FEDERAL REGISTER

Vol. 89 Monday,

No. 236 December 9, 2024

Pages 97459–99058

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rural Business-Cooperative Service

7 CFR Part 4270

[Docket No. RBS–22–BUSINESS–0004]

RIN 0570–AB05

Biobased Markets Program

AGENCY: Rural Business-Cooperative Service, USDA.

ACTION: Final rule.

SUMMARY: The Rural Business-Cooperative Service (RBCS or the Agency), an agency of the Rural Development (RD) mission area within the U.S. Department of Agriculture (USDA), is issuing a final rule to adopt changes from the Agriculture Improvement Act of 2018 (2018 Farm Bill) that apply to the Biobased Markets (BioPreferred) Program. These changes include the merger of the Guidelines for Designating Biobased Products for Federal Procurement and the Voluntary Labeling Program for Biobased Products into one streamlined regulation, Biobased Markets (BioPreferred) Program.

DATES: This final rule is effective January 8, 2025.

ADDRESSES: Information regarding the BioPreferred® Program is available at *biopreferred.gov.*

FOR FURTHER INFORMATION CONTACT: Vernell Thompson, Procurement Analyst, USDA RD, 1400 Independence Avenue SW, Washington, DC 20250–1522, STOP 3250; email: *vernell.thompson@usda.gov;* phone (202) 720–4145.

SUPPLEMENTARY INFORMATION: The information presented in this preamble is organized as follows:

I. Authority

The USDA Biobased Markets Program, called the BioPreferred® Program, is established under the authority of Section 9002 of the Farm Security and Rural Investment Act (FSRIA) of 2002 (Pub. L. 107–171) (the 2002 Farm Bill), as amended by the Food, Conservation, and Energy Act of 2008 (Pub. L. 10–246) (the 2008 Farm Bill), the Agricultural Act of 2014 (Pub. L. 113–79) (the 2014 Farm Bill), and the Agriculture Improvement Act of 2018 (Pub. L. 115–334) (the 2018 Farm Bill). Section 9002 of the 2002 Farm Bill, as amended by the 2008, 2014, and 2018 Farm Bills, is referred to in this rule as section 9002 of FSRIA.

II. Background

On January 24, 2024, the Agency published a proposed rule, 89 FR 4770, with request for comments for the purpose of implementing the amendments made to section 9002 of FSRIA by the 2018 Farm Bill by combining the Guidelines for Designating Biobased Products for Federal Procurement (7 CFR part 3201) and the Voluntary Labeling Program for Biobased Products (7 CFR part 3202), the legacy rules of the BioPreferred Program, into one regulation, 7 CFR part 4270, and making amendments to streamline and improve the BioPreferred Program's rules.

The legacy rules established the two core initiatives of the BioPreferred Program. Part 3201 of title 7 of the Code of Federal Regulations detailed the rules for the procurement of Biobased Products by Federal Agencies and their contractors, established the process for designating categories of Biobased Products for preferred Federal procurement, maintained the list of Designated Product Categories, and outlined the requirements for Biobased Products to qualify for preferred Federal procurement. Part 3202 of title 7 of the Code of Federal Regulations established the rules for manufacturers and vendors of Biobased Products to become certified to use the USDA Certified Biobased Product Label (Label) and provided rules for maintaining certification and utilizing the Label. With this rulemaking, the Agency is merging the legacy rules into one streamlined regulation that will facilitate the objective of the BioPreferred Program, which is to encourage the increased use of Biobased Products in all market sectors. Additionally, the Agency believes these changes will benefit BioPreferred Program Stakeholders by implementing process improvements and tying the two initiatives more closely together, making it easier to qualify for both initiatives.

III. Discussion of Public Comments

Sixteen respondents submitted comments on the proposed rule. The Agency reviewed the public comments in the development of the final rule. A discussion of the comments is provided as follows.

A. Definitions

a. Three respondents expressed support for the inclusion of Renewable Chemicals in the definition of the term Biobased Product.

Agency Response: The Agency thanks the respondents for their support of the change to the definition of Biobased Product.

b. One respondent recommended establishing the BioPreferred Program's definition of biobased as the uniform definition throughout the federal government.

Agency Response: The Agency agrees that it is important to have a uniform definition of biobased throughout the federal government. The requirements

established by the BioPreferred Program apply to all federal agencies, and therefore, the definitions established by the BioPreferred Program apply to all federal agencies as well. The Agency will continue efforts to educate federal agencies and their contractors about Biobased Products and the requirements associated with the BioPreferred Program.

B. Criteria for Eligibility

a. Three respondents expressed support for establishing a single participation process under which all products must undergo Biobased Content Testing using ASTM D6866.

Agency Response: The Agency thanks the respondents for their support in establishing a single participation process. For reader clarification, ASTM D6866 is the American Society for Testing and Materials (ASTM) International standard test methods for determining the Biobased Content of solid, liquid, and gaseous samples using radiocarbon analysis.

b. Two respondents expressed concern regarding the added requirements for all products to undergo Biobased Content Testing. The respondents noted that, through collaboration with USDA Forest Service Forest Products Lab (FPL), the Agency has established guidelines for testing wood products, under which specific types of wood and engineered wood products are exempt from testing. The respondents recommended that the Agency continue to uphold these guidelines under this final rule. The respondents asserted that changing the testing requirements for products that fall under the exemption guidelines established with FPL would add unnecessary cost to manufacturers (and therefore purchasers) and hinder the efficiency of the BioPreferred Program.

Agency Response: The Agency agrees that the guidelines for testing wood products that have been established in collaboration with FPL should be maintained. The Agency is not intending to change these guidelines with the implementation of this final rule. Products that are eligible to be exempt from testing under the guidelines established in collaboration with FPL will be exempt from testing as described by § 4270.7(d)(1) in this final rule.

c. Two respondents expressed support for maintaining the raw material sourcing innovative criterion that allows participants to demonstrate that their Biobased Product is innovative if the raw material is sourced from responsible sources according to standards such as ASTM Standard D7612—Standard Practice for Categorizing Wood and Wood-Based Products According to Their Fiber Sources.

Agency Response: The Agency thanks the respondents for their support.

d. One respondent expressed support for the addition of the raw material sourcing innovative criterion that allows participants to demonstrate that their Biobased Product is innovative if the raw material is grown, harvested, manufactured, processed, sourced, or applied in other sustainable and ethically sourced ways as determined by the Agency.

Agency Response: The Agency thanks the respondent for their support.

e. One respondent recommended that Biobased Products should never be grown, sold, or used as an energy source and strongly recommended against establishing any rules, requirements, or funding opportunities related to biofuels.

Agency Response: The Agency notes that biofuels, including motor vehicle fuels, heating oil, and electricity, are specifically excluded from the BioPreferred Program as mandated by section 9002 of FSRIA, and as such, this is outside the scope of the request for comment on the proposed rule.

C. Procurement Programs

a. One respondent would like to see increased enforcement of the requirements for federal agencies and their contractors to purchase Qualified Biobased Products. The respondent noted that the U.S. Government is the single largest purchaser of consumer goods in the world, yet this is not reflected in the reported levels of Biobased Products purchases.

Agency Response: The Agency appreciates this comment and agrees that increased education and enforcement of the requirements to purchase Qualified Biobased Products is needed. The Agency is actively trying to increase awareness of these requirements through outreach efforts such as hosting trainings for federal agencies as requested, reminding federal agencies and their contractors about reporting requirements near the end of each fiscal year, and reviewing solicitations for compliance. These efforts have led to an increase of 1,000% in reporting of Biobased Product purchases in recent years. While this increase is encouraging, the Agency acknowledges that more is needed and hopes to see this trend continue with the implementation of Executive Order (E.O.) 14081, which requires federal agencies to report their Biobased Product purchasing to the Office of Management and Budget.

b. One respondent expressed concerns with section 6 of E.O. 14081, Executive Order on Advancing Biotechnology and Biomanufacturing Innovation for a Sustainable, Safe, and Secure American Bioeconomy. The respondent asserted that E.O. 14081 has a very narrow window of improving the procurement by federal agencies for Renewable Chemicals and Biobased Products by 2024, and by the time staff are trained on the E.O., it may be rescinded by the next administration. The respondent requested that the concepts described in section 6 of E.O. 14081 be incorporated in the reauthorization of the next Farm Bill. The respondent asserted that the guidelines on procuring Biobased Products provided in section 6 of E.O. 14081 need to be codified in legislation as agencies have not been given direction in the implementation of the BioPreferred Program since its inception in the 2002 Farm Bill.

Agency Response: While the contents of E.O. 14081 and legislative changes to the Farm Bill are outside the scope of the request for comment on the proposed rule, the Agency agrees that efforts are needed to ensure federal agencies and their contractors are aware of and understand the requirements for purchasing Qualified Biobased Products.

D. Category Designation

a. Two respondents expressed support for the revised category designation process included in the proposed rule. The respondents noted that the revised process will encourage transparency and timeliness in the procurement of Biobased Products by federal agencies. One of the respondents further noted that the rapid advancement of sophisticated fermentation techniques is leading to the development of Biobased Products and Renewable Chemicals at an increasing rate and a timely response to these advancements will be necessary for the BioPreferred Program to keep pace with industry advancements. Thus, the respondent supported the changes to the category designation process.

Agency Response: The Agency thanks the respondents for their support for the revised category designation process.

b. Two respondents recommended maintaining the category designation process established in the legacy rules. The respondents noted that the process established in the legacy rules is transparent and provides clear guardrails regarding procedural steps for designating product categories. Specifically, the respondents were concerned that without going through

the regulatory process, the revised process may not allow for the collection and evaluation of Stakeholder feedback on category additions and updates. Further, the respondents were concerned that the revised process would lead to a loss of clear requirements to provide Stakeholders with adequate notice and opportunity to comment, and in turn, the requirement for the Agency to consider and respond to all comments would be lost. The respondents strongly encouraged the Agency to establish similar, robust procedures for notice, comment, and Stakeholder feedback should the Agency move forward with the revised process.

Agency Response: The Agency strongly agrees with maintaining the transparency and robustness of the category designation process, and the Agency intends to ensure that the revised designation process provides Stakeholders with opportunities to review and provide input equal to those provided by the process established by the legacy rules. Under the revised category designation process, the Agency intends to notify Stakeholders of potential updates and additions to designated product categories. While these updates will no longer be made through the formal rulemaking process, the Agency acknowledges that many Stakeholders have become accustomed to learning about designated category changes through **Federal Register** notices. As such, the Agency intends to notify Stakeholders of changes to designated product categories through **Federal Register** notices that will direct them to view and submit comments on the changes through the BioPreferred Program's website. Similarly, the Agency intends to maintain the process for considering and responding to public comments on designated product categories; this process will take place on the BioPreferred Program's website rather than as a step in the formal rulemaking process. The Agency believes that the revised process will create a balance between proposing and implementing changes in a timely manner and maintaining the transparency of the process established by the legacy rules.

E. Determining Biobased Content

a. One respondent urged the Agency to require Biobased Content Testing for products to qualify for the federal procurement preference. The respondent asserted that without required testing, there is a heightened risk for greenwashing and fraud. The respondent also recommended establishing Biobased Content audit procedures for products that are qualified to receive the federal procurement preference.

Agency Response: The Agency appreciates these comments. The Agency notes that under section 9002 of FSRIA, any Biobased Product that meets the requirement of one or more designated product category is qualified to receive a federal procurement preference. This means that Biobased Products may be qualified to receive a federal procurement preference even if they do not participate in the BioPreferred Program. Qualified Biobased Products that participate in the BioPreferred Program will be required to undergo the same Biobased Content Testing and auditing procedures as certified products according to this final rule. While the Agency is unable to establish requirements for products that do not participate in the BioPreferred Program, the Agency believes it is important for federal buyers to be aware of Biobased Content requirements and ask for validation of Biobased Content claims when making purchasing decisions. To that end, the legacy rules included a stipulation that required manufacturers and vendors to provide federal agencies information to verify Biobased Content claims for Qualified Biobased Products upon request. The Agency realized this stipulation was unintentionally left out of the proposed rule language and is revising the final rule to include it.

b. One respondent strongly supported the continued use of ASTM D6866 to measure Biobased Content. The respondent also recommended specifying the use of ASTM D6866 Method B when conducting Biobased Content Testing, rather than also allowing the use of ASTM D6866 Method C as the instruments used for Method C tend to be less accurate than those used in Method B. The respondent stated that the results produced by ASTM D6866 Method B are easily understood by regulators, policy makers, corporate officers, and the public, and the overwhelming advantage of this test method is that it is an independent and standardized laboratory measurement that produces highly accurate and precise values. This means that the test results can be easily reproduced to verify the value if the results are challenged. The respondent specifically supported the use of ASTM D6866 Method B over the test method EN 16785–2 and mass balance measurements. The respondent asserted that calculation-based approaches, such as mass balance calculations, are difficult to audit and could lead to greenwashing of Biobased Content claims.

Agency Response: The Agency thanks the respondent for their support of the continued use of ASTM D6866 to validate Biobased Content claims. The Agency agrees with the use of ASTM D6866 Method B when products undergo Biobased Content Testing for certification and notes that this is current practice. The Agency feels that specifying the use of Method B in the final rule is unnecessary but will refer to Method B in informational materials on the BioPreferred Program's website and in information sent to participants prior to testing.

c. Two respondents strongly encouraged the Agency to include an additional certification pathway that utilizes mass balance methods to verify content claims, a recommendation that was included in the Conference Report that accompanied the 2018 Farm Bill. The respondents stated that while the ASTM D6866 test method is adequate for determining the amount of traceable Biobased Content present in a finished product, it is unable to account for renewable feedstocks attributed under the mass balance approach. The respondents asserted that modernizing the BioPreferred Program to include the mass balance approach as one of the approved methods to qualify for the BioPreferred Program would advance the program's goals of furthering the bioeconomy and providing new markets for farm commodities. The respondents also stated that incorporating the mass balance method to approve products to qualify for the BioPreferred Program would substantially lower the barrier to entry for Participating Organizations and further incentivize U.S. production of mass balance Biobased Products and their related markets.

Agency Response: The Agency appreciates the comments. The Agency notes that it is required to follow the specifications included within the 2018 Farm Bill itself; some of the recommendations in the accompanying Conference Report were not included in the 2018 Farm Bill, and establishing a certification pathway using mass balance approaches is one such recommendation. The Agency acknowledges that industry use of the mass balance approach can help advance the BioPreferred Program's goals of furthering the bioeconomy and providing new markets for farm commodities. However, the Agency believes that further consideration is needed before including an additional certification pathway that utilizes mass balance methods to verify content claims. The Agency also acknowledges

that the mass balance process may make it easier for manufacturers to transition to more sustainable feedstocks because segregated production pathways are not needed. The Agency notes that products produced by mass balance methods are not Biobased Products as defined by this final rule. To maintain the integrity of the Label and to prevent diluting public understanding of what the Label means, it is important that the Agency maintain a consistent definition of what it means for a product to be biobased. The Agency feels that allowing alternative methods that certify claims other than Biobased Content as defined by this final rule would cause confusion about what the Label is reporting. The Agency believes that including the mass balance approach as one of the approved methods to participate in the BioPreferred Program would require establishing a separate Label and certification process with separate requirements to those established for Biobased Products, which would require significant resources. The Agency will continue to stay informed of any advancements in the use of the mass balance approach and will coordinate with program Stakeholders and the program's Technical Advisory Committee to evaluate these advancements as resources allow.

d. Two respondents recommended allowing alternative test methods in addition to the use of ASTM D6866 to validate Biobased Content claims. The respondents stated that the ASTM D6866 test method essentially discounts the relative weight of the non-carbon biobased components in products as ASTM D6866 only measures the weight of carbon content in a product. The respondents noted that certain types of products, such as wood products, contain a significant amount of molecular oxygen, and failing to account for molecular oxygen substantially underrepresents the proportion of ''biobased'' materials. The respondents recommended amending the final rule to allow for the use of alternative, more accurate methodologies for measuring Biobased Content as future industry consensus standards are developed and adopted.

Agency Response: The Agency appreciates the comments. The Agency believes it is important to maintain a consistent definition of Biobased Content across all types of materials to maximize understanding of what the Label means. At this time, the Agency defines Biobased Content as the amount of recent, biologically derived organic carbon in the material or product expressed as a percent of weight (mass) of the total organic carbon in the material or product. The Agency feels that allowing alternative test methods that measure attributes other than Biobased Content as defined by this final rule would cause confusion about what the Label is reporting.

e. One respondent recommended adding a certification attribute that quantifies the carbon intensity of a given product.

Agency Response: This is outside the scope of the request for comment on the proposed rule, which seeks to implement the amendments made to section 9002 of FSRIA by the 2018 Farm Bill.

f. Two respondents recommended allowing testing exemptions for products that have been certified to industry consensus standards that are substantively equivalent to the third-party requirements set out in the proposed rule. The respondents noted that doing so would avoid duplicative costs and compliance burdens.

Agency Response: The Agency appreciates these comments. The Agency agrees that, where possible, efforts should be made to minimize burdens associated with participating in the BioPreferred Program. To that end, the Agency allows testing exemptions in specific situations where the Biobased Content of an exempt product has been demonstrated using the alternative methods specified in § 4270.7(d)(1) of this final rule. Maintaining the integrity of the BioPreferred Program and the Label is of upmost importance, and the Agency believes that accepting testing that has been done outside of the Agency's oversight could erode that integrity.

g. One respondent expressed support for allowing testing exemptions for Biobased Product Ingredients with the same formulation as other, already-approved products. The respondent noted that allowing these exemptions reduces the cost and time burdens associated with participating in the BioPreferred Program, which is important as many potential participants already have tight margins as they work to scale their operations.

Agency Response: The Agency thanks the respondent for their support.

h. Two respondents recommended specifying that Biobased Content Testing must be done by a laboratory that is ISO/IEC 17025 accredited by an International Laboratory Accreditation Cooperation (ILAC) recognized accreditation body.

Agency Response: For reader clarity, International Organization for Standardization (ISO) is an independent, non-governmental, international standard development organization composed of representatives from the national standards organizations of member countries. International Electrotechnical Commission (IEC) is an organization that prepares and publishes international standards for all electrical, electronic, and related technologies.

The Agency agrees that ISO accreditation is important to maintain the integrity of the certification process. While the final rule does not specify that testing facilities must be ISO/IEC 17025 accredited, the Agency does require laboratories that are approved to perform testing for the BioPreferred Program to maintain ISO/IEC 17025 accreditation. The Agency believes it is not necessary to specify in the final rule that laboratories must be ISO/IEC 17025 accredited since the Agency verifies accreditation before laboratories are approved to perform testing for the BioPreferred Program.

i. One respondent recommended specifying that laboratories that are approved to perform testing for the BioPreferred Program be carbon-14 tracer-free facilities.

Agency Response: The Agency agrees that it is important for laboratories that are approved to perform testing for the BioPreferred Program be carbon-14 tracer-free facilities to minimize the potential for contamination of certification samples. Laboratories that are approved to perform testing for the BioPreferred Program sign an agreement with the Agency; the Agency believes the tracer-free stipulation would be better suited to be included in the laboratory agreement rather than in this final rule.

F. Initial Approval Process/Oversight and Monitoring

a. One respondent recommended reducing the time period between recertification requirements (referred to by the respondent as audits) from every 5 years to every 2 to 3 years. The respondent emphasized that these requirements must include retesting using ASTM D6866 rather than allowing a self-declaration attesting that the formulation has not been altered. The respondent asserted that, given the frequency of supply chain and formulation changes required in the Biobased Products industry, a 5-year sampling period does not guarantee that products displaying the USDA Certified Biobased Product Label will contain the Biobased Content their companies receive certification for. The respondent also recommended establishing a blind auditing procedure to randomly select products for testing in between recertification periods. The respondent

stated that coupling blind audits with more frequent recertification requirements is the best way to ensure accurate, fair validation.

Agency Response: The Agency appreciates these comments. The Agency notes that under the revised requirements, participants will be required to participate in an annual informational audit, during which they will self-verify that their company and product information remains up to date, as well as have their products recertified by undergoing ASTM D6866 testing every 5 years. Under the legacy rules, informational audits and retesting audits both took place every 6 years. The Agency believes that establishing an annual information audit during which participants must confirm or update their company and product information will be frequent enough to remind participants to notify the Agency of supply chain changes that may affect their product formulations. While the Agency agrees that more frequent retesting requirements, including the addition of a blind auditing procedure, would better ensure that the Biobased Content of certified products remain valid, the Agency must consider the burden associated with maintaining certification on program participants. The Agency believes that combining annual informational audits with 5-year recertification requirements balances the need to obtain updated information from participants while minimizing the burdens associated with retesting. However, the final rule does allow the Agency to request that a product be retested outside of the 5-year certification period if concerns about the validity of the product's Biobased Content are raised.

b. One respondent recommended reducing the window of time allowed to conform to the updated requirements for participants with products that are qualified but not certified or products that have been certified for more than 5 years. The respondent asserted that a 3-year window to conform to the final rule is too much time and recommended reducing this to 6 months to a year maximum and any product that does not conform within that timeframe should be removed from the BioPreferred Program.

Agency Response: The Agency appreciates these comments. The Agency agrees that allowing a 3-year window to conform to the final rule is a generous amount of time. However, given the large number of products that will be required to undergo Biobased Content Testing to conform to the updated requirements, the Agency believes that a grace period of this length is needed to minimize the burden that may be placed on program resources in undertaking these activities. The Agency notes that all participants will be required to participate in annual informational audits during the grace period and may be removed from the BioPreferred Program's website if they fail to participate in such audits.

c. One respondent noted that the success for this type of certification is dependent on its universality and flexibility.

Agency Response: The Agency thanks the respondent for their comment.

G. Miscellaneous/General

a. Five respondents expressed support for the Agency's efforts to streamline the BioPreferred Program's rules.

Agency Response: The Agency thanks the respondents for their support.

b. One respondent expressed support for streamlining the BioPreferred Program's rules but expressed concern that this final rule does not do enough to streamline the program for participants. The respondent stated that streamlining does not improve important issues within the BioPreferred Program, such as improving the procurement initiative. To further assist in the implementation and enforcement of Biobased Product purchasing and reporting requirements, the respondent requested that procurement officers be identified for the BioPreferred Program.

Agency Response: The Agency appreciates the comments. The Agency believes the efforts to streamline the BioPreferred Program will have positive impacts for participants and potential participants by establishing a single, efficient process through which products are determined to be qualified for a federal procurement preference and eligible to use the Label. The changes to the category designation process will also streamline the program for participants by making it quicker and easier to designate new categories, allowing more products to qualify for the federal procurement preference. The Agency notes that the BioPreferred Program does not itself procure products, and therefore, procurement officers are not needed within the BioPreferred Program. The Agency will continue its efforts to educate federal agencies (including procurement officers) and their contractors on the requirements for purchasing Qualified Biobased Products and reporting such purchases.

c. One respondent expressed general support for the BioPreferred Program. The respondent noted that the BioPreferred Program presents a significant opportunity to promote sustainability, innovation, and economic growth. The respondent also noted that the BioPreferred Program parallels the success of the National Organic Program, and by providing a clear framework for the certification and labeling of Biobased Products, the final rule will enhance consumer awareness of and confidence in Biobased Products in a similar manner to what the National Organic Program has done for organic products. The respondent further noted that the BioPreferred Program has the potential to create new avenues for job growth and economic development, particularly in rural communities. Additionally, the respondent noted that by incentivizing investment in Biobased Product research, production, and manufacturing, the BioPreferred Program can help bolster rural economies.

Agency Response: The Agency thanks the respondent for their support.

d. Three respondents recommended establishing North American Industry Classification System (NAICS) codes for Biobased Products with this final rule.

Agency Response: While establishing NAICS codes are outside the scope of the request for comment on the proposed rule, the Agency strongly agrees that it is necessary to establish NAICS codes for Biobased Products and will share these comments with the Department of Commerce. The Agency will continue its efforts to encourage the Department of Commerce to establish NAICS codes for Biobased Products and will continue to offer support as needed to advance these efforts.

e. One respondent recommended making updates to the BioPreferred Program website to make it more consumer friendly.

Agency Response: The Agency appreciates this comment. While this is outside the scope for the proposed rule request for comment, the Agency agrees that the BioPreferred Program's website is in need of updates to make information easier to find and understand. The Agency is currently working to refresh the BioPreferred Program's website to make these changes.

f. One respondent recommended that the BioPreferred Program be incorporated into the Coordinated Framework established by section 8 of E.O. 14081.

Agency Response: This is outside the scope of the proposed rule request for comment.

g. One respondent requested the proposed rule plain language summary.

Agency Response: The Agency provided the appropriate information for locating the plain language summary at *regulations.gov*.

h. One respondent inquired whether there would be an interagency review of the proposed rule.

Agency Response: The proposed rule did not require official interagency review because the rulemaking was designated as non-significant.

IV. Summary of Changes

The final rule will not include revisions based on the public comments received in response to the proposed rule. The final rule will include two technical amendments summarized below.

a. In the final rule, § 4270.7(a) is being revised to include the last sentence from 7 CFR 3201.7(a). While reviewing the public comments, the Agency determined that this stipulation was unintentionally excluded from the proposed rule language. This requirement is being added to the final rule language to clarify that manufacturers and vendors of Qualified Biobased Products may be asked to prove their Biobased Content claims regardless of whether they participate in the BioPreferred Program.

b. In addition, § 4270.7(c)(2)(i) is being revised to correct the notation used in the Complex Assemblies equation. The proposed rule used ''of the nth component'' and the final rule is being revised to correct this to ''of the ith component.''

V. Executive Orders/Acts

A. Executive Order 12866—Classification

This final rule has been determined to be not significant for purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget (OMB).

B. Executive Order 12372—Intergovernmental Consultation

This program is not subject to the requirements of Executive Order 12372, Intergovernmental Review of Federal Programs, as implemented under 2 CFR part 415.

C. Paperwork Reduction Act

The information collection and recordkeeping requirements contained in this final rule will not be effective until approved by OMB, subject to the submission of a paperwork package submitted to OMB pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35).

D. National Environmental Policy Act

In accordance with the National Environmental Policy Act of 1969, Public Law 91–190, this final rule has been reviewed in accordance with 7 CFR part 1970. The Agency has determined that (i) this action meets the criteria established in 7 CFR 1970.53(f); (ii) no extraordinary circumstances exist; and (iii) the action is not ''connected'' to other actions with potentially significant impacts, is not considered a ''cumulative action,'' and is not precluded by 40 CFR 1506.1. Therefore, the Agency has determined that the action does not have a significant effect on the human environment, and therefore neither an Environmental Assessment nor an Environmental Impact Statement is required.

E. Regulatory Flexibility Act

The final rule has been reviewed with regard to the requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612). The undersigned has determined and certified by signature on this document that this final rule will not have a significant economic impact on a substantial number of small entities since this rulemaking action does not involve a new or expanded program nor does it require any more action on the part of a small business than required of a large entity.

F. Administrative Pay-As-You-Go-Act of 2023

The Administrative Pay-As-You-Go-Act of 2023 (Act) (See Fiscal Responsibility Act of 2023, Pub. L. 118–5, 137 Stat 31, div. B, title III) requires the U.S. Government Accountability Office (GAO) to assess agency compliance with the Act, which establishes requirements for administrative actions that affect direct spending, in GAO's major rule reports. The Act does not apply to this final rule because it does not increase direct spending.

G. Executive Order 12988—Civil Justice Reform

This final rule has been reviewed under Executive Order 12988. In accordance with this final rule: (1) unless otherwise specifically provided, all State and local laws that conflict with this final rule will be preempted; (2) no retroactive effect will be given to this final rule except as specifically prescribed in the final rule; and (3) administrative proceedings of the National Appeals Division of the Department of Agriculture (7 CFR part 11) must be exhausted before bringing suit in court that challenges action taken under this final rule.

H. Unfunded Mandates Reform Act (UMRA)

Title II of the UMRA, Public Law 104–4, establishes requirements for Federal Agencies to assess the effects of their regulatory actions on State, local, and Tribal Governments and on the private sector. Under section 202 of the UMRA, Federal Agencies generally must prepare a written statement, including cost-benefit analysis, for proposed and Final Rules with ''Federal mandates'' that may result in expenditures to State, local, or Tribal Governments, in the aggregate, or to the private sector, of $100 million or more in any year. When such a statement is needed for a final rule, section 205 of the UMRA generally requires a Federal Agency to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the final rule.

This final rule contains no Federal mandates (under the regulatory provisions of title II of the UMRA) for State, local, and Tribal Governments or for the private sector. Therefore, this final rule is not subject to the requirements of sections 202 and 205 of the UMRA.

I. Executive Order 13132—Federalism

The policies contained in this final rule do not have any substantial direct effect on States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Nor does this final rule impose substantial direct compliance costs on State and local governments. Therefore, consultation with the States is not required.

J. Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

This final rule has been reviewed in accordance with the requirements of Executive Order 13175, Consultation and Coordination with Indian Tribal Governments. Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have Tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the

Federal Government and Indian tribes. Consultation is also required for any regulation that preempts Tribal law or that imposes substantial direct compliance costs on Indian Tribal governments and that is not required by statute.

The Agency has determined that this final rule does not, to our knowledge, have Tribal implications that require formal Tribal consultation under Executive Order 13175. If a Tribe requests consultation, the Agency will work with the Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions and modifications identified herein are not expressly mandated by Congress.

K. E-Government Act Compliance

RD is committed to the E-Government Act, which requires Government agencies in general to provide the public the option of submitting information or transacting business electronically to the maximum extent possible and to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

L. Civil Rights Impact Analysis

RD has reviewed this final rule in accordance with USDA Regulation 4300–4, Civil Rights Impact Analysis, to identify any major civil rights impacts the final rule might have on program participants on the basis of age, race, color, national origin, sex, disability, marital or familial status. Based on the review and analysis of the final rule and all available data, issuance of this final rule is not likely to negatively impact low and moderate-income populations, minority populations, women, Indian tribes or persons with disability, by virtue of their age, race, color, national origin, sex, disability, or marital or familial status. No major civil rights impact is likely to result from this final rule.

M. USDA Non-Discrimination Statement

In accordance with Federal civil rights laws and USDA civil rights regulations and policies, the USDA, its Mission Areas, agencies, staff offices, employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Program information may be made available in languages other than English. Persons with disabilities who require alternative means of communication to obtain program information (*e.g.,* Braille, large print, audiotape, American Sign Language) should contact the responsible Mission Area, agency, or staff office; or the 711 Relay Service.

To file a program discrimination complaint, a complainant should complete a Form AD–3027, USDA Program Discrimination Complaint Form, which can be obtained online at *usda.gov/sites/default/files/documents/ad-3027.pdf* from any USDA office, by calling (866) 632–9992, or by writing a letter addressed to USDA. The letter must contain the complainant's name, address, telephone number, and a written description of the alleged discriminatory action in sufficient detail to inform the Assistant Secretary for Civil Rights (ASCR) about the nature and date of an alleged civil rights violation. The completed AD–3027 form or letter must be submitted to USDA by:

a. *Mail:* U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410; or

b. *Fax:* (833) 256–1665 or (202) 690–7442; or

c. *Email: program.intake@usda.gov.*

N. Severability

It is USDA's intention that the provisions of this final rule shall operate independently of each other. In the event that this final rule or any portion of this final rule is ultimately declared invalid or stayed as to a particular provision, it is USDA's intent that the final rule nonetheless be severable and remain valid with respect to those provisions not affected by a declaration of invalidity or stayed. USDA concludes it would separately adopt all of the provisions contained in this final rule.

List of Subjects in 7 CFR Parts 3201, 3202, and 4270

Biobased products, Business and industry, and Government procurement.

For the reasons stated in the preamble, USDA amends chapters XXXII and XLII of title 7 of the Code of Federal Regulations as follows:

CHAPTER XXXII—OFFICE OF PROCUREMENT AND PROPERTY MANAGEMENT

PART 3201 [REMOVED AND RESERVED]

■ 1. Under the authority of 7 U.S.C. 8102, remove and reserve part 3201.

PART 3202 [REMOVED AND RESERVED]

■ 2. Under the authority of 7 U.S.C. 8102, remove and reserve part 3202.

CHAPTER XLII—RURAL BUSINESS-COOPERATIVE SERVICE

■ 3. Add part 4270, consisting of §§ 4270.1 through 4270.99, to read as follows:

PART 4270—USDA BIOBASED MARKETS PROGRAM: FEDERAL PROCUREMENT AND VOLUNTARY LABELING

Sec.

Authority: 7 U.S.C. 8102.

§ 4270.1 Purpose and scope.

(a) This part sets forth the procedures and guidelines for the implementation of the USDA Biobased Markets Program, called the BioPreferred® Program, established by section 9002 of the Farm Security and Rural Investment Act of 2002 (FSRIA) as amended by the Food, Conservation, and Energy Act of 2008, and further amended by the Agricultural Act of 2014, and the Agriculture Improvement Act of 2018 (Pub. L. 107–171, 116 Stat. 476, 7 U.S.C. 8102).

(b) The guidelines in this part establish:

(1) A process for designating categories of products that are, or can be, produced with biobased Intermediate Ingredients or feedstocks and whose procurement by procuring agencies and other relevant Stakeholders will carry out the objectives of section 9002 of FSRIA;

(2) The criteria for eligibility and the process through which Biobased Products can participate in the BioPreferred Program, be subject to preferred Federal procurement, and be eligible to display the USDA Certified Biobased Product Label;

(3) Specifications for the correct and incorrect uses of the USDA Certified Biobased Product Label and Certification Icon, which apply to Participating Organizations and Other Entities; and

(4) Actions that constitute noncompliance with this part.

§ 4270.2 Definitions

Agricultural materials. Plant, animal, and marine matter, raw materials or residues used in the manufacturing of a commercial or industrial product excluding food, feed, motor vehicle fuel, heating oil, and electricity.

Applicable minimum biobased content. The required Biobased Content level set by USDA that a product must meet or exceed to qualify for the Federal procurement preference and use of the USDA Certified Biobased Product Label.

ASTM International (ASTM). A nonprofit organization, formerly known as American Society for Testing and Materials, that provides an international forum for the development and publication of voluntary consensus standards for materials, products, systems, and services.

Biobased content. The amount of recent, biologically derived organic carbon in the material or product expressed as a percent of weight (mass) of the total organic carbon in the material or product.

Biobased content testing. The testing that is performed to verify a product's Biobased Content. For products participating in the BioPreferred Program, the Biobased Content is to be determined using ASTM Method D6866, Standard Test Methods for Determining the Biobased Content of Solid, Liquid, and Gaseous Samples Using Radiocarbon Analysis.

Biobased product(s). (1) A product determined by USDA to be a commercial or industrial product (other than food or feed) that is:

(i) Composed, in whole or in significant part, of Biological Products, including renewable domestic Agricultural Materials, Renewable Chemicals, and forestry materials; or

(ii) An Intermediate Ingredient or Feedstock.

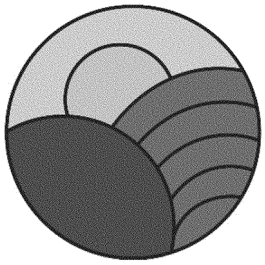
(2) The term Biobased Product includes, with respect to forestry materials, Forest Products that meet Biobased Content requirements, notwithstanding the market share the product holds, the age of the product, or whether the market for the product is new or emerging. For the purposes of the BioPreferred Program, the term Biobased Product does not include motor vehicle fuels, heating oils, or electricity.

Biodegradability. A quantitative measure of the extent to which a material is capable of being decomposed by biological agents, especially bacteria.

Biological products. Products derived from living materials.

Certification icon. The distinctive image, as shown in figure 1 (note that actual size will vary depending on application), that depicts the symbols of the sun, the soil, and the aquatic environments to be used with USDA's permission to identify Certified Biobased Products. The icon will be used in materials including, but not limited to, advertisements, catalogs, procurement databases, websites, and promotional and educational materials. The colors used in the Certification Icon can be found in the USDA BioPreferred Program Brand and Marketing Guidelines available on the BioPreferred Program website (*biopreferred.gov*).

Figure 1 to Definition of Certified Icon—Certification Icon



Certified application. An application for a Biobased Product to participate in the BioPreferred Program that has completed all steps of the certification process, including an initial Prequalification review and Biobased Content Testing as required, and has received a notice of certification.

Certified biobased product. A Biobased Product that is eligible for preferred Federal procurement because it meets the definition and Applicable Minimum Biobased Content criteria for one or more Designated Product Categories as specified in the Register of Designated Categories, and for which the Participating Organization has received approval from USDA to utilize the USDA Certified Biobased Product Label.

Complex assembly. A system of distinct materials and components assembled to create a finished product with specific functional intent where some or all of the system components contain some amount of biobased material or feedstock.

Days. As used in this part means calendar Days.

Defined product category. Any product category that has been established for a specified grouping of Biobased Products with similar characteristics and intended uses. A Defined Product Category includes a description of the product characteristics that fall within the category. The other product category is not a Defined Product Category.

Designated product category. A grouping of Biobased Products, including finished products, Intermediate Ingredients or Feedstocks, and Complex Assemblies, identified in the Register of Designated Categories on the BioPreferred Program website (*biopreferred.gov*). Certified or Qualified Biobased Products that meet the criteria for at least one designated category are eligible for the procurement preference established under section 9002 of FSRIA.

Designated representative. An entity authorized by a Participating Organization to act on their behalf to obtain certification or to affix the USDA Certified Biobased Product Label to the Participating Organization's Certified Biobased Product or its packaging or perform other marketing functions.

Federal agency. Any executive agency or independent establishment in the legislative or judicial branch of the Government (except the Senate, the House of Representatives, the Architect of the Capitol, and any activities under the Architect's direction).

Forest product. A product made from materials derived from the practice of forestry or the management of growing timber. The term Forest Product includes:

(1) Pulp, paper, paperboard, pellets, lumber, and other wood products; and

(2) Any recycled products derived from forest materials.

Formulated product. A product that is prepared or mixed with other Ingredients, according to a specified formula and includes more than one Ingredient.

FSRIA. The Farm Security and Rural Investment Act of 2002, Public Law 107–171, 116 Stat. 134 (7 U.S.C. 8102).

Ingredient. A component, or a part of a compound or mixture, that may be active or inactive.

Innovative criteria. Benchmark for demonstrating new and emerging approaches in the growing, harvesting, sourcing, procuring, processing, manufacturing, or application of the Biobased Product. Biobased Products must meet one of the Innovative Criteria

as defined by USDA to be eligible for preferred Federal procurement and to display the USDA Certified Biobased Product Label.

Intermediate ingredient or feedstock. A material or compound made in whole or in significant part from Biological Products, including renewable Agricultural Materials (including plant, animal, and marine materials) or forestry materials that have undergone value added processing (including thermal, chemical, biological, or a significant amount of mechanical processing), excluding harvesting operations, offered for sale by a Participating Organization and that is subsequently used to make a more complex compound or product.

ISO. The International Organization for Standardization, a network of national standards institutes working in partnership with international organizations, governments, industries, business, and consumer representatives.

ISO 9001 conformant. An entity that meets all the requirements of the ISO 9001 standard, but that is not required to be ISO 9001 certified. ISO 9001 refers to the ISO's standards and guidelines relating to quality management systems. Quality management is defined as what the manufacturer does to ensure that its products or services satisfy the customer's quality requirements and comply with any regulations applicable to those products or services.

Other entity. Any person, group, public or private organization, or business other than USDA or Participating Organizations that may wish to use the USDA Certified Biobased Product Label or Certification Icon in informational or promotional material related to a Certified Biobased Product.

Parent product. The Certified Biobased Product in a test exempt relationship that was originally tested for certification. A test exempt product references the Certified Application of its Parent Product.

Participating organization. An entity that has completed the steps required to have a Certified and/or Qualified Biobased Product under the BioPreferred Program. Participants can include entities that perform the necessary chemical and mechanical processes to make a Biobased Product, and entities that offer for sale Biobased Products that they do not manufacture but that are marketed and sold under their own brand.

Prequalification. The step during the certification process at which an application is conditionally approved pending the product undergoing Biobased Content Testing.

Procuring agency. Any Federal Agency that is using Federal funds for procurement or any business contracting with any Federal Agency with respect to work performed under the contract.

Qualified biobased product(s). A product that is eligible for preferred Federal procurement because it meets the definition and Applicable Minimum Biobased Content criteria for one or more Designated Product Categories as specified in the Register of Designated Categories.

Register of Designated Categories. The list of product categories that are eligible for the procurement preference established under section 9002 of FSRIA, including the category name, description, required minimum Biobased Content, and date of finalization. The Register of Designated Categories can be found on the BioPreferred Program website at *biopreferred.gov*.

Renewable chemical. A monomer, polymer, plastic, Formulated Product, or chemical substance produced from renewable biomass.

Secretary. The Secretary of the United States Department of Agriculture.

Stakeholder. Individuals or officers of State or local government organizations, private non-profit institutions, or organizations, and private businesses or consumers.

USDA. The United States Department of Agriculture.

USDA Certified Biobased Product label. A combination of the Certification Icon (as defined in this part); one of three statements identifying whether the USDA certification applies to the product, the package, or both the product and package; and the letters ''FP'' to indicate that the product is within a Designated Product Category and eligible for preferred Federal procurement. The distinctive image, as shown in figures 2, 3, and 4 (note that actual size will vary depending on application), identifies products as USDA Certified Biobased Products. The colors used in the USDA Certified Biobased Product Label can be found in the USDA BioPreferred Program Brand and Marketing Guidelines available on the BioPreferred Program website (*biopreferred.gov*). The USDA Certified Biobased Product Label is owned and its use is managed by USDA (standard trademark law definition applies).

Figure 2 to Definition of USDA Certified Biobased Product Label—USDA Certified Biobased Product Label

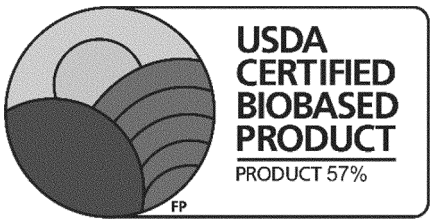


Figure 3 to Definition of USDA Certified Biobased Product Label—USDA Certified Biobased Package Label

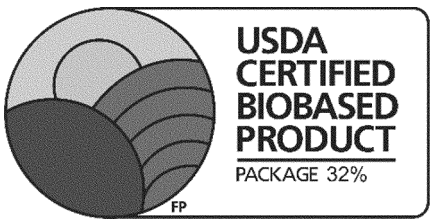

Figure 4 to Definition of USDA Certified Biobased Product Label—USDA Certified Biobased Product & Package Label

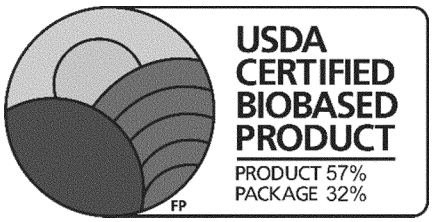

§ 4270.3 Applicability.

(a) *Applicability to Federal procurements*—(1) *Applicability to procurement actions.* The guidelines in this part apply to all procurement actions by Procuring Agencies involving product categories designated by USDA in this part, where the Procuring Agency makes purchases of $10,000 or more of one of these products during a fiscal year, or where the quantity of such products or of functionally equivalent products purchased during the preceding fiscal year was $10,000 or more. The $10,000 threshold applies to Federal Agencies as a whole rather than to agency subgroups such as regional offices or subagencies of a larger Federal department or agency.

(2) *Exception for procurements subject to Environmental Protection Agency (EPA) regulations under the Solid Waste Disposal Act.* For any procurement by any Procuring Agency that is subject to regulations of the Administrator of the EPA under section 6002 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976 (40 CFR part

247), these guidelines do not apply to the extent that the requirements of this part are inconsistent with such regulations.

(3) *Procuring products composed of the highest percentage of Biobased Content.* Section 9002(a)(2) of FSRIA (7 U.S.C. 8102(a)(2)) requires Procuring Agencies to procure Qualified Biobased Products composed of the highest percentage of Biobased Content practicable. Procuring agencies may decide not to procure such Qualified Biobased Products if they are not reasonably priced or readily available or do not meet specified or reasonable performance standards.

(4) *Incidental purchases.* This part does not apply to purchases of Qualified Biobased Products that are unrelated to or incidental to Federal funding (*i.e.,* purchases that are not the direct result of a contract or agreement with persons supplying products to a Procuring Agency or providing support services that include the supply or use of products).

(5) *Exemptions.* The following applications are exempt from the preferred procurement requirements of this part:

(i) Military equipment: Products or systems designed or procured for combat or combat-related missions.

(ii) Spacecraft systems and launch support equipment.

(b) *Applicability to Participating Organizations and Other Entities*—(1) *Participating Organizations.* The requirements in this part apply to all prospective Participating Organizations who wish to participate in the BioPreferred Program. Those wishing to participate in the BioPreferred Program are required to obtain and maintain product certification. USDA will allow only one owner or Designated Representative of a branded product to participate. Participating Organizations may not obtain product certification for a product using a brand name owned by a separate organization unless they are acting on behalf of the brand owner, with their approval, as a Designated Representative.

(2) *Other Entities.* The requirements in this part apply to Other Entities who wish to use the USDA Certified Biobased Product Label or Certification Icon in promoting the sales or the public awareness of Certified Biobased Products.

§ 4270.4 Criteria for eligibility.

A product must meet each of the criteria specified in paragraphs (a) through (c) of this section to be eligible to participate in the BioPreferred Program.

(a) *Biobased Product.* The product for which certification is sought must be a Biobased Product as defined in § 4270.2. Products must undergo Biobased Content Testing as described in § 4270.7 of this part to confirm the products meet or exceed the applicable minimums.

(1) *Products that are qualified for preferred Federal procurement but not certified as of the date of publication of this rule.* If the product is qualified for preferred Federal procurement through the BioPreferred Program as of January 8, 2025, the product will remain eligible under the legacy rules, which can be found on the BioPreferred Program website (*biopreferred.gov*), until the product is reformulated, discontinued, or until December 9, 2027, whichever comes first. These products must follow the procedures described in § 4270.9 before December 9, 2027 to remain eligible.

(2) *Exclusions.* Motor vehicle fuels, heating oil, and electricity are excluded by statute from this Program. For the purposes of this Program, food, animal feed, and products intended to be ingested or inhaled such as pharmaceuticals or nutraceuticals are also excluded.

(b) *Minimum Biobased Content.* The Biobased Content of the product must be equal to or greater than the Applicable Minimum Biobased Content, as described in paragraphs (b)(1) and (2) of this section.

(1) *Products that fall under one or more Defined Product Categories*—(i) *Product is within a single product category.* If the Biobased Product is within a single Defined Product Category that, at the time the application for certification is submitted, has been designated by USDA for preferred Federal procurement, the Applicable Minimum Biobased Content requirement for the product is the minimum Biobased Content specified for the Defined Product Category as found in the Register of Designated Categories on the BioPreferred Program website at *biopreferred.gov.*

(ii) *Product is within multiple product categories.* If the Biobased Product is marketed within more than one Defined Product Category identified for preferred Federal procurement at the time the application for certification is submitted and uses the same packaging for each use, the product's Biobased Content must meet or exceed the specified minimum Biobased Content for each of the applicable product categories, as found in the Register of Designated Categories on the BioPreferred Program website at *biopreferred.gov,* to become certified in each category. If the product's Biobased Content does not meet the specified minimum Biobased Content for the category that most closely matches the product's primary intended use, the product is not eligible to participate.

(2) *Products that do not meet the definition of at least one Defined Product Category.* If the Biobased Product does not meet the definition of a Defined Product Category that has been designated by USDA at the time the application for certification is submitted, the Applicable Minimum Biobased Content is 30 percent. USDA will evaluate such products as described in § 4270.6 to determine the viability of designating a new product category. If a new category is subsequently designated for preferred Federal procurement, the Applicable Minimum Biobased Content will become, as of the effective date indicated in the Register of Designated Categories, the minimum Biobased Content specified for the newly Defined Product Category.

(c) *Innovative Criteria.* In determining eligibility for certification under the BioPreferred Program, USDA will consider as eligible only those products that use innovative approaches in the growing, harvesting, sourcing, procuring, processing, manufacturing, or application of the Biobased Product. USDA will consider products that meet one or more of the criteria in paragraphs (c)(1) through (4) of this section to be eligible for certification. USDA will also consider other documentation of innovative approaches in the growing, harvesting, sourcing, procuring, processing, manufacturing, or application of Biobased Products on a case-by-case basis. USDA may deny or revoke certification for any products whose manufacturers are unable to provide USDA with the documentation necessary to verify claims that innovative approaches are used.

(1) *Product applications.* (i) The Biobased Product or material is used or applied in applications that differ from historical applications; or

(ii) The Biobased Product or material is grown, harvested, manufactured, processed, sourced, or applied in other innovative ways; or

(iii) The Biobased Content of the product or material makes its composition different from products or material used for the same historical uses or applications.

(2) *Manufacturing and processing.* (i) The Biobased Product or material is manufactured or processed using renewable, biomass energy or using technology that is demonstrated to increase energy efficiency or reduce

reliance on fossil-fuel based energy sources; or

(ii) The Biobased Product or material is manufactured or processed with technologies that reduce waste and ensure high feedstock material recovery and use.

(3) *Environmental Product Declaration.* The product has a current Environmental Product Declaration as defined by International Standard ISO 14025, Environmental Labels and Declarations—Type III Environmental Declarations—Principles and Procedures.

(4) *Raw material sourcing.* (i) The raw material used in the product is sourced from a Legal Source, a Responsible Source, or a Certified Source as designated by ASTM D7612 (Standard Practice for Categorizing Wood and Wood-Based Products According to Their Fiber Sources); or

(ii) The raw material used in the product is 100% resourced or recycled (such as material obtained from building deconstruction or agricultural wastes); or

(iii) The raw material used in the product is acquired as a result of activities related to a natural disaster, debris clearing, right-of-way maintenance, tree health improvement, or public safety; or

(iv) The raw material used in the product is grown, harvested, manufactured, processed, sourced, or applied in other sustainable and ethically sourced ways as determined by USDA. Examples include but are not limited to rainforest and habitat conservation, wildlife protection, ethical workplace practices, and adherence to environmental management systems, such as ISO 14001.

§ 4270.5 Procurement programs.

(a) *Integration into the Federal procurement framework.* The Office of Federal Procurement Policy, in cooperation with USDA, has the responsibility to coordinate this policy's implementation in the Federal procurement regulations. These guidelines are not intended to address full implementation of these requirements into the Federal procurement framework. This will be accomplished through revisions to the Federal Acquisition Regulation.

(b) *Federal Agency preferred procurement programs.* (1) Each Federal Agency will maintain and implement a procurement program that will assure that Qualified Biobased Products are purchased to the maximum extent practicable and that is consistent with applicable provisions of Federal procurement laws. Each procurement program will contain:

(i) A preference program for purchasing Qualified Biobased Products;

(ii) A training program to educate the Federal Agency and its contractors on the requirements for purchasing Qualified Biobased Products;

(iii) Provisions for the annual review and monitoring of the effectiveness of the procurement program;

(iv) Provisions for reporting quantities and types of Biobased Products purchased by the Federal Agency and its contractors through the BioPreferred Program Portal in the System for Award Management (*https://sam.gov*) as required by 48 CFR 52.223–2; and

(v) Provisions for reviewing and eliminating specifications that prohibit the purchasing of Qualified Biobased Products.

(2) In developing their preference program, Federal agencies will adopt one of the following options, or a substantially equivalent alternative, as part of the procurement program:

(i) A policy of awarding contracts on a case-by-case basis to the vendor offering a Qualified Biobased Product composed of the highest percentage of Biobased Content practicable except when such products:

(A) Are not available within a reasonable timeframe;

(B) Fail to meet performance standards for their intended use, or the reasonable performance standards of the Federal Agency; or

(C) Are not available at a reasonable price.

(ii) A policy of setting minimum Biobased Content specifications in such a way as to assure that the required Biobased Content of Qualified Biobased Products is consistent with section 9002 of FSRIA and the requirements of the guidelines in this part.

(iii) A policy of documenting and reporting cases where it is not possible to award contracts and set specifications in such a way that is consistent with section 9002 of FSRIA and the requirements of this part.

(3) In implementing the preference program, Federal agencies will treat as eligible for the preference Biobased Products from designated countries, as that term is defined in 48 CFR 25.003 (Federal Acquisition Regulation), provided that those products otherwise meet all requirements for participation in the preference program.

(4) Each Federal Agency will continue to establish an annual targeted biobased-only procurement requirement under which the Procuring Agency will issue a certain number of biobased-only contracts when the Procuring Agency is purchasing products, or purchasing services that include the use of products, that are included in a Biobased Product category designated by the Secretary.

(c) *Procurement specifications.* Federal agencies that have the responsibility for drafting or reviewing specifications for products procured by Federal agencies will ensure that their specifications require the use of Qualified Biobased Products, consistent with the guidelines in this part. These specifications must be put in place no later than six months after a designated category of products is finalized and added to the Register of Designated Categories. USDA will identify the allowable time frame for specifications to be put in place in the Register of Designated Categories found on the BioPreferred Program website at *biopreferred.gov*. The Biobased Content of Qualified Biobased Products within a Designated Product Category may vary considerably from product to product based on the mix of Ingredients used in its manufacture. In procuring Qualified Biobased Products, the percentage of Biobased Content should be maximized, consistent with achieving the desired performance for the product.

§ 4270.6 Category designation.

(a) *Procedure.* Designated Product Categories are found in the Register of Designated Categories on the BioPreferred Program website (*biopreferred.gov*).

(1) *General.* In designating product categories, USDA will designate categories composed of generic groupings of specific products, Intermediate Ingredients or Feedstocks, or Complex Assemblies and will identify the minimum Biobased Content for each listed category or subcategory. As product categories are designated for procurement preference, they will be added to the Register of Designated Categories on the BioPreferred Program website at *biopreferred.gov.*

(i) *Adding new product categories to the Register of Designated Categories.* If a product does not fall within a Defined Product Category that has been designated by USDA at the time the application for certification is submitted, the Applicable Minimum Biobased Content is 30 percent, and it will be listed in the other product category. USDA will evaluate the viability of designating new product categories to categorize products in the other product category more appropriately, following the procedure described in paragraphs (a)(1)(i)(A) through (D) of this section.

(A) New Defined Product Categories that are identified during the category evaluation process will be added to the Register of Designated Categories on the BioPreferred Program website (*biopreferred.gov*). Using the data gathered during the certification process, USDA will establish a provisional category name, definition, and minimum Biobased Content for each new product category based on the product(s) that fall within the new category.

(B) The provisional minimum will be in place for a period of six months following the addition of the new Defined Product Category to the Register of Designated Categories. During that time, any product that falls within the category based on the category definition and has a Biobased Content that is either at least 30 percent or within 30 percentage points of the provisional minimum, whichever is higher, will be considered for inclusion.

(C) After a period of six months following the addition of the new product category to the Register of Designated Categories, USDA will re-evaluate the provisional category name, description, and minimum Biobased Content based on the data gathered during the year. At that time, USDA will make final the product category name, description, and minimum Biobased Content, and the category will no longer be considered provisional.

(D) Procuring agencies, in accordance with this part, are encouraged to give a procurement preference for Qualified Biobased Products that falls within provisionally designated categories and are required to give a procurement preference for Qualified Biobased Products that falls within designated categories no later than six months after the finalized product category is added to the Register of Designated Categories. By that date, Federal agencies responsible for products to be procured will ensure that the relevant specifications require the use of Biobased Products that fall within the designated categories.

(ii) *Revising Defined Product Categories on the Register of Designated Categories.* USDA will periodically evaluate the need to update the product categories included in the Register of Designated Categories by reviewing items including, but not limited to, the category names, definitions, minimum Biobased Contents, subcategories, and the need for the category or subcategory. If the data support making updates, USDA will amend the category and publish the updated category to the Register of Designated Categories. No later than six months after the amended category is published to the Register of Designated Categories, procuring agencies, in accordance with this part, will give a procurement preference for Qualified Biobased Products that fall within the amended designated category. By that date, Federal agencies responsible for products to be procured will ensure that the relevant specifications require the use of Biobased Products that fall within the designated categories.

(2) *Public comments.* Interested parties, including manufacturers, vendors, groups of manufacturers and/or vendors, and trade associations may propose an alternative Applicable Minimum Biobased Content for a new, provisional, defined, or Designated Product Category by, in consultation with USDA, developing and conducting an analysis to support the proposed alternative Applicable Minimum Biobased Content. If approved by USDA, the proposed alternative Applicable Minimum Biobased Content would become the Applicable Minimum Biobased Content for products that fall within that category to be certified.

(3) *Continued eligibility.* If the applicable required minimum Biobased Content for a product to be eligible to participate in the BioPreferred Program is revised by USDA, the product will remain certified or qualified, as applicable, only if it meets the new minimum Biobased Content level. In those cases where the Biobased Content of a certified or qualified product fails to meet the new minimum Biobased Content level, USDA will notify the Participating Organization that their certification is no longer valid. Such Participating Organizations must notify USDA of their intent to increase the Biobased Content of their product to a level at or above the new minimum Biobased Content level within 120 Days and must re-apply for certification within an additional 120 Days if they wish to continue to participate in the Program. The affected product's certification will expire if the Participating Organization does not notify USDA of the intent to reformulate within 120 Days or if the Participating Organization does not re-apply within the additional 120 Days. Participating Organizations who have re-applied for certification may continue using the existing USDA Certified Biobased Product Label until they receive notification from USDA on the results of their re-application for certification.

(b) *Considerations.* (1) In designating product categories, USDA will consider the availability of Qualified Biobased Products and the economic and technological feasibility of using such products, including price. USDA will gather information on individual Qualified Biobased Products within a category and extrapolate that information to the category level for consideration in designating product categories.

(2) In designating product categories for the BioPreferred Program, USDA will consider as eligible only those products that use innovative approaches in growing, harvesting, sourcing, procuring, processing, manufacturing, or application of the Biobased Product. USDA will consider products that meet one or more of the criteria in § 4270.4(b)(1) and (2) to be eligible for the BioPreferred Program. USDA will also consider other documentation of innovative approaches in growing, harvesting, sourcing, procuring, processing, manufacturing, or application of Biobased Products on a case-by-case basis.

§ 4270.7 Determining Biobased Content.

(a) *Certification requirements.* For any Biobased Product seeking to participate in the BioPreferred Program, prospective Participating Organizations must submit an application as specified in § 4270.9 and confirm that the product meets the Applicable Minimum Biobased Content requirements and the definition for the Defined Product Category within which the Biobased Product falls. Paragraph (c) of this section addresses how to determine Biobased Content. Upon request, manufacturers and vendors must provide USDA and Federal agencies information to verify Biobased Content claims for Qualified Biobased Products.

(b) *Minimum Biobased Content.* Unless specified otherwise in the designation of a particular product category, the minimum Biobased Content requirements in a specific category designation refer to the organic carbon portion of the product, and not the entire product.

(c) *Determining Biobased Content.* Verification of Biobased Content must be based on third party ASTM/ISO compliant test facility testing using the ASTM Standard Method D6866 (Standard Test Methods for Determining the Biobased Content of Solid, Liquid, and Gaseous Samples Using Radiocarbon Analysis). ASTM Standard Method D6866 determines Biobased Content based on the amount of biobased carbon in the product as a percent of the weight (mass) of the total organic carbon in the product.

(1) *General.* Biobased Content will be based on the amount of biobased carbon in the product as a percent of the weight

(mass) of the total organic carbon in the product.

(2) *Complex Assemblies*—(i) *Equation.* The Biobased Content of a Complex Assembly product, where the product has n components whose Biobased Content and organic carbon content can be experimentally determined, may be calculated using the following equation:

$$Biobased\ Content\ of\ Product = \frac{\sum_{i=1}^{n} M_i * BBC_i * OCC_i}{\sum_{i=1}^{n} M_i * OCC_i}$$

Where:

M_i = mass of the ith component

BCC_i = biobased carbon content of the ith component (%)

OCC_i = organic carbon content of the ith component (%)

(ii) *Proportional sampling.* The Biobased Content of an Assembly product may be determined by sub-sampling (by weight) each organic constituent in a proportion representative of its content within the assembly and combining the sub-samples into a measurable quantity so that a single ASTM D6866 analysis of the combined sub-samples is representative of the assembly.

(d) *Products and Intermediate Ingredients or Feedstocks with the same formulation.* In the case of products and Intermediate Ingredients or Feedstocks that are essentially the same formulation but marketed under more than one brand name, Biobased Content test data may be shared as specified in paragraphs (d)(1) and (2) of this section.

(1) *Test exemptions.* In situations where a new product for which certification is sought is composed of the same Ingredients and has the same Biobased Content as a product that has already been certified and tested by a company that the interested party has a direct relationship with, the interested party may apply for a test exemption by referencing the Certified Application of the certified Parent Product in lieu of having the new product undergo Biobased Content Testing using ASTM D6866.

(2) *Families.* In situations where a Participating Organization is seeking certification for two or more products that are composed of the same Ingredients and have the same Biobased Content but are marketed for different uses or under more than one brand name, the products may be grouped in a family. Biobased Content test data must only be obtained for one of the products in the family, and the test data will apply to all products within the family.

§ 4270.8 [Reserved]

§ 4270.9 Initial approval process.

(a) *Application.* Prospective Participating Organizations seeking USDA approval to use the USDA Certified Biobased Product Label and to become qualified for preferred Federal procurement for an eligible Biobased Product must submit an application for each Biobased Product or product family. USDA has developed a standardized application form that must be used. The standardized application form and instructions are available on the BioPreferred Program website (*biopreferred.gov*). The contents of an acceptable application are as specified in paragraphs (a)(1) and (2) of this section.

(1) *General content.* The applicant must provide the information as specified in paragraphs (a)(1)(i) though (viii) of this section.

(i) Contact information, including the name, mailing address, email address, and telephone number of the applicant.

(ii) The product's brand name(s) or other identifying information.

(iii) Intended uses of the product.

(iv) The biobased source(s) of the raw materials used in the product.

(v) Information to document that one or more of the Innovative Criteria specified in § 4270.4(c) has been met.

(vi) The corresponding Designated Product Category classification for preferred Federal procurement.

(vii) The estimated Biobased Content of the product.

(viii) A web link directly to the applicant's website (if available).

(2) *Commitments.* The applicant must verify in the application that the product for which use of the USDA Certified Biobased Product Label is sought is a Biobased Product as defined in § 4270.2. The applicant must also agree to statements in the application that commit the applicant to submitting to USDA the information specified in paragraphs (a)(1)(i) through (viii) of this section, some of which USDA will post to the BioPreferred Program website (*biopreferred.gov*), and to providing USDA with up-to-date information on this website.

(b) *Evaluation of applications*—(1) *Initial evaluation.* USDA will evaluate each application to determine if it contains the information specified in paragraph (a) of this section and to determine compliance with the criteria specified in § 4270.4. If USDA determines that the application is incomplete, USDA will contact the applicant via email with an explanation of the application's deficiencies. Once the deficiencies have been addressed, the applicant may respond to USDA with an explanation of how the application's deficiencies were addressed for re-evaluation by USDA, and USDA will update the application as needed. If the applicant does not provide a response within 90 Days, USDA will make the application inactive.

(2) *Prequalification.* (i) USDA will provide a written response to each applicant as quickly as practicable, but no later than 90 Days after the receipt of a complete application, depending on the responsiveness of the applicant. The written response will inform the applicant of whether the application has been conditionally approved, or prequalified, to move forward to Biobased Content Testing, or has been disapproved. After notification that the application has been conditionally approved, if any of the information specified in paragraphs (a)(1)(i) through (viii) of this section has changed, the applicant must provide updates to USDA (for posting by USDA on the BioPreferred Program website).

(ii) For those applications that are conditionally approved to move forward, Biobased Content Testing must be completed as described in § 4270.7. Test results obtained prior to the application being conditionally accepted or obtained in a manner that does not comply with this part cannot be accepted.

(iii) After Biobased Content Testing has been completed, USDA will evaluate the results and determine if the product meets the criteria described in § 4270.4(b). For those applications that meet the criteria described in § 4270.4(b), USDA will issue a notice of certification, as specified in paragraph (c) of this section. A notice of certification must be issued before the use of the USDA Certified Biobased Product Label can begin.

(iv) For those applications that are disapproved, USDA will inform the applicant in writing of each criterion not met.

(c) *Notice of certification.* Once USDA confirms that the test results document an acceptable Biobased Content, USDA will issue a notice of certification to the applicant that includes the date of certification, name of the product(s) covered by the certification, and certified Biobased Content of the product(s). Upon receipt of a notice of certification, the applicant may begin using the USDA Certified Biobased Product Label on the Certified Biobased Product and may advertise that the product is a Certified Biobased Product. Paragraph (c)(1) of this section presents the procedures for revising the information provided under paragraphs (a)(1)(i) through (viii) of this section after a notice of certification has been issued.

(1) If at any time, during the application process or after a product has been certified, any of the information specified in paragraphs (a)(1)(i) through (viii) of this section changes, the applicant must notify USDA of the change within 30 Days. Such notification must be provided in writing via email to USDA. Failure to notify USDA of any change made to a Certified Biobased Product may result in the violation actions described in § 4270.12.

(2) After receiving the notice of certification, the Participating Organization may request to display a Biobased Content percentage that is lower than the content measured by the ASTM D6866 test results but is greater than or equal to the applicable category minimums. Such requests must be sent in writing via email to USDA and must be approved by USDA.

(3) If, after reviewing the test results, USDA determines that the product does not meet the Applicable Minimum Biobased Content, USDA will issue a notice of denial of certification and will inform the applicant in writing via email of each criterion not met.

(d) *Term of certification*—(1) *General.* The effective date of certification is included in the notice of certification from USDA. Except as specified in paragraphs (d)(1)(iii) and (iv) and (d)(2) through (4) of this section, certifications will remain in effect for five years. The applicant will be notified 90 Days before the certification expires, at which time, the product must be re-tested in accordance with the procedure as specified in § 4270.7.

(i) If the certification is not renewed within the 90 Days, the product certification will expire, the product will no longer be a Certified Biobased Product, and the product information will be removed from the BioPreferred Program website (*biopreferred.gov*).

(ii) If a Participating Organization whose product certification has expired wishes to renew the certification, the participant must follow the procedures required for original certification.

(iii) All certifications are subject to periodic USDA auditing activities, as described in § 4270.15. If a Participating Organization fails to participate in such audit activities or if such audit activities reveal Biobased Content violations, as specified in § 4270.12, the certification will be subject to suspension and revocation according to the procedures specified in § 4270.12(c)(3).

(iv) If USDA discovers that a certification has been issued for an ineligible product as a result of errors on the part of USDA during the approval process, USDA will notify the Participating Organization in writing that the certification is revoked effective 30 Days from the date of the notice.

(2) *Reformulations.* If at any time during the term of certification a Certified Biobased Product is reformulated, the participant must notify USDA of the change. USDA will consider the changes and inform the participant if re-testing is required as specified in paragraphs (d)(2)(i) through (iii) of this section.

(i) If the product formulation or raw materials of a Certified Biobased Product are changed such that the Biobased Content of the product is reduced to a level below that reported in the Certified Application, the existing certification will no longer be valid for the product under these revised conditions and the Participating Organization and its Designated Representatives must discontinue affixing the USDA Certified Biobased Product Label to the product and must not initiate any further advertising of the product using the USDA Certified Biobased Product Label. USDA will consider a product under such revised conditions to be a reformulated product, and the Participating Organization must submit a new application for certification using the procedures specified in paragraph (a) of this section.

(ii) If the product formulation of a Certified Biobased Product is changed such that the Biobased Content of the product is increased from the level reported in the Certified Application, and the raw materials are not significantly changed, the existing certification will continue to be valid for the product.

(iii) If the applicable required minimum Biobased Content for a product to participate in the BioPreferred Program is revised by USDA, Participating Organizations must follow the requirements specified in § 4270.6(a)(3).

(3) *Test exemptions.* For those products that are exempt from Biobased Content Testing as described in § 4270.7, the test exempt certification will expire at the same time as the Certified Application of the Parent Product.

(4) *Special considerations.* (i) For those Participating Organizations who have Qualified Biobased Products that are not certified as of January 8, 2025. USDA will solicit Biobased Content test data obtained using the ASTM D6866 test method. Participants who provide USDA with ASTM D6866 test data that has been obtained within the past five years from January 8, 2025 and whose products meet the requirements as described in § 4270.4 will receive certification for their products covered by the test data. The term of certification as described in paragraph (d)(1) of this section will then apply.

(ii) Participants who have Qualified Biobased Products that are not certified as of January 8, 2025 and do not provide recent ASTM D6866 test results within three years of the publication of this rule will be required to have their products tested and certified as described in § 4270.7. If certification is not completed within three years of the publication of this rule, these Biobased Products will no longer be listed as Qualified Biobased Products on the BioPreferred Program's website (*biopreferred.gov*) and will be removed from the BioPreferred Program's website (*biopreferred.gov*).

(iii) For those participants who have Certified Biobased Products that have been certified for more than five years as of the date of publication of this rule, USDA will require that the certification be renewed as described in paragraph (d)(1) of this section within three years of January 8, 2025. If an application for renewal is not completed within three years, the product certification will expire, the product will no longer be a Certified Biobased Product, and the product information will be removed from the BioPreferred Program website (*biopreferred.gov*).

§ 4270.10 [Reserved]

§ 4270.11 Requirements associated with promotional certification materials.

(a) *How participation in the BioPreferred Program can be promoted.* Guidance on promoting participation in the BioPreferred Program is provided in paragraphs (a)(1) and (2) of this section. USDA will evaluate additional requests for uses of promotional materials or references to the Program and will offer

guidance on the BioPreferred Program website (*biopreferred.gov*).

(1) *Participating Organizations.* Only Participating Organizations that have received a notice of certification, or Designated Representatives of the Participating Organization, may utilize certification materials provided by the BioPreferred Program. A Participating Organization that has received a notice of certification for a product under this part:

(i) May use the USDA Certified Biobased Product Label (in one of the approved variations, as applicable) on the product, its packaging, and other related materials including, but not limited to, advertisements, catalogs, specification sheets, procurement sheets, procurement databases, promotional material, websites, or user manuals for that product, according to the requirements set forth in this section.

(ii) Is responsible for the manner in which the USDA Certified Biobased Product Label is used by its companies, as well as its Designated Representatives, including advertising agencies, marketing and public relations firms, and subcontractors.

(2) *Other Entities.* Other Entities who have entered into a partnership agreement with USDA may use the BioPreferred Program's promotional certification materials to advertise or promote Certified Biobased Products in materials including, but not limited to, advertisements, catalogs, procurement databases, websites, and promotional and educational materials. Other Entities may use:

(i) The Certification Icon;

(ii) The phrase ''USDA Certified Biobased Product/Package/Product & Package,'' as applicable; and

(iii) The BioPreferred Program name in general statements as described in paragraph (b) of this section, as long as the statements do not imply that a non-certified product is certified or endorsed by USDA.

(b) *Correct usage of the USDA Certified Biobased Product Label and other promotional certification materials.* (1) The USDA Certified Biobased Product Label can be affixed only to Certified Biobased Products and their associated packaging.

(2) The USDA Certified Biobased Product Label may be used in material including, but not limited to, advertisements, catalogs, procurement databases, websites, and promotional and educational materials to distinguish certified products from those that are not certified. The USDA Certified Biobased Product Label may be used in advertisements for both Certified Biobased Products and non-certified/labeled products if the advertisement clearly indicates which products are certified/labeled. Care must be taken to avoid implying that any non-certified products are certified.

(3) When educating the public about the USDA Certified Biobased Product Label, the watermarked sample version of the USDA Certified Biobased Product Label may be used without reference to a specific Biobased Product. For example, the following or similar claims are acceptable: ''Look for the 'USDA Certified Biobased Product Label. It means that the product meets USDA standards for the minimum amount of Biobased Content and the manufacturer or vendor has provided relevant information on the product to be posted on the BioPreferred Program website (*biopreferred.gov*).'' This exception allows Participating Organizations or Other Entities to use a sample USDA Certified Biobased Product Label in documents such as corporate reports, but only in an informative manner, not as a statement of product certification.

(4) The USDA Certified Biobased Product Label may appear next to a picture of the Certified Biobased Product(s) or text describing it.

(5) The USDA Certified Biobased Product Label must stand alone and not be incorporated into any other certification mark or logo designs.

(6) The USDA Certified Biobased Product Label may be embossed, stamped, or used as a watermark provided the use does not violate any BioPreferred Program brand standards or usage restrictions specified in this part.

(7) The text portion of the USDA Certified Biobased Product Label must be written in English and may not be translated, even when the certification mark is used outside of the United States.

(c) *Incorrect usage of the USDA Certified Biobased Product Label and other promotional certification materials.* (1) The USDA Certified Biobased Product Label will not be used on any product that has not been certified by USDA as a ''USDA Certified Biobased Product.''

(2) The USDA Certified Biobased Product Label will not be used in a way that does not maintain the integrity of the label and the BioPreferred Program.

(3) The word ''BioPreferred'' will not be used as a descriptor for anything other than the Program, including but not limited to products, categories, and companies. The BioPreferred Program name, the word ''BioPreferred,'' and the phrase ''USDA Certified Biobased Product'' are not interchangeable. For example, certified products may not be referenced as being ''BioPreferred products.''

(4) The USDA Certified Biobased Product Label will not be used on any advertisements or informal materials where both Certified Biobased Products and non-certified products are shown unless it is clear that the USDA Certified Biobased Product Label applies to only the Certified Biobased Product(s).

(5) The BioPreferred Program name and the USDA Certified Biobased Product Label will not be used to imply endorsement by USDA or the BioPreferred Program of any particular product, service, or company.

(6) The BioPreferred Program name and the USDA Certified Biobased Product Label will not be used in any form that could be misleading to the consumer.

(7) The BioPreferred Program name and the USDA Certified Biobased Product Label will not be used by manufacturers or vendors of Certified Biobased Products in a manner disparaging to USDA or any other government body.

(8) The BioPreferred Program name, the word ''BioPreferred,'' the USDA Certified Biobased Product Label, and the Certification Icon will not be altered or incorporated into other label or logo designs.

(9) The USDA Certified Biobased Product Label will not be used on business cards, company letterhead, company stationary, or email signatures.

(10) The BioPreferred Program name, the word ''BioPreferred,'' the USDA Certified Biobased Product Label, and the Certification Icon will not be used in, or as part of, any company name, logo, product name, service, or website, except as may be provided for in this part.

(11) The BioPreferred Program name, the word ''BioPreferred,'' the USDA Certified Biobased Product Label, and the Certification Icon will not be used in a manner that violates any of the applicable requirements contained in this part.

(d) *Imported products.* The USDA Certified Biobased Product Label can be used only with a product that is certified by USDA under this part. The USDA Certified Biobased Product Label cannot be used to imply that a product meets or exceeds the requirements of biobased programs in other countries. Products imported for sale in the U.S. must adhere to the same guidelines as U.S. sourced Biobased Products. Any product sold in the U.S. as a ''USDA Certified Biobased Product/Package/Product & Package'' must have received certification from USDA.

(e) *Elements of the USDA Certified Biobased Product Label.* The USDA Certified Biobased Product Label will consist of the Certification Icon, the Biobased Content percentage, the letters ''FP'' to indicate that the product is qualified for preferred Federal procurement, and one of the three variations of text specified in paragraphs (e)(1) through (3) of this section, as applicable.

(1) USDA Certified Biobased Product: Product.

(2) USDA Certified Biobased Product: Package.

(3) USDA Certified Biobased Product: Product & Package.

(f) *Physical aspects of the USDA Certified Biobased Product Label.* The USDA Certified Biobased Product Label elements may not be altered, cut, separated into components, or distorted in appearance or perspective. The USDA Certified Biobased Product Label must appear only in the colors specified in paragraphs (f)(1) and (2) of this section unless approval is given by USDA for an exception.

(1) A multi-color version of the USDA Certified Biobased Product Label is preferred. The USDA Certified Biobased Product Label colors to be applied will be stipulated in the ''USDA BioPreferred Program Brand and Marketing Guidelines'' document available on the BioPreferred Program website (*biopreferred.gov*).

(2) Black or white outline versions of the USDA Certified Biobased Product Label are acceptable.

(g) *Placement of the USDA Certified Biobased Product Label.* (1) The USDA Certified Biobased Product Label can appear directly on a product, its associated packaging, in user manuals, and in other materials including, but not limited to, advertisements, catalogs, procurement databases, and promotional and educational materials.

(2) The USDA Certified Biobased Product Label will not be placed in a manner that is ambiguous about which product is a Certified Biobased Product or that could indicate certification of a non-certified product.

(3) When used to distinguish a Certified Biobased Product in material including, but not limited to, advertisements, catalogs, procurement databases, websites, and promotional and educational materials, the USDA Certified Biobased Product Label must appear near a picture of the product or text describing it.

(i) If all products on a page are Certified Biobased Products with the same Biobased Content percentage, the USDA Certified Biobased Product Label may be placed anywhere on that page.

(ii) If a page contains a mix of Certified Biobased Products and non-certified Biobased Products, the USDA Certified Biobased Product Label will be placed in close proximity to the Certified Biobased Products. An individual USDA Certified Biobased Product Label near each Certified Biobased Product may be necessary to avoid confusion.

(h) *Minimum size and clear space requirements for the USDA Certified Biobased Product Label.* (1) The USDA Certified Biobased Product Label may be sized to fit the individual application as long as the correct proportions are maintained, and all elements of the USDA Certified Biobased Product Label remain legible.

(2) The USDA Certified Biobased Product Label must be surrounded by a border of clear space that must be of sufficient width to offset it from surrounding images and text to avoid confusion. If a one-color outline version of the USDA Certified Biobased Product Label is used, the USDA Certified Biobased Product Label must appear on a solid background that is a contrasting color.

(i) *Where to obtain copies of the promotional certification materials.* The USDA Certified Biobased Product Label and other associated promotional materials including the USDA BioPreferred Program Brand and Marketing Guidelines are available at the BioPreferred Program website (*biopreferred.gov*).

§ 4270.12 Violations of program requirements.

This section identifies the types of actions that USDA considers violations under this part and the penalties (*e.g.,* the suspension or revocation of certification) associated with such violations.

(a) *General.* Violations under this section occur on a per product basis and the penalties are to be applied on a per product basis. Entities cited for a violation under this section may appeal using the provisions in § 4270.13. If certification for a product is revoked, the Participating Organization whose certification has been revoked may seek re-certification for the product specified under the provisions in § 4270.9.

(b) *Types of violations.* Actions that will be considered violations of this part include, but are not limited to, the examples as described in paragraphs (b)(1) through (4) of this section:

(1) *Biobased Content violations.* USDA reserves the right to request occasional testing of Certified Biobased Products without notice to compare the Biobased Content of the tested product with the product's Applicable Minimum Biobased Content and the Biobased content reported in its Certified Application. Such testing will be conducted using ASTM Method D6866 in accordance with the procedures discussed in § 4270.7.

(i) If the testing shows that the Biobased Content of a Certified Biobased Product is less than its Applicable Minimum Biobased Content, then a violation of this part will have occurred.

(ii) If the testing shows that the Biobased Content is less than that reported in the product's Certified Application but is still equal to or greater than its Applicable Minimum Biobased Content(s), USDA will provide written notification to the Participating Organization. The participant must submit, within 90 Days from receipt of USDA written notification, a new application for the lower Biobased Content. Failure to submit a new application within 90 Days will be considered a violation of this part.

(A) The participant can submit a new application to use the Biobased Content reported to it by USDA in the written notification.

(B) Alternatively, the participant may submit a new application and elect to retest the product in question. If the participant elects to retest the product, it must test a sample of the current product, and the procedures in § 4270.9 must be followed. USDA reserves the right to select the sample that will be submitted for retesting.

(2) *USDA Certified Biobased Product Label violations.* (i) Any usage or display of the USDA Certified Biobased Product Label that does not conform to the requirements specified in § 4270.10.

(ii) Affixing the USDA Certified Biobased Product Label to any product prior to issuance of a notice of certification from USDA.

(iii) Affixing the USDA Certified Biobased Product Label to a Certified Biobased Product during periods when certification has been suspended or revoked.

(iv) Using an image or icon other than the official USDA Certified Biobased Product Label in association with certification claims.

(3) *Application violations.* Knowingly providing false or misleading information in any application for certification of a Biobased Product.

(4) *BioPreferred Program website violations.* Failure to provide USDA with updated information when the information for a Certified Biobased Product becomes outdated or when new information for a Certified Biobased Product becomes available.

(c) *Noncompliance and escalation of actions.* Any identified violations as described in paragraphs (b)(1) through (4) are considered noncompliance with this part. USDA will respond to noncompliance through actions that include, but are not limited to, the examples as described in paragraphs (c)(1) through (4).

(1) *Noncompliance.* USDA will provide the applicable Participating Organization and any Other Entity involved, as known to USDA, written notification of any noncompliance identified by USDA, as well as actions that should be taken to resolve the noncompliance. USDA may remove the product or company information from the BioPreferred Program website (*biopreferred.gov*) until the noncompliance is corrected. If satisfactory resolution of the noncompliance is not reached, USDA will consider the noncompliance to be a violation of this part and may pursue further action as discussed in paragraphs (c)(2) through (4) of this section.

(2) *Violation.* USDA will first issue a notice of violation. Entities who receive a notice of violation for any violation must correct the violation(s) within 30 Days from receipt of the notice of violation. If the entity receiving a notice of violation is a Participating Organization, USDA will also issue notices of suspensions and revocations, as discussed in paragraph (c)(3) of this section. USDA reserves the right to further pursue action against these entities as provided in paragraph (c)(4) of this section. If the entity receiving a notice of violation is an Other Entity (*i.e.,* not a Participating Organization), then USDA may pursue action according to paragraph (c)(4) of this section.

(3) *Suspension and Revocation.* (i) If a violation is applicable to a Participating Organization and the participant fails to make the required corrections within 30 Days of receipt of a notice of violation, USDA will notify the participant, via email and certified mail as appropriate, of the continuing violation, and the certification for that product will be suspended. As of the date that the participant receives a notice of suspension, the participant and their Designated Representatives must not affix the USDA Certified Biobased Product Label to any of that product or associated packaging not already labeled and must not distribute any additional products bearing the USDA Certified Biobased Product Label. USDA will both remove the product information from the BioPreferred Program website (*biopreferred.gov*) and actively communicate the product suspension to buyers in a timely and overt manner.

(ii) If, within 30 Days from receipt of the notice of suspension, the participant whose USDA product certification has been suspended makes the required corrections and notifies the USDA that the corrections have been made, the participant and their Designated Representatives may, upon receipt of USDA approval of the corrections, resume use of the USDA Certified Biobased Product Label. USDA will also restore the product information to the BioPreferred Program website (*biopreferred.gov*).

(iii) If, following the 30-Day period, the participant does not make the required corrections, the certification for that product will be revoked. As of that date, the participant must not affix the USDA Certified Biobased Product Label to any of that product not already labeled. In addition, the participant and their Designated Representatives are prohibited from further sales of the product to which the USDA Certified Biobased Product Label is affixed, and the product will no longer be listed on the BioPreferred Program website (*biopreferred.gov*) as a product qualified for preferred Federal procurement.

(iv) If a participant whose product certification has been revoked wishes to participate in the BioPreferred Program again, the participant must follow the procedures required for the original certification specified in § 4270.9.

(4) *Other remedies.* In addition to the suspension or revocation of the product certification, depending on the nature of the violation, USDA may pursue suspension or debarment of the entities involved in accordance with 2 CFR part 417 and 48 CFR subpart 9.4. USDA further reserves the right to pursue any other remedies available by law, including any civil or criminal remedies, against any entity that violates the provisions of this part.

§ 4270.13 Appeal process.

Participating Organizations whose product certification has been revoked may appeal to USDA.

(a) *Filing an appeal.* (1) Appeals to the Agency must be filed within 30 Days of receipt by the appellant of a notice of suspension and revocation. Appeals must be filed in writing via email to the BioPreferred Program's email address as noted on the BioPreferred Program website (*biopreferred.gov*).

(2) All appeals must include a copy of the adverse decision and a statement of the appellant's reasons for believing that the decision was not made in accordance with the applicable Program regulations, policies, or procedures, or otherwise was not proper.

(b) *Reviewing appeals.* (1) If USDA sustains a Participating Organization's appeal of a notice of suspension and revocation, the participant and its Designated Representative(s) may immediately resume affixing the USDA Certified Biobased Product Label to the Certified Biobased Product and sell and distribute the Certified Biobased Product with the USDA Certified Biobased Product Label. In addition, USDA will reinstate the product's information to the BioPreferred Program website (*biopreferred.gov*).

(2) If USDA denies a participant's appeal of a notice of suspension and revocation, then the notice of suspension and revocation stands.

(c) *Appeals of decisions made on appeals.* Appeals of any of the BioPreferred Program's decisions may be made to the Rural Business-Cooperative Service Administrator. Appeals must be made, in writing, within 30 Days of receipt of USDA's decision and addressed to: Rural Business-Cooperative Service Administrator, 1400 Independence Avenue SW, Washington, DC 20250–1522 STOP 3250. If the Rural Business-Cooperative Service Administrator sustains an appeal, the provisions of paragraph (b) of this section will apply.

§ 4270.14 Reporting and recordkeeping.

(a) *Providing product information to Federal agencies*—(1) *Informational website.* An informational USDA website implementing section 9002 of FSRIA can be found at: *biopreferred.gov.* USDA will maintain a web-based information site for participating originations with Certified Biobased Products and Federal agencies to exchange information, as described in paragraphs (a)(1)(i) through (iv) of this section as applicable.

(i) *Product information.* The website will, as determined to be necessary by the Secretary based on the availability of data, provide the information specified in § 4270.9. USDA encourages Federal agencies to utilize this website to obtain current information on designated categories, contact information for Participating Organizations, and access to information on product characteristics relevant to procurement decisions. In addition to any information provided on the website, participants are expected to provide relevant information to Federal agencies, subject to the limitations specified in paragraph (a)(1)(ii) of this section, with respect to product characteristics, including verification of such characteristics if requested.

(ii) *Providing information on price and environmental and health benefits.* Federal agencies may not require Participating Organizations with Certified Biobased Products to provide procuring agencies with more data than would be required of other manufacturers or vendors offering products for sale to a Procuring Agency (aside from data confirming the Biobased Contents of the products) as a condition of the purchase of Biobased Products from the participant. USDA encourages industry Stakeholders to provide information on environmental and public health benefits based on industry accepted analytical approaches including, but not limited to, material carbon footprint analysis, the International Standards Organization (ISO) 14040, the ASTM International life-cycle cost method (E917) and multi-attribute decision analysis (E1765), and the British Standard Institution PAS 2050. USDA will make such Stakeholder-supplied information available on the BioPreferred Program website (*biopreferred.gov*).

(iii) *Industry standards test information.* The product information will include any relevant industry standard test information as supplied by the participant. In assessing performance of a Certified Biobased Product, USDA requires that procuring agencies rely on results of performance tests using applicable ASTM, ISO, Federal or military specifications, or other similarly authoritative industry test standards. Such testing may be conducted by a laboratory compliant with the requirements of the standards body. The procuring official will decide whether performance data must be brand-name specific in the case of products that are essentially of the same formulation.

(iv) *Biodegradability information.* If Biodegradability is claimed by a participant with a Certified Biobased Product as a characteristic of that product, USDA requires that, if requested by procuring agencies, these claims be verified using the appropriate, product-specific ASTM Biodegradability standard(s). Such testing must be conducted by an ASTM/ISO-compliant laboratory. The procuring official will decide whether Biodegradability data must be brand-name specific in the case of products that are essentially of the same formulation. ASTM Biodegradability standards include:

(A) D5338 (Standard Test Method for Determining Aerobic Biodegradation of Plastic Materials Under Controlled Composting Conditions);

(B) D5864 (Standard Test Method for Determining the Aerobic Aquatic Biodegradation of Lubricants or Their Components);

(C) D5988 (Standard Test Method for Determining Aerobic Biodegradation of Plastic Materials in Soil);

(D) D6006 (Standard Guide for Assessing Biodegradability of Hydraulic Fluids);

(E) D6400 (Standard Specification for Compostable Plastics) and the standards cited therein;

(F) D6139 (Standard Test Method for Determining the Aerobic Aquatic Biodegradation of Lubricants of Their Components Using the Gledhill Shake Flask);

(G) D6868 (Standard Specification for Biodegradable Plastics Used as Coatings on Paper and Other Compostable Substrates); and

(H) D7081 (Standard Specification for Non-Floating Biodegradable Plastics in the Marine Environment).

(2) *Advertising, labeling, and marketing claims.* Participating Organizations are reminded that their advertising, labeling, and other marketing claims, including claims regarding health and environmental benefits of the product, must conform to 16 CFR part 260 (Federal Trade Commission Guides for the Use of Environmental Marketing Claims). For further requirements on marketing claims associated with the BioPreferred Program, refer to the ''USDA BioPreferred Program Brand and Marketing Guidelines'' found on the BioPreferred Program website (*biopreferred.gov*).

(b) *Records.* Participating Organizations will maintain records documenting compliance with this part for each product that has received a notice of certification, as specified in paragraphs (b)(1) through (3) of this section.

(1) The results of all tests, and any associated calculations, performed to determine the Biobased Content of the product.

(2) The notice of certification from USDA, the dates of changes in formulation that affect the Biobased Content of Certified Biobased Products, and the dates when the Biobased Content of Certified Biobased Products were tested.

(3) Documentation of analyses performed by participants to support claims of environmental or human health benefits, life cycle cost, sustainability benefits, and product performance made by the participant.

(c) *Record retention.* For each Certified Biobased Product, records kept under paragraphs (a) and (b) of this section must be maintained for at least three years beyond the end of the certification period (*i.e.,* three years beyond the date the product's term of certification expires). Records may be kept in either electronic format or hard copy format. All records kept in electronic format must be readily accessible and/or provided by request.

§ 4270.15 Oversight and monitoring.

(a) *General.* USDA will conduct oversight and monitoring of Participating Organizations, Designated Representatives, and Other Entities involved with the BioPreferred Program to ensure compliance with this part. This oversight may include, but not be limited to, conducting facility visits to Participating Organizations that have Certified Biobased Products and their Designated Representatives. Participating Organizations are required to cooperate fully with all USDA audit efforts for the enforcement of the BioPreferred Program requirements.

(b) *Biobased Content Testing.* USDA will conduct Biobased Content Testing of Certified Biobased Products as described in § 4270.12(b)(1) to ensure compliance with this part.

(c) *Inspection of records.* Participating Organizations must allow Federal representatives access to the records required under § 4270.14 for inspection and copying during normal business hours.

(d) *Audits.* USDA will conduct an annual desk audit on an ongoing basis to verify that the product and company information supplied by Participating Organizations remain valid. Through the BioPreferred Program website (*biopreferred.gov*), Participating Organizations will be asked to confirm that they still manufacture the product, that the formulation remains the same, and that the information described under § 4270.9(a)(1) remains valid. Participants may also be asked for additional supplemental information.

(1) If a Participating Organization indicates that their product or company information needs to be updated during an annual desk audit, these updates will be incorporated into the BioPreferred Program website (*biopreferred.gov*). If it is indicated that a product is no longer manufactured, the product information will be removed from the BioPreferred Program website (*biopreferred.gov*).

(2) If a Participating Organization fails to complete an annual desk audit, the participant will be considered to be in noncompliance with this part, and the Participating Organization and associated product information will be removed from the BioPreferred Program website (*biopreferred.gov*). USDA reserves the right to revoke product

certification for failure to participate in an audit.

§§ 4270.16–4270.98 [Reserved]

§ 4270.99 OMB control number.

The information collection requirements in this part are approved by the Office of Management and Budget (OMB) and assigned OMB control number 0570–0083.

Xochitl Torres Small,

Deputy Secretary, United States Department of Agriculture.

7 CFR Part 5001

[Docket No. RUS–19–Agency–0030]

RIN 0572–AC56

OneRD Guaranteed Loan Regulation

AGENCY: Rural Business-Cooperative Service, Rural Housing Service, Rural Utilities Service, USDA.

ACTION: Final rule, correction and correcting amendments.

SUMMARY: On September 30, 2024, Rural Development's Rural Business-Cooperative Service, Rural Housing Service, and Rural Utilities Service, agencies of the United States Department of Agriculture (USDA), published a final rule with comment for the OneRD Guarantee Loan Program (OneRD). The final rule made necessary revisions to the policy and procedures that strengthened the oversight and management of the growing Community Facilities, Water and Waste Disposal, Business and Industry, and Rural Energy for America guarantee portfolios. The final rule had a misspelled subject heading in the preamble. The final rule also contained information in an instruction that was not ultimately in the final rule, an incomplete definition of affiliate, and a misstatement regarding protective advances. This document corrects the final regulation.

DATES: This rule is effective December 9, 2024.

ADDRESSES: Address all comments concerning this correction to Susan Woolard, Regulations Management Division, Rural Development Innovation Center, U.S. Department of Agriculture, 1400 Independence Ave. SW, Stop 1522, Washington, DC 20250; telephone (202) 720–9631; email *susan.woolard@usda.gov.*

FOR FURTHER INFORMATION CONTACT: Susan Woolard, Regulations Management Division, Rural Development Innovation Center, U.S. Department of Agriculture, 1400 Independence Ave. SW, Stop 1522, Washington, DC 20250; telephone (202) 720–9631; email *susan.woolard@usda.gov.*

SUPPLEMENTARY INFORMATION: Rural Development's Rural Business-Cooperative Service, Rural Housing Service, and Rural Utilities Service are issuing corrections to the final rule that published September 30, 2024, at 89 FR 79698.

List of Subjects in 7 CFR Part 5001

Business and industry, Community facility, Energy efficiency improvement, Loan programs, Renewable energy, Rural areas, Rural development, Water and waste disposal.

In FR Doc. 2024–21920 published September 30, 2024, beginning on page 79698, make the following corrections:

■ 1. On page 79699, in the third column, item 11, the title is corrected to read ''*11. § 5001.116 Ineligible CF Projects*''.

■ 2. On page 79702, in the third column, item 39a, is corrected to read:

■ a. § 5001.516(c) is updated to inform lenders that payment of real estate taxes is considered a protective advance but does not require advanced Agency approval.

■ 3. On page 79704, in the third column, Instruction 4 for § 5001.3, is corrected by removing the words ''commercially available''.

■ 4. On page 79711, in the second column, Instruction 14 is corrected to read:

■ 14. Amend § 5001.106 by revising the first sentence of the introductory text, paragraphs (d)(2), (e)(2) and (e)(3) introductory text to read as follows:

For the reasons discussed in the preamble, 7 CFR 5001 is corrected by making the following correcting amendments:

PART 5001—GUARANTEED LOANS.

■ 1. The authority citation for part 5001 continues to read as follows:

Authority: 5 U.S.C. 301; 7 U.S.C. 1926(a); 7 U.S.C. 1932(a); and 7 U.S.C. 8107.

■ 2. Amend § 5001.3 by revising the definition of ''affiliate'' to read as follows:

§ 5001.3 Definitions.

* * * * *

Affiliate means a person that is connected with or controlled by another organization. Factors such as ownership, management, current and previous relationships with or ties to another person, and contractual relationships, may be considered in determining whether affiliation exists. Affiliation is determined using the principles outlined in 13 CFR 121.301(f).

* * * * *

■ 3. Amend § 5001.516 by revising paragraph (c) to read as follows:

§ 5001.516 Protective advances.

* * * * *

(c) A lender must obtain written Agency approval for any protective advance that will cumulatively amount to more than $200,000, or 10 percent of the aggregate outstanding balance of principal and interest, whichever is less, to the same borrower. Payment of real estate taxes by the lender is considered a protective advance, subject to the requirements of this section, and does not require Agency advance approval.

Basil I. Gooden,

Deputy Under Secretary, Rural Development.

RIN 2120–AA64

Airworthiness Directives; ATR—GIE Avions de Transport Régional Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain ATR—GIE Avions de Transport Régional Model ATR42 and ATR72 airplanes. This AD was prompted by a report that for airplanes converted from passenger to cargo configuration using certain supplemental type certificates, no height limitation for the cargo, when loaded in the cargo compartment, is defined, and that as a consequence, cargo might be loaded up to the ceiling of the cargo compartment. This AD

requires modification of the cargo compartment and implementation of updated cargo loading procedures. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2129; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For Sabena Technics material identified in this AD, contact Sabena Technics BGC, Le Galilée, 9 Bd Henri Ziegler, 31700 Blagnac France; telephone 33 (0)1 56 54 42 30; email *airworthiness.office@sabenatechnics.com.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–2129.

FOR FURTHER INFORMATION CONTACT: Shahram Daneshmandi, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3220; email *shahram.daneshmandi@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain ATR—GIE Avions de Transport Régional Model ATR42 and ATR72 airplanes. The NPRM published in the **Federal Register** on August 22, 2024 (89 FR 67908). The NPRM was prompted by AD 2024–0025, dated January 24, 2024, issued by the European Union Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union (referred to after this as the MCAI). The MCAI states that it was identified that for airplanes converted from passenger to cargo configuration using EASA Supplemental Type Certificate (STC) 10069551, Revision 1 (EASA STC 10069551, Revision 0, corresponds to FAA STC ST04602NY), or the previous EASA STC 2004–2872 (which corresponds to FAA STC S116–004NM, Revision 1), no height limitation for the cargo, when loaded in the cargo compartment, is defined. Consequently, operators of such airplanes may load the cargo up to the ceiling of the cargo compartment and, therefore, potentially affect the proper functioning of the smoke detectors. This condition, if not corrected, could lead to smoke not being detected in time, possibly resulting in an uncontrolled fire.

In the NPRM, the FAA proposed to require modification of the cargo compartment and implementation of updated cargo loading procedures. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at regulations.gov under Docket No. FAA–2024–2129.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from Air Line Pilots Association, International (ALPA), who supported the NPRM without change.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Sabena Technics Airworthiness Technical Instructions 0110–09–A–ATI–F01–R00, and 0110–11–A–ATI–F01–R00, both dated September 19, 2023. This material describes procedures for modifying the cargo compartment (installing a label and tape to indicate maximum cargo height). These documents are distinct since they apply to different airplane models.

The FAA also reviewed Sabena Technics Weight & Balance Manual Supplement 0110–09–A–2305–R06, Revision 06, dated September 15, 2023; and Sabena Technics Weight & Balance Manual Supplement 0110–11–A–2305–R07, Revision 07, dated September 15, 2023. The maximum cargo height in the cargo compartment is described in Section 2.9., ''Cargo Compartment—Loading Limitation,'' of Sabena Technics Weight & Balance Manual Supplement 0110–09–A–2305–R06, Revision 06, dated September 15, 2023; and section 2.11., ''Cargo Compartment-Loading Limitation,'' of Sabena Technics Weight & Balance Manual Supplement 0110–11–A–2305–R07, Revision 07, dated September 15, 2023. These documents are distinct since they apply to different airplane models.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 2 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
8 work-hours × $85 per hour = $680	$100	$780	$1,560

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–23–10 ATR—GIE Avions de Transport Régional: Amendment 39–22889; Docket No. FAA–2024–2129; Project Identifier MCAI–2024–00066–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to ATR—GIE Avions de Transport Régional airplanes identified in paragraphs (c)(1) and (2) of this AD, certificated in any category, modified in accordance with FAA Supplemental Type Certificate (STC) ST116–004NM or STC ST04602NY.

(1) Model ATR42–200, –300, –320, and –500 airplanes.

(2) Model ATR72–101, –102, –201, –202, –211, –212, and –212A airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 11, Placards and Marking.

(e) Unsafe Condition

This AD was prompted by a report that for airplanes converted from passenger to cargo configuration using certain supplemental type certificates, no height limitation for the cargo, when loaded in the cargo compartment, is defined, and that as a consequence, cargo may be loaded up to the ceiling of the cargo compartment. The FAA is issuing this AD to address cargo being loaded up to the ceiling of the cargo compartment, which could affect the proper functioning of the smoke detectors. This condition, if not corrected, could lead to smoke not being detected in time, possibly resulting in an uncontrolled fire.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Modification of Cargo Compartment

Within 6 months after the effective date of this AD, modify the cargo compartment in accordance with the Accomplishment Instructions of Sabena Technics Airworthiness Technical Instructions 0110–09–A–ATI–F01–R00, dated September 19, 2023 (for Model ATR42 airplanes); or Sabena Technics Airworthiness Technical Instructions 0110–11–A–ATI–F01–R00, dated September 19, 2023 (for Model ATR72 airplanes).

(h) Revision of Weight and Balance Manual

Prior to or concurrently with accomplishing the actions required by paragraph (g) of this AD, implement the cargo loading procedures specified in Section 2.9., ''Cargo Compartment—Loading Limitation,'' of Sabena Technics Weight & Balance Manual Supplement 0110–09–A–2305–R06, Revision 06, dated September 15, 2023 (for Model ATR42 airplanes); or Section 2.11., ''Cargo Compartment-Loading Limitation,'' of Sabena Technics Weight & Balance Manual Supplement 0110–11–A–2305–R07, Revision 07, dated September 15, 2023 (for Model ATR72 airplanes).

(i) No Reporting Requirement

Although Sabena Technics Airworthiness Technical Instructions 0110–09–A–ATI–F01–R00, and 0110–11–A–ATI–F01–R00, both dated September 19, 2023, specify to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (k) of this AD. Information may be emailed to: *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or the European Union Aviation Safety Agency (EASA); or Sabena Technic BGC's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(k) Additional Information

For more information about this AD, contact Shahram Daneshmandi, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3220; email *shahram.daneshmandi@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Sabena Technics Airworthiness Technical Instructions 0110–09–A–ATI–F01–R00, dated September 19, 2023.

(ii) Sabena Technics Airworthiness Technical Instructions 0110–11–A–ATI–F01–R00, dated September 19, 2023.

Issued on November 21, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2024–28789 Filed 12–6–24; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–2025; Project Identifier MCAI–2024–00120–T; Amendment 39–22888; AD 2024–23–09]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Airbus SAS Model A321–251NX, –252NX, –253NX, –271NX, and –272NX airplanes. This AD was prompted by the discovery during a quality review performed during manufacturing, that a torque strip indicator (material ''Dykem'') had been applied on the orifice fitting on certain slides' inflation reservoirs' venting holes. This AD requires an inspection for discrepancies of affected parts (certain reservoirs having certain orifices) and replacement of discrepant affected parts, and prohibits installing affected parts, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2025; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu*; website *easa.europa.eu*. You may find this material on the EASA website at *ad.easa.europa.eu*.
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–2025.

FOR FURTHER INFORMATION CONTACT: Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email *timothy.p.dowling@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Airbus SAS Model A321–251NX, –252NX, –253NX, –271NX, and –272NX airplanes. The NPRM published in the **Federal Register** on August 21, 2024 (89 FR 67575). The NPRM was prompted by AD 2024–0057, dated February 28, 2024, issued by EASA, which is the Technical Agent for the Member States of the European Union (EASA AD 2024–0057) (also referred to as the MCAI). The MCAI states that during a quality review performed during manufacturing, a quality escape was identified on the Model A321NX door 3 slide and offwing slide inflation reservoirs' venting holes, where a torque strip indicator (material ''Dykem'') had been applied on the orifice fitting (clogging the vent hole). This condition, in combination with a slide reservoir pressure loss, if not detected and corrected, could lead to deployment in flight of a non-inflated slide, possibly resulting in damage to, and reduced control of, the airplane.

In the NPRM, the FAA proposed to require an inspection for discrepancies of affected parts (certain reservoirs having certain orifices) and replacement of discrepant affected parts, and prohibit installing affected parts, as specified in EASA AD 2024–0057. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2025.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from the Air Line Pilots Association, International (ALPA), and United Airlines, who supported the NPRM without change.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0057 specifies a general visual inspection of affected parts (certain reservoirs having certain orifices) for discrepancies (the presence of ''Dykem'' material on the orifice fitting) and replacement of discrepant affected parts, and prohibits installing affected parts. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 227 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
1 work-hour × $85 per hour = $85	$0	$85	$19,295

The FAA estimates the following costs to do any necessary on-condition action that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
1 work-hour × $85 per hour = $85	Negligible	$85

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–23–09 Airbus SAS: Amendment 39–22888; Docket No. FAA–2024–2025; Project Identifier MCAI–2024–00120–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Airbus SAS Model A321–251NX, –252NX, –253NX, –271NX, and –272NX airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/Furnishings.

(e) Unsafe Condition

This AD was prompted by the discovery during a quality review performed during manufacturing, that a torque strip indicator (material ''Dykem'') had been applied on the orifice fitting on certain slides' inflation reservoirs' venting holes. The FAA is issuing this AD to address blocked venting holes on the orifice fitting on an escape slide's inflation reservoir. The unsafe condition, if not addressed, could, in combination with a slide reservoir pressure loss, result in deployment in flight of a non-inflated slide, possibly resulting in damage to, and reduced control of, the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2024–0057, dated February 28, 2024 (EASA AD 2024–0057).

(h) Exceptions to EASA AD 2024–0057

(1) Where EASA AD 2024–0057 refers to March 13, 2024, or its effective date, this AD requires using the effective date of this AD.

(2) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0057.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (j) of this AD. Information may be emailed to: *AMOC@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS's

EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i)(2) of this AD, if any service information referenced in EASA AD 2024–0057 contains paragraphs that are labeled as RC, the instructions in RC paragraphs, including subparagraphs under an RC paragraph, must be done to comply with this AD; any paragraphs, including subparagraphs under those paragraphs, that are not identified as RC are recommended. The instructions in paragraphs, including subparagraphs under those paragraphs, not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the instructions identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to instructions identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email *timothy.p.dowling@faa.gov*.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0057, dated February 28, 2024.

(ii) [Reserved]

(3) For EASA AD 2024–0057 identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu*. You may find this EASA AD on the EASA website at *ad.easa.europa.eu*.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov*.

Issued on November 18, 2024.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain The Boeing Company Model 767–300F series airplanes. This AD was prompted by a determination that certain cargo compartment insulation blankets do not adequately fit some locations and allow smoke to migrate past the cargo compartment sidewall liners and upward into the main cabin. This AD requires replacing cargo compartment insulation blankets. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–1698; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–1698.

FOR FURTHER INFORMATION CONTACT: Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3684; email: *julie.linn@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain The Boeing Company Model 767–300F series airplanes. The NPRM published in the **Federal Register** on June 26, 2024 (89 FR 53370). The NPRM was prompted by a determination that certain cargo compartment insulation blankets do not adequately fit some locations and allow smoke to migrate past the cargo compartment sidewall liners and upward into the main cabin. In the NPRM, the FAA proposed to require replacing the cargo compartment insulation blankets. The FAA is issuing this AD to address inadequately fitting cargo compartment insulation blankets. The unsafe condition, if not addressed, could result in a fire in the bilge area of the cargo compartment, which if not contained could lead to a smoke and fire event in the passenger compartment.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from Air Line Pilots Association, International (ALPA) who supported the NPRM without change.

The FAA also received comments from Boeing, Aviation Partners Boeing, and All Nippon Airways. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Add a Boeing Alternative Method of Compliance (AMOC) Notice to the Proposed AD

All Nippon Airways and Boeing requested that the FAA add Boeing AMOC Notice 767–25–0550 AMOC 01, dated March 13, 2024, to the proposed AD. All Nippon Airways requested that Boeing AMOC Notice 767–25–0550 AMOC 01, dated March 13, 2024, be added to paragraph (g) of the proposed AD to specify that the actions should be done in accordance with both Boeing Special Attention Service Bulletin 767–25–0550 Revision 2, dated December 18, 2023, and Boeing AMOC Notice 767–25–0550 AMOC 01, dated March 13, 2024. All Nippon Airways stated that Boeing AMOC Notice 767–25–0550 AMOC 01, dated March 13, 2024, provides changes regarding Boeing

Special Attention Service Bulletin 767–25–0550, Revision 2, dated December 18, 2023.

Boeing requested that the FAA revise paragraph (h) of the proposed AD, (the ''Alternative Methods of Compliance (AMOCs)'' paragraph), to include language approving Boeing AMOC Notice 767–25–0550 AMOC 01, dated March 13, 2024, as an AMOC to the proposed AD. Boeing stated that Boeing AMOC Notice 767–25–0550 AMOC 01, dated March 13, 2024, applies to Boeing Special Attention Service Bulletin 767–25–0550, Revision 2, dated December 18, 2023, and was approved and published as an alternative to accomplishing the requirements specified by paragraph (g) of AD 2021–12–11 Amendment 39–21598 (86 FR 33112, June 24, 2021) (AD 2021–12–11).

The FAA notes that the approved FAA AMOC letter 522–24–00097, dated March 12, 2024, allows Boeing AMOC Notice 767–25–0550 AMOC 01, dated March 13, 2024, as an alternative to certain steps in Boeing Special Attention Service Bulletin 767–25–0550 Revision 2, dated December 18, 2023. FAA AMOC letter 522–24–00097, dated March 12, 2024, was previously approved for use in AD–2021–12–11. The FAA has revised paragraph (h)(4) of this AD to include FAA AMOC letter 522–24–00097, dated March 12, 2024, as an approved AMOC for the corresponding actions specified in paragraph (g) of this AD.

Effect of Winglets on Accomplishment of the Proposed Actions

Aviation Partners Boeing stated that the installation of winglets per Supplemental Type Certificate (STC) ST01920SE does not affect compliance with the proposed actions.

The FAA agrees with the commenter that STC ST01920SE does not affect the accomplishment of the manufacturer's service instructions. Therefore, the installation of STC ST01920SE does not affect the ability to accomplish the actions required by this AD. The FAA has not changed this AD in this regard.

Conclusion

The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Boeing Special Attention Service Bulletin 767–25–0550, Revision 2, dated December 18, 2023. This material specifies procedures for replacing insulation blankets in the cargo compartment with insulation blankets with integrated fire stops.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 32 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Replacement	270 work-hours × $85 per hour = $22,950	$35,900	$58,850	$1,883,200

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–24–05 The Boeing Company: Amendment 39–22895; Docket No. FAA–2024–1698; Project Identifier AD–2024–00005–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 767–300F series airplanes, certificated in any category, identified as Group 7, 11 through 15, and 18 in Boeing Special Attention Service Bulletin 767–25–0550, Revision 2, dated December 18, 2023.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/Furnishings.

(e) Unsafe Condition

This AD was prompted by a determination that certain cargo compartment insulation blankets do not adequately fit some locations and allow smoke to migrate past the cargo compartment. The FAA is issuing this AD to require replacing these cargo compartment insulation blankets. The unsafe condition, if not addressed, could result in a fire in the bilge area of the cargo compartment, which if not contained could lead to a smoke and fire event in the passenger compartment.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Within 36 months after the effective date of this AD, do all applicable actions identified as ''RC'' (required for compliance) in, and in accordance with, the Accomplishment Instructions of Boeing Special Attention Service Bulletin 767–25–0550, Revision 2, dated December 18, 2023.

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (i) of this AD. Information may be emailed to: *AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, FAA, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) FAA AMOC letter 522–24–00097, dated March 12, 2024, approved for AD 2021–12–11, Amendment 39–21598 (86 FR 33112, June 24, 2021) is approved as an AMOC for the corresponding provisions of Boeing Special Attention Service Bulletin 767–25–0550, Revision 2, dated December 18, 2023, that are required by paragraph (g) of this AD.

(5) For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (h)(5)(i) and (ii) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or substep is labeled ''RC Exempt,'' then the RC requirement is removed from that step or substep. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(i) Related Information

For more information about this AD, contact Julie Linn, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 206–231–3684; email: *julie.linn@faa.gov.*

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Special Attention Service Bulletin 767–25–0550, Revision 2, dated December 18, 2023.

(ii) [Reserved]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2023–2403; Project Identifier AD–2023–00888–T; Amendment 39–22893; AD 2024–24–03]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain The Boeing Company Model MD–11 and MD–11F airplanes. This AD was prompted by a report of a Model MD–11F airplane experiencing an uncommanded deployment of a thrust reverser in flight at low altitude. This AD requires initial and repetitive detailed inspections and repetitive wire integrity tests of the engine pylon thrust reverser control system wire harnesses, junction box assembly and junction box cover, left-side and right-side thrust reverser electrical harnesses, core (engine compartment) miscellaneous wire harness assembly, and 30-degree bulkhead wire harness assembly; and applicable on-condition actions. This AD also requires reporting inspection results. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2023–2403; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

• For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*

• You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2023–2403.

FOR FURTHER INFORMATION CONTACT: Tak Kobayashi, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone 206–231–3553; email *takahisa.kobayashi@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain The Boeing Company Model MD–11 and MD–11F airplanes equipped with General Electric (GE) CF6–80C2D1F high-bypass turbofan engines. The NPRM published in the **Federal Register** on December 29, 2023 (88 FR 90134). The NPRM was prompted by a report of a Model MD–11F airplane equipped with three GE CF6–80C2D1F high-bypass turbofan engines experiencing an uncommanded deployment of a thrust reverser in flight at low altitude. In the NPRM, the FAA proposed to require a one-time detailed inspection of the engine pylon thrust reverser control system wire harnesses; repetitive detailed inspections and wire integrity tests of the engine pylon thrust reverser control system wire harnesses, junction box assembly and junction box cover, left-side and right-side thrust reverser electrical harnesses, core (engine compartment) miscellaneous wire harness assembly, and 30-degree bulkhead wire harness assembly; and applicable on-condition actions. The FAA also proposed to require reporting inspection results. The FAA is issuing this AD to address uncommanded deployment of a thrust reverser in flight at low altitude, which could result in loss of flight control of the airplane and loss of continued safe flight and landing.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from the Air Line Pilots Association, International (ALPA), who supported the NPRM without change.

The FAA received additional comments from five commenters, including Boeing, FedEx Express (FedEx), United Parcel Service (UPS), and two individuals. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Delete an Incorrect Location

Boeing requested that the FAA delete the text ''(in the pylon)'' in the Summary and Material Incorporated by Reference under 1 CFR part 51 section of the NPRM. Boeing explained that the text ''(in the pylon)'' implies that the wire integrity tests shall be applied only to the pylon wiring as part of the repetitive wire integrity tests. Boeing stated that these tests also apply to the engine pylon thrust reverser control system wiring from the nose of the airplane.

The FAA agrees with the request. While a detailed inspection is performed on the wire harnesses in the pylon, the location for performing the wire integrity tests of the engine pylon thrust reverser control system wire harnesses is not limited to the pylon. The FAA has deleted the text ''(in the pylon)'' in this final rule accordingly.

Concern for the Workability of the Service Bulletin

FedEx expressed their concern regarding the workability of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023. FedEx stated that a prime example of complexity in Work Package 2 of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, is Part 19, which requires actions to be concurrently performed on the left and right thrust reverser halves, instead of having two separate PARTs to perform required actions on each thrust reverser half independently from the other thrust reverser half. This results in the need to evaluate four possible conditions of the wire harnesses on the left and right thrust reverser halves. The commenter stated that due to complexity of the service bulletin as well as the sheer scope of the work being performed, a significant risk exists for introducing human errors during the accomplishment of the required work.

The FAA recognizes that the work instructions provided in this service bulletin are extensive and complex. Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, was revised to Revision 1, dated June 4, 2024, to correct errors and improve clarity. The FAA reviewed Revision 1 of the service bulletin and determined it provides adequate information. Although the work instructions provided in the original and revised service bulletins are extensive and complex, the actions specified in the service bulletin that is required by this AD are necessary to address the unsafe condition. This AD mandates Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, and provides credit for actions accomplished before the effective date of this AD using Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023. In addition, the exception in paragraph (h)(2) of the proposed AD was addressed and corrected in Revision 1 of the service bulletin; therefore, paragraph (h)(2) of the proposed AD was removed from this AD. The current instructions in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, and Revision 1, dated June 4, 2024, can be followed without any major issue that would prevent accomplishment of the required actions. Further, additional actions in the revised service bulletin are intended for best maintenance practice and not necessary to address the unsafe condition. Those additional actions include the detailed inspection of the junction box assembly for any loose electrical connection in Step 1, Part 10, and application of torque to any loose electrical connection in Step 2, Part 11 of the revised service bulletin. Therefore, those parts in either the original or Revision 1 of the service bulletin are acceptable for compliance with the AD. For clarity, the FAA added a new exception to paragraph (h) of this AD specifying the added steps in Revision 1 of the service bulletin are not required for compliance with the AD.

Request To Remove Work Package 2

FedEx stated that Work Package 2 in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, is too broad in scope, and not supported or warranted by the results of the investigation. FedEx stated that a third protection feature to prevent in-flight thrust reverser deployment is not required for Model MD–11 airplanes since it was predicted that the airplane will be controllable with the thrust reverser deployed in air. FedEx stated that the outcome of the service event has served to validate this prediction. FedEx further stated that damaged wire bundles and grounds in the pylon discovered on the event airplane could have allowed energization of the pressure regulator shutoff valve (PRSOV) and directional pilot valve (DPV), which could result in in-flight thrust reverser deployment. No other element that could have contributed to the event was found by the investigation. Finally, FedEx stated that the actions in Work Package 2 will disturb the areas that are not routinely disturbed and therefore could introduce unintended consequences. FedEx added

that to properly accomplish Work Package 2, it is necessary to expend significant resources to deal with the complexity and extent of the requirements, including training of personnel.

The FAA does not agree with the request. The FAA infers that FedEx is requesting that Work Package 2 be removed from the requirements of the AD. Although the event airplane was safely brought back to the ground after in-flight uncommanded thrust reverser deployment, this does not suggest that Model MD–11 airplanes will be controllable under any anticipated operating condition with the thrust reverser deployed in air. Model MD–11 airplanes have not been demonstrated for their controllability when the deployment of single or dual thrust reverser halves is encountered on any single engine at low altitudes under anticipated operating conditions. The wiring damage discovered in the pylon of the event airplane was for the PRSOV and DPV circuits, and the manufacturer concluded that this damage was a contributing factor to the event. However, it is unclear what conditions resulted in power-to-power short—instead of power-to-ground [1] (shield), which would not result in uncommanded thrust reverser deployment. Based on available data, it is likely that a combination of conditions needs to be encountered to result in uncommanded thrust reverser deployment. Considering the age of the affected fleet, undetected degradation in wiring installation could have contributed to the event. Such a latent wiring anomaly could make an airplane vulnerable to a single failure that would impose a significant risk. Work Package 1 requires inspections of wiring in the pylon to detect any damage, and this action is intended to eliminate any similar condition discovered on the event airplane in a quick and practical manner. Work Package 2 requires wire integrity tests in addition to inspections of various wiring harnesses, and those actions are necessary to prevent and detect a potential latent anomalous condition of wiring installation. The FAA agrees that those actions are extensive, and the areas affected by the required actions are not routinely disturbed. However, in the FAA's assessment, Work Package 2 (which specifies the same substantive requirements in both the original issue and Revision 1 of Boeing Alert Service Bulletin MD11–78A017) is appropriate and necessary to understand and eliminate the root cause of the event, and the cost of any additional ''significant resources'' necessary to accomplish those actions would be outweighed by the safety benefits of the AD. This AD has not been changed regarding this request.

Request To Remove the Inspection Requirement for the Junction Box Assembly in Work Package 2

FedEx requested that the FAA remove the inspection requirement for the junction box assembly included in Work Package 2 in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023. FedEx stated that no chafed or burnt wires were found inside the junction box assembly of the event airplane or on numerous units examined as part of investigations. FedEx stated that removal of the junction box assembly for inspection will increase the risk of damage to the junction box assembly and surrounding wire harnesses.

The FAA does not agree with the request. Although the event airplane did not reveal any evidence directly linked to the PRSOV and DPV system wiring inside the junction box assembly, damage to those wires inside the junction box assembly could result in the same outcome encountered on the event airplane. The junction box assembly is a high-density area of wire routing, where wires with power are routed with the thrust reverser control wires. The inspection of the junction box assembly is intended to detect and eliminate any riding condition of wires since such condition could damage the thrust reverser control wires. The FAA does not have any data regarding the other units investigated. These units are subject to the same unsafe condition because of their similar design and installation. This AD has not been changed regarding this request.

Request To Remove the Required Actions on Engine 2

FedEx requested that the required actions on engine 2 (tail-mounted engine) be removed from the proposed AD. The commenter stated that in-flight deployment of a thrust reverser of engine 2 will have considerably less impact on controllability of the airplane than the wing-mounted engine 1 and engine 3. The commenter stated that wiring running through the wings and attaching structures are far more exposed to vibration and variable loading than those in the more stable tail structure. Because of the less harsh operating environment for engine 2, combined with the historical reliability and a lack of wire damage findings in the tail thrust reverser, FedEx concluded that the required actions on the engine are not justified.

The FAA does not agree with the request. As discussed earlier, Model MD–11 airplanes have not been demonstrated for their controllability when the deployment of single or dual thrust reverser halves is encountered on any single engine at low altitudes under anticipated operating conditions. Therefore, prevention of in-flight thrust reverser deployment is as critical for the tail-mounted engines as the wing-mounted engines. Also, routing of wire harnesses is not the same for the tail-mounted engines and wing-mounted engines as the wire routing is restricted by available space. Vibration is a factor that could contribute to wire chafing damage, but that is not the only factor. Available gaps between wire harnesses and surrounding structure as well as the types of wire support could also contribute to wire chafing damage. Therefore, an inspection of all engines, including engine 2, is critical and necessary. This AD has not been changed regarding this request.

Concern for Economic Impact

FedEx stated that the FAA considerably underestimated the economic impact to operators. FedEx claimed that the estimated costs in the NPRM completely ignored the expense of acquiring contingency material. Even if the inspections do not identify any out-of-limit conditions, operators must still be prepared for the eventuality of findings to prevent the possibility of extended grounding of airplanes. Preliminary attempts to acquire necessary spare materials have revealed little or no global supply. Boeing has not provided firm timelines for making spare materials available and pricing for this commitment. FedEx concluded that, because pricing has not been provided, it has not been correctly incorporated in the cost estimate of the NPRM.

The FAA acknowledges FedEx's concern but does not agree with the request. As explained in the NPRM, the FAA did not receive definitive data that would enable the FAA to provide a labor and parts cost estimate for the on-condition repairs or replacements. With regards to necessary parts, the manufacturer has been addressing this issue, and the FAA has concluded that the necessary spare materials would be available. To the extent spare parts may not exist to replace parts that fail the inspection requirements of this AD, the FAA cannot base its AD action on whether spare parts are available or can be produced. While every effort is made

[1] The words ''ground'' and ''shield'' may be used interchangeably in Boeing's documents.

to avoid grounding aircraft, the FAA must address the unsafe condition. However, if parts availability becomes a problem during compliance with the AD requirements, operators may request approval of an extension of the compliance time as an alternative method of compliance (AMOC) in accordance with the procedures specified in paragraph (k) of this AD, if the operator submits sufficient data to substantiate that an acceptable level of safety would be provided with such an extension. This AD has not been changed regarding this request.

Request for More Economical Solution

One individual requested that the FAA consider alternatives that could reduce the operational/economic burden on operators.

The commenter did not propose any alternative approach to addressing the unsafe condition. In developing the most appropriate solution, the FAA considered the recommendations of the manufacturer, the urgency associated with the unsafe condition, the availability of required parts, and the practical aspect of accomplishing the required actions within a period of time that corresponds to the normal scheduled maintenance for most affected operators. The FAA has determined that the cost to operators to comply with this AD, as proposed, is outweighed by the safety benefits.

Requests To Change Parts Necessary for Each Airplane Section in Service Bulletin

FedEx requested revision of the parts necessary for each airplane section in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, to make it workable. The commenter stated that the information provided in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, regarding parts necessary for each airplane is incomplete and insufficient for operators to effectively plan for the execution of the service bulletin requirements. The commenter stated that determining part numbers necessary for accomplishing the required action by researching Boeing documents should not fall under the operator's responsibility. The service bulletin provides an option of repair, but it will still require identification and availability of specific wire and related electrical components. The commenter stated that all part numbers of potentially affected assemblies and components would need to be identified in the service bulletin, or the materials necessary for repair would need to be available for procurement.

Similarly, UPS requested a comprehensive parts list in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, as well as a source of suitable available spares, prior to the implementation of the AD. UPS added that the components such as wiring and connectors are out of production, and available parts are limited. UPS requested that the AD be delayed until a suitable parts list and spare source are determined.

The FAA does not agree with the requests. Regarding the parts information provided in the service bulletin, the manufacturer anticipated that new replacement parts for full wire harnesses or junction box assemblies would not be available from suppliers. Therefore, a repair would be the only available option to address damaged or failed parts, unless serviceable parts removed from an airplane are installed as replacement parts for an affected airplane. As stated previously, if parts availability becomes a problem during compliance with the AD requirements, an operator may request approval of an extension of the compliance time as an AMOC in accordance with the procedures specified in paragraph (k) of this AD, if the operator submits sufficient data to substantiate that an acceptable level of safety would be provided with such an extension. The intent of the service bulletin was to provide sufficient information necessary to accomplish required actions instead of providing full details of all parts since providing such information for all wiring configurations would require a substantial amount of time for this urgent issue and may further complicate the service bulletin. Based on the information provided in the service bulletin and available documents, such as wiring diagrams, the illustrated parts catalog, and drawings, the operators should be able to determine the necessary parts for repairs. The manufacturer confirmed that they would support operators to confirm the necessary parts for accomplishing the required actions. This AD has not been changed regarding this request.

Request To Add an Instruction for a Condition With Multiple Options

FedEx requested that an instruction be added in the AD regarding how a required condition should be handled when the condition provides multiple options. The commenter stated that instructions identified as required for compliance (RC) are also identified as an option that is contingent on certain conditions being met and a choice being made by the operator. The commenter expressed a concern that if this is not directly addressed in the language of the AD, it is anticipated that these RC options will be difficult to deal with when maintenance work cards are generated, putting the technicians in the position of making a choice to sign off an AD-required step as not applicable for the option not taken.

The FAA does not agree with the comment. In addition to Section 1.E., Compliance, of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, or Revision 1, dated June 4, 2024, Note 13 in Section 3.A. of the service bulletin provides the instruction on how to handle a required condition when multiple options are provided under that condition. This instruction provided by a general note has been used in numerous service bulletins and is not unique to this specific service bulletin. Therefore, it is unnecessary to repeat this instruction in the AD. No further changes have been made to this AD regarding this request.

Request To Provide Instructions for Insulation Resistance Test

FedEx stated that Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, does not provide sufficient detail to ensure that wire harness insulation resistance checks in Parts 6 through 8 in the service bulletin are performed properly. The commenter recommended including a statement that each of the checks should be measured against ground. The commenter also stated that unless precautionary or explanatory statements are included to indicate application of 500V between the pins and each of the other contacts on the same connector may damage other components on the circuit, uncertainty around validating the test may result.

The FAA does not agree with the request. The insulation resistance check is a standard practice. The operators are expected to follow applicable instructions in the standard wiring practice manual to perform the test for the connectors specified in the service bulletin. The test requirement is to measure between every pin and ground (shielding) and between all two adjacent pins. This AD has not been changed regarding this request.

Request for Additional Details in Part 19 in the Service Bulletin

FedEx stated that the instructions for Part 19 in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, are too vague since the specific connectors and pins are not identified. FedEx added that Boeing does not have adequate data to specify the detail since the harnesses to be tested are not

controlled by Boeing. This lack of detail places the burden onto the operators to ensure that the tests are performed as intended. The commenter does not believe the instructions in the service bulletin are adequate to ensure successful compliance.

The FAA does not agree with the request. As the commenter stated, the manufacturer does not have the details of the pins or connectors, as the data for the wire harnesses is not controlled by Boeing. Further, due to the urgency of the unsafe condition, the FAA cannot delay issuance of this final rule further for Boeing to identify the connectors or pins. This will place the burden on the operators, but the operators should utilize available data and ensure that the tests are performed adequately based on input provided by the manufacturer. This AD has not been changed regarding this request.

Request To Revise the Work Instructions for Part 13 in the Service Bulletin

FedEx requested revision of the work instructions in Part 13 of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, which requires an inspection of the internal surface of the junction box cover per Figure 13 for burn marks, signs of arcing, and fretting. The commenter stated that many inspected junction boxes' covers exhibited smudges and discoloration that can be misinterpreted as soot and burn residual, rather than the dust from the harness lacings rubbing against the cover. The instructions as currently written may result in many false findings. The commenter requested that a note be added to the service bulletin to call attention to the possibility of the benign discoloration and allow for the presence of such residue.

The FAA partially agrees with the request. The FAA agrees that the work instructions in Part 13 of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, may result in false findings. However, this AD will require Revision 1 of the service bulletin. The work instructions in Part 13 of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, have been updated to eliminate the potential misinterpretation of the conditions found on the junction box cover during the inspection. No change to this AD has been made as a result of this comment.

Request To Revise Figures 14 and 15 in the Service Bulletin

FedEx requested that Figures 14 and 15 of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, be revised to remove the minimum clearance requirement between the wire harnesses and the junction box cover or to add a clarification stating that contact between the junction box cover and lacing material is acceptable. In the alternative, FedEx asked that the language of the proposed AD be revised to add an exemption to the minimum clearance requirement in paragraph (h) of the proposed AD. The commenter noted that Parts 14 and 15 of the service bulletin require a minimum clearance of 0.20 inch between the junction box cover and the wire bundles inside the junction box assembly. However, there is no instruction to confirm that this minimum clearance is maintained when the junction box cover is closed. The commenter stated that the wire harnesses inside the junction box assembly are very stiff and rigid and generally cannot be appreciably compacted. Although this condition may result in minor interference of the lacings with the cover, the commenter has not found any evidence of wire damage resulting from this contact.

The FAA partially agrees with the request. The FAA agrees that the instructions to achieve the required minimum clearance were unclear in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023. The work instructions have been revised in Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, for clarification. However, Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, or Revision 1, dated June 4, 2024, does not allow contact between the junction box cover and lacing material since such a condition may eventually result in wire damage. No change has been made to this AD as a result of this comment.

Request To Correct Typographical Errors

FedEx noted multiple errors and typographical errors in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, and requested revision of the service bulletin to correct these errors and typographical errors.

The errors and typographical errors identified by the commenter have been corrected in Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, which is the primary source of service information in this AD. No change has been made to this AD as a result of this comment.

Request To Revise the Compliance Time of the Reporting Requirement

FedEx requested revision of the compliance time of the reporting requirement in paragraph (i) of the proposed AD. The commenter stated that the proposed compliance time of 30 days is inadequate to prepare the data package and submit the reports. The commenter stated they do not understand the urgency of the reporting requirement considering the overall compliance span of the AD.

The FAA agrees that the proposed compliance time of 30 days for the reporting requirement is unnecessarily short considering the burden on the operators and the intent that those reports will be used for root cause assessment while managing the potential risk by the inspections. The FAA has revised the compliance time of paragraph (i) of this AD to 90 days accordingly.

Request To Change Reporting Requirements

FedEx requested that the FAA eliminate the reporting requirement of paragraph (i) of the proposed AD or revise the requirements to clarify what must be reported to meet the compliance criteria. The commenter was concerned that the reporting criteria in the service bulletin are open-ended and could be misinterpreted as to what qualifies as reportable and what level of detail is required. The commenter stated that because of the breadth of the reporting criteria involved, it would be extremely hard to definitively comply with the reporting requirement. Also, the commenter stated that the relationship between Boeing and the operators should be sufficient to ensure that findings will be provided to Boeing without a mandatory reporting requirement.

The FAA partially agrees with the request.

The FAA agrees to revise the reporting criteria for clarification so that the results of the inspections or tests are reported in a consistent manner. The reporting form in Appendix C of the original service bulletin was updated in Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024. The updated reporting forms in Appendixes C through E of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, provide clear instructions to address the concern expressed by the commenter.

The FAA disagrees, however, with the request to remove the reporting requirement in paragraph (i) of this AD. The findings provided by the reports will be used for the root cause assessment and the development of a final corrective action. Therefore, the reporting requirement is a critical piece of this interim action AD.

Request To Use Boeing Service Bulletin as an Optional Inspection

UPS requested that the actions specified in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, remain as an optional inspection until the root cause can be determined.

The FAA does not agree with the request. As discussed in the preamble of the NPRM, wiring damage was found in the engine pylon of the event airplane. The root cause of uncommanded thrust reverser deployment has not been determined yet, but the manufacturer concluded that wiring damage was a contributing factor of the event based on the assessment of on-wing data and laboratory inspection. The FAA considers this AD to be an interim action. The FAA issues an interim action AD when, for example, an unsafe condition that requires a mitigating action relatively quickly is identified on airplanes, but the root cause leading to the unsafe condition is still undetermined due to limited available data. In this case, the interim mitigating action is needed to address the overall risk of the unsafe condition. Based on the FAA's assessment, the actions required by this AD would mitigate the unsafe condition in the interim period while additional inspection data would allow the manufacturer to determine the root cause and develop an adequate corrective action. This AD has not been changed regarding this request.

Request To Delay Issuance of Final Rule

UPS requested that the effective date of the AD be extended until Boeing Alert Service Bulletin MD11–78A017 is revised. UPS stated that Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, identified in the NPRM is unworkable due to discrepancies and disagreements between the configurations specified in the instructions and the actual installation.

Because this AD has been changed to mandate Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, which clarifies these instructions, no further change is necessary to this AD as a result of this comment. The manufacturer also worked with the operators to ensure that the work instructions in Revision 1 can be accomplished. This AD has not been changed regarding this request.

Request To Extend the Compliance Time for Work Package 1 and Increase Labor Hours

UPS requested that the FAA revise paragraph (h) of the proposed AD to extend the compliance time of Work Package 1 of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, to 27 months from the current proposal of 12 months. UPS stated that the labor estimate provided in the service bulletin underestimates the tasks involved in Work Package 1. UPS estimated that about 700 work-hours would be involved, while Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, estimated 134.25 hours. Considering extensive work-hours and limited parts availability, UPS stated that the proposed compliance time of 12 months does not provide sufficient time to accomplish the required actions for the affected fleet.

The FAA does not agree with the request. The FAA infers that the labor estimates provided by UPS include the labor necessary for repairs. The labor estimates provided in the service bulletin do not include the labor necessary for repairs since a repair is an on-condition action that would be affected by the extent of the damage discovered on the affected parts. The FAA recognizes that a gap would exist between the estimates provided in the service bulletin and the actual labor needed for each airplane because of those on-condition actions. The FAA established the compliance time so that operators can accomplish this interim mitigation action in a quick and practical manner, considering the potential effect of the unsafe condition. The FAA also assessed parts availability and necessary labor and determined that the compliance time of 12 months would be appropriate for Work Package 1. Operators can request approval of an extension of the compliance time in accordance with paragraph (k) of this AD if operators can provide the evidence that would make the required compliance time impractical and justification for maintaining an acceptable level safety with such an extension. This AD has not been changed regarding these requests.

Request To Include Spare Engines and Thrust Reversers in Applicability

UPS requested that paragraph (c) of the proposed AD be revised to include spare engines and thrust reversers in the AD applicability. Although Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, requires inspections and repair of the components for the engines and thrust reversers, an engine or thrust reverser on which the actions of Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, were accomplished may be replaced with an engine or thrust reverser on which the actions specified in Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, have not been accomplished.

The FAA disagrees with the request. The FAA understands the concern of an AD-compliant engine or thrust reverser being inadvertently replaced with a non-AD-compliant engine or thrust reverser. However, the AD is issued to address the unsafe condition identified at the airplane level. The affected airplanes must be maintained in the AD-compliant configuration once each airplane is demonstrated to be compliant with the AD. Installing an engine or thrust reverser that has not been inspected or tested as required by this AD on an airplane that was demonstrated to be compliant with the AD is not allowed since such an action will bring the airplane back to a non-AD-compliant configuration, unless the engine or thrust reverser is inspected or tested as required by the AD prior to returning the airplane back to service. It is the operator's responsibility to maintain each airplane in the AD-compliant configuration. This AD has not been changed regarding this request.

Request for a Specific Interval Inspection

An individual commenter recommended that the FAA analyze the frequency of the occurrence of uncommanded thrust reverser deployment in air and determine a specific interval for this inspection.

Although the FAA agrees with the intent behind this request, it is not necessary to change the AD based on this request. The FAA already assessed the aspect the commenter raised. The FAA has assessed the risk of in-flight thrust reverser deployment, considering the frequency of occurrence based on available data, and determined that the compliance times for the initial and repetitive inspections are adequate. As discussed in the preamble of the NPRM, the actions required by this AD are considered an interim action. Additional data to be provided by the operators through the reporting requirement of this AD will enable the manufacturer to obtain better insight into the potential conditions that led to the event. Based on the information provided by those reports, the FAA may consider further rulemaking.

Conclusion

The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these

products. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024. This material specifies Work Package 1 inspection procedures to do an initial detailed inspection of the engine 1, engine 2, and engine 3 pylon thrust reverser control system wire harnesses. The material also specifies Work Package 2 procedures to do repetitive detailed inspections and wire integrity tests at the following locations: engine 1, engine 2, and engine 3 thrust reverser control system wire harnesses; junction box assembly and junction box cover (only detailed inspection); left side and right side thrust reverser electrical harnesses; core (engine compartment) miscellaneous wire harness assembly; and 30-degree bulkhead wire harness assembly. The material also specifies applicable on-condition actions (including repairs, replacements, installations, post-replacement inspections and tests, and return to service tests). The material also specifies that accomplishing the initial inspections and tests by doing Action 1 through Action 3 in Work Package 2 terminates the need to do the inspection in accordance with Part 2 as required in Work Package 1. However, this substitution of actions does not change the compliance time of Work Package 1 as specified in Table 1 of paragraph 1.E., ''Compliance,'' of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Interim Action

The FAA considers this AD to be an interim action. The reports that are required by this AD will enable the manufacturer to obtain better insight into the nature, cause, and extent of the unsafe condition, and eventually to develop final action to address the unsafe condition. If final action is later identified, the FAA might consider further rulemaking.

Costs of Compliance

The FAA estimates that this AD affects 79 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspections and Tests	Up to 78 work-hours × $85 per hour = Up to $6,630 per inspection/test cycle.	$0	Up to $6,630 per inspection/test cycle.	Up to $523,770 per inspection/test cycle.
Reporting	1 work-hour × $85 per hour = $85 per inspection/test cycle.	0	$85 per inspection/test cycle.	$6,715 per inspection/test cycle.

The FAA estimates the following costs to do any on-condition actions that would be required based on the results of the inspections and tests. The agency has no way of determining the number of aircraft that might need these repairs/replacements:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Repairs/Replacements/Tests	Up to 120 work-hours × $85 per hour = Up to $10,200	* $0	Up to $10,200.

* The FAA has received no definitive data that would enable the FAA to provide a parts cost estimate for the on-condition repairs/replacements specified in this AD.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to take approximately 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a

substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–24–03 The Boeing Company: Amendment 39–22893; Docket No. FAA–2023–2403; Project Identifier AD–2023–00888–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model MD–11 and MD–11F airplanes, certificated in any category, equipped with General Electric (GE) CF6–80C2D1F high-bypass turbofan engines.

(d) Subject

Air Transport Association (ATA) of America Code 78, Engine Exhaust.

(e) Unsafe Condition

This AD was prompted by a report of a Model MD–11F airplane experiencing an uncommanded deployment of a thrust reverser at approximately 500 feet above ground level. The FAA is issuing this AD to address uncommanded deployment of a thrust reverser in-flight at low altitude, which could result in loss of flight control of the airplane and loss of continued safe flight and landing.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Except as specified in paragraph (h) of this AD: At the applicable times specified in paragraph 1.E., ''Compliance,'' of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, do all applicable actions identified as ''RC'' (required for compliance) in, and in accordance with, the Accomplishment Instructions of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024.

(h) Exceptions to Service Bulletin Specifications

(1) Where the Compliance Time columns of the tables in the ''Compliance'' paragraph of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, use the phrase ''the original issue date of this service bulletin,'' this AD requires using the effective date of this AD.

(2) Where Step 1, Part 10 of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, specifies doing a detailed inspection of the junction box assembly for any loose electrical connection and Step 2, Part 11 of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024, specifies applying applicable torque to any loose electrical connection, those actions are not required for compliance with this AD.

(i) Reporting

At the applicable time specified in paragraph (i)(1) or (2) of this AD, submit a report to The Boeing Company via the Boeing Communication System (BCS) and include the information specified in Appendixes C, D, and E of Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024.

(1) If the inspection or test was done on or after the effective date of this AD: Submit the report within 90 days after the inspection or test.

(2) If the inspection or test was done before the effective date of this AD: Submit the report within 90 days after the effective date of this AD.

(j) Credit for Previous Actions

This paragraph provides credit for the actions specified in paragraphs (g) and (i) of this AD, if those actions were performed before the effective date of this AD using Boeing Alert Service Bulletin MD11–78A017, dated December 4, 2023, except where step 6.c.(2)(a), ''CONDITON 14 OPTION 1 (ACTION 1),'' and step 6.c.(2)(b)4)d), ''CONDITION 14.4 OPTION 2 (ACTION 1),'' of the Accomplishment Instructions of Boeing Service Bulletin MD11–78017, dated December 4, 2023, specify to replace the junction box, that replacement must be accomplished in accordance with ''PART 12: JUNCTION BOX REPLACEMENT'' of the Accomplishment Instructions of Boeing Service Bulletin MD11–78017, dated December 4, 2023.

(k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of AIR–520, Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (l)(1) of this AD. Information may be emailed to: *AMOC@faa.gov*.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, FAA, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) Except as specified by paragraph (h)(2) of this AD: For Boeing service bulletin that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (k)(4)(i) and (ii) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or substep is labeled ''RC Exempt,'' then the RC requirement is removed from that step or substep. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(l) Related Information

(1) For more information about this AD, contact Tak Kobayashi, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone 206–231–3553; email *takahisa.kobayashi@faa.gov*.

(2) Material identified in this AD that is not incorporated by reference is available at the address specified in paragraph (m)(3) of this AD.

(m) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Alert Service Bulletin MD11–78A017, Revision 1, dated June 4, 2024.

(ii) [Reserved]

(3) For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com*.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov*.

Issued on November 19, 2024.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–2134; Project Identifier MCAI–2024–00125–T; Amendment 39–22894; AD 2024–24–04]

RIN 2120–AA64

Airworthiness Directives; Airbus Defense and Space S.A. (Formerly Known as Construcciones Aeronauticas, S.A.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2018–18–09, which applied to all Airbus Defense and Space S.A. Model CN–235, CN–235–100, CN–235–200, and CN–235–300 airplanes; and certain Model C–295 airplanes. AD 2018–18–09 required a detailed inspection of the upper and lower lugs of each horizontal stabilizer-to-fuselage rear attachment fitting, repair if necessary, and a report of findings. This AD was prompted by reports of new occurrences of cracking. This AD requires repetitive inspections, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. This AD also revises the applicability. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2134; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–2134.

FOR FURTHER INFORMATION CONTACT: Shahram Daneshmandi, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3220; email *shahram.daneshmandi@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2018–18–09, Amendment 39–19388 (83 FR 45041, September 5, 2018) (AD 2018–18–09). AD 2018–18–09 applied to all Airbus Defense and Space S.A. Model CN–235, CN–235–100, CN–235–200, and CN–235–300 airplanes; and certain Model C–295 airplanes. AD 2018–18–09 required a detailed inspection of the upper and lower lugs of each horizontal stabilizer-to-fuselage rear attachment fitting, repair if necessary, and a report of findings. The FAA issued AD 2018–18–09 to address cracking, which could lead to reduced structural integrity of the lugs on the horizontal stabilizer-to-fuselage rear attachment fittings. The unsafe condition, if not addressed, could result in lug or fitting failure, and could result in reduced controllability of the airplane.

The NPRM published in the **Federal Register** on August 30, 2024 (89 FR 70582). The NPRM was prompted by AD 2024–0049, dated February 20, 2024, issued by EASA, which is the Technical Agent for the Member States of the European Union (EASA AD 2024–0049) (also referred to as the MCAI). The MCAI states that since EASA AD 2017–0218, dated November 8, 2017, was issued, new occurrences of cracking were reported and the manufacturer issued new material to provide instructions for repetitive high-frequency eddy current (HFEC) inspections for cracking of the affected part for all airplanes.

In the NPRM, the FAA proposed to require repetitive inspections, as specified in EASA AD 2024–0049. The NPRM also proposed to revise the applicability. The FAA is issuing this AD to address cracking, which could lead to reduced structural integrity of the lugs on the horizontal stabilizer-to-fuselage rear attachment fittings and consequent lug or fitting failure, and could result in reduced controllability of the airplane.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2134.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from a commenter who supported the NPRM without change.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comment received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0049 specifies procedures for repetitive HFEC inspections for discrepancies (including cracking, rework, and sharp corner radii) of the upper and lower lugs of

each horizontal stabilizer-to-fuselage rear attachment fitting and contacting the manufacturer for corrective actions. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 14 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
New actions	Up to 15 work-hours × $85 per hour = $1,275	None	Up to $1,275	Up to $17,850.

The FAA has received no definitive data on which to base the cost estimates for the on-condition actions specified in this AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:
■ a. Removing Airworthiness Directive (AD) 2018–18–09, Amendment 39–19388 (83 FR 45041, September 5, 2018); and
■ b. Adding the following new AD:

2024–24–04 Airbus Defense and Space S.A. (Formerly known as Construcciones Aeronauticas, S.A.): Amendment 39–22894; Docket No. FAA–2024–2134; Project Identifier MCAI–2024–00125–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

This AD replaces AD 2018–18–09, Amendment 39–19388 (83 FR 45041, September 5, 2018) (AD 2018–18–09).

(c) Applicability

This AD applies to all Airbus Defense and Space S.A. (formerly known as Construcciones Aeronauticas, S.A.) Model CN–235, CN–235–200, CN–235–300, and C–295 airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 55, Stabilizers.

(e) Unsafe Condition

This AD was prompted by a report that cracks were found on the horizontal stabilizer-to-fuselage rear attachment fitting. The FAA is issuing this AD to address cracking, which could lead to reduced structural integrity of the lugs on the horizontal stabilizer-to-fuselage rear attachment fittings. The unsafe condition, if not addressed, could result in lug or fitting failure, and could result in reduced controllability of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2024–0049, dated February 20, 2024 (EASA AD 2024–0049).

(h) Exceptions to EASA AD 2024–0049

(1) Where paragraph (1) of EASA AD 2024–0049 specifies to do the initial inspection within certain compliance times, for this AD, accomplish the initial inspection at the time specified in paragraph (h)(1)(i) or (ii) of this AD, whichever occurs later.

(i) At the applicable compliance time specified in paragraph (1) of EASA AD 2024–0049.

(ii) Within 50 flight cycles or 50 flight hours, whichever occurs first, after the effective date of this AD.

(2) Where paragraph (1) of EASA AD 2024–0049 specifies ''thereafter, at intervals as defined in paragraph 3.1.1 of the AOT,'' this AD requires replacing that text with ''thereafter, at intervals not to exceed the intervals defined in paragraph 3.1.1 of the AOT.''

(3) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0049.

(4) Where paragraph (2) of EASA AD 2024–0049 specifies ''If, during any inspection as required by paragraph (1) of this AD, discrepancies are detected, as defined in the AOT, before next flight, contact Airbus DS for approved corrective action instructions and accomplish those instructions accordingly,'' this AD requires replacing that text with ''If, during any inspection as required by paragraph (1) of this AD, any discrepancy is detected, the discrepancy must be repaired before further flight using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus Defense and Space S.A.'s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.''

(i) No Reporting Requirement

Although the material referenced in EASA AD 2024–0049 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (k) of this AD. Information may be emailed to: *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus Defense and Space S.A.'s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(k) Additional Information

For more information about this AD, contact Shahram Daneshmandi, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3220; email *shahram.daneshmandi@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0049, dated February 20, 2024.

(ii) [Reserved]

(3) For EASA AD 2024–0049, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this EASA AD on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

Issued on November 21, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2024–28787 Filed 12–6–24; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2023–1053; Project Identifier AD–2023–00164–T; Amendment 39–22891; AD 2024–24–01]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain The Boeing Company Model 757–200, –200CB, and –200PF series airplanes. This AD was prompted by a crack growth analysis, which indicated that current inspections are not adequate to detect cracks in certain sections of the upper frame at the frame splice between certain stringers before a single frame fails. This AD requires an inspection or records review for existing repairs, repetitive inspections for cracks of the upper frame at the frame splices between certain stringers in certain sections, and applicable on-condition actions. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2023–1053, or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2023–1053.

FOR FURTHER INFORMATION CONTACT: Wayne Ha, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: 562–627–5238; email: *wayne.ha@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain The Boeing Company Model 757–200, –200CB, and –200PF series airplanes. The NPRM published in the **Federal Register** on July 24, 2023 (88 FR 47402). The NPRM was prompted by a crack growth analysis, which indicated that current inspections are not adequate to detect cracks in certain sections of the upper frame at the frame splice between certain stringers before a single frame fails. In the NPRM, the FAA proposed to require an inspection or records review for existing repairs, repetitive inspections for cracks of the upper frame at the frame splices between certain stringers in certain sections, and applicable on-condition actions.

The FAA issued a supplemental notice of proposed rulemaking (SNPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain The Boeing Company Model 757–200, –200CB, and –200PF series airplanes. The SNPRM published in the **Federal Register** on April 22, 2024 (89 FR 29274). The SNPRM was prompted by a determination that the repetitive inspection intervals for airplanes that were modified by Aviation Partners Boeing (APB) supplemental type certificate (STC) ST01518SE needed to be revised. The SNPRM proposed to require the actions specified in the NPRM, with certain revised compliance times.

The FAA is issuing this AD to address cracking at the upper frames common to the splice at stringers S–13 to S–14, which could interact with fuselage skin cracking at the stringer S–14 lap splice. This unsafe condition, if not addressed, could result in the inability of a principal structural element to sustain

limit loads, and could adversely affect the structural integrity of the airplane.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from Boeing who supported the SNPRM without change.

The FAA received additional comments from FedEx Express, United Airlines (United), and European Air Transport Leipzig GmbH (EATL). The following presents the comments received on the SNPRM and the FAA's response to each comment.

Request To Use Different Figures

FedEx Express noted that its 757 fleet has been modified by VT MAE STC ST03562AT, passenger-to-freighter modification for Model 757–200 series airplanes, which adds a main deck cargo door to the airplane. After consultation with the STC holder, FedEx Express requested modifications for Groups 1, 2, and 3 of Boeing Alert Requirements Bulletin 757–53A0115, dated January 25, 2022, for airplanes modified by VT MAE STC ST03562AT. FedEx Express requested using the different figures from the requirements bulletin for the factory freighter airplanes along with shorter repeat intervals associated with those figures. FedEx Express stated that all other figures along with the method of inspections called out in the requirements bulletin will be complied with according to their respective effectivity.

The FAA finds no justification for airplanes modified by VT MAE STC ST03562AT to utilize the inspections, methods, and intervals in Groups 1, 2, and 3 of Boeing Alert Requirements Bulletin 757–53A0115, dated January 25, 2022. FedEx did not provide sufficient justification and data for airplanes modified by VT MAE STC ST03562AT to support a revision to this AD. Operators must request approval of an alternative method of compliance (AMOC) for airplanes modified by VT MAE STC ST03562AT to address the unsafe condition of this AD and comply with its requirements. For those airplanes, the FAA has added paragraph (h)(4) of this AD to provide an exception to the actions specified in Boeing Alert Requirements Bulletin 757–53A0115, dated January 25, 2022.

Comment Regarding Compliance Time

United stated that the proposed requirement to divide the applicable compliance times and repeat intervals specified in Boeing Alert Requirements Bulletin 757–53A0115, dated January 25, 2022, by a factor of two is excessive and could create an undue burden on the operators. United added that the FAA did not provide details regarding how it determined requiring a reduction in compliance by a factor of two. United understood that a reduction is necessary because APB does not yet have an approved service bulletin to provide its compliance requirements. However, United believed the reduction required by APB will likely show a factor of two is not an accurate determination.

EATL stated the proposed exception in paragraph (h)(3) of the proposed AD includes strong penalties for airplanes equipped with winglets, as modified by APB STC ST01518SE. EATL noted Boeing and APB usually work closely together to align impacts generated by installation of winglets, which is then included in the compliance tables of the requirements bulletin. EATL added that Boeing Alert Requirements Bulletin 757–53A0115, dated January 25, 2022, does not include such penalties or any indication that installation of winglets affects the compliance times.

EATL stated the proposed exception in paragraph (h)(3) of the proposed AD would prevent airplanes equipped with winglets, as modified by APB STC ST01518SE, from scheduling the inspections required by this AD during base maintenance events. EATL requested that the FAA re-evaluate halving the applicable compliance times and repeat intervals specified in Boeing Alert Requirements Bulletin 757–53A0115, dated January 25, 2022.

The FAA stated the reduction in compliance by a factor of two is to allow for APB to complete its evaluation of airplanes with APB STC ST01518SE installed. The FAA determined this is a conservative and appropriate compliance time for this AD. No changes have been made to this AD in this regard.

Conclusion

The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the SNPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022. This material specifies procedures for a general visual inspection (GVI) or records review between stringers S–13 and S–14 in Sections 43 and 46 for existing repairs. This material also describes procedures, depending on the configuration, for repetitive high frequency eddy current (HFEC) and low frequency eddy current (LFEC) inspections for cracking of the upper frames and splice doublers at the frame splices between stringers S–13 and S–14, left- and right-hand sides, in Sections 43 and 46; and applicable on-condition actions. On-condition actions include repair.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 456 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
GVI	2 work-hours × $85 per hour = $170 per inspection cycle.	$0	$170 per inspection cycle	$77,520 per inspection cycle.
Repetitive Inspections	Up to 267 work-hours × $85 per hour = Up to $22,695 per inspection cycle.	0	Up to $22,695 per inspection cycle.	Up to $10,348,920 per inspection cycle.

The FAA has received no definitive data on which to base the cost estimates for the on-condition repairs specified in this AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–24–01 The Boeing Company: Amendment 39–22891; Docket No. FAA–2023–1053; Project Identifier AD–2023–00164–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 757–200, –200CB, and –200PF series airplanes, certificated in any category, as identified in Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by a crack growth analysis, which indicated that current inspections are not adequate to detect cracks in the Sections 43 and 46 upper frame at the frame splice between stringers S–13 and S–14 before a single frame fails. The FAA is issuing this AD to address cracking at the upper frames common to the splice at stringers S–13 to S–14, which could interact with fuselage skin cracking at the stringer S–14 lap splice. The unsafe condition, if not addressed, could result in the inability of a principal structural element to sustain limit loads, and could adversely affect the structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Except as specified by paragraph (h) of this AD: At the applicable times specified in the ''Compliance'' paragraph of Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022.

Note 1 to paragraph (g): Guidance for accomplishing the actions required by this AD can be found in Boeing Alert Service Bulletin 757–53A0115, dated January 25, 2022, which is referred to in Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022.

(h) Exceptions to Service Information Specifications

(1) Where the Compliance Time columns of the tables in the ''Compliance'' paragraph of Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022, use the phrase ''the original issue date of Requirements Bulletin 757–53A0115 RB,'' this AD requires using the effective date of this AD.

(2) Where Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022, specifies contacting Boeing for repair instructions or for alternative inspections: This AD requires doing the repair and doing the alternative inspections and applicable on-condition actions using a method approved in accordance with the procedures specified in paragraph (i) of this AD.

(3) For airplanes on which winglet structural provisions (original equipment manufacturer (OEM) wingtips) or Aviation Partners Boeing (APB) winglets have been installed in accordance with APB Supplemental Type Certificate (STC) ST01518SE: This AD requires dividing the applicable compliance times and repeat intervals specified in the ''Compliance'' paragraph of Boeing Requirements Bulletin 757–53A0115 RB, dated January 25, 2022, by a factor of two.

(4) For airplanes modified by VT MAE STC ST03562AT: Where paragraph (g) of this AD requires doing ''all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022,'' this AD requires obtaining inspection instructions and applicable repair instructions in accordance with the procedures specified in paragraph (i) of this AD at the later of the compliance times specified in paragraphs (h)(4)(i) and (ii) of this AD. Comply with all applicable instructions at the time specified in the instructions.

(i) Before 50,000 total flight cycles.

(ii) Within 2,500 flight cycles after the effective date of this AD.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to: *AMOC@faa.gov*.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(j) Related Information

(1) For more information about this AD, contact Wayne Ha, Aviation Safety Engineer,

Continued Operational Safety Branch, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: 562–627–5238; email: *wayne.ha@faa.gov*.

(2) Service information identified in this AD that is not incorporated by reference is available at the address specified in paragraph (k)(3) of this AD.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Alert Requirements Bulletin 757–53A0115 RB, dated January 25, 2022.

(ii) [Reserved]

(3) For Boeing material identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website *myboeingfleet.com*.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov*.

Issued on November 19, 2024.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–0468; Project Identifier MCAI–2023–00762–T; Amendment 39–22898; AD 2024–24–08]

RIN 2120–AA64

Airworthiness Directives; Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. This AD was prompted by multiple occurrences of pilot and co-pilot seats locking in a fore-aft position due to the seat fore-aft adjustment mechanism disconnecting, caused by a broken cotter pin in the seat base egress linkage. This AD requires modifying the pilot and co-pilot seats by replacing the hardware of the seat base egress linkage, as specified in a Transport Canada AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–0468; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For Transport Canada material identified in this AD, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca*. You may find this material on the Transport Canada website at *tc.canada.ca/en/aviation.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–0468.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Airbus Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. The NPRM published in the **Federal Register** on March 21, 2024 (89 FR 20144). The NPRM was prompted by AD CF–2023–40, dated June 13, 2023, issued by Transport Canada, which is the aviation authority for Canada (Transport Canada AD CF–2023–40) (also referred to as the MCAI). The MCAI states that there have been in-service occurrences of pilot and co-pilot seats becoming locked in a fore-aft position due to disconnection of the seat fore-aft adjustment mechanism caused by a broken cotter pin in the seat base egress linkage.

In the NPRM, the FAA proposed to require modifying the pilot and co-pilot seats by replacing the hardware of the seat base egress, as specified in Transport Canada AD CF–2023–40. The FAA is issuing this AD to address the disconnection of the seat fore-aft adjustment mechanism caused by a broken cotter pin in the seat base egress linkage. The unsafe condition, if not addressed, could result in a significant increase in crew workload for continued safe flight and landing.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–0468.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from two commenters, including Collins Aerospace and Delta Airlines (Delta). The following presents the comments received on the NPRM and the FAA's response to each comment.

Request for Later-Approved Service Information

Collins Aerospace and Delta requested that the FAA edit paragraph (h)(3) of the proposed AD so that it would allow the use of later service information. Paragraph (h)(3) of the proposed AD would mandate Goodrich Interiors Service Bulletin 1430–25–003, Revision C, dated November 22, 2022.

The FAA disagrees with the request. Transport Canada AD CF–2023–40, dated June 13, 2023, refers to ''Airbus Canada Service Bulletin (SB) BD500–251006, Issue 001, dated 05 April 2023, or later revisions approved by the Chief, Continuing Airworthiness, Transport Canada,'' but does not specifically allow later-approved revisions of any service information cited in that Airbus Canada service bulletin. The FAA has not changed this AD as a result of this comment.

Request for Clarification of Paragraph (h)(3) of Proposed AD

Delta requested clarification of the wording in (h)(3) of the proposed AD

where it is specified to ''Do Goodrich Interiors Service Bulletin 1430–25–003'' and to update paragraph (h)(3) of the proposed AD to include either ''refer to'' or ''in accordance with.'' The commenter would like clarification whether the verb ''do'' implies ''refer to'' or ''in accordance with.'' Conditional on the FAA's concurrence with this request, Delta also requested an additional similar exception be included in paragraph (h) of the proposed AD to allow accomplishment of the operational test specified in Goodrich Interiors Service Bulletin 1430–25–003 instructions for the Function Check under Section 3.F. using the A220 AMP Task BD500–A–J25–11–00–01AAA–320A–A in lieu of CMM 25–11–20.

The FAA disagrees with changing paragraph (h)(3) of this AD to include ''refer to'' or ''in accordance with.'' To clarify, this AD and the service information use the word ''do'' to communicate what operators need to accomplish, and therefore indicates a required action.

Request for Additional Exception

Delta requested the addition of the following paragraph: ''(h)(4) As the Goodrich Interiors Service Bulletin 1430–25–003 have instructions of removal and installation of the affected seats from the seat tracks, this AD allows the seat removal and installation procedures using the AMP procedures as listed in the procedure of Service Bulletin BD500–251006 Issue No. 001, dated 05 April 2023, or later revisions approved by the Chief, Continuing Airworthiness, Transport Canada.'' Airbus SB BD500–251006 Issue 001 Procedures section and Goodrich Interiors SB 1430–25–003 Accomplishment Instructions section both state that the pilot seats need to be removed, so the commenter is concerned with confusion due to both service bulletins giving instructions to perform the same tasks.

The FAA agrees that the repetition of steps in the Airbus and Goodrich Interiors SB could lead to confusion if operators are trying to follow SB steps. The AD should clarify what procedures the operators should follow because operators may not know whether they are in compliance with this AD if there are steps that cannot be accomplished. The FAA has added paragraph (h)(4) to this AD to allow the use of only Airbus SB BD500–251006, Issue 001, dated April 5, 2023, for seat removal and installation procedures.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

Transport Canada AD CF–2023–40 specifies procedures for modifying the pilot and co-pilot seats by replacing the hardware of the seat base egress linkage. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 23 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 2 work-hours × $85 per hour = $170	Up to $200	Up to $370	Up to $8,510.

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–24–08 Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.): Amendment 39–22898; Docket No. FAA–2024–0468; Project Identifier MCAI–2023–00762–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Canada Limited Partnership (Type Certificate previously held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Model BD–500–1A10 and BD–500–1A11 airplanes, certificated in any category, as identified in Transport Canada AD CF–2023–40, dated June 13, 2023 (Transport Canada AD CF–2023–40).

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/Furnishings.

(e) Unsafe Condition

This AD was prompted by multiple occurrences of pilot and co-pilot seats locking in a fore-aft position due to the seat fore-aft adjustment mechanism disconnecting. The FAA is issuing this AD to address the disconnection of the seat fore-aft adjustment mechanism caused by a broken cotter pin in the seat base egress linkage. The unsafe condition, if not addressed, could result in a significant increase in crew workload for continued safe flight and landing.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada AD CF–2023–40.

(h) Exceptions to Transport Canada AD CF–2023–40

(1) Where Transport Canada AD CF–2023–40 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Transport Canada AD CF–2023–40 refers to ''hours air time,'' this AD requires using flight hours.

(3) Where the service information referenced in Transport Canada AD CF–2023–40 specifies to ''Do Goodrich Interiors Service Bulletin 1430–25–003,'' this AD requires replacing that text with ''Do Goodrich Interiors Service Bulletin 1430–25–003, Revision C, dated November 22, 2022.''

(4) Where the service information specified in Transport Canada AD CF–2023–40 specifies removal and installation steps in accordance with both Airbus Canada Limited Partnership Service Bulletin BD500–251006 and Goodrich Interiors Service Bulletin 1430–25–003, this AD does not require the removal/installation steps in Goodrich Interiors Service Bulletin 1430–25–003.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (j) of this AD. Information may be emailed to *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i)(2) of this AD, if any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact Fatin Saumik, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone 516–228–7300; email *fatin.r.saumik@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Transport Canada AD CF–2023–40, dated June 13, 2023.

(ii) [Reserved]

(3) For Transport Canada AD CF–2023–40 identified in this AD, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca.* You may find this Transport Canada AD on the Transport Canada website at *tc.canada.ca/en/aviation.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locationsoremailfr.inspection@nara.gov.*

Issued on November 22, 2024.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–1890; Project Identifier MCAI–2024–00087–T; Amendment 39–22899; AD 2024–24–09]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2022–24–05, which applied to all Airbus SAS Model A318, A319, A320, and A321 series airplanes. AD 2022–24–05 required repetitive inspections of certain galleys for corrosion of trolley retainer aluminum blocks and delamination of the upper panel of the trolley compartment, and applicable corrective action. This AD was prompted by the list of affected galleys being revised, and a new modification that was developed to restore the design integrity of the affected galleys. This AD continues to require the actions in AD 2022–24–05, provides optional terminating action for the repetitive inspections, revises the list of affected parts, and prohibits the installation of affected parts under certain conditions; as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–1890; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–1890.

FOR FURTHER INFORMATION CONTACT:

Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: 817–222–5102; email: *Timothy.P.Dowling@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2022–24–05, Amendment 39–22245 (87 FR 74291, December 5, 2022) (AD 2022–24–05). AD 2022–24–05 applied to all Airbus SAS Model A318–111, –112, –121, and –122 airplanes; Model A319–111, –112, –113, –114, –115, –131, –132, –133, –151N, –153N, and –171N airplanes; Model A320–211, –212, –214, –216, –231, –232, –233, –251N, –252N, –253N, –271N, –272N, and –273N airplanes; and Model A321–111, –112, –131, –211, –212, –213, –231, –232, –251N, –251NX, –252N, –252NX, –253N, –253NX, –271N, –271NX, –272N, and –272NX airplanes. AD 2022–24–05 required repetitive inspections of certain galleys for corrosion of trolley retainer aluminum blocks and delamination of the upper panel of the trolley compartment, and applicable corrective actions. The FAA issued AD 2022–24–05 to address damage that could affect the galley's capability to hold the trolley under emergency landing loads, which could lead to trolley detachment, possibly resulting in blocking of an escape path during an emergency exit.

The NPRM published in the **Federal Register** on July 17, 2024 (89 FR 58086). The NPRM was prompted by AD 2024–0038, dated February 5, 2024, issued by EASA, which is the Technical Agent for the Member States of the European Union (EASA AD 2024–0038) (also referred to as the MCAI). The MCAI states that the list of affected galleys has been revised, and Airbus and the galley manufacturer have developed a modification to restore the design integrity of the affected galleys.

In the NPRM, the FAA proposed to continue to require the actions in AD 2022–24–05, provide optional terminating action for the repetitive inspections, revise the list of affected parts, and prohibit the installation of affected parts under certain conditions, as specified in EASA AD 2024–0038. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–1890.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from Airbus. The following presents the comment received on the NPRM and the FAA's response.

Request To Include a Missing Part Number

Airbus requested [1] that the FAA revise the NPRM to include a missing forward-facing galley part number. Airbus stated that the missing part number is 601891–006801, which is derived from the delivered part number 601891–001501 by the optional vendor service bulletin 601891–25–001501–002, as specified in Airbus Service Bulletin 25–1BK4.

The FAA agrees to include forward-facing galley, part number 601891–006801, in this AD. Part number 601891–006801 is derived from the unsafe part number 601891–001501; therefore, part number 601891–006801 has the same unsafe condition. The FAA confirmed with EASA that part number 601891–006801 is an affected part. The FAA has added paragraph (h)(5) of this AD to include part number 601891–006801 as an affected part.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comment received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0038 includes the following provisions:

- Procedures for repetitive general visual inspections of certain galleys for discrepancies including corrosion of trolley retainer aluminum blocks and delamination of upper panel of trolley compartment;
- Corrective actions including repeating the inspection at an earlier interval, repairing the trolley compartment upper panel, and limiting the trolley weight;
- Procedures for modifying the affected galleys as optional terminating action for the repetitive inspections;
- A revised the list of affected galleys; and
- Prohibition of the installation of affected parts unless the parts are inspected and corrected.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 1,425 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

[1] Airbus' comment on this AD was submitted directly to the FAA but has been placed into the rulemaking docket.

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Retained actions from AD 2022–24–05	2 work-hours × $85 per hour = $170	$0	$170	$242,250

ESTIMATED COSTS FOR OPTIONAL ACTIONS

Labor cost	Parts cost	Cost per product
Up to 40 work-hours × $85 per hour = $3,400	(*)	Up to $3,400.*

*The FAA has received no definitive data on which to base the cost estimates for the parts associated with the modification specified in this AD.

The FAA estimates the following costs to do any necessary on-condition action that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION COSTS

Labor cost	Parts cost	Cost per product
1 work-hours × $85 per hour = $85	$0	$85

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2022–24–05, Amendment 39–22245 (87 FR 74291, December 5, 2022); and

■ b. Adding the following new AD:

2024–24–09 Airbus SAS: Amendment 39–22899; Docket No. FAA–2024–1890; Project Identifier MCAI–2024–00087–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

This AD replaces AD 2022–24–05, Amendment 39–22245 (87 FR 74291, December 5, 2022) (AD 2022–24–05).

(c) Applicability

This AD applies to all Airbus SAS Model airplanes identified in paragraphs (c)(1) through (4) of this AD, certificated in any category.

(1) Model A318–111, –112, –121, and –122 airplanes.

(2) Model A319–111, –112, –113, –114, –115, –131, –132, –133, –151N, –153N, and –171N airplanes.

(3) Model A320–211, –212, –214, –216, –231, –232, –233, –251N, –252N, –253N, –271N, –272N, and –273N airplanes.

(4) Model A321–111, –112, –131, –211, –212, –213, –231, –232, –251N, –251NX, –252N, –252NX, –253N, –253NX, –271N, –271NX, –272N, and –272NX airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/Furnishings.

(e) Unsafe Condition

This AD was prompted by a report that damage (including delamination of work deck and corroded and cracked retainer blocks) was found during inspection of certain galleys. The FAA is issuing this AD to address damage that could affect the galley's capability to hold the trolley under emergency landing loads, which could lead to trolley detachment, possibly resulting in blocking of an escape path during an emergency exit.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2024–0038, dated February 5, 2024 (EASA AD 2024–0038).

(h) Exceptions to EASA AD 2024–0038

(1) Where EASA AD 2024–0038 refers to ''18 August 2021 [the effective date of the EASA AD 2021–0183 at original issue],'' this AD requires using January 9, 2023 (the effective date of AD 2022–24–05).

(2) Where EASA AD 2024–0038 refers to its effective date, this AD requires using the effective date of this AD.

(3) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0038.

(4) Where EASA AD 2024–0038 does not specify corrective action after a post-repair inspection that has findings of damage, this AD requires obtaining repair instructions before further flight from the FAA, EASA, or Airbus SAS's EASA Design Organization Approval (DOA), and accomplishing those actions accordingly. Any approval by the DOA must include the DOA-authorized signature.

(5) Where EASA AD 2024–0038 defines an affected part as ''Forward-facing galleys, having a Part Number (P/N) as listed in Appendix 1 of this AD,'' for this AD, replace that text with ''Forward-facing galleys, having a Part Number (P/N) as listed in Appendix 1 of this AD, or having P/N 601891–006801.''

(i) No Reporting Requirement

Although material referenced in EASA AD 2024–0038 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (k) of this AD. Information may be emailed to: *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (j)(2) of this AD, if any material contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(k) Additional Information

For more information about this AD, contact Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: 817–222–5102; email: *Timothy.P.Dowling@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0038, dated February 5, 2024.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this EASA AD on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on November 25, 2024.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2023–03–09, Amendment 39–22334 (88 FR 12139, February 27, 2023) (AD 2023–03–09). AD 2023–03–09 applied to certain ATR–GIE Avions de Transport Régional Model ATR72–101, –102, –201, –202, –211, –212, and –212A airplanes. AD 2023–03–09 required revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations. The FAA issued AD 2023–03–09 to address fatigue cracking and damage in principal structural elements, which could result in reduced structural integrity of the airplane.

The NPRM published in the **Federal Register** on August 20, 2024 (89 FR 67329). The NPRM was prompted by AD 2024–0053, dated February 23, 2024, issued by EASA, which is the Technical Agent for the Member States of the European Union (EASA AD 2024–0053) (also referred to as the MCAI). The MCAI states that new or more restrictive airworthiness limitations have been developed.

In the NPRM, the FAA proposed to continue to require the actions in AD 2023–03–09 and to require revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations, as specified in EASA AD 2024–0053. The FAA is issuing this AD to address fatigue cracking and damage in principal structural elements, which could result in reduced structural integrity of the airplane.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2128.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from Air Line Pilots Association, International (ALPA), who supported the NPRM without change.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comment received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0053, dated February 23, 2024, specifies new or more restrictive airworthiness limitations for airplane structures and safe life limits. EASA AD 2024–0053 states that the new limitations include repetitive operational tests as required by EASA AD 2020–0249R1, dated November 30, 2021 (EASA AD 2020–0249R1).

This AD also requires EASA AD 2022–0201, dated September 26, 2022, which the Director of the Federal Register approved for incorporation by reference as of April 3, 2023 (88 FR 12139, February 27, 2023).

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Related AD

EASA AD 2020–0249, dated November 11, 2020, corresponds to FAA AD 2020–26–17, Amendment 39–21372 (85 FR 81795, December 17, 2020) (AD 2020–26–17), which applies to Model ATR42 and ATR72 airplanes. Accomplishing the revision of the existing maintenance or inspection program required by paragraph (j) of this AD terminates the requirements of AD 2020–26–17 for Model ATR72 airplanes.

Costs of Compliance

The FAA estimates that this AD affects 41 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

The FAA has determined that revising the existing maintenance or inspection program takes an average of 90 work-hours per operator, although the agency recognizes that this number may vary from operator to operator. Since operators incorporate maintenance or inspection program changes for their affected fleet(s), the FAA has determined that a per-operator estimate is more accurate than a per-airplane estimate.

The FAA estimates the total cost per operator for the new actions to be $7,650 (90 work-hours × $85 per work-hour).

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2023–03–09, Amendment 39–22334 (88 FR 12139, February 27, 2023); and

■ b. Adding the following new AD:

2024–24–06 ATR–GIE Avions de Transport Régional: Amendment 39–22896; Docket No. FAA–2024–2128; Project Identifier MCAI–2024–00136–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

(1) This AD replaces AD 2023–03–09, Amendment 39–22334 (88 FR 12139, February 27, 2023) (AD 2023–03–09).

(2) This AD affects AD 2020–26–17, Amendment 39–21372 (85 FR 81795, December 17, 2020) (AD 2020–26–17).

(c) Applicability

This AD applies to ATR–GIE Avions de Transport Régional Model ATR72–101, –102, –201, –202, –211, –212, and –212A airplanes, certificated in any category, with an original airworthiness certificate or original export certificate of airworthiness issued on or before October 16, 2023.

(d) Subject

Air Transport Association (ATA) of America Code 05, Time Limits/Maintenance Checks.

(e) Unsafe Condition

This AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. The FAA is issuing this AD to address fatigue cracking and damage in principal structural elements. The unsafe condition, if not addressed, could result in reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Retained Revision of the Existing Maintenance or Inspection Program, With No Changes

This paragraph restates the requirements of paragraph (j) of AD 2023–03–09, with no changes. For airplanes with an original airworthiness certificate or original export certificate of airworthiness issued on or before September 21, 2022: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2022–0201, dated September 26, 2022 (EASA AD 2022–0201). Accomplishing the revision of the existing maintenance or inspection program required by paragraph (j) of this AD terminates the requirements of this paragraph.

(h) Retained Exceptions to EASA AD 2022–0201, With No Changes

This paragraph restates the exceptions specified in paragraph (k) of AD 2023–03–09, with no changes.

(1) Where EASA AD 2022–0201 refers to its effective date, this AD requires using April 3, 2023 (the effective date of AD 2023–03–09).

(2) The requirements specified in paragraphs (1) and (2) of EASA AD 2022–0201 do not apply to this AD.

(3) Paragraph (3) of EASA AD 2022–0201 specifies revising ''the approved AMP'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after April 3, 2023 (the effective date of AD 2023–03–09).

(4) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2022–0201 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2022–0201, or within 90 days after April 3, 2023 (the effective date of AD 2023–03–09), whichever occurs later.

(5) The provisions specified in paragraphs (4) and (5) of EASA AD 2022–0201 do not apply to this AD.

(6) The ''Remarks'' section of EASA AD 2022–0201 does not apply to this AD.

(i) Retained Provisions for Alternative Actions, With a New Exception

This paragraph restates the requirements of paragraph (l) of AD 2023–03–09, with a new exception. Except as required by paragraph (j) of this AD, after the existing maintenance or inspection program has been revised as required by paragraph (g) of this AD, no alternative actions (*e.g.,* inspections) and intervals are allowed unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2022–0201.

(j) New Revision of the Existing Maintenance or Inspection Program

Except as specified in paragraph (k) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2024–0053, dated February 23, 2024 (EASA AD 2024–0053). Accomplishing the revision of the existing maintenance or inspection program required by this paragraph terminates the requirements of paragraph (g) of this AD.

(k) Exceptions to EASA AD 2024–0053

(1) This AD does not adopt the requirements specified in paragraphs (1) and (2) of EASA AD 2024–0053.

(2) Paragraph (3) of EASA AD 2024–0053 specifies revising ''the approved AMP,'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after the effective date of this AD.

(3) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2024–0053 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2024–0053, or within 90 days after the effective date of this AD, whichever occurs later.

(4) The provisions specified in paragraphs (4) and (5) of EASA AD 2024–0053 do not apply to this AD.

(5) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0053.

(l) New Provisions for Alternative Actions and Intervals

After the existing maintenance or inspection program has been revised as required by paragraph (j) of this AD, no alternative actions (*e.g.,* inspections)and intervals are allowed unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2024–0053.

(m) Terminating Action for AD 2020–26–17

Accomplishing the revision of the existing maintenance or inspection program required by paragraph (j) of this AD terminates the requirements of AD 2020–26–17, for Model ATR72 airplanes only.

(n) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (o) of this AD. Information may be emailed to: *AMOC@faa.gov.*

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or ATR–GIE Avions de Transport Régional's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(o) Additional Information

For more information about this AD, contact Shahram Daneshmandi, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3220; email: *shahram.daneshmandi@faa.gov.*

(p) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) The following material was approved for IBR on January 13, 2025.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0053, dated February 23, 2024.

(ii) [Reserved]

(4) The following material was approved for IBR on April 3, 2023 (88 FR 12139, February 27, 2023).

(i) EASA AD 2022–0201, dated September 26, 2022.

(ii) [Reserved]

(5) For EASA AD 2022–0201 and EASA AD 2024–0053, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find these EASA ADs on the EASA website at *ad.easa.europa.eu.*

(6) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(7) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locationsoremailfr.inspection@nara.gov.*

Issued on November 21, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–2139; Project Identifier MCAI–2024–00123–T; Amendment 39–22900; AD 2024–24–10]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2023–05–02, which applied to certain Airbus SAS Model A318, A319, A320, and A321 series airplanes. AD 2023–05–02 required revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations. This AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. This AD requires revising the existing maintenance or inspection program, as applicable, to incorporate additional new or more restrictive airworthiness limitations, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain other publication listed in this AD as of April 18, 2023 (88 FR 15600, March 14, 2023).

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2139; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–2139.

FOR FURTHER INFORMATION CONTACT: Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: 206–231–3667; email: *Timothy.P.Dowling@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2023–05–02, Amendment 39–22371 (88 FR 15600, March 14, 2023) (AD 2023–05–02). AD 2023–05–02 applied to certain Airbus SAS Model A318, A319, A320, and A321 series airplanes. AD 2023–05–02 required revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations. The FAA issued AD 2023–05–02 to address the risks associated with the effects of aging on airplane systems.

The NPRM published in the **Federal Register** on September 11, 2024 (89 FR 73608). The NPRM was prompted by AD 2024–0046, dated February 19, 2024, issued by EASA, which is the Technical Agent for the Member States of the European Union (EASA AD 2024–0046) (also referred to as the MCAI). The MCAI states that new or more restrictive airworthiness limitations have been developed.

In the NPRM, the FAA proposed to retain all of the requirements of EASA AD 2023–05–02. The FAA also proposed to require revising the existing maintenance or inspection program, as applicable, to incorporate additional new or more restrictive airworthiness limitations, as specified in EASA AD 2024–0046. The FAA is issuing this AD to address the risks associated with the effects of aging on airplane systems. Such effects could change system characteristics. The unsafe condition, if not addressed, could result in an increased potential for failure of certain life-limited parts, and reduced structural integrity of the airplane.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2139.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from three commenters, including Air Line Pilots Association, International (ALPA) and two individuals, who supported the NPRM without change.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined

that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0046 specifies new or more restrictive airworthiness limitations for airplane structures and safe life limits.

This AD also requires EASA AD 2022–0102, dated June 8, 2022, which the Director of the Federal Register approved for incorporation by reference as of April 18, 2023 (88 FR 15600, March 14, 2023).

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 1,920 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

The FAA estimates the total cost per operator for the retained actions from AD 2023–05–02 to be $7,650 (90 work-hours × $85 per work-hour).

The FAA has determined that revising the existing maintenance or inspection program takes an average of 90 work-hours per operator, although the agency recognizes that this number may vary from operator to operator. Since operators incorporate maintenance or inspection program changes for their affected fleet(s), the FAA has determined that a per-operator estimate is more accurate than a per-airplane estimate.

The FAA estimates the total cost per operator for the new actions to be $7,650 (90 work-hours × $85 per work-hour).

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2023–05–02, Amendment 39–22371 (88 FR 15600, March 14, 2023); and

■ b. Adding the following new AD:

2024–24–10 Airbus SAS: Amendment 39–22900; Docket No. FAA–2024–2139; Project Identifier MCAI–2024–00123–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

(1) This AD replaces AD 2023–05–02, Amendment 39–22371 (88 FR 15600, March 14, 2023) (AD 2023–05–02).

(2) This AD affects AD 2018–23–02, Amendment 39–19488 (83 FR 59278, November 23, 2018) (AD 2018–23–02).

(c) Applicability

This AD applies to Airbus SAS airplanes identified in paragraphs (c)(1) through (4) of this AD, certificated in any category, with an original airworthiness certificate or original export certificate of airworthiness issued on or before November 6, 2023.

(1) Model A318–111, –112, –121, and –122 airplanes.

(2) Model A319–111, –112, –113, –114, –115, –131, –132, –133, –151N, –153N, and –171N airplanes.

(3) Model A320–211, –212, –214, –216, –231, –232, –233, –251N, –252N, –253N, –271N, –272N, and –273N airplanes.

(4) Model A321–111, –112, –131, –211, –212, –213, –231, –232, –251N, –251NX, –252N, –252NX, –253N, –253NX, –271N, –271NX, –272N, and –272NX airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 05, Time Limits/Maintenance Checks.

(e) Unsafe Condition

This AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. The FAA is issuing this AD to address the risks associated with the effects of aging on airplane systems. Such effects could change system characteristics. The unsafe condition, if not addressed, could result in an increased potential for failure of certain life-limited parts, and reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Retained Revision of the Existing Maintenance or Inspection Program, With No Changes

This paragraph restates the requirements of paragraph (n) of AD 2023–05–02, with no changes. For airplanes with an original airworthiness certificate or original export certificate of airworthiness issued on or before February 18, 2022, comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2022–0102, dated June 8, 2022 (EASA AD 2022–0102). Accomplishing the revision of the existing maintenance or inspection program required by paragraph (j) of this AD terminates the requirements of this paragraph.

(h) Retained Exceptions to EASA AD 2022–0102, With No Changes

This paragraph restates the exceptions specified in paragraph (o) of AD 2023–05–02, with no changes.

(1) This AD does not adopt the requirements specified in paragraphs (1) and (2) of EASA AD 2022–0102.

(2) Paragraph (3) of EASA AD 2022–0102 specifies revising ''the approved AMP'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after April 18, 2023 (the effective date of AD 2023–05–02).

(3) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2022–0102 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2022–0102, or within 90 days after April 18, 2023 (the effective date of AD 2023–05–02), whichever occurs later.

(4) This AD does not adopt the provisions specified in paragraphs (4) and (5) of EASA AD 2022–0102.

(5) This AD does not adopt the ''Remarks'' section of EASA AD 2022–0102.

(i) Retained Restrictions on Alternative Actions and Intervals, With a New Exception

This paragraph restates the requirements of paragraph (p) of AD 2023–05–02, with a new exception. Except as required by paragraph (j) of this AD, after the existing maintenance or inspection program has been revised as required by paragraph (g) of this AD, no alternative actions (*e.g.,* inspections) or intervals are allowed unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2022–0102.

(j) New Revision of the Existing Maintenance or Inspection Program

Except as specified in paragraph (k) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2024–0046, dated February 19, 2024 (EASA AD 2024–0046). Accomplishing the revision of the existing maintenance or inspection program required by this paragraph terminates the requirements of paragraph (g) of this AD.

(k) Exceptions to EASA AD 2024–0046

(1) This AD does not adopt the requirements specified in paragraphs (1) and (2) of EASA AD 2024–0046.

(2) Paragraph (3) of EASA AD 2024–0046 specifies revising ''the AMP,'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after the effective date of this AD.

(3) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2024–0046 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2024–0046, or within 90 days after the effective date of this AD, whichever occurs later.

(4) This AD does not adopt the provisions specified in paragraphs (4) and (5) of EASA AD 2024–0046.

(5) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0046.

(l) New Provisions for Alternative Actions and Intervals

After the existing maintenance or inspection program has been revised as required by paragraph (j) of this AD, no alternative actions (*e.g.,* inspections) and intervals are allowed unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2024–0046.

(m) Terminating Action for Certain Requirements of AD 2018–23–02

Accomplishing the revision of the existing maintenance or inspection program required by paragraph (g) or (j) of this AD terminates the requirements of paragraphs (g) through (k) of AD 2018–23–02.

(n) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (o) of this AD and email to: *AMOC@faa.gov.*

(i) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(ii) AMOCs approved for AD 2023–05–02 are approved as AMOCs for the corresponding provisions of paragraph (g) of this AD.

(iii) AMOCs approved previously for AD 2023–05–02 are approved as AMOCs for the corresponding provisions of EASA AD 2024–0046 that are required by paragraph (j) of this AD.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(o) Additional Information

For more information about this AD, contact Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: 206–231–3667; email: *Timothy.P.Dowling@faa.gov.*

(p) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) The following material was approved for IBR on January 13, 2025.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0046, dated February 19, 2024.

(ii) [Reserved]

(4) The following material was approved for IBR on April 18, 2023 (88 FR 15600, March 14, 2023).

(i) EASA AD 2022–0102, dated June 8, 2022.

(ii) [Reserved]

(5) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*

(6) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(7) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on November 25, 2024.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–0995; Project Identifier MCAI–2023–01075–T; Amendment 39–22897; AD 2024–24–07]

RIN 2120–AA64

Airworthiness Directives; MHI RJ Aviation ULC (Type Certificate Previously Held by Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain MHI RJ Aviation ULC Model CL–600–2B19 (Regional Jet Series 100 & 440) airplanes. This AD was prompted by a determination that the overhead bin attachment could fail under certain conditions. This AD requires replacing existing overhead bin hook assemblies and support tubes with a different type, as specified in a Transport Canada AD, which is incorporated by reference (IBR). The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 13, 2025.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 13, 2025.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket

No. FAA–2024–0995; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For Transport Canada material identified in this AD, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca;* website at *tc.canada.ca/en/aviation.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available at *regulations.gov* under Docket No. FAA–2024–0995.

FOR FURTHER INFORMATION CONTACT: Fatin Saumik, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain MHI RJ Aviation ULC Model CL–600–2B19 (Regional Jet Series 100 & 440) airplanes. The NPRM published in the **Federal Register** on April 9, 2024 (89 FR 24745). The NPRM was prompted by AD CF–2023–71, dated October 16, 2023 (Transport Canada AD CF–2023–71) (also referred to as the MCAI), issued by Transport Canada, which is the aviation authority for Canada. The MCAI states that during a review of the certification test of the overhead bin configuration (also referred to as overhead storage compartment), it was discovered that the aft serrated hook attachment could fail when the overhead bin is subjected to the 9G forward emergency landing condition certification requirements. A design review revealed that a tolerance buildup could lead to a lack of engagement between the serrated hooks and the supporting serrated tube. This condition leads to a lack of forward load reaction capability, which is essential during an emergency landing, and could result in displacement of the overhead bins. As a result, the overhead bins could fall on the occupants and/or prevent access to emergency exits.

In the NPRM, the FAA proposed to require replacing existing overhead bin hook assemblies and support tubes with a different type, as specified in Transport Canada AD CF–2023–71. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–0995.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from Air Wisconsin Airlines. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request for Revising the Applicability

Air Wisconsin Airlines requested that the FAA list the serial numbers the proposed AD is applicable to, instead of stating the proposed AD applies to MHI RJ Aviation ULC Model CL–600–2B19 (Regional Jet Series 100 & 440) airplanes as identified in Transport Canada AD CF–2023–71. The commentator stated Transport Canada AD CF–2023–71 lists the applicable serial numbers.

The FAA disagrees with the request. As noted by the commenter, paragraph (c) of this AD states that this AD applies to Model CL–600–2B19 (Regional Jet Series 100 & 440) airplanes as identified in Transport Canada AD CF–2023–71, which lists the affected serial numbers. This AD was developed using the ''incorporate by reference (IBR) the MCAI'' method, which simplifies FAA ADs and facilitates a simpler AD process. The applicability of FAA ADs developed using the IBR the MCAI process identifies the airplane models that are on the U.S. type certificate data sheet and refers to the MCAI AD for the specific affected airplanes. The FAA has not changed this AD in this regard.

Request for Revising Estimated Costs

Air Wisconsin Airlines requested the FAA amend the ''Costs of Compliance'' paragraph in the NPRM to include an additional 120 hours if actions are not completed during a ''heavy check.'' The commenter stated that the estimate of 21 labor hours does not account for the removal and installation of interior products (*e.g.,* seats, sidewall, panels, ceiling panels, etc.) as specified in one of the aircraft maintenance manual (AMM) tasks.

The FAA agrees with the request. The FAA has revised the ''Costs of Compliance'' paragraph of this final rule accordingly.

Request To Refer to an Additional Document

Air Wisconsin Airlines requested the addition of MHI RJ Reference Instruction Letter (RIL) 10059, Revision A, dated June 6, 2024, to the proposed AD because AMM Task 25–23–01–400–805 was not yet published in the AMM. The commenter stated that MHI RJ Service Bulletin 601R–25–206, dated June 29, 2023, instructs installation of overhead bins and references AMM Task 25–23–01–400–805.

The FAA agrees with this request. MHI RJ Reference Instruction Letter (RIL) 10059, Revision A, dated June 6, 2024, may also be referred to for the installation of overhead bins. The FAA has added paragraph (h)(3) to this AD accordingly.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Material Incorporated by Reference Under 1 CFR Part 51

Transport Canada AD CF–2023–71 specifies procedures for the replacement of the existing serrated hook assemblies and serrated support tubes with hook assemblies using a shear pin and non-serrated support tubes on the overhead bins.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Costs of Compliance

The FAA estimates this AD affects 230 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
141 * work-hours × $85 per hour = $11,985	$1,764	$13,749	$3,162,270

* This figure does not include the time (up to 24 hours) for curing the sealant applied around the new hook assembly.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–24–07 MHI RJ Aviation ULC (Type Certificate Previously Held by Bombardier, Inc.): Amendment 39–22897; Docket No. FAA–2024–0995; Project Identifier MCAI–2023–01075–T.

(a) Effective Date

This airworthiness directive (AD) is effective January 13, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to MHI RJ Aviation ULC (Type Certificate previously held by Bombardier, Inc.) Model CL–600–2B19 (Regional Jet Series 100 & 440) airplanes, certificated in any category, as identified in Transport Canada AD CF–2023–71, dated October 16, 2023 (Transport Canada AD CF–2023–71).

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by a determination that the overhead bin attachment could fail under certain conditions. The FAA is issuing this AD to address a lack of forward load reaction capability during a high forward G emergency landing condition that could result in displacement of the overhead bins. The unsafe condition, if not addressed, could result in the overhead bins falling on the occupants and/or preventing access to emergency exits.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada AD CF–2023–71.

(h) Exception to Transport Canada AD CF–2023–71

(1) Where Transport Canada AD CF–2023–71 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Transport Canada AD CF–2023–71 refers to hours air time, this AD requires using flight hours.

(3) Where the service information specified in Transport Canada AD CF–2023–71, specifies to ''refer to AMM 25–23–01–400–805,'' for this AD, replace that text with '' refer to AMM 25–23–01–400–805 or MHI RJ Reference Instruction Letter (RIL) 10059, Revision A, dated June 6, 2024.''

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (j) of this AD and email to: *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or MHI RJ Aviation ULC's Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(j) Additional Information

For more information about this AD, contact Fatin Saumik, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Transport Canada AD CF–2023–71, dated October 16, 2023.

(ii) [Reserved]

(3) For Transport Canada material identified in this AD, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca.* You may find this Transport Canada AD on the Transport Canada website at *tc.canada.ca/en/aviation.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on November 21, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2024–1707; Airspace Docket No. 24–ASW–4]

RIN 2120–AA66

Amendment of VOR Federal Airways V–68, V–76, V–212, V–222, and V–558, and United States Area Navigation Route T–220 in the Vicinity of Industry, TX

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Very High Frequency Omnidirectional Range (VOR) Federal Airways V–68, V–212, and V–222, and United States Area Navigation (RNAV) Route T–220; and revokes VOR Federal Airway V–558. The proposed V–76 airway amendment is removed from this action due to the amendment already being accomplished by a separate airspace docket action. The FAA is taking this action due to the planned decommissioning of the VOR portion of the Industry, TX (IDU), VOR/Tactical Air Navigation (VORTAC) navigational aid (NAVAID). The Industry VOR is being decommissioned in support of the FAA's VOR Minimum Operational Network (MON) Program.

DATES: Effective date 0901 UTC, February 20, 2025. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: A copy of the Notice of Proposed Rulemaking (NPRM), all comments received, this final rule, and all background material may be viewed online at *www.regulations.gov* using the FAA Docket number. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year.

FAA Order JO 7400.11J, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20597; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Colby Abbott, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20597; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it modifies the National Airspace System as necessary to preserve the safe and efficient flow of air traffic.

History

The FAA published a NPRM for Docket No. FAA–2024–1707 in the **Federal Register** (89 FR 50537; June 14, 2024), proposing to amend VOR Federal Airways V–68, V–76, V–212, V–222, and V–558, and United States RNAV Route T–220 due to the planned decommissioning of the VOR portion of the Industry, TX, VORTAC NAVAID. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal. No comments were received.

Differences From the NPRM

Subsequent the NPRM, the FAA published a final rule for Docket No. FAA–2024–0485 in the **Federal Register** (89 FR 67853, August 22, 2024; corrected September 30, 2024 (89 FR 79429)), amending VOR Federal Airway V–76 by removing the airway segment between the San Angelo, TX, VORTAC and the Industry, TX, VORTAC. As amended, V–76 was changed to extend between the Lubbock, TX, VORTAC and the San Angelo, TX, VORTAC, effective October 31, 2024. As a result of that final rule, the proposed V–76 amendment in this airspace docket is removed.

Additionally, the final rule for Docket No. FAA–2024–0485 (89 FR 67853, August 22, 2024; corrected September 30, 2024 (89 FR 79429)) amended V–558 by removing the airway segment between the Llano, TX, VORTAC and the Centex, TX, VORTAC. As amended, V–558 was changed to extend between the Centex, TX, VORTAC and the Industry, TX, VORTAC, effective October 31, 2024. That amendment is included in this action.

Incorporation by Reference

VOR Federal Airways are published in paragraph 6010(a) and United States Area Navigation Routes (T-routes) are published in paragraph 6011 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document amends the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024, and effective September 15, 2024. FAA Order JO 7400.11J is publicly available as listed in the **ADDRESSES** section of this document. These amendments will be published in the next update to FAA Order JO 7400.11.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This action amends 14 CFR part 71 by amending VOR Federal Airways V–68, V–212, and V–222, and RNAV Route T–220; and revoking VOR Federal Airway V–558. The FAA is taking this action due to the planned decommissioning of the VOR portion of the Industry, TX, VORTAC NAVAID. The Air Traffic Service route actions are described below.

V–68: Prior to this final rule, V–68 extended between the Montrose, CO, VOR/Distance Measuring Equipment (VOR/DME) and the Industry, TX, VORTAC. The airway segment between

the San Antonio, TX, VORTAC and the Industry VORTAC is removed. Additionally, the designated Federal airway floor information in the airway description between the Corona, NM, VORTAC and the Chisum, NM, VORTAC is removed also. As amended, the airway is changed to now extend between the Montrose VOR/DME and the San Antonio VORTAC.

V–212: Prior to this final rule, V–212 extended between the Industry, TX, VORTAC and the Mc Comb, MS, VORTAC. The airway segment between the Industry VORTAC and the Navasota, TX, VOR/DME is removed. As amended, the airway is changed to now extend between the Navasota VOR/DME and the Mc Comb VORTAC.

V–222: Prior to this final rule, V–222 extended between the El Paso, TX, VORTAC and the Humble, TX, VORTAC; and between the Lake Charles, LA, VORTAC and the intersection of the LaGrange, GA, VORTAC 048° and Rome, GA, VORTAC 166° radials (TIROE Fix). The airway segment between the Stonewall, TX, VORTAC and the Humble, TX, VORTAC is removed. Additionally, the designated Federal airway floor information in the airway description between the Fort Stockton, TX, VORTAC and the Junction, TX, VORTAC is removed. As amended, the airway is changed to now extend between the El Paso VORTAC and the Stonewall VORTAC, and between the Lake Charles VORTAC and the TIROE Fix.

V–558: Prior to this final rule, V–558 extended between the Centex, TX, VORTAC and the Industry, TX, VORTAC. The airway segment between the Centex VORTAC and the Industry VORTAC is removed; therefore, the airway is removed in its entirety.

T–220: Prior to this final rule, T–220 extended between the Industry, TX, VORTAC and the Sabine Pass, TX, VOR/DME. The Industry VORTAC route point is replaced with the MNURE, TX, WP located approximately 2 nautical miles north of the Industry VORTAC and the route is extended westward from the MNURE WP to the MARCS, TX, Fix. As amended, the route is changed to now extend between the MARCS Fix and the Sabine Pass VORTAC. The full T–220 route description is listed in the regulatory text of this final rule.

The NAVAID radials listed in the VOR Federal airway descriptions in the regulatory text of this final rule are unchanged and stated in degrees True north.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action amending VOR Federal Airways V–68, V–212, and V–222, and United States RNAV Route T–220; and revoking VOR Federal Airway V–558, due to the planned decommissioning of the VOR portion of the Industry, TX, VORTAC NAVAID, qualifies for categorical exclusion under the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*) and its implementing regulations at 40 CFR part 1500, and in accordance with FAA Order 1050.1F, Environmental Impacts: Policies and Procedures, paragraph 5–6.5a, which categorically excludes from further environmental impact review rulemaking actions that designate or modify classes of airspace areas, airways, routes, and reporting points (see 14 CFR part 71, Designation of Class A, B, C, D, and E Airspace Areas; Air Traffic Service Routes; and Reporting Points); and paragraph 5–6.5i, which categorically excludes from further environmental impact review the establishment of new or revised air traffic control procedures conducted at 3,000 feet or more above ground level (AGL); procedures conducted below 3,000 feet AGL that do not cause traffic to be routinely routed over noise sensitive areas; modifications to currently approved procedures conducted below 3,000 feet AGL that do not significantly increase noise over noise sensitive areas; and increases in minimum altitudes and landing minima. As such, this action is not expected to result in any potentially significant environmental impacts. In accordance with FAA Order 1050.1F, paragraph 5–2 regarding Extraordinary Circumstances, the FAA has reviewed this action for factors and circumstances in which a normally categorically excluded action may have a significant environmental impact requiring further analysis. The FAA has determined that no extraordinary circumstances exist that warrant preparation of an environmental assessment or environmental impact study.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 95

[Docket No. 31579; Amdt. No. 582]

IFR Altitudes; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This amendment adopts miscellaneous amendments to the required IFR (instrument flight rules) altitudes and changeover points for certain Federal airways, jet routes, or direct routes for which a minimum or maximum en route authorized IFR altitude is prescribed. This regulatory action is needed because of changes occurring in the National Airspace System. These changes are designed to provide for the safe and efficient use of the navigable airspace under instrument conditions in the affected areas.

DATES: *Effective date:* 0901 UTC, 26 December 2024.

FOR FURTHER INFORMATION CONTACT: Thomas J. Nichols, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg. 26, Room 217, Oklahoma City, OK 73169–6918. Telephone: (405) 954–1139.

SUPPLEMENTARY INFORMATION: This amendment to part 95 of the Federal Aviation Regulations (14 CFR part 95) amends, suspends, or revokes IFR altitudes governing the operation of all aircraft in flight over a specified route or any portion of that route, as well as the changeover points (COPs) for Federal airways, jet routes, or direct routes as prescribed in part 95.

The Rule

The specified IFR altitudes, when used in conjunction with the prescribed changeover points for those routes, ensure navigation aid coverage that is adequate for safe flight operations and free of frequency interference. The reasons and circumstances that create the need for this amendment involve matters of flight safety and operational efficiency in the National Airspace System, are related to published aeronautical charts that are essential to the user, and provide for the safe and efficient use of the navigable airspace. In addition, those various reasons or circumstances require making this amendment effective before the next scheduled charting and publication date of the flight information to assure its timely availability to the user. The effective date of this amendment reflects those considerations. In view of the close and immediate relationship between these regulatory changes and safety in air commerce, I find that notice and public procedure before adopting this amendment are impracticable and contrary to the public interest and that good cause exists for making the amendment effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 95

Airspace, Navigation (air).

Issued in Washington, DC, on November 22, 2024.

Thomas J. Nichols,

Aviation Safety, Flight Standards Service, Manager, Standards Section, Flight Procedures & Airspace Group, Flight Technologies and Procedures Division.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, part 95 of the Federal Aviation Regulations (14 CFR part 95) is amended as follows effective at 0901 UTC, 26 December 2024.

PART 95—IFR ALTITUDES

■ 1. The authority citation for part 95 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, and 14 CFR 11.49(b)(2).

■ 2. Part 95 is amended to read as follows:

REVISIONS TO IFR ALTITUDES & CHANGEOVER POINT

BILLING CODE 4910–13–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 284

[Docket No. RM96–1–043; Order No. 587–AA]

Standards for Business Practices of Interstate Natural Gas Pipelines

AGENCY: Federal Energy Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Federal Energy Regulatory Commission amends its regulations to incorporate by reference, with certain enumerated exceptions, the latest version (Version 4.0) of Standards for Business Practices of Interstate Natural Gas Pipelines adopted by the Wholesale Gas Quadrant (WGQ) of the North American Energy Standards Board (NAESB). NAESB's revisions in this version of the standards are designed to promote greater efficiency and reliability of the natural gas industry's operations and strengthen the cybersecurity protections provided within the standards.

DATES:

Effective date: This rule is effective February 7, 2025.

Compliance date: Compliance filings required by this final rule are due on February 3, 2025. Compliance with the standards incorporated by reference in this rule is required by August 1, 2025.

Incorporation by reference: The incorporation by reference of certain publications listed in this rule is approved by the Director of the Federal Register as of February 7, 2025.

FOR FURTHER INFORMATION CONTACT:

Jerry Chiang (Technical Issues), Office of Energy Policy and Innovation, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502–8786

Oscar F. Santillana (Technical Issues), Office of Energy Market Regulation, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502–6392

Carla Pettus (Legal Issues), Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502–8361

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Overview

1. In this final rule, the Federal Energy Regulatory Commission (Commission) amends its regulations at 18 CFR 284.12 to incorporate by reference, with certain enumerated exceptions,[1] the latest version (WGQ Version 4.0) of business practice standards applicable to natural gas pipelines. On October 2, 2023, NAESB reported to the Commission that it had approved WGQ Version 4.0 to replace the currently incorporated version (Version 3.2) of those business practice standards. On May 21, 2024, NAESB reported a minor correction to WGQ Version 4.0. This final rule requires interstate natural gas pipelines to file compliance filings with the Commission by February 3, 2025, with an effective date of the tariff records of August 1, 2025.

2. The implementation of these standards will promote greater efficiency and reliability of the natural gas industry's operations and strengthen the cybersecurity protections provided within the standards.[2]

II. Background

3. Since 1996, the Commission has adopted regulations to standardize the business practices and communication methodologies of interstate natural gas pipelines to create a more integrated and efficient pipeline system. These regulations have been promulgated in the Order No. 587 series of orders,[3] wherein the Commission has incorporated by reference standards for interstate natural gas pipeline business practices and electronic communications that were developed and adopted by NAESB's WGQ. Upon incorporation by reference, this version of the standards will replace the currently incorporated version (Version 3.2) of those business practice standards.

4. On October 2, 2023, NAESB filed a report (Informational Report) informing the Commission that it had adopted and ratified WGQ Version 4.0 of its business practice standards applicable to interstate natural gas pipelines. WGQ Version 4.0 includes business practice standards developed and modified in response to industry requests and directives from the NAESB Board of Directors. This version also includes the standards developed in response to the recommendations of Sandia National Laboratories (Sandia),[4] which in 2019 issued a DOE-sponsored cybersecurity surety assessment of the NAESB standards.[5]

5. NAESB's Informational Report identifies all the changes made to the WGQ Version 3.2 standards and summarizes the deliberations that led to the changes being made. It also identifies changes to the existing standards that were considered but not adopted due to a lack of consensus or other reasons.

6. On March 21, 2024, the Commission issued a Notice of Proposed Rulemaking proposing to amend its regulations to incorporate by reference, with certain enumerated exceptions, the WGQ Version 4.0 business practice standards applicable to interstate natural gas pipelines.[6]

7. On May 21, 2024, NAESB submitted, and the Commission noticed for comment, an errata filing to update the Informational Report, noting a minor correction to an existing WGQ standard.[7] The standard supports the communication of invoices between trading partners, including transactions for natural gas transportation and sales and related charges and/or allowances. NAESB states that it adopted and ratified the changes for that standard on March 23, 2020, which became effective on November 3, 2020, but were inadvertently omitted from WGQ Version 3.2 and WGQ Version 4.0. The minor correction revised the Electronic Delivery Mechanism (EDI) X12 Mapping Guidelines for existing WGQ standard 3.4.1—Transportation/Sales Invoice to add code values for five data elements.[8]

8. In response to the WGQ Version 4.0 NOPR, the American Gas Association (AGA) and the Interstate Natural Gas Association (INGAA) filed comments. AGA expresses support of the Commission's proposed rulemaking as well as the minor correction submitted by NAESB on May 21, 2024.[9] INGAA also supports the Commission's proposed rulemaking but urges that the Commission not implement the final rule during the winter heating season, and thus, requests that the implementation date of the final rule should not be earlier than April 1, 2025.[10]

III. Discussion

9. In the WGQ Version 4.0 NOPR, the Commission proposed to incorporate by reference in its regulations the NAESB WGQ Version 4.0 business practice standards, with the exception of NAESB's standards specifying the terms of optional model contracts and the eTariff-related standards. No commenters opposed the Commission's proposal.

[1] As explained below, we are not incorporating by reference in this final rule the optional model contracts and the eTariff-related standards included in the North American Energy Standards Board (NAESB) Wholesale Gas Quadrant (WGQ) Version 4.0 package of business practice standards.

[2] As explained below, NAESB has developed and adopted, in conjunction with Sandia National Laboratories, a series of business practice standards to strengthen the cybersecurity protections provided within the standards.

[3] This series of orders began with the Commission's issuance of Order No. 587, *Standards for Business Practices of Interstate Natural. Gas Pipelines.* 61 FR 39053 (July 26, 1996), FERC Stats. & Regs. ¶ 31,038 (1996) (cross-referenced at 76 FERC ¶ 61,042).

[4] Sandia is a multidisciplinary national laboratory and federally funded research and development center for the U.S. Department of Energy's (DOE) National Nuclear Security Administration that supports numerous federal, state, and local government agencies, companies, and organizations.

[5] In April 2017, NAESB announced that Sandia, through funding provided by DOE, would be performing a surety assessment of the NAESB standards. As determined by Sandia and DOE, the purpose of the surety assessment was to analyze cybersecurity elements within the standards, focusing on four areas: (1) the NAESB Certification Program for Accredited Certification Authorities, including the Wholesale Electric Quadrant (WEQ)-012 Public Key Infrastructure Business Practice Standards, the NAESB Accreditation Requirements for Authorized Certificate Authorities, and the Authorized Certification Authority Process; (2) the WEQ Open Access Same-Time Information Systems suite of standards; (3) the WGQ and Retail Markets Quadrant internet Electronic Transport (IET) and Quadrant Electronic Delivery Mechanism (EDM) Related Standards Manual; and (4) a high-level dependency analysis between the gas and electric markets to evaluate the different security paradigms the markets employ.

[6] *Standards for Bus. Pracs. of Interstate Nat. Gas Pipelines,* Notice of Proposed Rulemaking, 89 FR 23954 (Apr. 4, 2024), 186 FERC ¶ 61,196 (2024) (WGQ Version 4.0 NOPR).

[7] NAESB WGQ implemented the minor correction, Minor Correction MC24002, on May 17, 2024, which modifies NAESB WGQ Standard No. 3.4.1—Transportation/Sales Invoice included in the WGQ Invoicing Related Standards.

[8] NAESB states that the standard changes are to ensure the hierarchal structure of the dataset complied with the Accredited Standards Institute X12 Transaction Set 811 Consolidated Service Invoice/Statement.

[9] AGA Comments at 1. AGA also expresses its disappointment that Standards Request No. 23001 was not part of the proposed revisions. AGA Comments at 1–2. These comments do not pertain to this final rule, and thus, will not be addressed.

[10] INGAA Comments at 2.

10. In this final rule, we adopt the proposal to incorporate by reference, in our regulations, the NAESB WGQ Version 4.0 business practice standards, with certain exceptions. As an initial matter, we note that the WGQ Version 4.0 business practice standards include modifications, reservations, deletions, and additions to the following set of Version 3.2 WGQ Standards. (Each set of Business Practice Standards is referred to as a manual.)

Manual	Business practice standards
0	Additional Standards.
2	Flowing Gas Related Standards.
3	Invoicing Related Standards.
4	Quadrant Electronic Delivery Mechanism Standards.
5	Capacity Release Related Standards.
10	WGQ/REQ/RGQ Internet Electronic Transport.

Additionally, the WGQ Version 4.0 business practice standards include one new manual of standards:

Manual	Business practice standards
12	Cybersecurity Related Standards.

11. We require compliance filings be made by February 3, 2025, with an effective date of August 1, 2025. as more fully described below.

12. We discuss below some specific aspects of NAESB's Informational Report.

A. The NAESB WGQ Version 4.0 Business Practice Standards

13. NAESB used its consensus procedures to develop and approve the WGQ Version 4.0 business practice standards. As the Commission found in Order No. 587, the adoption of consensus standards is appropriate, because the consensus process helps ensure the reasonableness of the standards by requiring that the standards draw support from a broad spectrum of industry participants representing all segments of the industry. Moreover, since the industry itself must conduct business under these standards, the Commission's regulations should reflect those standards that have the widest possible support. In section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTT&AA),[11] Congress affirmatively requires federal agencies to use technical standards developed by voluntary consensus standards organizations, like NAESB, as means to carry out policy objectives or activities.

14. We incorporate by reference into the Commission's regulations the WGQ Version 4.0 business practice standards, with the exception of NAESB's standards specifying the terms of optional model contracts and the eTariff-related standards, as discussed below.

1. WGQ Cybersecurity Related Standards

15. The new WGQ Cybersecurity Related Standards Manual consolidates existing NAESB cybersecurity-related standards from various NAESB standards manuals into a single manual. This consolidation should make the NAESB and Commission processes for revising NAESB cybersecurity standards easier and faster to help match the fast pace of changes in cybersecurity practices. These standards focus on strengthening the cybersecurity practices used by the industry through the mitigation of potential vulnerabilities and the use of secure communication and encryption methodologies.

2. Other Standards Modifications

16. In response to industry request, WGQ Version 4.0 adds new data elements to the WGQ Additional Standards and the WGQ Capacity Release Related Standards and modifies existing data elements in the WGQ Flowing Gas Related Standards and the WGQ Invoicing Related Standards to improve efficiencies of business processes for transportation service providers and parties interacting with these entities.[12]

17. The revised WGQ Additional Standards add a new data element, ''Cycle Indicator,'' to the data set for the Storage Information standard to address technical details for reporting natural gas storage balances and the activities that affect storage balances. The new sender's option data element ''Cycle Indicator'' will support the reporting of storage information data for each cycle while also allowing parties receiving such information to distinguish between the data more easily for individual transactions.[13]

18. Revisions to the WGQ Flowing Gas Related Business Practice Standards include a change to the ''Service Requester Contract'' data element from ''not used'' to ''mutually agreed,'' for allocation of natural gas between parties under two pre-determined allocation transaction types, found within the allocation matrix included as part of WGQ Standard 2.4.3.[14]

19. NAESB revised the WGQ Invoicing Related Standards by modifying the ''Charge Type Rate'' data element contained in the data set for the Transportation/Sales Invoice standard to allow for the identification of multiple rates that may be applicable for a single transaction or service. The modification to the data element allows transportation service providers to use a ''null'' value in circumstances where information describing the applicable charge type rate is included as part of miscellaneous notes. This change will allow transportation service providers to make available a summary of the amount due for each line item of an invoice with detailed, breakout information regarding the applicable rate and make it easier for a customer to ascertain the final charge amount.[15]

20. The revised WGQ Capacity Release Related Standards add a new sender's option data element, ''Location Indicator Data,'' to the Transactional Reporting—Capacity Release standard to provide a mechanism for a transportation service provider to communicate the locations at which a discounted rate is offered as well as if the rate is associated with a single location, multiple locations, or all locations.

21. Also included in WGQ Version 4.0 is a previous revision to an existing WGQ Invoicing Related Standard that modifies the ''Electronic Delivery Mechanism (EDI) X12 Mapping Guidelines'' by adding code values for five data elements to WGQ Standard 3.4.1—Transportation/Sales Invoice to ensure the hierarchal structure of the dataset complied with the Accredited Standards Institute X12 Transaction Set 811 Consolidated Service Invoice/ Statement.

3. Standards Not Incorporated by Reference

22. We continue our past practice [16] of not incorporating by reference into our regulations the WGQ standard contracts relating to the sale of natural gas because we do not require the use of these contracts.[17] Thus, we also do not incorporate by reference the WGQ 4.0

[11] Public Law 104–113, 12(d), 110 Stat. 775 (1996).

[12] Natural gas transportation service is provided by interstate pipelines, intrastate pipelines, natural gas gathering pipelines, and local distribution companies; all are referred to as ''transportation service providers.''

[13] Informational Report at 4.

[14] The matrix identifies the data elements needed to communicate the results of the allocation process.

[15] Informational Report at 5.

[16] *See, e.g., Standards for Bus. Practices of Interstate Nat. Gas Pipelines,* Notice of Proposed Rulemaking, 86 FR 12879 (March 5, 2021), 174 FERC ¶ 61,103, at P 19 (2021) (*Version 3.2 NOPR*).

[17] *Id.; Standards for Bus. Practices of Interstate Nat. Gas Pipelines,* Order No. 587–V, 77 FR 43711 (Jul. 26, 2012), 140 FERC ¶ 61,036, at P 11 n.11 (2012).

Contracts Related Standards Manual. In addition, consistent with our findings in past proceedings, we do not incorporate by reference the WGQ eTariff Related Standards because the Commission has previously adopted and posted its standards and protocols for electronic tariff filings based on NAESB standards.[18]

B. Required Compliance Filings

23. As suggested by INGAA, we will delay implementation of this final rule until after the 2024–2025 winter heating period. To implement the standards that we are incorporating by reference in this final rule, we will require each interstate natural gas pipeline to file a separate tariff record reflecting the changed standards by February 3, 2025.[19] In response to INGAA's concern that the Commission could require implementation of this final rule during the winter heating season, we will require the compliance filings to be made with an effective date of August 1, 2025. We are adopting this implementation schedule to give the interstate natural gas pipelines subject to these standards adequate time to implement these changes.

C. Implementation Procedures

24. We will continue the compliance filing requirements as revised and prescribed in Order No. 587–V to increase the transparency of the interstate natural gas pipelines' incorporation by reference of the NAESB WGQ Standards so that shippers and the Commission will know which tariff provision(s) implements each standard as well as the status of each standard.[20] We require each interstate natural gas pipeline to submit its compliance filing no later than February 3, 2025.

25. Consistent with the Commission's practice since Order No. 587–V, each interstate natural gas pipeline must designate a single tariff section under which every NAESB WGQ Standard incorporated by reference by the Commission is listed.[21] In that tariff section, the pipeline must list for each standard:

(a) whether the standard is incorporated by reference;

(b) for those standards not incorporated by reference, the tariff provision that complies with the standard; or

(c) for those standards with which the pipeline does not comply, an explanatory statement, including an indication of whether the pipeline has been granted a waiver, extension of time, or other variance with respect to compliance with the standard.[22]

26. Likewise, consistent with past practice, we will post on our eLibrary website (under Docket No. RM96–1–043) a sample tariff format, to provide filers with an illustrative example to aid them in preparing their compliance filings.

27. Consistent with our policy since Order No. 587–V,[23] entities may request waivers under the requirements set forth in Order No. 587–V and the Commission will then evaluate those requests at that time.[24]

28. If the pipeline is requesting a continuation of an existing waiver or extension of time, it must include a table in its transmittal letter that identifies the standard for which the Commission granted a waiver or extension of time, and the docket number or order citation to the proceeding in which the Commission granted the waiver or extension of time. The pipeline also must present an explanation for why such waiver or extension of time should remain in force with regard to the WGQ Version 4.0 Standards.

29. This implementation approach continues the Commission's practice of having pipelines include in their tariffs a common location that identifies the way in which the pipeline is incorporating all the NAESB WGQ Standards and the standards with which it is required to comply.

IV. Notice of Use of Voluntary Consensus Standards

30. Office of Management and Budget (OMB) Circular A–119 (section 11) (Feb. 10, 1998) provides that when a federal agency issues or revises a regulation containing a standard, the agency should publish a statement in the final rule stating whether the adopted standard is a voluntary consensus standard or a government-unique standard. In this final rule, we are incorporating by reference voluntary consensus standards developed by NAESB's WGQ. In section 12(d) of NTT&AA, Congress affirmatively requires federal agencies to use technical standards developed by voluntary consensus standards organizations to carry out policy objectives or activities determined by the agencies unless use of such standards would be inconsistent with applicable law or otherwise impractical.[25]

V. Incorporation by Reference

31. The Office of the Federal Register requires agencies incorporating material by reference in final rules to discuss the ways that the materials it incorporates by reference are reasonably available to interested parties and how interested parties can obtain the materials.[26] The regulations also require agencies to summarize, in the preamble of the final rule, the material it incorporates by reference. The standards that we are incorporating by reference in this final rule consist of seven suites of NAESB WGQ Business Practice Standards, which include a minor correction to the invoicing related standards, that address a variety of topics and are designed to streamline the transactional processes for the wholesale natural gas industry by promoting a more competitive and efficient market. These include the: WGQ Additional Business Practice Standards; WGQ Nominations Related Business Practice Standards; WGQ Flowing Gas Related Business Practice Standards; WGQ Invoicing Related Business Practice Standards, with WGQ Invoicing Related Standards Minor Correction MC24002; WGQ Quadrant Electronic Delivery Mechanism Related Business Practice Standards; WGQ Capacity Release Related Business Practice Standards; and WGQ Cybersecurity Related Standards.

32. As noted above, included in the standards incorporated by reference is the WGQ Invoicing Related Standards Minor Correction (MC 24002), which is an errata to update the Informational Report to the existing standard which supports the communication of invoices between trading partners.

33. We summarize these standards below. The WGQ Additional Business Practice Standards address six areas: Creditworthiness; Storage Information;

[18] *Version 3.2 NOPR,* 174 FERC ¶ 61,103 at P 19; *Elec. Tariff Filings,* Order No. 714, 73 FR 57515 (Oct. 3, 2008), 124 FERC ¶ 61,270 (2008).

[19] To aid in compliance, promptly after issuance of this final rule, we will post a sample tariff record on the Commission's website that may be accessed at *www.ferc.gov/ferc-online/elibrary.* All interstate natural gas pipelines are to file their tariff records in conformance with this sample tariff record.

[20] Order No. 587–V, 140 FERC ¶ 61,036 at PP 36–39.

[21] *Trans-Union Interstate Pipeline L.P.,* 141 FERC ¶ 61,167, at P 36 (2012) (Order No. 587–V Compliance Order); *Version 3.2 NOPR,* 174 FERC ¶ 61,103 at P 21.

[22] Shippers can use the Commission's electronic tariff system to locate the tariff record containing the NAESB standards, which will indicate the docket in which any waiver or extension of time was granted.

[23] Order No. 587–V, 140 FERC ¶ 61,036.

[24] Order No. 587–V Compliance Order, 141 FERC ¶ 61,167 at PP 4, 38 (a pipeline does not need to seek a waiver for standards that address business practices that the pipeline does not offer).

[25] Public Law 104–113, 12(d), 110 Stat. 775 (1996), 15 U.S.C. 272 note (1997).

[26] 1 CFR 51.5 (2023). *See* Incorporation by Reference, 79 FR 66267 (Nov. 7, 2014).

Gas/Electric Operational Communications; Operational Capacity; Unsubscribed Capacity; and Location Data Download.

- The Creditworthiness related standards describe requirements for the exchange of information, notification, and communication between parties during the creditworthiness evaluation process.
- The Storage Information related standards define the information to be provided to natural gas service requesters related to storage activities and/or balances.
- The Gas/Electric Operational Communications related standards define communication protocols intended to improve coordination between the natural gas and electric industries in daily operational communications between gas transportation service providers and gas-fired power plants. These standards include requirements for communicating anticipated power generation fuel needs for the upcoming day as well as any operating problems that might hinder gas-fired power plants from receiving contractual gas quantities.
- The Operational Capacity related standards define requirements for the transportation service provider's reporting of its operational capacity, total scheduled quantity, and operationally available capacity.
- The Unsubscribed Capacity related standards define requirements for the transportation service provider's reporting of its available unsubscribed capacity.
- The Location Data Download related standards define requirements for the use of codes assigned by the transportation service provider for locations and common codes for parties communicating electronically.

34. The WGQ Nominations Related Business Practice Standards define the process by which a natural gas service requester with a natural gas transportation contract nominates (or requests) service from a pipeline or a transportation service provider for the delivery of natural gas.

35. The WGQ Flowing Gas Related Business Practice Standards define the business processes related to the communication of entitlement rights of flowing gas at a location, of the entitlement rights on a contractual basis, of the management of imbalances, and of the measurement and gas quality information of the actual flow of gas.

36. The WGQ Invoicing Related Business Practice Standards define the process for the communication of charges for services rendered (Invoice), communication of details about funds rendered in payment for services rendered (Payment Remittance), and communication of the financial status of a customer's account (Statement of Account).

37. The WGQ Quadrant Electronic Delivery Mechanism Related Business Practice Standards define the framework for the electronic dissemination and communication of information between parties in the North American wholesale gas marketplace for Electronic Data Interchange/EDM transfers, batch flat file/EDM transfers, informational postings websites, Electronic Bulletin Boards/EDM, and interactive flat file/EDM.

38. The WGQ Capacity Release Related Business Practice Standards define the business processes for communication of information related to the selling of all or any portion of a transmission service requester's contract rights.

39. The WGQ Cybersecurity Related Standards consolidate existing NAESB cybersecurity-related standards from various standards manuals into a single manual. These standards define the requirements for ensuring the security of electronic communications and transactions among parties.

40. Commission regulations provide that copies of the standards incorporated by reference may be obtained through purchase or otherwise from the North American Energy Standards Board, 801 Travis Street, Suite 1675, Houston, TX 77002; phone: (713) 356–0060; website: *www.naesb.org/.* The standards can also be reviewed without purchasing them.

41. The procedures used by NAESB make its standards reasonably available to those affected by Commission regulations, which generally is comprised of entities that have the means to acquire the information they need to effectively participate in Commission proceedings. Participants can join NAESB, for an annual membership cost of $8,000, which entitles them to full participation in NAESB and enables them to obtain these standards at no additional cost. Non-members may obtain any of the ten individual standards manuals for $250 per manual, which in the case of these standards would total $2,500 for all ten manuals. Non-members also may obtain the complete set of Standards Manuals for $2,000.

42. NAESB provides ample opportunities for non-members, including agents, subsidiaries, and affiliates of NAESB members, to obtain access to the copyrighted standards through a no-cost limited copyright waiver. The limited copyright waivers are issued by the NAESB office and are granted to non-members on a case-by-case basis for the purpose of evaluating standards prior to purchase and/or reviewing the standards to prepare comments to a regulatory agency. Following the granting of a limited copyright waiver, the non-member is provided with read-only access to the standards through the end of the comment period or some other set period of time via Locklizard Safeguard Secure Viewer.[27] NAESB will grant one limited copyright wavier per company for each set of standards or final actions. Any entity seeking a limited copyright waiver should contact the NAESB office.

VI. Information Collection Statement

43. The OMB regulations require that OMB approve certain reporting, record keeping, and public disclosure requirements (information collection) imposed by an agency.[28] Therefore, we are submitting our proposed information collection to OMB for review in accordance with section 3507(d) of the Paperwork Reduction Act of 1995. Upon approval of a collection of information, OMB will assign an OMB control number and an expiration date. Respondents subject to the filing requirements of a rule will not be penalized for failing to respond to these collections of information unless the collection of information displays a valid OMB control number.

44. The Commission solicited comments on our need for this information, whether the information will have practical utility, the accuracy of the provided burden estimates, ways to enhance the quality, utility, and clarity of the information to be collected, and any suggested methods for minimizing respondents' burden, including the use of automated information techniques.

45. *Public Reporting Burden:* The burden estimates for this final rule are for one-time implementation of the information collection requirements of this final rule (including tariff filing, documentation of the process and procedures, and information technology work).

46. The collections of information related to this final rule fall under FERC–545 (Gas Pipeline Rates: Rate Change (Non-Formal)) [29] and FERC–549C (Standards for Business Practices

[27] For more information on Locklizard, please refer to the company's website: *www.locklizard.com.*

[28] 5 CFR 1320.11 (2023).

[29] FERC–545 covers rate change filings made by natural gas pipelines, including tariff changes.

of Interstate Natural Gas Pipelines).[30] The following estimates of reporting burden are related only to this Final Rule and include the costs to pipelines for compliance with the Commission's directives in this final rule. The burden estimates are primarily related to implementing these standards and regulations and will not result in ongoing costs.

RM96–1–043 NOPR (STANDARDS FOR BUSINESS PRACTICES OF INTERSTATE NATURAL GAS PIPELINES)

	Number of respondents[31] (1)	Annual number of responses per respondent (2)	Total number of responses (1) * (2) = (3)	Average burden hr. per response (4)	Total annual burden hours & total annual cost[32] (3) * (4) = (5)	Annual costs per respondent ($) (5)/(1) = (6)
FERC–545 (one-time)	193	1	193	10 hrs.; $1,110	1,930 hrs.; $214,230	$1,110
FERC–549C (one-time)	193	1	193	100 hrs.; $11,100	19,300 hrs.; $2,142,300	$11,100
Total			386		21,230 hrs.; $2,356,530.	

The one-time burden (for both the FERC–545 and FERC–549C) would take place in Year 1 and will be averaged over 3 years as follows:

FERC–545: 1,930 ÷ 3 = 643.33 hours/year over 3 years

FERC–549C: 19,300 ÷ 3 = 6,433.33 hours/year over 3 years

The responses and burden for Years 1–3 would total respectively as follows:

Year 1: 64.33 responses; 643.33 hours (FERC–545); 6,433.33 hours (FERC–549C)

Year 2: 64.33 responses; 643.33 hours (FERC–545); 6,433.33 hours (FERC–549C)

Title: FERC–545, Gas Pipeline Rates: Rates Change (Non-Formal); FERC–549C, Standards for Business Practices of Interstate Natural Gas Pipelines.

Action: Proposed information collections

OMB Control Nos.: 1902–0154 (FERC–545), 1902–0174 (FERC–549C).

Respondents: Business or other for profit (*e.g.,* Natural Gas Pipelines, applicable to only a few small businesses).

Frequency of Responses: One-time implementation (related to business procedures, capital/start-up).

Necessity of Information: In response to NAESB's standard development activities, the Commission has determined that the revisions the Commission makes in this final rule to its regulations would make minor adjustments to the standards previously adopted by the Commission. The standards consolidate the cybersecurity standards in one standards manual for ease of reference and revision, deleting one element in the Data Dictionary for internet ET included in the WGQ Cybersecurity Related Standards and makes numerous minor changes throughout the corresponding manual and the WGQ EDM Related Standards to correct typographical and capitalization errors.

47. Further, in response to industry requests or through the normal course of WGQ activities, the Commission has determined that the revisions the Commission makes in this final rule to its regulations would upgrade current business practices and communication standards by specifically: (1) adding a new data element, ''Cycle Indicator,'' to the data set for the Storage Information standard to address technical details for the reporting of storage balances and the activities that affect storage balances; (2) revising the data element ''Service Requester Contract'' contained in the data set for the Flowing Gas Related Allocation standard to identify the applicable contract and to support the communication of the results of processes used to allocate the actual flow of gas quantities to parties involved in a transaction; (3) modifying the ''Charge Type Rate'' data element contained in the data set for the Transportation/Sales Invoice standard that allows for the identification of multiple rates that may be applicable for a single transaction or service; (4) adding a new sender's option data element, ''Location Indicator Data,'' to the Transactional Reporting—Capacity Release standard to improve efficiencies by providing a mechanism for a transportation service provider to communicate the locations at which a discounted rate is offered as well as if the rate is associated with a single location, multiple locations, or all locations; (5) adding code values for five data elements to the EDI X12 Mapping Guidelines in the Transportation/Sales Invoice standard to ensure the hierarchal structure of the dataset complied with the Accredited Standards Institute X12 Transaction Set 811 Consolidated Service Invoice/Statement. In addition, the Commission's Office of Enforcement will use the data for general industry oversight.

Internal Review: The Commission has reviewed the requirements pertaining to business practices of interstate natural gas pipelines adopted by NAESB and has determined that the revisions the Commission makes in this final rule to its regulations are necessary to promote greater efficiency and reliability of the natural gas industry's operations and strengthen cybersecurity protections. These requirements conform to our plan for efficient information collection, communication, and management within the natural gas pipeline industry. The Commission has determined through its internal review that there is specific, objective support for the burden estimates associated with the information requirements.

48. Interested persons may obtain information on the reporting requirements by contacting the following: Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426; email: *DataClearance@ferc.gov.*

49. Comments concerning the collection of information(s) and the associated burden estimate(s), should be

[30] FERC–549C covers Standards for Business Practices of Interstate Natural Gas Pipelines.

[31] The number of respondents is the number of entities in which a change in burden from the current standards to the proposed exists, not the total number of entities from the current or proposed standards that are applicable.

[32] The estimated hourly cost (salary plus benefits) provided in this section is based on the salary figures for March 2024 posted on June 18, 2024 by the Bureau of Labor Statistics for the Utilities sector (available at *www.bls.gov/oes/current/naics3221000.htm*) and scaled to reflect benefits using the relative importance of employer costs for employee compensation (available at *https://www.bls.gov/news.release/ecec.nr0.htm*). The hourly estimates for salary plus benefits are:

Computer and Information Systems Manager (Occupation Code: 11–3021), $115.47.

Computer and Information Analysts (Occupation Code: 15–1221, $87.19.

Electrical Engineer (Occupation Code: 17–2071), $79.31.

Legal (Occupation Code: 23–0000), $162.66.

The average hourly cost (salary plus benefits), weighting these skill sets evenly, is $111.16. We round it to $111/hour.

sent to the Office of Information and Regulatory Affairs, the Office of Management and Budget, Washington, DC 20503; attention: Desk Officer for the Federal Energy Regulatory Commission, phone: (202) 395–0710; fax: (202) 395–4718. A copy of the comments on information collection should also be sent to the Commission, in Docket No. RM96–1–043 by any of the following methods:

- eFiling at Commission's website: *www.ferc.gov/docs-filing/efiling.asp;*
- U.S. Postal Service Mail: Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426; or
- Delivery of filings other than by eFiling or the U.S. Postal Service should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

VII. Environmental Analysis

50. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[33] The actions that we take here fall within categorical exclusions in the Commission's regulations for rules that are clarifying, corrective, or procedural, for information gathering, analysis, and dissemination, and for rules regarding sales, exchange, and transportation of natural gas that require no construction facilities.[34] Therefore, an environmental review is unnecessary and has not been prepared as part of this final rule.

VIII. Regulatory Flexibility Act

51. The Regulatory Flexibility Act of 1980 (RFA) [35] generally requires a description and analysis of proposed rules that will have significant economic impact on a substantial number of small entities. The Commission is not required to make such an analysis if proposed regulations would not have such an effect.

52. As we stated in the WGQ Version 4.0 NOPR, approximately 193 interstate natural gas pipelines, both large and small, are potential respondents subject to the requirements adopted by this rule. Most of the natural gas pipelines regulated by the Commission do not fall within the RFA's definition of a small entity,[36] which is currently defined for natural gas pipelines as a company that, in combination with its affiliates, has total annual receipts of $41.5 million or less.[37] For the year 2022, only 14 potential respondents not affiliated with larger companies had annual revenues in combination with their affiliates of $41.5 million or less and therefore could be considered a small entity under the RFA. This represents about eight percent of the total universe of potential respondents that may have a significant burden imposed on them. We estimate that the one-time implementation cost of the proposals in this final rule is $2,356,530 (or $12,210 per entity, regardless of entity size).[38] We do not consider the estimated $12,210 impact per entity to be significant. Moreover, these requirements are designed to benefit all customers, including small businesses that must comply with them. Further, as noted above, adoption of consensus standards helps ensure the reasonableness of the standards by requiring that the standards draw support from a broad spectrum of industry participants representing all segments of the industry. Because of that representation and the fact that industry conducts business under these standards, the Commission's regulations should reflect those standards that have the widest possible support.

53. Accordingly, pursuant to section 605(b) of the RFA,[39] the regulations proposed herein should not have a significant economic impact on a substantial number of small entities.

IX. Document Availability

54. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*www.ferc.gov/*).

55. From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

56. User assistance is available for eLibrary and the Commission's website during normal business hours from the Commission's Online Support at 202–502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room; phone: (202) 502–8371, TTY (202) 502–8659; email: *public.referenceroom@ferc.gov.*

X. Effective Date and Congressional Notification

57. These regulations are effective February 7, 2025. The Commission has determined, with the concurrence of the Administrator of the Office of Information and Regulatory Affairs of OMB, that this rule is not a ''major rule'' as defined in section 351 of the Small Business Regulatory Enforcement Fairness Act of 1996. This final rule is being submitted to the Senate, House, and Government Accountability Office.

List of Subjects in 18 CFR Part 284

Continental shelf, Incorporation by reference, Natural gas, Reporting and recordkeeping requirements.

By direction of the Commission.

Issued: November 22, 2024.

Debbie-Anne A. Reese,

Secretary.

In consideration of the foregoing, the Commission amends 18 CFR part 284 as follows.

PART 284—CERTAIN SALES AND TRANSPORTATION OF NATURAL GAS UNDER THE NATURAL GAS POLICY ACT OF 1978 AND RELATED AUTHORITIES

■ 1. The authority citation for part 284 continues to read as follows:

Authority: 15 U.S.C. 717–717z, 3301–3432; 42 U.S.C. 7101–7352; 43 U.S.C. 1331–1356.

■ 2. Amend § 284.12 by:
■ A. Revising paragraphs (a)(1)(i) through (vii);
■ B. Adding paragraph (a)(1)(viii); and
■ C. Revising paragraph (a)(2).

The revisions and additions read as follows:

BILLING CODE 6717–01–P

DEPARTMENT OF JUSTICE

Office of the Attorney General

28 CFR Part 50

[Docket No. OAG 177; AG Order No. 6101–2024]

RIN 1105–AB62

Guidelines and Limitations for Settlement Agreements Involving Payments to Non-Governmental Third Parties

AGENCY: Department of Justice.

ACTION: Final rule.

SUMMARY: This final rule adopts without change the interim final rule issued by the Department of Justice (''Department'' or ''DOJ'') on May 10, 2022, that revoked a prohibition on the inclusion of provisions in settlement agreements directing or providing for a payment or loan to a non-governmental person or entity not a party to the dispute, subject to limited exceptions.

DATES: This rule is effective December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Robert Hinchman, Senior Counsel, Office of Legal Policy, U.S. Department of Justice, telephone (202) 514–8059 (not a toll-free number).

SUPPLEMENTARY INFORMATION: The Department has established a docket for this action on the *www.regulations.gov* site under Docket DOJ–OAG–2022–0001. All documents in the docket are listed on the *http://www.regulations.gov* website.

I. Summary of This Rulemaking

A. Overview of This Rule

On December 16, 2020, the Department issued a regulation prohibiting, subject to limited exceptions, the inclusion of provisions in settlement agreements directing or providing for a payment or loan, in cash or in kind, to any non-governmental person or entity not a party to a dispute. *Prohibition on Settlement Payments to Non-Governmental Third Parties,* 85 FR 81409 (''the December 2020 Rule'') (adding 28 CFR 50.28). On May 10, 2022, DOJ published for public comment an interim final rule (''IFR'') that revoked the December 2020 Rule, *Guidelines and Limitations for Settlement Agreements Involving Payments to Non-Governmental Third Parties,* 87 FR 27936.

The IFR also solicited public comment on an Attorney General memorandum posted on the DOJ website in conjunction with the IFR, the Memorandum for the Heads of Department Components and United States Attorneys from the Attorney General, *Re: Guidelines and Limitations for Settlement Agreements Involving Payments to Non-Governmental Third Parties* (May 5, 2022) (the ''May 2022 Memorandum''), *https://www.justice.gov/d9/pages/attachments/2022/05/05/02._ag_guidlines_and_limitations_memorandum_0.pdf* (last visited Oct. 31, 2024).

This preamble responds to comments received on the IFR. As reflected in this preamble, the Department is not making any changes to the rule or to the May 2022 Memorandum.

That said, DOJ is using the opportunity of this final rule to publicly announce that it will add two provisions to the section of the *Justice Manual* (*https://www.justice.gov/jm/justice-manual*) addressing third-party payments, section 1–17.000, *Settlement Agreements Involving Payments to Non-Governmental Third Parties,* as discussed later in this preamble.

B. Background Explanation for This Rule

The Department, as explained in this preamble, has concluded that its action in May 2022 to revoke 28 CFR 50.28 and establish the current policy continues to be appropriate. The Department has authority to settle litigation incident to the Attorney General's power to supervise litigation for the United States. *Authority of the United States to Enter Settlements Limiting the Future Exercise of Executive Branch Discretion,* 23 Op. O.L.C. 126, 135 (1999) (''*Authority of the United States to Enter Settlements*''). The Department regularly settles civil and criminal matters to compensate victims, redress harms, and punish and deter unlawful conduct without the costs and delay that can accompany trials. For decades and across Administrations, Department components entered into settlement agreements that involved payments to certain third parties as a means of addressing harms arising from violations of Federal law.

It has been the consistent view of the Office of Legal Counsel (''OLC''), acknowledged when the December 2020 Rule was promulgated, that settlements involving payments to non-governmental third parties can comport with the Miscellaneous Receipts Act (''MRA''), 31 U.S.C. 3302(b). *See* Memorandum for William P. Barr, Attorney General, from Steven A. Engel, Assistant Attorney General, Office of Legal Counsel, *Re: Final Rule Prohibiting Settlement Payments to Non-Governmental Third Parties* at 2 (Dec. 4, 2020) (''December 2020 OLC Memo'') (citing *Application of the Government Corporation Control Act and the Miscellaneous Receipts Act to the Canadian Softwood Lumber Settlement Agreement,* 30 Op. O.L.C. 111, 119 (2006) (''*Softwood Lumber*'')), *https://www.justice.gov/oip/foia-library/foia-processed/general_topics/settlement_guidelines_third_parties_2_14_23/download* (last visited Oct. 31, 2024).

In 2017, the Attorney General issued a memorandum prohibiting Department attorneys from entering into case resolutions in civil and criminal matters providing for certain third-party payments. *See* Memorandum for All Component Heads and United States Attorneys from the Attorney General,

Re: Prohibition on Settlement Payments to Third Parties (June 6, 2017). In 2020, through the December 2020 Rule, the Department amended its regulations to add 28 CFR 50.28, memorializing prohibitions set forth in the 2017 memorandum and additionally expressly prohibiting expenditure of funds ''to provide goods or services to third parties for Supplemental Environmental Projects.'' 85 FR 81410.

In 2022, after considering the views of the Department's components and their experience with 28 CFR 50.28, the Attorney General concluded that the regulations at 28 CFR 50.28 were too restrictive and should be revoked, *see* 87 FR 27937, and issued an IFR revoking 28 CFR 50.28, *see* 87 FR 27936–38. The Attorney General determined that, when properly tailored, agreements providing for payments to third parties are lawful and allow the United States to more fully accomplish the goals of civil and criminal enforcement. *Id.* at 27937. For example, the Department usually seeks a penalty and injunctive relief to resolve violations of Federal environmental statutes. However, the harms caused by these violations, including harms to the communities most directly impacted by them, can be difficult to redress in particular cases. *Id.* For instance, in environmental enforcement cases, the Department may seek a defendant's agreement to make third-party payments in the form of a Supplemental Environmental Project (''SEP'') to counteract some of the downstream effects of a violation, and often as well to prevent future harm. *Id.* A SEP is a type of project or activity that a defendant undertakes as part of the settlement of an environmental enforcement action. As an illustration, a defendant refinery that violated its Clean Air Act permit by emitting excess volatile organic compounds (''VOCs'') agreed to perform a SEP to abate lead-based paint hazards in child-occupied facilities and lower-income residences located within a 50-mile radius of the refinery, in addition to an appropriate penalty and other relief. VOCs can accelerate the weathering and deterioration of lead-based paint, increasing potential lead exposure. The project, therefore, was designed to reduce a downstream harm to local residents, exacerbated by the defendant's conduct.

The May 2022 Memorandum contains important safeguards to ensure that case resolutions containing third-party payments are appropriately tailored. Permissible settlements with third-party payments must satisfy conditions that define with particularity the nature and scope of any third-party project; require a strong connection between the underlying violation(s) and the project; prevent the Federal Government from proposing the selection of a particular third party to receive payments; restrict the Federal Government's role after a settlement is entered; require that such settlements occur before an admission or finding of liability in favor of the United States; prohibit use of such settlements to satisfy existing statutory obligations or to provide additional resources to perform any activity for which a Federal agency receives a specific appropriation; and prohibit certain practices such as unrestricted cash donations. May 2022 Memorandum at 3. Such settlements are also subject to approval by the Deputy Attorney General or the Associate Attorney General. *Id.* at 3–4.

The May 2022 Memorandum also exempts four types of payments from these requirements, including payments providing restitution to non-party victims to directly remedy the harm the lawsuit seeks to redress, as well as payments for legal or professional services undertaken in connection with the case being settled, consistent with pre-2017 practice. *Id.* at 4. (The exception for legal or professional services includes payments to contractors implementing injunctive relief; payments to monitors, arbitrators, mediators, or other neutral third parties; and payments for other categories of legal and professional services.) In developing the new policy, the Department sought to address specific concerns that had been raised over such payments, while preserving the availability of these payments as a potential remedy when appropriate. In 2022, DOJ incorporated the terms of the May 2022 Memorandum in *Justice Manual* section 1–17.000.

C. Justice Manual Revisions

As part of the process of reviewing comments on the IFR and May 2022 Memorandum, the Department has determined that it will add two provisions to the *Justice Manual* section 1–17.000.[1] In particular, the Department is sensitive to the perception that it will ''strong-arm'' defendants to agree to third-party payments by declining to agree to a settlement unless the defendant agrees to make one or more third-party payments. It also recognizes the concern that the lack of public input into the development of third-party payments, and the difficulty of obtaining information on settlements that include such provisions, could lead to a lack of accountability and could give rise to claims of ''cronyism'' or favoritism. As discussed in greater detail below, *see infra* Part II.B.5.1, these concerns do not suggest that third-party payments writ large are unlawful, or that a rule prohibiting third-party payments is the only way to guard against them. Instead (and as also discussed in greater detail throughout this preamble), the Department has concluded that it can respond to these concerns through the more flexible approach of making changes to the *Justice Manual,* a course that preserves the benefits of third-party payments while responding in a more surgical manner to the concerns raised.

Specifically, with respect to concerns that the Department will ''strong-arm'' defendants into agreeing to third-party payments, the forthcoming revisions to the *Justice Manual* will specify that the Department may decline to agree to settle a civil claim in the absence of a particular remedy where the remedy in question would be available relief were the case litigated to judgment; but that if the third-party payment is not within the scope of the remedies the court could order, the Department will negotiate such a payment as part of a settlement only if the defendant expresses interest in doing so. For example, to resolve an antitrust investigation or filed case, the Antitrust Division may condition a settlement on the entity's agreement to divest itself of certain assets, because that is relief the Antitrust Division could receive if it litigated the case to judgment. *See, e.g., United States* v. *E.I. du Pont de Nemours & Co.,* 366 U.S. 316, 331 (1961); *see generally California* v. *Am. Stores Co.,* 495 U.S. 271, 280–81 (1990) (''[I]n Government actions divestiture is the preferred remedy for an illegal merger or acquisition.''). (Because these benefits would go to another unrelated entity, such a condition could potentially have the appearance of a third-party payment.) The Department believes that this division—between relief available if the case were litigated to judgment and relief that would not be—is an appropriate way to guard against concerns that the Department would strong-arm defendants into agreeing to third-party payments. In cases in which a court could order a particular remedy but a defendant is not

[1] The Department will limit these new provisions to civil settlements covered by the May 2022 Memorandum but not exempted under the four circumstances described therein. Plea agreements are always subject to court review and approval, ensuring the protection of the public's interest and the rights of the defendant. The timing and other process requirements of a criminal proceeding also make it less feasible to apply these new requirements in criminal cases.

willing to include it in a settlement, the Department has the option of litigating the case to judgment in order to secure the relief in question without the defendant's consent. In those cases in which a settlement term is not backed by a possible judicial remedy in this way, the Department is sensitive to the concern raised by commenters and views it as preferable (although not legally required) to include this additional safeguard to ensure that the defendant is amenable to the relief in the form of a third-party payment.

As to claims that information about settlements that include third-party payments is not readily available and that such settlements are concluded without adequate participation from the public, the Department will add a provision to the existing *Justice Manual* requirements that would provide additional opportunities for the public to participate in certain civil settlements.[2]

II. Public Comments on the IFR and May 2022 Memorandum

A. Summary of Public Comments

The comment period for the IFR and the May 2022 Memorandum closed on July 11, 2022, and the Department received 16 public comments.[3] The comments express both support for and opposition to the IFR and May 2022 Memorandum. DOJ is exercising its discretion to respond to public comments here.

B. Response to Comments

1. Applicability of the MRA

Comments: According to some commenters, under the 1980 OLC opinion *Effect of 31 U.S.C. § 484 on the Settlement Authority of the Attorney General,* 4B Op. O.L.C. 684 (1980) (''*Effect of 31 U.S.C. § 484*''), money available to the United States is constructively received and must be directed to the U.S. Treasury to comply with the MRA. Those commenters argue that any deviation from this result, such as an agency directing settlement money to a non-governmental third party, is a violation of that requirement. In particular, some commenters claim that SEPs are a violation of the MRA because the money used for them is public and the value of the SEP is exchanged, without congressional authorization, for a proportional reduction in the ultimate civil penalty that could have been payable to the U.S. Treasury. And still others contend that private defendants violate 31 U.S.C. 3302(c) by making third-party payments pursuant to settlements.

One commenter states that DOJ fails to explain why it applies the doctrine of constructive receipt from tax law cases (requiring the Government to exercise substantive control over the funds without significant limitation) to this context and argues that the Department has ''cherry-picked a version of constructive receipt in an attempt to thwart equity.''

Several commenters claim that SEPs are illegally diverted penalties except for the two instances in which SEPs are expressly authorized by statute: 42 U.S.C. 16138, which grants the Executive Branch permission to seek SEPs related to diesel emissions reductions; and 42 U.S.C. 7604(g)(2), which gives courts discretion to order that penalties received under the citizens suit provision of the Clean Air Act be used to fund beneficial mitigation projects that are consistent with that Act and enhance the public health or the environment, up to $100,000. Commenters assert that Congress's enactment of these provisions indicates that Congress views these types of payments as otherwise impermissible.

One commenter argues that the 2006 *Softwood Lumber* OLC opinion is not persuasive and, even if it were, the commenter claims that it would not authorize SEPs, which the commenter claims are designed entirely to exchange monetary penalties destined for the Treasury for a particular project. This commenter also suggests that caselaw supporting the legality of these payments cannot be reconciled with subsequent Supreme Court decisions and statutory provisions related to diesel emissions projects and citizens suits under the Clean Air Act, and cites Comptroller General/U.S. Government Accountability Office (''GAO'') opinions as supportive. Commenters further invoke a memorandum authored by then-Assistant Attorney General for ENRD Jeffrey Bossert Clark, *Supplemental Environmental Projects (''SEPs'') in Civil Settlements with Private Defendants* (Mar. 12, 2020) (''Clark Memorandum''), in support of their view that third-party settlements (and SEPs in particular) violate the MRA.

Other commenters cite with approval the OLC view (reflected in the May 2022 Memorandum) that settlement-funded projects do not violate the MRA if they are executed prior to a finding of the defendant's liability and if the United States does not retain control over the projects following settlement except for purposes of oversight of the settlement. Citing *U.S. Environmental Protection Agency Supplemental Environmental Projects Policy 2015 Update* (Mar. 10, 2015) (''*2015 SEP Policy*''), commenters make the point that SEPs are not substitutes for monetary penalties because settlements that include a SEP must always include a settlement penalty that recoups the economic benefit a violator gained from noncompliance with the law, as well as appropriate penalties that reflect the environmental and regulatory harm caused by the violations. These commenters state that SEPs are a factor to consider in making the decision to settle and on what terms to settle. By confusing SEPs with penalties or diversions of Treasury funds, these commenters argue, the previous Administration misconstrued decades of Federal practice.

Response: The Department appreciates commenters' statements that settlement-funded projects do not violate the MRA if they comply with the criteria set forth in *Softwood Lumber;* and that agreeing to SEPs as part of settlement agreements is consistent with those criteria.

The Department disagrees with commenters' contention that any settlement that includes a payment to a non-government third party violates the MRA and continues to conclude that the MRA permits such settlements in certain circumstances. The MRA requires that ''an official or agent of the Government receiving money for the Government from any source shall deposit the money in the Treasury as soon as practicable without deduction for any charge or claim.'' 31 U.S.C. 3302(b). The funds paid under these types of settlements, however, are not ''drawn from the Treasury'' and have not been ''receiv[ed] . . . for the Government'' by the United States.

Consistent with authoritative OLC opinions and advice, the Department

[2] Existing laws require public disclosure of settlement terms in certain circumstances. The Antitrust Procedures and Penalties Act, codified at 15 U.S.C. 16(b)–(h), provides for a notice-and-comment process before a consent decree can be finalized in civil antitrust cases. The Clean Air Act includes a similar requirement, 42 U.S.C. 7413(g), as do laws relating to cleanup and control of hazardous materials. *See* 42 U.S.C. 9622(d)(2) and (i); 42 U.S.C. 6973(d); *see also* 28 CFR 50.7 (providing for a notice-and-comment process in civil ''actions to enjoin [the] discharges of pollutants.''). Where legal requirements such as these do not apply, and to minimize disrupting or delaying the resolution of a wide range of routine matters, the Department will limit the *Justice Manual* requirement to cases involving a third-party payment that a court could not order in law or in equity. Where a court could order such relief, the public is already on notice that it might do so.

[3] *Regulations.gov* contains seventeen comments, one of which is a superseded version of a comment omitted from review at the request of the commenter. *FDMS.gov* contains one additional document, which is not a comment on the IFR and May 2022 Memorandum.

has long understood that the MRA applies when an official or agent of the Government either actually or ''constructively'' receives money for the Government. *See Effect of 31 U.S.C. § 484,* 4B Op. O.L.C. at 688. ''The doctrine of constructive receipt will ignore the form of a transaction in order to get to its substance,'' and the Department has accordingly concluded that a Federal agency will be considered to be in ''constructive receipt'' of money ''if a federal agency could have accepted possession and retains discretion to direct the use of the money.'' *Id.*

To ensure that a settlement including payment to a third party does not violate the MRA through constructive receipt, OLC has ''consistently advised that (1) the settlement be executed before an admission or finding of liability in favor of the United States; and (2) the United States not retain post-settlement control over the disposition or management of the funds or any projects carried out under the settlement, except for ensuring that the parties comply with the settlement.'' *Softwood Lumber,* 30 Op. O.L.C. at 119; *see also id.* at 119–20 (citing past precedent, including *Effect of 31 U.S.C. § 384*). ''If these two criteria are met, then the governmental control over settlement funds is so attenuated that the government cannot be said to be 'receiving money for the Government' '' under the MRA. *Id.*

The May 2022 Memorandum also does not implicate anti-augmentation concerns, which the Comptroller General decisions cited by commenters invoke in addition to the MRA. *See also Applicability of the Miscellaneous Receipts Act to an Arbitral Award of Legal Costs,* 42 Op. OLC 1, 3 (2018) (''[A]n agency may not augment its appropriations from outside sources without statutory authority''). The May 2022 Memorandum specifies that settlements may not ''be used to satisfy the statutory obligation of the Justice Department or any other federal agency to perform a particular activity. Nor shall any such settlement provide the Justice Department or any other federal agency with additional resources to perform a particular activity for which the Justice Department or any other federal agency, respectively, receives a specific appropriation.'' May 2022 Memorandum at 3.

Thus, as stated in the May 2022 Memorandum, ''[i]t has been the consistent view of the Office of Legal Counsel, including in 2020 when the Justice Department's current regulation [now-revoked 28 CFR 50.28] was promulgated, that settlements involving payments to non-governmental third parties, if properly structured, do not violate the Miscellaneous Receipts Act.'' *Id.* at 1. In support of this statement, the May 2022 Memorandum cites the OLC memorandum approving the now-revoked December 2020 Rule for form and legality, which recognized the longstanding position of the Department that properly structured settlement agreements do not violate the MRA. December 2020 OLC Memo at 2. This memorandum stated that the rule was ''consistent with the policy underlying the MRA—that Congress, and not the agency, should determine when government resources may be spent on behalf of third parties.'' *Id.* But it elaborated that the rule ''does not reflect an interpretation of the statute itself and thus prohibits certain payments to third parties that this Office has concluded that the MRA otherwise allows,'' *id.,* as detailed in the cited *Softwood Lumber* OLC opinion. And the May 2022 Memorandum explicitly incorporates the two criteria that *Softwood Lumber* identifies—the ''settlement must be executed before an admission or finding of liability in favor of the United States, and the Justice Department and its client agencies must not retain post-settlement control over the disposition or management of the funds or any projects carried out under any such settlement, except for ensuring that the parties comply with the settlement.'' May 2022 Memorandum at 3.

To the extent that commenters disagree with the *Softwood Lumber* opinion or believe it inapplicable, they do not offer authoritative judicial precedents or similar authoritative sources meaningfully undercutting its reasoning or its support for the current Department policy as set forth in the May 2022 Memorandum. *Softwood Lumber* remains applicable to this context, for several reasons.

First, Comptroller General opinions cited by commenters were addressed in the *Softwood Lumber* opinion itself, which noted that concerns in those matters were ''inapposite'' because the MRA is inapplicable where there has been no constructive receipt of money for the Government. 30 Op. O.L.C. at 121. (The same rationale applies to other GAO documents one commenter cites.)[4] The Department did not depart from that principle in the December 2020 Rule. Moreover, the Department has incorporated in some of the restrictions in the May 2022 Memorandum measures that address some of the other concerns raised in those Comptroller General opinions. The May 2022 Memorandum also explicitly incorporates the two criteria set forth in the *Softwood Lumber* OLC opinion—the ''settlement must be executed before an admission or finding of liability in favor of the United States, and the Justice Department and its client agencies must not retain post-settlement control over the disposition or management of the funds or any projects carried out under any such settlement, except for ensuring that the parties comply with the settlement.'' May 2022 Memorandum at 3. Moreover, in all events, decisions of GAO and the Comptroller General ''are not binding on Executive Branch agencies''; instead, ''the opinions of the Attorney General and th[e] Office [of Legal Counsel] are controlling.'' *Prioritizing Programs to Exempt Small Businesses From Competition in Federal Contracts,* 33 Op. O.L.C. 284, 302 (2009).

Second, the *Softwood Lumber* opinion does not, contrary to commenters' views, limit its understanding of the criteria for consistency with the MRA to its own facts or to the specific examples it cites. It instead articulates the two criteria for compliance broadly and refers to them as ''general principles'' applicable regardless of whether the United States is a plaintiff or defendant. 30 Op. O.L.C. at 120. *See also* December 2020 OLC Memo at 2 (citing *Softwood Lumber* for the principle that the MRA generally permits ''certain payments to third parties'').

Third, it is irrelevant that one commenter deems unpersuasive two circuit-level decisions sometimes invoked to support the legality of settlement payments—*Public Interest Research Group* v. *Powell Duffryn Terminals, Inc.,* 913 F.2d 64, 81 (3d Cir. 1990), and *Sierra Club* v. *Electronic Controls Design,* 909 F.2d 1350, 1354 (1990). *Softwood Lumber* does not rely on these decisions. The commenter, moreover, criticizes these decisions in part on the ground that ''Congress has subsequently indicated that SEPs (and thus all Third-Party Payments) violate

[4] The Department also notes that these Comptroller General decisions did not address the MRA's applicability when the Federal Government does not ''retain post-settlement control over the disposition or management of the funds or any projects carried out under any such settlement, except for ensuring that the parties comply with the settlement.'' *Softwood Lumber,* 30 Op. O.L.C. at 119. Moreover, all those decisions involved administrative agencies with statutory authority to both impose and also settle administrative penalties—a situation distinct from that addressed by the Department's May 2022 Memorandum and IFR. And those decisions focused on concerns raised when agencies enter settlements under which third parties carry out actions within the agencies' own statutory responsibilities, and with no nexus to the underlying violations—concerns that, again, the May 2022 Memorandum and the IFR address.

the MRA'' and the Anti-Deficiency Act (''ADA'') ''absent explicit congressional authorization,'' referring to Congress's express authorization of SEPs in 42 U.S.C. 16138. The Department disagrees with the commenter's reading of that provision, for reasons given below. Finally, the commenter claims that *Kokesh* v. *SEC,* 137 S. Ct. 1635 (2017), clarified that what constitutes a ''penalty'' is a functional inquiry. *Kokesh,* however, held that monetary disgorgement ordered by the SEC constitutes a penalty within the meaning of 28 U.S.C. 2462. *Id.* at 1641–45. *Kokesh* did not involve a settlement, and it is not relevant to when money paid under a settlement is received by the Federal Government under the MRA.

Fourth, when commenters contend that private defendants violate 31 U.S.C. 3302(c) by making third-party payments pursuant to settlements, they assume that funds in the hands of private defendants are ''public money'' subject to the MRA. Under *Softwood Lumber,* however, such funds are not public monies. And the commenters' argument improperly conflates funds in the hands of private litigants, before any determination of liability, with penalties imposed after trial that may in some circumstances constitute public money. *See Pub. Int. Rsch. Grp.,* 913 F.2d at 81 n.32 (noting that section 3302(c)(1) applies to penalties imposed after a trial, but recognizing that outside of penalties, ''a [private] party may compromise its claim however it sees fit''); *United States* v. *Smithfield Foods, Inc.,* 982 F. Supp. 373, 374 (E.D. Va. 1997) (finding with respect to a Clean Water Act penalty imposed after a trial that ''a penalty, which is imposed pursuant to a federal statute, in a suit brought by the federal government, . . . constitutes 'public money.' As such, it must be deposited with the Treasury, in accordance with the Miscellaneous Receipts Act, unless otherwise specified by Congress'').

Fifth, the Attorney General has not ''cherry-picked'' a favorable definition of ''constructive receipt'' to avoid violation of the MRA. To the contrary, the 1980 OLC opinion cited by the commenter applied the doctrine of ''constructive receipt'' as a ''practical'' constraint to guard against elevating form over substance in evaluating whether a settlement violated the MRA. *Effect of 31 U.S.C. 484,* 4B Op. O.L.C. at 688. In addition, as the comment itself acknowledges, there is no definitive version of the constructive receipt doctrine that is clearly applicable to the types of settlements at issue here and that differs from the Department's approach. Moreover, as *Effect of 31 U.S.C. 484* notes, the Department and Federal agencies had previously applied the same definition in other contexts, including to conclude that an individual in some circumstances does not ''accept'' funds when the individual does not retain control over the disposition of those funds. *Id.* at 688 n.11. That further undercuts the argument that the Department has chosen a particular version of the doctrine in order to permit circumvention of the MRA.

The Department also disagrees with the assertion that 42 U.S.C. 16138 (enacted in 2008) undercuts the legality of payments to third parties. That provision addresses EPA's authority to accept diesel emissions reduction SEPs. The commenter broadly states that the ''clear implication'' of this provision is that diesel emission SEPs (and accordingly all third-party payments) violate the MRA and the ADA absent express congressional authorization. But this claim ignores the text, context, and history of section 16138, which make clear that Congress enacted the 2008 provision to address a narrow concern that EPA then believed had newly arisen from Congress's express appropriations for diesel retrofit projects.

As an initial matter, nothing in the text of section 16138 indicates that it broadly prohibits the Federal Government from entering into settlement agreements that include payments to third parties. On the contrary, by its terms, it provides that the EPA ''may accept . . . diesel emissions reduction Supplemental Environmental Projects'' that meet certain criteria ''as part of a settlement of any alleged violates of environmental law.'' 42 U.S.C. 16138. To the extent that the commenter relies on the interpretive cannon *expressio unius est exclusio alterius*—that expressing one item of an associated group or series excludes another—that canon applies ''only when circumstances support a sensible inference that the term left out must have been meant to be excluded.'' *NLRB* v. *SW Gen., Inc.,* 580 U.S. 288, 302 (2017) (quotation marks and brackets omitted). Here, it is not ''sensible'' to ''infer[ ],'' *id.,* that Congress intended to disrupt the Federal Government's long-standing practice of entering into settlement agreements that include third-party payments from a provision that authorizes the Federal Government to agree to one such type of agreement—*i.e.,* those that include ''diesel emissions reduction Supplemental Environmental Projects,'' 42 U.S.C. 16138.

The history and context of section 16138 confirm this conclusion. As the Senate report accompanying the legislation states, SEPs had historically ''been an important funding stream for diesel retrofit projects.'' S. Rep. No. 110–266, at 2 (2008). The report notes that SEPs are ''projects [that] are undertaken by a defendant as part of a settlement in an environmental enforcement action . . . . They specifically do not include actions which a defendant is otherwise legally required to perform. So they generate environmental and public health benefits that would not have occurred without the settlement.'' *Id.* However, after Congress first funded the diesel retrofit program in 2005, the report continues, ''EPA apparently . . . concluded that the Agency generally should cease funding diesel retrofit projects via SEPs. EPA believes that allowing diesel retrofits to be funded by SEPs once Congress has specifically appropriated monies for that purpose could violate the Miscellaneous Receipts Act.'' *Id.* The Senate report explains that the new provision was ''intended to clarify that Congress did not intend the funding of the Diesel Emissions Reduction Act to affect EPA's ability to enter into SEPs that fund diesel retrofit projects.'' *Id.* Rather, ''Congress never intended the Diesel Emissions Reduction Act to limit EPA's ability to negotiate additional diesel retrofit projects as part of enforcement settlements.'' *Id.* at 3.

This history makes clear that Congress enacted the 2008 provision to address the narrow concern that, at the time, EPA believed had arisen from Congress's express appropriations in 2005 for diesel retrofit projects. Congress clarified that it had ''never intended'' to limit EPA's ability to negotiate SEPs when it funded the diesel retrofit program. *Id.* Neither the text nor the history or context of how section 16138 came about suggest that Congress understood SEPs to violate the MRA as a general matter. To the contrary, Congress was aware of EPA's and the Department's practice of using SEPs in environmental enforcement settlements and enacted this provision to support that practice and ensure that diesel retrofit projects would continue to be included. *See* S. Rep. No. 110–266, at 2.[5]

[5] Indeed, as one recent article put it, ''there is no evidence in the text or legislative history of the 2008 . . . amendment to show that Congress intended for the amendment to preclude EPA from accepting SEPs absent clear congressional authorization.'' Daniel Alvarez et al., *Clearing the*

Continued

The Department also disagrees with the same commenter's argument that 42 U.S.C. 7604(g)(2) undercuts the legality of payments to third parties in settlements, including SEPs. That provision allows a court to order that up to $100,000 of a penalty award in a citizen suit brought under the Clean Air Act to be used for ''beneficial mitigation projects which are consistent with'' the Clean Air Act and ''enhance the public health or the environment'' in lieu of being deposited in the U.S. Treasury. 42 U.S.C. 7604(g)(2). Like 42 U.S.C. 16138, nothing in the text of section 7604(g)(2) suggests that, in adopting that provision, Congress intended to upend the practice of agreeing to third-party payments as part of settlement agreements. Nor is that a ''sensible inference,'' *SW Gen.,* 580 U.S. at 302; section 7604(g)(2) is limited to cases brought by private citizens to abate pollution under the Clean Air Act and authorizes courts to order certain environmental projects in lieu of penalties—authority that, absent this provision, courts would lack.

The history of that provision confirms its limited scope. Section 7604(g)(2) was adopted as part of the Clean Air Act Amendments of 1990, Public Law 101–549, tit. VII, sec. 707, 104 Stat. 2399, 2682–83. One provision of that law, codified at 42 U.S.C. 7604(g)(1), created a special fund into which penalties imposed in Clean Air Act citizen suit actions ''shall be deposited''; the very next subsection, section 7604(g)(2), then provided that ''notwithstanding paragraph (1)'' courts had the authority to instead order the use of such civil penalty monies for beneficial mitigation projects. The close connection between these subsections—including the fact that section 7604(g)(2) twice cross-references section 7604(g)(1)—further indicates that section 7604(g)(2) was directed specifically to judicial remedies in citizen litigation under the Clean Air Act.[6] Congress's decision to authorize a court to order certain defined projects in the limited context of these private suits after a court determination of liability and penalty assessment has no bearing on the Government's authority to seek appropriate relief in a settlement.

In addition, the Department disagrees with commenters who contend that a third-party payment in the form of a SEP amounts to an agreement to trade back part of the penalty that would constitute public money subject to the MRA. Such trading back of penalties for third-party payments is not authorized by this rule or the May 2022 Memorandum. To the extent commenters suggest that such trade backs are permissible under the *2015 SEP Policy,* the Department notes that while that policy is beyond the scope of this rulemaking, it also does not authorize such trade backs. Nor does the Government violate the MRA simply because it settles a penalty claim that, if pursued to judgment, would have yielded public money subject to the MRA. Instead, the factors outlined in *Softwood Lumber* identify when the Government has constructively received money under the MRA.

Finally, the Department notes that the Clark Memorandum—which commenters cited in connection with this topic and for purposes of other topics—has been withdrawn and was not adopted more broadly by the Department. *See* Memorandum for ENRD Section Chiefs and Deputy Section Chiefs from Deputy Assistant Attorney General Jean E. Williams, Env't & Nat. Res. Div., U.S. Dep't of Just., *Withdrawal of Memoranda and Policy Documents* (Feb. 4, 2021), *https://www.justice.gov/enrd/page/file/1364716/dl* (last visited Oct. 31, 2024). Any related memoranda to the withdrawn Clark Memorandum and associated litigation filings also were not adopted more broadly by the Department. The Department has also addressed arguments made in the Clark Memorandum (which several commenters have repeated) elsewhere in this document.

2. The Anti-Deficiency Act

Comments: Some commenters state that the ADA, 31 U.S.C. 1341, was enacted to implement the Appropriations Clause of the U.S. Constitution. According to these commenters, it is a violation of the ADA for a settlement agreement to divert any funds from the U.S. Treasury into private hands without congressional authorization.

Other commenters state that there is no violation of the ADA because in these settlements, the Federal Government never received any funds to expend without congressional appropriation.

Response: The Department agrees that settlements that include third-party payments do not violate the ADA. The ADA generally prohibits any expenditure or obligation of public money exceeding an amount ''available in an appropriation or fund for the expenditure or obligation. . . .'' 31 U.S.C. 1341(a)(1)(A). As discussed above, *see supra* Part II.B.1, where a settlement is ''executed before an admission or finding of liability in favor of the United States'' and where the United States does not ''retain post-settlement control over the disposition or management of the funds or any projects carried out under any such settlement, except for ensuring that the parties comply with the settlement,'' the Government has not '' 'received money for the Government.' '' *Softwood Lumber,* 30 Op. O.L.C. at 119 (quoting 31 U.S.C. 3302(b)). In such settlements, no Government official or employee expends public money or creates an obligation of the Government.

3. Constitutionality of the Department's Actions

Comments: Multiple commenters state that the power to tax and the power to spend are granted only to Congress under Article I of the Constitution. They state that under the Appropriations Clause, only Congress has the authority to direct how Federal dollars are spent, and that body enacts annual appropriations measures mandating how Federal agencies do so. These commenters contend that the long-standing practices of the Department reflected in the May 2022 Memorandum circumvent these constitutional obligations. Additionally, commenters argue that through these settlements, DOJ is usurping the role of the legislature, without clear direction from Congress to do so. One commenter also claims that SEPs and similar payments to third parties use ''lawful enforcement authority to extract unlawful settlements,'' which, in the commenters' view, is inconsistent with the requirement in Article II of the Constitution that ''the executive take Care that the Laws be faithfully executed.''

Response: Third-party settlements entered into consistent with *Softwood Lumber* and the May 2022 Memorandum are consistent with the Constitution, as well as the MRA. The Constitution provides that ''[n]o Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law,'' U.S. Const. art. I, sec. 9, cl. 7, and that ''[t]he Congress shall have

Air on Supplemental Environmental Projects, 54 Env't L. Rep. 10382, 10394 (2024).

[6] The two provisions were closely linked in the legislative history of the 1990 Clean Air Act Amendments. The conference report describes the two provisions together in a single sentence, stating that ''[t]he House amendment establishes a special treasury fund similar to the one created in the Senate bill, and also authorizes courts in citizen suits to order that penalties be used in beneficial mitigation projects'' and noting that ''[t]he conference agreement adopts the House position.'' Congressional Research Service, *A Legislative History of the Clean Air Act Amendments of 1990,* at 946 (1993). Again, nothing here suggests that Congress intended to upend the practice of agreeing to third-party payments as part of settlement agreements.

Power . . . to pay the Debts and provide for the common Defence and general Welfare of the United States,'' *id.* art. I, sec. 8, cl. 1. In such settlements, no money is ''drawn from the Treasury.'' Nor does Congress's authority to provide for the ''general Welfare'' preclude the Executive Branch from settling litigation on terms that are otherwise consistent with applicable law.

The MRA helps ''preserve[ ] Congress's constitutional control over the expenditure of public funds.'' *Applicability of the Miscellaneous Receipts Act to an Arbitral Award of Legal Costs,* 42 Op. O.L.C. __, at *3 (Mar. 6, 2018). Similar to how the Framers of the Constitution limited the Appropriations Clause's commands to ''Money . . . drawn from the Treasury,'' Congress limited the MRA to ''money'' ''receiv[ed] . . . for the Government.'' And as discussed above in the responses to commenters, *see supra* Parts II.B.1 and II.B.2, funds paid under settlements that include third-party payments are not ''drawn from the Treasury'' and have not been ''receiv[ed] . . . for the Government'' by the United States. Commenters are also incorrect that the May 2022 Memorandum circumvents the Appropriations Clause and the MRA; on the contrary, the May 2022 Memorandum goes beyond what the Appropriations Clause and the MRA require. *See* May 2022 Memorandum at 2–4. To the extent the constitutional arguments of commenters also rely on their interpretation of the MRA or ADA, the Department addresses those arguments above.

Moreover, appropriately structured third-party payments are consistent with the discretion the Constitution accords the Executive Branch in enforcing the statutes enacted by Congress, which—absent a limitation by Congress—includes the authority to resolve claims by settlement on appropriate terms. *Authority of the United States to Enter Settlements,* 23 Op. O.L.C. at 135 (''The settlement power is sweeping, but the Attorney General must still exercise her discretion in conformity with her obligation to 'enforce the Acts of Congress.' '' (citation omitted)). While the Take Care Clause can impose certain limitations on that power, *see id.* at 138, the commenter offers no explanation for why all third-party settlements violate that provision beyond the conclusory statement that they ''obviously'' do.

4. Revocation of the December 2020 Rule and Issuance of the May 2022 Memorandum as Arbitrary and Capricious

Comments: Several commenters argue that the revocation of the December 2020 Rule is arbitrary and capricious or not grounded in law, or otherwise claim that DOJ lacks sufficient bases to justify the action. They argue that DOJ's conclusion that the December 2020 Rule is ''more restrictive and less tailored than necessary,'' 87 FR 27937, does not support repealing the entire rule. They further argue that the Department's statement that settlement policies ''have traditionally been addressed through memoranda,'' *id.,* is not sufficient to justify repeal.

Commenters assert that the Department placed the prior policy in regulations and that failing to do so here is a ''bad system of management'' because there is ''no central repository'' where the public and officials could locate memos governing the agency. One commenter states further that the May 2022 Memorandum describing the Department's new policy cites to an OLC memorandum that has not been produced via a Freedom of Information Act (''FOIA'') request and so itself is not available to the public.

Response: It is well-established that ''[a]gencies are free to change their existing policies as long as they provide a reasoned explanation for the change.'' *Encino Motorcars, LLC* v. *Navarro,* 579 U.S. 211, 221 (2016). ''When an agency changes its existing position, it 'need not always provide a more detailed justification than what would suffice for a new policy created on a blank slate.' '' *Id.* (quoting *FCC* v. *Fox Television Stations, Inc.,* 556 U.S. 502, 515 (2009)). ''But the agency must at least 'display awareness that it is changing position' and 'show that there are good reasons for the new policy.' '' *Id.* (quoting *Fox Television Stations,* 556 U.S. at 515). The IFR and the May 2022 Memorandum describe sound reasons for the revocation of 28 CFR 50.28 and a change in policy. Appropriately tailored ''agreements providing for payments to third parties are lawful and allow the United States to more fully accomplish the primary goals of civil and criminal enforcement: Compensating victims, remedying harm, and punishing and deterring unlawful conduct.'' 87 FR 27937. ''For example, the harms caused by violations of Federal environmental statutes . . . can be difficult to redress directly in particular cases''; and in such circumstances, third-party payments (including SEPs) can ''help achieve an enforcement action's goals.'' *Id.* Please see the other responses in this document to comments raising specific legal and policy concerns, especially Parts II.B.1 and 5, that underscore the reasons the Department changed policy.

Turning to the question of the form of the new policy, the Department observes that the previous Administration itself recognized that 28 CFR 50.28 was '' 'limited to agency organization, management, or personnel matters'. . . .'' 85 FR 81410 (citing 5 U.S.C. 553(a)(2), (b), and (d)). The same is true with respect to the IFR and with respect to this final rule. In such areas, Federal agencies have flexibility as to how they act and memorialize their actions. *Cf. Perez* v. *Mortg. Bankers Ass'n,* 575 U.S. 92, 101 (2015) (''Because an agency is not required to use notice-and-comment procedures [under the APA] to issue an initial interpretive rule, it is also not required to use those procedures when it amends or repeals that interpretive rule.''). Moreover, as the IFR states in announcing the revocation of 28 CFR 50.28, DOJ policies addressing the goals of settlements have ''traditionally'' been announced in memoranda. 87 FR 27937. Also of note, the previous Administration did not undertake a notice-and-comment rulemaking process; instead, it promulgated 28 CFR 50.28 as an immediately effective final rule. Likewise, in 2022, DOJ revoked this provision as an interim final rule and released simultaneously the May 2022 Memorandum and posted it to the DOJ website. *See https://www.justice.gov/media/1221546/dl?inline=* (last visited Oct. 31, 2024). At its discretion, the Department took the further step of requesting public comment as to those actions and is responding to significant submitted public comments in this final rule.

In response to the commenter who suggests that a memorandum is not appropriate because of the lack of a ''central repository'' for Department policy and states that the policy should be in the *Justice Manual* or *Code of Federal Regulations,* the Department notes that the memorandum is reflected in the *Justice Manual,* which is publicly available on the Justice.gov website. *See Settlement Agreements Involving Payments to Non-Governmental Third Parties,* section 1–17.000. Including these provisions in the *Justice Manual* is preferable because *Justice Manual* provisions can be readily amended, allowing the Department to adjust the guidance governing additional circumstances and fact patterns as needed. The *Justice Manual* governs the litigation practices of the Department

and is followed by Department litigators; a regulation is not needed for this purpose. Further, the Department has announced with this notice that it will make changes to these *Justice Manual* provisions, demonstrating the benefits of this approach.

Finally, as to the question of the release under FOIA of December 2020 OLC Memo, which is referenced in footnote two of the May 2022 Memorandum, DOJ did release this document (posted on February 16, 2023) and it is available in the FOIA Reading Room at *https://www.justice.gov/oip/foia-library/foia-processed/general_topics/settlement_guidelines_third_parties_2_14_23/download* (last visited Oct. 31, 2024).

5. The Attorney General's Guidelines and Limitations as Public Policy

5.1. Examples of Past Department of Justice Conduct as a Basis for Not Revoking the December 2020 Rule and Issuing the May 2022 Memorandum

Comments: Some commenters state that during the Clinton, Bush, and Obama Administrations, the Department entered into settlement agreements containing third-party payments that violated the statutory and constitutional provisions discussed in the previous topics; and further stated that these settlement agreements reflect bad public policy. Examples offered include settlements with financial institutions following the 2008–09 financial crisis; settlements addressing ''housing counseling assistance'' programs; cy pres settlements in other consumer and civil rights cases; and settlements in environmental cases. Commenters argued that these settlements demonstrate that case resolutions will lead to favoritism or ''cronyism.'' Several commenters further asserted that Congress declined to enact funding for some programs where similar activities were subsequently at least partially funded through third-party payments. Commenters also alleged that the Federal Government ''strong-armed'' defendants in some of these settlements to make payments to politically favored entities. Requiring defendants to donate to activist groups selected by the Department, they argue, raises serious legal and ethical issues, erodes public trust, and is analogous to ''corruption.'' Commenters also expressed concern about the ''lack of transparency'' surrounding third-party payments, and about decisions made by ''unaccountable bureaucrats.''

Response: Some of the points raised by commenters do not relate to the substance of the action on which the Department is seeking comment. For example, cy pres class action settlements are expressly outside the scope of the Department's action. *See* May 2022 Memorandum at 1 n.2.

A general prohibition by rule on third-party payments is unnecessary for several reasons. First, with respect to conflict-of-interest concerns, Department attorneys are subject to strict conflict of interest rules imposed by the Department and their respective State bars that apply in the context of litigation, including the settlement of claims. Second, the Department has concluded that, although the commenters' concerns are unfounded based on past settlements, it can best proactively address such concerns through the use of policies like the May 2022 Memorandum, or changes to the *Justice Manual,* rather than a less flexible rulemaking process. Indeed, the May 2022 Memorandum sets forth guidelines designed to ensure that third-party settlements are not used for improper purposes, including a requirement that projects ''have a strong connection to the underlying violation or violations of federal law at issue'' and a provision barring the Department and its client agencies from ''propos[ing] the selection of any particular third party to receive payments to implement any project carried out under any such settlement.'' May 2022 Memorandum at 3. These guidelines adequately guard against cronyism and political favoritism while preserving the benefits of third-party payments. Third (and relatedly), the Department notes that allowing for third-party payments can increase trust in the judicial process by, for example, allowing settlements to be more responsive to affected communities.

For similar reasons, the Department disagrees that a rule prohibiting third-party payments is necessary to ensure transparency. As detailed earlier in this preamble, *see supra* Part I.C, transparency concerns can be addressed through other means, including the revisions to the *Justice Manual* described there. Those revisions appropriately balance concerns of transparency and efficiency with the benefits that can accrue from third-party settlements in a way that a rule banning third-party settlements would not. Nor is a rule necessary to ensure that unaccountable actors are not making important settlement decisions. Rather, the Department can ensure accountability through other means, such as subjecting settlements that include third-party payments to approval requirements similar to those required for other significant departmental actions. *See* May 2022 Memorandum at 3–4 (settlements involving a payment to a non-governmental third party must obtain the approval of the Deputy Attorney General or the Associate Attorney General, with certain exceptions).

To the extent that commenters suggest that Congress's decision not to fund certain activities is evidence that it is improper for the Department to agree to third-party payments that would fund such activities, they have not provided any reason to draw an inference that Congress's inaction evinces an intent to affirmatively disapprove such settlements.

Some commenters identified particular past payments to third-party organizations that they view as inappropriate, including settlements involving allegations of lending discrimination that required the defendant to make payments to third-party organizations to conduct general public education and awareness projects and a 2006 environmental non-prosecution agreement requiring a third-party payment in the form of ''$1 million to the Alumni Association for the United States Coast Guard Academy, New London, Connecticut to fund an Endowed Chair of Environmental Studies.'' The Department, while not conceding to the commenters' characterizations of these settlements, is sensitive to the need to give the public confidence that settlements providing for payments to third parties are appropriately tailored. In that vein, the May 2022 Memorandum provides that ''[n]o such settlement shall require payments to non-governmental third parties solely for general public educational or awareness projects; solely in the form of contributions to generalized research, including at a college or university; or in the form of unrestricted cash donations.''

5.2. Selection of Third-Party Recipients

Comments: One commenter would revise the May 2022 Memorandum to allow DOJ and EPA to work with affected community members in two respects: to devise appropriate SEPs and to suggest appropriate third-party recipients. The commenter says that the May 2022 Memorandum can be read to give defendants ''sole control'' in selecting projects because it prohibits Department selection of a specific third party and allows the defendant to propose projects. The commenter argues that impacted communities may know how best to remedy harm done to them, and they should not be required to work directly with the party causing the harm. Such revisions, the comment

continues, would also help to prevent funding of organizations improperly favored by defendants.

Several commenters argue that under the May 2022 Memorandum, DOJ has too great a role in the selection of the recipients of third-party payments, which will lead to the funding of ''political allies.'' Other commenters similarly express concerns about ''steer[ing] settlement funds to political allies,'' ''picking winners,'' or funneling funds to ''advocacy groups'' for ''favored programs.''

Response: The Department acknowledges the concerns with allowing defendants sole authority to select third-party recipients, but in order to avoid the appearance that the Department is directing the inclusion of particular projects or third parties into a settlement, declines to adopt a policy under which the Department would make such selections. And the Department has addressed these concerns through other means to help ensure appropriate project selection. For example, under the May 2022 Memorandum, ''projects must have a strong connection to the underlying violation,'' ''be consistent with the underlying statute,'' and ''advance at least one of [the statute's] objectives.'' May 2022 Memorandum at 3. ''The project should also be designed to reduce the detrimental effects of the underlying violation . . . to the extent feasible and reduce the likelihood of similar violations in the future.'' *Id.* Moreover, the Department and its client agencies ''may specify the type of entity'' to be the beneficiary of any projects carried out, *id.,* and may ''disapprove of any third-party implementer or beneficiary that the defendant proposes'' provided that the disapproval is based upon objective criteria for assessing qualifications and fitness outlined in the settlement agreement. *Id.* The May 2022 Memorandum also expressly precludes certain payments that would ordinarily be too broad to satisfy the criteria above: Settlements may not ''require payments to non-governmental third parties solely for general public educational or awareness projects; solely in the form of contributions to generalized research . . . or in the form of unrestricted cash donations.'' *Id.* Thus, these provisions rule out Federal selection of any particular recipient but permit the United States to disapprove a particular recipient based on objective grounds laid out in the settlement agreement.

In addition, the Department can address the concerns about defendants selecting projects in other ways. The May 2022 Memorandum ''provides internal Justice Department guidance only.'' May 2022 Memorandum at 2. Nothing prevents a community from engaging with the defendant at any time, including regarding potential SEPs. Moreover, once a defendant expresses interest in or proposes a third-party payment as part of a judicial settlement, Department attorneys and their client agencies may encourage the defendant to seek input from affected communities on their proposal. Defendants may choose to consult with the community to identify the community's needs and concerns in advance of agreeing to a settlement, which would help satisfy the Department's requirement that third-party payments have a strong connection to the allegations and advance the underlying statutory purpose. The Department will also add a provision to *Justice Manual* section 1–17.000 that provides for public comment on certain settlements that include these types of payments, *see supra* Part I.C, so the public will be able to provide input on the particular remedies identified in the settlement.

Finally, with respect to concerns that the Department would steer settlement funds to political allies, pick winners, or funnel funds to favored groups and programs, the requirements detailed above operate to ensure, as stated in the May 2022 Memorandum, that third-party payments function properly as ''critical tools for addressing violations of federal law and remedying the harms those violations cause.'' May 2022 Memorandum at 2. The Department would not support the use of partisan or viewpoint-based criteria in determining how to implement a third-party payment, as those would not be ''objective criteria,'' *id.* at 3; such criteria could give rise to an inference that a potential recipient of a third-party payment was rejected based on the Department's disfavoring of that particular partisan characteristic or viewpoint.

5.3. Guidelines and Limitations: Adequacy To Constrain Settlement Discretion

Comment: One commenter views the May 2022 Memorandum as ''window-dressing that will reopen avenues of past abuse'' of the Department's settlement discretion. In this commenter's view, the guidelines still permit the Department to indicate the category of recipient of third-party payments and to disapprove specific recipients based on criteria the Department itself selects, and even the express prohibition of certain types of third-party payments can be circumvented by allowing some minimal funding of another type of activity or minimal statement of conditions for cash donations. The commenter made several further similar criticisms addressed below.

Response: The Department disagrees with the characterization that the May 2022 Memorandum does not sufficiently constrain its settlement discretion. On the contrary, the memorandum's provisions impose significant and appropriate constraints on the use of this tool. The guidelines and limitations operate together to ensure that settlement agreements providing for payments to non-governmental third parties are structured properly, and are consistent with applicable law. *See* May 2022 Memorandum at 2–3. The requirement that the Deputy Attorney General or Associate Attorney General approve a settlement containing a third-party payment also promotes consistency in application of the May 2022 Memorandum's terms. *See id.* at 3–4.

The commenter states that the prohibition on third-party payments ''solely'' for general public educational or awareness projects or generalized research is not constraining because a settlement could ''allocate *any* amount of the settlement money to some other activity that is not public education, awareness, or generalized research'' in order to ''skirt this limitation.'' That misunderstands the relevant limitation. The term ''solely'' is intended to recognize that a project that otherwise complies with the guidelines set forth in the May 2022 Memorandum could also have an incidental effect of public education or awareness or could have incidental benefits to generalized research. The Department now clarifies that no portion of a settlement may be directed at these prohibited purposes. For example, a settlement addressing the lead-based-paint violations of a commercial renovator may include a third-party payment in the form of a project to remediate lead-based paint in a nearby school. The settlement may have the incidental effect of educating school attendees, their families, and the local community about the dangers of lead paint, but no portion of the third-party project could be directly used for a public awareness campaign.

The commenter further argues that the requirement of a ''strong connection to the underlying violation or violations of federal law at issue in the enforcement action,'' May 2022 Memorandum at 3, is not a significant constraint. The commenter suggests that this provision requires only a connection to the broad purposes of the underlying statute,

which the commenter states is ''highly subjective.'' The Department disagrees. The same provision of the May 2022 Memorandum states that ''[t]he project should also be designed to reduce the detrimental effects of the violation or violations at issue to the extent feasible and reduce the likelihood of similar violations in the future.'' May 2022 Memorandum at 3. Linking the project to the detrimental effects of the violation (and preventing recurrence) requires a strong connection to the harms associated with the underlying violation; for violations that affect a particular geographic area, this requirement will also mandate that the project be linked to that area.

The commenter describes the limitation that a project ''should also be designed to reduce the detrimental effects of the underlying violation or violations at issue to the extent feasible and reduce the likelihood of similar violations in the future,'' *id.,* as expressing an ''aspirational preference, not a requirement of agency settlements.'' This is incorrect. The May 2022 Memorandum requires that a properly structured settlement must address this factor ''to the extent feasible.'' May 2022 Memorandum at 3. This qualification recognizes that, in some instances, it may be difficult to reduce the detrimental effects of a past violation of law where those effects are widely shared.

The commenter states that the provision limiting third-party payments for activities for which an agency receives a specific appropriation will not be effective, stating that ''[t]o sidestep these guidelines, an outside group need only describe the project for which it may receive settlement funds in a manner that differentiates the project from an agency's appropriations or statutory obligations.'' This is also incorrect. The Department will review any proposals for overlap between a project and appropriations that an agency receives and will not rely solely on the description of the project by the defendant or any other party.

The commenter also questions the benefits of the provisions of the May 2022 Memorandum providing for review and approval by the Deputy Attorney General or Associate Attorney General of settlements that include payments to non-governmental third parties. The Department has long required that certain significant settlements be approved by the Deputy Attorney General or Associate Attorney General. 28 CFR 0.160, 0.161. These requirements ensure that certain types of case resolution receive appropriate review and attention within the Department. The provisions of the May 2022 Memorandum requiring such approval for settlements including payments to non-governmental third parties are consistent with these longstanding provisions and will similarly ensure that the memorandum's provisions are applied consistently and uniformly.

The commenter also appears to presume that DOJ controls the development of third-party payment provisions. The Department will adopt a provision in *Justice Manual* section 1–17.000 clarifying that in negotiating a civil case resolution, the Department and its client agencies may condition a settlement on the inclusion of a third-party payment if the third-party payment constitutes relief that a court would have authority to order under applicable law or in equity, but that otherwise such provisions may only be included if the defendant expresses interest in doing so. Outside the context of relief that a court could order, then, these provisions will be included only where the defendant expresses interest in doing so. Second, the defendant has the lead on developing the proposed project, which must have a ''strong connection'' to the violation of Federal law underlying the case.

In addition, in many civil cases, following the conclusion of settlement negotiations, there is a public process for entry of a proposed Federal consent decree. 15 U.S.C. 16(b)–(h); 28 CFR 50.7. Once the United States files the proposed consent decree in Federal court, there is typically a period in which the general public may comment, including on any provisions addressing third-party payments. The Federal court then considers any resulting comments and exercises its own independent judgment in deciding whether to approve such a decree. The Department will add a provision to *Justice Manual* section 1–17.000 requiring a public comment process for certain civil third-party payments subject to the May 2022 Memorandum, so that the public will have additional opportunities for input on such provisions. This requirement will afford additional transparency for settlements including such remedies.

5.4. Guidelines and Limitations: Prohibition on Post-Settlement Control

Comment: According to one commenter, the recipients of third-party payments under the May 2022 Memorandum are not subject to reporting obligations to ensure oversight and accountability because DOJ and its client agencies cannot '' 'retai[n] post-settlement control over the disposition or management of the funds or any projects carried out under any such settlement.' ''

Response: The prohibition against post-settlement control is designed to address the requirements of the MRA. *See supra* Part II.B.1. This does not mean, however, that DOJ will not oversee the settlement and ensure the defendant's compliance with it. In fact, the fourth guideline in the May 2022 Memorandum specifically allows for this:

> Any such settlement must be executed before an admission or finding of liability in favor of the United States, and the Justice Department and its client agencies must not retain post-settlement control over the disposition or management of the funds or any projects carried out under any such settlement, *except for ensuring that the parties comply with the settlement.*

May 2022 Memorandum at 3 (emphasis added) (citing *Softwood Lumber,* 30 Op. O.L.C. at 119).

In addition, Federal consent decrees and settlements in civil cases contain standard provisions to ensure compliance, typically including stipulated penalties for failure to complete required actions spelled out in the agreement. Settlement agreements including a third-party payment may also contain specific terms addressing implementation and compliance. The Government can seek enforcement of these provisions to ensure compliance with the terms of the settlement or consent decree. Furthermore, following the conclusion of settlement negotiations, the Department will require opportunity for public comment on certain settlements that incorporate third-party payments in *Justice Manual* section 1–17.000, which will provide a mechanism for additional accountability on such terms. *See supra* Part I.C. (Such a public process is often already required by law, 15 U.S.C. 16(b)–(h), 28 CFR 50.7.)

6. Comments Regarding SEPs

6.1. Characterization of SEPs in the May 2022 Memorandum

Comment: One commenter states that the May 2022 Memorandum and IFR appear to ''fundamentally misunderstan[d] what SEPs are and how they are designed to function'' by treating them as ''a remedy for the underlying violation.'' The commenter goes on to provide his understanding of what a SEP is by reference to EPA's *2015 SEP Policy* and in contrast to the remedy the commenter identifies as mitigation. The commenter made several further similar criticisms addressed below.

Response: This comment discusses one potential type of third-party

payment used in the environmental context, ''Supplemental Environmental Projects.'' EPA's *2015 SEP Policy* specifically addresses such projects. The Department's May 2022 Memorandum is distinct from EPA's *2015 SEP Policy,* and comments on EPA's policy are outside the scope of the Department's request for comments, although the Department notes in this respect that the EPA policy never characterizes, as the comment suggests, SEPs as projects undertaken ''in exchange for a lower civil penalty.'' Similarly, the May 2022 Memorandum does not authorize third-party payments in any context to be made ''in exchange for a lower civil penalty.''

The Department's memorandum does reference SEPs as one potential category of third-party payment that can be an appropriate remedy in a Department settlement. (Note that not all SEPs necessarily involve third-party payments, however.) The Department will respond to this comment to the extent that it addresses aspects of the May 2022 Memorandum, as distinct from EPA's *2015 SEP Policy.*

This commenter asks why ''[t]he May [2022] Memo and the Interim Final Rule do not explain why courts' equitable authority is insufficient to remedy the harms from violations of federal environmental law.'' At the outset, remedying harm is not the only purpose of these types of third-party payments; they also operate to ''punish and deter future violations.'' May 2022 Memorandum at 1. As to their function in remedying harm, the May 2022 Memorandum states that some categories of harms, including in environmental cases, ''can be difficult to redress directly in particular cases.'' *Id.* at 1–2. Where a violation has attenuated or indirect effects (such as the example where excess air pollution accelerated weathering and increased lead exposure from deteriorating lead-based paint), it may not be feasible to identify the scope of those affected with precision. In settling a case, litigants are not subject to the same limitations that apply to judicial remedies and can agree to remedies that may go beyond those that a court would typically order. *See, e.g., Frew* v. *Hawkins,* 540 U.S. 431 (2004); *Local No. 93, Int'l Ass'n of Firefighters, AFL–CIO* v. *City of Cleveland,* 478 U.S. 501 (1986); *United States* v. *Charles George Trucking,* 34 F.3d 1081 (1st Cir. 1994); *United States* v. *BP Prods. N. Am., Inc.,* No. 2:23–CV–166, 2023 WL 5125148 (N.D. Ill. Aug. 9, 2023). In *Firefighters,* the Supreme Court stated that when considering a consent decree that would resolve a matter within its jurisdiction and within the general scope of the case pleadings and would ''further the objectives of the law upon which the complaint was based,'' ''a federal court is not necessarily barred from entering [that] consent decree merely because the decree provides broader relief than the court could have awarded after a trial.'' 478 U.S. at 525.

The remedies that theoretically a court could order can require more precise accounting of effects and injuries than may be practicable in some instances. Further, to fully remedy the underlying harm caused by the violation(s) might require more remedial action than a court may order in a particular statutory scheme. The May 2022 Memorandum requires that any project funded by a defendant ''be consistent with the underlying statute being enforced and advance at least one of the objectives of that statute,'' ensuring that the project will be consistent with congressional intent in enacting the applicable statutory framework. May 2022 Memorandum at 3.

Indeed, some of the other commenters provided examples of types of harms that cannot be adequately addressed without remedies of this type. *See infra* Part II.B.6.2. These harms can arise over long time scales, in circumstances in which there are multiple sources of exposure; in addition, it may be apparent that a particular area or community has experienced unusual environmental harms, but difficult to apportion causation from any individual source. For example, in 2015, the United States, the State of Michigan, and AK Steel Corporation agreed to a settlement to resolve claims for particulate matter violations of the Clean Air Act at AK Steel's Dearborn, Michigan steel plant, which is located in a mixed industrial area with multiple sources of pollution affecting neighboring communities. The settlement required AK Steel to pay a $1.35 million civil penalty and implement injunctive relief to address the violations. The settlement also required AK Steel to perform a SEP, consisting of the purchase and installation of dynamic air filters in the air conditioning systems at the Salina elementary and middle schools. The projects, which cost $337,000, reduced students' exposure to fine particulates—from the steel plant but commingled with pollution from other sources in the airshed—while in school. Examples like this illustrate why the Department concluded that ''[w]hen used appropriately, these agreements allow the government to more fully compensate victims, remedy harm, and punish and deter future violations.'' May 2022 Memorandum at 1.

6.2. SEPs as Public Policy

Comments: A number of commenters express support for the IFR's restoration of the use of third-party payments in the form of SEPs in judicial environmental enforcement settlements. In the view of these commenters, SEPs serve to provide fuller mitigation for harm caused by violations and are a tailored approach to address challenges for communities who routinely face noncompliance from industries. As one commenter states, ''SEPs represent a unique opportunity in the environmental enforcement context to secure some form of restitution for communities harmed by violations given the difficulty of identifying and quantifying full individual harm from a violating pollution source to support adequate direct mitigation. It is often difficult, if not impossible, to fully trace all human ailments or natural problems to a particular pollution source, especially over long periods of time.'' Absent the availability of this settlement tool, another commenter notes, ''enforcement actions are less able to reduce or offset the detrimental effects that the unlawful behavior has already had on affected communities.'' Some commenters state that the Department's changes will support State efforts to address equity, public health, and welfare issues in communities adversely affected by environmental violations and at no additional cost to the taxpayer, and note that 37 States have SEP policies allowing such projects in settlements.

The Department received multiple comments discussing the benefits of the changes in policy reflected in the Department's May 2022 Memorandum for communities and others affected by violations of law. Commenters describe how third-party payments in the form of SEPs have been used to provide more complete relief for communities affected by environmental pollution, particularly overburdened communities. Some of these comments specifically note that environmental violations can cause harms that cannot be adequately addressed without this type of remedy.

Some commenters, however, view third-party payments, including SEPs, as ''corrupt'' tools inadequate to remedy public rights or deter violators, arguing that SEPs and third-party payments undercut deterrence, do not prevent pollution in the case of environmental enforcement, and incentivize ''corrupt'' actions by officials to reward favored entities with payments. Similarly, another commenter questions the

deterrent effect of settlement agreements containing third-party payments in the form of SEPs and characterizes SEPs as ''ad hoc'' and as presenting ''likely inefficient ways to combat pollution.''

Response: These comments discuss one particular type of settlement instrument, SEPs. As noted in DOJ's response to topic 6.1 above, *see supra* Part II.B.6.1, comments on the terms of the *2015 SEP Policy* are outside the scope of the Department's request for public comment.

That said, the Department agrees with commenters that SEPs can provide benefits. Federal environmental statutes seek to protect public health writ large but, as applied in the context of a violating facility, it is often the people who live near and downwind of that facility who bear more of the harm. These harms can arise over long time scales, in circumstances in which there are multiple sources of exposure; in addition, it may be apparent that a particular area or community has experienced unusual environmental harms, but difficult to show causation from any individual source, as discussed. Third-party payments may be crafted to ensure that the case resolution accounts for the reality on the ground.

The Department disagrees that SEPs decrease the deterrent effect of Federal law and that they are inefficient ways to combat pollution. The commenter does not provide data to support these statements. In fact, the ability to include third-party payments in case resolution—in addition to a civil penalty and injunctive relief—increases the deterrent value of the Department's enforcement actions by expediting and facilitating settlement, enabling the Department to prosecute more violators and ensuring that violators are held accountable for all harms, including those harms that may be intangible or difficult to quantify, or where victims are no longer available to pursue individual claims. Certain third-party payments may also serve to deter and prevent violations, such as providing air-monitoring equipment to a surrounding community in a Clean Air Act enforcement case.

In addition, the Department does not depend solely upon third-party payments to accomplish its litigation objectives. Resolving violations of environmental laws by settlement is a complicated task, involving the weighing of a variety of factors, which the Department undertakes in accordance with applicable law and Departmental policy. Key considerations for the Department include compensating victims, redressing harms, and punishing and deterring unlawful conduct without the costs and delay of trial. The Department assesses that third-party payments can support these goals, and the Department disagrees with some commenters' suggestion that limiting the Department's enforcement tools to civil penalties after judgment will maximize deterrence, much less optimally serve the many goals of the Department's enforcement activities.

Whether a third-party payment is appropriate as part of case resolution is only one consideration for the Department when negotiating a settlement but including such a payment may contribute to a resolution. Such settlement agreements can be significantly more efficient than litigating every case to judgment because they save agencies and taxpayers significant time and expense. Those savings allow the Department to pursue more cases that will deter more violators from more future unlawful conduct. With respect to the commenters' claims of favoritism, see the discussion in topics 5.1 and 5.2 above of such claims and of constraints on selection of third parties and projects. *See supra* Part II.B.5.1 and II.B.5.2.

Finally, the Department notes that courts have entered Federal consent decrees containing SEPs for decades. As one court stated when approving a settlement with U.S. Steel involving SEPs at a value of $1.9 million and a $2.2 million civil penalty:

> Could the agreement be different? Of course. Could it demand more from U.S. Steel by way of a fine, for example? Again, of course it could. But making such a demand may have caused U.S. Steel to walk away from the bargaining table and set the parties on a course of protracted litigation. This is to say that there is no single fair and reasonable resolution, but rather a range of them. And, in my judgment, the Consent Decree proposed in this case is plainly within that range.

United States v. *U.S. Steel Corp.,* No. 12–CV–304–PPS–APR, 2017 WL 1190953, at *3 (N.D. Ind. Mar. 30, 2017).

7. Implementation of the May 2022 Memorandum

7.1. Publication of Future Memoranda

Comment: One commenter requests that DOJ make publicly available all future memoranda addressing third-party payments in settlements because they have been ''highly controversial and problematic.''

Response: DOJ recognizes the importance of and greatly values transparency and public participation in enforcement matters where it is possible given the sensitivity of bringing specific litigation. The Department published the May 2022 Memorandum (see response to topic 4 above, *supra* Part II.B.4) and voluntarily sought public comment on it. The requirements of the May 2022 Memorandum are publicly available in *Justice Manual* section 1–17.000, as will be the Department's revisions to that section. The Department will provide in the new *Justice Manual* provision for a public process on certain civil settlements that incorporate third-party payments. *See supra* Part I.C. The Department is aware of the public interest in this topic and will seek to make future memoranda in this area public to the extent it is feasible to do so.

7.2. Including Affected Communities

Comments: Multiple commenters address ways in which impacted communities and individuals should participate more fully in the settlement process and be better supported in doing so. Several commenters asked DOJ and EPA specifically to affirm the continued validity of EPA's *2015 SEP* Policy and to update EPA's 2003 community engagement guidance with ''meaningful'' engagement practices or made similar suggestions on ways to increase engagement. *See* U.S. Environmental Protection Agency, *Interim Guidance for Community Involvement in Supplemental Environmental Projects* (2003). Several commenters also encourage continued implementation of the training and outreach practices in a recently issued Department memorandum.

Response: Commenters suggest a variety of mechanisms to increase the role of communities in selecting and implementing SEPs. DOJ recognizes the importance of remedying the harms to the communities most directly impacted by violations of the Federal environmental laws. As noted above, comments that relate to the details of the *2015 SEP Policy* or other EPA policies are outside the scope of this request for public comment.

The Department recently addressed the need for meaningful engagement with at least a subset of impacted communities in a memorandum entitled *Comprehensive Environmental Justice Enforcement Strategy. See* Memorandum for Heads of Department Components, United States Attorneys from the Associate Attorney General, *Comprehensive Environmental Justice Enforcement Strategy* (May 5, 2022) (''*Comprehensive Environmental Justice Enforcement Strategy* Memorandum''), *https://www.justice.gov/asg/file/1217741-0/dl?inline* (last visited Oct. 31, 2024). Pursuant to the strategy, all

litigating components at DOJ shall consider appropriate outreach efforts to identify areas of environmental justice concern in relevant communities. *Id.* at 6–7. As the commenter suggested, designated environmental justice coordinators in each U.S. Attorney's Office have been trained to serve as point people for community outreach. *Id.* at 3 and 6. And cases initiated under the strategy will include the development of case-specific community outreach plans to obtain input on community concerns or potential case remedies. *Id.* at 6–7.

Regarding comments addressing consideration of community input in the development of SEPs in enforcement actions, comments on EPA's policy are outside the scope of the Department's request for comments. But DOJ notes that in December 2023 EPA began piloting the use of an email inbox to receive ideas from the public concerning potential projects for settlement negotiations. Further information is available at U.S. Environmental Protection Agency, *Supplemental Environmental Projects (SEPs), https://www.epa.gov/enforcement/supplemental-environmental-projects-seps#sepidea* (''USEPA SEPs website'') (last visited Oct. 31, 2024).

The Department appreciates commenters' suggestions for potential assistance to impacted communities from the DOJ Environmental Crime Victim Assistance program, and for funding streams from DOJ and EPA to compensate community-based organizations for their expertise. However, these comments are outside the scope of the IFR.

7.3. Working With Tribal Governments

Comment: One commenter expresses general support for SEPs, urges DOJ and EPA to address the aspects of SEPs that are relevant to Federally recognized Indian Tribes (''Tribes'') in Indian country, and offers recommendations to the Department based on previous experiences with SEPs. The commenter suggests working with Tribes early to avoid SEPs that are ''rigid'' or ''unworkable,'' and to achieve environmental justice.

Response: The Department has a policy on *Tribal Consultation* (Nov. 30, 2022), which can be found at *https://www.justice.gov/d9/2022-12/doj-memorandum-tribal-consultation.pdf* (last visited Oct. 31, 2024). Consistent with this policy, DOJ is committed to engaging in ongoing communication with Tribes. While settlement negotiations fall outside of our formal consultation policy, DOJ engages in communication with Tribes beyond consultation such as listening sessions, meetings with individual Tribes, and informal discussions with Tribal leaders.

The Department is a co-plaintiff with Tribes in a number of environmental enforcement matters. In such cases, the co-plaintiff Tribe is an active participant in settlement negotiations and able to discuss SEPs as an element of relief for the claims the Tribe advances.

As noted in DOJ's previous response, *see supra* Part II.B.7.2, the Department recently addressed the need for meaningful engagement with impacted communities in its *Comprehensive Environmental Justice Enforcement Strategy* Memorandum. Consistent with the strategy, all parts of the Department shall consider appropriate outreach efforts to identify areas of environmental justice concern, including each U.S. Attorney's Office in communities within its district. Designated environmental justice coordinators in each U.S. Attorney's Office have been trained to serve as point people for community outreach. And cases initiated under the strategy will include the development of case-specific community outreach plan. In addition, the strategy requires certain Department components to consider how to: ''(1) facilitate consideration of these unique [Tribal environmental justice] issues in cases brought pursuant to this Strategy; (2) identify opportunities to work with the governments of Federally recognized Tribes, including consortia of such Tribes; (3) work with other Federal agencies to coordinate investigative resources and enforcement authorities; and (4) recommend ways to address and incorporate Tribal concerns into the Department's enforcement work.'' *Comprehensive Environmental Justice Enforcement Strategy* Memorandum at 3.

The Department appreciates the commenter's suggestions for Tribal set-asides, whether in the context of mitigation or a third-party payment, depending on the particular case, and greater transparency regarding the impact of emissions on tribal communities. These comments are outside the scope of the IFR, and the Department does not address them further.

7.4. Effectiveness of the 2015 SEP Policy

Comment: One commenter asks DOJ and EPA to affirm that EPA's *2015 SEP Policy* remains in effect or to readopt it if does not. The commenter indicates that even if it was never withdrawn or replaced, having administrative procedural clarity would be beneficial.

Response: Where DOJ is working with EPA as a client agency, the Department certainly discusses case resolution with it by reference to relevant EPA policy documents. Whether EPA continues to apply a particular policy, including its *2015 SEP Policy,* is within that agency's purview and beyond the scope of this action. DOJ understands the 2015 policy to be in effect as reflected in several responses to comments and points commenters to EPA's website, which itself cites the *2015 SEP Policy. See* USEPA SEPs website.

IV. Regulatory Certifications

A. Administrative Procedure Act

This rule relates to a matter of agency management or personnel and is a rule of agency organization, procedure, or practice. As such, this rule is exempt from the usual requirements of prior notice and comment and a 30-day delay in effective date. *See* 5 U.S.C. 553(a)(2), (b), and (d). The rule is effective upon signature. In its discretion, the Department sought post-promulgation public comment on the IFR and is responding to public comment.

B. Regulatory Flexibility Act

An analysis under the Regulatory Flexibility Act was not required for this rule because the Department was not required to publish a general notice of proposed rulemaking for this matter. *See* 5 U.S.C. 601(2), 604(a).

C. Executive Orders 12866, 13563, and 14094—Regulatory Review

This rule has been drafted and reviewed in accordance with section 1(b) of Executive Order 12866, ''Regulatory Planning and Review,'' section 1(b) of Executive Order 13563, ''Improving Regulation and Regulatory Review,'' and Executive Order 14094, ''Modernizing Regulatory Review.''

This rule is ''limited to agency organization, management, or personnel matters'' and thus is not a ''rule'' for purposes of review by the Office of Management and Budget under section 3(d)(3) of Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget.

D. Executive Order 12988—Civil Justice Reform

This regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, ''Civil Justice Reform.''

E. Executive Order 13132—Federalism

This rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. It is a rule of internal agency practice and procedure. Therefore, in accordance with Executive Order 13132, ''Federalism,'' the Department has determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions are necessary under the provisions of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.*

G. Congressional Review Act

This rule is not a major rule as defined by the Congressional Review Act, 5 U.S.C. 804. This action pertains to agency management, personnel, and organization and does not substantially affect the rights or obligations of non-agency parties. Accordingly, it is not a ''rule'' as that term is used in the Congressional Review Act, 5 U.S.C. 804(3)(B), (C), and the reporting requirements of 5 U.S.C. 801 do not apply.

H. Paperwork Reduction Act of 1995

This final rule does not impose any new reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501–3521.

List of Subjects in 28 CFR Part 50

Administrative practice and procedure.

Accordingly, for the reasons set forth in the preamble, the interim final rule amending 28 CFR part 50, which published at 87 FR 27936 on May 10, 2022, is adopted as final without change.

Dated: December 3, 2024.

Merrick B. Garland,

Attorney General.

BILLING CODE 4410–BB–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2024–0999]

Special Local Regulations; Marine Events Within the Eleventh Coast Guard District

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulations.

SUMMARY: The Coast Guard will enforce multiple special local regulations codified in federal regulations for recurring marine events taking place in December 2024 located in the Los Angeles Long Beach Captain of the Port Area. This action is necessary and intended to provide for the safety of life and property on navigable waterways during these events. During the enforcement periods, the operator of any vessel in the regulated area must comply with directions from the Patrol Commander or any official patrol vessel displaying a Coast Guard ensign.

DATES: The Coast Guard will enforce the regulations listed in 33 CFR 100.1104, for the locations described in event entries (5) through (16) in Table 1 to § 100.1104 during December 2024, according to the schedule listed in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email LCDR Kevin Kinsella, U.S. Coast Guard Sector Los Angeles—Long Beach; telephone (310) 521–3860, email *D11-SMB-SectorLALB-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce multiple special local regulations for annual events in the Captain of the Port Los Angeles Long Beach Zone listed in 33 CFR 100.1104 Table 1 to § 100.1104 for events occurring in the month of December as listed.

1. Entry (5) Morro Bay Holiday Boat Parade (also known as (a.k.a.) Morro Bay Lighted Boat Parade). From 4 p.m. to 9 p.m. on December 7, 2024.

2. Entry (6) Santa Barbara Holiday Boat Parade (a.k.a. Santa Barbara Annual Boat Parade of Lights). From 5:30 p.m. to 9 p.m. on December 8, 2024.

3. Entry (7) Ventura Harbor Holiday Boat Parade (a.k.a. Ventura Harbor Parade of Lights). From 6:30 p.m. to 8 p.m. daily on December 13, 2024 and on December 14, 2024.

4. Entry (8) Channel Islands Harbor Holiday Boat Parade (a.k.a. Channel Islands Harbor Parade of Lights). From 7 p.m. to 9 p.m. on December 14, 2024.

5. Entry (9) Marina del Rey Holiday Boat Parade. From 5:30 p.m. to 10 p.m. on December 14, 2024.

6. Entry (10) King Harbor Holiday Boat Parade. From 4:30 p.m. to 10 p.m. on December 14, 2024.

7. Entry (11) Port of Los Angeles Holiday Boat Parade (a.k.a. LA Harbor Holiday Afloat Parade). From 5:30 p.m. to 9:30 p.m. on December 7, 2024.

8. Entry (12) Parade of 1,000 Lights (a.k.a. Shoreline Yacht Club Annual Christmas Boat Parade). From 5:30 p.m. to 7:30 p.m. on December 14, 2024.

9. Entry (13) Naples Island Holiday Boat Parade (a.k.a. Naples Boat Parade). From 6:30 p.m. to 7:30 p.m. on December 21, 2024.

10. Entry (14) Huntington Harbor Holiday Boat Parade (a.k.a. 62nd Annual Huntington Harbour Boat Parade). From 5 p.m. to 9 p.m. daily on December 14, 2024, and on December 15, 2024.

11. Entry (15) Newport Beach Holiday Boat Parade (a.k.a. 126th Annual Christmas Boat Parade). From 6:30 p.m. to 9 p.m. daily on December 18, 2024, and on December 22, 2024.

12. Entry (16) Dana Point Holiday in the Harbor (a.k.a. 49th Annual Dana Point Harbor Boat Parade of Lights). From 6:30 p.m. to 8:30 p.m. daily on December 13, 2024, December 14, 2024, and December 15, 2024.

Pursuant to 33 CFR 100.1104, all persons and vessels not registered with the sponsor as participants or as official patrol vessels are considered spectators. The ''official patrol'' consists of any Coast Guard; other Federal, state, or local law enforcement; and any public or sponsor-provided vessels assigned or approved by the cognizant Coast Guard Sector Commander to patrol each event. No spectator shall anchor, block, loiter, nor impede the through transit of participants or official patrol vessels in the regulated areas during all applicable effective dates and times unless cleared to do so by or through an official patrol vessel. When hailed and/or signaled by an official patrol vessel, any spectator located within a regulated area during all applicable effective dates and times shall come to an immediate stop. The Patrol Commander (PATCOM) is empowered to control the movement of all vessels in the regulated area or to restrict vessels from entering the regulated area. The Patrol Commander shall be designated by the cognizant Coast Guard Sector Commander; will be a U.S. Coast Guard commissioned officer, warrant officer, or petty officer

to act as the Sector Commander's official representative; and will be located aboard the lead official patrol vessel. As the Sector Commander's representative, the PATCOM may terminate the event any time it is deemed necessary for the protection of life and property. PATCOM may be reached on VHF–FM Channel 13 (156.65MHz) or 16 (156.8MHz) when required, by the call sign ''PATCOM.'' The Patrol Commander may, upon request, allow the transit of commercial vessels through regulated areas when it is safe to do so. The Coast Guard may be assisted by other Federal, state, or local agencies.

This notice of enforcement is issued under authority of 33 CFR 100.1104 and 5 U.S.C. 552(a). In addition to this notification of enforcement in the **Federal Register**, the Coast Guard will provide the maritime community with advance notification of this enforcement period via a Marine Safety Information Bulletin (MSIB) and a Broadcast Notice to Mariners (BNM). If the Captain of the Port Los Angeles Long Beach determines that the Special Local Regulations need not to be enforced for the full duration stated in this notice, the Captain of the Port may use a Broadcast Notice to Mariners to reflect the change.

Dated: December 3, 2024.

Stacey L. Crecy,

Captain, U.S. Coast Guard, Captain of the Port Los Angeles—Long Beach.

[FR Doc. 2024–28751 Filed 12–5–24; 11:15 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2024–0998]

Safety Zone; Los Angeles County Annual New Years Eve Fireworks Event

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce safety zones for the Los Angeles County Holiday Fireworks on December 14, 2024, and the Los Angeles County New Years Eve Fireworks on December 31, 2024 through January 1, 2025. These safety zones are to provide for the safety of life and property on the navigable waterways during these events. Our regulation for firework events within the Los Angeles Long Beach Captain of the Port Zone identifies the regulated areas for these firework events in Marina del Rey, CA. During the enforcement periods, the operator of any vessel in the regulated area must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

DATES: The regulations in 33 CFR 165.1125 will be enforced for the locations identified in Table 1 to § 165.1125 Item Number 14, from 5:30 p.m. to 6:30 p.m. on December 14, 2024, and Item Number 15, from 8:00 p.m. on December 31, 2024, through 1:00 a.m. on January 1, 2025.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email LCDR Kevin Kinsella, U.S. Coast Guard; telephone 310–521–3860, email *D11-SMB-SectorLALB-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zones in 33 CFR 165.1125 for the Los Angeles County Holiday Fireworks regulated area in Item Number 14 of Table 1 to § 165.1125 from 5:30 p.m. to 6:30 p.m. on December 14, 2024 and for the New Years Eve Fireworks regulated area in Item Number 15 of Table 1 to § 165.1125 from 8:00 p.m. on December 31, 2024, to 1:00 a.m. on January 1, 2025. This action will be taken to provide for the safety of life on navigable waterways during the events. Our regulation for fireworks events within the Los Angeles Long Beach Captain of the Port Zone, Table 1 to § 165.1125, Item Numbers 14 and 15, specifies the location of the regulated areas for the Los Angeles County Holiday Fireworks and the New Years Eve Fireworks, which encompasses portions of Marina del Rey. During the enforcement periods, § 165.1125 requires operators of a vessel in the regulated area to comply with directions from the Patrol Commander or Official Patrol, defined as any Coast Guard or other Federal, state, or local law enforcement assisting the Coast Guard in enforcing the regulated area.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via a Marine Safety Information Bulletin (MSIB) and a Broadcast Notice to Mariners (BNM).

Dated: December 3, 2024.

Stacey L. Crecy,

Captain, U.S. Coast Guard, Captain of the Port Los Angeles-Long Beach.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–1025]

RIN 1625–AA00

Safety Zone; Queensway Bay, Long Beach, CA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for the navigable waters of Queensway Bay. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by a fireworks display. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Los Angeles-Long Beach.

DATES: This rule is effective from 11 p.m. on December 31, 2024, through 12:30 a.m. January 1, 2025.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–1025 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email Lieutenant Commander Kevin Kinsella, U.S. Coast Guard Sector Los Angeles-Long Beach, Chief, Waterways Management Division; telephone (310) 521–3861, email *D11-SMB-SectorLALB-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule under the authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a

notice of proposed rulemaking (NPRM) with respect to this rule because the Coast Guard did not receive sufficient notice of this fireworks event in time to publish an NPRM. We must establish this safety zone by December 31, 2024 to protect personnel, vessels, and the marine environment from potential hazards created by the fireworks display. Accordingly, it is impracticable to publish an NPRM because we lack sufficient time to provide a reasonable comment period and then consider those comments before issuing the rule.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable because prompt action is needed to ensure potential safety hazards associated with fireworks do not impact the safety of the public and the marine environment.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Los Angeles-Long Beach (COTP) has determined that potential hazards associated with a fireworks event on December 31, 2024, will be a safety concern for anyone within Queensway Bay. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone during the fireworks event.

IV. Discussion of the Rule

This rule establishes a safety zone from 11 p.m. on December 31, 2024, through 12:30 a.m. on January 1, 2025. The safety zone will cover all navigable waters within 500 feet of the fireworks launch site. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters during the fireworks event. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration and time-of-day of the safety zone. This safety zone will impact a small, designated area during the evening when vessel traffic is normally low. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A. above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or Tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human

environment. This rule involves a safety zone lasting only two and a half hours that will prohibit entry within 500 feet of the fireworks launch site within Queensway Bay. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T11–191 to read as follows:

§ 165.T11–191 Safety Zone; Queensway Bay, Long Beach, CA.

(a) *Location.* The following area is a safety zone: All waters of Queensway Bay, from surface to bottom, encompassed by a line connecting the points creating a 500-foot radius around the launch site located at 33°45′06.8″ N, 118°11′13.7″ and along the shoreline back to the beginning point. These coordinates are based on the WGS 84 datum.

(b) *Definitions.* As used in this section, designated representative means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Los Angeles-Long Beach (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF–FM Channel 13 (156.65 MHz) or 16 (156.8 MHz). Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(d) *Enforcement period.* This section will be enforced from 11 p.m. on December 31, 2024, through 12:30 a.m. on January 1, 2025.

Dated: December 3, 2024.

Stacey L. Crecy,

Captain, U.S. Coast Guard, Captain of the Port Los Angeles-Long Beach.

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule under the authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the Coast Guard did not receive sufficient notice of this fireworks event in time to publish an NPRM. We must establish this safety zone by December 8, 2024 to protect personnel, vessels, and the marine environment from potential hazards created by a fireworks display. Accordingly, it is impracticable to publish an NPRM because we lack sufficient time to provide a reasonable comment period and then consider those comments before issuing the rule.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable because prompt action is needed to ensure potential safety hazards associated with fireworks do not impact the safety of the public and the marine environment.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Los Angeles-Long Beach (COTP) has determined that potential hazards associated with a fireworks event on December 8, 2024, will be a safety concern for anyone within Santa Barbara Harbor. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone during the fireworks event.

IV. Discussion of the Rule

This rule establishes a safety zone from 6 p.m. through 7:30 p.m. on December 8, 2024. The safety zone will cover all navigable waters within Santa Barbara Harbor. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters during the fireworks event. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration and time-of-day of the safety zone. This safety zone will impact a small, designated area during the evening when vessel traffic is normally low. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A. above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting only one and a half hours that will prohibit entry within Santa Barbara Harbor. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T11–194 to read as follows:

§ 165.T11–194 Safety Zone; Santa Barbara Harbor, Santa Barbara, CA.

(a) *Location.* The following area is a safety zone: All waters of Santa Barbara Harbor, from surface to bottom, encompassed by a line connecting the following points beginning at 34°24′26″ N, 119°41′27″ W, thence to 34°24′28″ N, 119°41′15″ W, thence to 34°24′17″ N, 119°41′15″ W, thence to 34°24′29″ N, 119°41′06″ W, thence to 34°24′40″ N, 119°41′17″ W and along the shoreline back to the beginning point. These coordinates are based on the WGS 84 datum.

(b) *Definitions.* As used in this section, designated representative means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Los Angeles-Long Beach (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF–FM Channel 13 (156.65 MHz) or 16 (156.8MHz). Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(d) *Enforcement period.* This section will be enforced from 6 p.m. through 7:30 p.m. on December 8, 2024.

Dated: December 3, 2024.

Stacey L. Crecy,

Captain, U.S. Coast Guard, Captain of the Port Los Angeles-Long Beach.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2023–0603; FRL–11596–02–R9]

Air Plan Revisions; Arizona; Maricopa County Air Quality Department

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve revisions to the Maricopa County Air Quality Department (MCAQD or ''County'') portion of the Arizona State Implementation Plan (SIP). These revisions concern emissions of volatile organic compounds (VOC) from storage, transfer, or loading of organic liquids and gasoline. We are approving local rules that regulate these emission sources under the Clean Air Act (CAA or the Act). We are also approving the MCAQD's reasonably available control technology (RACT) demonstration associated with these rules for the 2008 8-hour ozone national ambient air quality standards (NAAQS) in the Phoenix-Mesa ozone nonattainment area.

DATES: This rule is effective January 8, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R09–OAR–2023–0603. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *https://www.regulations.gov,* or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information. If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Kira Wiesinger, EPA Region IX, 75 Hawthorne St., San Francisco, CA 94105; phone: (415) 972–3827; email: *wiesinger.kira@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us'' and ''our'' refer to the EPA.

Table of Contents

I. Proposed Action

On August 19, 2024 (89 FR 67014), the EPA proposed to approve the following rules into the Arizona SIP.

Local agency	Rule No.	Rule title	Revised	Submitted
MCAQD	350	Storage and Transfer of Organic Liquids (Non-Gasoline) at an Organic Liquid Distribution (OLD) Facility.	11/18/2020	12/03/2020
MCAQD	351	Storage and Loading of Gasoline at Bulk Gasoline Plants and at Bulk Gasoline Terminals.	11/18/2020	12/03/2020

We proposed to approve these rules because we determined that they comply with the relevant CAA requirements. We also proposed to approve the MCAQD's RACT demonstration associated with these rules for the 2008 8-hour ozone NAAQS. Additionally, we proposed that the revised rules corrected the deficiencies identified in our previous conditional approval (85 FR 10986, February 26, 2020). Our proposed action contains more information on the rules and our evaluation.

II. Public Comments and EPA Responses

The EPA's proposed action provided a 30-day public comment period. During this period, we received no comments.

III. EPA Action

No comments were submitted. Therefore, as authorized in section 110(k)(3) of the Act, the EPA is approving MCAQD Rule 350 and Rule 351 into the Arizona SIP. The November 18, 2020 version of Rule 350 and Rule 351 will replace the conditionally approved version of these rules in the SIP. This action signifies that the State of Arizona has fulfilled its commitment

under the terms of the February 26, 2020 conditional approval (85 FR 10986) to submit revised versions of these rules, and the EPA is now removing the conditional approval text associated with these rules and CTG categories from 40 CFR 52.119(c)(1). The EPA is also approving MCAQD's RACT demonstration associated with these rules for the 2008 8-hour ozone NAAQS in the Phoenix-Mesa ozone nonattainment area.

IV. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of MCAQD Rule 350, ''Storage and Transfer of Organic Liquids (Non-Gasoline) at an Organic Liquid Distribution (OLD) Facility,'' revised on November 18, 2020, which regulates VOC emissions from organic liquid storage and transfer operations at organic liquid distribution facilities. The EPA is also finalizing the incorporation by reference of MCAQD Rule 351, ''Storage and Loading of Gasoline at Bulk Gasoline Plants and at Bulk Gasoline Terminals,'' revised on November 18, 2020, which regulates VOC emissions from gasoline storage and loading activities at bulk gasoline plants and terminals. Therefore, these materials have been approved by the EPA for inclusion in the SIP, have been incorporated by reference by the EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of the EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.[1] The EPA has made, and will continue to make, these documents available through *https://www.regulations.gov* and at the EPA Region IX Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements Executive Order 12898 and defines EJ as, among other things, ''the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, Tribal affiliation, or disability, in agency decision-making and other Federal activities that affect human health and the environment.''

The State did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of Executive Orders 12898 and 14096 of achieving EJ for communities with EJ concerns.

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 7, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: December 2, 2024.

Martha Guzman Aceves,

Regional Administrator, Region IX.

For the reasons stated in the preamble, the EPA amends part 52, chapter I, Title 40 of the Code of Federal Regulations as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart D—Arizona

■ 2. In § 52.119:

[1] 62 FR 27968 (May 22, 1997).

■ a. Remove and reserve paragraphs (c)(1)(i) and (c)(1)(ii); and
■ b. Revise paragraph (c)(1)(v).
The revisions read as follows:

§ 52.119 Identification of plan—conditional approvals.

* * * * *

(c) * * *

(1) * * *

(v) The RACT demonstration titled ''Analysis of Reasonably Available Control Technology for the 2008 8-Hour Ozone National Ambient Air Quality Standard (NAAQS) State Implementation Plan (RACT SIP),'' only those portions of the document beginning with ''Gasoline Tank Trucks And Vapor Collection System Leaks'' on page 34 through the first full paragraph on page 35, and Appendix C: CTG RACT Spreadsheet, the rows beginning with ''Gasoline Tank Trucks and Vapor Collection System Leaks'' on page 65, through ''Service Stations—Stage I'' on pages 67–69. This demonstration represents the RACT requirement for the following source categories: Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems (EPA–450/2–78–051); and Design Criteria for Stage I Vapor Control Systems—Gasoline Service Stations (EPA–450/R–75–102).

* * * * *

■ 3. In § 52.120, paragraph (c), Table 4, revise the entries for ''Rule 350'' and ''Rule 351'' to read as follows:

§ 52.120 Identification of plan.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 81

[EPA–R08–OAR–2024–0552; FRL–12458–01–R8]

Finding of Failure To Attain and Reclassification of an Area in Utah as Serious for the 2015 Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is determining that the Northern Wasatch Front, UT area failed to attain the 2015 ozone National Ambient Air Quality Standards (NAAQS) by the applicable attainment date. The effect of failing to attain by the applicable attainment date is that the area will be reclassified by operation of law to ''Serious'' nonattainment for the 2015 ozone NAAQS on, the effective date of this final rule. This action fulfills the EPA's obligation under the Clean Air Act (CAA) to determine whether ozone nonattainment areas attained the NAAQS by the Moderate area attainment date and to publish a document in the **Federal Register** identifying each area that is determined as having failed to attain and identifying the reclassification.

DATES: This rule is effective January 8, 2025.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R08–OAR–2024–0552. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *https://www.regulations.gov,* or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Amanda Brimmer, Air and Radiation Division, EPA, Region 8, Mailcode 8ARD–AQ–R, 1595 Wynkoop Street, Denver, Colorado 80202–1129, telephone number: (303) 312–6323, email address: *brimmer.amanda@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document wherever ''we,'' ''us,'' or ''our'' is used, we mean the EPA.

I. Overview of Action

The EPA is required to determine whether areas designated nonattainment for an ozone NAAQS attained the standard by the applicable attainment date, and to take certain steps for areas that failed to attain (see CAA section 181(b)(2)). The EPA's determination of attainment for the 2015 ozone NAAQS is based on a nonattainment area's design value (DV) as of the attainment date.[1]

The 2015 ozone NAAQS is met at an EPA regulatory monitoring site when the DV does not exceed 0.070 parts per million (ppm). For Moderate nonattainment areas for the 2015 ozone NAAQS, such as the area addressed in this action, the attainment date was August 3, 2024. Because the DV is based on the three most recent, complete calendar years of data, attainment must occur no later than December 31 of the year before the attainment date (*i.e.,* December 31, 2023, in the case of Moderate nonattainment areas for the 2015 ozone NAAQS). Accordingly, the EPA's determinations for each Moderate area are based upon the complete, quality-assured, and certified ozone monitoring data from calendar years 2021, 2022, and 2023.

This action addresses the Northern Wasatch Front area in Utah, which was classified as Moderate for the 2015 ozone NAAQS as of the Moderate area attainment date of August 3, 2024. The EPA is finding that the Northern Wasatch Front Moderate area did not attain by the attainment date, because the area's 2021–2023 DV was 0.077 ppm which is greater than 0.070 ppm. Under CAA section 181(b)(2)(A), the effect of this determination is that this area will be reclassified by operation of law as Serious on the effective date of this final rule. The reclassified area will then be subject to the Serious area requirement to attain the 2015 ozone NAAQS as expeditiously as practicable, but not later than August 3, 2027.

As a result of the area's reclassification as Serious, Utah must submit to the EPA the state implementation plan (SIP) revisions for this area that satisfy the statutory and regulatory requirements applicable to Serious areas established in CAA section 182(c) and in the 2015 Ozone NAAQS SIP Requirements Rule (see 83 FR 62998, December 6, 2018). The EPA is establishing deadlines for submitting SIP revisions for these reclassified areas in a separate action.

II. What is the background for this action?

On October 26, 2015, the EPA issued its final action to revise the NAAQS for ozone to establish a new 8-hour standard (*see* 80 FR 65452, October 26, 2015). In that action, the EPA promulgated identical tighter primary and secondary ozone standards designed to protect public health and welfare that specified an 8-hour ozone level of 0.070 ppm. Specifically, the standards require that the 3-year average of the annual fourth highest daily maximum 8-hour average ozone concentration may not exceed 0.070 ppm.

Effective on August 3, 2018, the EPA designated 52 areas throughout the country as nonattainment for the 2015 ozone NAAQS (see 83 FR 25776, June 4, 2018). In a separate action, the EPA assigned classification thresholds and attainment dates based on the severity of an area's ozone problem, determined by the area's DV (see 83 FR 10376, May 8, 2018). Consistent with CAA section 181(a), the EPA established the attainment date for Marginal, Moderate, and Serious nonattainment areas as 3 years, 6 years, and 9 years, respectively, from the effective date of the final designations. Thus, the attainment date for Marginal nonattainment areas for the 2015 ozone NAAQS was August 3, 2021, the attainment date for Moderate areas was August 3, 2024, and the attainment date for Serious areas is August 3, 2027. On October 7, 2022 (87 FR 60897), the EPA determined that 22 areas, including the Northern Wasatch Front area addressed in this action, did not attain the standards by the Marginal attainment date, and these areas were reclassified as Moderate by operation of law.

III. What is the statutory authority for this action?

The statutory authority for this determination is provided by the CAA, as amended (42 U.S.C. 7401 *et seq.*). Relevant portions of the CAA include sections 107, 181 and 182.

CAA section 107(d) provides that when the EPA establishes or revises a NAAQS, the agency must designate areas of the country as nonattainment, attainment, or unclassifiable based on whether each area is not meeting (or is contributing to air quality in a nearby area that is not meeting) the NAAQS, meeting the NAAQS, or cannot be classified as meeting or not meeting the NAAQS, respectively. Subpart 2 of part D of title I of the CAA governs the classification, state planning, and emissions control requirements for any areas designated as nonattainment for a revised primary ozone NAAQS. In particular, CAA section 181(a)(1) requires each area designated as nonattainment for a revised ozone NAAQS to be classified at the same time as the area is designated based on the extent of the ozone problem in the area (as determined based on the area's DV). Classifications for ozone nonattainment areas are ''Marginal,'' ''Moderate,'' ''Serious,'' ''Severe,'' and ''Extreme,'' in order of stringency. CAA section 182 provides the specific attainment planning and additional requirements that apply to each ozone nonattainment area based on its classification.

Section 181(b)(2)(A) of the CAA provides that within 6 months following the applicable attainment date, the EPA must determine whether an ozone nonattainment area attained the ozone standard based on the area's DV as of that date. Under CAA section 181(a)(5) and 40 CFR 51.1307, on application by any state, the EPA may grant a 1-year extension to the attainment date when certain criteria are met. One criterion for a first attainment date extension is that an area's fourth highest daily maximum 8-hour value for the attainment year must not exceed the level of the standard.

If an area fails to attain the ozone NAAQS by the applicable attainment date and is not granted a 1-year attainment date extension, CAA section 181(b)(2)(A) requires the EPA to make the determination that an ozone nonattainment area failed to attain the ozone standard by the applicable attainment date, and requires the area to be reclassified by operation of law to the higher of: (1) the next higher classification for the area, or (2) the classification applicable to the area's DV as of the determination of failure to attain.[2] Section 181(b)(2)(B) of the CAA requires the EPA to publish the determination of failure to attain and accompanying reclassification in the **Federal Register** no later than 6 months after the attainment date, which in the case of the Moderate nonattainment area considered in this determination is February 3, 2025.

Once an area is reclassified, each state that contains a reclassified area is

[1] A DV is a statistic used to compare data collected at an ambient air quality monitoring site to the applicable NAAQS to determine compliance with the standard. The data handling conventions for calculating DVs for the 2015 ozone NAAQS are specified in appendix U to 40 CFR part 50. The DV for the 2015 ozone NAAQS is the 3-year average of the annual fourth highest daily maximum 8-hour average ozone concentration. The DV is calculated for each air quality monitor in an area, and the DV for an area is the highest DV among the individual monitoring sites located in the area.

[2] The nonattainment area named in this action that failed to attain by the attainment date is being classified to the next higher classification, Serious. It does not have a DV that would otherwise place it in a higher classification.

required to submit certain SIP revisions in accordance with the more stringent classification. The SIP revisions are intended to, among other things, demonstrate how the area will attain the NAAQS as expeditiously as practicable, but no later than August 3, 2027, the Serious area attainment date for the 2015 ozone NAAQS. Per CAA section 182(i), a state with a reclassified ozone nonattainment area must submit the applicable attainment plan requirements ''according to the schedules prescribed in connection with such requirements'' in CAA section 182(c) for Serious areas, but the EPA ''may adjust applicable deadlines (other than attainment dates) to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions.'' EPA is addressing the SIP revision and implementation deadlines for newly reclassified Serious areas, as well as the continued applicability of Moderate area requirements that this area may not yet have met, in a separate rulemaking.

IV. How does EPA determine whether an area has attained the standard?

The level of the 2015 ozone NAAQS is 0.070 ppm.[3] Under EPA regulations at 40 CFR part 50, appendix U, the 2015 ozone NAAQS is attained at a site when the 3-year average of the annual fourth highest daily maximum 8-hour average ambient ozone concentration (*i.e.,* the DV) does not exceed 0.070 ppm. When the DV does not exceed 0.070 ppm at each ambient air quality monitoring site within the area, the area is deemed to be attaining the ozone NAAQS. Each area's DV is determined by the highest DV among monitors with valid DVs.[4] The data handling convention in 40 CFR part 50 appendix U states that concentrations are to be reported in ppm to the third decimal place, with additional digits to the right being truncated. Thus, a 3-year average ozone concentration of 0.071 ppm is greater than 0.070 ppm and would exceed the standard, but a 3-year average ozone concentration of 0.0709 ppm is truncated to 0.070 ppm and attains the 2015 ozone NAAQS.

The EPA's determination of whether the Northern Wasatch Front attained the standard is based on hourly ozone concentration data for calendar years 2021, 2022 and 2023 that have been collected and quality-assured in accordance with 40 CFR part 58 and reported to the EPA's Air Quality System (AQS) database.[5]

State and local monitoring network plans are subject to approval by the EPA on an annual basis, and any interim modifications to those plans must also be approved by the EPA.[6] The annual monitoring network plan process is provided in 40 CFR 58.10 and the requirements governing system modifications and monitor discontinuations are laid out in 40 CFR 58.14. Where state or local agencies seek to modify the ambient air quality monitoring networks by discontinuing a monitor station, the EPA may approve such modifications subject to the criteria established in 40 CFR 58.14(c). The EPA may not approve such discontinuation if doing so would compromise data collection needed for implementation of a NAAQS. If a monitor has been discontinued subject to 40 CFR 58.14 such that the discontinuation results in insufficient data to calculate a valid DV according to appendix U to 40 CFR part 50, EPA will determine the applicable area's attainment status based on the remaining monitors in the area.

V. What is EPA's determination for the area?

The EPA is determining that the Northern Wasatch Front Moderate nonattainment area failed to attain the 2015 ozone NAAQS by the attainment date of August 3, 2024. As shown in table 1, at least one monitor in this area had a 2021–2023 DV greater than 0.070 ppm; in fact, *all* of the area's monitors had a 2021–2023 DV greater than 0.070 ppm. The EPA has further determined that this area did not meet the requirements under section 181(a)(5)(B) and 40 CFR 51.1307 necessary to grant a 1-year extension of the attainment date, because at least one monitor had a 2023 fourth highest daily maximum 8-hour average that was greater than 0.070 ppm. Table 1 shows the annual fourth highest daily maximum 8-hour average ozone concentration and 2021–2023 DV for each monitor in the Northern Wasatch Front area.

TABLE 1—2021–2023 FOURTH HIGHEST DAILY MAXIMUM 8-HOUR AVERAGE OZONE CONCENTRATIONS AND DESIGN VALUES AT ALL MONITORS IN THE NORTHERN WASATCH FRONT AREA

AQS site ID	County	Fourth highest daily maximum 8-hour average ozone concentration (ppm)			2021–2023 DV (ppm)
		2021	2022	2023	
490110004	Bountiful Viewmont	0.082	0.075	0.073	0.076
490352005	Copper View	0.086	0.074	0.073	0.077
490353006	Hawthorne	0.081	0.072	0.072	0.075
490353010	Rose Park	0.079	0.075	0.070	0.074
490353013	Herriman #3	0.087	0.071	0.068	0.075
490353014	Lake Park	0.082	0.072	0.072	0.075

[3] See 40 CFR 50.19.

[4] According to appendix U to 40 CFR part 50, ambient monitoring sites with a DV of 0.070 ppm or less must meet minimum data completeness requirements in order to be considered valid. These requirements are met for a 3-year period at a site if daily maximum 8-hour average ozone concentrations are available for at least 90% of the days within the ozone monitoring season, on average, for the 3-year period, with a minimum of at least 75% of the days within the ozone monitoring season in any one year. Ozone monitoring seasons are defined for each state in appendix D to 40 CFR part 58. DVs greater than 0.070 ppm are considered to be valid regardless of the data completeness.

[5] The EPA maintains the AQS, a database that contains ambient air pollution data collected by the EPA, state, local, and Tribal air pollution control agencies. The AQS also contains meteorological data, descriptive information about each monitoring station (including its geographic location and its operator) and data quality assurance/quality control information. The AQS data is used to (1) assess air quality, (2) assist in attainment/non-attainment designations, (3) evaluate SIPs for non-attainment areas, (4) perform modeling for permit review analysis, and (5) prepare reports for Congress as mandated by the CAA. Access is through the website at *https://www.epa.gov/aqs.*

[6] Annual monitoring network plans for each state are available at *https://www.epa.gov/amtic/state-monitoring-agency-annual-air-monitoring-plans-and-network-assessments.*

VI. What action is EPA taking?

Pursuant to CAA section 181(b)(2), the EPA is determining that the Northern Wasatch Front area failed to attain the 2015 ozone NAAQS by the applicable attainment date of August 3, 2024. Therefore, upon the effective date of this final action, this area will be reclassified by operation of law to Serious nonattainment for the 2015 ozone NAAQS. Once reclassified as Serious, this area will be required to attain the standard ''as expeditiously as practicable'' but no later than 9 years after the initial designation as nonattainment, which in this case would be no later than August 3, 2027.

The Administrative Procedure Act (APA) provides that when an agency for good cause finds that notice and public procedures are impracticable, unnecessary or contrary to the public interest, the agency may issue a rule without providing notice and an opportunity for public comment. 5 U.S.C. 553(b)(B). The EPA has determined that there is good cause for making this final agency action without prior proposal and opportunity for comment, because our action to determine whether this area has attained the NAAQS by the attainment date is governed, per CAA section 181(b)(2)(A), solely by area design values as of that date. The area DVs relied upon in this document are calculations based on the certified air quality monitoring data governed by EPA's regulations at 40 CFR part 58 and involve no exercise of judgment or discretion. Thus, notice and public procedures are unnecessary to take this action. The EPA finds that this constitutes good cause under 5 U.S.C. 553(b)(B).

VII. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is not a ''significant regulatory action'' under the terms of Executive Order 12866 (58 FR 51735, October 4, 1993) and is therefore not subject to review under Executive Order 14094 (88 FR 21879, April 11, 2023).

B. Paperwork Reduction Act (PRA)

This rule does not impose an information collection burden under the provisions of the PRA of 1995 (44 U.S.C. 3501 *et seq.*). This action does not contain any information collection activities and serves only to make a final determination that the Northern Wasatch Front nonattainment area failed to attain the 2015 ozone standards by the August 3, 2024, attainment date, as a result of which the area will be reclassified as Serious nonattainment for the 2015 ozone standards by operation of law upon the effective date of this final reclassification action.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). This action will not impose any requirements on small entities. The determination of failure to attain the 2015 ozone standards (and resulting reclassifications), do not in and of themselves create any new requirements beyond what is mandated by the CAA. This final action would require the state to adopt and submit SIP revisions to satisfy CAA requirements and would not itself directly regulate any small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538 and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or Tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. The division of responsibility between the Federal government and the states for purposes of implementing the NAAQS is established under the CAA.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has Tribal implications. However, it will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law.

The EPA has identified one Tribal area within the nonattainment area covered by this final rule, that would potentially be affected by this rulemaking. Specifically, the Skull Valley Band of Goshute Indians is within the Northern Wasatch Front, Utah nonattainment area.

The EPA has concluded that the proposed rule may have Tribal implications for this Tribe for the purposes of Executive Order 13175 but would not impose substantial direct costs upon the Tribe, nor would it preempt Tribal law. As noted previously, a Tribe that is part of an area that is reclassified from Moderate to Serious nonattainment is not required to submit a Tribal Implementation Plan (TIP) revision to address new Serious area requirements. However, when the EPA finalizes the determinations of failure to attain in this action, the nonattainment new source review (NNSR) major source threshold and offset requirements would change for stationary sources seeking preconstruction permits in any nonattainment areas newly reclassified as Serious.

The EPA will communicate with the potentially affected Tribe located within the boundary of the Northern Wasatch Front nonattainment area addressed in this action, including offering government-to-government consultation, as appropriate.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

EPA interprets Executive Order 13045 (62 FR 19885, April 23, 1997) as applying to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not establish an environmental standard intended to mitigate health or safety risks.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards. Therefore, EPA is not considering the use of any voluntary consensus standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal

agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as, among other things, the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.

Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898/14096 of achieving environmental justice for communities with EJ concerns.

K. Congressional Review Act

This rule is exempt from the CRA because it is a rule of particular applicability. The rule makes factual determinations for an identified entity (Northern Wasatch Front, UT area), based on facts and circumstances specific to that entity. The determinations of attainment and failure to attain the 2015 ozone NAAQS do not in themselves create any new requirements beyond what is mandated by the CAA.

L. Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 7, 2025. Filing a petition for reconsideration by the Administrator of this action does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of this action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 81

Environmental protection, Air pollution control, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: December 4, 2024.

KC Becker,

Regional Administrator, Region 8.

For the reasons stated in the preamble, title 40 CFR part 81 is amended as follows:

PART 81—DESIGNATION OF AREAS FOR AIR QUALITY PLANNING PURPOSES

■ 1. The authority citation for part 81 continues to read as follows:

Authority: 42 U.S.C. 7401, et seq.

Subpart C—Section 107 Attainment Status Designations

■ 2. In § 81.345, the table entitled ''Utah—2015 8-Hour Ozone NAAQS [Primary and Secondary]'' is amended by revising the entry for ''Northern Wasatch Front, UT'' to read as follows:

§ 81.345 Utah.

* * * * *

UTAH—2015 8-HOUR OZONE NAAQS

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 282

[EPA–R07–UST–2024–0452; FRL–12274–03–R7]

Nebraska: Final Approval of State Underground Storage Tank Program Revisions, Codification, and Incorporation by Reference

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: Pursuant to the Resource Conservation and Recovery Act (RCRA or Act), the Environmental Protection Agency (EPA) is taking direct final action to approve revisions to the State of Nebraska's Underground Storage Tank (UST) program submitted by the Nebraska State Marshal (NSFM). This action also codifies EPA's approval of Nebraska's State program and incorporates by reference those provisions of the State regulations that we have determined meet the requirements for approval. The provisions will be subject to EPA's inspection and enforcement authorities under the RCRA and other applicable statutory and regulatory provisions.

DATES: This rule is effective February 7, 2025, unless EPA receives adverse comment by January 8, 2025. If EPA receives adverse comments, it will publish a timely withdrawal in the **Federal Register** informing the public that the rule will not take effect. The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register, as of February 7, 2025, in accordance with 5 U.S.C. 552(a) and 1 CFR part 51.

ADDRESSES: Submit your comments by one of the following methods:

1. *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the on-line instructions for submitting comments.

2. *Email: blankenship.marie@epa.gov.*

Instructions: Direct your comments to Docket ID No. EPA–R07–UST–2024–0452.

EPA's policy is that all comments received will be included in the public docket without change and may be available online at *https://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *https://www.regulations.gov,* or email. The Federal *https://www.regulations.gov* website is an ''anonymous access'' system, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through *https://www.regulations.gov,* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and also with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties, and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. EPA encourages electronic submittals, but if you are unable to submit electronically, please reach out to the EPA contact person listed in the document for assistance.

Docket: All documents in the docket are listed in the *https://www.regulations.gov* index. Although listed in the index, some information might not be publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Publicly available docket materials are available electronically through *https://www.regulations.gov.*

IBR and supporting material: You can view and copy the documents that form the basis for this codification and associated publicly available materials either through *https://www.regulations.gov* or by contacting Marie Blankenship at (913) 551–7908 or *blankenship.marie@epa.gov.* Please call or email the contact listed above if you need access to material indexed but not provided in the docket.

FOR FURTHER INFORMATION CONTACT: Marie Blankenship, Tanks, Toxics, and Pesticides Branch, Land, Chemical, and Redevelopment Division, U.S. Environmental Protection Agency, Region 7, 11201 Renner Boulevard, Lenexa, Kansas 66219; telephone number: (913) 551–7908; email address: *blankenship.marie@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Approval of Revisions to Nebraska's Underground Storage Tank Program

A. Why are revisions to State programs necessary?

States that have received final approval from the EPA under section 9004(b) of RCRA, 42 U.S.C. 6991c(b), must maintain an underground storage tank program that is no less stringent than the Federal UST program. Either EPA or the approved State initiate program revision. When EPA makes revisions to the regulations that govern the UST program, States must revise their programs to comply with the updated regulations and submit these revisions to the EPA for approval. Program revision may be necessary when the controlling Federal or State statutory or regulatory authority is modified or when responsibility for the State program is shifted to a new agency or agencies.

B. What decisions has the EPA made in this rule?

On September 8, 2023, in accordance with 40 CFR 281.51(a), Nebraska submitted a complete program revision application seeking the EPA approval for its UST program revisions (State Application). Nebraska's revisions correspond to the EPA final rule published on July 15, 2015 (80 FR 41566), which revised the 1988 UST regulations and the 1988 State program approval (SPA) regulations (2015 Federal Revisions). As required by 40 CFR 281.20, the State Application contains the following: a transmittal letter requesting approval, a description of the program and operating procedures, a demonstration of the State's procedures ensure adequate enforcement, a Memorandum of Agreement outlining the roles and responsibilities of the EPA and the implementing agency, a statement of certification from the Attorney General, and copies of all relevant State statutes and regulations. We have reviewed the State Application and determined that the revisions to Nebraska's UST program are no less stringent than the corresponding Federal requirements in subpart C of 40 CFR part 281, and that the Nebraska program provides for adequate enforcement of compliance (40 CFR 281.11(b)). Therefore, the EPA grants Nebraska final approval to operate its UST program with the changes described in the program revision application and as outlined below in section I.G. of this document.

C. What is the effect of this approval decision?

This action does not impose additional requirements on the regulated community because the regulations being approved by this rule are already effective in Nebraska and they are not changed by this action. This action merely approves the existing State regulations as meeting the Federal requirements and renders them federally enforceable.

D. Why is EPA using a direct final rule?

EPA is publishing this direct final rule concurrent with a proposed rule because we view this as a noncontroversial action and anticipate no adverse comment. EPA is providing an opportunity for public comment now.

E. What happens if the EPA receives comments that oppose this action?

Along with this direct final rule, the EPA is publishing a separate document in the ''Proposed Rules'' section of this issue of the **Federal Register** that serves as the proposal to approve the State's UST program revisions, providing opportunity for public comment. If EPA receives comments that oppose this approval, EPA will withdraw the direct final rule by publishing a document in the **Federal Register** before the rule becomes effective. The EPA will base any further decision on the approval of the State program changes after considering all comments received during the comment period. EPA will then address all public comments in a later final rule. You may not have another opportunity to comment. If you want to comment on this approval, you must do so at this time.

F. For what has Nebraska previously been approved?

On August 19, 2002, the EPA finalized a rule approving the Nebraska UST program, effective September 18, 2002, to operate in lieu of the Federal program. The State's program has not previously been codified.

G. What changes are we approving with this action?

On September 8, 2023, in accordance with 40 CFR 281.51(a), Nebraska submitted a complete application for final approval of its UST program revisions adopted on July 15, 2015. The EPA now makes an immediate final decision, subject to receipt of written comments that oppose this action, that Nebraska's UST program revisions satisfy all of the requirements necessary to qualify for final approval. Therefore, EPA grants Nebraska final approval for the following program changes:

Required Federal element	Implementing State authority
40 CFR 281.30, New UST Systems and Notification.	Title 159 NAC Chapter 2; Chapter 3, intro; Chapter 4, section 001; Chapter 6, section 001.
40 CFR 281.31, Upgrading Existing UST Systems.	Title 159 NAC Chapter 6.
40 CFR 281.32, General Operating Requirements.	Title 159 NAC Chapter 4, section 001, section 001.1A; Chapter 5; Chapter 6, sections 001–007; Chapter 7, section 006; Chapter 10, section 006.
40 CFR 281.33, Release Detection	Title 159 NAC Chapter 4; Chapter 7, sections 001–006; Chapter 14; Title 17 NAC Chapter 12.
40 CFR 281.34, Release Reporting, Investigation, and Confirmation.	Title 159 NAC Chapter 6, section 005; Chapter 8, section 001–005; Title 126 NAC Chapter 18, sections 002.01, 002.01C, 002.01D, 002.02–005, 007.02.
40 CFR 281.35, Release Response and Corrective Action.	Title 159 NAC Chapter 8, sections 001, 003–005; Title 126 NAC Chapter 18, sections 003–007; Title 118 NAC Chapter 1–2 6.002–7, 10–11 and appendix B; Title 115 NAC Chapter 3, sections 001, 001.02, 014, 016–018.
40 CFR 281.36, Out-of-service Systems and Closure.	Title 159 NAC Chapter 10, sections 001–005.
40 CFR 281.37, Financial Responsibility for USTs Containing Petroleum.	Title 159 NAC Chapter 9 as it references 40 CFR 280.90 through 280.115.
40 CFR 281.38 Lender Liability	Title 159 NAC Chapter 9, section 002.
40 CFR 281.39, Operator Training	Title 159 NAC Chapter 13, sections 001–002, 003.04–008.02.
40 CFR 281.40 Legal Authorities for Compliance Monitoring.	Title 159 NAC Chapter 6; Chapter 12; Chapter 13, section 002.
40 CFR 281.41, Legal Authorities for Enforcement Response.	Title 159 NAC Chapter 6; Title 126 NAC Chapter 18, section 008.

The State also demonstrates that its program provides adequate enforcement of compliance as described in 40 CFR 281.11(b) and part 281, subpart D. The Nebraska State Fire Marshal (NSFM) has broad statutory authority with respect to USTs to regulate installation, operation, maintenance, closure, and UST releases, and to the issuance of orders. These statutory authorities are found in Nebraska Revised Statutes, Chapters sections 81–15, 117 to 81–15, 127, sections 81–501 to 81–512, and section 66–1501 to 66–1531, and Nebraska Administrative Code, Title 159. The Nebraska Department of Environment and Energy (NDEE) has broad statutory authority for corrective action and the

administration of the State remedial action fund. These statutory authorities are found in: sections 81–1501 to 81–1532, N.R.S., and Titles 115, 118, 126, 178, and 200, NAC. These authorities address rules of practice and procedure, ground water quality standards and cleanup requirements, release reporting and follow-up, and the Petroleum Release Remedial Action Reimbursement Fund.

H. Where are the revised rules different from the Federal rules?

Broader in Scope Provisions

Where an approved State program has a greater scope of coverage than required by Federal law, the additional coverage is not part of the federally-approved program and is not federally enforceable (40 CFR 281.12(a)(3)(ii)). The following Nebraska requirements are considered ''broader in scope'' than the Federal program:

The NSFM has responsibilities with a greater scope of coverage than required by Federal law. NRS section 81–502.

The NSFM has responsibilities for rules and regulations; enforcement; and State procedure with a greater scope of coverage than required by Federal law. NRS section 81–502.04.

The NSFM has duties with a greater scope of coverage than required by Federal law. NRS section 81–503.01(a)–(g), (i).

The NSFM has its own authority to enter and conduct inspections when authorized. NRS section 81–512.

The Nebraska Protection Act defines terms not subject to the UST program. NRS sections 81–1502(1)–(5), (8)–(9), (12)–(13), (15)–(19), (23), (28)–(29), and (31)–(38).

The NDEE has duties with a greater scope of coverage than required by Federal law. NRS section 81–1504(1)–(30), (33)–(58).

The Nebraska Environmental Quality Council has responsibilities to adopt and promulgate rules and regulations; standards of air, land and water with a greater scope of coverage than required by Federal law. NRS section 81–1505.

The Director of the NDEE is authorized to bring State enforcement for violations of State law under a state authority for hearings and issuing orders, requiring monitoring, investigations and corrective action. NRS section 81–1507.

The NDEE is authorized to pursue State civil penalties and injunctive relief. NRS sections 81–1508, 81–1508.01, and 81–1508.02.

The NDEE is authorized to perform inspections and execute search warrants under State authority. NRS section 81–1511.

Portions of the Nebraska UST provisions are applicable to heating oil tanks of greater than 1,100 gallon capacity. NRS section 81–15, 119(10)(b).

Nebraska requires that owners of farm, residential, and heating oil tank systems of less than 1,100 gallon capacity to register such tank systems and pay a one-time registration fee. NRS sections 81–15,119(10)(a) and 81–15–120.

Nebraska establishes permitting requirements on owners and operators of UST systems (*e.g.,* registration, operating, installation, closure). NRS section 81–15, 121.

Nebraska establishes procedures for the denial or revocation of State issued permits. NRS section 81–15–122.

Nebraska establishes procedures for a permit and registration system for all tanks; an inspection fee; inventory-control procedures; procedures for notification of temporarily or permanently abandoned tanks; and procedures for licensing tank installation and removal contractors. NRS sections 81–15–123(2)–(3), (4)(b), (5), (10), and (12) as it refers to certification and subcontractors.

Nebraska sets deadlines for NDEE approval or disapproval of remedial action plans; establishes procedures for the reimbursement of expenses paid by the owner or operator; establishes procedures for the NDEE to prepare a remedial action plan and implement the plan in the event of an unknown or unavailable owner or operator of a facility causing a release; provides that the Environmental Quality Council establish standards; provides access under State law; provides for NDEE briefing and certificates of completion for work completed under a remedial action plan. NRS sections 81–15, 124(2) second and third sentence, 81–15, 124(3) second sentence and full second paragraph, 81–15, 124.01–81–15, 124.02, 81–15, 124.04–81–15, 124.07.

Nebraska establishes a process for penalties and actions to enjoin for violations of the Petroleum Products and Hazardous Substances Storage and Handling act under State law. NSR section 81–15, 125–81–15, 126.

Nebraska requires notice of registration and duty to provide the notice. NSR section 81–15, 127.

The Nebraska remedial fund is structured to reimburse owners and operators of both USTs and aboveground storage tanks for allowable costs of remedial action and third party claims. NRS section 66–1501, *et seq.*

Nebraska provides intervention in a matter in litigation under State law. NSR section 25–328.

Nebraska requires contractor licensure and certification for tank installation and removal contractors. Title 159 NAC Chapter 3.001–3.004.

Nebraska requires all owners and operators to comply with Nebraska financial responsibilities requirements for all categories of UST system owner or operators as of the effective date of the regulations with no extensions or deferrals or comply with the federal financial responsibility requirements. Title 159 NAC Chapter 9.001 and Title 200 NAC Chapter 1 [entire regulation].

Nebraska mandates that fuel distributors, or any person who deposits regulated substances in an UST system, are required to notify owners and operators of the registration requirements. Title 159 NAC Chapter 11.004.

Nebraska establishes approval standards for UST training courses and trainers. Title 159 NAC Chapter 13.003.01–13.003.03.

Nebraska establishes minimum requirements for public hearings for permit decisions which by statue or other agency regulations provide for public notice, public review and comment, and an opportunity to request a public hearing before making a final permit decision. Title 115 NAC Chapter 3.001.01, 3.002–3.013, and 3.015.

Nebraska establishes antidegradation; beneficial uses; narrative and numerical standards and sample collections. Title 118 NAC Chapter 3.

Nebraska has procedures to establish narrative and numerical standards for groundwater classification. Title 118 NAC Chapter 4.

Nebraska establishes procedures for changing a groundwater classification. Title 118 NAC Chapter 5.

Nebraska establishes remedial action provisions for point source pollution events for non-petroleum releases. Title 118 NAC Chapter 6.001 and appendix A.

Nebraska establishes definitions for the management of waste with a greater scope of coverage than required by Federal law. Title 126, NAC Chapter 1.002–1.004, 1.006–1.010, 1.012, 1.014–1.019, 1.023, 1.025–1.029, 1.030.02, 1.032, 1.035, 1.039, 1.041–1.044, 1.046–1.047.

Nebraska establishes provisions for waste management permits and licenses; land application of paunch; and fertilizer and pesticide wastewater with a greater scope of coverage than required by Federal law. Nebraska also reserves chapters for future use. Title 126 NAC Chapters 2–17, 19 and appendix I.

Nebraska establishes provisions for rules and regulations related to:

recreation camps; design construction; operation and maintenance of public swimming pools; rules, regulations and standards governing mobile home parks; clean indoor air; fees for inspection of private water supply or private sewage disposal facilities; rules and regulations governing a private well; licensure under the water well standards and contractors' practice act; fees under the water well standards and contractors' practice act; water well standards and contractors' licensing board; asbestos projects; lead based paint activities; and methamphetamine cleanups with a greater scope of coverage than required by Federal law. Nebraska also reserves chapters for future use. Title 178 NAC Chapters 1–11, 13–24.

The following definitions associated with well installation are not applicable to the UST program: Abandoned Water Well, Driven Sandpoint Well, Ground Water Heat Pump Well, Illegal Water Well, Inactive Status Water Well, Injection Well, Open Hole Well, Service connection, Special Irrigation District. Title 178 NAC Chapter 12–002.

Nebraska establishes procedures for the installation of potable well construction; non-potable well construction; public water supply systems; ground water heat pump wells; installation of pumps and pumping equipment as it relates to disinfection associated with potable wells; and procedures for driven sandpoint wells and closed loop heat pump wells. Nebraska further offers a Waiver of Disinfection. Title NAC 178 Chapter 12–04–12–05, 12–08, 12–10, 12–011.01B2, 12–012.08C, 12–012.08G, and Waiver of Disinfection.

Nebraska requires owners and operators of UST systems that permanently closed between December 22, 1988, and January 1, 1989, to close such UST systems when directed to do so by the NSFM. NFPA 30: Flammable and Combustible Liquids Code (21.7.4.3.1–21.7.4.3.3) 2012 Version.

Nebraska requires UST system owners and operators to have a tightness test performed on tanks and piping prior to placing the tank system back into service after receiving an extension to the 12-month temporary closure period. National Fire Protection Association 30: Flammable and Combustible Liquids Code (21.7.4.3.1–21.7.4.3.3) 2012 Version.

More Stringent Provisions

Nebraska limits the means by which owners and operators can demonstrate compliance with installation of a new UST system. Only an installer that has been certified or licensed by the State can provide certification of compliance on the UST notification form. Title 159 NAC Chapter 3 as it incorporates 40 CFR 280.20(e)(2).

Nebraska requires additional design and installation standards for new UST systems. Title 159 NAC Chapter 4.001.01–4.001.07.

The Federal program requires all cathodic protection systems to be tested within 6 months of installation. Nebraska general operating requirements for existing UST systems require annual testing for impressed current cathodic protection systems after the initial testing. Title 159 NAC Chapter 6.002.01A1.

Nebraska general operating requirements for existing UST systems requires repaired tanks, piping, overfill, and spill prevention equipment be tested prior to placing the system back into service, or 30 days following the date of completion of the repair, whichever occurs first. Title 159 NAC Chapter 6.004.01.

Nebraska general operating requirements for existing UST systems requires additional record-keeping and reporting. Title 159 NAC Chapter 6.005–6.006.

Nebraska general operating requirements for existing UST systems requires that if a ball float is to be abandoned in place, a drop tube shut off or audible alarm will be set at 85 percent tank capacity to prevent overfill. Title 159 NAC Chapter 6.006.01.

Nebraska excludes all UST systems larger than 1,100 gallons used to store heating oil from all release detection requirements except that they must instead perform the manual tank gauging procedures in 40 CFR 280.43(b) on a monthly basis from April 1 to November 1. Title 159 NAC Chapter 7.001.01.

Nebraska release detection requirements require owners and operators to conduct and record the daily product inventory control requirements as described in 40 CFR 280.43(a)(1)–(6) for all new and existing UST systems. However, UST systems eligible for and utilizing manual tank gauging in accordance with 40 CFR 280.43(b), do not need to meet the daily inventory requirement. Title 159 NAC Chapter 7.004.

Nebraska release and suspected release reporting requires notification to NSFM and NDEE within 24 hours by the owner and operator of the tank. Title 159 NAC Chapter 8.005.

Nebraska site assessment at closure or change-in-service requires sampling analysis, in- place closure assessment, removal closure assessment, tank excavation requirements, line excavation assessment, and reporting requirements. Title 159 NAC Chapter 10.003–10.004.

Nebraska operator training requirements for Class A, Class B, and Class C operators establish owner and operator responsibilities, operator training requirements, operator examination requirements, reciprocity, timing of operator training, operator retraining and owner and operator documentation. Title 159 NAC Chapter 13.001–13.002, 13.003.04–13.003.05, 13.004–13.008.

Nebraska establishes ground water quality standards and use classifications for ground water regulatory programs. Title 118 NAC Chapter 1–2, 6.002, 7, appendix B.

Nebraska establishes water well construction, pump installation and water well decommissioning standards for dewatering wells, ground water monitoring and recovery wells, and test holes. Nebraska further provides for declaratory orders about substantially equivalent procedures or materials and variances. Title 178 NAC Chapter 12.001, 12–03, 12–06–12–07, 12–09, 12–011.01–12–011.01B1, 12–011.01C–12–012.08B, 12–012.08D–12–012.08F2, 12–012.09–12–14, the tables and figures, and the following definitions found at Title 178, Chapter 12–002 Annular Fill, Annular Space, Aquifer, Aquifer Seal, Primary Aquifer Seal, Surface Seal, Backflow Preventer, Bentonite, Bentonite Seal, Bored or Dug Well, Casing, Cesspool, Clay, Community Water System, Confining Layer, Construction of Water Wells, Contamination, Decommissioned when used in relation to a water well, Department, Dewatering Well, Discharge Pipe, Distribution Piping, Good Cause, Gravel Pack, Ground Water, Grout, Installation of Pumps and Pumping Equipment, Monitoring Well, Non-potable Well, Observation Well, Person, Pitless Unit, Pollution, Potable Well, Primary Aquifer Seal, Public Water System, (Licensed) Pump Installation Contractor, (Licensed) Pump Installation Supervisor, Pumps and Pumping Equipment, Recovery Well, Sanitary Well Seal, Screen Apertures, Screened Vent, Secure Cover or Cap, Seepage Pit, Septic Tank, Soil Absorption System (Septic Lateral Field), Static Water Level, Substantially Equivalent, Subsurface Disposal System, Supervision or its derivatives, Surface Seal, Test Hole, Tremie Pipe, Watertight Casing, Watertight Secure Cover, Water Well, (Licensed) Water Well Contractor, (Licensed) Water Well Drilling Supervisor, Well Development, Well Pit, Well Screen.

II. Codification

A. What is codification?

Codification is the process of placing a State's statutes and regulations that comprise the State approved UST program into the CFR. Section 9004(b) of RCRA, as amended, allows the EPA to approve State UST programs to operate in lieu of the Federal program. The EPA codifies its authorization of State programs 40 CFR part 282 and incorporates by reference State statutes and regulations that the EPA will enforce under sections 9005 and 9006 of RCRA and any other applicable state provisions. The incorporation by reference of State authorized programs in the CFR should substantially enhance the public's ability to discern the current status of the approved State program and State requirements that can be federally enforced. This effort provides clear notice to the public of the scope of the approved program in each State.

B. What is the history of codification of Nebraska's UST program?

The EPA has not previously incorporated by reference and codified Nebraska's approved UST program. Through this action, the EPA is incorporating by reference and codifying Nebraska's State program in 40 CFR 282.77 to include the program and the approved revisions.

C. What codification decisions have we made in this rule?

Incorporation by reference: In this rule, we are finalizing regulatory text that includes incorporation by reference. In accordance with the requirements of 1 CFR 51.5, we are finalizing the incorporation by reference of the federally approved Nebraska UST program described in the amendments to 40 CFR part 282 set forth below. The EPA has made, and will continue to make, this document generally available through *https://www.regulations.gov* or by contacting the EPA Region 7 contact listed in the **ADDRESSES** section of this preamble.

The purpose of this **Federal Register** document is to codify Nebraska's approved UST program. The codification reflects the State program that would be in effect at the time EPA's approved revisions to the Nebraska UST program addressed in this direct final rule become final. The document incorporates by reference Nebraska's UST statutes and regulations and clarifies which of these provisions are included in the approved and federally enforceable program. By codifying the approved Nebraska program and by amending the CFR, the public will more easily be able to discern the status of the federally-approved requirements of the Nebraska program.

EPA is incorporating by reference the Nebraska approved UST program in 40 CFR 282.77. Section 282.77(d)(1)(i) incorporates by reference for enforcement purposes the State's statutes and regulations.

Section 282.77 also references the Attorney General's Statement, Demonstration of Adequate Enforcement Procedures, the Program Description, and the Memorandum of Agreement, which are approved as part of the UST program under Subtitle I of RCRA. These documents are not incorporated by reference.

D. What is the effect of Nebraska's codification on enforcement?

The EPA retains the authority under sections 9005 and 9006 of Subtitle I of RCRA, 42 U.S.C. 6991d and 6991e, and other applicable statutory and regulatory provisions to undertake inspections and enforcement actions and to issue orders in approved States. With respect to these actions, EPA will rely on Federal sanctions, Federal inspection authorities, and Federal procedures rather than the State authorized analogues to these provisions. Therefore, the EPA is not incorporating by reference such particular, approved Nebraska procedural and enforcement authorities. Section 282.77(d)(1)(ii) of 40 CFR lists those approved Nebraska authorities that would fall into this category.

E. What State provisions are not part of the codification?

The public also needs to be aware that some provisions of the State's UST program are not part of the federally approved State program. Such provisions are not part of the RCRA Subtitle I program because they are ''broader in scope'' than Subtitle I of RCRA. Section 281.12(a)(3)(ii) of 40 CFR states that where an approved State program has provisions that are broader in scope than the Federal program, those provisions are not a part of the federally approved program. As a result, State provisions which are broader in scope than the Federal program are not incorporated by reference for purposes of federal enforcement in part 282. Section 282.77(d)(1)(iii) lists for reference and clarity the Nebraska statutory and regulatory provisions which are broader in scope than the Federal program and which are not, therefore, part of the approved program being codified in this document. Provisions that are broader in scope cannot be enforced by EPA; the State, however, will continue to implement and enforce such provisions under State law.

III. Statutory and Executive Order Reviews

This action only applies to Nebraska's UST Program requirements pursuant to RCRA section 9004 and imposes no requirements other than those imposed by State law. It complies with applicable Executive Orders (EOs) and statutory provisions as follows:

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is not a significant regulatory action as defined in Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023), because this action approves and codifies State requirements for the purpose of RCRA section 9004 and imposes no additional requirements beyond those imposed by State. Therefore, this action was not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act (PRA)

This rule does not impose an information collection burden under the provisions of the PRA, 44 U.S.C. 3501 *et seq.* Burden is defined at 5 CFR 1320.3(b).

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA, 5 U.S.C. 601 *et seq.,* because this action authorizes State requirements pursuant to RCRA section 9004 and imposes no requirements beyond those imposed by State.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandates as described in UMRA, 2 U.S.C. 1501 *et seq.,* and does not significantly or uniquely affect small governments because this action approves and codifies pre-existing requirements under State law and does not impose any additional enforceable duty beyond that required by State.

E. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action approves and codifies pre-existing requirements under State law and does not impose any additional enforceable duty beyond that required by State law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538). For the same reason, this action also does not significantly or uniquely affect the communities of Tribal governments, as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

F. Executive Order 13132: Federalism

This action will not have substantial direct effects on the States, on the relationship between the National Government and the State on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it merely approves and codifies State requirements as part of the State RCRA underground storage tank program without altering the relationship or the distribution of power and responsibilities established by RCRA.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

EPA interprets Executive Order 13045 (62 FR 19885, April 23, 1997) as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it approves a State program.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This rule is not subject to Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not a ''significant regulatory action'' as defined under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

Under RCRA section 9004(b), EPA grants a State's application for approval as long as the States the criteria required by RCRA. It would thus be inconsistent with applicable law for EPA, when it reviews a State approved application, to require the use of any particular voluntary consensus standard in place of another standard that otherwise satisfies the requirements of RCRA. Thus, the requirements of Section 12(d) of the NTTAA, 15 U.S.C. 272 note, do not apply to this action.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations; and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

Executive Order 12898 (59 FR 7629, February 16, 1994) and Executive Order 14096 (88 FR 25251, April 26, 2023) direct Federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color and/or Indigenous peoples) and low-income populations. Because this action approves pre-existing State rules that are no less stringent than existing Federal requirements and imposes no additional requirements beyond those imposed by State and there are no anticipated significant adverse human health or environmental effects, this rule is not subject to Executive Order 12898 or Executive Order 14096.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.,* and EPA will submit a rule report containing this document and other required information to each House of the Congress and the Comptroller General of the United States prior to publication in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2). However, this action will be effective February 7, 2025 because it is a direct final rule.

Authority: This rule is issued under the authority of sections 2002(a), 7004(b), and 9004 of the Solid Waste Disposal Act, as amended, 42 U.S.C. 6912, 6991c, 6991d, and 6991e.

List of Subjects in 40 CFR Part 282

Environmental protection, Administrative practice and procedure, Confidential business information, Hazardous substances, Incorporation by reference, Indians-lands, Insurance, Intergovernmental relations, Oil pollution, Penalties, Petroleum, Reporting and recordkeeping requirements, State and local governments, Surety bonds, Underground storage tanks, Water pollution control, Water supply.

Dated: November 22, 2024.

Meghan A. McCollister,

Regional Administrator, EPA Region 7.

For the reasons set forth in the preamble, EPA is amending 40 CFR part 282 as follows:

PART 282—APPROVED UNDERGROUND STORAGE TANK PROGRAMS

■ 1. The authority citation for part 282 continues to read as follows:

Authority: 42 U.S.C. 6912, 6991c, 6991d, and 6991e.

■ 2. Add § 282.77 to read as follows:

§ 282.77 Nebraska State-Administered Program.

(a) *History of the approval of Nebraska's program.* The State of Nebraska is approved to administer and enforce an underground storage tank program in lieu of the Federal program under Subtitle I of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, 42 U.S.C. 6991 *et seq*. The State program, as administered by the Nebraska State Fire Marshal, was approved by EPA pursuant to 42 U.S.C. 6991c and part 281 of this Chapter. EPA approved the Nebraska program on August 19, 2002, and it was effective on September 18, 2002. A subsequent program revision application was approved by EPA and became effective on February 7, 2025.

(b) *Enforcement authority.* Nebraska has primary responsibility for administering and enforcing its federally approved underground storage tank program. However, EPA retains the authority to exercise its inspection and enforcement authorities under sections 9005 and 9006 of Subtitle I of RCRA, 42 U.S.C. 6991d and 6991e, as well as under any other applicable statutory and regulatory provisions.

(c) *Retaining program approval.* To retain program approval, Nebraska must revise its approved program to adopt new changes to the federal Subtitle I program which makes it more stringent, in accordance with section 9004 of RCRA, 42 U.S.C. 6991c and 40 CFR part 281, subpart E. If Nebraska obtains approval for the revised requirements pursuant to section 9004 of RCRA, 42 U.S.C. 6991c, the newly approved statutory and regulatory provisions will be added to this subpart and notice of any change will be published in the **Federal Register**.

(d) *Final program approval.* Nebraska has final approval for the following elements of its program application originally submitted to EPA and approved on August 19, 2002 and effective September 18, 2002, and the program revision application approved by EPA, effective on February 7, 2025:

(1) *State statutes and regulations*—(i) *Incorporation by reference.* The provisions cited in this paragraph, and listed in appendix A to part 282, are incorporated by reference as part of the underground storage tank program under Subtitle I of RCRA, 42 U.S.C. 6991 *et seq.* The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. You may obtain copies of the Nebraska regulations and statutes that are incorporated by reference in this paragraph from the Nebraska State Fire Marshal website at: *https://sfm.nebraska.gov* or the Nebraska State Fire Marshal Agency, 246 South 14th Street, Suite 1, Lincoln, NE 68508–1804. You may inspect all approved material at the EPA Region 7 Office, 11201 Renner Boulevard, Lenexa, KS 66219; telephone number: (913) 551–7908; or the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

(A) EPA-Approved Nebraska Statutory Requirements Applicable to the Underground Storage Tank Program, September 2024.

(B) EPA-Approved Nebraska Regulatory Requirements Applicable to the Underground Storage Tank Program, September 2024.

(ii) *Legal basis.* EPA evaluated the following statutes and regulations, which provide the legal basis for the State's implementation of the underground storage tank program, but they are not being incorporated by reference for enforcement purposes and do not replace Federal authorities:

(A) Nebraska Revised Statutes section 81–502.

(B) Nebraska Revised Statutes section 81–502.04.

(C) Nebraska Revised Statutes section 81–503.01.

(D) Nebraska Revised Statutes section 81–512.

(E) Nebraska Revised Statutes section 81–1502.

(F) Nebraska Revised Statutes section 81–1504.

(G) Nebraska Revised Statutes section 81–1505.

(H) Nebraska Revised Statutes section 81–1507.

(I) Nebraska Revised Statutes sections 81–1508, 81–1508.01—81–1508.02.

(J) Nebraska Revised Statutes section 81–1511.

(K) Nebraska Revised Statutes section 81–15, 117.

(L) Nebraska Revised Statutes section 81–15, 118.

(M) Nebraska Revised Statutes section 81–15, 119.

(N) Nebraska Revised Statutes section 81–15, 120.

(O) Nebraska Revised Statutes section 81–15, 121.

(P) Nebraska Revised Statutes section 81–15, 122.

(Q) Nebraska Revised Statutes section 81–15, 123.

(R) Nebraska Revised Statutes sections 81–15, 124, 81–15, 124.01–81–15, 124.07.

(S) Nebraska Revised Statutes section 81–15, 125.

(T) Nebraska Revised Statutes section 81–15, 126.

(U) Nebraska Revised Statutes section 81–15, 127.

(V) Nebraska Revised Statutes section 66–1531, *et seq.*

BILLING CODE 6560–50–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

42 CFR Part 11

[Docket No. NIH–2024–0001]

RIN 0925–AA71

Clinical Trials Registration and Results Information Submission

AGENCY: National Institutes of Health, HHS.

ACTION: Final rule; technical amendment.

SUMMARY: The Department of Health and Human Services (HHS), through the National Institutes of Health (NIH), is amending its regulation governing clinical trials registration and results information submission to update throughout the regulation the internet web address or uniform resource locator (URL) of the site that provides information about formatting of information for submission, procedures, and tools as specified in the regulation.

DATES: This final rule is effective December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Daniel Hernandez, NIH Regulations Officer, Office of Management Assessment, Division of Management Support, 6011 Executive Boulevard, Suite 601, Rockville, Maryland 20852–7669, telephone 301–435–3343, email *dhernandez@od.nih.gov*.

SUPPLEMENTARY INFORMATION: NIH is completing a multiyear initiative to modernize the *ClinicalTrials.gov* website to deliver an improved user experience on an updated platform that enhances efficiency. The modernized website integrates content from the *prsinfo.clinicaltrials.gov* website, which is referenced in several sections of 42 CFR part 11 as the web address for obtaining information on formatting and other guidance, into the centralized *ClinicalTrials.gov* website at *https://clinicaltrials.gov* for convenience and ease of access. This address change necessitates amending the regulation to update the URL for the *prsinfo.clinicaltrials.gov* successor site. NIH considered other options and concluded that this final rule technical amendment is necessary because the current codified URL is referenced throughout the regulation itself (*i.e.,* as opposed to the Preamble alone). Moreover, the ''or successor site'' modifier is not always used in the regulation; for example, 42 CFR 11.8 states ''Information submitted under this part must be submitted electronically to *ClinicalTrials.gov,* in the format specified at *https://prsinfo.clinicaltrials.gov*.''

The address change necessitates amending the regulation codified at 42 CFR part 11 by removing the URL address *https://prsinfo.clinicaltrials.gov* wherever it appears in part 11, and adding, in its place, the URL *https://clinicaltrials.gov* or successor site.

Specifically, this action results in removing the URL *https://prsinfo.clinicaltrials.gov* and adding, in its place, the URL *https://clinicaltrials.gov* or successor site in §§ 11.4(c)(2)(ii) and (c)(3), 11.8, 11.44(e)(3)(i), 11.48(a)(5) and (b), 11.54(a)(1) and (b)(1), and 11.64(b)(1) in part 11.

Amending the regulation is time sensitive, as NIH completed integration of content from the *prsinfo.clinicaltrials.gov* website into the modernized *ClinicalTrials.gov* website in June 2024. The address change is cost neutral, editorial in nature, and does not impose any new regulatory requirements on affected parties.

Matters of Regulatory Procedure

Administrative Procedure Act

Publication of this document constitutes final action on these changes under the Administrative Procedure Act (APA) (5 U.S.C. 553). The APA generally exempts rules from the requirements of notice and comment rulemaking when an agency ''for good cause finds (and incorporates the finding and a brief statement of reasons therefor in the rule issued) that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest'' (5 U.S.C. 553(b)(B)).

HHS has determined that notice and public comment are unnecessary because this amendment to the regulation provides only technical or non-substantive, administrative changes to specify the location of information about formatting of information for submission, procedures, and tools as specified in the regulation.

Additionally, HHS finds good cause for these amendments to become effective on the date of publication of this rulemaking action. The APA allows an effective date of less than 30 days after publication as ''provided by the agency for good cause found and published with the rule'' (5 U.SC. 553(d)(3). A delayed effective date is unnecessary in this case because the amendments do not impose any new regulatory requirements on affected parties. As a result, affected parties do not need time to prepare before the rule takes effect. Therefore, HHS finds good cause for this correction to become effective on the date of publication of this rulemaking action.

Further, it is in the public interest that correct and up-to-date information be contained in the affected sections of the regulation at 42 CFR part 11 as soon as possible.

Regulatory Impact Analysis

NIH examined the impacts of this rule under Executive Order 12866, Regulatory Planning and Review; Executive Order 13563, Improving Regulation and Regulatory Review; Executive Order 14094, Modernizing Regulatory Review; Executive Order 13132, Federalism; the Regulatory Flexibility Act (5 U.S.C. 601–612); and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866, 13563, and 14094

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is

necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). The Executive Order 14094 entitled ''Modernizing Regulatory Review'' amends section 3(f) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule that may: (1) have an annual effect on the economy of $200 million or more in any 1 year (adjusted every 3 years by the Administrator of OIRA for changes in gross domestic product); or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impacts of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

A regulatory impact analysis (RIA) must be prepared for major rules with significant regulatory action/s and/or with significant effects as per section 3(f)(1) ($200 million or more in any 1 year). OMB's Office of Information and Regulatory Affairs has determined that this rulemaking is ''not significant'' under section 3(f) and does not meet the criteria set forth in 5 U.S.C. 804(2) under subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act). Thus, a RIA is unnecessary.

Executive Order 13132

Executive Order 13132, ''Federalism,'' requires that Federal agencies consult with State and local government officials in the development of regulatory policies with federalism implications. The Secretary, HHS, has reviewed this rule as required under the Executive order and determined that it will not have federalism implications. The Secretary, HHS, certifies that the rule will not have effect on the States or on the distribution of power and responsibilities among various levels of government.

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. chapter 6) requires agencies to analyze regulatory options that would minimize the significant economic impact of a rule on small entities. The Secretary has determined that this rule will not have a significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act of 1995

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires agencies to prepare a written statement, to include an assessment of anticipated costs and benefits, before proposing any rule that includes a Federal mandate that may result in the expenditure by State, local and Tribal governments or more, in the aggregate or by the private sector, of $100,000.000 [adjusted annually for inflation (with base year 1995)] in any 1 year. The current inflation-adjusted statutory threshold as of January 2024 is approximately $183 million based on the Bureau of Labor Statistics inflation calculator. The Secretary, HHS, certifies that that this rule does not mandate any spending by State, local, or Tribal government in the aggregate or by the private sector.

Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. chapter 35) is not applicable, because this rule does not contain any new information collection or record keeping requirements that require the approval of the Office of Management and Budget, and this rule does not impact information collection and recordkeeping requirements in part 11 that are already approved under OMB Control Number 0925–0586.

Congressional Review Act

The Secretary, HHS, has determined this rule is a non-major rule under the Congressional Review Act (5 U.S.C. chapter 8) and has provided a report thereon to the Senate, House of Representatives and General Accounting Office in accordance with that law.

List of Subjects in 42 CFR Part 11

Biologics, Drugs, Human research subjects, Information, Laboratories, Medical devises, Medical research, Reporting and recordkeeping requirements.

Accordingly, under the authority of 42 U.S.C. 216, the Department of Health and Human Services amends 42 CFR part 11 by making the following technical amendment:

PART 11—CLINICAL TRIALS REGISTRATION AND RESULTS INFORMATION SUBMISSION

■ 1. The authority citation for part 11 continues to read as follows:

Authority: 42 U.S.C. 282(i); 42 U.S.C. 282(j); 5 U.S.C. 301; 42 U.S.C. 286(a); 42 U.S.C. 241(a); 42 U.S.C. 216(b).

§§ 11.4, 11.8, 11.44, 11.48, 11.54, and 11.64 [Amended]

■ 2. Amend §§ 11.4, 11.8, 11.44, 11.48, 11.54, and 11.64 by removing the URL ''*https://prsinfo.clinicaltrials.gov*'' wherever it appears, and adding, in its place, the text ''*https://clinicaltrials.gov* or successor site''.

Xavier Becerra,

Secretary, Department of Health and Human Services.

[FR Doc. 2024–28475 Filed 12–6–24; 8:45 am]

BILLING CODE 4140–01–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 90

[WP Docket No. 07–100; FCC 23–3; FR ID 261942]

Improving Public Safety Communications in the 4.9 GHz Band

AGENCY: Federal Communications Commission.

ACTION: Final rule, announcement of compliance date.

SUMMARY: In this document, the Federal Communications Commission (FCC) announces that the Office of Management and Budget (OMB) has approved, for a period of three years, the information collections associated with certain rules adopted in the Seventh Report and Order, in WP Docket No. 07–100; FCC 23–3. This document is consistent with the Seventh Report and Order, which directs the Public Safety and Homeland Security Bureau and the Wireless Telecommunications Bureau to publish a document in the **Federal Register** announcing a compliance date for the rule section and revise the rule accordingly.

DATES:

Effective Date: December 9, 2024.

Compliance Date: Compliance with 47 CFR 90.1207(e) and (f) published at 88 FR 12565 on February 28, 2023, is required as of December 9, 2024.

ADDRESSES: Federal Communications Commission, 45 L St. NE, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Brian Marenco of the Public Safety and

Homeland Security Bureau, at (202) 418–0838 or *Brian.Marenco@fcc.gov*. For additional information concerning the Paperwork Reduction Act information collection requirements contact Nicole Ongele at (202) 418–2991 or via email: *Nicole.Ongele@fcc.gov*.

SUPPLEMENTARY INFORMATION: This document announces that OMB approved the information collection requirements in § 90.1207(e) and (f) on September 7, 2023. This rule section was adopted in the Commission's Seventh Report and Order, in WP Docket No. 07–100; FCC 23–3, published at 88 FR 12565, February 28, 2023. In this Seventh Report and Order, the Commission adopted a proposal to collect more granular data on public safety deployments in the 4.9 GHz band. The Commission also decided to continue using the Universal Licensing System (ULS) as the licensing database for public safety operations in the 4.9 GHz band. The Commission directed the Public Safety and Homeland Security Bureau and the Wireless Telecommunications Bureau (collectively the Bureaus) to make any necessary enhancements to ULS and obtain any necessary review under the Paperwork Reduction Act, and announce by a notice when ULS is prepared to accept the granular data specified in § 90.1207(e) and (f) on public safety operations in the 4.9 GHz band. The Commission also directed the Bureaus to announce the compliance date for § 90.1207(e) and (f) by a subsequent notice and to cause § 90.1207(g) to be revised accordingly. ULS will be prepared to accept the granular data on December 9, 2024. Therefore, consistent with instructions from the Seventh Report and Order, this document revises § 90.1207 by adding compliance dates to paragraph (g) which states that compliance with paragraphs (e) and (f) is not required until paragraph (g) is updated. The Commission publishes this document as a compliance date of the rule. If you have any comments on the burden estimates listed below, or how the Commission can improve the collections and reduce any burdens cause thereby, please contact Nicole Ongele, Federal Communications Commission, 45 L Street NE, Washington, DC 20554. Please include OMB Control Number, 3060–1312, in your correspondence. The Commission will also accept your comments via email at *PRA@fcc.gov*.

Synopsis

As required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3507), the FCC is notifying the public that it received final OMB approval on September 7, 2023, for the information collection requirements contained in § 90.1207(e) and (f).

Under 5 CFR part 1320, an agency may not conduct or sponsor a collection of information unless it displays a current, valid OMB Control Number.

No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act that does not display a current, valid OMB Control Number. The OMB Control Number for the information collection requirements in this rule is 3060–1312.

The foregoing notice is required by the Paperwork Reduction Act of 1995, Public Law 104–13, October 1, 1995, and 44 U.S.C. 3507.

The total annual reporting burdens and costs for the respondents are as follows:

OMB Control Number: 3060–1312.

OMB Approval Date: September 7, 2023.

OMB Expiration Date: September 30, 2026.

Title: Sections 90.1207(e) through (f), Amendment of Part 90 of the Commission's Rules.

Form Number: N/A.

Respondents: State, Local, or Tribal Governments.

Number of Respondents and Responses: 3,871 respondents; 3,871 responses.

Estimated Time per Response: 16–160 hours.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this collection is contained in 47 U.S.C. 154(i), 161, 303(g), 303(r), 332(c)(7), and 1401–1473 of the Communications Act of 1934.

Total Annual Burden: 592,288 hours.

Total Annual Cost: $14,882,400.

Needs and Uses: On January 18, 2023, the Commission released a Seventh Report and Order in WP Docket No. 07–100 which adds new § 90.1207(e) and (f) to the Commission's rules requiring incumbent public safety licensees and public safety applicants in the 4940–4990 MHz (4.9 GHz) band to submit granular technical data into the Commission's Universal Licensing System (ULS). Section 90.1207(e) requires applicants seeking to license new or modify existing facilities to submit granular technical data on their proposed operations into ULS. Section 90.1207(f) requires incumbent licensees to perform a one-time submission into ULS of the granular data specified in paragraph (e) for their existing operations and gives incumbent licensees at least a one-year period to complete this one-time collection.

List of Subjects in 47 CFR Part 90

Private Land Mobile Radio Services.

Federal Communications Commission.

Katura Jackson,

Federal Register Liaison Officer.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 90 as follows:

PART 90—PRIVATE LAND MOBILE RADIO SERVICES

■ 1. The authority citation for part 90 continues to read as follows:

Authority: 47 U.S.C. 154(i), 161, 303(g), 303(r), 332(c)(7), 1401–1473.

■ 2. Amend § 90.1207 by revising paragraph (g) to read as follows:

§ 90.1207 Licensing.

* * * * *

(g) Compliance with paragraphs (e) and (f) in this section shall be required as of December 9, 2024. The deadline for submissions for licensees subject to paragraph (f) in this section is Monday, June 9, 2025.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 231221–0314; RTID 0648–XE510]

Fisheries of the Northeastern United States; Atlantic Bluefish Fishery; Quota Transfer From New York to North Carolina

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; quota transfer.

SUMMARY: NMFS announces that the State of New York is transferring a portion of their 2024 commercial bluefish quota to the State of North Carolina. This quota adjustment is necessary to comply with the Atlantic Bluefish Fishery Management Plan (FMP) quota transfer provisions. This announcement informs the public of the revised 2024 commercial bluefish

quotas for New York and North Carolina.

DATES: Effective December 6, 2024, through December 31, 2024.

FOR FURTHER INFORMATION CONTACT: Matthew Rigdon, Fishery Management Specialist, (978) 281–9336.

SUPPLEMENTARY INFORMATION: Regulations governing the Atlantic bluefish fishery are found in 50 CFR 648.160 through 648.167. These regulations require annual specification of a commercial quota that is apportioned among the coastal states from Maine through Florida. The process to set the annual commercial quota and the percent allocated to each state is described in § 648.162, and the final 2024 allocations were published on January 2, 2024 (89 FR 34).

The final rule implementing amendment 1 to the FMP, as published in the **Federal Register** on July 26, 2000 (65 FR 45844), provided a mechanism for transferring bluefish commercial quota from one state to another. Two or more states, under mutual agreement and with the concurrence of the NMFS Greater Atlantic Regional Administrator, can request approval to transfer or combine bluefish commercial quota under § 648.162(e). The Regional Administrator is required to consider three criteria in the evaluation of requests for quota transfers or combinations: (1) the transfers would not preclude the overall annual quota from being fully harvested; (2) the transfers address an unforeseen variation or contingency in the fishery; and (3) the transfers are consistent with the objectives of the FMP and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). The Regional Administrator has determined these criteria have been met for the transfers approved in this notification.

New York is transferring 50,000 pounds (lb) (22,680 kilograms (kg)) to North Carolina through mutual agreement of the States. This transfer was requested to ensure North Carolina would not exceed its 2024 State quota. The revised bluefish quotas for 2024 are: New York, 339,190 lb (153,854 kg) and North Carolina, 1,130,996 lb (513,011 kg).

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR 648.162(e)(1)(i) through (iii), which was issued pursuant to section 304(b), and is exempted from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: December 3, 2024.

Karen H. Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2024–28776 Filed 12–6–24; 8:45 am]

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 89, No. 236
Monday, December 9, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–2549; Project Identifier MCAI–2024–00359–T]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus SAS Model 330–200, A330–200 Freighter, and A330–300 series airplanes. This proposed AD was prompted by a report of contamination of the advanced pneumatic detector pressure switch of engine pylon fire detectors. This proposed AD would require replacement of the affected parts and would prohibit installation of affected parts, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by January 23, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2549; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For EASA material identified in this proposed AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.* It is also available at *regulations.gov* under Docket No. FAA–2024–2549.
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Vladimir Ulyanov, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3229; email *vladimir.ulyanov@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2024–2549; Project Identifier MCAI–2024–00359–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Vladimir Ulyanov, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3229; email *vladimir.ulyanov@faa.gov.* Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2024–0119, dated June 27, 2024 (EASA AD 2024–0119) (also referred to as the MCAI), to correct an unsafe condition for certain Model A330–201, –202, –203, –223, –223F, –243, –243F, –301, –302, –303, –321, –322, –323, –341, –342, –343, and –743L airplanes. Model A330–743L airplanes are not certificated by the FAA and are not included on the U.S. type certificate data sheet; this proposed AD therefore does not include those airplanes in the applicability. The MCAI states occurrences were reported of contamination of the advanced pneumatic detector pressure switch of engine pylon fire detectors.

The FAA is proposing this AD to address such contamination, which could affect the reliability of the engine pylon fire detector, possibly leading to an undetected fire and consequent reduced control of the airplane.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2549.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0119 specifies procedures for replacement of the affected engine pylon fire detector and prohibits installation of affected engine pylon fire detector. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2024–0119 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2024–0119 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2024–0119 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2024–0119 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2024–0119. Material required by EASA AD 2024–0119 for compliance will be available at *regulations.gov* under Docket No. FAA–2024–2549 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 6 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
7 work-hours × $85 per hour = $595	$828	Up to $1,423	Up to $8,538.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus SAS: Docket No. FAA–2024–2549; Project Identifier MCAI–2024–00359–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by January 23, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus SAS Model A330–201, –202, –203, –223, –223F, –243, –243F, –301, –302, –303, –321, –322, –323, –341, –342, and –343 airplanes, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) AD 2024–0119, dated June 27, 2024 (EASA AD 2024–0119).

(d) Subject

Air Transport Association (ATA) of America Code 26, Fire protection.

(e) Unsafe Condition

This AD was prompted by a report of contamination of the advanced pneumatic detector pressure switch of engine pylon fire detectors. The FAA is issuing this AD to address this contamination. The unsafe condition, if not addressed, could affect the reliability of the engine pylon fire detector,

possibly leading to an undetected fire and consequent reduced control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2024–0119.

(h) Exceptions to EASA AD 2024–0119

(1) Where EASA AD 2024–0119 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where paragraph (1) of the EASA AD 2024–0119 states to ''replace each affected part with a serviceable part in accordance with the instructions of the SB'' this AD requires replacing that text with ''replace each affected part with a serviceable part in accordance with the applicable tasks for removal and installation of the affected parts as specified in the accomplishment instructions of the SB.''

(3) Where EASA AD 2024–0119 defines a serviceable part as ''Engine pylon fire detector, eligible for installation in accordance with Airbus instructions, which is not an affected part'' for this AD replace that text with ''Engine pylon fire detector, eligible for installation that is not an affected part.''

(4) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0119.

(i) No Return of Parts Requirement

Although the material referenced in EASA AD 2024–0119 specifies to send affected pylon fire detectors to Kidde Technologies Inc., this AD does not include that requirement.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the AIR–520, Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (k) of this AD and email to: *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, AIR–520, Continued Operational Safety Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i) of this AD, if any material contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(k) Additional Information

For more information about this AD, contact Vladimir Ulyanov, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3229; email *vladimir.ulyanov@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0119, dated June 27, 2024.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on December 3, 2024.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–2548; Project Identifier MCAI–2024–00401–T]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus SAS Model A318 series airplanes, Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes; Model A320–211, –212, –214, –216, –231, –232, and –233 airplanes; and Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. This proposed AD was prompted by cracks being found during full-scale fatigue testing of the keel beam bottom panel between the edge profile and stringer run-out at a certain frame and stringer. This proposed AD would require repetitive special detailed inspections (SDI) of the affected area, and corrective actions if necessary, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by January 23, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2548; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory

continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

• For EASA material identified in this proposed AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.* It is also available at *regulations.gov* under Docket No. FAA–2024–2548.

• You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email *Timothy.P.Dowling@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2024–2548; Project Identifier MCAI–2024–00401–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email *Timothy.P.Dowling@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2024–0135, dated July 10, 2024 (EASA AD 2024–0135) (also referred to as the MCAI), to correct an unsafe condition for certain Airbus SAS Model A318 series airplanes; Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes, Model A320–211, –212, –214, –215, –216, –231, –232, and –233 airplanes; and Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. Model A320–215 airplanes are not certificated by the FAA and are not included on the U.S. type certificate data sheet; this proposed AD therefore does not include those airplanes in the applicability. The MCAI states that during full-scale fatigue testing, cracks were found on the keel beam bottom panel between the edge profile and stringer run-out at frame 46 and stringer 37, left- and right-hand sides. Crack propagation in this area could possibly result in reduced structural integrity of the airplane.

The FAA is proposing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2548.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0135 specifies procedures for repetitive SDIs for discrepancies (cracks) of the keel beam bottom panel between the edge profile and stringer run-out at frame 46 and stringer 37, left-hand and right-hand sides. EASA AD 2024–0135 also specifies corrective actions including crack repair.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2024–0135 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2024–0135 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2024–0135 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2024–0135 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2024–0135. Material required by EASA AD 2024–0135 for compliance will be available at *regulations.gov* under Docket No. FAA–2024–2548 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 1,920 airplanes of U.S. registry. The FAA

estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
16 work-hours × $85 per hour = $1,360	$0	$1,360	$2,611,200

The FAA has received no definitive data on which to base the cost estimates for the on-condition repairs specified in this proposed AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus SAS: Docket No. FAA–2024–2548; Project Identifier MCAI–2024–00401–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by January 23, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the Airbus SAS airplanes, certificated in any category, as identified in paragraphs (c)(1) through (4) of this AD and in European Union Aviation Safety Agency (EASA) AD 2024–0135, dated July 10, 2024 (EASA AD 2024–0135).

(1) Model A318–111, –112, –121, and –122 airplanes.

(2) Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes.

(3) Model A320–211, –212, –214, –216, –231, –232, and –233 airplanes.

(4) Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by cracks being found during full-scale fatigue testing of the keel beam bottom panel between the edge profile and stringer run-out at frame 46 and stringer 37, left- and right-hand sides. The FAA is issuing this AD to address the unsafe condition on these products. The unsafe condition, if not addressed, could result in crack propagation, possibly resulting in reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2024–0135.

(h) Exceptions to EASA AD 2024–0135

(1) Where EASA AD 2024–0135 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where paragraph (2) of EASA AD 2024–0135 specifies ''if, during any inspection as required by paragraph (1) of this AD, discrepancies are detected, as defined in the SB, before next flight, contact Airbus for approved repair instructions and accomplish those instructions accordingly,'' this AD requires replacing that text with ''if, during any inspection as required by paragraph (1) of this AD, any cracking is detected, the cracking must be repaired before further flight using a method approved by the Manager, AIR–520, Continued Operational Safety Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.''

(3) Where paragraph (3) of EASA AD 2024–0135 does not allow corrective action as terminating action for the repetitive inspection requirements ''unless otherwise stated in the repair instructions provided by Airbus,'' this AD requires that any terminating action be approved in accordance with the procedures specified in paragraph (j)(1) of this AD.

(4) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0135.

(i) No Reporting Requirement

Although the material referenced in EASA AD 2024–0135 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of AIR–520, Continued Operational Safety Branch, send it to the

attention of the person identified in paragraph (k) of this AD and email to: *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, AIR–520, Continued Operational Safety Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (j)(2) of this AD, if any material contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(k) Additional Information

For more information about this AD, contact Timothy Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email *Timothy.P.Dowling@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0135, dated July 10, 2024.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locationsoremailfr.inspection@nara.gov.*

Issued on December 3, 2024.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2024–2591; Airspace Docket No. 24–AGL–26]

RIN 2120–AA66

Amendment of VOR Federal Airways V–38, V–133, and V–144, and Revocation of VOR Federal Airway V–214 in the Vicinity of Zanesville, OH

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Very High Frequency Omnidirectional Range (VOR) Federal Airways V–38, V–133, and V–144; and to revoke VOR Federal Airway V–214. The FAA is proposing this action due to the planned decommissioning of the VOR portion of the Zanesville, OH (ZZV), VOR/Distance Measuring Equipment (VOR/DME) navigational aid (NAVAID). The Zanesville VOR is being decommissioned in support of the FAA's VOR Minimum Operational Network (MON) program.

DATES: Comments must be received on or before January 23, 2025.

ADDRESSES: Send comments identified by FAA Docket No. FAA–2024–2591 and Airspace Docket No. 24–AGL–26 using any of the following methods:

* *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.

* *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

* *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

* *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FAA Order JO 7400.11J, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20597; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Colby Abbott, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20597; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would modify the National Airspace System as necessary to preserve the safe and efficient flow of air traffic.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at *www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the office of the Operations Support Group, Central Service Center, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177.

Incorporation by Reference

VOR Federal Airways are published in paragraph 6010(a) of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024, and effective September 15, 2024. These updates would be published in the next update to FAA Order JO 7400.11. That order is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

Background

The FAA is planning to decommission the VOR portion of the Zanesville, OH, VOR/DME in October 2025. The Zanesville VOR is one of the candidate VORs identified for discontinuance by the FAA's VOR MON program and listed in the Final policy statement notice, ''Provision of Navigation Services for the Next Generation Air Transportation System (NextGen) Transition to Performance-Based Navigation (PBN) (Plan for Establishing a VOR Minimum Operational Network),'' published in the **Federal Register** on July 26, 2016 (81 FR 48694), Docket No. FAA–2011–1082.

Although the VOR portion of the Zanesville VOR/DME is planned for decommissioning, the co-located DME portion of the NAVAID is being retained to support current and future NextGen PBN flight procedure requirements.

The VOR Federal Airways affected by the planned decommissioning of the Zanesville VOR are V–38, V–133, V–144, and V–214. With the planned decommissioning of the Zanesville VOR, the remaining ground-based NAVAID coverage in the area is insufficient to enable the continuity of the affected airways. As such, proposed modifications to V–38 would result in an existing gap in the airway being expanded; to V–133 would result in one of two existing gaps in the airway being expanded; to V–144 would result in a gap being created in the airway; and to V–214 would result in the airway being revoked.

To address the proposed amendments and revocation to the affected airways, instrument flight rules (IFR) traffic could use VOR Federal Airways V–44, V–75, V–115, V–117, and V–166 to navigate around the area affected by the planned decommissioning of the Zanesville VOR. Additionally, IFR pilots with Area Navigation (RNAV)-equipped aircraft could navigate using RNAV Route T–323 or point-to-point using the existing Fixes and waypoints that will remain in place to support continued operations though the affected area. Visual flight rules pilots who elect to navigate via the affected airways could also take advantage of the adjacent airways listed above, as well as the listed RNAV route and point-to-point navigation, if properly equipped. Lastly, all aircraft have the option to request and receive radar vectors from air traffic control to transit the affected area.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 by amending VOR Federal Airways V–38, V–133, and V–144, and revoking VOR Federal Airway V–262. The FAA is proposing this action due to the planned decommissioning of the VOR portion of the Zanesville, OH, VOR/DME NAVAID. The proposed airway actions are described below.

V–38: V–38 currently extends between the Moline, IL, VOR/DME and the intersection of the Fort Wayne, IN, VOR/Tactical Air Navigation (VORTAC) 091° and Rosewood, OH, VORTAC 334° radials (WINES Fix); and between the Appleton, OH, VORTAC and the Cape Charles, VA, VORTAC. The FAA proposes to remove the route segment between the Appleton VORTAC and the Parkersburg, WV, VOR/DME. As amended, the route would be changed to extend between the Moline VOR/DME and the intersection of the Fort Wayne VORTAC 091° and Rosewood VORTAC 334° radials (WINES Fix), and between the Parkersburg VOR/DME and the Cape Charles VORTAC.

V–133: V–133 currently extends between the intersection of the Charlotte, NC, VOR/DME 305° and Barretts Mountain, NC, VOR/DME 197° radials (LINCO Fix) and the Zanesville, OH, VOR/DME; between the Saginaw, MI, VOR/DME and the Houghton, MI, VOR/DME; and between the International Falls, MN, VOR/DME and the Red Lake, Ontario (ON), Canada, VOR. The airspace within Canada is excluded. The FAA proposes to remove the airway segment between the Charleston, WV, VOR/DME and the Zanesville VOR/DME. As amended, the airway would be changed to extend between the intersection of the Charlotte VOR/DME 305° and Barretts Mountain VOR/DME 197° radials (LINCO Fix) and the Charleston VOR/DME; between the Saginaw VOR/DME and the Houghton VOR/DME; and between the International Falls VOR/DME and the Red Lake, ON, Canada, VOR. The airspace within Canada would continue to be excluded.

V–144: V–144 currently extends between the Fort Wayne, IN, VORTAC and the Linden, VA, VORTAC. The FAA proposes to remove the airway segment between the Appleton, OH, VORTAC and the Morgantown, WV, VOR/DME. As amended, the airway would be changed to extend between the Fort Wayne VORTAC and the Appleton VORTAC, and between the Morgantown VOR/DME and the Linden VORTAC.

V–214: V–214 currently extends between the intersection of the Appleton, OH, VORTAC 236° and Zanesville, OH, VOR/DME 274° radials (GLOOM Fix) and the Bellaire, OH,

VOR/DME. The FAA proposes to remove the airway in its entirety.

All NAVAID radials listed in the airway descriptions in the regulatory text of this notice of proposed rulemaking are unchanged and stated in degrees True north.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 6010(a) Domestic VOR Federal Airways.

* * * * *

V–38 [Amended]

From Moline, IL; INT Moline 082° and Peotone, IL, 281° radials; Peotone; Fort Wayne, IN; to INT Fort Wayne 091° and Rosewood, OH, 334° radials. From Parkersburg, WV; Elkins, WV; Gordonsville, VA; Richmond, VA; Harcum, VA; to Cape Charles, VA.

* * * * *

V–133 [Amended]

From INT Charlotte, NC, 305° and Barretts Mountain, NC, 197° radials; Barretts Mountain; to Charleston, WV. From Saginaw, MI; Traverse City, MI; Escanaba, MI; Sawyer, MI; to Houghton, MI. From International Falls, MN; to Red Lake, ON, Canada. The airspace within Canada is excluded.

* * * * *

V–144 [Amended]

From Fort Wayne, IN; to Appleton, OH. From Morgantown, WV; Kessel, WV; to Linden, VA.

* * * * *

V–214 [Removed]

* * * * *

Issued in Washington, DC, on December 3, 2024.

Richard Lee Parks,

Manager (A), Rules and Regulations Group.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A,

Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would modify the National Airspace System as necessary to preserve the safe and efficient flow of air traffic.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at *www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the office of the Operations Support Group, Central Service Center, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX, 76177.

Incorporation by Reference

Jet Routes are published in paragraph 2004 and VOR Federal Airways are published in paragraph 6010(a) of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024, and effective September 15, 2024. These updates would be published in the next update to FAA Order JO 7400.11. That order is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

Background

The FAA is planning to decommission the VOR portion of the Goshen, IN, VORTAC in June 2025. The Goshen VOR is one of the candidate VORs identified for discontinuance by the FAA's VOR MON program and listed in the Final policy statement notice, ''Provision of Navigation Services for the Next Generation Air Transportation System (NextGen) Transition to Performance-Based Navigation (PBN) (Plan for Establishing a VOR Minimum Operational Network),'' published in the **Federal Register** on July 26, 2016 (81 FR 48694), Docket No. FAA–2011–1082.

Although the VOR portion of the Goshen VORTAC is planned for decommissioning, the co-located Tactical Air Navigation (TACAN) portion of the NAVAID is being retained. The TACAN would continue to provide navigational service for military operations and Distance Measuring Equipment (DME) service supporting current and future NextGen PBN flight procedure requirements.

The Air Traffic Service (ATS) routes affected by the planned decommissioning of the Goshen VOR are J–60, J–82, V–8, V–55, V–92, V–126, and V–221. With the planned decommissioning of the Goshen VOR, the remaining ground-based NAVAID coverage in the area is insufficient to enable the continuity of the affected routes. As such, proposed modifications to J–82 and V–221 would result in the ATS routes being shortened; to J–60 would result in a gap in the route; to V–8 would result in an existing gap being expanded; to V–55 would result in an additional gap in the airway; and to V–92 and V–126 would result in the airways being revoked.

To address the proposed amendments to the affected ATS routes, instrument flight rules (IFR) traffic could use Jet Routes J–30, J–146, and J–584 in the high-altitude stratum or use VOR Federal Airways V–10, V–38, V–277, and V–526 in the low-altitude stratum to navigate around the area affected by the planned decommissioning of the Goshen VOR. Additionally, IFR pilots with Area Navigation (RNAV)-equipped aircraft could navigate using RNAV Route Q–62 in the high-altitude stratum, RNAV Routes T–215 and T–265 in the low-altitude stratum, or point-to-point using the existing Fixes and waypoints (WP) that would remain in place to support continued operations though the affected area. Visual flight rules pilots who elect to navigate via the affected ATS routes could also take advantage of the adjacent conventional airways listed above, as well as the listed RNAV routes and point-to-point navigation, if properly equipped. Lastly, all aircraft have the option to request and receive radar vectors from air traffic control to transit the affected area as well.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 by amending Jet Routes J–60 and J–82, and VOR Federal Airways V–8, V–55, and V–221; and revoking VOR Federal Airways V–92 and V–126. The FAA is proposing this action due to the planned decommissioning of the VOR portion of the Goshen, IN, VORTAC NAVAID. The proposed ATS route actions are described below.

J–60: J–60 currently extends between the Los Angeles, CA, VORTAC and the Sparta, NJ, VORTAC. The FAA proposes to remove the route segment between the Joliet, IL, VOR/Distance Measuring Equipment (VOR/DME) and the Dryer, OH, VOR/DME. As amended, the route would be changed to extend between the Los Angeles VORTAC and the Joliet VOR/DME, and between the Dryer VOR/DME and the Sparta VORTAC.

J–82: J–82 currently extends between the Battle Ground, WA, VORTAC and the Sioux Falls, SD, VORTAC; and between the Dubuque, IA, VORTAC and the Goshen, IN, VORTAC. The FAA proposes to remove the route segment between the Joliet, IL, VOR/DME and the Goshen VORTAC. As amended, the route would be changed to extend

between the Battle Ground VORTAC and the Sioux Falls VORTAC, and between the Dubuque VORTAC and the Joliet VOR/DME.

V–8: V–8 currently extends between the intersection of the Seal Beach, CA, VORTAC 266° and Ventura, CA, VOR/DME 144° radials (DOYLE Fix) and the Flag City, OH, VORTAC; and between the Martinsburg, WV, VORTAC and the Washington, DC, VOR/DME. The portion of the airway outside the United States has no upper limit. The FAA proposes to remove the airway segment between the Chicago Heights, IL, VORTAC and the Flag City VORTAC. As amended, the airway would be changed to extend between the intersection of the Seal Beach VORTAC 266° and Ventura VOR/DME 144° radials (DOYLE Fix) and the Chicago Heights VORTAC, and between the Martinsburg VORTAC and the Washington VOR/DME.

V–55: V–55 currently extends between the Dayton, OH, VOR/DME and the Pullman, MI, VOR/DME; and between the Grand Forks, ND, VOR/DME and the Bismarck, ND, VOR/DME. The FAA proposes to remove the airway segment between the Fort Wayne, IN, VORTAC and the Gipper, MI, VORTAC. As amended, the airway would be changed to extend between the Dayton VOR/DME and the Fort Wayne VORTAC, between the Gipper VORTAC and the Pullman VOR/DME, and between the Grand Forks VOR/DME and the Bismarck VOR/DME.

V–92: V–92 currently extends between the Chicago Heights, IL, VORTAC and the Goshen, IN, VORTAC. The FAA proposes to remove the airway in its entirety.

V–126: V–126 currently extends between the Goshen, IN, VORTAC and the intersection of the Goshen VORTAC 092° and Fort Wayne, IN, VORTAC 016° radials (ILTON Fix). The FAA proposes to remove the airway in its entirety.

V–221: V–221 currently extends between the Bible Grove, IL, VORTAC and the intersection of the Fort Wayne, IN, VORTAC 016° and Goshen, IN, VORTAC 092° radials (ILTON Fix). The FAA proposes to remove the airway segment between the Fort Wayne VORTAC and the intersection of the Fort Wayne VORTAC 016° and Goshen VORTAC 092° radials (ILTON Fix). As amended, the airway would be changed to extend between the Bible Grove VORTAC and the Fort Wayne VORTAC.

All NAVAID radials listed in the ATS route descriptions in the regulatory text of this notice of proposed rulemaking are unchanged and stated in degrees True north.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 2004 Jet Routes.

* * * * *

J–60 [Amended]

From Los Angeles, CA; Paradise, CA; Hector, CA; Boulder City, NV; Bryce Canyon, UT; Hanksville, UT; Red Table, CO; Mile High, CO; Hayes Center, NE; Lincoln, NE; Iowa City, IA; to Joliet, IL. From Dryer, OH; Philipsburg, PA; INT Philipsburg 100° and Sparta, NJ, 253° radials; to Sparta.

* * * * *

J–82 [Amended]

From Battle Ground, WA; Donnelly, ID; Dubois, ID; Crazy Woman, WY; Rapid City, SD; to Sioux Falls, SD. From Dubuque, IA; INT Dubuque 095° and Joliet, IL, 317° radials; to Joliet.

* * * * *

Paragraph 6010(a) Domestic VOR Federal Airways.

* * * * *

V–8 [Amended]

From INT Seal Beach, CA, 266° and Ventura, CA, 144° radials; Seal Beach; Paradise, CA; 35 miles, 7 miles wide (3 miles SE and 4 miles NW of centerline) Hector, CA; Goffs, CA; INT Goffs 033° and Morman Mesa, NV, 196° radials; Morman Mesa; Bryce Canyon, UT; Hanksville, UT; Grand Junction, CO; Rifle, CO; Kremmling, CO; Mile High, CO; Akron, CO; Hayes Center, NE; Grand Island, NE; Omaha, IA; Des Moines, IA; Iowa City, IA; Moline, IL; Joliet, IL; to Chicago Heights, IL. From Martinsburg, WV; to Washington, DC. The portion outside the United States has no upper limit.

* * * * *

V–55 [Amended]

From Dayton, OH; to Fort Wayne, IN. From Gipper, MI; Keeler, MI; to Pullman, MI. From Grand Forks, ND; INT Grand Forks 239° and Bismarck, ND, 067° radials; to Bismarck.

* * * * *

V–92 [Removed]

* * * * *

V–126 [Removed]

* * * * *

V–221 [Amended]

From Bible Grove, IL; Hoosier, IN; Shelbyville, IN; Muncie, IN; to Fort Wayne, IN.

* * * * *

Issued in Washington, DC, on December 3, 2024.

Richard Lee Parks,

Manager (A), Rules and Regulations Group.

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2024–2588; Airspace Docket No. 24–AGL–17]

RIN 2120–AA66

Amendment of Jet Routes J–26, J–64 and J–181, and VOR Federal Airways V–10 and V–156; and Revocation of VOR Federal Airway V–262 in the Vicinity of Bradford, IL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Jet Routes J–26, J–64, and J–181, and Very High Frequency Omnidirectional Range (VOR) Federal Airways V–10 and V–156; and to revoke VOR Federal Airway V–262. The FAA is proposing this action due to the planned decommissioning of the VOR portion of the Bradford, IL (BDF), VOR/Tactical Air Navigation (VORTAC) navigational aid (NAVAID). The Bradford VOR is being decommissioned in support of the FAA's VOR Minimum Operational Network (MON) program.

DATES: Comments must be received on or before January 23, 2025.

ADDRESSES: Send comments identified by FAA Docket No. FAA–2024–2588 and Airspace Docket No. 24–AGL–17 using any of the following methods:

* *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.

* *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

* *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

* *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FAA Order JO 7400.11J, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 600 Independence Avenue SW, Washington DC 20597; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Colby Abbott, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20597; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would modify the National Airspace System as necessary to preserve the safe and efficient flow of air traffic.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at *www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the office of the Operations Support Group, Central Service Center, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX, 76177.

Incorporation by Reference

Jet Routes are published in paragraph 2004 and VOR Federal Airways are published in paragraph 6010(a) of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024, and effective September 15, 2024. These updates would be published in the next update to FAA Order JO 7400.11. That order is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

Background

The FAA is planning to decommission the VOR portion of the Bradford, IL, VORTAC in August 2025. The Bradford VOR is one of the candidate VORs identified for discontinuance by the FAA's VOR MON program and listed in the Final policy statement notice, ''Provision of

Navigation Services for the Next Generation Air Transportation System (NextGen) Transition to Performance-Based Navigation (PBN) (Plan for Establishing a VOR Minimum Operational Network),'' published in the **Federal Register** on July 26, 2016 (81 FR 48694), Docket No. FAA–2011–1082.

Although the VOR portion of the Bradford VORTAC is planned for decommissioning, the co-located Tactical Air Navigation (TACAN) portion of the NAVAID is being retained. The TACAN would continue to provide navigational service for military operations and Distance Measuring Equipment (DME) service supporting current and future NextGen PBN flight procedure requirements.

The Air Traffic Service (ATS) routes affected by the planned decommissioning of the Bradford VOR are J–26, J–64, J–181, V–10, V–156, and V–262. With the planned decommissioning of the Bradford VOR, the remaining ground-based NAVAID coverage in the area is insufficient to enable the continuity of the affected routes. As such, proposed modifications to J–26, J–181, and V–156 would result in the ATS routes being shortened; to J–64 and V–10 would result in an existing gap in the ATS routes being expanded; and to V–262 would result in the airway being revoked.

To address the proposed amendments and revocation to the affected ATS routes, instrument flight rules (IFR) traffic could use Jet Routes J–18, J–87, J–96, and J–232 in the high-altitude stratum or use VOR Federal Airways V–8, V–38, V–48, and V–434 in the low-altitude stratum to navigate around the area affected by the planned decommissioning of the Bradford VOR. Additionally, IFR pilots with Area Navigation (RNAV)-equipped aircraft could navigate using RNAV Route Q–42 in the high-altitude stratum and RNAV Routes T–215, T–325 and T–354 in the low-altitude stratum, or point-to-point using the existing Fixes and Waypoints (WP) that would remain in place to support continued operations though the affected area. Visual flight rules pilots who elect to navigate via the affected ATS routes could also take advantage of the adjacent conventional routes and airways listed above, as well as the listed RNAV routes and point-to-point navigation, if properly equipped. Lastly, all aircraft have the option to request and receive radar vectors from air traffic control to transit the affected area as well.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 by amending Jet Routes J–26, J–64, and J–181, and VOR Federal Airways V–10 and V–156; and revoking VOR Federal Airway V–262. The FAA is proposing this action due to the planned decommissioning of the VOR portion of the Bradford, IL, VORTAC NAVAID. The proposed ATS route actions are described below.

J–26: J–26 currently extends between the Ciudad Juarez, Mexico, VOR/DME and the Joliet, IL, VOR/DME. The airspace within Mexico is excluded. The FAA proposes to remove the route segment between the Kirksville, MO, VORTAC and the Joliet VOR/DME. As amended, the route would be changed to extend between the Ciudad Juarez, Mexico, VOR/DME and the Kirksville VORTAC. The airspace within Mexico would remain excluded.

J–64: J–64 currently extends between the Los Angeles, CA, VORTAC and the Hill City, KS, VORTAC; and between the Lamoni, IA, VOR/DME and the intersection of the Ravine, PA, VORTAC 102° and Lancaster, PA, VOR/DME 044° radials (SARAA Fix). The FAA proposes to remove the route segment between the Lamoni VOR/DME and the Fort Wayne, IN, VORTAC. As amended, the route would be changed to extend between the Los Angeles VORTAC and the Hill City VORTAC, and between the Fort Wayne VORTAC and the intersection of the Ravine VORTAC 102° and Lancaster VOR/DME 044° radials (SARAA Fix).

J–181: J–181 currently extends between the Ranger, TX, VORTAC and the Okmulgee, OK, VOR/DME; and between the Hallsville, MO, VORTAC and the Bradford, IL, VORTAC. The FAA proposes to remove the route segment between the Hallsville VORTAC and the Bradford VORTAC. As amended, the route would be changed to extend between the Ranger VORTAC and the Okmulgee VOR/DME.

V–10: V–10 currently extends between the Pueblo, CO, VORTAC and the intersection of the Bradford, IL, VORTAC 058° and Joliet, IL, VOR/DME 287° radials (PLANO Fix); and between the intersection of the Chicago Heights, IL, VORTAC 358° and Gipper, MI, VORTAC 271° radials (NILES Fix) and the Gipper VORTAC. The FAA proposes to remove the airway segment between the Burlington, IA, VOR/DME and the intersection of the Bradford VORTAC 058° and Joliet VOR/DME 287° radials (PLANO Fix). Additionally, the FAA proposes to remove the legacy airway floor altitude information in the description between the Pueblo VORTAC and the Lamar, CO, VOR/DME route points as it is no longer required. As amended, the airway would be changed to extend between the Pueblo VORTAC and the Burlington VOR/DME, and between the intersection of the Chicago Heights VORTAC 358° and Gipper VORTAC 271° radials (NILES Fix) and the Gipper VORTAC.

V–156: V–156 currently extends between the Cedar Rapids, IA, VOR/DME and the Peotone, IL, VORTAC. The FAA proposes to remove the airway segment between the Moline, IL, VOR/DME and the Peotone VORTAC. As amended, the airway would be changed to extend between the Cedar Rapids VOR/DME and the Moline VOR/DME.

V–262: V–262 currently extends between the Peoria, IL, VORTAC and the Joliet, IL, VOR/DME. The FAA proposes to remove the airway in its entirety. However, the airway segment between the intersection of the Bradford, IL, VORTAC 085° and Joliet VOR/DME 204° radials (MOTIF Fix) and the Joliet VOR/DME would remain as V–69 and V–586.

All NAVAID radials listed in the ATS route descriptions in the regulatory text of this notice of proposed rulemaking are unchanged and stated in degrees True north.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration

proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 2004 Jet Routes.

* * * * *

J–26 [Amended]

From Ciudad Juarez, Mexico; El Paso, TX; INT El Paso 070° and Chisum, NM, 215° radials; Chisum; Panhandle, TX; Mitbee, OK; Wichita, KS; Kansas City, MO; to Kirksville, MO. The airspace within Mexico is excluded.

* * * * *

J–64 [Amended]

From Los Angeles, CA; INT Los Angeles 083° and Hector, CA, 226° radials; Hector; Peach Springs, AZ; Tuba City, AZ; Rattlesnake, NM; Pueblo, CO; to Hill City, KS. From Fort Wayne, IN; Ellwood City, PA; Ravine, PA; to INT Ravine 102° and Lancaster, PA, 044° radials.

* * * * *

J–181 [Amended]

From Ranger, TX; to Okmulgee, OK.

* * * * *

Paragraph 6010(a) Domestic VOR Federal Airways.

* * * * *

V–10 [Amended]

From Pueblo, CO; Lamar, CO; Garden City, KS; Dodge City, KS; Hutchinson, KS; Emporia, KS; INT Emporia 063° and Napoleon, MO, 243° radials; Napoleon; Kirksville, MO; to Burlington, IA. From INT Chicago Heights, IL, 358° and Gipper, MI, 271° radials; to Gipper.

* * * * *

V–156 [Amended]

From Cedar Rapids, IA; to Moline, IL.

* * * * *

V–262 [Removed]

* * * * *

Issued in Washington, DC, on December 3, 2024.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would modify the National Airspace System (NAS) as necessary to preserve the safe and efficient flow of air traffic.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed

electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy*.

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at *www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the office of the Operations Support Group, Central Service Center, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177.

Incorporation by Reference

Jet Routes are published in paragraph 2004, Canadian Area Navigation Routes (Q-routes) are published in paragraph 2007, VOR Federal Airways are published in paragraph 6010(a), and Canadian Area Navigation Routes (T-routes) are published in paragraph 6013 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024, and effective September 15, 2024. These updates would be published in the next update to FAA Order JO 7400.11. That order is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

Background

NAV CANADA, which operates Canada's civil air navigation service, is implementing changes to Canada's instrument flight rules (IFR) navigation infrastructure as part of their NAVAID Modernization Program. This modernization program is designed to enhance the efficiency of Canada's flying operations by taking advantage of performance-based navigation and RNAV avionics capabilities. The changes being implemented by NAV CANADA affect Jet Routes J–483, J–538, and J–562, and VOR Federal Airway V–129. These Air Traffic Service (ATS) routes provide cross-border connectivity between the U.S. and Canada.

NAV CANADA has decommissioned the Sioux Narrows, ON, VOR/DME and plans to decommission the Lumsden, SK, VORTAC and Brandon, MB, VORTAC as part of their NAVAID Modernization Program. As a result, amendments to J–538 and V–129, and revocation of J–483 and J–562 in U.S. airspace are required due to the loss of navigational guidance provided by the Sioux Narrows, ON; Lumsden, SK; and Brandon, MB, VORs and to match airway changes NAV CANADA is making within Canadian airspace. NAV CANADA has established Canadian RNAV Routes Q–828 in the high-altitude enroute structure and T–797 in the low-altitude enroute structure already and plans to establish Canadian RNAV Routes Q–945 and Q–971 in the high-altitude enroute structure as mitigations for the affected ATS routes within Canadian and U.S. airspace.

To mitigate the proposed loss of J–538 and V–129 route segments and proposed revocation of J–483 and J–562, and to support NAV CANADA's planned RNAV route replacements for these affected ATS routes, the FAA must establish portions of Canadian RNAV Routes Q–828, Q–945, Q–971, and T–797 within U.S. airspace. The new Canadian RNAV route segments in U.S. airspace would provide airway continuity with NAV CANADA's RNAV Routes that are established or being established within Canadian airspace and provide cross-border airway connectivity between the U.S. and Canada. Existing NAVAIDs that provide conventional enroute structure in the affected area are limited and alternate, parallel, or adjacent Jet Routes or VOR Federal Airways to use as mitigations are not available. To compensate for the loss of the conventional enroute structure, IFR pilots with RNAV-equipped aircraft could navigate using the Canadian RNAV Routes proposed in this action or fly point-to-point using the Fixes and Waypoints (WP) that would remain in place. Additionally, IFR pilots could request air traffic control (ATC) radar vectors to fly through or around the affected areas. Visual flight rules pilots who elect to navigate via airways could also take advantage of the ATC services listed previously.

The Proposal

The FAA is proposing to amend 14 CFR part 71 by amending Jet Route J–538 and VOR Federal Airway V–129; establishing Canadian RNAV Routes Q–828, Q–945, Q–971, and T–797 in U.S. airspace; and revoking Jet Routes J–483 and J–562. The FAA is proposing this action due to the decommissioning of the Sioux Narrows, ON, Canada, VOR/DME and the planned decommissioning of the Lumsden, SK, Canada, VORTAC and Brandon, MB, Canada, VORTAC by NAV CANADA in support of their NAVAID Modernization Program. The proposed ATS route actions are described below.

J–483: J–483 currently extends between the Minot, ND, VOR/DME and the Lumsden, SK, Canada, VORTAC. The airspace within Canada is excluded. The FAA proposes to remove the route in its entirety.

J–538: J–538 currently extends between the Sioux Narrows, ON, Canada, VOR/DME and the Badger, WI, VOR/DME. The airspace within Canada is excluded. The FAA proposes to remove the route segment between the Sioux Narrows, ON, VOR/DME and the Duluth, MN, VORTAC. As amended, the route would be changed to extend between the Duluth VORTAC and the Badger VOR/DME.

J–562: J–562 currently extends between the Dickinson, ND, VORTAC and the Brandon, MB, Canada, VORTAC. The airspace within Canada is excluded. The FAA proposes to remove the route in its entirety.

Q–828: Q–828 is a new Canadian RNAV route proposed to be established within U.S. airspace extending between the Duluth, MN, VORTAC and the FARID, MN, WP that would replace the ''CFCJN'' Computer Navigation Fix (CNF) on the U.S./Canada border. The new RNAV route would mitigate the proposed J–538 amendment and provide route continuity and cross-border connectivity with the RNAV Route Q–828 established by NAV CANADA within Canadian airspace.

Q–945: Q–945 is a new Canadian RNAV route proposed to be established within U.S. airspace extending between the Dickinson, ND, VORTAC and the OSMEE, ND, WP that would replace the ''CFMSZ'' CNF on the U.S./Canada border. The new RNAV route would mitigate the proposed J–562 revocation and provide route continuity and cross-border connectivity with the RNAV Route Q–945 being established by NAV CANADA within Canadian airspace.

Q–971: Q–971 is a new Canadian RNAV route proposed to be established within U.S. airspace extending between the Minot, ND, VOR/DME and the CIPTA, ND, WP that would replace the ''CFHLT'' CNF on the U.S./Canada border. The new RNAV route would mitigate the proposed J–483 revocation and provide route continuity and cross-border connectivity with the RNAV Route Q–971 being established by NAV CANADA within Canadian airspace.

V–129: V–129 currently extends between the Spinner, IL, VORTAC and the intersection of the International Falls, MN, VOR/DME 335° radial and United States/Canadian border. The FAA proposes to remove the airway segment between the International Falls VOR/DME and the intersection of the International Falls VOR/DME 335° radial and United States/Canadian border. As amended, the airway would be changed to extend between the Spinner VORTAC and the International Falls VOR/DME.

T–797: T–797 is a new Canadian RNAV route proposed to be established within U.S. airspace extending between the International Falls, MN, VOR/DME and the WUGOR, MN, WP replacing the ''CFDTS'' CNF on the U.S./Canada border. The new RNAV route would mitigate the proposed V–129 airway segment removal and provide route continuity and cross-border connectivity with the RNAV Route T–797 established by NAV CANADA within Canadian airspace.

The NAVAID radials listed in the VOR Federal Airway V–129 description in the regulatory text of this NPRM are unchanged and stated in degrees True north.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 2004 Jet Routes.

* * * * *

J–483 [Removed]

* * * * *

J–538 [Amended]

From Duluth, MN; Dells, WI; to Badger, WI.

* * * * *

J–562 [Removed]

* * * * *

Paragraph 2007 Canadian Area Navigation Routes.

* * * * *

Q–828 Duluth, MN (DLH) to FARID, MN [New]

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2024–0059; FRL–11682–10–OCSPP]

Receipt of a Pesticide Petition Filed for Residues of Pesticide Chemicals in or on Various Commodities (October 2024)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notification of filing of petition and request for comment.

SUMMARY: This document announces the Agency's receipt of an initial filing of a pesticide petition requesting the establishment or modification of regulations for residues of pesticide chemicals in or on various commodities.

DATES: Comments must be received on or before January 8, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2024–0059, through the *Federal eRulemaking Portal* at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Registration Division (RD) (7505T), main telephone number: (202) 566–1030, email address: *RDFRNotices@epa.gov.* The mailing address is Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001. As part of the mailing address, include the contact person's name, division, and mail code.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov/dockets/commenting-epa-dockets.*

3. *Environmental justice.* EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low-income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticides discussed in this document, compared to the general population.

II. What action is the Agency taking?

EPA is announcing receipt of a pesticide petition filed under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, requesting the establishment or modification of regulations in 40 CFR part 180 for residues of pesticide chemicals in or on various food commodities. The Agency is taking public comment on the request before responding to the petitioner. EPA is not proposing any particular action at this time. EPA has determined that the pesticide petition described in this document contains data or information prescribed in FFDCA section 408(d)(2), 21 U.S.C. 346a(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data supports granting of the pesticide petition. After considering the public comments, EPA intends to evaluate whether and what action may be warranted. Additional data may be needed before EPA can make a final determination on this pesticide petition.

Pursuant to 40 CFR 180.7(f), a summary of the petition that is the subject of this document, prepared by the petitioner, is included in a docket EPA has created for this rulemaking. The docket for this petition is available at *https://www.regulations.gov.*

As specified in FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), EPA is publishing notification of the petition so that the public has an opportunity to comment on this request for the establishment or modification of regulations for residues of pesticides in or on food commodities. Further information on the petition may be obtained through the petition summary referenced in this unit.

A. Notice of Filing—Amended Tolerances for Non-Inerts

PP 4F9153. EPA–HQ–OPP–2024–0509. BASF Corporation, 26 Davis Drive, Research Triangle Park, NC 27709, requests to amend the existing tolerance established in 40 CFR 180.700 for residues of the insecticide afidopyropen in or on Strawberry from 0.15 parts per million (ppm) to 0.3 ppm. In their initial assessment of afidopyropen (DP No. 441491), EPA–HED indicated the existing methods and

accompanying independent method validations were sufficient to support afidopyropen tolerances. EPA's ROCKS stated that the submitted analytical method for plant commodities can adequately detect parent afidopyropen (as well as its dimer M440I007) for the purposes of tolerance enforcement. *Contact:* RD.

B. Notice of Filing—New Tolerances for Non-Inerts

1. *PP 1F8969.* EPA–HQ–OPP–2023–0009. Syngenta Crop Protection, LLC., P.O. Box 18300, Greensboro, NC 27419, requests to amend tolerance in 40 CFR part 180.571 for residues of the herbicide, mesotrione, in or on soybean at 0.02 ppm. The high-performance liquid chromatography (HPLC) with tandem mass-spectrometry (MS/MS) is used to measure and evaluate the chemical mesotrione. *Contact:* RD.

2. *PP 3F9073.* EPA–HQ–OPP–2024–0212. K–I CHEMICAL U.S.A., Inc. c/o Landis International, Inc., P.O. Box 5126, Valdosta, GA 31603–5126, requests to establish a tolerance in 40 CFR part 180 for residues of the herbicide, pyroxasulfone, including its metabolites M–1, M–3, M–25, and M–28 calculated as the stoichiometric equivalent of pyroxasulfone, in or on almond, hulls at 0.15 ppm, fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13–07F at 0.07 ppm, and nut, tree, group 14–12 at 0.07 ppm. The Liquid Chromatography-Mass Spectrometry/Mass Spectrometry (LC–MS/MS) is used to measure and evaluate the chemical pyroxasulfone. *Contact:* RD.

3. *PP 1F8969.* EPA–HQ–OPP–2023–0009. Syngenta Crop Protection, LLC., P.O. Box 18300, Greensboro, NC 27419, requests to amend tolerance in 40 CFR part 180.571 for residues of the herbicide, mesotrione, in or on soybean at 0.02 ppm. The HPLC with MS/MS is used to measure and evaluate the chemical mesotrione. *Contact:* RD.

4. *PP 3F9073.* EPA–HQ–OPP–2024–0212. K–I CHEMICAL U.S.A., Inc. c/o Landis International, Inc., P.O. Box 5126, Valdosta, GA 31603–5126, requests to establish a tolerance in 40 CFR part 180 for residues of the herbicide, pyroxasulfone, including its metabolites M–1, M–3, M–25, and M–28 calculated as the stoichiometric equivalent of pyroxasulfone, in or on almond, hulls at 0.15 ppm, fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13–07F at 0.07 ppm, and nut, tree, group 14–12 at 0.07 ppm. The LC–MS/MS is used to measure and evaluate the chemical pyroxasulfone. *Contact:* RD.

5. *PP 3F9086.* EPA–HQ–OPP–2024–0415. Syngenta Crop Protection, LLC, P.O. Box 18300, Greensboro, NC 27419–8300, requests to establish a tolerance in 40 CFR part 180 for residues of the herbicide, bicyclopyrone in or on soybean, seed at .01 ppm, and soybean, meal at .02 ppm. The analytical methods GRM030.05A, GRM030.05B, and GRM030.08A are used to measure and evaluate the chemical bicyclopyrone. *Contact:* RD.

Authority: 21 U.S.C. 346a.

Dated: November 19, 2024.

Kimberly Smith,

Acting Director, Information Technology and Resources Management Division, Office of Program Support.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 282

[EPA–R07–UST–2024–0452; FRL–12274–01–R7]

Nebraska: Final Approval of State Underground Storage Tank Program Revisions, Codification, and Incorporation by Reference

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Resource Conservation and Recovery Act (RCRA or Act), the Environmental Protection Agency (EPA) is proposing to approve revisions to the State of Nebraska's Underground Storage Tank (UST) program submitted by the Nebraska State Fire Marshal (NSFM). This action is based on the EPA's determination that these revisions satisfy all requirements needed for program approval. This action also proposes to codify EPA's approval of Nebraska's State program and incorporate by reference those provisions of the State regulations that we have determined meet the requirements for approval. The provisions will be subject to EPA's inspection and enforcement authorities under the RCRA and other applicable statutory and regulatory provisions.

DATES: Comments on this proposed rule must be received on or before January 8, 2025.

ADDRESSES: Submit comments, identified by Docket ID Number EPA–R07–UST–2024–0452, by one of the following methods:

1. *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the on-line instructions for submitting comments.

2. *Email: blankenship.marie@epa.gov.*

Instructions: Direct your comments to Docket ID No. EPA–R07–UST–2024–0452. EPA's policy is that all comments received will be included in the public docket without change and may be available online at *https://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *https://www.regulations.gov,* or email. The Federal *https://www.regulations.gov* website is an ''anonymous access'' system, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through *https://www.regulations.gov,* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and also with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties, and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. EPA encourages electronic submittals, but if you are unable to submit electronically, please reach out to the EPA contact person listed in the document for assistance. You can view and copy the documents that form the basis for this codification and associated publicly available materials either through *https://www.regulations.gov* or by contacting Marie Blankenship at (913) 551–7908 or *blankenship.marie@epa.gov.* Please call or email the contact listed above if you need access to material indexed but not provided in the docket.

FOR FURTHER INFORMATION CONTACT: Marie Blankenship, Tanks, Toxics and Pesticides Branch, Land, Chemical, and Redevelopment Division, U.S. Environmental Protection Agency, Region 7, 11201 Renner Boulevard, Lenexa, Kansas 6; telephone number: (913) 551–7908; email address: *blankenship.marie@epa.gov.*

SUPPLEMENTARY INFORMATION: EPA has explained the reasons for this action in the preamble to the direct final rule. For additional information, see the direct final rule published in the ''Rules and Regulations'' section of this issue of the **Federal Register**.

Authority: This proposed rule is issued under the authority of sections 2002(a), 7004(b), and 9004 of the Solid Waste Disposal Act, as amended, 42 U.S.C. 6912, 6991c, 6991d, and 6991e.

Dated: November 22, 2024.

Meghan A. McCollister,

Regional Administrator, EPA Region 7.

[Docket DOT–OST–2021–0093]

RIN 2105–AF28

Procedures for Transportation Workplace Drug and Alcohol Testing Programs

AGENCY: Office of the Secretary, Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking.

SUMMARY: The U.S. Department of Transportation (DOT) proposes to revise its drug testing procedures rule, which became effective on June 1, 2023, to provide interim provisions to require the conduct of directly observed urine tests in situations where oral fluid tests are currently required, but oral fluid testing is not yet available.

DATES: Comments must be received on or before January 8, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. DOT–OST–2021–0093, at *https://www.regulations.gov/*. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. DOT may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. For additional submission methods and general guidance on making effective comments, please visit *https://www.transportation.gov/regulations/rulemaking-process.*

FOR FURTHER INFORMATION CONTACT: Bohdan Baczara, Deputy Director, Office of Drug and Alcohol Policy and Compliance, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone number 202–366–3784; *ODAPCwebmail@dot.gov.*

SUPPLEMENTARY INFORMATION:

I. Why is DOT proposing this rule?

DOT proposes to revise its drug testing regulation, Procedures for Transportation Workplace Drug and Alcohol Testing Programs (49 CFR part 40), to address unforeseen circumstances rendering it impossible to comply with requirements in the final rule.

II. General Information

DOT published a final rule amending the procedures for its drug testing program (49 CFR part 40) on May 2, 2023 (88 FR 27596) (May 2023 Final Rule). The May 2023 Final Rule went into effect on June 1, 2023. The May 2023 Final Rule authorized oral fluid drug testing as an additional methodology for employers to use as a means of achieving the safety goals of the program. In the May 2023 Final Rule, we required an oral fluid test to be conducted in certain circumstances where an observed collection is required. However, because oral fluid testing is not yet available, DOT proposes to amend DOT's regulations to require the conduct of directly observed urine collections in those circumstances for an interim period. This rulemaking would correct the inadvertent factual impossibility created by the May 2023 Final Rule.

Section 40.67 When and how is a directly observed urine collection conducted?

DOT regulations at § 40.67 require that a collection be directly observed in certain circumstances, *e.g.,* if the original sample was invalid without adequate medical explanation or the test is for a return to duty. In the May 2023 Final Rule, DOT codified a procedure requiring the directly observed collection to be an oral fluid test rather than a urine test in certain situations. However, oral fluid testing cannot be implemented until the Department of Health and Human Services (HHS) certifies at least two laboratories, one to serve as a primary laboratory, and a second to serve as a split specimen laboratory. Because no oral fluid laboratories have been certified, it is not yet possible to comply with this provision.

In the interim, it is necessary to ensure that directly observed collections can still be conducted when required. DOT proposes to require directly observed urine collections in the situations specified in § 40.67(g)(3) if an oral fluid collection is not yet available. We emphasize that the responsibility of ensuring the collection takes place has always been a requirement the employer must satisfy. If a directly observed urine collection is required, the burden—as is currently the case—remains on the employer to provide an observer as specified in § 40.67(g) if the collection site cannot do so.

We intend this provision to require directly observed urine tests in situations where an oral fluid collection is required, but is not yet available, to be a temporary, short-term solution because there are currently no certified oral fluid laboratories. This provision will sunset one year after HHS publishes a **Federal Register** notice that it certified the second oral fluid drug testing laboratory. So that all are aware of the date when this provision will sunset, we will publish a **Federal Register** document specifying the date the second oral fluid laboratory is certified by HHS. If, during the interim period, a collection site is able to conduct an oral fluid collection (HHS has certified at least two oral fluid drug testing laboratories, and both a qualified oral fluid collector and a conforming oral fluid collection device are available at the collection site), an oral fluid collection would be required to be conducted.

In the May 2023 Final Rule, we added § 40.67(g)(3) to address situations where an observer who meets the regulatory requirements cannot be found at the collection site, but mistakenly used the term ''collector'' instead of ''observer'' in the regulatory text of that section. In this rule, we propose to correct the error.

III. Regulatory Notices and Analyses

Executive Orders 12866, 13563, and 14094

This proposed rule is a non-significant rule for purposes of Executive Order (E.O.) 12886, as supplemented by E.O. 13563 and amended by E.O. 14094, and will not impose any significant costs or have any significant impacts. Given the uncertainty of testing costs and lack of data on other aspects of testing, DOT did not estimate cost savings or other benefits for the May 2023 Final Rule that permitted oral fluid testing as an alternative to urine testing in most scenarios. In the regulatory analyses for the May 2023 Final Rule, DOT stated that ''Oral fluid testing is optional in all but very rare cases . . .'' However, and because oral fluid testing is not yet

available, this proposed rule requires that a directly observed urine collection be conducted in those ''very rare cases'' where an oral fluid test is required but is not available. As an amendment to establish a temporary requirement to conduct directly observed urine collections in situations where oral fluid collections are required but oral fluid testing is not yet available, which was the requirement in existence before issuance of the May 2023 Final Rule, this proposed rule will not affect a significant number of drug tests, and as such, will not impose any significant costs or have any significant impacts on the DOT testing program.

Regulatory Flexibility Act and Small Business Regulatory Enforcement Fairness Act (SBREFA)

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires Federal agencies to consider the effects of their regulatory actions on small businesses and other small entities and minimize any significant economic impact. The term ''small entities'' comprises small businesses and not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with a population of less than 50,000. For this rulemaking, potentially affected small entities include drug testing companies (U.S. Small Business Administration (SBA) North American Industry Classification System (NAICS) Sector 54 (Professional, Scientific and Technical Services), Code 541380 (Testing Laboratories and Services)) as well as DOT-regulated entities (SBA NAICS Sectors 48–49 (Transportation and Warehousing)).

The Department does not expect that the proposed rule would have a significant economic impact on a substantial number of small entities. The proposed rule, if adopted, would establish a temporary requirement to conduct directly observed urine collections in situations where oral fluid collections are required but oral fluid testing is not yet available. Urine testing was the requirement in existence before issuance of the May 2023 Final Rule, and regulated entities are therefore familiar with the procedure for directly observed urine tests. Because oral fluid testing is not yet available for use in DOT's drug testing programs, regulated entities also likely still have the collection devices and other equipment necessary to conduct urine testing. In addition, the temporary procedures proposed in this rulemaking would be used only in the specific circumstances in § 40.67(g) where urine testing is currently required and would thus not affect a significant number of drug tests. As a result, the temporary amendments would not, if adopted, impose significant costs. For these reasons, I certify that the proposed rule would not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act. DOT requests comment on its certification and the expected economic impacts of the proposed rule.

Unfunded Mandates

The Secretary has examined the impact of this proposed rule under the Unfunded Mandates Reform Act (UMRA) of 1995 (Pub. L. 104–4). This proposed rule does not trigger the requirement for a written statement under sec. 202(a) of the UMRA because this rulemaking does not impose a mandate that results in an expenditure of $200 million or more by either State, local, and Tribal governments in the aggregate or by the private sector in any one year.

Environmental Impact

The DOT has analyzed the environmental impacts of this action pursuant to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*) and has determined that it is categorically excluded pursuant to DOT Order 5610.1C, ''Procedures for Considering Environmental Impacts'' (44 FR 56420, October 1, 1979). Categorical exclusions are actions identified in an agency's NEPA implementing procedures that do not normally have a significant impact on the environment and therefore do not require either an environmental assessment (EA) or environmental impact statement (EIS). This proposed rule would amend the transportation industry drug testing program procedures regulation to establish a temporary requirement to conduct directly observed urine collections in situations where oral fluid collections are required but oral fluid testing is not yet available. This action is covered by the categorical exclusion listed at 23 CFR 771.118(c)(4), ''[p]lanning and administrative activities that do not involve or lead directly to construction, such as: . . . promulgation of rules, regulations, directives . . .'' The Department does not anticipate any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

Executive Order 13132: Federalism

The Secretary has analyzed the proposed rule in accordance with Executive Order 13132: Federalism. Executive Order 13132 requires Federal agencies to carefully examine actions to determine if they contain policies that have federalism implications or that preempt State law. As defined in the order, ''policies that have federalism implications'' refer to regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

Most of the regulated parties under the Department's drug testing program are private entities. Some regulated entities are public entities (*e.g.,* transit authorities and public works departments); however, the Secretary has determined that the proposed rule, which would provide temporary procedures to require the conduct of directly observed urine testing where oral fluid testing is not available, does not contain policies that have federalism implications.

Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Executive Order 13175 (65 FR 67249, November 6, 2000) requires Federal agencies to develop an accountable process to ensure ''meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications.'' ''Policies that have tribal implications'' as defined in the Executive order, include regulations that have ''substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and the Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.'' This proposed rule does not have Tribal implications. The proposed rule will also not have substantial direct effects on Tribal governments, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes, as specified in Executive Order 13175.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (PRA) requires that DOT consider the impact of paperwork and other information collection burdens imposed on the public. This proposed rule would not require any new collection of information under the PRA. Notwithstanding any other provision of

law, no person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a currently valid Office of Management and Budget (OMB) control number.

Privacy Act

Anyone is able to search the electronic form of all comments received in any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). For information on DOT's compliance with the Privacy Act, please visit *https://www.transportation.gov/privacy.*

Rule Summary

As required by 5 U.S.C. 553(b)(4), a summary of this proposed rule can be found at *regulations.gov,* Docket DOT–OST–2021–0093, in the **SUMMARY** section of this document.

Pay-As-You-Go Act of 2023

In accordance with Compliance with Pay-As-You-Go Act of 2023 (Fiscal Responsibility Act of 2023, Pub. L. 118–5, div. B, title III) and OMB Memorandum (M–23–21) dated September 1, 2023, the Department has determined that this proposed rule is not subject to the Pay-As-You-Go Act of 2023 because it will not increase direct spending beyond specified thresholds.

List of Subjects in 49 CFR Part 40

Administrative practice and procedure, Alcohol abuse, Alcohol testing, Drug abuse, Drug testing, Laboratories, Reporting and recordkeeping requirements, Safety, Transportation.

For the reasons stated in the preamble, DOT proposes to amend 49 CFR part 40 as follows:

PART 40—PROCEDURES FOR TRANSPORTATION WORKPLACE DRUG AND ALCOHOL TESTING PROGRAMS

■ 1. The authority for 49 CFR part 40 continues to read as follows:

Authority: 49 U.S.C. 102, 301, 322, 5331, 20140, 31306, and 54101 *et seq.*

■ 2. In § 40.67:

■ a. In paragraph (g)(3) introductory text, remove the word ''collector'' and add in its place ''observer''; and

■ b. Add paragraph (g)(4).

The addition reads as follows:

§ 40.67 When and how is a directly observed urine collection conducted?

* * * * *

(g) * * *

(4) Notwithstanding paragraphs (g)(3)(i) and (ii) of this section, until otherwise specified (one year after HHS publishes a **Federal Register** notification of the second certified oral fluid drug testing laboratory), you must conduct an oral fluid collection if possible (*i.e.,* HHS has certified at least two oral fluid drug testing laboratories, and both a qualified oral fluid collector and a conforming oral fluid collection device are available at the collection site). Otherwise, you must conduct a directly observed urine collection as required in this section.

* * * * *

Signed pursuant to authority delegated at 49 CFR 1.27(c) in Washington, DC.

Subash Iyer,

Acting General Counsel.

COMMISSION ON CIVIL RIGHTS

Sunshine Act Meeting Notice

AGENCY: United States Commission on Civil Rights.

ACTION: Notice of Commission public business meeting.

DATES: Friday, December 13, 2024, 10:00 a.m. EST.

ADDRESSES: Meeting to take place virtually and is open to the public via livestream on the Commission's YouTube page: *https://www.youtube.com/user/USCCR/videos.*

FOR FURTHER INFORMATION CONTACT: Joe Kim: 202–376–8371; *publicaffairs@usccr.gov.*

SUPPLEMENTARY INFORMATION: In accordance with the Government in Sunshine Act (5 U.S.C. 552b), the Commission on Civil Rights is holding a meeting to discuss the Commission's business for the month. This business meeting is open to the public. Computer assisted real-time transcription (CART) will be provided. The web link to access CART (in English) on December 13, 2024, is *https://www.streamtext.net/player?event=USCCR.* Please note that CART is text-only translation that occurs in real time during the meeting and is not an exact transcript.

I. Approval of Agenda

II. Business Meeting

A. A Discussion and Vote on the planning documents for the 2025 Briefing Report Topic on Language Access, led by Commissioner Magpantay.

B. Management and Operations.

- Staff Director's Report.

III. Adjourn Meeting

Dated: December 5, 2024.

David Mussatt,

USCCR Chief of Regional Programs Unit.

BILLING CODE 6335–01–P

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; High-Frequency Surveys Program/Household Trends and Outlook Pulse Survey (HTOPS)

On July 22, 2024, the Department of Commerce received clearance from the Office of Management and Budget (OMB) in accordance with the Paperwork Reduction Act of 1995 to conduct Phase 4.2 of the Household Pulse Survey (OMB No. 0607–1029, Exp. 01/31/27) and on July 12, 2024, clearance was received to conduct the tenth, eleventh, and twelfth Census Household Panel topical operations (OMB No. 0607–1025, Exp. 6/30/26). The Household Trends and Outlook Pulse Survey (HTOPS) is designed to ensure availability of frequent data collection for nationwide estimates on a variety of topics for a variety of subgroups of the population. This notice serves to inform of the Department's intent to request clearance from OMB to conduct HTOPS sample replenishment and January and February topical operations.

The purpose of the sample replenishment baseline instrument is to recruit a nationally representative survey panel and also collect data on a variety of topics of interest. The topical survey that will field in January will include a household roster update and a section of assistance program income questions that will be used to test several possible changes being made in preparation for the transition to a multimode version of the Survey of Income and Program Participation (SIPP) the SIPP redesign effort on a larger representative respondent sample. The results of this test will be for internal use only. The February topical survey will include content from the Household Pulse Survey. The Household Pulse Survey will continue to serve as an experimental endeavor coordinated with other federal agencies to produce near real-time data to understand the effects of current events, including health events, natural disaster events, or other social or economic events facing the nation or a significant portion of the nation.

It is the Department's intention to commence data collection using the revised instrument on or about July 23, 2024. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on February 15, 2024 (OMB No. 0607–1029) during a 30-day comment period. This notice allows for an additional 30 days for public comments.

Agency: U.S. Census Bureau, Department of Commerce.

Title: High Frequency Surveys Program/Household Trends and Outlook Pulse Survey.

OMB Control Number: 0607–1029.

Form Number(s): Not yet determined.

Type of Request: Regular submission. Request for a Revision of a Currently Approved Collection.

Number of Respondents: Baseline: 18,000 respondents/Topicals 17,812 panel members.

Average Hours per Response: Baseline: .400 (24 minutes); Topicals: .333 (20 minutes).

Burden Hours: Baseline: 7,200/Topical 3,300 per month.

Needs and Uses: The High-Frequency Surveys Program was established as a natural progression from the creation of the Household Pulse Survey. The Household Trends and Outlook Pulse Survey (HTOPS) is a probability-based nationwide nationally representative survey panel designed to test the methods to collect data on a variety of topics of interest, and for conducting experimentation on alternative question wording and methodological approaches. The goal of the HTOPS is to ensure availability of frequent data collection for nationwide estimates on a variety of topics and a variety of subgroups of the population, meeting standards for transparent quality reporting of the Federal Statistical

Agencies and the Office of Management and Budget (OMB).

Panelists and households selected for the HTOPS were recruited from the Census Bureau's gold standard Master Address File. This ensures that HTOPS is rooted in this rigorously developed and maintained frame and available for linkage to administrative records securely maintained and curated by the Census Bureau. Invitations to complete the monthly surveys will be sent via email and SMS messages. Questionnaires will be mainly internet self-response. The HTOPS will maintain representativeness by allowing respondents who do not use the internet to respond via computer-assisted telephone interviewing (CATI). All panelists will receive an incentive for each complete questionnaire. Periodic replenishment samples will maintain representativeness and panelists will be replaced after a period of three years.

Affected Public: Households.

Frequency: Monthly.

Respondent's Obligation: Voluntary.

Legal Authority: 13 U.S.C. 141, 182 and 193.

This information collection request may be viewed at *www.reginfo.gov*. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0607–1025.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

[Docket No. 241127–0304]

RIN 0694–XC110

Impact of the Implementation of the Chemical Weapons Convention (CWC) on Legitimate Commercial Chemical, Biotechnology, and Pharmaceutical Activities Involving ''Schedule 1'' Chemicals (Including ''Schedule 1'' Chemicals Produced as Intermediates) During Calendar Year 2024

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Notice of inquiry.

SUMMARY: The Bureau of Industry and Security (BIS) is seeking public comments on the impact that implementation of the Chemical Weapons Convention (CWC or ''the Convention''), through the Chemical Weapons Convention Implementation Act of 1998 and the Chemical Weapons Convention Regulations (CWCR), has had on commercial activities involving ''Schedule 1'' chemicals during calendar year 2024. The purpose of this notice of inquiry is to collect information to assist BIS in its preparation of the annual certification to the Congress on whether the legitimate commercial activities and interests of chemical, biotechnology, and pharmaceutical firms are harmed by such implementation. This certification is required under Condition 9 of Senate Resolution 75 (April 24, 1997), in which the Senate gave its advice and consent to the ratification of the CWC.

DATES: Comments must be received by January 8, 2025.

ADDRESSES: Comments on this rule may be submitted to the Federal rulemaking portal at: *www.regulations.gov.* The *regulations.gov* ID for this rule is: BIS–2024–0054. Please refer to RIN 0694–XC110 in all comments.

All filers using the portal should use the name of the person or entity submitting the comments as the name of their files, in accordance with the instructions below. Anyone submitting business confidential information should clearly identify the business confidential portion at the time of submission, file a statement justifying nondisclosure and referring to the specific legal authority claimed, and provide a non-confidential version of the submission.

For comments submitted electronically containing business confidential information, the file name of the business confidential version should begin with the characters ''BC.'' Any page containing business confidential information must be clearly marked ''BUSINESS CONFIDENTIAL'' on the top of that page. The corresponding non-confidential version of those comments must be clearly marked ''PUBLIC.'' The file name of the non-confidential version should begin with the character ''P.'' Any submissions with file names that do not begin with either a ''BC'' or a ''P'' will be assumed to be public and will be made publicly available at: *https://www.regulations.gov.*

Commenters submitting business confidential information are encouraged to scan a hard copy of the non-confidential version to create an image of the file, rather than submitting a digital copy with redactions applied, to avoid inadvertent redaction errors which could enable the public to read business confidential information.

FOR FURTHER INFORMATION CONTACT:

For questions on the Chemical Weapons Convention requirements for ''Schedule 1'' chemicals, contact David Johnston, Treaty Compliance Division, (202) 482–2450, Email: David *Johnston@bis.doc.gov.*

For questions on the submission of comments, contact Logan Norton, Regulatory Policy Division, (202) 482–2440; Email: *RPD2@bis.doc.gov.*

SUPPLEMENTARY INFORMATION:

Background

In providing its advice and consent to the ratification of the Convention on the Prohibition of the Development, Production, Stockpiling, and Use of Chemical Weapons and Their Destruction (CWC or ''the Convention''), the Senate included, in Senate Resolution 75 (S. Res. 75, April 24, 1997), several conditions to its ratification. Condition 9, titled ''Protection of Advanced Biotechnology,'' calls for the President to certify to Congress on an annual basis that ''the legitimate commercial activities and interests of chemical, biotechnology, and pharmaceutical firms in the United States are not being significantly harmed by the limitations of the Convention on access to, and production of, those chemicals and toxins listed in Schedule 1.'' On July 8, 2004, President George W. Bush, by Executive Order 13346, delegated his authority to make the annual certification to the Secretary of Commerce.

The CWC is an international arms control treaty that contains certain verification provisions. In order to implement these verification provisions, the CWC established the Organization

for the Prohibition of Chemical Weapons (OPCW). In order to achieve the object and purpose of the Convention and the implementation of its provisions, the CWC imposes certain obligations on countries that have ratified the Convention (*i.e.,* States Parties), among which are the enactment of legislation to prohibit the production, storage, and use of chemical weapons and the establishment of a National Authority to serve as the national focal point for effective liaison with the OPCW and other States Parties. The CWC also requires each State Party to implement a comprehensive data declaration and inspection regime to provide transparency and to verify that both the public and private sectors of the State Party are not engaged in activities prohibited under the CWC. In the United States, the Chemical Weapons Convention Implementation Act of 1998 (22 U.S.C. 6701 *et seq.*) implements the provisions of the CWC.

''Schedule 1'' chemicals consist of those toxic chemicals and precursors set forth in the CWC ''Annex on Chemicals'' and in ''Supplement No. 1 to part 712—SCHEDULE 1 CHEMICALS'' of the CWCR (15 CFR parts 710–722). The CWC identified these toxic chemicals and precursors as posing a high risk to the object and purpose of the Convention.

The CWC (Part VI of the ''Verification Annex'') restricts the production of ''Schedule 1'' chemicals for protective purposes to two facilities per State Party: a single small-scale facility and a facility for production in quantities not exceeding 10 kilograms (kg) per year. The CWC Article-by-Article Analysis submitted to the Senate in Treaty Doc. 103–21 defined the term ''protective purposes'' to mean ''used for determining the adequacy of defense equipment and measures.'' Consistent with this definition and as authorized by Presidential Decision Directive (PDD) 70 (December 17, 1999), which specifies agency and departmental responsibilities as part of the U.S. implementation of the CWC, the Department of Defense (DoD) was assigned the responsibility to operate these two facilities. DoD maintains strict controls on ''Schedule 1'' chemicals produced at its facilities in order to ensure accountability for such chemicals, as well as their proper use, consistent with the object and purpose of the Convention. Although this assignment of responsibility to DoD under PDD–70 effectively precluded commercial production of ''Schedule 1'' chemicals for ''protective purposes'' in the United States, it did not establish any limitations on ''Schedule 1'' chemical activities that are not prohibited by the CWC.

The provisions of the CWC that affect commercial activities involving ''Schedule 1'' chemicals are implemented in the CWCR (see 15 CFR part 712) and in the Export Administration Regulations (EAR) (see 15 CFR 742.18 and 15 CFR part 745), both of which are administered by BIS. Pursuant to CWC requirements, the CWCR restrict commercial production of ''Schedule 1'' chemicals to research, medical, or pharmaceutical purposes. The CWCR prohibit commercial production of ''Schedule 1'' chemicals for ''protective purposes'' because such production is effectively precluded per PDD–70, as described above (see 15 CFR 712.2(a)).

The CWCR also contain other requirements and prohibitions that apply to ''Schedule 1'' chemicals and/or ''Schedule 1'' facilities. Specifically, the CWCR:

(1) Prohibit the import of ''Schedule 1'' chemicals from States not Party to the Convention (15 CFR 712.2(b));

(2) Require annual declarations by certain facilities engaged in the production of ''Schedule 1'' chemicals in excess of 100 grams aggregate per calendar year (*i.e.,* declared ''Schedule 1'' facilities) for purposes not prohibited by the Convention (15 CFR 712.5(a)(1) and (a)(2));

(3) Provide for government approval of ''declared Schedule 1'' facilities (15 CFR 712.5(f));

(4) Require 200 days advance notification of the establishment of new ''Schedule 1'' production facilities producing greater than 100 grams aggregate of ''Schedule 1'' chemicals per calendar year (15 CFR 712.4);

(5) Provide that ''declared Schedule 1'' facilities are subject to initial and routine inspection by the OPCW (15 CFR 712.5(e) and 716.1(b)(1));

(6) Require advance notification and annual reporting of all imports and exports of ''Schedule 1'' chemicals to, or from, other States Parties to the Convention (15 CFR 712.6, 742.18(a)(1) and 745.1); and

(7) Prohibit the export of ''Schedule 1'' chemicals to States not Party to the Convention (15 CFR 742.18(a)(1) and (b)(1)(ii)).

For purposes of the CWCR (see the definition of ''production'' in 15 CFR 710.1), the phrase ''production of a Schedule 1 chemical'' means the formation of ''Schedule 1'' chemicals through chemical synthesis, as well as processing to extract and isolate ''Schedule 1'' chemicals. The phrase also encompasses the formation of a chemical through chemical reaction, including by a biochemical or biologically mediated reaction. ''Production of a Schedule 1 chemical'' is understood, for CWCR declaration purposes, to include intermediates, by-products, or waste products that are produced and consumed within a defined chemical manufacturing sequence, where such intermediates, by-products, or waste products are chemically stable and therefore exist for a sufficient time to make isolation from the manufacturing stream possible, but where, under normal or design operating conditions, isolation does not occur.

Request for Comments

In order to assist in determining whether the legitimate commercial activities and interests of chemical, biotechnology, and pharmaceutical firms in the United States are significantly harmed by the limitations of the Convention on access to, and production of, ''Schedule 1'' chemicals as described in this notice, BIS is seeking public comments on any effects that implementation of the CWC, through the Chemical Weapons Convention Implementation Act of 1998 and the CWCR, has had on commercial activities involving ''Schedule 1'' chemicals during calendar year 2024. To allow BIS to properly evaluate the significance of any harm to commercial activities involving ''Schedule 1'' chemicals, public comments submitted in response to this notice of inquiry should include both a quantitative and qualitative assessment of the impact of the CWC on such activities.

Submission of Comments

All comments must be submitted to one of the addresses indicated in this notice and in accordance with the instructions provided herein. BIS will consider all comments received on or before January 8, 2025.

Matthew S. Borman,

Principal Deputy Assistant Secretary for Strategic Trade and Technology Security.

[FR Doc. 2024–28755 Filed 12–6–24; 8:45 am]

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–428–852]

Melamine From Germany: Final Affirmative Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that melamine from Germany is being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Noah Wetzel, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–7466.

SUPPLEMENTARY INFORMATION:

Background

On September 24, 2024, Commerce published in the **Federal Register** its preliminary determination in the LTFV investigation of melamine from Germany and invited interested parties to comment.[1] No interested party submitted comments. Accordingly, the final determination remains unchanged from the *Preliminary Determination* and no decision memoranda accompany this notice. The *Preliminary Determination* is hereby adopted in this final determination. Commerce conducted this LTFV investigation in accordance with section 735 of the Tariff Act of 1930, as amended (the Act).

Scope of the Investigation

The product covered by this investigation is melamine from Germany. For a complete description of the scope of this investigation, *see* the appendix to this notice.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Verification

As stated in the *Preliminary Determination,* after being selected as the sole mandatory respondent, LAT Nitrogen Piesteritz GmbH (LAT Nitrogen), declined to participate and did not provide information requested by Commerce. Accordingly, Commerce based the *Preliminary Determination* entirely on the application of facts available with adverse inferences (AFA), and did not conduct verification under section 782(i) of the Act.

Use of Adverse Facts Available

As discussed in the *Preliminary Determination,* we assigned LAT Nitrogen an estimated weighted-average dumping margin based entirely on AFA, pursuant to sections 776(a) and (b) of Act.[2] There is no new information on the record that would cause us to revisit our decision in the *Preliminary Determination.* Accordingly, for this final determination, we continue to find that the application of AFA pursuant to sections 776(a) and (b) of the Act is warranted with respect to LAT Nitrogen.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated excluding rates that are zero, *de minimis,* or determined entirely under section 776 of the Act.

In the *Preliminary Determination,* we assigned a dumping margin of 179.24 percent as the all-others rate based on a simple average of the calculated rates in the petition, pursuant to section 735(c)(5)(B) of the Act.[3] As noted above, we received no comments on our *Preliminary Determination;* thus, we continue to assign a dumping margin of 179.24 percent as the all-others rate for this final determination.

Final Determination

The final estimated weighted-average dumping margins are as follows:

Exporter/producer	Estimated weighted-average dumping margin (percent)
LAT Nitrogen Piesteritz GmbH	*218.73
All Others	179.24

*Rate based on facts available with adverse inferences.

Disclosure

Normally, Commerce will disclose to the parties in a proceeding the calculations performed in connection with a final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final determination in the **Federal Register**, in accordance with 19 CFR 351.224(b).

However, because Commerce received no comments on the *Preliminary Determination,* it is adopting the *Preliminary Determination* as the final determination in this investigation. Consequently, there are no new calculations to disclose.

Suspension of Liquidation

In accordance with section 735(c)(4) of the Act, we will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of subject merchandise, as described in the appendix to this notice, entered, or withdrawn from warehouse, for consumption, on or after September 24, 2024, which is the date of publication of the affirmative *Preliminary Determination* in the **Federal Register**.

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), where appropriate, Commerce will instruct CBP to require a cash deposit equal to the estimated weighted-average dumping margin or the estimated all-others rate as follows: (1) the cash deposit rate for the respondent listed above will be equal to the company-specific estimated weighted-average dumping margin determined in this final determination; (2) if the exporter is not a respondent identified above, but the producer is, then the cash deposit rate will be equal to the company-specific estimated weighted-average dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated weighted-average dumping margin. These suspension of liquidation instructions will remain in effect until further notice.

U.S. International Trade Commission (ITC) Notification

In accordance with section 735(d) of the Act, we will notify the ITC of the final affirmative determination of sales at LTFV. Because Commerce's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of melamine from Germany no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, and all cash deposits will be refunded, and suspension of liquidation will be lifted. If the ITC determines that material injury, or the threat of material injury, exists, Commerce will issue an

[3] *Id.*

antidumping duty order directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Suspension of Liquidation'' section above.

Administrative Protective Order (APO)

This notice serves as the only reminder to parties subject to an APO of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(c).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula C3 H6 N6). Melamine is also known as 2,4,6-triamino-striazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. All melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

Melamine From Germany: Final Affirmative Countervailing Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of melamine from the Federal Republic of Germany (Germany). The period of investigation is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Bob Palmer or Faris Montgomery, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–9068 or (202) 482–1537, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 22, 2024, Commerce published the *Preliminary Determination* in the **Federal Register**.[1] Commerce invited parties to comment on the *Preliminary Determination*.[2] We received no comments from interested parties and have accordingly made no changes to the *Preliminary Determination.* Accordingly, no decision memoranda accompany this notice. The *Preliminary Determination* is hereby adopted in this final determination. In the *Preliminary Determination,* and in accordance with section 705(a)(1) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.210(b)(4), Commerce aligned the final countervailing duty (CVD) determination with the final antidumping duty determination.[3] On July 22, 2024, Commerce tolled certain deadlines in this proceeding by seven days.[4] The deadline for the final determination is now December 2, 2024.

Scope of the Investigation

The product covered by this investigation is melamine from Germany. For a complete description of the scope of this investigation, *see* Appendix.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found to be countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[5]

In making this final determination, Commerce relied on facts otherwise available, including with an adverse inference, pursuant to sections 776(a) and (b) of the Act. For a full discussion of our application of adverse facts available, *see* the *Preliminary Determination.*

Verification

Because the examined respondents in this investigation did not provide information requested by Commerce and Commerce preliminarily determined each of the examined respondents to have been uncooperative, Commerce did not conduct verification.[6]

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that Commerce shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely under section 776 of the Act.

Pursuant to section 705(c)(5)(A)(ii) of the Act, if the individual estimated countervailable subsidy rates established for all exporters and producers individually examined are zero, *de minimis,* or determined based

[2] *Id.,* 89 FR 59053.

[3] *Id.,* 89 FR 59053–59054.

[4] *See* Memorandum, ''Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,'' dated July 22, 2024.

[5] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[6] *See Preliminary Determination,* 89 FR 39054.

entirely on facts otherwise available, Commerce may use any reasonable method to establish the estimated subsidy rate for all other producers or exporters. Commerce has determined the individually estimated subsidy rate for the individually examined respondent under section 776 of the Act. Consequently, as a reasonable method, Commerce is determining the all-others rate based on the rate determined for LAT Nitrogen Piesteritz GmbH (LAT Nitrogen), the mandatory respondent in this investigation, as determined under section 776 of the Act.[7] For a full description of the methodology underlying Commerce's analysis, *see* the *Preliminary Decision Memorandum*.[8]

Final Determination

Commerce determines that the following estimated countervailable subsidy rates exist:

Producer/exporter	Subsidy rate (percent *ad valorem*)
LAT Nitrogen Piesteritz GmbH	29.72
All Others	29.72

Disclosure

Normally, Commerce discloses to interested parties the calculations performed in connection with a final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final determination in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because Commerce received no comments on the *Preliminary Determination,* it is adopting the *Preliminary Determination* as the final determination in this investigation. Consequently, there are no new calculations to disclose.

[8] *See Preliminary Determination* PDM at 8–14.

Suspension of Liquidation

As a result of our *Preliminary Determination,* and pursuant to sections 703(d)(1)(B) and (d)(2) of the Act, Commerce instructed U.S. Customs and Border Protection (CBP) to collect cash deposits and suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after July 22, 2024, the date of publication of the *Preliminary Determination* in the **Federal Register**.

In accordance with section 703(d) of the Act, effective November 20, 2024, we instructed CBP to discontinue the suspension of liquidation of all entries at that time, but to continue the suspension of liquidation of all entries between July 22, 2024, and November 19, 2024.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a countervailing duty order, reinstate the suspension of liquidation under section 706(a) of the Act, and require a cash deposit of estimated countervailing duties for such entries of subject merchandise. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its final affirmative determination that countervailable subsidies are being provided to producers and exporters of melamine from Germany. As Commerce's final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports of melamine from Germany. In addition, we are making available to the ITC all non-privileged and non-proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

Administrative Protective Order

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to the APO of their responsibility concerning the destruction of proprietary information disclosed under APO, in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act, and 19 CFR 351.210(c).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula C_3 H_6 N_6). Melamine is also known as 2,4,6-triamino-s-triazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. All melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

International Trade Administration

[A–570–937]

Citric Acid and Certain Citrate Salts From the People's Republic of China: Final Results of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that RZBC Group Co., Ltd., RZBC Co., Ltd., RZBC Import & Export Co., Ltd., and RZBC (Juxian) Co., Ltd. (collectively, RZBC) did not sell subject merchandise in the United States at prices below normal value during the May 1, 2022, through April 30, 2023 period of review (POR).

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Maisha Cryor, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–5831.

SUPPLEMENTARY INFORMATION:

Background

On June 6, 2024, Commerce published the *Preliminary Results* of the 2022–2023 administrative review of the antidumping duty order on citric acid and certain citrate salts (citric acid) from the People's Republic of China (China) [1] in the **Federal Register** and invited interested parties to comment.[2] On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.[3] On October 8, 2024, Commerce extended the deadline for the final results of this administrative review until December 10, 2024.[4] For a summary of the events that occurred since the *Preliminary Results, see* the Issues and Decision Memorandum.[5] Commerce conducted this administrative review in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act).

Scope of the Order

The merchandise covered by the *Order* is citric acid from China. A full description of the scope of the *Order* is contained in the Issues and Decision Memorandum.

Analysis of Comments Received

The issue raised in an interested party's case brief is addressed in the Issues and Decision Memorandum. A list of topics discussed in the Issues and Decision Memorandum is provided in the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Changes Since the Preliminary Results

Based on an analysis of the comment received, we made six changes to the margin calculation from the *Preliminary Results* for RZBC.[6]

The China-Wide Entity

Because no party requested a review of the China-wide entity, and Commerce no longer considers the China-wide entity as an exporter conditionally subject to administrative reviews,[7] we did not conduct a review of the China-wide entity. Thus, the weighted-average dumping margin for the China-wide entity (*i.e.,* 156.87 percent) [8] is not subject to change as a result of this review.

Final Results of Review

We determine that the following weighted-average dumping margin exists for the period May 1, 2022, through April 30, 2023:

Exporter	Weighted-average dumping margin (percent)
RZBC Import & Export Co., Ltd	0.00

Disclosure

We intend to disclose the calculations performed for these final results of review to interested parties within five days of the date of publication of this notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Tariff Act of 1930, amended (the Act) and 19 CFR 351.212(b), Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise covered this review. Because the respondent's weighted-average dumping margin or an importer-specific assessment rate is zero or *de minimis* in the final results of review, we intend to instruct CBP to liquidate entries without regard to antidumping duties.[9] The final results of this administrative review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable.[10]

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of these final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Where the respondent reported reliable entered values, Commerce will calculate importer/customer-specific ad valorem assessment rates by aggregating the amount of dumping calculated for all U.S. sales to the importer/customer and dividing this amount by the total entered value of the merchandise sold to the importer/customer.[11] Where an importer- (or customer-) specific assessment rate is zero or *de minimis* (*i.e.,* less than 0.50 percent), Commerce

will instruct CBP to assess that importer's (or customer's) entries of subject merchandise without regard to antidumping duties in accordance with 19 CFR 351.106(c)(2). For entries that were not reported in the U.S. sales database submitted by RZBC during this review, Commerce will instruct CBP to liquidate such entries at the antidumping duty assessment rate for the China-wide entity (*i.e.,* 156.87 percent).[12]

Cash Deposit Requirements

The following deposit requirements will be effective upon publication of the final results of this administrative review for all shipments of the subject merchandise from China entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) for RZBC the cash deposit rate will be the margin listed above; (2) for previously investigated or reviewed Chinese and non-Chinese exporters not listed above that have separate rates, the cash deposit rate will continue to be the exporter-specific rate published for the most recently completed segment of this proceeding in which they were reviewed; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will be equal to the weighted- average dumping margin for the China-wide entity (*i.e.,* 156.87 percent); and (4) for all non- Chinese exporters of subject merchandise which have not received their own separate rate, the cash deposit rate will be the rate applicable to the Chinese exporter(s) that supplied that non-Chinese exporter. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping and/or countervailing duties prior to liquidation of the relevant entries during the POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping and/or countervailing duties occurred and the subsequent assessment of double antidumping duties, and/or an increase in the amount of antidumping duties by the amount of countervailing duties.

[12] For a full discussion of this practice, *see Non-Market Economy Antidumping Proceedings: Assessment of Antidumping Duties,* 76 FR 65694 (October 24, 2011).

Administrative Protective Order

This notice also serves as a final reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation subject to sanction.

Notification to Interested Parties

Commerce is issuing and publishing the final results of this review in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.221(b)(5).

Dated: December 3, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Organic Soybean Meal From India: Final Results and Partial Rescission of Antidumping Duty Administrative Review; 2021–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) finds that Shanti Worldwide (Shanti) made sales of subject merchandise at less than normal value during the period of review (POR) November 2, 2021, through April 30, 2023. Additionally, we are rescinding the review with respect to Shri Sumati Industries Pvt. Ltd. (Sumati), because we find that they did not make *bona fide* sales during the POR.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Sarah Keith, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0264.

SUPPLEMENTARY INFORMATION:

Background

On June 5, 2024, Commerce published the preliminary results of the 2021–2023 administrative review of the antidumping duty order on organic soybean meal from India.[1] We invited interested parties to comment on the *Preliminary Results*.[2] No interested parties submitted comments; thus, no decision memorandum accompanies this notice. The *Preliminary Results* are hereby adopted as the final results of this review. Commerce conducted this review in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act).

Scope of the Order [3]

The merchandise subject to the *Order* is organic soybean meal from India. A full description of the scope of the *Order* is provided in the *Preliminary Results*.[4]

Recission of Administrative Review, in Part

In the *Preliminary Results,* we stated that we intended to rescind this review with respect to Sumati for which we preliminarily found that Sumati did not make a *bona fide* sale of organic soybean meal during the POR.[5] No party filed comments with respect to this preliminary finding. Therefore, we are rescinding the administrative review with respect to this company.

Final Results of the Review

We determine the following estimated weighted-average dumping margins for the period November 2, 2021, through April 30, 2023.

[1] *See Organic Soybean Meal from India: Preliminary Results, Preliminary Intent to Rescind, in part, and Partial Rescission of Antidumping Duty Administrative Review; 2021–2023,* 89 FR 48147 (June 5, 2024) (*Preliminary Results*), and accompanying Preliminary Decision Memorandum (PDM).

[2] *See Preliminary Results.*

[3] *See Organic Soybean Meal from India: Antidumping Duty Order,* 87 FR 29737 (May 16, 2022) (*Order*).

[4] *See Preliminary Results* PDM at 3.

[5] *See* Memorandum, ''Preliminary *Bona Fide* Sales Analysis for Shri Sumat Industries Pvt. Ltd.,'' (June 5, 2024); *see also Preliminary Results* PDM at 4–5.

Exporter/producer	Weight-average dumping margin (percent)
Shanti Worldwide	18.80

Disclosure

Because Commerce received no comments on the *Preliminary Results,* we have not modified our analysis. Consequently, there are no calculations to disclose in accordance with 19 CFR 351.224(b) for these final results.

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b)(1), Commerce will determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise in accordance with the final results of this review. If the weighted-average dumping margin is not zero or *de minimis* (*i.e.,* less than 0.50 percent), upon completion of the final results, Commerce intends to calculate importer-specific assessment rates on the basis of the ratio of the total amount of dumping calculated for each importer's examined sales to the total entered value of those sales. Where we do not have entered values for all U.S. sales to a particular importer, we will calculate an importer-specific, per-unit assessment rate on the basis of the ratio of the total amount of dumping calculated for the importer's examined sales to the total quantity of those sales.[6] To determine whether an importer-specific, per-unit assessment rate is *de minimis,* in accordance with 19 CFR 351.106(c)(2), we also will calculate an importer-specific *ad valorem* ratio based on estimated entered values. Where the weighted-average dumping margin is zero or *de minimis,* or an importer-specific *ad valorem* assessment rate is zero or *de minimis,* we will instruct CBP to liquidate appropriate entries without regard to antidumping duties.[7]

For entries of subject merchandise during the POR produced by Shanti for which it did not know that the merchandise it sold to the intermediary (*e.g.,* reseller, trading company, or exporter) was destined for the United States, we will instruct CBP to liquidate such entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.[8]

For the company for which we are rescinding this review, we will instruct CBP to assess antidumping duties on all appropriate entries at a rate equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, in accordance with 19 CFR 351.212(c)(l)(i). Commerce intends to issue these rescission instructions to CBP no earlier than 35 days after the publication of this notice in the **Federal Register**.

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of these final results in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review, as provided for by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for the companies under review will equal to the dumping margin established in the final results of this review for each respondent (except, if that rate is *de minimis,* then the cash deposit rate will be zero); (2) for producers or exporters not covered in this review but covered in a prior segment of the proceeding, the cash deposit rate will continue to be the company-specific rate published for the most recently-completed segment of this proceeding in which they were reviewed; (3) if the exporter is not a firm covered in this review or a prior segment of the proceeding but the producer is, then the cash deposit rate will be the rate established for the most recently completed segment of this proceeding for the producer of the merchandise; and (4) the cash deposit rate for all other producers or exporters will continue to be 3.07 percent, the all-others rate established in the less-than-fair-value investigation.[9] These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping and/or countervailing duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping and/or countervailing duties occurred and the subsequent assessment of double antidumping duties, and/or an increase in the amount of antidumping duties by the amount of the countervailing duties.

Administrative Protective Order

This notice also serves as a reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under the APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

Commerce is issuing and publishing the final results of this review in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.221(b)(5).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Melamine From the Netherlands: Final Affirmative Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that melamine from the Netherlands is

being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Fred Baker, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2924.

SUPPLEMENTARY INFORMATION:

Background

On September 24, 2024, Commerce published in the **Federal Register** its preliminary determination in the LTFV investigation of melamine from the Netherlands and invited interested parties to comment.[1] No interested party submitted comments. Accordingly, the final determination remains unchanged from the *Preliminary Determination* and no decision memoranda accompany this notice. The *Preliminary Determination* is hereby adopted in this final determination. Commerce conducted this LTFV investigation in accordance with section 735 of the Tariff Act of 1930, as amended (the Act).

Scope of the Investigation

The product covered by this investigation is melamine from the Netherlands. For a complete description of the scope of this investigation, *see* the appendix to this notice.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Verification

As stated in the *Preliminary Determination,* after being selected as the sole mandatory respondent, OCI Nitrogen B.V. (OCI Nitrogen), discontinued its participation in this investigation. Accordingly, Commerce based the *Preliminary Determination* entirely on the application of facts available with adverse inferences (AFA), and did not conduct verification under section 782(i) of the Act.

Use of Adverse Facts Available

As discussed in the *Preliminary Determination,* we assigned OCI Nitrogen an estimated weighted-average dumping margin based entirely on AFA, pursuant to sections 776(a) and (b) of Act.[2] There is no new information on the record that would cause us to revisit our decision in the *Preliminary Determination.* Accordingly, for this final determination, we continue to find that the application of AFA pursuant to sections 776(a) and (b) of the Act is warranted with respect to OCI Nitrogen.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated excluding rates that are zero, *de minimis,* or determined entirely under section 776 of the Act.

In the *Preliminary Determination,* we assigned an estimated weighted-average dumping margin of 53.50 percent as the all-others rate based on a simple average of the dumping margins alleged in the petition, pursuant to section 735(c)(5)(B) of the Act.[3] As noted above, we received no comments on our *Preliminary Determination;* thus, we continue to assign an estimated weighted-average dumping margin of 53.50 percent to all other producers and exporters for this final determination.

Final Determination

The final estimated weighted-average dumping margins are as follows:

Exporter or producer	Weighted-average dumping margin (percent)
OCI Nitrogen B.V	*72.16
All Others	53.50

*Rate based on facts available with adverse inferences.

Disclosure

Normally, Commerce will disclose to the parties in a proceeding the calculations performed in connection with a final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final determination in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because Commerce received no comments on the *Preliminary Determination,* it is adopting the *Preliminary Determination* as the final determination in this investigation. Consequently, there are no new calculations to disclose.

Suspension of Liquidation

In accordance with section 735(c)(4) of the Act, we will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of subject merchandise, as described in the appendix to this notice, entered, or withdrawn from warehouse, for consumption, on or after September 24, 2024, which is the date of publication of the affirmative *Preliminary Determination* in the **Federal Register**.

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), where appropriate, Commerce will instruct CBP to require a cash deposit equal to the estimated weighted-average dumping margin or the estimated all-others rate as follows: (1) the cash deposit rate for merchandise produced or exported by OCI Nitrogen will be equal to OCI Nitrogen's company-specific estimated weighted-average dumping margin determined in this final determination; (2) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated weighted-average dumping margin as determined in the final determination. These suspension of liquidation instructions and cash deposit requirements will remain in effect until further notice.

U.S. International Trade Commission (ITC) Notification

In accordance with section 735(d) of the Act, we will notify the ITC of the final affirmative determination of sales at LTFV. Because Commerce's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of melamine from the Netherlands no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, and all cash deposits will be refunded, and suspension of liquidation will be lifted. If the ITC determines that material injury, or the threat of material injury, exists, Commerce will issue an antidumping order directing CBP to assess, upon further instruction by

[3] *Id.*

Commerce, antidumping duties on all imports of the subject merchandise, entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Suspension of Liquidation'' section.

Administrative Protective Order (APO)

This notice serves as the only reminder to parties subject to an APO of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(c).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula $C_3 H_6 N_6$). Melamine is also known as 2,4,6-triamino-striazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. All melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

Melamine From Qatar: Final Negative Determination of Sales at Less Than Fair Value and Final Negative Determination of Critical Circumstances

AGENCY: Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that melamine from Qatar is not being, or is not likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Andrew Hart, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1058.

SUPPLEMENTARY INFORMATION:

Background

On September 24, 2024, Commerce published in the **Federal Register** its preliminary negative determination in the LTFV investigation of melamine from Qatar and invited interested parties to comment on the *Preliminary Determination*.[1]

A summary of the events that occurred since Commerce published its *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum.[2] The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

[1] *See Melamine from Qatar: Preliminary Negative Determination of Sales at Less Than Fair Value,* 89 FR 77824 (September 24, 2024) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum.

[2] *See* Memorandum, ''Issues and Decision Memorandum for the Final Negative Determination in the Less-Than-Fair-Value Investigation of Melamine from Qatar,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

Final Negative Determination of Critical Circumstances

We continue to find that critical circumstances do not exist for imports of melamine from Qatar for all producers and exporters pursuant to section 733(e)(1)(A) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.206. For a discussion and analysis of comments regarding Commerce's critical circumstances analysis, *see* the Issues and Decision Memorandum.

Scope of the Investigation

The product covered by this investigation is melamine from Qatar. For a complete description of the scope of this investigation, *see* Appendix I to this notice.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Verification

As provided in section 782(i)(1) of the Act, in October 2024, we verified the sales and cost information submitted by QMC/Muntajat [3] for use in our final determination. We used standard verification procedures, including an examination of relevant sales and accounting records, and original source documents provided by QMC/Muntajat.[4]

Analysis of Comments Received

All issues raised in the case and rebuttal briefs submitted by interested parties in this investigation are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is attached as Appendix II to this notice.

[3] As discussed in the *Preliminary Determination,* Commerce preliminarily collapsed the following companies and treated them as a single entity: Qatar Melamine Company (QMC); Qatar Chemical and Petrochemical marketing and Distribution Company (Muntajat) Q.P.J.S.C. (Muntajat) (collectively QMC/Muntajat); and Qatar Fertiliser Company P.S.C. (QAFCO). Commerce continues to collapse these companies and treat them as a single entity for the final determination.

[4] *See* Memoranda, ''Verification of the Sales Response of Qatar Melamine Company and Qatar Chemical and Petrochemical Marketing and Distribution Company Q.P.J.S.C. in the Antidumping Duty Investigation of Melamine from Qatar,'' dated October 17, 2024 (Sales Verification Report); and ''Verification of the Cost Responses of Qatar Melamine Company in the Antidumping Duty Investigation of Melamine from Qatar,'' dated November 1, 2024 (Cost Verification Report).

Changes Since the Preliminary Determination

We made certain changes to the margin calculation for QMC/Muntajat, since the *Preliminary Determination*.[5] For a discussion of these changes, *see* the Issues and Decision Memorandum.

Final Determination

Commerce determines that the following estimated weighted-average dumping margins exist for the period, January 1, 2023, through December 31, 2023:

Exporter/producer	Weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offset(s)) (percent)
Qatar Melamine Company; Qatar Chemical and Petrochemical Marketing and Distribution Company (Muntajat) Q.P.J.S.C.; Qatar Fertiliser Company (P.S.C.).	0.00	Not Applicable.

Commerce has not calculated an estimated weighted-average dumping margin for all other producers and exporters pursuant to sections 735(c)(1)(B) and (c)(5) of the Act, because it has not made a final affirmative determination of sales at LTFV.

Disclosure

Commerce intends to disclose the calculations performed in connection with this final determination to interested parties within five days of any public announcement or, if there is no public announcement, within five days of the publication of the notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Suspension of Liquidation

In the *Preliminary Determination,* the estimated weighted-average dumping margin for QMC/Muntajat was *de minimis* and, therefore, we did not suspend liquidation of entries of melamine from Qatar. Because Commerce has made a final negative determination of sales at LTFV with regard to the subject merchandise, Commerce will not direct U.S. Customs and Border Protection to suspend liquidation or to require cash deposit of estimated antidumping duties for entries of melamine from Qatar.

U.S. International Trade Commission Notification

In accordance with section 735(d) of the Act, Commerce will notify the U.S. international Trade Commission of its final negative determination of sales at LTFV. As our final determination is negative, this proceeding is terminated in accordance with section 735(c)(2) of the Act.

Administrative Protective Order

This notice serves as a final reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and the terms of an APO is a violation subject to sanction.

Notification to Interested Parties

This determination and this notice are issued and published in accordance with sections 735(d) and 777(i) of the Act, and 19 CFR 351.210(c).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula $C_3 H_6 N_6$). Melamine is also known as 2,4,6-triamino-s-triazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. All melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

Melamine From Qatar: Final Affirmative Countervailing Duty Determination and Final Negative Critical Circumstances Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of melamine from Qatar. The period of investigation (POI) is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

[5] *See* Memorandum, ''Analysis for the Final Determination for Qatar Melamine Company and Qatar Chemical and Petrochemical Marketing and Distribution Company Q.P.J.S.C.,'' dated concurrently with this notice.

FOR FURTHER INFORMATION CONTACT: Samantha Kinney and Sofia Pedrelli, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2285 and (202)-482–4310, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 22, 2024, Commerce published in the **Federal Register** its preliminary determination in the countervailing duty (CVD) investigation of melamine from Qatar and invited interested parties to comment.[1] In the *Preliminary Determination,* and in accordance with section 705(a)(1) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.210(b)(4), Commerce aligned the final CVD determination with the final antidumping duty determination of melamine from Qater.[2] On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.[3] The deadline for the final determination is now December 2, 2024. On September 12, 2024, Commerce released its Post-Preliminary Decision.[4]

For a complete description of the events that followed the *Preliminary Determination, see* the Issues and Decision Memorandum.[5] The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Scope of the Investigation

The product covered by this investigation is melamine from Qatar. For a complete description of the scope of the investigation, *see* Appendix I.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Verification

As provided in section 782(i) of the Act, in September 2024, Commerce verified all information reported by Qatar Melamine Company (QMC), Qatar Chemical and Petrochemical Marketing and Distribution Company (Muntajat) Q.P.J.S.C (Muntajat), and its cross-owned affiliates, QAFCO, Industries Qatar, and QatarEnergy (collectively, QMC/Muntajat),[6] and the Government of Qatar (GOQ). We used standard verification procedures, including an examination of relevant account records and original source documents provided by QMC/Muntajat.[7]

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation, and the issues raised in the case and rebuttal briefs by interested parties in this investigation, are discussed in the Issues and Decision Memorandum. For a list of the issues raised by parties, and to which we responded in the Issues and Decision Memorandum, *see* Appendix II.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Act. For each of the subsidy programs found to be countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[8] Commerce notes that, in making these findings, it relied, in part, on facts available and, because it finds that QMC/Muntajat did not act to the best of its ability to respond to Commerce's requests for information, Commerce drew an adverse inference where appropriate in selecting from among the facts otherwise available.[9] For further information, *see* the ''Use of Facts Otherwise Available and Adverse Inferences'' section in the Preliminary Decision Memorandum. For a full description of the methodology underlying our final determination, *see* the Issues and Decision Memorandum.

Final Negative Determination of Critical Circumstances

Commerce determines that critical circumstances do not exist within the meaning of 703(e)(1) of the Act. For further information, *see* the Issues and Decision Memorandum.

Changes Since the Preliminary Determination and Post-Preliminary Analysis

Based on our review and analysis of the information received during verification and comments received from interested parties, for this final determination, we made certain changes to the countervailable subsidy rate calculations for QMC/Muntajat, and for all other producers/exporters. For a discussion of these changes, *see* the Issues and Decision Memorandum.

All-Others Rate

In accordance with section 705(c)(1)(B)(i) of the Act, we calculated an individual estimated countervailable subsidy rate for the mandatory respondent, QMC/Muntajat. Section 705(c)(5)(A)(i) of the Act states that, for companies not individually investigated, Commerce will determine an all-others rate equal to the weighted-average countervailable subsidy rates established for exporters and/or producers individually investigated, excluding any zero and *de minimis* countervailable subsidy rates, and any rates determined entirely under section 776 of the Act.

In this investigation, we continue to calculate an individual total net countervailable subsidy rate for QMC/Muntajat that is not zero, *de minimis,* or based entirely on facts otherwise available. Because QMC/Muntajat's individual total net countervailable subsidy rate is the only rate calculated in this investigation, the all-others rate is the individual estimated subsidy rate calculated for the examined respondent (QMC/Muntajat), in accordance with section 705(c)(5)(A)(i) of the Act.

[1] *See Melamine from Qatar: Preliminary Affirmative Countervailable Duty Determination, Preliminary Negative Determination of Critical Circumstances, and Alignment of Final Determination With the Final Antidumping Duty Determination,* 89 FR 59045 (July 22, 2024) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum (PDM).

[2] *See Preliminary Determination,* 89 FR 59046.

[3] *See* Memorandum, ''Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,'' dated July 22, 2024.

[4] *See* Memorandum, ''Post Preliminary Analysis Memorandum for the Countervailing Duty Investigation of Melamine from Qatar,'' dated September 12, 2024 (Post-Preliminary Analysis Memorandum).

[5] *See* Memorandum, ''Issues and Decision Memorandum for the Final Affirmative Determination of the Countervailing Duty Investigation of Melamine from Qatar,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[6] Commerce continues to determine that QMC is cross owned with Muntajat, Qatar Fertiliser Company (P.S.C.) (QAFCO), Industries Qatar Q.P.S.C. (Industries Qatar) and QatarEnergy. *See Preliminary Determination* PDM at 7–9; *see also* Post-Preliminary Analysis Memorandum at 3.

[7] *See* Memoranda, ''Verification of the Questionnaire Responses of Qatar Melamine Company and Muntajat,'' dated October 30, 2024; and ''Verification of the Questionnaire Responses of the Government of Qatar,'' dated October 30, 2024.

[8] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[9] *See* sections 776(a) and (b) of the Act.

Final Determination

Commerce determines that the following estimated net countervailable subsidy rates exist for the period January 1, 2023, through December 31, 2023:

Company	Subsidy rate (percent *ad valorem*)
Qatar Melamine Company; Qatar Chemical and Petrochemical Marketing and Distribution Company (Muntajat) Q.P.J.S.C.; Qatar Fertiliser Company (P.S.C.); Industries Qatar Q.P.S.C.; QatarEnergy	41.91
All Others	41.91

Disclosure

Commerce intends to disclose its calculations performed to interested parties in this final determination within five days of its public announcement or, if there is no public announcement, within five days of the date of the publication of this notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

As a result of our *Preliminary Determination,* and pursuant to sections 703(d)(1)(B) and (d)(2) of the Act, Commerce instructed U.S. Customs and Border Protection (CBP) to collect cash deposits and suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after July 22, 2024, the date of publication of the *Preliminary Determination* in the **Federal Register**. In accordance with section 703(d) of the Act, we instructed CBP to discontinue the suspension of liquidation of all entries of subject merchandise entered or withdrawn from warehouse, on or after November 19, 2024, but to continue the suspension of liquidation of all entries of subject merchandise on or before November 18, 2024.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a countervailing duty order, reinstate the suspension of liquidation under section 706(a) of the Act, and require a cash deposit of estimated countervailing duties for entries of subject merchandise in the amounts indicated above. Pursuant to section 705(c)(2) of the Act, if the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or cancelled.

ITC Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its final affirmative determination that countervailable subsidies are being provided to producers and exporters of melamine from Qatar. As Commerce's final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will determine, within 45 days of our final determination, whether the domestic industry in the United States is materially injured, or threated with material injury, by reason of imports of melamine from Qatar. In addition, we are making available to the ITC all non-privileged and non-proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

If the ITC determines that material injury or threat of material injury does not exist, this proceeding will be terminated and all cash deposits will be refunded. If the ITC determines that such injury does exist, Commerce will issue a countervailing duty order directing CBP to assess, upon further instruction by Commerce, countervailing duties on all imports of the subject merchandise that are entered, or withdrawn, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Continuation of Suspension of Liquidation'' section.

Administrative Protective Order

This notice will serve as the only reminder to parties subject to the APO of their responsibility concerning the destruction of proprietary information disclosed under APO, in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act, and 19 CFR 351.210(c).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula $C_3 H_6 N_6$). Melamine is also known as 2,4,6-triamino-s-triazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. All melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

Oil Country Tubular Goods From Argentina: Preliminary Results of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily finds that Siderca S.A.I.C. (Siderca) made sales of subject merchandise at less than normal value (NV) during the period of review (POR) May 11, 2022, through October 31, 2023. We invite interested parties to comment on these preliminary results.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Dmitry Vladimirov, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0665.

SUPPLEMENTARY INFORMATION:

Background

On November 21, 2022, Commerce published in the **Federal Register** the antidumping duty order on oil country tubular goods (OCTG) from Argentina.[1] On November 2, 2023, we published in the **Federal Register** a notice of opportunity to request an administrative review of the *Order* for the POR.[2] On December 29, 2023, based on timely requests for an administrative review, Commerce initiated an administrative review of the *Order*.[3] On January 25, 2024, Commerce identified Siderca as the sole mandatory respondent in this administrative review.[4] On July 9, 2024, Commerce extended the time limit for these preliminary results to November 29, 2024.[5] On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.[6] The deadline for the preliminary results is now December 6, 2024.

For a complete description of the events that occurred since the initiation of this review, *see* the Preliminary Decision Memorandum.[7]

Scope of the Order

The products covered by the *Order* are OCTG from Argentina. For a complete description of the scope of this *Order, see* the Preliminary Decision Memorandum.

Methodology

Commerce is conducting this review in accordance with sections 751(a)(1)(B) and (2) of the Tariff Act of 1930, as amended (the Act). We calculated constructed export price and NV in accordance with sections 772 and 773 of the Act, respectively. For a complete description of the methodology in these preliminary results, *see* the Preliminary Decision Memorandum. A list of topics discussed in the Preliminary Decision Memorandum is attached in the appendix to this notice. The Preliminary Decision Memorandum is a public document and is made available to the public via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Preliminary Results of Review

We preliminarily determine that the following estimated weighted-average dumping margin exists for the period May 11, 2022, through October 31, 2023:

Producer or exporter	Weighted-average dumping margin (percent)
Siderca S.A.I.C	6.8

Disclosure

We intend to disclose the calculations and analysis performed for these preliminary results to interested parties within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice.[8]

Public Comment

Pursuant to 19 CFR 351.309(c)(1)(ii), interested parties may submit case briefs to Commerce no later than 30 days after the date of publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[9] Interested parties who submit case or rebuttal briefs in this administrative review must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[10]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this administrative review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[11] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the

[11] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

issues and decision memorandum that will accompany the final results of this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance via ACCESS within 30 days after the date of publication of this notice. Hearing requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants and whether any participant is a foreign national; and (3) a list of issues to be discussed. Issues raised at the hearing will be limited to those raised in the case and rebuttal briefs. If a hearing request is made, parties will be notified of the date and time of the hearing.[12] Parties should confirm the date and time of the hearing two days before the scheduled date.

All submissions, including case and rebuttal briefs, as well as hearing requests, should be filed using ACCESS.[13] An electronically filed document must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time on the established deadline. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[14]

Final Results of Review

Unless otherwise extended, Commerce intends to issue the final results of this administrative review, including the results of its analysis of issues raised in written briefs, no later than 120 days after the date of publication of this notice in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(1).

Assessment Rates

Upon completion of the final results of this administrative review, pursuant to section 751(a)(2)(A) of the Act, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise covered by this review.[15] If Siderca's weighted-average dumping margin is not zero or *de minimis* (*i.e.,* less than 0.50 percent) in the final results of this review, we intend to calculate an importer-specific assessment rate for antidumping duties based on the ratio of the total amount of dumping calculated for each importer's examined sales and the total entered value of those same sales in accordance with 19 CFR 351.212(b)(1).[16] If Siderca's weighted-average dumping margin or an importer-specific assessment rate is zero or *de minimis* in the final results of this review, we intend to instruct CBP to liquidate relevant entries without regards to antidumping duties.

For entries of subject merchandise during the POR produced by Siderca for which it did not know that the merchandise was destined to the United States, we will instruct CBP to liquidate unreviewed entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.[17]

The final results of this administrative review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable.[18] Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired, *i.e.,* within 90 days of publication.

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication in the **Federal Register** of the notice of the final results of this administrative review for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication as provided in section 751(a)(2)(C) of the Act: (1) the cash deposit rate for Siderca will be equal to the weighted-average dumping margin established in the final results of this administrative review, except, if that rate is less than 0.50 percent and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), then the cash deposit rate will be zero; (2) for merchandise exported by a company not covered in this review but covered in a prior completed segment of this proceeding, the cash deposit rate will continue to be the company-specific rate published in the completed segment for the most recent period; (3) if the exporter is not a firm covered in this review, a prior review, or the investigation but the producer is, then the cash deposit rate will be the company-specific rate established in the most recently completed segment of this proceeding for the producer of the merchandise; and (4) the cash deposit rate for all other producers or exporters will continue to be 78.30 percent, the all-others rate established in the original less-than-fair-value investigation.[19] These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these preliminary results in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(1), (3), and (h)(2), and 19 CFR 351.221(b)(4).

Dated: December 3, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

International Trade Administration

[A–274–810]

Melamine From Trinidad and Tobago: Final Affirmative Determination of Sales at Less Than Fair Value and Final Affirmative Determination of Critical Circumstances, in Part

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that melamine from Trinidad and Tobago is being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Brittany Bauer, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3860.

SUPPLEMENTARY INFORMATION:

Background

On September 24, 2024, Commerce published in the **Federal Register** its preliminary determination in the LTFV investigation of melamine from Trinidad and Tobago and invited interested parties to comment.[1] No interested party submitted comments. Accordingly, the final determination remains unchanged from the *Preliminary Determination* and no decision memoranda accompany this notice. The *Preliminary Determination* is hereby adopted in this final determination. Commerce conducted this LTFV investigation in accordance with section 735 of the Tariff Act of 1930, as amended (the Act).

Scope of the Investigation

The product covered by this investigation is melamine from Trinidad and Tobago. For a complete description of the scope of this investigation, *see* the appendix to this notice.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Verification

As stated in the *Preliminary Determination,* after being selected as the sole mandatory respondent, Methanol Holdings (Trinidad) Limited (MHTL) discontinued its participation in this investigation. Accordingly, Commerce based the *Preliminary Determination* entirely on the application of facts available with adverse inferences (AFA), and did not conduct verification under section 782(i) of the Act.

Final Affirmative Determination of Critical Circumstances, in Part

We continue to find that critical circumstances exist for imports of melamine from Trinidad and Tobago for the mandatory respondent MHTL but do not exist for all other producers and exporters pursuant to sections 735(a)(3)(A) and (B) of the Act and 19 CFR 351.206.[2]

Use of Adverse Facts Available

As discussed in the *Preliminary Determination,* we assigned MHTL an estimated weighted-average dumping margin based entirely on AFA, pursuant to sections 776(a) and (b) of Act.[3] There is no new information on the record that would cause us to revisit our decision in the *Preliminary Determination.* Accordingly, for this final determination, we continue to find that the application of AFA pursuant to sections 776(a) and (b) of the Act is warranted with respect to MHTL.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated excluding rates that are zero, *de minimis,* or determined entirely under section 776 of the Act.

In the *Preliminary Determination,* we assigned a dumping margin of 98.32 percent as the all-others rate based on a simple average of the calculated rates in the petition, pursuant to section 735(c)(5)(B) of the Act.[4] As noted above, we received no comments on our *Preliminary Determination;* thus, we continue to assign a dumping margin of 98.32 percent as the all-others rate for this final determination.

Final Determination

The final estimated weighted-average dumping margins are as follows:

Exporter/Producer	Weighted-average dumping margin (percent) *
Methanol Holdings (Trinidad) Limited	** 146.85
All Others	98.32

* Consistent with the *Preliminary Determination,* because the companion countervailing duty investigation found no export subsidies, we have not offset the weighted-average dumping margins.

** Rate based on facts available with adverse inferences.

Disclosure

Normally, Commerce will disclose to the parties in a proceeding the calculations performed in connection with a final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final determination in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because Commerce received no comments on the *Preliminary Determination,* it is adopting the *Preliminary Determination* as the final determination in this investigation. Consequently, there are no new calculations to disclose.

Suspension of Liquidation

In accordance with section 735(c)(4) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of subject merchandise, as described in the appendix to this notice, entered, or withdrawn from warehouse, for consumption, on or after June 26, 2024, which is 90 days prior to the date of publication of the affirmative *Preliminary Determination* in the **Federal Register**.

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), where appropriate, Commerce will instruct CBP to require a cash deposit equal to the estimated weighted-average dumping margin or the estimated all-others rate as follows: (1) the cash deposit rate for the respondent listed above will be equal to the company-specific estimated weighted-average dumping margins determined in this final determination; (2) if the exporter is not a respondent identified above, but the producer is, then the cash deposit

[1] *See Melamine from Trinidad and Tobago: Preliminary Affirmative Determination of Sales at Less Than Fair Value and Affirmative Determination of Critical Circumstances, In Part,* 89 FR 77814 (September 24, 2024) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum (PDM).

[2] *See Preliminary Determination* PDM at 9–13.

[3] *See Preliminary Determination,* 89 FR 77815.

[4] *Id.*

rate will be equal to the company-specific estimated weighted-average dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated weighted-average dumping margin. These suspension of liquidation instructions will remain in effect until further notice.

U.S. International Trade Commission (ITC) Notification

In accordance with section 735(d) of the Act, we will notify the ITC of the final affirmative determination of sales at LTFV. Because Commerce's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of melamine from Trinidad and Tobago no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, and all cash deposits will be refunded, and suspension of liquidation will be lifted. If the ITC determines that material injury, or the threat of material injury, exists, Commerce will issue an antidumping duty order directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise, entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Suspension of Liquidation'' section.

Administrative Protective Order (APO)

This notice serves as the only reminder to parties subject to an APO of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(c).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula C3 H6 N6). Melamine is also known as 2,4,6-triamino-striazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. All melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

Melamine From Trinidad and Tobago: Final Affirmative Determination in the Countervailing Duty Investigation

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of melamine from Trinidad & Tobago. The period of investigation is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Megan Goins, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0884.

SUPPLEMENTARY INFORMATION:

Background

On July 22, 2024, Commerce published its *Preliminary Determination* in the **Federal Register** and invited interested parties to comment.[1] Also on July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.[2] The deadline for the final determination is now December 2, 2024.

A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum.[3] The Issues and Decision Memorandum is a public document and is made available to the public via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Scope of the Investigation

The product covered by this investigation is melamine from Trinidad and Tobago. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation, and the issues raised in the case brief that was submitted by a party in this investigation, are discussed in the Issues and Decision

[1] *See Melamine from Trinidad and Tobago: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination With Final Antidumping Duty Determination,* 89 FR 59057 (July 22 2024) (*Preliminary Determination*), and accompanying Preliminary Determination Memorandum (PDM).

[2] *See* Memorandum, ''Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,'' dated July 22, 2024.

[3] *See* Memorandum, ''Issues and Decision Memorandum for the Final Affirmative Determination in the Countervailing Duty Investigation of Melamine from Trinidad and Tobago,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

Memorandum. For a list of the issues raised by that interested party and addressed in the Issues and Decision Memorandum, *see* Appendix II to this notice.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found to be countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[4] For a full description of the methodology underlying our final determination, *see* the Issues and Decision Memorandum.

In making this final determination, Commerce relied on facts otherwise available, including with an adverse inference (AFA), pursuant to sections 776(a) and (b) of the Act. For a full discussion of our application of AFA, *see* the *Preliminary Determination,*[5] and the Issues and Decision Memorandum section entitled ''Use of Facts Otherwise Available and Application of Adverse Inferences.''

Verification

Because the examined respondent in this investigation did not provide information requested by Commerce and Commerce preliminarily determined the examined respondent to have been uncooperative, Commerce did not conduct verification.[6]

All-Others Rate

As discussed in the *Preliminary Determination,* Commerce based the selection of the all-others rate on the countervailable subsidy rate established for the mandatory respondent, in accordance with section 703(d) of the Act.[7] Consistent with section 705(c)(5)(A)(ii) of the Act, we made no changes to the selection of the all-others rate for this final determination.

Final Determination

Commerce determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent *ad valorem*)
Methanol Holdings (Trinidad) Ltd	*7.43
All Others	7.43

*Rate based on AFA.

Disclosure

Commerce normally discloses to interested parties the calculations and analysis performed in a final determination within five days of its public announcement, or if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b). However, because Commerce applied total AFA to the respondent in this investigation, in accordance with section 776 of the Act, and the applied AFA rates are based on rates calculated in prior proceedings, there are no calculations to disclose.

Suspension of Liquidation

As a result of our *Preliminary Determination,* and pursuant to sections 703(d)(1)(B) and (d)(2) of the Act, we instructed U.S. Customs and Border Protection (CBP) to collect cash deposits and suspend liquidation of entries of subject merchandise from Trinidad and Tobago that were entered, or withdrawn from warehouse, for consumption, on or after July 22, 2024, the date of the publication of the *Preliminary Determination* in the **Federal Register**. In accordance with section 703(d) of the Act, we also instructed CBP to discontinue the suspension of liquidation of all entries of subject merchandise entered or withdrawn from warehouse on, or after November 19, 2024, but to continue the suspension of liquidation of all entries of subject merchandise between July 22, 2024, and November 18, 2024.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a countervailing duty order, reinstate the suspension of liquidation under section 706(a) of the Act, and require a cash deposit of estimated countervailing duties for entries of subject merchandise in the amounts indicated above. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, we will notify the ITC of our final affirmative determination that countervailable subsidies are being provided to producers and exporters of melamine from Trinidad and Tobago. Because the final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports of melamine from Trinidad and Tobago no later than 45 days after our final determination. In addition, we are making available to the ITC all non-privileged and nonproprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

If the ITC determines that material injury or threat of material injury does not exist, this proceeding will be terminated and all cash deposits will be refunded. If the ITC determines that such injury does exist, Commerce will issue a countervailing duty order directing CBP to assess, upon further instruction by Commerce, countervailing duties on all imports of the subject merchandise that are entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Continuation of Suspension of Liquidation'' section.

Administrative Protective Order

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to an APO of their responsibility concerning the destruction of proprietary information disclosed under APO, in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing the final determination in accordance with sections 705(d) and 777(i) of the Act, and 19 CFR 351.210(c).

[4] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; *see also* section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula C3 H6 N6). Melamine is also known as 2,4,6- triamino-s-triazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. A ll melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–588–882]

Melamine From Japan: Final Affirmative Determination of Sales at Less Than Fair Value and Final Affirmative Determination of Critical Circumstances, In Part

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that melamine from Japan is being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is January 1, 2023, through December 31, 2023.

DATES: Applicable December 9, 2024.

FOR FURTHER INFORMATION CONTACT: George McMahon, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1167.

SUPPLEMENTARY INFORMATION:

Background

On September 24, 2024, Commerce published in the **Federal Register** its preliminary determination in the LTFV investigation of melamine from Japan and invited interested parties to comment.[1] No interested party submitted comments. Accordingly, the final determination remains unchanged from the *Preliminary Determination* and no decision memoranda accompany this notice. The *Preliminary Determination* is hereby adopted in this final determination. Commerce conducted this LTFV investigation in accordance with section 735 of the Tariff Act of 1930, as amended (the Act).

Scope of the Investigation

The product covered by this investigation is melamine from Japan. For a complete description of the scope of this investigation, *see* the appendix to this notice.

Scope Comments

We received no comments from interested parties on the scope of the investigation as it appeared in the *Preliminary Determination.* Therefore, we made no changes to the scope of the investigation.

Verification

As stated in the *Preliminary Determination,* after being selected as the sole mandatory respondent, Mitsui Chemicals, Inc. (Mitsui Chemicals), declined to participate and did not provide information requested by Commerce. Accordingly, Commerce based the *Preliminary Determination* entirely on the application of facts available with adverse inferences (AFA), and did not conduct verification under section 782(i) of the Act.

Final Affirmative Determination of Critical Circumstances, in Part

We continue to find that critical circumstances exist for imports of melamine from Japan for the mandatory respondent Mitsui Chemicals but do not exist for all other producers and exporters pursuant to sections 735(a)(3)(A) and (B) of the Act and 19 CFR 351.206.[2]

Use of Adverse Facts Available

As discussed in the *Preliminary Determination,* we assigned Mitsui Chemicals an estimated weighted-average dumping margin based entirely on AFA, pursuant to sections 776(a) and (b) of Act.[3] There is no new information on the record that would cause us to revisit our decision in the *Preliminary Determination.* Accordingly, for this final determination, we continue to find that the application of AFA pursuant to sections 776(a) and (b) of the Act is warranted with respect to Mitsui Chemicals.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated, excluding rates that are zero, *de minimis,* or determined entirely under section 776 of the Act.

In the *Preliminary Determination,* we assigned a dumping margin of 115.11 percent as the all-others rate based on a simple average of the calculated rates in the petition, pursuant to section 735(c)(5)(B) of the Act.[4] As noted above, we received no comments on our *Preliminary Determination;* thus, we

[1] *See Melamine from Japan: Preliminary Affirmative Determination of Sales at Less Than Fair Value and Affirmative Determination of Critical Circumstances, In Part,* 89 FR 77819 (September 24, 2024) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum.

[2] *See Preliminary Determination,* 89 FR 77820.

[3] *Id.*

[4] *Id.*

continue to assign a dumping margin of 115.11 percent as the all-others rate for this final determination.

Final Determination

The final estimated weighted-average dumping margins are as follows:

Exporter/producer	Estimated weighted-average dumping margin (percent)
Mitsui Chemicals, Inc	* 127.69
All Others	115.11

* Rate is based on facts available with adverse inferences.

Disclosure

Normally, Commerce will disclose to the parties in a proceeding the calculations performed in connection with a final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final determination in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because Commerce received no comments on the *Preliminary Determination,* it is adopting the *Preliminary Determination* as the final determination in this investigation. Consequently, there are no new calculations to disclose.

Suspension of Liquidation

In accordance with section 735(c)(4) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of subject merchandise, as described in the appendix to this notice, entered, or withdrawn from warehouse, for consumption, on or after June 26, 2024, which is 90 days prior to the date of publication of the affirmative *Preliminary Determination* in the **Federal Register**.

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), where appropriate, Commerce will instruct CBP to require a cash deposit equal to the estimated weighted-average dumping margin or the estimated all-others rate as follows: (1) the cash deposit rate for the respondent listed above will be equal to the company-specific estimated weighted-average dumping margins determined in this final determination; (2) if the exporter is not a respondent identified above, but the producer is, then the cash deposit rate will be equal to the company-specific estimated weighted-average dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to the all others estimated weighted-average dumping margin. These suspension of liquidation instructions will remain in effect until further notice.

U.S. International Trade Commission (ITC) Notification

In accordance with section 735(d) of the Act, we will notify the ITC of the final affirmative determination of sales at LTFV. Because Commerce's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of melamine from Japan no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, and all cash deposits will be refunded, and suspension of liquidation will be lifted. If the ITC determines that material injury, or the threat of material injury, exists, Commerce will issue an antidumping order directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation as discussed above in the ''Suspension of Liquidation'' section.

Administrative Protective Order (APO)

This notice serves as the only reminder to parties subject to an APO of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(c).

Dated: December 2, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Investigation

The merchandise subject to this investigation is melamine (Chemical Abstracts Service (CAS) registry number 108–78–01, molecular formula C_3 H_6 N_6). Melamine is also known as 2,4,6-triamino-striazine; 1,3,5-Triazine-2,4,6- triamine; Cyanurotriamide; Cyanurotriamine; Cyanuramide; and by various brand names. Melamine is a crystalline powder or granule. All melamine is covered by the scope of this investigation irrespective of purity, particle size, or physical form. Melamine that has been blended with other products is included within this scope when such blends include constituent parts that have been intermingled, but that have not been chemically reacted with each other to produce a different product. For such blends, only the melamine component of the mixture is covered by the scope of this investigation. Melamine that is otherwise subject to this investigation is not excluded when commingled with melamine from sources not subject to this investigation. Only the subject component of such commingled products is covered by the scope of this investigation.

The subject merchandise is provided for in subheading 2933.61.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheading and CAS registry number are provided for convenience and customs purposes, the written description of the scope is dispositive.

BILLING CODE 3510–DS–P

DEPARTMENT OF DEFENSE

Department of the Air Force

[AFD–2200]

Notice of Intent To Grant a Joint Ownership Agreement With an Exclusive Patent License

AGENCY: Department of the Air Force, Department of Defense.

ACTION: Notice of intent.

SUMMARY: Pursuant to the Bayh-Dole Act and implementing regulations, the Department of the Air Force hereby gives notice of its intent to grant a joint ownership agreement with an Exclusive Patent License to The Board of Trustees of the University of Alabama, for and on behalf of The University of Alabama in Huntsville having a place of business at 301 Sparkman Drive NW, Huntsville, AL 35899.

DATES: Written objections must be filed no later than fifteen (15) calendar days after the date of publication of this Notice.

ADDRESSES: Submit written objections to William Loux, AFRL/RWPB, 101 West Eglin Boulevard, Eglin AFB, FL 32542; Phone: (850) 882–3920; or Email: *afrl.rw.techtransfer@us.af.mil.* Include Docket No. AFD–2200 in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: William Loux, AFRL/RWPB, 101 West Eglin Boulevard, Eglin AFB, FL 32542; phone: (850) 882–3920; or email: *afrl.rw.techtransfer@us.af.mil.*

SUPPLEMENTARY INFORMATION:

Abstract of patent application(s): An image processing system receives a digital image and analyzes the digital image to determine a resolution limit, referred to herein as ''feature resolution,'' for measuring a metric for features of the image within an acceptable margin of error. Specifically, the system segments a digital image and calculates the error associated with the segmented data when features within a certain range a measured metric (*e.g.,* size range) are removed from the segmented data. This analysis can be repeatedly performed with different cutoff values for the metric until at least a threshold amount of error is reached, thereby indicating a resolution limit at the boundary of an acceptable amount of error.

Intellectual property: U.S. Application No. 17/671,527, filed on February 14, 2022, and entitled ''*Systems and Methods for Determining Feature Resolution of Image Data.*''

The Department of the Air Force may grant the prospective license unless a timely objection is received that sufficiently shows the grant of the license would be inconsistent with the Bayh-Dole Act or implementing regulations. A competing application for a patent license agreement, completed in compliance with 37 CFR 404.8 and received by the Air Force within the period for timely objections, will be treated as an objection and may be considered as an alternative to the proposed license.

Authority: 35 U.S.C. 209; 37 CFR part 404.

Tommy W. Lee,

Acting Air Force Federal Register Liaison Officer.

BILLING CODE 3911–44–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2411–030]

Eagle Creek Schoolfield, LLC, City of Danville; Notice of Intent To Prepare an Environmental Assessment

On July 29, 2022, Eagle Creek Schoolfield and the City of Danville filed a relicense application for the 4.5-megawatt Schoolfield Hydroelectric Project No. 2411. The project is located on the Dan River in Pittsylvania County near the City of Danville, Virginia.

In accordance with the Commission's regulations, on September 19, 2024, Commission staff issued a notice that the project was ready for environmental analysis (REA Notice). Based on the information in the record, including comments filed on the REA Notice, staff does not anticipate that licensing the project would constitute a major Federal action significantly affecting the quality of the human environment. Therefore, staff intends to prepare an Environmental Assessment (EA) on the application to relicense the project.[1]

The EA will be issued and circulated for review by all interested parties. All comments filed on the EA will be analyzed by staff and considered in the Commission's final licensing decision.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members, and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

The application will be processed according to the following schedule. The EA will be issued for a 30-day comment period. Revisions to the schedule may be made as appropriate.

Milestone	Target date
Commission issues EA.	December 2, 2025.

Any questions regarding this notice may be directed to Claire Rozdilski at (202) 502–8259 or *claire.rozdilski@ferc.gov.*

Dated: December 3, 2024.

Carlos D. Clay,

Acting Deputy Secretary.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *https://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Dated: December 3, 2024.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EL25–16–000]

Basin Electric Power Cooperative; Notice of Institution of Section 206 Proceeding and Refund Effective Date

On December 2, 2024, the Commission issued an order in Docket No. EL25–16–000, pursuant to section 206 of the Federal Power Act (FPA), 16 U.S.C. 824e, instituting an investigation to determine whether Basin Electric Power Cooperative's 2020 Rate Schedule A and Wholesale Power Contracts are considered unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful. *Basin Electric Power Cooperative,* 189 FERC ¶ 61,162 (2024).

The refund effective date in Docket No. EL25–16–000 established pursuant to section 206(b) of the FPA, will be the date of publication of this notice in the **Federal Register**.

Any interested person desiring to be heard in Docket No. EL25–16–000 must file a notice of intervention or motion to intervene, as appropriate, with the Federal Energy Regulatory Commission, in accordance with Rule 214 of the Commission's Rules of Practice and Procedure, 18 CFR 385.214 (2024), within 21 days of the date of issuance of the order.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*https://www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. From FERC's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field. User assistance is available for eLibrary and the FERC's website during normal business hours from FERC Online Support at 202–502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFile'' link at *https://www.ferc.gov.* In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Dated: December 3, 2024.

Carlos D. Clay,

Acting Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP25–19–000]

Southern Star Central Gas Pipeline, Inc.; Notice of Application and Establishing Intervention Deadline

Take notice that on November 18, 2024, Southern Star Central Gas Pipeline, Inc. (Southern Star), 4700 State Route 56, Owensboro, KY 42301, filed an application under section 7(c) of the Natural Gas Act (NGA), and Part 157 of the Commission's regulations requesting authorization for its Cedar Vale Compressor Station Project (Project). The Project consists of constructing, installing, operating, and maintaining a new 6,091 horsepower (HP) [1] compressor station in Osage County, Oklahoma. The Project will add approximately 98,000 dekatherms per day (Dth/d) of incremental firm capacity for deliveries in Southern Star's Market Area and approximately 35,000 Dth/d of incremental firm capacity in its Production Area. Southern Star states that this added compression will assist shippers in moving gas to the growing markets in and around Springfield, Joplin, Kansas City, and Topeka in Missouri and Kansas. Southern Star estimates the total cost of the Project to be $48.4 million, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*https://www.ferc.gov*). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

[1] The 6,091 HP refers to nominal HP at International Organization for Standardization (ISO) conditions.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

Any questions regarding the proposed project should be directed to Will Wathen, Director, Rates, Regulatory and Strategic Planning, Southern Star Central Gas Pipeline, Inc., 4700 State Route 56, Owensboro, Kentucky 42301, by phone at (270) 925–1969, or by email at *will.wathen@southernstar.com.*

Pursuant to section 157.9 of the Commission's Rules of Practice and Procedure,[2] within 90 days of this Notice the Commission staff will either: complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify Federal and State agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all Federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file comments on the project, you can protest the filing, and you can file a motion to intervene in the proceeding. There is no fee or cost for filing comments or intervening. The deadline for filing a motion to intervene is 5:00 p.m. Eastern Time on December 24, 2024. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Comments

Any person wishing to comment on the project may do so. Comments may include statements of support or objections, to the project as a whole or specific aspects of the project. The more specific your comments, the more useful they will be.

Protests

Pursuant to sections 157.10(a)(4)[3] and 385.211[4] of the Commission's regulations under the NGA, any person[5] may file a protest to the application. Protests must comply with the requirements specified in section 385.2001[6] of the Commission's regulations. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

To ensure that your comments or protests are timely and properly recorded, please submit your comments on or before December 24, 2024.

There are three methods you can use to submit your comments or protests to the Commission. In all instances, please reference the Project docket number CP25–19–000 in your submission.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments or protests electronically by using the eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Comment on a Filing''; or

(3) You can file a paper copy of your comments or protests by mailing them to the following address below. Your written comments must reference the Project docket number (CP25–19–000).

To file via USPS: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426

To file via any other courier: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852

The Commission encourages electronic filing of comments (options 1 and 2 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Persons who comment on the environmental review of this project will be placed on the Commission's environmental mailing list, and will receive notification when the environmental documents (EA or EIS) are issued for this project and will be notified of meetings associated with the Commission's environmental review process.

The Commission considers all comments received about the project in determining the appropriate action to be taken. However, the filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding. For instructions on how to intervene, see below.

Interventions

Any person, which includes individuals, organizations, businesses, municipalities, and other entities,[7] has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure[8] and the regulations under the NGA[9] by the intervention deadline for the project, which is December 24, 2024. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more

[3] 18 CFR 157.10(a)(4).

[4] 18 CFR 385.211.

[5] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[6] 18 CFR 385.2001.

[7] 18 CFR 385.102(d).

[8] 18 CFR 385.214.

[9] 18 CFR 157.10.

information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

There are two ways to submit your motion to intervene. In both instances, please reference the Project docket number CP25–19–000 in your submission.

(1) You may file your motion to intervene by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Intervention.'' The eFiling feature includes a document-less intervention option; for more information, visit *https://www.ferc.gov/docs-filing/efiling/document-less-intervention.pdf.;* or

(2) You can file a paper copy of your motion to intervene, along with three copies, by mailing the documents to the address below. Your motion to intervene must reference the Project docket number CP25–19–000.

To file via USPS: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426

To file via any other courier: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852

The Commission encourages electronic filing of motions to intervene (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail at: Will Wathen, Director, Rates, Regulatory and Strategic Planning, Southern Star Central Gas Pipeline, Inc., 4700 State Route 56, Owensboro, Kentucky 42301 or by email (with a link to the document) at *will.wathen@southernstar.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online. Service can be via email with a link to the document.

All timely, unopposed [10] motions to intervene are automatically granted by operation of Rule 214(c)(1).[11] Motions to intervene that are filed after the intervention deadline are untimely, and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations.[12] A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

Intervention Deadline: 5:00 p.m. Eastern Time on December 24, 2024.

Dated: December 3, 2024.

Carlos D. Clay,

Acting Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RM98–1–000]

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e)(1)(v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. Each filing may be viewed on the Commission's website at *https://www.ferc.gov* using the eLibrary link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659.

[10] The applicant has 15 days from the submittal of a motion to intervene to file a written objection to the intervention.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–R05–SFUND–2024–0559; FRL–12429–01–R5]

Proposed Prospective Purchaser Agreement for the Brandon Road Interbasin Project Site in Joliet, Illinois

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; request for public comment.

SUMMARY: In accordance with the Prospective Purchaser Agreement, notice is hereby given of a proposed administrative settlement concerning the property to be used in the Brandon Road Interbasin Project with the following Settling Party: Illinois Department of Natural Resources. The Settling Party intends to acquire title to an approximately 2.32-acre portion of the property at 1800 Channahon Road, Joliet, Illinois, which is adjacent to the Joliet 29 Generating Station and borders the Brandon Road Lock and Dam.

DATES: Comments must be submitted on or before January 8, 2025.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–R05–SFUND–2024–0559, by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov/* (our preferred method). Follow the online instructions for submitting comments.
- *Mail:* U.S. Environmental Protection Agency, ATTN: David Duckett, Assistant Regional Counsel, Office of Regional Counsel (C–14J), 77 W Jackson Blvd., Chicago, Illinois 60604.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Written Comments

Submit your comments, identified by Docket ID No. EPA–R05–SFUND–2024–0559, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

For thirty (30) days following the date of publication of this notice, the EPA will receive written comments relating to the proposed settlement. The EPA will consider all comments received and may modify or withdraw its consent to the proposed settlement if comments received disclose facts or considerations which indicate that the settlement is inappropriate, improper, or inadequate. The proposed settlement is available for public inspection at *https://www.regulations.gov.* The EPA's response to any comments received will be available for public inspection at the EPA, Region 5, Records Center, 77 W Jackson Blvd., 7th Fl., Chicago, Illinois 60604. Commenters may request an opportunity for a public hearing in the affected area, in accordance with section 7003(d) of RCRA, 42 U.S.C. 6973(d).

The settlement requires the Settling Party to enroll the property in the Illinois Site Remediation Program (''Illinois SRP'') within thirty days of acquiring the property and conduct a comprehensive site investigation including geotechnical and environmental investigations to determine the nature and extent of any soil or groundwater contamination. Based on the results of the site investigation, Purchaser will conduct a remedial action that generally includes addressing the presence of any contaminants of concern requiring remediation under the Illinois SRP, constructing a barrier to facilitate excavation of the Waste Material, excavating all Waste Material (as defined in the settlement) and properly disposing of it, relocating and extending a storm sewer system, and backfilling the excavated areas with clean fill. The Settling Party will complete all activities required by the Illinois SRP and obtain a No Further Remediation Letter for the Property from the Illinois Environmental Protection Agency. The settlement includes a covenant not to sue by the United States pursuant to sections 106 and 107(a) of the Comprehensive Environmental Response, Compensation, and Liability Act and section 7003 of the Resource Conservation and Recovery Act for Existing Contamination and the Work. Existing Contamination is defined as any hazardous substances, pollutants, or contaminants or Waste Material present or existing on or under the Property as of the Effective Date of the settlement; any hazardous substances, pollutants, or contaminants or Waste Material that migrated from the property prior to the Effective Date; and any hazardous substances, pollutants, or contaminants or Waste Material presently at the site at 1800 Channahon Rd. in Joliet, Illinois, that migrate onto, under, or

from the Property after the Effective Date.

Thomas Short,

Deputy Director, Superfund & Emergency Management Division, Region 5.

BILLING CODE 6560–50–P

FARM CREDIT SYSTEM INSURANCE CORPORATION

Board of Directors Meeting

SUMMARY: Notice of the forthcoming regular meeting of the Board of Directors of the Farm Credit System Insurance Corporation (FCSIC), is hereby given in accordance with the provisions of the Bylaws of the FCSIC.

DATES: 10 a.m., Wednesday, December 11, 2024.

ADDRESSES: You may observe the open portions of this meeting in person at 1501 Farm Credit Drive, McLean, Virginia 22102–5090, or virtually. If you would like to virtually attend, at least 24 hours in advance, visit *FCSIC.gov,* select ''News & Events,'' then select ''Board Meetings.'' From there, access the linked ''Instructions for board meeting visitors'' and complete the described registration process.

FOR FURTHER INFORMATION CONTACT: If you need more information or assistance for accessibility reasons, or have questions, contact Ashley Waldron, Secretary to the Board. Telephone: 703–883–4009. TTY: 703–883–4056.

SUPPLEMENTARY INFORMATION: Parts of this meeting will be open to the public. The rest of the meeting will be closed to the public. The following matters will be considered:

Portions Open to the Public

- Approval of Minutes for October 9, 2024
- Quarterly FCSIC Financial Reports
- Quarterly Report on Insured Obligations
- Quarterly Report on Annual Performance Plan
- Policy Statement Addressing Dual Board Governance Structure
- Policy Statement Addressing FCSIC Examination Authorities

Portions Closed to the Public

- Quarterly Report on Insurance Risk
- Audit Plan for the Year Ended December 31, 2024
- Executive Session of the Audit Committee with Auditor

Ashley Waldron,

Secretary to the Board.

BILLING CODE 6705–01–P

FEDERAL ACCOUNTING STANDARDS ADVISORY BOARD

Notice of 2025 Federal Accounting Standards Advisory Board Meetings

AGENCY: Federal Accounting Standards Advisory Board.

ACTION: Notice.

SUMMARY: Notice is hereby given that the Federal Accounting Standards Advisory Board (FASAB) will hold its meetings on the following dates throughout 2025, unless otherwise noted.

DATES:

February 25–26, 2025
April 22–23, 2025
June 17–18, 2025
August 19–20, 2025
October 21–22, 2025
December 9–10, 2025

ADDRESSES: Agendas, briefing materials, and virtual meeting information will be available at *https://www.fasab.gov/briefing-materials/* approximately one week before each meeting.

Any interested person may attend the meetings as an observer. Board discussion and reviews are open to the public. GAO building security requires advance notice of your attendance for in-person meetings. If you wish to attend a FASAB meeting that is being held in-person, please register on our website at *https://www.fasab.gov/pre-registration/* no later than 5 p.m. the Thursday before the meeting to be observed.

FOR FURTHER INFORMATION CONTACT: Ms. Monica R. Valentine, Executive Director, 441 G Street NW, Suite 1155, Washington, DC 20548, or call (202) 512–7350.

SUPPLEMENTARY INFORMATION: The purpose of the meetings is to discuss issues related to the following topics:

Accounting and Reporting of Government Land
Climate-Related Financial Reporting Commitments
Direct Loans and Loan Guarantees
Federal GAAP Hierarchy
Intangible Assets
Leases
Omnibus Amendments
Public-Private Partnerships
Reexamination of Existing Standards
Omnibus Concepts Amendments
Management's Discussion and Analysis Revenue
Software Technology
Appointments Panel
Any other topics as needed

Notice is hereby given that a portion of each scheduled meeting may be closed to the public. The Appointments Panel, a chartered subcommittee of FASAB that makes recommendations regarding appointments for non-Federal member positions, is expected to meet during each meeting. A portion of each Appointments Panel meeting will be closed to the public. The reason for the closures is that matters covered by 5 U.S.C. 552b(c)(2) and (6) will be discussed. Any such discussions will involve matters that relate solely to internal personnel rules and practices of the sponsor agencies and the disclosure of information of a personal nature where disclosure would constitute a clearly unwarranted invasion of personal privacy. Such discussions will be segregated into separate discussions so that a portion of each meeting will be open to the public.

Pursuant to section 10(d) of the Federal Advisory Committee Act (FACA), 5 U.S.C. 1009(d), portions of advisory committee meetings may be closed to the public where the head of the agency to which the advisory committee reports determines that such portion of such meeting may be closed to the public in accordance with subsection (c) of section 552b of title 5, United States Code. The determination shall be in writing and shall contain the reasons for the determination. A determination has been made in writing by the U.S. Government Accountability Office, the U.S. Department of the Treasury, and the Office of Management and Budget, as required by section 10(d) of FACA, that such portions of the meetings may be closed to the public in accordance with subsection (c) of section 552b of title 5, United States Code.

Unless otherwise noted, FASAB meetings begin at 9 a.m. and conclude before 5 p.m. Meetings are either in-person at the U.S. Government Accountability Office (GAO) building at 441 G St. NW or virtual. Unless otherwise noted, the February and June meetings are virtual, and the April, August, October, and December meetings are in-person. Regardless of whether the Board meeting is virtual or in-person, you may observe the meeting virtually.

Authority: 31 U.S.C. 3511(d); Federal Advisory Committee Act, 5 U.S.C. 1001–1014.

Dated: December 4, 2024.

Monica R. Valentine,

Executive Director.

[FR Doc. 2024–28863 Filed 12–6–24; 8:45 am]

FEDERAL ACCOUNTING STANDARDS ADVISORY BOARD

Notice of Appointments Panel Meeting

AGENCY: Federal Accounting Standards Advisory Board.

ACTION: Notice.

SUMMARY: Notice is hereby given that the Appointments Panel, a subcommittee of the Federal Accounting Standards Advisory Board (FASAB), will hold a meeting on January 30, 2025 and February 19, 2025. The Appointments Panel makes recommendations regarding appointments for non-Federal member positions.

FOR FURTHER INFORMATION CONTACT: Ms. Monica R. Valentine, Executive Director, 441 G Street NW, Suite 1155, Washington, DC 20548, or call (202) 512–7350.

SUPPLEMENTARY INFORMATION: The meetings are closed to the public. The reason for the closure is that matters covered by 5 U.S.C. 552b(c)(2) and (6) will be discussed. Any such discussions will involve matters that relate solely to internal personnel rules and practices of the sponsor agencies and the disclosure of information of a personal nature where disclosure would constitute a clearly unwarranted invasion of personal privacy.

Pursuant to section 10(d) of the Federal Advisory Committee Act (FACA), 5 U.S.C. 1009(d), portions of advisory committee meetings may be closed to the public where the head of the agency to which the advisory committee reports determines that such portion of such meeting may be closed to the public in accordance with subsection (c) of section 552b of title 5, United States Code. The determination shall be in writing and shall contain the reasons for the determination. A determination has been made in writing by the U.S. Government Accountability Office, the U.S. Department of the Treasury, and the Office of Management and Budget, as required by section 10(d) of FACA, that such portions of the meetings may be closed to the public in accordance with subsection (c) of section 552b of title 5, United States Code.

Authority: 31 U.S.C. 3511(d); Federal Advisory Committee Act, 5 U.S.C. 1001–1014).

Dated: December 4, 2024.

BILLING CODE 1610–02–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0207; FR ID 266100]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

DATES: Written PRA comments should be submitted on or before February 7, 2025. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicole Ongele, FCC, via email *PRA@fcc.gov* and to *nicole.ongele@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele, (202) 418–2991.

SUPPLEMENTARY INFORMATION: The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

OMB Control Number: 3060–0207.

Title: Part 11—Emergency Alert System (EAS), Order, FCC 21–77.

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit; Not-for-profit institutions; State, Local, or Tribal Government.

Number of Respondents and Responses: 63,084 respondents; 3,588,845 responses.

Estimated Time per Response: 0.017 hours–112 hours.

Frequency of Response: On occasion and annual reporting requirements.

Obligation to Respond: Mandatory and Voluntary. Statutory authority for this information collection is contained in 47 U.S.C. 154(i) and 606 of the Communications Act of 1934, as amended.

Total Annual Burden: 141,414 hours.

Total Annual Cost: No Cost.

Needs and Uses: Part 11 contains rules and regulations addressing the nation's Emergency Alert System (EAS). The EAS provides the President with the capability to provide immediate communications and information to the general public during periods of national emergency over broadcast television and radio, cable, direct broadcast radio and other EAS Participants, as defined in section 11.11(a) of the Commission's rules The EAS also provides State and local governments and the National Weather Service with the capability to provide immediate communications and information to the public concerning emergency situations posing a threat to life and property. Part 11 includes testing requirements to ensure proper and efficient operation of the EAS. State and local use of the EAS, alert processing requirements, and monitoring assignments covering the distribution of EAS alerts within the State, among other things, are required to be described in State EAS Plans that are administered by State Emergency Communications Committees (SECC) and submitted to the FCC annually for approval.

The Order, PS Docket Nos. 15–91 and 15–94, FCC 21–77, pursuant to the directions set forth in Section 9201 of the William M. (Mac) Thornberry National Defense Authorization Act for Fiscal Year 2021, Public Law 116–283, 134 Stat. 3388, sec. 9201 (NDAA21), among other things, (i) requires the Public Safety and Homeland Security Bureau (Bureau) to establish a State EAS Plan Content Checklist composed of the content set forth in section 11.21 of the Commission's rules, (47 CFR 11.21), post the checklist on the FCC's website, and incorporate it as an appendix in ARS user manual; (ii) amend the State EAS Plan requirements in section 11.21

of the Commission's rules to ensure plans are updated annually, require a certification by the SECC Chairperson or Vice-Chairperson that the SECC met (in person, via teleconference, or via other methods of conducting virtual meetings) at least once in the twelve months prior to submitting the annual updated plan, and require that the Bureau approve or reject State EAS Plans submitted for approval within 60 days of receipt; and (iii) require the Bureau to list the approval dates of State EAS Plans submitted on ARS on the Commission's website, and in the event a final decision is made to deny a plan, directly notify the chief executive of the State to which the plan applies of that determination and the reasons for such denial within 30 days of such decision. The Order also amends section 11.45 of the Part 11 rules to enable voluntary reporting to the Commission by the FEMA Administrator and Tribal, State, local or territorial governments of false EAS alerts.

The Commission seeks OMB approval of these rule amendments as an extension of a previously approved information collection. Congress has determined that EAS rule changes are necessary to increase oversight over the distribution of State and local EAS alerts within States, and increase false alert reporting capabilities to help ameliorate confusion or other harmful effects that might result from false EAS alerts. The internal State EAS Plan processing requirements and rule changes adopted in the Order will improve State EAS Plan processing and administration, improving the capabilities and efficacy of EAS as a national system for distributing vital alert information to all Americans, and will do so in a cost-effective manner.

The following information collections contained in Part 11 may be impacted by the rule amendments described herein.

State EAS Plans (47 CFR 11.21)

The establishment of a State EAS Plan Content Checklist for SECCs should have no impact or lessen SECC burdens, and posting it on the FCC's website, and incorporating it as an appendix in the ARS user manual, are routine Bureau activities. The requirement to ensure State EAS Plans are updated annually already was contained in section 11.21, and thus does not represent a new burden.

The amendment to include as a required element in the State EAS Plan, a certification (which will be incorporated into the ARS) by the SECC Chairperson or Vice-Chairperson that the SECC met (in person, via teleconference, or via other methods of conducting virtual meetings) at least once in the twelve months prior to submitting the annual updated plan to review and update their State EAS Plan should promote added diligence in SECC administration of State EAS Plans. The Commission estimates the burden to SECC members in complying with this requirement to be two hours per member.

The rule amendment requiring the Bureau approve or reject State EAS Plans submitted for approval within 60 days of receipt does not impose new burdens on any entity. The Bureau already is charged with reviewing State EAS Plans. The internal requirement that the Bureau list the approval dates of State EAS Plans submitted on ARS on the Commission's website, and in the event a final decision is made to deny a plan, directly notify the chief executive of the State to which the plan applies of that determination and the reasons for such denial within 30 days, does not impose new burdens on any entity. The Bureau already maintains a web page on the Commission's website dedicated to SECC and State EAS Plan information.

False EAS Alert Reporting (47 CFR 11.45)

The amendment enabling the FEMA Administrator and Tribal, State, local or territorial governments to file reports of false EAS alerts provides another mechanism for the Commission to receive information concerning false EAS alerts, does not impose burdens on any entity. Should any permitted government entity voluntarily elect to file a false EAS alert report, the burden associated with this provision amounts to composing an email, which the Commission estimates will take an hour or less to prepare, and falls within the routine activities of government employees. False alert reports help the Commission to identify, investigate, correct and prevent false EAS activations, which enhances the EAS's efficacy and the public trust in the EAS.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

[FR Doc. 2024–28783 Filed 12–6–24; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL DEPOSIT INSURANCE CORPORATION

[OMB No. 3064–0121; –0135]

Agency Information Collection Activities: Proposed Collection Renewal; Comment Request

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice and request for comment.

SUMMARY: The FDIC, as part of its obligations under the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to take this opportunity to comment on the renewal of the existing information collections described below (OMB Control No. 3064–0121 and –0135).

DATES: Comments must be submitted on or before February 7, 2025.

ADDRESSES: Interested parties are invited to submit written comments to the FDIC by any of the following methods:

- *Agency Website: https://www.fdic.gov/resources/regulations/federal-register-publications/.*
- *Email: comments@fdic.gov.* Include the name and number of the collection in the subject line of the message.
- *Mail:* Manny Cabeza (202–898–3767), Regulatory Counsel, MB–3128, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 17th Street NW building (located on F Street NW), on business days between 7 a.m. and 5 p.m.

All comments should refer to the relevant OMB control number. A copy of the comments may also be submitted to the OMB desk officer for the FDIC: Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Manny Cabeza, Regulatory Counsel, 202–898–3767, *mcabeza@fdic.gov,* MB–3128, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

SUPPLEMENTARY INFORMATION: Proposal to renew the following currently approved collections of information:

1. *Title:* Certification of Compliance with Mandatory Bars to Employment.

OMB Number: 3064–0121.

Form Number: 2120/16.

Affected Public: Individuals seeking employment from the FDIC.

Burden Estimate:

SUMMARY OF ESTIMATED ANNUAL BURDEN

[OMB No. 3064–0121]

Information collection (IC) (obligation to respond)	Type of burden (frequency of response)	Number of respondents	Number of responses per respondent	Time per response (HH:MM)	Annual burden (hours)
1. Form 2120/16, (Mandatory)	Reporting (Annual)	866	1	00:10	144
Total Annual Burden (Hours)					144

Source: FDIC.

General Description of Collection: This information collection arises from the reporting requirements contained in 12 CFR part 336, subpart B, of the FDIC Rules and Regulations entitled ''Minimum Standards of Fitness for Employment with the Federal Deposit Insurance Corporation.'' This rule implements section 19 of the Resolution Trust Corporation Completion Act, Public Law 103–204, by (among other things) prescribing a certification, with attachments in some cases, relating to job applicants' fitness and integrity. More specifically, the statute provides that the FDIC shall issue regulations implementing provisions that prohibit any person from becoming employed by the FDIC who has been convicted of any felony; has been removed from, or prohibited from participating in the affairs of, any insured depository institution pursuant to any final enforcement action by any appropriate Federal banking agency; has demonstrated a pattern or practice of defalcation regarding obligations to insured depository institutions; or has caused a substantial loss to Federal deposit insurance funds. This collection of information implements these mandatory bars to employment through a certification, signed by job applicants prior to an offer of employment using Form 2120/16. There is no change in the methodology or substance of this information collection. The increase in total estimated annual burden from 88 hours in 2022 to 144 hours currently is due to an increase in the estimated number of respondents.

2. *Title:* Purchaser Eligibility Certification.

OMB Number: 3064–0135.

Form Number: 7300/06.

Affected Public: Individuals and entities wishing to purchase receivership assets from the FDIC.

Burden Estimate:

SUMMARY OF ESTIMATED ANNUAL BURDEN

[OMB No. 3064–0135]

Information collection (IC) (obligation to respond)	Type of burden (frequency of response)	Number of respondents	Number of responses per respondent	Time per response (HH:MM)	Annual burden (hours)
1. Purchaser Eligibility Certification, 12 CFR 340 (Required to obtain or retain benefits).	Reporting (On Occasion)	140	1	00:30	70
Total Annual Burden (Hours)					70

Source: FDIC.

General Description of Collection: The FDIC is statutorily prohibited from selling assets held by insured depository institutions that have been placed under the conservatorship or receivership of the FDIC to individuals or entities that profited or engaged in wrongdoing at the expense of those failed institutions, or seriously mismanaged those failed institutions. This statutory prohibition is implemented by regulation. The FDIC uses Form No. 7300–06: Purchaser Eligibility Certification (PEC) to determine an entity or person's eligibility to purchase assets. This information collection (IC) pertains to the voluntary submission of the PEC by persons seeking to certify their eligibility to be able to purchase receivership assets. Potential respondents to this IC include any entity or individual that wishes to bid on or purchase assets held by insured depository institutions that have been placed under the conservatorship or receivership of the FDIC. There is no change in the substance of this IC. The decrease in total estimated annual burden from 190 hours in 2022 to 70 hours currently is due a decrease in the estimated number of annual respondents for cash sales, ORE sales, and securities sales as compared to the 2022 IC, reflecting the decrease in forecasted sales. This decrease is attenuated by the inclusion of joint venture transactions in the calculation of the estimated number of respondents, which were not included in the 2022 IC.

Request for Comment

Comments are invited on (a) whether the collections of information are necessary for the proper performance of the FDIC's functions, including whether the information has practical utility; (b) the accuracy of the estimates of the burden of the information collections, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collections of information on respondents, including through the use of automated collection techniques or other forms of information technology. All comments will become a matter of public record.

Federal Deposit Insurance Corporation.

Dated at Washington, DC, December 4, 2024.

James P. Sheesley,

Assistant Executive Secretary.

[FR Doc. 2024–28842 Filed 12–6–24; 8:45 am]

BILLING CODE 6714–01–P

FEDERAL ELECTION COMMISSION

[NOTICE 2024–27]

Filing Dates for the Florida Special Election in the 1st Congressional District

AGENCY: Federal Election Commission.

ACTION: Notice of filing dates for special election.

SUMMARY: Florida has scheduled special elections to fill the U.S. House of Representatives seat in the 1st Congressional District vacated by Representative Matt Gaetz.

DATES: There are two possible special elections, but only one may be necessary.

- *Special Primary Election:* January 28, 2025.
- *Possible Special General Election:* January 28, 2025. In the event that all partisan nominations are uncontested and the Special Primary Election is not necessary, the Special General Election will instead be held on January 28, 2025.
- *Special General Election:* April 1, 2025. However, if a Special Primary Election is not necessary, the Special General Election will be held on January 28, 2025.

ADDRESSES: 1050 First Street NE, Washington, DC 20463.

FOR FURTHER INFORMATION CONTACT: Ms. Elizabeth S. Kurland, Information Division, (202) 694–1100 or (800) 424–9530, *info@fec.gov.*

SUPPLEMENTARY INFORMATION:

Principal Campaign Committees

Special Primary Only

All principal campaign committees of candidates only participating in the Florida Special Primary shall file a consolidated Pre-Primary and Year-End Report on January 16, 2025. (See charts below for the closing date for the report.)

Special Primary and Special General Elections

If two elections are held, all principal campaign committees of candidates who participate in the Florida Special Primary and Special General Election shall file a consolidated Pre-Primary and Year-End Report on January 16, 2025; a Pre-General Report on March 20, 2025, and a Post-General Report on May 1, 2025. (See charts below for the closing date for each report.)

Special General Election

If only one election is held, all principal campaign committees of candidates who participate in the Florida Special General Election shall file a consolidated Pre-General and Year-End Report on January 16, 2025, and a Post-General Report on February 27, 2025. (See charts below for the closing date for each report.)

Note that these reports are in addition to the campaign committee's regular quarterly filings. (See charts below for the closing date for each report).

Unauthorized Committees (PACs and Party Committees)

Political committees not filing monthly are subject to special election reporting if they make previously undisclosed contributions or expenditures in connection with the Florida Special Primary or Special General Election by the close of books for the applicable report(s). (See charts below for the closing date for each report.)

Since disclosing financial activity from two different calendar years on one report would conflict with the calendar year aggregation requirements stated in the Commission's disclosure rules, unauthorized committees that trigger the filing of the consolidated Pre-Primary and Year-End Report (if two elections are held) or the consolidated Pre-General and Year-End Report (if one election is held) will be required to file this report on two separate forms: One form to cover 2024 activity, labeled as the Year-End Report; and the other form to cover only 2025 activity, labeled as the Pre-Primary or Pre-General Report, as applicable. Both forms must be filed by January 16, 2025.

Committees filing monthly that make contributions or expenditures in connection with the Florida Special Primary or Special General Election will continue to file according to the monthly reporting schedule.

Additional disclosure information for the Florida special elections may be found on the FEC website at *https://www.fec.gov/help-candidates-and-committees/dates-and-deadlines/.*

Disclosure of Lobbyist Bundling Activity

Principal campaign committees, party committees and leadership PACs that are otherwise required to file reports in connection with the special elections must simultaneously file FEC Form 3L if they receive two or more bundled contributions from lobbyists/registrants or lobbyist/registrant PACs that aggregate in excess of the lobbyist bundling threshold during the special election reporting periods. (See charts below for closing date of each period.) 11 CFR 104.22(a)(5)(v), (b), 110.17(e)(2), (f).

The lobbyist bundling disclosure threshold for calendar year 2024 is $22,700. This threshold amount may change in 2025 based upon the annual cost of living adjustment (COLA). As soon as the adjusted threshold amount is available, the Commission will publish it in the **Federal Register** and post it on its website. 11 CFR 104.22(g) and 110.17(e)(2).

CALENDAR OF REPORTING DATES FOR FLORIDA SPECIAL ELECTIONS

Report	Close of books [1]	Reg./cert. & overnight mailing deadline	Filing deadline
If Two Elections Are Held, Candidate Committees Involved in Only the Special Primary (01/28/2025) Must File:			
Pre-Primary & Year-End [2]	01/08/2025	01/13/2025	01/16/2025
April Quarterly	03/31/2025	04/15/2025	04/15/2025
If Two Elections Are Held, PACs and Party Committees Not Filing Monthly Involved in Only the Special Primary (01/28/2025) Must File:			
Pre-Primary & Year-End [2]	01/08/2025	01/13/2025	01/16/2025
Mid-Year	06/30/2025	07/31/2025	07/31/2025
If Two Elections Are Held, Candidate Committees Involved in Both the Special Primary (01/28/2025) and Special General (04/01/2025) Must File:			
Pre-Primary & Year-End [2]	01/08/2025	01/13/2025	01/16/2025

Mid-Year	06/30/2025	07/31/2025	07/31/2025

[1] The reporting period always begins the day after the closing date of the last report filed. If the committee is new and has not previously filed a report, the first report must cover all activity that occurred before the committee registered as a political committee up through the close of books for the first report due.
[2] Committees should file a consolidated Pre-Primary & Year-End Report by the filing deadline of the Pre-Primary Report.
[3] Committees should file a consolidated Pre-General & Year-End Report by the filing deadline of the Pre-General Report (if primary not held).

Dated: December 3, 2024.

On behalf of the Commission,

Sean J. Cooksey,

Chairman, Federal Election Commission.

BILLING CODE 6715–01–P

FEDERAL ELECTION COMMISSION

[NOTICE 2024–28]

Filing Dates for the Florida Special Election in the 6th Congressional District

AGENCY: Federal Election Commission.

ACTION: Notice of filing dates for special election.

SUMMARY: Florida has scheduled special elections to fill the U.S. House of Representatives seat in the 6th Congressional District being vacated by Representative Michael Waltz.

DATES: There are two possible special elections, but only one may be necessary.

- *Special Primary Election:* January 28, 2025.
- *Possible Special General Election:* January 28, 2025. In the event that all partisan nominations are uncontested and the Special Primary Election is not necessary, the Special General Election will instead be held on January 28, 2025.
- *Special General Election:* April 1, 2025. However, if a Special Primary Election is not necessary, the Special General Election will be held on January 28, 2025.

ADDRESSES: 1050 First Street NE, Washington, DC 20463.

FOR FURTHER INFORMATION CONTACT: Ms. Elizabeth S. Kurland, Information Division, (202) 694–1100 or (800) 424–9530, *info@fec.gov.*

SUPPLEMENTARY INFORMATION:

Principal Campaign Committees

Special Primary Only

All principal campaign committees of candidates *only* participating in the Florida Special Primary shall file a consolidated Pre-Primary and Year-End Report on January 16, 2025. (See charts below for the closing date for the report.)

Special Primary and Special General Elections

If two elections are held, all principal campaign committees of candidates who participate in the Florida Special Primary and Special General Election shall file a consolidated Pre-Primary and Year-End Report on January 16, 2025; a Pre-General Report on March 20, 2025, and a Post-General Report on May 1, 2025. (See charts below for the closing date for each report.)

Special General Election

If only one election is held, all principal campaign committees of candidates who participate in the Florida Special General Election shall file a consolidated Pre-General and Year-End Report on January 16, 2025, and a Post-General Report on February 27, 2025. (See charts below for the closing date for each report.)

Note that these reports are in addition to the campaign committee's regular quarterly filings. (See charts below for the closing date for each report).

Unauthorized Committees (PACs and Party Committees)

Political committees not filing monthly are subject to special election reporting if they make previously undisclosed contributions or expenditures in connection with the Florida Special Primary or Special General Election by the close of books for the applicable report(s). (See charts below for the closing date for each report.)

Since disclosing financial activity from two different calendar years on one report would conflict with the calendar year aggregation requirements stated in the Commission's disclosure rules, unauthorized committees that trigger the filing of the consolidated Pre-Primary and Year-End Report (if two elections are held) or the consolidated Pre-General and Year-End Report (if one election is held) will be required to file this report on two separate forms: One form to cover 2024 activity, labeled as the Year-End Report; and the other form to cover only 2025 activity, labeled as the Pre-Primary or Pre-General Report, as applicable. Both forms must be filed by January 16, 2025.

Committees filing monthly that make contributions or expenditures in connection with the Florida Special Primary or Special General Election will continue to file according to the monthly reporting schedule.

Additional disclosure information for the Florida special elections may be found on the FEC website at *https://www.fec.gov/help-candidates-and-committees/dates-and-deadlines/.*

Disclosure of Lobbyist Bundling Activity

Principal campaign committees, party committees and leadership PACs that are otherwise required to file reports in connection with the special elections must simultaneously file FEC Form 3L if they receive two or more bundled contributions from lobbyists/registrants or lobbyist/registrant PACs that aggregate in excess of the lobbyist bundling threshold during the special election reporting periods. (See charts below for closing date of each period.) 11 CFR 104.22(a)(5)(v), (b), 110.17(e)(2), (f).

The lobbyist bundling disclosure threshold for calendar year 2024 is $22,700. This threshold amount may change in 2025 based upon the annual cost of living adjustment (COLA). As soon as the adjusted threshold amount is available, the Commission will publish it in the **Federal Register** and post it on its website. 11 CFR 104.22(g) and 110.17(e)(2).

CALENDAR OF REPORTING DATES FOR FLORIDA SPECIAL ELECTIONS

Report	Close of books [1]	Reg./Cert. & overnight mailing deadline	Filing deadline

FEDERAL ELECTION COMMISSION

Sunshine Act Meetings

TIME AND DATE: Thursday, December 12, 2024, 10:00 a.m.

PLACE: Hybrid meeting: 1050 First Street NE, Washington, DC (12TH Floor) and virtual.

Note: If you would like to virtually access the meeting, see the instructions below.

STATUS: This meeting will be open to the public. To access the meeting virtually, go to the Commission's website *www.fec.gov* and click on the banner to be taken to the meeting page.

MATTERS TO BE CONSIDERED:

Draft Advisory Opinion 2024–15: Unified Libertarians of Massachusetts
MUR 1604 (Brady Campaign to Prevent Gun Violence, et al): Recommendation to Relieve the Brady Campaign from a Remedial Measure in a Conciliation Agreement
REG 2024–06 (Request to Modify or Redact Contributor Info)—Draft Notice of Proposed Rulemaking
Draft Legislative Recommendations 2024
Sample LLC Donor Form
Recommendation That the Office of General Counsel Conduct a Review of the Agency's Regulations
Proposed Revisions to Directives 10 (Rules of Procedure of the Federal Election Commission Pursuant to 2 U.S.C. 437(c)(e)) and 17 (Circulation Authority; Agenda Deadline Procedures)
Election of Officers for 2025
Management and Administrative Matters

CONTACT PERSON FOR MORE INFORMATION: Judith Ingram, Press Officer, Telephone: (202) 694–1220.

Individuals who plan to attend in person and who require special assistance, such as sign language interpretation or other reasonable accommodations, should contact Laura E. Sinram, Secretary and Clerk, at (202) 694–1040 or *secretary@fec.gov,* at least 72 hours prior to the meeting date.

(Authority: Government in the Sunshine Act, 5 U.S.C. 552b)

Laura E. Sinram,

Secretary and Clerk of the Commission.

BILLING CODE 6715–01–P

FEDERAL MEDIATION AND CONCILIATION SERVICE

Succession Plan for the Federal Mediation and Conciliation Service

AGENCY: Federal Mediation and Conciliation Service (FMCS).

ACTION: Notice of succession plan for the FMCS.

SUMMARY: The Federal Mediation and Conciliation Service (FMCS) is issuing this notice to inform the public of the succession plan for the Federal Mediation and Conciliation Service (FMCS) provided by the Director of FMCS. This notice supersedes all prior succession plans issued by the agency for officials performing the functions and duties of the Director of FMCS.

DATES: This succession plan for the FMCS is effective December 9, 2024.

FOR FURTHER INFORMATION CONTACT: For specific questions related to this notice, please contact Greg Goldstein, 202–606–8111, *ggoldstein@fmcs.gov.*

SUPPLEMENTARY INFORMATION: By the authority vested in the Director of the Federal Mediation and Conciliation Service (FMCS) by 29 U.S.C. 172, and to provide for the continuity of essential operations of the FMCS in all circumstances this Notice provides the succession plan of officials authorized to perform the functions and duties of the Director of the Federal Mediation and Conciliation Service. The following is the succession plan of officials hereby ordered:

Order of Succession

During any period in which the Director has died, resigned, or otherwise become unable to perform the functions and duties of the office of the Director, and there is no Acting Director serving under the Federal Vacancies Reform Act of 1998, 5 U.S.C. 3345–3349d, the following officers of the FMCS, in the order listed, are hereby delegated the authority to perform the functions and duties of the Director, to the extent permitted by law:

1. Principal Deputy, Chief Operating Officer;
2. Deputy Director, Field Operations;
3. Deputy Director for Labor Policy and Communications;
4. Director, Procurement and Operational Support;
5. General Counsel;
6. Associate Deputy Director for Field Operations, National;
7. Associate Deputy Director for Field Operations, Regional;
8. Director, Human Resources; and
9. Director, Budget.

No individual who is serving in an office listed in this order in an acting capacity, by virtue of so serving, shall be delegated the functions and duties of the Director.

Dated: December 4, 2024.

Gregory Goldstein,

Chief Operating Officer Performing the Duties of the Director.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Supplemental Evidence and Data Request on Medical Care for Adults With Down Syndrome

AGENCY: Agency for Healthcare Research and Quality (AHRQ), HHS.

ACTION: Request for supplemental evidence and data submission.

SUMMARY: The Agency for Healthcare Research and Quality (AHRQ) is seeking scientific information submissions from the public. Scientific information is being solicited to inform our review on *Medical Care for Adults with Down Syndrome,* which is currently being conducted by the AHRQ's Evidence-based Practice Centers (EPC) Program. Access to published and unpublished pertinent scientific information will improve the quality of this review.

DATES: *Submission Deadline* on or before January 8, 2025.

ADDRESSES:

Email submissions: epc@ahrq.hhs.gov.

Print submissions:

Mailing Address: Center for Evidence and Practice Improvement, Agency for Healthcare Research and Quality, ATTN: EPC SEADs Coordinator, 5600 Fishers Lane Mail Stop 06E53A, Rockville, MD 20857

Shipping Address (FedEx, UPS, etc.): Center for Evidence and Practice Improvement, Agency for Healthcare Research and Quality, ATTN: EPC SEADs Coordinator, 5600 Fishers Lane, Mail Stop 06E77D, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Kelly Carper, telephone: 301–427–1656 or email: *epc@ahrq.hhs.gov.*

SUPPLEMENTARY INFORMATION: The Agency for Healthcare Research and Quality has commissioned the Evidence-based Practice Centers (EPC) Program to complete a review of the evidence for *Medical Care for Adults with Down Syndrome.* AHRQ is conducting this review pursuant to section 902 of the Public Health Service Act, 42 U.S.C. 299a.

The EPC Program is dedicated to identifying as many studies as possible that are relevant to the questions for each of its reviews. In order to do so, we are supplementing the usual manual and electronic database searches of the literature by requesting information from the public (*e.g.,* details of studies conducted). We are looking for studies that report on *Medical Care for Adults with Down Syndrome.* The entire research protocol is available online at: *https://effectivehealthcare.ahrq.gov/products/care-adults-down-syndrome/protocol.*

This is to notify the public that the EPC Program would find the following information on *Medical Care for Adults with Down Syndrome* helpful:

- A list of completed studies that your organization has sponsored for this topic. In the list, please *indicate whether results are available on ClinicalTrials.gov along with the ClinicalTrials.gov trial number.*
- *For completed studies that do not have results on ClinicalTrials.gov,* a summary, including the following elements, if relevant: study number, study period, design, methodology, indication and diagnosis, proper use instructions, inclusion and exclusion criteria, primary and secondary outcomes, baseline characteristics, number of patients screened/eligible/enrolled/lost to follow-up/withdrawn/analyzed, effectiveness/efficacy, and safety results.
- *A list of ongoing studies that your organization has sponsored for this topic.* In the list, please provide the ClinicalTrials.gov trial number or, if the trial is not registered, the protocol for the study including, if relevant, a study number, the study period, design, methodology, indication and diagnosis, proper use instructions, inclusion and exclusion criteria, and primary and secondary outcomes.
- Description of whether the above studies constitute *ALL Phase II and above clinical trials* sponsored by your organization for this topic and an index outlining the relevant information in each submitted file.

Your contribution is very beneficial to the Program. Materials submitted must be publicly available or able to be made public. Materials that are considered confidential; marketing materials; study types not included in the review; or information on topics not included in the review cannot be used by the EPC Program. This is a voluntary request for information, and all costs for complying with this request must be borne by the submitter.

The draft of this review will be posted on AHRQ's EPC Program website and available for public comment for a period of 4 weeks. If you would like to be notified when the draft is posted, please sign up for the email list at: *https://effectivehealthcare.ahrq.gov/email-updates.*

The review will answer the following questions. This information is provided as background. AHRQ is not requesting that the public provide answers to these questions.

Key Questions (KQ)

1. What are the benefits, harms, and considerations of screening and diagnostic interventions, for co-occurring medical and behavioral health conditions in adults with Down syndrome?

2. What are the benefits and harms, and considerations of interventions to treat co-occurring medical and behavioral health conditions specifically in adults with Down syndrome?

Contextual Questions (CQ)

1. What conditions occur at an increased or decreased prevalence in adults with Down syndrome compared to the general adult population. How does prevalence vary by age/decade of age, gender, setting (rural), and race/ethnicity?

2. How do clinical symptoms and the presentation of common co-occurring behavioral/mental health conditions (*e.g.,* anxiety and depression) differ among adults with Down syndrome compared to their presentation in the general adult population?

PICOTS (POPULATIONS, INTERVENTIONS, COMPARATORS, OUTCOMES, TIMING, AND SETTING)

PICOTS	KQ1	KQ2
Population	Adults 18+ years of age with Down syndrome. *Subgroups:* demographics (age, race, ethnicity, gender), geography (rural and urban), socioeconomic status.	Adults 18+ years of age with Down syndrome *Subgroups:* demographics (age, race, ethnicity, gender), geography (rural and urban), socioeconomic status.
Intervention	Screening/diagnostic tests for co-occurring medical conditions in adults with Down syndrome.	Treatment interventions for co-occurring medical conditions in adults with Down syndrome.
Comparator	Alternative test for screening/diagnosis or no screening.	For all conditions, compared with usual care or alternative intervention for treatment.
Outcome	*Benefits:* accurate diagnosis, time to diagnosis or intervention/treatment. Health and quality of life outcomes. *Harms:* adverse events related to screening/diagnosis (mortality, medical trauma, unnecessary testing, etc.).	*Intermediate outcomes:* Treatment adherence. Lab values. Healthcare utilization. *Final outcomes:* Change in standardized symptom measures. Morbidity/mortality. Quality of life. Functional outcomes (*e.g.,* activities of daily living, assisted living/nursing home status). Caregiver or family outcomes (including caregiver health and quality of life). *Harm outcomes:* Adverse treatment effects.
Timing	All duration and follow up.	All duration and follow up.
Setting	US and non-US settings. All healthcare settings (*e.g.*, primary care, specialty care, specialized clinics, etc.)	US and non-US settings. All healthcare settings (*e.g.*, primary care, specialty care, specialized clinics, etc.).

Abbreviations: KQ = key question.

Dated: December 3, 2024.

Marquita Cullom,

Associate Director.

BILLING CODE 4160–90–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–319, CMS–2088–17, CMS–224–14 and CMS–R–297/CMS–L564]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by January 8, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.*

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Reinstatement without change of a previously approved collection; *Use:* Title XIX and title XXI State agencies are required to submit the MEQC pilot planning document in accordance with § 431.814(b), and the MEQC case level and CAP reports based on pilot findings in accordance with §§ 431.816 and 431.820, respectively.

The primary users of this information are State Medicaid (and where applicable CHIP) agencies and CMS. State agencies are expected to use the information collected for continuous quality improvement purposes. They will identify patterns of error in their eligibility processing operations and systems and take corrective actions to address issues and improve the eligibility determination process. CMS will use the data collected to identify and help those States that are most in need of technical assistance. CMS will also use the data set to identify potential weaknesses in Federal regulations. It will propose regulatory modifications designed to ensure that there are more effective quality controls in the eligibility determination process.; *Form Number:* CMS–319 (OMB control number: 0938–0147); *Frequency:* Occasionally; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 35; *Number of Responses:* 647; *Total Annual Hours:* 9,840. (For policy questions regarding this collection contact Camiel Rowe at 410–786–0069.)

2. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Community Mental Health Center Cost Report *Use:* CMS requires the Form CMS–2088–17 to determine a provider's reasonable cost incurred in furnishing medical services to Medicare beneficiaries and reimbursement due to or from a provider. In addition, CMHCs may receive reimbursement through the cost report for Medicare reimbursable bad debts. CMS uses the Form CMS–2088–17 for rate setting; payment refinement activities, including market basket analysis; Medicare Trust Fund projections; and to support program operations. The primary function of the cost report is to determine provider reimbursement for services rendered to Medicare beneficiaries. Each CMHC submits the cost report to its contractor for reimbursement determination. Section 1874A of the Act describes the functions of the contractor. CMHCs must follow the principles of cost reimbursement, which require they maintain sufficient financial records and statistical data for proper determination of costs. The S series of worksheets collects the provider's location, CBSA, date of certification, operations, and unduplicated census days. The A series of worksheets collects the provider's trial balance of expenses for overhead costs, direct patient care services, and non-revenue generating cost centers. The B series of worksheets allocates the overhead costs to the direct patient care and non-revenue generating cost centers using functional statistical bases. The Worksheet C computes the apportionment of costs between Medicare beneficiaries and other patients. The D series of worksheets are Medicare specific and calculate the reimbursement settlement for services rendered to Medicare beneficiaries. The Worksheet F collects the provider's revenues and expenses data from the provider's income statement. *Form Number:* CMS–2088–17 (OMB control number: 0938–0378); *Frequency:* Annually; *Affected Public:* Private Sector, Business or other for-profits, Not-for-profits institutions; *Number of Respondents:* 191; *Total Annual Responses:* 191; *Total Annual Hours:* 17,190. (For policy questions regarding this collection contact Jill Keplinger at 410–786–4550.)

3. *Type of Information Collection Request:* Extension of a previously approved collection; *Title of Information Collection:* Federally Qualified Health Center Cost Report Form; *Use:* The Form CMS–224–14 cost report is needed to determine a provider's reasonable cost incurred in furnishing medical services to Medicare beneficiaries and to calculate the FQHC settlement amount. These providers, paid under the FQHC prospective payment system (PPS), may receive reimbursement outside of the PPS for Medicare reimbursable bad debts, pneumococcal, influenza, and COVID–19 vaccines, and monoclonal antibody products. CMS uses the Form CMS–224–14 for rate setting; payment refinement activities, including developing a FQHC market basket; Medicare Trust Fund projections; and to support program operations. Additionally, the Medicare Payment Advisory Commission (MedPAC) uses the FQHC Medicare cost report data to calculate Medicare margins; to formulate recommendations to Congress regarding the FQHC PPS; and to conduct additional analysis of the FQHC PPS. *Form Number:* CMS–224–14 (OMB control number: 0938–1298); *Frequency:* Yearly; *Affected Public:* Private Sector, State, Local, or Tribal Governments, Federal Government, Business or other for-profits, Not-for-Profit Institutions; *Number of Respondents:* 2,967; *Total Annual Responses:* 2,967; *Total Annual Hours:* 172,086. (For policy questions regarding this collection contact LuAnn Piccione at 410–786–5423.)

4. *Type of Information Collection Request:* Extension of a currently approved information collection; *Title of Information Collection:* Medicare Request for Employment Information; *Use:* Section 1837(i) of the Social Security Act (the Act) provides for a SEP for individuals who delay enrolling in Medicare Part B because they are covered by a group health plan based on their own or a spouse's current employment status. Disabled individuals with Medicare may also delay enrollment because they have large group health plan coverage based on their own or a family member's current employment status. When these individuals apply for Medicare Part B, they must provide proof that the group health plan coverage is (or was) based on current employment status. Form CMS L564 provides this proof so that SSA can determine eligibility for the SEP. Individuals eligible for the SEP can enroll in Part B without incurring a late enrollment penalty (LEP). Individuals may also use this form to prove that their group health plan coverage is based on current employment status and to have the assessed Medicare LEP reduced. *Form Number:* CMS–R–297/CMS–L564 (OMB control number: 0938–0787); *Frequency:* Annually; *Affected Public:* Individuals or households, Business or other for-profits and Not-for-profit institutions; *Number of Respondents:* 594,998; *Total Annual Responses:* 594,998; *Total Annual Hours:* 243,949. (For policy questions regarding this collection contact Candace Carter at 410–786–8466 or *Candace.Carter@cms.hhs.gov*).

William N. Parham, III,

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

[FR Doc. 2024–28857 Filed 12–6–24; 8:45 am]

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for Office of Management and Budget for Review and Approval; ''State SNAP Agency NDNH Matching Program Performance Report'' (Office of Management Budget #: 0970–0464)

AGENCY: Office of Child Support Services, Administration for Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: OCSS is requesting the Office of Management and Budget (OMB) to approve the ''State SNAP Agency NDNH Matching Program Performance Report,''

with minor revisions, for an additional three years. State agencies administering their Supplemental Nutrition Assistance Program (SNAP) provide the annual performance report to OCSS in accordance with the computer matching agreement between state SNAP agencies and OCSS. The current OMB approval expires on February 28, 2025.

DATES: Comments due January 8, 2025. The Office of Management and Budget (OMB) must make a decision about the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. You can also obtain copies of the proposed collection of information by emailing *infocollection@acf.hhs.gov.* Identify all emailed requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: State agencies administering SNAP are mandated to participate in a computer matching program with OCSS. The matching program compares SNAP applicant and recipient information with employment and wage information maintained in the National Directory of New Hires (NDNH). The outcomes of the compared information help State SNAP agencies verify an individual's identity and determine a benefit eligibility. To receive NDNH information, state agencies enter into a computer matching agreement and adhere to its terms and conditions, including providing OCSS with annual performance outcomes attributable to the use of NDNH information. To fulfill OMB requirements, OCSS periodically reports performance measurements demonstrating how the use of information in the NDNH supports the OCSS strategic mission, goals, and objectives. These periodic reports include information derived from state SNAP agency annual NDNH performance reports. OCSS provides states with required performance report template and instructions, which OCSS revised to update the submission contacts and formatting, improve grammar, and to change ''Office of Child Support Enforcement (OCSE)'' to ''Office of Child Support Services (OCSS).''

Respondents: State SNAP Agencies.

ANNUAL BURDEN ESTIMATES

Information collection instrument	Total number of respondents	Annual number of responses per respondent	Average burden hours per response	Total annual burden hours
SNAP Agency Performance Reporting Tool and Instructions	53	1	0.83	43.99

Authority: 42 U.S.C. 653(j)(10); 5 U.S.C. 552a; and Pub. L. 111–352.

Mary C. Jones,

ACF/OPRE Certifying Officer.

[FR Doc. 2024–28760 Filed 12–6–24; 8:45 am]

BILLING CODE 4184–41–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Electronic Document Exchange (Office of Management and Budget #: 0970–0435)

AGENCY: Office of Child Support Services, Administration for Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: The Office of Child Support Services (OCSS), Administration for Children and Families (ACF), is requesting the Office of Management and Budget (OMB) to approve the Electronic Document Exchange (EDE), with minor revisions, for an additional three years. State child support agencies (CSAs) use the EDE to improve case processing. The current OMB approval expires on June 30, 2025.

DATES: Comments due February 7, 2025. In compliance with the requirements of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: You can obtain copies of the proposed collection of information and submit comments by emailing *infocollection@acf.hhs.gov.* Identify all requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The EDE provides a centralized, secure system for authorized users in state CSAs to electronically exchange child support and spousal support case information with other state CSAs. EDE benefits state CSAs by reducing delays, costs, and barriers associated with interstate case processing. It increases state collections, improves document security, standardizes data sharing, increases state participation, and improves case processing, resulting in better overall child and spousal support outcomes. OCSS made minor updates to the Portal screens to enhance functionality and changed ''Office of Child Support Enforcement (OCSE)'' to ''Office of Child Support Services (OCSS).''

Respondents: State CSAs

ANNUAL BURDEN ESTIMATES

Instrument	Annual number of respondents	Annual number of responses per respondent	Average burden hours per response	Annual burden hours
EDE Screens	49	7,383	0.017	6,150

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Authority: 42 U.S.C. 652(a)(7); 42 U.S.C. 666(c)(1); and 45 CFR 303.7(a)(5).

Mary C. Jones,

ACF/OPRE Certifying Officer.

[FR Doc. 2024–28766 Filed 12–6–24; 8:45 am]

BILLING CODE 4184–41–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Request for Certification of Adult Victims of Human Trafficking

AGENCY: Office on Trafficking in Persons, Administration for Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: The Administration for Children and Families (ACF), Office on Trafficking in Persons (OTIP) is requesting a 3-year extension of the form: Request for Certification of Adult Victims of Human Trafficking (RFC) form (Office of Management and Budget (OMB) #: 0970–0454, expiration April 30, 2025).

DATES: Comments due February 7, 2025. In compliance with the requirements of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: You can obtain copies of the proposed collection of information and submit comments by emailing *infocollection@acf.hhs.gov.* All requests should be identified by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The U.S. Department of Health and Human Services (HHS) provides letters of certification to victims of severe forms of trafficking in persons under the authority of the Trafficking Victims Protection Act of 2000 (TVPA), as amended 22 U.S.C. 7105(b)(1)(C) and (E). HHS delegated this authority to OTIP. Certification is required for foreign national adult victims of human trafficking in the U.S. to apply for federally funded benefits and services.

OTIP developed the RFC form for potential victims and their advocates, including case managers, attorneys, law enforcement officers, service providers, and other representatives to provide the required information for certification to HHS in accordance with the TVPA of 2000, as amended.

Since the RFC form originally received clearance, OTIP modernized its request process and launched Shepherd, an online case management system, to process requests for certification and assistance. The PDF version of the form should only be used in exceptional circumstances when the online case management system is inaccessible. If a requester encounters issues submitting a request through Shepherd, they may submit the RFC form to OTIP as a password protected PDF to *Trafficking@acf.hhs.gov.*

The form asks the requester for their identifying information, identifying information for the individual who experienced trafficking victimization in the event the form is submitted by a case manager, and information describing the victim's case management service needs.

Respondents: Potential victims of a severe form of trafficking in persons and their advocates, including case managers, attorneys, law enforcement officers, service providers, and other representatives.

Annual Burden Estimates

The fluctuation in certification letters issued by HHS primarily reflects changing patterns in law enforcement investigations and the number of T visas and Continued Presence status issued by the Department of Homeland Security (DHS). In April 2024, DHS U.S. Citizenship and Immigration Services (USCIS) issued a (89 FR 34864*)* updating regulations that govern the requirements and procedures for foreign nationals who have experienced human trafficking seeking a T visa and eligible family members seeking derivative T–2 nonimmigrant status (T visa derivative). The Final Rule established a process for USCIS to conduct bona fide determinations (BFDs). Principal applicants who have submitted a complete bona fide T visa application will receive a BFD and are eligible for case management services and for benefits and services to the same extent as refugees through HHS Certification while their application is pending. OTIP anticipates that the USCIS Final Rule will significantly increase the number of requests for certification received. Since the Final Rule went into effect, OTIP has received approximately 100 RFCs per week, whereas historically, OTIP received approximately 8 to 12 RFCs per week. Burden estimates for this collection have been revised, accordingly.

Instrument	Total number of respondents	Total number of responses per respondent	Average burden hours per response	Total burden hours	Annual burden hours
Request for Certification of Adult Victims of Human Trafficking	15,600	1	1	15,600	5,200

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Authority: 22 U.S.C. 7105.

Mary C. Jones,

ACF/OPRE Certifying Officer.

[FR Doc. 2024–28819 Filed 12–6–24; 8:45 am]

BILLING CODE 4184–47–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for Office of Management and Budget Review; Child Support Portal Registration (Office of Management and Budget #: 0970–0370)

AGENCY: Office of Child Support Services, Administration for Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: The Office of Child Support Services (OCSS), Administration for Children and Families (ACF), is requesting the federal Office of Management and Budget (OMB) approve the ''Child Support Portal Registration,'' with minor revisions, for an additional three years. The OCSS Child Support Portal (''Portal'') contains applications to help state child support agencies administer their programs. Authorized Portal users must register with OCSS to access Portal applications and provide OCSS with certain Portal application preferences. The current OMB approval expires on February 28, 2025.

DATES: Comments due January 8, 2025. OMB must make a decision about the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. You can also obtain copies of the proposed collection of information by emailing *infocollection@acf.hhs.gov.* Identify all emailed requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: OCSS maintains the Portal, which contains various applications through which authorized users may view, update, upload, or download information for child support purposes. Authorized users must register to access the Portal. The OCSS Portal authenticates registrants and then creates secure profiles for authorized users for employers, insurers, and financial institutions based on information provided in the Employer Services Profile and Insurance Match Debt Inquiry Portal Agreement and Profile forms. Information provided in the electronic National Medical Support Notice (e-NMSN), the electronic Incoming Withholding Order (e-IWO), and the Federally Assisted State Transmitted (FAST) Levy Financial Institution Profile forms gives OCSS the necessary information to set up the respective program user's process and capture preferences. State child support agencies manage and authenticate authorization for individual users via the state proxy server; therefore, a Portal Registration form is not required. State users must, however, provide OCSS with their respective Portal preferences. The information OCSS collects for the Portal registration and profiles remains the same but they underwent minor clarification revisions and edits to update ''Office of Child Support Enforcement (OCSE)'' to ''Office of Child Support Services (OCSS).'' OCSS revised the ''Registration Screen'' burden after the 60-day notice published to correctly reflect the current number of respondents and removed ''agreement'' from the Employer Services Profile form. OCSS also removed the e-NMSN Plan Administrator form because there are no respondents.

Respondents: Employers, Financial Institutions, Insurers, and State Child Support Agencies.

ANNUAL BURDEN ESTIMATES

Information collection instrument	Total annual estimated number of respondents	Total annual number of responses per respondent	Average burden hours per response	Total annual burden hours
Portal Registration Screens	16,268	1	0.15	2,440.20
Employer Services Profile	20,040	1	0.08	1,603.20
e-NMSN: Employer Profile	20	1	0.22	4.40
e-NMSN: State Profile	4	1	0.22	0.88
e-IWO Employer/Payroll Provider Profile	117	1	0.08	9.36
Insurance Match Debt Inquiry Agreement and Profile	6	1	0.08	0.48
FAST Levy Financial Institution Profile	2	1	0.08	0.16

Estimated Total Annual Burden Hours: 4,058.68.

Authority: 42 U.S.C. 653(m)(2) and 44 U.S.C. 3554.

Mary C. Jones,

ACF/OPRE Certifying Officer.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–D–0481]

Standardized Format for Electronic Submission of Marketing Application Content for the Planning of Bioresearch Monitoring Inspections for Center for Drug Evaluation and Research Submissions; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is announcing the availability of the guidance for industry entitled ''Standardized Format for Electronic Submission of NDA and BLA Content for the Planning of Bioresearch Monitoring (BIMO) Inspections for CDER Submissions.'' This guidance describes the electronic submission of certain data and information in standardized formats. This information is used by the Center for Drug Evaluation and Research (CDER) in the planning of, and by FDA's Office of Inspections and Investigations (OII) in the conduct of, BIMO inspections.

DATES: The announcement of the guidance is published in the **Federal Register** on December 9, 2024.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2018–D–0481 for ''Standardized Format for Electronic Submission of NDA and BLA Content for the Planning of Bioresearch Monitoring (BIMO) Inspections for CDER Submissions.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *http://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments, and you must identify this information as ''confidential.'' Any information marked ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box, and follow the prompts; and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time ((see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Emily Gebbia, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 240–402–0980.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled ''Standardized Format for Electronic Submission of NDA and BLA Content for the Planning of Bioresearch Monitoring Inspections (BIMO) for CDER Submissions.'' This guidance describes the electronic submission of certain data and information in standardized formats. CDER uses the data and information described in the guidance to plan BIMO inspections. The guidance addresses major (*i.e.,* pivotal) studies used to support safety and efficacy claims in new drug applications (NDAs), biologic license applications (BLAs) regulated by CDER, as well as supplements containing new clinical study reports.

To meet its review performance goals in accordance with CDER good review management principles and practices for products covered by the Prescription Drug User Fee Act, CDER generally initiates inspection planning early in the application review process (*i.e.,* during the filing determination and review planning phase). CDER's inspection planning includes the selection of clinical investigator sites and other regulated entities for on-site inspections, and the preparation of assignment memos and background packages that CDER provides to OII investigators, who perform FDA's BIMO inspections. CDER uses the data and information described in this guidance to plan BIMO inspections, including: (1) to facilitate the timely identification of sites for inspection and (2) to ensure the availability of information needed to conduct BIMO inspections by OII investigators.

This guidance finalizes the draft guidance entitled ''Standardized Format for Electronic Submission of NDA and BLA Content for the Planning of Bioresearch Monitoring (BIMO) Inspections for CDER Submissions'' issued on February 16, 2018 (83 FR 7043). The draft guidance superseded the previously issued draft guidance for industry ''Providing Submissions in Electronic Format—Summary Level Clinical Site Data for CDER's Inspection Planning'' issued on December 19, 2012 (77 FR 75174).

We reviewed all comments received on the draft guidance issued on February 16, 2018, and revised several sections of the guidance. The updates include:

- Clarified, throughout the guidance, which NDA and BLA supplements the requirements in the guidance apply to.
- Clarified that clinical sites that screened, consented, or enrolled trial participants are to be included in the table listing all clinical sites that participated in clinical studies.
- Clarified that the request for a list of all entities that the sponsor has used to conduct clinical trial related activities includes both entities the sponsor has contracted without a transfer of regulatory obligations and those to whom the sponsor has transferred regulatory obligations.
- Deleted specific directions related to eCTD formatting and optional submission of a BIMO Reviewer's Guide and clarified that specifications for these items are now included in the technical specifications document.
- Additional comments received, which were related to the technical specifications document ''Bioresearch Monitoring Technical Conformance Guide,'' have been addressed separately in prior revisions to that document.

In section 745A(a) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 379k-1(a)), Congress granted explicit authorization to FDA to specify, in guidance, the electronic format for submissions under section 505(b), (i), or (j) of the FD&C Act (21 U.S.C. 355(b), (i), or (j)) and submissions under section 351(a) or (k) of the Public Health Service Act (42 U.S.C. 262(a) or (k)). Accordingly, to the extent that this guidance provides such requirements, as indicated by the use of the words *must* or *required,* this guidance will not be subject to the usual restrictions in FDA's good guidance practices regulations (GGPs), such as the requirement that guidances not establish legally enforceable responsibilities (see 21 CFR 10.115(d); see also the guidance for industry ''Providing Regulatory Submissions in Electronic Format—Submissions Under Section 745A(a) of the Federal Food, Drug, and Cosmetic Act'' issued on December 18, 2014 (79 FR 75570)).

To comply with GGPs and make sure that regulated entities and the public understand that guidance documents are nonbinding, FDA guidances ordinarily contain standard language explaining that guidance documents should be viewed only as recommendations unless specific regulatory or statutory requirements are cited. FDA is not including this standard language in this guidance document because it is not an accurate description of this guidance. Insofar as this guidance specifies the format for electronic submissions pursuant to section 745A(a) of the FD&C Act, 24 months after the issuance of this guidance, electronic submission of certain data and information in the standardized formats described in the guidance will be required.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 312 relating to the submission of investigational new drug applications have been approved under OMB control number 0910–0014. The collections of information in 21 CFR part 314 relating to the submission of new drug applications have been approved under OMB control number 0910–0001. The collections of information contained in 21 CFR part 601 relating to the submission of biologics license applications have been approved under OMB control number 0910–0338.

III. Electronic Access

Persons with access to the internet may obtain the guidance at *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov.*

Dated: December 2, 2024.

P. Ritu Nalubola,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–5331]

Joint Meeting of the Drug Safety and Risk Management Advisory Committee and the Anesthetic and Analgesic Drug Products Advisory Committee; Notice of Meeting; Establishment of a Public Docket; Request for Comments—Extended-Release/Long-Acting Opioid Analgesic Postmarketing Requirement

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; establishment of a public docket; request for comments.

SUMMARY: The Food and Drug Administration (FDA) announces a forthcoming public advisory committee meeting of the Drug Safety and Risk Management Advisory Committee and the Anesthetic and Analgesic Drug Products Advisory Committee (the Committees). The general function of the Committees is to provide advice and recommendations to FDA on regulatory issues. The meeting will be open to the public. FDA is establishing a docket for public comment on this document.

DATES: The meeting will be held on February 5, 2025, from 8 a.m. to 5 p.m. Eastern Time.

ADDRESSES: FDA White Oak Campus, 10903 New Hampshire Ave., Bldg. 31 Conference Center, the Great Room (Rm. 1503), Silver Spring, MD 20993–0002. The public will also have the option to participate, and the advisory committee meeting will be heard, viewed, captioned, and recorded through an online teleconferencing and/or video conferencing platform.

Answers to commonly asked questions about FDA advisory committee meetings, including information regarding special accommodations due to a disability, visitor parking, and transportation may be accessed at: *https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm408555.htm.*

FDA is establishing a docket for public comment on this meeting. The docket number is FDA–2024–N–5331. The docket will close on February 4, 2025. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of February 4, 2025. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Comments received on or before January 22, 2025, will be provided to the Committees. Comments received after that date will be taken into consideration by FDA. In the event that the meeting is cancelled, FDA will continue to evaluate any relevant applications or information, and consider any comments submitted to the docket, as appropriate.

You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–N–5331 for ''Joint Meeting of the Drug Safety and Risk Management Advisory Committee and the Anesthetic and Analgesic Drug Products Advisory Committee; Notice of Meeting; Establishment of a Public Docket; Request for Comments—Extended-Release/Long-Acting (ER/LA) Opioid Analgesic (OA) Postmarketing Requirement (PMR).'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' FDA will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify the information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Jessica Seo, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 31, Rm. 2417, Silver Spring, MD 20993–0002, 301–796–7699, email: *DSaRM@fda.hhs.gov,* or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington, DC area). A notice in the **Federal Register** about last-minute modifications that impact a previously announced advisory committee meeting cannot always be published quickly enough to provide timely notice. Therefore, you should always check FDA's website at *https://www.fda.gov/AdvisoryCommittees/default.htm* and scroll down to the appropriate advisory committee meeting link, or call the advisory committee information line to learn about possible modifications before the meeting.

SUPPLEMENTARY INFORMATION:

Agenda: The meeting presentations will be heard, viewed, captioned, and recorded through an online teleconferencing and/or video conferencing platform. The Committees will discuss the findings of the completed ER/LA OA PMRs 3033–1 and 3033–2 (link to Release and Reissue letter: *https://www.fda.gov/media/95546/download*).

These PMRs are prospective (3033–1) and retrospective (3033–2) epidemiologic studies that examined the serious risks and predictors of misuse, abuse, addiction, and fatal and non-fatal opioid overdose in patients with long-term use of opioid analgesics for management of chronic pain, including patients prescribed ER/LA OAs.

FDA intends to make background material available to the public no later than 2 business days before the meeting. If FDA is unable to post the background material on its website prior to the meeting, the background material will be made publicly available on FDA's website at the time of the advisory committee meeting. Background material and the link to the online

teleconference and/or video conference meeting will be available at the location of the advisory committee meeting and at *https://www.fda.gov/AdvisoryCommittees/Calendar/default.htm.* Scroll down to the appropriate advisory committee meeting link. The online presentation of materials will include slide presentations with audio and video components to allow the presentation of materials in a manner that most closely resembles an in-person advisory committee meeting.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the Committees. All electronic and written submissions to the Docket (see **ADDRESSES**) on or before January 22, 2025, will be provided to the Committees. Oral presentations from the public will be scheduled between approximately between 1 p.m. and 2 p.m. Eastern Time. Those individuals interested in making formal oral presentations should notify the contact person and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, whether they would like to present online or in-person, and an indication of the approximate time requested to make their presentation on or before January 13, 2025. Time allotted for each presentation may be limited. If the number of registrants requesting to speak is greater than can be reasonably accommodated during the scheduled open public hearing session, FDA may conduct a lottery to determine the speakers for the scheduled open public hearing session. Similarly, room for interested persons to participate in-person may be limited. If the number of registrants requesting to speak in-person during the open public hearing is greater than can be reasonably accommodated in the venue for the in-person portion of the advisory committee meeting, FDA may conduct a lottery to determine the speakers who will be invited to participate in-person. The contact person will notify interested persons regarding their request to speak by January 14, 2025. Persons attending FDA's advisory committee meetings are advised that FDA is not responsible for providing access to electrical outlets.

For press inquiries, please contact the Office of Media Affairs at *fdaoma@fda.hhs.gov* or 301–796–4540.

FDA welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with disabilities. If you require accommodations due to a disability, please contact Jessica Seo (see **FOR FURTHER INFORMATION CONTACT**) at least 7 days in advance of the meeting.

FDA is committed to the orderly conduct of its advisory committee meetings. Please visit our website at *https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm111462.htm* for procedures on public conduct during advisory committee meetings.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. 1001 *et seq.*). This meeting notice also serves as notice that, pursuant to 21 CFR 10.19, the requirements in 21 CFR 14.22(b), (f), and (g) relating to the location of advisory committee meetings are hereby waived to allow for this meeting to take place using an online meeting platform in conjunction with the physical meeting room (see location). This waiver is in the interest of allowing greater transparency and opportunities for public participation, in addition to convenience for advisory committee members, speakers, and guest speakers. The conditions for issuance of a waiver under 21 CFR 10.19 are met.

Dated: December 2, 2024.

P. Ritu Nalubola,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission to OMB for Review and Approval; Public Comment Request; HRSA Ryan White HIV/AIDS Program Part F Regional AIDS Education and Training Center Program Activities

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, HRSA submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period. OMB may act on HRSA's ICR only after the 30-day comment period for this notice has closed.

DATES: Comments on this ICR should be received no later than January 8, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments,'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: To request a copy of the clearance requests submitted to OMB for review, email Joella Roland, the HRSA Information Collection Clearance Officer, at *paperwork@hrsa.gov* or call (301) 443–3983.

SUPPLEMENTARY INFORMATION:

Information Collection Request Title: HRSA Ryan White HIV/AIDS Program Part F Regional AIDS Education and Training Center Program Activities, OMB No. 0906–xxxx—New.

Abstract: The Ryan White HIV/AIDS Program's (RWHAP) AIDS Education and Training Center (AETC) Program, authorized under title XXVI of the Public Health Service Act, supports a network of regional centers that conduct targeted, multi-disciplinary education and training programs for health care providers treating people with HIV. The RWHAP Regional AETC Program's purpose is to increase the number of health care providers who are effectively educated and equipped to counsel, diagnose, treat, and medically manage people with HIV. The RWHAP Regional AETC Program recipients are required to report data on the training activities and trainees to HRSA once a year. HRSA is requesting the approval of new AETC data collection forms to accurately capture data relating to Regional AETC activities, participants, and site information for both Practice Transformation (PT) and Interprofessional Education (IPE) sites as well as involvement in the HIV care and treatment workforce (1-year post-participation), knowledge gained through participating in an activity, and satisfaction with the activity. The RWHAP Regional AETC Program recipients will gather data on the training activities they conduct using six data collection instruments. The Individual Participant Record is completed at least once every reporting period by participants actively engaging in Regional AETC activities. This form includes Regional AETC participant demographic, workplace, and clients-served data for the participant's

respective provider sites. The Regional AETC recipient completes the Training Activity Record form at the end of each Regional AETC activity that takes place during the reporting period. This form describes the activity in hours, modality, and topic(s). The PT Site Characteristics/Outcomes form collects site characteristics information for PT recipient sites only, such as clinic activities and procedures and aggregate counts of clients. PT sites provide clinical services and differ from IPE sites that support students, thus necessitating a different form. The IPE Site Characteristics/Outcomes form collects site characteristics information for IPE recipient sites only. The Participant Post-Activity Immediate Survey collects information from participants immediately after an activity, specifically, their satisfaction and potential increased knowledge due to participating in said activity. The IPE Long-Term form collects 1-year post-participation information from participant students who engaged in an IPE program to assess involvement in the field of HIV care and treatment.

A 60-day notice published in the **Federal Register** on July 19, 2024, 89 FR 58744–45. The 60-day FRN publication elicited 15 public comments, including feedback from eight currently funded AETC regional recipients. The public comments offered input to clarify the definitions of the terminology used on the forms; requested additions and revisions to response options and categories; provided feedback to update demographic questions; requested more review to identify which professions should be included or removed from the forms; asked for clarity on the training track and the process for selecting a track; and suggested that there be a balance of questions on both HIV treatment and prevention.

HRSA's HIV/AIDS Bureau conducted a thorough review of all the feedback provided by the public during the 60-day publication period. HRSA will incorporate much of the public feedback into the new forms, including through the addition of new proposed questions, removal of current incompatible questions, correcting spelling and grammar, providing definitions and instructions for clarity, incorporating skip logic to streamline question response options/categories, updating the form format, and the change of the form title from Interprofessional Education Site Characteristics/Outcomes Form to the Interprofessional Education Health Profession Program Characteristics/Outcomes Form. Other suggestions may be further reviewed in future OMB packages or non-substantive change memos.

Need and Proposed Use of the Information: HRSA uses the data collected when conducting RWHAP AETC programmatic assessments to determine future program needs. These data allow HRSA to identify where gaps exist in training HIV professionals as well as to measure whether training activities are meeting the goals of the National HIV/AIDS Strategy and the RWHAP statute.

Likely Respondents: RWHAP Regional AETC participants complete the Individual Participant Record at least once a reporting period. Regional AETC recipients complete a Training Activity Record for each training activity they conduct during the reporting period. All Regional AETC participants will take the Participant Post-Activity Survey immediately after any attended activity. The IPE Long-Term form will only be completed by participants who engaged in an IPE program, 1-year post-participation in the program. Finally, PT recipients will complete the PT Site Characteristics/Outcomes form at least once per reporting period, and IPE recipients will complete the IPE Site Characteristics/Outcomes form at least once per reporting period.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose, or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install, and use technology and systems for the purpose of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Individual Participant Record	59,576	1	59,576	0.27	16,085.52
Training Activity Record	12,226	1	12,226	0.21	2,567.46
PT, Site Characteristics and Outcomes	128	1	128	0.31	39.68
IPE, Site Characteristics and Outcomes	86	1	86	0.09	7.74
Participant Post-Activity Immediate Survey	59,576	3	178,728	0.06	10,723.68
IPE, Long-Term	4,403	1	4,403	0.07	308.21
Combined Data Set	8	1	8	64.00	512.00
Total	136,003	.....	255,155	.....	30,244.29

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Notice of Availability of Draft Health Center Program Scope Policy Manual Guidance

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services (HHS).

ACTION: Request for public comment.

SUMMARY: HRSA requests public comments on the Draft Health Center Program Scope of Project Manual (draft Scope Policy Manual). The draft Scope Policy Manual provides updated policy guidance on what constitutes the Health Center Program scope of project under the Public Health Service Act (PHS Act).

DATES: Submit comments no later than February 7, 2025.

ADDRESSES: Electronic comments should be submitted through the HRSA Bureau of Primary Health Care Contact Form (*https://hrsa.my.site.com/support/s/*), by selecting ''Comment on Draft Policy'' under the ''Policy'' section.

FOR FURTHER INFORMATION CONTACT: Jennifer Joseph, Office of Policy and Program Development Director, Bureau of Primary Health Care, HRSA, at *jjoseph@hrsa.gov* and 301–594–4300.

SUPPLEMENTARY INFORMATION: The draft Scope Policy Manual (*https://bphc.hrsa.gov/sites/default/files/bphc/compliance/draft-health-center-program-scope-project-manual*) updates Health Center Program scope of project policy guidance for all health centers that apply for and receive federal award (*https://bphc.hrsa.gov/compliance/compliance-manual/glossary#federal-award*) funds under the Health Center Program subrecipient organization (sections 1861(aa)(4)(A)(ii) and 1905(l)(2)(B)(ii) of the Social Security Act; *https://bphc.hrsa.gov/compliance/compliance-manual/glossary#subrecipient*), and Health Center Program look-alikes (sections 1861(aa)(4)(B) and 1905(l)(2)(B) of the Social Security Act; (*https://bphc.hrsa.gov/compliance/compliance-manual/glossary#look-alike*).

The draft Scope Policy Manual proposes new policy and clarifies existing policy in key areas. Through the draft Scope Policy Manual, HRSA updates the Health Center Program scope of project policy to consolidate scope of project-related policy into a single policy document to assist health centers in understanding scope of project, statutory language and the Health Center Program Compliance Manual (*https://bphc.hrsa.gov/compliance/compliance-manual*).

The draft Scope Policy Manual does not include scope of project process-related instructions. Instructions for documenting and updating scope of project will continue to be available on the Health Center Program Scope of Project web page (*https://bphc.hrsa.gov/compliance/scope-project*).

HRSA proposes that the final Scope Policy Manual supersede the following previously issued scope of project Policy Information Notices (PINs):

- *PIN 2007–09:* Service Area Overlap: Policy and Process
- *PIN 2008–01:* Defining Scope of Project and Policy for Requesting Changes
- *PIN 2009–02:* Specialty Services and Health Centers' Scope of Project
- *PIN 2009–05:* Policy for Special Populations-Only Grantees Requesting a Change in Scope to Add a New Target Population

HRSA provides grants to eligible applicants under section 330 of the PHS Act (42 U.S.C. 254b) to support the delivery of preventive and primary care services to the nation's underserved individuals and families. HRSA also designates eligible applicants as Health Center Program look-alikes. Look-alikes do not receive Health Center Program funding but must meet the Health Center Program statutory and regulatory requirements. Nearly 1,400 Health Center Program-funded health centers and more than 100 Health Center Program look-alike organizations operate more than 15,000 service delivery sites that provide care to more than 30.5 million patients in every U.S. state, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and the Pacific Basin. Note that for the purposes of this document, the term ''health center'' refers to entities that receive a federal award under section 330 of the PHS Act, as well as subrecipients and organizations designated as look-alikes, unless otherwise stated.

Carole Johnson,

Administrator.

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the Advisory Committee on Minority Health

AGENCY: Office of Minority Health, Office of the Secretary, U.S. Department of Health and Human Services.

ACTION: Notice of meeting.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the U.S. Department of Health and Human Services (HHS) is hereby giving notice that the Advisory Committee on Minority Health (ACMH) will hold a meeting conducted as a webcast on January 7, 2025. This virtual meeting will be open to the public.

DATES: The virtual ACMH meeting will be held on January 7, 2025, from 2 p.m. to 3 p.m. EST. If the Committee completes its work before 3 p.m. EST, the meeting will adjourn early.

Any individual who wishes to participate in the virtual meeting should register using the Zoom registration link provided below by 5 p.m. EST on January 3, 2025.

ADDRESSES: The meeting will be held virtually and will be accessible by webcast. Instructions regarding webcast access and providing written public comments will be given after meeting registration occurs.

Registration is required for the public to attend the meeting, provide comment, and/or distribute material(s) to ACMH members. Instructions regarding participating in the call and providing written or verbal public comments will be provided after meeting registration occurs. Information about the meeting will be posted on the HHS Office of Minority Health (OMH) website: *www.minorityhealth.hhs.gov*. Information about ACMH activities can be found on the OMH website under the heading *About OMH, Committees and Working Groups*.

FOR FURTHER INFORMATION CONTACT: Violet Woo, Designated Federal Officer, Advisory Committee on Minority Health, OMH, HHS, Tower Building, 1101 Wootton Parkway, Suite 100, Rockville, Maryland 20852. Phone: 240–453–6816; email: *OMH-ACMH@hhs.gov*.

SUPPLEMENTARY INFORMATION: In accordance with Public Law 105–392, the ACMH was established to provide advice to the Deputy Assistant Secretary for Minority Health on the development of goals and program activities related to OMH's duties.

The topic to be discussed during the virtual meeting will be finalizing recommendations on the

implementation of the updated Office of Management and Budget (OMB) Federal race and ethnicity data collection standards (SPD 15) that is focused on opportunities for engagement with racial, ethnic, and Tribal community level organizations to support increased awareness of OMB SPD 15 and their intended goals within their communities. The final recommendations will be given to the Deputy Assistant Secretary for Minority Health to inform efforts related to engagement with racial, ethnic, and tribal community level organizations to support increased awareness of OMB SPD 15 and their intended goals within their communities.

Any individual who wishes to attend the meeting must register via the Zoom registration link, *https://www.zoomgov.com/webinar/register/WN_Lvv-t5RdTNi0Hfqz6basPQ,* by 5 p.m. EST on January 3, 2025. Each registrant should provide their name, affiliation, phone number, email address, if they plan to provide either written or verbal comment, and whether they have requests for special accommodations, including sign language interpretation. After registering, registrants will receive an automated email response with the meeting connection link. The meeting connection link is unique to each registrant and should not be shared.

Members of the public will have an opportunity to provide comments at the meeting. Individuals should indicate during registration whether they intend to provide written or verbal comment. Public comments will be limited to two minutes per speaker during the time allotted. Individuals of the public may also submit and distribute electronic or printed statements or material(s) related to this meeting's topic. Written statements or material(s) should be double-spaced with one-inch margins and not exceed two pages in length. Any content beyond the two-page limit will not be presented to the Committee. Registered members of the public who plan to submit electronic and distribute electronic or printed public statements or material(s) related to the meeting's topic should email the material to *OMH-ACMH@hhs.gov* at least two (2) business days prior to the meeting.

Violet Woo,

Designated Federal Officer, Advisory Committee on Minority Health.

BILLING CODE 4140–01–P

ADVISORY COUNCIL ON HISTORIC PRESERVATION

Program Comment on Stewardship and Management of National Park Service Mission 66-Era Facilities (1945–1972)

AGENCY: Advisory Council on Historic Preservation

ACTION: Notice of approval of program comment.

SUMMARY: The Advisory Council on Historic Preservation (ACHP) has approved a program comment to facilitate continued use and preservation of Mission 66-era historic properties.

DATES: The program comment went into effect on November 4, 2024.

FOR FURTHER INFORMATION CONTACT: Kirsten Kulis, (202) 517–0217, *kkulis@achp.gov.*

SUPPLEMENTARY INFORMATION: Section 106 of the National Historic Preservation Act, 54 U.S.C. 306108 (Section 106 and NHPA), requires Federal agencies to consider the effects of projects they carry out, license/permit/approve, or assist (undertakings) on historic properties, and provide the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment with regard to such undertakings. The ACHP has issued the regulations that set forth the process through which Federal agencies comply with these duties. Those regulations are codified under 36 CFR part 800 (Section 106 regulations).

Under section 800.14(e) of those regulations, agencies can request the ACHP to provide a ''Program Comment'' on a particular category of undertakings in lieu of conducting individual reviews of each individual undertaking under such category, as set forth in 36 CFR 800.4 through 800.7. An agency can meet its Section 106 responsibilities with regard to the effects of those undertakings by taking into account an applicable Program Comment and following the steps set forth in that comment.

The U.S. Department of the Interior, National Park Service (NPS) sought a Program Comment to facilitate continued use and preservation of Mission 66-era historic properties. On November 4, 2024, the ACHP issued such a Program Comment, the text of which is reproduced at the end of this notice, with various typographical errors corrected.

I. Background

''Mission 66'' refers to the massive building campaign that occurred between 1945 and 1972 that improved, standardized, and democratized the public's national park experience with new facilities including comfort stations, picnic shelters, campgrounds, visitor centers, park staff housing, maintenance buildings, warehouses, roads, and other infrastructure. This period of feverish construction was called ''Mission 66'' because it was supposed to have been completed by 1966, in time for the fiftieth anniversary of the founding of the NPS.

The NPS requested a Program Comment (PC) to facilitate continued use and preservation of Mission 66-era historic properties by providing parks with an optional tool that would reduce or eliminate external reviews for certain straightforward Mission 66-era focused undertakings. It would also allow superintendents to consider Mission 66-era facilities as eligible for listing in the National Register of Historic Places (National Register) when they reference the Mission 66-Era Multiple Property Determination Form (MPDF), thereby addressing NPS's identification backlog. Recent laws provided NPS with funding and charged them with improving the visitor experience and addressing accessibility requirements. NPS plans to meet these mandates using these facilities and reinvesting in the historic properties from this era.

II. Program Comment Summary

The PC is intended to be an optional compliance tool and park superintendents will not be required to use it. Moreover, the PC cannot be used in a variety of circumstances including:

—when there's potential to affect National Historic Landmarks, historic battlefields, burial sites, human remains, and/or funerary objects, or if an undertaking is proposed to occur on or affect historic properties located on Tribal lands (as defined in the NHPA), or there's potential to affect properties of religious and cultural significance to Indian Tribes or Native Hawaiian Organizations, or to the Native Hawaiian Community;

—when there may be adverse effects to historic properties that are significant for reasons other than Mission 66 (*e.g.,* not primarily National Register -eligible or -listed due any association with the Mission 66-era as it is described in the MPDF); or

—when there's potential for adverse effects to Mission 66-era historic properties such that they would become ineligible for National Register listing or candidates for de-listing.

The PC will not amend or change the existing Programmatic Agreement among the National Park Service (U.S. Department of the Interior), the Advisory Council on Historic Preservation, and the National Conference of State Historic Preservation Officers for Compliance with Section 106 of the National Historic Preservation Act (2008 PA), nor any other valid Section 106 agreements.

The implementation of the PC will include regional and national oversight and reporting, as well as regular training, to ensure accountability. The PC will facilitate nationwide implementation of the aforementioned MPDF, so that NPS may achieve a broader perspective in managing these properties and they may be understood within their national context. The NPS

believes that the PC will encourage reuse of Mission 66 era resources.

III. NPS Consultation Summary

The PC is the product of more than a year of early coordination as well as formal NPS consultation which was initiated last Fall and closed this past Summer. NPS determined the development of this request required government-to-government consultation with Tribes. NPS held six virtual formal consultation meetings that were attended by sixty-two (62) external participants. This included two government-to-government consultation meetings with Tribes. The other four formal meetings were attended by State Historic Preservation Officers (SHPO) from twenty (20) separate states and other stakeholders. In addition to the comments from Tribes described immediately below, NPS received a total of sixteen (16) correspondences including from eight SHPOs, three members of the public, and the National Trust for Historic Preservation.

NPS received one verbal comment about identification from one Tribal representative who participated in one of the meetings and NPS responded via email. Over the course of the NPS comment period, NPS received four written comment letters from Tribes. One had specific questions about a park and their comments are confidential; one was not concerned because the proposed PC would not be used as a method of Section 106 compliance for undertakings with potential to affect Tribal lands and/or properties of religious or cultural significance to Tribes; and two others declined to participate but wanted to be made aware if there was an unanticipated discovery. NPS responded to each of these directly.

Some of the comments from the SHPOs emphasized that qualified NPS staff must be involved in all aspects of project planning and execution, especially given the nuanced approach to adverse effects in the PC. Other SHPOs noted that the proposed fifteen (15) calendar day review period was too short for ''meaningful'' comments, and that NPS should use proprietary (*e.g.,* State) databases to enter project information instead of providing information on Planning, Environment, and Public Comment (PEPC) and emailing stakeholders. Comments from SHPOs, the National Trust for Historic Preservation, and members of the public also indicated concern that mitigation should be commensurate with the adverse effects associated with the specific undertakings, and inquired about how the mitigation will benefit the public.

NPS considered all comments received in consultation and responded directly to written comments. NPS changed certain aspects of the PC to address the comments, adding or clarifying language in the PC regarding qualified personnel, park suspension, use on Tribal lands (it will not be so used), consultation responsibilities and confidentiality. At that time, NPS did not adjust the proposed fifteen (15) calendar day review period. However, NPS responded that the accelerated timeframe will better allow Parks to focus on other more complex projects using the standard Section 106 process. Also, NPS clarified that Park Superintendents will notify the relevant SHPO and/or THPO and potentially interested Indian Tribe, Native Hawaiian Organization or others in the Native Hawaiian Community or Alaska Natives via email, hard-copy letter via mail or mail service (or an alternative method arranged in advance in writing) when external review process (ERP) packages are available for review and comment.

Finally, NPS clarified that NPS will provide mitigation for collective adverse effects to Mission 66-era historic properties at the national level, rather than park-/undertaking-specific approaches. However, ERP packages must identify mitigation measures, and the Federal Preservation Officer must track mitigation progress annually. NPS also added a requirement for NPS to develop a brief web-based on-demand training for use by internal and external partners. NPS provided drafts of PC to the ACHP and made various changes to address ACHP staff comments.

In summary, NPS addressed consulting party comments on the PC conceptual overview and outline/plan and made substantive changes in preparation of the PC based on that consultation. NPS subsequently prepared the PC draft, in coordination with ACHP through several iterations of review and comment. NPS addressed all ACHP staff comments and submitted the resulting final PC for ACHP action.

IV. ACHP Consultation Summary

ACHP initiated consultation on August 26, 2024, and held two virtual consultation meetings; one was with SHPOs, and one was government-to-government consultation with Indian Tribes. The meetings were attended by thirty-five (35) external participants, including representatives from seventeen (17) SHPOs, and four THPOs as well as staff from the National Conference of State Historic Preservation Officers and the National Association of Tribal Historic Preservation Officers (NATHPO). ACHP also posted a dedicated website and accepted public comments through October 18, 2024. ACHP members discussed the PC at a Regulations and Governance Committee meeting on October 7, 2024. ACHP received twelve (12) correspondences from SHPOs and one from NATHPO, totaling eighty (80) comments. ACHP responded directly to all written correspondences.

About thirty (30) of the comments were addressed with minor edits or clarifications. The remaining comments focused on the topics below and were addressed with substantive changes listed in order of magnitude:

—External Review Process: The steps in this clause were clarified and the review period was extended to fifteen (15) business days with an optional additional five (5) business day review and consultation period for handling objections. The requirements for objections were specified, and it was made clear that objections are made by the relevant SHPO/THPO, Indian Tribe, or Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives.

—Special External Review Process for Certain Findings of No Historic Properties: Additional language in this clause clarifies that a special external review must occur when a Park Superintendent makes a finding that a Mission 66-era facility is no longer historic because it lacks integrity. It also explains that the main purpose of the review is to confirm that there are no properties of religious and cultural significance to an Indian Tribe or to Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives.

—Discoveries: This clause was expanded to provide step-by-step instructions for Park Superintendents, to reference the Native American Graves Protection and Repatriation Act (25 U.S.C. 3001 *et seq.*), and to state, ''When applicable, the Park Superintendent will consider the principles within the ACHP's Policy Statement on Burial Sites, Human Remains, and Funerary Objects, dated March 1, 2023.'' The clause also states that the NPS will fulfill its Tribal and Native Hawaiian consultation obligations ''consistent with all relevant Executive Orders, Secretary's Orders, the Department of the Interior Departmental Manual, and NPS Director's Orders and Related Guidance. NPS recognizes and considers Indigenous Knowledge in

the Section 106 review process in accordance with the November 30, 2022 Guidance for Federal Departments and Agencies on Indigenous Knowledge issued by the White House Office of Science and Technology Policy and Council on Environmental Quality and the Departmental Manual (301 DM 7, Departmental Responsibilities for Consideration and Inclusion of Indigenous Knowledge in Departmental Actions and Scientific Research).''

—Mitigation: This clause commits NPS to developing and publishing an Administrative History of NPS Housing which will be completed as part of a partnership with the NPS History Program and a public university and made publicly available by the spring of 2027. It also commits NPS to publishing an MPDF reference guide for internal and external partners within about six (6) months. In addition, the agency will develop a brief web-based on-demand training for use by internal and external partners within one (1) year of the publication of the PC in the **Federal Register**.

—Park Suspension: New language in this clause specifies that the respective SHPO/THPO, Indian Tribes and Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives may also offer comments on park suspension.

—Design Guidelines: This clause allows for the development of various types of design guidelines. It also explains that if design guidelines are being developed for a specific park, comments from the respective SHPO must be reasonably incorporated.

Finally, ACHP staff provided a final review and NPS duly addressed its requests for minor edits and clarifications. ACHP staff concluded that the PC request met the requirements in 36 CFR 800.14(e)(1) and the changes made in the document reasonably addressed the comments and concerns offered during consultation, the ACHP's Regulations and Governance Committee meeting, and ACHP's staff review.

V. Text of the Program Comment

The full text of the issued program comment, with various typographical errors corrected, is reproduced below. Please note that the text of the issued program comment includes hyperlinks. The footnotes below show the web addresses that were hyperlinked:

Program Comment on Stewardship and Management of National Park Service Mission 66-Era Facilities (1945–1972) for Compliance With Section 106 of the National Historic Preservation Act

This Program Comment (Program Comment) provides the U.S. Department of Interior, National Park Service (NPS) with an alternative way to comply with their responsibilities under Section 106 of the National Historic Preservation Act (54 U.S.C. 306108, and 36 CFR part 800 (Section 106)) regarding certain stewardship and management undertakings at NPS facilities built between 1945 and 1972 (Mission 66-era). This document was developed in consultation by the NPS, as part of a larger agency request, and submitted for consideration by the Advisory Council on Historic Preservation (ACHP) pursuant to 36 CFR 800.14(e) in August 2024. It was consulted upon by the ACHP between August and October 2024, and edits were duly incorporated.

Table of Contents

For purposes of this Program Comment, definitions listed in 54 U.S.C. 300309 (*i.e.,* Tribe, Tribal lands), 54 U.S.C. 300214 (*i.e.,* Native Hawaiian organization), and in the regulations at 36 CFR part 800 broadly and in 36 CFR 800.16 are incorporated by reference. Other definitions appear within the document in parenthesis (*e.g.,* ERP, IRP, 2008 PA, Qualifying Undertaking, etc.). Native Hawaiian Community is defined in 43 CFR part 50.4. The NPS has requested that Native Hawaiian Communities and Alaska Natives be specifically included in the scope, consultation, and other review points in the Program Comment. The NPS consults with the Native Hawaiian Community and Alaska Natives in accordance with U.S. Department of Interior Departmental Manual 512 (2022) Chapters 4–7 and Departmental Manual 513 Chapters 1–2. More information about the Program Comment can be found on the NPS Section 106 Compliance web page (ParkPlanning—Mission 66 Program Comment (*nps.gov*) [1]).

I. Introduction

A. *Background.* In 2020, the U.S. Congress provided NPS with $1.5 billion in funding via the Great American Outdoors Act (Pub. L. 116–152), and other legislation and funding followed. Funds from these laws must be obligated by NPS within the next few years or they will no longer be available for NPS use. The laws called out the agency's deferred maintenance backlog generally, but also the need for the agency to ensure people with disabilities have equal opportunity to benefit from park facilities, programs, services, and activities.

There are approximately 20,000 Mission 66-era facilities in NPS parks, many of them serving visitors and staff, located across the country and

[1] *https://parkplanning.nps.gov/projectHome.cfm?projectID=116344.*

concentrated in the Pacific West and Intermountain Regions. According to NPS data, while almost 50% of Mission 66-era facilities are in ''good'' or ''fair'' condition, 35% are in ''poor'' condition and 16% are in ''serious'' condition and contribute to the NPS deferred maintenance and repair backlog. This backlog totals $23.3 billion as of the end of fiscal year 2023.

Many NPS visitor centers still lack accessible restrooms, water fountains, and entrances. Also, paths between parking lots, sidewalks, buildings, and interpretive programs are often not accessible. Many facilities in staff areas (*e.g.,* housing and maintenance facilities) are also in need of accessibility improvements, as detailed in NPS reports and testimony before the U.S. Congress (ALL IN! Accessibility in the National Park Service 2015–2020).

Further, the lack of suitable affordable NPS staff housing in parks has been identified by the current NPS director as a ''critical issue,'' and widely reported.

B. *Significance.* The massive NPS ''Mission 66'' building campaign that occurred between 1945 and 1972 improved, standardized, and democratized the public's national park experience with new facilities including comfort stations, picnic shelters, campgrounds, visitor centers, park staff housing, maintenance buildings, warehouses, roads, and other infrastructure. This period of feverish construction was called ''Mission 66'' because it was supposed to have been completed by 1966, in time for the fiftieth anniversary of the founding of the NPS.

Based on NPS nationwide data, the Intermountain Region and Pacific West have the greatest number of NPS Mission 66-era facilities, followed by the Southeast and Northeast, Midwest, National Capital, and the Alaska Regions. The states with 500 or more Mission 66-era facilities are: California (2,450), Wyoming (1,500), Washington (1,200), Virginia (1,150), North Carolina (900), Utah (900), Arizona (900), Colorado (800), Tennessee (700), New York (650), Montana (650), Mississippi (600), Maryland (500), and Texas (500), for a total of about 12,950 facilities (approximately). Other States have less than 500 each. (All figures are approximate and nationwide data has not been verified at the regional, State, or park levels.)

While some of the Mission 66-era facilities, especially visitor centers, were designed by renowned architects, many others were built using standard plans such as those developed for comfort stations, staff housing, administrative and maintenance/utility buildings, ranger kiosks, and similar. During the Mission 66-era, some adjustments were made to the standard plans to address changing park needs as well as both the suitability and availability of construction materials in different regions.

NPS staff typically utilizes the National Register of Historic Places Multiple Property Documentation Form (MPDF, NRIS #64501248, 2015, *https://npgallery.nps.gov/AssetDetail/84789671-6031-4916-8bf1-18fbe8c80511/*) to provide a framework for identification of Mission 66-era historic properties. The MPDF established the period of significance as 1945 to 1972. It mentions certain properties as early or exemplary embodiments of the period, lists the ninety-five (95) parks that were established as part of Mission 66, sets eligibility evaluation criteria for individual listings and park-wide districts, and focuses on consideration of small area use-specific districts.

A monograph on the subject, ''Mission 66: Modernism and the National Park Dilemma'' (Ethan Carr, LALH, 2007, Review of Mission 66: Modernism and the National Park Dilemma (*nps.gov*)[2]), and an NPS-published book, ''MISSION 66 VISITOR CENTERS: The History of a Building Type'' (Sarah Allaback, Ph.D., NPS, 2000, National Park Service: Mission 66 Visitor Centers (*nps.gov*)[3]), provide additional context. In 2022, NPS also published process guidelines for determinations of eligibility for Mission 66 Campgrounds (Mission 66 Campgrounds Determination of Eligibility Process Guidelines (*npshistory.com*)[4]).

C. *Current Compliance Efforts.* The Programmatic Agreement among the National Park Service (U.S. Department of Interior), the Advisory Council on Historic Preservation, and the National Conference of State Historic Preservation Officers for Compliance with Section 106 of the National Historic Preservation Act (2008) (2008 PA, What We Do—Section 106 Compliance Program (U.S. National Park Service) (*nps.gov*)[5]), governs implementation of regular management activities at the NPS. Such management activities may include work done on Mission 66-era facilities; however, as described below, the 2008 PA has limited applicability in regard to many undertakings on Mission 66-era facilities.

The 2008 PA requires Park Superintendents to develop an inventory of historic properties, properties that are listed in or eligible for listing in the National Register. When an undertaking is proposed, the 2008 PA's streamlined process requires that ''identification and evaluation of all types of historic properties within the project area of potential effects (APE) must have been previously undertaken, sufficient to assess effects on those resources'' either via 36 CFR part 800 or section 110 (54 U.S.C. 306102) (The identification effort would have occurred sometime before the undertaking was planned.).

These processes can be time consuming and according to NPS nationwide data, approximately 75% of Mission 66 facilities have not been evaluated for listing in the National Register.

Furthermore, the 2008 PA focuses on regular management activities. As many Mission 66-era facilities are in poor or serious condition and hundreds are underutilized or unutilized (defined in the Federal Real Property Profile Data Dictionary, FRPC Guidance Library | GSA[6]), scopes of work may address more than regular management. Also, the streamlined review process described in the 2008 PA can only be used by Park Superintendents when there is a determination of ''no historic properties affected'' or ''no adverse effects'' (36 CFR part 800). Some proposed scopes of work go beyond regular management and may pose adverse effects to Mission 66-era historic properties, rendering the 2008 PA inapplicable. Finally, the 2008 PA's streamlined review process cannot be used when there is a lease that includes a change of use or where projects cumulatively result in the complete rehabilitation of a historic property.

While it is standard for NPS to make reasonable efforts to avoid and minimize adverse effects (*e.g.,* so activities are completed in accordance with various NPS Preservation Briefs Preservation Briefs—Technical Preservation Services (U.S. National Park Service) (*nps.gov*)[7]), again, there may be cases in which projects cannot achieve mission goals while completely avoiding or minimizing adverse effects to Mission 66-era historic properties

[2] Book review—*https://www.nps.gov/crps/CRMJournal/Winter2010/reviewbook3.html.*

[3] *https://www.nps.gov/parkhistory/online_books/allaback/index.htm.*

[5] *https://www.nps.gov/orgs/1966/whatwedo.htm.*

[6] *https://www.gsa.gov/policy-regulations/policy/real-property-policy-division-overview/asset-management/federal-real-property-council/frpc-guidance-library.*

[7] *https://www.nps.gov/orgs/1739/preservation-briefs.htm.*

(*e.g.,* such as making accessibility improvements to comfort stations by changing their layouts, upgrading staff housing kitchens and baths, applying certain preventive seal treatments to vehicular areas, switching out building yard plantings to address the changing climate, and improving utilities at campgrounds, etc.). There may also be temporary adverse effects to Mission 66-era historic properties and other historic properties during construction and reasonably associated with construction activities, that may not be entirely avoidable or minimizable, but will cease once construction is complete.

In these cases, compliance for Mission 66-era facilities has often occurred in conjunction with other larger park initiatives, for which a memorandum of agreement or a programmatic agreement has been executed, or when a park-wide programmatic agreement is already in place.

D. *Goals.* The Program Comment will support specific NPS efforts to use Mission 66-era historic properties to meet mission needs, by expediting Section 106 reviews. It will help NPS fulfill legislated mandates to improve the visitor experience and accessibility, enhance conditions for staff, address longstanding deferred maintenance, and advance ongoing stewardship efforts. NPS plans to accomplish the following with the Program Comment:

1. implement the MPDF on a national level, to address the NPS identification backlog and alleviate workloads;

2. utilize the existing NPS compliance staffing and teams with Qualified Personnel and/or Cultural Resource Management (CRM) Team engagement;

3. encourage preservation and predictability in project planning by requiring internal reviews by Qualified Personnel and/or a CRM Team for certain undertakings that either pose no adverse effects to historic properties or when the only condition for such a finding, by a Park Superintendent, is that the undertaking will follow the Secretary of the Interior's Standards for the Treatment of Historic Properties, (Secretary's Standards, The Secretary of the Interior's Standards for the Treatment of Historic Properties—Technical Preservation Services (U.S. National Park Service) (*nps.gov*) [8]) and applicable guidelines;

4. provide for accountability by listing requirements for the Consultation Record and ensuring the NPS Federal Preservation Officer (FPO) and deputies have access to it for oversight and regular reporting, and may reference it as needed;

5. complete mitigation for adverse effects associated with undertakings subject to the Program Comment with measures including development of additional National Register documentation of Mission 66-era historic properties, development and publication of an Administrative History of NPS Housing available by spring 2027, and either advancing conservation of Mission 66-era materials via materials research and analysis or developing a nationwide interpretive plan, as funds allow; and

6. facilitate a smooth transition to consistent use of the 2008 PA, for regular routine management activities, at the end of the Program Comment's ten-year duration.

E. *Existing Compliance Structure.* NPS will utilize the existing NPS compliance staffing and teams (described in the 2008 PA and this Program Comment) at the national, regional, and park levels, with Qualified Personnel and/or Cultural Resource Management Team engagement, to implement this Program Comment as described below.

1. In the entire Federal Government, NPS has one of the largest concentrations of qualified cultural resource personnel. In this Program Comment, the term Qualified Personnel (Qualified Personnel) refers to those in NPS employ that meet the Secretary of the Interior's Professional Qualification Standards or the OPM Personnel Qualification Standards, which codify the minimum requirements that must be met for professional work concerning historic properties.

2. The term Cultural Resources Management Team or CRM Team is explained in the 2008 PA and in NPS's PA Guidance as follows: A team of subject matter experts appropriate to the resource types found in the park. The number of individuals on the CRM Team may vary from park to park as needed to represent all disciplines appropriate to the park's resources. For example, an undertaking being planned that involves a historic building must have a historical architect on the CRM Team. Typical CRM Teams often include a historical architect, a historical landscape architect, an archeologist, a cultural anthropologist, a historian, and a museum curator. Members may include park staff or staff of other parks, NPS Regional Offices, NPS Centers, federally recognized Indian Tribes or Native Hawaiian organizations, or others from the public or private sector. Agency personnel or contractors who participate on the Park's CRM Team must meet either the qualification standards established in Appendix E to NPS–28, which references the Office of Personnel Management (OPM) Personnel Qualifications Standards, or the Professional Qualification Standards in the Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation. These qualification standards define minimum education and experience required to perform identification, evaluation, registration, and treatment activities. In some cases, additional areas or levels of expertise may be needed, depending on the complexity of the task and the nature of the historic properties involved (NPS Nationwide Programmatic Agreement National Guidance Document, 2022, NPS Nationwide Programmatic Agreement National Guidance Document [9]). A CRM Team may be brought in by a Park Superintendent to support the review process set forth in the Program Comment as needed.

II. Scope

A. *Mission 66-Era Historic Properties.* Within this Program Comment, the term Mission 66-era Historic Property refers to a type of historic property (see 36 CFR 800.16(l)) that was built between 1945–1972, during a massive NPS ''Mission 66'' building campaign that was called ''Mission 66'' because it was supposed to have been completed by 1966, in time for the fiftieth anniversary of the founding of the NPS. This term includes Operations Outdoors historic properties that were built for the U.S. Forest Service, or any other historic properties from the Mission 66-era that are now in the custody and control of the NPS as described in the relevant section in this document. Any facility built between 1945–1972 may be covered by this Program Comment; the facility does not need to have been built as part of the Mission 66 program. (May be referred to in singular as a Mission 66-era Historic Property, and both historic and non-historic Mission 66-era properties are referred to as Mission 66-era facilities.)

B. *Overall Effect.* This Program Comment will provide an alternative way for NPS to fulfill their Section 106 responsibilities to take into account the effects on historic properties of their covered undertakings at Mission 66-era facilities. The Program Comment also provides the ACHP a reasonable opportunity to comment regarding

[8] *https://www.nps.gov/orgs/1739/secretary-standards-treatment-historic-properties.htm.*

[9] *https://www.nps.gov/orgs/1966/upload/2022-06-06-PA_Guidance_508_2022-0606-3.pdf.*

covered undertakings at Mission 66-era facilities.

C. *Effect on Other Applicable Laws or Existing Agreements.* The Program Comment is an optional tool, and will not replace, amend, or otherwise change the 2008 PA, nor any other park- or project-specific Section 106 agreements.

Under NPS policy, each Park Superintendent serves as the responsible agency official for the purposes of Section 106 compliance for their park and makes all findings and determinations in the Section 106 process.

If standard Section 106 review, the 2008 PA, a park- or project-specific agreement, or some other applicable program alternative is better suited for NPS to fulfill their Section 106 responsibilities for a given undertaking, there is no requirement for this Program Comment to be used by the Park Superintendent. Again, use of this Program Comment is optional.

D. *Effect on Tribal Lands.* This Program Comment cannot be used on Tribal lands (as defined in the NHPA). In addition, this Program Comment cannot be used when any portion of an undertaking is proposed to occur on or affect historic properties located on Tribal lands or when the undertaking includes activities that may affect historic properties located on Tribal lands (section II.F.2.).

E. *Category of Undertakings.* A Park Superintendent will determine whether it is appropriate to use this Program Comment for a given undertaking as described immediately below and referencing both the park inventory of historic properties described in I.C, above and the park's most recent annual report, such as a report associated with the 2008 PA or some other park-wide agreement, and going forward as described in section X.

This Program Comment may be selected by a Park Superintendent as the appropriate Section 106 compliance method when one of the following management undertakings is planned to take place: (a) at a single Mission 66-era facility or (b) at one or more NPS facilities where the majority of facilities (or resources) within the APE are from the Mission 66-era (1945 to 1972), as determined by the Park Superintendent (in consultation with Qualified Personnel and/or the CRM Team with such consultation documented in the Consultation Record).

The following lists the qualified undertakings (Qualified Undertaking(s) or Qualifying Undertaking(s)) covered by this Program Comment:

1. Regular repetitive management activities (as listed in the 2008 PA Stipulation III.C, and referred to in this Program Comment as Regular Management Activities.) and associated work (*e.g.,* site, site signage, and utilities) and

2. Other management activities (Other Management Activities) and associated work (*e.g.,* site, site signage, and utilities) listed below:

i. Complete rehabilitation in accordance with the Secretary's Standards, specifically the Secretary's Standards for Rehabilitation, and applicable guidelines; and/or

ii. section II.E.2.i. when associated with leasing; and/or

iii. Alteration, accessibility improvements, HazMat abatement, stabilization and mothballing, demolition of non-historic properties, new construction in accordance with the Secretary's Standards and applicable guidelines or with Design Guidelines (section II.H.), and construction of additions.

F. *Non-Qualifying Undertakings.* However, an otherwise Qualifying Undertaking may not utilize the Program Comment when the Park Superintendent (in consultation with Qualified Personnel and/or the CRM Team and documented in the Consultation Record), determines that any of the conditions below (also referred to as Kick-Outs) are present, as it would then be considered non-qualified or non-qualifying (Non-Qualified Undertaking(s) or Non-Qualifying Undertaking(s)):

1. potential to affect National Historic Landmarks (NHLs) (including those from the Mission 66-era), historic battlefields, burial sites, human remains, and/or funerary objects;

2. any portion is proposed to occur on or affect historic properties located on Tribal lands, or there is the potential to affect properties of religious and cultural significance to an Indian Tribe or to Native Hawaiian organizations or others in the Native Hawaiian Community, or to Alaska Natives;

3. potential to affect a historic property that is significant for reasons other than Mission 66 (*e.g.,* National Register-eligible or -listed historic properties that are not primarily-eligible or -listed due to any association with the Mission 66-era as it is described in the MPDF, such as a Colonial-period archaeological site, a Queen Anne Style farmhouse complex district, a CCC-era structure or linear district, a historic landscape site or district, etc.); and/or

4. potential to affect a Mission 66-era historic property or properties such that it/they would be ineligible for National Register listing or a candidate(s) for de-listing.

To clarify, the majority of facilities (or resources) within the APE must have been built within the Mission 66-era (1945 to 1972), as determined by the Park Superintendent (in consultation with Qualified Personnel and/or the CRM Team with such consultation documented in the Consultation Record), section II.E., or the undertaking is Non-Qualifying.

G. *Temporary Effects.* Use of this Program Comment may still occur if there may be potential temporary adverse effects to a historic property or properties during construction which may be reasonably associated with construction activities for the Qualifying Undertaking. Such temporary adverse effects are the type that will cease once construction is complete (Temporary Effects) (*e.g.,* temporary effects associated with safety signage or apparatus, construction lay-down or staging areas, or for temporary provision or cessation of utilities or channeled drainage). These effects must be minimized with assistance from Qualified Personnel and/or the CRM Team, as documented in the Qualifying Undertaking's Consultation Record.

If a Qualified Undertaking would not otherwise trigger an External Review Process (defined below), but may cause Temporary Effects, the External Review Process will not be triggered due to the Temporary Effects.

H. *Design Guidelines.* Guidelines for new construction, construction of additions, or other actions (II.E.2.) at Mission 66-era facilities that may be developed on a park-by-park basis or on a facility type basis (*e.g.,* Design and Maintenance Guidelines: Mission 66 Comfort Stations, National Capital Region, Washington, DC) and utilized in conjunction with this Program Comment to avoid and minimize adverse effects when comments by ACHP, the National Conference of State Historic Preservation Officers (NCSHPO), and the respective state State Historic Preservation Officers (SHPOs) for park-by-park guidelines have been reasonably incorporated and the final document is promulgated by the Federal Preservation Officer (FPO) to ACHP, NCSHPO, and the respective state SHPO(s) online, and in regular reporting (Design Guidelines).

III. Identification of Historic Properties

A. *Reasonable and Good Faith Effort.* After determining that it is appropriate to use the Program Comment for the proposed Qualifying Undertaking as described above, the Park Superintendent will identify historic properties within its APE. Qualified Personnel and/or a CRM Team will

support Park Superintendents to help them make informed determinations. The Park Superintendent will make a reasonable and good-faith effort to identify historic properties through one of the options described below, or a combination thereof, and must also reference their park's most recent annual report, such as a report associated with the 2008 PA or some other parkwide agreement and going forward as described in section X.

1. Rely on the records from previous identification efforts including but not limited to those completed pursuant to 36 CFR 800.4(c) for another undertaking within the APE, or identification efforts done in implementation of the agency's responsibilities under section 110 of the NHPA (54 U.S.C. 306102). In consultation with the Qualified Personnel and/or CRM Team, the Park Superintendent would determine if those previous efforts are sufficient to identify historic properties within the APE for the proposed undertaking.

2. Alternatively and in lieu of conducting individual determinations of eligibility in accordance with 36 CFR 800.4, the Park Superintendent may consider unevaluated Mission 66-era facilities (or those for which evaluations were incomplete or insufficient) as eligible for the National Register for the purposes of compliance with Section 106 via the Program Comment, with assistance from Qualified Personnel and/or a CRM Team primarily by applying the criteria set forth in the MPDF, and the National Register criteria, and any associated guidance so that the historic property's character-defining features are identified and documented as described immediately below.

Identification efforts and consultation (*e.g.,* among the Park Superintendent, Qualified Personnel and/or a CRM Team), including any disagreements and their resolution, must be documented in the Qualifying Undertaking's Consultation Record. The Consultation Record must also summarize the applicability of the MPDF and the National Register criteria, and any associated guidance, the summary being prepared by Qualified Personnel and/or the CRM Team, so that the historic property's character-defining features are identified. The following resources, ''Mission 66: Modernism and the National Park Dilemma'' (Ethan Carr, LALH, 2007) and ''MISSION 66 VISITOR CENTERS: The History of a Building Type'' (Sarah Allaback, Ph.D., NPS, 2000), and other NPS publications may provide additional context, if necessary.

B. *Re-evaluation of Previously Evaluated Non-Mission 66-Era Historic Properties.* Analysis and formal correspondence may be necessary to determine whether properties that are not from the Mission 66-era are historic. This may require re-evaluation of previously evaluated properties (*e.g.,* in accordance with 36 CFR 800.4), and would preclude use of the Program Comment until such evaluation is complete.

C. *Properties Built Between 1990 and the Present Day.* The Park Superintendent would not carry out any identification or evaluation efforts on properties within the APE that were built between 1990 and the present day unless previous review or consultation identified that property as National Register-eligible under Criteria Consideration G. Excepting previously determined eligible properties, the Park Superintendent would have no further review responsibility to consider effects for Qualifying Undertakings on post-1990 properties under the Program Comment.

D. *Mission 66-Era Utilities.* The Mission 66 program provided funds to introduce potable water, sewer systems, and electricity to new comfort stations and other buildings and structures within a park, as well as certain roads or trails. While construction of this infrastructure addressed Mission 66 goals to modernize parks and visitor services, utility infrastructure, such as water, sewer, telephone (communication), and electric lines (above and below ground), the utilities seldom in and of themselves have architectural or historical significance. Utility resources that are buried, either wholly or in part, should be described as a part of the overall setting, but need not be further evaluated or assessed to consider potential effects to them. They should be considered and described within the context of a related historic district, as applicable. As such, there are two (2) types of Mission 66-era facilities for which no further review is required under the Program Comment:

i. Effects to those Mission 66-era facilities already formally determined as ineligible, when those determinations indicated that the MPDF was taken into consideration and did not call for further evaluation of the subject facilities; and

ii. Effects to below-grade utilities and above or below-grade utility covers, lines, poles, and pipes (*e.g.,* water, sewer, telephone and communication, and electric) unless it is/they are an example of distinctive design or engineering.

However, there may be components of Mission 66-era utility systems that are visible and if, based on a determination of the Park Superintendent with input from Qualified Personnel and/or the CRM Team, they constitute examples of distinctive design or engineering compatible with other Mission 66 facilities and retain integrity, they should be evaluated for eligibility and included with the Park Superintendent's assessment of effects under the Program Comment (sections IV. and V.).

E. *Identification Findings and Next Steps.* After completing the effort described above, the Park Superintendent will make one of the following determinations (with input from Qualified Personnel and/or the CRM Team and made part of the Consultation Record):

1. A finding of no historic properties within the APE including no Mission 66-era historic properties, or

2. A finding that properties identified within the APE consist of:

i. only Mission 66-era historic properties, or

ii. Mission 66-era facilities (a combination of Mission 66-era historic properties and Mission 66-era facilities that are not historic), or

iii. a combination of Mission 66-era historic properties and other non-historic facilities (or resources) from outside of the Mission 66-era (but with the latter not representing a majority of the properties, per the Kick-Outs); or

iv. Mission 66-era facilities that are not historic and other facilities (or resources) from outside of the Mission 66-era that are historic (section II.E.).

Once one of these determinations has been made by the Park Superintendent, they will proceed to the next steps in the process, sections IV. and V., below.

The Park Superintendent must also record the identification finding(s), for the purposes of the annual report (section X.).

F. *Identification Findings for the Program Comment.* The Park Superintendent would only make National Register determinations of eligibility as described above for Mission 66-era facilities when considering a Qualified Undertaking(s) under the Program Comment. If for any reason Section 106 compliance must be accomplished via another means (*e.g.,* standard Section 106 review, a park-specific programmatic agreement, or an undertaking-specific memorandum of agreement is needed because an undertaking is no longer a Qualified Undertaking), additional analysis and reviews may be necessary.

IV. Review Process Overview and Assessing Effects

A. *Two Review Processes.* Under this Program Comment, there are two review processes. Some Qualifying Undertakings may require an External Review Process (ERP) and others may require only an Internal Review Process (IRP). The ERP package and IRP package will include relevant documentation so as to meet the requirements set forth in 36 CFR 800.11, as described below, and will be part of the Consultation Record.

Qualified Personnel and/or a CRM Team will support Park Superintendents to help them make informed determinations, to avoid or minimize adverse effects, and to take cumulative effects into consideration. It is standard for Park Superintendents to make reasonable efforts to avoid and minimize adverse effects to historic properties. The Consultation Record must indicate that such consideration occurred and support the Park Superintendent's findings. Any disagreements about the ERP or IRP between Park Superintendents, Qualified Personnel, and/or a CRM Team, and their resolution, must also be part of the Consultation Record.

B. *Special External Review Process for Certain Findings of No Historic Properties.* When no historic properties are identified within the APE, including findings that there are no Mission 66-era historic properties (section III.E.1.) or some Mission 66-era facilities that are not historic because they lack integrity (section III.E.2.ii. and iv.), a special ERP is required. This review is independent of the ERP but follows the same process (section V.A.) and has the same ERP Package Content requirements (section IV.A.). It requires a special review with Indian Tribes or Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives and the main purpose is to confirm that there are no properties of religious and cultural significance to an Indian Tribe or to Native Hawaiian organizations or others in the Native Hawaiian Community or to Alaska Natives in the APE.

If an ERP is occurring, the Special ERP may be accomplished in conjunction with the ERP. If an ERP is not occurring, the Special ERP must be completed separately.

C. *Internal Review Process for Certain No Adverse Effects Findings.* For all findings in section III.E.2., when there is a determination that there are no adverse effects to historic properties in the APE because the Secretary's Standards and applicable guidelines will be applied (confirmed with input from Qualified Personnel and/or the CRM Team and as shown in in the Consultation Record), and there are no other conditions (Conditions such as but not limited to archaeological monitoring, movement monitoring, and similar, but not those for Temporary Effects), the Park Superintendent is required to do an IRP.

D. *External Review Process for Certain No Adverse Effects Findings.* For all findings in section III.E.2., when there is also a determination that there are no adverse effects to historic properties in the APE because the Secretary's Standards and applicable guidelines will be applied, and other conditions will also be applied (aside from those for Temporary Effects), the Park Superintendent is required to do an ERP. (Conditions such as but not limited to archaeological monitoring, movement monitoring, and similar.)

E. *External Review Process for Adverse Effects Findings.* For findings in section III.E.2.i–iii., if there is a determination that there may be adverse effects to Mission 66-era historic properties, the Park Superintendent is required to do an ERP.

(For findings in section III.E.2.iv., if there is a determination that there may be adverse effects to non-Mission 66 era historic properties (*i.e.,* II.F.3.), excepting Temporary Effects, the Park Superintendent must follow the standard Section 106 review process or another applicable program alternative, because such adverse effects would render the undertaking Non-Qualifying.)

V. The External and Internal Review Processes

A. *The External Review Process.* The ERP will occur in the situations described above, sections IV. B. and D–E. The Park Superintendent will develop the ERP package as set forth in section VI. and post it on a public-facing PEPC (or other publicly accessible) website for Notified Parties (hereinafter defined) and consulting parties.

The Park Superintendent will notify the relevant SHPO and/or Tribal Historic Preservation Officer (THPO) and potentially interested Indian Tribes, or Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives (Notified Parties) (*i.e.,* via email, hard-copy letter via mail or mail service, or an alternative method arranged in advance in writing) that the ERP package has been posted.

Upon the Notified Parties' receipt of the notification, a fifteen (15) business day review period commences. The public-facing PEPC (or other publicly accessible) website and the first page of the ERP will clearly indicate the last day of the review period.

Consulting parties and the Notified Parties may provide any comments in writing via the public-facing PEPC (or other publicly accessible) website or email to the Park Superintendent within the review period, and the Park Superintendent will take them into account.

If no written objection or no response from the Notified Parties is received by the Park Superintendent within the review period, the Section 106 review as documented in the ERP is complete and no further review or consultation on the Qualifying Undertaking is required.

A Notified Party may object to the ERP package by providing a written notice to the Park Superintendent within the review period with a substantive, fact-based, and project-specific objection, and including a reasonable level of detail. Upon receipt, the Park Superintendent will either follow the standard Section 106 review process in 36 CFR part 800 or another applicable program alternative, or attempt to resolve the objection with the objecting Notified Party.

If the Park Superintendent attempts to resolve the objection, they may reach out to the objecting Notified Party and/or other Notified Parties to consult. If additional materials are necessary, they must be posted on the public-facing PEPC (or other publicly accessible) website for an additional five (5) business day review and consultation period. The Notified Parties will be notified of the availability of the additional information in the same way they received the initial ERP notification, and the first page of the public-facing PEPC (or other publicly accessible) website and the first page of the additional ERP information will clearly indicate the last day of the additional review and consultation period.

If the Park Superintendent is able to resolve the objection by the end of the additional review and consultation period, a summary of the resolution will be posted on the public-facing PEPC (or other publicly accessible) website promptly, and the Notified Parties will be notified of the resolution in the same way they received the initial ERP notification.

If the Park Superintendent is unable to resolve the Notified Party's objection by the end of the additional review and consultation period, the Program Comment cannot be used for the proposed undertaking and the Park Superintendent will follow the standard Section 106 review process in 36 CFR

part 800 or another applicable program alternative.

All ERP package materials, comments, and objections will become part of the Consultation Record.

B. *The Internal Review Process.* The IRP will occur in the situations described in section IV.C. Park Superintendents, Qualified Personnel, and/or a CRM Team will develop the IRP package in accordance with the requirements in section VI., reasonable time periods will be provided for internal review and discussion, and the Consultation Record must reflect all findings and determinations. Any disagreements between Park Superintendents, Qualified Personnel, and/or a CRM Team, and their resolution must also be documented in the Consultation Record.

C. *Implementation as Documented and Reporting.* Implementation of a Qualifying Undertaking in accordance with the finding(s) as documented in the ERP or IRP, including with any documented resolution summary described in section V.A., fulfills the agency's responsibilities under Section 106 for the Qualifying Undertaking.

The status of any ERP or IRP will be included in annual reporting, described in section X. If the Qualified Undertaking is not being reasonably executed as documented in the ERP or IRP package (*e.g.,* due to substantive differences between the preliminary design documents from the ERP or IRP package and later final design or construction documents that introduce Kick-Outs or new adverse effects, intensification of adverse effects, etc., or for another reason), then NPS will consult with Qualified Personnel and/or the CRM Team to determine whether the matter can be resolved, the initial effect findings maintained, and documented appropriately (*i.e.,* in the Consultation Record). If it cannot, Section 106 compliance must be reopened and accomplished via the Program Comment (*i.e.,* a new or updated IRP or a new ERP) or another means (*i.e.,* standard Section 106 review, a park-specific programmatic agreement, or an undertaking-specific memorandum of agreement). If this occurs, additional analysis and reviews may be necessary.

VI. ERP and IRP Package Contents

A. *ERP Package Contents.* The ERP package for the proposed Qualifying Undertaking must include:

1. a description of the Qualifying Undertaking;

2. analysis confirming no Kick-Outs are present;

3. a relevant excerpt of current preliminary design documents that clearly depict and delineate the Qualifying Undertaking (*i.e.,* plans, elevations, and specifications);

4. a description and map of the APE;

5. ground-disturbance information and surveys as appropriate and consistent with confidentiality provisions in 36 CFR 800.11(c);

6. a finding by the Park Superintendent as noted in section III.E.;

7. a finding by the Park Superintendent as noted in section IV. B., D. (*e.g.,* conditions), or E.;

8. the Park Superintendent's name and the name(s) of Qualified Personnel and/or the CRM Team; and,

9. the Park Superintendent's signature on the ERP package to confirm: the proposed project is a Qualifying Undertaking; that reasonable efforts were made to avoid and minimize adverse effects; the finding and determinations; that the park will execute the Qualifying Undertaking as documented; and,

10. the following statement, to account for various situations such as where there may be substantive differences between the preliminary design documents from the ERP package and later final design or construction documents that introduce Kick-Outs or new adverse effects, or intensify adverse effects, ''If the Qualifying Undertaking is not substantively executed as documented in the ERP, including any resolution summary if applicable, NPS will consult with Qualified Personnel and/or the CRM Team to determine whether the matter can be resolved and documented appropriately (*i.e.,* in the Consultation Record). If the matter cannot be resolved, and the initial effect findings would change, the Park Superintendent will reopen Section 106 and accomplish compliance for the proposed project via the Program Comment (*i.e.,* a new or updated ERP or IRP) or another means (*i.e.,* standard Section 106 review, a park-specific programmatic agreement, or an undertaking-specific memorandum of agreement).''

With regard to section VI.A.7., when adverse effects to Mission 66-era historic properties may result from the proposed undertaking, the Park Superintendent will reference the commensurate and relevant Mitigation Menu measure in section VIII., which will not be subject to further consultation, nor available for objection in the ERP.

The status of the ERP for the Qualifying Undertaking will be posted on a public-facing PEPC (or other publicly accessible) website for the duration of construction.

B. *IRP Package Contents.* The IRP package for the proposed Qualifying Undertaking must include the same elements listed for the ERP package to the extent applicable to the proposed undertaking, but will be posted on an internal-facing PEPC site, and all references to ERP above will be substituted with the term IRP.

VII. The Consultation Record

A. A complete Consultation Record that follows the documentation standards in 36 CFR 800.11, will be available and accessible to NPS staff at the park-, regional-, and national-levels for NPS reporting purposes, and includes:

—a summary of the Qualifying Undertaking;
—the APE;
—information on Kick-Outs, and their applicability;
—a summary of the applicability of the MPDF and National Register criteria and any associated guidance;
—a summary of any Temporary Effects and how they were minimized;
—the ERP package or IRP package including the finding of effects, comments and objections, and resolution summaries, as applicable;
—any other relevant internal or external comments or objections and their resolution or next steps planned or taken.
—in cases when the undertaking is not substantively executed as documented in the ERP or the IRP, and consultation must occur with Qualified Personnel and/or the CRM Team to determine whether the matter can be resolved and documented in the Consultation Record, such documentation or information on how the matter was addressed;
—the date the PEPC file was closed.

VIII. Mitigation

A. *Collective Mitigation.* NPS will provide mitigation for collective adverse effects to Mission 66-era historic properties at the national level, rather than park-/undertaking-specific approaches. The list below is a Mitigation Menu which consists of measures which may be employed alone or combined, and may be accomplished at the park-, regional-, or national-level(s), or some combination thereof. The Park Superintendent will identify the selected measure to resolve adverse effects to Mission 66-era historic properties that may occur when Qualified Undertakings are completed in accordance with the Program Comment:

—resource stewardship training;
—national-level inventory management;
—national-, park-, district-, and individual property-level National Register documentation;
—development and publication of an Administrative History of NPS Housing which will be completed as part of a partnership with the NPS History Program and a public university, and which will be publicly available by the spring of 2027;
—publication of an MPDF reference guide for internal and external partners, to facilitate standardized use of the MPDF, within six months of publication of the Program Comment in the **Federal Register**, and
—formal study of materials analysis and/or materials conservation or development of a national-level Mission 66-focused interpretive plan (as funds allow).

(The above list will be referred to as the Mitigation Menu and the individual measures will be referred to as Mitigation Measure(s).)

In addition, utilizing materials generated from regular reporting and Mitigation Measures, NPS national-level staff may endeavor to conduct data (statistics) collection and perform associated analysis, which may be described in the agency annual report (defined below).

For Qualifying Undertakings that pose adverse effects to historic properties, the associated ERP package will reference associated Mitigation Measure(s). The Park Superintendent will specify whether the Mitigation Measure will be completed at the park-, regional-, or national-level and who will be responsible for reporting on its status.

Mitigation Measures will be tracked by the FPO and deputy associate directors at the national level. National-, regional- and park-level progress must be detailed in the annual meeting and report, the regional annual report, and the agency annual report and meeting (defined below), segments of which must be posted on a public-facing PEPC (or other publicly accessible) website as described in the section X.

Within one (1) year of publication of the Program Comment in the **Federal Register**, NPS will also develop a brief web-based on-demand training for use by internal and external partners.

B. *Changes to Mitigation Measures.* Any change or modification to the mitigation menu would require an amendment to this Program Comment.

IX. Park Suspension

A. *Park Suspension Process.* Park suspension from use of the Program Comment, for a reasonable period of time, may occur if there are repeated or egregious instances where the Qualified Undertaking was not reasonably executed as documented in the IRP package or ERP package, or for similar concerns as may be raised by Notified Parties, the ACHP, NCSHPO, individual SHPOs, or Tribes or Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives, as noted below and as determined by the FPO in consultation with regional leadership, and with input from the respective Park Superintendent and the Qualified Personnel and/or the CRM Team(s). It may also occur if a park has a pattern of not complying with the terms of the Program Comment when it was the selected Section 106 compliance method, with such pattern documented in the Consultation Records or annual reporting, also as determined by the FPO as described in this section.

The respective SHPO/THPO, Indian Tribes and Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives may also offer comments in this regard to the Park Superintendent and/or FPO at any time in writing.

B. *Notification of Park Suspension.* The ACHP, NCSHPO, and the respective SHPO/THPO, Indian Tribes and Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives, will be promptly notified, in writing, if a park has been suspended from using the Program Comment and informed of the terms of such suspension. Those parks suspended from use of the Program Comment will be listed in the annual meeting and report (*e.g.,* to close out the year for that park), the regional annual report, and the agency annual report and meeting. (Segments of certain reports must be posted on a public-facing PEPC or other publicly accessible website, as described in the next section.)

X. Reporting and Meetings

A. *Park Annual Report and Annual Meeting.* For parks using or planning to use the Program Comment, the Park Superintendent will develop a park annual report and hold an annual meeting with consulting parties each year, initially occurring at least within eight (8) months of the issuance of the Program Comment or in conjunction with biannual meetings already occurring to meet requirements of other program alternatives (*e.g.,* the 2008 PA), whichever is earlier, either virtually, in-person, or via telephone.

Primary invitees include the SHPO, THPO, Indian Tribes and Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives, and a reasonable effort will be made, by the Park Superintendent, to accommodate their schedules. Other invitees may include other consulting parties, lessees, historic societies, gateway communities, Qualified Personnel and/or CRM Teams. Other stakeholders may also be invited.

The Park Superintendent will provide the park annual report to invitees concurrently with the annual meeting invitation via email, hard-copy letter through mail or other shipping service, or an alternative method arranged in advance and agreed to in writing by the sending and receiving parties. The annual reports will include:

—updates to inventories of Mission 66-era historic properties and non-historic properties, including new determinations of National Register eligibility;
—a summary of undertakings that were completed which utilized the Program Comment (if applicable);
—information about undertakings that are ongoing or are planned and the status of any relevant objections on an ERP package;
—park-level mitigation status;
—problems with implementation of the Program Comment;
—training administered;
—relevant NPS contact information; and
—any park suspension status.

The park will hold the annual meeting no less than thirty (30) days after the park has transmitted the invitation and park annual report.

Meeting minutes will be distributed by the park to all attendees, the Regional Director and Regional Section 106 Coordinator, and the Park 106 Coordinator, within thirty (30) days after the meeting. The park will also provide a summary on public-facing PEPC (or other publicly-accessible website) including meeting highlights, within that same period.

If a THPO, Indian Tribe and/or Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives has informed a Park Superintendent of an area of interest or concern due to the location of a property of religious and cultural significance to them, and a Mission 66-era facility has any geographic overlap with that area of interest or concern, the Park Superintendent will individually write to the respective THPO, Indian Tribe and/or Native Hawaiian organizations or others in the Native Hawaiian Community or Alaska Natives, (*i.e.,* via email, hard-copy letter through mail or other shipping service, or an alternative method arranged in

advance and agreed to in writing by the sending and receiving parties) in parallel with the park annual reporting, to inform them of the inventory and any updates. Park Superintendents will comply with all confidentiality requirements as applicable.

B. *Regional, Agency, and Wrap-Up Reports.* For regions that include parks using or planning to use the Program Comment, a regional annual report must be provided to the FPO within one (1) month before the end of the fiscal year and include a summary and compilation of:

—PEPC data;
—inventories of Mission 66-era historic properties and non-historic properties including new determinations of National Register eligibility;
—a summary of undertakings that were completed which utilized the Program Comment (if applicable);
—undertakings that are ongoing or are planned;
—park- and regional-level mitigation status;
—problems with implementation of the Program Comment including any park suspension(s) or overarching objections to multiple ERP packages;
—training administered; and
—NPS contact information.

Any disagreements between Park Superintendents, Qualified Personnel, and/or a CRM Team, and their resolution, must also be listed in summary fashion.

The FPO's summary and compilation of all the regional annual reports, as well as a summary of national-level mitigation status will comprise the agency annual report. It will include an executive summary that will be posted by the FPO on a public-facing PEPC (or other publicly accessible) website by the end of the fiscal year. The ACHP and NCSHPO will be notified of the posting in writing.

At the written request of the ACHP and/or NCSHPO, an annual meeting may occur to review implementation of the terms of the Program Comment and determine whether an amendment is needed. In the event that a meeting on the agency annual report is held by NPS, ACHP and NCSHPO will both be invited and it will occur no less than thirty (30) days after the agency annual report was posted on a PEPC (or other publicly accessible) website.

Three (3) years before the end of the duration of the Program Comment, the FPO will send a report to the ACHP and NCSHPO detailing progress made with the Program Comment, Mitigation Measures completed, National Register nomination status, challenges encountered, and the NPS's plans for the final two and a half (2.5) years of the Program Comment's duration. This will be known as the Program Comment wrap-up report.

In the final six (6) months of the ninth year of Program Comment's duration, regardless of the status of an amendment (if pursued), the FPO will submit an agency report to ACHP and NCSHPO detailing progress made and providing links to completed mitigation. NPS will also promptly post a summary of the agency report for public review on a public-facing PEPC (or other publicly accessible) website.

XI. Administrative Clauses and Discoveries

A. *Duration and Amendment.* The Program Comment will remain in effect until November 4, 2034 unless, prior to that time, the ACHP withdraws the Program Comment in accordance with 36 CFR 800.14(e)(6). Following such expiration or withdrawal, NPS will be required to comply with Section 106 through the process in 36 CFR part 800, or an applicable program alternative under 36 CFR 800.14.

During the first six (6) months of the ninth year of the issuance of the Program Comment, and at the time the wrap-up report is supposed to be issued, NPS and the ACHP will meet to determine whether the ACHP should consider an extension to its term via an amendment.

The Program Comment may be amended by the ACHP's Executive Director when the NPS, NCSHPO, or the ACHP's Executive Director proposes an amendment in writing to the other parties. In deciding whether to amend the Program Comment, the ACHP's Executive Director will consult with NPS and NCSHPO, and other parties as appropriate. The ACHP will publish notice in the **Federal Register** within thirty (30) days after the Executive Director's decision to amend the Program Comment, and also provide written notification to NPS, NCSHPO, and other parties as appropriate.

B. *Discoveries.* In the event that previously undocumented historic properties are encountered during an undertaking for which review has been completed under this Program Comment, the Park Superintendent will stop work and notify the SHPO/THPO, Indian Tribe(s), and/or Native Hawaiian organizations and the Native Hawaiian Community, as appropriate, within 48 hours, or as soon as reasonably possible. The Park Superintendent in consultation with Qualified Personnel and/or the CRM Team, will notify the parties of the park's proposed eligibility assessment for the property(ies) and any proposed measures to avoid, minimize, or mitigate adverse effects to historic property(ies), if present. The SHPO/THPO, Tribes, NHOs and Native Hawaiian Community will have 48 hours from receipt of the notice to provide the Superintendent with any comments on the proposal. The Superintendent will take into account any timely comments, in consultation with Qualified Personnel and/or the CRM Team, in implementing the proposal and proceed with the undertaking.

In the event the discovery includes human remains, funerary objects, sacred objects, or objects of cultural patrimony, the Park Superintendent will comply with the Native American Graves Protection and Repatriation Act (NAGPRA, 25 U.S.C. 3001 *et seq.*). Pursuant to an applicable NAGPRA Plan of Action or as otherwise required, the Park Superintendent will ensure that any human remains are left in situ, are not exposed, and remain protected while the park complies with relevant provisions of applicable Federal, State, and/or local laws.

When applicable, the Park Superintendent will consider the principles within the ACHP's Policy Statement on Burial Sites, Human Remains, and Funerary Objects, dated March 1, 2023. In implementing the Program Comment the NPS will fulfill its obligation to consult with Tribes and Native Hawaiian organizations and the Native Hawaiian Community consistent with all relevant Executive Orders, Secretary's Orders, the Department of the Interior Departmental Manual, and NPS Director's Orders and Related Guidance. NPS recognizes and considers Indigenous Knowledge in the Section 106 review process in accordance with the November 30, 2022 Guidance for Federal Departments and Agencies on Indigenous Knowledge issued by the White House Office of Science and Technology Policy and Council on Environmental Quality and the Departmental Manual (301 DM 7, Departmental Responsibilities for Consideration and Inclusion of Indigenous Knowledge in Departmental Actions and Scientific Research).

C. *Emergencies.* Emergency situations will be addressed via 36 CFR 800.12.

D. *Section 106 Review for a Single Undertaking.* Each proposed undertaking to be subject to the Program Comment should be reviewed in its entirety. Different program alternatives may not be used to fulfill Section 106 review responsibility for a single undertaking. To clarify, a Park Superintendent may not use more than

one program alternative to fulfill that park's Section 106 compliance for a single undertaking.

E. *Document Website.* This document will initially be available at *www.achp.gov* and Park 106 Compliance—Section 106 Compliance Program (U.S. National Park Service) (*nps.gov*) [10] and will continue to be made available online by NPS as referenced in agency annual reports. (END OF DOCUMENT)

Authority: 36 CFR 800.14(e).

Dated: December 2, 2024.

Javier Marqués,

General Counsel.

Coast Guard

[Docket No. USCG–2024–0733]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number 1625–0128

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: 1625–0128, Prospect Questionnaire, Chat Now Questionnaire, and the Officer Program Application; without change. Our ICR describes the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: You may submit comments to the Coast Guard and OIRA on or before January 8, 2025.

ADDRESSES: Comments to the Coast Guard should be submitted using the Federal eRulemaking Portal at *https://www.regulations.gov.* Search for docket number [USCG–2024–0733]. Written comments and recommendations to OIRA for the proposed information collection should be sent within 30 days of publication of this notice to *https://www.reginfo.gov/public/do/PRAMain.*

Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

A copy of the ICR is available through the docket on the internet at *https://www.regulations.gov.* Additionally, copies are available from: Commandant (CG–6P), Attn: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr. Ave. SE, Stop 7710, Washington, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: A.L. Craig, Office of Privacy Management, telephone 202–475–3528, fax 202–372–8405, or email *hqs-dg-m-cg-61-pii@uscg.mil* for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. 3501 *et seq.,* chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, USCG–2024–0733, and must be received by January 8, 2025.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *https://www.regulations.gov.* If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *https://www.regulations.gov* and can be viewed by following that website's instructions. We review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the Coast Guard in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). For more about privacy and submissions to OIRA in response to this document, see the *https://www.reginfo.gov,* comment-submission web page. OIRA posts its decisions on ICRs online at *https://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0128

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (89 FR 71915, September 4, 2024) required by 44 U.S.C. 3506(c)(2). That notice elicited no comments. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: Prospect Questionnaire, Chat Now Questionnaire, and the Officer Program Application.

OMB Control Number: 1625–0128.

Summary: This collection contains the recruiting website gocoastguard.com Prospect Questionnaire (CGRC–1130), Chat Now Questionnaire (CGRC–1132), and the Officer Program Application (CGRC–1131) that are used to screen active duty and reserve enlisted and officer applicants.

Need: The information is needed to initiate the recruiting and commissioning of active duty and reserve, enlisted and officer members.

[10] *https://www.nps.gov/orgs/1966/park-106-compliance.htm.*

14 U.S.C. 468 authorizes the United States Coast Guard to recruit personnel for military service. The information requested on the gocoastguard.com website is collected in accordance with 10 U.S.C. 503 and may be used to identify and process individuals interested in applying for enlistment or commission into the United States Coast Guard or Coast Guard Reserve.

Forms: Online Application plus hard copy of the Prospect Questionnaire (CGRC–1130), and/or the Officer Program Application (CGRC–1131) if a prospect does not use gocoastguard.com but contacts a recruiter directly.

Respondents: Approximately 50,000 applicants apply annually to initiate the screening process.

Frequency: Applicants may apply more than once, by initially completing the Chat Now Questionnaire (CGRC–1132) to answer questions on eligibility and may apply for both enlisted and officer programs through the Prospect Questionnaire (CGRC–1130) and/or Officer Program Application (CGRC–1131).

Hour Burden Estimate: The estimated burden remains 11,625 hours a year.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. *et seq.,* chapter 35, as amended.

Dated: November 19, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the Coast Guard in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). For more about privacy and submissions to OIRA in response to this document, see the *https://www.reginfo.gov,* comment-submission web page. OIRA posts its decisions on ICRs online at *https://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0089.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (89 FR 71917, September 4, 2024) required by 44 U.S.C. 3506(c)(2). That notice received six supportive comments. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: National Recreational Boating Safety Survey.

OMB Control Number: 1625–0089.

Summary: The National Recreational Boating Safety Survey collects data on recreational boating participation and exposure. Specifically, the survey focuses on the types of boats used, the demographics of boaters, the types of safety equipment on recreational boats, and the amount of time boaters spend on the water. Boating hours calculated from this survey play an integral part in calculating risk ratios associated with recreational boating. In light of the USCG's safety-oriented mission, we are proposing a name change of this survey to the National Recreational Boating Safety Survey from the National Recreational Boating Survey.

Need: The Federal Boat Safety Act of 1971 determines the framework of the Coast Guard recreational boating safety program. This program as set forth in 46 U.S.C., Chapter 131, requires the Coast Guard to ''encourage greater State participation and uniformity in boating safety efforts, and particularly to permit the States to assume a greater share of boating safety education, assistance, and enforcement activities.'' See 46 U.S.C. 13102. The Coast Guard Office of Auxiliary & Boating Safety, Boating Safety Division achieves these goals by providing timely and relevant information on boating activities that occur in each respective jurisdiction. The boating information provided by the Coast Guard enables each State agency to tailor and implement safety initiatives addressing specific needs of boaters in local jurisdictions. The primary objective of this collection is to provide the Coast Guard with the required information in a format suitable to effectively manage the program.

Forms: None.

Respondents: Recreational boaters and recreational boat owners living in the 50 states and the District of Columbia.

Frequency: The survey takes place every five to eight years and the last survey was conducted in 2018.

Hour Burden Estimate: The survey will take approximately 125,863 respondents a total estimate burden of 15,151 hours.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. *et seq.,* chapter 35, as amended.

Dated: November 19, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

For more about privacy and submissions to OIRA in response to this document, see the *https://www.reginfo.gov,* comment-submission web page. OIRA posts its decisions on ICRs online at *https://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0081

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (89 FR 71380, September 3, 2024) required by 44 U.S.C. 3506(c)(2). That notice received one supportive comment. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: Alternate Compliance Program.

OMB Control Number: 1625–0081.

Summary: This information is used by the Coast Guard to assess vessels participating in the voluntary Alternate Compliance Program (ACP) before issuance of a Certificate of Inspection.

Need: Sections 3306 and 3316 of 46 U.S.C. authorize the Coast Guard to establish vessel inspection regulations and inspection alternatives. Part 8 of 46 CFR contains the Coast Guard regulations for recognizing classification societies and enrollment of U.S.-flag vessels in ACP.

Forms: None.

Respondents: Owners and operators of U.S.-flag inspected vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has decreased from 198 hours to 178 hours a year, due to a decrease in the estimated annual number of respondents.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. *et seq.,* chapter 35, as amended.

Dated: November 19, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the Coast Guard in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). For more about privacy and submissions to OIRA in response to this document, see the *https://www.reginfo.gov,* comment-submission web page. OIRA posts its decisions on ICRs online at *https://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0113.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (89 FR 71914, September 4, 2024) required by 44 U.S.C. 3506(c)(2). That notice elicited no comments. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: Crewmember Identification Documents.

OMB Control Number: 1625–0113.

Summary: This information collection covers the requirement that crewmembers on vessels calling at U.S. ports must carry and present on demand an identification that allows the identity of crewmembers to be authoritatively validated.

Need: 46 U.S.C.70111 mandated that the Coast Guard establish regulation about crewmember identification. The regulations are in 33 CFR part 160 Subpart D.

Forms: None.

Respondents: Crewmembers, and operators of certain vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 32,955 hours to 35,724 hours a year, due to an increase in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. *et seq.,* chapter 35, as amended.

Dated: November 19, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. 3501 *et seq.,* chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, USCG–2024–0738, and must be received by January 8, 2025.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *https://www.regulations.gov.* If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *https://www.regulations.gov* and can be viewed by following that website's instructions. We review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the Coast Guard in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). For more about privacy and submissions to OIRA in response to this document, see the *https://www.reginfo.gov,* comment-submission web page. OIRA posts its decisions on ICRs online at *https://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0084

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (89 FR 71379, September 3, 2024) required by 44 U.S.C. 3506(c)(2). That notice elicited no comments. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: Audit Reports under the International Safety Management Code.

OMB Control Number: 1625–0084.

Summary: This information helps to determine whether U.S. vessels, subject to SOLAS 74, engaged in international trade, are in compliance with that treaty. Organizations recognized by the Coast Guard conduct ongoing audits of vessels' and companies' safety management systems.

Need: 46 U.S.C. 3203 authorizes the Coast Guard to prescribe regulations regarding safety management systems. 33 CFR part 96 contains the rules for those systems and hence the safe operation of vessels.

Forms: None.

Respondents: Owners and operators of vessels, and organizations authorized to issue ISM Code certificates for the United States.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 15,512 hours to 16,814 hours a year, due to an increase in the estimated annual number of responses.

Authority:

The Paperwork Reduction Act of 1995; 44 U.S.C. *et seq.,* chapter 35, as amended.

Dated: November 19, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

[FR Doc. 2024–28814 Filed 12–6–24; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

[OMB Control Number 1615–0107]

Agency Information Collection Activities; Revision of a Currently Approved Collection: H–2 Petitioner's Employment Related or Fee Related Notification

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: 30-Day notice.

SUMMARY: The Department of Homeland Security (DHS), U.S. Citizenship and Immigration Services (USCIS) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The purpose of this notice is to allow an additional 30 days for public comments. The changes to this information collection are related to the ongoing rulemaking, Modernizing H–2 Program Requirements, Oversight, and Worker Protections, proposed rule, and are contingent on its successful conclusion.

DATES: Comments are encouraged and will be accepted until January 8, 2025.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, must be submitted via the Federal eRulemaking Portal website at *http://www.regulations.gov* under e-Docket ID number USCIS–2009–0015. All submissions received must include the OMB Control Number 1615–0107 in the body of the letter, the agency name and Docket ID USCIS–2009–0015.

FOR FURTHER INFORMATION CONTACT: USCIS, Office of Policy and Strategy, Regulatory Coordination Division, Samantha Deshommes, Chief, telephone number (240) 721–3000 (This is not a toll-free number. Comments are not accepted via telephone message). Please note contact information provided here is solely for questions regarding this notice. It is not for individual case status inquiries. Applicants seeking information about the status of their individual cases can check Case Status Online, available at the USCIS website at *https://www.uscis.gov,* or call the USCIS Contact Center at 800–375–5283 (TTY 800–767–1833).

SUPPLEMENTARY INFORMATION:

Comments

The information collection notice was previously published in the **Federal Register** on October 3, 2024, at 89 FR 80589, allowing for a 60-day public comment period. USCIS received three comments in connection with the 60-day notice.

You may access the information collection instrument with instructions or additional information by visiting the Federal eRulemaking Portal site at: *https://www.regulations.gov* and entering USCIS–2009–0015 in the search box. Comments must be submitted in English, or an English translation must be provided. The comments submitted to USCIS via this method are visible to the Office of Management and Budget and comply with the requirements of 5 CFR 1320.12(c). All submissions will be posted, without change, to the Federal eRulemaking Portal at *http://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *http://www.regulations.gov.* Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Revision of a Currently Approved Collection.

(2) *Title of the Form/Collection:* H–2 Petitioner's Employment-Related or Fee-Related Notification.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I–129N; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Business or other for-profit. The notification requirement is necessary to ensure that alien workers maintain their nonimmigrant status and will help prevent H–2 workers from engaging in unauthorized employment.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection H–2 Petitioner's Employment Related Notification (email) is 8,893 and the estimated burden per response is 0.4167 hours and the H–2 Petitioner's Employment Related Notification (mail) is 371 and the estimated burden per response is 0.5 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 3,891 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is $1,852.80.

DHS is proposing changes to this information collection to align with the regulatory changes proposed in *Modernizing H–2 Program Requirements, Oversight, and Worker Protections,* proposed rule, 88 FR 65040 (Sep. 20, 2023) and are contingent on the successful completion of that rulemaking.

Dated: December 3, 2024.

Samantha L. Deshommes,

Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security.

[FR Doc. 2024–28784 Filed 12–5–24; 8:45 am]

BILLING CODE 9111–97–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7082–N–12]

60-Day Notice of Proposed Information Collection: Self-Help Homeownership Opportunity Program (SHOP); OMB Control No.: 2506–0157

AGENCY: Office of Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comment Due Date:* February 7, 2025.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection can be sent within 60 days of publication of this notice to *www.regulations.gov.* Interested persons are also invited to submit comments regarding this proposal by name and/or OMB Control Number and can be sent to: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410–5000; telephone (202) 402–3400 (this is not a toll-free number) or email at *Colette.Pollard@hud.gov* for a copy of the proposed forms or other available information.

FOR FURTHER INFORMATION CONTACT: Holly A. Kelly, Office of Rural Housing and Economic Development, Department of Housing and Urban Development, 451 Seventh Street SW, Room 7132, Washington, DC 20410–4500; email *Holly.A.Kelly@hud.gov;* telephone 202–402–6324. This is not a toll-free number. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.* Copies of available documents submitted to OMB may be obtained from Ms. Kelly.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Self-Help Homeownership Opportunity Program (SHOP).

OMB Approval Number: 2506–0157.

Type of Request: Extension of currently approved collection.

Form Number: SF–424; SF–424B; HUD 424 CB; HUD 424 CBW; SF–424D; HUD 425; HUD 425.1; HUD 2880; HUD 50153; SF–LLL/OMB 0348–00; SF–LLL/OMB 4040–0013; and Grant Reporting (Disaster Recover Grant Reporting/DRGR System).

Description of the need for the information and proposed use: This is a proposed information collection for submission requirements under the SHOP Notice of Funding Availability (NOFO) and post-award reporting requirements. HUD requires information to ensure the eligibility of SHOP applicants and the compliance of SHOP proposals, to rate and rank SHOP applications, and to select applicants for grant awards. Information is collected on an annual basis from each applicant that responds to the SHOP NOFO. The SHOP NOFO requires applicants to submit specific forms and narrative responses. HUD also requires semi-annual grant reporting post-award in order to ensure the SHOP grantees are complying with the terms of the Executed Grant Agreement.

Respondents: National and regional non-profit self-help housing organizations (including consortia) that apply for funds in response to the SHOP NOFO.

Frequency of Submission: Annually in response to the issuance of a SHOP NOFO. Semi-annually in response to post-award grant reporting.

Estimation of the Total Number of Hours Needed To Prepare the Information Collection Including Number of Respondents, Hours per Response, Frequency of Response, and Total Hours of Response for All Respondents

The estimates of the average hours needed to prepare the information collection are based on information provided by previous applicants and grantees. Actual hours will vary depending on the proposed scope of the applicant's/grantee's program, the applicant's/grantee's geographic service area and the number of affiliate organizations. The information burden is generally greater for national organizations with numerous affiliates.

Information collection	Number of respondents	Frequency of response	Responses per annual	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost

Total Annual Hour Burden				303	2,430.00		200,183.40

Note: Hourly cost per response was updated from the FY2021 rate of $70.45 to the FY2024 hourly cost per response rate of $82.38.

B. Solicitation of Public Comments

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3506 of the Paperwork Reduction Act of 1995, 44 U.S.C. chapter 35, as amended.

Marion M. McFadden,

Principal Deputy Assistant Secretary for Community Planning and Development.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7082–N–13]

60-Day Notice of Proposed Information Collection: Continuum of Care (CoC) Program Registration; OMB Control No: 2506–0182

AGENCY: Office of Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* February 7, 2025.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection can be sent within 60 days of publication of this notice to *www.regulations.gov.* Interested persons are also invited to submit comments regarding this proposal by name and/or OMB Control Number and can be sent to: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410–5000; telephone (202) 402–3400. (this is not a toll-free number) or email at *Colette.Pollard@hud.gov,* for a copy of the proposed forms or other available information.

FOR FURTHER INFORMATION CONTACT: Robert Waters, Senior Program Specialist, Office of Special Needs Assistance Programs, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email *Robert.P.Waters@hud.gov,* telephone (202) 402–4494. This is not a toll-free number. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.* Copies of available documents submitted to OMB may be obtained from Mr. Waters or Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Continuum of Care (CoC) Program Registration.

OMB Approval Number: 2506–0182.

Type of Request: Extension of currently approved collection.

Description of the need for the information and proposed use: This submission is to request an extension of an existing collection in use with OMB Control Number 2506–0182, for the Recordkeeping for HUD's Continuum of Care Homeless Assistance Grant Application—Continuum of Care Registration. CoC Program Collaborative Applicants complete forms registering CoCs prior to the annual CoC Program Competition, which collects each CoCs number and name (designated by HUD), the geographic codes selected by CoCs to designate the areas each CoC covers to provide housing and services to individuals and families experiencing homelessness. The information collected during the registration process is used by HUD to determine the CoCs that will submit a CoC Consolidated Application when the Competition process opens.

During CoC Program Registration, Collaborative Applicants may also request Unified Funding Agency (UFA) or High Performing Community (HPC) designation. If requesting UFA or HPC designation, additional forms and attachments created by the Collaborative Applicant or CoC are submitted for HUD's review to determine eligibility. The statutory and regulatory requirements related to the CoC Program and applicable supplementary documents are located on the CoC Program page on HUD's website.

Respondents (i.e., affected public): Nonprofit organizations, states, local governments, and instrumentalities of state and local governments, Indian Tribes, Tribally Designated Housing Entities (TDHEs) (as defined in section 4 of the Native American Housing Assistance and Self-Determination Act of 1996 (25 U.S.C. 4103)), and Public Housing Agencies (PHAs), as such term is defined in 24 CFR 5.100.

Information Collection/Form Number: Information is collected via the electronic e-snaps application system.

Estimated Number of Respondents: 405.

Estimated Number of Responses: 405.

Frequency of Response: Annually.

Responses per Annum: 835.

Average Hours per Response: See chart.

Total Estimated Burdens: See chart; however, the information included in the chart below is subject to change due to: 1) increase or decrease, based on the number of CoCs due to CoC mergers, splits, or creation of new CoCs; and 2) submission of UFA and HPC registration forms due to the number of Collaborative Applicants requesting UFA designation and the number of CoCs requesting HPC designation.

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost
CoC Registration—Basic	405	1	405	1	405	$43.55	$17,637.75
CoC Registration—UFA designation request	20	1	20	15	300	43.55	13,065.00
CoC Registration—HPC designation request	5	1	5	10	50	43.55	2,177.50
Grant Inventory Worksheet	405	1	405	4	1,620	43.55	70,551.00
Total	405	1	835	5	3,995		103,431.25

*Responses to UFA and HPC designations are subsets of the total 405 basic registration numbers as the basic CoC Registration is completed by all Collaborative Applicants to register the CoCs. On average there are 20 requests for UFA designation and to date no requests for HPC designation. The total number of respondents is subject to change annually due to CoCs merging or splitting and with newly created CoCs due to authorizing language expanding eligibility (*e.g.,* FY 2021 appropriations language authorizing the Indian Tribes and TDHEs eligibility to form CoCs, submit CoC Consolidated applications, and project applications).

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. chapter 35.

Marion M. McFadden,

Principal Deputy Assistant Secretary for Community Planning and Development.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[256A2100DD/AAKC001030/A0A501010.999900; OMB Control Number 1076–0169]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Probate of Indian Estates, Except for Members of the Osage Nation and Five Civilized Tribes

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Indian Affairs (BIA) are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before January 8, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection request (ICR) should be sent within 30 days of publication of this notice to the Office of Information and Regulatory Affairs (OIRA) through *https://www.reginfo.gov/public/do/PRA/icrPublicCommentRequest?ref_nbr=202405-1076-013* or by visiting *https://www.reginfo.gov/public/do/PRAMain* and selecting ''Currently under Review—Open for Public Comments'' and then scrolling down to the ''Department of the Interior.''

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Steven Mullen, Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs, U.S. Department of the Interior, 1001 Indian School Road NW, Suite 229, Albuquerque, New Mexico 87104; *comments@bia.gov;* (202) 924–2650.

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. You may also view the ICR at *https://www.reginfo.gov/public/Forward?SearchTarget=PRA&textfield=1076-0169.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on June 21, 2024 (89 FR 52076). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The Secretary of the Interior probates the estates of individual Indians owning trust or restricted property in accordance with 25 U.S.C. 372–373. In order to compile the probate file, the BIA must obtain the family heirship data regarding the deceased from individuals and the tribe. This section contains the procedures that the Secretary of the Interior follows to initiate the probate of the trust estate for a deceased person who owns an interest in trust or restricted property. The Secretary must perform the necessary research of family heirship data collection requests in this part to obtain the information necessary to compile an accurate and complete probate file. This file will be forwarded to the Office of Hearing and Appeals (OHA) for disposition. Responses to these information collection requests are required to create a probate file for the decedent's estate so that OHA can determine the heirs of the decedent and order distribution of the trust assets in the decedent's estate.

Title of Collection: Probate of Indian Estates, Except for Members of the Osage Nation and Five Civilized Tribes.

OMB Control Number: 1076–0169.

Form Number: OHA–7 form.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Indians, businesses, and tribal authorities.

Total Estimated Number of Annual Respondents: 36,906 per year.

Total Estimated Number of Annual Responses: 41,139 per year.

Estimated Completion Time per Response: Varies from 0.5 hours to 45 hours.

Total Estimated Number of Annual Burden Hours: 617,486 per year.

Respondent's Obligation: Required to Obtain a Benefit.

Frequency of Collection: Once per respondent per year.

Total Estimated Annual Nonhour Burden Cost: $0.

Authority

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Steven Mullen,

Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_CA_FRN_MO4500183243]

Filing of Plats of Survey: California

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of official filing.

SUMMARY: The plats of survey of lands described in this notice are scheduled to be officially filed in the Bureau of Land Management (BLM), California State Office, Sacramento, California, 30 calendar days from the date of this publication. The surveys, which were executed at the request of the U.S. Forest Service, U.S. Fish and Wildlife Service, and Bureau of Land Management, are necessary for the management of these lands.

DATES: Unless there are protests to this action, the plats described in this notice will be filed on January 8, 2025.

ADDRESSES: You may submit written protests to the BLM California State Office, Cadastral Survey, 2800 Cottage Way, W–1623, Sacramento, CA 95825. A copy of the plats may be obtained from the BLM California State Office, Public Room, 2800 Cottage Way, W–1623, Sacramento, California 95825, upon required payment.

FOR FURTHER INFORMATION CONTACT: Joan Honda, Chief, Branch of Cadastral Survey, Bureau of Land Management, California State Office, 2800 Cottage Way, W–1623, Sacramento, California 95825; 1–916–978–4316; *jhonda@blm.gov.*

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services for contacting Ms. Honda. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The lands surveyed are:

Mount Diablo Meridian, California

T. 15 S., R. 35 E., dependent resurvey and

subdivision, for Group No. 1813, accepted May 31, 2024.

T. 18 N., R. 9 W., dependent resurvey and metes-and-bounds survey of tracts 37 through 49, for Group No. 1740, accepted September 5, 2024

T. 6 N., R. 13 E., dependent resurvey, for Group No. 1819, accepted September 30, 2024.

T. 23 S., R. 24 E., dependent resurvey, subdivision, metes-and-bounds survey and corrective dependent resurvey, for Group No. 1804, accepted October 3, 2024.

San Bernardino Meridian, California

T. 2 N., R. 6 W., dependent resurvey, subdivision and metes-and-bounds survey, for Group No. 1798, accepted September 27, 2024.

A person or party who wishes to protest one or more plats of survey must file a written notice of protest within 30 calendar days from the date of this publication at the address listed in the **ADDRESSES** section of this notice. Any notice of protest received after the due date will be untimely and will not be considered. A written statement of reasons in support of a protest, if not filed with the notice of protest, must be filed at the same address within 30 calendar days after the notice of protest is filed. If a protest against the survey is received prior to the date of official filing, the filing will be stayed pending consideration of the protest. A plat will not be officially filed until the day after all protests have been dismissed or otherwise resolved.

Before including your address, phone number, email address, or other personal identifying information in your notice of protest or statement of reasons, you should be aware that the documents you submit—including your personal identifying information—may be made publicly available at any time. While you can ask the BLM to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 43 U.S.C. chapter 3.

Joan H. Honda,

Chief Cadastral Surveyor.

[FR Doc. 2024–28792 Filed 12–6–24; 8:45 am]

BILLING CODE 4331–15–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLHQ220000 L63000000 PH0000 25X; OMB Control No. 1004–0058]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Reporting Provision for Timber Export Determination and Log Scale Disposition

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Land Management (BLM) proposes to renew an information collection.

DATES: Interested persons are invited to submit comments on or before January 8, 2025.

ADDRESSES: Written comments and recommendations for this information collection request (ICR) should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Chris Schumacher by email at *c1schuma@blm.gov,* or by telephone at (202) 577–6745. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the PRA (44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we invite the public and other Federal agencies to comment on new, proposed, revised and continuing collections of information. This helps the BLM assess impacts of its information collection requirements and minimize the public's reporting burden. It also helps the public understand BLM information collection requirements and ensure requested data are provided in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on March 24, 2024 (89 FR 20999).

As part of our continuing effort to reduce paperwork and respondent burdens, we are again inviting the public and other Federal agencies to comment on the proposed ICR described below. The BLM is especially interested in public comment addressing the following:

(1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments submitted in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BLM collects the information from respondents to determine if they are qualified by statute to purchase Federal timber resources originating from public lands managed by the BLM. This OMB control number is currently scheduled to expire December 31, 2024. This request is for OMB to renew this OMB control number for an additional three (3) years.

Title of Collection: Reporting Provision for Timber Export Determination and Log Scale Disposition (43 CFR parts 5424 and 5462).

OMB Control Number: 1004–0058.

Form Numbers: 5450–17 and 5460–15.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Purchasers of Federal timber and their affiliates.

Total Estimated Number of Annual Respondents: 200.

Total Estimated Number of Annual Responses: 200.

Estimated Completion Time per Response: 1 hour.

Total Estimated Number of Annual Burden Hours: 200.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin King,

Information Collection Clearance Officer.

[FR Doc. 2024–28868 Filed 12–6–24; 8:45 am]

BILLING CODE 4310–84–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–606 and 731–TA–1416 (Review)]

Quartz Surface Products From China; Scheduling of Expedited Five-Year Reviews

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the scheduling of expedited reviews pursuant to the Tariff Act of 1930 (''the Act'') to determine whether revocation of the antidumping duty and countervailing duty orders on quartz surface products From China would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time.

DATES: September 6, 2024.

FOR FURTHER INFORMATION CONTACT: (Julie Duffy (202) 708–2579), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for this proceeding may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—On September 6, 2024, the Commission determined that the domestic interested party group response to its notice of institution (89 FR 47614, June 3, 2024) of the subject five-year reviews was adequate and that the respondent interested party group response was inadequate. The Commission did not find any other circumstances that would warrant conducting full reviews.[1] Accordingly, the Commission determined that it would conduct expedited reviews pursuant to section 751(c)(3) of the Act (19 U.S.C. 1675(c)(3)).

For further information concerning the conduct of these reviews and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

Staff report.—A staff report containing information concerning the subject matter of the reviews has been placed in the nonpublic record, and will be made available to persons on the Administrative Protective Order service list for these reviews on December 18, 2024. A public version will be issued thereafter, pursuant to § 207.62(d)(4) of the Commission's rules.

Written submissions.—As provided in § 207.62(d) of the Commission's rules, interested parties that are parties to the reviews and that have provided individually adequate responses to the notice of institution,[2] and any party other than an interested party to the reviews may file written comments with the Secretary on what determination the Commission should reach in the reviews. Comments are due on or before December 26, 2024 and may not contain new factual information. Any person that is neither a party to the five-year reviews nor an interested party may submit a brief written statement (which shall not contain any new factual information) pertinent to the reviews by December 26, 2024. However, should the Department of Commerce (''Commerce'') extend the time limit for its completion of the final results of its reviews, the deadline for comments (which may not contain new factual information) on Commerce's final results is three business days after the issuance of Commerce's results. If comments contain business proprietary information (BPI), they must conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the reviews must be served on all other parties to the reviews (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Determination.—The Commission has determined these reviews are extraordinarily complicated and therefore has determined to exercise its authority to extend the review period by up to 90 days pursuant to 19 U.S.C. 1675(c)(5)(B).

Authority: These reviews are being conducted under authority of title VII of the Act; this notice is published pursuant to § 207.62 of the Commission's rules.

By order of the Commission.

Issued: December 3, 2024.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2024–28772 Filed 12–6–24; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1425]

Certain TOPcon Solar Cells, Modules, Panels, Components Thereof, and Products Containing Same (II); Notice of Institution of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on October 23, 2024, under section 337 of the Tariff Act of 1930, as amended, on

[1] A record of the Commissioners' votes, the Commission's statement on adequacy, and any individual Commissioner's statements will be available from the Office of the Secretary and at the Commission's website.

[2] The Commission has found the responses submitted on behalf of Cambria Company LLC, Dal-Tile LLC, and Guidoni USA to be individually adequate. Comments from other interested parties will not be accepted (*see* 19 CFR 207.62(d)(2)).

behalf of Trina Solar (U.S.), Inc. of Fremont, California; Trina Solar US Manufacturing Module 1, LLC of Wilmer, Texas; and Trina Solar Co., Ltd. of China. Supplements to the complaint were filed on November 8, 2024, and November 15, 2024. The complaint, as supplemented, alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain TOPCon solar cells, modules, panels, components thereof, and products containing same by reason of the infringement of certain claims of U.S. Patent No. 9,722,104 (''the '104 patent'') and U.S. Patent No. 10,230,009 (''the '009 patent''). The complaint further alleges that an industry in the United States exists or is in the process of being established as required by the applicable Federal Statute. The complainant requests that the Commission institute an investigation and, after the investigation, issue a limited exclusion order and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.*

FOR FURTHER INFORMATION CONTACT: Pathenia M. Proctor, The Office of Unfair Import Investigations, U.S. International Trade Commission, telephone (202) 205–2560.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2024).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on December 3, 2024, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1–11 of the '104 patent and claims 1–17 of the '009 patent, and whether an industry in the United States exists or is in the process of being established as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission's Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is ''Tunnel Oxide Passivated Contact ('TOPCon') solar cells that include an isolation portion in an edge portion of a silicon semiconductor substrate and that prevents contact between two opposite type conductive semiconductor regions and solar modules and panels that include such solar cells'';

(3) Pursuant to Commission Rule 210.50(b)(l), 19 CFR 210.50(b)(1), the presiding administrative law judge shall take evidence or other information and hear arguments from the parties or other interested persons with respect to the public interest in this investigation, as appropriate, and provide the Commission with findings of fact and a recommended determination on this issue, which shall be limited to the statutory public interest factors set forth in 19 U.S.C. l337(d)(l), (f)(1), (g)(1);

(4) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainants are:

Trina Solar (U.S.), Inc., 7100 Stevenson Blvd., Fremont, CA 94538

Trina Solar US Manufacturing Module 1, LLC, Tradepoint 45 West, 1200 Sunrise Road, Wilmer, TX 75172

Trina Solar Co., Ltd., No. 2 Tianhe Road, Trina PV Industrial Park, Xinbei District, Jiangsu Province, China, 213031

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

CSI Solar Co., Ltd., 199 Lushan Road, Suzhou National & Hi-Tech Industrial Development Zone, Suzhou, Jiangsu Province, China, 215129

Canadian Solar Inc., 545 Speedvale Avenue, West Guelph, Ontario, N1K 1E6

Canadian Solar (USA) Inc., 1350 Treat Blvd. Ste 500, Walnut Creek, CA 94597

Canadian Solar Manufacturing (Thailand) Co., Ltd., 168, Bo Win, Si Racha District, Chon Buri 20230, Thailand

Canadian Solar US Module Manufacturing Corporation, 3000 Skyline Drive, Mesquite, TX 75149

Recurrent Energy Development Holdings, LLC, 98 San Jacinto Boulevard, Suite 750, Austin, TX 78701

(c) The Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW, Suite 401, Washington, DC 20436; and

(5) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge, and the Chief Administrative Law Judge is authorized to consider whether to consolidate Inv. No. 337–TA–1425 with Inv. No. 337–TA–1422, and to consolidate them if he deems it appropriate.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainants of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: December 4, 2024.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2024–28832 Filed 12–6–24; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

[OMB Number 1140–0036]

Agency Information Collection Activities; Proposed eCollection eComments Requested; FFL Out of Business Records Request—ATF Form 5300.3A

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 30 days until January 8, 2025.

FOR FURTHER INFORMATION CONTACT: If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact: Matthew S. Grim, NTCD/TORM, by email at *matthew.grim@atf.gov,* or telephone at 304–260–3683.

SUPPLEMENTARY INFORMATION: The proposed information collection was previously published in the **Federal Register**, 89 FR 81552, on Tuesday, October 8, 2024, allowing a 60-day comment period. Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and/or

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the information collection or the OMB Control Number 1140–0036. This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view Department of Justice, information collections currently under review by OMB.

DOJ seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOJ notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Overview of This Information Collection

1. *Type of Information Collection:* Revision of a previously approved collection.

2. *Title of the Form/Collection:* FFL Out of Business Records Request.

3. *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* ATF Form 5300.3A.

Component: Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Affected Public: Private Sector-for or not for profit institutions.

Abstract: Information Collection (IC) OMB 1140–0036 (FFL Out of Business Records Request—ATF Form 5300.3A) is used by ATF to notify licensees who go out of business and fail to submit their records in the prescribed time frame. The questions are simple and a return physical or email address is provided. The format is easy for the user to list the required information ATF needs to perform its function regarding laws and regulations. Upon receipt of this form, licensees are to submit their records to the ATF Out-of-Business Records or transfer them to an active FFL successor. Information collection (IC) OMB #1140–0036 is being revised to reflect minor changes in narrative text to articulate more clearly what out out-of-business records are required to be submitted, where they are to be submitted, and how they are to be submitted to the ATF OOBRC by OOB FFLs.

5. *Obligation to Respond:* The obligation to respond is mandatory per, 18 U.S.C. 923(g)(4), as implemented by 27 CFR 478.127.

6. *Total Estimated Number of Respondents:* 3,030 respondents.

7. *Estimated Time per Respondent:* 10 hours.

8. *Frequency:* Once annually.

9. *Total Estimated Annual Time Burden:* 30,300 hours.

10. *Total Estimated Annual Other Costs Burden:* $0.

If additional information is required, contact: Darwin Arceo, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE, 4W–218 Washington, DC 20530.

Dated: December 4, 2024.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* December 10, 2024.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

Pursuant to 39 CFR 3041.405, the Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to Competitive negotiated service agreement(s). The request(s) may propose the addition of a negotiated service agreement from the Competitive product list or the modification of an existing product currently appearing on the Competitive product list.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

Section II identifies the docket number(s) associated with each Postal Service request, if any, that will be reviewed in a public proceeding as defined by 39 CFR 3010.101(p), the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each such request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 and 39 CFR 3000.114 (Public Representative). Section II also establishes comment deadline(s) pertaining to each such request.

The Commission invites comments on whether the Postal Service's request(s) identified in Section II, if any, are consistent with the policies of title 39. Applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR

[1] Judge Ryerson was appointed as an Administrative Judge on the Atomic Safety and Licensing Board Panel in 2008. Since 2012, he has served as the Panel's Associate Chief Administrative Judge. In all his adjudicatory and leadership roles, Judge Ryerson served with surpassing distinction.

part 3035, and 39 CFR part 3041. Comment deadline(s) for each such request, if any, appear in Section II.

Section III identifies the docket number(s) associated with each Postal Service request, if any, to add a standardized distinct product to the Competitive product list or to amend a standardized distinct product, the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. Standardized distinct products are negotiated service agreements that are variations of one or more Competitive products, and for which financial models, minimum rates, and classification criteria have undergone advance Commission review. *See* 39 CFR 3041.110(n); 39 CFR 3041.205(a). Such requests are reviewed in summary proceedings pursuant to 39 CFR 3041.325(c)(2) and 39 CFR 3041.505(f)(1). Pursuant to 39 CFR 3041.405(c)–(d), the Commission does not appoint a Public Representative or request public comment in proceedings to review such requests.

II. Public Proceeding(s)

1. *Docket No(s).:* MC2025–525 and K2025–523; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 817 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Kenneth Moeller; *Comments Due:* December 10, 2024.

2. *Docket No(s).:* MC2025–536 and K2025–534; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 828 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Maxine Bradley; *Comments Due:* December 10, 2024.

3. *Docket No(s).:* MC2025–537 and K2025–535; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 829 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Maxine Bradley; *Comments Due:* December 10, 2024.

4. *Docket No(s).:* MC2025–555 and K2025–553; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 842 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Maxine Bradley; *Comments Due:* December 10, 2024.

5. *Docket No(s).:* MC2025–556 and K2025–554; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 843 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Maxine Bradley; *Comments Due:* December 10, 2024.

6. *Docket No(s).:* MC2025–557 and K2025–555; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 844 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Maxine Bradley; *Comments Due:* December 10, 2024.

7. *Docket No(s).:* MC2025–558 and K2025–556; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 845 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Kenneth Moeller; *Comments Due:* December 10, 2024.

8. *Docket No(s).:* MC2025–559 and K2025–557; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 846 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Kenneth Moeller; *Comments Due:* December 10, 2024.

9. *Docket No(s).:* MC2025–560 and K2025–558; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 847 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Kenneth Moeller; *Comments Due:* December 10, 2024.

10. *Docket No(s).:* MC2025–561 and K2025–559; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 848 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Almaroof Agoro; *Comments Due:* December 10, 2024.

11. *Docket No(s).:* MC2025–562 and K2025–560; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 849 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Almaroof Agoro; *Comments Due:* December 10, 2024.

12. *Docket No(s).:* MC2025–563 and K2025–561; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 850 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Almaroof Agoro; *Comments Due:* December 10, 2024.

13. *Docket No(s).:* MC2025–564 and K2025–562; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 851 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Almaroof Agoro; *Comments Due:* December 10, 2024.

14. *Docket No(s).:* MC2025–565 and K2025–563; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 852 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Gregory Stanton; *Comments Due:* December 10, 2024.

15. *Docket No(s).:* MC2025–566 and K2025–564; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage 853 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public*

Representative: Almaroof Agoro; *Comments Due:* December 10, 2024.

16. *Docket No(s).:* MC2025–567 and K2025–565; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 854 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Jennaca Upperman; *Comments Due:* December 10, 2024.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

Pursuant to 39 CFR 3041.405, the Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to Competitive negotiated service agreement(s). The request(s) may propose the addition of a negotiated service agreement from the Competitive product list or the modification of an existing product currently appearing on the Competitive product list.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*https://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

Section II identifies the docket number(s) associated with each Postal Service request, if any, that will be reviewed in a public proceeding as defined by 39 CFR 3010.101(p), the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each such request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 and 39 CFR 3000.114 (Public Representative). Section II also establishes comment deadline(s) pertaining to each such request.

The Commission invites comments on whether the Postal Service's request(s) identified in Section II, if any, are consistent with the policies of title 39. Applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3041. Comment deadline(s) for each such request, if any, appear in Section II.

Section III identifies the docket number(s) associated with each Postal Service request, if any, to add a standardized distinct product to the Competitive product list or to amend a standardized distinct product, the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. Standardized distinct products are negotiated service agreements that are variations of one or more Competitive products, and for which financial models, minimum rates, and classification criteria have undergone advance Commission review. *See* 39 CFR 3041.110(n); 39 CFR 3041.205(a). Such requests are reviewed in summary proceedings pursuant to 39 CFR 3041.325(c)(2) and 39 CFR 3041.505(f)(1). Pursuant to 39 CFR 3041.405(c)–(d), the Commission does not appoint a Public Representative or request public comment in proceedings to review such requests.

II. Public Proceeding(s)

1. *Docket No(s).:* K2025–577; *Filing Title:* Request of United States Postal Service Concerning Functionally Equivalent Inbound Competitive Multi-Service Agreement with Foreign Postal Operator—FY25–1; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 CFR 3035.105 and 39 CFR 3041.315; *Public Representative:* Katalin

[1] *See* Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

Clendenin; *Comments Due:* December 10, 2024.

2. *Docket No(s).:* MC2025–571 and K2025–569; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 858 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Katalin Clendenin; *Comments Due:* December 10, 2024.

3. *Docket No(s).:* MC2025–572 and K2025–570; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 859 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Katalin Clendenin; *Comments Due:* December 10, 2024.

4. *Docket No(s).:* MC2025–573 and K2025–571; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 860 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* December 2, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Katalin Clendenin; *Comments Due:* December 10, 2024.

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–126, OMB Control No. 3235–0287]

Submission for OMB Review; Comment Request; Extension: Form 4—Statement of Changes in Beneficial Ownership of Securities

Upon Written Request Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') has submitted to the Office of Management and Budget this request for extension of the previously approved collection of information discussed below.

Under the Exchange Act of 1934 (15 U.S.C. 78a *et seq.*) every person who is directly or indirectly the beneficial owner of more than 10 percent of any class of any equity security (other than an exempted security) which registered under Section 12 of the Exchange Act (15 U.S.C. 78l), or who is a director or any officer of the issuer of such security (collectively ''insider), must file a statement with the Commission reporting their ownership. Form 4 is a statement to disclose changes in an insider's ownership of securities. The information is used for the purpose of disclosing the equity holdings of insiders of reporting companies. Approximately 186,052 insiders file Form 4 annually and it takes approximately 0.5 hours to prepare for a total of 93,026 annual burden hours (0.5 hours per response × 93,026 responses).

Public Comment Instructions: The 30-day public comment period for this information collection request opens on December 10, 2024 and closes at the end of the day on January 9, 2025. The public may view the full information request and submit comments at *https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202412-3235-003* or email comments to *MBX.OMB.OIRA.SEC_desk_officer@omb.eop.gov.*

Dated: December 4, 2024.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101798; File No. SR–PEARL–2024–55]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Make Non-Substantive, Clarifying Changes to the Exchange's Rulebook

December 3, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 21, 2024, MIAX PEARL, LLC (''MIAX Pearl'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to make non-substantive, clarifying changes to the Exchange's Rulebook.

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-equities/pearl-equities/rule-filings,* at MIAX Pearl's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Proposal To Amend Chapter III

The Exchange proposes to make non-substantive clarifying changes to the second paragraph of Chapter III to provide accuracy and precision within the rule text. For background, Regulation SCI and MIAX [3] Rule 321 require MIAX Pearl to designate certain members of both the options and equities trading facilities of MIAX Pearl to participate in business continuity and disaster recovery testing in a manner specified by MIAX Pearl and at a frequency of not less than once every 12 months.[4] Such testing ordinarily is part of an annual industry-wide test. MIAX Rule 321, as incorporated into the MIAX Pearl Rulebook, governs mandatory participation in testing of MIAX Pearl's backup systems. In particular, MIAX Rule 321, as incorporated, requires MIAX Pearl to designate certain Members [5] and Equity Members [6] that account for a specified percentage of executed volume on MIAX Pearl (separately, with respect to the options and equities trading facilities of MIAX Pearl), measured on quarterly basis, to connect to the MIAX Pearl backup systems and participate in functional and performance testing of such system.[7]

On August 14, 2020, the U.S. Securities and Exchange Commission (''Commission'') approved the Exchange's proposal to adopt rules governing the trading of equity securities, referred to as MIAX Pearl Equities.[8] MIAX Pearl Equities began trading on September 25, 2020.[9] For calendar year 2020, the annual business continuity and disaster recovery industry-wide test was scheduled for October 24, 2020. MIAX Pearl Equities did not have two quarters of trading data on which to base its Equity Member designation prior to the October 24, 2020 test. Thus, MIAX Rule 321 would not permit MIAX Pearl Equities to designate any Equity Members to participate in the industry-wide test for 2020 because no Equity Members would have the requisite trading volume on MIAX Pearl Equities upon which a designation could be made at that time.

To address the unique circumstances for disaster recovery testing in 2020, the year in which MIAX Pearl Equities became operational, the Exchange amended Chapter III of the Exchange's Rules to provide that for calendar year 2020, notwithstanding paragraph (b) and Interpretations and Policies .01 of MIAX Rule 321, which assigns the Exchange responsibility of ''identifying Members that account for a meaningful percentage of the Exchange's overall volume,'' the Exchange instead designated at least three Equity Members on MIAX Pearl Equities who have a meaningful percentage of trading volume in NMS Stocks across the other equity exchanges in 2020.[10] This allowed MIAX Pearl Equities to identify Equity Members for industry-wide disaster recovery testing in the absence of the metrics that are used in the ordinary course to designate such firms.

MIAX Pearl Equities now has sufficient trading data each year to designate Equity Members that account for a specified percentage of executed volume on MIAX Pearl Equities, measured on quarterly basis, to require certain Equity Members to connect to the MIAX Pearl backup systems and participate in functional and performance testing of such system. Since the unique circumstances for disaster recovery testing in 2020 no longer exists, the Exchange now proposes to delete the second paragraph of Chapter III. The purpose of the purposed change is to delete the outdated rule text.

Proposal To Amend Exchange Rule 503

The Exchange proposes to make non-substantive, clarifying changes to subparagraphs (a)(3)–(4) of Exchange Rule 503 to provide consistency within the rule text.

Specifically, the Exchange proposes to amend the announcement method by requiring announcements through a Regulatory Circular, instead of a post on the Exchange's website, for the purpose of Exchange Rule 503. The Exchange proposes to replace ''on the Exchange's website'' with ''through a Regulatory Circular'' at the end of subparagraph (a)(3) of Exchange Rule 503. The Exchange proposes to replace ''published by the Exchange on its website'' with ''announced to Members through a Regulatory Circular'' at the end of the first sentence of subparagraph (a)(4) of Exchange Rule 503. The Exchange proposes to replace ''posted by MIAX Pearl on its website'' with ''announced to Members through a Regulatory Circular'' at the end of the second sentence of subparagraph (a)(4) of Exchange Rule 503. The purpose of the proposed changes is to harmonize the Exchange's rules and provide consistency within the Exchange's Rulebook as the Exchange, and its affiliates, historically announce such information through a Regulatory Circular.[11] The proposed changes do not impact or alter the information provided to any Member. Accordingly, with the proposed changes, subparagraphs (a)(3)–(4) of Exchange Rule 503 will provide as follows:

(3) ''Market for the Underlying Security'' shall mean either the primary listing market, the primary volume market (defined as the market with the most liquidity in that underlying security for the previous two calendar months), or the first market to open the underlying security, as determined by the Exchange on a class by class basis and announced to Members through a Regulatory Circular.

(4) ''Valid Width National Best Bid or Offer'' or ''Valid Width NBBO'' shall mean the combination of all away market quotes and any combination of MIAX Pearl Market Maker orders and quotes received from a minimum number of away markets and a minimum number of MIAX Pearl Market Makers within a specified bid/ask differential each as established and announced to Members through a Regulatory Circular. The Valid Width NBBO will be configurable by the underlying, and tables with valid width

[3] The term ''MIAX'' means Miami International Securities Exchange, LLC. *See* Exchange Rule 100. The rules contained in MIAX Chapter III, as such rules may be in effect from time to time, are incorporated by reference into MIAX Pearl Chapter III, and are thus MIAX Pearl Rules and thereby applicable to MIAX Pearl Members. *See* Chapter III of Exchange's Rulebook.

[4] *See* MIAX Rule 321(a)–(b).

[5] The term ''Member'' means an individual or organization that is registered with the Exchange pursuant to Chapter II of these Rules for purposes of trading on the Exchange as an ''Electronic Exchange Member'' or ''Market Maker.'' Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[6] The term ''Equity Member'' is a Member authorized by the Exchange to transact business on MIAX Pearl Equities. See Exchange Rule 1901. The term ''MIAX Pearl Equities'' shall mean MIAX Pearl Equities, a facility of MIAX PEARL, LLC. *See id.*

[7] *See* MIAX Rule 321(b).

[8] *See* Securities Exchange Act Release No. 89563 (August 14, 2020), 85 FR 51510 (August 20, 2020) (SR–PEARL–2020–03).

[9] *See* ''MIAX PEARL Receives Approval to Operate Equities Exchange; Launch Date Confirmed for September 25, 2020,'' *available at https://www.miaxglobal.com/sites/default/files/alert-files/MIAX_Press_Release_08182020.pdf.*

[10] *See* Securities Exchange Act Release No. 89736 (September 2, 2020), 85 FR 55730 (September 9, 2020) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Relating to the Designation of Members for Mandatory Disaster Recovery Testing Pursuant to Regulation SCI for Calendar Year 2020).

[11] *See, e.g.,* MIAX Rule 503(d); *see also* MIAX Pearl Options Exchange Regulatory Circular 2024–58, Market for Underlying Security Used for Openings on MIAX Options, MIAX Pearl Options, MIAX Emerald Options and MIAX Sapphire Options for Newly Listed Symbols Effective Wednesday, October 23, 2024, *available at https://www.miaxglobal.com/sites/default/files/circular-files/MIAX_Pearl_Options_RC_2024_58.pdf.*

differentials will be announced to Members through a Regulatory Circular. Away markets that are crossed will void all Valid Width NBBO calculations. If any Market Maker orders or quotes on MIAX Pearl are crossed internally, then all such orders and quotes will be excluded from the Valid Width NBBO calculation. If any Market Maker orders or quotes on MIAX Pearl are locking or crossing the ABBO, the Market Maker's orders or quotes will be considered to be at the locked or crossed ABBO price for purposes of calculating the Valid Width NBBO.

Proposal To Delete All References to Mini-Options

The Exchange proposes to delete all outdated references to mini-options in the rule text.[12] On September 8, 2016, the Commission approved the Exchange's Form 1 application to register as a national securities exchange under Section 6 of the Exchange Act.[13] At that time, the Exchange established rule text for mini-options. Mini-options never gained significant market acceptance and have not achieved the expected level of traction or success in its target market. Accordingly, all mini-options were delisted several years ago and the Exchange does not have plans to re-list them in the foreseeable future. As the Exchange no longer offers mini-option contracts, the Exchange proposes to delete all references to mini-options to provide greater clarity to Members and the public regarding the Exchange's offerings and Rulebook. The Exchange also notes that other exchanges filed similar proposals to delete references to mini-options.[14] In the event that the Exchange desires to list mini-options in the future, the Exchange will file a rule change with the Commission to adopt rules to list mini-options and corresponding fees and rebates for transactions in mini-options, if applicable.

Specifically, the Exchange proposes to delete the content in Interpretations and Policies .08 of Exchange Rule 404 and then insert ''Reserved'' so as to keep the remainder of the Rulebook as currently formatted. The Exchange proposes to delete the content in subparagraph (c) of Exchange Rule 509 and then insert ''Reserved'' so as to keep the remainder of the Rulebook as currently formatted. The Exchange proposes to delete the content in Interpretations and Policies .02 of Exchange Rule 510 and then insert ''Reserved'' so as to keep the remainder of the Rulebook as currently formatted.

Proposal To Update Citations to Rule 600(b) of Regulation NMS

The Exchange proposes to update citations to Rule 600(b) of Regulation NMS in Exchange Rule 100, Definitions, Rule 530, Limit Up-Limit Down, Rule 2612, Minimum Price Variations, Rule 2614, Orders and Order Instructions, and Rule 2705, Prohibition Against Trading Ahead of Customer Orders.

In 2024, the Commission amended Regulation NMS under the Act to update the rule that requires disclosures for order executions in national market system (''NMS'') stocks.[15] As part of that initiative, the Commission adopted new definitions in Rule 600(b) of Regulation NMS and renumbered the remaining definitions, including the definitions of Trading Center (formerly Rule 600(b)(95)), Regular Trading Hours (formerly Rule 600(b)(77)), NMS Stock (formerly Rule 600(b)(55)), and Intermarket Sweep Orders (formerly Rule 600(b)(38)).

The Exchange accordingly proposes to update the relevant citations to Rule 600(b) in its rules as follows:

- The citation to the definition of Trading Center in Rule 100 would be changed to Rule 600(b)(106).
- The citation to the definition of Regular Trading Hours in Rule 530, Limit Up-Limit Down, would be changed to Rule 600(b)(88).
- The citation to the definition of NMS Stock in Rule 2612 would be changed to Rule 600(b)(65).
- The citation to the definition of Intermarket Sweep Orders in Rule 2614 would be changed to Rule 600(b)(47).

The citation to the second requirement of the definition of Intermarket Sweep Order would be changed to Rule 600(b)(47)(ii).

2. Statutory Basis

The Exchange believes that the proposed changes are consistent with Section 6(b) of the Act[16] in general, and further the objectives of Section 6(b)(1) of the Act[17] in particular, in that they are designed to enforce compliance by the Exchange's Members and persons associated with its Members and Equity Members, with the provisions of the rules of the Exchange.

In particular, the Exchange believes that the proposed changes are designed to enforce compliance by the Exchange's Members and Equity Members with the provisions of the rules of the Exchange because the changes will provide greater clarity to Members, Equity Members and the public regarding the Exchange's Rulebook by deleting the outdated rule text in Chapter III that is no longer applicable, amending the announcement method for certain types of openings on the Exchange, deleting outdated references to mini-options that are no longer offered by the Exchange, and updating the citations to Rule 600(b) of Regulation NMS.

The proposed change to delete the second paragraph of Chapter III of the Rulebook is to delete the outdated rule text since the unique circumstances for disaster recovery testing in 2020 no longer exists for Equity Members of MIAX Pearl Equities. The proposed changes to amend the announcement method for certain types of openings on the Exchange are to harmonize the rules and provide consistency within the Exchange's Rulebook as the Exchange, and its affiliates, historically announce such information through a Regulatory Circular. The proposed changes to remove outdated references to mini-options will help enforce compliance with the Exchange's rules by removing obsolete rule text. Mini-options were delisted from the Exchange years ago since mini-options failed to gain significant market acceptance and never achieved the expected level of traction or success in its target market.

The proposed changes to update the citations to Rule 600(b) of Regulation NMS are to correct inaccurate rule citations, thereby reducing potential confusion and ensuring that those subject to the Exchange's jurisdiction, regulators, and the investing public can more easily navigate and understand the Exchange's rules. The Exchange believes that the proposed changes will help enforce compliance with the Exchange's rules by providing clarity and consistency within the Exchange's

[12] The Exchange anticipates it will file a separate rule filing pursuant to Rule 19b–4 of the Exchange Act with the Commission to remove references to ''mini-options'' in the MIAX Pearl Options Exchange Fee Schedule, including outdated tables that still list fees (or rebates) for transactions by market participants in mini-options.

[13] *See* Securities Exchange Act Release No. 78793 (September 8, 2016), 81 FR 63238 (September 14, 2016) (File No. 10–227) (Exhibit B) (establishing rules for mini-options).

[14] *See* Securities Exchange Act Release No. 88374 (March 12, 2020), 85 FR 15522 (March 18, 2020) (SR–Phlx–2020–08) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Certain Phlx Rules To Remove References to Mini Options); *see also* Securities Exchange Act Release No. 88458 (March 23, 2020), 85 FR 17372 (March 27, 2020) (SR–MRX–2020–07) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Related to the Removal of Obsolete Listing Rules); *see also* Securities Exchange Act Release No. 88456 (March 23, 2020), 85 FR 17126 (March 26, 2020) (SR–ISE–2020–11) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Related to the Removal of Obsolete Listing Rules).

[15] *See* Securities Exchange Act Release No. 99679, 89 FR 26428 (April 15, 2024) (S7–29–22).

[16] 15 U.S.C. 78f(b).

[17] 15 U.S.C. 78f(b)(1).

Rulebook, thereby making it easier for Members and Equity Members to interpret the Exchange's Rulebook. The Exchange believes that Members and Equity Members would benefit from the increased clarity and consistency, thereby alleviating potential investor or market participant confusion.

The Exchange believes that the proposed rule changes also further the objectives of Section 6(b)(5) of the Act. In particular, they are designed to prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, protect investors and the public interest.

The Exchange believes the proposed changes promote just and equitable principles of trade and remove impediments to and perfect the mechanism of a free and open market and a national market system because the proposed rule changes will provide greater clarity to Members and Equity Members and the public regarding the Exchange's Rulebook by deleting the outdated rule text in Chapter III of the Rulebook that is no longer applicable to Equity Members, amending the announcement method for certain types of openings on the Exchange to provide consistency within the Rulebook, deleting outdated references to mini-options that are no longer offered by the Exchange, and updating citations to Rule 600(b) of Regulation NMS. It is in the public interest for the Exchange's Rulebook to be accurate and consistent so as to eliminate the potential for confusion.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed changes will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Specifically, the Exchange believes the proposed changes will not impose any burden on intra-market competition as there is no functional change to the Exchange's System [18] and because the rules of the Exchange apply to all Members and Equity Members equally.

The proposed change to delete the second paragraph of Chapter III of the Rulebook is to delete the outdated rule text applicable to Equity Members since the unique circumstances for disaster recovery testing in 2020 no longer exists. The proposed changes to amend the announcement method for certain types of openings on the Exchange are to harmonize the rules and provide consistency within the Exchange's Rulebook as the Exchange, and its affiliates, historically announce such information through a Regulatory Circular. The proposed changes to remove obsolete rule text include the removal of outdated references to mini-options. Mini-options are no longer offered by the Exchange since mini-options failed to gain significant market acceptance and have not achieved the expected level of traction or success in its target market. The proposed changes to update the citations to Rule 600(b) of Regulation NMS are to correct inaccurate rule citations, reduce potential confusion, and ensure that market participants can more easily navigate and understand the Exchange's rules. The proposed rule changes will have no impact on competition as they are not designed to address any competitive issue but rather are designed to remedy minor, non-substantive issues and provide added clarity to the Exchange's Rulebook.

In addition, the Exchange does not believe the proposal will impose any burden on inter-market competition as the proposal does not address any competitive issues but rather would provide additional clarity in the Exchange's rule by deleting the outdated rule text in Chapter III of the Rulebook that is no longer applicable, amending the announcement method for certain types of openings on the Exchange, deleting outdated references to mini-options that are no longer offered by the Exchange, and updating citations to Rule 600(b) of Regulation NMS. Since the proposal does not substantively modify System functionality or processes on the Exchange, the proposed changes will not impose any burden on competition nor are they meant to affect competition among the exchanges.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [19] and Rule 19b–4(f)(6) thereunder.[20]

A proposed rule change filed under Rule 19b–4(f)(6) [21] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[22] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing.

The Exchange states that waiver of the operative delay would permit the Exchange to delete outdated rule text regarding unique circumstances for disaster recovery that applied in 2020 and no longer exist, amend the announcement method for certain types of openings on the Exchange to make it consistent with the Exchange's historical announcement method, delete outdated references to mini-options that are no longer offered by the Exchange, and correct inaccurate rule citations, thereby alleviating potential confusion and adding clarity to its rules. For these reasons, and because the proposal does not raise any new or novel issues, the Commission believes that waiver of the operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposal operative upon filing.[23]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such

[18] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[19] 15 U.S.C. 78s(b)(3)(A)(iii).

[20] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[21] 17 CFR 240.19b–4(f)(6).

[22] 17 CFR 240.19b–4(f)(6)(iii).

[23] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [24] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–PEARL–2024–55 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–PEARL–2024–55. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–PEARL–2024–55 and should be submitted on or before December 30, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[25]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101803; File No. SR–MIAX–2024–44]

Self-Regulatory Organizations; Miami International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 1306 (Branch Offices) and Exchange Rule 1308 (Supervision of Accounts) To Harmonize With FINRA Rules

December 3, 2024.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 25, 2024, Miami International Securities Exchange, LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to: (i) amend Rule 1306 (Branch Offices) to adopt the definition used by Financial Industry Regulatory Authority, Inc. (''FINRA'') of Office of Supervisory Jurisdiction (''OSJ''); (ii) amend Rule 1308 (Supervision of Accounts) to adopt FINRA's inspection requirement for non-branch location; (iii) harmonize Rule 1308 (Supervision of Accounts) with certain changes by FINRA to FINRA Rule 3110 to permit eligible Members [3] to participate in FINRA's remote inspections program (''FINRA Pilot Program''); [4] and (iv) adopt FINRA's Residential Supervisory Location (''RSL'') classification.

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/miax-options/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to (i) amend Rule 1306 to adopt FINRA's definition of OSJ; (ii) amend Rule 1308 to adopt FINRA's inspection requirement for non-branch location; (iii) harmonize Rule 1308 with certain changes by FINRA to FINRA Rule 3110 to permit eligible Members to participate in FINRA's Remote Inspections Pilot Program; and (iv) adopt FINRA's RSL classification. The proposed changes would harmonize the Exchange's office and other location inspection rules with those of FINRA and thus promote uniform inspection standards across the securities industry resulting in less burdensome and more efficient regulatory compliance for common members.[5] Additionally, the proposed changes would allow Members who participate in FINRA's Remote Inspections Pilot Program to also satisfy the equivalent internal inspections requirements set out in Rule 1308. The

[3] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[4] *See* Securities Exchange Act Release No. 97398 (April 28, 2023), 88 FR 28620 (May 4, 2023) (''Remote Inspections Pilot Program Proposal''); Securities Exchange Act Release No. 98982 (November 17, 2023), 88 FR 82464 (November 24, 2023) (''Remote Inspections Pilot Program Approval Order'') (SR–FINRA–2023–007).

[5] Currently, all Exchange Members are also FINRA members.

Exchange notes that Exchange Rules 1306 and 1308 as proposed to be amended by this filing, are incorporated by reference into the rulebooks of the Exchange's affiliate MIAX PEARL, LLC (''MIAX Pearl''), MIAX Emerald, LLC (''MIAX Emerald''), and MIAX Sapphire, LLC (''MIAX Sapphire''). As such, the amendment to Exchange Rules 1306 and 1308 proposed herein will also apply to MIAX Pearl, MIAX Emerald, and MIAX Sapphire members.

Proposal To Adopt FINRA's Definition of OSJ

The Exchange proposes to adopt paragraph (j) of Rule 1306 to adopt FINRA's definition of OSJ. Currently, Exchange Rule 1306(a) only requires Members to file with the Exchange and keep current a list of each of its branch offices showing the location of each such office and the name of the manager of each such office. FINRA Rule 3110.01 provides that a member's main office location is required to be registered and designated as a branch office or OSJ if it meets the definitions of a ''branch office'' or ''office of supervisory jurisdiction'' as set forth in FINRA Rule 3110(f). The purpose of the proposed change is to harmonize Exchange Rule 1306 with FINRA Rule 3110.01 to provide that both branch offices and OSJs will be subject to the office registration requirements set forth in Exchange Rule 1306(a). The proposed Exchange Rule 1306(j) is substantively identical to FINRA Rule 3110(f)(1). The proposed definition of OSJ defined in Rule 1306(j) will read as follows:

''Office of Supervisory Jurisdiction'' means any office of a member at which any one or more of the following functions take place: (1) order execution or market making; (2) structuring of public offerings or private placements; (3) maintaining custody of customers' funds or securities; (4) final acceptance (approval) of new accounts on behalf of the Member; (5) review and endorsement of customer orders; (6) final approval of retail communications for use by persons associated with the Member, pursuant to FINRA Rule 2210(b)(1), except for an office that solely conducts final approval of research reports; or (7) responsibility for supervising the activities of persons associated with the Member at one or more other branch offices of the Member.

The Exchange proposes to add ''offices of supervisory jurisdictions'' to Exchange Rule 1306(a) as follows:

Every Member approved to do options business with the public under this Chapter shall file with the Exchange and keep current a list of each of its branch offices and offices of supervisory jurisdictions showing the location of each such office and the name of the manager of each such office.

Additionally, the Exchange proposes to add ''OSJ'' to Exchange Rule 1308(d)(1) and its subparagraph (i) to provide that both branch offices and OSJs that supervise one or more non-branch locations must be inspected no less than once each calendar year. In the event that it has been demonstrated to the satisfaction of the Exchange that because of proximity, special reporting or supervisory practice, other arrangements may satisfy this Rule's requirements for a particular branch office or OSJ, the Member does not have inspect such office no less than once every calendar year. The proposed Rule 1308(d)(1) is substantively identical to FINRA Rule 3110(c)(1)(A). The purpose of the proposed change is to harmonize Exchange Rule 1308(d) with FINRA Rule 3110(c), resulting in less burdensome and more efficient regulatory compliance for common members. The proposed rule change would enable Exchange Rule 1308 to continue to be incorporated into the agreement between the Exchange and FINRA to allocate regulatory responsibility for common rules (the ''17d–2 Agreement''), thereby facilitating FINRA's performance of its regulatory performance on the 17d–2 Agreement.[6]

Proposal To Adopt FINRA's Inspection Requirement for Non-Branch Location

Next, the Exchange propose to amend Rule 1308(d)(3) to adopt FINRA's inspection requirement for non-branch location. Exchange Rule 1308 sets forth the main requirements for inspections. An inspection of an office or location must occur on a designated frequency. The periodicity of the required inspection varies depending on the classification of the location or the nature of the activities that take place. Currently, Exchange Rule 1308(d) provides that each branch office that supervises one or more non-branch locations must be inspected no less often than once each calendar year; [7] and every branch office, without exception, must be inspected at least once every three calendar-years.[8] The Exchange proposes to amend Rule 1308(d)(3) to provide that each non-branch office should be inspected on a regular periodic schedule. The Member shall consider the nature and complexity of the securities activities for which the location is responsible and the nature and extent of contact with customers when establishing the schedule. In addition, the Member should have written supervisory and inspection procedures to set forth the schedule and an explanation regarding how the Member determined the frequency of the examination. FINRA Rule 3110(c) requires Members to inspect every branch office that supervises one or more non-branch locations at least annually, every branch office that does not supervise one or more non-branch locations at least every three years, and every non-branch location on a regular periodic schedule. The proposed Exchange Rule 1308(d)(3) is substantively identical to FINRA Rule 3110(c)(1)(C). The purpose of the proposed change is to harmonize Exchange Rule 1308(d) with FINRA Rule 3110(c), resulting in less burdensome and more efficient regulatory compliance for common members and facilitating FINRA's performance of its regulatory performance on the 17d–2 Agreement.[9] The proposed Exchange Rule 1308(d)(3) will read as follows:

Each Member shall inspect on a regular periodic schedule every non-branch location. In establishing such schedule, the Member shall consider the nature and complexity of the securities activities for which the location is responsible and the nature and extent of contact with customers. The Member's written supervisory and inspection procedures shall set forth the schedule and an explanation regarding how the Member determined the frequency of the examination.

The Exchange proposes to amend the hierarchical headings in Exchange Rule 1308 so that subparagraphs (d)(3)–(5) will be renumbered as (d)(4)–(6). In addition, the Exchange proposes to amend proposed renumbered subparagraph (d)(6) of Rule 1308 to replace certain internal cross references to other paragraphs of Rule 1308 in light of the hierarchical heading changes described above. In particular, the Exchange propose to amend the cross references contained in proposed renumbered subparagraph (d)(6) of Rule 1308 that are to subparagraphs (d)(4) and (d)(5), to now to be subparagraphs (d)(5) and (d)(6), respectively. The Exchange proposes to add the reference to subparagraph (d)(3) in the sentence describing Member complying with the requirements of the New York Stock Exchange or FINRA in proposed renumbered Rule 1308(d)(4). With the proposed changes, proposed

[6] *See* Securities Exchange Act Release No. 68363 (December 5, 2012), 77 FR 73711 (December 11, 2012) (File No. S7–966). The 17d–2 Agreement includes a certification by the Exchange that states that the requirements contained in certain Exchange rules are identical to, or substantially similar to, certain FINRA rules that have been identified as comparable.

[7] *See* Exchange Rule 1308(d)(1).

[8] *See* Exchange Rule 1308(d)(2).

[9] *See supra* note 6.

renumbered Rule 1308(d)(4) will provide that a Member that complies with requirements of the New York Stock Exchange or FINRA that are substantially similar to the requirements in paragraphs (d)(1), (d)(2), and (d)(3) of Rule 1308 as well as other related requirements in paragraphs (e) and (f) of Rule 1308 will be deemed to have met inspection requirements set forth in Rule 1308.

Proposal To Adopt FINRA Remote Inspections Pilot Program

The Exchange proposes to adopt subparagraph (d)(7) of Rule 1308, which would provide that any Member that participates in the FINRA Remote Inspections Pilot Program, [10] thereby satisfying the internal inspections requirements in FINRA Rule 3110(c), would also satisfy the equivalent annual branch office inspections requirements in Exchange Rule 1308(d). This proposed rule change would supplant Rule 1308(d)(5) (to be renumbered as Rule 1308(d)(6)), which allowed Members to fulfill any calendar year 2024 internal inspection obligations set forth in Rule 1308(d)(5) (to be renumbered as Rule 1308(d)(6)) by conducting remote inspections of the applicable branch offices [11] or non-branch locations.[12] This temporary relief, which was analogous to relief that FINRA provided for, automatically sunset on June 30, 2024.[13] As described below, adding proposed subparagraph (d)(7) of Rule 1308 would harmonize the Exchange's annual branch office inspections obligations for its Members with FINRA's comparable obligations for its members, thereby avoiding confusion to Members with respect to the applicability of participation in the FINRA Remote Inspections Pilot Program and compliance with Exchange Rule 1308. Additionally, because the proposed subparagraph (d)(7) of Rule 1308 would incorporate by reference FINRA Rule 3110.18, this rule change would enable Exchange Rule 1308 to continue to be incorporated into the 17d–2 Agreement.[14]

Standards for Supervision of Remote Offices

The responsibility of firms to supervise their associated persons is a critical component of broker-dealer regulation.[15] Members must supervise all of their associated persons, regardless of their location, compensation or employment arrangement, or registration status. Exchange Rule 1308(d), which is substantially identical to FINRA Rule 3110(c), requires any Member, regardless of size or type, to have a supervisory system for the activities of its associated persons that is reasonably designed to achieve compliance with the applicable securities laws and regulations and Exchange rules, and that sets forth the minimum requirements for such supervisory system.[16] The internal inspection obligation under Exchange Rule 1308(d) and FINRA Rule 3110(c) is one component of such system.

Exchange Rule 1308(d), as amended herein, sets forth three main requirements for inspections. First, an inspection of an office or location must occur on a designated frequency. The periodicity of the required inspection varies depending on the classification of the location or the nature of the activities that take place: each branch office that supervises one or more non-branch locations must be inspected no less often than once each calendar year; [17] and every branch office, without exception, must be inspected at least once every three calendar-years.[18] Second, written reports reflecting the results of such inspections are to be maintained with the Member for the longer of three years or until the next branch office inspection.[19] Third, to prevent compromising the effectiveness of inspections due to conflicts of interest, the rule requires a Member to ensure that the person conducting the inspection is independent of the direct supervision and control of the branch office in question (*i.e.,* not the branch office manager, or any person who directly or indirectly reports to such manager, or any person to whom such manager directly reports).[20]

Further, Rule 1306(i) sets out factors that should be considered when developing risk-based sampling techniques to determine the appropriateness of on-site for cause reviews of selected residences and other remote locations shall include, but not be limited to, the following: (1) the firm's size; (2) the firm's organizational structure; (3) the scope of business activities; (4) the number and location of offices; (5) the number of associated persons assigned to a location; (6) the nature and complexity of products and services offered; (7) the volume of business done; (8) whether the location has a Series 9/10-qualified person on-site; (9) the disciplinary history of the registered persons or associated persons, including a review of such person's customer complaints and Forms U4 and U5; and (10) the nature and extent of a registered person's or associated person's outside business activities, whether or not related to the securities business. Rule 1306(h) further states that the written supervisory procedures pertaining to supervision of sales activities conducted at the associated person's primary residence and other remote locations must be designed to assure compliance with applicable securities laws and regulations and with Exchange Rules.

Notably, all of the above requirements about supervision and inspections of branch offices reflected a business environment in which Members conducted in-person inspections of all of their offices.[21]

FINRA's Recent Attempts To Change the In-Person Inspection Requirements of Offices of Supervisory Jurisdiction, Branch Offices, and Non-Branch Locations

In the Remote Inspections Pilot Program Proposal, FINRA described its efforts during the past several years to offer its members the option of remotely conducting internal inspections of their OSJs, branch offices, and non-branch locations.[22] As stated therein, FINRA believed that as more recordkeeping moved from paper to electronic records, and as more meetings were conducted virtually using platforms such as Zoom and WebEx, the burden on FINRA members of conducting in-person inspections for all their remote office locations became harder to justify.[23]

Thus, when the COVID–19 pandemic required many securities industry professionals to work from home,

[23] *See Id.*

FINRA implemented several forms of regulatory relief to its members, including introducing FINRA Rule 3110.17, which the Exchange also introduced as subparagraph (d)(5) of Exchange Rule 1308 (to be renumbered as Rule 1308(d)(6)), to permit remote internal inspections of their branch offices.

The pandemic accelerated the industry's adoption of a broad remote work environment and the Exchange recognizes that the pandemic has profoundly changed attitudes on where work can occur. As a result of this change many firms have adopted, in varying scale, hybrid work models involving personnel who are working at least part time from alternative work locations (*e.g.,* private residences). As part of an effort to modernize its rules to reflect evolving technologies and business models, in April 2023, FINRA filed the Remote Inspections Pilot Program Proposal with the Securities and Exchange Commission (''SEC'') to establish a voluntary, three-year remote inspections pilot program that would allow eligible firms to conduct inspections of all or some offices or locations, remotely, subject to the specified terms therein.[24] The SEC approved the FINRA Remote Inspection Pilot Program Proposal in November 2023,[25] and FINRA commenced the pilot program on July 1, 2024.[26]

FINRA's Remote Inspections Pilot Program

FINRA's Remote Inspection Pilot Program builds on the terms of the temporary relief in FINRA Rule 3110.17, while requiring members to provide even more information about their remote inspections to allow FINRA to assess the overall impact and effectiveness of remote inspections.[27] The pilot program is designed to provide broader systemized information to supplement the information obtained through the FINRA examination process in an environment where offices and locations were closed. The information firms would be required to produce as a pilot program participant will help FINRA more accurately assess the overall impact and effectiveness of remote inspections.[28]

FINRA's Remote Inspection Pilot Program includes, among other things, the following requirements for participating firms:

- Risk Assessment. Prior to electing a remote inspection for an office or location, participating firms must develop a reasonable risk-based approach to using remote inspections and conduct and document a risk assessment for that office or location.[29]
- Written Supervisory Procedures for Remote Inspections. Participating firms must establish, maintain, and enforce written procedures that are reasonably designed for conducting remote inspections and reasonably designed to achieve compliance with applicable securities laws and regulations.[30]
- Effective Supervisory System. Participating firms must have an effective supervisory system for remote inspections that will be held to the same standards of review (set forth under FINRA Rule 3110.12). Where a member's remote inspection of an office or location identifies any ''red flags,'' the member may need to impose additional supervisory procedures for that office or location or may need to provide for more frequent monitoring of that office or location, including potentially a subsequent on-site visit on an announced or unannounced basis.[31]
- Documentation Requirement. Participating firms must maintain and preserve a centralized record for each of the Pilot Years specified in the pilot program that separately identifies: (1) all offices or locations that were inspected remotely; and (2) any offices or locations for which the member determined to impose additional supervisory procedures or more frequent monitoring, as provided in FINRA Rule 3110.18(d). A member's documentation of the results of a remote inspection for an office or location must identify any additional supervisory procedures or more frequent monitoring for that office or location that were imposed as a result of the remote inspection, including whether an on-site inspection was conducted at such office or location.[32]
- Firm Level Requirements. Participating firms must meet certain firm- level eligibility requirements to participate in the program set forth in FINRA Rule 3110.18(f)(1). For example, a firm cannot participate if it is designated as: (i) Restricted Firm under FINRA Rule 4111 or (ii) a Taping Firm under FINRA Rule 3170. Additionally, firms with suspended or new (effective less than 12 months) FINRA memberships or that have been found by the SEC or FINRA to have violated FINRA Rule 3110(c) are ineligible to participate. Participating firms must also comply with firm- level conditions to participate in the program. For example, a firm must have a recordkeeping system that keeps records current and promptly accessible, and that does not maintain physical or electronic records at the location subject to remote inspection. Additionally, participating firms must have firm-wide tools such as electronic recordkeeping systems, system security tools such as secure network connections and effective cybersecurity protocols, and tools specifically applied to each office or location based on the activities of associated persons, products offered, or any restrictions on the activity of the office or location.[33]
- Location Level Requirements. Participating firms must exclude from participating in the program any locations that do not meet the location level eligibility criteria set forth in FINRA Rule 3110.18(g)(1) (*e.g.,* the location includes: (i) persons subject to a disciplinary action, a statutory disqualification, or a mandated heightened supervisory plan; (ii) persons engaged in proprietary trading; or (iii) the handling of customer funds or securities). Additionally, eligible locations must use the firm's electronic communication system and may not maintain any original copies of books or records at the location.[34]
- Data and Information Collection Requirement. Participating firms must collect and on a quarterly basis produce to FINRA data consisting of separate counts for OSJs, supervisory branch offices, non-supervisory branch offices, and non-branch locations. This data must include information about the number of remote inspections conducted and any significant findings. Firms shall establish, maintain, and enforce written policies and procedures that are reasonably designed to comply with the data collection and transmission requirements.[35]
- Election to Participate in Remote Inspections Pilot Program. Participating firms must opt-in to the pilot program in a manner specified by FINRA.[36]
- Failure to Satisfy Conditions and Determination of Ineligibility. Participating firms that fail to satisfy terms of the Remote Inspections Pilot Program will be ineligible to participate in the pilot program and return to

[36] *See* FINRA Rule 3110.18(i).

conducting only on-site inspections.[37] FINRA may also make a determination to revoke a member's eligibility to participate if FINRA finds it to be in the public interest.[38]

• Definitions of Pilot Year periods. Includes clarifications that Pilot Year 1 is the second half of 2024, and Pilot Year 4 is the first half of 2027.[39]

Proposal

The Exchange now proposes to adopt subparagraph (d)(7) of Exchange Rule 1308. This proposed new paragraph reads as follows:

Members that are obligated to conduct an inspection of an office of supervisory jurisdiction, branch office or non-branch location pursuant to, as applicable, Rule 1308(d)(1), (2), and (3) may satisfy such obligation by participating in the FINRA Remote Inspections Pilot Program, as set forth in FINRA Rule 3110.18. The FINRA Remote Inspections Pilot Program shall cover required inspections of such offices or locations for a period of three years starting on [effective date] (''pilot period''), and such pilot period shall expire on July 1, 2027. If the pilot period is not extended, this subparagraph will automatically sunset on July 1, 2027. Members will not be able to participate in the FINRA Remote Inspections Pilot Program after such date.[40]

As stated in proposed new Exchange Rule 1308(d)(7), any Member that participates in the FINRA Remote Inspections Pilot Program, thereby satisfying the annual branch office inspections requirements in FINRA Rule 3110(c), will satisfy the equivalent annual branch office inspections requirements in Exchange Rule 1308(d).

The Exchange is not proposing to add the entire FINRA Remote Inspections Pilot Program to its rules, because it would be unnecessarily duplicative and burdensome for Members to submit the data and information required as part of the Remote Inspections Pilot Program to both the Exchange and FINRA.[41] The Exchange understands that adopting proposed paragraph (d)(7) of Exchange Rule 1308 would update Rule 1308 so that it remains substantially similar to FINRA Rule 3110, such that they remain common rules subject to the 17d–2 Agreement.[42] As a result, regulatory responsibility for Exchange Rule 1308(d) would continue to be allocated to FINRA.

As noted above, all Members were temporarily eligible to conduct remote office inspections until June 30, 2024. This proposed rule change would allow those Members who have enrolled in FINRA's Remote Inspections Pilot Program to continue to use remote inspections as part of an effective supervisory system.[43] The Exchange believes this Remote Inspections Pilot Program is a reasonable alternative for firms to fulfill their Rule 1308(d) obligations while permitting FINRA to collect data as the regulatory authority in this area under the 17d–2 Agreement to assess the efficacy and long-term viability of a permanent remote office inspections program. The Exchange emphasizes that the inspection requirement is one aspect of a firm's overall supervisory system, and that the inspection, whether done in accordance with the FINRA Remote Inspections Pilot Program, or on-site, would be held to the existing standards of review under Exchange Rule 1308(d).[44]

Adopt FINRA's RSL Classification

The Exchange proposes to adopt paragraph (d)(8) of Rule 1308, which would allow a location that is the private residence of a person associated with a Member where supervisory activities are conducted, including those described in proposed Rule 1306(j)(4) through (7) or Rule 1306(c)(2), that satisfies the conditions for designation as RSL set forth in FINRA Rule 3110.19 to also be considered a non-branch location (*i.e.,* an unregistered office) for those activities under the Exchange rules. Without this proposed rule change, any private residence at which a person associated with a member conducts supervisory activities is subject to registration, an annual inspection and, in some cases, additional licensing requirements.[45] As described below, adding proposed paragraph (d)(8) of Rule 1308 would harmonize the Exchange's internal inspections obligations for its Members with FINRA's comparable obligations for its members, thereby avoiding confusion to Members with respect to the applicability of FINRA's new RSL designation with respect to compliance with Rule 1308(d).[46] Additionally, because proposed paragraph (d)(8) of Rule 1308 would incorporate by reference FINRA Rule 3110.19, this rule change would enable Exchange Rule 1308 to continue to be incorporated into the 17d–2 agreement.[47]

Background

Early in 2020, the COVID–19 pandemic prompted FINRA to provide temporary relief to member firms from certain regulatory requirements to address the public health crisis.[48] As mentioned above, FINRA subsequently adopted temporary relief to allow remote inspections of an OSJ, branch office, or non-branch location for calendar years 2020 and 2021;[49] FINRA extended the temporary relief several times to include calendar years 2022, 2023, and the first half of 2024.[50] The Exchange, following FINRA, offered its Members the same temporary relief to allow remote inspections of OSJs, branch offices, and non-branch locations for calendar years 2021, 2022, 2023, and until June 30, 2024.[51] FINRA

[37] *See* FINRA Rule 3110.18(j).

[38] *See* FINRA Rule 3110.18(k).

[39] *See* FINRA Rule 3110.18(l).

[40] Proposed Exchange Rule 1308(d)(6).

[41] Pursuant to this proposed rule change, Members will be required to collect and on a quarterly basis produce to FINRA data regarding its participation in the Remote Inspections Pilot Program. *See* FINRA Rule 3110.18(h). But Members will not be required to produce that information directly to the Exchange.

[42] *See* supra note 6.

[43] The Exchange notes that any inspections conducted by its Members in the brief period between July 1, 2024 and the effective date of this filing will not satisfy Exchange Rule 1308(d), but believes this will not be an issue for its Members because the remote inspections process outlined in the pilot program is an ongoing process that cannot be completed in the few days between the start of the FINRA's pilot program and the effectiveness of this rule filing.

[44] Those standards provide, in part that based on the factors set forth under Exchange Rule 1308(d)(6)(ii), Members ''may need to provide for more frequent monitoring or oversight of that office or location.''

[45] *See* Exchange Rules 1306(d) and 1308(d)(1).

[46] The Exchange notes that all Members are currently FINRA members.

[47] *See supra* note 6.

[48] Among the temporary regulatory relief provided, FINRA adopted relief pertaining to branch office registration requirements through Form BR (Uniform Branch Office Registration Form) and FINRA Rule 3110(c) inspection requirements. Specifically, FINRA temporarily suspended the requirement for member firms to submit branch office applications on Form BR for any newly opened temporary office locations or space-sharing arrangements established as a result of the pandemic. *See* Regulatory Notice 20–08 (March 2020). With respect to inspection obligations, FINRA adopted temporary Rule 3110.16 that provided additional time for member firms to complete their calendar year 2020 inspection obligations. *See* Securities Exchange Act Release No. 89188 (June 30, 2020), 85 FR 40713 (July 7, 2020) (SR–FINRA–2020–019).

[49] *See* Securities Exchange Act Release No. 90454 (November 18, 2020), 85 FR 75097 (November 24, 2020) (SR–FINRA–2020–040).

[50] *See* Securities Exchange Act Release No. 96241 (November 4, 2022), 87 FR 67969 (November 10, 2022) (SR–FINRA–2022–030); Securities Exchange Act Release No. 93002 (September 15, 2021), 86 FR 52508 (September 21, 2021) (SR–FINRA–2021–023); Securities Exchange Act Release No. 94018 (January 20, 2022), 87 FR 4072 (January 26, 2022) (SR–FINRA–2022–001); and Securities Exchange Act Release No. 98560 (September 27, 2023), 88 FR 68258 (October 3, 2023) (SR–FINRA–2023–012).

[51] *See* Securities Exchange Act Release Nos. 90937 (January 15, 2021), 86 FR 6944 (January 25, 2021) (SR–MIAX–2021–01) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 1308, Supervision of Accounts, To Adopt Temporary Rules To Extend the Time by Which Members Must Complete Their Branch Office Inspections for the Calendar Year 2020 and To Provide Temporary Remote Inspection Relief for Their Office Inspections for Calendar

replaced the temporary remote inspections relief with the Remote Inspections Pilot Program [52] that impacts the internal inspections requirements of FINRA Rule 3110(c); the Exchange proposes to amend its supervision rules such that any Member that participates in the FINRA pilot shall be deemed to satisfy the equivalent internal inspection requirements in Exchange Rule 1308(d) as above.

In response to the pandemic, many private and government employers closed their offices and their employees continued with their work from alternative locations such as private residences. The Exchange, like FINRA, believes this model will endure, irrespective of the state of the pandemic. The pandemic accelerated reliance on technological advances in surveillance and monitoring capabilities and prompted significant changes in lifestyles and work habits, including the growing expectation for workplace flexibility. Moreover, the technology advancements that facilitated the transition to working outside the conventional office setting on a broad scale have not only effected a profound change in lifestyle and workplace practices for member firms, but provided SROs such as FINRA and the Exchange an opportunity to consider aspects of their supervision rules that may benefit from modernization.[53] As such, the Exchange, like FINRA, believes measured changes to its regulatory approach would allow firms to effectively and more efficiently carry out their supervisory responsibilities to review the activities of each office or location while preserving investor protections.

Requirements To Register and Inspect Offices

Exchange Rule 1308 requires a Member, regardless of size or type, to have a supervisory system for the activities of its associated persons. Proposed Exchange Rule 1306(a) would set forth the minimum requirements of a Member's supervisory system that includes registering a location as an OSJ or branch office that meets the definitions under paragraph (c) and proposed paragraph (j) of Exchange Rule 1306. Proposed Exchange Rule 1308(d) would require Members to inspect all offices and locations. The proposed rule would categorize offices or locations as an OSJ or supervisory branch office, a non-supervisory branch office, or a non-branch location.[54] The requirements to register, inspect and have a principal on-site vary based on the categorization. Specifically, proposed Rule 1306(a) would require the registration as an OSJ or branch office of each location, that meets their respective definition under paragraph (c) and proposed paragraph (j) of Exchange Rule 1306, as described in more detail below.[55]

An OSJ is a type of branch office. The Exchange defines a ''branch office'' as ''any location where one or more associated persons of a Member regularly conduct the business of effecting any transactions in, or inducing or attempting to induce the purchase or sale of any security, or is held out as such[.]'' [56] In addition, any location that is responsible for supervising the activities of persons associated with a Member at one or more non-branch locations of such Member is considered to be a branch office.[57] A location registered as a branch office must file with the Exchange and keep current a list of each of its branch offices showing the location of each such office and the name of the manager of each such office,[58] and is subject to an inspection at least every three years, unless it is a supervisory branch office in which case it is subject to at least an annual inspection.[59]

Depending upon the functions occurring at a branch office, it may be further classified as an OSJ. As described above, proposed paragraph (j) of Rule 1306 would define as any office of a member at which any one or more of the following functions take place: (1) order execution or market making; (2) structuring of public offerings or private placements; (3) maintaining custody of customers' funds or securities; (4) final acceptance (approval) of new accounts on behalf of the Member; (5) review and endorsement of customer orders; (6) final approval of retail communications for use by persons associated with the Member, pursuant to FINRA Rule 2210(b)(1), except for an office that solely conducts final approval of research reports; or (7) responsibility for supervising the activities of persons associated with the Member at one or more other branch offices of the Member.[60] Under the proposed rule change, each OSJ would need to be inspected at least annually.[61]

However, subject to specified conditions, an office or location may be deemed a ''non-branch location,'' and excluded from registration as a branch office. Currently, Exchange Rule 1306(c) sets forth seven exclusions—often referred to as unregistered offices or non-branch locations—of which two pertain to residential locations.[62] One such exclusion appears under Exchange Rule 1306(c)(2) and exempts from registration as a branch office an associated person's primary residence subject to the following express conditions: (1) only one associated person, or multiple associated persons who reside at that location and are members of the same immediate family, conduct business at the location; (2) the location is not held out to the public as an office and the associated person does not meet with customers at the location; (3) neither customer funds nor securities are handled at that location; (4) the associated person is assigned to a

[61] *See* proposed Exchange Rule 1308(d)(1).

[62] *See* generally Rule 1306(c)(1) and Rule 1306(c)(4)(7) which, in addition to the primary residence and the non-primary residence exclusions that are further described, excludes the following from the definition of ''branch office'': (1) any location that is established solely for customer service or back office type functions where no sales activities are conducted and that is not held out to the public as a branch office; (2) any office of convenience, where associated persons occasionally and exclusively by appointment meet with customers, which is not held out to the public as an office; (3) any location that is used primarily to engage in non-securities activities and from which the associated person(s) effects no more than 25 securities transactions in any one calendar year; provided that any retail communication identifying such location also sets forth the address and telephone number of the location from which the associated person(s) conducting business at the non-branch locations are directly supervised; (4) the Floor of a registered national securities exchange where a member conducts a direct access business with public customers; or (5) a temporary location established in response to the implementation of a business continuity plan.

designated branch office, and such designated branch office is reflected on all business cards, stationery, retail communications and other communications to the public by such associated person; (5) the associated person's correspondence and communications with the public are subject to all supervisory provisions of the Exchange's Rules; (6) electronic communications (*e.g.,* email) are made through the Member's electronic system; (7) all orders are entered through the designated branch office or an electronic system established by the Member that is reviewable at the branch office; (8) written supervisory procedures pertaining to supervision of sales activities conducted at the residence are maintained by the Member; and (9) a list of the residence locations is maintained by the Member (''primary residence exclusion'').[63] The second exclusion that pertains to a residential location appears under Rule 1306(c)(3) is any location, other than a primary residence, that is used for securities business for less than 30 business days in any one calendar year, provided that the Member complies with the provisions of (ii) through (viii) of Exchange Rule 1306(c) (2) (''non-primary residence exclusion'').[64] In general, the non-primary residence exclusion typically refers to a vacation or second home.[65] Under the proposed rule change, a non-branch location would need to be inspected on a periodic schedule, presumed to be at least every three years.[66]

Notwithstanding either of these two residential exclusions or the other exclusions listed under Exchange Rule 1306(c)(1),[67] a primary or non-primary residence location that is responsible for either the supervisory activities set forth in the OSJ definition or for supervising the activities of persons associated with the Member at one or more non-branch locations of the Member is considered an OSJ or (supervisory) branch office, respectively.[68] Consequently, such residential supervisory offices would be subject to registration, an annual inspection and, in some cases, additional licensing requirements.[69]

FINRA Residential Supervisory Location Rule

Effective June 1, 2024, FINRA implemented a rule change that establishes a new RSL designation for a private residence at which an associated person engages in specified supervisory activities, subject to specified investor protection safeguards and limitations.[70] This new non-branch location designation targets the subset of residential locations that have many of the attributes contained in the primary residence exclusion, but must be registered as an OSJ or branch office because of the supervisory functions taking place there.

As described in the FINRA RSL Proposal,[71] the definition of an RSL is based largely on several existing aspects of FINRA Rule 3110(f) (and therefore on the functionally identical to Exchange Rule 1306). In particular, the RSL definition incorporates the existing supervisory functions appearing in the OSJ definition (FINRA Rule 3110(f)(1)) and branch office definition (FINRA Rule 3110(f)(2)(A)) with the existing residential exclusions set forth in the branch office definition to classify an RSL as a non-branch location. Under current Exchange rules, a private residence at which these supervisory functions occur must be registered as a branch office under Exchange Rule 1306(d), and inspected at least annually under proposed Exchange Rule 1308(d)(1). By treating such location as a non-branch location, the private residence would become subject to inspections on a regular periodic schedule under proposed Exchange Rule 1308(d)(3).[72]

FINRA Rule 3110.19 incorporates some existing safeguards and limitations members must already satisfy to rely on the primary residence exclusion.[73] As described in the FINRA RSL Proposal, FINRA intends for the terms underlying the RSL designation to be interpreted consistently with their meaning in FINRA Rule 3110(f) and existing related guidance.[74] The requirements for designation of a location as an RSL, which are set forth in FINRA Rule 3110.19, include the following key elements:

- A location where supervisory activities are conducted shall be considered for those activities a non-branch location provided that:[75]
  - only one associated person (or members of the same immediate family) may conduct business at the location;[76]
  - the location is not held out to the public as an office:[77]
  - the associated person does not meet with customers or prospective customers at the location;[78]
  - any sales activity that takes place at the location complies with the conditions set forth under FINRA Rule 3110(f)(2)(A)(ii) (the primary residence exclusion[79]) or FINRA Rule 3110(f)(2)(A)(iii) (the non-primary residence exclusion;[80])[81]
  - neither customer funds nor securities are handled at that location;[82]
  - the associated person is assigned to a designated branch office, and such designated branch office is reflected on all business cards, stationery, retail communications and other communications to the public by such associated person;[83]
  - the associated person's correspondence and communications with the public are subject to the firm's supervision in accordance with FINRA's supervision rule;[84]
  - the associated person's electronic communications are made through the member's electronic system;[85]
  - the member must have a recordkeeping system to make and keep current, and preserve records required to be made and kept current, and preserved under applicable securities laws and regulations, FINRA rules, and the member's own written supervisory procedures under Rule 3110; such records are not physically or electronically maintained and preserved at the office or location; and the member has prompt access to such records;[86] and
  - the member must determine that its surveillance and technology tools are appropriate to supervise the types of risks presented by each Residential Supervisory Location, and these tools may include but are not limited to: firm-wide tools such as, electronic recordkeeping system; electronic surveillance of email and correspondence; electronic trade

blotters; regular activity-based sampling reviews; and tools for visual inspections; tools specific to the RSL based on the activities of associated person assigned to the location, products offered, restrictions on the activity of the RSL; and system tools such as secure network connections and effective cybersecurity protocols.[87]

• FINRA members shall not be eligible to designate an office or location as an RSL if, among other things, the FINRA member is designated as: (i) Restricted Firm under FINRA Rule 4111 or (ii) a Taping Firm under FINRA Rule 3170. Additionally, firms with suspended or new (effective less than 12 months) FINRA memberships or that have been found within the past three years by the SEC or FINRA to have violated FINRA Rule 3110(c) are ineligible to participate.[88]

• An office or location shall not be eligible for designation as an RSL if one or more associated persons at such office or location: [89]

○ is a designated supervisor who has less than one year of direct supervisory experience with the member, or an affiliate or subsidiary of the member that is registered as a broker-dealer or investment adviser; [90]

○ is functioning as a principal for a limited period in accordance with FINRA Rule 1210.04; [91]

○ is subject to a mandatory heightened supervisory plan under the rules of the SEC, FINRA or state regulatory agency; [92]

○ is statutorily disqualified, unless such disqualified person has been approved (or is otherwise permitted pursuant to FINRA rules and the federal securities laws) to associate with a member and is not subject to a mandatory heightened supervisory plan under FINRA Rule 3110.19(c)(3) or otherwise as a condition to approval or permission for such association; [93]

○ has an event in the prior three years that required a ''yes'' response to any item in Questions 14A(1)(a) and 2(a), 14B(1)(a) and 2(a), 14C, 14D and 14E on Form U4; [94] or

○ has been notified in writing that such associated person is now subject to, any Investigation or Proceeding, as such terms are defined in the Explanation of Terms for the Form U4 (Uniform Application for Securities Industry Registration or Transfer), by the SEC, an SRO, including FINRA, or state securities commission (or agency or office performing like functions) (each, a ''Regulator'') expressly alleging they have failed reasonably to supervise another person subject to their supervision, with a view to preventing the violation of any provision of the Securities Act, the Exchange Act, the Investment Advisers Act, the Investment Company Act, the Commodity Exchange Act, any state law pertaining to the regulation of securities or any rule or regulation under any of such Acts or laws, or any of the rules of the MSRB or other self-regulatory organization, including FINRA; provided, however, such office or location may be designated or redesignated as an RSL subject to the requirements of FINRA Rule 3110.19 upon the earlier of: (i) the member's receipt of written notification from the applicable Regulator that such Investigation has concluded without further action; or (ii) one year from the date of the last communication from such Regulator relating to such Investigation.[95]

• FINRA members that elect to designate an office or location of the member as an RSL shall provide FINRA with a current list of all locations designated as RSLs by the 15th day of the month following each calendar quarter in the manner and format as FINRA may prescribe.[96]

• FINRA members must conduct a risk assessment prior to designating an office or location as an RSL. Specifically, the FINRA member must develop a reasonable risk-based approach to designating such office or location as an RSL, and conduct and document a risk assessment for the associated person assigned to that office or location. The assessment must document the factors considered, including among others, whether the associated person at such office or location is now subject to: (1) customer complaints, taking into account the volume and nature of the complaints; (2) heightened supervision other than where such office or location is ineligible for RSL designation under FINRA Rule 3110.19(c)(3); (3) any failure to comply with the member's written supervisory procedures; (4) any recordkeeping violation; and (5) any regulatory communications from a Regulator, indicating that the associated person at such office or location failed reasonably to supervise another person subject to their supervision, including but not limited to, subpoenas, preliminary or routine regulatory inquiries or requests for information, deficiency letters, ''blue sheet'' requests or other trading questionnaires, or examinations. The FINRA member must take into account any higher risk activities that take place or a higher risk associated person that is assigned to that office or location. Consistent with its obligation under FINRA Rule 3110(a), the member's supervisory system must take into consideration any indicators of irregularities or misconduct (*i.e.,* ''red flags'') when designating an office or location as an RSL. Red flags should also be reviewed in determining whether it is reasonable to maintain the RSL designation of such office or location in accordance with the requirements of FINRA Rule 3110.19 and the member should consider evidencing steps taken to address those red flags where appropriate.[97]

Proposal

The Exchange proposes to adopt subparagraph (d)(8) of Exchange Rule 1308. This proposed new paragraph reads as follows:

> Residential Supervisory Location. A location that is the private residence of a person associated with a Member where supervisory activities are conducted, including those described in Rule 1306(j)(4) through (7) or Rule 1306(c)(2), which satisfies the conditions for designation as a Residential Supervisory Location set forth in FINRA Rule 3110.19 shall also be considered a non-branch location for those activities pursuant to the Exchange Rules.[98]

As stated in proposed new paragraph (d)(8) of Rule 1308, any location that a Member designates as an RSL pursuant to FINRA Rule 3110.19 shall also be considered a non-branch location for those activities pursuant to Exchange rules.

Pursuant to this proposed rule change, Members will be required to share information about designated RSLs with FINRA on a quarterly basis. The Exchange is not proposing to add the entire FINRA Residential Supervisory Location designation rule to its rules, because it would be unnecessarily duplicative and burdensome for Members to share the same quarterly RSL designation information with the Exchange. The Exchange understands that adopting paragraph (d)(8) of Rule 1308 would update Exchange Rule 1308 so that it remains substantially similar to FINRA Rule 3110, such that they remain common rules subject to the 17d–2

[87] *See* FINRA Rule 3110.19(a)(10).
[88] *See* FINRA Rule 3110.19(b).
[89] *See* FINRA Rule 3110.19(c).
[90] *See* FINRA Rule 3110.19(c)(1).
[91] *See* FINRA Rule 3110.19(c)(2).
[92] *See* FINRA Rule 3110.19(c)(3).
[93] *See* FINRA Rule 3110.19(c)(4).
[94] *See* FINRA Rule 3110.19(c)(5).
[95] *See* FINRA Rule 3110.19(c)(6).
[96] *See* FINRA Rule 3110.19(d).
[97] *See* FINRA Rule 3110.19(e).
[98] *See* proposed paragraph (d)(8) of Rule 1308.

Agreement. As a result, regulatory responsibility for Exchange Rule 1308 would continue to be allocated to FINRA.

The Exchange, like FINRA, believes that the current work environment merits a reevaluation of the regulatory benefit of requiring firms to designate a private residence, at which specified supervisory functions occur, as an OSJ or branch office. The Exchange's proposal to incorporate by reference FINRA's RSL designation is intended to reflect a pragmatic balance between the hybrid workforce model and the parameters that should ensure that all locations, including residential locations, are appropriately supervised.

Separate and apart from the classification of the office or location and the attendant inspection obligations, Members will continue to have an ongoing obligation to supervise the activities of each associated person in a manner reasonably designed to achieve compliance with applicable securities laws and regulations, and with applicable the Exchange and FINRA rules.[99] The Exchange, like FINRA, emphasizes that Members have a statutory duty to supervise their associated persons, regardless of their location, compensation or employment arrangement, or registration status, in accordance with the Exchange and FINRA rules.[100]

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b)[101] of the Act in general, and furthers the objectives of Section 6(b)(5) of the Act[102] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. The Exchange's rule proposal is intended to harmonize the Exchange's supervision rules, specifically with respect to the definition of OSJ, the requirements for inspections of Members' all offices and locations, and designation of certain non-branch offices as RSL, with those of FINRA, on which they are based. As discussed in the Purpose section, because proposed Exchange Rules 1308(d)(7) and (8) would incorporate by reference FINRA Rule 3110.18 and 3110.19, the proposed rule changes would enable Exchange Rule 1308 to continue to be incorporated into the 17d–2 Agreement, resulting in less burdensome and more efficient regulatory compliance. Specifically, the proposed change will conform the Exchange's rules to changes made to corresponding FINRA rules insofar as a Member's compliance with FINRA Rule 3110.18 and 3110.19 shall mean the Member would be also in compliance with Exchange Rule 1308, thus promoting the application of consistent regulatory standards with respect to rules that FINRA enforces. Adopting the definition of OSJ is to harmonize Exchange Rule 1306 with FINRA Rule 3110.01 to provide that both branch offices and OSJs will be subject to the office registration requirements set forth in Exchange Rule 1306(a). Adopting FINRA's inspection requirement for non-branch locations is to harmonize Exchange Rule 1308(d) with FINRA Rule 3110(c) so that a Member's compliance with FINRA Rule 3110(c) shall mean the Member would be also in compliance with Exchange Rule 1308(d). As such, the proposed rule changes would foster cooperation and coordination with persons engaged in facilitating transactions in securities and would remove impediments to and perfect the mechanism of a free and open market and a national market system in accordance with Section 6(b)(5) of the Act.[103]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule changes will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule changes are not designed to address any competitive issue but rather to provide greater harmonization among the Exchange and FINRA rules of similar purpose, resulting in less burdensome and more efficient regulatory compliance for common members and facilitating FINRA's performance of its regulatory performance.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act[104] and Rule 19b–4(f)(6)[105] thereunder. Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder. In addition, the Exchange provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing.[106]

A proposed rule change filed under Rule 19b–4(f)(6)[107] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b4(f)(6)(iii),[108] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing.

The Exchange stated that this proposed rule change is non-controversial because it does not present any new or novel issues. In particular, MIAX is harmonizing the Exchange's supervision rules with those of FINRA, on which they are based and which have been previously approved by the Commission. By conforming the Exchange's rules to FINRA's, the proposed rule change would promote the application of consistent regulatory standards with respect to rules that FINRA enforces pursuant to the 17d–2 Agreement. As such, the Exchange believes that the proposed rule change would foster cooperation and coordination with persons engaged in facilitating transactions in securities and would remove impediments to and perfect the mechanism of a free and open market and a national market

[99] *See* FINRA Rule 3110.12.

[100] *See* 15 U.S.C. 78o(b)(4)(E) and 15 U.S.C. 78o(b)(6)(A).

[101] 15 U.S.C. 78f(b).

[102] 15 U.S.C. 78f(b)(5).

[103] 15 U.S.C. 78f(b)(5).

[104] 15 U.S.C. 78s(b)(3)(A).

[105] 17 CFR 240.19b–4(f)(6).

[106] 17 CFR 240.19b–4(f)(6)(iii).

[107] 17 CFR 240.19b–4(f)(6).

[108] 17 CFR 240.19b–4(f)(6)(iii).

system in accordance with Exchange Act Section 6(b)(5).

Further, the Exchange stated that waiver of the operative delay would be consistent with the protection of investors and the public interest because such waiver would allow the Exchange to immediately harmonize its supervision rule with the FINRA rule on which it is based without delay, thereby eliminating the possibility of a significant regulatory gap between the FINRA and Exchange rules, providing more uniform inspection standards across the securities industry, and helping to avoid confusion for Exchange Members that are also FINRA members. For these reasons, the Commission believes that waiver of the 30-day operative delay for this proposed rule change is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.[109]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [110] of the Act to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MIAX–2024–44 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MIAX–2024–44. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.
All submissions should refer to file number SR–MIAX–2024–44 and should be submitted on or before December 30, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[111]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meetings

TIME AND DATE: 2:00 p.m. on Thursday, December 12, 2024.

PLACE: The meeting will be held via remote means and/or at the Commission's headquarters, 100 F Street NE, Washington, DC 20549.

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED: Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters also may be present.

In the event that the time, date, or location of this meeting changes, an announcement of the change, along with the new time, date, and/or place of the meeting will be posted on the Commission's website at *https://www.sec.gov.*

The General Counsel of the Commission, or her designee, has certified that, in her opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(3), (5), (6), (7), (8), 9(B) and (10) and 17 CFR 200.402(a)(3), (a)(5), (a)(6), (a)(7), (a)(8), (a)(9)(ii) and (a)(10), permit consideration of the scheduled matters at the closed meeting.

The subject matter of the closed meeting will consist of the following topics:

Institution and settlement of injunctive actions;

Institution and settlement of administrative proceedings;

Resolution of litigation claims; and

Other matters relating to examinations and enforcement proceedings.

At times, changes in Commission priorities require alterations in the scheduling of meeting agenda items that may consist of adjudicatory, examination, litigation, or regulatory matters.

CONTACT PERSON FOR MORE INFORMATION: For further information, please contact Vanessa A. Countryman from the Office of the Secretary at (202) 551–5400.

Authority: 5 U.S.C. 552b.

Dated: December 5, 2024.

J. Matthew DeLesDernier,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101802; File No. SR–CboeBZX–2024–115]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend its Fee Schedule Relating to Fee Codes and Volume Tiers

December 3, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2]

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

notice is hereby given that on November 20, 2024, Cboe BZX Exchange, Inc. (''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') proposes to amend its Fee Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/BZX/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Effective November 1, 2024, the Exchange proposes to amend its Fee Schedule applicable to its equities trading platform by: (i) updating the criteria for BZX Add Volume Tier 3 and Add Volume Tier 5; (ii) removing the rebate and implementing a fee for fee code, AA; and (iii) removing fee code, BJ.[3]

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 16 registered equities exchanges, as well as a number of alternative trading systems and other off-exchange venues that do not have similar self-regulatory responsibilities under the Securities Exchange Act of 1934 (the ''Act''), to which market participants may direct their order flow. Based on publicly available information,[4] no single registered equities exchange has more than 16% of the market share. Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow. The Exchange in particular operates a ''Maker-Taker'' model whereby it pays rebates to members that add liquidity and assesses fees to those that remove liquidity. The Exchange's Fee Schedule sets forth the standard rebates and rates applied per share for orders that provide and remove liquidity, respectively. Currently, for orders in securities priced at or above $1.00, the Exchange provides a standard rebate of $0.00160 per share for orders that add liquidity and assesses a fee of $0.0030 per share for orders that remove liquidity.[5] For orders in securities priced below $1.00, the Exchange does not provide a rebate for orders that add liquidity and assesses a fee of 0.30% of the total dollar value for orders that remove liquidity.[6] Additionally, in response to the competitive environment, the Exchange also offers tiered pricing which provides Members opportunities to qualify for higher rebates or reduced fees where certain volume criteria and thresholds are met. Tiered pricing provides an incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

Add/Remove Volume Tiers

Under footnote 1 of the Fee Schedule, the Exchange offers various Add/Remove Volume Tiers. In particular, the Exchange offers nine Add/Remove Volume Tiers that each provide an enhanced rebate for Members' qualifying orders yielding fee codes B,[7] V,[8] and Y,[9] where a Member reaches a certain volume-based criteria offered in each tier.

The Exchange now proposes to update the criteria for Add Volume Tier 3, as follows:

- The current Add Volume Tier 3 provides an enhanced rebate of $0.0027 per share in securities priced at or above $1.00 to qualifying orders (*i.e.,* orders yielding fee codes B, V, or Y), where a Member has an ADAV [10] as a percentage of TCV [11] ≥ 0.30% or a Member has an ADAV ≥ 35,000,000.

Now, the Exchange proposes to amend the second prong of criteria in proposed Add Volume tier 3 by reducing the ADAV requirement. The proposed criteria are as follows:

- Proposed Add Volume Tier 3 provides an enhanced rebate of $0.0027 per share in securities price at or above $1.00 to qualifying orders (*i.e.,* orders yielding fee codes B, V, or Y), where a Member has an ADAV as percentage of TCV ≥ 0.30% or a Member has an ADAV ≥ 30,000,000 (as compared to 35,000,000).

In addition, the Exchange also proposes to update the criteria for Add Volume Tier 5, as follows:

- The current Add Volume Tier 5 provides an enhanced rebate of $0.0029 per share in securities priced at or above $1.00 to qualifying orders (*i.e.,* orders yielding fee codes B, V, or Y), where a Member has an ADAV as a percentage of TCV ≥ 0.35% or a Member has an ADAV ≥ 40,000,000.

Now, the Exchange proposes to amend the second prong of criteria in proposed Add Volume Tier 5 by reducing the ADAV requirement. The proposed criteria are as follows:

- Proposed Add Volume Tier 5 provides an enhanced rebate of $0.0029 per share in securities priced at or above $1.00 to qualifying orders (*i.e.,* orders yielding fee codes B, V, or Y), where a Member has an ADAV as a percentage of TCV ≥ 0.35% or a Member has an ADAV ≥ 35,000,000 (as compared to 40,000,000).

[3] The Exchange initially filed the proposed fee change on November 1, 2024 (SR–CboeBZX–2024–110). On November 14, 2024, the Exchange withdrew SR–CboeBZX–2024–110 and submitted SR–CboeBZX–2024–114. On November 20, 2024, the Exchange withdrew SR–CboeBZX–2024–114, and submitted this filing.

[4] *See* Cboe Global Markets, U.S. Equities Market Volume Summary, Month-to-Date (June 21, 2024), available at *https://www.cboe.com/us/equities/market_statistics/.*

[5] *See* BZX Equities Fee Schedule, Standard Rates, available at: .

[6] *Id.*

[7] Fee code B is appended to displayed orders that add liquidity to BZX (Tape B). Orders appended with fee code, B, for securities priced below $1.00 neither pay a fee nor receive a rebate.

[8] Fee code V is appended to displayed orders that add liquidity to BZX (Tape A). Orders appended with fee code, B, for securities priced below $1.00 neither pay a fee nor receive a rebate

[9] Fee code Y is appended to displayed orders that add liquidity to BZX (Tape C). Orders appended with fee code, B, for securities priced below $1.00 neither pay a fee nor receive a rebate

[10] ADAV means average daily added volume calculated as the number of shares added per day, calculated on a monthly basis.

[11] TCV means total consolidated volume calculated as the volume reported by all exchanges and trade reporting facilities to a consolidated transaction reporting plan for the month for which fees apply.

The proposed amended ADAV requirements for Add Volume Tier 3 and Add Volume Tier 5 are intended to incentivize Members to earn an enhanced rebate by increasing their order flow to the Exchange, which further contributes to a deeper, more liquid market and provides even more execution opportunities for active market participants. Incentivizing an increase in liquidity adding volume through enhanced rebate opportunities encourages liquidity-adding Members to increase transactions and take execution opportunities provided by such increased liquidity, together providing for overall enhanced price discovery and price improvement opportunities on the Exchange. As such, increased overall order flow benefits all Members by contributing towards a robust and well-balanced market ecosystem. While the proposed criteria in Add Volume Tier 3 and Add Volume Tier 5 is less difficult to achieve than the current criteria, the revised criteria continue to remain commensurate with rebates (which remain unchanged) that will be paid to a Member satisfying the proposed criteria.

Fee Codes

The Exchange also proposes to modify the rebate for fee code, AA. The proposed changes are as follows:

• For securities priced above $1.00,[12] fee code AA is appended to orders that are routed to EDGA using the ALLB [13] routing strategy. Currently, orders appended with fee code AA receive a rebate of $0.0016.

The Exchange now proposes to amend fee code, AA, as follows:

• For securities priced above $1.00, fee code AA will continue to be appended to orders that are routed to EDGA using the ALLB routing strategy. However, orders appended with fee code AA will now pay a fee of $0.0030. The Exchange does not propose to add a fee or rebate for removing liquidity for securities priced below $1.00.

The Exchange also proposes to remove fee code, BJ. For securities priced above $1.00,[14] fee code BJ is currently appended to orders that are routed to EDGA using the TRIM [15] or SLIM [16] routing strategies. Currently, orders appended with fee code, BJ, receive a rebate of $0.0016. However, effective November 1, 2024,[17] EDGA will be transitioning from an inverted fee model [18] to a maker taker fee model.[19] As such, orders that remove liquidity from EDGA will pay a remove fee, rather than receive a rebate. Because Members typically utilize routing options TRIM and SLIM, and fee code BJ, to seek low-cost executions, it does not make sense to maintain fee code, BJ, as Members would not expect to pay a fee for removing liquidity from EDGA. Therefore, the Exchange proposes to discontinue this fee code, as it is no longer necessary, and BZX does not desire to charge such orders a fee for removing liquidity from EDGA.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[20] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [21] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [22] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers as well as Section 6(b)(4) [23] as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities.

As described above, the Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The Exchange believes that its proposal to adjust the criteria to Add Volume Tier 3 and Add Volume Tier 5 reflects a competitive pricing structure designed to incentivize current levels of liquidity provision, as well as encourage Members to add even more volume on the Exchange, by offering Members an enhanced rebated for reaching a reduced ADAV volume threshold Tier 3, 30,000,000 compared to 35,000,000; Tier 5: 40,000,000 compared to 45,000,000). In turn, such liquidity provision will help contribute to a deeper and more liquid market, which benefits all market participants and provides greater execution opportunities on the Exchange.

Additionally, the Exchange notes that relative volume-based incentives and discounts have been widely adopted by exchanges,[24] including the Exchange,[25] and are reasonable, equitable and non-discriminatory because they are open to all Members on an equal basis and provide additional benefits or discounts that are reasonably related to (i) the value to an exchange's market quality and (ii) associated higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns. Competing equity exchanges offer similar tiered pricing structures, including schedules of rebates and fees that apply based upon members achieving certain volume and/or growth thresholds, as well as assess similar fees or rebates for similar types of orders, to that of the Exchange.

The Exchange believes that its proposal to update the criteria for Add Volume Tier 3 and Add Volume Tier 5

[12] The Exchange notes for securities priced below $1.00, there is no fee or rebate for removing liquidity from EDGA using the ALLB routing strategy.

[13] ALLB is a routing option under which an order checks the System for available shares and is then sent to Cboe BZX Exchange, Inc., Cboe EDGA Exchange, Inc., and/or Cboe EDGX Exchange, Inc., in accordance with the System routing table. If shares remain unexecuted after routing, they are posted on the BZX Book, unless otherwise instructed by the User. *See* Rule 11.13(b)(3)(O).

[14] For securities priced below $1.00, there is no fee or rebate.

[15] TRIM is a routing strategy under which an order checks EDGA for available shares if so instructed by the entering User, and then is sent to destinations on the applicable System routing table. *See generally* Rule 11.13(b)(3)(G).

[16] SLIM is a routing strategy under which an order checks EDGA for available shares if so instructed by the entering User, and then is sent to destinations on the applicable System routing table. *See generally* Rule 11.13(b)(3)(G).

[17] *See* SR–CboeEDGA–2024–042; *see also,* SR–CboeEDGA–2024–045.

[18] The inverted fee model is a pricing structure in which a market, such as an exchange, charges its participants a fee to provide liquidity in securities, and provides a rebate to participants that remove liquidity in securities. *See* SEC Market Structure Advisory Committee, Memorandum on ''Maker-Taker Fees on Equities Exchanges,'' October 20, 2015, available at: *https://www.sec.gov/spotlight/emsac/memo-maker-taker-fees-on-equities-exchanges.pdf.*

[19] The maker-taker fee model is a pricing structure in which a market, such as an exchange, generally pays its members a per share rebate to provide (*i.e.,* ''make'') liquidity in securities and assesses on them a fee to remove (*i.e.,* ''take'') liquidity. *Id.*

[20] 15 U.S.C. 78f(b).

[21] 15 U.S.C. 78f(b)(5).

[22] *Id.*

[23] 15 U.S.C. 78f(b)(4).

[24] *See e.g.,* EDGX Equities Fee Schedule, Footnote 1, Add/Remove Volume Tiers.

[25] *See e.g.,* BZX Equities Fee Schedule, Footnote 1, Add/Remove Volume Tiers.

is reasonable as the proposed criteria does not represent a significant departure from the criteria currently offered in the Fee Schedule. The Exchange also believes that the proposal represents an equitable allocation of fees and rebates and is not unfairly discriminatory because all Members will be eligible for the proposed Add Volume Tier 3 and Add Volume Tier 5 and have the opportunity to meet the tiers' criteria and receive the corresponding enhanced rebate if such criteria is met. Without having a view of activity on other markets and off-exchange venues, the Exchange has no way of knowing whether this proposed rule change would definitively result in any Members qualifying for proposed Add Volume Tier 3 and Add Volume Tier 5. While the Exchange has no way of predicting with certainty how the proposed changes will impact Member activity, based on the prior month's volume, the Exchange anticipates that at least one Member will be able to satisfy the proposed Add Volume Tier 3 and Add Volume Tier 5. The Exchange also notes that proposed changes will not adversely impact any Member's ability to qualify for enhanced rebates offered under other tiers. Should a Member not meet the proposed new criteria, the Member will merely not receive that corresponding enhanced rebate.

Adjusting fee code AA and removing fee code, BJ, is necessary to reflect the transition of EDGA to a maker-taker fee model, effective November 1, 2024. Prior to the November 1, 2024, orders entered onto BZX, that were appended with fee code, AA, and were routed to EDGA using routing option ALLB, received a rebate of $0.0016 for removing liquidity from the EDGA Book for securities priced at or above $1.00. However, given EDGA's transition to a maker-taker fee model, orders that remove liquidity will now need to pay a liquidity removal fee, rather than receive a rebate. Accordingly, removal of the current $0.0016 rebate associated with fee code, AA, and implementation of a $0.0030 remove fee is appropriate and consistent with the economics of a maker-taker model, as well as the expectations of Members that remove liquidity from EDGA (*i.e.,* Members would expect to pay a fee to remove liquidity). Moreover, the proposed fee is not unfairly discriminatory because it applies to all Members equally, in that all Members will pay the same fee for orders routed to EDGA using the ALLB routing strategy, and appended with fee code, AA.

The Exchange also believes that its removal of fee code, BJ, is reasonable, equitable, and not unfairly discriminatory as it does not change the fees or rebates assessed by the Exchange, but rather updates the BZX Fee Schedule to remove a fee code that the Exchange no longer desires to, nor is required to, offer to its Members. Therefore, the proposed rule change is reasonably designed to update the Fee Schedule to accurately reflect the Exchange's current product offerings and is designed to reduce any potential confusion regarding the routing of orders with fee code, BJ, from BZX to EDGA. Furthermore, as noted above, orders appended with fee code, BJ, entered onto BZX and routed to EDGA using the routing option TRIM or SLIM, previously received a rebate of $0.0016 for removing liquidity from the EDGA Book. However, effective November 1, 2024, EDGA transitioned from an inverted fee model to a maker taker fee model. As such, orders that remove liquidity from EDGA will pay a remove fee, rather than receive a rebate. Because Members typically utilize routing options TRIM and SLIM, and fee code BJ, to seek low-cost executions, it does not make sense to maintain the BJ fee code, as Members utilizing this fee code would not expect to pay a fee for removing liquidity from EDGA. Therefore, the Exchange proposes to discontinue this fee code, as it is no longer necessary, and BZX does not desire to charge such orders a fee for removing liquidity from EDGA.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed changes will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Rather, as discussed above, the Exchange believes that the proposed modifications to Add Volume Tier 3 and Add Volume Tier 5 would encourage the submission of additional order flow to a public exchange, thereby promoting market depth, execution incentives and enhanced execution opportunities, as well as price discovery and transparency for all Members. Additionally, the proposed changes to Add Volume Tier 3 and Add Volume Tier 5 do not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Particularly, the Exchange's proposal to modify the criteria for Add Volume Tier 3 and Add Volume Tier applies to all Members equally. All Members will be eligible for the modified tier and have a reasonable opportunity to meet the proposed tier's reduced criteria and receive the enhanced rebate on their qualifying orders if such criteria is met. In addition, the Exchange does not believe the proposed changes to Add Volume Tier 3 and Add Volume Tier 5 burden competition, but rather, enhance competition as these changes are intended to increase the competitiveness of BZX by amending existing pricing incentives in order to attract order flow and incentivize participants to increase their participation on the Exchange, providing for additional execution opportunities for market participants and improved price transparency. Greater overall order flow, trading opportunities, and pricing transparency benefits all market participants on the Exchange by enhancing market quality and continuing to encourage Members to send orders, thereby contributing towards a robust and well-balanced market ecosystem.

Furthermore, the Exchange believes the proposed changes to Add Volume Tier 3 and Add Volume Tier 5 do not impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As previously discussed, the Exchange operates in a highly competitive market. Members have numerous alternative venues that they may participate on and direct their order flow, including other equities exchanges, off-exchange venues, and alternative trading systems. Additionally, the Exchange represents a small percentage of the overall market. Based on publicly available information, no single equities exchange has more than 16% of the market share.[26] Therefore, no exchange possesses significant pricing power in the execution of order flow. Indeed, participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels at those other venues to be more favorable. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [27] The fact that this market is competitive has

[26] *Supra* note 3.

[27] *See* Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

also long been recognized by the courts. In *NetCoalition* v. *Securities and Exchange Commission,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[28] Accordingly, the Exchange does not believe its proposed fee changes impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange does not believe that the proposed adjustment to the AA fee will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Given EDGA's transition to a maker-taker fee model, orders that remove liquidity will now need to pay a liquidity removal fee, rather than receive a rebate. Accordingly, removing the current $0.0016 rebate associated with fee code, AA, and implementing a $0.0030 remove fee is appropriate and consistent with the economics of a maker-taker model, as well as the expectations of Members that remove liquidity from EDGA (*i.e.,* Members would expect to pay a fee to remove liquidity). Moreover, the proposed fee is not unfairly discriminatory because it applies to all Members equally, in that all Members will pay the same fee for orders routed to EDGA using the ALLB routing strategy, and appended with fee code, AA.

The Exchange also believes that its removal of fee code, BJ, is reasonable, equitable, and not unfairly discriminatory as it does not change the fees or rebates assessed by the Exchange, but rather updates the BZX Fee Schedule to remove a fee code that the Exchange no longer desires to, nor is required to, offer to its Members. Therefore, the proposed rule change is reasonably designed to update the Fee Schedule to accurately reflect the Exchange's current product offerings and is designed to reduce any potential confusion regarding the routing of orders with fee code, BJ, from BZX to EDGA. Furthermore, as noted above, orders appended with fee code, BJ, entered onto BZX and routed to EDGA using the routing option TRIM or SLIM, previously received a rebate of $0.0016 for removing liquidity from the EDGA Book. However, effective November 1, 2024, EDGA transitioned from an inverted fee model to a maker taker fee model. As such, orders that remove liquidity from EDGA will pay a remove fee, rather than receive a rebate. Because Members typically utilize routing options TRIM and SLIM, and fee code BJ, to seek low-cost executions, it does not make sense to maintain the BJ fee code, as Members utilizing this fee code would not expect to pay a fee for removing liquidity from EDGA. Therefore, the Exchange proposes to discontinue this fee code, as it is no longer necessary, and BZX does not desire to charge such orders a fee for removing liquidity from EDGA.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[29] and paragraph (f) of Rule 19b–4[30] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2024–115 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeBZX–2024–115. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBZX–2024–115 and should be submitted on or before December 30, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[31]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101806; File No. SR–NYSEARCA–2024–70]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Amendment No. 1 and Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change, as Modified by Amendment No. 1, To List and Trade Shares of the COtwo Advisors Physical European Carbon Allowance Trust Under NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares)

December 3, 2024.

I. Introduction

On August 19, 2024, NYSE Arca, Inc. (''NYSE Arca'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares of the COtwo Advisors Physical European Carbon Allowance Trust. The proposed rule change was published for comment in the **Federal Register** on September 5, 2024.[3]

On October 16, 2024, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] On November 22, 2024, the Exchange filed Amendment No. 1 to the proposed rule change, described in Item II below, which Item has been prepared by the Exchange.[6]

The Commission is publishing this notice and order to solicit comments on the proposed rule change, as modified by Amendment No. 1, from interested persons and to institute proceedings pursuant to Section 19(b)(2)(B) of the Act [7] to determine whether to approve or disapprove the proposed rule change, as modified by Amendment No. 1.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to list and trade shares (''Shares'') of the COtwo Advisors Physical European Carbon Allowance Trust (the ''Trust''), under NYSE Arca Rule 8.201–E, which governs the listing and trading of Commodity-Based Trust Shares.[8]

The Trust was formed as a Delaware statutory trust on January 12, 2023.[9] The Trust has no fixed termination date. The Trust will not be registered as an investment company under the Investment Company Act of 1940, as amended,[10] and is not required to register under such act. The Trust is not a commodity pool for purposes of the Commodity Exchange Act, as amended.[11]

The sponsor of the Trust is COtwo Advisors LLC, a Delaware limited liability company (''Sponsor''). State Street Bank and Trust Company serves as the Trust's administrator (the ''Administrator'') to perform various administrative, accounting and recordkeeping functions on behalf of the Trust. Wilmington Trust serves as trustee of the Trust (the ''Trustee''). State Street Bank and Trust Company serves as the Trust's transfer agent (the ''Transfer Agent'') and as custodian of the Trust's cash, if any (''Cash Custodian'').[12]

The Exchange represents that the Shares will satisfy the requirements of NYSE Arca Rule 8.201–E and thereby will qualify for listing on the Exchange.

Operation of the Trust [13]

The investment objective of the Trust will be for the Shares to reflect the performance of the price of EU Carbon Emission Allowances for stationary installations (''EUAs''), less the Trust's expenses. The Trust intends to achieve its objective by investing all of its assets in EUAs on a non-discretionary basis (*i.e.,* without regard to whether the value of EUAs is rising or falling over any particular period). Shares of the Trust will represent units of fractional undivided beneficial interest in and ownership of the Trust. The Trust's only ordinary recurring expense will be the Sponsor's annual fee. The Trust will not hold any assets other than EUAs and cash. The Trust may purchase or sell EUAs in connection with the creation or redemption of Shares by Authorized Participants (as defined below). In addition to selling EUAs to distribute cash to Authorized Participants redeeming Shares, the Trust may sell EUAs to pay the Sponsor's annual fee. All EUAs will be held in the Union Registry (defined below).

The Trust will not invest in futures, options, options on futures, or swap contracts. The Trust will not hold or trade in commodity futures contracts, ''commodity interests,'' or any other instruments regulated by the Commodity Exchange Act.

The Trust is not a proxy for investing in EUAs. Rather, the Shares are intended to provide a cost-effective means of obtaining investment exposure through the securities markets that is similar to an investment in EUAs. Specifically, the Shares are intended to constitute a simple and cost-efficient means of gaining investment benefits similar to those of holding EUAs directly, by providing investors an opportunity to participate in the EUA market through an investment in the Shares, instead of the traditional means

[5] *See* Securities Exchange Act Release No. 101360, 89 FR 84406 (Oct. 22, 2024). The Commission designated December 4, 2024, as the date by which the Commission shall approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change.

[6] The full text of Amendment No. 1 is available on the Commission's website at: *https://www.sec.gov/comments/sr-nysearca-2024-70/srnysearca202470.htm.*

[7] 15 U.S.C. 78s(b)(2)(B).

[8] Commodity-Based Trust Shares are securities issued by a trust that represent investors' discrete identifiable and undivided beneficial ownership interest in the commodities deposited into the trust.

[9] On May 12, 2023, the Trust filed with the Commission a registration statement on Form S–1, as amended on January 16, 2024 and April 4, 2024 (File No. 333–271910) (the ''Registration Statement'') under the Securities Act of 1933 (15 U.S.C. 77a) (the ''Securities Act''). The description of the operation of the Trust herein is based, in part, on the Registration Statement. The Registration Statement in not yet effective and the Shares will not trade on the Exchange until such time that the Registration Statement is effective.

[10] 15 U.S.C. 80a–1.

[11] 17 U.S.C. 1.

[12] The Cash Custodian is responsible for holding the Trust's cash as well as receiving and dispensing cash on behalf of the Trust. Deposits of cash held by the Cash Custodian will be used in connection with the purchase of an applicable amount of EUAs for creations and redemptions of Creation Units and in connection with the payment of Trust expenses.

[13] The description of the operation of the Trust, the Shares, and the carbon credit industry contained herein are based, in part, on the Registration Statement. *See* note 9, *supra.*

of purchasing and storing EUAs. Trust shareholders will be exposed to the risks of investing in EUAs, as well as to additional risks that are unrelated to EUAs. For example, the public trading price at which an investor buys or sells Shares during the day from their broker may be different from the value of the Trust's holdings. Price differences may relate primarily to supply and demand forces at work in the secondary trading market for the Trust's Shares that are closely related to, but not identical to, the same forces influencing the prices of EUAs, cash and cash equivalents that constitute the Trust's assets. In addition, EUAs will have to be sold to pay Trust expenses that would not be associated with an investment in EUAs. Additional risks related to the Trust's structure, the Sponsor's management of the Trust, and the tax treatment of an investment in Shares are further in the Registration Statement.

EUAs and the EUA Industry

Description of EU Emissions Trading Scheme

According to the Registration Statement, the European Union Emissions Trading System (''EU ETS'') is a ''cap and trade'' system that caps the total volume of greenhouse gas (''GHG'') emissions from installations and aircraft operators responsible for around 40% of European Union (''EU'') GHG emissions.[14] The EU ETS is the largest cap and trade system in the world and covers more than 11,000 power stations and industrial plants in 31 countries, and flights between airports of participating countries. The EU ETS is administered by the EU Commission, which issues a predefined amount of EUAs through auctions or free allocation. An EUA represents the right to emit one metric ton of carbon dioxide equivalent into the atmosphere by operators of stationary installations (''Covered Entities''). By the end of April each year, all Covered Entities are required to surrender EUAs equal to the total volume of actual emissions from their installation for the last calendar year. EU ETS operators can buy or sell EUAs to achieve EU ETS compliance.

In 2012, EU ETS operations were centralized into a single EU registry operated by the EU Commission (the ''Union Registry''), which covers all countries participating in the EU ETS. According to the Registration Statement, the Union Registry is an online database that holds accounts for all entities covered by the EU ETS as well as for participants (such as the Trust) not covered under the EU ETS. The Union Registry can be accessed online in a similar manner to online banking systems. An account must be opened in the Union Registry by a legal or natural person before being able to participate in the EU ETS and transact in EUAs. The European Union Transaction Log (''EUTL'')[15] checks, records and authorizes all transactions that take place between accounts in the Union Registry to ensure that transfers are in accordance with the EU ETS rules. The Union Registry is at all times responsible for holding the EUAs. All EUAs are held in the Union Registry, regardless of whether the EUAs are acquired through transactions on an exchange or in over-the-counter (''OTC'') transactions.

Major Holders and Allowance Use Cases

According to the Registration Statement, while there is limited publicly available data on individuals or individual organizations' holdings in physical carbon allowances, carbon allowances are primarily held for three different use cases:

(a) Complying with the EU ETS: Companies that need to surrender allowances under the EU ETS hold allowances to surrender them annually. These positions are typically built over time and ultimately surrendered at time of compliance. Therefore, the largest emitters in the EU ETS hold a significant amount of allowances, which include entities such as large utilities with a substantial share of fossil fuel fired power plants, cement companies, steel producers, chemical producers, oil and gas majors and airlines.

(b) Providing financial services for hedging purposes or speculation, such as clearing houses for the European Energy Exchange or the Intercontinental Exchange, or banks holding allowances for their clients.

(c) Trading on and speculating around price moves, using physical emission allowances. This can take many forms, including ''yield trades'', which includes holding a physical allowance and selling an EUA future at a premium to gain the yield in the forward curve; or outright positions for short term or long term speculation.

In addition to holding physical allowances, there is a liquid secondary futures and options market that is primarily used for hedging future emissions or speculating.

Trading Location

According to the Registration Statement, the EU ETS is linked to small emissions trading systems in Europe (Norway, Switzerland, Iceland and Liechtenstein), but not to any other major cap and trade markets. Therefore, allowances handed out in the EU ETS are not transferable to any registry outside of the EU ETS and cannot be used for compliance in any other cap and trade market.

There are a number of other trading systems globally, and like the EU ETS, no allowances of any of these systems can be used in any other system:

(a) Western Climate Initiative (WCI): The State of California and the Canadian province Quebec created a linked cap and trade market, that covers >80% of emissions.

(b) Regional Greenhouse Gas Initiative (RGGI): a group of US east coast states created a linked market that covers power generators only.

[14] There are two types of EU emissions allowance: (i) general allowances for stationary installations, or EUA; and (ii) allowances for the aviation sector (''EUAA''). The Trust will hold EUAs only.

[15] The EUTL is a central transaction log that checks and records all transactions taking place within the EU ETS. It is run by the European Commission and provides an easy access to emission trading data contained in the EUTL. *See https://www.eea.europa.eu/data-and-maps/dashboards/emissions-trading-viewer-1.*

(c) The China National ETS: Technically not a cap and trade scheme (as the amount of allowances is not fixed but calculated according to historic production of units).

(d) South Korea ETS: A comprehensive market covering the majority of Korean emissions.

Pricing of Allowances and Trading Volume

According to the Registration Statement, there are currently two primary avenues for trading EUAs: a primary market and a secondary market. The primary market involves participation in a regularly scheduled auction. The secondary market involves transactions between buyers and sellers on regulated markets. The instruments offered for trading are the following (1) instruments with a daily expiry, including spot EUAs and the Daily EUA Future (as defined below), (2) futures contracts with various maturities; and (3) options on futures contracts. There are also over-the-counter transactions, but they comprise a negligible percentage of transactions.

The spot and futures markets for EUAs have existed since 2005 after the formal launch of the EU ETS on January 1, 2005. Spot EUAs are traded exclusively on the European Energy Exchange AG (''EEX''),[16] and futures contracts and options on futures contracts are traded on EEX, ICE Endex Markets B.V. (''ICE Endex'') [17] and Nasdaq Oslo, although the latter's market share is marginal.

According to the Registration Statement, the EUA markets are generally liquid. The classifications for market participants include five basic categories—(1) investment firms or credit institutions, (2) investment funds, (3) other financial institutions, (4) operators with compliance obligations and (5) commercial undertakings which are non-financial firms without compliance obligations under the EU ETS.[18] According to the European Union Transaction Log, there are over 18,773 registry accounts.[19] The number of participants in the market have a direct bearing on the quality of trading. An Oxera report indicates that as the number of participants trading EUA futures has increased consistently since January 2017, relative spreads, calculated as the average quoted spread divided by the closing price, have decreased significantly—from just under 0.4% in January 2017 to roughly 0.06% in October 2021.[20] In an October 2024 publication, the European Securities Markets Authority (''ESMA'') estimated that approximately 10.75 billion EUAs were traded across all markets in 2023, amounting to approximately €764.1 billion.[21] Out of the total EUA market, approximately 523 million EUAs (amounting to €43.6 billion) were attributable to the EUA primary (auction) market, 9.3 billion EUAs (€648 billion) were attributable to the EUA on-exchange secondary market,[22] and 900 million EUAs (€72.5 billion) were attributable to OTC transactions. In this context, the ''on-exchange secondary market'' includes (1) the EEX spot EUA market, (2) the Daily EUA Futures market, (3) the markets for other EUA futures contracts (together with Daily EUA Futures, ''EUA Futures''), and (4) options contracts on EUA Futures. Data regarding each of the trading of each of these instruments is provided below. During 2023, approximately 99% of on-exchange secondary market transactions in EUAs, representing 81% of total trading volumes, occurred through futures contracts.[23]

[16] EEX is an exchange under the German Exchange Act and a Regulated Market (''RM''), as defined in the Markets in Financial Instruments Directive (Directive 2014/65/EC) (''MIFID II''). As a RM for spot and derivatives transactions, EEX is supervised by the Saxon State Ministry for Economic Affairs, Labour and Transport (the ''Exchange Supervisory Authority''). The Exchange Supervisory Authority is in charge of the legal supervision of EEX and of market supervision of the trading participants according to the German Exchange Act. The members of EEX are supervised by the Federal Financial Supervisory Authority (BaFin). All trading participants are required to comply with the market abuse regulations within the German Securities Trading Act. Beside this supervision, the market behavior at the spot and derivatives markets of all exchange participants is supervised on a daily basis by the Market Surveillance Office, an independent body of the exchange according to Section 7 of the German Exchange Act. *See https://www.esma.europa.eu/sites/default/files/EEX_1.pdf. See also* Rules and Regulations at *https://www.eex.com/en/markets/trading-ressources/rules-and-regulations.* EEX is also recognized by the CFTC as an authorized Foreign Board of Trade. *See https://www.cftc.gov/sites/default/files/filings/documents/2019/orgeexregistrationorder11519.pdf.*

[17] ICE Endex is regulated in the Netherlands by the Dutch Authority for the Financial Markets (''AFM'') as a RM, as defined in MIFID II, which is implemented in Dutch Act on Financial Supervision (''DFSA''). The license as a RM is obtained under Section 5:26(1) of the DFSA, resulting in an authorization by the Minister of Dutch Ministry of Finance to operate a RM and supervised by the AFM. In the UK, ICE Endex is a Recognized Overseas Investment Exchange by the Financial Conduct Authority. *See https://www.ice.com/endex/regulation#:~:text=The%20Dutch%20Authority%20for%20Consumers,energy%20industry%20and%20wholesale%20trading.* ICE Endex is also recognized by the CFTC as an authorized Foreign Board of Trade. *See https://www.cftc.gov/sites/default/files/idc/groups/public/@otherif/documents/ifdocs/orgiceeregorder170110.pdf.*

[22] The EUA on-exchange secondary market in 2023 included 7.6 billion EUAs traded through EUA Futures (as defined below), 1.7 billion EUAs traded through options of EUA Futures, and 30 million EUAs traded through other instruments, including spot EUAs. *Id.*

[23] *Id.*

EUA auctions are held on a near-daily basis throughout the year, other than between mid-December to mid-January, when auctions are paused. Twenty-eight countries (25 EU member states plus Liechtenstein, Norway, and Iceland) have agreed to use EEX to conduct their regularly scheduled auctions. Germany and Poland have opted out of the common auction but also utilize the EEX for auctions. Hence, EUA auctions take place exclusively on EEX. These auctions take place on a regularly scheduled basis; the number of allowances being auctioned is disclosed on a schedule prior to auction. Prices achieved in these auctions are published on various publicly-accessible websites, including the European Commission's primary website. For the year-to-date period ended September 30, 2024, the year ended December 31, 2023 and year ended December 31, 2022, the number of EUAs auctioned off on the EEX was 453,034,000, 523,307,500 and 491,194,000, respectively. The auctions cleared at an average discount to the current EUA on-exchange secondary market price of €0.04, €0.08 and €0.11, respectively, for the same time periods, based on the prevailing best bid and offer for EUA instruments with daily expiry (as discussed below) at the time the auction clears. These narrowing discounts as the auction volumes increase is indicative of a maturing marketplace that can provide accurate price discovery.

Below is a discussion of the secondary markets for EUAs and associated derivatives. The Trust will only hold EUAs and possibly cash, and will not hold any of the EUA derivatives.

Exchange-Traded Instruments With a Daily Expiry

Exchange-traded instruments with daily expiry traded on an exchange include spot EUAs traded on the EEX and the Daily EUA Future traded on ICE Endex. The Exchange notes that the settlement and economic outcome for a spot purchase on the EEX and a same day futures purchase on the ICE Endex are identical (as further detailed below). In fact, ESMA, in its ''Final Report: Emission Allowances and Associated Derivatives,'' uses the term ''spot'' EUAs to include both spot EUAs traded on EEX and the Daily EUA Future traded on ICE Endex.[24]

Secondary Spot EUA Market

As noted above, exchange-traded spot EUAs are traded exclusively on the EEX. The current value (spot price) for an EUA is greatly influenced by a number of factors, including regulatory changes, world events and general levels of economic activity. The trading hours for spot EUAs on EEX are 8:00 a.m. to 6:00 p.m. Central European Time (''C.E.T.''), and trade registrations are possible until 6:45 p.m. C.E.T. Trades concluded before 4:00 p.m. C.E.T. are settled on the next business day, or T+1, while trades after 4:00 p.m. C.E.T. are settled on the day after the first business day, or T+2. In the twelve-month period ended September 30, 2024, the average daily, monthly and annual trading volumes of spot EUAs on the EEX was 146, 2,917 and 35,009 round lots of 1000 EUAs, respectively. Over the same period, spot EUAs traded in the secondary market on EEX at their highest volume of 5,010 round lots of EUAs on December 1, 2023, and their lowest volume of 0 EUAs on five different occasions. The EEX calculates and publishes each trading day an index (the ''EUA End of Day Index'') reflecting the end of day price of EUAs traded in the secondary market on EEX.[25]

Daily EUA Futures

Most liquidity in the secondary market is achieved by trading futures contracts. These contracts have expiration going out as far as 2030. A single day futures contract on EUAs is exclusively traded on the ICE Endex (the ''Daily EUA Future''), which settles each day at the close of trading.[26] The Daily EUA Future is a deliverable contract where each person with a position open at cessation of trading is obliged to make or take physical delivery of EUAs upon the expiration of the contract at the end of each trading day. Settlement of the Daily EUA Future does not occur through cash transactions. Each Daily EUA Future represents one lot of 1,000 EUAs, with each EUA providing an entitlement to emit one ton of carbon dioxide equivalent gas. Generally, Daily EUA Futures trade on ICE Endex from approximately 2:00 a.m. Eastern Time (''E.T.'') to approximately 12:00 p.m. E.T. The settlement price is fixed each business day and is published by the exchange at approximately 12:15 E.T. Final settlement of the requisite number of EUAs versus cash occurs the first business day following the expiry day (T+1). In the twelve-month period ended September 30, 2024, the average daily, monthly and annual trading volumes of Daily EUA Futures was approximately 3,829, 78,189 and 938,279, respectively, which represents trading volumes of 3,829,000, 78,189,000 and 938,279,000 EUAs, respectively. Over the same period, Daily EUA Futures traded at their highest volume of 27,749 on April 17, 2024, representing 27,749,000 EUAs, and their lowest volume of 174 on July 26, 2024, representing 174,000 EUAs.

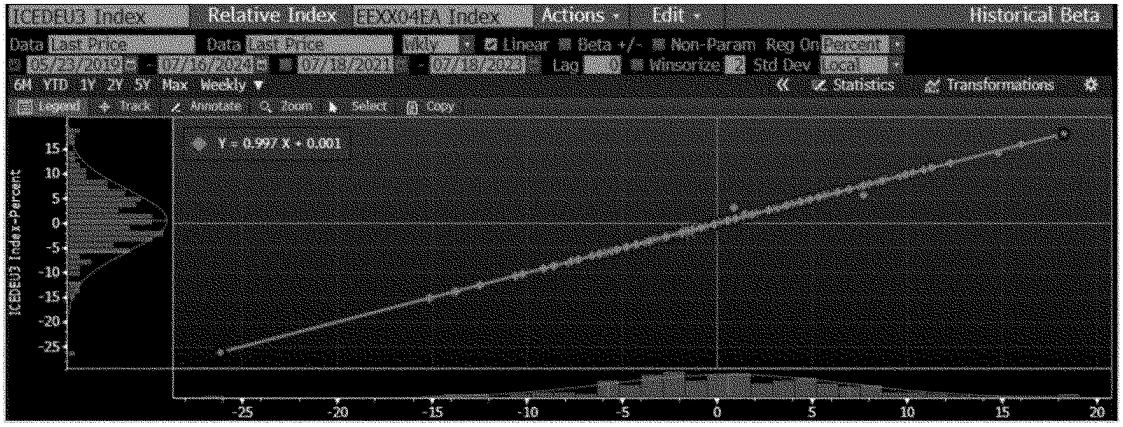
Comparison of Spot EUA Market and Daily EUA Futures Market

The daily EUA End of Day Index value can be expected to be substantially identical to the daily settlement price of the Daily EUA Future. The comparison below shows a 99.8% correlation between the movements of the two values over the five years from May 23, 2019 through May 23, 2024.

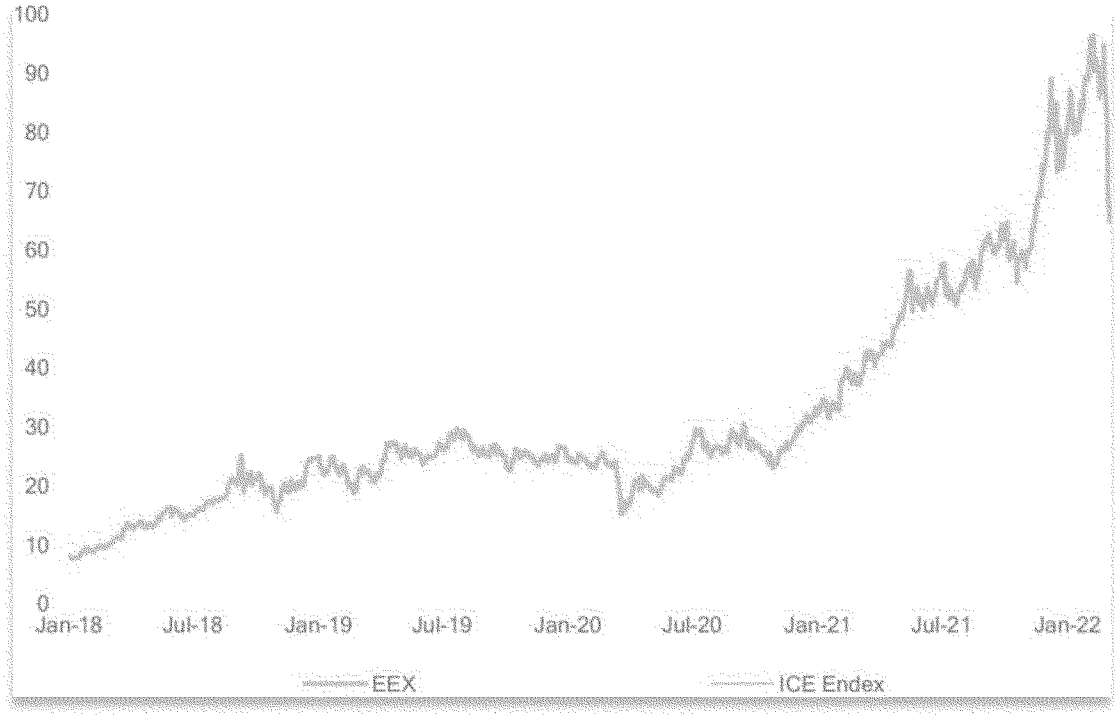
[24] *See esma70-445-38_final_report_on_emission_allowances_and_associated_derivatives.pdf (europa.eu).*

[25] The EUA End of Day Index methodology is available at *https://www.eex.com/fileadmin/EEX/Downloads/Trading/Specifications/Indeces/DE/20211005_Index_Description_v010.pdf.*

[26] All references to the ''Daily EUA Future'' refer to the single day EUA futures contract traded on ICE Endex. NASDAQ Oslo also offers a single day futures contract on EUAs, but the contract is not traded.



Additionally, the chart below illustrates how closely the Daily EUA Future, in fact, reflects the EUA spot price during the trading day. This chart shows the prices of EUAs on the EEX and the Daily EUA Futures on ICE Endex, in EUR/tCO2 from January 2018 to January 2022. No major differences can be observed, with an average absolute difference of €0.015 between the daily settlement prices for EUAs on the EEX and ICE Endex.



(https://www.esma.europa.eu/sites/default/files/library/esma70-445-38_final_report_on_emission_allowances_and_associated_derivatives.pdf :p37)

Other EUA Futures Contracts

EEX offers monthly EUA futures contracts for the current and next two months unless a quarterly or December future expires at that month's maturity date; quarterly futures for the current and next 11 quarters unless a December future expires at that quarter's maturity date; and yearly, or December, futures for the next 8 years which mature in December of each respective year. ICE Endex offers up to seven December futures contracts, nine quarterly futures contracts, three August futures contracts and two monthly futures contracts. Nasdaq Oslo offers quarterly futures contracts over a rolling six year period. There is only *de minimis* trading volume in EUA Futures on Nasdaq Oslo.[27] The EUA Futures are fungible, meaning any EUA Futures contract acquired on one exchange can be sold on the other exchange.

During 2023, approximately 7.6 billion EUAs, amounting to €643 billion, were traded through EUA Futures (including the Daily EUA Future). The trading volumes of the EUA Futures, including Daily EUA Futures, with expiration dates through

[27] For 2023, Nasdaq Oslo reported only 64 transactions in EUA Futures, for a total volume of 417 EUA Futures contracts. *See https://www.nasdaq.com/path-file/11506.*

the end of 2026 on EEX and ICE Endex for the period from January 1, 2024, through September 30, 2024, were as follows:

YEAR-TO-DATE TRADING VOLUMES, JANUARY 1, 2024—SEPTEMBER 30, 2024

	EEX (in round lots of 1,000 EUAs)	ICE Endex (in round lots of 1,000 EUAs)
Spot EUAs/Daily EUA Future	22,239 (Spot)	741,416 (Daily EUA Futures).
October 2024 EUA Future		38,816.
November 2024 EUA Future		4.

Options on EUA Futures Contracts

Options on EUA futures contracts are also traded on EEX and ICE Endex for many of the available EUA Futures. In 2023, approximately 1.7 billion EUAs, amounting to €900 million, were traded through options on EUA Futures. The options on EUA Futures, like the EUA Futures, are fungible and can be traded on any of the participating exchanges, regardless of the exchange on which a particular contract is acquired.

Section 6(b)(5) and the Applicable Standards

The Commission has approved numerous Commodity-Based Trust Shares, to be listed on U.S. national securities exchanges. In order for any proposed rule change from an exchange to be approved, the Commission must determine that, among other things, the proposal is consistent with the requirements of Section 6(b)(5) of the Act, specifically including: (i) the requirement that a national securities exchange's rules are designed to prevent fraudulent and manipulative acts and practices; and (ii) the requirement that an exchange proposal be designed, in general, to protect investors and the public interest. The Exchange believes that this proposal is consistent with the requirements of Section 6(b)(5) of the Act and that this filing sufficiently demonstrates that ICE Endex is a regulated market of significant size for trading EUAs.

Designed To Prevent Fraudulent and Manipulative Acts and Practices

The Exchange believes that the proposal is designed to prevent fraudulent and manipulative acts and practices and to protect investors and the public interest, consistent with Section 6(b)(5) of the Act because (1) the Exchange has entered into a comprehensive surveillance-sharing agreement (''CSSA'') with ICE Endex, a regulated market of ''significant size'' and (2) there are sufficient ''other means to prevent fraudulent and manipulative acts and practices.''

Comprehensive Surveillance-Sharing Agreement

The Commission has explained that a proposal could satisfy the requirements of the Act in the first instance by demonstrating that the listing exchange has entered into a CSSA with a regulated ''market of significant size'' relating to the underlying assets.[28] With respect to the Trust, the underlying assets are EUAs. The relevant analysis, therefore, is whether the Exchange has a CSSA with a regulated market of significant size related to EUAs. The Commission has further stated that ''[c]onsistent with the discussion of 'significant market' . . . , the Commission has not previously, and does not now, require that [a] listing exchange be able to enter into a surveillance-sharing agreement with each regulated spot or derivatives market relating to an underlying asset, provided that the market or markets with which there is such an agreement constitute a 'significant market.' '' [29]

The Commission has emphasized that it is essential for an exchange listing a derivative securities product to enter into a surveillance-sharing agreement with markets trading the underlying assets for the listing exchange to have the ability to obtain information necessary to detect, investigate, and deter fraud and market manipulation, as well as violations of exchange rules and applicable federal securities laws and rules.[30] Comprehensive surveillance-sharing agreements ''provide a necessary deterrent to manipulation because they facilitate the availability of information needed to fully investigate a manipulation if it were to occur.'' [31] The hallmarks of a surveillance-sharing agreement are that the agreement provides for the sharing of information about market trading activity, clearing activity, and customer identity; that the parties to the agreement have reasonable

ability to obtain access to and produce requested information; and that no existing rules, laws, or practices would impede one party to the agreement from obtaining this information from, or producing it to, the other party.[32]

The ICE Endex Futures Market is a Regulated Market

As discussed more below, ICE Endex is subject to the EU regulatory framework for EUAs and EUA derivatives.[33] The EU regulatory framework includes the Markets in Financial Instruments Directive and Regulation (''MiFID II'' and ''MiFIR''), the Market Abuse Regulation (''MAR'') and the European Market Infrastructure Regulation (''EMIR''). MiFID II and MiFIR together is a framework governing investment firms, trading venues, data reporting service providers and non-EU investment firms that provide investment services in the EU. The MAR prohibits insider dealing, unlawful disclosure of inside information and market manipulation and provides broad powers to the national competent authorities (''NCAs'') for detection and prosecution of violations. EMIR regulates OTC derivatives transactions, central counterparties and trade repositories. It is critical for ICE Endex to maintain fair and orderly markets. A fair and orderly market is necessary to maintain a level playing field for trading participants, to attract new participants, and to attract trading activity. ICE Endex has an extensive framework in place to facilitate the existence of such fair and orderly markets, including the performance of market surveillance activities that allow for the monitoring of market activity, including intra-day activity, and the detection of irregular trading behavior that could negatively impact the integrity of ICE Endex or constitute breaches of statutory law or regulations in the form of market abuse by market participants.

The ICE Endex Futures Market is a Market of Significant Size

In the Winklevoss Order, the Commission stated that the term ''significant market'' or ''market of significant size'' includes a market (or group of markets) as to which (1) there is a reasonable likelihood that a person attempting to manipulate the Trust would also have to trade on that market to successfully manipulate the Trust, so that a surveillance-sharing agreement would assist in detecting and deterring misconduct, and (2) it is unlikely that trading in the Trust would be the predominant influence on prices in that market.[34] The Commission explained that this definition is illustrative and not exclusive, and that there could be other types of ''significant markets'' and ''markets of significant size.'' [35]

Any Manipulator Would Have To Trade on ICE Endex

The first prong of the analysis addresses whether the surveillance-sharing agreement on which the fund's listing exchange proposes to rely would assist in detecting and deterring fraudulent or manipulative misconduct related to the assets held by the fund. In the present proposal, the Trust's only non-cash holdings will be EUAs. The predominant market for trading EUA instruments with daily expiry is the ICE Endex Daily EUA Futures market, with de minimis secondary market trading taking place on EEX or over-the-counter. The EEX's primary role in the EUA ecosystem is to serve as the venue for the daily auctions of EUAs.

The regulated market of significant size test does not require that the spot EUA market be subject to direct surveillance by the Exchange in order for the Commission to approve this proposal, and precedent makes clear that an underlying market for a spot commodity or currency being a surveilled market would actually be an exception to the norm. These largely un-surveilled currency and commodity markets do not provide the same protections as the markets that are subject to the Commission's oversight, but the Commission has consistently looked to surveillance sharing agreements with the underlying futures market in order to determine whether such products were consistent with the Act. With this in mind, the ICE Endex EUA Futures market is an appropriate market to consider in determining whether there is a related regulated market of significant size.

ICE Endex is the only market for trading Daily EUA Futures and, as noted above, for the twelve-months ended September 30, 2024, the average daily trading volume of Daily EUA Futures on the ICE Endex was 3,829 contracts, representing 3,829,000 EUAs, whereas the average daily trading volume on the EEX was 146 round lots, representing 146,000 EUAs. Therefore, over that one year period, over 96% of all on-exchange secondary market trading of EUA spot instruments with daily expiry (which, as described above, includes spot EUAs and Daily EUA Futures) occurred on the ICE Endex. With respect to EUAs and EUA based derivatives more broadly, the chart above shows that, year-to-date through September 30, 2024, approximately 96% of all trades in EUAs and EUA Futures dated through December 2026 occurred on ICE Endex.[36]

Given the size of the ICE Endex futures markets, especially the Daily EUA Futures market, the Sponsor believes such markets meet the Commission's definition of ''significant market'' because there is a reasonable likelihood that a person attempting to manipulate the Trust would also have to trade on that market to successfully manipulate the Trust, since arbitrage between the derivative and spot markets would tend to counter an attempt to manipulate the spot market alone. Of the 256 members of ICE Endex, 151 are also members of EEX. Each of these exchange members acts on behalf of their clients, each member in common between the exchanges represents potentially hundreds of accounts that can and do act on both markets to effect arbitrage transactions. Therefore, a sufficient number of arbitrageurs have access to both the EEX and ICE Endex such that any attempt to manipulate one market that causes a difference between the EUA spot price and the Daily EUA Futures price will quickly be exploited. This will serve to maintain the EUA price correlation between EEX and ICE Endex. Any attempt to manipulate the spot EUA market alone would be impossible because arbitrage would correct any movements in the spot market to bring the prices of spot EUAs back in line with the settlement price of the Daily EUA Future. Therefore, any person attempting to manipulate the Trust Shares would also have to trade in the Daily EUA Futures market (ICE Endex) to manipulate the spot and futures markets in tandem.[37]

[36] *See esma70-445-38_final_report_on_emission_allowances_and_associated_derivatives.pdf (europa.eu).*

[37] The Commission has granted several prior proposals to list and trade shares of physical commodity-based exchange-traded products, noting in every case that there was at least one regulated market of significant size for trading futures in the underlying commodity—whether gold, silver, platinum, palladium or copper—and the product's listing exchange has entered into surveillance-sharing agreements with, or held Intermarket Surveillance Group (''ISG'') membership in common with, that market. *See* Securities Exchange Act Release Nos. 61220 (December 22, 2009), 74 FR 68895, 68896 (December 29, 2009) (SR–NYSEArca–2009–94) (notice of proposed rule change included

Similarly, it is impossible to manipulate the prices of EUAs by trading the other EUA based derivatives on the EEX alone. With respect to EUA Futures other than the Daily EUA Future, the size and predominance of ICE Endex would make it impossible to manipulate the price of EUAs through trading EUA Futures on the EEX alone. The fungibility of EUA Futures and the significant overlap in exchange membership would cause arbitrage activity to bring the settlement prices of EUA Futures traded on EEX in line with the settlement price of EUA Futures traded on ICE Endex. In addition, because the options on EUA Futures reference EUA Futures, the prices of EUA Futures would reflect any attempt by a would-be manipulator to manipulate the price of the Fund's Shares through the use of options. Therefore, any would-be manipulator would have to manipulate the prices of EUA Futures Contracts in order to manipulate the price of the Fund's Shares, and the size of predominance of the ICE Endex would require that would-be manipulator to trade on ICE Endex.

The Trust Is Unlikely To Be the Predominant Influence on Price

It is unlikely that trading in the Trust Shares would be the predominant influence on Daily EUA Futures prices traded on ICE Endex for a number of reasons, including the significant volume in and size of the EUA daily expiry market (meaning the Daily EUA Futures market, in effect). In 2023, the total EUA market size was approximately €764.1 billion with approximately €67.1 billion of that attributable to the Daily EUA Futures market and €3.4 billion attributable to spot EUAs. The daily average trading volume in 2023 for EUAs across the on-exchange secondary market was approximately €2.6 billion, with approximately €266.3 million attributable to trading in the Daily EUA Futures market and €13.5 million attributable to trading in spot EUAs. The Trust has not yet launched and cannot predict its future inflows; however, given the size of the Daily EUA Futures market and the EUA market, as a whole, the Sponsor does not anticipate that the Trust will have available capital to buy and sell EUAs in an amount that would move the EUA market or that investors would be able to trade Trust Shares at such a volume as to influence Daily EUA Futures prices on ICE Endex. Additionally, the trading hours for the ICE Endex (*i.e.,* EUA Futures market) are approximately 2:00 a.m. E.T. to approximately 12:00 p.m. E.T. The majority of this time period (7.5 hours) is outside of the Trust's trading hours of 9:30 a.m. E.T. to 4:00 p.m. E.T. As such, it is unlikely that trading in the Trust's Shares would be the primary influencer of the EUA Futures prices traded on ICE Endex, because the ICE Endex is actively traded for 7.5 hours during which the Trust Shares cannot be traded.

Other Means To Prevent Fraudulent and Manipulative Acts and Practices

The Exchange has a CSSA With the Market on Which the Trust's Sole Asset Trades

In the present proposal, the Trust's only non-cash holdings will be EUAs. Moreover, the proposed ''significant'' regulated market (*i.e.,* the ICE Endex) with which the listing exchange has a surveillance-sharing agreement is the principal market on which these assets trade.

The Daily EUA Futures market functions as the ''spot'' market for EUAs. The purchase and sale of Daily EUA Futures is the functional and economic equivalent of transactions in spot EUAs. The settlement, functionality and economic outcome for a spot purchase on the EEX and a Daily EUA Future purchase on the ICE Endex are identical. Because the Daily EUA Future is physically settled through the delivery of one lot of EUAs to the purchaser of the Daily EUA Future, whether the Trust acquires an EUA through a transaction on the EEX or through the acquisition of a Daily EUA Future on ICE Endex, the Trust will acquire the same EUA on a T+1 basis. It is not possible for an acquirer to roll a same day futures contract to a later dated future, as each day it would expire and the market participant would end up holding physical EUAs. Therefore, the Daily EUA Futures market functions as a spot market.

The EEX's primary role in the EUA ecosystem is to serve as the venue for the daily auctions of EUAs. The predominant market for trading EUA instruments with daily expiry is the ICE Endex Daily EUA Futures market, with *de minimis* secondary market trading taking place on EEX or in the OTC market. As noted above, for the twelve-month period ended September 30, 2024, the average daily trading volume of Daily EUA Futures on ICE Endex was approximately 3,829 contracts, representing 3,829,000 EUAs, whereas the average daily trading volume of spot EUAs on the EEX was 146 lots, representing 146,000 EUAs. Therefore, over that one year period, approximately 96% of all secondary market trading of EUA spot instruments with daily expiry occurred on the ICE Endex. Therefore, because a Daily EUA Future is functionally identical to a physical EUA, and the ICE Endex serves as the predominant market for the trading of ''spot'' EUAs, the Exchange's CSSA with ICE Endex will serve to detect and deter fraudulent and manipulative acts and practices in the EUA market.

NYSE Arca's representation that ''[t]he most significant palladium futures exchanges are the NYMEX and the Tokyo Commodity Exchange,'' that ''NYMEX is the largest exchange in the world for trading precious metals futures and options,'' and that NYSE Arca ''may obtain trading information via the Intermarket Surveillance Group,'' of which NYMEX is a member; 61219 (December 22, 2009), 74 FR 68886, 68887–88 (December 29, 2009) (SR–NYSEArca–2009–95) (notice of proposed rule change included NYSE Arca's representation that ''[t]he most significant platinum futures exchanges are the NYMEX and the Tokyo Commodity Exchange,'' that ''NYMEX is the largest exchange in the world for trading precious metals futures and options,'' and that NYSE Arca ''may obtain trading information via the Intermarket Surveillance Group,'' of which NYMEX is a member; 62692 (August 11, 2010), 75 FR 50789, 50790 (August 17, 2010) (SR–NYSEArca–2010–56) (notice of proposed rule change included NYSE Arca's representation that ''the most significant gold, silver, platinum and palladium futures exchanges are the COMEX and the TOCOM'' and that NYSE Arca ''may obtain trading information via the Intermarket Surveillance Group,'' of which COMEX is a member; 62875 (September 9, 2010), 75 FR 56156, 56158 (September 15, 2010) (SR–NYSEArca–2010–71) (notice of proposed rule change included NYSE Arca's representation that ''the most significant silver, platinum and palladium futures exchanges are the COMEX and the TOCOM'' and that NYSE Arca ''may obtain trading information via the Intermarket Surveillance Group,'' of which COMEX is a member; 63464 (December 8, 2010), 75 FR 77926, 77928 (December 14, 2010) (SR–NYSEArca–2010–95) (notice of proposed rule change included NYSE Arca's representation that ''the most significant gold futures exchanges are the COMEX and the Tokyo Commodity Exchange,'' that ''COMEX is the largest exchange in the world for trading precious metals futures and options,'' and that NYSE Arca ''may obtain trading information via the Intermarket Surveillance Group,'' of which COMEX is a member; 68430 (December 13, 2012), 77 FR 75239, 75240–41 (December 19, 2012) (SR–NYSEArca–2012–111) (notice of proposed rule change included NYSE Arca's representation that ''[f]utures on platinum and palladium are traded on two major exchanges: The New York Mercantile Exchange . . . and Tokyo Commodities Exchange'' and that NYSE Arca ''may obtain trading information via the Intermarket Surveillance Group,'' of which COMEX is a member; 71378 (January 23, 2014), 79 FR 4786, 4786–87 (January 29, 2014) (SR–NYSEArca–2013–137) (notice of proposed rule change included NYSE Arca's representation that ''COMEX is the largest gold futures and options exchange'' and that NYSE Arca ''may obtain trading information via the Intermarket Surveillance Group,'' including with respect to transactions occurring on COMEX pursuant to CME and NYMEX's membership, or from exchanges ''with which [NYSE Arca] has in place a comprehensive surveillance sharing agreement.'')

EU's Oversight and Monitoring of EUA Markets Serves To Prevent Fraudulent and Manipulative Acts and Practices

In addition to Exchange's CSSA with ICE Endex, there are other mechanisms in place to deter and detect misconduct across both the EUA spot and derivatives markets. Both EEX and ICE Endex are subject to the EU regulatory framework for EUAs and EUA derivatives. The EU regulatory framework includes the Markets in Financial Instruments Directive and Regulation (''MiFID II'' and ''MiFIR''), the Market Abuse Regulation (''MAR'') and the European Market Infrastructure Regulation (''EMIR'').[38] MiFID II and MiFIR together is a framework governing investment firms, trading venues, data reporting service providers and non-EU investment firms that provide investment services in the EU.[39] The MAR prohibits insider dealing, unlawful disclosure of inside information and market manipulation and provides broad powers to the national competent authorities (''NCAs'') for detection and prosecution of violations.[40] EMIR regulates OTC derivatives transactions, central counterparties and trade repositories.[41] ESMA is the EU's overall financial markets regulator that has supervisory authority over the NCAs.[42] Under the EU regulatory framework, there are three lines of defense against market abuse.[43] At the firm level (first line), firms are required to have systems and procedures in place to ensure that abusive trading is detected and reported to NCAs. At the market operator, investment firm and trading venue level (second line), these entities are required to identify and report suspicious transactions and maintain policies and procedures to prevent market abuse. Additionally, exchanges such as EEX and ICE Endex are required to report information to the relevant authorities on a daily basis. At the NCA level (third line), NCAs have market surveillance systems in place to monitor markets and identify and investigate suspicious transactions. NCAs have broad enforcement power and cooperate with each other and ESMA to obtain the information needed for optimal surveillance and in order to prosecute violations.[44] Exchanges (such as EEX and ICE Endex) and governmental authorities share information and communicate frequently regarding monitoring activities.[45]

While the Exchange is not a participant in the EU regulatory framework, the Exchange believes that the EU's robust oversight and monitoring regime, in addition to the Exchange's CSSA with ICE Endex which would allow for the sharing of information and thus provide sufficient means to prevent fraudulent and manipulative acts and practices.

Designed To Protect Investors and the Public Interest

The Exchange believes that the proposal is designed to protect investors and the public interest. The Exchange believes that the concerns related to the prevention of fraudulent and manipulative acts and practices have been sufficiently addressed for this proposal to be consistent with the Act. As such, the Exchange believes that approving this proposal provides the Commission with the opportunity to allow U.S. investors to access EUAs in a regulated and transparent exchange-traded vehicle that would act to limit risk and benefit U.S. investors by: (i) reducing premium and discount volatility as compared to OTC investment vehicles; (ii) increasing competitive pressure on management fees resulting in fee compression/reductions; (iii) reducing risks and costs as compared to those associated with investing in EUAs; and (iv) providing an alternative to maintaining custody of EUAs.

Creation and Redemption of Shares

According to the Registration Statement, the Trust will create and redeem Shares on a continuous basis in one or more Creation Units. A ''Creation Unit'' equals a block of 50,000 Shares, which amount may be revised from time-to-time. The Trust will issue Shares in Creation Units to certain authorized participants (''Authorized Participants'') on an ongoing basis. Each Authorized Participant must be a registered broker-dealer or other securities market participant such as a bank or other financial institution which is not required to register as a broker-dealer to engage in securities transactions, a participant in The Depository Trust Company (''DTC'') and have entered into an agreement with the Sponsor and the Transfer Agent (the ''Participant Agreement'').

Creation Units may be created or redeemed only by Authorized Participants. The creation and redemption of Creation Units is made in exchange for the delivery to the Trust or the distribution by the Trust of the amount of EUAs, or the amount of cash sufficient to purchase the amount of EUAs, represented by the Creation Units being created or redeemed. The amount of EUAs or cash required to be delivered to the Trust in connection with any creation, or paid out upon redemption, is based on the combined net asset value of the number of Shares included in the Creation Units being created or redeemed as determined on the day the order to create or redeem Creation Units is properly received and accepted. Orders must be placed by 11:00 a.m. New York time. The day on which the Administrator receives a valid purchase or redemption order is the order date. Creation Units may only be issued or redeemed on a day that the Exchange is open for regular trading.

For a cash creation, an Authorized Participant will deliver the cash to the Trust's account at the Cash Custodian, which the Sponsor will then use to purchase EUAs from a third party selected by the Sponsor who (1) is not an Authorized Participant and (2) will not be acting as an agent, nor at the discretion, of the Authorized Participant with respect to the delivery of EUAs to the Trust (such third party, a ''Liquidity Provider''). For a cash redemption, the Sponsor shall arrange for the EUAs represented by the Creation Units to be sold to a Liquidity Provider selected by the Sponsor and the cash proceeds distributed from the Trust's account at the Cash Custodian to the Authorized Participant in exchange for its Shares. In the case of ''in-kind'' creation or redemption orders for Shares, an Authorized Participant may deliver or direct the delivery of EUAs by third parties, or take delivery or direct the taking of delivery of EUAs by third parties.

For cash creations, an Authorized Participant who places a purchase order is responsible for arranging for the delivery to the Trust's account with the Cash Custodian of the required cash deposit by 2:00 p.m. New York time on the first business day following the

[45] Carbon trading in the European Union: An economic assessment of market functioning in 2021, Oxera, p. 26–27 (February 15, 2022); available at *https://www.oxera.com/wp-content/uploads/2022/02/Oxera-EU-carbon-trading-report-3.pdf.*

purchase order date. The Liquidity Provider delivers EUAs to the Trust's Union Registry account in exchange for the cash purchase price. Upon settlement of the EUA purchase from the Liquidity Provider into the Trust's Union Registry account, the Trust instructs the Transfer Agent to release the Shares to the Authorized Participant, and the Transfer Agent directs DTC to credit the number of Shares ordered to the applicable DTC account, by close of business on the purchase settlement date.

For in-kind creation orders, an Authorized Participant who places a purchase order is responsible for arranging for the delivery to the Trust's Union Registry account the required EUA deposit by 2:00 p.m. New York time on the first business day following the order date. Upon receipt of the EUA deposit amount in the Trust's Union Registry account, the Union Registry will notify the Sponsor that the EUAs have been deposited. Upon receipt of confirmation from the Union Registry that the EUA deposit amount has been received, the Administrator will direct DTC to credit the number of Shares created to the Authorized Participant's DTC account.

According to the Registration Statement, the redemption distribution due from the Trust will be delivered once the Administrator notifies the Sponsor that the Authorized Participant has delivered the Shares to be redeemed to the Trust's DTC account. The redemption distribution will be delivered to the Authorized Participant on the first business day following the order date.

For cash redemptions, on the redemption settlement date, the Liquidity Provider delivers cash to the Trust's account with the Cash Custodian in exchange for the redemption EUAs amount. Upon settlement of the EUA sale by the Trust to the Liquidity Provider and the receipt of the Liquidity Provider's cash in the Trust's Cash Custodian account, the Trust instructs the Transfer Agent to deliver the Authorized Participant's Shares to be redeemed back to the Trust, in exchange for which the Trust instructs the Cash Custodian to transfer the requisite cash to the Authorized Participant's designated bank account and the redemption order is settled.

For in-kind redemptions, once the Administrator notifies the Sponsor that the Shares have been received in the Trust's DTC account, the Sponsor instructs the Union Registry to transfer the redemption EUA amount from the Trust's Union Registry account to the Union Registry account of the Authorized Participant or its agent.

The Sponsor is the only entity that may initiate a withdrawal of EUAs from the Trust's Union Registry account, and the only accounts that may receive EUAs from the Trust's Union Registry account are the Union Registry accounts of the Authorized Participants and Liquidity Providers, their agents or the Sponsor.

Net Asset Value (''NAV'')

The Trust's NAV is calculated by taking the current market value of its total assets, less any liabilities of the Trust, and dividing that total by the total number of outstanding Shares.

The Administrator will calculate the NAV of the Trust once each Exchange trading day. The NAV for a normal trading day will be released after the end of the Core Trading Session, which is typically 4 p.m. New York time. The NAV for the Trust's Shares will be disseminated daily to all market participants at the same time. The Administrator will use the settlement price for the Daily EUA Futures established by ICE Endex to calculate the NAV. The Administrator also converts the value of Euro denominated assets into US Dollar equivalent using published foreign currency exchange prices by an independent pricing vendor. Third parties supplying quotations or market data may include, without limitation, dealers in the relevant markets, end-users of the relevant product, information vendors, brokers and other sources of market information.

Indicative Fund Value (''IFV'')

In order to provide updated information relating to the Trust for use by investors and market professionals, an updated IFV will be made available through on-line information services throughout the Exchange Core Trading Session (normally 9:30 a.m. to 4:00 p.m. E.T.) on each trading day. The IFV will be calculated by using the prior day's closing NAV per Share of the Trust as a base and updating that value throughout the trading day to reflect changes in the most recently reported mid-point of the bid-ask spread of the Daily EUA Future. The IFV disseminated during NYSE Arca Core Trading Session hours should not be viewed as an actual real time update of the NAV, because the NAV will be calculated only once at the end of each trading day based upon the relevant end of day values of the Trust's investments. Although the IFV will be disseminated throughout the Core Trading Session, the customary trading hours for EUAs are 2 a.m. to 12 p.m. Eastern Time. During the gap in time at the end of each trading day during which the Shares are traded on the Exchange, but real-time trading prices for EUAs are not available, the IFV will be calculated based on the last reported mid-point of the bid-ask spread of the Daily EUA Future in the immediately preceding trading session until the day's settlement price is reported, in which case the day's settlement price will be used.

The IFV will be disseminated on a per Share basis every 15 seconds during regular NYSE Arca Core Trading Session.

Availability of Information

The NAV for the Trust's Shares will be disseminated daily to all market participants at the same time. The intraday, closing prices, and settlement prices for EUAs will be readily available from the applicable futures exchange websites, automated quotation systems, published or other public sources, or major market data vendors. The IFV per Share for the Shares will be disseminated by one or more major market data vendors on at least a 15 second delayed basis as required by NYSE Arca Rule 8.201–E(e)(2)(v).

Complete real-time data for EUAs and Daily EUA Futures is available by subscription through on-line information services. Quotation and last-sale information regarding the Shares will be disseminated through the facilities of the Consolidated Tape Association. The IFV will be available through on-line information services. The trading prices for EUAs and Daily EUA Futures will be disseminated by on-line subscription services or by one or more major market data vendors during the NYSE Arca Core Trading Session of 9:30 a.m. to 4:00 p.m. E.T.

EEX also provides on its website, on a daily basis, transaction volumes and transaction prices for the EUA spot market. ICE Endex provides on its website, on a daily basis, transaction volumes, transaction prices, daily settlement prices and historical settlement prices for Daily EUA Futures that were traded outside of block trades by EUA futures brokers. In addition, transaction volumes, transaction prices, daily settlement prices and historical settlement prices for Daily EUA Futures traded in block trades by futures brokers are available on a daily basis through a subscription service to ICE Endex. However, ICE Endex provides the daily settlement price change of the Daily EUA Future on its website.

In addition, the Trust's website (*www.cotwoadvisors.com*) will contain

the following information, on a per Share basis, for the Trust: (a) the prior business day's end of day closing NAV; (b) the Official Closing Price [46] or the midpoint of the national best bid and the national best offer (''NBBO'') as of the time the NAV is calculated (''Bid-Ask Price''); (c) calculation of the premium or discount of the Official Closing Price against the NAV expressed as a percentage of such NAV; (d) the prospectus; and (e) other applicable quantitative information. The Trust will also provide website disclosure of its EUA holdings before 9:30 a.m. E.T. on each trading day.

The Trust's website will be publicly available prior to the public offering of Shares and accessible at no charge. The website disclosure of the Trust's daily holdings will occur at the same time as the disclosure by the Trust of the daily holdings to Authorized Participants so that all market participants are provided daily holdings information at the same time. Therefore, the same holdings information will be provided on the public website as well as in electronic files provided to Authorized Participants. Accordingly, each investor will have access to the current daily holdings of the Trust through the Trust's website. In addition, information regarding market price and trading volume of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. Information regarding the previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers.

Trading Rules

The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. Trading in the Shares on the Exchange will occur in accordance with NYSE Arca Rule 7.34–E (Early, Core, and Late Trading Sessions). The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions. As provided in NYSE Arca Rule 7.6–E, the minimum price variation (''MPV'') for quoting and entry of orders in equity securities traded on the NYSE Arca Marketplace is $0.01, with the exception of securities that are priced less than $1.00, for which the MPV for order entry is $0.0001.

The Shares will conform to the initial and continued listing criteria under NYSE Arca Rule 8.201–E. The trading of the Shares will be subject to NYSE Arca Rule 8.201–E(g), which sets forth certain restrictions on Equity Trading Permit (''ETP'') Holders acting as registered Market Makers in Commodity-Based Trust Shares to facilitate surveillance. The Exchange represents that, for initial and continued listing, the Trust will be in compliance with Rule 10A–3 [47] under the Act, as provided by NYSE Arca Rule 5.3–E. A minimum of 50,000 Shares will be outstanding at the commencement of trading on the Exchange.

As a general matter, the Exchange has regulatory jurisdiction over its ETP Holders and their associated persons, which include any person or entity controlling an ETP Holder. To the extent the Exchange may be found to lack jurisdiction over a subsidiary or affiliate of an ETP Holder that does business only in commodities or futures contracts, the Exchange could obtain information regarding the activities of such subsidiary or affiliate through surveillance sharing agreements with regulatory organizations of which such subsidiary or affiliate is a member.

Trading Halts

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares. Trading on the Exchange in the Shares may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. These may include: (1) the extent to which conditions in the underlying carbon credit market have caused disruptions and/or lack of trading, or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. In addition, trading in Shares will be subject to trading halts caused by extraordinary market volatility pursuant to the Exchange's ''circuit breaker'' rule.[48]

The Exchange may halt trading during the day in which an interruption occurs to the dissemination of the IFV, as described above. If the interruption to the dissemination of the IFV persists past the trading day in which it occurs, the Exchange will halt trading no later than the beginning of the trading day following the interruption. In addition, if the Exchange becomes aware that the NAV with respect to the Shares is not disseminated to all market participants at the same time, it will halt trading in the Shares until such time as the NAV is available to all market participants.

Surveillance

The Exchange represents that trading in the Shares will be subject to the existing trading surveillances administered by the Exchange, as well as cross-market surveillances administered by the Financial Industry Regulatory Authority Inc. (''FINRA''), on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws.[49] The Exchange represents that these procedures are adequate to properly monitor Exchange trading of the Shares in all trading sessions and to deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.

The surveillances referred to above generally focus on detecting securities trading outside their normal patterns, which could be indicative of manipulative or other violative activity. When such situations are detected, surveillance analysis follows and investigations are opened, where appropriate, to review the behavior of all relevant parties for all relevant trading violations.

The Exchange has entered into a CSSA with ICE Endex. Pursuant to the CSSA, the Exchange will communicate as needed regarding trading in the Shares and Daily EUA Futures with ICE Endex, and the Exchange may obtain trading information regarding trading in the Shares and Daily EUA Futures from ICE Endex.

The Exchange represents that all EUAs held by the Trust will be held and maintained in the Union Registry and that the Trust will not invest in futures, options, options on futures, or swap contracts. It is possible that EUAs and Daily EUA Futures may become listed on other exchanges that are members of ISG [50] or with which the Exchange has in place a comprehensive surveillance sharing agreement.

Additionally, the Exchange is able to obtain information regarding trading in the Shares in connection with ETP Holders' proprietary or customer trades

[46] The term ''Official Closing Price'' is defined in NYSE Arca Rule 1.1(ll) as the reference price to determine the closing price in a security for purposes of Rule 7–E Equities Trading, and the procedures for determining the Official Closing Price are set forth in that rule.

[47] With respect to the application of Rule 10A–3 (17 CFR 240.10A–3) under the Act, the Trust relies on the exemption contained in Rule 10A–3(c)(7).

[48] *See* NYSE Arca Rule 7.12–E.

[49] FINRA conducts cross-market surveillances on behalf of the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement.

[50] For a list of the current members of ISG, *see www.isgportal.org.*

which they effect through ETP Holders on any relevant market. Additionally, under NYSE Arca Rule 8.201–E(g), an ETP Holder acting as a registered Market Maker in the Shares is required to provide the Exchange with information relating to its accounts for trading in any underlying commodity, related futures or options on futures, or any other related derivatives. Commentary .04 of NYSE Arca Rule 11.3–E requires an ETP Holder acting as a registered Market Maker, and its affiliates, in the Shares to establish, maintain and enforce written policies and procedures reasonably designed to prevent the misuse of any material nonpublic information with respect to such products, any components of the related products, any physical asset or commodity underlying the product, applicable currencies, underlying indexes, related futures or options on futures, and any related derivative instruments (including the Shares). As a general matter, the Exchange has regulatory jurisdiction over its ETP Holders and their associated persons, which include any person or entity controlling an ETP Holder. To the extent the Exchange may be found to lack jurisdiction over a subsidiary or affiliate of an ETP Holder that does business only in commodities or futures contracts and that subsidiary or affiliate is a member of another regulatory organization, the Exchange could obtain information regarding the activities of such subsidiary or affiliate through a surveillance sharing agreement with that regulatory organization.

In addition, the Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees.

All statements and representations made in this filing regarding (a) the description of the portfolio or reference assets, (b) limitations on portfolio holdings or reference assets, or (c) the applicability of Exchange listing rules specified in this rule filing shall constitute continued listing requirements for listing the Shares on the Exchange.

The Trust has represented to the Exchange that it will advise the Exchange of any failure by the Trust to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Trust is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under NYSE Arca Rule 5.5–E(m).

Information Bulletin

Prior to the commencement of trading, the Exchange will inform its ETP Holders in an Information Bulletin of the special characteristics and risks associated with trading the Shares. Specifically, the Information Bulletin will discuss the following: (1) the procedures for purchases and redemptions of Shares in Creation Units (including noting that Shares are not individually redeemable); (2) NYSE Arca Rule 9.2–E(a), which imposes a duty of due diligence on its ETP Holders to learn the essential facts relating to every customer prior to trading the Shares; (3) how information regarding the IFV is disseminated; (4) the requirement that ETP Holders deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; (5) the possibility that trading spreads and the premium or discount on the Shares may widen as a result of reduced liquidity of EUAs during the Core and Late Trading Sessions; and (6) trading information. For example, the Information Bulletin will advise ETP Holders, prior to the commencement of trading, of the prospectus delivery requirements applicable to the Trust. The Exchange notes that investors purchasing Shares directly from the Trust will receive a prospectus. ETP Holders purchasing Shares from the Trust for resale to investors will deliver a prospectus to such investors.

In addition, the Information Bulletin will reference that the Trust is subject to various fees and expenses as will be described in the Registration Statement. The Information Bulletin will also reference the fact that last sale information regarding EUAs is subject to regulation by EEX and ICE Endex, that the Commission and the CFTC do not have jurisdiction over the trading of EUAs as a commodity, and that jurisdiction over the trading of EUAs is held by the relevant competent authority of the individual EU member states in which the trading takes place, namely the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFIN) in Germany and the Autoriteit Financiële Markten (AFM) in the Netherlands.[51] The Information Bulletin will also discuss any relief, if granted, by the Commission or the staff from any rules under the Act.

The Information Bulletin will also disclose the trading hours of the Shares and that the NAV for the Shares will be calculated after 4:00 p.m. E.T. each trading day. The Information Bulletin will disclose that information about the Shares will be publicly available on the Trust's website.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5)[52] that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in NYSE Arca Rule 8.201–E. Further, the Exchange has demonstrated that the proposed rule change satisfies Section 6(b)(5) of the Act by showing that the ICE Endex is a regulated market of significant size that shares surveillance with the Exchange. The Exchange has in place surveillance procedures that are adequate to properly monitor trading in the Shares in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws. The Exchange may obtain information regarding trading in the Shares and Daily EUA Futures from ICE Endex with which the Exchange has entered into a CSSA. Also, pursuant to NYSE Arca Rule 8.201–E(g), the Exchange is able to obtain information regarding trading in the Shares and the underlying commodity through ETP Holders acting as registered Market Makers, in connection with such ETP Holders' proprietary trades which they effect on any relevant market. The Exchange represents that all EUAs held by the Trust will be held and maintained in the Union Registry and that the Trust will not invest in futures, options, options on futures, or swap contracts. The Exchange further represents that ICE Endex is the principal market for EUAs in which the Trust may invest, and that

[51] Article 22 of Regulation (EU) No. 596/2014 on market abuse (market abuse regulation) (''MAR'') requires each EU member state to designate a single administrative competent authority to ensure that the provisions of MAR are applied on its territory. Commission Regulation 596/2014, 2014 O.J. (L 173) 42. For a list of the competent authorities for each EU Member State. *See https://www.esma.europa.eu/sites/default/files/mar.pdf.*

[52] 15 U.S.C. 78f(b)(5).

the Exchange can monitor those EUAs through its CSSA with ICE Endex.[53]

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that there is a considerable amount of information on EUAs and Daily EUA Futures available on public websites and through professional and subscription services. The trading prices for EUAs will be disseminated by on-line subscription services or by one or more major market data vendors during the NYSE Arca Core Trading Session. EEX also provides on its website, on a daily basis, transaction volumes and transaction prices for the EUA spot market. Additionally, ICE Endex provides on its website, on a daily basis, transaction volumes, transaction prices, daily settlement prices and historical settlement prices for Daily EUA Futures that were traded outside of block trades by EUA futures brokers. In addition, transaction volumes, transaction prices, daily settlement prices and historical settlement prices for Daily EUA Futures traded in block trades by futures brokers are available on a daily basis through a subscription service to ICE Endex. ICE Endex also provides the daily settlement price change of the Daily EUA Future on its website.

In addition, the Trust's website (*www.cotwoadvisors.com*) will provide pricing information for EUAs and the Shares. Market prices for the Shares will be available from a variety of sources including brokerage firms, information websites and other information service providers. Quotation and last-sale information regarding the Shares will be disseminated through the facilities of the Consolidated Tape Association. The NAV of the Trust will be published on each day that NYSE Arca is open for regular trading and will also be posted on the Trust's website. The IFV relating to the Shares will be widely disseminated by one or more major market data vendors at least once every 15 seconds as required by NYSE Arca Rule 8.201–E(e)(2)(v). The Trust's website will also provide its prospectus and other relevant quantitative information regarding the Shares. The Trust will also provide website disclosure of its EUA holdings before 9:30 a.m. E.T. on each trading day. In addition, information regarding market price and trading volume of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. Information regarding the previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of an additional type of exchange-traded product that will enhance competition among market participants, to the benefit of investors and the marketplace. As noted above, the Exchange has in place surveillance procedures relating to trading in the Shares and may obtain information regarding trading in the Shares, EUAs and Daily EUA Futures from ICE Endex pursuant to the CSSA between the Exchange and ICE Endex. In addition, as noted above, investors will have ready access to information regarding the Trust's NAV, IFV, and quotation and last sale information for the Shares.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes the proposed rule change will enhance competition by accommodating Exchange trading of an additional exchange-traded product, and the first such product relating to physical carbon credits, which will enhance competition among market participants, to the benefit of investors and the marketplace.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Proceedings To Determine Whether To Approve or Disapprove SR–NYSEARCA–2024–70, as Modified by Amendment No. 1, and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act[54] to determine whether the proposed rule change, as modified by Amendment No. 1, should be approved or disapproved. Institution of such proceedings is appropriate at this time in view of the legal and policy issues raised by the proposed rule change, as modified by Amendment No. 1, as discussed below. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide comments on the proposed rule change, as modified by Amendment No. 1.

Pursuant to Section 19(b)(2)(B) of the Act,[55] the Commission is providing notice of the grounds for disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis of the proposal's consistency with Section 6(b)(5) of the Act, which requires, among other things, that the rules of a national securities exchange be ''designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade,'' and ''to protect investors and the public interest.'' [56]

IV. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their views, data, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposal, as modified by Amendment No. 1. In particular, the Commission invites the written views of interested persons concerning whether the proposal, as modified by Amendment No. 1, is consistent with Section 6(b)(5) or any other provision of the Act, or the rules and regulations thereunder. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b–4, any request for an opportunity to make an oral presentation.[57]

Interested persons are invited to submit written data, views, and arguments regarding whether the proposed rule change, as modified by Amendment No. 1, should be approved or disapproved by December 30, 2024. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by January 13, 2025.

[53] *See* the discussion in the ''Section 6(b)(5) and the Applicable Standards'' section, *supra.*

[54] 15 U.S.C. 78s(b)(2)(B).

[55] *Id.*

[56] 15 U.S.C. 78f(b)(5).

[57] Section 19(b)(2) of the Act, as amended by the Securities Act Amendments of 1975, Pub. L. 94–29 (June 4, 1975), grants the Commission flexibility to determine what type of proceeding—either oral or notice and opportunity for written comments—is appropriate for consideration of a particular proposal by a self-regulatory organization. *See* Securities Act Amendments of 1975, Senate Comm. on Banking, Housing & Urban Affairs, S. Rep. No. 75, 94th Cong., 1st Sess. 30 (1975).

The Commission asks that commenters address the sufficiency of the Exchange's statements in support of the proposal, which are set forth in Amendment No. 1,[58] in addition to any other comments they may wish to submit about the proposed rule change. In particular, the Commission seeks comment on the following questions and asks commenters to submit data where appropriate to support their views:

1. Given the nature of the underlying assets held by the Trust, what are commenters' views on whether the proposed Trust and Shares would be susceptible to manipulation? What are commenters' views generally on whether the Exchange's proposal is designed to prevent fraudulent and manipulative acts and practices? What are commenters' views generally with respect to the liquidity and transparency of the EUA spot and futures markets and such markets' susceptibility to manipulation? Are there particular features related to the EUA markets and the EUA ecosystem that raise unique concerns about whether the proposed Trust, which would hold EUAs and, possibly, a very limited amount of cash, would be susceptible to fraud or manipulation?

2. Based on data and analysis provided by the Exchange,[59] do commenters agree with the Exchange that ICE Endex, on which EUA Futures (including Daily EUA Futures) trade, represents a regulated market of significant size related to spot EUAs? [60] What are commenters' views on whether there is a reasonable likelihood that a person attempting to manipulate the Shares would also have to trade on ICE Endex to manipulate the Shares? [61] Do commenters agree with the Exchange that trading in the Shares would not be the predominant influence on prices in the Daily EUA Futures market? [62]

3. The Exchange further states that the ''Daily EUA Futures market functions as the 'spot' market for EUAs'' and that the ''purchase and sale of Daily EUA Futures is the functional and economic equivalent of transactions in spot EUAs.'' [63] What are commenters' views on whether the Daily EUA Futures market functions as a spot EUA market? What are commenters' views on the extent to which a surveillance sharing agreement with ICE Endex would assist in detecting and deterring fraud and manipulation that impacts an ETP that holds spot EUAs, and on whether the Exchange's analysis provides evidence to this effect?

4. In addition to the Exchange's CSSA with ICE Endex, the Exchange asserts that there are other mechanisms in place to deter and detect misconduct across both the EUA spot and derivatives markets. Specifically, the Exchange states that both EEX and ICE Endex are subject to the EU regulatory framework [64] and represents that both EEX and ICE Endex are recognized by the CFTC as authorized Foreign Boards of Trade.[65] Do commenters agree with the Exchange that the EU's oversight and monitoring regime, combined with the Exchange's CSSA with ICE Endex, may provide other means to prevent fraudulent and manipulative acts and practices? [66]

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–NYSEARCA–2024–70 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEARCA–2024–70. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSEARCA–2024–70 and should be submitted on or before December 30, 2024. Rebuttal comments should be submitted by January 13, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[67]

Sherry R. Haywood,

Assistant Secretary.

DEPARTMENT OF STATE

[Public Notice: 12555]

RIN 1400–AF92

Public Notice of Revised Exchange Visitor Skills List

AGENCY: Department of State.

ACTION: Public notice.

SUMMARY: The Department of State (''Department'') is announcing an update of the Exchange Visitors Skills List (''Skills List''). The Skills List is a list of countries designated by the Secretary of State as clearly requiring the services of persons engaged in certain fields of specialized knowledge or skills. This list is used by the Department of State and the Department of Homeland Security to determine whether an individual who has been admitted into the United States as a ''J'' nonimmigrant exchange visitor, or who acquired such status, is subject to the two-year foreign residence requirement under Section 212(e) of the Immigration and Nationality Act (''INA''), as amended.

DATES: The Exchange Visitor Skills List is applicable on December 9, 2024.

FOR FURTHER INFORMATION CONTACT: Jami Thompson, Senior Regulatory Coordinator, Visa Office, Bureau of Consular Affairs, Department of State; email: *VisaRegs@state.gov.*

SUPPLEMENTARY INFORMATION: INA 212(e) (8 U.S.C. 1182(e)) provides that certain individuals who have been admitted to the United States as ''J'' nonimmigrant exchange visitors, or who acquired such status in the United States, are ineligible to apply for an immigrant visa, for permanent residence, or for certain nonimmigrant visas until they have resided and been physically present in their country of nationality or last residence for an aggregate of at least two years following departure from the United States. More specifically, under INA 212(e) (8 U.S.C. 1182(e)), this requirement attaches to J nonimmigrants who, among other criteria, are a national or resident of a country that the Secretary of State, pursuant to Department regulations, has designated as clearly requiring the services of persons engaged in the field of specialized knowledge or skill in which the individual was engaged. Department regulations at 22 CFR 41.62(c) implement the Secretary's designation authority under this provision, providing that an exchange visitor is subject to the two-year foreign residence requirement if they are a national or legal permanent resident of a ''country which the Secretary of State has designated, through publication by public notice in the **Federal Register**, as clearly requiring the services of persons engaged in the field of specialized knowledge or skill'' during their exchange visitor program. The Department also implements INA 212(e), 8 U.S.C. 1182(e) through regulations at 22 CFR 41.63 and 22 CFR 40.202.

Pursuant to the provisions of INA 212(e), 8 U.S.C. 1182(e), 22 CFR 41.62, and 22 CFR 41.63, the Department is announcing a revised Skills List. The Department has periodically updated the Skills List since the initial publication of the Skills List on April 25, 1972. New lists were published on February 10, 1978, June 12, 1984, January 16, 1997, and April 30, 2009. This revised Skills List supersedes the most recent Skills List published in 2009. Accordingly, J nonimmigrant exchange visitors who were subject to the two-year foreign residence requirement at the time of their admission or acquisition of J status based on designations in a previously published Skills List will no longer be subject to that requirement if their country is not designated in this revised

list. This Skills List was developed by the Bureau of Consular Affairs Visa Office in collaboration with the State Department's Office of the Chief Economist and the Bureau of Educational and Cultural Affairs.

The Department is updating the countries included on the Skills List based on criteria that is data driven, transparent, and consistent with U.S. goals for the development of foreign countries. The Department is not updating skills in this revision—for countries present on this revised Skills List, the skills listed remain the same as in the 2009 Skills List. The Skills List below accounts for overall economic development (as measured by per capita Gross Domestic Product (GDP)), country size, and overall outbound migration rate. [1]

- If a country has per capita GDP that is less than $7,500 [2] in 2023 dollars (calculated using the purchasing power parity (PPP) exchange rate), the Department presumes it would benefit from its nationals or residents possessing the specialized knowledge or skills designated on the Skills List.
- If a country is at or above the $ 7,500 GDP threshold, but below the median per capita GDP ($15,000 in 2023 dollars), and determined to be small, which makes it more difficult to develop internal hubs of specialized knowledge or skills, the Department presumes that country would benefit from its nationals or residents possessing the specialized knowledge or skills designated on the Skills List.
- If a country is at or above the $7,500 GDP threshold, but below the median per capita GDP ($15,000 in 2023 dollars), and has experienced a significant balance of outbound migration, which is likely to have resulted in the loss of talent and skills over the preceding decade, the Department presumes that country would benefit from its nationals or residents possessing the specialized knowledge or skills designated on the Skills List.

The Department has chosen these indicators and thresholds as an objective, measurable proxy for a country's standard of living and development and is closely linked to the accumulation of human capital within a given country. These criteria are meant to ensure countries with low levels of development as well as those countries with higher levels of development that have other extenuating circumstances that stymie the development of a skilled workforce will remain on the Skills List to support the development of that country.

The Department has chosen these criteria to assist its determination that the listed countries clearly require the services of persons engaged in designated fields of specialized knowledge or skills, because these well-established measures of a country's standard of living are informative of whether the country in fact clearly requires the relevant knowledge or skill, as opposed to the country only benefiting from or otherwise not requiring additional expertise in the relevant fields.

The Department intends to review the Skills List every three years and will publish updates as appropriate.

Exchange Visitors who seek a definitive determination from the Department of whether the two-year foreign residence requirement applies to them may request an Advisory Opinion from the Waiver Review Division. Information on this process is available on our website at *travel.state.gov*.

This Notice is exempt from notice and comment as it involves a foreign affairs function of the United States. 5 U.S.C. 553(a)(1).). The Department has invoked the foreign affairs exemption from Administrative Procedure Act (APA) requirements for numerous rules involving the Exchange Visitor Program going back to 1949, including several rules specifically relating to the two-year foreign residence requirement.[3]

Under 5 U.S.C. 553(a)(1), notice-and-comment requirements of the APA do not apply ''to the extent there is involved . . . a military or foreign affairs function of the United States.'' This exemption applies when the rule in question ''is clearly and directly involved in a foreign affairs function.'' [4] In addition, although the text of the APA does not require an agency invoking this exemption to show that such procedures may result in ''definitely undesirable international consequences,'' some courts have required such a showing.[5] Both standards are satisfied here.

In designating countries and skills on the Skills List, the Secretary is carrying out authority vested by Congress to assess the needs of foreign countries. As this relates to the Exchange Visitor Program, a key diplomacy tool, the Secretary's designations of countries on the list directly involves a foreign affairs function as the designations are a vehicle to advancing U.S. foreign policy objectives in countries whose nationals and residents participate in exchange visitor programs. The Exchange Visitor Program's nexus to foreign affairs is reflected in the purpose of the United States Information and Educational Exchange Act of 1948 to ''promote the better understanding of the United States among the peoples of the world and to strengthen cooperative international relations,'' [6] and the Secretary's discretionary designation of countries as ''clearly requiring'' certain fields of knowledge or skills by nature reflects a quintessential foreign affairs function. The Mutual Educational and Cultural Exchange Act of 1961 (also known as the Fulbright-Hays Act), provides further evidence of the foreign affairs function served by the Exchange Visitor Program.

''The purpose of this [Act] is to enable the Government of the United States to increase mutual understanding between the people of the United States and the people of other countries by means of educational and cultural exchange; to strengthen the ties which unite us with other nations by demonstrating the educational and cultural interests, developments, and achievements of the people of the United States and other nations, and the contributions being made toward a peaceful and more fruitful life for people throughout the world; to promote international cooperation for educational and cultural advancement; and thus to assist in the development of friendly, sympathetic, and peaceful relations between the United States and the other countries of the world.'' 22 U.S.C. 2451.

The revised Exchange Visitors Skills List clearly and directly involves a foreign affairs function given the nature of the Secretary's express authority to designate countries under INA section 212(e), 8 U.S.C. 1182(e). Even more generally, courts have acknowledged that ''[t]he exchange visitor program—with its statutory mandate for international interaction through nonimmigrants—certainly relates to the foreign affairs and diplomatic duties conferred upon the Secretary of State and the State Department.'' *Raoof* v. *Sullivan,* 315 F. Supp. 3d 34, 44 (D.D.C. 2018).

Further, requiring the Department to subject this list of designations to the

[1] All data taken from the World Bank Group Data (*https://data.worldbank.org/*).

[2] $7500 in 2023 dollars is approximately 50% of global median income or about the 33 percentile of income distribution, which covers about ⅓ of all countries with lowest human development indicator measure.

[3] *See, e.g.,* 14 FR 4591 (July 22, 1949), 21 FR 6270 (Aug. 21, 1956), 37 FR 7156 (Apr. 11, 1972), 37 FR 17470 (Aug. 29, 1972), 38 FR 20319 (July 31, 1973), 72 FR 10060 (Mar. 7, 2007).

[6] Public Law 80–402 (1948).

APA's notice and comment requirements would result in ''definitely undesirable international consequences.'' The foreign relations considerations of opening this list of designations to public comment, including comment from foreign governments whose policies are directly affected by this list and requiring the Department to respond publicly to questions regarding the balancing of foreign policy and other national interests, would have definitely undesirable international consequences.[7] For example, if a foreign country expresses dissatisfaction with the Skills List designations, requiring the Department to air this disagreement in a public forum could have larger implications for foreign relations between the United States and that other country.

The 2024 Exchange Visitor Skills List reads as follows:

(01) Agriculture, Agriculture Operations, and Related Sciences

(01.00)

- Agriculture, General

(01.01)

- Agricultural Business and Management
- Production Operations and Mechanization

(01.06)

- Applied Horticulture/Horticulture

(01.09)

- Animal Sciences
- Agricultural Animal Breeding
- Animal Health and Nutrition
- Dairy Science
- Livestock Management
- Poultry Science

(01.10)

- Food Science

(01.11)

- Plant Sciences
- Crop Science
- Horticulture Science
- Agricultural and Horticultural Plant Breeding
- Pest Management
- Range Science

(01.12)

- Soil Science and Agronomy

(03) Natural Resources and Conservation

(03.01)

- Natural Resources Conservation and Research
- Environmental Science
- Wildlife Studies
- Wildlands Studies
- Environmental Protection

(03.02)

- Natural Resources Management and Policy

(03.03)

- Fishing and Fisheries Sciences
- Fishing and Fisheries Management

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2024–0253]

Entry-Level Driver Training; Albert Farley Jr.; Application for Exemption

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of application for exemption; request for comments.

SUMMARY: FMCSA announces that Albert Farley Jr. has requested an exemption from the theory and behind-the-wheel (BTW) instructor requirements contained in the entry-level driver training (ELDT) regulations for himself as a prospective training instructor. Mr. Farley Jr. seeks an exemption from the requirement that instructors have at least two years of driving experience of the same or higher class and/or the same endorsement level as the commercial motor vehicle (CMV) to be operated to satisfy the instructor requirements under the ELDT regulations. FMCSA requests public comment on the applicant's request for exemption.

DATES: Comments must be received on or before January 8, 2025.

ADDRESSES: You may submit comments identified by Federal Docket Management System Number FMCSA–2024–0253 by any of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* See the Public Participation and Request for Comments section below for further information.
- *Mail:* Dockets Operations, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* West Building, Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m. E.T., Monday through Friday, except Federal holidays.
- *Fax:* (202) 493–2251.

Each submission must include the Agency name and the docket number (FMCSA–2024–0253) for this notice. Note that DOT posts all comments received without change to *www.regulations.gov,* including any personal information included in a comment. Please see the Privacy Act heading below.

Docket: If you do not have access to the internet, you may view the docket by visiting Docket Operations on the ground floor of the DOT West Building,

1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

Privacy Act: In accordance with 49 U.S.C. 31315(b), DOT solicits comments from the public to better inform its regulatory process. DOT posts these comments, including any personal information the commenter provides, to *www.regulations.gov* as described in the system of records notice DOT/ALL–14 FDMS, which can be reviewed under the ''Department Wide System of Records Notices'' at *https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices.* The comments are posted without edit and are searchable by the name of the submitter.

FOR FURTHER INFORMATION CONTACT: Mr. Richard Clemente, Driver and Carrier Operations Division; Office of Carrier, Driver and Vehicle Safety Standards, FMCSA; (202) 366–2722; *richard.clemente@dot.gov.* If you have questions on viewing or submitting material to the docket, contact Dockets Operations at (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation and Request for Comments

FMCSA encourages you to participate by submitting comments and related materials.

Submitting Comments

If you submit a comment, please include the docket number for this notice (FMCSA–2024–0253), indicate the specific section of this document to which the comment applies, and provide a reason for your suggestions or recommendations. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so the Agency can contact you if it has questions regarding your submission.

To submit your comment online, go to *www.regulations.gov* and put the docket number ''FMCSA–2024–0253'' in the ''Keyword'' box, and click ''Search.'' When the new screen appears, click on the ''Comment'' button and type your comment into the text box in the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing.

Confidential Business Information (CBI)

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to the notice contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to the notice, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission that constitutes CBI as ''PROPIN'' to indicate it contains proprietary information. FMCSA will treat such marked submissions as confidential under the Freedom of Information Act, and they will not be placed in the public docket of the notice. Submissions containing CBI should be sent to Brian Dahlin, Chief, Regulatory Evaluation Division, Office of Policy, FMCSA, 1200 New Jersey Avenue SE, Washington, DC 20590–0001 or via email at *brian.g.dahlin@dot.gov.* At this time, you need not send a duplicate hardcopy of your electronic CBI submissions to FMCSA headquarters. Any comments FMCSA receives not specifically designated as CBI will be placed in the public docket for this notice.

II. Legal Basis

FMCSA has authority under 49 U.S.C. 31136(e) and 31315(b) to grant exemptions from Federal Motor Carrier Safety Regulations (FMCSRs). FMCSA must publish a notice of each exemption request in the **Federal Register** (49 CFR 381.315(a)). The Agency must provide the public an opportunity to inspect the information relevant to the application, including any safety analyses submitted by the applicant. The Agency must provide an opportunity for public comment on the request.

The Agency reviews safety analyses and public comments submitted and determines whether granting the exemption would likely maintain a level of safety equivalent to, or greater than, the level that would be achieved by the current regulation (49 CFR 381.305(a)). The Agency must publish its decision in the **Federal Register** (49 CFR 381.315(b)). If granted, the notice will identify the regulatory provision(s) from which the applicant will be exempt, the effective period, and all terms and conditions of the exemption (49 CFR 381.315(c)(1)). If the exemption is denied, the notice will explain the reasons for the denial (49 CFR 381.315(c)(2)). The exemption may be renewed (49 CFR 381.300(b)).

III. Applicant's Request

Albert Farley, Jr. requests an exemption from the two-year road time requirement for a Class A CDL in 49 CFR 380.301. Although Mr. Farley's application references 49 CFR 380.301, section 380.301 applies to Longer Combination Vehicle (LCV) instructor requirements. FMCSA contacted Mr. Farley and confirmed that he is a Class A CDL holder who instructs Class A and B CDL students and does not seek to be an LCV instructor. FMCSA clarified that Mr. Farley requests an exemption from the requirement in the ELDT regulations in 49 CFR 380.605 that theory and BTW instructors have at least two years of driving experience of the same or higher class and/or the same endorsement level as the CMV to be operated.

Mr. Farley requests the exemption due to the growing demand for Class A CDL operators in his county, as agricultural hauling and logging are two primary industries that rely heavily on these drivers. He further asserts that there is an urgent need for CDL instructors as there are only three driver training schools that offer such training. The applicant adds that over the past 32 years, he has gained valuable experience as a bus driver, and in the last two years he has taken on the role of instructor to address the bus driver shortage by becoming a Class 1 CDL—Bus Driver Education Instructor. The applicant further states that fulfilling the two-year road requirement in the ELDT rules would pose a financial strain and create a void in his current workplace. Mr. Farley's application includes three letters of support emphasizing Mr. Farley's work experience and the need for more Class A instructors.

A copy of Albert Farley Jr.'s application for exemption and the letters in support of his application are available for review in the docket for this notice.

IV. Request for Comments

In accordance with 49 U.S.C. 31315(b), FMCSA requests public comment from all interested persons on Albert Farley, Jr.'s application for an exemption from the requirements in 49 CFR 380.605 from the definition of a Theory and Behind-the-wheel (BTW) instructor, which would allow Mr. Farley to become a class A CDL instructor without two years of interstate driving on his class A CDL license. All comments received before

the close of business on the comment closing date indicated at the beginning of this notice will be considered and will be available for examination in the docket at the location listed under the Addresses section of this notice. Comments received after the comment closing date will be filed in the public docket and will be considered to the extent practicable. In addition to late comments, FMCSA will also continue to file, in the public docket, relevant information that becomes available after the comment closing date. Interested persons should continue to examine the public docket for new material.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2024–0125]

Commercial Driver's License; 3 North LLC; Application for Exemption

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of final disposition; denial of application for exemption.

SUMMARY: FMCSA announces its decision to deny 3 North LLC's request for a 5-year exemption to enable 3 of its commercial driver's license (CDL) holders under the age of 21, with a ''K'' restriction for intrastate-only operations, to drive commercial motor vehicles (CMVs) in intrastate operations in a State other than their State of domicile. FMCSA analyzed the application and public comments and determined that the exemption would not likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption.

FOR FURTHER INFORMATION CONTACT: Ms. Bernadette Walker, FMCSA Driver and Carrier Operations Division; Office of Carrier, Driver and Vehicle Safety Standards, FMCSA; (202) 385–2415; *bernadette.walker@dot.gov.* If you have questions on viewing or submitting material to the docket, contact Dockets Services, (202) 366–9826.

Viewing Comments and Documents

To view comments, go to *www.regulations.gov,* insert the docket number ''FMCSA–2024–0125'' in the keyword box, and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, click ''Browse Comments.''

To view documents mentioned in this notice as being available in thein the docket, go to *www.regulations.gov,* insert docket number ''FMCSA–2024–0125'' in the keyword box, click ''Search,'' and choose the document to review.

If you do not have access to the internet, you may view the docket by visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

II. Legal Basis

FMCSA has authority under 49 U.S.C. 31136(e) and 31315(b) to grant exemptions from Federal Motor Carrier Safety Regulations (FMCSRs). FMCSA must publish a notice of each exemption request in the **Federal Register** (49 CFR 381.315(a)). The Agency must provide the public an opportunity to inspect the information relevant to the application, including the safety analyses submitted by the applicant.

The Agency reviews safety analyses and public comments submitted and determines whether granting the exemption would likely achieve a level of safety equivalent to, or greater than, the level that would be achieved by the current regulation (49 CFR 381.305(a)). The Agency must publish its decision in the **Federal Register** (49 CFR 381.315(b)). If granted, the notice will identify the regulatory provision(s) from which the applicant will be exempt, the effective period, and all terms and conditions of the exemption (49 CFR 381.315(c)(1)). If the exemption is denied, the notice will explain the reason for the denial (49 CFR 381.315(c)(2)). If granted, the exemption may be renewed (49 CFR 381.300(b)).

III. Background

Current Regulation(s)/Requirements

Drivers of CMVs, as defined in 390.5T, operating in interstate commerce, must be at least 21 years of age (§ 391.11(b)(1)). CDL holders who are younger than age 21 may drive in intrastate commerce only in the driver's State of domicile. FMCSA's CDL regulations in 49 CFR 383.153(a)(10)(vii) require that CDLs issued to drivers limited to intrastate commerce be marked with a ''K'' restriction.

Applicant's Request

3 North LLC's application for an exemption was described in detail in the **Federal Register** published on June 11, 2024 (89 FR 49263) and will not be repeated here as the facts have not changed.

IV. Public Comments

In the **Federal Register** Notice announcing the receipt of 3 North LLC's application, FMCSA requested public comments by July 11. FMCSA subsequently extended the comment period until July 25, 2024 (89 FR 56473) because the exemption application was not available for public review in the docket until June 24, 2024.

The Agency received six comments, one supporting the application, three opposing, and two neither supporting nor opposing it. The Hooper Cooperation stated in support, ''There are many exceptions in the FMCSRs that attempt to balance the need for public safety with the common value of the service being performed by the CMV driver, including one relieving hours of service requirements for utility service vehicles. One would think similar consideration could be made for the 'K' restricted CDL holder provided they operate only in a route-defined intrastate capacity when working on projects outside of their home state.''

Three commenters opposed the exemption. The Truck Safety Coalition, Citizens for Reliable and Safe Highways, and Parents Against Tired Truckers jointly stated, ''This exemption request is unsafe and defies all available evidence for teen driving safety.'' They said about the applicant's request, ''No data is cited regarding the vehicle density of the alleged remote roads. No reason is given why the company cannot simply hire drivers with a CDL age 21 or older. No additional precautions are proposed for these under-21 drivers to minimize risk to themselves or others on the road or at the job site. No effort is made to ensure they achieve an equivalent or greater level of safety with a high-risk cohort of drivers.'' The American Association of Motor Vehicle Administrators (AAMVA) stated that States use the intrastate in a variety of different circumstances, commenting, ''the application of the K restriction as limited to intrastate operations is specifically meant to ensure that the driver, who has not met federal regulatory obligations, is prevented from moving to another jurisdiction and exchanging a restricted driver's license for another restricted license. If the license transfer process does not include

a reason for issuance, drivers may now be allowed to operate in environments for which they may not be qualified.'' AWM Associates, LLC stated, ''FMCSA should not be interfering with state laws regarding transfer of CDLs.''

Dennis Murphy made the following suggestion: ''3 North LLC could accomplish its goals of having 18–20-year-old CDL holders operate in another State by enrolling in the Safe Driver Apprenticeship Program without requiring any exemptions. This would ensure that the 18–20-year-old CDL holders who are operating in another State than they hold a license in are held to the same standards as any other 18–20-year-old CDL holder who wishes to operate in a different state than they hold a license in.'' CL, an individual, stated, ''If an exemption is granted, the exempted individuals should be required to obtain a medical certificate. This exemption must be tied to the three (3) individuals and should not be transferable once those individuals turn 21.''

V. FMCSA Safety Analysis and Decision

FMCSA evaluated 3 North LLC's application and the public comments and denies the exemption request. Based on the information provided by the applicant and commenters, the Agency is unable to determine that the applicant would likely achieve a level of safety equivalent to, or greater than, the level obtained by complying with the regulation. FMCSA agrees with AAMVA that allowing drivers with a ''K'' restriction to operate in States other than their State of domicile could disrupt and confuse each State's use of the ''K'' restriction and could allow drivers to operate in environments for which they may not be qualified. Accordingly, the Agency would need persuasive evidence that such operations would likely achieve an equivalent level of safety before interfering with the ''K'' restriction. Furthermore, FMCSA agrees that the more appropriate path for motor carriers interested in using individuals under the age of 21 is the Agency's Safe Driver Apprenticeship Program (*https://www.fmcsa.dot.gov/sdap*).

For the reasons stated above, 3 North LLC's exemption application is denied.

Vincent G. White,

Deputy Administrator.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No.: DOT–OST–2024–0130]

Public Interest Waiver of the Application of Certain Domestic Preference Requirements and Policies for Transit-Oriented Development Housing Projects

ACTION: Notice; request for comment.

SUMMARY: In order to expeditiously deliver projects and provide meaningful infrastructure results while ensuring the appropriate application of domestic content standards, the U.S. Department of Transportation (DOT) is proposing a waiver of the domestic preference requirements to transit-oriented development (TOD) projects that receive credit assistance through the Build America Bureau (the Bureau) under the Transportation Infrastructure Finance and Innovation Act (TIFIA) and Railroad Rehabilitation and Improvement Financing (RRIF) credit programs.

DATES: Comments must be received by December 24, 2024.

ADDRESSES: Comments on this notice may be submitted to the U.S. Government electronic docket site at *https://www.regulations.gov,* Docket: DOT–OST–2024–0130.

Note: All submissions received, including any personal information therein, will be posted without change or alteration to *https://www.regulations.gov.* For more information, you may review DOT's complete Privacy Act Statement published in the **Federal Register** on April 11, 2000 (65 FR 19477).

FOR FURTHER INFORMATION CONTACT: For questions about this notice, please contact Duane Callender, US Department of Transportation, Build America Bureau, at 202–366–2300 or *Duane.Callender@dot.gov.* For legal questions, please contact, Jessica Pettrone, DOT Office of the General Counsel, at 202–366–8560 or *jessica.pettrone@dot.gov.*

SUPPLEMENTARY INFORMATION:

Background

DOT has a longstanding policy of requiring all projects, including TOD projects, receiving TIFIA and RRIF credit assistance to comply with domestic steel, iron, and manufactured products content requirements, collectively known as ''Buy America'' requirements,[1] even where not covered by a specific Buy America statute. DOT has consistently required for-profit borrowers to comply with Buy America requirements on projects receiving credit assistance since TIFIA's inception in 1998 and since 2010 for RRIF, whether or not appropriated funds were used for the cost of the credit assistance. Accordingly, because Buy America is applied to all projects receiving TIFIA or RRIF credit assistance, DOT, in an effort to ensure transparency and maintain consistency in the application of Buy America standards for all recipients (one rule for all projects and borrowers), proposes to apply this waiver to both projects with for-profit borrowers that do not use any appropriated funds for the cost of the loan, to which Buy America requirements are applied as a matter of policy, as well as to projects with non-Federal entity borrowers (whether or not such loans use appropriated funds), to which Buy America requirements apply as a matter of law. DOT proposes a waiver of the Buy America manufactured products requirement for TIFIA and RRIF TOD projects that include any housing elements (TOD Housing Projects) and that enter into creditworthiness review on or before December 31, 2025.

On November 15, 2021, President Biden signed the Bipartisan Infrastructure Law (BIL), enacted as the Infrastructure Investment and Jobs Act (IIJA). Public Law 117–58. BIL reauthorized Federal surface transportation programs and invested billions in transformational projects that are creating good-paying jobs, growing the economy, and making our transportation system safer and more resilient. TOD projects are eligible for both TIFIA (23 U.S.C. 601(a)(12)(E)) and RRIF (49 U.S.C. 22402(b)(1)(F)) financing, subject to all other eligibility criteria, and compliance with all applicable Federal requirements and creditworthiness standards.[2]

Transportation and land use reforms are central strategies to achieving many of the Biden-Harris administration goals, including reaching net-zero greenhouse gas emissions by 2050; addressing the housing supply and affordability crises throughout the country; and advancing equity, fair

[1] As described in more detail below, after the enactment of the Infrastructure Investment and Jobs Act in 2021 (Pub. L. 117–58), Buy America requirements now include domestic construction material requirements.

[2] Eligible TOD projects can take many forms, including joint development; public infrastructure; and economic development, including commercial and residential development. One of the key parameters of the programs, among others, is that TOD projects must be within walking distance of a qualifying transit or passenger rail station. *See https://www.transportation.gov/buildamerica/TOD.*

housing, and environmental justice.[3] Providing long-term, low-interest direct loans through the TIFIA and RRIF credit programs to TOD projects is one of the primary tools available to DOT to help achieve this mission.

Over the last three years, DOT has taken several concrete steps to date to facilitate TOD financing under the TIFIA and RRIF credit programs. DOT has published TOD guidance [4] and a policy statement [5] and authorized TOD projects' eligibility to borrow up to the maximum allowed under TIFIA to promote the creation of more walkable, mixed-use spaces near transit that support vibrant, sustainable, and equitable communities.[6] Additionally, the Bureau has worked on outreach to developers and created several tools including the TOD Eligibility Map [7] and has conducted webinars to help educate potential borrowers about the opportunities and requirements of the programs.

The BIL also includes the Build America, Buy America Act (BABA) at div. G, sec. 70901–52. BABA greatly strengthens Made in America standards by expanding the coverage and application of Buy America preferences in Federal financial assistance programs for infrastructure. The Act requires that the head of each covered Federal agency shall ensure that ''none of the funds made available for a Federal financial assistance program for infrastructure . . . may be obligated for a project unless all of the iron, steel, manufactured products, and construction materials used in the project are produced in the United States.'' BIL sec. 70914(a).

BABA applies to Federal financial assistance, which term includes ''all expenditures by a Federal agency to a non-Federal entity for an infrastructure project.'' BIL sec. 70912(4)(B). ''Non-Federal entity,'' as defined in 2 CFR 200.1, does not include for-profit entities. Therefore, BABA by its terms does not apply to Federal financial assistance to for-profit entities.[8] However, in accordance with the Office of Management and Budget (OMB)'s Guidance Memorandum M–24–02, *Guidance on Application of Buy America Preference in Federal Financial Assistance Programs for Infrastructure,* Federal agencies may consider applying domestic preference requirements to for-profit entities, consistent with their legal authorities. DOT has a longstanding policy of requiring all projects, including TOD projects, receiving TIFIA or RRIF credit assistance to comply with domestic steel, iron, and manufactured products content requirements, collectively known as ''Buy America'' requirements,[9] even where not covered by a specific Buy America statute, including chapter 83 of title 41, United States Code (Buy American), because no appropriated funds are used for the cost of the loan. DOT has consistently required for-profit borrowers to comply with Buy America requirements on projects receiving credit assistance since TIFIA's inception in 1998 and since 2010 for RRIF, whether or not appropriated funds were used for the cost of the credit assistance. Accordingly, because Buy America is applied to all projects receiving TIFIA or RRIF credit assistance, DOT, in an effort to ensure transparency and maintain consistency in the application of Buy America standards for all recipients (one rule for all projects and borrowers), will apply this waiver to both projects with for-profit borrowers that do not use any appropriated funds for the cost of the loan, to which Buy America requirements are applied as a matter of policy, as well as to projects with non-Federal entity borrowers (whether or not such loans use appropriated funds), to which Buy America requirements apply as a matter of law. DOT is proposing a waiver of the Buy America manufactured products requirement for TOD Housing Projects that enter into creditworthiness review on or before December 31, 2025.

TOD projects are a class of eligible capital projects under the TIFIA and RRIF credit programs administered by the Bureau. The Bureau recently provided guidance on Federal requirements for TOD projects receiving TIFIA or RRIF credit assistance.[10] Pursuant to that guidance, the Bureau reiterated the DOT's longstanding policy of requiring all projects, including TOD projects, receiving TIFIA and RRIF credit assistance to comply with domestic steel, iron, and manufactured products content requirements, collectively known as ''Buy America'' requirements, even where not covered by a specific Buy America statute, including Buy American requirements because no appropriated funds are used for the cost of the loan.

Waiver

DOT is proposing to issue a public interest waiver of the Buy America requirements for manufactured products that apply to Bureau-financed TOD Housing Projects that enter into creditworthiness review on or before December 31, 2025. For these projects, DOT would continue to apply domestic steel, iron, and construction materials content requirements.

To ensure transparency and maintain consistency in the application of Buy America standards for all recipients (one rule for all projects and borrowers), this waiver will apply to both TOD Housing Projects with for-profit borrowers and those with non-Federal entity borrowers.

To continue to support the goals of Buy America policies, DOT will work closely with TOD Housing Project borrowers to better understand and document the sources of materials and products used in such projects. This research will assist DOT in refining its domestic preference requirements policy for TOD projects entering enter the Bureau's creditworthiness review phase after January 1, 2026, and to further support both the delivery of housing and domestic manufacturing.

Under OMB Memorandum M–24–02, agencies are expected to assess ''whether a significant portion of any cost advantage of a foreign-sourced product is the result of the use of dumped steel, iron, or manufactured products or the use of injuriously subsidized steel, iron, or manufactured products'' as appropriate before granting a public interest waiver. DOT's analysis has concluded that this assessment is not applicable to this waiver.

DOT will consider all comments received in the initial 15-day comment

BILLING CODE 4910–9X–P

DEPARTMENT OF THE TREASURY

Community Development Financial Institutions Fund

Notice of Information Collection and Request for Public Comment

ACTION: Notice and request for public comment.

SUMMARY: The U.S. Department of the Treasury, as part of a continuing effort to reduce paperwork and respondent burden, invites the general public and other federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act (PRA) of 1995. Currently, the Community Development Financial Institutions Fund (CDFI Fund), U.S. Department of the Treasury, is soliciting comments concerning information collections utilized by the CDFI Bond Guarantee Program (BG Program). Information on the BG Program can be found on the CDFI Fund's website at *https://www.cdfifund.gov/programs-training/programs/cdfi-bond*.

DATES: Written comments must be received on or before February 7, 2025 to be assured of consideration.

ADDRESSES: You may submit comments concerning the BG Program information collections via the Federal e-Rulemaking Portal at *www.regulations.gov*. Follow the instructions on the website for the submission of comments. In general, all comments will be available for inspection at *www.regulations.gov*. Comments, including attachments and other supporting materials, are part of the public record. Do not submit any information in your comments or supporting materials that you consider confidential or inappropriate for public disclosure.

FOR FURTHER INFORMATION CONTACT: Susan Suckfiel, BG Program Manager, CDFI Fund, U.S. Department of the Treasury, 1500 Pennsylvania Avenue NW, Washington DC 20220, (202) 653–0421 (not a toll-free number) or by email to *bgp@cdfi.treas.gov*. Information regarding the CDFI Fund and its programs may be obtained through the CDFI Fund's website at *http://www.cdfifund.gov*.

SUPPLEMENTARY INFORMATION:

Titles: BG Program Information Collections—(1) Qualified Issuer Application, (2) Guarantee Application, (3) Secondary Loan Requirements Certification, (4) Financial Condition Monitoring Report, (5) Pledged Loan Monitoring Report, (6) Tertiary Loan Monitoring Report, (7) Annual Assessment Report, and (8) Secondary Loan Commitment Form.

OMB Number: 1559–0044.

Abstract: The purpose of the Community Development Financial Institutions (CDFI) Bond Guarantee Program (BG Program) is to support CDFI lending by providing Guarantees for Bonds issued by Qualified Issuers as part of a Bond Issue for Eligible Community or Economic Development Purposes. The BG Program provides CDFIs with a source of long-term capital and further the mission of the CDFI Fund to increase economic opportunity and promote community development investments for underserved populations and distressed communities in the United States. The CDFI Fund achieves its mission by promoting access to capital and local economic growth by investing in, supporting, and training Community Development Financial Institutions (CDFIs). The operation of the BG Program is supported by the collection of information across various forms, collectively the BG Program Information Collections: (1) Qualified Issuer Application, (2) Guarantee Application, (3) Secondary Loan Requirements Certification, (4) Financial Condition Monitoring Report, (5) Pledged Loan Monitoring Report, (6) Tertiary Loan Monitoring Report, (7) Annual Assessment Report, and (8) Secondary Loan Commitment Form. There are no significant content changes to the forms; however, minor, non-substantive changes may have been made to certain forms in order to improve the clarity and/or accuracy of the data collections.

Copies of the forms constituting the BG Program Information Collection may be found on the CDFI Fund's website at *https://www.cdfifund.gov*.

Current Actions: Extension without change of currently approved collection.

Type of Review: Regular.

Affected Public: Approved Eligible CDFIs and Qualified Issuers (QI).

TABLE 1—ALL FORMS—ESTIMATED REPORTING BURDEN

Form	Number of respondents	Number of responses per respondent	Number of annual responses	Hours per response	Number of hours annually

Request for Comments: Comments submitted in response to this Notice will be summarized and/or included in the request for Office of Management and Budget approval. Comments concerning the BG Program Information Collection are invited on: (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on

respondents, including through the use of technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services required to provide information.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collections of information displays a valid OMB control number.

Authority: 12 CFR part 1808.

Pravina Raghavan,

Director, Community Development Financial Institutions Fund.

BILLING CODE 4810–05–P

DEPARTMENT OF THE TREASURY

Bureau of the Fiscal Service

Application and Renewal Fees Imposed on Surety Companies and Reinsuring Companies; Increase in Fees Imposed; Correction

AGENCY: Bureau of the Fiscal Service, Treasury.

ACTION: Notice of fees imposed on surety companies and reinsuring companies; Correction.

SUMMARY: The Department of the Treasury, Bureau of the Fiscal Service, published a document in the Federal Register of December 2, 2024, adding renewal fees for Complementary and Alien Reinsurers as well as Admitted Reinsurer—Reinsurance Market companies and increasing the existing fees it imposes on and collects from surety companies and reinsuring companies, effective January 1, 2025. The document contained typographical errors effecting the dollar values.

FOR FURTHER INFORMATION CONTACT: Melvin Saunders, at (304) 480–5108 or *melvin.saunders@fiscal.treasury.gov*; or Bobbi McDonald, at (304) 480–7098 or *bobbi.mcdonald@fiscal.treasury.gov*.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of December 2, 2024, in FR Doc. 2024-28231, on page 95911, in ''The new fee rate schedule'' section should read as follows:

(1) Examination of a company's application for a Certificate of Authority as an acceptable surety or as an acceptable reinsuring company on Federal bonds: $13,600.

* * * * *

(3) Examination of a company's application for recognition as an Admitted Reinsurer: $5,000.

* * * * *

(6) Examination of a company's application for recognition as an Alien Reinsurer: $5,000.

* * * * *

(8) Examination of a company's application for recognition as a Complementary Reinsurer: $5,000.

* * * * *

Dated: December 4, 2024.

Lela Anderson,

Attorney-Advisor.

BILLING CODE 4810–AS–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0892]

Agency Information Collection Activity Under OMB Review: Request for Reimbursement of Preparatory (PREP) Course for Licensing or Certification Test

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Comments and recommendations for the proposed information collection should be sent by January 8, 2025.

ADDRESSES: To submit comments and recommendations for the proposed information collection, please type the following link into your browser: *www.reginfo.gov/public/do/PRAMain,* select ''Currently under Review—Open for Public Comments'', then search the list for the information collection by Title or ''OMB Control No. 2900–0892.''

FOR FURTHER INFORMATION CONTACT:

VA PRA information: Maribel Aponte, 202–461–8900, *vacopaperworkreduact@va.gov*.

SUPPLEMENTARY INFORMATION:

Title: Request for Reimbursement of Preparatory (PREP) Course for Licensing or Certification Test, VA Form 22–10272.

OMB Control Number: 2900–0892, *https://www.reginfo.gov/public/do/PRASearch.*

Type of Review: Revision of a currently approved collection.

Abstract: The information collected on the VA Form 22–10272 will be utilized to permit beneficiaries to apply for reimbursement of approved preparatory courses taken to assist with preparing for a Licensing or Certification Test. VA will use data from this information collection to ensure eligible Post 9/11 GI Bill (chapter 33) and Survivors' and Dependents' Educational Assistance (DEA or chapter 35) can receive payment for attending and completing the approved preparatory course. Without the utilization of this form, eligible beneficiaries will not be able to apply for the reimbursement they may be rightly entitled to pursuant to 38 U.S.C. 3315B.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 80631–80632, October 3, 2024.

Affected Public: Individuals and Households.

Estimated Annual Burden: 10 hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: Occasionally.

Estimated Number of Respondents: 41.

Authority: 44 U.S.C. 3501 *et seq.*

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–NEW]

Agency Information Collection Activity Under OMB Review: Veterans Group Life Insurance

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration, Department of Veterans Affairs, will

submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Comments and recommendations for the proposed information collection should be sent by January 8, 2025.

ADDRESSES: To submit comments and recommendations for the proposed information collection, please type the following link into your browser: *www.reginfo.gov/public/do/PRAMain,* select ''Currently under Review—Open for Public Comments'', then search the list for the information collection by Title or ''OMB Control No. 2900–NEW.''

FOR FURTHER INFORMATION CONTACT: *VA PRA information:* Maribel Aponte, (202) 461–8900, *vacopaperworkreduact@va.gov.*

SUPPLEMENTARY INFORMATION:

Title: Veterans Group Life Insurance, VA Form SGLV 8714.

OMB Control Number: 2900–NEW. *https://www.reginfo.gov/public/do/PRASearch.*

Type of Review: New collection.

Abstract: This form will be used by the Department of Veterans Affairs Insurance Center (VAIC) to enable a third party to act on behalf of the insured Veteran/beneficiary. Many of our customers are of advanced age or suffer from limiting disabilities and need assistance from a third party to conduct their affairs. The information collected provides an optional service and is not required to receive insurance benefits.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 80017, October 1, 2024.

Affected Public: Individuals or Households.

Estimated Annual Burden: 12,500 hours.

Estimated Average Burden per Respondent: 30 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 25,000.

Authority: 44 U.S.C. 3501 *et seq.*

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0679]

Agency Information Collection Activity: Certification of Change or Correction of Name Government Life Insurance

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Veterans Benefits Administration (VBA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to the notice.

DATES: Comments must be received on or before February 7, 2025.

ADDRESSES: Comments must be submitted through *www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT:

Program-Specific information: Nancy Kessinger, 202–461–8900, *nancy.kessinger@va.gov*.

VA PRA information: Maribel Aponte, 202–461–8900, *vacopaperworkreduact@va.gov*.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Certification of Change or Correction of Name Government Life Insurance—VA Form 29–586.

OMB Control Number: 2900–0679. *https://www.reginfo.gov/public/do/PRASearch* (Once at this link, you can enter the OMB Control Number to find the historical versions of this Information Collection).

Type of Review: Extension of a currently approved collection.

Abstract: The form is used by the insured as a certification of change or correction of name. The information on the form is required by law, U.S.C. 1904 and 1942.

Affected Public: Individuals and households.

Estimated Annual Burden: 20 hours.

Estimated Average Burden per Respondent: 10 minutes.

Frequency of Response: Once.

Estimated Number of Respondents: 120.

Authority: 44 U.S.C. 3501 *et seq.*

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration/Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0178]

Agency Information Collection Activity Under OMB Review: Monthly Certification of On-The-Job and Apprenticeship Training

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Comments and recommendations for the proposed

information collection should be sent within 30 days of publication of this notice by clicking on the following link *www.reginfo.gov/public/do/PRAMain,* select ''Currently under Review—Open for Public Comments'', then search the list for the information collection by Title or ''OMB Control No. 2900–0178.''

FOR FURTHER INFORMATION CONTACT: *VA PRA information:* Maribel Aponte, 202–461–8900, *vacopaperworkreduact@va.gov.*

SUPPLEMENTARY INFORMATION:

Title: Monthly Certification of On-The-Job and Apprenticeship Training, VA Form 22–6553d-1; 22–6553d.

OMB Control Number: 2900–0178, *https://www.reginfo.gov/public/do/PRASearch.*

Type of Review: Revision of a currently approved collection.

Abstract: With the use of VA Forms 22–6553d-1; 22–6553d, benefits are authorized monthly based on the number of hours worked in a training capacity by the trainee as verified by the training establishment. Unscheduled terminations result in the termination of benefits. If hours are reduced to less than a full-time work schedule, a reduction of benefits will occur. Public Law 115–89 ''Veterans Apprenticeship and Labor Opportunity Reform Act'' (VALOR Act) was signed into law on November 21, 2017. Section 3 of this law amended 38 U.S.C. 3680(c) to eliminate the trainee's certification requirement. As a result, this form is only completed, signed, and certified by the training establishment to report the trainee's number of hours worked and/or to report the trainee's date of termination. The form no longer requires the signature of the trainee. The form is then sent to the Regional Processing Office (RPO) for processing.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 80307–80308, October 2, 2024.

Affected Public: Training Establishments.

Estimated Annual Burden: 39,340 hours.

Estimated Average Burden per Respondent: 10 minutes.

Frequency of Response: 12 Annually per Respondent.

Estimated Number of Respondents: 19,670.

Authority: 44 U.S.C. 3501 *et seq.*

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

Medicare and Medicaid Programs; CY 2025 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Prescription Drug Inflation Rebate Program; and Medicare Overpayments

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule addresses: changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; codification of establishment of new policies for, the Medicare Prescription Drug Inflation Rebate Program under the Inflation Reduction Act of 2022; updates to the Medicare Diabetes Prevention Program expanded model; payment for dental services inextricably linked to specific covered medical services; updates to drugs and biological products paid under Part B including immunosuppressive drugs and clotting factors; Medicare Shared Savings Program requirements; updates to the Quality Payment Program; Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to policies for Rural Health Clinics and Federally Qualified Health Centers; electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or a Medicare Advantage Prescription Drug (MA–PD) plan under the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act); update to the Ambulance Fee Schedule regulations; codification of the Inflation Reduction Act and Consolidated Appropriations Act, 2023 provisions; updates to Clinical Laboratory Fee Schedule regulations; updates to the diabetes payment structure and PHE flexibilities; expansion of colorectal cancer screening and Hepatitis B vaccine coverage and payment; establishing payment for drugs covered as additional preventive services; Medicare Parts A and B Overpayment Provisions of the Affordable Care Act and Medicare Parts C and D Overpayment Provisions of the Affordable Care Act.

DATES: These regulations are effective on January 1, 2025.

FOR FURTHER INFORMATION CONTACT: *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for any issues not identified below. Please indicate the specific issue in the subject line of the email.

Michael Soracoe, (410) 786–6312, Morgan Kitzmiller, (410) 786–1623, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to practice expense, work RVUs, conversion factor, and PFS specialty-specific impacts.

Hannah Ahn, (814) 769–0143, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to potentially misvalued services under the PFS.

Mikayla Murphy, (667) 414–0093, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to direct supervision using two-way audio/video communication technology, telehealth, and other services involving communications technology.

Tamika Brock, (312) 886–7904, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to teaching physician billing for services involving residents in teaching settings.

Sarah Leipnik, (410) 786–3933, Mikayla Murphy, (667) 414–0093, Regina Walker-Wren, (410) 786–9160, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to payment for caregiver training services and addressing health-related social needs (community health integration, principal illness navigation, and social determinants of health risk assessment).

Erick Carrera, (410) 786–8949, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to office/outpatient evaluation and management visit inherent complexity add-on.

Sarah Irie, (410) 786–1348, Emily Parris (667) 414–0418, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to payment for advanced primary care management service.

Sarah Leipnik, (410) 786–3933, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to global surgery payment accuracy.

Pamela West, (410) 786–2302, for issues related to supervision of outpatient therapy services in private practices, certification of therapy plans of care, and KX modifier threshold.

Lindsey Baldwin, (410) 786–1694, Regina Walker-Wren, (410) 786–9160, Erick Carrera, (410) 786–8949, Mikayla Murphy, (667) 414–0093, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to advancing access to behavioral health services.

Michelle Cruse, (443) 478–6390, Erick Carrera, (410) 786–8949, Zehra Hussain, (214) 767–4463, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to dental services inextricably linked to other covered medical services.

Zehra Hussain, (214) 767–4463, or *MedicarePhysicianFeeSchedule@cms.hhs.gov*, for issues related to payment of skin substitutes.

Laura Kennedy, (410) 786–3377, Adam Brooks, (202) 205–0671, Rachel Radzyner, (410) 786–8215, Rebecca Ray, (667) 414–0879, and Jae Ryu, (667) 414–0765 for issues related to Drugs and Biological Products Paid Under Medicare Part B.

MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to complex drug administration.

Glenn McGuirk, (410) 786–5723, or *CLFS_Inquiries@cms.hhs.gov* for issues related to Clinical Laboratory Fee Schedule.

Lisa Parker, (410) 786–4949, or *FQHC–PPS@cms.hhs.gov*, for issues related to FQHC payments.

Heidi Oumarou, (410) 786–7942, for issues related to the FQHC market basket.

Michele Franklin, (410) 786–9226, or *RHC@cms.hhs.gov*, for issues related to RHC payments.

Kianna Banks (410) 786–3498 and Cara Meyer (667) 290–9856, for issues related to RHCs and FQHCs and Conditions for Certification or Coverage.

Colleen Barbero (667) 290–8794, for issues related to Medicare Diabetes Prevention Program.

Ariana Pitcher, (667) 290–8840, or *OTP_Medicare@cms.hhs.gov*, for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs.

Sabrina Ahmed, (410) 786–7499, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality performance standard and quality reporting requirements.

Janae James, (410) 786–0801, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to Shared Savings Program beneficiary assignment and benchmarking methodology.

Richard (Chase) Kendall, (410) 786–1000, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to reopening ACO payment determinations, and mitigating the impact of significant, anomalous, and highly suspect billing activity on Shared Savings Program financial calculations.

Lucy Bertocci, (410) 786–3776, or *SharedSavingsProgram@cms.hhs.gov*, for issues related to Shared Savings Program prepaid shared savings, advance investment payments, beneficiary notice and eligibility requirements.

Rachel Radzyner, (410) 786–8215, for issues related to payment for preventative services, including preventive vaccine administration and drugs covered as additional preventive services.

Elisabeth Daniel, (667) 290–8793, for issues related to the Medicare Prescription Drug Inflation Rebate Program.

Genevieve Kehoe, *Ambulatoryspecialtycare@cms.hhs.gov*, or 1–844–711–2664 (Option 4) for issues related to the Request for Information: Building upon the MIPS Value Pathways (MVPs) Framework to Improve Ambulatory Specialty Care.

Kimberly Long, (410) 786–5702, for issues related to expanding colorectal cancer screening.

Rachel Katonak, (410) 786–8564, for issues related to expanding Hepatitis B vaccine coverage.

Mei Zhang, (410) 786–7837, for issues related to requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA–PD plan (section 2003 of the SUPPORT Act).

Katie Parker, (410) 786–0537, for issues related to Parts A and B overpayment provisions of the Affordable Care Act.

Alissa Stoneking, (410)786–1120, for issues related to Parts C and D overpayment provisions of the Affordable Care Act.

Amy Gruber, (410) 786–1542, for issues related to low titer O+ whole blood transfusion therapy during ground ambulance transport.

Renee O'Neill, (410) 786–8821, for inquiries related to Merit-based Incentive Payment System (MIPS) track of the Quality Payment Program.

Danielle Drayer, (516) 965–6630, for inquiries related to Alternative Payment Models (APMs).

Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary

A. Purpose

This final rule revises payment policies under the Medicare PFS and makes other policy changes, including the implementation of certain provisions of the Further Continuing Appropriations and Other Extensions Act of 2024 (Pub. L. 118–22, November 16, 2023), Consolidated Appropriations Act, 2023 (Pub. L. 117–328, September 29, 2022), Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169, August 16, 2022), Consolidated Appropriations Act, 2022 (Pub. L. 117–103, March 15, 2022), Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116–260, December 27, 2020), Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271, October 24, 2018), related to Medicare Part B payment. In addition, this final rule includes provisions regarding other Medicare payment policies described in sections III. and IV.

This rulemaking also codifies policies previously established in guidance for the Medicare Prescription Drug Inflation Rebate Program at new parts 427 and 428, including clarifications to certain existing policies, consistent with sections 1847A(i) and 1860D–14B of the Social Security Act (the Act). This rulemaking establishes new policies for the Medicare Prescription Drug Inflation Rebate Program, including removal of units of drugs subject to discarded drug refunds from the Part B rebate amounts, the process for reconciliation of a Part B or Part D rebate amount to incorporate certain revised information, and procedures for imposing civil money penalties on manufacturers that do not pay Part B or Part D inflation rebate amounts within a specified period of time.

This rulemaking updates the Rural Health Clinic (RHC) and Federally Qualified Health Clinic (FQHC) Conditions for Certification and Conditions for Coverage (CfCs), respectively, by clarifying the requirements and intent of the program regarding the provision of services. These changes also aim to ensure RHCs are provided flexibility in the services they offer, including specialty and laboratory services.

This rulemaking also further advances Medicare's overall value-based care strategy of growth, alignment, and equity through the Medicare Shared Savings Program (Shared Savings Program) and the Quality Payment Program. The structure of these programs enables us to develop a set of tools for measuring and encouraging improvements in care, which may support a shift to clinician payment over time into Advanced Alternative Payment Models (APMs) and accountable care arrangements which reduce care fragmentation and unnecessary costs for patients and the health system.

This rulemaking amends our regulations regarding the standard for an ''identified overpayment'' under Medicare Parts A, B, C, and D to align the regulations with the statutory language in section 1128J(d)(4)(A) of the Act, which provides that the terms ''knowing'' and ''knowingly'' have the meaning given to those terms in the Federal False Claims Act. 87 FR 79559. This rulemaking also finalizes proposals regarding timeframes for reporting and returning Parts A and B overpayments that we made in the CY 2025 PFS proposed rule.

B. Summary of the Key Provisions

Section 1848 of the Act requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: work, practice expense (PE), and malpractice (MP) expense. In

addition, the statute requires that each year we establish, by regulation, the payment amounts for physicians' services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this final rule, we establish RVUs for CY 2025 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This final rule also includes discussions and provisions regarding several other Medicare Part B payment policies, Medicare and Medicaid provider and supplier enrollment policies, and other policies regarding programs administered by CMS.

Specifically, this final rule addresses:

- Background (section II.A.)
- Determination of PE RVUs (section II.B.)
- Potentially Misvalued Services Under the PFS (section II.C.)
- Payment for Medicare Telehealth Services Under Section 1834(m) of the Act (section II.D.)
- Valuation of Specific Codes (section II.E.)
- Evaluation and Management (E/M) Visits (section II.F.)
- Enhanced Care Management (section II.G.)
- Supervision of Outpatient Therapy Services in Private Practices, Certification of Therapy Plans of Care with a Physician or NPP Order, and KX Modifier Thresholds (section II.H.)
- Advancing Access to Behavioral Health Services (section II.I.)
- Provisions on Medicare Parts A and B Payment for Dental Services Inextricably Linked to Other Covered Services (section II.J.)
- Payment for Skin Substitutes (section II.K.)
- Strategies for Improving Global Surgery Payment Accuracy (section II.L.)
- Drugs and Biological Products Paid Under Medicare Part B (section III.A.)
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) (section III.B.)

C. Summary of Costs and Benefits

We have determined that this final rule is economically significant. We estimate the CY 2025 PFS conversion factor to be 32.3465 which reflects a 0.02 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the removal of the temporary 2.93 percent payment increase for services furnished from March 9, 2024, through December 31, 2024, as provided in the CAA, 2024. For a detailed discussion of the economic impacts, see section VI., Regulatory Impact Analysis, of this final rule.

II. Provisions of the Final Rule for the PFS

A. Background

In accordance with section 1848 of the Social Security Act (the Act), CMS has paid for physicians' services under the Medicare physician fee schedule (PFS) since January 1, 1992. The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA '89) (Pub. L. 101–239, December 19, 1989), and the Omnibus Budget Reconciliation Act of 1990 (OBRA '90) (Pub. L. 101–508, November 5, 1990). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for Medicare payment for physicians' services.

We note that throughout this final rule, unless otherwise noted, the term ''practitioner'' is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding malpractice (MP) expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service specific PE RVUs. We referred readers to the CY 2010 Physician Fee Schedule (PFS) final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical

equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the American Medical Association (AMA) Relative Value Scale Update Committee (RUC) and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we referred readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology in the CY 2007 PFS proposed rule (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked to develop the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty obtained from the AMA's Socioeconomic Monitoring System (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology or how the PE/HR data are used. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs nor independent labs participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file titled ''CY 2025 PFS final rule PE/HR'' on the CMS website under downloads for the CY 2025 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

For CY 2025, we have incorporated the available utilization data for two new specialties, Marriage and Family Therapist (MFT) and Mental Health Counselor (MHC), which we recognized effective January 1, 2024, in accordance with section 4121 of the CAA, 2023. We proposed to use proxy PE/HR values for these new specialties, as there are no PPIS data for these specialties, by crosswalking the PE/HR as follows from specialties that furnish similar services in the Medicare claims data:

- Marriage and Family Therapist (MFT) from Licensed Clinical Social Workers; and
- Mental Health Counselor (MHC) from Licensed Clinical Social Workers

These updates are reflected in the ''CY 2025 PFS final rule PE/HR'' file available on the CMS website under the supporting data files for the CY 2025 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

Comment: One commenter stated that they supported the proposal to include utilization data for MFTs and MHCs in calculating practice expense Relative Value Units. The commenter stated that accurate RVUs ensure that MFTs and MHCs receive appropriate reimbursement, covering essential overhead costs and sustaining their practices, which supports the financial viability of mental health practices and also promotes equitable access to care for all patients, regardless of the complexity of their conditions.

Response: We appreciate the support for our proposal from the commenter.

After consideration of the comments, we are finalizing our proposed PE/HR crosswalks for the Marriage and Family Therapist and Mental Health Counselor specialties.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level based on the direct costs specifically associated with a code and

the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).
- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.
- Then, we incorporate the specialty specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: a professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different healthcare providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we direct readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled ''Calculation of PE RVUs under Methodology for Selected Codes'' which is available on our website under downloads for the CY 2025 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*. This file contains a table that illustrates the calculation of PE RVUs as described in this proposed rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the three most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 59283) to use the most recent year of

claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning a specialty mix based on the specialties of the practitioners reporting the services in the claims data, we use the expected specialty that we identify on a list developed based on medical review and input from expert interested parties. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other interested parties on changes to this list annually. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, ''always therapy'' services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 52983) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

We did not make any proposals associated with the list of expected specialty assignments for low volume services, however we received public comments on this topic from interested parties. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that they had performed an analysis to identify all codes that meet the criteria to receive a specialty override under this CMS policy and drafted updated recommendations for codes that meet these criteria for CY 2024. Commenters stated that the purpose of assigning a specialty to these codes was to avoid the significant adverse impact on MP RVUs that results from errors in specialty utilization data magnified in representation (percentage) by small sample size. These commenters submitted a list of approximately 75 low volume HCPCS codes with recommended expected specialty assignments.

Response: After reviewing the information provided by the commenters to determine whether the specialty assignments they recommended were appropriate for the services in question, based on determining if the recommended specialty matches the dominant specialty in the claims data, we are finalizing the additions to the list of expected specialty assignments for low volume services identified in Table 1. We agreed with the commenters that, based on claims data, CPT codes 33231 and 33240 should be crosswalked to the Cardiac Electrophysiology specialty and that CPT codes 33900–33904 and 93574–93575 should be crosswalked to the Interventional Cardiology specialty. We also agree with commenters that CPT codes 56633 and 58240 should be crosswalked to the Gynecological Oncology specialty. However, we do not have PE/HR data for these specialties as they were not part of the PPIS when it was conducted in 2007; therefore, we are crosswalking these CPT codes to the closest available specialties (Cardiology and Obstetrics/Gynecology, respectively), as listed on Table 1.

We disagreed with the commenters on a series of additional suggested assigned specialties. In each case, there was another specialty which was reported more than twice as often in the claims data as the specialty suggested by commenters and in some cases reported as much as twenty times as often. Therefore, we are crosswalking CPT code 22505 to the Neurosurgery specialty, CPT code 25670 to the Orthopedic Surgery specialty, CPT code 28116 to the Podiatry specialty, CPT code 35231 to the Otolaryngology specialty, CPT code 36585 to the General Surgery specialty, CPT code 36810 to the Pulmonary Disease specialty, and CPT code 60522 to the Thoracic Surgery specialty (which was additionally suggested by one commenter) as these were the dominant specialties in the claims data. These crosswalks are included in Table 1.

BILLING CODE 4120–01–P

Table 1: New Additions to the Expected Specialty Assignment List

HCPCS	Short Descriptor	Expected Specialty Assignment
15600	Delay flap trunk	Plastic And Reconstructive Surgery
15920	Removal of tail bone ulcer	General Surgery
15941	Remove hip pressure sore	Plastic And Reconstructive Surgery
21422	Treat mouth roof fracture	Maxillofacial Surgery
22505*	Manipulation of spine	Neurosurgery
22808	Arthrd ant dfrm 2-3 vrt sgm	Orthopedic Surgery
23180	Remove collar bone lesion	Orthopedic Surgery

G9157	Transesoph doppl cardiac mon	Anesthesiology

* Recommended specialty assignment crosswalked; see above.

BILLING CODE 4120–01–C

After consideration of the public comments, we are finalizing the additions to the list of expected specialty assignments for low volume services as detailed in Table 1. The full list of expected specialty assignments is included in the CY 2025 public use files, which are available on the CMS website under downloads for the CY 2025 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-ServicePayment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(Note: For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled ''Calculation of PE RVUs under Methodology for Selected Codes'', the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty specific adjusted indirect PE allocators for all PFS services for a specialty by

adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty specific indirect PE/HR data, calculate specialty specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS BN. (See ''Specialties excluded from ratesetting calculation'' later in this final rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we referred readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

- Specialties excluded from ratesetting calculation: To calculate the PE and MP RVUs, we exclude certain specialties, such as NPPs paid at a percentage of the PFS and low volume specialties, from the calculation. These specialties are included to calculate the BN adjustment. They are displayed in Table 2.

BILLING CODE 4120–01–P

TABLE 2: Specialties Excluded from Ratesetting Calculation

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (e.g., drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	SNF
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

- *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.
- *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.
- *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).
- *Payment modifiers:* Payment modifiers are accounted for in creating the file consistent with the current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services,

the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 3 details the manner in which the modifiers are applied.

TABLE 3: Application of Payment Modifiers to Utilization Files

Modifier	Description	Volume Adjustment	Time Adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion
AS	Assistant at Surgery – Physician Assistant	14% (85% * 16%)	Intraoperative portion
50 or LT and RT	Bilateral Surgery	150%	150% of work time
51	Multiple Procedure	50%	Intraoperative portion
52	Reduced Services	50%	50%
53	Discontinued Procedure	50%	50%
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims	Preoperative + Intraoperative portion
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims	Postoperative portion
62	Co-surgeons	62.5%	50%
66	Team Surgeons	33%	33%
CO, CQ	Physical and Occupational Therapy Assistant Services	88%	88%

BILLING CODE 4120–01–C

We also adjust volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We noted that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

Beginning in CY 2022, section 1834(v)(1) of the Act required that we apply a 15 percent payment reduction for outpatient occupational therapy services and outpatient physical therapy services that are provided, in whole or in part, by a physical therapist assistant (PTA) or occupational therapy assistant (OTA). Section 1834(v)(2)(A) of the Act required CMS to establish modifiers to identify these services, which we did in the CY 2019 PFS final rule (83 FR 59654 through 59661), creating the CQ and CO payment modifiers for services provided in whole or in part by PTAs and OTAs, respectively. These payment modifiers are required to be used on claims for services with dates of service beginning January 1, 2020, as specified in the CY 2020 PFS final rule (84 FR 62702 through 62708). We applied the 15 percent payment reduction to therapy services provided by PTAs (using the CQ modifier) or OTAs (using the CO modifier), as required by statute. Under sections 1834(k) and 1848 of the Act, payment is made for outpatient therapy services at 80 percent of the lesser of the actual charge or applicable fee schedule amount (the allowed charge). The remaining 20 percent is the beneficiary copayment. For therapy services to which the new discount applies, payment will be made at 85 percent of the 80 percent of allowed charges. Therefore, the volume discount factor for therapy services to which the CQ and CO modifiers apply is: (0.20 + (0.80* 0.85), which equals 88 percent.

We note that for CY 2025, we proposed mandatory use of the 54 and 55 modifiers when practitioners furnishing global surgery procedures share in patient care and intend only to furnish preoperative/intraoperative or postoperative portions of the total global procedure. If finalized, this proposal will likely increase the number of claims subject to the adjustment described in the discussion above. We discuss this proposal in section II.L. of this final rule.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- *Work RVUs:* The setup file contains the work RVUs from this final rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

(1/(minutes per year * usage)) * price * ((interest rate/(1 (1/((1 + interest rate)^ life of equipment)))) + maintenance)

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage=1); generally, 150,000 minutes.

usage = variable, see discussion below in this proposed rule.

price = price of the particular piece of equipment.
life of equipment = useful life of the particular piece of equipment.
maintenance = factor for maintenance; 0.05.
interest rate = variable, see discussion below in this proposed rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Useful Life: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA's ''Estimated Useful Lives of Depreciable Hospital Assets'' guidelines (69 FR 66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than two years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.

In the CY 2021 PFS final rule, we finalized a proposal to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. In the rare cases where items are replaced every few months, we noted that we believe it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For a more detailed discussion of the methodology associated with very short equipment life durations, we refer readers to the CY 2021 PFS final rule (85 FR 84482 through 84483).

- *Maintenance:* We finalized the 5 percent factor for annual maintenance in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also noted that we believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding data sources containing equipment maintenance rates, commenters could not identify an auditable, robust data source that CMS could use on a wide scale. We noted that we did not believe voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we did not propose a variable maintenance factor for equipment cost per minute pricing as we did not believe that we have sufficient information at present. We noted that we would continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.
- *Interest Rate:* In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The interest rates are listed in Table 4.

TABLE 4: SBA Maximum Interest Rates

Price	Useful Life	Interest Rate
<$25K	<7 Years	7.50%
$25K to $50K	<7 Years	6.50%
>$50K	<7 Years	5.50%
<$25K	7+ Years	8.00%
$25K to $50K	7+ Years	7.00%
>$50K	7+ Years	6.00%

We did not propose any changes to the equipment interest rates for CY 2025.

3. Adjusting RVUs To Match the PE Share of the Medicare Economic Index (MEI)

In the past, we have stated that we believe that the MEI is the best measure available of the relative weights of the three components in payments under the PFS—work, practice expense (PE), and malpractice (MP). Accordingly, we believe that to ensure that the PFS payments reflect the relative resources in each of these PFS components as required by section 1848(c)(3) of the Act, the RVUs used in developing rates should reflect the same weights in each component as the cost share weights in the Medicare Economic Index (MEI). In the past, we have proposed (and subsequently finalized) to accomplish this by holding the work RVUs constant and adjusting the PE RVUs, MP RVUs, and CF to produce the appropriate balance in RVUs among the three PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the MEI cost shares are updated, we would typically propose to modify steps 3 and 10 to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the 2017-based MEI cost share weights, and to recalibrate the relativity adjustment that we apply in step 18 as described in the CY 2023 PFS final rule (87 FR 69414 and 69415) and CY 2014 PFS final rule (78 FR 74236 and 74237). The most recent recalibration was done for the CY 2014 RVUs.

In the CY 2014 PFS proposed rule (78 FR 43287 through 43288) and final rule (78 FR 74236 through 74237), we detailed the steps necessary to accomplish this result (see steps 3, 10, and 18). The CY 2014 proposed and final adjustments were consistent with our longstanding practice to make adjustments to match the RVUs for the PFS components with the MEI cost share weights for the components,

including the adjustments described in the CY 1999 PFS final rule (63 FR 58829), CY 2004 PFS final rule (68 FR 63246 and 63247), and CY 2011 PFS final rule (75 FR 73275).

In the CY 2023 PFS final rule (87 FR 69688 through 69711), we finalized to rebase and revise the MEI to reflect more current market conditions faced by physicians in furnishing physicians' services (referred to as the ''2017-based MEI''). We also finalized a delay of the adjustments to the PE pools in steps 3 and 10 and the recalibration of the relativity adjustment in step 18 until the public had an opportunity to comment on the rebased and revised 2017-based MEI (87 FR 69414 through 69416). Because we finalized significant methodological and data source changes to the MEI in the CY 2023 PFS final rule and significant time has elapsed since the last rebasing and revision of the MEI in CY 2014, we believed that delaying the implementation of the finalized 2017-based MEI was consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. We refer readers to the discussion of our comment solicitation in the CY 2023 PFS final rule (87 FR 69429 through 69432), where we reviewed our ongoing efforts to update data inputs for PE to aid stability, transparency, efficiency, and data adequacy. We also solicited comment in the CY 2023 PFS proposed rule on when and how to best incorporate the 2017-based MEI into PFS ratesetting, and whether it would be appropriate to consider a transition to full implementation for potential future rulemaking. We presented the impacts of implementing the 2017-based MEI in PFS ratesetting through a 4-year transition and through full immediate implementation, that is, with no transition period in the CY 2023 PFS proposed rule. We also solicited comment on other implementation strategies for potential future rulemaking in the CY 2023 PFS proposed rule. In the CY 2023 PFS final rule, we discussed that many commenters supported our proposed delayed implementation, and many commenters expressed concerns with the redistributive impacts of the implementation of the 2017-based MEI in PFS ratesetting. Many commenters also noted the AMA's intent to collect practice cost data from physician practices, which could be used to derive cost share weights for the MEI and RVU shares.

In the CY 2025 PFS proposed rule, we stated that in light of the AMA's current data collection efforts and because the methodological and data source changes to the MEI finalized in the CY 2023 PFS final rule would have significant impacts on PFS payments, similar to our discussion of this topic in the CY 2024 PFS rulemaking cycle (88 FR 78829 through 78831), we continue to believe that delaying the implementation of the finalized 2017-based MEI cost share weights for the RVUs is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. For these reasons, we did not propose to incorporate the 2017-based MEI in PFS ratesetting for CY 2024. As we noted in the CY 2024 PFS final rule, many commenters on the CY 2024 PFS proposed rule supported our continued delayed implementation of the 2017-based MEI in PFS ratesetting (88 FR 78830). Most of these commenters urged us to pause consideration of other sources for the MEI until the AMA's efforts to collect practice cost data from physician practices have concluded, although a few commenters recommended that we implement the MEI for PFS ratesetting as soon as possible. We stated that we agree with the commenters that it would be prudent, and avoid potential duplication of effort, to wait to consider other data sources for the MEI while the AMA's data collection activities are ongoing. We stated that as we discussed in the CY 2024 PFS final rule, we continue to monitor the data available related to physician services' input expenses, but we are not proposing to update the data underlying the MEI cost weights at this time. Given our previously described policy goal to balance PFS payment stability and predictability with incorporating new data through more routine updates to the MEI, we did not propose to incorporate the 2017-based MEI in PFS ratesetting for CY 2025. We invited comments on this approach, as well as any information on the timing of the AMA's practice cost data collection efforts and other sources of data we could consider for updating the MEI. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our continued delayed implementation of the 2017-based MEI in PFS ratesetting. Most of these commenters urged CMS to delay consideration of other sources for the MEI until the AMA's efforts to collect practice cost data from physician practices have concluded. The AMA RUC commented that they concluded survey efforts on August 31, 2024, and are working to analyze the data. Some commenters requested a more frequent update of the PPIS every three to five years given the dramatic redistributive impacts of implementing updated data after many years. Some commenters requested a separate MEI for behavioral health to adequately and appropriately value outpatient mental health and substance use services. Another commenter disagreed with more frequent PPIS efforts because they can be burdensome, particularly for small, independent practices in underserved areas where time must be taken away from direct patient care to complete the survey. The commenter stated that larger health systems and practices are more equipped to respond to these surveys which leads to biased and unreliable survey results. The commenter urged CMS to consider contingencies or alternatives to the PPIS to address the lack of data availability or response rates for some specialties. One commenter requested that CMS seek alternative, more current data sources to rebase and revise the MEI if the AMA PPIS data proves insufficient, stating that the 2017-based MEI derived predominantly from the 2017 US Census Bureau's Service Annual Survey (SAS) are outdated and should not be used for updates.

A few commenters urged CMS to implement the 2017-based MEI for PFS ratesetting as soon as possible. One commenter stated that the SAS Census Bureau data should be used to determine the MEI in the future instead of the AMA's PPIS data because it is reliable, regularly updated, and objectively collected.

Response: We appreciate commenters' feedback, specifically as it relates to updating PFS ratesetting, and will consider the commenters' feedback in future rulemaking.

Comment: One commenter stated that CMS finalized the 2017-based MEI based primarily on a subset of data from the 2017 US Census Bureau's SAS. The commenter stated that assumptions made for the updated weights did not include physicians who are employed by hospitals and large health systems. The commenter stated that data from facility-based physicians should be included since MEI weights also cover physician compensation and professional liability insurance.

Response: We refer the commenter to the discussion of methodologies and a response to this concern in the CY 2024 PFS final rule (88 FR 78830 and 78831).

4. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are

included in the CY 2025 direct PE input public use files, which are available on the CMS website under downloads for the CY 2025 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve the relativity of values among codes. For example, as medical practice and technologies change over time, standards could be updated simultaneously for all codes with the applicable clinical labor tasks instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for ''Availability of prior images confirmed'', 2 minutes for ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'', 2 minutes for ''Review examination with interpreting MD'', and 1 minute for ''Exam documents scanned into PACS'' and ''Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.'' In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, ''Technologist QCs images in PACS, checking for all images, reformats, and dose page.'' These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the ''Prepare room, equipment and supplies'' (CA013) clinical labor activity were split into 2 minutes for the ''Prepare room, equipment and supplies'' activity and 1 minute for the ''Confirm order, protocol exam'' (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (*Review patient clinical extant information and questionnaire*) in the preservice period, and CA014 (*Confirm order, protocol exam*) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we believe that the three total minutes of clinical staff time would be more accurately described by the CA013 ''Prepare room, equipment and supplies'' activity code, and we finalized these clinical labor refinements. We directed readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 through 59464) for additional details.

Following the publication of the CY 2020 PFS proposed rule, one commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of applying refinements to the clinical labor time and did not constitute separate refinements; the commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC's equipment time recommendations. However, we believed it was important to publish the specific equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. We directed readers to the discussion in the CY 2020 PFS final rule (84 FR 62584) for additional details.

Historically, the RUC has submitted a ''PE worksheet'' that details the

recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time, and among the medical specialties developing the recommendations. These variations have made it difficult for the RUC's development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC mandated the use of a new PE worksheet for its recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC's use of the new PE worksheet in developing and submitting recommendations helps us simplify and standardize the hundreds of clinical labor tasks currently listed in our direct PE database. As in previous calendar years, to facilitate rulemaking for CY 2025, we are continuing to display two versions of the Labor Task Detail public use file: one version with the old listing of clinical labor tasks and one with the same tasks crosswalked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2025 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

b. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. Beginning in CY 2019 and continuing through CY 2022, we conducted a market-based supply and equipment pricing update using information developed by our contractor, StrategyGen, which updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. Given the potentially significant changes in payment that would occur, in the CY 2019 PFS final rule, we finalized a policy to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy while maintaining stability and allowing interested parties to address potential concerns about changes in payment for particular items. This 4-year transition period to update supply and equipment pricing concluded in CY 2022; for a more detailed discussion, we referred readers to the CY 2019 PFS final rule with comment period (83 FR 59473 through 59480).

For CY 2025, we proposed to update the price of 17 supplies and one equipment item in response to the public submission of invoices following the publication of the CY 2024 PFS final rule. The 18 supply and equipment items with proposed updated prices are listed in the valuation of specific codes section of the preamble under Table 20, CY 2025 Invoices Received for Existing Direct PE Inputs.

Comment: Several commenters stated that they commended CMS for recognizing the importance and cost of Long-Term Electrocardiography Monitoring (LT–ECG) Services, reflected in the updated pricing for supply item SD339. The commenters stated that the updated pricing is critical for ensuring patient access to LT–ECG services under CPT codes 93241, 93243, 93245, and 93247, while also providing essential payment stability for providers.

Response: We appreciate the support from the commenters for our proposed SD339 supply pricing.

Comment: A commenter stated that they supported the proposed pricing increases for the EP112 equipment and the SL474, SL478, SL479, SL480, SL482, and SL492 supplies. The commenter stated that they supported the proposed changes to the pricing for these items and urges CMS to finalize them as proposed. A separate commenter stated that they supported the proposed change to the pricing of the SL474 supply as they believe it improves the accuracy of pricing for practice expense items within the overall fee schedule.

Response: We appreciate the support from the commenters for our proposed supply and equipment pricing.

Comment: A commenter stated that they fully supported CMS's proposal to create three new supply codes in the PE database (SD370, SD371, and SD372) to facilitate appropriate pricing by the MACs for Temporary Female Intraurethral Valve-Pump services. The commenter stated that they agreed that short of establishing national pricing for CPT codes 0596T and 0597T, creating supply codes with accurate pricing for the devices should facilitate rate setting by the MACs that appropriately accounts for the device costs. The commenter urged CMS to finalize as proposed the creation of these supply codes and the proposed prices that correspond to each.

Response: We appreciate the support from the commenter for our proposed supply pricing of the SD370–SD372 items.

An interested party submitted 30 invoices to update pricing for the human amniotic membrane allograft mounted on a non-absorbable self-retaining ring (SD248) supply. We previously updated the price of this supply in the CY 2024 final rule (88 FR 78901) based on averaging together the price of the Prokera Slim, Prokera Classic, and Prokera Plus devices. The interested party submitted new invoices for all three of these devices which averaged to a new price of $1149.00 which we proposed for the SD248 supply. We solicited additional comments from interested parties regarding the price of the SD248 supply as well as any information as far as whether one of these three devices (the Prokera Slim, Prokera Classic, and Prokera Plus) would be more typical than the other two for use as a supply in CPT code 65778.

Comment: Many commenters stated that they supported the proposed payment increase for CPT 65778 based on the proposed pricing of the SD248 supply. Commenters described the clinical benefits of the SD248 supply and how it has been instrumental in helping patients with medical conditions that would not respond to conventional medical treatment.

Response: We appreciate the support from the commenters for our proposed pricing of the SD248 supply.

In the case of the indocyanine green (25ml uou) (SL083) supply, we noticed that there was a clear bimodal distribution of prices on the eight submitted invoices, clustered around $91.00 and $141.67, respectively, with no pricing in between $100 and $140. We proposed the updated total average price of $125.11 based on the eight submitted invoices for the SL083 supply, however, we solicited comments on why there was such divergence in the pricing on the submitted invoices, as well as whether these may represent pricing for two different supplies.

Comment: Several commenters thanked CMS for updating the price of the indocyanine green (25ml uou) (SL083) supply in the proposed rule and recommended that this price be finalized. Commenters stated that the differences in pricing for the SL084 supply contained on the submitted invoices demonstrated an increase that occurred during the second half of 2023 rather than a price differential between two distinct products; commenters stated that practices paid an average of

$87 earlier in 2023 and by 2024 the price had increased to $141, with some paying as much as $156.

Response: We appreciate the support from the commenters for our proposed supply pricing of the SL083 supply, as well as the additional information regarding its pricing.

Regarding the Reaction buffer 10X (Ventana 950–300) (SL478) supply, we proposed to update the price from $0.037 to $0.045, which is less than the $0.075 contained on the invoice submitted by interested parties. We were able to find this product readily available for purchase online at a quantity of 10 liters for $453 or a price of $0.045. We do not believe that it would be typical for providers to pay a higher price based on smaller unit quantities; therefore, we proposed to update the price of the SL478 supply but only to $0.045, which is the price to purchase this supply online, as stated above.

Interested parties also alerted CMS to a technical correction for pricing the Atomizer tips (disposable) (SL464) supply. We previously finalized a price of $2.66 for the SL464 supply, which was included in the table of Invoices Received for Existing Direct PE Inputs in the CY 2018 final rule (82 FR 53162). However, due to a technical error, the updated pricing for the SL464 supply was never implemented. We proposed to make this correction for CY 2025; the corrected price of $2.66 for the SL464 supply is included in Table 20.

Comment: A commenter stated that the proposed payment rates for HCPCS codes G2082 and G2083 did not include the updated supply pricing for esketamine described by the SH109 and SH110 supply codes, based on wholesale acquisition cost (WAC) data submitted by the commenter to CMS on May 31, 2024. The commenter stated that lack of consistent WAC supply pricing updates has contributed to payment instability for these services and puts beneficiary access at risk. The commenter stated that their goal was to align on a clear process to ensure consistency and predictability in the approach to updating the annual payment amounts for the SH109 and SH110 supplies and urged CMS to incorporate the updated WAC pricing data for these supplies in the PFS final rule.

Response: We did not propose to update the price of the SH109 and SH110 esketamine supplies in the proposed rule. However, as part of our process to act on public requests to update equipment and supply prices, we have reviewed the WAC pricing data submitted by the commenters. Based on this information, we are finalizing an increase in the pricing of the SH109 supply from $735.63 to $772.41 and an increase in the pricing of the SH110 supply from $1103.44 to $1158.62.

With regards to the process for submitting annual pricing updates for these supply items, we remind the commenter that to be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule and will consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Interested parties are encouraged to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at *PE_Price_Input_Update@cms.hhs.gov.*

We did not propose to update the price of another ten supplies, which were the subject of public submission of invoices. Our reasons for not proposing updates to these prices are detailed below, and we solicited additional information from interested parties for assistance in pricing these supplies:

- *Liposorber supplies: Tubing set (SC083), Plasma LDL adsorption column (SD186), and Plasma separator (SD188):* We received invoices for these three Liposorber supplies from an interested party. However, it was unclear from the invoice submissions what the unit quantity size is for each product. We require additional information regarding the unit size of each supply included on these invoices to establish updated pricing, and therefore, we did not propose updates to the prices for these supplies. We solicited additional comments regarding the pricing of these supplies and whether the pricing has increased so dramatically, as it seems unlikely that prices have tripled in the 5 years since we most recently updated the pricing for these supplies.

Comment: A commenter stated that they continue to believe that CPT code 36516 suffers from a large reimbursement gap between the facility and non-facility/physician office setting because CMS is using outdated pricing data for essential liposorber supplies. The commenter therefore submitted additional paid invoices for three liposorber supply items: the tubing set (SC083), Plasma LDL adsorption column (SD186), and plasma separator (SD188). The commenter stated that these invoices clearly identified the unit quantity and provided a breakdown of the costs to show the individual (per-supply item price) as well as case price (6 items per case per different supply item).

Response: We appreciate the additional invoice submissions from the commenter and the clarification on the supply quantities for the associated supply items. Based on this additional pricing data, we are finalizing price increases to $87.52 for the SC083 supply, to $1419.04 to the SD186 supply, and to $149.70 for the SD188 supply, in each case based on an average of the six submitted invoices.

Comment: A commenter stated that Liposorber supplies are unique in that they require special shipping, handling, storing, and insurance requirements. The commenter stated that, for instance, the Plasma LDL adsorption Column (SD186) and the Plasma Separator (SD188) are sensitive to atmospheric conditions and must be packaged, shipped, and stored at mandated temperatures, as well as avoid exposure to cold, direct sunlight, high humidity, or excessive vibrations. The commenter stated that the high cost and fragility of these supplies requires the practice to purchase additional insurance coverage, and these additional shipping and handling costs are not reflected in the invoiced purchase price but add considerable expense to the provision of apheresis services.

Response: We remind the commenter that shipping and storage costs are not included in the price of supplies and equipment under our PE methodology. This is because these costs are covered under the indirect portion of the PE; it is not the case that these costs are not being paid, but rather that they are addressed under a different part of the PE methodology.

- *Congo Red kits (SA110):* We received three invoices from interested parties requesting an increase in the price of the SA110 supply from $6.80 to $18.78. However, we were able to find Congo Red staining kits readily available online at a price of 100 for $410 or $4.10 per kit. The unit size of these kits was also unclear, which made price comparisons with the submitted invoices difficult. Based on the three invoices and the online price of 100 for $410 or $4.10 per kit, we do not believe there is enough pricing data to support an increase in the price of the SA110 supply from $6.80 to $18.78, and we did not propose an increase in the price of this supply.
- *Gauze, non-sterile 4in x 4in (SG051):* We received one invoice from interested parties requesting an increase

in the price of the SG051 supply from $0.03 to $0.04. However, the submitted invoice price appeared to be for surgical gauze, not non-sterile gauze. We were able to find the 4x4 non-sterile gauze readily available online at less than the invoice price. Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SG051 supply from $0.03 to $0.04, and we did not propose an increase in the price of this supply.

- *Permanent marking pen (SL477):* We received one invoice from interested parties requesting an increase in the price of the SL477 supply from $2.81 to $4.62. However, we found black marking pens, such as Sharpies, widely available at unit prices around $2.00 when purchased in larger quantities. Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SL477 supply from $2.81 to $4.62, and we did not propose an increase in the price of this supply.
- *Hematoxylin II (Ventana 790–2208) (SL483):* We received four invoices from interested parties requesting an increase in the price of the SL483 supply from $0.780 to $2.722. However, we were able to find hematoxylin II stains readily available online at cheaper prices, such as $52.00 for 500 ml ($0.104 per ml). Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SL483 supply from $0.780 to $2.722, and we did not propose an increase in the price of this supply.
- *Bluing reagent (Ventana 760–2037) (SL484):* We received three invoices from interested parties requesting an increase in the price of the SL484 supply from $4.247 to $6.130. While researching the pricing of the SL484 supply, we were unable to determine the unit quantity size on invoices, which made it difficult to evaluate if the requested price accurately reflected market pricing. As best we could tell, the requested price increase to $6.130 was more expensive than comparable online bluing reagents available for purchase. Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SL484 supply from $4.247 to $6.130, and we did not propose an increase in the price of this supply.
- *EZ Prep (10X) (Ventana 950–102) (SL481) and 250 Test Prep Kit # 78 (Ventana 786–3034) (SL486):* In each of these cases, we received invoices from interested parties requesting substantial increases in the price of the associated supplies, from $0.034 to $0.509 for the SL481 supply and from $0.309 to $2.134 for the SL486 supply. We do not believe that it is reasonable to expect that the typical market prices for these supplies have increased by 1400 percent and 600 percent, respectively, in the 5 years since we most recently updated the pricing for these supplies. The limited pricing information we could find online for each product also failed to support these drastic increases in pricing. Based on this information, we do not believe there is enough pricing data to support the requested increases for the SL481 and SL486 supplies, and we did not propose increases to the prices for these supplies.

(1) Invoice Submission

We reminded readers that we routinely accept public submissions of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often, these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule and will consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Interested parties are encouraged to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at *PE_Price_Input_Update@cms.hhs.gov*.

In recent years, we have noticed a growing number of invoice submissions for use in updating supply and equipment pricing. Although we continue to believe in the importance of using the most recent and accurate invoice data to reflect current market pricing, we do have some concerns that the increased use of these submissions may distort relativity across the fee schedule. Relying on voluntary invoice submissions to update pricing for a small subset of the total number of supply and equipment items in our database, while leaving the overwhelming majority of prices untouched, could be distorting pricing in favor of the most recent submissions. We believe that it may be more efficient, and more accurate, to update supply and equipment pricing in a more comprehensive fashion similar to the pricing update that took place from CY 2019 to CY 2022. For example, future updates to supply and equipment pricing could take place in tandem with updates to clinical labor pricing after the current clinical labor update concludes in CY 2025. We welcomed public comments on this general topic of more comprehensive updates to supply and equipment pricing, and we may consider comments we receive to inform future rulemaking.

Comment: Many commenters supported the concept of more regular and comprehensive updates to supply and equipment pricing. Commenters stated their support for a deliberate, systematic approach to supply, equipment, and clinical labor updates and agreed that it would be prudent to update pricing consistently, such as every 5 years. Many commenters stated that such a process would provide transparency in the timing of these updates, give greater granularity into the data sources that serve as the basis of input pricing changes, and maintain the current process that allows stakeholders to submit invoices in advance of rulemaking. Several commenters requested the implementation of a 4-year phase-in transition for any future pricing updates, as gradually phasing in cost changes helps to prevent abrupt and potentially harmful effects on specific providers or services. One commenter stated that establishing a cycle of updates every four years was not advisable, as updates that frequent could amplify the impact of short-term market fluctuations, in addition to increasing the administrative burden for both CMS and health care providers.

Response: We appreciate the feedback from the commenters regarding potential future updates to supply and equipment pricing, which we will consider for use in potential future rulemaking.

(2) Supply Pack Pricing Update

Interested parties previously notified CMS that they identified numerous discrepancies between the aggregated cost of some supply packs and the individual item components contained within. The interested parties indicated that CMS should rectify these mathematical errors as soon as possible to ensure that the sum correctly matches the totals from the individual items, and they recommended that we resolve these pricing discrepancies in the supply packs during CY 2024 rulemaking. The AMA RUC convened a workgroup on this subject and submitted recommendations to update pricing for a series of supply packs along with the RUC's comment letter for the CY 2024 rule cycle.

We appreciated the additional information and RUC workgroup recommendations regarding discrepancies in the aggregated cost of some supply packs. However, due to the projected significant cost revisions in the pricing of supply packs and because we did not propose to address supply pack pricing in the CY 2024 proposed rule, we stated that this issue would be better addressed in future rulemaking. For example, the cleaning and disinfecting endoscope pack (SA042) is included as a supply input in more than 300 HCPCS codes, which could have a sizable impact on the overall valuation of these services, and which was not incorporated into the proposed RVUs published for the CY 2024 proposed rule. We stated that interested parties would be better served if we comprehensively addressed this topic during future rulemaking in which commenters could provide feedback in response to proposed pricing updates (88 FR 78833 through 78834).

For CY 2025, we proposed to implement the supply pack pricing update and associated revisions as recommended by the RUC's workgroup. We proposed to update the pricing of the ''pack, cleaning and disinfecting, endoscope'' (SA042) supply from $19.43 to $31.29, to update the pricing of the ''pack, drapes, cystoscopy'' (SA045) supply from $17.33 to $14.99, to update the pricing of the ''pack, ocular photodynamic therapy'' (SA049) supply from $16.35 to $26.35, to update the pricing of the ''pack, urology cystoscopy visit'' (SA058) supply from $113.70 to $37.63, and to update the pricing of the ''pack, ophthalmology visit (w-dilation)'' (SA082) supply from $3.91 to $2.33. As recommended by the RUC workgroup, we also proposed to delete the ''pack, drapes, laparotomy (chest-abdomen)'' (SA046) supply entirely. The updated prices for these supply packs are listed in the valuation of specific codes section of the preamble under Table 20, CY 2025 Invoices Received for Existing Direct PE Inputs.

In accordance with the RUC workgroup's recommendations, we also proposed to create 8 new supply codes, including components contained within previously existing supply packs. Aside from the SB056 supply, which is a replacement in several HCPCS codes for the deleted SA046 supply pack, all of these new supplies are not included as standalone direct PE inputs in any current HCPCS codes, as they are, again, components contained within previously existing supply packs. We proposed to add:

- The kit, ocular photodynamic therapy (PDT) (SA137) supply at a price of $26.00 as a component of the SA049 supply pack;
- The Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in) (SB056) supply at a price of $8.049 as a replacement for the SA046 supply pack;
- The drape, surgical, legging (SB057) supply at a price of $3.284 as a component of the SA045 supply pack;
- The drape, surgical, split, impervious, absorbent (SB058) supply at a price of $8.424 as a component of the SA045 supply pack;
- The post-mydriatic spectacles (SB059) supply at a price of $0.328 as a component of the SA082 supply pack;
- The y-adapter cap (SD367) supply at a price of $0.352 as a component of the SA049 supply pack;
- The ortho-phthalaldehyde 0.55% (eg, Cidex OPA) (SM030) supply at a price of $0.554 as a component of the SA042 supply pack; and
- The ortho-phthalaldehyde test strips (SM031) supply at a price of $1.556 as a component of the SA042 supply pack.

The new supply pack component items are listed in the valuation of specific codes section of the preamble under Table 21, CY 2025 New Invoices.

We also proposed the following additional supply substitutions based on the recommendations of the RUC workgroup. We proposed to remove the deleted SA046 supply pack and replace it with the drape, sterile, fenestrated 16 in x 29 in (SB011) supply for CPT codes 19020, 19101, 19110, 19112, 20101, and 20102. We proposed to remove the deleted SA046 supply pack and replace it with two supplies—the drape, sterile, three-quarter sheet (SB014) and the drape, towel, sterile 18 in x 26 in (SB019)—for CPT codes 19000 and 60300. We proposed to remove the deleted SA046 supply pack and replace it with 2 supplies—the drape, towel, sterile 18 in x 26 in (SB019) and the newly created Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in) (SB056) supply—for CPT codes 22510, 22511, 22513, and 22514. We proposed to remove the deleted SA046 supply pack without replacing it with anything for CPT code 22526; the RUC workgroup did not make a recommendation on what to do with CPT code 27278, which also previously contained the SA046 supply pack. Therefore, we also proposed not to replace the SA046 supply pack with any supplies for this code. The RUC workgroup also recommended removing the SA046 supply pack from CPT code 64595 with no replacement; however, this code was recently reviewed at the April 2022 RUC meeting and it no longer includes the SA046 supply.

Comment: Several commenters stated their appreciation that CMS proposed to implement the supply pack pricing update and associated revisions as recommended by the RUC's workgroup.

Response: We appreciate the support for our proposal from the commenters.

Comment: Several commenters supported the proposed supply pack pricing update as recommended by the RUC workgroup, however they indicated concern over the proposed decrease in the price of the urology cystoscopy visit pack (SA058) from $113.70 to $37.63. Commenters stated that the proposed pricing reduction in the SA058 supply could result in drastic payment rate cuts for physicians performing cystoscopy services in the office setting. Commenters requested that CMS either delay the pricing update or phase-in the supply pack changes over a four-year period like it has done for other PE changes with significant redistributive effects, allowing independent urology practices to better prepare for the negative financial impact this change will have. One commenter requested that pricing reductions should be implemented over a 7- to 10-year period.

Response: We appreciate the feedback from the commenters regarding the proposed changes in pricing for these supply packs, particularly the decrease in pricing for the urology cystoscopy visit pack (SA058). After considering the comments, we agree that the use of a phased-in transition period would be appropriate to allow practitioners to adjust to the updated pricing of these supplies. During our previous supply and equipment pricing update in the CY 2019 PFS final rule, we finalized a policy to phase in any updated pricing that we established during the 4-year transition period for very commonly used supplies and equipment, such as sterile gloves (SB024) or exam tables (EF023), even if invoices were provided as part of the formal review of a code family (83 FR 59475). Based on this previously established policy, we are finalizing the use of a pricing transition for three supply packs:

TABLE 5: Supply Pack Pricing Transition

CMS_ CODE	HCPCS Codes	CMS_2024 Price	Recommended Price	Year 1 (CY 2025) Price	Year 2 (CY 2026) Price	Year 3 (CY 2027) Price	Final (CY 2028) Price
SA042	306	$19.43	$31.29	$22.40	$25.36	$28.33	$31.29
SA058	38	$113.70	$37.63	$94.68	$75.67	$56.65	$37.63
SA082	145	$3.91	$2.33	$3.52	$3.12	$2.73	$2.33

Following the same pattern as our previous supply/equipment and clinical labor pricing updates, we are finalizing the implementation of this pricing transition over 4 years such that one-quarter of the difference between the current price and the fully phased-in price is implemented for CY 2025, one-third of the difference between the CY 2025 price and the final price is implemented for CY 2026, and one-half of the difference between the CY 2026 price and the final price is implemented for CY 2027, with the new direct PE prices fully implemented for CY 2028 (86 FR 65025). For the other proposed supply packs, the cystoscopy drapes pack (SA045) is only included in 7 HCPCS codes and the ocular photodynamic therapy pack (SA049) is only included in a single HCPCS code which do not meet these criteria established in previous rulemaking. We are therefore finalizing each of them at their updated pricing for CY 2025 as proposed in the proposed rule. We believe that the use of this pricing transition will minimize any potential disruptive effects during the 4-year transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply packs.

Comment: Several commenters stated that although five incomplete packs would have their pricing updated in the proposed rule, mathematical errors still remained for a number of additional supply packs. Commenters stated that only 3 of the 18 affirmed packs were priced correctly to match their components and provided tables showing the pricing of an additional 15 packs that needed mathematical correction by deconstructing the packs to determine the correct price through summing their individual components. Commenters requested that CMS initiate a correction of the packs pricing such that the sum of the individual components match the price of the corresponding pack.

Response: We appreciate the additional information provided by the commenters regarding the pricing of these supply packs. We have compiled this information provided by the commenters for the 15 affected supply packs into Table 6.

TABLE 6: Supply Pack Pricing Requested By Commenters

HCPCS Codes	Item Name	CMS Code	Current Price	New Price	% Change
111 codes	pack, basic injection	SA041	$10.45	$17.28	65%
560 codes	pack, cleaning, surgical instruments	SA043	$12.61	$11.09	-12%
3 codes	pack, moderate sedation	SA044	$18.55	$19.20	4%
4568 codes	pack, minimum multi-specialty visit	SA048	$5.02	$1.98	-61%
168 codes	pack, ophthalmology visit (no dilation)	SA050	$2.72	$1.35	-50%
239 codes	pack, pelvic exam	SA051	$20.16	$2.81	-86%
1079 codes	pack, post-op incision care (staple)	SA052	$4.80	$9.90	106%
469 codes	pack, post-op incision care (suture & staple)	SA053	$5.47	$11.54	111%
1708 codes	pack, post-op incision care (suture)	SA054	$4.62	$10.34	124%
12 codes	pack, post-op incision care, craniotomy	SA055	$7.30	$18.18	149%
24 codes	pack, post-op incision care, neurosurgical	SA056	$6.20	$16.05	159%
120 codes	pack, drapes, ortho, large	SA080	$37.30	$25.38	-32%
29 codes	pack, drapes, ortho, small	SA081	$2.25	$1.88	-16%
119 codes	pack, protective, ortho, large	SA083	$10.86	$14.75	36%
27 codes	pack, protective, ortho, small	SA084	$5.99	$8.15	36%

While we share the concerns of the commenters regarding the need for accuracy in the pricing of these supply packs, we have reservations about their potential for pricing disruptions. Ten of these supply packs are included in the direct PE inputs for at least 100 HCPCS codes, and three of the packs are included in more than 1000 HCPCS codes. Many of these pricing updates would lead to drastic changes in pricing for these supply packs which are included in hundreds of HCPCS codes, such as the SA051 pelvic exam pack decreasing in price from $20.16 to $2.81 (−86 percent) and the SA048 minimum multi-specialty visit pack decreasing in price from $5.02 to $1.98 (−61 percent). We are particularly concerned that these changes in supply pack pricing could lead to significant shifts in the overall PE RVU for affected HCPCS codes, without these proposed rates appearing in the proposed rule or allowing any opportunity for public comment.

Therefore, we are not finalizing pricing updates for these additional 15 supply packs as requested by commenters. We anticipate returning to this subject in future rulemaking to allow any changes in associated pricing for HCPCS codes to appear in the proposed rule and provide an opportunity for the public to comment. Should these supply pack pricing updates be proposed in future rulemaking, we anticipate that we may propose the same pricing transition described above due to the number of potentially affected HCPCS codes. We are finalizing all of the other supply pack pricing changes as proposed, with the exception of the 4-year pricing transition for three supply packs as described above.

The RUC workgroup also reviewed the issue of skin adhesives and identified several generic alternatives to using the skin adhesive (Dermabond) (SG007) supply. The workgroup stated that there are multiple skin adhesive products, at different price points, available that work similarly to Dermabond and requested that generic alternatives be used overall in place of brand names in the CMS direct PE database. The workgroup made a series of suggestions for CMS to create new medical supply item codes to encompass the generic formulations of cyanoacrylate skin adhesive in multidose form and single use sterile application.

We appreciated the recommendations from the RUC workgroup and concur that generic alternatives should be used in place of brand names, where appropriate, in the CMS direct PE database. However, we had no pricing information or submitted invoices for the 4 generic formulations of cyanoacrylate skin adhesive requested by the RUC workgroup (2-Octyl-cyanoacrylate, n-Butyl-2-cyanoacrylate, Combined n-Butyl and 2-Octylcyanoacrylate, and Ethyl-2-cyanoacrylate). Since these 4 potential new supplies had no pricing information and are not currently included as direct PE inputs for any HCPCS codes, we did not add them to our direct PE database for the CY 2025 proposed rule due to lack of available information.

Comment: Several commenters, including the RUC, stated that they solicited invoices for Dermabond and its generic alternatives. The commenters stated that they were able to find and submit invoices for the Dermabond (SG007) supply but were unable to find invoices for the generic skin adhesives. Commenters stated that they continued to believe that generic versions overall are a better alternative than the use of brand names in the CMS direct PE database and encouraged CMS to explore other sources of information regarding generic skin adhesives.

Response: We appreciate the feedback from commenters regarding these skin adhesives and the submission of invoices associated with the SG007 supply. We agree with the commenters that the use of generic alternatives is preferred in place of brand names when naming new supply and equipment items for use in the CMS direct PE database. However, many of the supply and equipment items such as the SG007 supply have existed in the CMS files for decades at this point. We believe that it would be more disruptive and potentially confusing to attempt to rename items like the SG007 supply given how the current Dermabond name has been in common use for PFS ratesetting for at least 20 years. We are not finalizing a change to the name of this supply, and since we received no pricing information or submitted invoices for the four generic formulations of cyanoacrylate skin adhesive, we are not finalizing any changes to their status as well.

With regards to the submitted invoices for the SG007 supply, the six invoices refer to different Dermabond products and their unit quantity size is unclear. The current SG007 supply simply has the unit size of ''item'' and we were unable to determine how the submitted invoices relate in terms of pricing to the current supply. We are therefore not finalizing an update to the price of the SG007 supply at this time.

c. Clinical Labor Pricing Update

Section 220(a) of the PAMA provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types, and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

Beginning in CY 2019, we updated the supply and equipment prices used for PE as part of a market-based pricing transition; CY 2022 was the final year of this 4-year transition. We initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the supply and equipment pricing for CY 2019, and we finalized a policy in CY 2019 to phase in the new pricing over a period of 4 years. However, we did not propose to update the clinical labor pricing, and the pricing for clinical labor has remained unchanged during this pricing transition. Clinical labor rates were last updated for CY 2002 using Bureau of Labor Statistics (BLS) data and other supplementary sources where BLS data were not available; we refer readers to the full discussion in the CY 2002 PFS final rule for additional details (66 FR 55257 through 55262).

Interested parties raised concerns that the long delay since clinical labor pricing was last updated created a significant disparity between CMS' clinical wage data and the market average for clinical labor. In recent years, several interested parties suggested that certain wage rates were inadequate because they did not reflect current labor rate information. Some interested parties also stated that updating the supply and equipment pricing without updating the clinical labor pricing could create distortions in the allocation of direct PE. They argued that since the pool of aggregated direct PE inputs is budget neutral, if these rates are not routinely updated, clinical labor may become undervalued over time relative to equipment and supplies, especially since the supply and equipment prices are in the process of being updated. There was considerable interest among interested parties in updating the clinical labor rates, and

when we solicited comment on this topic in past rules, such as in the CY 2019 PFS final rule (83 FR 59480), interested parties supported the idea.

Therefore, we proposed to update the clinical labor pricing for CY 2022, in conjunction with the final year of the supply and equipment pricing update (86 FR 39118 through 39123). We believed updating the clinical labor pricing was important to maintain relativity with the recent supply and equipment pricing updates. We proposed to use the methodology outlined in the CY 2002 PFS final rule (66 FR 55257), which draws primarily from BLS wage data, to calculate updated clinical labor pricing. As we stated in the CY 2002 PFS final rule, the BLS' reputation for publishing valid estimates that are nationally representative led to the choice to use the BLS data as the main source. We believe that the BLS wage data continues to be the most accurate source to use as a basis for clinical labor pricing and this data will appropriately reflect changes in clinical labor resource inputs for setting PE RVUs under the PFS. We used the most current BLS survey data (2019) as the main source of wage data for our CY 2022 clinical labor proposal.

We recognized that the BLS survey of wage data does not cover all the staff types contained in our direct PE database. Therefore, we crosswalked or extrapolated the wages for several staff types using supplementary data sources for verification whenever possible. In situations where the price wages of clinical labor types were not referenced in the BLS data, we used the national salary data from the Salary Expert, an online project of the Economic Research Institute that surveys national and local salary ranges and averages for thousands of job titles using mainly government sources. (A detailed explanation of the methodology used by Salary Expert to estimate specific job salaries can be found at *www.salaryexpert.com.*) We previously used Salary Expert information as the primary backup source of wage data during the last update of clinical labor pricing in CY 2002. If we did not have direct BLS wage data available for a clinical labor type, we used the wage data from Salary Expert as a reference for pricing, then crosswalked these clinical labor types to a proxy BLS labor category rate that most closely matched the reference wage data, similar to the crosswalks used in our PE/HR allocation. For example, there is no direct BLS wage data for the Mammography Technologist (L043) clinical labor type; we used the wage data from Salary Expert as a reference and identified the BLS wage data for Respiratory Therapists as the best proxy category. We calculated rates for the ''blend'' clinical labor categories by combining the rates for each labor type in the blend and then dividing by the total number of labor types in the blend.

As in the CY 2002 clinical labor pricing update, the proposed cost per minute for each clinical staff type was derived by dividing the average hourly wage rate by 60 to arrive at the per minute cost. In cases where an hourly wage rate was not available for a clinical staff type, the proposed cost per minute for the clinical staff type was derived by dividing the annual salary (converted to 2021 dollars using the Medicare Economic Index) by 2080 (the number of hours in a typical work year) to arrive at the hourly wage rate and then again by 60 to arrive at the per minute cost. We ultimately finalized the use of median BLS wage data instead of mean BLS wage data in response to comments in the CY 2022 PFS final rule. To account for the employers' cost of providing fringe benefits, such as sick leave, we finalized a benefits multiplier of 1.296 based on a BLS release from June 17, 2021 (USDL–21–1094). As an example of this process, for the Physical Therapy Aide (L023A) clinical labor type, the BLS data reflected a median hourly wage rate of $12.98, which we multiplied by the 1.296 benefits modifier and then divided by 60 minutes to arrive at the finalized per-minute rate of $0.28.

After considering the comments on our CY 2022 proposals, we agreed with commenters that the use of a multi-year transition would help smooth out the changes in payment resulting from the clinical labor pricing update, avoiding potentially disruptive changes in payment for affected interested parties, and promoting payment stability from year-to-year. We believed it would be appropriate to use a 4-year transition, as we have for several other broad-based updates or methodological changes. While we recognized that using a 4-year transition to implement the update means that we will continue to rely in part on outdated data for clinical labor pricing until the change is fully completed in CY 2025, we agreed with the commenters that these significant updates to PE valuation should be implemented in the same way, and for the same reasons, as for other major updates to pricing such as the recent supply and equipment update. Therefore, we finalized the clinical labor pricing update implementation over 4 years to transition from current prices to the final updated prices in CY 2025. We finalized the implementation of this pricing transition over 4 years, such that one-quarter of the difference between the current price and the fully phased-in price is implemented for CY 2022, one-third of the difference between the CY 2022 price and the final price is implemented for CY 2023, and one-half of the difference between the CY 2023 price and the final price is implemented for CY 2024, with the new direct PE prices fully implemented for CY 2025. (86 FR 65025) An example of the transition from the current to the fully-implemented new pricing that we finalized in the CY 2022 PFS final rule is provided in Table 7.

TABLE 7: Example of Clinical Labor Pricing Transition

Current Price	$1.00	
Final Price	$2.00	
Year 1 (CY 2022) Price	$1.25	1/4 difference between $1.00 and $2.00
Year 2 (CY 2023) Price	$1.50	1/3 difference between $1.25 and $2.00
Year 3 (CY 2024) Price	$1.75	1/2 difference between $1.50 and $2.00
Final (CY 2025) Price	$2.00	

(1) CY 2023 Clinical Labor Pricing Updates

For CY 2023, we received information from one interested party regarding the pricing of the Histotechnologist (L037B) clinical labor type. The interested party provided data from the 2019 Wage Survey of Medical Laboratories which supported an increase in the per-minute rate from the $0.55 finalized in the CY 2022 PFS final rule to $0.64. This rate of $0.64 for the L037B clinical labor type is a close match to the online salary data that we had for the Histotechnologist and matches the $0.64 rate that we initially proposed for L037B in the CY 2022 PFS proposed rule. Based on the wage data provided by the commenter, we proposed this $0.64 rate for the L037B clinical labor type for CY 2023; we also proposed a slight increase in the pricing for the Lab Tech/Histotechnologist (L035A) clinical labor type from $0.55 to $0.60 as it is a blend of the wage rate for the Lab Technician (L033A) and Histotechnologist clinical labor types. We also proposed the same increase to $0.60 for the Angio Technician (L041A) clinical labor type, as we previously established a policy in the CY 2022 PFS final rule that the pricing for the L041A clinical labor type would match the rate for the L035A clinical labor type (86 FR 65032).

Based on comments received on the CY 2023 proposed rule, we finalized a change in the descriptive text of the L041A clinical labor type from ''Angio Technician'' to ''Vascular Interventional Technologist''. We also finalized an update in the pricing of three clinical labor types: from $0.60 to $0.84 for the Vascular Interventional Technologist (L041A), from $0.63 to $0.79 for the Mammography Technologist (L043A), and from $0.76 to $0.78 for the CT Technologist (L046A) based on submitted wage data from the 2022 Radiologic Technologist Wage and Salary Survey (87 FR 69422 through 69425).

(2) CY 2024 Clinical Labor Pricing Updates

We did not receive new wage data or other additional information for use in clinical labor pricing from interested parties prior to the publication of the CY 2024 PFS proposed rule. Therefore, our proposed clinical labor pricing for CY 2024 was based on the clinical labor pricing that we finalized in the CY 2023 PFS final rule, incremented an additional step for Year 3 of the update. Based on comments received on the CY 2024 proposed rule, we finalized an update in the clinical labor pricing of the cytotechnologist (L045A) clinical labor type from $0.76 to $0.85 based on submitted data from the 2021 American Society of Clinical Pathologists (ASCP) Wage Survey of Medical Laboratories (88 FR 78838).

(3) CY 2025 Clinical Labor Pricing Update Proposals

We did not receive new wage data or other additional information for use in clinical labor pricing from interested parties prior to the publication of the CY 2025 PFS proposed rule. Therefore, our proposed clinical labor pricing for CY 2025 in Table 8 is based on the clinical labor pricing that we finalized in the CY 2024 PFS final rule, incremented an additional step for the final Year 4 of the update:

TABLE 8: CY 2025 Clinical Labor Pricing

Labor Code	Labor Description	Source	CY 2021 Rate Per Minute	Final Y4 Rate Per Minute	Total % Change
L023A	Physical Therapy Aide	BLS 31-2022	0.23	0.28	22%
L026A	Medical/Technical Assistant	BLS 31-9092	0.26	0.36	38%
L030A	Lab Tech/MTA	L033A, L026A	0.30	0.46	53%
L032B	EEG Technician	BLS 29-2098	0.32	0.44	38%
L033A	Lab Technician	BLS 29-2010	0.33	0.55	67%
L033B	Optician/COMT	BLS 29-2081, BLS 29-2057	0.33	0.39	18%
L035A	Lab Tech/Histotechnologist	L033A, L037B	0.35	0.60	70%
L037A	Electrodiagnostic Technologist	BLS 29-2098	0.37	0.44	19%
L037B	Histotechnologist	BLS 29-2010	0.37	0.64	73%
L037C	Orthoptist	BLS 29-1141	0.37	0.76	105%
L037D	RN/LPN/MTA	L051A, BLS 29-2061, L026A	0.37	0.54	46%
L037E	Child Life Specialist	BLS 21-1021	0.37	0.49	32%
L038A	COMT/COT/RN/CST	BLS 29-2057, BLS 29-2055, L051A, BLS 19-4010	0.38	0.52	37%
L038B	Cardiovascular Technician	BLS 29-2031	0.38	0.60	58%
L038C	Medical Photographer	BLS 29-2050	0.38	0.38	0%
L039A	Certified Retinal Angiographer	BLS 29-9000	0.39	0.52	33%
L039B	Physical Therapy Assistant	BLS 31-2021	0.39	0.61	56%
L039C	Psychometrist	BLS 21-1029	0.39	0.64	62%
L041A	Vascular Interventional Technologist	ASRT Wage Data	0.41	0.84	104%
L041B	Radiologic Technologist	BLS 29-2034	0.41	0.63	54%
L041C	Second Radiologic Technologist for Vertebroplasty	BLS 29-2034	0.41	0.63	54%
L042A	RN/LPN	L051A, BLS 29-2061	0.42	0.63	50%
L042B	Respiratory Therapist	BLS 29-1126	0.42	0.64	52%
L043A	Mammography Technologist	ASRT Wage Data	0.43	0.79	84%
L045A	Cytotechnologist	BLS 29-9092	0.45	0.85	89%
L045B	Electron Microscopy Technologist	BLS 29-1124	0.45	0.89	98%
L045C	CORF social worker/psychologist	BLS 21-1022, BLS 19-3031	0.45	0.70	56%
L046A	CT Technologist*	ASRT Wage Data	0.46	0.78	70%
L047A	MRI Technologist	BLS 29-2035	0.47	0.76	62%
L047B	REEGT (Electroencephalographic Tech)	BLS 29-2035	0.47	0.76	62%
L047C	RN/Respiratory Therapist	L051A, L042B	0.47	0.70	49%
L047D	RN/Registered Dietician	L051A, BLS 29-1031	0.47	0.70	49%
L049A	Nuclear Medicine Technologist	BLS 29-2033	0.62	0.81	32%
L050A	Cardiac Sonographer	BLS 29-2032	0.50	0.77	54%
L050B	Diagnostic Medical Sonographer	BLS 29-2032	0.50	0.77	54%
L050C	Radiation Therapist	BLS 29-1124	0.50	0.89	78%
L050D	Second Radiation Therapist for IMRT	BLS 29-1124	0.50	0.89	78%
L051A	RN	BLS 29-1141	0.51	0.76	49%
L051B	RN/Diagnostic Medical Sonographer	L051A, BLS 29-2032	0.51	0.77	51%
L051C	RN/CORF	L051A	0.51	0.76	49%
L052A	Audiologist	BLS 29-1181	0.52	0.81	56%
L053A	RN/Speech Pathologist	L051A, L055A	0.53	0.79	49%
L054A	Vascular Technologist	BLS 19-1040	0.54	0.91	69%
L055A	Speech Pathologist	BLS 29-1127	0.55	0.82	49%
L056A	RN/OCN	BLS 29-2033	0.79	0.81	3%
L057A	Genetics Counselor	BLS 29-9092	0.57	0.85	50%

Labor Code	Labor Description	Source	CY 2021 Rate Per Minute	Final Y4 Rate Per Minute	Total % Change
L057B	Behavioral Health Care Manager	BLS 21-1018	0.57	0.57	0%
L063A	Medical Dosimetrist	BLS 19-1040	0.63	0.91	44%
L107A	Medical Dosimetrist/Medical Physicist	L063A, L152A	1.08	1.52	41%
L152A	Medical Physicist	AAPM Wage Data	1.52	2.14	41%

As was the case for the market-based supply and equipment pricing update, the clinical labor rates remained open for public comment during the 60-day comment period for the CY 2025 PFS proposed rule. We stated that we expect to set the updated clinical labor rates for CY 2025 in this final rule. We updated the pricing of some clinical labor types in the CY 2022, CY 2023, and CY 2024 PFS final rules in response to information provided by commenters. For the full discussion of the clinical labor pricing update, we directed readers to the CY 2022 PFS final rule (86 FR 65020 through 65037).

Comment: Several commenters urged CMS to freeze the final year of implementation of the clinical labor policy in CY 2025 to avoid further redistributions and instability in the PFS. Commenters asked CMS to hold harmless the specialties that were most affected by the clinical labor pricing update and not move forward with the final year of the phase-in. One commenter disagreed with the finalized BLS 2021 benefit multiplier of 1.296 and stated that CMS should use the originally proposed 1.366 benefits multiplier instead.

Response: We finalized the use of a 4-year transition in the CY 2022 PFS final rule to help smooth out the changes in payment resulting from the clinical labor pricing update, avoiding potentially disruptive changes in payment for affected stakeholders, and promoting payment stability from year-to-year. As we stated in the CY 2022 PFS final rule, under section 1848 of the Act, we are required to base payment for services under the PFS on relative resource costs. To accomplish that, it is necessary periodically to update the information on which we base relative values. We believe, and commenters overwhelmingly agreed, that the BLS wage data is the best source to use for clinical labor pricing, and commenters did not identify alternative sources of data that could be used to update pricing. Although we recognize that payment for some services will be reduced as a result of the pricing update due to the BN requirements of the PFS, we do not believe that this is a reason to refrain from updating clinical labor pricing to reflect changes in resource costs over time as suggested by some commenters. The PFS is a resource-based relative value payment system that necessarily relies on accuracy in the pricing of resource inputs; continuing to use clinical labor cost data that are nearly two decades old would maintain distortions in relativity that undervalue many services which involve a higher proportion of clinical labor. As noted above, we also finalized the implementation of the pricing update through a 4-year transition to help address the concerns of the commenters about stabilizing RVUs and reducing large fluctuations in year-to-year payments. We direct readers to this prior discussion in the CY 2022 PFS final rule at 86 FR 65025.

Comment: Several commenters stated that the ongoing clinical labor pricing update was having the effect of driving patient care from the non-facility to the facility setting. The commenters stated that access to care for beneficiaries is increasingly constrained for many essential services and listed a series of procedures most impacted, such as hemorrhagic and ischemic strokes, maternal health, PAD, dialysis access, limb salvage services, and CPT code 93229 (*External mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; technical support for connection and patient instructions for use, attended surveillance, analysis and transmission of daily and emergent data reports as prescribed by a physician or other qualified health care professional*).

Response: We previously addressed these concerns about site of service and patient access to care when we finalized the clinical labor pricing update; we direct readers to this prior discussion in the CY 2022 PFS final rule at 86 FR 65025.

Comment: A commenter stated that, to promote predictability and stability in physician payments and mitigate the financial impacts of significant fluctuations in physician payments that might accompany the clinical labor pricing update, CMS should consider using a threshold to limit the level of reductions in payments for specific services that would occur in a single year. The commenter stated that CMS consider implementing a cap on payment cuts to individual codes in a single year.

Response: We agree with the commenter on the importance of avoiding potentially disruptive changes in payment for affected interested parties and the need to promote payment stability from year-to-year. This is why we finalized the use of a multi-year transition for the clinical labor update in the CY 2022 PFS final rule to help smooth out the changes in payment resulting from the updated data (86 FR 65024). We also note for the commenter that section 1848(c)(7) of the Act, as added by section 220(e) of the PAMA, specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased-in over a 2-year period. For additional information regarding the phase-in of significant RVU reductions, we direct readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70929).

Comment: A commenter thanked CMS for raising the clinical labor rate paid to nurses, however the commenter stated that this was only one step and nurses are consistently undervalued across all settings. The commenter stated that nursing care should be valued more highly than it is today and that nursing care is still undervalued in today's healthcare system. The commenter stated that RNs are mentioned in ten separate rows on the clinical labor pricing table, with the rate per minute for nurses varying from $0.52 per minute to $0.81 per minute, which brings uncertainty to the fee schedule as the value of the nurse fluctuates depending on the situation.

Response: We note for the commenter that the proposed CY 2025 clinical labor rate for the RN (L051A) type is $0.76,

which is based upon Bureau of Labor Statistics wage data as outlined in our methodology above. We believe that the BLS wage data continues to be the most accurate source to use as a basis for clinical labor pricing, and we did not receive any alternate wage data from commenters to suggest alternate RN pricing. With regards to the multiple listing of RNs on the table, there are a number of ''blended'' clinical labor types which often include RNs as one of the staffing types being averaged together. Blended clinical labor types have been a historical part of PFS services since we adopted the current PE methodology. We have done our best to identify which staffing types, including RNs, are included in these blends along with how they are averaged together to arrive at the final clinical labor pricing. We also note for the commenter that the pricing for the RN (L051A) clinical labor type is drawn directly from BLS wage data and the inclusion of RNs in other ''blended'' clinical labor types has no effect on the pricing of the L051A category itself.

Comment: A commenter stated that CMS must reevaluate the pricing for the Behavioral Health Care Manager (L057B) clinical labor type. The commenter noted that CMS maintained the current clinical labor pricing for the Behavioral Health Care Manager clinical labor type rather than update it in the CY 2022 PFS final rule because, although the BLS data reflected a decreased clinical labor rate for the Behavioral Health Care Manager labor type, CMS did not believe that the typical wages had decreased for this clinical labor type given that every other clinical labor type had increased (86 FR 65022). The commenter stated that growth for Behavioral Health Care Managers has increased on a similar trajectory as other clinical labor types and has in fact outpaced wage growth for other types of behavioral health providers. The commenter stated that BLS data indicates that salaries for clinicians who work as Behavioral Health Care Managers have increased at a rate of approximately 5 percent per year between 2021 and 2023, outpacing the wage increases for other types of related practitioners, such as psychiatrists, nurse practitioners, and physician assistants, which increased at rates below 4 percent per year. The commenter stated that Behavioral Health Care Manager wages increased at a pace that is consistent with the increase in wages for other clinical labor types (such as registered nurses, licensed practical nurses, and medical assistants), increasing by 27.2 percent from 2017 to 2023, compared with a 30.2 percent increase among other clinical labor types during the same period. The commenter requested that rather than holding the clinical labor rate for Behavioral Health Care Managers steady, the rate should be increased at a rate similar to the costs associated with other clinical labor types.

Response: We appreciate the additional information provided by the commenter with regards to the Behavioral Health Care Manager (L057B) clinical labor type. However, we continue to believe that the proposed pricing for this clinical labor type remains accurate, as it was based directly on BLS wage data (BLS category 21–1018: Substance Abuse, Behavioral Disorder, and Mental Health Counselors) rather than relying on a crosswalk or third party information. Although we understand that it appears unfair that the L057B clinical labor type maintained the same pricing while all of the other clinical labor types increased in valuation, this was due to the fact that the L057B type had been valued much more recently than the other clinical labor types. The L057B clinical labor type was added to the PFS for the CY 2017 final rule and therefore was priced at $0.57 per minute based on then-current rates for genetic counselors (81 FR 80350). Almost all of the other clinical labor types were last valued based on 2002 wage data, which caused the L057B clinical labor type to be artificially inflated in pricing relative to the other clinical labor types. For example, before the current clinical labor pricing update, Behavioral Health Care Managers were priced at $0.57 per minute, higher than the $0.51 per minute valuation of the Registered Nurse (L051A) clinical labor type, which clearly did not reflect market-based salaries. The commenter included a table in their submission indicating that salaries for Registered Nurses are approximately 40 higher than salaries for Behavioral Health Care Managers, which matches our current proposed pricing for these clinical labor types ($0.76 and $0.57 respectively). We believe that the current clinical labor pricing update has brought valuation of the L057B clinical labor type into relativity with the other clinical labor types by virtue of valuing all of them at the same time.

After consideration of the comments, we did not receive any new wage data for use in clinical labor pricing. Therefore, we are finalizing the clinical labor prices as proposed in Table 8 without refinement.

d. Technical Corrections to Direct PE Input Database and Supporting Files

We received the following comments on technical corrections to the direct PE input database and supporting files:

Comment: Several commenters, including the RUC, requested that CMS separately identify and pay for high-cost disposable supplies. Commenters highlighted the outsized impact that high-cost disposable supplies have within the current practice expense RVU methodology, which not only accounts for a large amount of direct practice expense for these supplies but also allocates a large amount of indirect practice expense into the PE RVU for the procedure codes that include these supplies. Commenters stated that if high-cost supplies were paid separately with appropriate HCPCS codes, the disproportionate indirect expense would no longer be associated with that service, with the result that indirect PE RVUs would be redistributed throughout the specialty practice expense pool and the practice expense for all other services. Commenters requested that CMS separately identify and pay for high-cost disposable supplies priced more than $500 using appropriate Healthcare Common Procedure Coding System (HCPCS) codes. Commenters provided several examples from the proposed rule where they stated this policy would be appropriate, including new HCPCS code GMEM1, the potential for a new add-on service based on tympanostomy CPT code 69433, and the price of the SD248 supply (human amniotic membrane allograft mounted on a non-absorbable self-retaining ring). In each case, commenters stated that these issues would be better addressed through the creation of standalone Q codes separately paid from the PFS so those prices could be monitored and, when appropriate, updated annually.

Response: We have received a number of prior requests from interested parties, including the RUC, to implement these separately billable alpha-numeric Level II HCPCS codes to allow practitioners to be paid the cost of high cost disposable supplies per patient encounter instead of per CPT code. We stated at the time, and we continue to believe, that this option presents a series of potential problems that we have addressed previously in the context of the broader challenges regarding our ability to price high cost disposable supply items. We are therefore not finalizing the implementation of standalone Level II HCPCS codes for high cost disposable supplies at this time. For further discussion of this issue, we direct the

reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251).

We are aware of the issues with the current PE methodology caused by very expensive supply and equipment items, and this is a subject that we may consider for future rulemaking alongside other updates to the PE methodology. We appreciate the continued feedback from commenters as we consider potential approaches to this complicated topic.

Comment: A commenter echoed the request from other interested parties that CMS separately identify and pay for high-cost disposable supplies priced more than $500. This commenter stated that they believed these services should be paid outside of the PFS, since PFS budget neutrality rules compound the challenge of appropriately valuing high-cost technology inputs without underpaying for physician professional services. The commenter recommended that CMS designate such services as office based procedures under a new place of service designation and establish payment under the outpatient prospective payment system (OPPS)/ambulatory surgical center rulemaking instead of the PFS.

Response: We appreciate the feedback from the commenter on potential methods for implementing separate payment for high-cost disposable supplies. Although we have no current plans for such a policy, we will take under consideration for potential future rulemaking.

Comment: Several commenters asked for clarification regarding the proposed PE RVUs for HCPCS code G2251. Commenters stated that the proposed non-facility and facility PE RVUs for HCPCS code G2251 showed a significant reduction from 0.15 to 0.00 despite no mention of a policy proposal for this service. Commenters stated that they wanted to bring this valuation to the attention of CMS and sought clarification on whether this was a data entry error or an intentional change related to the proposed Advanced Primary Care Management (APCM) codes.

Response: We appreciate the commenters for bringing this issue to our attention, and we clarify that the published 0.00 PE RVUs for HCPCS code G2251 was an unintended technical error. When we investigated this issue, we found that it was due to a previously finalized crosswalk: we finalized a policy in the CY 2021 PFS final rule to value HCPCS code G2251 identically to HCPCS code G2012 (85 FR 84532). However, we also proposed to delete HCPCS code G2012 for CY 2025 which inadvertently resulted in HCPCS code G2251 crosswalking over a zero value for its PE RVUs. Since HCPCS code G2012 will no longer exist in CY 2025, we are finalizing the removal of this crosswalk for HCPCS code G2251 which should correct this error and restore its PE RVUs.

Comment: A commenter requested that CMS consider changing the assistant at surgery payment policy indicator to ''2'' for CPT codes 37211, 37212, 37242, and 37197 to allow for the use of assistant surgeons. The commenter stated that these transcatheter procedures involve the infusion of thrombolytic therapy, precise embolization of arteries, and foreign body retrieval, which have the potential to be extremely technical in nature and may require a highly functional team, including an assistant surgeon in select cases. The commenter stated that select cases that are particularly challenging may necessitate the skills of two operators to perform distinct parts of the navigation and procedure for the precise and safe delivery of thrombolytic therapy and vascular embolization devices, as well as the safe and effective retrieval of foreign bodies. The commenter stated that changes to these payment policy indicators will ensure patient procedural safety and bring policy alignment to these complex transcatheter procedures.

Response: The four CPT codes identified by the commenter each currently have an assistant at surgery payment policy of ''1'' under which an assistant at surgery may not be paid. After reviewing the four CPT codes identified by the commenter, we agree that an assistant at surgery may be medically necessary in some particularly challenging cases. However, we believe that it would be more accurate to finalize an assistant as surgery payment policy of ''0'' rather than the requested ''2'', which establishes that the payment restriction for an assistant at surgery applies to this procedure only if supporting documentation is submitted to establish medical necessity. We believe that this will ensure that an assistant at surgery will only be employed in the particularly challenging and medically necessary cases described by the commenter. Therefore we are finalizing an assistant at surgery payment policy indicator of ''0'' for CPT codes 37211, 37212, 37242, and 37197.

Comment: A commenter stated that the direct PE inputs for CPT code 65426 do not contain a supply item for human amniotic membrane allograft product (the SD247 supply). The commenter stated that as a result, the practice expense valuation does not account for the significant cost of this item when it is purchased and used. The commenter stated that while they are working with stakeholders to submit a potentially misvalued CPT code request for review in future rulemaking, they also wanted to note this issue and concern within the public comment period for this CY 2025 PFS rule.

Response: We appreciate the feedback from the commenter on this topic, and we would encourage them to continue pursuing the potentially misvalued code process if they believe that CPT code 65426 does not properly capture its typical direct PE inputs. We note the commenter did not present data indicating that the use of the expensive $835 SD247 supply is typical in CPT code 65426. We are not finalizing any changes to the code at this time.

5. Development of Strategies for Updates To Practice Expense Data Collection and Methodology

a. Background

The AMA PPIS was first introduced in 2007 as a means to collect comprehensive and reliable data on the direct and indirect PEs incurred by physicians (72 FR 66222). In considering the use of PPIS data, the goal was to improve the accuracy and consistency of PE RVUs used in the PFS. The data collection process included a stratified random sample of physicians across various specialties, and the survey was administered between August 2007 and March 2008. Data points from that period of time are integrated into PFS calculations today. In the CY 2009 PFS proposed rule (73 FR 38507 through 3850), we discussed the indirect PE methodology that used data from the AMA's survey that predated the PPIS. In CY 2010 PFS rulemaking, we announced our intent to incorporate the AMA PPIS data into the PFS ratesetting process, which would first affect the PE RVU. In the CY 2010 PFS proposed rule, we outlined a 4-year transition period, during which we would phase in the AMA PPIS data, replacing the existing PE data sources (74 FR 33554). We also explained that our proposals intended to update survey data only (74 FR 33530 through 33531). In our CY 2010 final rule, we finalized our proposal, with minor adjustments based on public comments (74 FR 61749 through 61750). We responded to the comments we received about the transition to using the PPIS to inform indirect PE allocations (74 FR 61750). In the responses, we acknowledged concerns about potential gaps in the

data, which could impact the allocation of indirect PE for certain physician specialties and suppliers, which are issues that remain important today. The CY 2010 PFS final rule explains that section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113, November 29, 1999) (BBRA) directed the Secretary to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. BBRA required us to establish criteria for accepting supplemental survey data. Since the supplemental surveys were specific to individual specialties and not part of a comprehensive multispecialty survey, we had required that certain precision levels be met in order to ensure that the supplemental data was sufficiently valid, and acceptable for use in the development of the PE RVUs. At the time, our rationale included the assumption that because the PPIS is a contemporaneous, consistently collected, and comprehensive multispecialty survey, we do not believe similar precision requirements are necessary, and we did not propose to establish them for the use of the PPIS data (74 FR 61742). We noted potential gaps in the data, which could impact the allocation of indirect PE for certain physician and suppliers. The CY 2010 final rule adopted the proposal, with minor adjustments based on public comments, and explained that these minor adjustments were in part due to non-response bias that results when the characteristics of survey respondents differ in meaningful ways, such as in the mix of practices sizes, from the general population (74 FR 61749 through 61750).

Throughout the 4-year transition period, from CY 2010 to CY 2013, we gradually incorporated the AMA PPIS data into the PFS rates, replacing the previous data sources. The process involved addressing concerns and making adjustments as necessary, such as refining the PFS ratesetting methodology in consideration of interested party feedback. For background on the refinements that we considered after the transition began, we referred readers to discussions in the CY 2011 through 2014 final rules (75 FR 73178 through 73179; 76 FR 73033 through 73034; 77 FR 98892; 78 FR 74272 through 74276).

In the CY 2011 PFS proposed rule, we requested comments on the methodology for calculating indirect PE RVUs, explicitly seeking input on using survey data, allocation methods, and potential improvements (75 FR 40050). In our CY 2011 PFS final rule, we addressed comments regarding the methodology for indirect PE calculations, focusing on using survey data, allocation methods, and potential improvements (75 FR 73178 through 73179). We recognized some limitations of the current PFS ratesetting methodology but maintained that the approach was the most appropriate at the time. In the CY 2012 PFS final rule, we responded to comments related to indirect PE methodology, including concerns about allocating indirect PE to specific services and using the AMA PPIS data for certain specialties (76 FR 73033 through 73034). We indicated that CMS would continue to review and refine the methodology and work with interested parties to address their concerns. In the CY PFS 2014 final rule, we responded to comments about fully implementing the AMA PPIS data. By 2014, the AMA PPIS data had been fully integrated into the PFS, serving as the primary source for determining indirect PE inputs (78 FR 74235). We continued to review data and the PE methodology annually, considering interested party feedback and evaluating the need for updates or refinements to ensure the accuracy and relevance of PE RVUs (79 FR 67548). In the years following the full implementation of the AMA PPIS data, we further engaged with interested parties, thought leaders and subject matter experts to improve our PE inputs' accuracy and reliability. For further background, we referred readers to our discussions in final rules for CY 2016 through 2022 (80 FR 70892; 81 FR 80175; 82 FR 52980 through 52981; 83 FR 59455 through 59456; 84 FR 62572; 85 FR 84476 through 84478; 86 FR 62572).

In our CY 2023 PFS final rule, we issued an RFI to solicit public comment on strategies to update PE data collection and methodology (87 FR 69429 through 69432). We solicited comments on current and evolving trends in health care business arrangements, the use of technology, or similar topics that might affect or factor into PE calculations. We reminded readers that we have worked with interested parties and CMS contractors for years to study the landscape and identify possible strategies to reshape the PE portion of physician payments. The fundamental issues are clear but thought leaders and subject matter experts have advocated for more than one tenable approach to updating our PE methodology.

As described in previous rulemaking, we have continued interest in developing a roadmap for updates to our PE methodology that account for changes in the health care landscape. Of various considerations necessary to form a roadmap for updates, we reiterate that allocations of indirect PE continue to present a wide range of challenges and opportunities. As discussed in multiple cycles of previous rulemaking, our PE methodology relies on AMA PPIS data, which may represent the best aggregated available source of information at this time. However, we acknowledge the limitations and challenges interested parties have raised about using the current data for indirect PE allocations, which we have also examined in related ongoing research. We noted in our CY 2023 and CY 2024 rules that there are several competing concerns that CMS must take into account when considering updated data sources, which also should support and enable ongoing refinements to our PE methodology.

b. Preparation for Incorporating Refreshed Data and Request for Information on Timing To Effectuate Routine Updates

In the CY 2024 PFS proposed rule, we continued to encourage interested parties to provide feedback and suggestions to CMS that give an evidentiary basis to shape optimal PE data collection and methodological adjustments over time. Considering our ratesetting methodology and prior experiences implementing new data, we issued a follow-up from the CY 2023 comment solicitation for general information. We solicited comments from interested parties on strategies to incorporate information that could address known challenges we experienced in implementing the initial AMA PPIS data. Our current methodology relies on the AMA PPIS data, legislatively mandated supplemental data sources (for, example, we use supplemental survey data collected in 2003, as required by section 1848(c)(2)(H)(i) of the Act to set rates for oncology and hematology specialties), and in some cases crosswalks to allocate indirect PE as necessary for certain specialties and provider types. We also sought to understand whether, upon completion of the updated PPIS data collection effort by the AMA, contingencies or alternatives may be necessary and available to address the lack of data availability or response rates for a given specialty, set of specialties, or specific service suppliers who are paid under the PFS.

In response to last year's RFI, most commenters stated that CMS should

defer significant changes until the AMA PPIS results become available. For further background, refer to 88 FR 78841 to 78843. In responding to our RFI, the AMA RUC provided a set of responses, which many other commenters repeated in their separate, individual comments. In summary, the AMA RUC letter submission from CY 2024 suggested that CMS should not consider further changes until PPIS data collection and analysis is complete. Overall, the AMA comments generally do not support any change to the methodology and stated that CMS should wait to consider any further changes until PPIS updates become available. Further, we noted that through its contractor, Mathematica, the AMA secured an endorsement for the PPIS updates from each State society, national medical specialty society, and others prior to fielding the survey (88 FR 78843). Refer to the AMA's summary of the PPIS, available at *https://www.ama-assn.org/system/files/physician-practice-information-survey-summary.pdf*. The AMA expects analysis, reporting, and documentation to complete by the end of CY 2024, and the AMA would share data with CMS when results become available.

As we stated in the proposed rule, we believe the AMA's approach may possibly mitigate nonresponse bias, which created challenges using previous PPIS data. However, we remain uncertain about whether endorsements prior to fielding the survey may inject other types of bias in the validity and reliability of the information collected. We believe it remains important to reflect on the challenges with our current methodology, and to continue to consider alternatives that improve the stability and accuracy of our overall PE methodology. We reiterate our discussion summarizing the responses to previous years' RFIs in each of the CY 2023 and CY 2024 final rules (refer to 87 FR 69429 through 69432 and 88 FR 78841 to 78843). We have started new work under contract with the RAND Corporation to analyze and develop alternative methods for measuring PE and related inputs for implementation of updates to payment under the PFS. We will continue to study possible alternatives, and would include analysis of updated PPIS data, as part of our ongoing work. In the meantime, we requested general information from the public on ways that CMS may continue work to improve the stability and predictability of any future updates. Specifically, we requested feedback from interested parties regarding scheduled, recurring updates to PE inputs for supply and equipment costs.

We stated that we believe that establishing a cycle of timing to update supply and equipment cost inputs every 4 years may be one means of advancing shared goals of stability and predictability. CMS would collect available data, including, but not limited to, submissions and independent third-party data sources, and propose a phase-in period over the following 4 years. The phase-in approach maps to our experience with previous updates. Additionally, we stated that more frequent updates may have the unintended consequence of disproportionate effects of various supplies and equipment that have newly updated costs.

Further, we solicited feedback on possible mechanisms to establish a balance whereby our methodology would account for inflation and deflation in supply and equipment costs. We remain uncertain how economies of scale (meaning a general principle that cost per unit of production decreases as the scale of production increases) should or should not factor into future adjustments to our methodology. There remains a diversity of perspectives among interested parties about such effects. We sought information about specific mechanisms that may be appropriate, and in particular, approaches that would leverage verifiable and independent, third-party data that is not managed or controlled by active market participants.

Comment: Numerous commenters expressed concerns regarding CMS's current PE methodology, particularly highlighting its inadequacies in accommodating modern medical technologies and services, such as Software as a Medical Device (SaMD) and artificial intelligence (AI). These commenters stated that there is a need for CMS to revise its PE methodology to better reflect the actual costs of running medical practices today, which includes more frequent updates and the incorporation of direct costs for software and innovative technologies. Many also supported the AMA's ongoing Physician Practice Information Survey (PPIS) to ensure updated and accurate data informs PE calculations. Commenters urged CMS to collaborate closely with medical associations and incorporate broad stakeholder feedback without increasing reporting burdens, particularly for smaller practices.

Response: We thank commenters for their feedback and may consider this information for future rulemaking.

C. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the relative value units (RVUs) established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As outlined in section II.E. of this final rule, under Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the American Medical Association (AMA) Resource-Based Relative Value Scale (RBRVS) Update Committee (RUC), MedPAC, and other interested parties. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by statute. We may also consider analyses of work time, work RVUs, or direct practice expense (PE) inputs using other data sources, such as the Veterans Health Administration (VHA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other interested parties such as from the general medical-related community and the public. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of

consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (*https://www.medpac.gov/document/report-to-the-congress-2006-medicare-payment-policy/*), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, ''When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.'' We believe services can also become overvalued when PE costs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases, or PE costs rise.

As MedPAC noted in its March 2009 Report to Congress (*https://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf*), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time-period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using current processes for consideration of coding changes), which may involve consolidating individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period (76 FR 73026, 73058 through 73059), other individuals and groups submit nominations for review of potentially misvalued codes as well. Individuals and groups may submit codes for review under the potentially misvalued codes initiative to CMS in one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS emailbox at *MedicarePhysicianFeeSchedule@cms.hhs.gov*, with the phrase ''Potentially Misvalued Codes'' and the referencing CPT code number(s) and/or the CPT descriptor(s) in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare & Medicaid Services, Mail Stop: C4–01–26, 7500 Security Blvd., Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled ''Attention: Division of Practitioner Services, Potentially Misvalued Codes.'' Nominations for consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the same CY 2012 PFS final rule with comment period, we finalized our policy to consolidate the review of physician work and PE at the same time and established a process for the annual public nomination of potentially misvalued services.

In the CY 2013 PFS final rule with comment period (77 FR 68892, 68896 through 68897), we built upon the work

we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called ''Harvard-valued codes'' [1]). In the CY 2019 PFS proposed rule (73 FR 38589), we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review of Work RVUs proposed rule (76 FR 32410, 32419), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least $10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time). We continue each year to consider and finalize a list of potentially misvalued codes that have or will be reviewed and revised as appropriate in future rulemaking.

3. CY 2025 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67548, 67606 through 67608), we modified this process whereby the public and interested parties may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In each year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

In each proposed rule, we seek nominations from the public and from interested parties of codes that they believe we should consider as potentially misvalued. We receive public nominations for potentially misvalued codes by February 10th and we display these nominations on our public website, where we include the submitter's name, their associated organization, and the submitted studies for full transparency. We sometimes receive submissions for specific, PE-related inputs for codes, and discuss these PE-related submissions, as necessary under the Determination of PE RVUs section of the rule. We summarize below this year's submissions under the potentially misvalued code initiative. For CY 2025, we received 5 nominations concerning various codes. The nominations are as follows:

(1) CPT Codes 22210, 22212, 22214, 22216

An interested party nominated CPT codes 22210 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; cervical*) (090 day global code), 22212 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; thoracic*) (090 day global code), 22214 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; lumbar*) (090 day global code), and 22216 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (List separately in addition to primary procedure)* (add-on ZZZ) as potentially misvalued for six reasons: (1) incorrect global period; (2) incorrect inpatient days; (3) incorrect intraservice work description; (4) overvalued intraservice times; (5) changed surgical practice; and (6) incorrect use of posterior osteotomy codes. The posterior osteotomy codes were last valued by the RUC in 1995. Currently, CPT code 22210 has a work RVU of 25.38, CPT code 22212 has a work RVU of 20.99, CPT code 22214 has a work RVU of 21.02, and CPT code 22216 has a work RVU of 6.03. CPT codes 22210, 22212, and 22214 have 7 inpatient days each, while CPT code 22216 has 0 inpatient days, and it is an add-on code.

First, the nominator stated that these posterior osteotomies are always performed as an optional addition to a spinal fusion and should be valued as add-on services and not as 90-day global services. We noted in the proposed rule that no references were provided to support the statement that the service is always performed as an optional addition to a spinal fusion. Second, the nominator explained that the average hospital stay for scoliosis fusion with osteotomy is 4 to 5 days according to the current literature,[2] [3] [4] in contrast with the currently included 7 inpatient days. We noted in the proposed rule that the

[1] The research team and panels of experts at the Harvard School of Public Health developed the original work RVUs for most CPT codes, in a cooperative agreement with the Department of Health and Human Services (HHS). Experts from both inside and outside the Federal Government obtained input from numerous physician specialty groups. This input was incorporated into the initial PFS, which was implemented on January 1, 1992.

majority of the medical literature submitted by the nominator presented outcome information on adolescent patients, which may be different from the Medicare population. Furthermore, the nominator stated that the intraservice work description for CPT code 22216 describes removal of the pedicle, which is not a typical part of a Ponte/Schwab II osteotomy. Among the posterior osteotomy codes, only CPT code 22216 had vignettes and we do not have information to decide whether the code descriptor is correct. We stated that we believed this issue would benefit from further review by the medical community and welcomed comments and considerations, including from the AMA CPT.

The nominator also asserted that intraservice times were too high, particularly for these osteotomy services furnished with scoliosis fusion procedures. The nominator explained that a typical scoliosis fusion would be billed with an intraservice time of up to 840 minutes for pediatric scoliosis fusion and 915 minutes for adult cases. However, referencing current literature, they observed that a typical scoliosis fusion in a child requires approximately 278 minutes (243–296 minutes),[5] [6] [7] which contrasts significantly with the durations indicated for the current codes. The nominator provided no studies to support a typical scoliosis fusion time in adults. Drawing from the literature, the nominators assert that intraservice times are overvalued for these services and propose that these times should be adjusted to align more closely with average and/or typical surgery times.

The nominator further asserted that this code family is potentially misvalued because surgical practice for these procedures has evolved since 1995. Approximately 30 years ago, osteotomies were infrequently performed and usually reserved for addressing completely ankylosed or fused spinal segments.[8] However, according to the nominator, contemporary surgical techniques often involve posterior osteotomies to release multiple stiff vertebral segments, thereby enhancing coronal correction and reducing thoracic hypokyphosis. In addition to changes in surgical techniques over time, there are notable shifts in the trends regarding the utilization of osteotomies. For instance, between 2007 and 2015, the use of posterior osteotomies in scoliosis cases nearly doubled, increasing from 17 percent to 35 percent.[9] Additionally, 73 percent of patients undergoing scoliosis surgery received posterior osteotomies.[4] This information supports the nominator's assertion that there have been notable changes in the surgical practice for these codes over time.

Lastly, the nominator highlighted what they believe is incorrect usage of posterior osteotomy codes. They noted instances where facet/soft tissue releases, such as Schwab type I osteotomies, are inaccurately reported with these codes. According to the nominator, isolated partial facetectomy and soft tissue release are already included in spinal fusion procedures and should not be separately billed with an osteotomy code. Additionally, CMS in reviewing data for these services identified potential bundling of services within this code family. For instance, CPT code 22210 is frequently billed alongside CPT code 22600 (*Arthrodesis, posterior or posterolateral technique, single interspace; cervical below C2 segment*) (090-day global code), approximately 83 percent of the time. This indicates a common billing pattern, suggesting potential for coding revisions, including the consideration of consolidating individual services into bundled codes.

Overall, based on the six reasons provided by the nominator, along with the fact that these codes were last valued almost 30 years ago, and given the identified billing practices, we stated in the proposed rule that we concurred that CPT codes 22210, 22212, 22214, and 22216 were potentially misvalued. The nominator suggested two options to address this concern: (1) developing add-on codes to differentiate between the number of vertebral segments involved in the osteotomy procedure and whether it occurs in the cervical, thoracic, or lumbar regions; and (2) removing the current posterior osteotomy codes and incorporating osteotomies into new deformity fusion codes, both with and without osteotomy. We proposed to consider this code family as potentially misvalued and expressed appreciation for the detailed information submitted by the nominator with sufficient supporting evidence. We stated that we believed that this code family would benefit from a comprehensive review by the RUC, and we welcomed comments on a broader understanding of these codes. Additionally, we sought input on current standard billing practices. For example, information on whether the standard of practice has evolved over time, and if so, how it has evolved, could aid in identifying potential coding issues related to this matter.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters, including the AMA RUC, supported our proposal. The RUC stated that, since the osteotomy of the spine codes (CPT codes 22210, 22212, 22214, and 22216) were last reviewed in 1995, these codes may benefit from updated descriptions and consideration of bundling with related procedures. They suggested options such as developing add-on codes for segment-specific osteotomies or integrating these into new deformity fusion codes. They further stated they will place the nominated osteotomy codes (CPT codes 22210, 22212, 22214, and 22216) on the next Level of Interest (LOI) list for review at the January 2025 RUC meeting.

Response: We thank the commenters for their feedback.

Comment: A few commenters disagreed that the osteotomy of spine codes are potentially misvalued. The commenters stated that the procedures are primary interventions, not add-ons, and that the current global periods, inpatient days, and intraservice work descriptions accurately reflect the complexity of adult deformity surgery. They further stated that surgical techniques have not changed significantly and they believe that the codes are accurately valued and that altering them could disrupt coding practices and negatively impact patient care.

Response: While we acknowledge the comments asserting that CPT codes 22210, 22212, 22214 and 22216 are appropriately valued, we agree with the RUC that services such as those

described by the nominator would benefit from review by the AMA RUC. Therefore, we are finalizing our proposal to finalize CPT codes 22210, 22212, 22214 and 22216 as potentially misvalued.

(2) CPT Code 27279

CPT code 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) (090 day global code) has been re-nominated as potentially misvalued based on the absence of separate direct PE inputs for this 090 day global code in the nonfacility setting. Currently, CPT code 27279 is only priced under the PFS in the facility setting, but the nominator requested that we establish separate direct PE inputs for this service to value the service when performed in the nonfacility/office setting (for example, in an office-based lab). The nominator stated that establishing payment for direct PE inputs in the nonfacility/office setting would increase access to this service for Medicare patients.

We did not nominate CPT code 27279 as potentially misvalued in the CY 2024 PFS final rule, mainly due to a lack of consensus in the medical community on whether these services may be safely and effectively furnished in the nonfacility/office setting. In this year's submission, the nominator provided three post-market surveillance publications and two independent reviews of minimally invasive sacroiliac (SI) joint fusion procedures to support their assertion that this 90-day surgical service could be safely and effectively furnished in the nonfacility/office setting. Based on the studies, the nominator stated that the current medical literature provides evidence supporting the conclusion that percutaneous or minimally invasive SI joint arthrodesis (CPT code 27279) carries a complication rate that is acceptably low, comparable to other spinal procedures commonly performed in the office-based lab (OBL). For instance, the risk of major complications during lateral trans iliac (LTI) SI joint fusion (CPT code 27279) is lower than the risks associated with other OBL procedures. These include the risk of iliac perforation during angioplasty, the risk of death, myocardial infarction (MI), and stroke during diagnostic cardiac catheterization. The nominator did not reference literature regarding the rates of major complications for other OBL procedures in their submission.

Based on the information submitted, we recognized the possibility that CPT code 27279 may be potentially misvalued, given the nominator's assertion that its complication rate is acceptably low based on the five studies they submitted. The results of the studies may suggest that CPT code 27279 can be safely performed in the office-based lab setting, as asserted by the nominator, with a relatively low complication rate. However, upon reviewing the submitted information, we also noted that these studies collectively report heterogeneous safety outcomes. The large variabilities in safety outcomes reported in the studies, coupled with several unreported outcomes, may indicate that we have little knowledge about the effect of the service on safety outcomes, prompting the need for further investigation. Therefore, we did not propose to consider this code as potentially misvalued, and we instead sought comments and additional studies from the broader medical community regarding whether this code should be priced under the PFS for the nonfacility/office setting.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters stated that they opposed creating a nonfacility/office payment rate for CPT code 27279 due to patient safety concerns regarding this service being performed in the office setting. These commenters agreed with CMS on the lack of sufficient safety evidence for CPT code 27279 in nonfacility settings and recommended to maintain the current policy with respect to CPT code 27279 and not extend its use to nonfacility settings. They expressed that they were unaware that the service described by CPT code 27279 was being performed in nonfacility settings and stated their belief that it would be challenging for a medical practice to consistently meet the sanitary requirements necessary to safely perform this procedure on an ongoing basis. In addition, one commenter indicated that although this service is performed in hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs), both of those settings have rigorous conditions of participation that hold them to higher safety standards than physician offices. Regarding patient safety specifically, commenters shared CMS's concerns regarding the safety of delivering sacroiliac joint procedures in the office setting. The majority of the commenters recommended that CMS maintain its current policy and refrain from valuing CPT code 27279 in the non-facility setting and not adopt nonfacility PE values for CY 2025.

Response: We thank commenters for their feedback.

Comment: A few commenters supported establishing payment in the nonfacility/office setting for CPT code 27279. Commenters stated that the procedure described by CPT code 27279 can be safely performed in an office or nonfacility setting by referencing studies showing a low complication rate in OBL. They indicated that establishing direct PE inputs for the nonfacility setting would improve patient access to this service and supported obtaining direct PE inputs to increase patient access to care.

Response: We appreciate the comments and the additional information to support the establishment of nonfacility/office valuation for CPT code 27279. However, after review, the studies submitted by the nominator were not found to be persuasive. While we are seeking further information, commenters stated that they were not aware of any studies demonstrating the quality or safety of this procedure in a nonfacility setting. Based on Medicare claims data, CPT code 27279 is not regularly furnished in the nonfacility/office setting; the majority of utilization has occurred in the facility setting, with less than 1.0% in the nonfacility setting over the past 7 years. As with last year, the majority of commenters recommended that CMS maintain its current policy regarding CPT code 27279 and not extend its use to nonfacility settings. Since this service is not routinely furnished in a nonfacility setting, we believe that this procedure should only be paid in the facility settings at this time. Therefore, for CY 2025, we are finalizing our proposal not to nominate CPT code 27279 as potentially misvalued.

We continue to welcome the submission of new information regarding these services that was not part of our CY 2024 review of CPT code 27279. We would appreciate receiving any additional information, particularly published studies with sound methodology (for example, a systematic review or meta-analysis covering at least three databases) or new data.

(3) CPT Code 95800

An interested party re-nominated CPT code 95800 (*Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (e.g., by airflow or peripheral arterial tone), and sleep time*) to update PEs that were last reviewed in 2017. This code was nominated as potentially misvalued

in the CY 2024 PFS proposed rule (88 FR 52283). For the CY 2024 final rule, we stated that we were unable to properly assess whether CPT code 95800 is potentially misvalued based on the evidence submitted with the original nominations and subsequent comments that CMS received (88 FR 78849 and 78850). This year, an interested party re-nominated CPT code 59800 noting two significant changes: (1) in the technologies available to perform home sleep apnea testing (HSAT) services; and (2) in clinical practice that leads to the typical procedure reported with the CPT code 95800. According to the nominator, the current practice utilizes disposable HSAT technology, such as the WatchPat One device, more often than the reusable equipment currently included in the procedure's direct PE inputs.

To account for these changes, the nominator requested the deletion of three direct PE input codes: (1) equipment code EQ335 (*WatchPAT 200 Unit with strap, cables, charger, booklet, and patient video*); (2) equipment code EQ336 (*Oximetry and Airflow Device*); and (3) supply code SD263 (*WatchPAT pneumo-opt sleep probes), which are WatchPAT probes used with the reusable WatchPAT unit. Instead, the nominator requested the addition of a supply code SD362 (the WatchPAT ONE device*), a disposable HSAT technology, as a replacement. According to our PE supply list, the combined price of the items that the nominator requested to delete (EQ335, EQ336, and SD263) is $4.71 + $4.55 + $73.32 = $82.58, which is $15.62 less than the price of the item that the nominator requested to add (SD362), priced at $98.20. The price of $98.20 was mentioned in the nomination letter without an accompanying specific invoice. Last year, the nominator submitted invoices, showing a price of $99.00 each (a case of 12 totaling $1,188.00) for the WatchPat One Device (SD362) (see Table 9).

TABLE 9: Listing of Nominator's Practice Expense items for addition or deletion to CPT code 95800

Current Equipment/Supply Code	Equipment/Supply Description	Nonfacility/ Office Equipment/Supply PE Cost	Recommended Equipment/ Supply Status
EQ335	WatchPAT 200 Unit with strap, cables, charger, booklet and patient video	$4.71	Delete
EQ336	Oximetry and Airflow Device	$4.55	Delete
SD263	WatchPAT pneumo-opt slp probes (reusable)	$73.32	Delete
SD362	WatchPAT ONE device (disposable)	$98.20	Add

The nominator asserted that testing trends have shifted away from traditional airflow-based tests, with a noticeable rise in peripheral arterial tone (PAT)-based (non-airflow) tests. The traditional airflow-based tests use the reusable supplies and equipment, whereas the PAT-based non-airflow tests use the disposable HSAT device. While describing these changes in trends, the nominator did not provide us with their internal data, thus we are unable to verify its validity. The nominator also stated that disposable HSAT devices were used for nearly 50 percent of CPT code 95800 services in 2023 and attributed the increased use of disposable devices to the COVID–19 public health emergency (PHE). Furthermore, the nominator projected that over 50 percent of CPT code 95800 services will be furnished using disposable devices in 2024 and 2025. Explaining the patterns and predictions, the nominator concluded that the pandemic significantly altered the delivery of HSAT services, with many sleep physicians transitioning to single-use, disposable sleep tests as an alternative to the reusable testing equipment that is shipped from patient-to-patient after post-use cleaning. The nominator believes that, going forward, the typical procedure described by CPT code 95800 in CY 2024 and beyond will be furnished using disposable HSAT devices rather than reusable equipment.

Since the COVID–19 PHE ended in 2023, we are still unclear as to whether the typical procedure reported with CPT code 95800 involves the use of a reusable or disposable HSAT device. Given that we only have access to the nominator's summary of their internal data to observe changes in usage trends, which may not be generalizable, we proposed to maintain the current direct PE supply and equipment inputs for CPT code 95800. While we did not propose to review CPT code 95800 as potentially misvalued for CY 2025, we sought public comments on this nomination. In particular, we sought comments on whether the typical procedure described by CPT code 95800 now involves the use of a disposable HSAT device rather than reusable equipment.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to not nominate CPT code 95800 as potentially misvalued and advised us to continue monitoring this issue. The commenters reported a mix of disposable and reusable HSAT devices in use, noting that disposable devices have become more common since the COVID–19 PHE. The American Academy of Sleep Medicine (AASM) stated that HSAT data from AASM accredited sleep facilities indicated that, while there is an observed increase in the use of disposable HSAT devices, this does not suggest that members have converted to using them at this time. According to AASM, their survey data in 2022 indicated that the majority were still

using reusable HSAT devices. They generally believed there is insufficient information to determine whether disposable devices are more typical than reusable ones at this time, and therefore, they did not support the nomination of CPT code 95800 as potentially misvalued. They stated that further data collection would be needed to confirm whether the typical practice is now using disposable devices and suggested continued monitoring. Additionally, they opposed the removal of the Oximetry and Airflow device (EQ336), as it remains necessary for certain procedures.

Response: We thank commenters for their feedback.

Comment: The manufacturer and distributor of the WatchPAT disposable HSAT devices stated that a disposable HSAT offers the same accuracy and reliability as other WatchPAT products, but allows for quicker access to sleep data, particularly benefiting those in rural areas, enables physicians to better extend care, and reduces reinfection risks. Using their internal data, the device manufacturer stated that in 2023, 48 percent of WatchPAT tests used the disposable WatchPAT One device, reflecting a 4—8 percent annual increase since 2020; by the first half of 2024, this trend continued, with 53 percent of WatchPAT tests in the U.S. using the disposable HSAT device. Based on their utilization data and projections, the device manufacturer believed that there is strong evidence that the typical procedure in 2024 will involve the use of disposable rather than reusable HSAT equipment. The device manufacturer indicated that they do not have data on the number of Medicare patients using the disposable HSAT device, though they do not believe there is a significant difference in the use of reusable versus disposable equipment among Medicare or home sleep testing populations.

Response: We thank commenters for their summary of internal data and their feedback.

We acknowledge that the practice of medicine is evolving, and in clinically appropriate and effective circumstances, there may be support for transitioning from reusable to disposable HSAT equipment. We also recognize that the PE inputs for such services should be accurately determined to reflect typical clinical practice. However, after reviewing the public comments, we believe there is insufficient information at this time to demonstrate whether disposable or reusable HSAT devices are more commonly used than reusable HSAT equipment. Therefore, we are finalizing our proposal not to nominate CPT code 95800 as potentially misvalued.

However, we look forward to considering any additional information in the future as to whether disposable or reusable HSAT devices are more common. As suggested by the commenters, we believe more information is needed to confirm whether disposable devices are now the typical practice.

(4) CPT Codes 10021, 10004, 10005, 10006

An interested party nominated the CPT code 10021 (*Fine needle aspiration biopsy, without imaging guidance; first lesion*), CPT code 10004 (*Fine needle aspiration biopsy, without imaging guidance; each additional lesion*), CPT code 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*) and CPT code 10006 (*Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion*) as potentially misvalued. We noted in the proposed rule that this code family has been nominated several times in recent years. We discussed our review of these codes and our rationale for finalizing the current values extensively in the CY 2019 PFS final rule (83 FR 59517) and CY 2021 PFS final rule (85 FR 84602). Furthermore, this code family was nominated as potentially misvalued and discussed in the CY 2020 PFS final rule (84 FR 62625). For more information, we encourage the interested parties to refer to these prior PFS final rules.

The nominator specifically requested that we revisit our work RVU decisions for these codes, stating that the underpinnings of the reduction in work RVUs from the RUC-recommended values were flawed. The nominator suggested that CMS should adopt the RUC-recommended work RVUs. For CPT code 10021, the RUC recommended a work RVU of 1.20, but we adopted a lower value of 1.03. Similarly, for CPT code 10005, the RUC recommended a work RVU of 1.63, but we adopted 1.46. The nominator disagreed with these reductions from the RUC-recommended values by CMS, raising particular concerns about our choice for the RVU crosswalk for CPT code 36440 (*Push blood transfusion, patient 2 years or younger).* According to the nominator, the CPT code we chose is not comparable to fine needle aspiration (FNA) in any respect other than service time. The nominator raised several points, including that CPT code 36440 is rarely utilized and is almost never billed to Medicare because it pertains to a pediatric procedure conducted on neonates, while CPT code 10021 is never performed on neonates. They further asserted that the training and experience levels required to properly perform these procedures differ significantly; neonatal transfusions can be conducted by less experienced personnel, while performing a thyroid FNA demands more experience. Specifically, they argued that there is a notable difference in the work intensity between the two procedures. The thyroid is closely positioned to vital structures such as the carotid artery, jugular vein, lymphatic vessels, nerves, trachea, and esophagus. When sampling thyroid nodules, they are often in proximity to the carotid artery, jugular vein, or both. According to the nominator, even a slight deviation of 1–2 millimeters during the sampling procedure can result in accidental puncture of these critical blood vessels or other nearby structures. Factors such as respiratory movements, patient swallowing, or anxiety may cause the thyroid to move, further increasing the risk during the procedure. In contrast, neonatal phlebotomy does not require such measures. Also, the CPT code 36440 is designated as facility-only, meaning it does not include any clinical staff pre-service time and has no associated PE inputs. According to the nominator, FNA is a very complex and high-risk procedure that may require significant physician work and a higher level of clinical expertise to furnish the service, which is very different from CPT code 36440. We appreciated the survey (N=74) results that the nominator submitted to support their statements. The nominator-conducted survey, and their survey questions aimed to gather information on the practitioners' experiences, opinions, and practices related to FNA procedures. However, no other references such as peer reviewed medical literature or other nationally representative survey data were provided to reinforce their argument.

The nominator further stated that thyroid FNA should exclusively be performed as an outpatient procedure and does not require hospitalization. The nominator emphasized that the reduction in payment for the code family due to the reduction in work RVUs from the RUC-recommended values has led endocrinologists in office-based practices, those who are not affiliated with facilities, to discontinue furnishing this service. According to the nominator, as a consequence of this payment decrease, patients are now being referred to hospital-based radiology practices, despite the fact that thyroid FNA should ideally be conducted exclusively in nonfacility

outpatient settings. The nominator asserted that radiologists in hospital settings are often unfamiliar with the patient's medical history and risk factors for suspected thyroid cancer. The nominator further stated that radiologists' training in thyroid cancer primarily emphasizes imaging and procedures, rather than considering the patient's overall health perspective. This result may further lead to an increase in medically unnecessary procedures. Additionally, the nominator believes that the payment reduction for this code family has the potential to diminish the specialist workforce trained to perform these procedures, thereby presenting future challenges in patient care and access to specialized services.

Overall, we appreciate the comprehensive information and level of detail provided by the nominator. The nominator disagreed with the choice of crosswalk CPT code 36440 made by CMS, emphasizing the differences in provider training, procedure risk, and patient population. They stated the rarity of Medicare billing for this code. Additionally, they emphasized the importance of outpatient thyroid FNA being performed by endocrinologists. The shift to facility settings, prompted by reduced work RVUs, could raise Medicare costs. This, along with a potential decline in specialist workforce, may hinder patient access. However, in discussing this group of codes, we noted in the proposed rule that these codes have been recently reviewed multiple times through the annual PFS rulemaking process. We clarified once again that we disagree with the nominator that this code family is potentially misvalued. We acknowledged the possibility that there could be significant changes in the practice of delivering services described by these codes that were not fully reflected in the current work RVU. In such cases, it would be appropriate to refer the codes to the RUC to conduct a new survey to capture these changes accurately. However, we noted that these codes underwent thorough RUC survey and review processes during the October 2017 and January 2018 RUC meetings. Based on these considerations, we stated that we disagreed with the assertion that this code family is potentially misvalued. Nevertheless, we welcomed comments on whether these codes should be re-reviewed in light of the arguments made by the nominator.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal not to nominate CPT codes 10005, 10009, and 10021 as potentially misvalued and did not support a resurvey of the codes at this time, stating that these sets of codes have undergone several reviews in recent years.

Response: We thank the commenters for this feedback

Comment: The AMA RUC stated that these codes do not necessarily need to be re-evaluated and urged CMS to correct the mathematical error underlying the current work RVUs for CPT codes 10005, 10009, and 10021, and to accept the previous RUC-recommended work RVUs of 1.63 for CPT code 10005, 2.43 for CPT code 10009, and 1.20 for CPT code 10021. The RUC stated that the mathematical error occurred when CMS mistakenly double-counted the utilization of new codes that included bundled image guidance. The RUC believes that CMS misinterpreted the AMA's utilization crosswalk recommendations, emphasizing that the figures in the source utilization and utilization destination columns in Table 12 from the CY 2019 PFS final rule should be identical. Additionally, they stated that they provided the actual claims data from CY 2019 to evaluate the accuracy of CMS's RVU pool estimates during the CY 2019 rulemaking process. Lastly, a few commenters stated that they are not suggesting the entire code family is misvalued, but rather that only a subset of nominated FNA procedures is in question.

Response: The RUC continues to state that it believes there was an error in the utilization crosswalk for this code family during the CY 2019 review. In the CY 2019 PFS final rule, we refined the work RVUs of CPT codes 10021, 10005, and 10009 based on changes in surveyed work time and the relationships among the codes. For example, for CPT code 10021, we adjusted the work RVU from the RUC-recommended value of 1.20 to a finalized value of 1.03. This decision was driven by a decrease in the recommended intraservice time from 17 minutes to 15 minutes (a 12 percent reduction) and a decrease in total time from 48 minutes to 33 minutes (a 32 percent reduction). In contrast, the RUC-recommended work RVU only decreased from 1.27 to 1.20, representing a reduction of just over 5 percent. To better reflect these decreases in surveyed work time, we determined a work RVU of 1.03 was more accurate, using a crosswalk to CPT code 36440. It is important to note that the primary rationale for refining the work RVU did not reference the utilization crosswalk. Additionally, based on our previously explained rationale, we also note that the two columns—source utilization and utilization destination—do not need to be identical. Our review of these codes and our rationale for finalizing the current values are discussed in the CY 2019 PFS final rule (83 FR 59517 through 59521) and the CY 2021 PFS final rule (85 FR 84602 through 84604).

In continuing to repeat the same positions regarding the utilization crosswalk, however, the RUC has not provided any new information that was not already presented for the previous CMS reviews of these codes. In the event that there is a new RUC review of these services, as opposed to a restatement of the RUC's previous review, we would look forward to receiving any additional information or new data. We continue to welcome the submission of new information regarding these services that was not part of the previous CY 2019 and CY 2021 reviews of the code family.

Comment: Several commenters expressed concerns about the RVU reduction for the FNA codes, noting that since 2018, reduced reimbursement has led to an 18 percent decline in FNA procedures. They highlighted that this decrease disrupts continuity of care, causing delays in diagnosis and treatment, especially affecting patients in rural and low-income areas. Furthermore, they stated that the shift of FNA procedures from the office to facility setting has resulted in a 524 percent increase in Medicare costs and a rise in hospital-based services. Commenters also pointed out that Medicare claims from calendar year 2022 also indicate a shift in the type of clinician performing the procedure, with 52.3 percent of FNAs being performed by radiologists and only 17.6 percent by endocrinologists. They stated that radiologists often lack the capacity for the comprehensive follow-up care that would be provided by endocrinologists. Overall, they stated that the RVU reduction for the FNA codes would result in an increase in hospital-based facility fees and longer wait times for patients, would burden the healthcare system, and limit training opportunities for endocrinology fellows, potentially compromising future care quality and access.

Response: We appreciate the information provided by commenters regarding the impact of the current valuation on the setting of care where these services are provided. We welcome additional information on this issue; however, we continue to believe, as we have stated in past rulemaking,

that the FNA codes are accurately valued.

After consideration of the public comments, we continue to believe that the current valuation accurately reflects the typical work and direct PE inputs involved in furnishing FNA services. Therefore, for CY 2025, we are finalizing our proposal not to nominate CPT codes 10021, 10004, 10005, and 10006 as potentially misvalued.

(5) Tympanostomy Codes

CMS routinely interacts with interested parties, and in our most recent review, we have observed several new devices that could be beneficial for populations but are not currently included in our coding system. While there are variations in the described devices, they commonly share the following descriptions. This device uses an innovative surgical technology that combines the separate functions of creating a myringotomy (incision in the eardrum), and positioning and placing a ventilation tube across the tympanic membrane. The new device is intended to deliver a tympanostomy tube (also referred to as a ventilation tube) through the tympanic membrane of the patient and is indicated to be used in office settings for pediatric patients 6 months and older. This device allows the tympanostomy service to be furnished to patients without general anesthesia and the service could therefore be performed in the office setting.

Regarding the delivery of this service using innovative surgical technology, CMS stated in the proposed rule that we recognized that CPT code 69433 (*Tympanostomy (requiring insertion of ventilating tube), local or topical anesthesia*) (010-day global code) may serve as a sufficient base code, adequately describing the majority of the surgeon's work and facility resources. However, a practitioner may incur additional resources, due to the higher expected intraservice work driven by both time and intensity factors, especially when furnishing a service to a child, and the cost of the device when using these devices as part of the performed procedure. While the existing CPT code 69433 is not age-specific, both the vignette and the RVU associated with this procedure are established for adult patients who can respond to surgeon direction, and do not have risk of movement during the procedure. We stated that we believed that potentially establishing additional coding and payment for tympanostomy services may enable the provision of these services utilizing new technologies to a broader patient population who may benefit from innovative surgical technology. To improve the accuracy of the payment for these services, we solicited comments on several alternatives that we were considering for adoption in the CY 2025 PFS final rule or future rulemaking. First, we solicited comment on whether to establish a new G code that accounts for the work and PE for a procedure involving the positioning and placement of a ventilation tube across the tympanic membrane using an innovative surgical technology that combines the separate functions of creating a myringotomy (incision in the eardrum). We stated that we could assign contractor pricing to this potential G code for generalizable innovative tympanostomy tube delivery devices and/or systems falling under emerging technology and services categories. Alternatively, we solicited comment on whether we should establish an add-on payment for the service using inputs from CPT code 69433 as a crosswalk reference, plus direct costs from invoices for the surgical devices referenced above. We solicited comments regarding these potential approaches, particularly on whether there is additional information we should consider if we were to establish additional coding and payment for these services.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received several comments, including from the RUC, stating that rather than developing new codes to describe tympanostomy tube delivery devices and/or systems, CMS should establish national pricing for Category III CPT code 0583T (*Tympanostomy (requiring insertion of ventilating tube), using an automated tube delivery system and iontophoresis local anesthesia).* This code, implemented in 2020, includes a vignette describing its use for a child (the patient sitting on the parent or guardian's lap) and does not include general anesthesia. Commenters stated that national pricing for CPT code 0583T would allow procedures to be furnished without general anesthesia, saving families from taking time off work and avoiding the costs and risks associated with general anesthesia. One commenter stated that CPT code 31295 (*Nasal/sinus endoscopy, surgical, with dilation (eg, balloon dilation); maxillary sinus ostium, transnasal or via canine fossa*) is similar to the Category III CPT code 0583T procedure with respect to the intensity and invasiveness of the procedure, preparation time for the procedure, or total time to complete the procedure which is around 35–40 mins. Therefore, the commenter stated CMS can consider CPT code 31295 as the appropriate crosswalk reference. The RUC stated that it believes that this CPT code may be used to report this service as described and suggested that CMS should not create duplicate ways to report the same procedure.

Response: We thank comments for their feedback. We believe that CPT code 0583T does not adequately reflect the work and PEs for a procedure that uses innovative tympanostomy tube delivery devices and/or systems falling under emerging technology and services categories. Additionally, CPT code 0583T represents only one type of technology used for this service, whereas it is our understanding that there are multiple types of tympanostomy tube delivery devices and/or systems, and we do not want to limit payment for only one device. Therefore, we are not establishing a national price for Category III CPT code 0583T at this time. We appreciate the comments and feedback regarding the need for an appropriate rate for Category III CPT code 0583T and the potential for a crosswalk reference, however as discussed previously we will not be finalizing national pricing for CPT code 0583T.

Comment: Many commenters collectively supported the creation of additional coding to describe the resources associated with innovative tympanostomy tube delivery devices and/or systems. Commenters generally preferred that CMS establish a new G code, specifically an add-on G code with inputs based on CPT code 69433, for tympanostomy procedures, particularly using innovative surgical technology for patients at risk of movement during the procedure, such as pediatric patients. These commenters referenced the benefits of these minimally invasive, in-office procedures, which eliminate the risks associated with general anesthesia and offer quicker recovery, fewer infections, and improved access to care. They also stated that this innovative technology can be cost-effective, particularly for vulnerable and underserved populations with multiple health conditions. Additionally, the commenters stated that the ability to perform these procedures in an office setting, without the need for general anesthesia, significantly reduces associated risks and recovery time. Commenters stated that minimizing the use of general anesthesia is especially beneficial for pediatric patients, who are at a higher risk for anesthesia-related complications. However, while supporting the establishment of an add-

on G-code, a few commenters indicated that the current CPT code 69433 was designed for cooperative adults using standard instruments and therefore does not adequately reflect the resources and expertise involved.

Response: We appreciate the feedback from commenters and thank them for highlighting that these innovative tympanostomy procedures can be particularly beneficial for patients with additional health conditions, some of which may require multiple procedures and that CPT code 69433 may not fully account for the resources and expertise involved, or the tube delivery devices and/or systems.

We agree with commenters that these minimally invasive, in-office procedures can offer significant benefits, including reduced risks associated with general anesthesia, quicker recovery, fewer infections, and improved access to care. We also agree with commenters that the current coding is inadequate to reflect the different kinds of technologies used to conduct tympanostomies on children in the office setting, particularly those that do not require general anesthesia. Therefore, for CY 2025, we are finalizing the creation of a new add on G code, HCPCS code G0561 (*Tympanostomy with local or topical anesthesia and insertion of a ventilating tube when performed with tympanostomy tube delivery device, unilateral (List separately in addition to 69433) (Do not use in conjunction with 0583T)*) to be billed with 69433 in order to describe the additional resource costs associated with using the innovative tympanostomy tube delivery devices and/or systems falling under emerging technology and services categories and are finalizing contractor pricing for CY 2025.

Lastly, we received several comments regarding CPT codes 21076–21089 which describe maxillofacial prosthodontic procedures (see Table 10). This code family was not discussed in the CY 2025 PFS proposed rule. Therefore, these comments are outside the scope of proposals included in the proposed rule, and we would not ordinarily summarize and respond to them in this final rule. However, we note that the commenters are welcome to submit these codes by February 10 of the coming year for consideration as potentially misvalued for the CY 2026 PFS proposed rule. See above for more information on how to submit a nomination for a potentially misvalued code.

TABLE 10: Listing of Maxillofacial Prosthetics

CPT codes	Description
21076	Impression and custom preparation; surgical obturator prosthesis
21077	Impression and custom preparation; orbital prosthesis
21079	Impression and custom preparation; interim obturator prosthesis
21080	Impression and custom preparation; definitive obturator prosthesis
21081	Impression and custom preparation; mandibular resection prosthesis
21082	Impression and custom preparation; palatal augmentation prosthesis
21083	Impression and custom preparation; palatal lift prosthesis
21084	Impression and custom preparation; speech aid prosthesis
21085	Impression and custom preparation; oral surgical splint
21086	Impression and custom preparation; auricular prosthesis
21087	Impression and custom preparation; nasal prosthesis
21088	Impression and custom preparation; facial prosthesis
21089	Unlisted maxillofacial prosthetic procedure

D. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. See further details and full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006), the CY 2021 PFS final rule (85 FR 84502) and the CY 2024 PFS final rule (88 FR 78861 through 78866) and in 42 CFR 410.78 and 414.65. For a discussion of Telemedicine Evaluation and Management (E/M) Services, we refer readers to section II.E.4.18 of this final rule.

1. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

a. Changes to the Medicare Telehealth Services List

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a regulatory process for adding services to or deleting services from the Medicare Telehealth Services List in accordance with section 1834(m)(4)(F)(ii) of the Act. This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us and assigned to categories established through notice and comment rulemaking. Under the process we established beginning in CY 2003, we evaluated whether a service meets the following criteria:

- *Category 1:* Services similar to professional consultations, office visits, and office psychiatry services currently on the Medicare Telehealth Services List. In reviewing these requests, we looked for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site, and, if necessary, the telepresenter, a practitioner who was present with the beneficiary in the originating site. We also looked for similarities in the telecommunications system used to deliver the service, for example, the use of interactive audio and video equipment.
- *Category 2:* Services that are not similar to those on the current Medicare Telehealth Services List. Our review of these requests included assessing

whether the service was accurately described by the corresponding code when furnished via telehealth and whether using a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should have included both a description of relevant clinical studies that demonstrated the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer-reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit did not include minor or incidental benefits. Some examples of other clinical benefits that we considered include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable signs or symptoms.
- Reduced recovery time.

In the CY 2021 PFS final rule (85 FR 84507), we created a third category of criteria for adding services to the Medicare Telehealth Services List on a temporary basis following the end of the PHE for the COVID–19 pandemic. This new category described services that were added to the Medicare Telehealth Services List during the PHE, for which there was likely to be clinical benefit when furnished via telehealth, but there was not yet sufficient evidence available to consider the services for permanent addition under the Category 1 or Category 2 criteria. Services added on a temporary, Category 3 basis ultimately needed to meet the criteria under Category 1 or 2 in order to be permanently added to the *Medicare Telehealth* Services List. To add specific services on a Category 3 basis, we would conduct a clinical assessment to identify those services for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth.

In the CY 2024 PFS final rule (88 FR 78861 through 78866), we consolidated these three categories and implemented a revised 5-step process for making additions, deletions, and changes to the Medicare Telehealth Services List (5-step process), beginning for the CY 2025 Medicare Telehealth Services List. Rather than categorizing a service as ''Category 1'' or ''Category 2,'' each service is now assigned a ''permanent'' or ''provisional'' status. As described further below, a service is assigned a ''provisional'' status if there is not enough evidence to demonstrate that the service is of clinical benefit, but there is enough evidence to suggest that further study may demonstrate such benefit. The 5-step process review criteria are set forth in the CY 2024 PFS final rule (88 FR 78861 through 78866), listed at *https://www.cms.gov/medicare/coverage/telehealth/criteria-request,* and summarized below. Consistent with the deadline for our receipt of code valuation recommendations from the American Medical Association's Relative Value Scale Update Committee (AMA RUC) and other interested parties (83 FR 59491) and with the process set forth in prior calendar years, for CY 2025, requests to add services to the Medicare Telehealth Services List must have been submitted to and received by CMS by February 10, 2024. Each request to add a service to the Medicare Telehealth Services List must have included any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process to make changes to the Medicare Telehealth Services List, requesters are advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request to add services to the Medicare Telehealth Services List, including where to send these requests, and to view the current Medicare Telehealth Service List, see our website at *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html.*

Step 1. Determine whether the service is separately payable under the PFS.

When considering whether to add, remove, or change the status of a service on the Medicare Telehealth Services List, we first determine whether the service, as described by the individual HCPCS code, is separately payable under the PFS because, as further discussed in CY 2024 PFS final rule (88 FR 78861 through 78866), Medicare telehealth services are limited to those services for which separate Medicare payments can be made under the PFS. Before gathering evidence and preparing to submit a request to add a service to the Medicare Telehealth Services List, the submitter should therefore first check the payment status for a given service and ensure that the service (as identified by a HCPCS code), is a covered and separately payable service under the PFS (as identified by payment status indicators A, C, T, or R on our public use files).

Step 2. Determine whether the service is subject to the provisions of section 1834(m) of the Act.

If we determine at Step 1 that a service is separately payable under the PFS, we apply Step 2 under which we determine whether the service at issue is subject to the provisions of section 1834(m) of the Act. Section 1834(m) of the Act provides for payment to a physician (or other practitioner) for a service furnished via an interactive telecommunications system, notwithstanding that the furnishing practitioner and patient are not in the same location, at the same amount that would have been paid if the service was furnished without the telecommunications system. We have historically interpreted this to mean that only services that are ordinarily furnished with the furnishing practitioner and patient in the same location can be classified as a ''telehealth service'' for which payment can be made under section 1834(m) of the Act. Given that there may be a range of services delivered using certain telecommunications technology that, though they are separately payable under the PFS, do not fall within the definition of telehealth service set forth in section 1834(m) of the Act, the aim of Step 2 is therefore to determine whether the service at issue is, in whole or in part, inherently a face-to-face service. Services that fall outside the definition of telehealth service generally include services that do not require the presence of, or involve interaction with, the patient (for example, remote interpretation of diagnostic imaging tests, and certain care management services). Other examples include virtual check-ins, e-visits, and remote patient monitoring services which involve the use of telecommunications technology to facilitate interactions between the patient and practitioner, but do not serve as a substitute for an in-person encounter.

In determining whether a service is subject to the provisions of section 1834(m) of the Act, we therefore review during this Step 2 whether one or more of the elements of the service, as described by the particular HCPCS code at issue, ordinarily involve direct, face-to-face interaction between the patient

and practitioner such that the use of an interactive telecommunications system to deliver the service would be a substitute for an in-person visit.

Step 3. Review the elements of the service as described by the HCPCS code and determine whether each of them is capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3).

Step 3 is corollary to Step 2, and is used to determine whether one or more elements of a service are capable of being delivered via an interactive telecommunication system as defined in § 410.78(a)(3). In Step 3, we consider whether one or more face-to-face component(s) of the service, if furnished via audio-video communications technology, would be equivalent to the service being furnished in-person, and we seek information from requesters to demonstrate evidence of substantial clinical improvement in different beneficiary populations that may benefit from the requested service when furnished via telehealth, including, for example, in rural populations. The services are not equivalent when the clinical actions, or patient interaction, would not be of similar content as an in-person visit, or could not be completed.

Step 4. Consider whether the service elements of the requested service map to the service elements of a service on the list that has a permanent status described in previous final rulemaking.

The purpose of Step 4 is to simplify and reduce the administrative burden of submission and review. For Step 4, we review whether the service elements of a code that we are considering for addition to, or removal from, the Medicare Telehealth Services List map to the service elements of a service that is already on the list and is assigned permanent status. Any code that satisfies this criterion would require no further analysis. If the service elements of a code maps to the service elements of a code that is already included on the Medicare Telehealth Services List and is assigned permanent basis, we will add the code to the Medicare Telehealth Services List and assign it permanent status. While we have not previously found that the service elements of a code we are considering for addition to the list map to the elements of a service that was previously added to the list and assigned permanent basis, we believe that it is appropriate to apply this step 4 analysis to compare the candidate service with any permanent code that is on the list on a permanent basis. When Step 4 is met, further evidence review is not necessary. We continue to Step 5 if Step 4 is not met.

Step 5. Consider whether there is evidence of clinical benefit analogous to the clinical benefit of the in-person service when the patient, who is located at a telehealth originating site, receives a service furnished by a physician or practitioner located at a distant site using an interactive telecommunications system.

Similar to Steps 3, 4, and 5 above, the purpose of step 5 is to simplify and reduce the administrative burden. Under Step 5, we review the evidence provided with a submission to determine the clinical benefit of a service. We then compare the clinical benefit of that service, when provided via telehealth, to the clinical benefit of the service if it were to be furnished in person. If there is enough evidence to suggest that further study may demonstrate that the service, when provided via telehealth, is of clinical benefit, CMS will assign the code a ''provisional'' status on the Medicare Telehealth Services List. Where the clinical benefit of a service, when provided via telehealth, is clearly analogous to the clinical benefit of the service when provided in person, CMS will assign the code ''permanent'' status on the Medicare Telehealth Services List, even if the code's service elements do not map to the service elements of a service that already has permanent status. We reminded readers that our evidentiary standard of demonstrated clinical benefit does not include minor or incidental benefits (81 FR 80194). We review the evidence submitted by interested parties, and other evidence that CMS has on hand. The evidence should indicate that the service can be safely delivered using two-way interactive audio-video communications technology. Clinical practice guidelines, peer-reviewed literature, and similar materials, should illustrate specifically how the methods and findings within the material establish a foundation of support that each element of the defined, individual service described by the existing face-to-face service code has been studied in the typical setting of care, typical population of beneficiaries, and typical clinical scenarios that practitioners would encounter when furnishing the service using only interactive, two-way audio-video communications technology to complete the visit or encounter with Medicare beneficiaries. General evidence may also answer the question of whether a certain beneficiary population requiring care for a specific illness or injury may benefit from receiving a service via telehealth versus receiving no service at all, but must establish that the service is a substitute for an equivalent in-person service. Evidence should demonstrate how all elements described by the individual service code can be met when two-way, interactive audio-video communications technology is used as a complete substitute for any face-to-face interaction required between the patient and practitioner that are described in the individual code descriptor. We further remind readers that submissions reflecting practitioner services furnished to Medicare beneficiaries are helpful in our considerations.

b. Requests To Add Services to the Medicare Telehealth Services List for CY 2025

We received several requests to permanently add various services to the Medicare Telehealth Services List, effective for CY 2025. The requested services are listed in Table 11.

Many of the services listed above were added to the Medicare Telehealth Services List on a temporary basis during the PHE for COVID–19, as discussed in the March 31st COVID–19 interim final rule with comment period (IFC) (85 FR 19235 through 19237) for the PHE for Covid–19, and we subsequently retained these services on a provisional basis. All of the submissions received this calendar year were requests to add services, including several of which are assigned provisional status on Medicare Telehealth Services List, to the Medicare Telehealth Services List on a permanent basis. For services currently assigned provisional status on the Medicare Telehealth Services List, we believe that, rather than selectively adjudicating only those services for which we received requests for potential permanent status, it would be appropriate to complete a comprehensive analysis of all provisional codes currently on the Medicare Telehealth Services List before determining which codes should be made permanent. Therefore, we are not making determinations on whether to recategorize provisional codes as permanent until such time as CMS can complete a comprehensive analysis of all such provisional codes which we expect to address in future rulemaking.

The following is a discussion of the requests received for addition of services to the Medicare Telehealth Services List:

(1) Continuous Glucose Monitoring

We received a request to add CPT code 95251 (*Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report*) to the Medicare Telehealth Services List and assign it permanent status. This code is not on the Medicare Telehealth Services List, nor had it been previously added and removed. The requester stated that the ability of the practitioner to interpret continuous glucose monitoring data and communicate changes in the diabetes care plan to their patients is enhanced by the availability of video visits, and the code should therefore be added to the Medicare Telehealth Services List.

This service does not meet the criteria described by Step 2 of the 5-step process: determination of whether the service is subject to the provisions of section 1834(m) of the Act. Under section 1834(m)(2)(A) of the Act, Medicare pays the same amount for a telehealth service as if the service is furnished in person (88 FR 78862). A service is subject to the provisions of section 1834(m) of the Act when at least some elements of the service, when delivered via telehealth, are a substitute for an in-person, face-to-face encounter, and all of those face-to-face elements of the service are furnished using an interactive telecommunications system as defined in § 410.78(a)(3) (88 FR 78863). In other words, as stated above, for a service to be considered a Medicare telehealth service subject to and payable under section 1834(m) of the Act, the service must be so analogous to in-person care such that the telehealth service, as defined in § 410.78, is essentially a substitute for a face-to-face encounter. We do not consider this service a Medicare telehealth service because it is not an inherently face-to-face service; the patient does not need to be present for the service to be furnished in its entirety. CPT code 95251 describes sensor placement and monitoring over a 72-hour period. We do not consider CPT code 95251 a telehealth service under section 1834(m) of the Act or our regulation at § 410.78. Therefore, we proposed to not add this service to the Medicare Telehealth Services List.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: We received some comments requesting that we remove the criterion we use in Step 2 of our 5-step process to consider whether a services is analogous to an in-person service. The commenters stated that this service may be performed virtually alongside an E/M service furnished via Medicare telehealth. The commenters stated that a practitioner can provide this service in conjunction with a separately reportable telehealth service on the same day, and expressed concern that unless this code is added to the Medicare Telehealth Services List, there could be claims processing errors if the continuous glucose monitoring service is reported with Medicare telehealth POS codes.

Response: We believe that Step 2 of our 5-step process plays a critical role in ensuring that any service being considered to be added on the Medicare Telehealth Services List is sufficiently analogous to an in-person service in terms of both the clinical benefit provided and the way it is furnished. This criterion ensures that services delivered virtually offer the same, if not similar diagnostic and treatment value as in-person visits. Removing Step 2 would undermine this goal.

Furthermore, Section 1834(m) of the Act requires the Secretary to pay to a physician or practitioner located at a distant site that furnishes a telehealth service to an eligible telehealth individual an amount equal to the amount that such physician or practitioner would have been paid had such service been furnished without the use of a telecommunications system. As discussed in CY 2025 PFS proposed rule and this CY 2025 PFS final rule, this limits payment for Medicare telehealth services to those services that are, in whole or in part, inherently a face-to-face service.

We thank commenters for the additional information and concerns. We continue to believe that this service does not meet the requirements to be added to the Medicare Telehealth Services List because the service does not ordinarily involve the presence of, or interaction with, the patient.

After consideration of public comments, we are finalizing as proposed to not add this service on the Medicare Telehealth Services List.

(2) Cardiovascular and Pulmonary Rehabilitation

We received requests to permanently add cardiovascular *rehabilitation* services (CPT codes 93797 and 93798) and *pulmonary rehabilitation* services (CPT codes 94625 and 94626) to the Medicare Telehealth Services List. A requester cited studies that they say demonstrate that the availability of these services via telehealth enhances access and patient equity. Another requester cited evidence of improved outcomes for patients that had access to these services via telehealth.

These services are currently on the Medicare Telehealth Services List and are assigned provisional status. In the CY 2022 PFS final rule (86 FR 65054 through 65055), we explained that some services were added temporarily to the Medicare Telehealth Services List on an emergency basis to allow practitioners and beneficiaries to have access to medically necessary care while avoiding both risk for infection and further burdening healthcare settings during the PHE for COVID–19. As explained in the CY 2025 PFS proposed rule, rather than selectively adjudicating only those services for which we receive requests for potential permanent status, we intend to first complete a comprehensive analysis of all provisional codes currently on the Medicare Telehealth Services List before determining which codes should be made permanent. We therefore stated in the proposed rule that while we would consider the requestors' input in future rulemaking, we were not proposing to assign CPT codes 93797 and 93798 or CPT codes 94625 and 94626 permanent status on the Medicare Telehealth Services List and would instead maintain the services on the Medicare Telehealth Services List on a provisional basis for CY 2025.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported these services remaining on the Medicare Telehealth Services List, along with additional requests to revise their status of from provisional to permanent. In addition, we also received a resubmission of the original request to revise the status of these codes from provisional to permanent with no changes in the information provided.

Response: As we stated in the proposed rule, we are not considering whether to recategorize provisional codes as permanent in this rulemaking for CY 2025 because we intend to conduct a comprehensive analysis of all such provisional codes, which we expect to address in future rulemaking.

After consideration of public comments, we are finalizing as proposed to maintain these services on the Medicare Telehealth Services List on a provisional basis.

(3) Health and Well Being-Coaching

We received a request to add Health and Well-Being Coaching (CPT codes 0591T—0593T) to the Medicare Telehealth Services List with permanent status. These services are currently on the Medicare Telehealth Services List and are assigned a provisional status. We originally added these codes on a provisional basis in the CY 2024 PFS final rule (88 FR 78859 and 78860). One requester stated that health and well-being coaching, including content education, delivered in a telehealth modality is an evidence-based, cost-effective, sustainable, and common sense approach to facilitating lifestyle/behavioral intervention and treating the Medicare population with or at heightened risk for chronic diseases. As explained previously, we did not propose to revise the status of codes from provisional to permanent in the proposed rule because we intend to conduct a comprehensive review. Therefore, we did not propose to assign them to the Medicare Telehealth Services List with permanent status.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported these services remaining on the Medicare Telehealth Services List, along with additional requests to revise the status of codes from provisional to permanent. Some commenters recommended that we maintain the designation of these codes as provisional on the Medicare Telehealth Services List to allow for additional data and support to be collected for future requests to revise the status of codes from provisional to permanent.

Response: As we stated in the proposed rule, we are not considering in rulemaking for CY 2025 whether to recategorize provisional codes as permanent because we intend to conduct a comprehensive analysis of all such provisional codes, which we expect to address in future rulemaking.

After consideration of public comments, we are finalizing as proposed to maintain these services on the Medicare Telehealth Services List on a provisional basis.

(4) Psychological Testing and Developmental Testing

We received a request to add Psychological Testing and Developmental Testing (CPT codes 96112, 96113, 96130, 96136, and 96137) to the Medicare Telehealth Services List on a permanent basis. These services are currently on the Medicare Telehealth Services List and are assigned provisional status. In the March 31, 2020 interim final rule with comment period (IFC–1) (85 FR 19239), we originally added CPT codes 96130, 96136, and 96137 to the Medicare Telehealth Services List for the duration of the PHE for COVID–19, and in the CY 2021 PFS final rule (85 FR 85003), we stated we were retaining them on the list on a category 3 basis. In the CY 2023 PFS final rule (87 FR 69460), we added CPT codes 96112 and 96113 on a temporary basis.

As explained previously, we did not propose to revise the status of codes from provisional to permanent in the proposed rule because we intend to conduct a comprehensive review. Therefore, we did not propose to either remove these services from or to assign them permanent status on the Medicare Telehealth Services List.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported these services remaining on the Medicare Telehealth Services List, along with additional requests to revise the status of codes from provisional to permanent.

Response: We are not considering in this rulemaking for CY 2025 whether to recategorize provisional codes as permanent because we intend to conduct a comprehensive analysis of all such provisional codes, which we expect to address in future rulemaking.

After consideration of public comments, we are finalizing as proposed to maintain these services on the Medicare Telehealth Services List on a provisional basis.

(5) Therapy/Audiology/Speech Language Pathology

We received multiple requests to add the Therapy services described by CPT codes 97110, 97112, 97116, 97161 through 97164, 97530 and 97535, 97165 through 97168, and Audiology and Speech Language Pathology services CPT codes 92507, 92508, 92521 through 92524, 92526, 92607 through 92610, 96105 92626, 92627, 96125, 97129, 97130, 92607 through 92609 92550 through 92557, 92563, 92565 92567, 92568, 92570, 92587, 92588, 92601 through 92604, 92625 through 92627, and 92651 and 92652 to the Medicare Telehealth Services List on a permanent basis, stating that continuing telehealth flexibilities for these services could lead to reduced health care expenditures, increased patient access, and improved management of chronic disease and quality of life. These services are currently available on the Medicare Telehealth Services List and are assigned provisional status, and we refer readers to section II.D.1. for further discussion of these services. In the CY 2023 PFS final rule (87 FR 69451), we originally added CPT codes 90901, 97150, 97530, 97537, 97542, 97763, and 98960–98962 to the Medicare Telehealth Services List on a Category 3 basis. As explained previously, we did not propose to revise the status of codes from provisional to permanent in the proposed rule because we intend to conduct a comprehensive analysis of all such provisional codes, which we expect to address in future rulemaking. Therefore, we did not propose to assign them permanent status on the Medicare Telehealth Services List.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters requested that these services be added to the Medicare Telehealth Services List on a permanent basis, citing concerns that, due to expiring PHE flexibilities, they believe the codes are scheduled to be removed from Medicare Telehealth Services List on December 31, 2024.

Response: As we stated in the proposed rule, we are not considering in this rulemaking for CY 2025 whether to recategorize provisional codes as permanent because we intend to conduct a comprehensive analysis of all such provisional codes, which we expect to address in future rulemaking. We clarify that we will retain these Therapy/Audiology/Speech Language Pathology codes on the Medicare Telehealth Services List with a provisional status after the expiration on December 31, 2024, of current statutory PHE-related telehealth policies that have expanded the scope of practitioners that could furnish and be paid for telehealth services.

After consideration of public comments, we are finalizing as proposed to maintain these services as provisional on the Medicare Telehealth Services List.

(6) Care Management

We received a request to permanently add General Behavioral Health Integration (CPT code 99484) and Principal Care Management (CPT codes 99424—99427) to the Medicare Telehealth Services List. These services are not on the Medicare Telehealth Services List, nor have they been previously added and removed. These services do not meet the criteria described by Step 2 of the 5-step process: determination of whether the service is subject to the provisions of section 1834(m) of the Act. As stated previously in this CY 2025 PFS final rule, section 1834(m) of the Act requires the Secretary to pay to a physician or practitioner located at a distant site that furnishes a telehealth service to an eligible telehealth individual an amount equal to the amount that such physician or practitioner would have been paid had such service been furnished without the use of a telecommunications system. As discussed in the CY 2025 PFS proposed rule and this CY 2025 PFS final rule, this limits payment for Medicare telehealth services to those services that are, in whole or in part, inherently a face-to-face service. Because these services are not inherently face-to-face services, and the patient need not be present for the services to be furnished in its entirety, we do not consider CPT codes 99484 and 99424—99427 to be telehealth services under section 1834(m) of the Act or our regulation at § 410.78. Therefore, we proposed to not add these services to the Medicare Telehealth Services List.

We did not receive public comments on this proposal and are finalizing as proposed.

(7) Posterior Tibial Nerve Stimulation for Voiding Dysfunction

We received a request to permanently add Posterior tibial neurostimulation (CPT code 64566) to the Medicare Telehealth Services List. This code is not on the Medicare Telehealth Services List, nor had it been previously added and removed. This service does not meet the criteria for addition described by Step 3 of the 5-step process, namely the review of the elements of the service as described by the HCPCS code and determining whether each of them is capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3). The requestor describes the services underlying CPT code 64566 as the continual or recurring treatments over a period of time consisting of the remote monitoring of device utilization and bladder diary for the generation of reports for review by the care provider. Based on our review, this description does not align with the elements of the service as described by CPT code 64566. CPT code 64566 describes a single treatment provided by a clinician who has direct contact with the patient and inserts an electrode into the skin overlying the posterior tibial nerve. Upon conclusion of the treatment, the clinician removes the electrode and examines and dresses the puncture wound. Providing these services would require in-person interaction. Therefore, we proposed to not add the service to the Medicare Telehealth Services List because we did not believe the service elements can be could in full using two-way audio-video telecommunications technology.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter recommended that we add this service to the Medicare Telehealth Services List on a permanent basis. This commenter provided similar information that was provided in the initial submission about a patch containing a microneedle array that the patient can apply themselves in support of their argument that the service can be furnished in full using two-way, audio/video telecommunications technology.

Response: We thank the commenter for the additional information. We continue to believe that this service does not meet the requirements to be added to the Medicare Telehealth Services List because the service elements cannot be met in full using two-way audio-video telecommunications technology. While

we appreciate the additional information regarding the patch, based on information provided by the RUC as to the typical resource costs associated with furnishing this procedure and input from our clinical advisors, there is not sufficient evidence to demonstrate, if the service was furnished using two-way audio-video telecommunications technology, that the clinician actions and patient interaction would be of similar content as an in-person visit. We will continue to evaluate whether Posterior Tibial Nerve Stimulation for Voiding Dysfunction, if using the patch discussed by the commenter, is capable of being delivered via an interactive telecommunication system and encourage interested parties to continue to engage with us regarding payment for this service. After consideration of public comments, we are finalizing as proposed to not add CPT code 64566 to the Medicare Telehealth Services List.

(8) Radiation Treatment Management

We received requests to permanently add Radiation Treatment Management (CPT code 77427) to the Medicare Telehealth Services List. The code is currently on the Medicare Telehealth Services List with provisional status. In the March 31, 2020 IFC (85 FR 9240), we originally added CPT code 77427 on the Medicare Telehealth Services List for the duration of the PHE for Covid-19. A requester stated that data collected during the PHE demonstrates that the telehealth option is as safe as the in-person equivalent. We also received a request that we remove this code from the Medicare Telehealth Services List, citing the importance of in-person physical examination to ensure quality of care and stating that a telehealth modality presents patient safety concerns such as those related to the ability of the practitioner to address side effects of radiation therapy. Given the safety concerns raised by members of the practitioner community, we believe this service may not be safely and effectively furnished, and therefore believe that such concerns merit removing this item from the telehealth list. Therefore, we proposed to remove this code from the Medicare Telehealth Services List, and we solicited comment on these quality of care concerns.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to remove Radiation Treatment Management from the Medicare Telehealth Services List. These commenters cited that the in-person visit portion of this code is important for high-quality care and patient safety. In addition, they provided information about the side effects of radiation treatment that can be impacted by comorbidities or other therapies or treatments.

Many commenters did not support our proposal to remove Radiation Treatment Management from the Medicare Telehealth Services List. These commenters stated that there have been no published safety incidents since this service has been able to be furnished via Medicare telehealth and that most of the side effects associated with radiation treatment delivery are minor dermatological issues that can be treated via audio-video technology. The commenters who did not support our proposal also provided information about the medical decision-making that is used when determining if a patient's side effects are appropriate to be resolved via a telehealth encounter or if an in-person visit would be more appropriate. Because the in-person visit portion of this code is conducted weekly, this decision can change based on whether the patient is experiencing side effects and other clinical considerations.

Response: We thank commenters for the extensive information provided both in support of and counter to our proposal for this service. After reviewing this information, we are compelled by the points raised by commenters regarding the lack of evidence of adverse patient safety outcomes and the importance of allowing clinical judgement in determining whether a patient can be seen via Medicare telehealth or whether the patient needs to be seen in-person. However, we recognize the ongoing patient safety concerns and welcome information regarding any adverse outcomes as it becomes available.

After consideration of public comments, we are not finalizing as proposed. Instead, we will retain Radiation Treatment Management (CPT code 77427) on the Medicare Telehealth Services List on a provisional basis.

(9) Home International Normalized Ratio (INR) Monitoring

We received a request to permanently add Home INR Monitoring (HCPCS code G0248) to the Medicare Telehealth Services List. This service is not on the Medicare Telehealth Services List, nor had it been previously added and removed. We proposed to add HCPCS code G0248 to the Medicare Telehealth Services List with provisional status because our clinical analyses of these services indicate that they can be furnished in full using two-way, audio and video technology, and information provided by requesters indicates that there may be clinical benefit; however, there is not yet sufficient evidence available to consider the services for permanent status. This service as described by the HCPCS code is a face-to-face demonstration of use and care of the INR monitor, obtaining at least one blood sample, provision of instructions for reporting home INR test results, and documentation of patient's ability to perform testing and report results, and we believe each of these service elements the elements is capable of being furnished using an interactive telecommunications system. Adding this service on a provisional basis will allow additional time for the development of evidence of clinical benefit when this service is furnished via telehealth for CMS to consider when evaluating this service for potential permanent addition to the Medicare Telehealth Services List.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported adding these services to the Medicare Telehealth Services List on a provisional basis, and several recommended that we add these services to the Medicare Telehealth Services List on a permanent basis. Many commenters suggested that, as home INR services are primarily furnished by IDTFs, we should clarify that these suppliers are also able bill for Medicare Telehealth services. As these commenters explained in detail, the interaction with the patient described by this service is generally delivered by individuals considered to be clinical staff and not practitioners under the PFS and that studies have indicated positive outcomes when this clinical staff-provided service is delivered virtually, as it commonly has been since the first part of 2020.

Response: We thank commenters for their input. After reviewing the comments information provided by commenters regarding the entities who commonly bill for these services and the how they are currently delivered, we believe we need additional time to consider whether these services should be added to the formal list of Medicare telehealth services. Therefore, we are not finalizing addition to the Medicare telehealth list for CY 2025 and welcome input from interested parties which we may consider for future rulemaking. We note that we believe continued access to this service is important and not adding this service to the telehealth list at this

time does not mean that suppliers should change their current practices.

After consideration of public comments, we are not finalizing as proposed to add Home INR Monitoring (HCPCS code G0248) to the Medicare Telehealth Services List on a provisional basis.

(10) Caregiver Training

We received a request to permanently add Caregiver Training services, as described by CPT codes 97550 (*Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [iADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; initial 30 minutes*) and CPT code 97551 *(Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [iADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; each additional 15 minutes (List separately in addition to code for primary service))* to the Medicare Telehealth Services List. These codes do not currently appear on the Medicare Telehealth Services List nor had they previously been added or removed. We proposed to add these services to the Medicare Telehealth List with provisional status for CY 2025, in addition to the other currently payable caregiver training service codes (CPT codes 97550, 97551, 97552, 96202, 96203). . These codes describe new services that were added to the PFS beginning in 2024. Contingent upon finalizing the service code descriptions that we proposed in section II.E. of this final rule, we also proposed that HCPCS codes G0541–G0543 (GCTD1–3) and G0539–G0540 (GCTB1–2) be added to the Medicare Telehealth Services list for CY 2025 on a provisional basis. We believe that these codes are similar to other services already available on the Medicare Telehealth Services List, including education and training for patient self-management (CPT codes 98960–98962), self-care/home management training (CPT codes 97535), and caregiver-focused health risk assessment (CPT code 96161). Further, it appears that all elements of these services may be furnished when using two-way, audio-video interactive communications technology. Given the limited utilization of those codes for 2024, there are not studies supporting these codes' ability to be furnished remotely. Adding these services on a provisional basis will allow additional time for the development of evidence of clinical benefit when this service is furnished via telehealth for CMS to consider when evaluating these services for potential permanent addition to the Medicare Telehealth Services List.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported adding these services to the Medicare Telehealth Services List on a provisional basis. Some commenters recommended that we add these services to the Medicare Telehealth Services List on a permanent basis.

Response: We thank commenters for their support and may consider designating these services with permanent status on the Medicare Telehealth Services List in the future after additional data is provided in support of these services being furnished via telehealth.

After consideration of public comments, we are finalizing as proposed to add caregiver training services (CPT codes 97550, 97551, 97552, 96202, 96203 and HCPCS codes G0541–G0543 (GCTD1–3) and G0539–G0540 (GCTB1–2)) to the Medicare Telehealth Services list for CY 2025 on a provisional basis.

c. Other Services Proposed for Addition to the Medicare Telehealth Services List

(1) Preexposure Prophylaxis (PrEP) of Human Immunodeficiency Virus (HIV)

As outlined in Section II.E. of this final rule, we proposed national rates for HCPCS codes G0011 (Individual counseling for pre-exposure prophylaxis (PrEP) by physician or QHP to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence, 15–30 minutes) and G0013 (Individual counseling for pre-exposure prophylaxis (PrEP) by clinical staff to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence) pending the future finalization of the NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection. We believe these services are similar to services currently on the Medicare Telehealth Services list, specifically HCPCS codes G0445 (High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes) and CPT code 99211 (Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional) as these codes are the codes from which HCPCS codes G0011 and G0013 were unbundled, respectively. As similarity to services currently on the Medicare Telehealth Services List is one of our criteria for permanent addition, we proposed to add HCPCS codes G0011 and G0013 to the Medicare Telehealth Services List with a permanent status.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this proposal, and we did not receive any comments that were not in support of our proposal.

Response: We thank commenters for their input. After consideration of public comments, we are finalizing as proposed to add HCPCS codes G0011 and G0013 to the Medicare Telehealth Services List with a permanent status on the Medicare Telehealth Services List, beginning in CY 2025.

(2) Other Consideration for Medicare Telehealth Services List

Comment: Many commenters requested that we add services to the Medicare Telehealth Services List for which we did not receive requests through the annual submissions for consideration for the CY 2025 rulemaking cycle and that we did not discuss in the CY 2025 PFS proposed rule.

Response: We consider requests to add or remove services from the Medicare Telehealth Services List through the process we established as required under section 1834(m)(4)(F)(ii). Requests can be submitted to the CMS Telehealth Review Process mailbox (*telehealth_review_process@cms.hhs.gov*) no later than February 10, 2025, to be considered for the CY 2026 cycle of annual notice and comment rulemaking. For more information on requesting additions to the Medicare Telehealth Services List, please see *https://www.cms.gov/medicare/coverage/telehealth/request-addition.*

Comment: Some commenters requested clarification that the services designated as ''provisional'' on the Medicare Telehealth Services List will remain on the list for CY 2025.

Response: As explained previously, we are not considering in this

rulemaking for CY 2025 whether to recategorize provisional codes as permanent because we intend to conduct a comprehensive analysis of all such provisional codes, which we expect to address in future rulemaking. Except as specifically stated otherwise in this section, services included on *the Medicare Telehealth Services List* with provisional status will remain on the list for CY 2025.

The services that we are adding to the Medicare Telehealth Services List are listed in Table 12.

BILLING CODE 4120–01–P

TABLE 12: Services Finalized for Addition to the Medicare Telehealth Services List for CY 2025

Category	HCPCS	Long Description	Finalized Status
PrEP for HIV	G0011	Individual counseling for pre-exposure prophylaxis (PrEP) by physician or QHP to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence, 15-30 minutes	Permanent
	G0013	Individual counseling for pre-exposure prophylaxis (PrEP) by clinical staff to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence	Permanent
Caregiver Training	97550	Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [adls], instrumental adls [iadls], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; initial 30 minutes	Provisional
	97551	Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [adls], instrumental adls [iadls], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; each additional 15 minutes (list separately in addition to code for primary service)	Provisional
	97552	Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [adls], instrumental adls [iadls], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face with multiple sets of caregivers	Provisional

Category	HCPCS	Long Description	Finalized Status
	96202	Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); initial 60 minutes	Provisional
	96203	Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); each additional 15 minutes (List separately in addition to code for primary service)	Provisional
	G0541	Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound care, and infection control) (without the patient present), face-to-face; initial 30 minutes	Provisional
	G0542	Caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound care, and infection control) (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) (Use G0542 in conjunction with G0541)	Provisional

Category	HCPCS	Long Description	Finalized Status
	G0543	Group caregiver training in direct care strategies and techniques to support care for patients with an ongoing condition or illness and to reduce complications (including, but not limited to, techniques to prevent decubitus ulcer formation, wound care, and infection control) (without the patient present), face-to-face with multiple sets of caregivers	Provisional
	G0539	Caregiver training in behavior management/modification for caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face; initial 30 minutes	Provisional
	G0540	Caregiver training in behavior management/modification for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face; each additional 15 minutes	Provisional
Safety Planning Interventions	G0560	Safety planning interventions, including assisting the patient in the identification of the following personalized elements of a safety plan: recognizing warning signs of an impending suicidal or substance use-related crisis; employing internal coping strategies; utilizing social contacts and social settings as a means of distraction from suicidal thoughts or risky substance use; utilizing family members, significant others, caregivers, and/or friends to help resolve the crisis; contacting mental health or substance use disorder professionals or agencies; and making the environment safe; (List separately in addition to an E/M visit or psychotherapy)	Permanent

BILLING CODE 4120–01–C

We also point commenters to section II.I. of this final rule where we address requests from commenters to add HCPCS code G0560 to the Medicare Telehealth Services List. We are finalizing addition of HCPCS code G0560 to the Medicare Telehealth Services List.

d. Frequency Limitations on Medicare Telehealth Subsequent Care Services in Inpatient and Nursing Facility Settings, and Critical Care Consultations

When adding some services to the Medicare Telehealth Services List in the past, we have included certain frequency restrictions on how often practitioners may furnish the service via Medicare telehealth. These include a limitation of one subsequent hospital care service furnished through telehealth every three days, added in the CY 2011 PFS final rule (75 FR 73317 through 73318), one subsequent nursing facility visit furnished through telehealth every 14 days, added in the CY 2011 PFS final rule (75 FR73318),

and one critical care consultation service furnished through telehealth per day, added in the CY 2017 final rule (81 FR 80198). In establishing these limits, we cited concerns regarding the potential acuity and complexity of these patients.

We temporarily removed these frequency restrictions during the PHE for COVID–19. In the March 31, 2020 COVID–19 interim final rule with comment period (IFC) (85 FR 19241), we stated that we did not believe the frequency limitations for certain subsequent inpatient visits, subsequent NF visits, and critical care consultations furnished via Medicare telehealth were appropriate or necessary for the duration of the PHE because this would have been a patient population who would have otherwise not had access to clinically appropriate in-person treatment. Although the frequency limitations resumed effect on May 12, 2023 (upon expiration of the PHE), through enforcement discretion during the remainder of CY 2023 and notice-and-comment rulemaking for CY 2024, Medicare telehealth frequency limitations have been suspended for CY 2024 (88 FR 78876 through 78878) for the following codes relating to Subsequent Inpatient Visits, Subsequent Nursing Facility Visits, and Critical Care Consultation Services:

1. Subsequent Inpatient Visit CPT Codes:

- 99231 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making when using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.*);
- 99232 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making when using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.*); *and*
- 99233 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making when using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.*)

2. Subsequent Nursing Facility Visit CPT Codes:

- 99307 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. when using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.*);
- 99308 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making when using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.*);
- 99309 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making when using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.*); and
- 99310 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. when using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*)

3. Critical Care Consultation Services: HCPCS Codes

- G0508 (*Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth.*); and
- G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth.*)

In the CY 2024 PFS final rule (88 FR 78877), we solicited comments from interested parties on how practitioners have been ensuring that Medicare beneficiaries receive subsequent inpatient and nursing facility visits, as well as critical care consultation services since the expiration of the PHE. As discussed in that final rule, many commenters supported permanently removing these frequency limitations, stating that they are arbitrary and re-imposing the limitations would result in decreased access to care; that practitioners should be allowed to use their clinical judgment to determine the type of visit, how many visits, and the type of treatment that is the best fit for the patient so long as the standard of care is met; and that lifting these limitations during the PHE has been instructive and demonstrates the value of continuing such flexibilities. Many commenters urged us to permanently remove them. That said, some commenters did not support removing these frequency limitations citing patient acuity and safety, some commenters cited the importance of in-person care for patients in acute care settings. Some commenters stated that telehealth patient assessments and evaluations are never the same as in-person, hands on visits and should not be considered a viable replacement with no limitations for in-person care. We are continuing to consider what changes we should be making to how telehealth services are paid under Medicare in light of the way practice patterns may have changed following the PHE for COVID–19. Taking into account the information received from commenters in the CY 2024 PFS final rule, we believe it is reasonable to continue to pause certain pre-pandemic restrictions, such as the frequency limitations for the abovementioned codes for CY 2025. Removing such restrictions for CY 2025 would allow us to gather an additional year of data to determine how practice patterns are evolving and what changes, if any, to frequency limitations should be made on a permanent basis.

We do not believe pausing such frequency limitations for another year presents a level of safety risk requiring us to immediately reinstate the limitations. Our analysis of claims data indicates that the volume of services that would be affected by implementing these limitations is relatively low; in other words, these services are not being furnished via telehealth with such frequency that, if the frequency limits were in place, they would be met or exceeded very often or for many beneficiaries. Claims data from 2020–2023 suggest that less than five percent received one or more of these services as a telehealth service. Therefore, while claims data does not suggest that lifting these limitations during the PHE has led to an increase in utilization, we continue to be interested in information from interested parties on our concerns regarding the potential acuity and complexity of these patients and how such acuity and complexity should complexity should influence our implementation of frequency limitations.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposals to continue to suspend application of telehealth frequency limits on subsequent

inpatient and nursing facility visits and critical care consultations through 2025. Commenters stated that they appreciated the continued flexibility while also acknowledging the concerns we expressed regarding the necessity of in-person care for patients in higher-acuity settings of care. Several commenters did suggest that we should permanently lift these restrictions, stating that this flexibility is helpful in addressing staffing shortages and that we should defer to individual clinical judgement when it comes to how frequently a patient requires in-person, non-telehealth care. A few commenters cautioned that we should not remove frequency limitations permanently, stating in-person care is essential to quality of life and care due to the complex nature and acuity of patients in these settings.

Response: We thank commenters for their input. We believe that continuing to suspend these frequency limitations on a temporary basis for CY 2025 will allow us more time to evaluate patient safety while preserving access in a way that is not disruptive to practice patterns that were established during and after the PHE. We appreciate the information regarding both patient safety concerns and concerns regarding supporting healthcare access. We expect to address these concerns in future rulemaking.

After consideration of public comments, we are finalizing as proposed to continue suspension of the telehealth frequency limits on subsequent inpatient and nursing facility visits and critical care consultations through CY 2025.

e. Audio-Only Communication Technology To Meet the Definition of ''Telecommunications System''

In our regulation at § 410.78(a)(3), we define ''interactive telecommunications system'' as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. Through emergency regulations and waiver authority under section 1135(b)(8) of the Act, in response to the PHE for COVID–19, we allowed the use of audio-only communications technology to furnish services described by the codes for audio-only telephone evaluation and management services and behavioral health counseling and educational services. Section 4113 of the CAA, 2023, extended the availability of telehealth services that can be furnished using audio-only technology and provided for the extension of other PHE-related flexibilities including removal of the geographic and location limitations under section 1834(m) of the Act through December 31, 2024.

In the CY 2022 PFS final rule (86 FR 65060), in part to recognize the changes made by section 123 of the CAA, 2021 that removed the geographic restrictions for Medicare telehealth services for the diagnosis, evaluation, or treatment of a mental health disorder and the addition of the patient's home as a permissible originating site for these services, we revisited our regulatory definition of ''interactive telecommunications system'' beyond the circumstances of the PHE. Specifically, we finalized a policy to allow for audio-only services under certain circumstances and revised the regulation at § 410.78(a)(3) to permit the use of audio-only equipment for telehealth services furnished to established patients in their homes for purposes of diagnosis, evaluation, or treatment of a mental health disorder (including substance use disorders) if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined previously, but the patient is not capable of, or does not consent to, the use of video technology. We also established this policy in part because mental health services are different from most other services on the Medicare telehealth services list in that many of the services primarily involve verbal conversation where visualization between the patient and furnishing physician or practitioner may be less critical to the provision of the service.

However, with the successive statutory extensions of the telehealth flexibilities implemented in response to the PHE for COVID–19, most recently by the CAA, 2023, and our adoption of other extensions where we have had authority to do so, we have come to believe that it would be appropriate to allow interactive audio-only telecommunications technology when any telehealth service is furnished to a beneficiary in their home (when the patient's home is a permissible originating site) and when the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined previously, but the patient is not capable of, or does not consent to, the use of video technology. While practitioners should always use their clinical judgment as to whether the use of interactive audio-only technology is sufficient to furnish a Medicare telehealth service, we recognize that there is variable broadband access in patients' homes, and that even when technologically feasible, patients simply may not always wish to engage with their practitioner in their home using interactive audio and video. Under current statute, with the expiration of the PHE-related telehealth flexibilities on December 31, 2024, the patient's home is a permissible originating site only for services for the diagnosis, evaluation, or treatment of a mental health or substance use disorder, and for the monthly ESRD-related clinical assessments described in section 1881(b)(3)(B) of the Act.

We proposed in the CY 2025 PFS proposed rule to revise the regulation at § 410.78(a)(3) to state that an interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a beneficiary in their home if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication, but the patient is not capable of, or does not consent to, the use of video technology. Additionally, a modifier designated by CMS must be appended to the claim for services described in this paragraph to verify that these conditions have been met. These are CPT modifier ''93'' and, for RHCs and FQHCs, Medicare modifier ''FQ'' (Medicare telehealth service was furnished using audio-only communication technology). Practitioners have the option to use the ''FQ'' or the ''93'' modifiers or both where appropriate and true, since they are identical in meaning.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal, stating that allowing audio-only communications technology to meet the definition of telecommunications system when a beneficiary is in their home and does not have access to, or does not wish to use, two-way, audio/video would improve access to care, particularly for rural and underserved populations.

Response: We thank commenters for their support.

Comment: A few commenters requested the removal of the requirement that the distant site practitioner be able to furnish Medicare telehealth services via two-way, audio/video technology. Commenters pointed out that there are circumstances where the practitioner might also be in a rural area or area without sufficient broadband infrastructure that might inhibit their capacity to furnish two-way, audio-video interactions. Other commenters recommended that we remove the requirement that audio-only only meet the definition of telecommunications system when the beneficiary is in their home, instead requesting that this flexibility be extended to all originating sites. We also received a few comments expressing reservation with the use of audio-only communication technology in furnishing Medicare telehealth services, stating that audio-only services are not analogous to in-person care and should not be a substitute for face-to-face encounters.

Response: We appreciate the commenters' views and concerns. As explained previously, Medicare telehealth services serve as a substitute for a service that is typically delivered through an in-person, face-to-face visit with the patient and practitioner. Medicare telehealth services are generally analogous to, and must include the elements of, the in-person service. We continue to believe that the use of two-way, real-time audio/video communications technology to furnish Medicare telehealth services is the closest approximation to an in-person service, and is an appropriate general expectation when furnishing a Medicare telehealth service. Therefore, we are maintaining the general definition of interactive telecommunications system in § 410.78(a)(3) for purposes of Medicare telehealth services to mean multimedia communications equipment that includes, at minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and the distant site physician or practitioner. We are also maintaining the requirement that distant site physicians and practitioners must have the technical capability to use an interactive telecommunications system that includes two-way, real-time, interactive audio and video communications at the time that an audio-only telehealth service is furnished.

We proposed in the CY 2025 PFS proposed rule to revise our definition of interactive telecommunications system in § 410.78(a)(3) to include two-way, real-time audio-only communication technology under certain circumstances for any telehealth service furnished to a beneficiary in their home (when the home is a permissible originating site for the telehealth service). We limited our proposal to permit Medicare telehealth services to be furnished using real-time audio-only technology only in the narrow circumstances that the service is furnished to a patient in their home, and the patient is either not capable or does not consent to use video technology. The purpose of our proposal was to recognize that, while real-time interactive audio-video remains the generally applicable standard, including for distant site practitioners who wish to furnish these services, there are special considerations for patients when a Medicare telehealth service is delivered in their home. For example, a patient may not have sufficient (or any) access to broadband to support the use of real-time video technology, may not have the technical proficiency or support in place to use video technology, or may have privacy concerns about using video technology for Medicare telehealth services in their home.

Patients may not wish to use video in their homes because they do not want the practitioner to view their private, personal living space. If the patient perceives the use of real-time video technology as intrusive, the requirement to use video technology without exception could discourage patients from accessing appropriate health care services through telehealth. We also recognize that a policy to address these special considerations can facilitate access to care that would be unlikely to otherwise occur, given the patient's technological limitations, abilities, or personal preferences. To reflect this limited exception to address the unique considerations of patients who may receive Medicare telehealth services in their homes, as stated in the CY 2025 PFS proposed rule, we proposed a policy that would permit a patient-driven choice to use audio-only technology to receive a Medicare telehealth service based on their technological capabilities and limitations, and their comfort level with the use of video technology in their home.

Separately, based on our review of the comments and our own independent analysis, we do not believe it would be appropriate at this time to permit two-way, real-time audio-only communication technology for telehealth services furnished at originating sites other than the patient's home. As we stated in the CY 2025 PFS proposed rule, all other originating sites are medical facilities that would generally have the infrastructure and broadband capacity to support two-way, audio/video communication technology. Additionally, patients would not have the same heightened expectation of privacy when video is used for a Medicare telehealth service in a medical facility as they would in their home.

We also note that practitioners should always use their clinical judgment in deciding to furnish services via telehealth, including in the patient's home, to ensure that appropriate care is being delivered; including scheduling in-person care as needed.

After consideration of public comments, we are finalizing as proposed to revise our regulations at § 410.78(a)(3) to permanently change the regulatory definition of an interactive telecommunications system to include two-way, real-time audio-only communication technology for any telehealth services furnished to beneficiaries in their homes if the distant site physician or practitioner is technically capable of using an interactive telecommunications system that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner, but the patient is not capable of, or does not consent to, the use of video technology. We clarify that no additional documentation, except for the appropriate modifier as mentioned above, are needed.

f. Distant Site Requirements

In the CY 2024 PFS final rule (88 FR 78873 through 78874) we discussed that many commenters expressed concerns regarding the expiring flexibility for telehealth practitioners to bill from their currently enrolled location instead of their home address when providing telehealth services from their home. CMS issued an FAQ, available at *https://www.cms.gov/files/document/physicians-and-other-clinicians-cms-flexibilities-fight-covid-19.pdf*, which extended the flexibility for telehealth practitioners to bill from their currently enrolled location instead of their home address when providing telehealth services from their home through December 31, 2023. Interested parties suggested that the expiration of this flexibility poses a potential and imminent threat to the safety and privacy of health professionals who work from home and furnish telehealth services. Commenters cited recent examples of workplace violence in health care facilities, where direct harm to nurses and other medical staff occurred. In addition to safety and privacy concerns, interested parties

explained that a significant number of practitioners would need to change their billing practices or add their home address to the Medicare enrollment file, coordinating with the appropriate Medicare Administrative Contractor in their jurisdiction, and this would present administrative burden. To address these concerns, commenters requested that CMS take steps to protect telehealth practitioners by adjusting enrollment requirements so that individual practitioners do not have to list their home addresses on enrollment forms.

In response, CMS finalized, through CY 2024, that we would continue to permit a distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home.

We have continued to hear from interested parties who have stressed the importance of continuing this flexibility for the safety and privacy of health care professionals. Given the shift in practice patterns toward models of care that include the practitioner's home as the distant site, we believe it would be appropriate to continue this flexibility as CMS considers various proposals that may better protect the safety and privacy of practitioners. Therefore, we proposed in the CY 2025 PFS proposed rule that through CY 2025 we would continue to permit the distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to continue to permit the distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home through CY 2025. We also received comments requesting that we make this extension or a similar policy permanent. These commenters highlighted the need for a permanent solution for practitioners who do not have an in-person practice location. Other commenters requested clarification regarding whether the practitioner's home address could be across a state line from the location of the beneficiary provided that the practitioner is licensed in both states.

Response: We thank commenters for their input and may continue to consider the issues raised in future rulemaking. We remind interested parties that we defer to state law regarding licensure requirements for distant site Medicare telehealth practitioners. In addition, we note that a separate Medicare enrollment is required for each state in which the practitioner furnishes and intends to bill for covered Medicare services.

After consideration of public comments, we are finalizing as proposed that, through CY 2025, we continue to permit the distant site practitioner to use their currently enrolled practice location instead of their home address when providing Medicare telehealth services from their home.

2. Other Non-Face-to-Face Services Involving Communications Technology Under the PFS

a. Direct Supervision Via Use of Two-Way Audio/Video Communications Technology

Under Medicare Part B, certain types of services, including diagnostic tests described under § 410.32 and services incident to a physician's (or other practitioner's) professional service described under § 410.26 (incident-to services), are required to be furnished under specific minimum levels of supervision by a physician or other practitioner. We define three levels of supervision in our regulation at § 410.32(b)(3): General Supervision, Direct Supervision, and Personal Supervision. Notwithstanding the temporary measures implemented in response to the PHE for COVID–19, direct supervision requires the physician (or other supervising practitioner) to be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. Again, notwithstanding the temporary measures implemented in response to the PHE for COVID–19, we have established this ''immediate availability'' requirement to mean in-person, physical, not virtual, availability (please see the April 6, 2020 IFC (85 FR 19245) and the CY 2022 PFS final rule (86 FR 65062)).

Direct supervision is required for various types of services, including most incident-to services under § 410.26, many diagnostic tests under § 410.32, pulmonary rehabilitation services under § 410.47, cardiac rehabilitation and intensive cardiac rehabilitation services under § 410.49, and certain hospital outpatient services as provided under § 410.27(a)(1)(iv). In the March 31, 2020 COVID–19 IFC, we amended the definition of ''direct supervision'' for the duration of the PHE for COVID–19 (85 FR 19245 through 19246) at § 410.32(b)(3)(ii) to state that the necessary presence of the physician (or other practitioner) for direct supervision includes virtual presence through audio/video real-time communications technology. Instead of requiring the supervising physician's (or other practitioner's) physical presence, the amendment permitted a supervising physician (or other practitioner) to be considered ''immediately available'' through virtual presence using two-way, real-time audio/visual technology for diagnostic tests, incident-to services, pulmonary rehabilitation services, and cardiac and intensive cardiac rehabilitation services. We made similar amendments at § 410.27(a)(1)(iv) to specify that direct supervision for certain hospital outpatient services may include virtual presence through audio/video real-time communications. The CY 2021 PFS final rule (85 FR 84538 through 84540) and the CY 2024 PFS final rule (88 FR 78878) subsequently extended these policies through December 31, 2024. As stated in the CY 2024 PFS final rule, we extended this definition of direct supervision through December 31, 2024, in order to align the timeframe of the policy with other PHE-related telehealth policies that were extended most recently under the provisions of the CAA, 2023.

We note that in the CY 2021 PFS final rule (85 FR 84539) we clarified that, to the extent our policy allows direct supervision through virtual presence using audio/video real-time communications technology, the requirement could be met by the supervising physician (or other practitioner) being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the service. We noted that this was the case during the PHE and would continue to be the case following the PHE. While flexibility to provide direct supervision through audio/video real-time communications technology was adopted to be responsive to critical needs during the PHE for COVID–19 to ensure beneficiary access to care, reduce exposure risk and to increase the capacity of practitioners and physicians to respond to COVID–19, we expressed concern that direct supervision through virtual presence may not be sufficient to support PFS payment on a permanent basis, beyond

the PHE for COVID–19, due to issues of patient safety. For instance, in complex, high-risk, surgical, interventional, or endoscopic procedures, or anesthesia procedures, a patient's clinical status can quickly change; in-person supervision would be necessary for such services to allow for rapid on-site decision-making in the event of an adverse clinical situation. In addition to soliciting comment in the CY 2021 PFS proposed rule on whether there should be any additional ''guardrails'' or limitations to ensure patient safety/clinical appropriateness, beyond typical clinical standards, as well as restrictions to prevent fraud or inappropriate use, we solicited comment in the CY 2024 PFS proposed rule on whether we should consider extending the definition of direct supervision to permit virtual presence beyond December 31, 2024. Specifically, we stated that we were interested in input from interested parties on potential patient safety or quality concerns when direct supervision occurs virtually; for instance, if direct supervision of certain types of services with virtual presence of the supervising practitioner is more or less likely to present patient safety concerns, or if this flexibility would be more appropriate for certain types of services, or when certain types of auxiliary personnel are performing the supervised service. We were also interested in potential program integrity concerns that interested parties may have regarding this policy, such as overutilization or fraud and abuse.

(1) Proposal To Extend Definition of ''Direct Supervision'' To Include Audio-Video Communications Technology Through 2025

As discussed in the CY 2024 PFS final rule (88 FR 78878), in the absence of evidence that patient safety is compromised by virtual direct supervision, we are concerned about an abrupt transition to our pre-PHE policy that defines direct supervision to require the physical presence of the supervising practitioner. We noted that an immediate reversion to the pre-PHE definition of direct supervision would prohibit virtual direct supervision, which may present a barrier to access to many services, such as incident-to services, and that physicians and/or other supervising practitioners, in certain instances, would need time to reorganize their practice patterns established during the PHE to reimplement the pre-PHE approach to direct supervision without the use of audio/video technology. We acknowledge the utilization of this flexibility and recognize that many practitioners have stressed the importance of maintaining it, however we seek additional information regarding potential patient safety and quality of care concerns. This flexibility has been available and widely utilized since the beginning of the PHE, and we recognize that may enhance patient access. However, given the importance of certain services being furnished under direct supervision in ensuring quality of care and patient safety, and in particular the ability of the supervising practitioner to intervene if complications arise, we believe an incremental approach is warranted, particularly in instances where unexpected or adverse events may arise for procedures which may be riskier or more intense. In light of these potential safety and quality of care implications, and exercising an abundance of caution, we proposed in the CY 2025 PFS proposed rule to extend this flexibility for all services on a temporary basis only. Specifically, we proposed to revise the regulations at § 410.32(b)(3)(ii) to state that through December 31, 2025, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported extending this flexibility on a temporary basis for an additional year, although most requested that we make this flexibility permanent. A few commenters informed us of potential patient safety concerns and barriers to billing that we should consider before further extending or making this flexibility permanent. Some commenters opposed making this flexibility permanent due to concerns about increasing the amount of physician ''incident to'' billing for services provided by physician assistants and nurse practitioners, which would obscure the extent to which physician assistants and nurse practitioners are actually performing the services.

Response: We appreciate the support of commenters and look forward to reviewing the information provided as we consider the most appropriate way to balance patient safety concerns with the interest of supporting access that we may address in future rulemaking. After consideration of public comments, we are finalizing as proposed, to continue to define direct supervision to permit the presence and ''immediate availability'' of the supervising practitioner through real-time audio and visual interactive telecommunications through December 31, 2025, and finalizing corresponding revisions to our regulations at § 410.32(b)(3)(ii).

(2) Proposal to Permanently Define ''Direct Supervision'' To Include Audio-Video Communications Technology for a Subset of Services

In the CY 2024 PFS proposed rule, we solicited comment on extending or permanently establishing the virtual presence flexibility for certain services valued under the PFS that are typically are performed in their entirety by auxiliary personnel as defined at § 410.26(a)(1). We stated such services would include incident-to services wholly furnished by auxiliary personnel or Level I office or other outpatient E/M visits for established patients. We also mentioned Level I Emergency Department (ED) visits in this list but have since concluded that ED services would not be wholly furnished by auxiliary personnel and, for that reason, have excluded them from the discussion in this final rule. Based on our review, these specific services present less of a patient safety concern than services for which there may be a need for immediate intervention of the supervising practitioner. As noted in the CY 2024 PFS proposed rule, allowing virtual presence for direct supervision of these services could balance patient safety concerns with the interest of supporting access and preserving workforce capacity for medical professionals while considering potential quality and program integrity concerns. After reviewing the various comments in response to this solicitation, additional feedback provided by interested parties, and conducting our own independent review, we believe these services are low risk by their nature, do not often demand in-person supervision, are typically furnished entirely by the supervised personnel, and allowing virtual presence for direct supervision of these services would balance patient safety concerns with the interest of supporting access and preserving workforce capacity.

We proposed in the CY 2025 PFS proposed rule to adopt a definition of direct supervision that allows ''immediate availability'' of the supervising practitioner using audio/video real-time communications technology (excluding audio-only), but only for the following subset of incident-to services described under § 410.26: (1) services furnished incident to a physician or other practitioner's service when provided by auxiliary

personnel employed by the billing practitioner and working under their direct supervision, and for which the underlying HCPCS code has been assigned a PC/TC indicator of '5';[10] and (2) services described by CPT code 99211 (*Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional*). As provided in the code descriptor for CPT code 99211, an office or other outpatient visit for the evaluation and management of an established patient does not require the presence of a physician or other practitioner and may be furnished incident to a physicians' service by a nonphysician employee of the physician under direct supervision. The service described by CPT code 99211 and the services that are identified with a PC/TC indicator of '5' as listed in the PFS Relative Value Files are services that are nearly always performed in entirety by auxiliary personnel. The vignette for CPT code 99211 describes the provision of supervision and guidance to the clinical staff as necessary. The code descriptor for this service specifies an E/M service that may not require the presence of a physician or other professional; and the current valuation, which is relatively low compared to other office and outpatient E/M services, suggests that this service would primarily be provided by auxiliary personnel.

We proposed an incremental approach whereby we would adopt without any time limitation the definition of direct supervision permitting virtual presence for services that are inherently lower risk: that is, services that do not ordinarily require the presence of the billing practitioner, do not require direction by the supervising practitioner to the same degree as other services furnished under direct supervision, and are not services typically performed directly by the supervising practitioner.

For all other services required to be furnished under the direct supervision of the supervising physician or other practitioner, we proposed, as described previously, to continue to define ''immediate availability'' to include real-time audio and visual interactive telecommunications technology only through December 31, 2025.

We proposed to revise the regulation at § 410.26(a)(2) to state that for the following services furnished after December 31, 2025, the presence of the physician (or other practitioner) required for direct supervision shall continue to include virtual presence through audio/video real-time communications technology (excluding audio-only): services furnished incident to a physician's service when they are provided by auxiliary personnel employed by the physician and working under his or her direct supervision and for which the underlying HCPCS code has been assigned a PC/TC indicator of '5'; and services described by CPT code 99211 (office and other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported this policy and supported an incremental approach to making permanent the services that this definition applies to. Commenters provided additional services for us to consider adopting permanently as inherently low risk for purposes of the policy permitting direct supervision through virtual presence, such as diagnostic tests and behavioral health, dermatology, therapy, registered dietitian nutritionists, cardiac rehabilitation, and pulmonary rehabilitation services.

Response: We will consider adding to the services for which direct supervision can include virtual presence in future rulemaking.

After consideration of public comments, we are finalizing as proposed and revising our regulations at § 410.26(a)(2) to state that, for the following services furnished after December 31, 2025, the presence of the physician (or other practitioner) required for direct supervision shall continue to include virtual presence through audio/video real-time communications technology (excluding audio-only): services furnished incident to a physician's service when they are provided by auxiliary personnel employed by the physician and working under his or her direct supervision and for which the underlying HCPCS code has been assigned a PC/TC indicator of '5'; and office and other outpatient visits for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional. We note that, in instances where a service on the Medicare telehealth list, is available to beneficiaries in their homes, and also has the requirement of direct supervision, that under the applicable definition of direct supervision, the physician/practitioner is required to be available using both and audio and video. We note that does not necessarily mean that any interaction between the patient and the physician/practitioner supervising the service would require a video component.

(3) Teaching Physician Billing for Services Involving Residents With Virtual Presence

In the CY 2021 PFS final rule (85 FR 84577 through 84584), we established a policy that, after the end of the PHE for COVID–19, teaching physicians may meet the requirements to be present for the key or critical portions of services when furnished involving residents through audio/video real-time communications technology (virtual presence), but only for services furnished in residency training sites located outside of an Office of Management and Budget (OMB)-defined metropolitan statistical area (MSA). We made this location distinction consistent with our longstanding interest in increasing beneficiary access to Medicare-covered services in rural areas. We noted the ability to expand training opportunities for residents in rural settings. For all other locations, we expressed concerns that continuing to permit teaching physicians to bill for services furnished involving residents when they are virtually present, outside the conditions of the PHE for COVID–19, may not allow the teaching physician to have personal oversight and involvement over the management of the portion of the case for which the payment is sought, under section 1842(b)(7)(A)(i)(I) of the Act. In addition, we stated concerns about patient populations that may require a teaching physician's experience and skill to recognize specialized needs or testing and whether it is possible for the teaching physician to meet these clinical needs while having a virtual presence for the key portion of the service. We referred readers to the CY 2021 PFS final rule (85 FR 84577 through 84584) for a more detailed description of our specific concerns. At the end of the PHE for COVID–19, and as finalized in the CY 2021 PFS final rule, we intended for the teaching physician to have a physical presence during the key portion of the service

[10] For a full list of all PFS payment status indicators and descriptions, see the Medicare Claims Processing Manual (IOM Pub. 100–04, chapter 23, sections 30.2.2). For a full list of all PFS payment status indicators and descriptions, see the Medicare Claims Processing Manual (IOM Pub. 100–04, chapter 23, sections 30.2.2 and 50.6). Specific indicators by service are listed in the PFS Relative Value files at *https://www.cms.gov/medicare/payment/fee-schedules/physician/pfs-relative-value-files*).

personally provided by residents in order to be paid for the service under the PFS, in locations that were within a MSA. This policy applied to all services, regardless of whether the patient was co-located with the resident or only present virtually (for example, the service was furnished as a 3-way telehealth visit, with the teaching physician, resident, and patient in different locations). However, interested parties expressed concerns regarding the requirement that the teaching physician be physically present with the resident when a service is furnished virtually (as a Medicare telehealth service) within an MSA. Some interested parties stated that during the PHE for COVID–19, when residents provided telehealth services, and the teaching physician was virtually present, the same safe and high-quality oversight was provided as when the teaching physician and resident were physically co-located. In addition, these interested parties stated that during telehealth visits, the teaching physician was virtually present during the key and critical portions of the telehealth service, available immediately in real-time, and had access to the electronic health record. After review of the public comments, we finalized a policy that allowed the teaching physician to have a virtual presence in all teaching settings, only in clinical instances when the service was furnished virtually (for example, a 3-way telehealth visit, with all parties in separate locations). This permitted teaching physicians to have a virtual presence during the key portion of the Medicare telehealth service for which payment was sought, through audio/video real-time communications technology, in all residency training locations through December 31, 2024.

As stated in the CY 2024 PFS final rule (88 FR 78880), we are concerned that an abrupt transition to our pre-PHE policy may present a barrier to access to many services. We also understand that teaching physicians have gained clinical experience providing services involving residents with virtual presence during the PHE for COVID–19 and could help us to identify circumstances where the teaching physician can routinely provide sufficient personal and identifiable services to the patient through their virtual presence during the key portion of the Medicare telehealth service. We sought comment and information to help us consider other clinical treatment situations where it may be appropriate to continue to permit the virtual presence of the teaching physician, while continuing to support patient safety, meeting the clinical needs for all patients, and ensuring burden reduction without creating risks to patient care or increasing opportunities for fraud. As summarized in the CY 2024 PFS final rule (88 FR 78881 through 78882), commenters encouraged us to establish this policy permanently and include in-person services to promote access to care, stated that teaching physicians should be allowed to determine when their virtual presence would be clinically appropriate, based on their assessment of the patient's needs and the competency level of the resident. While we continue to consider clinical scenarios where it may be appropriate to permit the virtual presence of the teaching physician, we proposed in the CY 2025 PFS proposed rule to continue our current policy to allow teaching physicians to have a virtual presence for purposes of billing for services furnished involving residents in all teaching settings through December 31, 2025, but only when the service is furnished virtually (for example, a 3-way telehealth visit, with the patient, resident, and teaching physician in separate locations). This would permit teaching physicians to have a virtual presence during the key portion of the Medicare telehealth service for which payment is sought in any residency training location through December 31, 2025. The teaching physician's virtual presence would continue to require real-time observation (not mere availability) and excludes audio-only technology. The documentation in the medical record would need to continue to demonstrate whether the teaching physician was physically present or present through audio/video real-time communications technology at the time of the Medicare telehealth service, which includes documenting the specific portion of the service for which the teaching physician was present through audio/video real-time communications technology.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported extending the policy described in this proposal through CY 2025. However, several commenters continued to encourage us to establish this policy permanently for in-person and telehealth services, within or outside of an MSA. Commenters also reiterated that teaching physicians should be allowed to determine when their virtual presence would be clinically appropriate, based on their assessment of the patient's needs and the competency level of the resident, noting that the Accreditation Council for Graduate Medical Education (ACGME) rules allow teaching physicians to concurrently monitor patient care through appropriate telecommunication technology when the teaching physician and/or patient is not physically present with the resident, in all geographic locations.

Response: We thank commenters for the additional information provided. We will consider the clinical instances when PFS payment is appropriate for teaching physicians furnishing services that involve residents, to ensure the teaching physician has personal oversight and involvement over the management of the portion of the case for which the payment is sought in future rulemaking.

After consideration of the public comments, we are finalizing the policy as proposed, to continue to allow teaching physicians to have a virtual presence in all teaching settings, but only for services furnished as a Medicare telehealth service. This will continue to permit teaching physicians to have a virtual presence during the key portion of the Medicare telehealth service for which payment is sought, through audio/video real-time communications technology, for all residency training locations through December 31, 2025.

(a) Request for Information for Teaching Physician Services Furnished Under the Primary Care Exception

The so-called primary care exception set forth at § 415.174 permits the teaching physician to bill for certain lower and mid-level complexity physicians' services furnished by residents in certain types of residency training settings even when the teaching physician is not present with the resident during the services as long as certain conditions are met, including that the services are furnished by residents with more than six months of training in the approved residency program; and that the teaching physician directs the care of no more than four residents at a time, remains immediately available and has no other responsibilities while directing the care, assumes management responsibility for beneficiaries seen by the residents, ensures that the services furnished are appropriate, and reviews certain elements of the services with each resident during or immediately after each visit. For a more detailed description of the list of services currently allowed under the primary care exception policy, we refer readers

to the CY 2021 PFS final rule (85 FR 84585 through 84590).

We have received feedback from interested parties requesting that we permanently expand the list of services that can be furnished under the primary care exception to include all levels of E/M services and additional preventive services. These interested parties have stated that the fact that high-value primary care and preventive services are not included in the scope of the primary care exception discourages their integration in residency training in these primary care settings, which has a negative impact on physician training, patient access, and longer-term outcomes. Additionally, these interested parties have suggested that including all levels of E/M services under the primary care exception could support primary care workforce development and improve patient continuity of care without compromising patient safety; furthermore, including additional preventive services within the primary care exception would increase the utilization of high-value services.

We believe the primary care exception was intended to broaden opportunities for teaching physicians to involve residents in furnishing services under circumstances that preserve the direction of the care by the teaching physician and promote safe, high-quality patient care. As such, we requested information to help us consider whether and how best to expand the array of services included under the primary care exception in future rulemaking. We were interested in hearing more about the types of services that could be allowed under the primary care exception, specifically preventive services, and whether the currently required six months of training in an approved program is sufficient for residents to furnish these types of services without the presence of a teaching physician. We sought comment to help us consider whether adding certain preventive services or higher level E/M services to the primary care exception will hinder the teaching physician from maintaining sufficient personal involvement in the care to warrant PFS payment for the services being furnished by up to four residents at any given time. Similarly, we requested information on whether the inclusion in the primary care exception of specific higher-level or preventive services will impede the teaching physician's ability to remain immediately available for up to four residents at any given time, while directing and managing the care furnished by these residents.

We received public comments in response to this request for information. The following is a summary of the comments we received and our response.

Comment: Many commenters stated they support permanently expanding the array of services included under the primary care exception, specifically to include certain preventive and/or higher level E/M services. Commenters continued to suggest that this expansion would support the primary care workforce development, improve patient continuity of care without compromising patient safety, and increase the utilization of some high-value services. Some commenters suggested that additional services should also be considered for inclusion under the primary care exception, specifically services that are related to patient continuity and integration of care, such as transitional care management, advance care planning, and chronic care management services. Other commenters requested that we consider expanding the primary care exception and definition of a ''teaching setting'' to include Rural Health Clinics (RHCs), Federally Qualified Health Centers (FQHCs) and Teaching Health Centers (THCs) that are reimbursed under Section 340H of the Public Health Service Act. Currently, the primary care exception does not apply to these centers, and commenters believe their inclusion would offer more training opportunities for residents and align payments for services provided at these centers with those furnished by residents under Medicare graduate medical education funding.

Response: We will consider the information provided for future rulemaking.

3. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m)(2)(B) of the Act established the Medicare telehealth originating site facility fee for telehealth services furnished from October 1, 2001, through December 31, 2002 at $20.00, and specifies that, for telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. The proposed MEI increase for CY 2025 was 3.6 percent and was based on the expected historical percentage increase of the 2017-based MEI. For the final rule, we proposed to update the MEI increase for CY 2025 based on historical data through the second quarter of 2024. The final CY 2025 MEI update is 3.5 percent. Therefore, for CY 2025, the payment amount for HCPCS code Q3014 (*Telehealth originating site facility fee*) is $31.01. Table 13 shows the Medicare telehealth originating site facility fee and the corresponding MEI percentage increase for each applicable time period.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

4. Telehealth Place of Service Code

Comment: While not specifically addressing the proposed policies set forth in the CY 2025 PFS proposed rule, many commenters asked if claims for telehealth services billed with POS 10 (telehealth provided in patient's home) will be paid at the non-facility PFS rate for 2025.

Response: In the CY 2024 PFS final rule (88 FR 78874), we finalized that beginning in CY 2024, claims for telehealth services billed with POS 10 (telehealth provided in patient's home) will be paid at the non-facility PFS rate. This policy, as finalized, was not limited to CY 2024. Claims for telehealth services billed with POS 10 (telehealth provided in patient's home) will continue to be paid at the non-facility PFS rate for CY 2025 and beyond.

TABLE 13: The Medicare Telehealth Originating Site Facility Fee

Time Period	MEI (%)	Facility Fee for Q3014
Oct. 1, 2001 to Dec. 31, 2002	NA	$ 20.00
2003	3.0	$ 20.60
2004	2.9	$ 21.20
2005	3.1	$ 21.86
2006	2.8	$ 22.47
2007	2.1	$ 22.94
2008	1.8	$ 23.35
2009	1.6	$ 23.72
2010	1.2	$ 24.00
2011	0.4	$ 24.10
2012	0.6	$ 24.24
2013	0.8	$ 24.43
2014	0.8	$ 24.63
2015	0.8	$ 24.83
2016	1.1	$ 25.10
2017	1.2	$ 25.40
2018	1.4	$ 25.76
2019	1.5	$ 26.15
2020	1.9	$ 26.65
2021	1.4	$ 27.02
2022	2.1	$ 27.59
2023	3.8	$ 28.64
2024	4.6	$ 29.96
2025*	3.5	$ 31.04

*Reflects the most recent estimate of the CY 2025 MEI percentage based on historical data through the second quarter of 2024.

5. Payment for Outpatient Therapy Services, Diabetes Self-Management Training, and Medical Nutrition Therapy When Furnished by Institutional Staff to Beneficiaries in Their Homes Through Communication Technology

For information related to outpatient physical therapy, occupational therapy, speech-language pathology, diabetes self-management training (DSMT) and medical nutritional therapy (MNT) services furnished by institutional staff in hospitals and other institutional settings to beneficiaries in their homes through communication technology, please refer to the CY 2025 Hospital Outpatient Prospective Payment System (OPPS) final rule.

E. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010, CY 2015, and CY 2020. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as outlined in section II.C. of this final rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we

established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule. We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the Federal Government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with interested parties, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. Section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes $\times$ 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs discuss our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist, we also include a summary of interested party reactions to our approach. We noted that many commenters and interested parties have expressed concerns over the years with our ongoing adjustment of work RVUs

based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We note that we are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several interested parties, including the RUC, have expressed general objections to our use of these methodologies and suggested that our actions in adjusting the recommended work RVUs are inappropriate; other interested parties have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

We received several comments regarding our methodologies for work valuation in response to the CY 2025 PFS proposed rule and those comments are summarized below.

Comment: Several commenters disagreed with CMS' reference to older work time sources and stated that their use led to the proposal of work RVUs based on flawed assumptions. Commenters stated that codes with ''CMS/Other'' or ''Harvard'' work time sources, used in the original valuation of certain older services, were not surveyed, and therefore, were not resource-based. Commenters also stated that it was invalid to draw comparisons between the current work times and work RVUs of these services to the newly surveyed work time and work RVUs as recommended by the RUC.

Response: We agree that it is important to use the recent data available regarding work times and note that when many years have passed since work time has been measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had been routinely overestimated, this would undermine the relativity of the work RVUs on the PFS in general, in light of the fact that codes are often valued based on comparisons to other codes with similar work times. Such an assumption would also undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times that have been used in PFS ratesetting are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available, and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: Several commenters disagreed with the use of time ratio methodologies for work valuation. Commenters stated that this use of time ratios is not a valid methodology for valuation of physician services. Commenters stated that treating all components of physician time (preservice, intraservice, postservice and post-operative visits) as having identical intensity is incorrect, and inconsistently applying it to only certain services under review creates inherent payment disparities in a payment system, which is based on relative valuation. Commenters stated that in many scenarios, CMS selects an arbitrary combination of inputs to apply rather than seeking a valid clinically relevant relationship that would preserve relativity. Commenters suggested that CMS determine the work valuation for each code based not only on surveyed work times, but also the intensity and complexity of the service and relativity to other similar services, rather than basing the work value entirely on time. Commenters recommended that CMS embrace the clinical input from practicing physicians when valid surveys were conducted and provide a clinical rationale when proposing crosswalks for valuation of services.

Response: We disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for survey information that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in time are not accounted for in a RUC-recommended work RVU, the obligation to account for that change when establishing proposed and final work RVUs remains.

We recognize that it would not be appropriate to develop work RVUs solely based on time, given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. We clarify again that we do not treat all components of physician time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is not the case, as indicated by the many services that share the same time values but have different work RVUs. For example, among the codes reviewed in this CY 2025 PFS final rule, the following all share the same total work time of 30 minutes: CPT/HCPCS codes 76019 (*MR safety implant positioning and/or immobilization under supervision of physician or other qualified health care professional, including application of physical protections to secure implanted medical device from MR-induced translational or vibrational forces, magnetically induced functional changes, and/or prevention of radiofrequency burns from inadvertent tissue contact while in the MR room, with written report*), 98005 (*Synchronous audio-video visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low medical decision making. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded*), 98013 (*Synchronous audio-only visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination, low medical decision making, and more than 10 minutes of medical discussion. When using total time on the date of the encounter for code selection, 20 minutes must be met or exceeded*), G0445 (*High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes*), and G0545 (*Visit complexity inherent to hospital inpatient or observation care associated with a confirmed or suspected infectious disease by an infectious diseases consultant, including disease transmission risk assessment and mitigation, public health investigation, analysis, and testing, and complex antimicrobial therapy counseling and treatment. (add-on code, list separately in addition to hospital inpatient or observation evaluation and management visit, initial, same day discharge, or subsequent).* However, these codes had very different proposed work RVUs of 0.60, 1.30 (ProcStat ''I''), 1.20 (ProcStat ''I''), 0.45, and 0.89, respectively. These examples demonstrate that we do not value services purely based on work time; instead, we incorporate time as one of multiple different factors in our review process. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key references or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

We also clarify for the commenters that our review process is not arbitrary in nature. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information).

With regard to the commenter's concerns regarding clinically relevant relationships, we emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms ''reference services'', ''key reference services'', and ''crosswalks'' as described by the commenters are part of the RUC's process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate feedback

from interested parties, we stated that we would seek to limit the use of the term, ''crosswalk,'' to those cases where we are making a comparison to a CPT code with the identical work RVU. (83 FR 59515) We note that we also occasionally make use of a ''bracket'' for code valuation. A ''bracket'' refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with interested parties and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and we will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 17 contains a list of codes and descriptors for which we proposed work RVUs for CY 2025; this includes all codes for which we received RUC recommendations by February 10, 2024. The proposed work RVUs, work time and other payment information for all CY 2025 payable codes are available on the CMS website under downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*).

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code-by-code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 18 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain refinements that will be common across codes. Refinements to particular codes are addressed in the portions of that section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is $0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. In this final rule, we also note that many of the refinements listed in Table 18 result in changes under the $0.35 threshold and will be unlikely to result in a change to the RVUs.

We note that the direct PE inputs for CY 2025 are displayed in the CY 2025 direct PE input files, available on the CMS website under the downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*. The inputs displayed there have been used in developing the CY 2025 PE RVUs as displayed in Addendum B (see *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*).

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time will also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also noted that we believe these same assumptions will apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since

any items in the room in question will be available if the room is not being occupied by a particular patient. For additional information, we referred readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the ''PE worksheets.'' For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2025 we received invoices for several new supply and equipment items. Tables A–E8 and A–E9 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this final rule, Determination of Practice Expense Relative Value Units, we encourage interested parties to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage interested parties to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.
