measure, which has an inverse analytic for the calculation of performance.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62530), we are finalizing the changes to measure Q238 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1101] The 2023 American Geriatrics Society Beers Criteria Update Expert Panel. (2023). American Geriatrics Society 2023 updated AGS Beers Criteria for potentially inappropriate medication use in older adults. Journal of the American Geriatrics Society, 71(7), 2052-2081. https://doi.org/10.1111/jgs.18372.

D.19. Barrett's Esophagus

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	249
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of esophageal biopsy reports that document the presence of Barrett's mucosa that also include a statement about dysplasia.
Substantive Change:	**Updated denominator exception: For all collection types: Added**: Specimen site other than anatomic location of esophagus. **Updated denominator exclusion**: **For all collection types: Removed**: Specimen site other than anatomic location of esophagus.
Measure Steward:	College of American Pathologists
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to remove the denominator exclusion so that all patients with a diagnosis for Barrett's Esophagus are included in the denominator of the measure and proposed to add a denominator exception for specimen sites other than the anatomic location of the esophagus. Revising the measure to include this element as a denominator exception will allow for an automated capture of the relevant cases with less manual intervention reducing overall burden of measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62531), we are finalizing the changes to measure Q249 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.20. Sleep Apnea: Severity Assessment at Initial Diagnosis

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	277
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.
Substantive Change:	**Updated denominator exception: Added:** patients previously diagnosed with OSA and severity assessed by another provider.
Measure Steward:	American Academy of Sleep Medicine
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the denominator exception by adding that patients previously diagnosed with obstructive sleep apnea (OSA), with severity assessed by another clinician and documented will not need to have the testing completed again. This denominator exceptions allows clinician judgement as to whether repeat testing is needed, as we do not want to promote overutilization. This revision increases clarity of this element and ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to add the denominator exclusion for patients previously diagnosed with OSA and severity assessed by another provider to measure Q277: Sleep Apnea: Severity Assessment at Initial Diagnosis. The commenter agreed this change will remove unnecessary repeat assessments for clinicians reporting this measure.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62531), we are finalizing the changes to measure Q277 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.21. Dementia: Cognitive Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / 2872e
Quality #:	281
CMS eCQM ID:	CMS149v13
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.
Substantive Change:	**Updated guidance: Added:** The measure requires a diagnosis of dementia is present before the routine assessment of cognition once in a 12-month period.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the measure guidance to clarify that the diagnosis of dementia must be present prior to the cognitive assessment. This will ensure that any cognitive assessments performed prior to the dementia diagnosis but occurred during the 12-month lookback period will not be attributed to this measure numerator.[1102] This change will ensure consistency in the abstraction of the measure's numerator elements based upon a specific timeframe that support rigorous data for the calculation of MIPS performance rates.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposed substantive changes to measure Q281: Dementia: Cognitive Assessment.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62532), we are finalizing the changes to measure Q281 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1102] Office of the Assistance Secretary for Planning and Evaluation. (2016). Examining Models of Dementia Care: Final Report. https://aspe.hhs.gov/reports/examining-models-dementia-care-final-report-0.

D.22. Dementia: Functional Status Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	282
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months.
Substantive Change:	**Updated denominator criteria: Added:** coding for speech language pathology and nuclear medicine.
Measure Steward:	American Academy of Neurology/American Psychiatric Association
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to add encounter codes for speech language pathologists and nuclear medicine to the denominator criteria as these are appropriate specialties to identify changes in functional status in patients diagnosed with dementia. Dementia, which can be caused by "different brain diseases," affects a person's activities of daily living including, but not limited to eating and swallowing, and speech.[1103]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q282: Dementia: Functional Status Assessment.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62533), we are finalizing the changes to measure Q282 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1103] American Speech-Language-Hearing Association (ASHA). Dementia. https://www.asha.org/public/speech/disorders/dementia/.

D.23. Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	286
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: 1) dangerousness to self or others and 2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources.
Substantive Change:	**Updated denominator criteria: Added:** coding for speech language pathology and nuclear medicine.
Measure Steward:	American Academy of Neurology/American Psychiatric Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the denominator criteria to include coding for speech language pathology and nuclear medicine as this measure is applicable to their scope of care. Dementia, which can be caused by "different brain diseases," affects a person's activities of daily living including, but not limited to eating and swallowing, and speech.[1104]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposed substantive changes to measure Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62534), we are finalizing the changes to measure Q286 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1104] See footnote ASHA in Table D.22 of this Appendix.

D.24. Dementia: Education and Support of Caregivers for Patients with Dementia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	288
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
Substantive Change:	**Updated denominator criteria: Added:** coding for speech language pathology and nuclear medicine.
Measure Steward:	American Academy of Neurology/American Psychiatric Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the denominator criteria to include coding for speech language pathology and nuclear medicine as this measure is applicable to their scope of care. Dementia, which can be caused by "different brain diseases," affects a person's activities of daily living including, but not limited to eating and swallowing, and speech.[1105]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposed substantive changes to measure Q288: Dementia: Education and Support of Caregivers for Patients with Dementia.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62535), we are finalizing the changes to measure Q288 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1105] See footnote ASHA in Table D.22 of this Appendix.

D.25. Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	290
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period.
Substantive Change:	**Updated denominator criteria: Added:** coding for neuropsychology and behavioral health.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the denominator criteria to include coding for neuropsychology and behavioral health as it's clinically appropriate for these clinician types to assess for depression, anxiety, apathy, and psychosis.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed substantives change to add coding for neuropsychology to measure Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62536), we are finalizing the changes to measure Q290 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.26. Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	291
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction once during the measurement period.
Substantive Change:	**Updated denominator criteria: Added:** coding for neuropsychology, behavioral health, and physical and occupational therapy.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the denominator criteria to include coding for neuropsychology, behavioral health, and physical and occupational therapy as it's clinically appropriate for these clinician types to assess for cognitive impairment or dysfunction.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed substantives change to add coding for neuropsychology to measure Q291: Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease. Several additional commenters appreciated the addition of coding for physical therapy for measure Q291.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62536), we are finalizing the changes to measure Q291 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.27. Rehabilitative Therapy Referral for Patients with Parkinson's Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	293
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease who were referred to physical, occupational, speech, or recreational therapy once during the measurement period.
Substantive Change:	**Updated denominator criteria: Added:** coding for neuropsychology, behavioral health, and speech language pathology.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the denominator criteria to include coding for neuropsychology, behavioral health, and speech language pathology as this measure is applicable to their scope of care.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q293: Rehabilitative Therapy Referral for Patients with Parkinson's Disease.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62536), we are finalizing the changes to measure Q293 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.28. Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	317
CMS eCQM ID:	CMS22v13
Current Collection Type:	Medicare Part B Claims Measure Specifications / eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.
Substantive Change:	**Updated denominator criteria: For the MIPS CQM Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:** coding for nutrition/dietitian clinician type. **Updated numerator definition: For all collection types: Revised:** intervals for rescreening for first and second hypertensive BP readings.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to add encounter codes for nutrition therapy to the denominator criteria for the MIPS CQM Specifications and the Medicare Part B Claims Measure collection types as this is an appropriate setting to identify people who may have elevated blood pressure (BP) readings. Nutritional approaches play a pivotal role in helping to reduce the risk of hypertension or control blood pressure in people with hypertension.[1106] We proposed to remove the minimum timeframe for follow-up screenings for patients with elevated BP readings for all collection types. This change will allow clinician discretion to recommend a follow-up plan based on the patient's current health status. Additionally, this supports stability of this measure component, as the frequency is each visit, within the specification over time, while still maintaining consistency with the current guidelines.[1107]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive change to eliminate the minimum timeframe for follow-up screenings for patients with elevated blood pressure readings for all collection types to measure Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented. The commenter agreed this change will enable clinicians to exercise their judgment in recommending follow-up plans based on each patient's health status, thereby personalizing care to better meet individual needs and ultimately enhancing the quality of care delivered.

A second commenter thanked CMS for adding medical nutrition therapy codes to the denominator criteria as this acknowledges the important role of RDNs in managing elevated blood pressure. The commenter also supported eliminating the minimum timeframe for follow-up screenings as it gives clinicians the flexibility to tailor care to the specific needs of each patient.

Response: We thank the commenters for supporting the substantive change to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62537), we are finalizing the changes to measure Q317 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

J., Muntner, P., Ovbiagele, B., Smith, S. C., Jr, Spencer, C. C., Stafford, R. S., Taler, S. J., Thomas, R. J., Williams, K. A., Sr, Williamson, J. D., … Wright, J. T., Jr (2018). 2017 ACC/AHA/AAPA/ABC/ACPM/AGS/APhA/ASH/ASPC/NMA/PCNA Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines. *Journal of the American College of Cardiology*, *71*(19), e127–e248. https://doi.org/10.1016/j.jacc.2017.11.006.

D.29. Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients

Category	Description
CBE # / eCQM CBE #:	0658 / N/A
Quality #:	320
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.
Substantive Change:	**The measure description is revised to read: For all collection types:** Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of 10 years for repeat colonoscopy documented in their colonoscopy report. **Updated numerator: For all collection types: Revised:** Patients who had recommended follow-up interval of 10 years for repeat colonoscopy documented in their colonoscopy report. **Updated numerator note: For all collection types: Added:** To meet the numerator, patients with a negative screening colonoscopy should have documentation that they received counseling or instruction to have a follow-up or repeat colonoscopy in 10 years. A 6 month period before or after 10 years is considered within the recommended follow-up interval. **Updated numerator options: For all collection types: Revised:** **Performance Met:** Recommended follow-up interval for repeat colonoscopy of 10 years documented in colonoscopy report and communicated with patient. **Denominator Exception:** Documentation of medical reason(s) for not recommending a 10 year follow-up interval (e.g., inadequate prep, familial or personal history of colonic polyps, patient had no adenoma and age is ≥ 66 years old, or life expectancy < 10 years, other medical reasons) **Performance Not Met:** A 10 year follow-up interval for colonoscopy not recommended, reason not otherwise specified.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the measure description, numerator, and numerator options to ensure the time frame for recommended follow up after a normal colonoscopy for the average risk patient accurately reflects current guidelines which states "[n]ew observational and modeling studies of colonoscopy confirm and strengthen the evidence base to support the conclusion that individuals with normal colonoscopy are at lower-than-average risk for CRC. Based on this reduced risk, we recommend CRC screening in average-risk individuals be repeated 10 years after a normal examination complete to the cecum with bowel preparation adequate to detect polyps >5 mm in size."[1108] Additionally, we proposed to add a numerator note to indicate inclusion of documentation that the patient has received counseling and instruction on when a repeat colonoscopy should be scheduled. This change will ensure the patient is aware of clinical recommendations to drive healthy outcomes.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62538), we are finalizing the changes to measure Q320 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1108] Gupta, S., Lieberman, D., Anderson, J. C., Burke, C. A., Dominitz, J. A., Kaltenbach, T., Robertson, D. J., Shaukat, A., Syngal, S., & Rex, D. K. (2020). Recommendations for Follow-Up After Colonoscopy and Polypectomy: A Consensus Update by the US Multi-Society Task Force on Colorectal Cancer. *Gastrointestinal Endoscopy*, *91*(3), 463–485.e5. https://doi.org/10.1016/j.gie.2020.01.014.

D.30. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	322
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period.
Substantive Change:	**The measure description is revised to read**: Percentage of stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), multigated acquisition scan (MUGA), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period. **Updated instructions: Added:** multigated acquisition scan (MUGA). **Updated denominator: Added:** multigated acquisition scan (MUGA). **Updated denominator criteria: Added:** coding for multigated acquisition scan (MUGA). **Updated numerator: Added:** multigated acquisition scan (MUGA).
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale	We proposed to update multiple components of the measure to add MUGA. Even though MUGA scanning allows a clinician to evaluate many heart parameters and can be done while resting or under stress, this diagnostic imaging test will ensure this type of imaging is not performed on low-risk surgery patients since the risks of the procedure exceed the expected clinical benefit for the denominator eligible patient population.[1109] The MUGA scan is primarily used for assessing myocardial function in patients on cardiotoxic chemotherapy.[1110]

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62539), we are finalizing the changes to measure Q322 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.31. Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	331
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.
Substantive Change:	**Updated the instructions: Revised:** This measure is to be submitted once for each occurrence of acute viral sinusitis (AVS) during the performance period. Each unique occurrence starts with the onset of AVS symptoms and concludes with the resolution of AVS symptoms or after 90 days if a resolution of AVS symptoms is not documented. If multiple encounters are documented within an occurrence, Merit-based Incentive Payment System (MIPS) eligible clinicians should submit the most recent encounter during that occurrence. A new occurrence of AVS cannot start until the previous occurrence during the performance period has concluded.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the measure instructions to clarify what constitutes an occurrence for the purposes of this measure. This additional guidance will further clarify how patients are attributed to the denominator of this measure for each eligible occurrence. This change will ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62540), we are finalizing the changes to measure Q331 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.32. Maternity Care: Postpartum Follow-up and Care Coordination

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	336
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
Substantive Change:	**The measure description is revised to read:** Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breastfeeding evaluation and education, postpartum depression screening, intimate partner violence screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update. **Updated numerator: Added:** intimate partner violence screening. **Updated numerator definition: Added:** Intimate Partner Violence Screening – Patients who were screened for intimate partner violence before or at 12 weeks postpartum. Questions may be asked either directly by a health care provider or in the form of self-completed paper-or computer-administered questionnaires, and results should be documented in the medical record. Intimate partner violence screening should include a self-reported validated intimate partner violence screening tool (e.g., Abuse Assessment Screen (AAS), Extended – Hurt, Insult, Threaten, Scream (E-HITS), Humiliation, Afraid, Rape, Kick (HARK)). **Updated numerator instructions: Added:** intimate partner violence screening.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update multiple measure components to include intimate partner violence screening. "The effects of intimate partner violence (IPV) on maternal and neonatal outcomes are multifaceted and largely preventable."[1111] This type of abuse has maternal and neonatal consequences on mental and physical health that could be far reaching beyond the perinatal period;[1112] therefore, intimate partner violence screening was proposed for inclusion. This revision will support clinicians currently screening and will encourage others to begin screening for this risk within this patient population as IPV may escalate during the postpartum period.[1113] The American College of Obstetricians and Gynecologists recommend including screening for IPV at the postpartum checkup to help identify patients experiencing IPV so that support may be offered to break this cycle, leading to positive outcomes for both maternal and neonatal health.[1114]

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62541), we are finalizing the changes to measure Q336 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.33. HIV Medical Visit Frequency

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	340
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients, regardless of age with a diagnosis of HIV who had at least one medical visit in each 6 month period of the 24 month measurement period, with a minimum of 60 days between medical visits.
Substantive Change:	**Modified collection type:** eCQM Specifications, MIPS CQM Specifications collection type. **The measure title is revised from "HIV Medical Visit Frequency" to:** HIV Annual Retention in Care. **The measure description is revised to read:** Percentage of patients, regardless of age, with a diagnosis of Human Immunodeficiency Virus (HIV) before or during the first 240 days of the performance period who had at least two eligible encounters or at least one eligible encounter and one HIV viral load test that were at least 90 days apart within the measurement period. **The measure denominator is revised to read:** Patients, regardless of age, with a diagnosis of HIV before or during the first 240 days of the performance period who had at least one eligible encounter during the first 240 days of the performance period. **The measure denominator note is revised to read:** Only patients with an eligible encounter in the first 240 days are included in this measure to allow for sufficient time to complete a second eligible encounter or viral load laboratory at least 90 days after the initial encounter during the performance period. **Updated denominator criteria: Added:** coding for telephone and home visit patient encounters. **Updated denominator exclusion: Removed:** Patient died at any time during the 24-month measurement period. **The measure numerator is revised to read**: Number of patients who had at least one eligible encounter and one HIV viral load test at least 90 days apart during the performance period, or who had at least two eligible encounters at least 90 days apart during the performance period. **Updated numerator note: Added:** A patient would be included in the measure numerator if they have either 1) two eligible encounters at least 90 days apart, or 2) one eligible encounter and one viral load test at least 90 days apart from each other. The encounter or encounters that cause a patient to be included in the numerator do not need to include the encounter that caused the patient to be included in the denominator. **The measure numerator options are revised to read:** **Performance Met:** Patient had two eligible encounters at least 90 days apart or one eligible encounter and one HIV viral load test at least 90 days apart **Performance Not Met:** Patient did not have two eligible encounters at least 90 days apart or one eligible encounter and one HIV viral load test at least 90 days apart
Measure Steward:	Health Resources and Services Administration
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the collection types available for this measure to include the eCQM collection type to provide choice in submission method. We also proposed to revise multiple components of the measure allowing for improved quality outcome which is to engage persons who are infected with HIV in regular HIV care that promote test-and-treat strategies.[1115] In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62542), we are finalizing the changes to measure Q340 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1115] Gardner, E. M., McLees, M. P., Steiner, J. F., Del Rio, C., & Burman, W. J. (2011). The Spectrum of Engagement in HIV Care and its Relevance to Test-and-treat Strategies for Prevention of HIV Infection. *Clinical Infectious Diseases: An Official Publication of the Infectious Diseases Society of America*, *52*(6), 793–800. https://doi.org/10.1093/cid/ciq243.

D.34. Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	344
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percent of asymptomatic patients undergoing CAS who are discharged to home no later than post-operative day #2.
Substantive Change:	**The measure title is revised from Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) to:** Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) **The measure description is revised to read:** Percent of asymptomatic patients undergoing Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) without major complication who are discharged to home no later than post-operative day #2. **Updated instructions: Added:** CEA. **Updated denominator: Added:** CEA. **Updated denominator criteria: Added:** coding for carotid endarterectomy. **Updated numerator: Added:** CEA. **Updated numerator definition: Added:** procedure for CEA or CAS. **Updated numerator options: Added:** CEA.
Measure Steward:	Society for Vascular Surgery
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale	We proposed to revise this measure to include Carotid Endarterectomy (CEA) to assess for post-operative complications for asymptomatic patients who had CEA. CEA for asymptomatic carotid stenosis reduces the risk of ipsilateral stroke, and any stroke, by approximately 30 percent over 3 years.[1116] Previously, assessment of outcomes for CEA procedures was a separate measure. As both procedures are appropriate for treating asymptomatic carotid artery stenosis, these measures are being combined so that a full picture of positive outcomes can be captured for this patient population.[1117] Additionally, by combining these measures the denominator eligible patient population may increase allowing for more robust data for participating MIPS clinicians. In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62542 through 62543), we are finalizing the changes to measure Q344 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1116] Chambers, B. R., & Donnan, G. A. (2005). Carotid Endarterectomy for Asymptomatic Carotid Stenosis. *The Cochrane Database of Systematic Reviews*, *2005*(4), CD001923. https://doi.org/10.1002/14651858.CD001923.pub2.

D.35. Unplanned Reoperation within the 30-Day Postoperative Period

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	355
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30 day postoperative period.
Substantive Change:	**Updated denominator criteria: Revised:** coding for fissurectomy, including sphincterotomy.
Measure Steward:	American College of Surgeons
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale	We proposed to update denominator criteria to revise coding for fissurectomy, including sphincterotomy as this is an operative procedure that could have complications requiring unplanned reoperation within 30 days postoperatively.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62544), we are finalizing the changes to measure Q355 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.36. Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	360
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion studies) imaging reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion) studies that the patient has received in the 12-month period prior to the current study.
Substantive Change:	**The measure description is revised to read:** Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies that the patient has received in the 12-month period prior to the current study. **The measure denominator is revised to read:** All final reports for patients, regardless of age, undergoing a CT or cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) procedure. **Updated denominator criteria: Added:** coding for cardiology infarct imaging. **The measure numerator is revised to read:** CT and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) reports that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies that the patient has received in the 12-month period prior to the current study. **Updated numerator instructions: Added:** infarct avid imaging. **The measure numerator options are revised to read:** **Performance Met:** Count of previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies documented in the 12-month period prior to the current study. **Performance Not Met:** Count of previous CT and cardiac nuclear medicine (myocardial perfusion or infarct avid imaging) studies not documented in the 12-month period prior to the current study, reason not given.
Measure Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to revise multiple components of this measure to include infarct avid imaging in the cardiac nuclear medicine imaging study that involves the use of radiation, including a radiotracer or contrast agent and/or Imaging modalities, such as positron emission tomography (PET), single-photon emission computed tomography (SPECT), or magnetic resonance imaging (MRI).[1118] Given that this imaging can expose a patient to potentially high doses of radiation,[1119] including it in the denominator of this measure requires the clinician to document a more complete count of previous cardiac nuclear medicine imaging studies, increasing patient safety by preventing continued exposure to radiation.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed the proposed substantive changes to measure Q360: Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies to expand the denominator of eligible cases by including coding for cardiology infarct imaging. The commenter stated this change will create a meaningful burden on radiologists to report all prior CT and cardiac nuclear medicine studies that a patient has received in the 12-month period prior to the current study.

Response: We acknowledge the commenter's concerns and agree that the addition of infarct avid imaging may increase the denominator. However, this measure already requires a count of cardiac nuclear medicine studies of which infarct avid imaging is a component. The inclusion of infarct avid imaging as one of the options of nuclear cardiac medicine allows for a more complete

[1118] Enabnit, A. & Warren, A. (2023). Infarct Avid Imaging Study: Purpose, Procedure, and Applications. https://www.dovemed.com/health-topics/focused-health-topics/infarct-avid-imaging-study-purpose-procedure-and-applications.

[1119] Salah, H., Alkhorayef, M., Jambi, L., Almuwannis, M., & Sulieman, A. (2023). Radiation Dose to Patients and Public Exposure in Cardiac Rest and Stress Single Photon Emission Computed Tomography Examinations. *Radiation Physics and Chemistry*. https://doi.org/10.1016/j.radphyschem.2023.111383.

count of previous cardiac nuclear medicine imaging studies, increasing patient safety by preventing continued exposure to radiation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62545), we are finalizing the changes to measure Q360 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.37. Closing the Referral Loop: Receipt of Specialist Report

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	374
CMS eCQM ID:	CMS50v13
Current Collection Type:	eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.
Substantive Change:	**Updated denominator criteria: For all collection types: Added:** coding for psychology and neuropsychology. **The measure numerator definition is revised to read: For the MIPS CQM Specifications collection type: Revised:** A written document prepared by the eligible clinician (and staff) to whom the patient was referred and that accounts for their findings, provides summary of care information about findings, diagnostics, assessments and/or plans of care, or states the patient did not attend the appointment, and is provided to the referring eligible clinician.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to add psychology and neuropsychology encounter codes to the denominator criteria as this measure is applicable to their scope of care. This expansion of the denominator will allow more clinician types to submit the measure leading to an increase in denominator eligibility, capturing a more complete patient population, as it is clinically appropriate for these clinician types to complete the quality action for a patient referred to a specialist. We proposed to revise the numerator definitions for the MIPS CQM collection type to clarify which information should be included in the referring clinician's report to successfully close the referral loop. This revision increases clarity of this element and ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q374: Closing the Referral Loop: Receipt of Specialist Report to require documentation of patient no-shows or missed appointments in the reports sent to referring clinicians.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62546), we are finalizing the changes to measure Q374 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.38. Functional Status Assessment for Total Hip Replacement

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	376
CMS eCQM ID:	CMS56v13
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 300 – 425 days after the surgery.
Substantive Change:	**Updated initial patient population: Revised:** encounter timeframe from November of the year prior to August of the year prior.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to revise initial patient population by changing the timing of the encounter to better align with the post-surgical assessment timeframe of 300 to 425 days after the original THA surgery. This will also harmonize the timeframe of the patient encounter with the administrative claims measure "Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)" available for Hospital Inpatient Quality Reporting (88 FR 59067 through 59070), thereby aligning timing specificity and patterns across similar measures. Measure alignment, in accordance with clinical recommendations, guidelines, and best practices, allows for consistent and comparable data points, which leads to actionable data to drive quality care, through understanding where the gaps in care are within a patient population or along the continuum of care.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes on the timing of the encounter to better align with the post-surgical assessment timeframe of 300 to 425 days after the original THA surgery for measure Q376: Functional Status Assessment for Total Hip Replacement. This revision aligns the timeframe for measure Q376 with that of other quality reporting programs (for example, the Hospital-Level THA/TKA Patient Reported Outcome-Based Performance Measure).

Response: We thank the commenter for supporting the substantive changes to this measure.

Comment: One commenter noted the proposed substantive changes to this measure and recommended revising the age criterion to include patients 18 years and older. This adjustment would align the measure with existing orthopedic standards and simplify the tracking process by maintaining a straightforward adult population of 18 years and older, thereby reducing complexity for clinicians and ensuring more accurate data collection across the board.

Response: We thank the commenter for their feedback. While we endeavor to align measures across reporting programs, there may be nuances within the program and/or collection type requirements that lead to small differences between specifications. The age criterion starts at 19 because this is determined at the start of the measurement period, while the denominator eligible procedure has a lookback period starting in November two years prior to the measurement period, allowing for patients age 18 at the time of the procedure to be included within the denominator eligible patient population. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62546), we are finalizing the changes to measure Q376 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.39. Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Category	Description
CBE # / eCQM CBE #:	1879 / N/A
Quality #:	383
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.
Substantive Change:	**Updated denominator note: Removed:** distinction of typical versus atypical, 'days' supply' notation, and medication HCPCS codes. **Updated denominator criteria: Removed:** HCPCS coding from prescription criteria.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale	We proposed to remove "days' supply" and HCPCS (J codes) from the list of antipsychotic medications in the measure. This revision will ensure inclusion for any duration of the listed long acting injectables permitting the clinician, or site, to obtain days' supply information from any appropriate clinical or administrative source, thus aligning the calculation of PDC with all appropriate medications listed in the measure. This revision reduces the burden of collecting this aspect of the measure from medical records. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data. Finally, we proposed to remove "typical" and "atypical" as part of the subheadings of the lists of antipsychotic medications as this distinction does not apply to the list of oral and long-acting injectable antipsychotic medications listed under each of the categories which include both typical and atypical medications.[1120]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter expressed that it had previously communicated its concern that the current version of measure Q383: Adherence to Antipsychotic Medications For Individuals with Schizophrenia is not inclusive of long-acting injectable medications (LAI) with days' supply beyond 28 days, and therefore unfairly penalizes clinicians who use these treatments. While the commenter appreciated that CMS' proposal is intended to address this concern by removing 'days' supply" and HCPCS (J codes) from the list of antipsychotic medications to include any duration of long acting injectables, the commenter was concerned that this approach would create burden and confusion among providers, and variability in the measure's implementation across quality programs.

The commenter stated that the proposed substantive changes to measure Q383 do not provide sufficient clarity about the medication list and corresponding days' supply and places the onus on clinicians to determine days' supply to calculate the proportion of days covered. The commenter was concerned a lack of clarity and added administrative burden on physicians may disincentivize reporting of this quality measure if providers are unclear on the methodology for calculating adherence.

The commenter also stated in April 2024, NCQA released updates to the Adherence to Antipsychotic Medications for Individuals with Schizophrenia (SAA) measure.[1121] The commenter recommended that CMS align its proposed measure with the recently updated NCQA version. NCQA's updated measure clarifies the HCPCS codes J2794 and J2798 as 14 days' supply and 30 days' supply respectively; delete paliperidone palmitate from the "Long-acting injections 28 days' supply" row; and adds LAI products for 35 days (paliperidone palmitate – Invega Sustenna), 104 days (Paliperidone palmitate - Invega Trinza), and 201 days (Paliperidone palmitate - Invega Hafyera) supply to the LAI list. Alignment with the NCQA version of the measure will reduce burden and complexity and better align the measure across quality programs, including MIPS, Certified Community Behavior Health Centers Program, HEDIS®, and Medicaid.

Response: We thank the commenter for their feedback and concerns. The removal of days' supply and HCPCS (J codes) ensures inclusion of long-acting injectable medications as appropriate per the measure specification; therefore, permitting the clinician to obtain days' supply information from any appropriate clinical or administrative source, thus aligning the calculation of PDC with all appropriate medications listed in the measure. This revision reduces the burden of collecting this aspect of the measure from medical records. While we endeavor to align measures across reporting programs, there may be nuances within the program and/or collection type requirements that lead to small differences between specifications. The updated version of the specification removes the 'days' supply' requirement for each prescription, which should allow better flexibility in measure data capture.

[1121] NCQA. (2024). HEDIS Measurement Year 2024 Volume 2: Technical Update. https://www.ncqa.org/wp-content/uploads/HEDIS-MY-2024-Volume-2-Technical-Update.pdf.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62547), we are finalizing the changes to measure Q383 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.40. Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	384
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Patients aged 18 years and older who had surgery for primary rhegmatogenous retinal detachment who did not require a return to the operating room within 90 days of surgery.
Substantive Change:	**Updated instructions: Revised**: timeframe for when surgery for primary rhegmatogenous retinal detachment must have occurred to meet the denominator criteria. **Updated numerator note: Added:** For the purposes of meeting the numerator, complications are only those related to the following procedures: 67107, 67108, 67110.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale	We proposed to update the instructions to clarify that surgery for primary rhegmatogenous retinal detachment must occur between January 1st and September 30th of the performance period to allow 90 days after the surgery to assess for the numerator action for patients who have surgeries performed by September 30th. We also proposed to add a numerator note to clarify that the numerator is not required to capture only procedures covered by the three original procedure codes in the denominator, but rather any procedure that is related to complications arising from the original procedures listed.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62548), we are finalizing the changes to measure Q384 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.41. Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	386
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, lawful physician-hastened death, or hospice) or whose existing end of life plan was reviewed or updated at least once annually or more frequency as clinically indicated (i.e., rapid progression).
Substantive Change:	**Updated denominator criteria: Added:** coding for speech language pathology.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the denominator criteria to include coding for speech language pathology and nuclear medicine as this measure is applicable to their scope of care.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q386: Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62548), we are finalizing the changes to measure Q386 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.42. Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	393
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Infection rate following CIED device implantation, replacement, or revision.
Substantive Change:	**Updated instructions: Added:** A new device would be either the first device OR a device implanted with new functionality.
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale	We proposed to update the measure instructions to clarify the definition of a new device. This change will ensure alignment and consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to update to the measure instructions for measure Q393: Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision. The commenter agreed with CMS' rationale that the change would ensure alignment and consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62548), we are finalizing the changes to measure Q393 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.43. Door to Puncture Time for Endovascular Stroke Treatment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	413
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of 90 minutes or less.
Substantive Change:	**Updated denominator exclusion: Added:** Patients with secondary stroke within 5 days of the initial procedure.
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale	We proposed to add a denominator exclusion to remove patients with secondary stroke, such as those which may occur with vasospasm in the setting of subarachnoid hemorrhage. Treatment for an initial stroke is most effective when administered very shortly after the onset of symptoms.[1122] However, the same is not the case for secondary stroke which is more challenging to manage as patients with secondary stroke may already be on "blood thinners or aspirin, medication to control cholesterol, or drugs to lower blood pressure" as a result of the initial stroke and "experience more severe and long-lasting disability."[1123] This additional exclusion will more precisely reflect the time to reperfusion for obtaining favorable outcomes in cerebral revascularization within the target patient population.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62549), we are finalizing the changes to measure Q413 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1122] Esenwa, C., & Gutierrez, J. (2015). Secondary Stroke Prevention: Challenges and Solutions. *Vascular Health and Risk Management*, *11*, 437–450. https://doi.org/10.2147/VHRM.S63791.

[1123] Medical News Today. (2023). Recurrent Strokes: What to Know. https://www.medicalnewstoday.com/articles/recurrent-strokes.

D.44. Osteoporosis Management in Women Who Had a Fracture

Category	Description
CBE # / eCQM CBE #:	0053 / N/A
Quality #:	418
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications / MIPS CQM Specifications
Current Measure Description:	The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.
Substantive Change:	**The measure description is revised to read: For all collection types:** The percentage of women 50-85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture. **Updated instructions: For all collection types: Revised:** from six months to 180 days. **Updated denominator exclusion: For all collection types: Removed:** specific encounter requirements from the frailty/advanced illness exclusion. **The measure numerator is revised to read: For all collection types:** Patients who received either a bone mineral density test or a prescription for a drug to treat osteoporosis in the 180 days after the fracture.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to use both 6 months and 180 days within the measure denominator and numerator to allow for the appropriate time anchors. In the denominator, 6 months is used so that the measurement period to identify a fracture is always July 1 – June 30 (during the 6 months prior to the performance period through June 30 of the performance period). The numerator action of administration of a bone mineral density test or a prescription for a drug to treat osteoporosis within a specific number of days (180 days after the date of a fracture) rather than months with varying number of days (e.g., 28 – 31 days). We proposed to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision will update the denominator exclusion to remove any patient 66-80 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q418. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the frailty exclusion criteria to measure Q418: Osteoporosis Management in Women Who Had a Fracture. The removal of the encounter criteria will reduce reporting burden while still following through with the intent of the exclusion for patients with an indication of frailty.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62550), we are finalizing the changes to measure Q418 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.45. Varicose Vein Treatment with Saphenous Ablation: Outcome Survey

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	420
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment.
Substantive Change:	**Updated numerator definition: Added:** Varicose Veins Symptom Questionnaire (VVSymQ) and Venous Clinical Severity Score (VCSS).
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale	We proposed to revise the definition of an 'Outcome Survey' to include the VVSymQ and VCSS. These outcome surveys measure improvement for saphenous vein ablation and will allow clinicians more choices for meeting the numerator, which may encourage further adoption of this measure.[1124]

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62551), we are finalizing the changes to measure Q420 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1124] Paty, J., Turner-Bowker, D. M., Elash, C. A., & Wright, D. (2016). The VVSymQ® Instrument: Use of a New Patient-Reported Outcome Measure for Assessment of Varicose Vein Symptoms. *Phlebology*, *31*(7), 481–488. https://doi.org/10.1177/0268355515595193.

D.46. Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	432
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the bladder recognized either during or within 30 days after surgery.

Substantive Change:	**The measure title is revised from Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair to:** Proportion of Patients Sustaining a Bladder or Bowel Injury at the time of any Pelvic Organ Prolapse Repair. **The measure description is revised to read:** Percentage of patients undergoing surgical repair of pelvic organ prolapse that is complicated by a bladder or bowel injury at the time of index surgery that is recognized intraoperatively or within 30 days after surgery. **The measure instructions are revised to read:** This measure is to be submitted each time an anterior, posterior, or apical prolapse repair surgery is performed from December 1st of the previous performance period through November 30th of the current performance period. There is no diagnosis associated with this measure. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding. This measure will be calculated with 2 performance rates: 1) Percentage of patients undergoing prolapse repair who sustain a bladder injury that necessitates repair either intraoperatively or within 30 days after surgery. 2) Percentage of patients undergoing prolapse repair who sustain a bowel injury that necessitates repair either intraoperatively or within 30 days after surgery. Submission of the two performance rates is required for this measure. A simple average, which is the sum of the performance rates divided by the number of the performance rates will be used to calculate performance. THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE: 1) All patients undergoing anterior or apical pelvic organ prolapse (POP) surgery who sustain a bladder injury. 2) All patients undergoing anterior, posterior, or apical pelvic organ prolapse (POP) surgery who sustain a bowel injury. This measure contains two submission criteria which together ensure that the proper evaluation and treatment is provided for patients who undergo pelvic organ prolapse repair. Submission Criteria 1 evaluates whether patients sustained a bladder injury intraoperatively or within 30 days after surgery. Submission Criteria 2 evaluates whether patients sustained a bowel injury intraoperatively or within 30 days after surgery. Patients who undergo a procedure that meets the denominator of both submission criteria should be included in both and assessed for each clinical outcome. **Updated denominator: Added:** SUBMISSION CRITERIA 2: All patients undergoing anterior, posterior, or apical pelvic organ prolapse (POP) surgery. **Updated denominator criteria: Added:** SUBMISSION CRITERIA 2: All patients, regardless of age AND Patient procedure during the denominator identification period WITHOUT Telehealth Modifier **Updated definition: Added:** SUBMISSION CRITERIA 1 & 2: Denominator identification period – the twelve month period in which eligible patients have a procedure, which December 1st of the previous performance period through November 30th of the current performance period. **Updated numerator:** **Revised:** SUBMISSION CRITERIA 1: Percentage of patients undergoing prolapse repair who sustain a bladder injury that necessitates repair either intraoperatively or within 30 days after surgery. **Added:** SUBMISSION CRITERIA 2: Percentage of patients undergoing prolapse repair who sustain a bowel injury that necessitates repair either intraoperatively or within 30 days after surgery. Update numerator instructions: Added: SUBMISSION CRITERIA 2: INVERSE MEASURE – A lower calculated performance rate for this measure indicates better clinical care or control. The "Performance Not Met" numerator option for this measure is the representation of the better clinical quality or control. Submitting that numerator option will produce a performance rate that trends closer to 0%, as quality increases. For inverse measures, a rate of 100% means all of the denominator eligible patients did not receive the appropriate care or were not in proper control. **Updated numerator note: Added:** SUBMISSION CRITERIA 2:

Category	Description
	In order to meet the measure, bowel injury is sustained as a result of the prolapse surgery. **Updated numerator options: Added:** SUBMISSION CRITERIA 2: Performance Met: Patient sustained bowel injury at the time of surgery or discovered subsequently up to 30 days post-surgery OR Denominator Exception: Documented medical reasons for not reporting bowel injury (e.g. gynecologic or other pelvic malignancy documented, planned (e.g. not due to an unexpected bowel injury) resection and/or re-anastomosis of bowel, or patient death from non-medical causes not related to surgery, patient died during procedure without evidence of bowel injury) OR Performance Not Met: Patient did not sustain a bowel injury at the time of surgery nor discovered subsequently up to 30 days post-surgery
Measure Steward:	American Urogynecologic Society
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale	We proposed to revise this measure to add a submission criteria and performance rate for patients who retain a bowel injury at the time of any pelvic organ prolapse repair. We proposed to add submission criteria two to evaluate all patients undergoing anterior, posterior, or apical pelvic organ prolapse surgery who sustain a bowel injury. Previously, assessment of bowel injury outcomes for POP procedures was a separate measure. As both measures are assessing for adverse outcomes following POP procedures, these measures are being combined so that a full picture of adverse outcomes can be captured for this patient population. Additionally, by combining these measures, the denominator eligible patient population may increase allowing for more robust data for participating MIPS clinicians. We also proposed to add a definition for the denominator identification period of December 1st of the previous performance period through November 30th of the current performance period. In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair to include both bladder and bowel injury.

Response: We thank the commenter for supporting the substantive changes to this measure.

For the reasons stated above and in the proposed rule (89 FR 62552 through 62554), we are finalizing the changes to measure Q432 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.47. Appropriate Workup Prior to Endometrial Ablation

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	448
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation.
Substantive Change:	**Updated the instructions: Revised:** submission of the measure to once per performance period.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to change the frequency of this measure from each time a procedure for endometrial ablation is performed to once per performance period, as this is more aligned with the clinical action being assessed for this measure.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62554), we are finalizing the changes to measure Q448 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.48. Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer

Category	Description
CBE # / eCQM CBE #:	1858 / N/A
Quality #:	450
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of female patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer for whom appropriate treatment is initiated.
Substantive Change:	**The measure description is revised to read:** Percentage of patients aged 18 to 70 with stage I (T1c) – III HER2 positive breast cancer for whom appropriate treatment is initiated. **The measure denominator is revised to read:** All breast cancer patients aged 18 to 70 with pathologic stage I (T1c) – III HER2 positive breast cancer diagnosed between July 1st of the previous performance period through June 30th of the current performance period. **Updated denominator instructions: Added:** For the purposes of this measure, only pathologic staging and HER-2 testing performed between July 1st of the previous performance period through June 30th of the current performance period will be included in the denominator of this measure. **Updated denominator note: Added:** This measure includes both female and male breast cancers. While treatment recommendations for males have largely been extrapolated from results of clinical trials focused on breast cancer in females, management of breast cancer in males is similar in overall management to breast cancer in females. Consistent with guidance in National Comprehensive Cancer Network (NCCN) guideline recommendations for adjuvant systemic therapy, chemotherapy with/without HER2-targeted therapy should be recommended for males with breast cancer according to guidelines for females with breast cancer. **Updated denominator criteria: Revised:** Patients age 18-70 years on date of encounter **Added:** diagnosis codes for male breast cancer. **Added:** Diagnosis of breast cancer between July 1st of the previous performance period through June 30th of the current performance period. **Updated numerator note: Added:** The timeframe to identify the adjuvant treatment course is within six months of breast cancer pathologic staging. To satisfy the numerator, both chemotherapy and HER2-targeted therapy must occur within six months of pathologic staging.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update multiple components of this measure to ensure that all patients diagnosed with breast cancer are included in the measure's denominator. While treatment recommendations for males have largely been extrapolated from results of clinical trials focused on breast cancer in females,[1125] management of breast cancer in males is similar in overall management to breast cancer in females. Consistent with guidance in NCCN recommendations for adjuvant systemic therapy, chemotherapy with/without HER2-targeted therapy should be recommended for males with breast cancer according to guidelines for females with breast cancer.[1126] Additionally, revisions to the denominator definition will clarify the timeframe in which pathologic staging and HER-2 testing should be performed for patient to be included in the denominator. We also proposed revisions to the numerator note to further clarify definition of and timeframe for when adjuvant treatment, for the purposes of this measure, should occur relative to pathologic staging.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62555), we are finalizing the changes to measure Q450 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.49. RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who Receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy

Category	Description
CBE # / eCQM CBE #:	1859 / N/A
Quality #:	451
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed.
Substantive Change:	**Updated denominator instructions: Added:** The denominator of this measure is intended to capture newly diagnosed stage IV patients or patients who have distant metastases at the time of colon cancer diagnosis. For the purposes of this measure, the patient's initial diagnosis may occur between December 1 of the prior year through November 30 of the performance period, and anti-EGFR monoclonal antibody therapy may occur between December 1 of the prior year through December 31 of the performance period.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to add denominator instructions to clarify that only patients who have been newly diagnosed with Stage IV colorectal cancer or patients who have distant metastases at the time of colon cancer diagnosis are to be captured in the denominator of the measure. This will ensure that the appropriate patient population is assessed for the numerator action.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62556), we are finalizing the changes to measure Q451 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.50. Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	462
CMS eCQM ID:	CMS645v8
Current Collection Type:	eCQM Specifications
Current Measure Description:	Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
Substantive Change:	**The measure denominator is revised to read:** Patients with a qualifying encounter in the measurement period AND with a diagnosis of prostate cancer AND with an order for ADT or an active medication of ADT with an intent for treatment greater than or equal to 12 months during the measurement period AND order for ADT in 3 months before to 9 months after the start of the measurement period.
Measure Steward:	Oregon Urology Institute
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to expand the denominator to include all patients regardless of gender. This revision broadens the denominator population to capture all patients with a diagnosis of prostate cancer who are receiving androgen deprivation therapy and ensure a bone density evaluation is completed prior to the start of treatment. As significantly lower PSA screening rates were seen among transgender individuals for ages 40-54 and 55-69, but higher rates within the age group 70-80 (P.ß<.ß.001 for all),[1127] broadening the denominator will ensure these patient populations are being screened in accordance with current clinical guidelines.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62557), we are finalizing the changes to measure Q462 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1127] Premo, H., Gordee, A., Lee, H. J., Scales, C. D., Moul, J. W., & Peterson, A. (2023). Disparities in Prostate Cancer Screening for Transgender Women: An Analysis of the MarketScan Database. *Urology*, *176*, 237–242. https://doi.org/10.1016/j.urology.2023.03.016.

D.51. Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use

Category	Description
CBE # / eCQM CBE #:	0657 / N/A
Quality #:	464
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.
Substantive Change:	**The measure instructions are revised to read:** This measure is to be submitted once for each occurrence of otitis media with effusion (OME) in children seen during the performance period. Each unique occurrence starts with the onset of OME symptoms and concludes with the resolution of OME or after 90 days if a resolution of OME symptoms is not documented. If multiple encounters are documented within an occurrence, Merit-based Incentive Payment System (MIPS) eligible clinicians should submit the most recent encounter during that occurrence. A new occurrence of OME cannot start until the previous occurrence during the performance period has concluded.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the measure instructions to clarify what constitutes an occurrence for the purposes of this measure. This additional guidance will further clarify how patients are attributed to the denominator of this measure for each eligible occurrence. This change will ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62558), we are finalizing the changes to measure Q464 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.52. Functional Status After Primary Total Knee Replacement

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	470
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR. tool at one year (9 to 15 months) postoperatively.
Substantive Change:	**Updated numerator note: Revised:** list of situations that denote performance not met.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale	We proposed to revise the numerator note by clarifying that if a tool other than the Oxford Knee Score (OKS) or Knee injury/Osteoarthritis Outcome Score Joint Replacement (KOOS, JR.) is used to assess a patient's functional status for this measure, it will result in a performance not met. The requirements for meeting this measure require use of the specific tools referenced in the measure specification, as they have been tested, validated, and determined to be most appropriate for capturing the numerator action.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q470: Functional Status After Primary Total Knee Replacement. The commenter requested clarification if a tool other than the Oxford Knee Score (OKS) or Knee injury/Osteoarthritis Outcome Score Joint Replacement (KOOS, JR.) is used to assess a patient's functional status, this should result in a performance not met.

Response: We thank the commenter for supporting the substantive changes to this measure. Currently this measure is prescriptive as to the tools that can be utilized to meet performance; however, we encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62558), we are finalizing the changes to measure Q470 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.53. Psoriasis – Improvement in Patient-Reported Itch Severity

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	485
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	The percentage of patients aged 8 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient-reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow-up visit.
Substantive Change:	**Updated denominator note: Added:** The initial (index) visit assessment and the follow-up visit for assessment must occur during the performance period. The initial (index) visit is the first encounter with the patient during the performance period. Every visit after the initial (index) visit during the performance period is a follow-up visit. An assessment should be completed at each visit. **Updated numerator instructions: Removed:** If a patient has multiple follow-up visits within the measurement period, the last (most recent) visit should be used.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Patient-reported Outcome-based Performance Measure
Rationale	We proposed to update the denominator note to clarify encounter timing by including language outlining that a patient's first visit during the measurement period is considered the initial (index) encounter. Each visit after the initial (index) visit during the measurement period will be deemed a follow-up visit used to determine the outcome of the measure. This change will ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q485: Psoriasis – Improvement in Patient-Reported Itch Severity.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62559), we are finalizing the changes to measure Q485 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.54. Dermatitis – Improvement in Patient-Reported Itch Severity

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	486
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	The percentage of patients aged 8 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient-reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow-up visit.
Substantive Change:	**Updated denominator note: Added:** The initial (index) assessment and the follow-up visit for assessment must occur during the performance period. The initial (index) visit is the first encounter with the patient during the performance period. Every visit after the initial (index) visit during the performance period is a follow-up visit. An assessment should be completed at each visit. **Updated numerator instructions: Removed**: If a patient has multiple follow-up visits within the measurement period, the last (most recent) visit should be used.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-based Performance Measure
Rationale	We proposed to update the denominator note to clarify encounter timing by including language outlining that a patient's first visit during the measurement period is considered the initial (index) encounter. Each visit after the initial (index) visit during the measurement period will be deemed a follow-up visit used to determine the outcome of the measure. This change will ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q486: Dermatitis – Improvement in Patient-Reported Itch Severity.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62559), we are finalizing the changes to measure Q486 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.55. Kidney Health Evaluation

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	488
CMS eCQM ID:	CMS951v3
Current Collection Type:	eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period.
Substantive Change:	**Updated description: For all collection types: Revised:** patients aged 18-85 years. **Updated denominator: For all collection types: Revised:** patients aged 18-85 years. **Updated denominator criteria: For the MIPS CQM Specifications collection type: Revised:** patients aged 18-85 years.
Measure Steward:	National Kidney Foundation
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the age from 18-75 to 18-85 years of age for denominator eligibility. Based on information from National Institutes of Health states, "A high proportion of older CKD patients are usually affected by multimorbidity, polypharmacy, frailty, functional and cognitive impairment, and disability."[1128] "The benefits of preventing/slowing the progression of CKD has the potential to impact different social and health domains, for example, reducing the need for long-term care and the cost related to caregiving."[1129] Increasing the denominator age criteria support the reporting of clinicians currently screening a broader elderly population for this preventable disease.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to adjust the upper age range from 75 to 85 years old to promote screening for a broader elderly population to measure Q488: Kidney Health Evaluation. Kidney heath evaluation, which begins with appropriate, clinically adherent screening, is essential to identifying CKD at early stages and increases the likelihood of successful intervention.

Response: We thank the commenter for supporting the substantive changes to this measure.

Comment: One commenter opposed the age extension from 75 to 85 years to measure Q488. The commenter stated most older adults, with or without diabetes mellitus, will have annual serum creatinine assessments due to their frequent contact with the healthcare system and ubiquitous blood testing, including the basic and comprehensive metabolic panels. Therefore, this measure specification change effectively impacts the addition of annual urine microalbumin creatinine ratio (uMAC) testing. Due to abundant serum creatinine testing, clinicians and patients are likely to be aware of renal decline in those 76 to 85 years of age and beyond, without a uMAC result. The commenter indicated that this proposed change would force clinicians to order and communicate the results of a test that in most cases they should not order or act on.

Response: We appreciate the concerns expressed by the commenter. The extension of the age to 85 years will encourage annual kidney health evaluations in older adults with diabetes to assess for kidney function and kidney damage. These recommended blood and urine kidney tests forge an intentional focus on early detection and improved kidney care. The National Kidney Foundation recommends annual testing for patients with certain risk factors, including diabetes and being over the age of 60.[1130]

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62560), we are finalizing the changes to measure Q488 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.56. Appropriate Intervention of Immune-Related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	490
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, with a diagnosis of cancer, on immune checkpoint inhibitor therapy, and grade 2 or above diarrhea and/or grade 2 or above colitis, who have immune checkpoint inhibitor therapy held and corticosteroids or immunosuppressants prescribed or administered.
Substantive Change:	**Updated denominator definition: For the MIPS CQM Specifications collection type: Added:** immune checkpoint inhibitors Lag-3 inhibitor drug: Relatlimab; and Tremelimumab to CTLA-4 inhibitor drugs.
Measure Steward:	Society for Immunotherapy of Cancer (SITC)
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the denominator definition to add new Food and Drug Administration (FDA) approved checkpoint inhibitors, Relatlimab and Tremelimumab. These inhibitors are clinically appropriate to include in the denominator of this measure.[1131] [1132]

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (89 FR 62561), we are finalizing the changes to measure Q490 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1132] FDA. (2022). FDA Approves Opdualag for Unresectable or Metastatic Melanoma. https://www.fda.gov/drugs/resources-information-approved-drugs/fda-approves-opdualag-unresectable-or-metastatic-melanoma.

D.57. Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	492
CMS eCQM ID:	N/A
Current Collection Type:	Administrative Claims
Current Measure Description:	Annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy.
Substantive Change:	**Updated: Reporting Requirements: Removed:** individual reporting.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale	We proposed a substantive change to this measure that will be applied retroactively starting with the CY 2023 performance period/2025 MIPS payment year. In the CY 2023 PFS final rule, we inadvertently specified the measure was available at the individual clinician level. The inclusion of the availability of the measure at the individual clinician level is a misrepresentation and erroneously conveys to MIPS eligible clinicians reporting at the individual clinician level that the measure is available to meet the minimum required number of measures to report under traditional MIPS or an MVP. The measure was tested and developed for implementation at the group, virtual group, subgroup via an MVP, and APM Entity levels. Thus, the measure is limited to groups, virtual groups, subgroups via an MVP, and APM Entities participating in MIPS. A failure to apply this substantive change retroactively will be contrary to the public interest. Prior to the finalization of this measure as a new measure available within the MIPS quality measure inventory in the CY 2023 PFS final rule, the measure was initially proposed as a new measure in the CY 2022 PFS proposed rule. Based on the public comments received in response to the initial proposal of this measure in the CY 2022 PFS proposed rule, there were concerns regarding the attribution of certain patients to clinicians, particularly the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. As a result, the measure was not finalized as part of the CY 2022 PFS final rule; however, we noted that we will continue to consider how to implement condition-specific measures such as this measure under MIPS (86 FR 65692 through 65694). In the CY 2023 PFS proposed rule, we re-proposed this measure, which mitigated the concerns regarding the attribution of such patients to clinicians by excluding patients at advanced stages of heart failure and requiring that a group, virtual group, subgroup via an MVP, and APM Entity to include at least 1 cardiologist (and a 21-patient case minimum); and subsequently, the measure was finalized in the CY 2023 PFS final rule (87 FR 70266) through 70271). The intent of the measure is for assessment of performance to be conducted at the group, virtual group, subgroup via an MVP, and APM Entity levels. The measure was not tested, developed, or implemented at the individual clinician level. In order for this measure to be available at the individual clinician level, the measure will need to be tested at the individual clinician level to establish validity, reliability, and risk adjustments at the individual clinician level. It is not appropriate for the measure to be available at the individual clinician level without further testing. Consequently, any assessment of data for this measure at the individual clinician level will produce invalid and unreliable results. By retroactively applying the substantive change to this measure (modifying the measure to remove the individual clinician level as an option) effective starting with the CY 2023 performance period/2025 MIPS payment year, the level of reporting available for the measure will align with the intent, implementation, and operationalization of the measure, and clarify that the measure is not available at the individual clinician level.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q492: Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System and was pleased that CMS acknowledged that this measure's application at the individual clinician level could result in invalid and unreliable results, given that it has not been tested. A second commenter supported the proposed substantive change as it ensures accuracy and validity by using the measure as intended. The change also aligns the measure's use with its tested and developed levels, namely groups, virtual groups, subgroups, and APM Entities.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62562), we are finalizing the changes to measure Q492 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.58. Adult Immunization Status

Category	Description
CBE # / eCQM CBE #:	3620 / N/A
Quality #:	493
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
Substantive Change:	**Updated instructions: Revised:** pneumococcal vaccine on or after their 19th birthday. **Updated numerator: Revised:** Submission Criteria 4: pneumococcal vaccine on or after their 19th birthday.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the measure instructions and numerator to lower the minimum age from 60 years of age to 19 years of age. This revision aligns with the updated ACIP pneumococcal vaccination guidelines[1133] that recommend administering conjugate vaccines to all adults with certain underlying medical conditions. In the CY 2023 PFS final rule, this measure was finalized, and it was noted that the scoring of the measure will use a weighted average for the first 2 years of implementation; and starting with the CY 2025 performance period/2027 MIPS payment year, the measure will be scored as an all-or-none composite measure to ensure a more thorough assessment of a patient's vaccination status (87 FR 70272 through 70274). However, based upon an analysis of preliminary data submitted for the CY 2023 performance period, low measure adoption, and feedback received through Quality Payment Program Service Now tickets regarding burden of implementation and ability to meet performance on all four components, we proposed to maintain the weighted average analytic for the CY 2025 performance period and subsequent years as determined by CMS. The utilization of the weighted average metric/analytic beyond 2 years will provide clinicians with more time to prepare for the transition to a more stringent all-or-none metric/analytic, which will require a complete vaccination history to meet numerator compliance.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported revisions to measure Q493: Adult Immunization Status to align with ACIP recommendations, such as the proposal to update the numerator instructions lowering the minimum age for pneumococcal vaccinations. The commenter encouraged CMS to continue refinements of the Adult Immunization Status measure in accordance with up-to-date ACIP recommendations, and to create consistency of the measure specifications with updates made by the measure steward, NCQA, related to removing the herpes zoster live (ZVL) vaccine from the herpes zoster immunization indicator, and adding a hepatitis B immunization indicator.

The commenter indicated it is important for CMS to create consistencies of this measure in MIPS and across other reporting structures, given the broad uptake of this measure in quality reporting programs and MVPs. The commenter also acknowledged the challenges some clinicians have faced in meeting the performance requirements for all four vaccine indicators under measure Q494 and suggested tracking individual vaccine performance under this measure.

Response: We thank this commenter for supporting the substantive changes to this measure. We appreciate the commenters feedback. We strive to align measures across quality reporting programs as much as possible and encourage measure stewards to propose refinements to keep the measures up to date. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years, such as tracking individual performance under this measure. This measure will retain its weighted average analytic as we are delaying the transition to an all-or-none analytic to a future year.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62563), we are finalizing the changes to measure Q493 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

Pneumococcal Vaccine for Adults Aged ≥19 Years: Recommendations of the Advisory Committee on Immunization Practices, United States, 2023. *MMWR. Recommendations and Reports: Morbidity and Mortality Weekly Report. Recommendations and Reports*, *72*(3), 1–39. https://doi.org/10.15585/mmwr.rr7203a1.

D.59. Preventive Care and Wellness (composite)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	497
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).
Substantive Change:	**Updated instructions: Updated:** Percentage of patients 65 years of age or older who received a pneumococcal vaccination on or after their 19th birthday. **Updated denominator exclusion: Removed:** (Submission Criteria 3 and Submission Criteria 4): specific encounter requirements from the frailty/advanced illness exclusion. **Updated denominator criteria: Added:** (Submission Criteria 7) coding for nutrition/dietitian clinician type. **Updated numerator definition: Revised:** intervals for rescreening for first and second hypertensive BP readings.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the measure instructions for patients 65 years of age and older who have received a pneumococcal vaccination on or after their 19th birthday. This update will allow for the identification of patients 65 years of age and older who may have a clinical condition that will make them a candidate to receive the pneumococcal vaccine prior to 65 years of age.[1134] We proposed to add encounter codes for nutrition therapy to the denominator criteria as this is an appropriate setting to identify people who may have elevated blood pressure (BP) readings. Nutritional approaches play a pivotal role in helping to reduce the risk of hypertension or control blood pressure in people with hypertension.[1135] We proposed to remove the minimum timeframe for follow-up screenings for patients with elevated BP readings. This change allows clinician discretion to recommend a follow-up plan based on the patient's current health status. Additionally, this supports stability of this measure component, as the frequency is each visit, within the specification over time, while still maintaining consistency with the current guidelines.[1136] We proposed to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision will update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator for submission criteria 3 and submission criteria 4 of measure Q497.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the frailty exclusion criteria to measure Q497: Preventive Care and Wellness (composite). The removal of the encounter criteria will reduce reporting burden while still following through with the intent of the exclusion for patients with an indication of frailty.

Response: We thank the commenter for supporting the substantive changes to this measure

Comment: One commenter appreciated that measure Q497 was updated to improve data capture and ensure that it is aligned with evidence but remained concerned on the complexity of the measure and its inclusion in MIPS.

Response: We thank the commenter for supporting the substantive changes to this measure. By setting a more stringent performance standard through use of a single composite measure compared to the prior framework, under which each quality action was reported through a separate quality measure, we will gain a better picture of overall preventive care practices as each

[1134] See footnote Kobayashi et al., 2023 in Table D.58 of this Appendix.
[1135] See footnote Physicians Committee for Responsible Medicine, 2023 in Table D.28 of this Appendix.
[1136] See footnote Whelton et. al., 2018 in Table D.28 of this Appendix.

component is important to either prevention of or early detection of disease (*https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/*). We maintained two of the component measures, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention and Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented, in select specialty measure sets due to the importance of those clinical concepts to specialties where the composite measure would not be applicable, and we maintained measure Q493: Adult Immunization Status for use within traditional MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62564), we are finalizing the changes to measure Q497 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.60. Connection to Community Service Provider

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	498
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.
Substantive Change:	**Updated denominator criteria: Added:** coding for Dentistry, Emergency Medicine, Inpatient, Nuclear Medicine, Interventional Radiology, Psychiatry, Mental and Behavioral Health, Nephrology, Nutrition/Dietician, Obstetrics/Gynecology, Ophthalmology, Otolaryngology, Physical Therapy/Occupational Therapy, Home Care and Skilled Nursing.
Measure Steward:	OCHIN
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to update the denominator criteria to include coding for multiple patient services as this measure is applicable to the scope of care associated with these services. Clinicians treating patients within these services have an opportunity for screening for HRSNs and connecting with an appropriate CSP. Addressing the social determinants is an important and emerging area of practice that entails starting earlier and broadening the scope of interventions, thus making entire families and communities healthier.[1137]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to include medical nutrition therapy codes in the denominator criteria to measure Q498: Connection to Community Service Provides that underscores the crucial role RDNs play in screening for health-related social needs and connecting patients with appropriate community service providers. One commenter appreciated the addition of coding for physical therapy. Two additional commenters supported the proposed substantive changes to measure Q498.

Response: We thank the commenters for the supporting substantive changes to this measure.

Comment: One commenter did not support expanding the measure's coding to measure Q498 to be attributed to the additional specialties under the substantive change. The commenter supported the measure's intent, but continued to oppose its inclusion in MIPS, stating that measures must be evidence-based and facilitate improvements in patient care. The commenter continued to see a lack of any evidence supporting the measure, or any testing been provided to demonstrate the measure's reliability and validity. By expanding to additional specialties without sufficient testing at the individual clinician level, the commenter believed that CMS increases the potential for unintended negative consequences, and as a result, the commenter did support the measure or this expansion in MIPS or MVPs.

The commenter remained concerned that clinicians will be unable to address their patient needs due to the lack of resources and tools that are widely and readily available to clinicians and practices. The availability of resources will also be dependent on the patient's locality and the type of service needed. The commenter expressed that the measure should continue to align with the work of the HL 7 Gravity Project and the United States Core Data for Interoperability (USCDI). The commenter also voiced that to continue to include social needs-related measures in MIPS along with all the CMS quality programs without a comprehensive strategy on the best approach for physicians and clinicians to address the problem will exacerbate inequities and runs the risk of deteriorating the physician-patient relationship.

Response: We acknowledge the commenters concerns with this measure; however, we disagree with the commenter that this measure is not evidence-based. Studies have shown that social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health.[1138] Systematically screening patients for social drivers of health and referring them to community-based resources as needed can result in improved health outcomes.[1139] Furthermore, improving the clinician's understanding of the social obstacles their patients face beyond the clinical realm – but which may

[1138] Daniel, H., Bornstein, S. S., Kane, G. C., Health and Public Policy Committee of the American College of Physicians, Carney, J. K., Gantzer, H. E., Henry, T. L., Lenchus, J. D., Li, J. M., McCandless, B. M., Nalitt, B. R., Viswanathan, L., Murphy, C. J., Azah, A. M., & Marks, L. (2018). Addressing Social Determinants to Improve Patient Care and Promote Health Equity: An American College of Physicians Position Paper. *Annals of Internal Medicine*, *168*(8), 577–578. https://doi.org/10.7326/M17-2441.

[1139] See footnote Daniel et al., 2018.

affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, improve a patient's overall health and well-being.[1140]

While we agree availability of resources may be a challenge in some areas, with the increase in telehealth and virtual networking, the CSP need not be in the general area to provide assistance. Through different programs, CSPs can identify and work with the proper resources to reduce social stressors for patients and clinicians. We acknowledge that due to nuances in clinician specialization, scope of care, or regional location, not all measures within MIPS will be applicable or appropriate to all clinicians within that specialty set umbrella. However, no measures within traditional MIPS are required. MIPS provides clinician choice to account for these nuances, while ensuring clinicians can choose measures that are most meaningful to their scope of care and patient case-mix.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62565), we are finalizing the changes to measure Q498 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.61. Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	500
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks.
Substantive Change:	**Updated denominator criteria: Added:** acute PVD. **Removed:** coding for non-acute disorders related to PVD.
Measure Steward:	American Society of Retina Specialists
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to revise the denominator criteria by removing diagnosis codes for non-acute PVD and adding acute PVD within the criteria of the denominator. The ICD-10-CM PVD diagnosis codes do not differentiate between acute and non-acute disorders of vitreous detachment; therefore, to ensure the intended patient population is identified, the denominator criteria must be specific to acute PVD.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter provided comments related to proposed substantive changes proposed to measure Q500: Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up and measure Q501: Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up (see Table D.62 of this Appendix). The commenter requested guidance on what specific coding will be added to indicate acute PVD. Currently, the measure specification for measure Q500 does not require a HCPCS code for acute PVD, while the measure specification for measure Q501 does. The commenter requested that the coding requirements be consistent for these two measures.

Currently, the 2024 measure specifications for measures Q500 and Q501 both have the following definition of acute PVD specified in the Denominator section "Acute PVD – For the purposes of this measure, acute PVD and vitreous hemorrhage is defined as recent onset of 30 days or less. For PVD, acute can be documented as new onset vitreous separation or vitreous detachment." This indicates these measures could be mapped to keywords for reporting, rather than relying on coding. The commenter requested that CMS allow providers to use either the HCPCS code or the field mapping to identify the patient population. Since a significant percentage of clinicians do not use the acute PVD HCPCS code, there will need to be significant education required to implement new practices should the code be required for these measures in 2025. Therefore, in addition to making the denominator requirements the same for measures Q500 and Q501, the commenter requested that CMS clarify and clearly communicate what the coding changes for these measures will be prior to December 2024. This would allow time to educate clients and members to ensure they are able to code appropriately for these measures for a full year starting on January 1, 2025.

Response: We thank the commenters for their feedback. The specific coding will be listed in the measure specifications along with the Single Source document which will be posted in December.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62566), we are finalizing the changes to measure Q500 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.62. Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	501
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks.
Substantive Change:	**Updated denominator criteria: Removed:** coding for non-acute disorders related to PVD.
Measure Steward:	American Society of Retina Specialists
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to revise the denominator criteria by removing diagnosis codes for non-acute PVD and adding acute PVD within the criteria of the denominator. The ICD-10-CM PVD diagnosis codes do not differentiate between acute and non-acute disorders of vitreous detachment; therefore, to ensure the intended patient population is identified, the denominator criteria must be specific to acute PVD.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table D.61 of this Appendix, one commenter requested guidance on what specific coding will be added to indicate acute PVD to measures Q500: Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up and Q501: Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up.

Response: Please see our response to this commenter under Table D.61 of this Appendix.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62566), we are finalizing the changes to measure Q501 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.63. Gains in Patient Activation Measure (PAM®) Scores at 12 Months

Category	Description
CBE # / eCQM CBE #:	2483 / N/A
Quality #:	503
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	The Patient Activation Measure® (PAM®) is a 10- or 13- item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.
Substantive Change:	**Updated instructions: Revised:** follow-up PAM® survey collected on at least 25% of all eligible patients within 4 to 12 months of the baseline during the performance period. **The measure denominator is revised to read:** **For Submission Criteria 1:** Patients aged 14 years and older with at least two qualifying visits during the performance period. **For Submission Criteria 2, 3 & 4:** Patients aged 14 years and older with Performance Met for Submission Criteria 1 who had a baseline PAM® score and a second score within 4 to 12 month of baseline PAM® score and who were seen for a qualifying visit at least twice during the performance period. **Updated denominator criteria: Revised:** For Submission Criteria 2, 3, & 4: follow-up PAM® survey collected on at least 25% of all eligible patients within 4 to 12 months of the baseline during the performance period. **Updated denominator exception: Revised:** For Submission Criteria 1: to remove patients with excessive missing responses or patients who were not seen for the second PAM survey within 4 months of the baseline. **Updated denominator exclusion: Added:** For ALL Submission Criteria: Patients who died during the performance period. **Updated numerator: Revised:** for ALL Submission Criteria: timing of follow-up PAM® survey to occur 4 to 12 months after baseline. **Updated numerator definition: Added**: For Submission Criteria 1: clarification as to what denotes excessive missing responses for each PAM survey.
Measure Steward:	Insignia Health, LLC, a wholly owned subsidiary of Phreesia
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale	We proposed to revise multiple components of this measure to allow re-administration of the PAM® survey no less than 4 months after the baseline survey is administered as opposed to 6 months. This change will allow a higher percentage of patients to complete the survey and be included in the measure denominator. In addition, we proposed to lower the minimum performance threshold for collected follow-up PAM® surveys from 50 percent to 25 percent and remove patients who were missing more than 3 responses on the PAM-10® surveys or more than 4 responses on the PAM-13® surveys. Revising the threshold for the collected follow-up PAM® survey reduces clinician burden by lowering the number of survey responses that need to be collected to meet the measure denominator. We also proposed to add a definition to clarify what denotes excessive for missing responses. Removing patients with excessive missing responses allows for a more complete assessment of an individual's knowledge, skills, and confidence for managing their health and health care. In addition, we proposed to increase the number of qualifying visits to two during the performance period and add an exclusion to remove patients who may have died during the performance period. These revisions to the denominator ensure a patient is established within that clinician's patient population which supports the completion of the baseline and follow-up of the survey.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed substantive changes to measure Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months. One of these commenters agreed with the proposal to lower the minimum performance threshold for collected follow-up PAM® surveys from 50 percent to 25 percent and supported the proposed modification to the denominator criteria to require two visits. This will ensure patients who are lost to follow-up do not count against a reporting clinician.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62567), we are finalizing the changes to measure Q503 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

D.64. Initiation, Review, and/or Update to Suicide Safety Plan for Individuals with Suicidal Thoughts, Behavior, or Suicide Risk

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	504
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM Specifications
Current Measure Description:	Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.
Substantive Change:	**The measure description is revised to read:** Percentage of patients aged 12 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician. **The measure denominator is revised to read:** For denominator submission criteria 1 & 2: Patients aged 12 years and older with a mental and/or substance use disorder with suicidal ideation and/or behavior symptoms or suicide risk at a clinical encounter during the denominator identification period.
Measure Steward:	American Psychiatric Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale	We proposed to revise the age from 18 years and older to 12 years and older for denominator eligibility as suicide risk assessment is an important part of child and adolescent mental health, as noted in an American Academy of Pediatrics publication.[1141] "Suicide is the second leading cause of death for 10- to 24-year-olds in the United States and is a global public health issue, with a recent declaration of a National State of Emergency in Children's Mental Health by the American Academy of Pediatrics, American Academy of Child and Adolescent Psychiatry, and Children's Hospital Association."[1142]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to measure Q504: Initiation, Review, and/or Update to Suicide Safety Plan for Individuals with Suicidal Thoughts, Behavior, or Suicide Risk to include patients 12 years and older as part of data collection. However, the commenter recommended lowering the age to 10 years and older to capture the quality of care for a broader population of patients who are impacted by suicide.

Response: We thank the commenter for supporting the substantive changes to this measure and appreciate the feedback regarding lowering the age to 10. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62568), we are finalizing the changes to measure Q504 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

[1141] Hua, L. L., Lee, J., Rahmandar, M. H., Sigel, E. J., Committee on Adolescence, & Council on Injury, Violence, and Poison Prevention. (2024). Suicide and Suicide Risk in Adolescents. *Pediatrics*, *153*(1), e2023064800. https://doi.org/10.1542/peds.2023-064800.

[1142] See footnote Hua et al., 2024.

Table Group DD: Finalized Substantive Changes to Previously Finalized MIPS Quality Measures Available Only for Use in Relevant MVPs for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

As finalized for the CY 2024 performance period/2026 MIPS payment year and future years, the following three MIPS quality measures were retained for utilization in MVPs only while removed from traditional MIPS: Q112**:** Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128**:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (88 FR 79897 through 79902). We note that some MIPS quality measures available only in MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as finalized in section IV.A.4.c.(3) of this final rule. For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group DD.

Table Group DD within this final rule provides substantive changes finalized for the CY 2025 performance period/2027 MIPS payment year for MIPS quality measures available only in a relevant MVP. Two of the aforementioned MIPS quality measures, Q112 and Q113, have substantive changes under Table Group DD. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2025 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2025 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2026. The 2025 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at *https://qpp.cms.gov*.

Note: Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table DD of this Appendix as follows: CBE # / eCQM CBE #.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2025 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We solicited comments on these substantive changes.

DD.1. Breast Cancer Screening

Category	Description
CBE # / eCQM CBE #:	2372 / N/A
Quality #:	112
CMS eCQM ID:	CMS125v13
Current Collection Type:	Medicare Part B Claims Measure Specifications / eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of women 40 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications, and Medicare CQM Specifications (collection type available only in the APP and/or APP Plus). **Updated denominator exclusion: For all collection types: Removed:** specific encounter requirements from the frailty/advanced illness exclusion.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision will update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q112. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the frailty exclusion criteria to measure Q112: Breast Cancer Screening. The removal of the encounter criteria will reduce reporting burden while still following through with the intent of the exclusion for patients with an indication of frailty.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62570), we are finalizing the changes to measure Q112 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

DD.2. Colorectal Cancer Screening

Category	Description
CBE # / eCQM CBE #:	0034 / N/A
Quality #:	113
CMS eCQM ID:	CMS130v13
Current Collection Type:	Medicare Part B Claims Measure Specifications / eCQM Specifications / MIPS CQM Specifications
Current Measure Description:	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQM Specifications, and Medicare CQM Specifications (collection type available only in the APP and/or APP Plus) **Updated denominator exclusion: For all collection types: Removed:** specific encounter requirements from the frailty/advanced illness exclusion.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale	We proposed to update the denominator exclusion by removing the requirement for patients to have had at least one inpatient or two outpatient encounters to recognize a diagnosis of advanced illness. The removal of this requirement within the denominator exclusion reduces the burden of identifying applicable encounters, while still identifying patients with an indication of frailty. This is particularly applicable for those patients seen outside of their reporting clinician's medical record. This revision will update the denominator exclusion to remove any patient 66 years of age and older who has a diagnosis of advanced illness during the measurement period or the year prior from the denominator of measure Q113. Decreasing complexity and burden of this element ensures consistent implementation allowing for more comparable data.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed substantive changes to the frailty exclusion criteria to measure Q113: Colorectal Cancer Screening. The removal of the encounter criteria will reduce reporting burden while still following through with the intent of the exclusion for patients with an indication of frailty.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (89 FR 62570), we are finalizing the changes to measure Q113 as proposed for the CY 2025 performance period/2027 MIPS payment year and future years.

APPENDIX 2: IMPROVEMENT ACTIVITIES

We refer readers to the CY 2025 Physician Fee Schedule (PFS) proposed rule (89 FR 62056 through 62057 and 89 FR 62571 through 62581), where we proposed for the CY 2025 performance period/2027 MIPS payment year and future years to add two new improvement activities, modify two previously adopted improvement activities, and remove eight previously adopted improvement activities. We refer readers to 89 FR 62056 of the CY 2025 PFS proposed rule for additional details on the Call for Improvement Activities process. In this final rule, for the CY 2025 performance period/2027 MIPS payment year and future years, we are adding **two** new improvement activities, modifying **one** previously adopted improvement activity, and removing **four** previously adopted improvement activities. These changes are discussed in section IV.A.4.e.(3)(b)(iii) of this final rule and in more detail below.

TABLE A: New Improvement Activities for the CY 2025 Performance Period/2027 MIPS Payment Year and for Future Years

New Improvement Activity	
Proposed Activity ID:	**IA_PM_24**
Proposed Subcategory:	Population Management
Proposed Activity Title:	Implementation of Protocols and Provision of Resources to Increase Lung Cancer Screening Uptake
Proposed Activity Description:	Establish a process or procedure to increase rates of lung cancer screening through one or more of the following interventions: • Implementation of protocols that support enhanced documentation methods to identify eligible patients for lung cancer screening. ++ Example: A practice could embed electronic health record (EHR) prompts to flag insufficient patient smoking history (for example, total pack-years) and increase practice awareness around patient eligibility for screening ++ Example: A practice could implement documentation processes or procedures (for example, retrospective chart review, lung cancer screening eligibility questionnaire) to improve patient lung cancer screening eligibility data in the medical record • Development of a patient outreach and activation plan consisting of educational materials and resources for patients at high-risk of lung cancer for improved patient engagement and decision-making. ++ Example: Providers or clinic staff could provide culturally and linguistically appropriate patient-directed educational or care navigation materials related to lung cancer screening, eligibility criteria for low-dose computed tomography (LDCT), and the purpose and benefits of screening ++ Example: Providers or clinic staff could provide tools to prepare patients for shared decision-making (SDM) clinical encounters and promote patient/provider communication on lung cancer screening decision-making • Establishment of a navigation program to improve uptake and adherence of lung cancer screening and increase rates of LDCT referral completion. ++ Example: A practice could designate and train existing clinic staff or hire an additional staff member to counsel patients on the importance of lung cancer screening and refer them to existing resources (for example, transportation assistance, translator, financial services, appointment scheduling) to support ability to obtain LDCT ++ Example: A practice could create a process to follow up with referred patients via telephone reminders or virtual notifications (for example, email, patient charts)
Rationale:	Lung cancer is a leading cause of cancer-related deaths (21%) in the U.S., more than colon and breast cancers combined.[1,2] While there are established guidelines for the targeted use of LDCT for eligible patients, including particular criteria for age and

smoking history[3,4], national lung cancer screening (LCS) rates are estimated at only 6.5% as of 2020, compared to 63% for colon and 64% for breast cancer screening in 2019.[5,6]

Evidence demonstrates that screening for lung cancer can improve patient outcomes. The implementation of protocols that support enhanced documentation methods to identify eligible patients for LCS has been found to increase early-stage lung cancer detection, in one study by 24 percent (Russel et al., 2022).[7] Other studies have also shown benefits from enhancing documentation to allow for more appropriate LCS:

- Following a retrospective chart review of existing patient smoking history and implementation of a notification system for primary care providers (PCPs), a community hospital identified 82 percent of patients who were eligible for LCS not yet referred for screening, and of that, 31 percent completed an LDCT referral.[8]
- Implementation of a clinical reminder system in an EHR to refer eligible patients to an LCS program, increased the number of LDCTs performed from 54 percent to 79 percent in one Veterans Affairs (VA) medical center.[9]
- EHR prompts generating a notification for providers to order LDCT screening for eligible patients, increased documentation of complete patient smoking history by 31 percent.[10]
- Updating patient pack-year data in the EHR through a patient questionnaire on smoking history and implementation of an EHR screen assessing pack-year data in alignment with evidence-based guidelines; development of a patient outreach and activation plan consisting of educational materials and resources for patients at high-risk of lung cancer for improved patient engagement and decision-making: among patients from a tobacco quit-line utilizing a video-based LCS decision aid, 50 percent reported feeling well-prepared to make screening decisions than with traditional materials and 68 percent reported being clear about their values related to the harms and benefits of screening. Additionally, patients using the decision-aid were more knowledgeable about LCS than participants using standard educational materials at each follow-up assessment.[11]
- A web-based tool developed for SDM led to improved patient engagement, knowledge of LDCT, and preparation for SDM discussions among veterans in a primary care setting.[12]
- A computer tailored decision-support tool developed in alignment with the U.S. Preventive Services Task Force (USPSTF) LCS guidelines, increased LCS knowledge scores (2.33 mean change) and patient-perceived self-efficacy and benefits of LCS in a community-based clinic.[13]

Evidence also demonstrates the outcomes-improvement potential of the establishment of a navigation program to improve uptake and adherence of LCS and to increase rates of LDCT referral completion:

- In a patient navigator-led program including patient outreach to determine LCS eligibility, SDM discussions, and appointment-scheduling with patient's PCPs, 23.5 percent of LDCTs were performed in the intervention group compared to 8.6 percent in the control group among high-risk current smokers across 5 community health centers.[14]
- An oncology nurse navigator-led provider education program resulted in improved provider knowledge of LDCT and documented tobacco cessation discussions, as well as increased LDCT ordering for eligible patients.[15]
- A nurse-practitioner-led LCS clinic observed a 60 percent increase in the total number of LDCTs conducted and 85 percent of stakeholder participants noted the clinic was effective at addressing barriers to LCS.[16]

Exemplifying the importance of efforts seeking to increase LCS and follow up, guidelines and recommendations on expanded LCS eligibility criteria and SDM requirements by the Centers for Medicare & Medicaid Services (CMS) have recently been implemented:

- In 2021, leading LCS clinical guideline developers, including USPSTF and the AAFP lowered the starting age of LCS with LDCT from 55 to 50 years and

	patient pack-year history from 30 to 20 years, resulting in a larger eligible screening population.[17,3] • In 2022, under the Medicare National Coverage Determination, CMS expanded LCS eligibility criteria for age and pack-year history for beneficiaries receiving LDCT in alignment with clinical guidelines (for example, USPSTF, AAFP). • In addition to the expanded eligibility criteria, CMS requires a counseling and SDM visit to be appropriately documented in a patient's medical record and be inclusive of determination of beneficiary eligibility and the use of one or more decision-aids.[18] There is also published evidence that cost-effectiveness of care can improve as a result of expanded eligibility screening. Research has found downstream effects linked to early detection and prevention in LCS to be associated with long-term cost-effectiveness in LCS care delivery: • In 2021, the USPSTF expanded screening recommendations to include individuals at an earlier age of 50 from 55 years, and minimum cumulative smoking exposure from 30 to 20 pack-years. An economic evaluation of this guideline change indicated that the updated recommendations were cost effective compared to the earlier recommendations, with a mean incremental cost-effectiveness ratio of $72,564 per quality-adjusted life-year (QALY) gained.[19] • One study demonstrates the cost-savings of earlier diagnosis of lung cancer. In a review of patients with non-small cell lung cancer (NSCLC), it was revealed that the total per-patient per-month health care costs after diagnosis were significantly higher among those diagnosed at a Stage IV and lower among those diagnosed at Stage I ($7,239 Stage I, $9,484 Stage II, $11,193 Stage IIIa, $17,415 Stage IIIb, and $21,441 Stage IV).[20] • One modeling study of costs and outcomes associated with lung cancer found that implementation of a patient navigation program is cost-effective for lung cancer patients in Medicare, including that the program was cost-effective at a probability of 0.91 at $100,000/QALY.[21] • Given the significant impact of lung cancer in the U.S.--and the effectiveness of LCS and related interventions--as noted above, this activity has a high likelihood of making a positive impact on outcomes for eligible clinicians' patients.
Comment & Response:	*Comment*: We received comments in support of this new activity, citing that this will promote increased utilization of these important screenings. *Response*: We appreciate the supportive comments regarding this new activity.
Final Action:	We are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_PM_25**
Proposed Subcategory:	Population Management
Proposed Activity Title:	Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk
Proposed Activity Description:	Implement standardized, evidence-based cardiovascular disease risk assessment and care management for a defined population in the clinician's practice. The clinician or clinician group will apply standardized risk assessment and care management to a broad, clinician-defined patient population in the practice. The population can be defined by 1) patient age and/or atherosclerotic cardiovascular disease (ASCVD) risk factors; or 2) the constraints of the risk assessment tool (for example, the American College of Cardiology (ACC)/American Heart Association (AHA) ASCVD Risk Calculator is validated for patients over age 40). The results of screening and the plan for treatment and follow up will be documented using a standardized method in the patient's medical record. Care management plan and follow up intervals will be influenced by the degree of patient risk.

	Cardiovascular care management should be defined by risk assessment and lead to the development of individualized care plans with specific goals. Shared decision making should be part of the development of every patient care plan.
Rationale:	Heart disease is the leading cause of death in the United States. Stroke is the fifth most common cause of death in the United States.[22]This activity is informed by the results of the CMS Innovation Center Million Hearts Model, which included initial ASCVD assessment as well as cardiovascular care management. [23] The Million Hearts Model used the ACC/AHA ASCVD Risk Calculator: ASCVD Risk Estimator (acc.org). [24] The proposed new activity supports improved identification and treatment of patients at risk for ASCVD, and would expand on the work of the model in two ways: (1) increasing flexibility in requirements, allowing more clinician specialties to participate, along with increased flexibility in risk assessment to fit the needs of attesting clinicians and their patient populations; (2) requiring the use of structured documentation of risk factors and associated treatment plans with the aim of addressing all risk factors directly. This activity accommodates the use of any evidence-based approach to risk evaluation and patient care management that is implemented using standardized methods and across an entire patient population. The ASCVD Risk Estimator used by the Million Hearts Model is evidence based and simple to implement but may not be appropriate for every practice scenario or patient population. There is strong published evidence validating the ACC/AHA ASCVD Risk Calculator; describing optimal care for coronary artery disease (including making comparisons to European Union best practices); and providing guidelines for primary prevention of coronary artery disease.[25,26,27,28]
Comment & Response:	*Comment*: We received comments in support of this new activity, citing that this will promote increased utilization of these important screenings. *Response*: We appreciate the supportive comments regarding this new activity.
Final Action:	We are finalizing this new activity as proposed.

TABLE B: Changes to Previously Adopted Improvement Activities for the CY 2025 Performance Period/2027 MIPS Payment Year and for Future Years

In this final rule, we are modifying **one** previously finalized improvement activity for the CY 2025 performance period/2027 MIPS payment year and future years. This change is discussed in section IV.A.4.e.(3)(b)(iii) of this final rule and in more detail below.

Current Improvement Activity	
Current Activity ID:	**IA_ERP_6**
Current Subcategory:	Emergency Response & Preparedness
Current Activity Title:	COVID-19 Vaccine Achievement for Practice Staff
Current Activity Description:	Demonstrate that the MIPS eligible clinician's practice has maintained or achieved a rate of 100 percent of office staff staying up to date with COVID vaccines according to the Centers for Disease Control and Prevention.[29] Please note that those who are determined to have a medical contraindication specified by CDC recommendations are excluded from this activity.
Current Weighting:	Medium
Proposed Activity ID:	**IA_PM_26**
Proposed Subcategory:	Population Management
Proposed Revised Activity Title:	Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B
Proposed Revised Activity Description:	Demonstrate that the MIPS eligible clinician's practice has achieved and/or maintained a vaccination rate of 60 percent of clinical practice staff for COVID-19, and 80 percent for influenza. Demonstrate vaccination, immunity, or non-responder status to hepatitis B for 95 percent of clinical practice staff. Vaccination recommendations are from Centers for Disease Control and Prevention; staff with contraindications to the vaccinations, as determined by the CDC, are excluded from the requirements. Vaccines and Immunizations CDC.
Proposed Change and Rationale:	Adjusting the target goals for this activity would align with the latest CDC recommendations and feedback received indicates that the proposal could increase the activity's utilization. Additionally, we are expanding the focus of this activity to include influenza and hepatitis B to highlight the importance of staff vaccination for vaccine-preventable diseases prevalent today. We also proposed a change in this activity's subcategory, from Emergency Response & Preparedness to Population Management, to emphasize that staff vaccination is a long-term strategy in reducing morbidity and mortality rates for these diseases.
Comment & Response:	*Comment*: We received comments in general support of this activity modification. One commenter pointed out that this revised activity will promote workforce safety from serious illness, enabling clinicians to continue providing essential long-term patient care, as well as limiting the potential spread of diseases to vulnerable patients. *Response*: We appreciate the supportive comments regarding this activity modification, and we will continue with our approach of reviewing, assessing, and refining each activity on a regular basis for relevance and effectiveness in promoting clinical practice improvement.
Final Action:	We are finalizing this activity modification as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_BE_4**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Engagement of patients through implementation of improvements in patient portal
Current Activity Description:	To receive credit for this activity, MIPS eligible clinicians must provide access to an enhanced patient/caregiver portal that allows users (patients or caregivers and their clinicians) to engage in bidirectional information exchange. The primary use of this portal should be clinical and not administrative. Examples of the use of such a portal

	include but are not limited to: brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; or any relevant acute or chronic disease management.
Current Weighting:	Medium
Proposed Activity ID:	**IA_BE_4**
Proposed Subcategory:	Beneficiary Engagement
Proposed Revised Activity Title:	Engagement of Patients through Implementation of New Patient Portal
Proposed Revised Activity Description:	To receive credit for this activity, MIPS eligible clinicians must implement and provide access to a new patient/caregiver portal that allows users (patients or caregivers and their clinicians) to engage in bidirectional information exchange. The primary use of this portal should be clinical and not administrative. Examples of the use of such a portal include, but are not limited to, the following: brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; and/or any relevant acute or chronic disease management.
Proposed Change and Rationale:	We proposed to modify this activity's description and its validation criteria to specify the implementation of a new patient/caregiver portal by clinicians who were not previously using a patient portal. This activity was originally created during a time of transition to EHRs to encourage electronic information exchange. It has become standard practice to use patient portals; therefore, the activity is likely no longer driving improvement among clinicians who have already implemented a patient portal. This activity has been highly utilized year over year and continues to be in the top ten activities reported. Limiting the activity to clinicians that implement new patient portals in practices that previously did not use them would refocus the measure on its original purpose and encourage clinicians who have previously implemented patient portals to report other improvement activities that may offer meaningful opportunities for improvement.
Comment & Response:	*Comment*: Several commenters supported our Inventory changes as proposed. *Response*: We appreciate commenters' support as well as suggestions on ways to maintain an Inventory of activities that are diverse, robust, and meaningful. *Comment*: Multiple commenters did not support this modification to limit this activity to new patient portal users. A few commenters argued that maintaining an established patient portal and deploying new functionalities demonstrates a continued commitment to quality improvement and a significant financial investment, and that current clinicians who regularly use a patient portal should also be able to attest to this improvement activity. *Response*: We disagree with the commenters that stated the activity should remain available for the maintenance of a patient portal. The implementation of a patient portal is a specific action that promotes clinical improvement. While maintaining and updating an existing patient portal is an integral part of supporting patient engagement and health information exchange, it does not improve clinical care relative to the prior year. *Comment*: Several commenters requested that CMS give a one-year notice before modifying this activity so that practices have enough time to plan for changes.

	Response: In response to comments received requesting a one-year notice before modifying this activity, we are delaying implementation of this activity modification to give clinicians additional time to prepare to report alternate activities.
Final Action:	We are delaying implementation of this activity modification. It will be effective beginning with the CY 2026 performance period/2028 MIPS payment year.

[29]Centers for Disease Control and Prevention (2024). Stay Up to Date with COVID-19 Vaccines. Last Updated April 25, 2024. https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html

TABLE C: Improvement Activities Being Removed for the CY 2025 Performance Period/20267MIPS Payment Year and for Future Years

In this final rule, we are removing **four** previously finalized improvement activities beginning with the CY 2025 performance period/2027 MIPS payment year. These changes are discussed in section IV.A.4.e.(3)(b)(iii) of this final rule and in more detail below; activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

Current Improvement Activity	
Current Activity ID:	**IA_ EPA_1**
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
Current Activity Description:	Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent care (for example, MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following: • Expanded hours in evenings and weekends with access to the patient medical record for example, coordinate with small practices to provide alternate hour office visits and urgent care); • Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (for example, senior centers and assisted living centers); and/or • Provision of same-day or next-day access to a MIPS eligible clinician, group or care team when needed for urgent care or transition management.
Current Weighting:	High
Removal Rationale:	We proposed to remove this activity under removal factor seven, activity is obsolete; this activity was created, in part, to incentivize utilization of EHRs to increase access to clinicians in off hours and decrease emergency room (ER) visits. Today, EHRs are highly utilized, and this activity has become standard of care. This is supported by the fact that this activity continues to be in the top ten activities reported, indicating that it is overutilized and that the clinical practice improvement promoted by the activity has been achieved. We proposed the removal of this activity in the context of our regular review of the Inventory. In conducting this review recently, we concluded that the goal of this activity has been widely achieved by eligible clinicians and practices.
Comment & Response:	*Comment*: We received comments expressing broad support for this activity removal. *Response*: We appreciate the supportive comments. *Comment*: Several commenters expressed concern about removing this activity, citing the importance of clinicians' having continual access to their patient medical records. One commenter suggested that, rather than removing the activity, it should be limited to newly established access to patient medical records. A few commenters requested that CMS give a one-year notice before removing or modifying an activity so that practices have enough time to plan for changes. *Response*: We also acknowledge commenters' expressions of concern about this removal. The establishment of expanded hours of access to patient medical records, alternative methods for accessing patient information, and/or a process for providing rapid access to patient information during urgent care or transition management are specific actions that promote clinical improvement. While maintaining 24/7 access to patient records for clinicians is an integral part of health information exchange, maintaining this access does not improve care relative to the prior year. More broadly, this improvement activity is obsolete because there has been widespread adoption of EHR systems that provide 24/7 access to and health exchange of patient data for clinicians and groups.

Final Action:	We are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_12**
Current Subcategory:	Population Management
Current Activity Title:	Population empanelment
Current Activity Description:	Empanel (assign responsibility for) the total population, linking each patient to a MIPS eligible clinician or group or care team. Empanelment is a series of processes that assign each active patient to a MIPS eligible clinician or group and/or care team, confirm assignment with patients and clinicians, and use the resultant patient panels as a foundation for individual patient and population health management. Empanelment identifies the patients and population for whom the MIPS eligible clinician or group and/or care team is responsible and is the foundation for the relationship continuity between patient and MIPS eligible clinician or group /care team that is at the heart of comprehensive primary care. Effective empanelment requires identification of the "active population" of the practice: those patients who identify and use your practice as a source for primary care. There are many ways to define "active patients" operationally, but generally, the definition of "active patients" includes patients who have sought care within the last 24 to 36 months, allowing inclusion of younger patients who have minimal acute or preventive health care.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor seven, activity is obsolete; this activity was designed in the early years of the MIPS program to highlight the importance of patient population empanelment to drive patient-centered care and, over time, to drive quality improvement. Empanelment is now more widely accepted and/or used as an option to drive and/or measure comprehensive care, and this activity has no requirement for implementation or improvement beyond the empanelment; therefore, we are recommending its removal.
Comment & Response:	*Comment*: Several commenters supported our Inventory changes as proposed. A few commenters did not support this removal, arguing that panel management is a critical, ongoing activity that requires regular monitoring to adjust for patient acuity and clinician workloads. One commenter suggested that, rather than removing the activity, it should be limited to new reporters for a finite number of years. *Response*: We appreciate commenters' suggestions. This improvement activity is obsolete because the establishment of empanelment processes has been widely achieved and annual maintenance, while integral, does significantly improve clinical care relative to the prior year. *Comment*: A few commenters requested that CMS give a one-year notice before removing or modifying an activity so that practices have enough time to plan for changes. *Response*: In response to comments received requesting a one-year notice before removing this activity, we are delaying implementation of this activity removal to give clinicians additional time to prepare to report alternate activities.
Final Action:	We are delaying implementation of this activity removal. It will be effective beginning with the CY 2026 performance period/2028 MIPS payment year.
Current Improvement Activity	
Current Activity ID:	**IA_CC_1**
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of use of specialist reports back to referring clinician or group to close referral loop
Current Activity Description:	Performance of regular practices that include providing specialist reports back to the referring individual MIPS eligible clinician or group to close the referral loop or where the referring individual MIPS eligible clinician or group initiates regular inquiries to

	specialist for specialist reports which could be documented or noted in the EHR technology.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor one, this activity is duplicative, and factor five, this activity does not align with the quality, cost, or Promoting Interoperability performance categories. This activity provides credit for ensuring that consultation reports are communicated between an ordering and a consulting provider, and this is now standard of care. Also, this concept is redundant with some quality and Quality Clinical Data Registry (QCDR) measures, including QM#374. Our recommendation for removal is supported by the fact that this activity continues to be in the top ten activities reported, indicating that it is overutilized and that the clinical practice improvement promoted by the activity has been achieved. We proposed the removal of this activity in the context of our regular review of the Inventory. In conducting this review recently, we concluded that the goal of this activity has been widely achieved by eligible clinicians and practices.
Comment & Response:	*Comment*: Several commenters supported our Inventory changes as proposed. A few commenters did not support this removal because supporting electronic referral loops contributes to delivering well-coordinated, patient-centered care. *Response*: We appreciate commenters' feedback. The practice of closing the referral loop among specialists and referring clinicians has been widely achieved and credit for completing this action is already being offered in other performance categories, making this activity duplicative of and out of alignment with the quality measures performance category. *Comment*: Several commenters requested that CMS give a one-year notice before removing this activity so that practices have enough time to plan for changes. *Response*: In response to comments received requesting a one-year notice before removing this activity, we are delaying implementation of this activity removal to give clinicians additional time to prepare to report alternate activities.
Final Action:	We are delaying implementation of this activity removal. It will be effective beginning with the CY 2026 performance Period/2028 MIPS payment year.
Current Improvement Activity	
Current Activity ID:	**IA_CC_2**
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of improvements that contribute to more timely communication of test results
Current Activity Description:	Timely communication of test results defined as timely identification of abnormal test results with timely follow-up.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor seven, activity is obsolete. This activity was created, in part, to encourage strategies for timely communication and to improve upon those strategies. This process has become widely used with the use of EHRs and the adoption of patient portals and is now standard of care. This is supported by the fact that this activity continues to be in the top ten activities reported, indicating that it is overutilized. We proposed the removal of this activity in the context of our regular review of the Inventory. In conducting this review recently, we concluded that the goal of this activity has been widely achieved by eligible clinicians and practices.
Comment & Response:	*Comment*: Several commenters supported our Inventory changes as proposed. A few commenters did not support this removal, arguing that timely communication of test results is an ongoing activity. One commenter suggested that, rather than removing the activity, it should be limited to new reporters for a finite number of years. A few commenters requested that CMS give a one-year notice before removing or modifying an activity so that practices have enough time to plan for changes.

	Response: We appreciate commenters' suggestions. This improvement activity is obsolete because the establishment of processes to support timely communication of results has been widely achieved, and maintenance, while integral, does not significantly improve clinical care relative to the prior year. In response to comments received requesting a one-year notice before removing this activity, we are delaying implementation of this activity removal to give clinicians additional time to prepare to report alternate activities.
Final Action:	We are delaying implementation of this activity removal. It will be effective beginning with CY 2026 performance period/2028 MIPS payment ear.
Current Improvement Activity	
Current Activity ID:	**IA_ERP_4**
Current Subcategory:	Emergency Response and Preparedness
Current Activity Title:	Implementation of a Personal Protective Equipment (PPE) Plan
Current Activity Description:	Implement a plan to acquire, store, maintain, and replenish supplies of personal protective equipment (PPE) for all clinicians or other staff who are in physical proximity to patients. In accordance with guidance from the Centers for Disease Control and Prevention (CDC) the PPE plan should address: • Conventional capacity: PPE controls that should be implemented in general infection prevention and control plans in healthcare settings, including training in proper PPE use. • Contingency capacity: actions that may be used temporarily during periods of expected PPE shortages. • Crisis capacity: strategies that may need to be considered during periods of known PPE shortages. The PPE plan should address all of the following types of PPE: • Standard precautions (for example, hand hygiene, prevention of needle-stick or sharps injuries, safe waste management, cleaning and disinfection of the environment) • Eye protection • Gowns (including coveralls or aprons) • Gloves • Facemasks • Respirators (including N95 respirators)
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor seven, activity is obsolete; since the COVID-19 pandemic, most clinicians are well prepared in PPE safety, as PPE enhancements have been made throughout patient care settings. It is unlikely that this activity will drive new improvements. We acknowledge the ongoing importance of PPE, and will work to ensure that, going forward, improvement activities that support continued enhancement and maintenance of PPE protocols are reflected in MIPS.
Comment & Response:	*Comment*: We received comments expressing general support for this activity removal. Two commenters expressed concern about the removal of this activity, citing that maintaining a plan for PPE will be essential for any future pandemics as well as everyday functioning of the health care system. A few commenters requested that CMS give a one-year notice before modifying or removing this activity so that practices have enough time to plan for changes. *Response*: We appreciate commenters' suggestions. The implementation of PPE plans has been widely achieved. We will consider comments received urging CMS to develop and may propose through rulemaking an improvement activity that promotes a comprehensive approach to long-term sustenance of PPE protocols.
Final Action:	We are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_ERP_5**
Current Subcategory:	Emergency Response and Preparedness
Current Activity Title:	Implementation of a Laboratory Preparedness Plan
Current Activity Description:	Develop, implement, update, and maintain a preparedness plan for a laboratory intended to support continued or expanded patient care during COVID-19 or another public

	health emergency. The plan should address how the laboratory would maintain or expand patient access to health care services to improve beneficiary health outcomes and reduce healthcare disparities. For laboratories without a preparedness plan, MIPS eligible clinicians would meet with stakeholders, record minutes, and document a preparedness plan, as needed. The laboratory must then implement the steps identified in the plan and maintain them. For laboratories with existing preparedness plans, MIPS eligible clinicians should review, revise, or update the plan as necessary to meet the needs of the current PHE, implement new procedures, and maintain the plan. Maintenance of the plan in this activity could include additional hazard assessments, drills, training, and/or developing checklists to facilitate execution of the plan. Participation in debriefings to evaluate the effectiveness of plans are additional examples of engagement in this activity.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor seven, activity is obsolete; since the COVID-19 pandemic, most clinicians are now well prepared in COVID-19-related patient safety and laboratory-preparedness enhancements have been made throughout patient care settings. It is unlikely that this activity will drive new improvements. We acknowledge the ongoing importance of laboratory preparedness, and will work to ensure that, going forward, improvement activities that support continued enhancement and maintenance of lab preparedness protocols are reflected in MIPS.
Comment & Response:	*Comment*: We received comments expressing general support for this activity removal. Two commenters expressed concern about the removal of this activity, citing that maintaining a plan for laboratory preparedness will be essential for any future pandemics as well as everyday functioning of the health care system. A few commenters requested that CMS give a one-year notice before modifying or removing this activity so that practices have enough time to plan for changes. *Response*: We appreciate commenters' suggestions. The implementation of laboratory preparedness plans has been widely achieved. We will consider comments received urging CMS to develop and may propose through rulemaking an improvement activity that promotes a comprehensive approach to long-term sustenance of lab preparedness protocols.
Final Action:	We are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_BMH_8**
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Electronic Health Record Enhancements for BH data capture
Current Activity Description:	Enhancements to an electronic health record to capture additional data on behavioral health (BH) populations and use that data for additional decision-making purposes (for example, capture of additional BH data results in additional depression screening for at-risk patient not previously identified).
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor two, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. This activity was created, in part, to assist in the transition from paper charts to EHRs. While the use of EHRs is now highly prevalent and has become part of current basic standards of care, there is still much progress to be made in terms of adoption and use of EHRs and other health information technologies in a behavioral health context. This activity, though, allows attestation with a low level of effort and with vague requirements related to clinical outcomes. Because there are other, more potentially impactful, behavioral health activities in the current Inventory, we are recommending that this activity be removed. IA_BMH_7, Implementation of Integrated Patient Centered Behavioral Health Model, which includes 'use of a registry or health information technology functionality to support active care management and outreach

	to patients in treatment,' is a strong alternative activity. We also intend, in future rulemaking, to develop a new activity (or to modify an existing activity) to promote the effective use of health information technologies in behavioral health.
Comment & Response:	*Comment*: Several commenters supported our Inventory changes as proposed. A few commenters did not support this removal, expressing concern that this sends a message that we are not prioritizing behavioral health. *Response*: We appreciate commenters' feedback. We are committed to promoting the use of health information technology and exchange in behavioral health, as evidenced by our ongoing efforts to refocus the improvement activity Inventory on more high-impact improvement activities in general, including behavioral health improvement activities. Please see more discussion regarding this at section IV.A.4.e.(3)(b)(iii) of this final rule. *Comment*: Multiple commenters requested that CMS give a one-year notice before removing or modifying an activity so that practices have enough time to plan for changes. *Response*: In response to comments received requesting a one-year notice before removing this activity, we are delaying implementation of this activity removal to give clinicians additional time to prepare to report alternate activities.
Final Action:	We are delaying implementation of this activity removal. It will be effective beginning with CY 2026 performance period/2028 MIPS payment ear
Current Improvement Activity	
Current Activity ID:	**IA_PSPA_27**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Invasive Procedure or Surgery Anticoagulation Medication Management
Current Activity Description:	For an anticoagulated patient undergoing a planned invasive procedure for which interruption in anticoagulation is anticipated, including patients taking vitamin K antagonists (warfarin), target specific oral anticoagulants (such as apixaban, dabigatran, and rivaroxaban), and heparins/low molecular weight heparins, documentation, including through the use of electronic tools, that the plan for anticoagulation management in the periprocedural period was discussed with the patient and with the clinician responsible for managing the patient's anticoagulation. Elements of the plan should include the following: discontinuation, resumption, and, if applicable, bridging, laboratory monitoring, and management of concomitant antithrombotic medications (such as antiplatelets and nonsteroidal anti-inflammatory drugs (NSAIDs)). An invasive or surgical procedure is defined as a procedure in which skin or mucous membranes and connective tissue are incised, or an instrument is introduced through a natural body orifice.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor one, this activity is duplicative. We recommend removal of this activity as its focus is duplicative with IA_CC_15: PSH [Perioperative-Surgical Home] Care Coordination. IA_CC_15 requires coordination of patient care through the perioperative period and includes anticoagulant management as one part of its requirements. This activity, IA_PSPA_27, is more tightly focused in an area that is high risk and, therefore, is not likely changing clinical practice widely. We acknowledge the ongoing importance of care coordination and medication management, and will work to ensure that, going forward, improvement activities that support continued enhancement and maintenance of anticoagulation medication management are reflected in MIPS.
Comment & Response:	*Comment*: We received comments expressing general support for this activity removal. Response: We appreciate the supportive comments.
l Action:	We are finalizing this activity removal as proposed.

APPENDIX 3: MVP INVENTORY

MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix contains two groups of MVP tables: Group A, which includes six new MVPs and Group B, which includes modifications to 16 previously finalized MVPs. We received comments on all Group A and Group B MVPs with the comment summaries and responses following each MVP set of tables.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category relevant to the clinical theme of the MVP. Each MVP also includes a foundational layer comprised of population health measures and Promoting Interoperability performance category measures.

MVP Development: Performance Category Sources

The MVP tables contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities considered in developing the MVP tables are as follows:

- Existing MIPS quality measures are in the 2024 MIPS Quality Measures List on the Quality Payment Program website.[1143] See Appendix 1: MIPS Quality Measures of this final rule for any additions (Table Group A), removals (Table Group C), or modifications to existing quality measures (Table Groups D and DD).
- Existing QCDR measures are based on the most recent publication of the 2024 QCDR Measure Specification file, located on the Quality Payment Program website.[1144] We plan to modify the list of 2025 QCDR measures around December 2024.
- Improvement activities are in the 2024 Improvement Activities Inventory and the 2024 MIPS Data Validation Criteria, located on the Quality Payment Program website.[1145] See Appendix 2: Improvement Activities of this final rule for any proposed additions (Table Group A), proposed modifications to existing improvement activities (Table Group B), or proposed removals (Table Group C).
- Existing cost measures are in the 2024 Cost Measures Inventory.[1146] See section IV.A.4.e.(2) of this final rule for any additions or modifications to existing cost measures.
- For further details on the population health measures (attributed to the Quality Performance Category) included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).
- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located on the Quality Payment Program website.[1147] We did not propose, and are not finalizing, any policy updates to the Promoting Interoperability performance category or any new, modified, or removed Promoting Interoperability measures for the CY 2025 performance period/2027 MIPS payment year (see section IV.A.4.e. of this final rule).

MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity

[1146] See the 2024 Cost Measures Inventory: *https://qpp.cms.gov/mips/explore-measures?tab=costMeasures&py=2024.*

[1147] See the 2024 Promoting Interoperability Measure Specifications: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2223/2024%20MIPS%20Promoting%20Interoperability%20Measure%20Specifications.zip* for Promoting Interoperability measure details.

- We proposed to eliminate the weighting from improvement activities and provide full credit for the improvement activities performance category when an MVP participant attests to one improvement activity option within the selected MVP. See section IV.A.4.e.(3)(b)(iv) of this final rule for detailed information regarding finalized proposals on the removal of weighting from improvement activities and for detailed information regarding finalized proposals on the reporting requirement changes for improvement activities.
- We proposed to modify IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff to expand the focus and importance of vaccination status to drive improvement across the practice. We proposed to add the proposed modified IA_ERP_6 to all new and previously finalized MVPs because of the importance of vaccination status in practice settings. See Appendix 2, Improvement Activities: Table B of this final rule for detailed information regarding finalized modifications to IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff, including the finalized activity ID and title update.

MVP Table Symbol Information and Definitions

Please note the following symbols and definitions used within the MVP tables in the Group A and Group B tables below:

● Quality measures, improvement activities, and cost measures proposed for addition to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.

● New quality measures, improvement activities, and cost measures proposed for inclusion in MIPS beginning with the CY 2025 performance period/2027 MIPS payment year and future years are identified with a caret symbol (^). See Appendix 1, MIPS Quality Measures: Table Group A of this final rule for further information regarding new MIPS quality measures. See Appendix 2: Improvement Activities: Table A of this final rule for further information regarding new improvement activities. See section IV.A.4.e.(2)(a)(ii) of this final rule for further information regarding new cost measures.

● Existing measures and improvement activities with revisions are identified with a single asterisk (*). See Appendix 1, MIPS Quality Measures: Table Group D of this final rule for further information regarding proposed revisions to MIPS quality measures. See Appendix 2: Improvement Activities: Table B of this final rule for further information regarding proposed revisions to improvement activities. See section IV.A.4.e.(2)(a)(iii) of this final rule for further information regarding proposed revisions to cost measures. We intend to include existing measures or activities with proposed revisions in MVPs (as applicable) regardless of whether the proposed revisions are finalized beginning with the CY 2025 performance period/2027 MIPS payment year.

● Quality measures and improvement activities identified with a double asterisk (**) can only be submitted when included in an MVP.

● Quality measures considered high priority (as defined in § 414.1305) are identified with a single exclamation point (!) while outcome measures (as defined in § 414.1305) are identified with a double exclamation point (!!). Further details of these types of measures are in the CMS Measures Management System Hub.[1148]

● Quality measures and improvement activities that include a health equity component are identified with a tilde (~) within the MVP table.

● Quality measure collection types are identified in parentheses after each quality measure title, and improvement activity medium/high weight designations are identified in parentheses after each improvement activity

[1148] See *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf.*

Group A: New MVPs Proposed for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

A.1 Complete Ophthalmologic Care MVP

In the CY 2025 PFS proposed rule (89 FR 62583 through 62588), we proposed and solicited comments on the Complete Ophthalmologic Care MVP. The proposed Complete Ophthalmologic Care MVP focuses on assessing meaningful outcomes in cataract, glaucoma, retinal detachment, and broadly applicable ocular care. This MVP would be most applicable to clinicians who treat patients within the practice of ophthalmology and optometry. The summary of the public comments received and our responses for this MVP are included immediately after Table A.1b.

Quality Measures

We proposed to include 18 MIPS quality measures and 6 QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of ocular care by assessing ocular health and treatment of disorders attributed to diabetes related disease, glaucoma, retinal detachment, and cataracts. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in ocular care:

- Q012: Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation: This MIPS quality measure evaluates changes in the optic nerve which define the progression and worsening of glaucoma disease status.
- Q019: Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care: This MIPS quality measure focuses on the communication between the primary physician managing ongoing care and the physician performing the dilated macular or fundus exam on patients with diabetic retinopathy.
- Q117: Diabetes: Eye Exam: This MIPS quality measure supports eye screening for diabetic retinal disease.
- Q141: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care: This MIPS quality measure focuses on glaucoma treatment and follow up, ensuring the IOP is within a range at which visual field loss is unlikely to significantly reduce a patient's health-related quality of life over their lifetime.
- Q191: Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery: This MIPS quality measure evaluates visual acuity as a surgical outcome following cataract surgery.
- Q303: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery: This MIPS quality measure looks for improvement in visual function following cataract surgery.
- Q304: Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery: This MIPS quality measure assesses patient satisfaction following cataract surgery. Patient satisfaction is a valuable performance indicator for measuring quality of care delivered by clinicians providing cataract surgery. Patient satisfaction is an assessment of the patient's experience with the care process delivered by the clinician and health care services.
- Q384: Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery: This MIPS quality measure assesses for successful surgical procedures by evaluating if patients required a return to the operation room or not.
- Q385: Adult Primary Rhegmatogenous Retinal Detachment Surgery: Visual Acuity Improvement Within 90 Days of Surgery: This MIPS quality measure assesses for successful surgical procedures by evaluating if patients showed improvement of visual acuity following surgery as compared to their preoperative level.
- Q389: Cataract Surgery: Difference Between Planned and Final Refraction: This MIPS quality measure evaluates patients for achieving a final refraction within +/- 1.0 diopters of their planned (target) refraction following cataract surgery.
- Q499: Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy: This MIPS quality measure focuses on patient safety and ensures appropriate screening and plan of care for elevated intraocular pressure following treatment with intravitreal or periocular steroid.
- Q500: Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up: This MIPS quality measure evaluates patients following acute posterior vitreous detachment to ensure prompt and appropriate care to minimize potential for complications.
- Q501: Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up: This MIPS quality measure evaluates patients following acute posterior vitreous detachment and acute vitreous hemorrhage to ensure prompt and appropriate care to minimize potential for complications.
- IRIS2: Glaucoma – Intraocular Pressure Reduction: This QCDR measure focuses on glaucoma patients to assess management of their IOP by evaluating if it is below a threshold level based on severity of their glaucoma.
- IRIS13: Diabetic Macular Edema – Loss of Visual Acuity: This QCDR measure evaluates outcomes of treatment for diabetic macular edema by assessing for change in visual acuity after treatment.
- IRIS39: Intraocular Pressure Reduction Following Trabeculectomy or an Aqueous Shunt Procedure: This QCDR measure assesses for successful treatment of patients with glaucoma who have undergone trabeculectomy or an aqueous shunt procedure by evaluating for intraocular pressure reduction.

- IRIS54: Complications After Cataract Surgery: This QCDR measure assesses for successful cataract surgeries by reviewing patients for complications within 90 days of the procedure.
- IRIS58: Improved Visual Acuity after Vitrectomy for Complications of Diabetic Retinopathy within 120 Days: This QCDR measure assesses for successful vitrectomy procedure in patients with diabetic retinopathy by reviewing patients for complications within 120 days of the procedure.
- IRIS61: Visual Acuity Improvement Following Cataract Surgery and Minimally Invasive Glaucoma Surgery: This QCDR measure evaluates visual acuity as a surgical outcome following cataract surgery and minimally invasive glaucoma surgery.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in ocular care. The quality measures below assess for age-specific screenings and the patients' understanding of engagement in their healthcare:

- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q374: Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receival from the referred to clinician, closing the communication loop.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 14 improvement activities that reflect actions and processes undertaken by clinicians who specialize in ocular care, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_25: Drug Cost Transparency
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_10: Care transition documentation practice improvements
- IA_CC_13: Practice improvements to align with OpenNotes principles
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff (modified to IA_PM_26)
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_13: Chronic care and preventative care management for empaneled patients
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of ocular care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in ocular care, specifically cataract removal, and aligns with other measures and activities within this MVP:

- Routine Cataract Removal with Intraocular Lens (IOL) Implantation: This MIPS episode-based cost measure assesses costs associated with routine cataract removal. The addition of this measure aligns with included quality measures, such as Q191: Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery and Q303: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.

We proposed to modify the Routine Cataract Removal with Intraocular Lens (IOL) Implantation cost measure, which included a measure title update to Cataract Removal with Intraocular Lens (IOL) Implantation. Please see section IV.A.4.e(2)(a)(iii) of this final rule for all finalized revisions to this cost measure.

Complete Ophthalmologic Care MVP Tables

Tables A.1a and A.1b serve to represent the measures and activities that are finalized within the Complete Ophthalmologic Care MVP.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

TABLE A.1a: Complete Ophthalmologic Care MVP Measures and Improvement Activities

Quality	Improvement Activities	Cost
Q012: Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation (Collection Type: eCQM Specifications) **(*)(!) Q019:** Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care (Collection Type: eCQM Specifications) **(*) Q117:** Diabetes: Eye Exam (Collection Type: eCQM Specifications, MIPS CQM Specifications) **(*)(!) Q130:** Documentation of Current Medications in the Medical Record (Collection Type: eCQM Specifications, MIPS CQM Specifications) **(!!) The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for this MVP as proposed. One commenter recommended the inclusion of more patient-centered measures in the MVP. For example, measures vetted by the Core Quality Measures Collaborative (CQMC) with consumer input, measures of patient outcomes, patient-reported measures, as well as new approaches to the evaluation of patient experience. One commenter supported the inclusion of the Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter was opposed to the inclusion of the population health measures in this MVP. The commenter does not believe claims-based population health measures are applicable to ophthalmologists. The commenter stated that administrative claims-based quality measures have a high potential for holding clinicians accountable for care they do not provide, meaning clinicians have limited ability to influence their performance on them.

Response: The population health measures are part of the foundational layer included in all MVPs. If the case minimum is not met for the population health measures, they will be excluded from scoring. For further details on the population health measures included in the foundational layer, see CY 2022 PFS final rule (86 FR 65408 through 65409).

Comment: One commenter recommended specialty groups be provided the opportunity to determine if the measures included in an MVP are appropriate and operationally reasonable.

Response: We post MVP candidates to the QPP website for public feedback for up to a 45-day window to further engage with interested parties on MVP candidates prior to rulemaking. In addition, interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP

website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We will also continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: One commenter recommended leveraging the IRIS Registry measures in supporting meaningful eye-care related MVPs. One commenter recommended a few improvement activities be added to this MVP: IA_AHE_7: Comprehensive Eye Exams, IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record, IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements, and IA_PSPA_2: Participation in MOC Part IV.

Response: We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter stated that the measures in this MVP may disadvantage ophthalmic practices in MIPS by limiting the maximum Quality score achievable under this MVP. The commenter explained small and rural practices are less likely to have the resources available to adopt EHRs. These practices would be further disadvantaged under this MVP candidate as they would not be able to report eCQMs and, thus, would be limited to lower scoring manual measures. Moreover, due to the smaller number of patients seen, singular adverse events will have a substantially greater impact on small practices than large practices in this MVP because they will be unable to choose measures with less clustered performance rates.

Response: We acknowledge the commenters' concerns regarding quality scoring. There are currently 24 quality and QCDR measures available in the MVP, 17 of which have a benchmark and 4 showing a 7-point cap. While we endeavor to include measures that allow for maximum points, we want to ensure important aspects of care within the MVP clinical topic are represented. Currently, this MVP aligns with the Ophthalmology specialty measure set, excluding only two measures, and therefore, should not adversely affect those clinicians who choose to report the MVP versus traditional MIPS. However, as MVPs are optional and there is clinician choice allowed in quality performance reporting, we would encourage clinicians to review each MVP and the measures and activities within to ensure it is appropriate and applicable to them prior to reporting.

Comment: Several commenters expressed opposition to this MVP and stated that it would be appropriate to limit the first ophthalmic MVP to cataract surgery. Commenters stated their belief that the MVP is not feasible given the complexity of properly representing ophthalmic subspecialties in both the cost and quality performance categories. The commenters noted that the cost measure proposed in this MVP applies only to cataract surgery, putting cataract surgeons at a disadvantage compared to other ocular care clinicians.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting, which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all measures are applicable to all clinicians who would choose to report this MVP. However, this represents the foundation from which to build the most meaningful MVP addressing ophthalmologic care and allows for clinician choice in choosing quality measures that best represent their practice.

Currently, there are no additional applicable episode-based cost measures available for use in this MVP beyond the Cataract Removal with Intraocular Lens (IOL) Implantation cost measure. Should additional applicable cost measures become available for use in MVPs, interested parties are welcome to submit recommended changes to the MVP through the MVP Maintenance Process. Until such time, ophthalmologists can choose to report this MVP. If a clinician cannot be scored on any of the cost measures within an MVP they choose to report (see § 414.1380(b)(2)(v)), the cost performance category will be reweighted in alignment with existing MIPS scoring policies (§ 414.1380(c)) and the clinician will not be penalized if there is not a cost measure applicable to their clinical practice.

After consideration of public comments, we are finalizing the *Complete Ophthalmologic Care MVP* with modifications in Table A.1a and as proposed in Table A.1b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal.

A.2 Dermatological Care MVP

In the CY 2025 PFS proposed rule (89 FR 62588 through 62592), we proposed and solicited comments on the Dermatological Care MVP. The proposed Dermatological Care MVP focuses on the clinical theme of providing treatment and management of dermatologic care. This MVP will be most applicable to clinicians who treat patients within the practice of dermatology, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.2b.

Quality Measures

We proposed to include 11 MIPS quality measures and 6 QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of dermatology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in dermatology:

- Q176: Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy: This MIPS quality measure ensures TB testing is completed prior to the first course of biologic and/or immune response modifier therapy.
- Q397: Melanoma Reporting: This MIPS quality measure assesses that the pathology report for primary malignant cutaneous melanoma includes reporting identifiers needed for microsatellitosis of invasive tumors.
- Q410: Psoriasis: Clinical Response to Systemic Medications: This MIPS quality measure ensures patients with psoriasis vulgaris who are being treated with systemic medications maintain disease control by evaluating documented body surface assessments meet at least one of the specified benchmarks.
- Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician: This MIPS quality measure ensures pathology reports diagnosing carcinoma or melanoma are communicated from the Pathologist/Dermatopathologist within 7 days from the Pathologist receiving the specimen.
- Q485: Psoriasis – Improvement in Patient-Reported Itch Severity: This MIPS quality measure evaluates patients with a diagnosis of psoriasis for a reduction in itch severity of 3 or more points at follow up visits.
- Q486: Dermatitis – Improvement in Patient-Reported Itch Severity: This MIPS quality measure evaluates patients with a diagnosis of dermatitis for a reduction in itch severity of 3 or more points at follow up visits.
- Q509: Melanoma: Tracking and Evaluation of Recurrence: This proposed MIPS quality measure ensures patients who undergo excisional surgery for melanoma or melanoma in situ within the previous 5 years have documentation that an exam for recurrence of melanoma was performed within the performance period and results captured.
- AAD6: Skin Cancer: Biopsy Reporting Time – Clinician to Patient: This QCDR measure ensures timely communication from the clinician to the patient when they have a positive finding for carcinoma, melanoma, or primary cutaneous malignancies.
- AAD8: Chronic Skin Conditions: Patient Reported Quality-of-Life: This QCDR measure ensures a patient- reported quality-of-life assessment is completed and recorded in the medical record with a plan of care at least once in the performance period.
- AAD12: Melanoma: - Appropriate Surgical Margins: This QCDR measure ensures the initial biopsy and surgical margins are documented in the medical record and are in compliance with the minimum margin recommended in the current National Comprehensive Cancer Network (NCCN) guideline.
- AAD16: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures: This QCDR measure assesses for the appropriate use of post operative antibiotics for patients with skin cancer undergoing an office-based closure or reconstruction procedure.
- AAD17: Continuation of Anticoagulation Therapy in the Office-based Setting for Closure and Reconstruction After Skin Cancer Resection Procedures: This QCDR measure assesses the percentage of patients who had their anticoagulation therapy continued prior to an in-office procedure for intermediate layer and/or complex linear closures OR reconstruction after skin cancer resection performed.
- AAD18: Avoidance of Opioid Prescriptions for Closure and Reconstruction After Skin Cancer Resection: This QCDR measure identifies the number of patients diagnosed with skin cancer who were prescribed an opioid/narcotic therapy as a first line pain management option post-operative by the reconstructing surgeon.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in dermatology. The quality measures below assess for age-specific screenings, and follow-up actions for select measures:

- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in dermatology, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement

activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA_AHE_6: Provide Education Opportunities for New Clinicians
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff (modified to IA_PM_26)
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_8: Use of Patient Safety Tools

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which includes a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of dermatology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in dermatology, specifically melanoma resection, and aligns with other measures and activities within this MVP:

- Melanoma Resection: This MIPS episode-based cost measure assesses costs associated with excision procedures to remove a cutaneous melanoma. The addition of this measure aligns with Q397: Melanoma Reporting and Q509: Melanoma: Tracking and Evaluation of Recurrence.

Dermatological Care MVP Tables

Tables A.2a and A.2b serve to represent the measures and activities that are finalized within the Dermatological Care MVP.

Symbol Key:
Caret symbol (^): new proposed measures and improvement activities
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for this MVP as proposed. One commenter recommended the inclusion of more patient-centered measures in the MVP. For example, measures vetted by the Core Quality Measures Collaborative (CQMC) with consumer input, measures of patient outcomes, patient-reported measures, as well as new approaches to the evaluation of patient experience.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended the removal of the pathology specific quality measures from this MVP. The commenter stated their belief that evaluating pathologists solely on dermatology measures does not capture the extent of the practice of pathology and could lead to confusion among single specialty pathology practices. Furthermore, the presence of only two quality measures in the MVP prevents pathologists from fully participating.

Response: We appreciate the commenters concerns. The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care, such as dermatopathology. We understand that not all measures are applicable to all clinicians who would choose to report this MVP; however, reporting MVPs is voluntary at this time. We maintain that this represents the foundation from which to build the most meaningful MVP addressing dermatological care and allows for clinician choice in choosing quality measures that best represent their practice. For guidance, please note that as stated above, this MVP is most applicable to dermatologists and is not directed towards pathology alone.

Comment: Several commenters recommend narrowing the scope of this MVP to focus on skin cancer, a neoplastic disease, which has a cost measure and clinically relevant quality measures, allowing for meaningful measurement. One commenter stated their belief that the broad Dermatological Care MVP will inevitably lead to unfair comparisons among dermatologists with varying sub-specializations and patient populations. Another commenter expressed concerns with the MVP as proposed, particularly the singular cost outcome focused on melanoma resection which would be limited to those practices with a Mohs surgeon.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all measures are applicable

to all clinicians who would choose to report this MVP. However, this represents the foundation from which to build the most meaningful MVP addressing dermatological care and allows for clinician choice in choosing quality measures that best represent their practice.

Currently, there are no additional applicable episode-based cost measures available for use in this MVP beyond the Melanoma Resection cost measure. Should additional applicable cost measures become available for use in MVPs, interested parties are welcome to submit recommended changes to the MVP through the MVP Maintenance Process. Until such time, dermatologists can choose to report this MVP. We note that this cost measure assesses costs related to melanoma resection procedures but does not include Mohs procedures. If a clinician cannot be scored on any of the cost measures within an MVP they choose to report (see § 414.1380(b)(2)(v)), the cost performance category will be reweighted in alignment with existing MIPS scoring policies (§ 414.1380(c)) and the clinician will not be penalized if there is not a cost measure applicable to their clinical practice..

Comment: One commenter recommended specialty groups be provided the opportunity to determine if the measures included are appropriate and operationally reasonable.

Response: We post MVP candidates to the QPP website for public feedback for up to a 45-day window to further engage with interested parties on MVP candidates prior to rulemaking. In addition, interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We will also continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: One commenter recommended the inclusion of the following quality measures to provide participants with a full choice of potentially relevant measures: Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented, Q374: Closing the Referral Loop: Receipt of Specialist Report, and Q498: Connection to Community Service Provider. In addition, the commenter recommended the inclusion of the following improvement activities to ensure broad, applicable improvement activities that reflect current clinical practice of dermatologic care: IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record, IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, IA_CC_2: Implementation of improvements that contribute to more timely communication of test results, IA_BMH_2: Tobacco use, IA_BE_1: Use of certified EHR to capture patient-reported outcomes, and IA_ERP_4: Implementation of a Personal Protective Equipment (PPE) Plan.

Response: We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We note that we proposed and finalized the removal of the following improvement activities recommended by the commenter: IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record and IA_ERP_4: Implementation of a Personal Protective Equipment (PPE) Plan. See Appendix 2, Table C for additional details.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Annual Call for Quality Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Annual Call for Quality Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs or claims-based to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Dermatological Care MVP* with modifications in Table A.2a and as proposed in Table A.2b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details.

A.3 Gastroenterology Care MVP

In the CY 2025 PFS proposed rule (89 FR 62593 through 62596), we proposed and solicited comments on the Gastroenterology Care MVP. The proposed Gastroenterology Care MVP focuses on the clinical theme of providing treatment and management of the digestive system and the liver. This MVP will be most applicable to clinicians who treat patients within the practice of gastroenterology, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.3b.

Quality Measures

We proposed to include 11 MIPS quality measures and 3 QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of gastroenterology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in gastroenterology:

- Q113: Colorectal Cancer Screening: This MIPS quality measure ensures appropriate screening of patients for colorectal cancer.
- Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps - Avoidance of Inappropriate Use: This MIPS quality measure ensures appropriate follow-up, an interval of 3 or more years, for patients with a history of prior adenomatous polyp(s) in previous colonoscopy.
- Q275: Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy: This MIPS quality measure requires patients with a diagnosis of inflammatory bowel disease (IBD) have Hepatitis B Virus (HBV) status assessed prior to initiating anti-TNF (tumor necrosis factor) therapy.
- Q320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients: This MIPS quality measure ensures appropriate follow-up for patients receiving a screening colonoscopy without biopsy or polypectomy.
- Q400: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation: This MIPS quality measure requires patients have received a one-time screening for hepatitis C virus (HCV) infection as well as treatment initiation or referral if screening is positive.
- Q401: Hepatitis C: Screening for Hepatocellular Carcinoma (HCC) in Patients with Cirrhosis: This MIPS quality measure ensures patients with a diagnosis of chronic Hepatitis C cirrhosis have appropriate surveillance imaging for hepatocellular carcinoma at least once during the performance period.
- GIQIC23: Appropriate follow-up interval based on pathology findings in screening colonoscopy: This QCDR measure ensures appropriate follow-up consistent with US Multi-Society Task Force (USMSTF) recommendations based upon pathology findings from screening colonoscopy with biopsy or polypectomy documented in colonoscopy report.
- GIQIC26: Screening Colonoscopy Adenoma Detection Rate: This QCDR measure evaluates patients who had a screening colonoscopy and at least one conventional adenoma or colorectal cancer was detected.
- NHCR4: Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation: This QCDR measure ensures patients with inadequate bowel prep receive a repeat screening or surveillance colonoscopy or an alternate tier 1 or tier 2 colorectal cancer screening modality within one year.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in gastroenterology. The quality measures below assess for age-specific screenings, and follow-up actions for select measures:

- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q374: Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receival from the referred to clinician, closing the communication loop.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in gastroenterology, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_6: Provide Education Opportunities for New Clinicians
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_CC_7: Regular training in care coordination
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_10: Care transition documentation practice improvements

- IA_CC_13: Practice improvements to align with OpenNotes principles
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff (modified to IA_PM_26)
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity. which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Cost Measures

We proposed to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of gastroenterology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in gastroenterology, including colonoscopies and broader gastroenterology care, and align with other measures and activities within this MVP:

- Screening/Surveillance Colonoscopy: This MIPS episode-based cost measure assesses costs associated with screening or surveillance colonoscopy procedures. This measure aligns with quality measures such as Q113: Colorectal Cancer Screening or Q320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.
- Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers. Gastroenterologists are included in attribution for the TPCC measure as they may provide broad, ongoing care to their patients, which is in line with the intent of the TPCC measure.

Gastroenterology Care MVP Tables

Tables A.3a and A.3b serve to represent the measures and activities that are finalized within the Gastroenterology Care MVP.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

TABLE A.3a: Gastroenterology Care MVP Measures and Improvement Activities

Quality	Improvement Activities	Cost
(*) Q113: Colorectal Cancer Screening (Collection Type: Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQM Specifications) **(*)(!) Q130:** Documentation of Current Medications in the Medical Record (Collection Type: eCQM Specifications, MIPS CQM Specifications) **(*)(!) Q185:** Colonoscopy Interval for Patients with a History of Adenomatous Polyps - Avoidance of Inappropriate Use (Collection Type: MIPS CQM Specifications) **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQM Specifications) **Q275:** Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy (Collection Type: MIPS CQM Specifications)	**(~) IA_AHE_3:** Promote use of Patient-Reported Outcome Tools **(~) IA_AHE_6:** Provide Education Opportunities for New Clinicians **(~) IA_AHE_9:** Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols **IA_BE_4:** Engagement of patients through implementation of improvements in patient portal **IA_CC_7:** Regular training in care coordination **(~) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans **(~) IA_CC_10:** Care transition documentation practice improvements **IA_CC_13:** Practice improvements to align with OpenNotes principles **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways	**Screening/Surveillance Colonoscopy** **Total Per Capita Cost (TPCC)**

Quality	Improvement Activities	Cost

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for this MVP as proposed. One commenter supported the inclusion of the Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP and a couple of commenters supported the inclusion of Q113: Colorectal Cancer Screening measure in this MVP. One commenter recommended the inclusion of more patient-centered measures in the MVP. For example, measures vetted by the Core Quality Measures Collaborative (CQMC) with consumer input, measures of patient outcomes, patient-reported measures, as well as new approaches to the evaluation of patient experience. Another commenter recommended including measures in this MVP for metabolic dysfunction–associated steatohepatitis (MASH), Metabolic dysfunction–associated steatotic liver disease (MASLD), or obesity.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A few commenters expressed concern that the measure set lacks the ability to measure and evaluate the full spectrum of care under the purview of gastroenterologists, particularly gastroenterologists who subspecialize. One commenter recommended narrowing the scope of this MVP to focus on colorectal cancer prevention.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all measures are applicable to all clinicians who would choose to report this MVP. However, this represents the foundation from which to build the most meaningful MVP addressing gastroenterology care and allows for clinician choice in choosing quality measures that best represent their practice.

Comment: One commenter recommended specialty groups be provided the opportunity to determine if the measures included in an MVP are appropriate and operationally reasonable.

Response: We post MVP candidates to the QPP website for public feedback for up to a 45-day window to further engage with interested parties on MVP candidates prior to rulemaking. In addition, interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We will also continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: A few commenters expressed concern that specialty care is being assessed through the lens of quality measures and improvement activities that are intended for use by primary care clinicians. The commenters felt that measures like Q113: Colorectal Cancer Screening, Q374: Closing the Referral Loop: Receipt of Specialist Report, and Q487: Screening for Social Drivers of Health are not intended for gastroenterologists; instead, they are geared toward primary care physicians.

Response: We acknowledge that due to nuances in clinician specialization and subsequent scope of care, not all measures will be applicable or appropriate to all clinicians. However, the MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. While measures Q113: Colorectal Cancer Screening and Q487: Screening for Social Drivers of Health may be perceived as being only applicable to primary care physicians, it would be incumbent upon all clinicians treating each patient to ensure they are providing proper care and are able to support their healthcare journey, driving positive health outcomes. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended this MVP include at least six eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward for current measures not available as eCQMs to discuss revisions and possible implementation in futures years.

Comment: A couple of commenters are concerned with the inclusion of the TPCC measure in this MVP. One commenter suggested that if we do not remove the TPCC measure from MIPS, we should at a minimum remove the TPCC measure from all MVPs that include other episode-based cost measures. Another commenter stated their belief that there is an absence of strong clinical or patient-reported outcome performance measures for high-cost conditions treated by gastroenterologists, such as inflammatory bowel disease. They stated that, without correlating quality measures, there is a possibility that the inclusion of broad population-based cost measures, such as the TPCC measure, that incentivize reduced spending could lead to inappropriate care.

Response: We agree with the commenters that it is important to consider quality performance alongside cost performance. The quality and cost measures included in the Gastroenterology MVP are aligned to focus on screenings performed by gastroenterologists. In addition to the Screening/Surveillance Colonoscopy episode-based cost measure, which assesses costs of care for screening or surveillance colonoscopy procedures, the TPCC measure also captures costs related to ongoing care management provided by gastroenterologists, which align with the quality measures in the MVP that address colonoscopy, inflammatory bowel disease, and care for hepatic disease.

We disagree with the commenter that broad population-based cost measures, such as the TPCC measure, could lead to inappropriate care. The inclusion of broadly applicable measures, such as the TPCC measure, in MVPs encourages clinicians to coordinate with other clinicians in treating a patient to improve overall cost performance. By holding multiple clinicians accountable, this promotes shared responsibility for a patient's care across primary care and specialties who tend to provide ongoing care. Ultimately, cost measures aim to promote care coordination and can capture clinicians' cost savings through reduction of poor patient outcomes associated with high costs, such as potentially avoidable hospitalizations or complications.

After consideration of public comments, we are finalizing the *Gastroenterology Care MVP* with modifications in Table A.3a and as proposed in Table A.3b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details.

A.4 Optimal Care for Patients with Urologic Conditions MVP

In the CY 2025 PFS proposed rule (89 FR 62596 through 62600), we proposed and solicited comments on the Optimal Care for Patients with Urologic Conditions MVP. The proposed Optimal Care for Patients with Urologic Conditions MVP focuses on assessing optimal care for patients treated for a broad range of urologic conditions, including kidney stones, urinary incontinence,

bladder cancer, and prostate cancer. This MVP will be most applicable to clinicians who treat patients within the practice urology including general urologists, urology oncologists, and sub-specialists focused on urology care for women, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.4b.

Quality Measures

We proposed to include nine MIPS quality measures and five QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of urology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in urology:

- Q050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older: This MIPS quality measure ensures patients have a documented plan of care for urinary incontinence at least once within 12 months.
- Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy: This MIPS quality measure ensures patients with prostate cancer currently on or starting androgen deprivation therapy (ADT), with an intent for treatment greater than or equal to 12 months, have a bone density evaluation prior to starting or within 3 months after the start of ADT.
- Q476: Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia: This MIPS quality measure assesses for improvement in urinary symptoms for patients with a diagnosis of benign prostatic hyperplasia based upon the International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI).
- Q481: Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer: This MIPS quality measure ensures patients initially diagnosed with non-muscle invasive bladder cancer have treatment initiated within 6 months of the cancer staging.
- AQUA8: Hospital Admissions or Infectious Complications Within 30 days of Prostate Biopsy: This QCDR measure assesses the number of patients who have urinary retention, infection, or a new antibiotic prescription at least 24 hours after and within 30 days of a prostate biopsy or inpatient consultation or require hospitalization within 30 days of prostate biopsy.
- AQUA14: Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment: This QCDR measure assesses the number of patients who had a repeat shock wave lithotripsy procedure within the 6 months of the initial treatment.
- AQUA15: Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures: This QCDR measure ensures patients have a urinalysis or culture within 14 days prior to surgical stone procedures.
- AQUA16: Non-Muscle Invasive Bladder Cancer: Repeat Transurethral Resection of Bladder Tumor (TURBT) for T1 disease: This QCDR measure assesses the number of patients who undergo a second TURBT within 6 weeks of the initial procedure.
- MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed LowRisk Prostate Cancer Patients: This QCDR measure ensures newly diagnosed low-risk prostate cancer patients are managed via active surveillance or watchful waiting to maintain the patient's quality of life.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in urology. The measures assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- Q318: Falls: Screening for Future Fall Risk: This MIPS quality measure ensures patients are screened each performance period for future fall risk.
- Q321: CAHPS for MIPS Clinician/Group Survey: This survey provides direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.
- Q358: Patient-Centered Surgical Risk Assessment and Communication: This MIPS quality measure ensures a personalized surgical risk assessment is completed on each patient using a validated risk calculator or multi-institutional clinical data prior to the surgery along with discussion of the identified risks with the surgeon.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 17 improvement activities that reflect actions and processes undertaken by clinicians who specialize in urology, as well as activities that promote patient

engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care
- IA_CC_7: Regular training in care coordination
- IA_CC_13: Practice improvements to align with OpenNotes principles
- IA_CC_17: Patient Navigator Program
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff (modified to IA_PM_26)
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_17: Participation in Population Health Research
- IA_PM_21: Advance Care Planning
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_12: Participation in private payer CPIA
- IA_PSPA_19: Implementation of formal quality improvement methods, practice changes or other practice improvement processes
- IA_PSPA_21: Implementation of fall screening and assessment programs

Cost Measures

We proposed to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of urology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in urology and align with other measures and activities within this MVP:

- Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those who treat patients with urology-related conditions or procedures.
- Renal or Ureteral Stone Surgical Treatment: This MIPS episode-based cost measure assesses costs associated with surgical treatment for renal or ureteral stones. This also aligns with quality measures such as AQUA14: Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment or AQUA15: Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures.
- Prostate Cancer: This proposed MIPS episode-based cost measure will assess costs associated with prostate cancer. This also aligns with quality measures such as Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy or MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed LowRisk Prostate Cancer Patients.

Optimal Care for Patients with Urologic Conditions MVP Tables

Tables A.4a and A.4b serve to represent the measures and activities that are finalized within the Optimal Care for Patients with Urologic Conditions MVP.

Symbol Key:
Caret symbol (^): new proposed measures and improvement activities
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for this MVP as proposed. One commenter recommended the inclusion of more patient-centered measures in the MVP. For example, measures vetted by the Core Quality Measures Collaborative (CQMC) with consumer input, measures of patient outcomes, patient-reported measures, as well as new approaches to the evaluation of patient experience. A couple of commenters recommended the addition of two additional improvement activities related to bladder cancer care; IA_CC_12: Care Coordination Agreements that Promote Improvements in Patient Tracking Across Settings and IA_PSPA_8: Use of Patient Safety Tools.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended this MVP be modified to be more meaningful and directly beneficial to both physicians and their patients, reflecting the real-world clinical scenarios and challenges faced in practice.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing urological care and allows for clinician choice in choosing quality measures that best represent their practice.

Comment: One commenter recommended specialty groups be provided the opportunity to determine if the measures included are appropriate and operationally reasonable.

Response: We post MVP candidates to the QPP website for public feedback for up to a 45-day window to further engage with interested parties on MVP candidates prior to rulemaking. In addition, interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. Guidance on how to submit recommended changes

to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We will also continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: One commenter recommended this MVP include at least six eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

Comment: A couple of commenters recommended the removal of IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff from this MVP. The commenters stated their belief that a focus on this activity might shift focus from improvement activities that are more clinically relevant to urology and align more closely with the quality measures included in the MVP.

Response: We appreciate commenters' feedback. This activity was proposed for inclusion in all MVPs because of the importance of vaccination status in practice settings; we consider this activity to be of significant public-health importance.

Comment: A few commenters recommended the removal of the Medicare Spending Per Beneficiary (MSPB) Clinician cost measure from this MVP. The commenters expressed concern about the potential attribution of cases to consultant urologists, even though they likely have little control over the cost of the hospital episodes.

Response: The MSPB Clinician cost measure is appropriate for use in this MVP, as it assesses costs associated with inpatient hospitalizations for urologic conditions, including those not captured by the episode-based cost measures we also proposed for inclusion in this MVP. The MSPB Clinician measure is designed to assess costs associated with inpatient hospitalizations that can be influenced by a clinician's care decisions, including urologists who practice in an inpatient setting and provide care such as bladder and urinary tract procedures.

Comment: A couple of commenters were opposed to the inclusion of the proposed, new Prostate Cancer episode-based cost measure in this MVP. One commenter is concerned the risk adjustment methodology for the proposed Prostate Cancer measure is insufficient to accurately account for variation in costs due to disease severity. Furthermore, commenters stated their belief that, without substantial measure testing to understand unintended consequences, they are concerned adoption of this measure could result in care stinting. These commenters stated that this is of particular risk for advanced prostate cancer, which may necessitate genetic or mutation testing, advanced imaging, or novel treatments.

Response: The new Prostate Cancer episode-based cost measure (which we are finalizing) is appropriate for use in this MVP, as it assesses costs associated with prostate cancer and aligns withs Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy and MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed LowRisk Prostate Cancer Patients. Additionally, we maintain that the measure appropriately accounts for disease severity identifiable in claims, as reflected in the measure's subgrouping and risk adjustment methodologies. We addressed the measure-specific feedback, regarding risk adjustment methodology, measure testing, and potential unintended consequences, in section IV.A.4.e.(2)(a)(ii)of this final rule in further detail.

After consideration of public comments, we are finalizing the *Optimal Care for Patients with Urologic Conditions MVP* as proposed in Tables A.4a and A.4b for the CY 2025 performance period/2027 MIPS payment year and future years.

A.5 Pulmonology Care MVP

In the CY 2025 PFS proposed rule (89 FR 62600 through 62603), we proposed and solicited comments on the Pulmonology MVP. The proposed Pulmonology Care MVP focuses on assessing optimal care for patients treated for a broad range of pulmonology conditions including COPD, asthma, sleep apnea, and general pulmonology. This MVP will be most applicable to clinicians who treat patients within the practice of pulmonology and sleep medicine, including nonphysician practitioners (NPPs) such as nurse practitioners, and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.5b.

Quality Measures

We proposed to include nine MIPS quality measures and one QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of pulmonology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in pulmonology:

- Q052: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation for Long-Acting Inhaled Bronchodilator Therapy: This MIPS quality measure ensures adults 18 and older diagnosed with COPD have spirometry results documented airflow obstruction confirming diagnosis and have been prescribed a long-acting bronchodilator to provide proper treatment if symptomatic.
- Q277: Sleep Apnea: Severity Assessment at Initial Diagnosis: This MIPS quality measure ensures adults diagnosed with obstructive sleep apnea have an appropriate assessment completed and documented at the time of diagnosis or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.
- Q279: Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy: This MIPS quality measure ensures patients with a diagnosis of obstructive sleep apnea (OSA) who were prescribed an evidence-based therapy with documentation that adherence to the therapy was assessed annually.
- Q398: Optimal Asthma Control: This MIPS quality measure assesses pediatric and adult patients to ensure their asthma is well-controlled as demonstrated by one of three age-appropriate patient reported outcome tools and not at risk for exacerbation.
- ACEP25: Tobacco Use: Screening and Cessation Intervention for Patients with Asthma and COPD: This QCDR measure ensures patients with asthma or COPD seen in the emergency department receive tobacco cessation if screened positive for tobacco use.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in pulmonology care. The measures assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- Q047: Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.
- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients for a BMI documented with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in pulmonology care, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_23: Integration of patient coaching practices between visits
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff (modified to IA_PM_26)
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_13: Chronic care and preventative care management for empaneled patients
- IA_PM_16: Implementation of medication management practice improvements

Cost Measures

We proposed to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of pulmonology care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in pulmonology and align with other measures and activities within this MVP:

- Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation: This MIPS episode-based cost measure assesses costs associated with inpatient treatment for an acute exacerbation of COPD. This also aligns with quality measures such as Q052: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation for Long-Acting Inhaled Bronchodilator Therapy.

- Asthma/Chronic Obstructive Pulmonary Disease (COPD): This MIPS episode-based cost measure assesses costs associated with medical care to manage and treat asthma or COPD. This also aligns with quality measures such as Q398: Optimal Asthma Control or ACEP25: Tobacco Use: Screening and Cessation Intervention for Patients with Asthma and COPD.

Pulmonology Care MVP Tables

Tables A.5a and A.5b serve to represent the measures and activities that are finalized within the Pulmonology MVP.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

TABLE A.5a: Pulmonology Care MVP Measures and Improvement Activities

Quality	Improvement Activities	Cost
(*)(!) Q047: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM Specifications) **Q052:** Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation and Long-Acting Inhaled Bronchodilator Therapy (Collection Type: MIPS CQM Specifications) **(**) Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Collection Type: Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQM Specifications) **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQM Specifications) **(*) Q277:** Sleep Apnea: Severity Assessment at Initial Diagnosis (Collection Type: MIPS CQM Specifications) **Q279:** Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy (Collection Type: MIPS CQM Specifications) **(!!) The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for this MVP as proposed. One commenter recommended the inclusion of more patient-centered measures in the MVP. For example, measures vetted by the Core Quality Measures Collaborative (CQMC) with consumer input, measures of patient outcomes, patient-reported measures, as well as new approaches to the evaluation of patient experience. One commenter supported the inclusion of the Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP. Another commenter expressed support for the inclusion of Q277: Sleep Apnea: Severity Assessment at Initial Diagnosis and Q279: Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea Therapy in this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended this MVP be modified to be more meaningful and directly beneficial to both physicians and their patients, reflecting the real-world clinical scenarios and challenges faced in practice.

Response: We acknowledge the commenters concerns; however, the MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing pulmonology care and allows for clinician choice in choosing quality measures that best represent their practice. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended specialty groups be provided the opportunity to determine if the measures included are appropriate and operationally reasonable.

Response: We post MVP candidates to the QPP website for public feedback for up to a 45-day window to further engage with interested parties on MVP candidates prior to rulemaking. In addition, interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We will also continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: A few commenters are concerned this MVP is not a viable option for allergists, noting only three quality measures are regularly utilized by allergist. The commenters recommended the addition of Quality measure Q130: Documentation of Current Medications in the Medical Record, Q331: Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse) Sinusitis, and Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use) which are applicable to allergists.

Response: We acknowledge the commenters' concerns, and we may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Pulmonology MVP* as proposed in Tables A.5a and A.5b for the CY 2025 performance period/2027 MIPS payment year and future years.

A.6 Surgical Care MVP

In the CY 2025 PFS proposed rule (89 FR 62603 through 62606), we proposed and solicited comments on the Surgical Care MVP. The proposed Surgical Care MVP focuses on the clinical theme of surgery. This MVP will be most applicable to clinicians who treat patients within the surgical settings of general surgery, neurosurgery, cardiothoracic surgery, anesthesiologists, including nonphysician practitioners (NPPs) such as certified registered nurse anesthetists (CRNAs), nurse practitioners, and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.6b.

Quality Measures

We proposed to include 15 MIPS quality measures within the quality performance category of this MVP, which are specific to the clinical theme of surgery. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in surgery:

- Q164: Coronary Artery Bypass Graft (CABG): Prolonged Intubation: This MIPS quality measure identifies patients who undergo an isolated CABG and require intubation > 24 hours following exit from the operating room.
- Q167: Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure: This MIPS quality measure assesses patients for postoperative renal failure or who require dialysis after CABG.
- Q168: Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration: This MIPS quality measure identifies patients who return to the operating room for surgical re-exploration following an isolated CABG surgery during the current hospitalization.
- Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer: This MIPS quality measure assesses the percentage of patients with a diagnosis of primary invasive breast cancer who undergo a sentinel lymph node procedure.
- Q354: Anastomotic Leak Intervention: This MIPS quality measure evaluates for anastomotic leak intervention following gastric bypass or colectomy surgery.

- Q355: Unplanned Reoperation within the 30-Day Postoperative Period: This MIPS quality measure evaluates for an unplanned reoperation within 30 days of a denominator eligible procedure.
- Q357: Surgical Site Infection (SSI): This MIPS quality measure evaluates for SSI within 30 days of a denominator eligible procedure.
- Q358: Patient-Centered Surgical Risk Assessment and Communication: This MIPS quality measure ensures a personalized surgical risk assessment is completed on each patient using a validated risk calculator or multi-institutional clinical data prior to the surgery along with discussion of the identified risks with the surgeon.
- Q445: Risk-Adjusted Operative Mortality for Coronary Artery Bypass Graft (CABG): This MIPS quality measure assesses patients undergoing isolated CABG for quality outcomes by identifying the percentage of patients who die, including all deaths occurring during CABG hospitalization and deaths occurring after discharge up to 30 days post CABG surgery.
- Q459: Back Pain After Lumbar Surgery: This MIPS quality measure evaluates patients for a decrease in back pain post lumbar surgery based upon predetermined benchmarks.
- Q461: Leg Pain After Lumbar Surgery: This MIPS quality measure evaluates patients for a decrease in leg pain post lumbar surgery based upon predetermined benchmarks.
- Q471: Functional Status After Lumbar Surgery: This MIPS quality measure evaluates patients for an increase in functional status post lumbar surgery based upon predetermined benchmarks.

The following broadly applicable MIPS quality measures are relevant to clinicians who treat patients in surgical settings. The measures assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- Q047: Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure ensures patients are screened for tobacco use and if screened positive receive tobacco cessation intervention.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

Improvement Activities

We reviewed the Improvement Activities Inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 12 improvement activities that reflect actions and processes undertaken by surgical care clinicians, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- IA_CC_15: PSH Care Coordination
- IA_CC_17: Patient Navigator Program
- IA_CC_18: Relationship-Centered Communication
- IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff (modified to IA_PM_26)
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_8: Use of Patient Safety Tools

Cost Measures

We proposed to include six MIPS cost measures within the cost performance category of this MVP, which apply to the clinical theme of surgical care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in surgical care and align with other measures and activities within this MVP:

- Colon and Rectal Resection: This MIPS episode-based cost measure assesses costs associated with colon or rectal resections for either benign or malignant indications.
- Femoral or Inguinal Hernia Repair: This MIPS episode-based cost measure assesses costs associated with surgical procedures to repair a femoral or inguinal hernia.
- Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels: This MIPS episode-based cost measure assesses costs associated with surgery for lumbar spine fusion. This also aligns with quality measures such as Q471: Functional Status After Lumbar Surgery or Q461: Leg Pain After Lumbar Surgery.
- Lumpectomy, Partial Mastectomy, Simple Mastectomy: This MIPS episode-based cost measure assesses costs associated with partial or total mastectomy for breast cancer.

- Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those who treat patients within the surgical settings of general surgery, neurosurgery, and cardiothoracic surgery.
- Non-Emergent Coronary Artery Bypass Graft (CABG): This MIPS episode-based cost measure assesses costs associated with CABG. This also aligns with quality measures such as Q164: Coronary Artery Bypass Graft (CABG): Prolonged Intubation or Q168: Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration.

Surgical Care MVP Tables

Tables A.6a and A.6b serve to represent the measures and activities that are finalized within the Surgical Care MVP.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for this MVP as proposed. One commenter recommended the inclusion of more patient-centered measures in the MVP. For example, measures vetted by the Core Quality Measures Collaborative (CQMC) with consumer input, measures of patient outcomes, patient-reported measures, as well as new approaches to the evaluation of patient experience. One commenter supported the inclusion of the Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: Several commenters expressed opposition to this MVP as they believed the MVP is too broad to provide a meaningful pathway for specialists to be measured and meet the stated MVP goals as they relate to vascular surgeons and other surgical specialists. A couple of commenters believed the MVP is limiting for many surgical specialties. Other commenters believed the MVP includes measures across distinct populations without consideration of how these populations are treated in practice and does not allow for significant comparison or quality improvement. Another commenter believed there's a lack of benchmarks for certain measures, such as those quality measures related to CABG, which they feel may discourage meaningful participation and hinder the MVP's effectiveness. One commenter recommended the development of a Geriatric Surgery MVP instead of this MVP. The commenter believed a Geriatric Surgery MVP could align physician reporting with the Age Friendly Hospital measure that will be required for hospital reporting under the Hospital Inpatient Quality Reporting (IQR) program in 2025. They suggested that an MVP on this topic could focus on the unique needs of older adults as they move through the phases of surgical care. If aligned with the Hospital IQR program measure, hospitals could show their commitment to improving care for older adults, while also aligning metrics to achieve attestations and track performance for multiple programs. One commenter questioned combining measures from disparate surgical specialties that have little to no overlap in team-based care. The commenter stated the inclusion of measures relevant to spine surgery, cardiothoracic surgery, breast surgery, and general surgery appears arbitrary and disconnected from actual clinical practice.

Response: This MVP was intentionally made broad to allow for multiple surgical specialties the option of reporting an MVP as we move towards the sunsetting of traditional MIPS. While we understand this MVP covers multiple surgical specialties, this is due to limited measure inventory which does not allow for the creation of individual robust, meaningful MVPs for each surgical specialty. Clinicians who choose to report this MVP would still report data based upon the measures that are most applicable to their scope of care, allowing for an alternate option to traditional MIPS especially when choosing subgroup reporting with MVPs.

We acknowledge the commenters' concerns regarding benchmarks. While we endeavor to include measures that allow for maximum points, we want to ensure important aspects of care within the MVP clinical topic are represented. While we recognize that some of the quality measures don't have sufficient adoption to create a benchmark under traditional MIPS, we expect the move to MVP reporting, including subgroup reporting, will drive adoption of those measures as CABG is one of the most commonly performed procedures on Medicare beneficiaries.

We acknowledge the recommendation for a geriatric surgery MVP. Due to nuances between different CMS programs including Hospital IQR Program and MIPS, full alignment is not always possible, however, we continue to strive for alignment as feasible. Currently, the MIPS quality measure inventory does not contain surgical measures that are specific to the geriatric population. We encourage the commenter to submit quality measures to the Annual Call for Quality Measures for potential inclusion in future years. We will continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: One commenter requested clarification on why this MVP focuses on specific types of surgery but excludes others for which MIPS measures currently exist. For example, the commenter questioned why measures related to hip/knee surgery are not included in this MVP.

Response: We thank the commenter for their feedback. This MVP was intentionally made broad to allow for surgical specialties the option of reporting an MVP. While we understand this MVP covers multiple surgical specialties, the intent was to not overlap with currently available MVPs, such as the Improving Care for Lower Extremity Joint Repair MVP. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A couple of commenters expressed frustration regarding the construction of this MVP. They stated their belief that affected surgical specialties were not included in developing the MVP to assess the appropriateness of this strategy. One commenter recommended specialty groups be provided the opportunity to determine if the measures included in the MVP are appropriate and operationally reasonable.

Response: We post MVP candidates to the QPP website for public feedback for up to a 45-day window to further engage with interested parties on MVP candidates prior to rulemaking. In addition, interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We will also continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: One commenter recommended moving the CABG measures to the Advancing Care for Heart Disease MVP for this MVP to make more clinical sense and be more representative of team-based care.

Response: We thank the commenters for their general feedback on the CABG measures. We maintain that the Non-Emergent CABG episode-based cost measure is appropriate for use in the Surgical Care MVP, as it assesses costs associated with cardiothoracic surgery and aligns with Q164: Coronary Artery Bypass Graft (CABG): Prolonged Intubation, Q167: Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure, and Q168: Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration. We may consider the inclusion of additional measures and improvement activities in this and other MVPs through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended refinements to the MVP to make it more accessible to CRNAs or to encourage subgroup reporting. The commenter noted that only one of the quality measures, Q164: Coronary Artery Bypass Graft: Prolonged Intubation, is directly attributable to CRNAs.

Response: We acknowledge the commenters' concerns. While this MVP focuses on the clinical theme of promoting quality care provided by surgeons, CRNAs and other applicable surgical clinicians play a vital role and positively influence the outcomes of several other quality measures within this MVP. Recognizing the MIPS quality measures inventory contains a limited number of measures that are specific to CRNAs, the Patient Safety and Support of Positive Experiences with Anesthesia MVP may be more in alignment with the scope of care provided by CRNAs. We would encourage the commenter to submit quality measures to the Annual Call for Quality Measures for potential inclusion in future years. We will continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: One commenter is opposed to the use of Q459: Back Pain After Lumbar Surgery in this MVP since improving back pain is typically not the primary goal of lumbar fusion surgery.

Response: We acknowledge the commenters' concerns. Low back pain is a common, disabling symptom driving patients to seek medical care. The benchmark of change (5.0) utilized within the measure was derived from years of data obtained by the measure steward. While we recognize that spine surgical interventions rarely eliminate back pain, assessing the percentage of patients achieving an "acceptable symptom state" may be an indicator of surgical success.

Comment: A couple of commenters believed there are limitations to measures Q355: Unplanned Reoperation within the 30-Day Postoperative Period and Q357: Surgical Site Infection. Although the title and description of these two measures seem to suggest that they are broadly applicable across surgical specialties, the denominator codes are almost exclusively focused on general surgery.

Response: We acknowledge the commenters' concerns and appreciate the feedback. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: One commenter believed there are limitations related to the spine measures included in this MVP. For example, for Q471: Functional Status After Lumbar Surgery, the only acceptable functional assessment tool that can be used to satisfy the measure is the Oswestry Disability Index. The commenter stated their belief that there are more appropriate functional outcome measures from tools such as PROMIS® (Patient-Reported Outcomes Measurement Information System) that should be included. The commenter was also concerned that all three spine surgery measures included in this MVP continue to lack a benchmark.

Response: We encourage the commenter to reach out to measure developers/stewards to develop additional measures utilizing the PROMIS tool for submission to the Annual Call for Quality Measures for possible future implementation. We may consider the inclusion of QCDR measures that meet the inclusion criteria and address a measurement gap through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Many of these measures currently lack a benchmark due to substantive changes made in previous years with the goal of creating a more robust set of measures leading to benchmark creation.

Comment: One commenter recommended the removal of IA_CC_15: PSH Care Coordination as they believed that the improvement activity is not multidisciplinary and does not necessarily involve CRNAs.

Response: We appreciate the feedback received. Upon reflection and to allow for clinician choice in choosing improvement activities that best represent their practice, we are going to retain this activity in this MVP.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

Comment: One commenter expressed uncertainty about how the quality measures related to Coronary Artery Bypass Grafting (CABG) surgery align with the corresponding cost measure for non-emergent CABG procedures. The commenter stated that, while the MVP's quality measures primarily focus on clinical outcomes, they indirectly influence the cost-effectiveness of CABG surgery. The commenter suggested that, however, clinical outcomes alone may not provide a comprehensive picture of resource utilization or costs, as factors like hospital length of stay and equipment usage significantly impact costs but may not be adequately captured by these measures. The commenter stated that, as with any of the cost measures, the focus on cost containment may inadvertently incentivize clinicians to limit necessary care or select patients based on cost considerations, potentially compromising patient outcomes or access to care. A couple of commenters are concerned that there is a lack of internal consistency between the quality and cost measures included in this MVP related to lumbar fusion. For example, quality measures Q461: Leg Pain After Lumbar Surgery, Q471: Functional Status After Lumbar Surgery and Q459: Back Pain After Lumbar Surgery each capture lumbar fusion or discectomy/laminectomy without fusion. On the other hand, the cost measure, Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels, only focuses on fusions. Furthermore, the lumbar fusion quality measures are evaluated at one-year post-operation, whereas the lumbar fusion acute episode cost measure ends at 90 days post-operation. As a result, the commenter stated their belief is that these quality and cost measures are misaligned, do not evaluate the same patient populations in the same manner, and will not result in accurate assessments of value. The commenter suggested this disparity creates an incentive to delay care, such as physical therapy, until after the acute cost measurement episode has ended.

Response: We agree with the commenters that it is important to consider quality performance alongside cost performance. The quality and cost measures included in the Surgical Care MVP are aligned to focus on the same clinical subgroupings, such as cardiothoracic and neurosurgery, as well as to cover similar patient populations. Both the Non-Emergent CABG and the Lumbar Spine Fusion for Degenerative Disease cost measures use similar service and diagnoses codes to their quality measure counterparts to identify the patient populations. The MVP also includes additional quality measures and improvement activities to collectively assess the overall value of surgical care. Additionally, the quality measures assess clinical outcomes which utilize different timeline criteria, based upon guidelines and best practices, for the purposes of assessing the quality action.

We also disagree with commenters that the inclusion of cost measures in the MVP do not adequately capture costs of resource utilization and incentivize care stinting. Cost measures encompass costs of all clinically related services furnished during an episode, including hospital stays, treatment and diagnostic services, ancillary items, services directly related to treatment, and those furnished as a consequence of care (for example, complications, readmissions, unplanned care, and emergency department visits). Cost measures aim to promote care coordination and can capture clinicians' cost savings through reduction of poor patient outcomes associated with higher-than-expected episode costs, such as potentially avoidable hospitalizations or complications.

After consideration of public comments, we are finalizing the *Surgical Care MVP* as proposed in Tables A.6a and A.6b for the CY 2025 performance period/2027 MIPS payment year and future years.

Group B: Modifications to Previously Finalized MVPs for the CY 2025 Performance Period/2027 MIPS Payment Year and Future Years

B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

In the CY 2025 PFS proposed rule (89 FR 62607 through 62609), we proposed and solicited comments on the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. Tables B.1a and B.1b represent the measures and activities that were finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP in (88 FR 88029 through 80032) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.1b.

Quality Measures

We proposed to modify the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP to remove one MIPS quality measure as it is a process measure and has become standard of care, based upon MIPS performance data showing continued high performance.

- Q254: Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

Improvement Activities

For the reasons stated in the introduction of this appendix[1149], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Tables

Tables B.1a and B.1b serve to represent the measures and activities that are finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

[1149] See *Improvement Activity Policy Update and Global Inclusion of an Improvement A*ctivity.

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP.

Response: We thank the commenters for their support.

Comment: One commenter questioned why the Emergency Medicine MVP does not align with the Emergency Medicine specialty set.

Response: As we move to sunset traditional MIPS, MVPs are not intended to be duplicative of specialty measure sets but rather create a connected set of quality measures, cost measures and improvement activities to promote quality care within Emergency Medicine.

Comment: One commenter expressed concern that the MVP does not offer a broad enough inventory of CQMs to reflect the diversity of emergency medicine patient populations and the considerable expense of investing in a Qualified Clinical Data Registry (QCDR). The commenter recommended the addition of the following CQMs to the MVP; Q066: Appropriate Testing for Pharyngitis, Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy, and Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis.

Response: We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP* with modifications in Table B.1a and as proposed in Table B.1b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details. Based on comments received, we are delaying the removal of IA_CC_2: Implementation of improvements that contribute to more timely communication of test results. See Appendix 2, Table C for additional details.

B.2: Advancing Cancer Care MVP

In the CY 2025 PFS proposed rule (89 FR 62609 through 62613), we proposed and solicited comments on the previously finalized Advancing Cancer Care MVP. Tables B.2a and B.2b represent the measures and activities that were finalized within the Advancing Cancer Care MVP in (88 FR 80008 through 80011) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.2b.

Quality Measures

We proposed to modify the previously finalized Advancing Cancer Care MVP within the quality performance category of this MVP to include six additional MIPS quality measures and one additional QCDR measure that address appropriate cancer care treatment. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians providing care to patients with cancer:

- Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients: This MIPS quality measure assesses overuse of bone scans for patients with prostate cancer with low incidence of recurrence receiving treatment.
- Q506: Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy: This proposed MIPS quality measure ensures timely biomarker testing for patients with a diagnosis of metastatic non-small cell lung cancer or squamous cell carcinoma of head and neck on first-line immune checkpoint inhibitor (ICI) therapy.
- Q507: Appropriate Germline Testing for Ovarian Cancer Patients: This proposed MIPS quality measure assesses patients with a diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer for completion germline testing within 6 months of diagnosis.
- TBD: Patient-Reported Pain Interference Following Chemotherapy among Adults with Breast Cancer: This proposed MIPS quality measure assesses pain interference following chemotherapy administered with curative intent to adult patients with breast cancer.
- TBD: Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer: This proposed MIPS quality measure assess fatigue following chemotherapy administered with curative intent to adult patients with breast cancer.
- PIMSH17: Oncology: Utilization of Prophylactic GCSF for Cancer Patients Receiving Low-Risk Chemotherapy (inverse measure): The intent of this QCDR measure is to assess prophylactic use of granulocyte colony stimulating factor (G-CSF) when it is not indicated for low-risk chemotherapy and is not restricted to metastatic colorectal cancer.

In addition, we proposed the following broadly applicable MIPS quality measure, which is relevant to patients receiving cancer care and their experience of their health care treatment journey:

- Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: This MIPS quality measure ensures palliative care clinicians and/or teams are actively engaged to ensure patients are understood in a significant and empowering way.

We proposed to modify the previously finalized Advancing Cancer Care MVP to remove two MIPS quality measures as they are duplicative in concept to current MIPS quality measures and are being proposed for removal from MIPS:

- Q144: Oncology: Medical and Radiation - Plan of Care for Pain
- Q452: Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies

We are also proposing to remove one QCDR measure which will be replaced by PIMSH17: Oncology: Utilization of Prophylactic GCSF for Cancer Patients Receiving Low-Risk Chemotherapy (inverse measure), which has a broader denominator and is not restricted to metastatic colorectal cancer.

- PIMSH2: Oncology: Utilization of GCSF in Metastatic Colorectal Cancer

Improvement Activities

For the reasons stated in the introduction of this appendix[1150], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and add an additional improvement activity that addresses maintenance requests from the public, as well as addresses priority areas including food insecurity and the incorporation of patient voices into health care decision making:

- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols

For the reasons stated in the introduction of this appendix, we proposed the following: remove the weights associated with the improvement activities contained in this MVP; and remove three improvement activities being proposed for removal from MIPS:

- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_ERP_4: Implementation of a Personal Protective Equipment (PPE) Plan

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Cost Measures

We proposed to add one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of cancer care. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in cancer care and aligns with other measures and activities included within this MVP:

- Prostate Cancer: This proposed MIPS episode-based cost measure will assess costs associated with prostate cancer. This also aligns with quality measures such as Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients.

Advancing Cancer Care MVP Tables

Tables B.2a and B.2b serve to represent the measures and activities that are finalized within the Advancing Cancer Care MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Caret symbol (^): new proposed measures and improvement activities
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter appreciated the focus on screening measures in this MVP. One commenter supported the addition of the Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP. A couple of commenters supported the inclusion of the Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure in this MVP. One commenter supported the inclusion of Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients. One commenter expressed support for retaining the following quality measures: Q450: Appropriate Treatment for Patients with Stage I (T1c) – III HER2 Positive Breast Cancer, Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy, and PIMSH13: Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to Start of Targeted Therapy in this MVP. One commenter expressed support for the addition of the following new MIPS quality measures: Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy and Appropriate Germline Testing for Ovarian Cancer Patients in this MVP. A couple of commenters supported the removal of the improvement activity weights from all activities and the updated requirement for MVP reporting requiring attestation to only one improvement activity.

One commenter suggested Q112: Breast Cancer, Q309 Cervical Cancer, and Q226 Preventative Care and Screening for Tobacco Care will be better for this MVP than the proposed new quality measure additions. They believed that these measures would support reporting of the MVP by both radiation oncology and medical oncology. A couple of commenters encouraged expanding this MVP to capture non-patient-facing clinicians who are integral to cancer care. Other commenters supported the removal of PIMSH2: Oncology: Utilization of GCSF in Metastatic Colorectal Cancer and replacing it with PIMSH17: Oncology: Utilization of Prophylactic GCSF for Cancer Patients Receiving Low-Risk Chemotherapy (inverse measure), which has a broader denominator and is not restricted to metastatic colorectal cancer. A couple of commenters recommended the inclusion of PIMSH15 and PIMSH16 to this MVP. One commenter recommended the inclusion of PIMSH4. One commenter encouraged expanding this MVP to capture non-patient-facing clinicians who are integral to cancer care.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on

an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter believed this MVP fails to recognize the complexity of cancer care that frequently involves the services of a surgical oncologist, a medical oncologist and a radiation oncologist. Another commenter noted the MVP is predominantly focused on medical oncology and would not be meaningful for radiation oncologists.

Response: We recognize the three main areas of oncology care and work to ensure the MVPs are broad to allow for comprehensive reporting within the MVP topic. We include measures that represent different aspects of care; however, we are limited to the current MIPS quality measure inventory and encourage interested parties to develop quality measures pertinent to their scope of care for potential consideration of implementation in MIPS. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing oncology care and allows for clinician choice in choosing quality measures that best represent their practice.

Comment: A few commenters opposed the removal of Q144: Oncology: Medical and Radiation – Plan of Care for Pain from the MVP. They asserted that this measure is not duplicative of, but rather paired with Q143: Oncology: Medical and Radiation – Pain Intensity Quantified and that the measures should be implemented sequentially to achieve a comprehensive clinical quality outcome, with Q143 confirming that the patient's pain was evaluated and Q144 validating that a patient care plan for pain was developed based on that assessment. They stated that the intent is for applicable clinicians to report on both measures as a unit, while resulting in individual measure scores.

Response: Based on comments received, Q144 will be maintained in MIPS therefore it will be maintained in this MVP.

Comment: A couple of commenters believed the quality measures in this MVP should align with the measures included in the "oncology/hematology specialty set".

Response: As we move towards sunsetting traditional MIPS, MVPs are not intended to be duplicative of specialty measure sets but rather create a connected set of quality measures, cost measures and improvement activities to promote quality care for cancer patients.

Comment: One commenter recommended this MVP include at least six eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

Comment: A couple of commenters opposed the addition of the new, proposed Prostate Cancer cost measure to this MVP. The commenters stated that they do not believe the measure accurately reflects appropriate and expected cost variation based on disease severity and patient needs and may, in fact, create unintended disincentives that would limit provision of appropriate, high-quality care.

Response: The Prostate Cancer episode-based cost measure is appropriate for use in this MVP, as it assesses costs associated with prostate cancer and aligns with Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients. Additionally, we maintain that the measure appropriately accounts for disease severity identifiable in claims, as reflected in the measure's subgrouping and risk adjustment methodologies. We have addressed this measure-specific feedback under section IV.A.4.e.(2)(a)(ii)of this final rule in further detail.

Comment: A couple of commenters advocated for the removal of the Total Per Capita Cost (TPCC) measure from the MVP. One commenter suggested that, if we do not remove the TPCC measure from MIPS, then we should at a minimum remove the TPCC measure from all MVPs that include episode-based cost measures.

Response: The Total Per Capita Cost (TPCC) measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about why it is appropriate to include the TPCC measure in MVPs. We may consider the addition or removal of cost measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Cancer Care MVP* with modifications in Table B.2a and as proposed in Table B.2b for the CY 2025 performance period/2027 MIPS payment year and future years. The following measures are not being finalized in MIPS and therefore are not being finalized in this MVP, TBD: Patient-Reported Pain

Interference Following Chemotherapy among Adults with Breast Cancer and TBD: Patient-Reported Fatigue Following Chemotherapy among Adults with Breast Cancer. See Appendix 1, Table B.27a for additional details. Based on comments received, we are not finalizing the removal of quality measure Q144: Oncology: Medical and Radiation - Plan of Care for Pain. The measure steward is evaluating respecifying measures Q143: Oncology: Medical and Radiation – Pain Intensity Quantified and Q144: Oncology: Medical and Radiation – Plan of Care for Pain into a single, combined measure and requested that both measures be retained at this time. See Appendix 1, Table C.3 for additional details. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details. We are delaying the removal of IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop. See Appendix 2, Table C for additional details.

B.3: Advancing Care for Heart Disease MVP

In the CY 2025 PFS proposed rule (89 FR 62613 through 62616), we proposed and solicited comments on the previously finalized Advancing Care for Heart Disease MVP. Tables B.3a and B.3b represent the measures and activities that were finalized within the Advancing Care for Heart Disease MVP in (88 FR 80022 through 80025) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.3b.

Quality Measures

We proposed to modify the previously finalized Advancing Care for Heart Disease MVP within the quality performance category of this MVP to include one additional broadly applicable MIPS quality measure relevant to patients receiving care for heart disease. We reviewed the quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

- Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.

Improvement Activities

For the reasons stated in the introduction of this appendix[1151], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and remove the weights associated with the improvement activities contained in this MVP.

Cost Measures

We did not propose to modify the MIPS cost measures included within the cost performance category of this previously finalized Advancing Care for Heart Disease MVP by proposing to add or remove cost measures from the MVP.
However, we proposed to modify the ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI) cost measure, which included a proposed measure title update to Inpatient (IP) Percutaneous Coronary Intervention (PCI). Please see section IV.A.4.e.(2)(a)(iii) of this final rule for all finalized revisions to this cost measure.

Advancing Care for Heart Disease MVP Tables

Tables B.3a and B.3b serve to represent the measures and activities that are finalized within the Advancing Care for Heart Disease MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter supported the inclusion of IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP. Another commenter supported the inclusion of the Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure in this MVP. One commenter recommended Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease be added to this MVP. The commenter also recommended the inclusion of the new improvement activity for clinicians to assess and manage patients at risk of ASCVD. Another commenter recommended the inclusion of the newly proposed Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk improvement activity.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter was concerned with the inclusion of Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood noting the measure is not the best fit for interventional cardiologists attempting to report this MVP.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing cardiology care and allows for clinician choice in choosing quality measures that best represent their practice.

Comment: One commenter suggested that, if we do not remove the TPCC measure from MIPS, then we should at a minimum remove the TPCC measure from all MVPs that include episode-based cost measures.

Response: The Total Per Capita Cost (TPCC) measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about why it is appropriate to include the TPCC measure in MVPs. We may consider the addition or removal of cost measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Care for Heart Disease MVP* as proposed in Tables B.3a and B.3b for the CY 2025 performance period/2027 MIPS payment year and future years.

B.4: Advancing Rheumatology Patient Care MVP

In the CY 2025 PFS proposed rule (89 FR 62616 through 62619), we proposed and solicited comments on the previously finalized Advancing Rheumatology Patient Care MVP. Tables B.4a and B.4b represent the measures and activities that were finalized within the Advancing Rheumatology Patient Care MVP in (88 FR 80026 through 80029) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.4b.

Quality Measures

We proposed to modify the previously finalized Advancing Rheumatology Patient Care MVP within the quality performance category of this MVP to include one additional MIPS quality measure and two QCDR measures that are relevant to patients receiving rheumatology care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP provide address appropriate clinical care for patients with rheumatological conditions:

- Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age: This MIPS quality measure assesses women who have ever received a dual-energy x-ray absorptiometry (DXA) test to evaluate for the disease osteoporosis.
- UREQA2: Ankylosing Spondylitis: Appropriate Pharmacologic Therapy: This QCDR measure assesses patients newly diagnosed with ankylosing spondylitis for appropriate pharmacologic therapy by ensuring a course of NSAIDs is prescribed before initiation of biologics during the first six months of treatment.
- UREQA9: Screening for Osteoporosis for Men Aged 70 Years and Older: This QCDR measure identifies male patients who have ever had a central dual-energy X-ray absorptiometry (DXA) to screen for osteoporosis to identify osteoporotic risk for fracture.

Improvement Activities

For the reasons stated in the introduction of this appendix[1152], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activities being proposed for removal from MIPS:

- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Cost Measures

We proposed to add one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of rheumatology care. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in rheumatology care and aligns with the other measures and activities included within this MVP:

- Rheumatoid Arthritis: This proposed MIPS episode-based cost measure will assess costs associated with medical care to manage and treat rheumatoid arthritis. This also aligns with quality measures such as Q177: Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity or Q178: Rheumatoid Arthritis (RA): Functional Status Assessment.

[1152] See *MVP Development: Improvement Activity Policy Update and Global Inclusion of an Improvement Activity.*

Advancing Rheumatology Patient Care MVP Tables

Tables B.4a and B.4b serve to represent the measures and activities that are finalized within the Advancing Rheumatology Patient Care MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Caret symbol (^): new proposed measures and improvement activities
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

TABLE B.4a: Advancing Rheumatology Patient Care MVP Measures and Improvement Activities

Q484:** Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Collection Type: Administrative Claims)	Security Risk Analysis High Priority Practices Safety Assurance Factors for EHR Resilience Guide (SAFER Guide) e-Prescribing Query of Prescription Drug Monitoring Program (PDMP) Provide Patients Electronic Access to Their Health Information Support Electronic Referral Loops By Sending Health Information AND Support Electronic Referral Loops By Receiving and Reconciling Health Information OR Health Information Exchange (HIE) Bi-Directional Exchange OR Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) Immunization Registry Reporting Syndromic Surveillance Reporting (Optional) Electronic Case Reporting Public Health Registry Reporting (Optional) Clinical Data Registry Reporting (Optional) Actions to Limit or Restrict Compatibility or Interoperability of CEHRT ONC Direct Review Attestation

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter supported the inclusion of Q493: Adult Immunization Status measure in MVPs with a broad clinical reach such as this MVP. Another commenter supported the addition of the following quality measures: Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age, UREQA2: Ankylosing Spondylitis: Appropriate Pharmacologic Therapy, and UREQA9: Screening for Osteoporosis for Men Aged 70 Years and Older.

Response: We thank the commenters for their support.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

Comment: One commenter encouraged retaining IA_EPA_1 in MIPS and this MVP for at least one additional year given its wide use across multiple specialties, so practices have a greater duration of time to review all improvement activities to identify and plan for more meaningful activities for the 2026 performance year.

Response: We appreciate the commenter's feedback. Upon careful consideration, we are proceeding with removal of this activity under removal factor seven, activity is obsolete: this activity was created, in part, to incentivize utilization of EHRs to increase access to clinicians in off hours and decrease emergency room (ER) visits. Today, EHRs are highly utilized, and this activity has become standard of care.

Comment: One commenter suggested that, if we do not remove the TPCC measure from MIPS, then we should at a minimum remove the TPCC measure from all MVPs that include episode-based cost measures.

Response: The Total Per Capita Cost (TPCC) measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about why it is appropriate to include the TPCC measure in MVPs. We may consider the addition or removal of cost measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Rheumatology Patient Care MVP* with modifications in Table B.4a and as proposed in Table B.4b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details.

B.5: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

In the CY 2025 PFS proposed rule (89 FR 26219 through 62622), we proposed and solicited comments on the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. Tables B.5a and B.5b represent the measures and activities that were finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP in ((88 FR 80039 through 80041) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.5b.

Quality Measures

We proposed to modify the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP to include one additional broadly applicable MIPS quality measure relevant to patients receiving stroke care and their experience of their health care treatment journey. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

- Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.

We also proposed to modify the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP to remove one MIPS quality measure as this measure is proposed for removal from MIPS:

- Q409: Clinical Outcome Post Endovascular Stroke Treatment

We proposed to modify the Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this final rule for all finalized revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix[1153], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP Tables

Tables B.5a and B.5b serve to represent the measures and activities that are finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP.

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter supported the inclusion of IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP. Another commenter supported the inclusion of the Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure in this MVP.

Response: We thank the commenters for their support.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP* with modifications in Table B.5a and as proposed in Table B.5b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details. Based on comments received, we are delaying the removal of IA_CC_2: Implementation of improvements that contribute to more timely communication of test results. See Appendix 2, Table C for additional details.

B.6: Focusing on Women's Health MVP

In the CY 2025 PFS proposed rule (89 FR 62622 through 62625), we proposed and solicited comments on the previously finalized Focusing on Women's Health MVP. Tables B.6a and B.6b represent the measures and activities that were finalized within the Focusing on Women's Health MVP in (88 FR 79981 through 79986) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.6b.

Quality Measures

We proposed to modify the previously finalized Focusing on Women's Health MVP within the quality performance category of this MVP to include one additional MIPS quality measure that is relevant to women's health. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measure proposed within this MVP provides a meaningful and comprehensive assessment of the clinical care for clinicians providing women's health care to patients:

- Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age: This MIPS quality measure assesses women who have ever received a dual-energy x-ray absorptiometry (DXA) test to evaluate for the disease osteoporosis.

We are also proposing to modify the previously finalized Focusing on Women's Health MVP to remove one MIPS quality measure as it is a process measure that has become standard of care, based on MIPS performance data as demonstrated by the measure's high performance in the PY2024 MIPS Historical Quality Benchmarks file, as well as previous year's benchmark data, and is being proposed for removal from MIPS:

- Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

We proposed to modify the Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this final rule for all finalized revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix[1154], we proposed the following: add the modified proposed IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and remove the weights associated with the improvement activities contained in this MVP.

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Focusing on Women's Health MVP Tables

Tables B.6a and B.6b serve to represent the measures and activities that are finalized within the Focusing on Women's Health MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for this MVP. One commenter supported the inclusion of Q493: Adult Immunization Status measure in MVPs with a broad clinical reach such as this MVP. And another commenter supported the inclusion of IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP. One commenter suggested the addition of the Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services improvement activity to this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter expressed continued opposition to this MVP and recommended an MVP be developed that focused on gynecologic health and maternity care separately with the input of specialty societies.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing women's health and allows for clinician choice in choosing quality measures that best represent their practice.

After consideration of public comments, we are finalizing the *Focusing on Women's Health MVP* with modifications in Table B.6a and as proposed in Table B.6b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details.

B.7: Improving Care for Lower Extremity Joint Repair MVP

In the CY 2025 PFS proposed rule (89 FR 62626 through 62628), we proposed and solicited comments on the previously finalized Improving Care for Lower Extremity Joint Repair MVP. Tables B.7a and B.7b represent the measures and activities that were finalized within the Advancing Improving Care for Lower Extremity Joint Repair MVP in (88 FR 80033 through 80035) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.7b.

Improvement Activities

For the reasons stated in the introduction of this appendix[1155], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and add an additional improvement activity that addresses maintenance requests from the public, as well as addresses priority areas including food insecurity and the incorporation of patient voices into health care decision making:

- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols

In addition, we proposed the following: remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_PSPA_27: Invasive Procedure or Surgery Anticoagulation Medication Management

Improving Care for Lower Extremity Joint Repair MVP Tables

Tables B.7a and B.7b serve to represent the measures and activities that are finalized within the Improving Care for Lower Extremity Joint Repair MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter expressed support for the modifications proposed to this MVP. Another commenter supported the addition of the Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols improvement activity in this MVP.

Response: We thank the commenters for their support.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Improving Care for Lower Extremity Joint Repair MVP* as proposed in Tables B.7a and B.7b for the CY 2025 performance period/2027 MIPS payment year and future years.

B.8: Optimal Care for Kidney Health MVP

In the CY 2025 PFS proposed rule (89 FR 62628 through 62631), we proposed and solicited comments on the previously finalized Optimal Care for Kidney Health MVP. Tables B.8a and B.8b represent the measures and activities that were finalized within the Optimal Care for Kidney Health MVP in (88 FR 80012 through 80015) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.8b.

Quality Measures

We proposed to modify the previously finalized Optimal Care for Kidney Health MVP within the quality performance category of this MVP to include three additional broadly applicable MIPS quality measures that are relevant to patients receiving care for kidney health. We reviewed the quality measure inventory and considered feedback received during the 2025 MVP maintenance period to determine which quality measures to include in this MVP.

- Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.
- Q510: First Year Standardized Waitlist Ratio (FYSWR): This MIPS quality measure measures number of incident (newly initiated on dialysis) patients in a practitioner (inclusive of physicians and advanced practice providers) groups who were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis.
- Q511: Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW): This MIPS quality measure tracks dialysis patients who at a practitioner group practice who were on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status).

We proposed to modify the Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) quality measure, which includes a proposed measure title update. Please see Appendix 1: MIPS Quality Measures, Table Group D of this final rule for all finalized revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix[1156], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Cost Measures

We proposed to add three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of kidney health. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following proposed new cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in kidney care and align with the other measures and activities included within this MVP and are described in section IV.A.4.e(2)(a)(ii) of this final rule:

- Chronic Kidney Disease (CKD): This proposed MIPS episode-based cost measure will assess costs associated with medical care to manage and treat stage 4 or 5 chronic kidney disease.
- End-Stage Renal Disease (ESRD): This proposed MIPS episode-based cost measure will assess costs associated with medical care to manage ESRD.
- Kidney Transplant Management: This proposed MIPS episode-based cost measure will assess costs associated with medical care related to kidney transplant, beginning no sooner than 90 days post-transplant.

Optimal Care for Kidney Health MVP Tables

Tables B.8a and B.8b serve to represent the measures and activities that are finalized within the Optimal Care for Kidney Health MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Caret symbol (^): new proposed measures and improvement activities
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP

Q484:** Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Collection Type: Administrative Claims)	Security Risk Analysis High Priority Practices Safety Assurance Factors for EHR Resilience Guide (SAFER Guide) e-Prescribing Query of Prescription Drug Monitoring Program (PDMP) Provide Patients Electronic Access to Their Health Information Support Electronic Referral Loops By Sending Health Information AND Support Electronic Referral Loops By Receiving and Reconciling Health Information OR Health Information Exchange (HIE) Bi-Directional Exchange OR Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) Immunization Registry Reporting Syndromic Surveillance Reporting (Optional) Electronic Case Reporting Public Health Registry Reporting (Optional) Clinical Data Registry Reporting (Optional) Actions to Limit or Restrict Compatibility or Interoperability of CEHRT ONC Direct Review Attestation

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for the modifications made to this MVP. A couple of commenters recommended the addition of Remote Monitoring [remote physiological monitoring (RPM) and remote therapeutic monitoring (RTM)]. One commenter expressed support for the inclusion of the First Year Standardized Waitlist Ratio measure or the Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted (PPPW) Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure in this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter did not support the inclusion of the First Year Standardized Waitlist Ratio measure or the Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted (PPPW) Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure as they feel these measures are largely outside of nephrologists' ability to influence.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing kidney health and allows for clinician choice in choosing quality measures that best represent their practice.

Comment: One commenter recommended this MVP include at least six eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to

reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

Comment: One commenter suggested that, if we do not remove the TPCC measure from MIPS, then we should at a minimum remove the TPCC measure from all MVPs that include episode-based cost measures.

Response: The Total Per Capita Cost (TPCC) measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about why it is appropriate to include the TPCC measure in MVPs.. We may consider the addition or removal of cost measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Optimal Care for Kidney Health MVP* with modifications in Table B.8a and as proposed in Table B.8b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details. Based on comments received, we are delaying the removal of IA_CC_2: Implementation of improvements that contribute to more timely communication of test results. See Appendix 2, Table C for additional details.

B.9: Patient Safety and Support of Positive Experiences with Anesthesia MVP

In the CY 2025 PFS proposed rule (89 FR 62631 through 62633), we proposed and solicited comments on the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP. Tables B.9a and B.9b represent the measures and activities that were finalized within Patient Safety and Support of Positive Experiences with Anesthesia MVP in (88 FR 80036 through 80038) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.9b.

Improvement Activities

For the reasons stated in the introduction of this appendix[1157], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

Patient Safety and Support of Positive Experiences with Anesthesia MVP Tables

Tables B.9a and B.9b serve to represent the measures and activities that are finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP.

Symbol Key:

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter appreciates our effort in ensuring nurse practitioners (NPs) are eligible to participate in all the currently developed MVPs. Another commenter expressed support for all proposed changes to the improvement activity performance category in this MVP. Several commenters specifically supported the removal of the improvement activity weights from all activities and the updated requirement for MVP reporting requiring attestation to only one improvement activity. One commenter supported the inclusion of Q487: Screening for Social Drivers of Health improvement activity in this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Patient Safety and Support of Positive Experiences with Anesthesia MVP* with modifications in Table B.9a and as proposed in Table B.9b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the removal of IA_CC_2: Implementation of improvements that contribute to more timely communication of test results. See Appendix 2, Table C for additional details.

B.10: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

In the CY 2025 PFS proposed rule (89 FR 62633 through 62636), we proposed and solicited comments on the previously finalized Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP. Tables B.10a and B.10b represent the measures and activities that were finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP in (88 FR 79991 through 79995) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.10b.

Quality Measures

We did not propose to modify the previously finalized Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP within the quality performance category of this MVP by proposing to add or remove quality measures from the MVP. However, we proposed to modify the Q340: HIV Medical Visit Frequency quality measure, which includes a proposed measure title update to HIV Annual Retention in Care. Please see Appendix 1: MIPS Quality Measures, Table Group D of this final rule for all finalized revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix[1158], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove one improvement activity being proposed for removal from MIPS:

- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups who Have Real-Time Access to Patient's Medical Record

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP Tables

Tables B.10a and B.10b serve to represent the measures and activities that are finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

	OR Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) Immunization Registry Reporting Syndromic Surveillance Reporting (Optional) Electronic Case Reporting Public Health Registry Reporting (Optional) Clinical Data Registry Reporting (Optional) Actions to Limit or Restrict Compatibility or Interoperability of CEHRT ONC Direct Review Attestation

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter supported the inclusion of Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services IA in this MVP. One commenter supported the inclusion of Q493: Adult Immunization Status measure in MVPs with a broad clinical reach such as this MVP.

Response: We thank the commenters for their support.

Comment: One commenter continued to oppose the inclusion of the Total Per Capita Cost (TPCC) measure in this MVP. The commenter believed this measure captures aspects of care that infectious disease physicians do not have direct control over, and it provides little meaningful or actionable data to help clinicians understand what they can do to lower costs and improve the value of care. Importantly, for their specialty, is the failure of the measure to account for short-term investments that might result in savings and higher-quality care over the long term. One commenter suggested that, if we do not remove the TPCC measure from MIPS, then we should at a minimum remove the TPCC measure from all MVPs that include episode-based cost measures.

Response: The Total Per Capita Cost (TPCC) measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about why it is appropriate to include the TPCC measure in MVPs. We may consider the addition or removal of cost measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP* with modifications in Table B.10a and as proposed in Table B.10b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details.

B.11: Quality Care for Patients with Neurological Conditions MVP

In the CY 2025 PFS proposed rule (89 FR 62636 through 62639), we proposed and solicited comments on the previously finalized Optimal Care for Patients with Episodic Neurological Conditions and the Supportive Care for Neurodegenerative Conditions MVPs proposal to consolidate the two MVPs into a single consolidated neurological MVP titled Quality Care for Patients with Neurological Conditions. Tables B.11a and B.11b represent the measures and activities that were finalized within the Optimal Care for Patients with Episodic Neurological Conditions MVP (88 FR 80015 through 80018) and the Supportive Care for Neurodegenerative Conditions MVP (88 FR 80019 through 80021) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.11b.

Quality Measures

We proposed to modify the previously finalized neurology MVPs within the quality performance category of this MVP to include two additional broadly applicable MIPS quality measures relevant to patients receiving care for neurodegenerative disorders. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

- Q155: Falls: Plan of care: This MIPS quality measure ensures adult patients, with a history of falls, have a plan of care for falls.

- Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: This MIPS quality measure ensures palliative care clinicians and/or teams empathize to ensure patients are understood in a significant and empowering way.

We proposed to modify the previously finalized MVPs to remove six QCDR measures no longer being supported by Axon Registry QCDR:

- AAN5: Treatment Prescribed for Acute Migraine Attack
- AAN9: Querying and Follow-Up About Symptoms of Autonomic Dysfunction for Patients with Parkinson's Disease
- AAN22: Quality of Life Outcome for Patients with Neurologic Conditions
- AAN31: Acute Treatment Prescribed for Cluster Headache
- AAN32: Preventive Treatment Prescribed for Cluster Headache
- AAN34: Patient reported falls and plan of care

Improvement Activities

For the reasons stated in the introduction of this appendix[1159], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove three improvement activities being proposed for removal from MIPS:

- IA_BMH_8: Electronic Health Record Enhancements for BH data capture
- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Quality Care for Patients with Neurological Conditions MVP Tables

Tables B.11a and B.11b serve to represent the measures and activities that are finalized within the Quality Care for Patients with Neurological Conditions MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures

The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed support for the consolidation of the Optimal Care for Patients with Episodic Neurological Conditions and Supportive Care for Neurodegenerative Conditions MVPs. One commenter supported the inclusion of the Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure in this MVP. One commenter recommended the addition of Q182: Functional Outcome Assessment in this MVP. The commenter believed this measure would provide a broader functional status measure with flexibility for selecting standardized PROM tools, allowing clinicians evaluating patients with a broad range of neurological conditions, including rare diseases such as myasthenia gravis, to evaluate functionality and be measured under MIPS . A couple of commenters recommended additional eCQM collection types for Quality measures in this MVP.

Response: We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Please note that all collection types for each MIPS quality measure finalized through rulemaking will be available for use within the MVP.

Comment: One commenter believed the current iteration of Quality Care for Patients with Neurological Conditions MVP does not meet its intended purpose of serving as a transition from MIPS into value-based care. The commenter appreciated the development of the current comprehensive MVPs but encouraged further development of quality and cost measures as well as care delivery models that are targeted and condition specific, while also serving as a meaningful on-ramp into participating in APMs.

Response: This MVP has a broad clinical focus and captures performance driving positive clinical outcomes by providing fundamental treatment and management of patients with neurological conditions. As we work through the transition from traditional MIPS to MVPs, we anticipate MIPS eligible clinicians/groups will continue to utilize traditional MIPS in the absence of an appropriate and applicable MVP; however, by utilizing reporting trends and focusing on more specialty-specific quality measures, the MVP works to capture more meaningful data to the clinician's scope of care. Moreover, it would not be expected for every aspect of a clinician's scope of care to be assessed, as the clinician would have choice in which quality measures, they find most meaningful and appropriate for their case-mix and practice. The intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP based upon a clinical topic. We would encourage the commenter to submit quality measures to the Annual Call for Quality Measures for potential inclusion in future years. As MVPs continue from year to year, the MVP Maintenance Process can be utilized to update MVPs to ensure they represent priorities in care for the MVP topic and align with care being delivered by the clinicians reporting.

Comment: One commenter recommended this MVP include at least six eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to

reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Quality Care for Patients with Neurological Conditions MVP* with modifications in Table B.11a and as proposed in Table B.11b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details. Based on comments received, we are delaying the removal of IA_BMH_8: Electronic Health Record Enhancements for BH data capture and IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop. See Appendix 2, Table C for additional details.

B.12: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

In the CY 2025 PFS proposed rule (89 FR 62639 through 62641), we proposed and solicited comments on the previously finalized Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP. Tables B.12a and B.12b represent the measures and activities that were finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP in (88 FR 79986 through 79990) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.12b.

Quality Measures

We proposed to modify the previously finalized Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP within the quality performance category of this MVP to remove two QCDR measures whose quality actions reflect a standard of care based upon clinical guidelines recognized as best practices by health care clinicians. Based upon MIPS performance data, AAO16 is high performing and AAO23 has had minimal variation in its historical benchmark. Though allergic rhinitis falls within the spectrum of care otolaryngologists provide, the complexity of caring for the condition is typically low. Many non-surgical clinician specialties, including primary care, treat allergic rhinitis regularly. Further, measure AAO23 requires the use of medications that all are available over the counter. Removal of AAO23 will encourage use of other measures within the MVP that represent the complexity of care otolaryngologists provide.

- AAO16: Age-Related Hearing Loss: Audiometric Evaluation
- AAO23: Allergic Rhinitis: Intranasal Corticosteroids or Oral Antihistamines

Improvement Activities

For the reasons stated in the introduction of this appendix[1160], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP Tables

Tables B.12a and B.12b serve to represent the measures and activities that are finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP

Q484:** Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Collection Type: Administrative Claims)	Security Risk Analysis High Priority Practices Safety Assurance Factors for EHR Resilience Guide (SAFER Guide) e-Prescribing Query of Prescription Drug Monitoring Program (PDMP) Provide Patients Electronic Access to Their Health Information Support Electronic Referral Loops By Sending Health Information AND Support Electronic Referral Loops By Receiving and Reconciling Health Information OR Health Information Exchange (HIE) Bi-Directional Exchange OR Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) Immunization Registry Reporting Syndromic Surveillance Reporting (Optional) Electronic Case Reporting Public Health Registry Reporting (Optional) Clinical Data Registry Reporting (Optional) Actions to Limit or Restrict Compatibility or Interoperability of CEHRT ONC Direct Review Attestation

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP.

Response: We thank the commenters for their support.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

Comment: One commenter is opposed to the removal of IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record, AAO16: Age-Related Hearing Loss: Audiometric Evaluation, and AAO23: Allergic Rhinitis: Intranasal Corticosteroids or Oral Antihistamines. The commenter believed that the removal of the quality measures would eliminate nearly one quarter of the specialty-specific quality measures within the MVP, which could significantly affect the ability of otolaryngologists to participate in the MVP decreasing the opportunity to effectively evaluate and improve care for patients.

Response: Upon careful consideration, we are proceeding with removal of IA_EPA_1 under removal factor seven, activity is obsolete: this activity was created, in part, to incentivize utilization of EHRs to increase access to clinicians in off hours and decrease emergency room (ER) visits. Today, EHRs are highly utilized, and this activity has become standard of care.

We appreciate commenters' feedback on AAO16 and AAO23. Based upon MIPS performance data, AAO16 is high performing and AAO23 has had minimal variation in its historical benchmark. Though allergic rhinitis falls within the spectrum of care

otolaryngologists provide, the complexity of caring for the condition is typically low. Many non-surgical clinician specialties, including primary care, treat allergic rhinitis regularly.

After consideration of public comments, we are finalizing the *Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP* with modifications in Table B.12a and as proposed in Table B.12b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details. Based on comments received, we are delaying the removal of IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop. See Appendix 2, Table C for additional details.

B.13: Quality Care in Mental Health and Substance Use Disorders MVP

In the CY 2025 PFS proposed rule (89 FR 62641 through 62643), we proposed and solicited comments on the previously finalized Quality Care in Mental Health and Substance Use Disorders MVP. Tables B.13a and B.13b represent the measures and activities that were finalized within the Quality Care in Mental Health and Substance Use Disorders MVP in (88 FR 79986 through 80001) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.13b.

Improvement Activities

For the reasons stated in the introduction of this appendix[1161], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and remove the weights associated with the improvement activities contained in this MVP.

Quality Care in Mental Health and Substance Use Disorders MVP Tables

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter supported the inclusion of IA_ERP_6: COVID-19 Vaccine Achievement for Practice Staff activity to this MVP. One commenter appreciated the continuation of Q468: Continuity of Pharmacotherapy for Opioid Use Disorder (OUD) in this MVP. One commenter recommended the addition of Q493: Adult Immunization Status and other potentially relevant vaccination measures into this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter believed the data reportable for many of the measures in this MVP are not clinically meaningful for much of the treated patient population and are not tracked for clinicians.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting which would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all measures are applicable to all clinicians who would choose to report this MVP. However, this represents the foundation from which to build the most meaningful MVP addressing mental health and substance use disorder care and allows for clinician choice in choosing quality measures that best represent their practice.

After consideration of public comments, we are finalizing the *Quality Care in Mental Health and Substance Use Disorders MVP* as proposed in Tables B.13a and B.13b for the CY 2025 performance period/2027 MIPS payment year and future years.

B.14: Rehabilitative Support for Musculoskeletal Care MVP

In the CY 2025 PFS proposed rule (89 FR 62643 through 62646), we proposed and solicited comments on the previously finalized Rehabilitative Support for Musculoskeletal Care MVP. Tables B.14a and B.14b represent the measures and activities that were finalized within the Rehabilitative Support for Musculoskeletal Care MVP in (88 FR 80002 through 80007) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.14b.

Quality Measures

We proposed to modify the previously finalized Rehabilitative Support for Musculoskeletal Care MVP within the quality performance category of this MVP to include one additional MIPS quality measure and four QCDR measures that are relevant to patients receiving rehabilitative support for Musculoskeletal Care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

- Q050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older: This MIPS quality measure ensures that female patients with a diagnosis of urinary incontinence have a documented plan of care regarding rehabilitative treatment for urinary incontinence at least once within 12 months. A rehabilitation plan of care for these patients will address the musculoskeletal impairments of the pelvic floor related to urinary incontinence in women.
- MSK6: Patients Suffering From a Neck Injury who Improve Pain: This QCDR measure evaluates patients with a neck injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.
- MSK7: Patients Suffering From an Upper Extremity Injury who Improve Pain: This QCDR measure evaluates patients with an upper extremity injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.
- MSK8: Patients Suffering From a Back Injury who Improve Pain: This QCDR measure evaluates patients with a back injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.
- MSK9: Patients Suffering From a Lower Extremity Injury who Improve Pain: This QCDR measure evaluates patients with a lower extremity injury for achieving the minimal clinically important difference (MCID) improvement in pain by the end of treatment.

Improvement Activities

For the reasons stated in the introduction of this appendix[1162], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

Rehabilitative Support for Musculoskeletal Care MVP Tables

Tables B.14a and B.14b serve to represent the measures and activities that are finalized within the Rehabilitative Support for Musculoskeletal Care MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for the proposed modifications of the Rehabilitative Support for this MVP. A few commenters supported the addition of MSK6: Patients Suffering From a Neck Injury who Improve Pain, MSK7: Patients Suffering From an Upper Extremity Injury who Improve Pain, MSK8: Patients Suffering From a Back Injury who Improve Pain, and MSK9: Patients Suffering From a Lower Extremity Injury who Improve Pain to this MVP. One commenter supported the addition of Q050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older. Another commenter supported the inclusion of IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols in this MVP. Several commenters supported the removal of the improvement activity weights from all activities and the updated requirement for MVP reporting requiring attestation to only one improvement activity.

Response: We thank the commenters for their support.

Comment: Several commenters expressed concern with the limited nature of what can be reported in this MVP. The proposed measures to be added are pain measures, not functional measures; MSK6: Patients Suffering From a Neck Injury who Improve Pain, MSK7: Patients Suffering From an Upper Extremity Injury who Improve Pain, MSK8: Patients Suffering From a Back Injury who Improve Pain, and MSK9: Patients Suffering From a Lower Extremity Injury who Improve Pain. The commenters believed that the measures provide a poor measure of value for outpatient physical and occupational therapy clinicians.

Response: The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting that would create an overly complex MVP inventory state and increase administrative burden, these nuances may be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all measures are applicable to all clinicians who would choose to report this MVP. However, this represents the foundation from which to build the most meaningful MVP addressing rehabilitative support for musculoskeletal care and allows for clinician choice in choosing quality measures that best represent their practice.
Specifically, in addition to the MSK pain measures, this MVP does include seven MIPS CQMs that assess patient function and are applicable to most physical and occupational therapists. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing Rehabilitative Support for Musculoskeletal Care and allows for clinician choice in choosing quality measures that best represent their practice.

Comment: One commenter recommended adding functional measures to this MVP. A few commenters specifically requested the addition of MSK01: Patients Suffering From a Neck Injury who Improve Physical Function, MSK02: Patients Suffering From an Upper Extremity Injury who Improve Physical Function, MSK03: Patients Suffering From a Back Injury who Improve Physical Function, MSK04: Patients Suffering From a Lower Extremity Injury who Improve Physical Function, MSK05: Patients Suffering From a Knee Injury who Improve Physical Function and MSK10: Patients Suffering From a Knee Injury who Improve Pain. The commenter believed these measures would strengthen the MVPs ability to assess and report on quality in musculoskeletal rehabilitation and drive increased participation in the MVP and Quality Payment Programs.

Response: We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A couple of commenters stated their belief that the current functional measures (FOTO measures Q217: Functional Status Change for Patients with Knee Impairments, Q218: Functional Status Change for Patients with Hip Impairments, Q219: Functional Status Change with Lower Leg, Foot or Ankle Impairments, Q220: Functional Status Change for Patients with Low Back Impairments, Q221: Functional Status Change for Patients with Shoulder Impairments, Q222: Functional Status Change for Patients with Elbow, Wrist or Hand Impairments, and Q478: Functional Status Change for Patients with Neck Impairments) included in the MVP do not allow participation in the program with use of the PROMIS measures and are burdensome to collect and report if the therapist prefers to use the industry standard outcome measure tools. They asserted that this causes an additional burden on the clinician due to the absence of interoperability available for the FOTO measures to be integrated into other digital applications. One commenter recommended this MVP be expanded to include the complete MSK measure set.

Another commenter recommended the addition of several additional quality measures that would promote meaningful participation for physical therapists and other nonphysicians: Q182: Functional Outcome Assessment, Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention), and Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling. One commenter requested the inclusion of several additional improvement activities: IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care, IA_BE_16: Promote Self-management in Usual Care, IA_CC_9: Implementation of practices/processes for developing regular individual care plans, and IA_PM_13: Chronic care and preventative care management for empaneled patients.

Response: We acknowledge the commenters' concerns; however, the MIPS CQMs within this MVP are currently implemented and reported in MIPS. Specifically, the FOTO measures do not have to be reported within an existing digital application. The tools are publicly available for clinician and patient use and allows for a cross walk to several industry standard legacy tools. We understand that not all quality measures are applicable to all clinicians who would choose to report this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing Rehabilitative Support for Musculoskeletal Care and allows for clinician choice in choosing quality measures that best represent their scope of care. Currently, we endeavor to not create overlap in quality/QCDR measure concepts. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will continue to evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Please note that all collection types for each MIPS quality measure finalized through rulemaking will be available for use within the MVP.

Comment: One commenter expressed concern with potential misalignment between the Low Back Pain cost measure and the quality measures included in this MVP. The commenter stated that most of the quality measures included in this MVP are not related to back pain and among the few that are, most lack a benchmark which means they are not being reported.

Response: We note that MIPS Q220: Functional Status Change for Patients with Low Back Impairments has a 2024 historical benchmark of 74.02% indicating that the measure is being reported and performance still indicates a gap. QCDR measure, MSK8: Patients Suffering From a Back Injury who Improve Pain is a new measure for the CY 2024 performance period, so would not yet have established a benchmark as reporting data would be submitted in early 2025. We maintain that the Low Back Pain episode-based cost measure is appropriate for use in this MVP, as described in the CY 2024 PFS proposed rule (88 FR 53164) and finalized in the CY 2024 PFS final rule (88 FR 80003 through 80007). We may consider the addition or removal of cost measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter recommended this MVP include at least six eCQMs. One commenter is concerned that the MVP cannot be reported solely utilizing eCQMs. Another commenter stated their belief that quality measure reporting in an MVP should be available using a combination of claims-based reporting and eCQMs.

Response: We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not

currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.

After consideration of public comments, we are finalizing the *Rehabilitative Support for Musculoskeletal Care MVP* with modifications in Table B.14a and as proposed in Table B.14b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the removal of IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop. See Appendix 2, Table C for additional details.

B.15: Value in Primary Care MVP

In the CY 2025 PFS proposed rule (89 FR 62646 through 62648), we proposed and solicited comments on the previously finalized Value in Primary Care MVP. Tables B.15a and B.15b represent the measures and activities that were finalized within the Value in Primary Care MVP in (88 FR 80042 through 80047) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are included immediately after Table B.15b.

Quality Measures

We did not propose to modify the previously finalized Value in Primary Care MVP within the quality performance category of this MVP by proposing to add or remove quality measures from the MVP. However, we proposed to modify the Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) quality measure, which includes a proposed measure title update to Diabetes: Glycemic Status Assessment Greater Than 9%. Please see Appendix 1: MIPS Quality Measures, Table Group D of this final rule for all finalized revisions to this measure.

Improvement Activities

For the reasons stated in the introduction of this appendix[1163], we proposed the following: add the proposed modified IA_ERP_6 (modified to IA_PM_26) to all new and previously finalized MVPs because of the importance of vaccination status in practice settings; and add a proposed improvement activity that addresses risk for heart disease, the leading cause of death in the United States, as well as risk for stroke, which is the fifth most common cause of death. Promoting the implementation of standardized, evidence-based cardiovascular disease risk assessment and care management in the primary care setting has the potential to impact patient outcomes sizably and positively. This new activity, IA_PM_25, is based on the results of the CMS Innovation Center Million Hearts Model:

- IA_PM_25: Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

In addition, we proposed the following: remove the weights associated with the improvement activities contained in this MVP; and remove two improvement activities being proposed for removal from MIPS:

- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record

We proposed to modify the IA_BE_4: Engagement of patients through implementation of improvements in patient portal improvement activity, which included a proposed activity title update. Please see Appendix 2, Improvement Activities: Table Group B of this final rule for finalized revisions to this activity.

Value in Primary Care MVP Tables

Tables B.15a and B.15b serve to represent the measures and activities that are finalized within the Value in Primary Care MVP.

Symbol Key:
Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
Caret symbol (^): new proposed measures and improvement activities
Single asterisk (*): existing measures and improvement activities with revisions
Double asterisk (**): measures and improvement activities only available when included in an MVP
Single exclamation point (!): high priority measures
Double exclamation point (!!): outcome measures
Tilde (~): measures and improvement activities that include a health equity component

The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for this MVP. One commenter appreciated the focus on screening in this MVP. One commenter agreed that the measures reflected in this MVP are consistent with the focus of the APCM service requirements and practice capabilities for advanced primary care. Another commenter supported the inclusion of Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services IA in this MVP. A couple of commenters supported the inclusion of Q493: Adult Immunization Status measure in this MVP. Another commenter supported the inclusion of IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols in this MVP.

A couple of commenters recommended the addition of the following quality measures to this MVP as they provide additional collection types; Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow Up Plan, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention, Q309: Cervical Cancer Screening. Q238: Use of High-Risk Medications in Older Adults, Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture, and Q065: Appropriate Treatment for Upper Respiratory Infection (URI). One commenter urged us to consider the inclusion of the kidney health evaluation quality measure to promote screening and diagnosis of CKD for Medicare beneficiaries with diabetes in the primary care setting. One commenter recommended the inclusion of the new improvement activity for clinicians to assess and manage patients at risk of ASCVD. Another commenter recommended the addition of the proposed Implementation of Protocols and Provision of Resources to Increase Lung Cancer Screening Uptake activity in this MVP. One commenter recommended the addition of the Ambulatory Palliative Care Patients Experience of Feeling Heard and Understood measure in this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter suggested that, if we do not remove the TPCC measure from MIPS, then we should at a minimum remove the TPCC measure from all MVPs that include episode-based cost measures.

Response: The Total Per Capita Cost (TPCC) measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about why it is appropriate to include the TPCC measure in MVPs. We may consider the addition or removal of cost measures through future MVP maintenance and rulemaking processes. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Value in Primary Care MVP* with modifications in Table B.15a and as proposed in Table B.15b for the CY 2025 performance period/2027 MIPS payment year and future years. Based on comments received, we are delaying the proposed modification of IA_BE_4: Engagement of patients through implementation of improvements in patient portal. See Appendix 2, Table B for additional details. Based on comments received, we are delaying the removal of IA_CC_2: Implementation of improvements that contribute to more timely communication of test results. See Appendix 2, Table C for additional details.

CUSTOMER SERVICE AND INFORMATION

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: **www.govinfo.gov.**

Federal Register information and research tools, including Public Inspection List and electronic text are located at: **www.federalregister.gov.**

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to **https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new**, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to **http://listserv.gsa.gov/archives/publaws-l.html and select** *Join or leave the list (or change settings);* then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: **fedreg.info@nara.gov**

The Federal Register staff cannot interpret specific documents or regulations.

FEDERAL REGISTER PAGES AND DATE, DECEMBER

CFR PARTS AFFECTED DURING DECEMBER

At the end of each month the Office of the Federal Register publishes separately a List of CFR Sections Affected (LSA), which lists parts and sections affected by documents published since the revision date of each title.
