provides that regardless of the purpose for which a credit card is to be used, including business, commercial, or agricultural use, no credit card shall be issued to any person except: (1) in response to an oral or written request or application for the card; or (2) as a renewal of, or substitute for, an accepted credit card.

The CFPB did not propose changes to the existing regulatory text for § 1026.12(a). It did, however, propose certain revisions to related commentary to clarify how the prohibition on issuing unsolicited credit cards applies to hybrid debit-credit cards.

Clarifications to Explicit Request Requirement (§ 1026.12(a)(1))

As discussed above, under the proposal and as finalized in this rule, a hybrid debit-credit card is a credit card that a consumer may use from time to time to obtain covered overdraft credit from a very large financial institution. To the extent that covered overdraft credit from a very large financial institution would be accessible through a hybrid debit-credit card, a request for such credit would constitute an application for a credit card with overdraft features. Therefore, the prohibition set forth in § 1026.12(a)(1) on issuing a credit card except in response to an oral or written request or application for the card applies to hybrid debit-credit cards.

Existing comment 12(a)(1)–1 states that the request or application for a card must be explicit and that a request for an overdraft plan tied to a checking account does not constitute an application for a credit card with overdraft checking features. The CFPB proposed to revise comment 12(a)(1)–1 to clarify that a very large financial institution cannot issue a hybrid debit-credit card to a person without first receiving an oral or written request or application from that person for the hybrid debit-credit card.

A consumer advocate commenter supported the proposed clarification, stating that it promotes TILA's purposes of ensuring the informed use of credit and prevents creditors from pushing on people credit that they may not want. The commenter further asserted that unwanted or unsolicited credit could lead to problems managing finances, damage to credit reports, debt collection harassment, and other harms, and that ensuring the informed and desired use of overdraft credit is important for hybrid debit-credit cards just as it is for other credit cards.

For the same reasons, the consumer advocate commenter supported the changes the CFPB proposed to existing

comment 12(a)(1)–2, which explains that the addition of a credit feature or plan to a non-credit card that would turn that card into a credit card under § 1026.2(a)(15)(i) constitutes issuance of a credit card. The commenter further noted that consumers should not have overdraft credit features added to their asset accounts without their request. Comment 12(a)(1)–2 currently provides two examples of when the addition of credit features constitutes issuance of a credit card. Proposed comment 12(a)(1)–2.iii set out the scenario of extending covered overdraft credit through a hybrid debit-credit card as a third example of an action that would constitute issuance of a credit card.

Because the clarification promotes TILA's purposes of ensuring the informed use of credit and for the reasons discussed above, the CFPB is finalizing the proposed changes to the commentary for paragraph 12(a)(1) with only nonsubstantive changes. As explained in the proposed rule, if a very large financial institution initially allowed a consumer to use a debit card to access overdraft credit that is not "covered overdraft credit" as defined in § 1026.62, the very large financial institution would be issuing a credit card if it then allowed the consumer to use the same card to access covered overdraft credit. Under that illustration, the debit card would convert into a hybrid debit-credit card that is a credit card under § 1026.2(a)(15)(i) and is subject to the issuance limitations in § 1026.12(a).

Clarifications to Replacement Card Requirements (§ 1026.12(a)(2))

As an additional exception to the general prohibition on the unsolicited issuance of a credit card, § 1026.12(a)(2) allows the issuance of a credit card to a person when the card is issued as a renewal of, or substitute for, an already accepted credit card. Existing comment 12(a)(2)–5 (the so-called one-for-one rule) explains that an accepted card generally may be replaced by no more than one renewal or substitute card. For example, the card issuer may not replace a credit card permitting purchases and cash advances with two cards, one for the purchases and another for the cash advances. However, comment 12(a)(2)–6 currently provides three exceptions to the one-for-one rule. In particular, existing comment 12(a)(2)–6.i explains that the unsolicited issuance rule in § 1026.12(a) does not prohibit the card issuer from replacing a single card that is both a debit card and a credit card with a credit card and separate card with only debit functions (or debit functions plus an associated

overdraft capability), since the card with only debit functions could be issued on an unsolicited basis under Regulation E.

The CFPB proposed to revise comment 12(a)(2)–6.i in two respects. First, a revision would add a clarification that a hybrid debit-credit card is an example of a single card that is both a debit card and a credit card. Second, language in an existing parenthetical that addresses debit functions and associated access to overdraft credit would be revised to align terminology relating to overdraft credit across Regulation Z, in light of the proposed amendments. Specifically, the CFPB proposed to remove the phrase "an associated overdraft capability" and replace it with the phrase "an associated capability to extend overdraft credit that is not covered overdraft credit as defined in § 1026.62." The revision to the terminology in the parenthetical would not change how the provision applies to card issuers. Rather, the purpose of these proposed revisions is to clarify that a very large financial institution may replace a hybrid debit-credit card with a credit card and a separate debit card so long as the separate debit card does not provide the capability to extend covered overdraft credit (*i.e.*, overdraft that is subject to a finance charge or payable by written agreement in more than four installments).

The CFPB received no comments on the proposed revision of comment 12(a)(2)–6.i and, because the clarification promotes TILA's purposes of ensuring the informed use of credit, is finalizing the revision as proposed. The CFPB did not propose, and has not made, changes to the two other existing exceptions to the one-for-one rule in comments 12(a)(2)–6.ii and –6.iii.

iv. Right of Cardholder To Assert Claims or Defenses Against Card Issuer (§ 1026.12(c))

When a cardholder has a dispute with a person honoring the credit card, TILA section 170 generally provides that the cardholder may assert against the card issuer all claims (other than tort claims) and defenses arising out of the transaction.²³¹ Regulation Z § 1026.12(c) implements this section of TILA.

TILA does not except overdraft credit from the scope of cardholders' right to assert claims or defenses against card issuers. However, in 1981 the Board created a non-statutory exception for the use of a debit card in connection with an overdraft credit plan.²³² This

²³¹ 15 U.S.C. 1666i.

²³² 46 FR 20848, 20865 (Apr. 7, 1981).

exception is in existing comment 12(c)–3.

As discussed above, the CFPB proposed to update exceptions in Regulation Z and thus increase consumer protections that apply to covered overdraft credit offered by very large financial institutions. Accordingly, the CFPB proposed to narrow the overdraft exception in comment 12(c)–3 such that a “hybrid debit-credit card” would be covered by the consumer protections in § 1026.12(c). As discussed above, under § 1026.62(b)(5) a “hybrid debit-credit card” includes a debit card that a consumer may use from time to time to obtain covered overdraft credit from a very large financial institution. The CFPB further proposed conforming revisions to the commentary for § 1026.12(c)(1).

The CFPB received few comments on the proposal to apply the consumer protections in § 1026.12(c) to hybrid debit-credit cards. A consumer advocate commenter supported the proposal and stated that these consumer protections are important whether the payment is made by a credit card drawing on overdraft credit or on other credit. The commenter asserted that these consumer protections give card issuers greater incentive to vet and monitor the merchants who they authorize to accept their cards because it makes the card issuers more accountable for the merchants’ conduct. The commenter further asserted that both credit and debit cards are issued on the same major networks and vetting and monitoring of the merchants that card issuers authorize to accept their cards already takes place and applies to both debit and credit cards. The commenter stated that the existing exception for hybrid debit-credit cards in comment 12(c)–3 is not in the TILA statute and the CFPB has the authority to remove or narrow the exception. The commenter further stated that, while the Board noted operational problems cited by commenters in 1981 when the Board added the exception in existing comment 12(c)–3, card issuers—particularly very large financial institutions covered by the definition of “hybrid debit-credit card”—have far greater technology and resources today to address operational issues than they did over 40 years ago.

A nonprofit commenter suggested without explanation that a § 1026.12(c) exception for hybrid debit-credit cards could provide room for innovative and affordable small dollar overdraft line of credit products.

For the reasons stated below, the CFPB is finalizing comment 12(c)–3, as well as the conforming revisions to the

commentary for § 1026.12(c)(1), as proposed. Consistent with TILA, the CFPB has determined that the consumer protections in § 1026.12(c) are important whether a credit card accesses covered overdraft credit or another type of credit from a very large financial institution. Moreover, the CFPB has determined that the rule provides room for innovative and affordable overdraft credit and that operational concerns alluded to by the Board in 1981 no longer justify the overdraft exception that the Board added in comment 12(c)–3, particularly for very large financial institutions, given advances in information technology systems over the last 40 years. The existing exception would not change for financial institutions with total assets of \$10 billion or less.

v. Credit Card Applications and Solicitations (§ 1026.60)

Existing § 1026.60 includes certain requirements related to applications and solicitations for credit cards. Among other things, it requires certain disclosures in connection with credit card applications and solicitations and prescribes content and format of the application or solicitation. Existing § 1026.60(a)(5) excepts certain types of credit from the requirements of § 1026.60, including § 1026.60(a)(5)(ii), which excepts overdraft lines of credit tied to asset accounts accessed by check-guarantee cards or by debit cards; § 1026.60(a)(5)(iii), which excepts lines of credit accessed by check-guarantee cards or by debit cards that can be used only at automated teller machines; and § 1026.60(a)(5)(iv), which excepts lines of credit accessed solely by account numbers except for a covered separate credit feature solely accessible by an account number that is a hybrid prepaid-debit card as defined in § 1026.61.

The CFPB proposed to amend § 1026.60 to narrow the exception for overdraft lines of credit. Specifically, the proposal would amend § 1026.60(a)(5)(ii), (iii), and (iv) so that those exceptions would not apply to covered overdraft credit accessed by a hybrid debit-credit card. As explained above, the CFPB is defining a “hybrid debit-credit card” as any card (including a debit card) that can access covered overdraft credit offered by a very large financial institution. Accordingly, the proposed amendments to § 1026.60(a)(5)(ii), (iii), and (iv) would narrow the exception so that the requirements of § 1026.60 would apply to covered overdraft credit offered by a very large financial institution when that credit can be accessed by any card, including a debit card.

For the reasons stated below, the CFPB is finalizing the changes to § 1026.60 as proposed.

Comments Received

As discussed in the disclosure-related requirements discussion in the CARD Act section above, the CFPB received several comments about the application of disclosure-related requirements to covered overdraft credit that can be accessed by a hybrid debit-credit card. With respect to § 1026.60, for example, an industry commenter said that more guidance is needed. For example, this industry commenter noted that many of the APR and fee disclosures would show “\$0” for all except the overdraft fee. The commenter noted that the commentary states that disclosures need only be given as applicable but the proposed rule did not state how financial institutions should adapt the forms for overdraft credit.

Final Rule

For the reasons discussed below, the CFPB is finalizing amendments to § 1026.60 as proposed. The requirements in § 1026.60 implement provisions of the Fair Credit and Charge Card Disclosure Act of 1988.²³³ The purpose of the law was to provide for more detailed and uniform disclosures of rates and other cost information in applications and in solicitations to open credit and charge card accounts. The statute applies the disclosure requirements broadly to any application to open a credit card account for any person under an open-end consumer credit plan or to a solicitation to open such an account without requiring an application. In implementing the statutory requirements, the Board narrowed the scope of coverage by adopting the exceptions in what is now § 1026.60(a)(5), determining that the requirements should apply only to “traditional” credit or charge accounts that are used primarily to purchase goods and services.²³⁴

The CFPB has determined that, as with the CARD Act provisions, covered overdraft offered by a very large financial institution that is accessible by a hybrid debit-credit card should be subject to the requirements of § 1026.60. In excepting certain types of credit from those requirements, the Board noted only that the requirements should apply only to “traditional” credit cards that are used to purchase goods and services. However, given the expanded use of debit cards to purchase goods and

²³³ Public Law 100–583, 102 Stat. 2960 (Nov. 3, 1988).

²³⁴ 54 FR 13855, 13856–57 (Apr. 6, 1989).

services, many of which are linked to accounts that offer overdraft credit, the distinction between “traditional” credit cards and debit cards that can access overdraft credit appears far less clear. The CFPB has determined that the requirements of § 1026.60 should be applied consistent with the broad statutory language to cards that can access covered overdraft credit, and that doing so will carry out the purposes of TILA by assuring a meaningful disclosure of credit terms and avoiding the uninformed use of credit.

As noted in the discussion of the CARD Act disclosure requirements above, with respect to comments that more guidance is needed, the CFPB reviewed the credit card disclosure requirements and determined that Regulation Z and its staff commentary provide sufficient flexibility and instructions for a financial institution to meet the disclosure requirements in a manner appropriate for the particular credit card product the institution is offering. As one of the industry commenters accurately noted, for § 1026.60’s application and solicitation disclosures, comment 60(a)(2)–4 states that generally, disclosures need only be given as applicable. In addition, Regulation Z subpart B and subpart G, the related staff commentary, and appendix G model and sample disclosures provide extensive instructions and guidance on the disclosure requirements. As such, modifications or exceptions to the disclosure requirements for hybrid debit-credit cards and additional guidance for complying with the requirements are not necessary. Consistency in the credit card disclosure requirements, including the APR and fee disclosures, will assist consumers in comparing the cost of various credit cards and various credit products.

vi. “Charge Card” (§ 1026.2(a)(15)(iii))

The CFPB proposed to amend the definition of “charge card” in § 1026.2(a)(15)(iii) to exclude a hybrid debit-credit card from the definition. Under the proposed amendment, a hybrid debit-credit card would be subject to the same disclosure and other rules as other credit cards, rather than certain special rules for charge cards. The CFPB proposed the amendment because it preliminarily determined that consumers using hybrid debit-credit cards would benefit from the TILA and Regulation Z provisions that apply to credit cards generally.

The CFPB did not receive any comments on the proposed change to the definition of charge card and is

finalizing this definition as proposed for the reasons stated below.

TILA defines “charge card” as “a card, plate, or other single credit device that may be used from time to time to obtain credit which is not subject to a finance charge.”²³⁵ Because hybrid debit-credit cards would generally access credit that is subject to a finance charge, they do not fit within the statutory definition of charge card. The term “charge card” was introduced into TILA with the Fair Credit and Charge Card Disclosure Act of 1988, which amended TILA to define “charge card” as “a card, plate, or other single credit device that may be used from time to time to obtain credit *which is not subject to a finance charge*” (emphasis added).²³⁶ In its rule implementing the 1988 act, the Board expanded the definition of “charge card” such that, in Regulation Z, the definition includes any card on which *there is no periodic rate*.²³⁷ In other words, a card with a finance charge that is not a periodic rate is excluded from the statutory charge card definition but is included within the Regulation Z definition of that term. The Board sought to address a perceived inconsistency between that statutory definition and the fact that some disclosure provisions that apply to charge cards reference finance charges.

Under both the statutory and regulatory definitions, a charge card is a type of credit card. Thus, where Regulation Z provisions apply to credit cards, the provisions also generally apply to charge cards. However, in specific provisions, which are listed in comment 2(a)(15)–3.i, the term charge card is distinguished from credit card such that different requirements apply. One example of such a provision is § 1026.7(b)(11), which, in accordance with TILA, requires on credit card periodic statements the disclosure of a payment due date and requires that that date be the same day of the month for each billing cycle. The Board in Regulation Z excluded charge cards from these requirements.²³⁸ The CFPB has determined, however, that these requirements should apply to a debit card that can access a covered overdraft credit account (*i.e.*, a hybrid debit-credit card). The CFPB accordingly is excluding hybrid debit-credit cards from the Regulation Z definition of charge card. This approach is consistent with TILA; in applying the TILA and

Regulation Z credit card provisions to debit cards that can access covered overdraft, the CFPB is merely declining to exercise its regulatory authority to implement TILA with respect to hybrid debit-credit cards in the ways that the Board previously did with respect to charge cards.

The CFPB understands that charge cards are typically offered to higher income individuals with prime or super-prime credit, and they often have no set credit limit.²³⁹ In contrast, current users of non-covered overdraft credit often are lower-income consumers with lower credit scores.²⁴⁰ Subsequent to the CFPB’s proposal, many of these consumers may be offered hybrid debit-credit cards, which will access covered overdraft credit that typically will be subject to finance charges, and therefore do *not* fit the statutory definition of a “charge card.” Accordingly, consistent with TILA, and to ensure that consumers who use covered overdraft credit benefit from the full protection of the Regulation Z credit card rules, the CFPB is amending the regulatory definition of “charge card” such that a ‘hybrid debit-credit card’ will *not* be within the credit card subset “charge card” but will nonetheless remain in the larger set “credit card.” This will ensure that a hybrid debit-credit card that accesses covered overdraft credit offered by a very large financial institution will be subject to the same disclosure and other rules as other credit cards, including the § 1026.7(b)(11) requirements discussed above.

3. Compulsory Use of Preauthorized Transfers (§ 1005.10(e)(1))

The CFPB proposed to apply the Regulation E compulsory use prohibition to covered overdraft credit extended by very large financial institutions. EFTA’s compulsory use prohibition, EFTA section 913(1), prohibits any person from conditioning the extension of credit to a consumer on the consumer’s repayment by means of preauthorized EFTs.²⁴¹ However, the Board in 1981 adopted in Regulation E § 1005.10(e)(1) a non-statutory exception to that prohibition for overdraft credit plans.²⁴² The CFPB proposed to eliminate that exception when covered overdraft credit is provided by a very large financial

²³⁹ See Fed. Trade Comm’n, *Comparing Credit, Charge, Secured Credit, Debit, or Prepaid Cards* (Dec. 2021), <https://consumer.ftc.gov/articles/comparing-credit-charge-secured-credit-debit-or-prepaid-cards>.

institution. As a result, a very large financial institution providing covered overdraft credit would be required to offer a consumer at least one method of repaying an overdraft credit balance other than automatic repayment by preauthorized EFT. For example, in addition to an automatic repayment option, the institution could offer consumers an option to repay their outstanding overdraft credit balances by expressly authorizing (*e.g.*, on the institution's website or smartphone application) a one-time transfer of funds from the consumer's asset account. For the reasons discussed below, the CFPB is finalizing as proposed the application of the compulsory use prohibition to covered overdraft credit extended by very large financial institutions.

Many industry commenters opposed the CFPB's proposal. They argued that the requirement to offer consumers a repayment option other than automatic repayment would impose costs that would not have commensurate consumer benefit. Specifically, they argued that the requirement would result in one-time costs to implement an alternative repayment method and a process for obtaining consumers' decisions whether to use automatic repayment or the alternative, and ongoing costs of maintaining the alternative and handling the higher costs associated with those consumers who choose the alternative, including the cost of higher risk of non-repayment. They asserted that if institutions cannot guarantee themselves the repayment method of automatic transfers, the result would be a higher underwriting bar than is currently in place. They also asserted that these costs would not result in any material consumer benefit because almost all consumers will choose automatic repayment. Further, they stated, it is appropriate for consumers to choose automatic repayment because it ensures consumers do not miss repayments and thereby incur concomitant costs such as late fees and higher interest rates.

Many consumer advocate commenters supported the CFPB's proposal. They argued that improvements in technology have reduced institutions' costs associated with providing alternative means of repayment and that any costs in this area have not inhibited the credit card market (where the compulsory use prohibition has long applied). They also stated that the requirement would benefit consumers by improving their control over their funds. Further, they stated, any increased risk of non-repayment would appropriately incentivize institutions to offer overdraft credit that is affordable.

The CFPB has determined that advances in information technology in the decades since the Board's 1981 adoption of the compulsory use exception for overdraft have reduced institutions' costs of obtaining repayment by means other than automatic repayment by preauthorized EFT. For example, an institution can establish at reasonable cost an internet computer or smartphone interface through which consumers may easily initiate—such as by tapping a “button” on a smartphone screen—repayment of a monthly credit balance.

For similar reasons, the CFPB has also determined that application of the prohibition will not inappropriately increase institutions' risk of nonrepayment. Specifically, the CFPB finds that technology makes it virtually costless for institutions to remind consumers of their repayment obligation, such as through app notifications on smartphones as well as text and email messages. The CFPB also finds that technology makes it virtually costless for consumers to act in response to those notifications, such as by clicking on a notification and then making one or a few clicks (depending on the details of the repayment process the institution establishes) to specify the amount to repay, identify the funding source, and initiate the repayment. This ease of notification and consumer response helps increase the likelihood that those who can repay the credit will do so. As a result, any increased nonrepayment risk to institutions resulting from application of the compulsory use prohibition will serve as an appropriate incentive to institutions to offer covered overdraft credit to those consumers who can and will repay it, *i.e.*, to offer covered overdraft credit to those consumers who will not be harmed by it.

For these reasons, the CFPB has determined that applying the compulsory use prohibition to covered overdraft credit provided by a very large financial institution will carry out the purposes of EFTA by safeguarding consumers' rights in EFT systems. This determination is consistent with Congress's original intent in adopting the prohibition.

Offset Prohibition in 12 CFR 1026.12(d)(1)

While the CFPB did not propose to amend the Regulation Z prohibition against offset, it is closely related to the Regulation E compulsory use prohibition discussed above. Further, commenters provided feedback on application of the offset prohibition. Below the CFPB summarizes the

substance of the prohibition and addresses the comments that the CFPB received.

“Offset” is a term used to describe a practice whereby an institution uses funds from an incoming deposit to a consumer's asset account at the institution to immediately obtain repayment of the consumer's debt to the institution, such as an outstanding overdraft balance in the asset account. TILA and Regulation Z prohibit that practice with respect to credit card accounts. Specifically, TILA section 169(a) (15 U.S.C. 1666h(a)) and 12 CFR 1026.12(d)(1) prohibit an institution from using funds in a consumer's asset account at the institution to offset consumer debt arising from a credit card plan the institution provides to the consumer. Thus, when a financial institution ties a consumer's asset account (*i.e.*, a covered asset account) to covered overdraft credit accessible by credit card (*i.e.*, a hybrid debit-credit card), the institution may not use funds in the consumer's asset account to offset the consumer's overdraft credit balance.

Periodic deductions are a different practice than offset. TILA section 169(a)(1) (15 U.S.C. 1666h(a)(1)) permits an institution to periodically deduct all or part of a consumer's credit card debt from the consumer's asset account if the periodic deductions are in accordance with the consumer's preauthorized written agreement. This TILA provision is implemented in 12 CFR 1026.12(d)(3), which the CFPB did not propose to amend. Thus, when a very large financial institution provides covered overdraft credit that is accessible by a card, the institution must comply with the offset prohibition, but may obtain a consumer's preauthorized written agreement to periodic deductions of the consumer's overdraft balances from the consumer's asset balances held at the institution. Pursuant to the Regulation E compulsory use prohibition (discussed above), the institution must also provide the consumer with a repayment option other than periodic deduction.

Many industry commenters opposed application of the offset prohibition. They argued that the offset prohibition would increase risk of nonrepayment and result in higher underwriting standards relative to institutions' standards today for non-covered overdraft credit, thereby eliminating access to overdraft credit for those subprime or deeply subprime consumers (or those without any credit history) who use it today. As a result, they argued, these consumers would have no choice but to use alternative credit products such as payday loans.

Many consumer advocate commenters supported application of the offset prohibition. They observed that Congress adopted the prohibition because it was concerned about an institution's power to collect credit card debt by offsetting against money in a consumer's asset account at the institution, thereby causing other consumer payments from the account to go unpaid. They argued that the same concerns apply to covered overdraft credit, *i.e.*, that an institution's offset of overdraft credit reduces a consumer's ability to prioritize which obligations to repay and can cause consumer obligations other than overdraft to go unpaid. Consumer advocates argued that that effect is exacerbated by the high fees that typically accompany overdraft credit, because those fees increase the loss of consumer control and the amount that is offset and thus the amount of other consumer obligations that go unpaid. In light of these current consumer harms and costs from overdraft credit, consumer advocates supported higher underwriting standards for overdraft credit relative to today.

The CFPB has determined that application of the offset prohibition to above breakeven overdraft credit provided by very large financial institutions will serve the consumer protection purposes for which Congress adopted the prohibition (avoiding the uninformed use of credit and protecting consumers against inaccurate and unfair credit billing and credit card practices). To the extent the prohibition increases risk of nonrepayment and thereby causes institutions to decline some overdraft credit transactions that they currently authorize, the CFPB finds that these changes will not result in lost benefit for many of the consumers who use overdraft credit today, because the credit is often of little or no benefit for these consumers. Further, many of these consumers will be able to find other forms of consumer credit (should they think it necessary to do so). In sum, when a hybrid debit-credit card can access covered overdraft credit, the card is a type of credit card and the CFPB finds that consumers using such a card should receive the same TILA protections, including those of the offset prohibition, that any other credit card consumer receives.

Defining "Periodically"

The CFPB requested comment on whether it should define "periodically" to mean no more frequently than once per calendar month, or some other interval for covered overdraft credit accounts tied to covered asset accounts.

The CFPB received very few comments and no specific information in response. The CFPB is not taking any action at this time pursuant to this request for comment. The CFPB notes that § 1026.7(b)(11) requires the payment due date for credit card accounts under an open-end (not home-secured) consumer credit plan to be the same every month.

4. Definition of Overdraft Services in Regulation E (§ 1005.17(a))

The CFPB proposed to add comment 17(a)–2 to clarify that the added defined terms in Regulation Z regarding covered overdraft credit do not change the scope of the definition of overdraft services under Regulation E § 1005.17(a). The proposed comment clarified that covered overdraft credit, which includes above breakeven overdraft credit, is not an overdraft service under § 1005.17(a) because it is a line of credit subject to Regulation Z.

Very few commenters addressed this aspect of the CFPB's proposal and those that did supported it. The CFPB adopts comment 17(a)–2 as proposed.

V. Effective and Compliance Date

Consistent with TILA section 105(d), the CFPB proposed that the final rule have an effective date of the October 1 that follows by at least six months the date it is published in the **Federal Register**.²⁴³ The CFPB sought comment on the proposed effective date including whether such date should be different, and if so, when and why. For the reasons discussed below, the effective date is finalized as proposed. As a result, this rule will become effective on October 1, 2025.

Consumer advocates generally supported the proposed effective date. Industry commenters opposed the effective date because they stated it would not be sufficient time to implement required changes, particularly with respect to covered overdraft credit. They stated that they would need anywhere from 12 to 24 months to comply with the rule. These commenters explained that the rule would require a comprehensive review and restructuring of every aspect of their overdraft programs, from operations to technology to customer service. One commenter stated that it will need to perform an impact analysis to determine how to change its programs and then implement those changes, which will require working with third party vendors, training employees, testing, and communicating changes to consumers. With respect to

communicating changes to consumers, the commenter stated that a change in terms notice is unlikely to be sufficient and it would need to engage in an extended campaign to inform consumers about the changes and effects. One industry commenter noted that for existing debit cards on asset accounts, institutions would need to determine whether to continue offering debit cards on overdraft credit, informing their consumers about the change in card status, giving consumers time to accept the new card status, and possibly changing the card number.²⁴⁴

As discussed further above, the CFPB's rule would apply only to very large financial institutions. Accordingly, financial institutions that are not very large financial institutions would not need to make any changes in response to the rule.

With respect to very large financial institutions, the changes that the rule would require vary depending on the institution's current activities. If a very large financial institution already offers non-covered overdraft services in compliance with existing regulations and, in response to the rule, chooses to provide those services at or below its breakeven price, it could continue to provide such services without making any operational changes in response to the rule, apart from developing a process to confirm that its pricing for such services complied with the rule's breakeven standard provisions if the financial institution chooses to use that method. Alternatively, using the \$5 benchmark may further simplify compliance with the rule. If a financial institution needs extra time to convert to the breakeven method, they could charge \$5 fees on October 1, 2025, and then convert to the breakeven amount at its own pace.

If a very large financial institution currently offers non-covered overdraft services in compliance with existing regulations, and, in response to the rule, chooses to provide above breakeven overdraft credit, it would need to ensure that such credit complies with Regulation Z. If the very large financial institution is unable to bring to market by the rule's effective date an above breakeven overdraft credit program that complies with Regulation Z, including the credit card rules, the institution still could comply with the rule by charging breakeven or \$5 overdraft fees in the interim.

If a very large financial institution currently offers covered overdraft credit

²⁴⁴ Whether the debit card number must change under these circumstances is not governed by the CFPB under any of its rules.

²⁴³ 15 U.S.C. 1604(d).

in compliance with Regulation Z and, in response to the rule, chooses to continue offering such credit, the very large financial institution would need to comply with the rule by: (1) beginning to comply with the newly applicable Regulation Z provisions including, if applicable, changes to the examples of finance charges and the credit card provisions that would newly apply to certain types of covered overdraft credit; and (2) offering consumers a means of repaying their overdrafts other than by preauthorized EFTs.

Many very large financial institutions currently provide overdraft lines of credit subject to Regulation Z. Subsequent to the effective date of the rule, these lines of credit would be covered overdraft credit accounts, regardless of whether they are above or below breakeven pricing. However, the institution would not be opening a new credit account (*i.e.*, would not be newly opening an account that is subject to Regulation Z) because a credit account—the overdraft line of credit—already existed prior to the effective date of the rule. Thus, Regulation Z requirements triggered by credit-account opening (such as §§ 1026.5, 1026.6, 1026.51, and 1026.52(a) mentioned above) would not apply to these previously existing overdraft lines of credit.²⁴⁵ However, other Regulation Z requirements such as change-in-terms requirements would continue to apply to them.²⁴⁶

In general, financial institution commenters were more concerned about implementing the rule where they do not currently provide covered overdraft credit accounts. Many such institutions do already offer credit cards and therefore have in place a compliance framework that meets applicable Regulation Z requirements. Those that do not could prioritize ensuring that their pricing of non-covered overdraft credit complies with the rule's

breakeven or benchmark provisions, as described above. If needed, those institutions could delay offering new covered overdraft credit accounts to ensure compliance with Regulation Z requirements, including those tied to credit account opening.

For these reasons, the proposed effective date is sufficient for a very large financial institution to make appropriate changes necessary to comply with the rule. Accordingly, this rule has an effective date of October 1, 2025.

VI. Other Comments

A. Possible Alternative or Additional Requirements

Some commenters proposed various exemptions from the rule such as exempting credit unions and exempting check transactions. As to the credit union exemption, commenters raised that there are differences between credit unions large enough to be covered by this rule and other very large financial institutions covered by the proposed rule, including noting that credit unions are member-focused and are subject to different market incentives. Also, as discussed below regarding the implications for other laws, commenters stated that Federal credit unions are generally subject to a usury limit under the Federal Credit Union Act and asserted that it would be economically unfeasible for them to provide covered overdraft credit. These commenters also noted the small number of credit unions that would be directly covered at this time but argued that the rule could nevertheless have broad impact. As to the check exemption, one commenter argued that checks and debit cards are used by consumers in different ways and for differently sized purchases and that there may be a greater consumer impact when a check is not honored, including but not limited to possible NSF fees.

The CFPB has considered these requests for exemptions but declines to add exemptions at this time. While credit unions may operate differently from banks in some respects, those differences are generally not material in the context of overdraft credit. In addition, the relatively small number of credit unions that will be covered by the very large financial institution designation and therefore subject to the final rule represent large entities with significant market impact. The CFPB has determined that any institution, including a Federal credit union, that qualifies as a very large financial institution should not be excluded from the rule solely because other applicable

laws may limit the amount that they can charge consumers. The potential impact of other laws on institutions' overdraft credit products is discussed in parts VI.E and VII below. Applying the same rule to overdraft credit provided by all VLFIs is consistent with the policy goal of applying the same consumer protections to overdraft credit that apply to other types of consumer credit. The CFPB, as discussed further below, intends to monitor the impact of this final rule, including the potential impact on non-covered entities, which may include smaller credit unions. As to the check exemption, the CFPB did not propose such an exemption and does not believe that consumers should receive less protection for checks than for other transaction types such as debit card or ACH transactions. The CFPB also notes that consumer usage of checks has been and continues to decline, such that any exemption would have declining impact.²⁴⁷

Many industry commenters argued that instead of applying Regulation Z to above breakeven overdraft credit, the CFPB should have proposed a different rule that retains overdraft credit's current exclusions from the regulation and that encourages or mandates changes in practice for overdraft credit that some institutions have already implemented, including, for example: grace periods between when a consumer overdrafts (or further overdrafts) their account and when an institution assesses a fee; not assessing fees on de minimis overdraft balance amounts and overdraft transaction amounts; and processing transactions in an order that benefits consumers all else equal. Many of these commenters also suggested that the CFPB propose changes to the opt-in disclosure requirements in § 1005.17. In general, industry commenters argued that the CFPB's chosen approach of applying Regulation Z—and applying coverage under Regulation Z based on the price of the overdraft credit—would result in increased prices for other deposit account features, including for consumers who do not currently use overdraft credit.

The CFPB considered alternatives such as these prior to its issuance of the NPRM. The CFPB has determined that these alternative approaches would not adequately protect consumers who today use non-covered overdraft credit as an expensive short-term loan.

²⁴⁷ See FRS, *The Federal Reserve Payments Study: 2022 Triennial Initial Data Release*, <https://www.federalreserve.gov/paymentsystems/2023-April-The-Federal-Reserve-Payments-Study.htm> (last updated Nov. 13, 2024). There were 18.1 billion check payments in the U.S. in 2015, 14.0 billion in 2018, and 11.2 billion in 2021.

²⁴⁵ The ability to pay analysis is also required prior to a credit line increase. See 12 CFR 1026.51(a)(i). This requirement is applicable upon the effective date of the rule.

²⁴⁶ As noted, if a very large financial institution currently provides overdraft lines of credit in compliance with Regulation Z and chooses to continue providing them after the effective date (at which point the lines would be covered overdraft credit accounts), the institution would need to begin to provide consumers a repayment option other than preauthorized EFTs. For overdraft lines of credit (*i.e.*, covered overdraft credit accounts) extant as of the effective date where agreements are in place for preauthorized EFTs, beginning to provide the option would not trigger change-in-terms notice requirements under § 1026.9(c)(2) or § 1005.8(a)(1). However, when a card issuer opens a covered overdraft credit account on or after the effective date, section 1026.12(d)(3) requires the card issuer to clearly disclose the fact that the option exists. See comment 12(d)(3)–1.iii.

Because these consumers use overdraft credit in this way, the CFPB has determined that regulating overdraft credit as credit—*i.e.*, applying to that credit the congressionally chosen statutory framework for consumer credit—will better protect these consumers than would the alternatives suggested by industry commenters. For example, the TILA framework will facilitate consumers' ability to shop between institutions on the basis of the price institutions charge for providing covered overdraft credit. In contrast, consumers today generally do not shop between deposit accounts on the basis of institutions' fees for non-covered overdraft credit, which may explain, at least in part, why institutions' fees for non-covered overdraft credit persistently remain so high and consumers sometimes overdraw their accounts even though they have less expensive credit available elsewhere, such as through a credit card. Further, the TILA framework will require institutions to refrain from immediately taking consumers' incoming deposits to repay their outstanding overdraft balances, which will facilitate consumers' ability to control how their asset funds are used. In contrast, consumers today do not have a choice about their incoming deposits immediately being taken to repay overdrafts and the high fees. Moreover, the TILA framework will require institutions to provide separate periodic statements, and other required disclosures, for the covered overdraft credit account and for the covered asset account, which will facilitate consumers' ability to know when they are accessing overdraft credit and how much they are being charged for it.

In addition, nothing in the CFPB's rule precludes institutions from providing the consumer protective features that they provide today for non-covered overdraft credit, such as those described above, in the context of covered overdraft credit (or from continuing to provide them in the context of non-covered overdraft credit). For example, nothing in Regulation Z precludes an institution from: providing a grace period between when the institution extends covered overdraft credit and when the institution assesses a finance charge (whether a fee or a periodic rate) on the credit; providing de minimis amounts of covered overdraft credit without assessing a finance charge for the credit; or, processing covered overdraft credit transactions in an order that benefits consumers by minimizing the associated finance charges.

Regarding comments that the CFPB's chosen approach could increase prices for other deposit account features, the CFPB discusses in the "Offsetting changes to other deposit account prices" section of the CFPB section 1022(b) Analysis below the possibility of potential increases to other deposit account prices as a result of this rule, and concludes that there is uncertainty about whether lost overdraft revenue would be replaced by increases to fees on deposit accounts, taking into account the fact that the lost revenue would be relatively low if divided by account per month, and that the CFPB has not observed offsetting price increases when financial institutions recently reduced a comparable amount of overdraft revenue voluntarily. And even if financial institutions wish to do so, these prices are likely to be more salient to consumers than overdraft fees, and so the CFPB expects there to be more efficient competition over those prices, which will limit the extent to which financial institutions are able to increase those prices.

Many commenters other than industry commenters—including academic, nonprofit, and consumer advocate commenters—argued that *in addition* to the breakeven standard for the dollar amount of an overdraft fee for non-covered overdraft credit, the CFPB should restrict the number of overdraft fees for such credit that an institution may assess in a given time period (such as a day, week, month, or year). The CFPB is not adopting this additional restriction at the present time. The CFPB believes that its breakeven standard for the dollar amount of a fee for non-covered overdraft credit will provide sufficient consumer protection and that an additional restriction on the number of such fees that may be assessed is not necessary at the present time. The CFPB also believes that this additional restriction could result in increased implementation cost and complexity for institutions that might not be justified by the increased consumer benefit it would achieve.

Other commenters encouraged the CFPB to pursue disclosure-type alternatives or additions to the rulemaking, such as increased financial education. These commenters felt that better financial education could empower consumers, which may reduce reliance on overdraft programs. Other commenters suggested revised consumer opt-in disclosures, more comprehensive, upfront disclosure of fee structures, or requiring an annual opt-out notice to consumers who previously opted-into overdraft programs. Another commenter

suggested new disclosures to prevent misleading advertising. One industry commenter stated that whether a product or a service is a courtesy depends on more than whether the bank makes a reasonable profit, and encouraged the CFPB to consider the full suite of features surrounding an overdraft program in determining whether to exempt the program from Regulation Z. Two commenters suggested enhanced regulatory reporting for overdraft fees while a consumer advocate commenter suggested imposing fines for banks that abuse overdraft practices.

Before issuing the proposal, the CFPB also considered changes such as these, including modifying the opt-in disclosure requirements at § 1005.17 of Regulation E. The CFPB did not propose such disclosure interventions and declines to pursue them at this time. After considering the comments, the CFPB has determined, as it preliminarily concluded in the proposal, that Regulation E opt-in disclosures would not communicate the cost of above breakeven overdraft credit as effectively as Regulation Z disclosures. As discussed above, applying Regulation Z will ensure that above breakeven overdraft credit is disclosed as a credit product and treated like other credit products. In addition, Regulation E disclosures distinguish between overdraft transactions completed via electronic fund transfers and overdraft transactions completed via other funds transfer methods (such as checks), whereas Regulation Z disclosures would apply to above breakeven overdraft transactions regardless of fund transfer method. Modifying the opt-in disclosure requirements at § 1005.17 of Regulation E also would not provide other substantive protections available through Regulation Z, such as the ability to pay requirements and the offset prohibition discussed above. These substantive protections are important. For example, by requiring financial institutions to assess consumers' ability to pay, the rule will ensure that financial institutions confirm that consumers can make the required minimum periodic payments under the terms of their account based on their income or assets and their current obligations. As another example, by prohibiting offset and requiring the due date to be on the same day each month for covered overdraft credit accessible by a hybrid debit-credit card, the rule will give consumers more time to repay overdraft credit and greater control over how to structure those repayments.

The CFPB also observes that the Truth in Savings Act already prohibits misleading deposit account advertisements, including misleading deposit account advertisements related to overdraft.²⁴⁸ The CFPB's analysis of whether and when overdraft is or is not a courtesy is discussed elsewhere in this notice. As noted, the CFPB intends to monitor the impact of the final rule and may consider additional interventions as necessary in the future.

B. Usury Limits

Many industry commenters asserted under various bases that the CFPB's proposed rule would constitute an impermissible usury limit. Some asserted that the proposal to apply TILA and Regulation Z to above breakeven overdraft credit would constitute a usury limit in contravention of CFPA section 1027(o) because VLFIs would no longer be permitted to provide non-covered overdraft credit at a price above that amount. Other industry commenters conceded that section 1027(o) does not apply. Some asserted that TILA is a disclosure statute limited to ensuring adequate disclosure of credit terms and that the CFPB exceeded its authority by attempting to apply substantive limits to institutions' pricing of overdraft credit. Some asserted that the application of TILA's substantive protections, including the protections of the CARD Act, to covered overdraft credit would constitute an effective usury limit because, they argued, it would be infeasible for very large financial institutions to provide overdraft credit in compliance with those substantive protections. Some asserted that the proposed rule would constitute an impermissible usury limit because the application of Regulation Z to covered overdraft credit—*i.e.*, the shift in the legal status of overdraft credit from being not subject to Regulation Z (non-covered overdraft credit) to being subject to Regulation Z (covered overdraft credit)—would result in the application of usury limits in other laws to covered overdraft credit, including limits in the Military Lending Act (10 U.S.C. 987), the Federal Credit Union Act (12 U.S.C. 1751 *et seq.*), and States' laws.

Applying TILA to above breakeven overdraft credit does not create a usury limit under CFPA section 1027(o). That section states that the CFPB has no authority “to establish a usury limit applicable to an extension of credit offered or made by a covered person to a consumer, unless explicitly authorized

by law.” This CFPB rule applying Regulation Z to above breakeven overdraft credit does not “establish a usury limit”: it does not impose a fee or rate cap or ban fees above a certain threshold, and, under the rule, an institution may charge any price it wishes for overdraft credit so long as it complies with Regulation Z.²⁴⁹

It is true that the shift in the legal status of overdraft credit as a result of the CFPB's rule, from not being subject to Regulation Z (non-covered overdraft credit) to being subject to Regulation Z (covered overdraft credit), may result in other laws' usury limits applying to certain instances of covered overdraft credit, such as the limits found in the Military Lending Act (MLA), the Federal Credit Union Act (FCUA), and States' laws. Nonetheless, the CFPB's rule applying Regulation Z to covered overdraft credit is not thereby “establish[ing] a usury limit” because the CFPB's rule does not establish any applicable usury limit. Instead, the legislatures that adopted those laws—*e.g.*, the U.S. Congress and State legislatures—established those usury limits. The potential impact of the usury limits in those other laws on covered overdraft credit is discussed elsewhere in this notice.

Moreover, commenters appear to mischaracterize the benchmark and breakeven thresholds to suggest that they create regulatory obligations and apply them to credit priced above those thresholds. Overdraft services are credit and overdraft fees are finance charges under TILA, but for the existing regulatory exception in Regulation Z. The CFPB is narrowing that exception in this final rule to the breakeven or benchmark level. This means the breakeven and benchmark thresholds do not apply heightened regulatory obligations on more expensive credit. TILA does that. The failure to shield credit above a certain threshold from Congressionally created consumer protections is not the creation of a usury rate.

Regardless, TILA's requirements, which the CFPB's rule applies to covered overdraft credit, are not so onerous as to constitute an effective usury limit. As noted, TILA includes numerous substantive consumer

protections that are implemented in Regulation Z and that the CFPB is applying to covered overdraft credit. Many very large financial institutions already provide credit cards, including subprime credit cards, that comply with all of Regulation Z's substantive protections. Consumers of subprime credit cards share the same general characteristics as many consumers who use overdraft credit. The CFPB fully expects that covered overdraft credit can and will comply with the same substantive Regulation Z protections that subprime credit cards do. Accordingly, applying those Regulation Z protections to covered overdraft credit is not so onerous as to constitute an effective usury limit.

Finally, some commenters asserted that the proposed rule would constitute an unlawful taking prohibited by the Fifth Amendment to the U.S. Constitution. The rule is not a limitation on Constitutionally protected private property that renders property unusable and is not an unlawful taking under the Fifth Amendment.

C. Other Comments Regarding Statutory Authority

One commenter asserted that the CFPB lacked authority to issue this Rule, arguing that the rule constituted a matter of vast economic and political significance subject to the “major questions” doctrine. Another contended that the CFPB lacked the authority to establish rules for overdraft services based on the price of the service because the TILA statutory provisions at issue do not reference credit price, whereas other credit laws (such as the Home Ownership and Equity Protection Act and the Military Lending Act) do.

Consistent with the discussion above, the CFPB has the statutory authority to implement this rule. First, this rule does not implicate the “major questions” doctrine. This rule updates existing regulatory exceptions for overdraft credit offered by very large financial institutions and does not rely on a novel interpretation of the CFPB's statutory authority. As discussed above, the plain meaning of TILA's statutory definition of “credit” encompasses overdraft credit. Overdraft credit has only been partially excluded from TILA coverage by the operation of preexisting regulatory exceptions, including from the definition of “finance charge.” The major questions doctrine is a canon of judicial interpretation used to determine whether Congress delegated authority to an agency. This final rule does not create new obligations, but rather, it partially removes portions of existing regulation that act to relieve industry of

²⁴⁸ See 12 U.S.C. 4302(d); see also 12 CFR 1030.8(a) and 12 CFR 707.8(a).

²⁴⁹ No provision in Regulation Z limits the price that an institution may charge for credit, including covered overdraft credit. The fee harvester provision in § 1026.52(a), which implements TILA section 127(n) (15 U.S.C. 1637(n)), limits to 25 percent of the credit limit the amount of fees, other than penalty fees (which are addressed in § 1026.52(b)), that may be charged during the first year of a credit card account. However, the fee harvester provision does not limit charges that are assessed as periodic rates.

certain obligations Congress created by statute. It would be illogical to conclude an agency does not have delegated authority to remove a regulatory exception from a statute, but that the regulatory exception was nonetheless issued based on a valid delegation. Instead, both the Federal Reserve's original rule creating the exception and this rule partially removing it are pursuant to authority granted to the agencies by Congress, as described herein. Furthermore, the economic impact of this rule, as discussed elsewhere in this notice, is significantly lower than any level that would implicate the major questions doctrine.

Second, nothing in the relevant provisions of TILA precludes the CFPB from considering the price of a credit product when partially rescinding a regulatory exception to TILA's coverage. For the reasons described above, the rule's changes to § 1026.4(c)(3) are consistent with TILA and reasonable. The fact that Congress has regulated other credit products based in part on their price does not render these considerations forbidden in this context.

D. Data Supporting Application of Regulation Z to Overdraft

Some industry commenters asserted that the data the CFPB cited for its proposal to apply Regulation Z to above breakeven overdraft credit provided by very large financial institutions is outdated and therefore unreliable because some of the data predates the pandemic and some large institutions' reduction or elimination of overdraft and NSF fees during the pandemic timeframe. As a result, these commenters assert, the CFPB is using insufficient and flawed data to justify its policy change of now applying Regulation Z to above breakeven deposit account overdraft credit provided by these institutions. These commenters stated, in particular, that the CFPB is relying primarily on its own 2012 data to identify and analyze consumers who overdraft, including "frequent overdrafters" (more than 10 overdraft fees in a year), which are the consumers that will be most affected by the rule. The CFPB's 2012 data identified about 9 percent of checking accounts as belonging to frequent overdrafters, whereas commenters argued that more recent survey research has found that only roughly 1.5 percent to 3 percent of banked households report more than 10 overdraft fees in a year.²⁵⁰

²⁵⁰ These commenters point to the following three examples of more recent survey research. In survey research by FHN, 9 percent of overdrafters, representing roughly 1.5 percent of all banked

The CFPB did not primarily rely on the 2012 data and assessed a number of evidentiary sources including more recent studies, but it was appropriate to include all of the data cited in the proposal. The CFPB is finalizing this rule not because of the precise percentage of overdrafters or frequent overdrafters but because the CFPB has concluded that above breakeven overdraft credit offered by very large financial institutions should no longer be exempt from TILA's consumer credit protection for the reasons discussed above. Even were one to assume that the difference between recent surveys and CFPB data is due in whole or in part to an actual and permanent change in overdrafting frequency, the CFPB's rule would remain justified for the reasons discussed herein.

Moreover, it remains true and uncontroverted that overdraft is inordinately profitable for institutions and that this profit is made off consumers who are financially disadvantaged.²⁵¹ Specifically, evidence provided by the CFPB shows that net losses from overdraft were only 14 percent of overdraft fees.²⁵² And in 2024 the CFPB found that five large institutions' average net losses from overdraft were only about 6 percent of overdraft fees across all overdraft transactions, and about 16 percent of overdraft fees across only fee-assessed transactions.²⁵³ Also, recent uncontroverted evidence reaffirms that financially vulnerable households continue to be more likely to pay overdraft fees than are other households. Specifically, about 17 percent of all households with a checking account—i.e., households across all levels of financial health—reported incurring at least one overdraft

households, reported having incurred more than 10 overdraft fees in 2022 (FHN Brief 2023). In survey research by the Federal Reserve Bank of New York, less than 1 percent of individuals reported overdrafting more than 10 times (see Donald P. Morgan & Wilbert van der Klaauw, *Learning by Bouncing: Overdraft Experience and Salience*, Liberty Street Econ. (Apr. 2024), <https://libertystreeteconomics.newyorkfed.org/2024/04/learning-by-bouncing-overdraft-experience-and-salience/>). In survey research by the Consumer Bankers Association, 3 percent of consumers reported overdrafting 10 or more times in the past 12 months. CBA, *Nationwide Survey of Consumer Overdraft Services Use and Sentiment: Post COVID-19 Pandemic* (Mar. 2024), <https://consumerbankers.com/wp-content/uploads/2024/04/2024.03.21-CBA-Overdraft-Survey.pdf>.

²⁵¹ CFPB 2017 Data Point.

²⁵² CFPB 2013 White Paper at 17.

²⁵³ The CFPB found the average overdraft fee at these institutions to be \$32.50 and the average amount attributable to losses to be \$2.00 per overdraft transaction regardless of whether a fee was assessed, and \$5.34 per fee-assessed transaction. CFPB Overdraft and NSF Practices Report.

or NSF fee in 2022²⁵⁴ and 2023.²⁵⁵ In contrast, over that same time period, forty-six percent of financially vulnerable households reported incurring at least one overdraft fee and just 4 percent of financially healthy households reported incurring at least one overdraft fee.²⁵⁶ Commenters did not offer data to contradict these figures. Accordingly, the CFPB finds both that the overdraft fees consumers pay are about seven times higher than large institutions' losses from overdraft and that financially vulnerable consumers are more likely to pay overdraft fees than are other consumers.

Applying Regulation Z to above breakeven overdraft credit offered by VLFIs will benefit the financially vulnerable consumers who currently pay the preponderance of overdraft fees. The CFPB does not predict exactly how very large financial institutions will react to this final rule. Nonetheless, the CFPB notes that some very large financial institutions already offer overdraft credit at prices well below the median marketwide price. Whether very large institutions offer consumers non-covered, below-breakeven (courtesy) overdraft credit or covered overdraft credit that complies with the requirements of Regulation Z, the CFPB believes that such overdraft credit will be provided to these consumers on terms that are more beneficial to them than the terms on which non-covered overdraft credit currently is provided. Those disadvantaged consumers who are not offered any overdraft credit at all will benefit from avoiding the harms associated with today's non-covered overdraft credit and from using alternative forms of credit that are more beneficial (less harmful) to them to the extent available.

E. Implications for Other Laws

Commenters noted the cumulative effect of the proposed rule and other Federal and State regulatory actions would result in higher costs for financial institutions, and higher costs and limited account availability for consumers. Industry commenters identified regulatory actions by the CFPB, the Board, FDIC, OCC, FTC, SEC, and various State agencies, such as the CFPB's credit card late fee rule,²⁵⁷ the Board's Regulation II,²⁵⁸ and the prudential regulators' Basel III endgame

²⁵⁴ FHN Brief 2023.

²⁵⁸ 88 FR 78100 (Nov. 14, 2023).

proposal.²⁵⁹ In addressing the changes to overdraft products and practices with this rule, the CFPB is aware of these other regulatory changes and proposals. As noted above, in the course of developing this rule, the CFPB met with other regulators to better understand the interaction of this rule with other laws and has determined that proceeding with the rule is appropriate to effectuate the purposes of TILA.

Commenters also discussed the interaction of the rule with other statutes, regulations, and guidance. For example, industry commenters stated that the rule would result in the Equal Credit Opportunity Act (ECOA) and Regulation B applying to all financial institutions at any overdraft fee level. These commenters also stated that the CFPB did not consider the procedural burdens that applying ECOA to overdraft credit would impose on banks, such as keeping records and providing adverse action notices.

The CFPB has considered the costs of applying the ECOA and Regulation B to overdraft credit. The ECOA prohibition against discrimination already applies to covered and non-covered overdraft credit regardless of the overdraft fee amount and regardless of the size of the creditor.²⁶⁰ The 2005 Joint Guidance on Overdraft Protection Programs makes that point in its discussion of the application of ECOA and Regulation B to overdrafts.²⁶¹ However, non-covered overdraft credit is likely exempt from certain Regulation B requirements such as the requirement regarding adverse action notices²⁶² due to the Regulation

B exemption for incidental credit.²⁶³ Covered overdraft credit, such as an overdraft line of credit, does not qualify for that exemption and thus must comply with certain Regulation B requirements such as the requirement regarding adverse action notices. With this final rule and its change to the definition of finance charge, previously non-covered overdraft credit will become covered overdraft credit (*i.e.*, above breakeven overdraft credit) and will no longer qualify for the Regulation B exemption for incidental credit. Such newly covered overdraft credit must comply with Regulation B requirements such as the requirement regarding adverse action notices. Commenters provided no compelling reasons why financial institutions should not have to comply with these provisions of ECOA when they provide covered overdraft credit.

Commenters also noted the impact of the proposed rule on the effect of certain statutes and regulations promulgated and administered by other Federal or State actors due to those statutes and regulations incorporating the Regulation Z definition of finance charge. State Attorneys General commenters stated that the rule would benefit States' enforcement of their own consumer protection laws, especially in States where a practice that violates Federal law also violates the State's consumer protection law. As discussed above, industry commenters noted that deeming fees for above breakeven overdraft credit to be finance charges would result in above breakeven overdraft credit exceeding usury limits under the MLA, the FCUA, and State usury laws. Consumer advocates noted that the impact of the rule on other laws benefits consumers, and that Congress and applicable agencies or other government entities have the authority to amend the statutes or implementing regulations and guidance as they see fit. Assuming the commenters are correct about the interaction of this rule with price caps under the MLA, FCUA and State usury laws, Congress or other Federal or State agencies and government entities are the appropriate entities to address the effects of those laws on the overdraft credit market.

An industry commenter also stated that the proposal conflicts with OCC guidance and with the prudential regulators' capital requirements. Citing the OCC 2001 proposal to amend its

rules governing investment securities, bank activities and operations, and leasing,²⁶⁴ and the 2007 Interpretive Letter 1082 on overdraft practices,²⁶⁵ the commenter stated that the OCC does not treat overdrafts as credit nor treat the overdraft charges as interest. Even assuming the industry commenter's statements are accurate, the CFPB and OCC are interpreting and acting under different statutes, the CFPB under TILA and the OCC under the National Bank Act. With respect to TILA, a consumer advocate commenter noted that the 2001 OCC interpretive letter states that an "overdraft would be 'credit,' as defined by the Truth in Lending Act and Regulation Z."²⁶⁶

State regulators commented that applying Regulation Z to above breakeven overdraft credit would trigger additional capital requirements and that the additional capital requirements in combination with higher compliance costs and higher risks for financial institutions would render offering above breakeven overdraft credit impractical. The CFPB understands that, unrelated to whether the credit is subject to Regulation Z, (1) all extensions of overdraft credit—whether covered or non-covered—trigger capital requirements; and (2) it is a fact-specific analysis as to whether a particular overdraft credit contract would trigger capital requirements for credit not yet extended, including an analysis of whether there is a "commitment," whether it is "unconditionally cancelable," and what the resulting capital requirement would be.²⁶⁷

After considering comments about the cumulative impact of and interaction with other laws and after consulting with other agencies, the CFPB has determined to issue this final rule in order to effectuate the purposes of TILA.

²⁶⁴ See 66 FR 8178, 8180 (Jan. 30, 2001) (stating that the OCC's proposed rule amends § 7.4001(a) to clarify that the term "NSF fees" includes only those fees imposed by a creditor bank when a borrower attempts to pay an obligation to that bank with a check drawn on nonsufficient funds. Fees that a bank charges for its deposit account services—including overdraft and returned check charges—are not covered by the term "NSF fees." These fees are therefore not "interest" but, rather, are charges covered by 12 CFR 7.4002; see also 66 FR 34784, 34786 (July 2, 2001) (adopting the proposed change in the final rule).

²⁶⁵ See OCC Interpretive Letter 1082 (May 17, 2007) (stating that a bank "is not creating a 'debt' that it then 'collects' by recovering the overdraft and the overdraft fee from the account" and that, "[u]nder these circumstances, the [bank's] rights to collect debts under [S]tate law . . . are not implicated").

²⁶⁶ See OCC Interpretive Letter No. 914 (Aug. 3, 2001). See also 70 FR 9127, 9129 (Feb. 24, 2005) (stating that "[w]hen overdrafts are paid, credit is extended").

²⁶⁷ See 12 CFR parts 3, 217 and 324.

²⁵⁹ 88 FR 64028 (Sept. 18, 2023).

²⁶⁰ See 15 U.S.C. 1691(a); 12 CFR 1002.4(a) which prohibits a creditor from discriminating on the basis of race, color, religion, national origin, sex, marital status, or age (provided the applicant has the capacity to contract); to the fact that all or part of the applicant's income derives from a public assistance program; or to the fact that the applicant has in good faith exercised any right under the Consumer Credit Protection Act. See 12 CFR 1002.2(l) defining a creditor as a person who, in the ordinary course of business, regularly participates in a credit decision, including setting the terms of the credit. See 12 CFR 1002.2(j) which defines credit as the right granted by a creditor to an applicant to defer payment of a debt, incur debt and defer its payment.

²⁶¹ The 2005 Joint Guidance on Overdraft Protection Programs states that under ECOA and Regulation B, creditors are prohibited from discriminating against an applicant on a prohibited basis in any aspect of a credit transaction. This prohibition applies to overdraft protection programs. Thus steering or targeting certain consumers on a prohibited basis for overdraft protection programs while offering other consumers overdraft lines of credit or other more favorable credit products or overdraft services, will raise concerns under the ECOA. 70 FR 9127, 9131 (Feb. 24, 2005).

²⁶² See 12 CFR 1002.2(c) and 1002.9.

²⁶³ 12 CFR 1002.3(c)(1) defines incidental credit as consumer credit not made pursuant to the terms of a credit card account; not subject to a finance charge (as defined in Regulation Z, 12 CFR 1026.4); and not payable by agreement in more than four installments.

The CFPB acknowledges that these other laws may impose additional obligations and could affect a very large financial institution's decision whether to offer covered overdraft credit. Institutions must consider the interaction of various laws when considering whether to offer any consumer credit product.

VII. CFPB Section 1022(b) Analysis

A. Overview

In developing this final rule, the CFPB has considered the final rule's potential benefits, costs, and impacts per section 1022(b)(2)(A) of the Consumer Financial Protection Act of 2010 (CFPA). The CFPB requested comment on the preliminary analysis in the 2024 proposal as well as submissions of more data that could have informed the CFPB's analysis of the potential benefits, costs, and impacts. In developing the final rule, the CFPB has consulted with the appropriate prudential regulators and other Federal agencies, including about the consistency of this final rule with any prudential, market, or systemic objectives administered by those agencies, in accordance with section 1022(b)(2)(B) of the CFPA. The CFPB also consulted with agencies described in TILA section 149.

The goal of this final rule is to allow consumers to better compare certain overdraft credit to other types of credit and to provide consumers with several substantive protections that already apply to other consumer credit, while still encouraging the availability of overdraft coverage. The section proceeds as follows. First, it describes data limitations and the quantification of benefits, costs, and impacts. Second, it presents the baseline for its analysis. Third, it summarizes comments received and the CFPB's responses. Fourth, it goes through the potential benefits and costs, first to consumers and then to covered persons. Fifth and sixth, it summarizes specific impacts on financial institutions with \$10 billion in assets or less and on consumers in rural areas, respectively.

B. Data Limitation and Quantification of Benefits, Costs, and Impacts

The discussion below relies on information that the CFPB has obtained from industry, other regulatory agencies, comments received, and publicly available sources, including reports published by the CFPB. These sources form the basis for the CFPB's consideration of the likely impacts of the final rule. The CFPB provides estimates, to the extent possible, of the

potential benefits and costs to consumers and covered persons of this final rule given available data.

Specifically, this discussion is based on the CFPB's analysis of public Call Reports and other publicly available data sources, internal data from multiple supervisory information requests, as described in part II above, as well as research reports published by the CFPB. The CFPB also consulted the academic literature and policy analyses of United Kingdom and State regulators.

The CFPB acknowledges several important limitations that prevent a full determination of benefits, costs, and impacts. Quantifying the benefits, costs, and impacts requires quantifying consumer and depository institution responses to the proposed changes, and the CFPB finds the body of knowledge on relevant behavioral responses and elasticities incomplete. In particular, the CFPB is not aware of evidence that could be used to predict how changes to overdraft pricing will affect negative balance periods or the expected substitution effects across asset accounts and between deposit accounts with overdraft coverage and other forms of credit, including the consumer impact from delaying or forgoing some transactions. Similarly, the CFPB has found little reliable quantitative evidence available on the cost and effectiveness of steps financial institutions might take to facilitate clients' money management or timely repayment on overdrawn accounts; reprice any of their services; remunerate their staff, suppliers, or sources of capital differently; or enter or exit any or all segments of the checking account market. Thus, while the quantitative data and research available to the CFPB provide an important basis for understanding the likely effects of the final rule, the data and research are insufficient to fully quantify the potential effects of the final rule for consumers and very large financial institutions. This reflects, in part, the fact that the effects of the final rule will depend on choices made by independent actors in response to the final rule, and the data and research available to the CFPB do not allow reliable predictions of those choices.

In light of these data limitations, the analysis below provides quantitative estimates where possible and a qualitative discussion of the final rule's benefits, costs, and impacts. General economic principles and the CFPB's expertise, together with the available data, provide insight into these benefits, costs, and impacts. The 2024 proposal requested additional data or studies that could help quantify the benefits and

costs to consumers and covered persons of the final rule. The CFPB received little new informative data from commenters in response to this request; this information is discussed in part VII.E.

C. Baseline for Analysis

To evaluate the final rule's benefits, costs, and impacts, the CFPB measures the final rule's benefits, costs, and impacts against a baseline in which the CFPB takes no action. This baseline assumes existing regulations remain in place and that market conditions in the overdraft market do not change from their current state.

Some changes, including changes to the definition of finance charge, may affect other legal requirements under various Federal and State laws, including the Military Lending Act, usury limits, capital requirements, and interchange fees. The CFPB is not responsible for interpreting those laws and regulations, and therefore has imperfect insight as to how they might interact with the final rule. Nevertheless, the ensuing analysis discusses some interactions as the CFPB understands them under current rules, as of September 2024.

The discussion below assumes that, without action, both the overdraft credit market and the broader consumer checking market would function in the manner understood through past CFPB research, external academic literature, and supervisory activity. The CFPB bases its prediction for the baseline on market conditions and market data from the 2022 calendar year. As a result, its baseline reflects changes to the overdraft market through 2022, including changes to checking account pricing (both fee and net interest revenue) and changes to the speed, cost, availability, and prevalence of payment systems.

The CFPB sees that both the market and the regulatory environment are changing rapidly and might continue to do so absent the rule, but for purposes of the baseline the CFPB generally uses data from 2022 and established law at the time of drafting to characterize the status quo.

D. Comments Received

1. General Comments on the 1022(b)(2)(A) Analysis

Several academic and policy research groups argued that the CFPB's consideration of the proposed rule's potential benefits and costs in the 1022(b)(2)(A) section of the proposal lacked sufficient rigor. They contended the CFPB failed to quantify many of the tangible costs it identified as likely

resulting from the proposed rule. The CFPB acknowledged certain limitations in part VIII.B of the proposal and considered all the available data and evidence. In the 2024 proposal, the CFPB requested that commenters provide additional data that could help inform the rule. While few comments contained relevant empirical information, the CFPB also considered the qualitative information provided by commenters in analyzing the potential benefits and costs of the rule. Nevertheless, the CFPB does not have sufficient data to precisely estimate every potential benefit and cost of the rule. The CFPB has reasonably evaluated all available data and evidence to provide quantitative benefit and cost estimates when possible and relied on economic principles and its subject matter expertise to provide qualitative benefit and cost estimates when suitable quantitative data were not available.

Multiple industry trade groups claimed the CFPB did not appropriately consider the proposal's potential to reduce consumer access to overdraft services as required by the CFPA. The CFPB did consider access to credit in the proposal and in this final rule, as mandated. The trade groups also said this outcome would cause significant harm to consumers who rely on overdraft as a short-term liquidity tool. The CFPB has considered the full effects of the rule on consumers, including of any potential loss of access, as part of its analysis in parts VII.E and VII.F. If covered financial institutions opt to comply with the final rule by lowering their non-covered overdraft fees and charging consumers the benchmark fee, they may also choose to use tighter underwriting standards for the non-covered overdraft credit that they extend. This could result in less non-covered overdraft credit access for some consumers. Given the evidence discussed in parts VII.E and VII.F below, a reduction in non-covered overdraft could also be beneficial to some affected consumers, and covered financial institutions may have incentives to offer other products in place of non-covered overdraft to help consumers cover potential deposit account shortfalls. Covered financial institutions that opt to use the breakeven standard will not have the same incentive to reduce non-covered overdraft credit access.

Some industry commenters, including banks and credit unions, stated that the CFPB's sample of institutions used to determine the benchmark overdraft fees was small and not representative of the broader market. On the contrary, the

CFPB considers its recent relevant data from some major market participants together with the comment record, sufficient to establish a benchmark fee that allows a reasonable number of firms to break even while providing greater transparency and less administrative burden. Some of these commenters stated that each institution should be allowed to determine its own costs of providing overdraft services. The CFPB highlights that the benchmark fee is not a regulatory obligation and that the breakeven standard allows for any institution that prefers not to use the benchmark fee to calculate their own costs and losses to determine the appropriate fee.

2. Comments Concerning the Proposal's Impact on Consumers

Numerous consumer advocates, nonprofits, and academic commenters expressed strong support for the proposal. They felt it would provide important new protections for vulnerable consumers who bear a disproportionate share of overdraft fees. Low-income Americans, communities of color, and students were highlighted as groups that would particularly benefit. Commenters cited statistics showing these populations are substantially more likely to incur multiple overdraft charges. Any resulting lower fees would therefore be seen as beneficial for these populations. The CFPB is in general agreement with these statements.

Many individual commenters and consumer advocates shared personal stories illustrating the financial distress caused by overdraft fees. Examples included people going hungry because an unexpected overdraft charge deprived them of money for food or having to forgo needed medication because of fee-induced cash shortfalls. Several commenters said high overdraft charges had pushed them out of the banking system altogether. Commenters indicated that by curtailing institutions' ability to impose onerous fees, the proposal was seen as promoting greater financial inclusion and access. These comments illustrate some of the consumer benefits the CFPB expects from potentially lower charges for overdraft credit.

However, some industry groups, along with a few academic and individual commenters, stated that significantly lowering overdraft fees could restrict access to short-term liquidity for consumers who need it most. These commenters argued that if banks and credit unions can no longer profitably provide this service, these cash-strapped consumers may be pushed toward predatory payday lenders and other

high-cost credit alternatives. Or they may be cut off from credit entirely and forced to forego the consumption that higher-priced overdraft credit might have funded. Further, some commenters argued that consumers generally value overdraft services because such services allow them to avoid the inconvenience and embarrassment of having transactions declined. The CFPB notes that the impact analysis of the proposal discussed possible effects on credit access in part VIII.D and VIII.G of the proposal and expects that credit is most likely to be withheld in situations where the borrower may be better off not accessing overdraft credit because of risks like default, account closure, collections, losses of future deposit account access, and the availability of cheaper alternative sources of liquidity.

Several industry commenters also expressed concern that the proposal would lead to higher costs for other basic banking services or that institutions may reduce the banking services they provide to low-income households. They predicted that institutions may introduce new maintenance fees or balance requirements on checking accounts to compensate for lost overdraft revenue. Some asserted that this outcome could prompt more low-income consumers to become unbanked. However, consumer advocate commenters generally disagreed, arguing competitive pressures would prevent any drastic increases in account costs. They also noted that underserved consumers would still come out ahead financially even if modest new fees were introduced, given the outside impact that overdraft charges currently have on lower-income consumer households. The CFPB understands that maintenance fees may already be as high as the market can bear (depository institutions are unlikely to be foregoing potential profits from higher deposit account maintenance fee pricing in the current market), but any small increase in the use of maintenance fees would introduce predictable, transparent, equal, and fair pricing for widely used deposit services and would replace a cross-subsidy from supernormal profits on a product used primarily by more resource constrained consumers. The CFPB includes a more detailed discussion of these potential responses by covered financial institutions in part VII.E.1.

3. Comments Concerning the Proposal's Impact on Covered Persons

Several commenters expressed concern that applying Regulation Z to above breakeven overdraft credit would

have a negative impact on the market for financial services, stating, for example, that the proposed changes are a one-size-fits-all approach that would stifle competition and innovation. The CFPB notes that the final rule allows covered financial institutions the flexibility to determine whether providing non-covered overdraft at the benchmark fee, using the breakeven standard, or, alternatively, providing consumers with covered overdraft credit makes the most sense for their institution. To the extent that covered financial institutions elect to substitute towards offering more covered overdraft credit, if anything, market competition should be enhanced by the rule as market participants compete through more transparent prices, and disclosures improve the salience of prices for different available credit options to consumers. Numerous industry commenters strongly objected to the CFPB's calculation of the benchmark fees for non-covered overdraft. They said the proposed benchmarks failed to account for all of the costs institutions incur to maintain overdraft programs. In addition to losses from unpaid overdrafts, banks and credit unions described substantial expenses related to compliance, disclosure, technology, and customer service that would not be recouped under the proposed potential benchmarks. While some portion of such costs may be directly traceable to providing overdraft coverage, generally these costs are more appropriately classified as costs of providing deposit services to consumers as opposed to costs of providing overdraft coverage to deposit account customers. Requiring that the costs of providing deposit accounts be borne primarily by the low-balance consumers most likely to be charged overdraft fees is cross-subsidizing deposit account use for higher-balance accounts through fees assessed primarily on low-balance accounts. The CFPB acknowledges that some covered institutions may have overdraft costs that exceed the \$5 benchmark fee. For this impact analysis, the CFPB reiterates that institutions will be able to break even on non-covered overdraft even if the \$5 benchmark is too low to cover their traceable costs, whether enumerated in the non-exhaustive examples of section 1026.62(d)(2) or not, by resorting to the breakeven standard. Many industry commenters stated that if the rule were finalized as proposed, they would be forced to stop offering overdraft services altogether. Several smaller institutions said it would be impossible for them to profitably provide these services under

market pressure from very large financial institutions. Even if some larger banks continued overdraft programs, commenters anticipated they would significantly tighten eligibility standards. The CFPB notes again that non-covered overdraft will not generate losses to institutions offering it as any covered financial institution has the option to use the breakeven standard, and some other expected responses have been detailed in the sections below. Restricting access to only a subset of customers will not make non-covered overdraft any more profitable for institutions using the breakeven standard. Institutions using the benchmark fee may have a short-term incentive to stop paying overdraft transactions when the expected cost of doing so is higher than the benchmark fee and they choose not to apply the breakeven standard. Some industry groups claimed that shifting current overdrafts to a Regulation Z model (of covered overdraft) would entail significant new compliance costs and restrictions that would make the products unprofitable and impractical. The CFPB disagrees, as mass market credit products offered under Regulation Z are prevalent, including subprime credit cards in particular. The CFPB includes a more detailed discussion of the potential for increased covered overdraft credit access in response to the final rule in part VII.E and VII.H below. Several industry commenters claimed the proposal would disproportionately harm smaller community banks and credit unions, asserting that these institutions often derive a greater share of their overall revenue from overdraft fees compared to large national banks and typically have a higher share of low-income customers who rely on overdraft. If the rule curtails this income stream, commenters warned it could threaten the viability of some smaller institutions, spurring further industry consolidation. The comments stated that this outcome would be detrimental to traditionally underserved communities that depend on local banks and credit unions for access to basic financial services. The CFPB notes that the rule will only apply to very large financial institutions and therefore will not have any direct impact on smaller financial institutions. To the extent that very large financial institutions respond to the rule by offering overdraft credit to consumers at more favorable rates, the rule could generate some competitive pressure that may indirectly affect smaller financial institutions. However, the CFPB notes that some very large financial

institutions already offer overdraft at prices well below the median market price, or without assessing any fee at all. The CFPB does not expect overdraft price reductions in response to the rule to exert different competitive pressures for smaller financial institutions than past price reductions that some very large financial institutions have already implemented. In particular, the CFPB does not expect the final rule to make overdraft prices more salient for consumers at small financial institutions, and thus the final rule is unlikely to increase shopping for deposit accounts based on overdraft prices.

A number of credit unions argued the proposal failed to account for their unique structure and constraints. They argued that as not-for-profit cooperatives, credit unions use overdraft fees to support services and programs that benefit their membership as a whole, and that curtailing this revenue could force them to cut back on financial education, community development efforts, and other initiatives. The CFPB acknowledges that its impact analysis does not attempt to estimate how much of prior supernormal profits were invested in prosocial activities or cross-subsidies to consumers in even greater need than typical overdrafters. Commenters also noted that most credit unions are subject to an 18 percent interest rate cap, which they asserted would make it very difficult to offer overdrafts as a Regulation Z line of credit. They said this limit puts credit unions at a competitive disadvantage to banks, which are not subject to the same restriction. The CFPB acknowledges that the few credit unions among very large financial institutions subject to the rule may face additional constraints on their covered overdraft programs in accordance with the requirements of the Federal Credit Union Act and associated regulations. The CFPB also understands that the nonprofit nature of credit unions makes changes offsetting the lost overdraft revenue more likely, or as much as lower profits will manifest as lower yields on deposits (as dividends to members), even mechanical. There was also widespread concern among industry commenters that while the proposal only directly applies to financial institutions with over \$10 billion in assets, smaller entities would be under pressure to reduce their fees in order to remain competitive. Community banks and credit unions said they simply do not have the economies of scale to absorb the same loss of overdraft income that large

national banks can withstand. Several commenters urged the CFPB to exempt small institutions from the rule entirely in recognition of this dynamic. The CFPB does not expect that applying the rule to very large financial institutions will materially change market conditions for smaller market participants not subject to such constraints, including the large majority of credit unions not subject to this rule. The existence of a wide range of fees and product offerings under the baseline suggests that there are unlikely to be large changes in the rate of consumers that are currently served by small financial institutions not covered by the final rule shopping for or switching between banks due to the rule. To the extent that some consumers become more sensitive to overdraft fees when choosing a financial institution, the CFPB expects that small institutions will find ways to offer these consumers value that convinces them to stay.

E. Potential Benefits and Costs to Consumers and Covered Persons

1. Potential Benefits and Costs to Consumers

In addition to other changes discussed later in this section and the further changes discussed in the following section, the final rule will apply Regulation Z to above breakeven overdraft credit that is currently excepted from the regulation (*i.e.*, it is currently non-covered overdraft credit). Overdraft credit is above breakeven overdraft credit when a very large financial institution imposes a charge or combination of charges for such credit that exceeds the greater of either the average of the institution's costs and losses for providing non-covered overdraft credit (as defined in the final rule) or the benchmark fee published by the CFPB. The CFPB anticipates that its final rule generally will benefit consumers in two ways. First, some very large financial institutions may reduce their fees so that they can continue offering non-covered overdraft credit. In general, lower overdraft fees for non-covered overdraft credit will benefit consumers by reducing the amount they pay through these fees. Second, some financial institutions may continue offering above breakeven overdraft credit and apply the Regulation Z regulatory framework. In general, applying the Regulation Z regulatory framework to above breakeven overdraft credit will benefit consumers by promoting their informed use of such credit and by applying TILA's substantive protections. The CFPB's analysis may underestimate or

overestimate the final rule's benefits to consumers depending on how various market participants, such as financial institutions covered by the final rule, entities not covered by the final rule, and consumers, respond to the final rule. The discussion below begins with an analysis of the final rule's direct benefits to consumers assuming that very large financial institutions comply with the final rule by lowering their fees for non-covered overdraft credit. The discussion then considers how other potential responses by very large financial institutions could impact the final rule's direct benefits to consumers. Next, the discussion considers how the final rule might impact consumer behavior, including demand for both covered and non-covered overdraft credit, demand for alternative credit products, and deposit behavior. Finally, the discussion briefly considers how institutions not covered by the final rule may respond to the final rule.

i. Estimated Savings to Consumers if All Very Large Financial Institutions Use the CFPB's Proposed Benchmark Fee or Breakeven Standard

Under the final rule, overdraft credit offered by very large financial institutions that currently is non-covered overdraft credit could remain non-covered overdraft credit if the per-transaction price for such credit were less than or equal to the \$5 benchmark fee established by the CFPB. Consequently, if all very large financial institutions were to use the benchmark fee to comply with the rule, the final rule's direct benefits to consumers, assuming no change in overdraft frequency, could be as high as the difference between the total fees currently paid by consumers for non-covered overdraft credit and the total fees they will pay if non-covered overdraft credit were priced at the \$5 benchmark fee. Today, fees for non-covered overdraft credit are generally greater than \$30 per transaction.²⁶⁸ Under the final rule, fees for any non-covered overdraft product provided by a very large financial institution will be substantially lower. From Call Report data, the CFPB estimates that consumers paid \$5.98 billion in overdraft fees to very large banks and thrifts in 2022. For this estimate, the CFPB started with

²⁶⁸ In narrative responses to supervisory information requests, financial institutions generally stated that discretionary overdraft fees are set using factors such as: (1) the direct and indirect cost of offering OD services, (2) deterrence effects, (3) positioning with respect to other competitors, (4) customer feedback, experiences, and utility, (5) regulatory requirements and (6) safety and soundness concerns. CFPB 2024 Overdraft NSF Report at 11.

CFPB-supervised banks' total reported consumer overdraft-related service charges levied on those transaction account and non-transaction savings account deposit products intended primarily for individuals for personal, household, or family use.²⁶⁹ This amount was \$6.42 billion in 2022, including fee revenue from both overdraft and NSF transactions. In prior work, the CFPB has estimated that, between January 2011 through June 2012, 18.9 percent of such revenue at several very large financial institutions was NSF fee revenue.²⁷⁰ However, most of the largest banks eliminated NSF fees during 2022; the CFPB estimates that nearly two-thirds of supervised banks had eliminated NSF fees by mid-2023, representing an estimated 97 percent of annual NSF fee revenue earned by those institutions.²⁷¹ For purposes of this analysis, the CFPB estimates that the NSF fee share in 2022 was half as large as the earlier 18.9 percent share, so supervised banks' overdraft fees are an estimated 90.55 percent of the 2022 fee total, or \$5.81 billion. This total does not include fee revenue from credit unions that are very large financial institutions, since credit union call reports did not include data on overdraft fee revenue in 2022.²⁷² To estimate overdraft revenue earned by CFPB-supervised (very large) credit unions, the CFPB estimates the overdraft revenue earned by all credit unions and distributes that estimated revenue to credit unions above and below \$10 billion in assets based on those groups' relative share of member shares and deposits. The CFPB has estimated that overdraft revenue reported by banks with over \$1 billion in assets comprises approximately 77 percent of the total overdraft/NSF revenue earned by banks and credit unions combined, while credit union overdraft/NSF revenue comprises approximately 15 percent of such revenue (overdraft/NSF revenue of banks under \$1 billion in assets comprises approximately 7 percent of

²⁶⁹ This information is reported in Schedule RI, Memorandum item 15.a on the FFIEC 031 and 041 forms, as of September 2023. For most institutions, this definition also includes fees associated with sustained negative balances. Few charges related to overdraft transactions are reported as net interest revenue, if any.

²⁷⁰ CFPB 2014 Data Point at 10 tbl.2.

²⁷¹ CFPB October 2023 Data Spotlight.

²⁷² Some State-chartered credit unions reported substantial overdraft revenue under California's Financial Code sec. 521. See Dep't of Fin. Prot. & Innovation, *Annual Report of Income from Fees on Nonsufficient Funds and Overdraft Charges* (Mar. 2023), https://dfpi.ca.gov/wp-content/uploads/sites/337/2023/04/Annual-Report-of-Income-from-Fees-on-Nonsufficient-Funds-and-Overdraft-Charges_2023.pdf (DFPI 2023 Report).

such revenue).²⁷³ Banks with more than \$1 billion in assets reported \$7.72 billion in overdraft/NSF revenue in 2022, 90.55 percent of \$7 billion of which the CFPB estimates is overdraft revenue for reasons explained above. Assuming this \$7 billion represents 77 percent of the market total overdraft revenue, the CFPB estimates that credit unions earned 15 percent of the total, or \$1.43 billion in overdraft revenue in 2022. At the end of 2022, very large credit unions held 24.1 percent of all member shares and deposits held by federally insured credit unions. Applying this 24.1 percent to \$1.43 billion, the CFPB estimates that very large credit unions earned \$0.34 billion in overdraft fees in 2022, and that very large financial institutions collectively earned \$6.16 billion.²⁷⁴ From information collections by the CFPB, it estimates the average overdraft fee amount to be \$32.50.²⁷⁵ The CFPB

²⁷³ See CFPB 2021 Data Point at 7 (estimating combined overdraft/NSF revenue for credit unions and for banks with less than \$1 billion in assets using 2014 data collected from core processors for the number of accounts by asset size and the overdraft/NSF revenue per account, and from 2014 call report data for distribution of institutions by asset size, and then assuming that overdraft/NSF revenue at small institutions saw the same growth from 2014 to 2019 as at large banks to arrive at the 2019 estimates). For purposes of this analysis, the CFPB assumes that banks with assets over \$1 billion, banks with assets below \$1 billion, and all credit unions represent the same relative portions of total nationwide overdraft/NSF revenue in 2022 as they did in 2019.

²⁷⁴ The CFPB used FFIEC call report data on overdraft and NSF fee revenue from 2022 rather than 2023 to estimate benefits and costs to ensure consistency with the overdraft-related cost data the CFPB collected and used to inform the benchmark fee, which are only available from 2022. Total overdraft and NSF fee revenue paid by consumers at banks with more than \$1 billion in total assets was somewhat lower in 2023 than in 2022—\$5.83 billion in 2023 as compared to \$7.61 billion in 2022 (As in 2022, data on banks below \$1 billion in assets are not available for 2023.) This would suggest that the estimated benefits, costs, and impacts on consumers and covered persons could be somewhat smaller if the analysis relied on data from 2023 rather than 2022. See CFPB Data Spotlight, *Overdraft/NSF Revenue in 2023 down more than 50% versus pre-pandemic levels, saving consumers over \$6 billion annually* (Apr. 2024), <https://www.consumerfinance.gov/data-research/research-reports/data-spotlight-overdraft-nsf-revenue-in-2023-down-more-than-50-versus-pre-pandemic-levels-saving-consumers-over-6-billion-annually/> (2024 CFPB Data Spotlight).

²⁷⁵ The CFPB collected information about some very large financial institutions' 2022 overdraft practices. For those institutions with available data on the number of instances of non-covered overdraft when the institution charged a fee, the reported weighted average fee amount was \$32.50. CFPB 2024 Overdraft NSF Report. Based on the CFPB's review of publicly available information between December 2022 and July 2023, the unweighted median non-covered overdraft fee amount across all very large financial institutions was \$35. Past CFPB research publications have reported the median non-covered overdraft fee as \$35; this median was also based on data from very

initially assumes that a reduction in the fee for non-covered overdraft credit will affect neither the quantity of credit demanded nor the quantity supplied, meaning that the application of the benchmark fee across the entire market will imply mechanical savings for consumers, unaffected by behavioral responses.²⁷⁶ As discussed in part IV.D.3, the CFPB has finalized \$5 as the benchmark fee. Assuming \$5 will be the new average fee across the market, the decline in market total revenue will be proportional to the decline in the average fee amount. Thus, using a 2022 baseline, a \$5 fee will save consumers \$5.2 billion (84.6 percent of the 2022 total) annually. Savings from lower fees will be particularly valuable in cases when they protect liquidity at times when the consumer needs it most. Consumers with low balances may deplete their asset account less frequently if they have paid less in overdraft fees in the past, and thus their asset account recovered to a higher balance after a sufficiently large deposit. Moreover, if fees, in particular multiple or cascading fees, deplete less of the buffer the depository institution is willing to lend to the consumer (*i.e.*, the shadow line of their non-covered overdraft credit), the consumer might be able to cover more or larger transactions with it when they have depleted their

large financial institutions. A \$35 fee is higher than the \$25.77 average fee recently reported by the New York State Department of Financial Services for 2022 based on surveyed entities, most of which would not be subject to this final rule. See N.Y. State Dep't of Fin. Servs., *Consumer Fee Practices in New York* (July 14, 2023), https://www.dfs.ny.gov/system/files/documents/2023/07/rpt_20230714_consumer_fee_practices_nys.pdf. The Department of Financial Protection and Innovation of the State of California annually tabulates State-chartered banks' and credit unions' revenue from overdraft charges but not the fee amounts. See DFPI 2023 Report. Note that to the extent market revenue or fees for very large financial institutions were lower by the effective date of the proposed rule, the proportional drop from a smaller market total would amount to less than these extrapolations from 2022 market revenue totals and fees. Bankrate's 2023 checking account and ATM fee survey reports that the average overdraft fee was 11 percent lower than a year before. See Karen Bennet et al., *Survey: ATM fees reach 26-year high while overdraft fees inch back up*, Bankrate.com (Aug. 21, 2024) <https://www.bankrate.com/banking/checking/checking-account-survey/>.

²⁷⁶ This assumption approximates the situation where overdraft transactions are inadvertent (a fixed quantity demanded) and always met at the prevailing price, even after the supply curve shifts downward with the benchmark fee. As discussed elsewhere, this outcome is unlikely to hold exactly. Consumers might be less attentive to avoid overdraft when it is cheaper, though many might have larger buffers if earlier fees have depleted their account balances less than they would under the baseline. Financial institutions might also meet demand only at higher prices, applying the breakeven standard approach or offering covered overdraft credit instead.

asset account. The same shadow line will permit more consumption. Current users of non-covered overdraft credit will enjoy similar benefits even if they end up with substitute products like covered overdraft credit, or linked asset or credit accounts, as long as the new source of liquidity is cheaper than non-covered overdraft is currently. A large reduction in fees for non-covered overdraft could reduce some operating costs associated with complaints, collections, and account closures. Such benefits to covered persons do not need to reflect an equal but opposite pecuniary cost to consumers. Fewer complaints, collections, or account closures can save money for both the accountholder and the depository institution, who somehow split the value that would have been spent otherwise. These gains will mitigate some losses covered persons suffer from lower fee revenue, so they lose less on net, in total. The CFPB understands from its general monitoring activities that complaints fell by 70 percent or more at depository institutions that radically decreased overdraft fees recently. With lower fees and charges, the CFPB expects more non-covered or covered overdraft credit accounts to recover from negative balance episodes. Very large financial institutions with per-incident costs and losses traceable to overdrawing transactions above the \$5 benchmark fee will have an incentive to set fees for non-covered overdraft using the breakeven standard described at proposed § 1026.62(d)(1)(i). Consumer gains when very large financial institutions with per-incident costs and losses above the benchmark fee use the breakeven standard will be less as their fee will not drop all the way to \$5. The gains for consumers will be even smaller if the application of the breakeven standard imposes additional administrative costs on the institutions who use it, and, in turn, those institutions shift some of these costs to their customers. However, the CFPB expects these administrative costs to be small compared to revenue. Data produced in response to the CFPB's supervisory information collections on 2022 overdraft practices suggest that at least some very large financial institutions will have traceable costs and losses per overdraft fee charged greater than the benchmark fee level, such that they could find it more advantageous to use the breakeven standard. The CFPB has less data on the costs and losses of other very large financial institutions, whose costs and losses (mostly their charge-off losses) may be higher than for some institutions

in its supervisory information collection. However, because the costs and losses of providing non-covered overdraft are driven largely by credit losses, and because these losses depend on underwriting policies, which, as discussed below, very large financial institutions may change in response to the final rule, current cost and loss levels may not be a reliable indicator of future cost and loss levels under the final rule. Overdraft fees are incurred by consumers in an estimated 17 percent of households annually.²⁷⁷ Among these, the consumers who will benefit most from the final rule are those that incur the largest number of overdraft fees. Thus, a change in fee amounts will have an outsized impact on specific groups of consumers. The CFPB collected 2022 calendar year information from entities it supervises (the group that will be affected by the final rule), which reinforced patterns of disparity that prior CFPB research and others have established:²⁷⁸ Overdraft and NSF fees comprised 53 percent of all fees that the institutions charged to consumer checking accounts, nearly three quarters of all fees charged to accounts with an average balance below \$500 (lower balance accounts), and nearly three quarters of all fees charged to accounts where accountholders opted to authorize overdraft fees on debit card and ATM overdraft transactions (opted-in accounts). While overdraft-related fees averaged approximately \$65 per year over all accounts, accountholders of opted-in accounts and accountholders of lower-balance accounts paid over \$165 and \$220, respectively, in total overdraft fees per year on average. Therefore, the benefits of any fee changes driven by the final rule will be predominantly experienced by accountholders who had either opted-in accounts or lower-balance accounts. Indeed, in aggregate, across all institutions represented in the CFPB's Supervisory Information collection, one-fifth of accounts were lower-balance accounts, but these accounts paid 68 percent of per-item overdraft fees assessed. In fact, at least one institution charged over half of per-item overdraft fees to accounts that were both lower-balance accounts and opted-in accounts, even though only five percent of

accounts fell into this category. Furthermore, accounts that paid for overdraft most often (12 or more overdraft fees per year) were nearly five times as prevalent among opted-in accounts than not-opted-in accounts. Overdraft use, and therefore the potential benefit from reduced fees, is also correlated with other consumer characteristics. As lower-income accountholders pay more fees, and minorities pay more fees even after controlling for income, these groups are more likely to benefit from the proposed changes.²⁷⁹

ii. Responses by Very Large Financial Institutions Covered by the Final Rule

Consumer gains will likely differ from the mechanical effect of lower fees on non-covered overdraft as described in the section above if some very large financial institutions tailor their offering to the new environment as the final rule allows. The discussion in this part starts with the possibility that institutions might adjust underwriting standards or overdraft coverage limits for non-covered overdraft credit when the marginal profit on each non-covered overdraft transaction falls. Then the text turns to the decision of whether to waive the fees on some overdraft transactions. Next is the analysis of decisions about whether to instead extend products that substitute for non-covered overdraft, primarily covered overdraft credit but also transfers from linked asset accounts. Finally, this part discusses repricing of financial products, like maintenance fees on the underlying checking account.

Availability of Non-Covered Overdraft Credit

Assuming that very large financial institutions comply with the final rule by lowering their fees for non-covered overdraft credit, these lower fees may change very large financial institutions' decisions about whether to extend non-covered overdraft credit for a given transaction on a given account. Financial institutions generally have discretion in setting overdraft policies.²⁸⁰ When a financial institution decides whether to cover an overdraft

transaction, it generally trades off the revenue from charging a fee against expected marginal costs and charge-off losses, although decisions about extending credit and charging or waiving a fee may also take into account their impact on the lifetime value of the customer as well as the financial institution's reputation.²⁸¹ Lower potential fee revenue could impact the decision to extend non-covered overdraft credit. In addition, very large financial institutions often offer services that are substitutes for non-covered overdraft credit, including covered overdraft credit and the option of linking other asset accounts to a checking account such that those other accounts can, sometimes for a fee, be accessed in the event of a shortfall. If fees for non-covered overdraft credit were limited for very large financial institutions, they could have incentives to limit access to non-covered overdraft credit but encourage consumers to take advantage of these substitute services. Having said that, firms that use the breakeven standard and not the benchmark fee could be disincentivized from reducing overdraft transactions because to do so will necessarily reduce the firms' cost and loss basis for the next year's fee calculation for remaining overdraft customers but not yield profits over the long run. In principle, very large financial institutions could respond to the final rule's changes by underwriting non-covered overdraft credit more conservatively, by reducing credit limits (whether or not disclosed to the accountholder) for accountholders with higher expected credit losses, or even by eliminating access to non-covered overdraft credit for some consumers who currently qualify for such credit, though as discussed, the firms may offer other products instead. To the extent that very large financial institutions opt to reduce access to non-covered overdraft, it could result in an increased likelihood that transactions are declined for some consumers. The CFPB understands that depository institutions rarely charge NSF fees on declined ATM or one-time debit card transactions when there were nonsufficient funds at the time the transaction was attempted. The CFPB expects that this will somewhat

²⁷⁷ FinHealth Spend Research Reports from 2021, 2022 and 2023 have estimated that 17 percent of responding households have paid an overdraft fee in the prior 12 months between November 2021 and January 2023. See generally, FHN, *Market Analysis: FinHealth Spend Research—Latest Research*, <https://finhealthnetwork.org/finhealth-spend-research/> (last visited Dec. 3, 2024).

²⁷⁸ See CFPB Fall 2023 Highlight; see also CFPB 2014 Data; CFPB 2017 Data Point.

²⁷⁹ Oz Shy & Joanna Stavins, *Who Is Paying All These Fees? An Empirical Analysis of Bank Account and Credit Card Fees* (Fed. Rsv. Bank of Bos., Working Paper No. 22-18, 2022), <https://www.bostonfed.org/-/media/Documents/Workingpapers/PDF/2022/wp2218.pdf>.

²⁸⁰ Institutions authorize and pay transactions that they are contractually obligated to, such as "authorize positive, settle negative" (APSN) transactions, since under applicable payment system rules, once a transaction is authorized, the financial institution must pay the transaction. Pursuant to the CFPA, charging an overdraft fee on such transactions can be unfair.

²⁸¹ In response to supervisory information requests, financial institutions said that when setting limits for discretionary overdraft they consider factors that could be relevant both to the risk of charge-off and to the lifetime value of the customer, including (1) age of the account, (2) available balance, (3) account transaction activity and history, (4) standing of the account, and (5) existence of direct deposits. CFPB 2024 Overdraft NSF Report at 8.

attenuate any increase in likelihood that institutions decline these transactions since their expected revenue from the decline is negligible. While assessing NSF fees when declining ATM or one-time debit card transactions may make this response more likely, doing so would harm customers, damage consumer goodwill by charging a fee in return for no service, and, as noted by the Board in its preamble to the 2009 Opt-In Rule, “could raise significant fairness issues” under the Federal Trade Commission (FTC) Act because “the institution bears little, if any, risk or cost to decline authorization of an ATM or one-time debit card transaction.”²⁸²

Limited access to non-covered overdraft could be beneficial to consumers with access to cheaper credit options they mistakenly forgo or who would have preferred that a transaction was declined rather than incurring an overdraft fee. Some consumers who would not have repaid the overdraft credit may avoid the negative effects of default, including account closures, debt collection calls and litigation, and reporting to account screening consumer reporting agencies (which are specialty deposit credit reporting agencies) that can make it difficult to open a checking account at another financial institution. Consumers often overdraw their account when they have liquid funds or available cheaper credit. In these cases, consumers might benefit from using those options instead of overdraft credit. However, there are scenarios, even when there are other credit options available and overdraft is more expensive, that the prompt completion of the transaction would be more valuable to consumers than the fee charged.

The CFPB is aware of an empirical study finding that relaxing restrictions to overdraft fees may result in increased access to deposit accounts with overdraft coverage.²⁸³ Contrary to some

commenters’ claims, the CFPB considered this study carefully in its proposal and reconsidered it for the final rule.²⁸⁴ The work analyzed an episode in 2001 in which national banks’ sudden exemption from State fee caps permitted some banks to increase their fees for non-covered overdraft. The study attempts to identify the effect of the regulatory change by comparing national banks (which became exempt from State fee restrictions) to State banks (which did not), and also comparing banks in States that had such restrictions to States that did not. The authors find that the analyzed change to fee caps seems to have led to higher overdraft fees at national banks in these States, expanded overdraft coverage at these banks, and more low-income households opening deposit accounts. In the survey data the study uses, about 56 percent of consumers in the lowest income quartile did not have checking accounts before the regulatory change, and the authors estimate that this share fell by about five percentage points after the change.²⁸⁵ The estimates are consistent with the regulatory change making it more profitable, in those States affected, for national banks to provide accounts to consumers who maintain low balances. The authors do not find evidence that the newly banked consumers regretted (or at least reverted) their choice or suffered worse financial health, and they suggest that this is consistent with welfare improvements for these consumers in the short run. These estimates do not make the CFPB expect substantial consumer harm from this final rule. As with most modern empirical research in

(Fed. Rsv. Bank of N.Y., Staff Rep. No. 973, June 2021), https://www.newyorkfed.org/medialibrary/media/research/staff_reports/sr973.pdf (revised July 2023) (Dlugosz 2021 Study).

²⁸⁴ Comments citing this study generally overlooked the CFPB’s consideration of some negative consequences of unpaid overdraft or declined transactions. The CFPB has not ruled out and does not rule out decreased overdraft credit or checking account access for some consumers, but does not expect consumer harm from such potential outcomes to necessarily outweigh consumer gains from lesser charges, more transparent pricing, and more efficient competition in overdraft credit and deposit account markets.

²⁸⁵ The study cites three possible reasons why the share with checking accounts might be lower in their data than other surveys or administrative records: their focus on checking accounts and exclusion of savings and money market accounts, the nearly 10 year difference in timing between their survey and other available survey evidence, and the known underreporting of bank account ownership in survey data relative to administrative records shown in a 2021 study by Yogo, Cox, and Whitten. See Dlugosz 2021 Study at 17 n.19; see also Yogo et al., *Financial Inclusion Across the United States* (Dec. 6, 2021), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3934498 (last revised Nov. 25, 2024) (Cox 2021 Study).

economics, the study focuses attention on the internal validity of the findings, *i.e.*, the measurement of the causal effect of the policy change at the time and place that it took effect. The study’s causal reasoning requires that differential trends at national and State institutions in affected States would have continued to diverge (or converge) at the same linear rate in the absence of the exemption from State fee caps, and evaluating these assumptions is difficult given the five-year window for which the study has data.²⁸⁶ Assuming the internal validity of the findings, differences in both the economic context and the nature of the regulatory change make it unlikely that the study’s findings will apply directly in the context of this final rule. The study authors suggest that relaxing caps may have been beneficial to consumers without bank accounts in 2001, but this is difficult to conclude without strong assumptions about how consumers value deposit account access, overdraft credit, and overdraft fees. In addressing which of the four proposed benchmark fees the CFPB should adopt in this final rule, an academic commenter urged the CFPB to adopt one of the lower proposed benchmarks fees while acknowledging that these would be more likely to result in reduced overdraft credit limits for some consumers. The commenter asserted that ensuring consumers can make better-informed borrowing choices or that they would face substantially lower per-episode non-covered overdraft fees would be preferable to permitting higher non-covered overdraft fees, even if those fees were less than half of the prevailing fees charged in today’s market. The CFPB also notes that the final rule will not impose limits on all overdraft fees but rather will require very large financial institutions to comply with Regulation Z when offering covered overdraft credit.

A prominent precedent for a U.S. policy change affecting overdraft fee revenue was the implementation of the opt-in rule of Regulation E in August 2010. The CFPB is not aware of a careful empirical study that isolates the effect of this change in the market. That said, there was a substantial decrease in marketwide overdraft revenue following the introduction of the opt-in rule and

²⁸⁶ An academic discussant of an earlier draft of the study recommended further analysis to allay similar concerns. See Christopher Palmer, MIT Sloan & NBER, *Who Pays the Price? Overdraft Fee Ceilings and the Unbanked*, Presentation at the Boston Fed Day Ahead Conference, at 9 (Jan. 6, 2022), <https://web.mit.edu/cjpalmer/www/discussions/Palmer%20Discussion%20of%20DMM.pdf>.

²⁸² 74 FR 59033, 59041 (Nov. 17, 2009). In 2010, card issuers reported that their median per-transaction cost of nonsufficient funds handling was one cent. 76 FR 43394, 43398 (July 20, 2011). Since then, the transacted weighted average cost of nonsufficient funds handling has fallen to \$0.005. FRS, *2021 Interchange Fee Revenue, Covered Issuer Costs, and Covered Issuer and Merchant Fraud Losses Related to Debit Card Transactions*, at 39 tbl.14A (Oct. 2023), https://www.federalreserve.gov/paymentsystems/files/debitfees_costs_2021.pdf. Nonsufficient funds handling costs were described in the survey as “[c]osts of handling of events in which an account does not have enough funds to settle an authorized debit card transaction between the time of authorization of that transaction and the settlement of that transaction.” *Id.* at 28 n.25. Based on this description, the cost of handling events in which the debit card transaction was not authorized is likely even lower.

²⁸³ See Jennifer L. Dlugosz et al., *Who Pays the Price? Overdraft Fee Ceilings and the Unbanked*

a smaller decrease in total service charges, which suggests less than fully offsetting price responses.²⁸⁷ However, isolating the effect of the opt-in rule is made more difficult by the fact that the implementation of the cap on very large financial institutions' interchange fees on debit cards came a mere three months later, and the Great Recession might also confound the effects of the opt-in rule alone. The CFPB's market monitoring activities also indicate that some institutions ceased to offer "free checking" after the 2010 changes.²⁸⁸ The downward trend in the share of American adults without a bank account does not seem to have broken around the time of these changes in the long-running series of the Survey of Consumer Finances, and the FDIC's Survey of Household Use of Banking and Financial Services, which started in 2009, shows a small increase in the unbanked share in 2011 before steady declines thereafter.²⁸⁹ According to the CFPB's market monitoring, recent voluntary decreases in overdraft revenue at many large American depository institutions have not coincided with conspicuous restrictions of checking offerings or increases in other fees, though this period corresponded to increases in net interest revenue on deposits resulting from a changing interest rate environment.²⁹⁰ In some cases, in response to the final rule, the above referenced more conservative underwriting may lead lenders to reject transactions they would not have rejected under the baseline where consumers do not have other viable options. In such cases, those consumers will no longer have the option to use non-covered overdraft as credit, which means transactions will be declined, but also, the consumers will

not incur its high cost and potential risks of account closure. Overdraft use can also decrease due to financial institution responses that cause no consumer harm. With smaller profits on each transaction, very large financial institutions could have more of an incentive to educate their depositors and help them avoid negative balance episodes.²⁹¹ Financial institutions will also have less of an incentive to inflate the number of overdraft transactions with transaction posting orders designed to increase the number of overdraft fees.

One industry trade commenter summarized responses from 21 member banks answering its survey about their overdraft practices in 2023 to support its assertion that the CFPB could quantify the impact of the rule on availability of non-covered overdraft, and asserted that the survey results show that the final rule would lead to a significant reduction in the amount of credit available to customers through non-covered overdraft, which the commenter stated was not accounted for in the

proposal. The commenter provided results for 13 of the 21 member banks that responded to the survey, excluding responses for banks that did not offer overdraft or did not meet the definition of a very large financial institution. Among these 13 respondents, the reported average amount of non-covered overdraft credit available to overdraft customers in 2023 was \$756, and on average overdraft consumers "used" about half of the available credit in 2023. Respondents reported that they would reduce the amount of available non-covered overdraft credit under different potential benchmark fee amounts. Furthermore, the survey's methodology provides an insufficient basis to credibly quantify potential impacts of the rule. For example, the study's description of its methodology does not make clear how the measure of credit used is calculated, making it difficult to evaluate if the calculation captures the relevant economic concept.²⁹² In any event, at the \$7 benchmark fee amount, five out of ten respondents reported that the reduction in average available overdraft credit would not exceed 50 percent. Even at the \$3 benchmark, two out of ten claimed the available overdraft credit would be reduced by 50 percent or less. Either scenario is consistent with an expectation that only heavy users of overdraft would face an effective reduction in their overdraft credit available to cover transactions; respondents stated that, on average, overdrafters used only half of their available credit line and currently extended liquidity also covers the excess overdraft fees that the final rule will reduce.²⁹³ The survey thus suggests that many financial institutions will be able to use the \$5 benchmark fee without meaningfully reducing overdraft access or use for many consumers.

Waiver Policies

Currently, a substantial fraction of overdraft fees is waived by financial institutions, either because regulation

²⁸⁷ As discussed in part I.B above, marketwide overdraft revenue (for both banks and credit unions) is estimated at approximately \$25 billion in 2009, and fell to an estimated \$12 billion in 2011. According to bank call report data, total bank deposit service charges fell from \$41.7 billion in 2009 to \$33.1 billion in 2011 and remained at a similar level in following years. While other factors may explain part of the reduction in deposit service charges, the large and persistent decrease suggests that banks did not make up all of the lost overdraft revenue from the 2009 opt-in rule by increasing other prices.

²⁸⁸ See, e.g., E. Scott Reckord, *At many big banks, no more free checking*, L.A. Times (Feb. 4, 2011), <https://www.latimes.com/archives/la-xpm-2011-feb-04-la-fi-free-checking-20110204-story.html>.

(May 26, 2002), <https://www.clevelandfed.org/publications/economic-commentary/2022/ec-202207-unbanked-in-america-a-review-of-the-literature>. Note that the increase in the FDIC measure may have been impacted by the Financial Crisis.

²⁹⁰ See CFPB May 2023 Data Spotlight.

²⁹¹ Various pieces of evidence have bolstered the view that overdraft is a mistake for many. Stango and Zinman document that surveying consumers about overdraft makes them use it less, strongly suggesting that they overuse the service when they are paying less attention. See Victor Stango & Jonathan Zinman, *Limited and Varying Consumer Attention: Evidence from Shocks to the Salience of Bank Overdraft Fees*, 27 Rev. Fin. Stud. 990 (2014), <https://academic.oup.com/rfs/article/27/4/990/1603971>. Alan et al. ran an experiment in Turkey, where overdraft fee discounts lowered use while messages about availability raised it, suggesting that consumers are overdrawing their account without regard to the actual fees and even a discounted price is too high for them when it draws their attention. See Sule Alan et al., *Unshrouding: Evidence from Bank Overdrafts in Turkey*, 73 J. Fin. 481 (2018), <https://onlinelibrary.wiley.com/doi/full/10.1111/jofi.12593>. Grubb modeled the direct and indirect consequences of just-in time "bill-shock alerts" (e.g., for debit card transactions) on consumers and finds that the overdraft market is ripe for such reminders, as people differ in how much attention they pay to their available balance. See Michael D. Grubb, *Consumer Inattention and Bill-Shock Regulation*, 82 Rev. Econ. Stud. 219 (2015), <https://academic.oup.com/restud/article/82/1/219/1543467>. Grubb et al. indeed report on field experiments in the U.K. where timely text message alerts saved consumers 11 to 27 percent of overdraft fees, which also shows that many had available funds elsewhere. See Michael D. Grubb et al., *Sending Out an SOS: Automatic Enrollment Experiments for Overdraft Alerts* (forthcoming in the Journal of Finance, accepted May 8, 2024), <https://sites.google.com/bc.edu/michael-grubb/research>. Heidhues and Köszegi use overdraft as their prime example of markets where providers exploit the mistakes of some consumers. See Paul Heidhues & Botond Köszegi, *Naïveté-Based Discrimination*, 132 The Q. J. Econ. 1019 (2017), <https://academic.oup.com/qje/article/132/2/1019/2724551?searchresult=1>. Gathergood and Olafsson find in granular administrative data some overdraft behaviors impossible to rationalize. See John Gathergood & Arna Olafsson, *The Co-holding Puzzle: New Evidence from Transaction-Level Data* (Oct 10, 2023), <https://ssrn.com/abstract=3607560>.

²⁹² For example, it is not clear if the credit used as calculated in the study reflects the highest overdraft balance a consumer had during the year, the sum of all overdraft transactions during the year, average monthly overdraft balances within the year, or some other measure.

²⁹³ At the commenter's "average amount of overdraft liquidity available per customer" of \$756, this would be expected to cover nine overdraft transactions at an average overdraft transaction amount of \$50 (see FHN Brief 2024) and an average overdraft fee of \$32.50 (see CFPB 2024 Overdraft NSF Report at 13). Under the benchmark fee of \$5, available overdraft liquidity close to half the current average among the survey respondents (\$385) would still cover seven overdraft transactions at the average transaction amount.

does not allow fees on transactions that are paid per contractual obligations (such as debit APSN transactions without opt-in), pursuant to an automatic policy like a daily maximum, or at the discretion of a customer service representative or manager, often called a discretionary waiver or a reversal after the fact. Lower fee amounts will change institutions' incentives related to whether to waive the fee by policy or discretion, which is a subset of overall waivers. For this decision, the depository institution trades off the net revenue from charging the fee against the expected value of a marginally better relationship with the customer. Lower fee amounts will affect both parts of this tradeoff. Lower potential fee revenue will mean that depository institutions will have less to lose by waiving a fee, while they also imply that there is less at stake for the consumer, likely making fee waivers less important to maintaining good customer relationships. As discussed in the Overdraft and NSF Practices Report, the \$5 benchmark fee would not have covered the average charge-off losses across the institutions in the CFPB's data for 2022 if they had applied their current waiver policies (charging \$5 only in instances where they actually charged their current higher fee in 2022).²⁹⁴ This suggests that institutions that currently waive or reverse fees might reconsider their policies if the benchmark fee did not allow them to recoup their costs and losses on their non-covered overdraft credit product, if product-specific profit targets were more important in practice than the marginal incentives for individual waivers. If an institution was to adopt the breakeven standard, it will charge higher fees but may still have an incentive to tailor its waiver policies to foster customer goodwill and retention according to the accountholder's lifetime value to the institution. A decrease in the chance of a waiver will shift the consumer experience from higher overdraft fees (as much as \$35) that might be waived discretionarily, to lower overdraft fees (as low as \$5) that are more predictable. On net, the CFPB expects that this shift will lower costs and create more predictability for consumers. In addition, the discretionary nature of some fee waivers can lead to the potential for disparate treatment of customers, as some customers may be more likely to get an overdraft fee waived than others. This disparate treatment amounts to what has

been called "contractual inequality."²⁹⁵ A substantial decrease in discretionary waivers is likely to move towards more equality of waiver rates across underprivileged and more privileged groups.

Expanding Covered Overdraft Credit or Other Substitutes for Non-Covered Overdraft

Financial institutions may choose to offer covered overdraft credit in addition to or instead of non-covered overdraft credit. Whether consumers will choose to apply for and use covered overdraft products, and whether very large financial institutions will find it profitable to offer them, depends on a number of factors, and available evidence does not permit the CFPB to confidently predict whether or how such products will develop. In particular, it will depend on the price that the market will bear for these products in new segments, as well as the cost and time required to develop reliable underwriting and consumer acquisition systems to support such products.

Lines of credit on any such new covered overdraft product might be smaller than on existing covered overdraft lines of credit, which generally focus on premium market segments. If underwriting these covered overdraft credit lines on the new accounts will require extensions of existing systems or new installations at many institutions, transitioning a new customer base to covered overdraft credit will take time and experimentation, even at institutions with experience underwriting credit cards or extant overdraft lines of credit. The frequent overdrafter population might be profitable to underwrite with small lines, but few financial institutions will have experience underwriting such small lines of credit covered by Regulation Z for this population (either for a credit card or extant overdraft lines of credit). The effective date will leave time for very large financial institutions to experiment before implementation, which could facilitate development of new covered overdraft credit offerings.

If frictions slowed the transition of consumers from non-covered to covered overdraft credit, fewer consumers will receive the new coverage at institutions that try to move some of their overdraft customers into a covered product.

Past experience offers little guidance on the extent to which very large

financial institutions will attempt to transition current non-covered overdraft transactions into a covered product. As depository institutions generally target existing covered overdraft credit as a premium product at customers with low charge-off risks and high expected lifetime value to the institution, inertia might imply that customers who are more likely to struggle to recover from a negative balance episode continue to access a non-covered overdraft product subject to the new breakeven or benchmark limits, keeping non-covered overdraft fees higher under the breakeven standard than otherwise.²⁹⁶ Institutions may find it harder to quickly adjust credit limits for covered overdraft credit than for non-covered overdraft credit, and this difference may be more pronounced when extending overdraft credit that is less likely to be repaid.

The disclosure provisions of Regulation Z might result in more competitive pressure on the pricing of covered overdraft credit products than currently exists for non-covered overdraft credit. An increase in competitive pressure could mean that new covered overdraft products will be less expensive than existing non-covered overdraft products for the same consumers and coverage.²⁹⁷

Consumers will also stand to gain from the availability of covered overdraft credit because meeting periodic minimum payments, which are generally lower than the full balance, will allow them to revolve their overdraft debt and cover more extended needs for liquidity. They could also pay less in per-transaction fees if their asset account, not depleted by full repayment of prior overdrafts, will cover more transactions while the credit account

²⁹⁶ Interest rates are similar on arranged and unarranged overdrafts in the United Kingdom, following recent regulation setting a comparable pricing structure on both. See Danail Vasilev et al., Fin. Conduct Auth., *Evaluation Paper 23/1: An evaluation of our 2019 overdrafts intervention* (Apr. 2023), <https://www.fca.org.uk/publication/corporate/ep23-1.pdf> (FCA 2023). This could suggest similar pricing for covered overdraft credit as for current non-covered overdraft credit, even if it becomes better disclosed and the credit limits are clearer than current shadow lines. However, the same British reform also resulted in expanding arranged overdraft lines and smaller unarranged lines in addition, which suggests that covered overdraft credit could also become competitive or prevalent in the United States.

²⁹⁷ Regulatory constraints may also affect the fees charged for covered overdraft credit. For example, for open-end covered overdraft credit accounts accessible with a hybrid debit-credit card, the fee-harvesting provisions in § 1026.52(a) would limit some fees that very large financial institutions can charge in the first year of a new account to 25 percent of the approved credit line. Section 1026.52(a) does not, however, limit charges that are assessed as periodic rates.

²⁹⁴ CFPB Overdraft and NSF Practices Report at 6.

²⁹⁵ Manisha Padi, *Contractual Inequality*, 120 Mich. L. Rev. 825, 834–40 (2021), <https://repository.law.umich.edu/cgi/viewcontent.cgi?article=8399&context=mlr>.

carries a balance. Periodic repayment saves consumers some per-transaction finance charges at the cost of somewhat higher periodic charges resulting from a credit balance remaining outstanding for longer. Furthermore, consumers who cannot repay the overdrawn amount within 60 days, when non-covered overdraft credit balances are typically charged off, might benefit from revolving their covered overdraft credit balance for a longer period of time.

Consumers who go delinquent on new covered overdraft credit accounts will have their credit negatively impacted if the delinquency is reported to consumer reporting agencies, though not necessarily with more dire consequences than with a negative report to account screening consumer reporting agencies (which are specialty deposit credit reporting agencies) after involuntary account closure due to a negative balance on the original asset account that would have resulted from similar behavior with non-covered overdraft credit in the absence of the final rule.

When consumers at very large financial institutions are offered covered overdraft credit, that covered overdraft credit will not be subject to the Regulation E opt-in requirement for non-covered debit card overdraft. However, it will be subject to Regulation Z's application and solicitation requirements and limitations on the issuance of credit cards if it can be accessed by a hybrid debit-credit card. Financial institutions will not be required to permit consumers to consent separately to overdraft charges on one-time debit card and ATM transactions, versus overdraft on other transaction types, the way Regulation E requires. A very large financial institution will be permitted, instead, to simply give the consumer the choice to apply for covered overdraft credit that will be extended to cover any overdrawing transaction (whether it be check, ACH, debit card, ATM, or any other form). Once the account is established, the CFPB expects those covered overdraft accounts to be presented to consumers as a credit account on phone applications, accounts on websites, and periodic statements, which will call attention to the fact that covered overdraft credit is a credit product.

Consumers who choose to have covered overdraft credit that is accessible by a hybrid debit-credit card might be better off than those who are opted into non-covered overdraft credit on one-time debit card and ATM transactions today if the same amount of credit for the same transactions costs less, as discussed above, or because of

the other protections included in this final rule. Where a financial institution only offers covered overdraft credit bundled for all transaction types, consumers who are not opted in today will gain the right to, effectively, refrain from opting into overdraft on transactions other than one-time debit and ATMs. They will lose, however, the ability to refrain from opting into overdraft for one-time debit and ATMs while intentionally keeping overdraft for other transactions. It is unclear how many consumers would prefer the default of Regulation E, particularly given evidence that consumer understanding of the Regulation E opt-in right is low.²⁹⁸

If very large financial institutions chose to offer closed-end covered overdraft credit, such closed-end covered overdraft credit will not be subject to the substantive protections discussed above. Instead, it will be subject to the disclosure requirements that apply to closed-end credit. The CFPB believes it is unlikely that this product will be provided.

With non-covered overdraft credit less profitable for financial institutions and available to fewer consumers, both institutions and consumers will have greater incentive to take advantage of linked accounts. Institutions might offer and promote more of these opportunities. Transfer fees on linked asset accounts to cover overdrawing checking account debits can result in costs for consumers but protect them from unnecessary borrowing if they indeed have liquid assets elsewhere. Links to existing credit lines like credit cards will not have this benefit but give more control to consumers to shop for rates and decide on repayment, with potentially still lower transfer fees than fees on non-covered overdraft credit under the final rule. Transfer fees for transfers from both savings accounts and credit accounts have been less common among the largest banks in recent years than they were prior.²⁹⁹

Offsetting Changes to Other Deposit Account Prices

As discussed above, the final rule will lead to reductions in non-covered overdraft revenue at many very large financial institutions, and it is uncertain

whether that revenue will be replaced, potentially by revenue from covered overdraft or other substitute products. Overdraft provider responses to this lost revenue will affect both the sum of consumer gains and their distribution across market segments and populations. Total consumer gains will be lower if very large financial institutions make up for lost overdraft fee revenue and any potential increase in costs by raising revenue through increasing other checking account prices or decreasing rates paid on deposit accounts. Whether financial institutions will offset lost overdraft fee revenue in this way for some or all deposit accounts will depend on a number of factors, including overall profitability of deposit accounts and the nature of competition among financial institutions. Without predicting exactly how firms will respond, the CFPB believes a reduction in overdraft fee revenue need not translate into increased maintenance fees, especially for high-balance consumers.³⁰⁰ In addition, as discussed in this section, very large financial institutions will generate revenue by assessing charges on covered overdraft credit or other credit products that substitute for non-covered overdraft.

To give an upper bound on how much lost revenue might be offset on a per-account basis, the CFPB estimates the mechanically lost revenue per account from non-covered overdraft fees without any behavioral responses. While full offset of the revenue loss is not a likely scenario, calculating this upper bound provides some quantitative context for understanding the limits of potential lost revenue and corresponding changes that might result. The CFPB does not have current information on the number of active checking accounts at all very large financial institutions but requested such information for 2022 from eight very large financial institutions in a supervisory capacity. For these institutions, the overall average overdraft fee revenue from any active account-month was \$3.77. Of course, the final rule will not eliminate all non-covered overdraft fee revenue. With the \$5 benchmark (and again, assuming for analytical purposes full adoption of the benchmark), financial institutions will lose approximately 84.6 percent in weighted average fee revenue (from \$32.50 average fees to the \$5 benchmark), totaling a revenue loss of \$3.19 per account per month.

The magnitude of this extreme upper bound on lost revenue per account

²⁹⁸ See Pew 2017 Chartbook at 1, 6 fig. 5 (three out of four consumers do not understand they have a right to not opt-in to overdraft on debit card transactions).

²⁹⁹ Based on the CFPB's review of publicly available information in June 2023, of the 20 banks reporting the most in overdraft/NSF revenue in 2021, 18 were not charging a transfer fee to transfer funds from a savings account to cover an overdraft, and 16 were not charging a fee to transfer funds from a credit account.

³⁰⁰ Today's market features checking accounts with neither maintenance nor overdraft fees.

reassures the CFPB that any potential losses to banking access can remain limited. In fact, there are large financial institutions for which this final rule is unlikely to result in substantial reductions in revenue.³⁰¹ Furthermore, this decrease in overdraft revenue is likely to be on par with, if not lower than, the voluntary decrease in revenue many large financial institutions already absorbed between 2019 and 2022, without apparent disruptions to checking and overdraft access.³⁰² The proposed fee reductions are in some ways similar to new regulations of the overdraft market in the United Kingdom in 2019, whose impacts the Financial Conduct Authority evaluated ex-post with a careful causal analysis. Their findings are generally consistent with the CFPB's expectations about limited disruption to checking and credit access and no complete offset of lost overdraft revenue.³⁰³

Offsetting changes in prices, if any, will limit the benefits to consumers from the final rule (as well as the corresponding costs to covered persons), but also redistribute the burden of paying for consumer checking services in the United States. Those consumers who are currently frequent users of high-cost non-covered overdraft credit will benefit substantially from lower fees even if checking account APY or maintenance fees adjust, as those adjustments are unlikely to be similarly concentrated. Consumers who currently receive cross-subsidies from frequent (or just occasional) overdrafters but might now receive lower net interest or pay higher maintenance fees to their checking provider, will incur only modest losses under the final rule relative to the baseline. Thus, to the extent that covered financial institutions respond to the rule by increasing deposit account maintenance fees or decreasing net interest paid for deposit accounts, this will decrease the total benefit to consumers from the final rule. However, as these prices are likely to be more salient to consumers, the CFPB expects there to be more efficient competition which will limit the extent to which covered financial institutions are able to pass along price increases (or net interest decreases) to consumers. Furthermore, and as mentioned above, any offsetting changes in prices are likely to be less regressive than overdraft fee revenue and thereby would

replace a cross-subsidy from supernormal profits on a product used primarily by more resource constrained consumers.³⁰⁴

Under the baseline scenario for this analysis, very large financial institutions generally do not charge nonsufficient fund fees for transactions that consumers attempt to authorize in close to real time, which could include non-recurring debit card transactions or certain person-to-person transactions. Thus, consumers that end up with less access to overdraft credit due to this final rule (and therefore more declined transactions) are not likely to pay fees on these types of transactions that they attempted but that were not authorized. Other types of declined transactions might trigger NSF fees to the extent those fees are not subject to the penalty fees limitation in § 1026.52(b), although, as noted earlier, a significant majority of supervised entities subject to this final rule eliminated NSF fees during 2022 and early 2023.

iii. Responses by Consumers

A lower price for non-covered overdraft credit will lead some consumers to use the product more on the margin, assuming it remains available to them. For those who are attentive to the price of the product, who are also likely to use the product deliberately and experience liquidity and convenience benefits outweighing the cost, any additional utilization will likely provide net benefits. Inattentive consumers, for whom overdraft has already often been a mistake, will continue to be unlikely to pay attention to and rationally consider the lower cost of overdrawing their balance, and will thus be unlikely to use overdraft more even at a lower price.

Some consumers might keep a lower deposit balance as long as their overdraft protection seems sufficient but is now cheaper. As consumers with checking account balances forgo a net interest margin of 250 basis points³⁰⁵

relative to short-term Treasury bill yields, on average, every \$500 in deposits shifted from a checking account to an account with short-term Treasury bill yields would earn each consumer an additional average \$12.50 over a year. Others might keep higher balances in their checking accounts if the final rule were to reduce their access to overdraft credit or if more salient use of overdraft credit made them try harder to avoid it. The cost-of-credit disclosures required for covered overdraft credit make its use more salient for the switchers than non-covered overdraft used to be. Consumers who keep more in their checking account may forgo more interest on their savings if they would have otherwise kept it in higher-yielding accounts.

While the rate of consumers switching depository institutions is relatively low, some consumers may also choose different depository institutions as account terms change as a result of the final rule. The ability to do so will generally increase consumer benefits and reduce consumer costs. For example, consumers who frequently overdraft at banks that are not very large financial institutions could switch to an account at a very large financial institution if non-covered overdraft credit is available there at lower cost. Conversely, a consumer at a very large financial institution that loses access to non-covered overdraft credit as a result of the rule could switch their account to another institution that is not covered by the final rule.

To the extent that marginal consumers could expect to pay a predictable and lower amount for checking overall, the final rule will encourage unbanked or underbanked customers to return to the banking system and gain access to deposit insurance and the low-cost payments system banks provide.

Overdraft use might also change because very large financial institutions will need to disclose newly covered overdraft credit to consumers as a credit product, which can only help them. For consumers who will use overdraft more because of this, their increased use may suggest that they will be deliberately taking advantage of a product worth its price for them. For consumers who will use overdraft less after these changes, better information might correct prior

rates hit the zero lower bound. For months with four-week Treasury yields below one hundred basis points, the national average (non-jumbo) checking account paid 8.3 basis points less. In other times, partly because checking account APYs have not risen as fast as short-term nominal interest rates, checking accounts paid 251.7 basis points below the four-week Treasury bill yield, on average.

³⁰¹ See CFPB, *Chart of Overdraft/NSF metrics for Top 20 banks based on overdraft/NSF revenue reported* (Feb. 2022), https://files.consumerfinance.gov/f/documents/cfpb_overdraft-chart_2022-02.pdf.

³⁰² See CFPB May 2023 Data Spotlight.

³⁰³ See FCA 2023.

³⁰⁴ Minimum balance requirements typically affect fee waivers and not overall account access. To the extent that fees are introduced for consumers that fail to satisfy minimum balance requirements, the resulting fees will also disproportionately be assessed on more resource-constrained consumers. A discussion on the availability of non-covered overdraft credit is above. Upon opening, some accounts might require a larger balance to limit adverse selection. The CFPB expects non-covered overdraft access to be determined separately from basic checking and deposit account access, with limited changes to the supply of the latter. A discussion on potential demand responses to more transparent price changes is below.

³⁰⁵ The FDIC has been reporting national average interest rates on checking accounts since 2009, separately for non-jumbo and jumbo accounts until 2021. For much of this history, nominal interest

misunderstandings and prevent further mistakes.

Disclosure as a credit product will also help consumers compare the costs of different forms of credit (or other options to delay or forgo transactions), which provides direct benefits to those who are able to make more informed choices, and also provides indirect benefits to other potential users as more intensive comparison shopping will bring down prices among competitors. For example, Regulation Z requires disclosure of annual percentage rates, which aid consumers in comparing the cost of credit across products.

Consumers currently not opting into one-time debit card transaction coverage by their non-covered overdraft service under Regulation E may be more likely to opt into such coverage under lower prices. To the extent these consumers pay particular attention to the fee and how it might affect them, they are less likely to regret when they use non-covered overdraft credit than less attentive consumers and are thus more likely to benefit from the final rule.

iv. Responses by Financial Institutions Not Covered by the Final Rule

The final rule will only apply to very large financial institutions and will not lead to any new compliance costs for financial institutions not covered by the final rule.

The CFPB recognizes that a bank or credit union's demand for deposits (including demand and time deposits) derives from a multitude of factors, including, but not limited to, meeting expected loan demand and liquidity needs. In addition, when consumers select a deposit product, they rely on many factors unrelated to the overdraft pricing, including ATM and branch availability, interest rate, and expected customer service.

As the final rule outlines, many large financial institutions have already substantially reduced overdraft fees. During this time, there was no major shift in the total share of deposits from small financial institutions to very large financial institutions.

The CFPB acknowledges that it is difficult to predict with certainty as to how very large financial institutions will evolve their business models over time. Of course, as with any change in business strategies by market participants with substantial market shares, this may ultimately lead to evolving industry dynamics with uncertain benefits and costs.

2. Potential Benefits and Costs to Covered Persons

This final rule will affect the consumer business of certain depository institutions with more than \$10 billion in assets. At the end of calendar year 2022, used for some tabulations here, this list included 176 depository institutions.

For covered persons, costs and benefits mostly mirror the existence and extent of each respective pecuniary benefit or cost to their customers, as detailed above, net of offsetting changes. As it did for consumers, the CFPB has carefully considered the various causes, mediating channels and modulating responses affecting costs and benefits to covered persons, and much of the discussion of the factors and mechanisms affecting potential consumer pecuniary benefits and costs in the previous section also applies to the potential costs and benefits, respectively, of the final rule for covered persons.

In particular, the final rule will reduce the revenue of very large financial institutions from non-covered overdraft credit, and these institutions may be able to offset this lost revenue in various ways, including expanding their offerings of covered overdraft or other services that substitute for non-covered overdraft credit. The extent to which depository institutions will be able to pass the price changes of checking accounts under the final rule onto input prices depends on the pricing pressures on capital, labor, and intermediary goods, and services that very large financial institutions pay for. Due to their complexity, the CFPB has not modeled them in detail.

The operating cost of offering covered overdraft may be higher than the cost of providing similar non-covered overdraft credit. This arises from the costs of complying with Regulations Z and E, and potentially other laws. Covered persons might bear these costs if market forces do not let them pass some of them on to the consumer.

Very large financial institutions already have to provide disclosures per Regulations DD and E for non-covered overdraft credit. If they chose to continue offering non-covered overdraft credit, they will need to update these systems to make sure they accurately disclose and charge the new lower fees. If they decide to offer covered overdraft credit instead to any customer, then the disclosures will follow Regulation Z. The one-time cost of setting up a new covered overdraft program or transitioning consumers to existing covered overdraft programs could be

substantial. The compulsory use prohibition will impose an administrative burden on the institution to offer another form of payment to the covered overdraft credit customer, as well as the operating cost of collecting the payment.

As discussed in the previous section, mechanical application of the benchmark fee amount to existing non-covered overdraft could reduce revenue of very large financial institutions by \$5.2 billion. This revenue impact on covered persons is limited by the final rule's design, which allows depository institutions to collect their costs and losses in overdraft fees. part IV.D.3 details why the CFPB believes that the \$5 benchmark fee will allow some very large financial institutions to cover their costs and losses. Where the benchmark fee will not allow this, fees set based on the breakeven standard will allow institutions to recover their costs and losses over time. This mechanism ensures that even entities that will see less revenue due to this final rule need not take losses on overdraft credit, unless they charge lower fees than the final rule will allow. And financial institutions whose per-transaction traceable costs and losses are lower than the benchmark fee could charge that fee and thereby make a profit on overdraft.

The CFPB finds it plausible that a different revenue model for checking in the U.S. that may result from the final rule will have broader implications on counterparties, competitors, or new entrants, or elsewhere in the economy. Such considerations are too speculative for this impact analysis.

F. Potential Benefits and Costs to Consumers and Covered Persons of Further Provisions of the Proposed Rule

The final rule will also apply the Regulation E compulsory use prohibition to covered overdraft credit provided by a very large financial institution. The rule does not amend the Regulation Z prohibition against offset, nor the Regulation Z provision permitting periodic deductions. The final rule's approach to these provisions will affect the costs and benefits for consumers and covered persons of consumers potentially switching from non-covered overdraft to covered overdraft. Consumers who have access to covered overdraft credit but consciously avoid pre-authorized EFTs to repay covered overdraft credit are likely to benefit from the compulsory use prohibition, which will give them additional control over their finances, though they might be overoptimistic about their future repayment discipline, and mistakenly turn down automatic

payments, to their detriment. Consumers who forget to repay can incur additional costs, including late fees, default interest rates or negative credit reporting after a period of delinquency. Some consumers might not be able to switch to covered overdraft credit if their depository institution was on the margin of offering it and they deem the consumer too prone to delinquency without a pre-authorized EFT for repayment. It is less likely that existing users of covered overdraft credit will be impacted for the same reason, as they are typically premium customers not on the margin of profitability.

Covered persons should not incur substantial cost from establishing repayment options in addition to a preauthorized EFTs. They can feasibly establish processes for consumers to have the repayment option of authorizing individual EFTs. Covered overdraft credit accounts that are not accessible via a hybrid debit-credit card will not be subject to the no-offset provision of Regulation Z.

Consumers with covered overdraft who do not repay their balance with frequent preauthorized EFTs pay either more interest from debt held longer or the hassle cost of making unscheduled repayments more often.

1. Applying CARD Act Provisions of Regulation Z to Covered Overdraft Credit

On covered overdraft credit accounts accessible via a debit card (a hybrid debit-credit card), financial institutions cannot automatically offset the credit balance against a positive balance on the associated asset account after a deposit. Therefore, consumers will be able to pay new debit transactions from the asset account before they repay the credit account. As discussed above, this flexibility in when to repay debt will generally give consumers better opportunities to manage their finances, although in practice the extent of any benefit to consumers from being able to delay repayment depends on finance charges for the credit and whether delaying repayment out of the asset account allows them to avoid higher additional credit charges for new transactions.

Consumers making purchases using hybrid debit-credit cards that access covered overdraft credit will also benefit from the final rule's effect on dispute resolution for such purchases. The CFPB expects the burden on covered persons from this occasional service to be minimal.

The final rule will also require very large financial institutions that provide

covered overdraft credit to do so through a credit account that is separate from the associated asset account. These provisions will clarify that a very large financial institution must treat existing deposit accounts with above breakeven overdraft credit that is currently non-covered overdraft credit, but that the institution chooses to provide as covered overdraft credit subsequent to the rule, as a new credit account for purposes of Regulation Z. Consumers with hybrid debit-credit cards able to access a covered overdraft credit account, and the very large financial institutions that provide these accounts, will then be subject to the CARD Act protections in subpart G of Regulation Z.

Section 1026.51 will require card issuers to consider consumers' ability to make the required minimum periodic payments under the terms of the account. This could generally reduce the amount of credit available to some consumers, and some consumers may benefit from this requirement if it makes it less likely that they are burdened with covered overdraft debt for which they are unlikely to be able to make required minimum periodic payments. Because benefitting from the ability-to-pay regulation's safe harbor requires lenders to estimate whether consumers can repay the minimum payment and all fees assuming full use of the credit line, this could result in firms setting more concrete and less fluid credit limits, could result in lower credit limits, and firms might institute minimum payment formulas that do not require full payment of overdrawn amounts every month.

Section 1026.52(a) will limit fees charged in the first year a covered overdraft credit account is open to 25 percent of the account's credit limit (Section 1026.52(a) does not restrict charges attributable to periodic interest rates; see comment 1026.52(a)(2)-1.). This could benefit consumers with hybrid debit-credit cards able to access a covered overdraft credit account in the first year the account is open. Any reduction in fees paid by consumers as a result of § 1026.52(a) will result in a corresponding cost to covered persons from decreased fee revenue. Developing and implementing pricing strategies for covered overdraft products that comply with these requirements could impose costs on the covered persons providing these products, though the CFPB does not expect these costs to impose a substantial direct burden.

Penalty fees, like declined transaction fees, for violating the terms of the covered overdraft credit account will be subject to limitations under

§ 1026.52(b), providing further benefits to consumers who would have paid such fees. For example, § 1026.52(b) will restrict NSF fees from being charged on ACH transactions on accounts that have covered overdraft credit that is accessible by a hybrid debit-credit card. Consumers that would have been charged penalty fees, including NSF fees on debit card or ACH transactions, will benefit by not being charged these fees. Similarly, financial institutions that would have received NSF fee revenue from these transactions will see a decrease in revenue. Yet, the CFPB understands that NSF fees are currently rarely charged on debit card transactions and, as discussed above, most of the largest banks have already eliminated all NSF fees. This suggests that the benefits to consumers and costs to covered persons from this restriction are likely to be limited.

Very large financial institutions will be required to provide credit account opening disclosures and comply with other requirements of credit account opening in connection with tying covered overdraft credit to deposit accounts that already exist. Applying new credit account opening requirements in connection with deposit accounts of consumers who already have existing non-covered overdraft credit that the institution chooses to replace with covered overdraft credit under the final rule will impose some costs on the depository institution.

Under the final rule, above breakeven overdraft credit will no longer qualify as "incidental credit" under § 1002.3 and thus will be newly subject to certain requirements under Regulation B, including with respect to providing notice and record-keeping. These obligations will have costs to covered persons which are detailed in the Regulation B Supporting Statement that has been filed with OMB in connection with this final rule and are available as part of its public docket.

2. Potential Interactions With Other Regulations

The final rule, including changes to the definition of finance charge, may affect other legal requirements under various Federal and State laws, including the Military Lending Act, usury limits, capital requirements, and interchange fees. The CFPB acknowledges that some or all of these legal requirements might also affect charges for non-covered and covered overdraft credit indirectly. Under the baseline, covered overdraft will be particularly affordable at Federal credit

unions and whenever MLA caps and other potential usury limits apply. As much as covered overdraft credit remains or becomes available in these scenarios under the final rule, it will be particularly beneficial to consumers and will entail a loss of revenue for covered persons as these regulations will restrict the interest rates at which credit can be extended to covered consumers. Due to the effects of these laws, covered overdraft may be less frequently offered to affected consumers. The CFPB has not attempted to quantify the effects of such changes because the CFPB does not predict the extent to which very large financial institutions will choose to offer covered overdraft credit that is subject to those rules.

G. Potential Impacts on Depository Institutions and Credit Unions With \$10 Billion or Less in Total Assets, as Described in CFPB Section 1026

As this final rule applies only to financial institutions with more than \$10 billion in total assets, the CFPB expects no specific impact on small entities directly. Part VII.D.3 above discusses how the CFPB understands the final rule's indirect impact on these entities.

H. Potential Impacts on Consumer Access to Credit and on Consumers in Rural Areas

As discussed above, the final rule may lead to an increase in overdraft credit regulated by TILA and Regulation Z, and for remaining non-covered overdraft credit, a decrease in the fee. To the extent that consumers in rural areas bank with institutions other than very large financial institutions, the impact of the final rule on these areas will be limited. The CFPB has limited insight into overdraft practices in rural areas specifically. It is not aware of reasons to suggest more adverse or particular impacts in rural areas.

The CFPB has tabulated the share of the unbanked in lowest fifth of the income distribution in ZIP codes that the Census classified as urban, rural, or with a fraction rural.³⁰⁶ With this precise measurement, both fully urban or fully rural areas see 74 percent of those with lowest incomes with a bank account, with slight variations in the ratio for the mixed ZIP codes in between. This makes the CFPB expect that urban and rural areas have similar exposure to overdraft fees and will

likely experience similar impacts from the final rule.

The CFPB has also tabulated the average credit score in each ZIP code, in the latest year available in a public dataset released by researchers at the Board. Fully rural ZIP codes have higher credit scores (719.6 on average) than fully urban ZIP codes (713.7), though with even higher averages scores in mostly urban areas and the lowest averages for fairly rural areas. This again suggests that on average, rural areas will have as much access to newly underwritten covered overdraft credit as the rest of the United States.

VIII. Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis of any rule subject to notice-and-comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities (SISNOSE). The CFPB is also subject to specific additional procedures under the RFA involving convening a panel to consult with small business representatives before proposing a rule for which an IRFA is required. An IRFA is not required for this final rule because the final rule, if adopted, will not have a SISNOSE.

Small institutions, for the purposes of the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996, are defined by the Small Business Administration. Effective March 17, 2023, financial institutions with less than \$850 million in total assets are determined to be small.³⁰⁷

As this final rule only applies to financial institutions with more than \$10 billion in total assets, it affects no small entities. Accordingly, the Director hereby certifies that the final rule will not have a significant economic impact on a substantial number of small entities. Thus, a FRFA is not required for this rule.

In the notice of proposed rulemaking, the Director certified that the final rule, if adopted, would not have a significant economic impact on a substantial number of small entities. Thus, neither an IRFA nor a small business review panel was required for this final rule. The CFPB requested comment on its analysis and any relevant data.

The CFPB received a number of comments on its RFA analysis from

industry trade groups, financial institutions that would not be considered "very large financial institutions," and at least one consumer advocate commenter. The industry trade groups and financial institutions asserted that the CFPB should have convened a SBREFA panel for the rule and that the RFA in the 2024 proposal did not have a sufficient factual basis. These industry commenters generally stated that the rule would substantially affect small and mid-sized financial institutions as they would face competitive market pressure to decrease overdraft prices if very large financial institutions decrease overdraft prices to comply with the rule. The consumer advocate commenter stated that the rule would not have a significant impact on a substantial number of small entities even if the CFPB lowered the threshold to \$850 million or more in assets.

Any change in overdraft pricing by small and mid-sized financial institutions due to competitive pressures would be an indirect effect of this final rule. Indirect effects fall outside the scope of the RFA.

IX. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA), Federal agencies are generally required to seek the Office of Management and Budget's (OMB's) approval for information collection requirements prior to implementation.

Under the PRA, the CFPB may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to an information collection unless the information collection displays a valid control number assigned by OMB.

The final rule amends 12 CFR 1026 (Regulation Z), which implements the Truth in Lending Act and is assigned OMB Control number 3170-0015, which expires 05/31/2025, as well as 12 CFR 1005 (Regulation E), which implements the Electronic Fund Transfer Act, which is assigned OMB control number 3170-0014, which expires 5/31/2025.

However, this final rule may, in addition to the information collection requirements of Regulation Z, affect the information collection requirements contained in 12 CFR part 1002 (Regulation B), which implements ECOA, which is assigned OMB Control number 3170-0013 which expires 08/31/2026. A full description of those changes and the estimated burdens thereof can be found in the Supporting Statements for each affected regulation that have been filed with OMB in connection with this final rule and are available as part of its public docket.

³⁰⁶ Cox et al. (2021) identified the unbanked in the universe of tax records as those not listing an account for rebates or payment over a 10 year period, focusing on the 50–59 age group in 2019. See Cox 2021 Study. The Census links ZCTAs to an urban area (or none).

³⁰⁷ See U.S. Small Bus. Admin., *Table of size standards*, <https://www.sba.gov/document/support-table-size-standards> (last updated June 4, 2024).

The CFPB has a continuing interest in the public's opinions regarding this determination. At any time, comments regarding this determination may be sent to: The Consumer Financial Protection Bureau (Attention: PRA Office), 1700 G Street NW, Washington, DC 20552, or by email to CFPB_Public_PRA@cfpb.gov.

X. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the CFPB will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States at least 60 days prior to the rule's published effective date. The Office of Information and Regulatory Affairs has designated this rule as a "major rule" as defined by 5 U.S.C. 804(2).

XI. Severability

The CFPB proposed the following statement regarding severability and received no comments. Accordingly, the CFPB is finalizing it as proposed.³⁰⁸

If any provision of this rule, or any application of a provision, is stayed or determined to be invalid, the remaining provisions or applications are severable and shall continue in effect. For example, if the \$5 benchmark in § 1026.62(d)(1)(ii) is overturned, the breakeven method under § 1026.62(d)(1)(i) will remain in effect, meaning very large financial institutions could charge overdraft fees in compliance with TILA, or use the breakeven exemption, but would not be able to use the \$5 safe-harbor benchmark.

List of Subjects

12 CFR Part 1005

Banks, banking, Consumer protection, Credit unions, Electronic fund transfers, National banks, Reporting and recordkeeping requirements, Savings associations.

12 CFR Part 1026

Advertising, Banks, banking, Consumer protection, Credit, Credit unions, Mortgages, National banks, Reporting and recordkeeping requirements, Savings associations, Truth-in-lending.

Authority and Issuance

For the reasons set forth in the preamble, the CFPB amends 12 parts 1005 and 1026, as set forth below:

PART 1005—ELECTRONIC FUND TRANSFER ACT (REGULATION E)

■ 1. The authority citation for part 1005 continues to read as follows:

Authority: 12 U.S.C. 5512, 5581; 15 U.S.C. 1693b. Subpart B is also issued under 12 U.S.C. 5601 and 15 U.S.C. 1693o–1.

Subpart A—General

■ 2. Section 1005.10 is amended by revising paragraph (e)(1) to read as follows:

§ 1005.10 Preauthorized transfers.

* * * * *

(e) *Compulsory use*—(1) *Credit*. No financial institution or other person may condition an extension of credit to a consumer on the consumer's repayment by preauthorized electronic fund transfers, except for credit extended under an overdraft credit plan or extended to maintain a specified minimum balance in the consumer's account. This exception does not apply to a covered separate credit feature accessible by a hybrid prepaid-credit card as defined in Regulation Z, 12 CFR 1026.61. This exception also does not apply to covered overdraft credit extended by very large financial institutions as those terms are defined in Regulation Z, 12 CFR 1026.62.

* * * * *

■ 3. In Supplement I to Part 1005—Official Interpretations:

■ a. Under *Section 1005.10—*

Preauthorized Transfers, revise 10(e)(1) *Credit*; and

■ b. Under *Section 1005.17—Requirements for Overdraft Services*, revise 17(a) *Definition*.

The revisions read as follows:

Supplement I to Part 1005—Official Interpretations

* * * * *

Section 1005.10—Preauthorized Transfers

* * * * *

10(e) Compulsory Use

10(e)(1) Credit

1. *General rule for loan payments.*

Creditors may not require repayment of loans by electronic means on a preauthorized, recurring basis.

2. *Overdraft credit plans not accessible by hybrid prepaid-credit cards and covered overdraft credit extended by very large financial institutions.* i. Section 1005.10(e)(1) provides an exception from the general rule for an overdraft credit plan other than for a covered separate credit feature accessible by a hybrid prepaid-credit card as defined in Regulation Z, 12 CFR 1026.61 and for covered overdraft credit extended by very large financial institutions as those terms are defined in Regulation Z, 12 CFR 1026.62. A

financial institution may therefore require the automatic repayment of an overdraft credit plan, other than a covered separate credit feature accessible by a hybrid prepaid-credit card or covered overdraft credit extended by very large financial institutions, even if the overdraft extension is charged to an open-end account that may be accessed by the consumer in ways other than by overdrafts.

ii. Credit extended through a negative balance on the asset feature of a prepaid account that meets the conditions of Regulation Z, 12 CFR 1026.61(a)(4), is considered credit extended pursuant to an overdraft credit plan for purposes of § 1005.10(e)(1). Thus, the exception for overdraft credit plans in § 1005.10(e)(1) applies to this credit.

3. *Applicability to covered separate credit features accessible by hybrid prepaid-credit cards.* i. Under § 1005.10(e)(1), creditors may not require by electronic means on a preauthorized, recurring basis repayment of credit extended under a covered separate credit feature accessible by a hybrid prepaid-credit card as defined in Regulation Z, 12 CFR 1026.61. The prohibition in § 1005.10(e)(1) applies to any credit extended under such a credit feature, including preauthorized checks. See Regulation Z, 12 CFR 1026.61, and comment 61(a)(1)–3.

ii. Under Regulation Z, 12 CFR 1026.12(d)(1), a card issuer may not take any action, either before or after termination of credit card privileges, to offset a cardholder's indebtedness arising from a consumer credit transaction under the relevant credit card plan against funds of the cardholder held on deposit with the card issuer. Under Regulation Z, 12 CFR 1026.12(d)(3), with respect to covered separate credit features accessible by hybrid prepaid-credit cards as defined in 12 CFR 1026.61, a card issuer generally is not prohibited from periodically deducting all or part of the cardholder's credit card debt from a deposit account (such as a prepaid account) held with the card issuer under a plan that is authorized in writing by the cardholder, so long as the card issuer does not make such deductions to the plan more frequently than once per calendar month. A card issuer is prohibited under Regulation Z, 12 CFR 1026.12(d), from automatically deducting all or part of the cardholder's credit card debt under a covered separate credit feature from a deposit account (such as a prepaid account) held with the card issuer on a daily or weekly basis, or whenever deposits are made to the deposit account. Section 1005.10(e)(1) further restricts the card issuer from requiring payment from a deposit account (such as a prepaid account) of credit card balances of a covered separate credit feature accessible by a hybrid prepaid-credit card by electronic means on a preauthorized, recurring basis.

4. *Incentives.* A creditor may offer a program with a reduced annual percentage rate or other cost-related incentive for an automatic repayment feature, provided the program with the automatic payment feature is not the only loan program offered by the creditor for the type of credit involved. Examples include:

i. Mortgages with graduated payments in which a pledged savings account is

³⁰⁸ The CFPB notes that this severability clause is not codified but forms an operative part of the rule.

automatically debited during an initial period to supplement the monthly payments made by the borrower.

ii. Mortgage plans calling for preauthorized biweekly payments that are debited electronically to the consumer's account and produce a lower total finance charge.

* * * * *

Section 1005.17—Requirements for Overdraft Services

17(a) Definition

1. *Exempt securities- and commodities-related lines of credit.* The definition of “overdraft service” does not include the payment of transactions in a securities or commodities account pursuant to which credit is extended by a broker-dealer registered with the Securities and Exchange Commission or the Commodity Futures Trading Commission.

2. *Covered overdraft credit.* Under § 1005.17(a)(1), a line of credit subject to Regulation Z (12 CFR 1026) is not an overdraft service. Covered overdraft credit as that term is defined in 12 CFR 1026.62, is a line of credit subject to Regulation Z and is therefore not an overdraft service. Covered overdraft credit includes above breakeven overdraft credit extended by a very large financial institution as those terms are defined in 12 CFR 1026.62. Above breakeven overdraft credit extended by a very large financial institution is therefore not an overdraft service under § 1005.17(a).

* * * * *

PART 1026—TRUTH IN LENDING (REGULATION Z)

■ 4. The authority citation for part 1026 continues to read as follows:

Authority: 12 U.S.C. 2601, 2603–2605, 2607, 2609, 2617, 3353, 5511, 5512, 5532, 5581; 15 U.S.C. 1601 *et seq.*

Subpart A—General

■ 5. Section 1026.2 is amended by revising paragraph (a)(15) to read as follows:

§ 1026.2 Definitions and rules of construction.

(a) * * *

(15)(i) *Credit card* means any card, plate, or other single credit device that may be used from time to time to obtain credit. The term *credit card* includes both a hybrid prepaid-credit card as defined in § 1026.61 and a hybrid debit-credit card as defined in § 1026.62.

(ii) *Credit card account under an open-end (not home-secured) consumer credit plan* means any open-end credit account that is accessed by a credit card, except:

(A) A home-equity plan subject to the requirements of § 1026.40 that is accessed by a credit card; or

(B) A covered overdraft credit account as defined in § 1026.62 offered by a

creditor other than a very large financial institution as defined in § 1026.62 that is accessed by a debit card or account number.

(iii) *Charge card* means a credit card on an account for which no periodic rate is used to compute a finance charge. The term does not include a hybrid debit-credit card as defined in § 1026.62.

(iv) *Debit card* means any card, plate, or other single device that may be used from time to time to access an asset account other than a prepaid account as defined in § 1026.61. The term *debit card* does not include a prepaid card as defined in § 1026.61.

* * * * *

■ 6. Section 1026.4 is amended by revising paragraph (b)(2), adding paragraph (b)(12), and revising paragraph (c)(3) to read as follows:

§ 1026.4 Finance charge.

* * * * *

(b) * * *

(2) Service, transaction, activity, and carrying charges, including any charge imposed on a checking or other transaction account (except a prepaid account as defined in § 1026.61 or a covered asset account as that term is defined in § 1026.62) to the extent that the charge exceeds the charge for a similar account without a credit feature.

* * * * *

(12) With regard to a covered asset account as that term is defined in § 1026.62(b)(2):

(i) Any service, transaction, activity, or carrying charge imposed on the separate credit account required by § 1026.62(c); and

(ii) Any service, transaction, activity, or carrying charge imposed on the covered asset account to the extent that the charge exceeds a comparable charge imposed on a checking or other transaction account that does not have overdraft credit.

(iii) For purposes of paragraph (b)(12)(ii) of this section, a charge or combination of charges, including a per transaction fee, imposed on a covered asset account when overdraft credit is extended is not comparable to the following fees or charges imposed on a checking or other transaction account that does not have overdraft credit:

(A) A charge for authorizing or paying a transaction that overdraws the checking or other transaction account.

(B) A charge for declining to authorize or pay a transaction.

(C) A charge for returning a transaction unpaid.

(D) A charge for transferring funds into the checking or other transaction account from any credit account.

(E) A charge for transferring funds into the checking or other transaction account from any other asset account.

(c) * * *

(3) Charges imposed by a financial institution for paying items that overdraw an account, unless the payment of such items and the imposition of the charge were previously agreed upon in writing. This paragraph (c)(3) does not apply to credit offered in connection with a prepaid account as defined in § 1026.61. This paragraph (c)(3) also does not apply to above breakeven overdraft credit as defined in § 1026.62.

* * * * *

Subpart G—Special Rules Applicable to Credit Card Accounts and Open-End Credit Offered to College Students

■ 7. Section 1026.60 is amended by revising paragraph (a)(5) to read as follows:

§ 1026.60 Credit and charge card applications and solicitations.

(a) * * *

(5) *Exceptions.* This section does not apply to:

(i) Home-equity plans accessible by a credit or charge card that are subject to the requirements of § 1026.40;

(ii) Covered overdraft credit as defined in § 1026.62 tied to asset accounts accessed by check-guarantee cards or by debit cards other than hybrid debit-credit cards as defined in § 1026.62;

(iii) Lines of credit accessed by check-guarantee cards or by debit cards, other than covered overdraft credit accessed by hybrid debit-credit cards, that can be used only at automated teller machines;

(iv) Lines of credit accessed solely by account numbers except for a covered separate credit feature solely accessible by an account number that is a hybrid prepaid-credit card as defined in § 1026.61 or covered overdraft credit accessible by an account number that is a hybrid debit-credit card;

(v) Additions of a credit or charge card to an existing open-end plan;

(vi) General purpose applications unless the application, or material accompanying it, indicates that it can be used to open a credit or charge card account; or

(vii) Consumer-initiated requests for applications.

* * * * *

■ 8. Section 1026.62 is added to read as follows:

§ 1026.62 Overdraft credit.

(a) *In general*—(1) Overdraft credit is subject to this section and this part as specified below.

(2) *Overdraft credit* is any consumer credit extended by a financial institution to pay a transaction from a checking or other transaction account (other than a prepaid account as defined in § 1026.61) held at the financial institution when the consumer has insufficient or unavailable funds in that account. The term overdraft credit includes, but is not limited to, any such consumer credit extended through a transfer from a credit card account or overdraft line of credit. The term does not include credit exempt from this part pursuant to § 1026.3.

(b) *Definitions.* For purposes of this section and this part, the following definitions apply:

(1) *Above breakeven overdraft credit* means overdraft credit extended by a very large financial institution to pay a transaction on which, as an incident to or a condition of the overdraft credit, the very large financial institution imposes a charge or combination of charges exceeding the average of its costs and charge-off losses for providing non-covered overdraft credit as described in paragraph (d) of this section.

(2) *Covered asset account* means a checking or other transaction account (other than a prepaid account as defined in § 1026.61) provided by a very large financial institution that is tied to overdraft credit provided by the very large financial institution.

(3) *Covered overdraft credit* means overdraft credit that is subject to a finance charge or is payable by written agreement in more than four installments.

(4) *Covered overdraft credit account* means a credit account through which a financial institution extends or can extend covered overdraft credit. For example, the term includes any line of credit, credit card account, credit feature, credit plan, or credit subaccount through which the financial institution extends or can extend covered overdraft credit.

(5) *Hybrid debit-credit card* means any card, plate, or other single credit device that a consumer may use from time to time to obtain covered overdraft credit from a very large financial institution.

(6) *Non-covered overdraft credit* means overdraft credit that is not subject to a finance charge and is not payable by written agreement in more than four installments.

(7) *Overdraft credit* has the meaning set out in paragraph (a)(2) of this section.

(8) *Very large financial institution* means an insured depository institution or an insured credit union that has total

assets of more than \$10,000,000,000 and any affiliate thereof, as determined under 12 U.S.C. 5515(a).

(c) *Structure of covered overdraft credit.* A very large financial institution shall not structure covered overdraft credit as a negative balance on a checking or other transaction account. The very large financial institution shall structure covered overdraft credit as a separate credit account. The separate credit account is a covered overdraft credit account. The tied checking or other transaction account is a covered asset account.

(d) *Charges exceeding the average of its costs and charge-off losses for providing non-covered overdraft credit—(1) General rule.* For purposes of paragraph (b)(1) of this section, any charge or combination of charges to pay a transaction exceeds the average of a very large financial institution's costs and charge-off losses for providing non-covered overdraft credit if the charge or combination of charges exceeds the greater of:

(i) The pro rata share of the very large financial institution's total direct costs and charge-off losses for providing non-covered overdraft credit in the previous year, calculated in accordance with this paragraph; or

(ii) \$5.

(2) *Cost and loss calculation.* When calculating the pro rata share of the very large financial institution's total direct costs and charge-off losses for providing non-covered overdraft credit in the previous year, a very large financial institution may consider only those costs and charge-off losses specifically traceable to its provision of non-covered overdraft credit in the previous year. Such costs and charge-off losses include, but are not limited to, its cost of funds, its net charge-off losses, and operating expenses for its non-covered overdraft credit program. Such costs and charge-off losses do not include general overhead costs or charge-off losses due to unauthorized use, EFT errors, billing errors, returned deposit items, or rescinded provisional credit.

(3) For purposes of paragraph (d)(2) of this section, a cost or charge-off loss is specifically traceable if it has a direct relationship to the provision of non-covered overdraft services and the very large financial institution can provide evidence to demonstrate that direct relationship.

(4) For purposes of paragraph (d)(1) of this section, a charge or combination of charges includes all revenue received in connection with an overdraft transaction, including, but not limited to, any extended or sustained overdraft fees, any interest charges on outstanding

overdraft balances, and any other payments the very large financial institution receives in connection with an overdraft transaction.

(5) When calculating the pro rata share of its total direct costs and charge-off losses for providing non-covered overdraft credit in the previous year, a very large financial institution must include all non-covered overdraft transactions from the previous year in its calculation.

(6) For purposes of paragraph (d)(1)(i) of this section, the term "previous year" means a period that encompasses, at the very large financial institution's option, any of the following periods:

- (i) The prior calendar year,
- (ii) Any 365-day period that begins within the prior calendar year,
- (iii) The prior four financial quarters, or
- (iv) The very large financial institution's prior accounting year.

■ 9. In Supplement I to Part 1026—Official Interpretations:

■ a. Under Section 1026.2—Definitions and Rules of Construction revise 2(a)(14) *Credit*, Paragraph 2(a)(15), and 2(a)(20) *Open-End Credit*;

■ b. Under Section 1026.4—Finance Charge revise Paragraph 4(b)(2) and 4(c)(3);

■ c. Under Section 1026.12—Special Credit Card Provisions revise the introductory text, and Paragraph 12(a)(1), Paragraph 12(a)(2), 12(c) *Right of Cardholder To Assert Claims or Defenses Against Card Issuer*, and 12(c)(1) *General Rule*;

■ d. Under Section 1026.55—Limitations on Increasing Annual Percentage Rates, Fees, and Charges, revise 55(a) *General Rule*; and

■ e. Under Section 1026.57—Reporting and Marketing Rules for College Student Open-End Credit, revise 57(a)(1) *College student credit card*.

The revisions read as follows:

Supplement I to Part 1026—Official Interpretations

* * * * *

Subpart A—General

* * * * *

Section 1026.2—Definitions and Rules of Construction

* * * * *

2(a)(14) *Credit*

1. *Exclusions.* The following situations are not considered credit for purposes of the regulation:

- i. Layaway plans, unless the consumer is contractually obligated to continue making payments. Whether the consumer is so obligated is a matter to be determined under

applicable law. The fact that the consumer is not entitled to a refund of any amounts paid towards the cash price of the merchandise does not bring layaways within the definition of credit.

ii. Tax liens, tax assessments, court judgments, and court approvals of reaffirmation of debts in bankruptcy. However, third-party financing of such obligations (for example, a bank loan obtained to pay off a tax lien) is credit for purposes of the regulation.

iii. Insurance premium plans that involve payment in installments with each installment representing the payment for insurance coverage for a certain future period of time, unless the consumer is contractually obligated to continue making payments.

iv. Home improvement transactions that involve progress payments, if the consumer pays, as the work progresses, only for work completed and has no contractual obligation to continue making payments.

v. Borrowing against the accrued cash value of an insurance policy or a pension account, if there is no independent obligation to repay.

vi. Letters of credit.

vii. The execution of option contracts. However, there may be an extension of credit when the option is exercised, if there is an agreement at that time to defer payment of a debt.

viii. Investment plans in which the party extending capital to the consumer risks the loss of the capital advanced. This includes, for example, an arrangement with a home purchaser in which the investor pays a portion of the downpayment and of the periodic mortgage payments in return for an ownership interest in the property, and shares in any gain or loss of property value.

ix. Mortgage assistance plans administered by a government agency in which a portion of the consumer's monthly payment amount is paid by the agency. No finance charge is imposed on the subsidy amount, and that amount is due in a lump-sum payment on a set date or upon the occurrence of certain events. (If payment is not made when due, a new note imposing a finance charge may be written, which may then be subject to the regulation.)

2. *Payday loans; deferred presentment.* Credit includes a transaction in which a cash advance is made to a consumer in exchange for the consumer's personal check, or in exchange for the consumer's authorization to debit the consumer's deposit account, and where the parties agree either that the check will not be cashed or deposited, or that the consumer's deposit account will not be debited, until a designated future date. This type of transaction is often referred to as a "payday loan" or "payday advance" or "deferred-presentment loan." A fee charged in connection with such a transaction may be a finance charge for purposes of § 1026.4, regardless of how the fee is characterized under state law. Where the fee charged constitutes a finance charge under § 1026.4 and the person advancing funds regularly extends consumer credit, that person is a creditor and is required to provide disclosures consistent with the requirements of Regulation Z. (See § 1026.2(a)(17).)

3. *Transactions on the asset features of prepaid accounts when there are insufficient or unavailable funds.* Credit includes authorization of a transaction on the asset feature of a prepaid account as defined in § 1026.61 where the consumer has insufficient or unavailable funds in the asset feature of the prepaid account at the time the transaction is authorized to cover the amount of the transaction. It also includes settlement of a transaction on the asset feature of a prepaid account where the consumer has insufficient or unavailable funds in the asset feature of the prepaid account at the time the transaction is settled to cover the amount of the transaction. This includes a transaction where the consumer has sufficient or available funds in the asset feature of a prepaid account to cover the amount of the transaction at the time the transaction is authorized but insufficient or unavailable funds in the asset feature of the prepaid account to cover the transaction amount at the time the transaction is settled. See § 1026.61 and related commentary on the applicability of this regulation to credit that is extended in connection with a prepaid account.

4. *Overdraft credit.* Credit includes, for example, funds extended by a financial institution to a consumer to pay transactions that overdraw a checking or other transaction account held at the financial institution whenever the consumer has a contractual obligation to repay the funds.

Paragraph 2(a)(15)

1. *Usable from time to time.* A credit card must be usable from time to time. Since this involves the possibility of repeated use of a single device, checks and similar instruments that can be used only once to obtain a single credit extension are not credit cards.

2. *Examples.* i. Examples of credit cards include:

A. A card that guarantees checks or similar instruments, if the asset account is also tied to covered overdraft credit or if the instrument directly accesses a line of credit.

B. A debit card (other than a debit card that is solely an account number) that also accesses a credit account (that is, a debit-credit card or hybrid debit-credit card as defined in § 1026.62). See comment 2(a)(15)–2.ii.C for guidance on whether a debit card that is solely an account number is a credit card.

C. An identification card that permits the consumer to defer payment on a purchase.

D. An identification card indicating loan approval that is presented to a merchant or to a lender, whether or not the consumer signs a separate promissory note for each credit extension.

E. A card or device that can be activated upon receipt to access credit, even if the card has a substantive use other than credit, such as a purchase-price discount card. Such a card or device is a credit card notwithstanding the fact that the recipient must first contact the card issuer to access or activate the credit feature.

F. A prepaid card that is a hybrid prepaid-credit card as defined in § 1026.61.

ii. In contrast, credit card does not include, for example:

A. A check-guarantee or debit card with no credit feature or agreement.

B. Any card, key, plate, or other device that is used in order to obtain petroleum products for business purposes from a wholesale distribution facility or to gain access to that facility, and that is required to be used without regard to payment terms.

C. An account number that accesses a credit account, unless the account number can access an open-end line of credit to purchase goods or services or as provided in § 1026.61 with respect to a hybrid prepaid-credit card. An account number that can access an open-end line of credit to purchase goods or services includes an account number that can access a covered overdraft credit account offered by a very large financial institution. For example, if a creditor provides a consumer with an open-end line of credit that can be accessed by an account number in order to transfer funds into another account (such as an asset account with the same creditor), the account number is not a credit card for purposes of § 1026.2(a)(15)(i). However, if the account number can also access the line of credit to purchase goods or services (such as an account number that can be used to purchase goods or services on the internet), the account number is a credit card for purposes of § 1026.2(a)(15)(i), regardless of whether the creditor treats such transactions as purchases, cash advances, or some other type of transaction. Furthermore, if the line of credit can also be accessed by a card (such as a debit card), that card is a credit card for purposes of § 1026.2(a)(15)(i).

D. A prepaid card that is not a hybrid prepaid-credit card as defined in § 1026.61.

E. A check-guarantee or debit card that can access non-covered overdraft credit as defined in § 1026.62 and cannot access any other form of credit.

3. *Charge card.* i. Charge cards are credit cards where no periodic rate is used to compute the finance charge. The term *charge card* does not include a hybrid debit-credit card as defined in § 1026.62. Thus, covered overdraft credit extended by a very large financial institution through a hybrid debit-credit card is not subject to special charge card rules.

A. Under the regulation, a reference to credit cards generally includes charge cards. In particular, references to credit card accounts under an open-end (not home-secured) consumer credit plan in subparts B and G generally include charge cards.

B. The term *charge card* is, however, distinguished from credit card or credit card account under an open-end (not home-secured) consumer credit plan in §§ 1026.6(b)(2)(xiv), 1026.7(b)(11) (except as described in comment 2(a)(15)–3.ii below), 1026.7(b)(12), 1026.9(e), 1026.9(f), 1026.28(d), 1026.52(b)(1)(ii)(C), 1026.60, and appendices G–10 through G–13.

ii. A hybrid prepaid-credit card as defined in § 1026.61 is a charge card with respect to a covered separate credit feature if no periodic rate is used to compute the finance charge in connection with the covered separate credit feature. Unlike other charge card accounts, the requirements in § 1026.7(b)(11) apply to a covered separate

credit feature accessible by a hybrid prepaid-credit card that is a charge card when that covered separate credit feature is a credit card account under an open-end (not home-secured) consumer credit plan. Thus, under § 1026.5(b)(2)(ii)(A), with respect to a covered separate credit feature that is a credit card account under an open-end (not home-secured) consumer credit plan, a card issuer of a hybrid prepaid-credit card that meets the definition of a charge card because no periodic rate is used to compute a finance charge in connection with the covered separate credit feature must adopt reasonable procedures for the covered separate credit feature designed to ensure that

(1) periodic statements are mailed or delivered at least 21 days prior to the payment due date disclosed on the statement pursuant to § 1026.7(b)(11)(i)(A); and

(2) the card issuer does not treat as late for any purposes a required minimum periodic payment received by the card issuer within 21 days after mailing or delivery of the periodic statement disclosing the due date for that payment.

4. *Credit card account under an open-end (not home-secured) consumer credit plan.*

i. An open-end consumer credit account is a credit card account under an open-end (not home-secured) consumer credit plan for purposes of § 1026.2(a)(15)(ii) if:

A. The account is accessed by a credit card, as defined in § 1026.2(a)(15)(i); and

B. The account is not excluded under § 1026.2(a)(15)(ii)(A) or (B).

ii. The exclusion from credit card account under an open-end (not home-secured) consumer credit plan provided by § 1026.2(a)(15)(ii)(B) for covered overdraft credit offered by a creditor that is not a very large financial institution does not apply to a covered separate credit feature accessible by a hybrid prepaid-credit card (including a hybrid prepaid-credit card that is solely an account number) as defined in § 1026.61.

* * * * *

2(a)(20) *Open-End Credit*

1. *General.* This definition describes the characteristics of open-end credit (for which the applicable disclosure and other rules are contained in Subpart B), as distinct from closed-end credit. Open-end credit is consumer credit that is extended under a plan and meets *all 3* criteria set forth in the definition.

2. *Existence of a plan.* i. The definition requires that there be a plan, which connotes a contractual arrangement between the creditor and the consumer.

ii. With respect to a covered separate credit feature accessible by a hybrid prepaid-credit card as defined in § 1026.61, a plan means a program where the consumer is obligated contractually to repay any credit extended by the creditor. For example, a plan includes a program under which a creditor routinely extends credit from a covered separate credit feature offered by the prepaid account issuer, its affiliate, or its business partner where the prepaid card can be used from time to time to draw, transfer, or authorize the draw or transfer of credit from the covered separate credit feature in the course of authorizing, settling, or otherwise completing transactions

conducted with the card to obtain goods or services, obtain cash, or conduct person-to-person transfers, and the consumer is obligated contractually to repay those credit transactions. Such a program constitutes a plan notwithstanding that, for example, the creditor has not agreed in writing to extend credit for those transactions, the creditor retains discretion not to extend credit for those transactions, or the creditor does not extend credit for those transactions once the consumer has exceeded a certain amount of credit. See § 1026.61(a) and related commentary for guidance on the applicability of this regulation to credit accessible by hybrid prepaid-credit cards.

iii. Some creditors offer programs containing a number of different credit features. The consumer has a single account with the institution that can be accessed repeatedly via a number of sub-accounts established for the different program features and rate structures. Some features of the program might be used repeatedly (for example, an overdraft line) while others might be used infrequently (such as the part of the credit line available for secured credit). If the program as a whole is subject to prescribed terms and otherwise meets the definition of open-end credit, such a program would be considered a single, multifeatured plan.

iv. With respect to a covered asset account as defined in § 1026.62, a plan includes, for example, a program where the consumer is obligated contractually to repay any credit extended by the creditor. Such a program constitutes a plan notwithstanding that, for example, the creditor has not agreed in writing to extend credit for those transactions, the creditor retains discretion not to extend credit for those transactions, or the creditor does not extend credit for those transactions once the consumer has exceeded a certain amount of credit.

3. *Repeated transactions.* Under this criterion, the creditor must reasonably contemplate repeated transactions. This means that the credit plan must be usable from time to time and the creditor must legitimately expect that there will be repeat business rather than a one-time credit extension. The creditor must expect repeated dealings with consumers under the credit plan as a whole and need not believe a consumer will reuse a particular feature of the plan. The determination of whether a creditor can reasonably contemplate repeated transactions requires an objective analysis. Information that much of the creditor's customer base with accounts under the plan make repeated transactions over some period of time is relevant to the determination, particularly when the plan is opened primarily for the financing of infrequently purchased products or services. A standard based on reasonable belief by a creditor necessarily includes some margin for judgmental error. The fact that particular consumers do not return for further credit extensions does not prevent a plan from having been properly characterized as open-end. For example, if much of the customer base of a clothing store makes repeat purchases, the fact that some consumers use the plan only once would not affect the

characterization of the store's plan as open-end credit. The criterion regarding repeated transactions is a question of fact to be decided in the context of the creditor's type of business and the creditor's relationship with its customers. For example, it would be more reasonable for a bank or depository institution to contemplate repeated transactions with a customer than for a seller of aluminum siding to make the same assumption about its customers.

4. *Finance charge on an outstanding balance.* i. The requirement that a finance charge may be computed and imposed from time to time on the outstanding balance means that there is no specific amount financed for the plan for which the finance charge, total of payments, and payment schedule can be calculated. A plan may meet the definition of open-end credit even though a finance charge is not normally imposed, provided the creditor has the right, under the plan, to impose a finance charge from time to time on the outstanding balance. For example, in some plans, a finance charge is not imposed if the consumer pays all or a specified portion of the outstanding balance within a given time period. Such a plan could meet the finance charge criterion, if the creditor has the right to impose a finance charge, even though the consumer actually pays no finance charges during the existence of the plan because the consumer takes advantage of the option to pay the balance (either in full or in installments) within the time necessary to avoid finance charges.

ii. With regard to a covered separate credit feature and an asset feature on a prepaid account that are both accessible by a hybrid prepaid-credit card as defined in § 1026.61, any service, transaction, activity, or carrying charges imposed on the covered separate credit feature, and any such charges imposed on the asset feature of the prepaid account to the extent that the amount of the charge exceeds comparable charges imposed on prepaid accounts in the same prepaid account program that do not have a covered separate credit feature accessible by a hybrid prepaid-credit card, generally is a finance charge. See § 1026.4(a) and (b)(11). Such charges include a periodic fee to participate in the covered separate credit feature, regardless of whether this fee is imposed on the credit feature or on the asset feature of the prepaid account. With respect to credit from a covered separate credit feature accessible by a hybrid prepaid-credit card, any service, transaction, activity, or carrying charges that are finance charges under § 1026.4 constitute finance charges imposed from time to time on an outstanding unpaid balance as described in § 1026.2(a)(20) if there is no specific amount financed for the credit feature for which the finance charge, total of payments, and payment schedule can be calculated.

iii. Regardless of whether a financial institution assesses such charges on a covered asset account as defined in § 1026.62 or a separate credit account, any service, transaction, activity, or carrying charges imposed by the financial institution for paying a transaction that overdraws a consumer's covered asset account held at the financial institution are generally finance

charges unless they are otherwise addressed by § 1026.4(b)(2), (b)(12), or (c). See § 1026.4(a), (b)(2), (b)(12), and (c).

Additionally, such charges would constitute finance charges imposed from time to time on an outstanding unpaid balance, as described in § 1026.2(a)(20), if there is no specific amount financed for the plan for which the finance charge, total of payments, and payment schedule can be calculated.

5. *Reusable line.* The total amount of credit that may be extended during the existence of an open-end plan is unlimited because available credit is generally replenished as earlier advances are repaid. A line of credit is self-replenishing even though the plan itself has a fixed expiration date, as long as during the plan's existence the consumer may use the line, repay, and reuse the credit. The creditor may occasionally or routinely verify credit information such as the consumer's continued income and employment status or information for security purposes but, to meet the definition of open-end credit, such verification of credit information may not be done as a condition of granting a consumer's request for a particular advance under the plan. In general, a credit line is self-replenishing if the consumer can take further advances as outstanding balances are repaid without being required to separately apply for those additional advances. A credit card account where the plan as a whole replenishes meets the self-replenishing criterion, notwithstanding the fact that a credit card issuer may verify credit information from time to time in connection with specific transactions. This criterion of unlimited credit distinguishes open-end credit from a series of advances made pursuant to a closed-end credit loan commitment. For example:

i. Under a closed-end commitment, the creditor might agree to lend a total of \$10,000 in a series of advances as needed by the consumer. When a consumer has borrowed the full \$10,000, no more is advanced under that particular agreement, even if there has been repayment of a portion of the debt. (See § 1026.2(a)(17)(iv) for disclosure requirements when a credit card is used to obtain the advances.)

ii. This criterion does not mean that the creditor must establish a specific credit limit for the line of credit or that the line of credit must always be replenished to its original amount. The creditor may reduce a credit limit or refuse to extend new credit in a particular case due to changes in the creditor's financial condition or the consumer's creditworthiness. (The rules in § 1026.40(f), however, limit the ability of a creditor to suspend credit advances for home equity plans.) While consumers should have a reasonable expectation of obtaining credit as long as they remain current and within any preset credit limits, further extensions of credit need not be an absolute right in order for the plan to meet the self-replenishing criterion.

6. *Verifications of collateral value.* Creditors that otherwise meet the requirements of § 1026.2(a)(20) extend open-end credit notwithstanding the fact that the creditor must verify collateral values to comply with Federal, state, or other

applicable law or verifies the value of collateral in connection with a particular advance under the plan.

7. *Open-end real estate mortgages.* Some credit plans call for negotiated advances under so-called open-end real estate mortgages. Each such plan must be independently measured against the definition of open-end credit, regardless of the terminology used in the industry to describe the plan. The fact that a particular plan is called an open-end real estate mortgage, for example, does not, by itself, mean that it is open-end credit under the regulation.

* * * * *

Section 1026.4—Finance Charge

* * * * *

Paragraph 4(b)(2)

1. *Checking or transaction account charges.* A charge imposed in connection with a credit feature on a checking or transaction account (other than a prepaid account as defined in § 1026.61 or a covered asset account as that term is defined in § 1026.62) is a finance charge under § 1026.4(b)(2) to the extent the charge exceeds the charge for a similar account without a credit feature and the charge is not addressed by § 1026.4(b)(12). If a charge for an account with a credit feature does not exceed the charge for an account without a credit feature, the charge is not a finance charge under § 1026.4(b)(2). To illustrate:

i. A \$5 service charge is imposed on an account with an overdraft line of credit (where the institution has agreed in writing to pay an overdraft), while a \$3 service charge is imposed on an account without a credit feature; the \$2 difference is a finance charge. (If the difference is not related to account activity, however, it may be excludable as a participation fee. See the commentary to § 1026.4(c)(4)).

ii. A \$5 service charge is imposed for each item that results in an overdraft on an account with an overdraft line of credit, while a \$25 service charge is imposed for paying or returning each item on a similar account without a credit feature; the \$5 charge is not a finance charge.

2. *Prepaid accounts.* Fees or charges related to credit offered in connection with prepaid accounts as defined in § 1026.61 are discussed in §§ 1026.4(b)(11) and 1026.61 and related commentary.

* * * * *

Paragraph 4(c)(3)

1. *Assessing interest on an overdraft balance.* Except with respect to credit offered in connection with a prepaid account as defined in § 1026.61 and above breakeven overdraft credit as defined in § 1026.62(b)(1), a charge on an overdraft balance computed by applying a rate of interest to the amount of the overdraft is not a finance charge, even though the consumer agrees to the charge in the account agreement, unless the financial institution agrees in writing that it will pay such items.

2. *Credit accessed in connection with a prepaid account.* See comment 4(b)(11)–1 for guidance on when fees imposed with regard

to credit accessed in connection with a prepaid account as defined in § 1026.61 are finance charges.

3. *Credit accessed in connection with a covered asset account.* See § 1026.4(b)(12) for guidance on when fees imposed on a covered asset account as defined in § 1026.62 are finance charges.

* * * * *

Section 1026.12—Special Credit Card Provisions

1. *Scope.* Sections 1026.12(a) and (b) deal with the issuance and liability rules for credit cards, whether the card is intended for consumer, business, or any other purposes. Sections 1026.12(a) and (b) are exceptions to the general rule that the regulation applies only to consumer credit. (See §§ 1026.1 and 1026.3.) Notwithstanding paragraph (g) of this section or Regulation E, 12 CFR 1005.12(a), paragraphs (a) through (f) of this section apply to hybrid debit-credit cards as defined in § 1026.62.

2. *Definition of “accepted credit card”.* For purposes of this section, “accepted credit card” means any credit card that a cardholder has requested or applied for and received, or has signed, used, or authorized another person to use to obtain credit. Any credit card issued as a renewal or substitute in accordance with § 1026.12(a) becomes an accepted credit card when received by the cardholder.

12(a) Issuance of Credit Cards

Paragraph 12(a)(1)

1. *Explicit request.* A request or application for a card must be explicit. For example, a request for an overdraft plan tied to a checking account does not constitute an application for a credit card with overdraft checking features. Therefore, a very large financial institution cannot issue a hybrid debit-credit card to a person without first receiving an oral or written request or application for the hybrid debit-credit card. The term hybrid debit-credit card has the same meaning as provided in § 1026.62.

2. *Addition of credit features.* If the consumer has a non-credit card, including a prepaid card, the addition of a credit feature or plan to the card that would make the card into a credit card under § 1026.2(a)(15)(i) constitutes issuance of a credit card. For example, the following constitute issuance of a credit card:

i. Granting overdraft privileges on a checking account when the consumer already has a check guarantee card; or

ii. Allowing a prepaid card to access a covered separate credit feature that would make the card into a hybrid prepaid-credit card as defined in § 1026.61 with respect to the covered separate credit feature.

iii. Extending covered overdraft credit through a hybrid debit-credit card as defined in § 1026.62.

3. *Variance of card from request.* The request or application need not correspond exactly to the card that is issued. For example:

i. The name of the card requested may be different when issued.

ii. The card may have features in addition to those reflected in the request or application.

4. *Permissible form of request.* The request or application may be oral (in response to a telephone solicitation by a card issuer, for example) or written.

5. *Time of issuance.* A credit card may be issued in response to a request made before any cards are ready for issuance (for example, if a new program is established), even if there is some delay in issuance.

6. *Persons to whom cards may be issued.* A card issuer may issue a credit card to the person who requests it, and to anyone else for whom that person requests a card and who will be an authorized user on the requester's account. In other words, cards may be sent to consumer A on A's request, and also (on A's request) to consumers B and C, who will be authorized users on A's account. In these circumstances, the following rules apply:

i. The additional cards may be imprinted in either A's name or in the names of B and C.

ii. No liability for unauthorized use (by persons other than B and C), not even the \$50, may be imposed on B or C since they are merely users and not cardholders as that term is defined in § 1026.2 and used in § 1026.12(b); of course, liability of up to \$50 for unauthorized use of B's and C's cards may be imposed on A.

iii. Whether B and C may be held liable for their own use, or on the account generally, is a matter of state or other applicable law.

7. *Issuance of non-credit cards.* i. *Issuance of non-credit cards other than prepaid cards.* A. Under § 1026.12(a)(1), a credit card cannot be issued except in response to a request or an application. (See comment 2(a)(15)–2 for examples of cards or devices that are and are not credit cards.) A non-credit card other than a prepaid card may be sent on an unsolicited basis by an issuer that does not propose to connect the card to any credit plan; a credit feature may be added to a previously issued non-credit card other than a prepaid card only upon the consumer's specific request.

B. *Examples.* A purchase-price discount card may be sent on an unsolicited basis by an issuer that does not propose to connect the card to any credit plan. An issuer demonstrates that it proposes to connect the card to a credit plan by, for example, including promotional materials about credit features or account agreements and disclosures required by § 1026.6. The issuer will violate the rule against unsolicited issuance if, for example, at the time the card is sent a credit plan can be accessed by the card or the recipient of the unsolicited card has been preapproved for credit that the recipient can access by contacting the issuer and activating the card.

ii. *Issuance of a prepaid card.* Section 1026.12(a)(1) does not apply to the issuance of a prepaid card where an issuer does not connect the card to any covered separate credit feature that would make the prepaid card into a hybrid prepaid-credit card as defined in § 1026.61 at the time the card is issued and only opens a covered separate credit feature, or provides an application or

solicitation to open a covered separate credit feature, or allows an existing credit feature to become a covered separate credit feature accessible by a hybrid prepaid-credit card as defined in § 1026.61 in compliance with § 1026.61(c). A covered separate credit feature may be added to a previously issued prepaid card only upon the consumer's application or specific request and only in compliance with § 1026.61(c). An issuer does not connect a prepaid card to a covered separate credit feature that would make the card into a credit card simply by providing the disclosures required by Regulation E, 12 CFR 1005.18(b)(2)(x), (b)(4)(iv), and (vii), with the prepaid card. See § 1026.12(a)(2) and related commentary for when a hybrid prepaid-credit card as defined in § 1026.61 may be issued as a replacement or substitution for another hybrid prepaid-credit card. See also Regulation E, 12 CFR 1005.5 and 1005.18(a), and related commentary, governing issuance of access devices under Regulation E.

8. *Unsolicited issuance of PINs.* A card issuer may issue personal identification numbers (PINs) to existing credit cardholders without a specific request from the cardholders, provided the PINs cannot be used alone to obtain credit. For example, the PINs may be necessary if consumers wish to use their existing credit cards at automated teller machines or at merchant locations with point of sale terminals that require PINs.

Paragraph 12(a)(2)

1. *Renewal.* Renewal generally contemplates the regular replacement of existing cards because of, for example, security reasons or new technology or systems. It also includes the re-issuance of cards that have been suspended temporarily, but does not include the opening of a new account after a previous account was closed.

2. *Substitution—examples.* Substitution encompasses the replacement of one card with another because the underlying account relationship has changed in some way—such as when the card issuer has:

- i. Changed its name.
- ii. Changed the name of the card.
- iii. Changed the credit or other features available on the account. For example, the original card could be used to make purchases and obtain cash advances at teller windows. The substitute card might be usable, in addition, for obtaining cash advances through automated teller machines. (If the substitute card constitutes an access device, as defined in Regulation E, then the Regulation E issuance rules would have to be followed.) The substitution of one card with another on an unsolicited basis is not permissible, however, where in conjunction with the substitution an additional credit card account is opened and the consumer is able to make new purchases or advances under both the original and the new account with the new card. For example, if a retail card issuer replaces its credit card with a combined retailer/bank card, each of the creditors maintains a separate account, and both accounts can be accessed for new transactions by use of the new credit card, the card cannot be provided to a consumer without solicitation.

iv. Substituted a card user's name on the substitute card for the cardholder's name appearing on the original card.

v. Changed the merchant base, provided that the new card is honored by at least one of the persons that honored the original card. However, unless the change in the merchant base is the addition of an affiliate of the existing merchant base, the substitution of a new card for another on an unsolicited basis is not permissible where the account is inactive. A credit card cannot be issued in these circumstances without a request or application. For purposes of § 1026.12(a), an account is inactive if no credit has been extended and if the account has no outstanding balance for the prior 24 months. (See § 1026.11(b)(2)).

3. *Substitution—successor card issuer.* Substitution also occurs when a successor card issuer replaces the original card issuer (for example, when a new card issuer purchases the accounts of the original issuer and issues its own card to replace the original one). A permissible substitution exists even if the original issuer retains the existing receivables and the new card issuer acquires the right only to future receivables, provided use of the original card is cut off when use of the new card becomes possible.

4. *Substitution—non-credit-card plan.* A credit card that replaces a retailer's open-end credit plan not involving a credit card is not considered a substitute for the retailer's plan—even if the consumer used the retailer's plan. A credit card cannot be issued in these circumstances without a request or application.

5. *One-for-one rule.* An accepted card may be replaced by no more than one renewal or substitute card. For example, the card issuer may not replace a credit card permitting purchases and cash advances with two cards, one for the purchases and another for the cash advances.

6. *One-for-one rule—exceptions.* The regulation does not prohibit the card issuer from:

i. Replacing a single card that is both a debit card and a credit card, such as a hybrid debit-credit card as defined in § 1026.62, with a credit card and a separate debit card with only debit functions (or debit functions plus an associated capability to extend overdraft credit that is not covered overdraft credit as defined in § 1026.62), since the latter card could be issued on an unsolicited basis under Regulation E.

ii. Replacing a single card that is both a prepaid card and a credit card with a credit card and a separate prepaid card where the latter card is not a hybrid prepaid-credit card as defined in § 1026.61.

iii. Replacing an accepted card with more than one renewal or substitute card, provided that:

A. No replacement card accesses any account not accessed by the accepted card;

B. For terms and conditions required to be disclosed under § 1026.6, all replacement cards are issued subject to the same terms and conditions, except that a creditor may vary terms for which no change in terms notice is required under § 1026.9(c); and

C. Under the account's terms the consumer's total liability for unauthorized

use with respect to the account does not increase.

7. *Methods of terminating replaced card.* The card issuer need not physically retrieve the original card, provided the old card is voided in some way, for example:

- i. The issuer includes with the new card a notification that the existing card is no longer valid and should be destroyed immediately.
- ii. The original card contained an expiration date.
- iii. The card issuer, in order to preclude use of the card, reprograms computers or issues instructions to authorization centers.

8. *Incomplete replacement.* If a consumer has duplicate credit cards on the same account (Card A—one type of bank credit card, for example), the card issuer may not replace the duplicate cards with one Card A and one Card B (Card B—another type of bank credit card) unless the consumer requests Card B.

9. *Multiple entities.* Where multiple entities share responsibilities with respect to a credit card issued by one of them, the entity that issued the card may replace it on an unsolicited basis, if that entity terminates the original card by voiding it in some way, as described in comment 12(a)(2)–7. The other entity or entities may not issue a card on an unsolicited basis in these circumstances.

* * * * *

12(c) Right of Cardholder To Assert Claims or Defenses Against Card Issuer

1. *Relationship to § 1026.13.* The § 1026.12(c) credit card “holder in due course” provision deals with the consumer’s right to assert against the card issuer a claim or defense concerning property or services purchased with a credit card, if the merchant has been unwilling to resolve the dispute. Even though certain merchandise disputes, such as non-delivery of goods, may also constitute “billing errors” under § 1026.13, that section operates independently of § 1026.12(c). The cardholder whose asserted billing error involves undelivered goods may institute the error resolution procedures of § 1026.13; but whether or not the cardholder has done so, the cardholder may assert claims or defenses under § 1026.12(c). Conversely, the consumer may pay a disputed balance and thus have no further right to assert claims and defenses, but still may assert a billing error if notice of that billing error is given in the proper time and manner. An assertion that a particular transaction resulted from unauthorized use of the card could also be both a “defense” and a billing error.

2. *Claims and defenses assertible.* Section 1026.12(c) merely preserves the consumer’s right to assert against the card issuer any claims or defenses that can be asserted against the merchant. It does not determine what claims or defenses are valid as to the merchant; this determination must be made under state or other applicable law.

3. *Transactions excluded.* Section 1026.12(c) does not apply to the use of a check guarantee card or a debit card (other than a hybrid debit-credit card) in connection with an overdraft credit plan, or to a check guarantee card used in connection with cash-advance checks.

4. *Method of calculating the amount of credit outstanding.* The amount of the claim or defense that the cardholder may assert shall not exceed the amount of credit outstanding for the disputed transaction at the time the cardholder first notifies the card issuer or the person honoring the credit card of the existence of the claim or defense. However, when a consumer has asserted a claim or defense against a creditor pursuant to § 1026.12(c), the creditor must apply any payment or other credit in a manner that avoids or minimizes any reduction in the amount subject to that claim or defense. Accordingly, to determine the amount of credit outstanding for purposes of this section, payments and other credits must be applied first to amounts other than the disputed transaction.

i. For examples of how to comply with §§ 1026.12 and 1026.53 for credit card accounts under an open-end (not home-secured) consumer credit plan, see comment 53–3.

ii. For other types of credit card accounts, creditors may, at their option, apply payments consistent with § 1026.53 and comment 53–3. In the alternative, payments and other credits may be applied to: Late charges in the order of entry to the account; then to finance charges in the order of entry to the account; and then to any debits other than the transaction subject to the claim or defense in the order of entry to the account. In these circumstances, if more than one item is included in a single extension of credit, credits are to be distributed pro rata according to prices and applicable taxes.

5. *Prepaid cards.* i. Section 1026.12(c) applies to property or services purchased with the hybrid prepaid-credit card that accesses a covered separate credit feature as defined in § 1026.61. The following examples illustrate when a hybrid prepaid-credit card is used to purchase property or services:

A. A consumer uses a hybrid prepaid-credit card as defined in § 1026.61 to make a purchase to obtain goods or services from a merchant and credit is drawn directly from a covered separate credit feature accessed by the hybrid prepaid-credit card without transferring funds into the asset feature of the prepaid account to cover the amount of the purchase. For example, assume that the consumer has \$10 of funds in the asset feature of the prepaid account and initiates a transaction with a merchant to obtain goods or services with the hybrid prepaid-credit card for \$25. In this case, \$10 is debited from the asset feature and \$15 of credit is drawn directly from the covered separate credit feature accessed by the hybrid prepaid-credit card without any transfer of funds into the asset feature of the prepaid account to cover the amount of the purchase. In this case, the consumer is using credit accessed by the hybrid prepaid-credit card to purchase property or services where credit is drawn directly from the covered separate credit feature accessed by the hybrid prepaid-credit card to cover the amount of the purchase.

B. A consumer uses a hybrid prepaid-credit card as defined in § 1026.61 to make a purchase to obtain goods or services from a merchant and credit is transferred from a covered separate credit feature accessed by

the hybrid prepaid-credit card into the asset feature of the prepaid account to cover the amount of the purchase. For example, assume the same facts as above, except that the \$15 will be transferred from a covered separate credit feature to the asset feature, and a transaction of \$25 is debited from the asset feature of the prepaid account. In this case, the consumer is using credit accessed by the hybrid prepaid-credit card to purchase property or services because credit is transferred to the asset feature of the prepaid account to cover the amount of a purchase made with the card. This is true even though the \$15 credit transaction is treated as “nonsale credit” under § 1026.8(b). See comments 8(a)–9.ii and 8(b)–1.vi.

ii. For a transaction at point of sale where a hybrid prepaid-credit card is used to obtain goods or services from a merchant and the transaction is partially paid with funds from the asset feature of the prepaid account, and partially paid with credit from the covered separate credit feature, the amount of the purchase transaction that is funded by credit generally would be subject to the requirements of § 1026.12(c). The amount of the transaction funded from the prepaid account would not be subject to the requirements of § 1026.12(c).

12(c)(1) General Rule

1. *Situations excluded and included.* The consumer may assert claims or defenses only when the goods or services are “purchased with the credit card.” This would include when the goods or services are purchased by a consumer using a hybrid prepaid-credit card to access a covered separate credit feature as defined in § 1026.61 or using a hybrid debit-credit card to access a covered overdraft credit account as defined in § 1026.62. This could include mail, the internet or telephone orders, if the purchase is charged to the credit card account. But it would exclude:

i. Use of a credit card to obtain a cash advance, even if the consumer then uses the money to purchase goods or services. Such a transaction would not involve “property or services purchased with the credit card.”

ii. The purchase of goods or services by use of a check accessing an overdraft account and a credit card used solely for identification of the consumer. (On the other hand, if the credit card is used to make partial payment for the purchase and not merely for identification, the right to assert claims or defenses would apply to credit extended via the credit card, although not to credit extended by the overdraft line. If partial payment for the purchase is made with a hybrid prepaid-credit card or a hybrid debit-credit card, the right to assert claims or defenses would apply to credit accessed from a covered separate credit feature or covered overdraft credit account, respectively.)

iii. Purchases made by use of a check guarantee card in conjunction with a cash advance check (or by cash advance checks alone). (See comment 12(c)–3.) A cash advance check is a check that, when written, does not draw on an asset account; instead, it is charged entirely to an open-end credit account.

iv. Purchases effected by use of either a check guarantee card or a debit card (other

than a hybrid debit-credit card) when used to draw on overdraft credit plans. (See comment 12(c)–3.) The debit card exemption applies whether the card accesses an asset account via point of sale terminals, automated teller machines, or in any other way, and whether the card qualifies as an “access device” under Regulation E or is only a paper based debit card. If a card serves both as an ordinary credit card and also as a check guarantee or debit card, a transaction will be subject to this rule on asserting claims and defenses when used as an ordinary credit card (including when used as a hybrid debit-credit card to access a covered overdraft credit account), but not when used as a check guarantee or debit card. For purchases effected by use of a hybrid debit-credit card where the transaction is partially paid with funds from the asset account, and partially paid with covered overdraft credit, the provisions of § 1026.12(c) apply only to the credit portion of the purchase transaction.

* * * * *

Section 1026.55—Limitations on Increasing Annual Percentage Rates, Fees, and Charges

55(a) General Rule

1. *Increase in rate, fee, or charge.* Section 1026.55(a) prohibits card issuers from increasing an annual percentage rate or any fee or charge required to be disclosed under § 1026.6(b)(2)(ii), (b)(2)(iii), or (b)(2)(xii) on a credit card account unless specifically permitted by one of the exceptions in § 1026.55(b). Except as specifically provided in § 1026.55(b), this prohibition applies even if the circumstances under which an increase will occur are disclosed in advance. The following examples illustrate the general application of § 1026.55(a) and (b). Additional examples illustrating specific aspects of the exceptions in § 1026.55(b) are provided in the commentary to those exceptions.

i. *Account-opening disclosure of non-variable rate for six months, then variable rate.* Assume that, at account opening on January 1 of year one, a card issuer discloses that the annual percentage rate for purchases is a non-variable rate of 15% and will apply for six months. The card issuer also discloses that, after six months, the annual percentage rate for purchases will be a variable rate that is currently 18% and will be adjusted quarterly by adding a margin of 8 percentage points to a publicly-available index not under the card issuer's control. Furthermore, the card issuer discloses that the annual percentage rate for cash advances is the same variable rate that will apply to purchases after six months. Finally, the card issuer discloses that, to the extent consistent with § 1026.55 and other applicable law, a non-variable penalty rate of 30% may apply if the consumer makes a late payment. The payment due date for the account is the twenty-fifth day of the month and the required minimum periodic payments are applied to accrued interest and fees but do not reduce the purchase and cash advance balances.

A. *Change-in-terms rate increase for new transactions after first year.* On January 15 of year one, the consumer uses the account to

make a \$2,000 purchase and a \$500 cash advance. No other transactions are made on the account. At the start of each quarter, the card issuer may adjust the variable rate that applies to the \$500 cash advance consistent with changes in the index (pursuant to § 1026.55(b)(2)). All required minimum periodic payments are received on or before the payment due date until May of year one, when the payment due on May 25 is received by the creditor on May 28. At this time, the card issuer is prohibited by § 1026.55 from increasing the rates that apply to the \$2,000 purchase, the \$500 cash advance, or future purchases and cash advances. Six months after account opening (July 1), the card issuer may begin to accrue interest on the \$2,000 purchase at the previously-disclosed variable rate determined using an 8-point margin (pursuant to § 1026.55(b)(1)). Because no other increases in rate were disclosed at account opening, the card issuer may not subsequently increase the variable rate that applies to the \$2,000 purchase and the \$500 cash advance (except due to increases in the index pursuant to § 1026.55(b)(2)). On November 16, the card issuer provides a notice pursuant to § 1026.9(c) informing the consumer of a new variable rate that will apply on January 1 of year two (calculated using the same index and an increased margin of 12 percentage points). On December 15, the consumer makes a \$100 purchase. On January 1 of year two, the card issuer may increase the margin used to determine the variable rate that applies to new purchases to 12 percentage points (pursuant to § 1026.55(b)(3)). However, § 1026.55(b)(3)(ii) does not permit the card issuer to apply the variable rate determined using the 12-point margin to the \$2,000 purchase balance. Furthermore, although the \$100 purchase occurred more than 14 days after provision of the § 1026.9(c) notice, § 1026.55(b)(3)(iii) does not permit the card issuer to apply the variable rate determined using the 12-point margin to that purchase because it occurred during the first year after account opening. On January 15 of year two, the consumer makes a \$300 purchase. The card issuer may apply the variable rate determined using the 12-point margin to the \$300 purchase.

B. *Account becomes more than 60 days delinquent during first year.* Same facts as above except that the required minimum periodic payment due on May 25 of year one is not received by the card issuer until July 30 of year one. Because the card issuer received the required minimum periodic payment more than 60 days after the payment due date, § 1026.55(b)(4) permits the card issuer to increase the annual percentage rate applicable to the \$2,000 purchase, the \$500 cash advance, and future purchases and cash advances. However, § 1026.55(b)(4)(i) requires the card issuer to first comply with the notice requirements in § 1026.9(g). Thus, if the card issuer provided a § 1026.9(g) notice on July 25 stating that all rates on the account would be increased to the 30% penalty rate, the card issuer could apply that rate beginning on September 8 to all balances and to future transactions.

ii. *Account-opening disclosure of non-variable rate for six months, then increased*

non-variable rate for six months, then variable rate; change-in-terms rate increase for new transactions after first year. Assume that, at account opening on January 1 of year one, a card issuer discloses that the annual percentage rate for purchases will increase as follows: A non-variable rate of 5% for six months; a non-variable rate of 10% for an additional six months; and thereafter a variable rate that is currently 15% and will be adjusted monthly by adding a margin of 5 percentage points to a publicly-available index not under the card issuer's control. The payment due date for the account is the fifteenth day of the month and the required minimum periodic payments are applied to accrued interest and fees but do not reduce the purchase balance. On January 15 of year one, the consumer uses the account to make a \$1,500 purchase. Six months after account opening (July 1), the card issuer may begin to accrue interest on the \$1,500 purchase at the previously-disclosed 10% non-variable rate (pursuant to § 1026.55(b)(1)). On September 15, the consumer uses the account for a \$700 purchase. On November 16, the card issuer provides a notice pursuant to § 1026.9(c) informing the consumer of a new variable rate that will apply on January 1 of year two (calculated using the same index and an increased margin of 8 percentage points). One year after account opening (January 1 of year two), the card issuer may begin accruing interest on the \$2,200 purchase balance at the previously-disclosed variable rate determined using a 5-point margin (pursuant to § 1026.55(b)(1)). Section 1026.55 does not permit the card issuer to apply the variable rate determined using the 8-point margin to the \$2,200 purchase balance. Furthermore, § 1026.55 does not permit the card issuer to subsequently increase the variable rate determined using the 5-point margin that applies to the \$2,200 purchase balance (except due to increases in the index pursuant to § 1026.55(b)(2)). The card issuer may, however, apply the variable rate determined using the 8-point margin to purchases made on or after January 1 of year two (pursuant to § 1026.55(b)(3)).

iii. *Change-in-terms rate increase for new transactions after first year; penalty rate increase after first year.* Assume that, at account opening on January 1 of year one, a card issuer discloses that the annual percentage rate for purchases is a variable rate determined by adding a margin of 6 percentage points to a publicly-available index outside of the card issuer's control. The card issuer also discloses that, to the extent consistent with § 1026.55 and other applicable law, a non-variable penalty rate of 28% may apply if the consumer makes a late payment. The due date for the account is the fifteenth of the month. On May 30 of year two, the account has a purchase balance of \$1,000. On May 31, the card issuer provides a notice pursuant to § 1026.9(c) informing the consumer of a new variable rate that will apply on July 16 for all purchases made on or after June 15 (calculated by using the same index and an increased margin of 8 percentage points). On June 14, the consumer makes a \$500 purchase. On June 15, the consumer makes a \$200 purchase. On July 1, the card issuer has not received the payment

due on June 15 and provides the consumer with a notice pursuant to § 1026.9(g) stating that the 28% penalty rate will apply as of August 15 to all transactions made on or after July 16 and that, if the consumer becomes more than 60 days late, the penalty rate will apply to all balances on the account. On July 17, the consumer makes a \$300 purchase.

A. *Account does not become more than 60 days delinquent.* The payment due on June 15 of year two is received on July 2. On July 16, § 1026.55(b)(3)(ii) permits the card issuer to apply the variable rate determined using the 8-point margin disclosed in the § 1026.9(c) notice to the \$200 purchase made on June 15 but does not permit the card issuer to apply this rate to the \$1,500 purchase balance. On August 15, § 1026.55(b)(3)(ii) permits the card issuer to apply the 28% penalty rate disclosed at account opening and in the § 1026.9(g) notice to the \$300 purchase made on July 17 but does not permit the card issuer to apply this rate to the \$1,500 purchase balance (which remains at the variable rate determined using the 6-point margin) or the \$200 purchase (which remains at the variable rate determined using the 8-point margin).

B. *Account becomes more than 60 days delinquent after provision of § 1026.9(g) notice.* Same facts as above except the payment due on June 15 of year two has not been received by August 15. Section 1026.55(b)(4) permits the card issuer to apply the 28% penalty rate to the \$1,500 purchase balance and the \$200 purchase because it has not received the June 15 payment within 60 days after the due date. However, in order to do so, § 1026.55(b)(4)(i) requires the card issuer to first provide an additional notice pursuant to § 1026.9(g). This notice must be sent no earlier than August 15, which is the first day the account became more than 60 days' delinquent. If the notice is sent on August 15, the card issuer may begin accruing interest on the \$1,500 purchase balance and the \$200 purchase at the 28% penalty rate beginning on September 29.

2. *Relationship to grace period.* Nothing in § 1026.55 prohibits a card issuer from assessing interest due to the loss of a grace period to the extent consistent with § 1026.5(b)(2)(ii)(B) and § 1026.54. In addition, a card issuer has not reduced an annual percentage rate on a credit card account for purposes of § 1026.55 if the card issuer does not charge interest on a balance

or a portion thereof based on a payment received prior to the expiration of a grace period. For example, if the annual percentage rate for purchases on an account is 15% but the card issuer does not charge any interest on a \$500 purchase balance because that balance was paid in full prior to the expiration of the grace period, the card issuer has not reduced the 15% purchase rate to 0% for purposes of § 1026.55.

3. *Fees in connection with covered separate credit features accessible by hybrid prepaid-credit cards.* With regard to a covered separate credit feature and an asset feature on a prepaid account that are both accessible by a hybrid prepaid-credit card as defined in § 1026.61 where the credit feature is a credit card account under an open-end (not home-secured) consumer credit plan, § 1026.55(a) prohibits card issuers from increasing an annual percentage rate or any fee or charge required to be disclosed under § 1026.6(b)(2)(ii), (iii), or (xii) on a credit card account unless specifically permitted by one of the exceptions in § 1026.55(b). This is true regardless of whether these fees or annual percentage rates are imposed on the asset feature of the prepaid account or on the credit feature.

4. *Fees imposed on the asset feature of a prepaid account that are not charges imposed as part of the plan.* Section 1026.55(a) does not apply to any fee or charge imposed on the asset feature of the prepaid account that is not a charge imposed as part of the plan under § 1026.6(b)(3). See § 1026.6(b)(3)(iii)(D) and (E) and related commentary regarding fees imposed on the asset feature of the prepaid account that are not charges imposed as part of the plan under § 1026.6(b)(3) with respect to covered separate credit features accessible by hybrid prepaid-credit cards and non-covered separate credit features as those terms are defined in § 1026.61.

5. *Fees in connection with covered overdraft credit.* With regard to covered overdraft credit accessible by a hybrid debit-credit card, § 1026.55(a) prohibits card issuers from increasing an annual percentage rate or any fee or charge required to be disclosed under § 1026.6(b)(2)(ii), (iii), or (xii) on a credit card account unless specifically permitted by one of the exceptions in § 1026.55(b). This is true regardless of whether these fees or annual percentage rates are imposed on the covered

asset account associated with the covered overdraft credit or on the covered overdraft credit account.

Section 1026.57—Reporting and Marketing Rules for College Student Open-End Credit

57(a) Definitions

57(a)(1) College Student Credit Card

1. *Definition.* The definition of college student credit card excludes home-equity lines of credit accessed by credit cards and covered overdraft credit accounts as defined in 1026.62 offered by a creditor other than a very large financial institution as defined in 1026.62 that is accessed by a debit card or account number. A college student credit card includes a college affinity card within the meaning of TILA section 127(r)(1)(A). In addition, a card may fall within the scope of the definition regardless of the fact that it is not intentionally targeted at or marketed to college students. For example, an agreement between a college and a card issuer may provide for marketing of credit cards to alumni, faculty, staff, and other non-student consumers who have a relationship with the college, but also contain provisions that contemplate the issuance of cards to students. A credit card issued to a student at the college in connection with such an agreement qualifies as a college student credit card. The definition of college student credit card includes a hybrid prepaid-credit card as defined by § 1026.61 that is issued to any college student where the card can access a covered separate credit feature that is a credit card account under an open-end (not home-secured) consumer credit plan. The definition of college student credit card also includes a prepaid account as defined in § 1026.61 that is issued to any college student where a covered separate credit feature that is a credit card account under an open-end (not home-secured) consumer credit plan accessible by a hybrid prepaid-credit card as defined by § 1026.61 may be added in the future to the prepaid account.

Revising Consolidated Return Regulations and Controlled Group of Corporations Regulations to Reflect Statutory Changes, Modernize Language, and Enhance Clarity; Final Rule and Proposed Rule

DEPARTMENT OF THE TREASURY**Internal Revenue Service****26 CFR Parts 1, 5, 301, and 602**

[TD 10018]

RIN 1545–BJ87

Revising Consolidated Return Regulations and Controlled Group of Corporations Regulations to Reflect Statutory Changes, Modernize Language, and Enhance Clarity**AGENCY:** Internal Revenue Service (IRS), Treasury.**ACTION:** Final regulations.

SUMMARY: This document contains final regulations that affect affiliated groups of corporations that file consolidated Federal income tax returns. These regulations modify the consolidated return regulations and the controlled group of corporations regulations to reflect statutory changes, update language to remove antiquated or regressive terminology, and enhance clarity. Additionally, this document withdraws certain temporary regulations.

DATES: *Effective date:* These final regulations are effective on December 30, 2024.

Applicability date: For dates of applicability, see §§ 1.52–1(i), 1.414(c)–6(g), 1.1502–0, 1.1502–5(e), 1.1502–45(f), 1.1552–1(g), 1.1562–1(e), 1.1563–2(d), and 1.1563–3(e).

FOR FURTHER INFORMATION CONTACT: Concerning the regulations under section 52, Christopher Dellana of the Office of Associate Chief Counsel (Employee Benefits, Exempt Organizations, and Employment Taxes) at (202) 317–5500; concerning the regulations under section 414, Jessica Weinberger of the Office of Associate Chief Counsel (Employee Benefits, Exempt Organizations, and Employment Taxes) at (202) 317–4148; concerning the regulations under all other sections, William W. Burhop or Kelton P. Frye of the Office of Associate Chief Counsel (Corporate) at (202) 317–5363 or (202) 317–6975, respectively (not toll-free numbers).

SUPPLEMENTARY INFORMATION:**Authority**

Section 1502 of the Internal Revenue Code (Code) authorizes the Secretary of the Treasury or her delegate (Secretary) to prescribe consolidated return regulations for an affiliated group of corporations that join in filing (or that are required to join in filing) a

consolidated return (consolidated group) to clearly reflect the Federal income tax liability of the consolidated group and to prevent avoidance of such tax liability. See § 1.1502–1(h) (defining the term “consolidated group”). For purposes of carrying out those objectives, section 1502 also permits the Secretary to prescribe rules that may be different from the provisions of chapter 1 of the Code (chapter 1) that would apply if the corporations composing the consolidated group filed separate returns. Additionally, section 7805(a) of the Code authorizes the Secretary to “prescribe all needful rules and regulations for the enforcement of [the Code], including all rules and regulations as may be necessary by reason of any alteration of law in relation to internal revenue.”

Background*I. Overview*

This Treasury decision contains final regulations under sections 52, 414, 1502, 1503, 1552, and 1563 of Code. These regulations primarily revise the Income Tax Regulations (26 CFR part 1) issued under section 1502 (consolidated return regulations). Terms used in the consolidated return regulations generally are defined in § 1.1502–1.

II. 2023 Proposed Regulations

On August 7, 2023, the Department of the Treasury (Treasury Department) and the IRS published a notice of proposed rulemaking (REG–134420–10) in the **Federal Register** (88 FR 52057) under sections 1502, 1503, 1552, and 1563 (2023 proposed regulations). The 2023 proposed regulations would revise the consolidated return regulations (i) to eliminate obsolete or otherwise outdated provisions, (ii) to modernize the language and improve the clarity of the regulations, and (iii) to facilitate taxpayer compliance.

The 2023 proposed regulations also would revise the consolidated return regulations and the regulations under section 1563 to eliminate antiquated or regressive terminology. For example, the 2023 proposed regulations (i) would replace gender-specific pronouns and other identifiers with gender-neutral pronouns and identifiers, and (ii) would identify (A) American Samoa, (B) the Commonwealth of the Northern Mariana Islands, (C) the Commonwealth of Puerto Rico, (D) Guam, and (E) the U.S. Virgin Islands as “territories” of the United States rather than “possessions” in §§ 1.1502–4(d)(1) and 1.1503(d)–1(b)(7). These revisions are consistent with, and in furtherance of, the Treasury Department’s Equity Action Plan, as

well as Executive Order 13985 of January 20, 2021, *Advancing Racial Equity and Support for Underserved Communities Through the Federal Government*, 86 FR 7009 (January 25, 2021).

The 2023 proposed regulations also would revise or remove other regulations under the Code. These regulations are set forth in (i) the Income Tax Regulations (26 CFR part 1), (ii) the Temporary Income Tax Regulations under the Revenue Act of 1978 (26 CFR part 5), (iii) the Regulations on Procedure and Administration (26 CFR part 301), and (iv) the OMB Control Numbers under the Paperwork Reduction Act Regulations (26 CFR part 602).

The notice of proposed rulemaking (NPRM) containing the 2023 proposed regulations also withdrew or partially withdrew numerous earlier NPRMs, including: (i) NPRMs that previously had been incorporated into final regulations in revised form or that were incorporated into the 2023 proposed regulations in revised form; (ii) an NPRM that became obsolete when proposed regulations provided in a subsequent, discrete NPRM were adopted as final regulations; and (iii) NPRMs that cross-referenced temporary regulations (the text of which served as the text for those proposals) that were removed, have expired, or otherwise have become obsolete. Additionally, the 2023 proposed regulations proposed to withdraw temporary regulations that (i) no longer have practical applicability to taxpayers, or (ii) would be replaced by final regulations provided by this Treasury decision.

Finally, the 2023 proposed regulations would remove numerous provisions that cross-reference prior-law editions of the Code of Federal Regulations (CFR).

III. Correction to 2023 Proposed Regulations

The 2023 proposed regulations contained amendments to the regulations under section 1563. A correction to the 2023 proposed regulations was published in the **Federal Register** (88 FR 84770–02) on December 6, 2023, and provided an additional opportunity for public comment (2023 correction), to make parallel amendments to similar regulations under sections 52 and 414 to avoid creating inconsistencies.

IV. Comments Received

The Treasury Department and the IRS requested comments on the 2023 proposed regulations. The comments received are described in further detail

in the Summary of Comments and Explanation of Revisions. No public hearing was requested or held.

Summary of Comments and Explanation of Revisions

I. Withdrawal of Proposed or Temporary Regulations

A commenter expressed concern that the withdrawal or partial withdrawal of old proposed or temporary regulations in the 2023 proposed regulations could lead to confusion or uncertainty for consolidated groups if the withdrawn regulations contain substantive provisions on which consolidated groups continue to rely. The commenter recommended either retaining or revising the withdrawn proposed or temporary regulations or providing guidance on how to apply the existing final regulations in light of the withdrawals.

The Treasury Department and the IRS are of the view that, with the exception of the proposed consolidated return regulations under § 1.1502–80(d) relating to the non-applicability of section 357(c) discussed in part VII of this Summary of Comments and Explanation of Revisions, the withdrawn or partially withdrawn regulations do not contain substantive provisions on which taxpayers continue to rely. Accordingly, these final regulations do not adopt the commenter's recommendation.

II. Section 1.1502–5 (Consolidated Estimated Tax)

Section 10101 of Public Law 117–169, 136 Stat. 1818 (August 16, 2022), commonly referred to as the Inflation Reduction Act of 2022, amended section 55 of the Code to impose a new corporate alternative minimum tax (commonly referred to as the corporate alternative minimum tax, or CAMT) based on adjusted financial statement income. To reflect this change, the 2023 proposed regulations would modify the definition of the term “tax” in § 1.1502–5(b)(5) by adding a reference to section 55(a). Because the amount of tax imposed under section 55 is determined in part by reference to the amount of tax imposed under section 59A of the Code (that is, the base erosion anti-abuse tax, or BEAT), the 2023 proposed regulations also would modify the definition of the term “tax” in § 1.1502–5(b)(5) by adding a reference to section 59A.

A commenter recommended adding the foregoing references not only in § 1.1502–5(b)(5), but also in other sections of the consolidated return regulations that use the word “tax”.

However, these changes in the 2023 proposed regulations were necessary to implement the recently enacted CAMT. The Treasury Department and the IRS have determined that similar changes to other provisions in the consolidated return regulations are beyond the scope of this guidance. Accordingly, these final regulations do not adopt the commenter's recommendation.

III. Revisions To Remove Obsolete or Outdated References or Terms

As noted in part II of the Background, the 2023 proposed regulations would make nonsubstantive changes to the consolidated return regulations and the regulations under section 1563 to replace gender-specific pronouns and other identifiers with gender-neutral pronouns and identifiers, and to replace the term “possession” with the defined term “U.S. territory” in §§ 1.1502–4(d)(1) and 1.1503(d)–1(b)(7). A commenter welcomed the removal of gender-specific pronouns and identifiers but suggested that the gender-neutral pronouns and identifiers are not entirely clear or consistent throughout the consolidated return regulations (for example, some provisions use “its” as a singular possessive pronoun, whereas others use “their” as a singular possessive pronoun). The commenter recommending either using a consistent set of gender-neutral pronouns and identifiers throughout the regulations or providing a glossary or explanation of these pronouns and identifiers.

The Treasury Department and the IRS have determined that revising all gender-neutral pronouns throughout the consolidated return regulations and the section 1563 regulations is beyond the scope of this guidance. However, the Treasury Department and the IRS will continue to consider the revision of particular pronouns when modifying the consolidated return regulations in future guidance.

The commenter also requested clarification that the replacement of the term “possessions” with the term “territories” is purely terminological and is not intended to affect the tax treatment of these jurisdictions under the consolidated return regulations. The Treasury Department and the IRS agree with the commenter that this change was intended to be purely terminological. See <https://www.doi.gov/oia/islands/politicatypes>.

IV. Revisions to §§ 1.1502–13, 1.1502–32, and 1.1502–36

A commenter raised questions about amendments to §§ 1.1502–13(c)(2)(ii) and (c)(6)(ii)(A), 1.1502–32(b)(2)(iv) and (b)(4)(i), and 1.1502–36(d)(3)(ii)(B) and

(d)(6)(ii)(B) in the 2023 proposed regulations. However, neither the 2023 proposed regulations nor these final regulations would amend these provisions. Accordingly, no revisions have been made in response to this comment.

V. Definition of “Consolidated Return Regulations”

The 2023 proposed regulations would add “consolidated return regulations” as a new defined term in § 1.1502–1. As defined in proposed § 1.1502–1(g), this term would mean the regulations issued under section 1502. A commenter noted that certain consolidated return regulations issued under the authority of section 1502 were not actually placed under section 1502 (for example, see § 1.163(j)–4 and § 1.385–4). Accordingly, these final regulations revise the term “consolidated return regulations” to mean the regulations issued under the authority of section 1502. These final regulations also amend §§ 1.1502–47(a)(3), (k), and (l) and 1.1504–3(d)(1)(ii) to replace the cited range of sections with the defined term “consolidated return regulations.”

VI. Sections 52 and 414

Sections 52(a) and 414(b) provide rules for controlled groups of corporations that incorporate the definitions and rules in section 1563(a), with modifications. Sections 52(b) and 414(c)(1) authorize regulations applying principles similar to the principles that apply in the case of sections 52(a) and 414(b), respectively, to trades or businesses under common control.

A controlled group of corporations under section 52(a) or section 414(b), which cross-reference section 1563(a), is determined based on the constructive ownership rules of section 1563(e), including section 1563(e)(2) and (3) (but not section 1563(e)(3)(C)). A group of trades or businesses under common control under sections 52(b) and 414(c) is determined by taking into account the constructive ownership rules in §§ 1.52–1(b) and (c) and 1.414(c)–2(b)(1), respectively, that mirror the rules under section 1563.

As discussed in the preamble to the 2023 proposed regulations, the 2023 proposed regulations would revise § 1.1563–1(a)(2)(i)(A) and (B) to reflect an amendment to section 1563(d)(1)(B) by the Technical and Miscellaneous Revenue Act of 1988, Public Law 100–647, 102 Stat. 3342 (November 10, 1988). That amendment expanded the constructive ownership rules of section 1563(e) that apply for purposes of section 1563(d)(1) to include section 1563(e)(2) (relating to attribution from

partnerships) and section 1563(e)(3) (relating to attribution from estates or trusts). The 2023 proposed regulations generally would apply to consolidated return years for which the due date of the return (without regard to extensions) is after the date of publication of the Treasury Decision adopting the regulations as final regulations in the **Federal Register**.

The 2023 correction does not specify an applicability date for the proposed revisions to §§ 1.52–1(c)(1) and 1.414(c)–2(b)(1). In addition, the Treasury Department and the IRS are of the view that applying the general applicability date in the 2023 proposed regulations to the proposed revisions to §§ 1.52–1(c)(1) and 1.414(c)–2(b)(1) may cause confusion, because the rules in §§ 1.52–1(c)(1) and 1.414(c)–2(b)(1) apply to taxpayers who may not file consolidated returns.

Accordingly, these final regulations clarify that the amendment to § 1.52–1(c)(1) applies to taxable years beginning on or after January 1, 2025, and that the amendment to § 1.414(c)–2(b)(1) applies to plan years beginning on or after January 1, 2025. The final regulations add new paragraph (i) to § 52–1 to provide that § 52–1, as amended by this Treasury decision, applies to taxable years beginning on or after January 1, 2025. Section 1.414(c)–6, which provides the effective date and various applicability dates for the regulations under sections 414(b) and (c), is amended to reflect the applicability date of the amendment to § 1.414(c)–2(b)(1); *see also* the Applicability Date section of this preamble. The amendment to section 1563(d)(1)(B) by the Technical and Miscellaneous Revenue Act of 1988 was not incorporated into the regulations under sections 52(b) and 414(c)(1) with respect to taxable years and plan years, respectively, that began prior to the applicability date for the regulations specified in this Treasury decision. Accordingly, the IRS will not challenge the application of §§ 1.52–1(c)(1) and 1.414(c)–2(b) as previously in effect or taking into account the amendment to section 1563(d)(1)(B) with respect to taxable years that began prior to January 1, 2025, for the regulations under section 52(b) or plan years that began prior to January 1, 2025, for the regulations under section 414(c)(1).

VII. Section 357(c) and § 1.1502–80(d)

A commenter raised concerns about the withdrawal of proposed consolidated return regulations under § 1.1502–80(d) relating to the non-applicability of section 357(c). The comment has led the Treasury

Department and the IRS to reconsider that withdrawal. For a discussion of the comment, *see* the notice of proposed rulemaking published in the Proposed Rules section of this issue of the **Federal Register**.

VIII. Other Non-Substantive Revisions

To make the reading of these regulations more user-friendly, these final regulations generally restate the revised paragraphs in the regulations under sections 52, 414, 1502, 1503, 1552, and 1563. Additionally, the formatting changes to the examples in § 1.1502–13(j) in the 2023 proposed regulations were adopted by T.D. 10016, published in the **Federal Register** on December 11, 2024 (89 FR 100138).

Applicability Date

Pursuant to section 1503(a) of the Code, the regulations issued under the authority of section 1502 apply to consolidated return years for which the due date of the return (without regard to extensions) is after December 30, 2024.

In addition, § 1.52–1(c)(1) applies to taxable years beginning on or after January 1, 2025, and § 1.414(c)–2(b)(1) applies to plan years beginning on or after January 1, 2025. The amendments to §§ 1.1552–1(g), 1.1562–1(e), 1.1563–2(d), and 1.1563–3(e) apply to taxable years beginning after December 30, 2024.

Special Analyses

I. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

These final regulations update the consolidated return regulations by revising and removing outdated and obsolete provisions, such as cross-references to temporary regulations, regulations, and statutes that have been repealed, removed, expired, renumbered, or otherwise have become obsolete. Therefore, these final regulations would not impose an additional reporting burden beyond what is otherwise required by existing statutes, regulations, and forms. The total burden associated with these final regulations is \$0.

III. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby

certified that these final regulations would not have a significant economic impact on a substantial number of small entities. This certification is based on the fact that these final regulations would apply only to corporations that file consolidated Federal income tax returns, and that such corporations tend to be larger businesses. Specifically, based on data available to the IRS, corporations that file consolidated Federal income tax returns represent only approximately two percent of all filers of Forms 1120 (U.S. Corporation Income Tax Return). However, these consolidated Federal income tax returns account for approximately 95 percent of the aggregate amount of receipts reported on all Forms 1120. Therefore, these final regulations would not create significant additional obligations for, or impose an economic impact on, a substantial number of small entities. Accordingly, the Secretary certifies that these final regulations will not have significant economic impact on a significant number of small entities.

Pursuant to section 7805(f) of the Code, the notice of proposed rulemaking that preceded these final regulations was submitted to the Chief Counsel for the Office of Advocacy of the Small Business Administration for comment on its impact on small business. No comments were received from the Chief Counsel for the Office of Advocacy of the Small Business Administration.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of \$100 million in 1995 dollars, updated annually for inflation. [In 2024, that threshold is approximately \$190 million.] These final regulations do not include any rule that would include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. These final regulations

do not propose rules that would have federalism implications, impose substantial direct compliance costs on State and local governments, or preempt State law within the meaning of the Executive order.

VI. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as not a major rule, as defined by 5 U.S.C. 804(2).

Drafting Information

The principal authors of this document are Kelton P. Frye and William W. Burhop of the Office of Associate Chief Counsel (Corporate). Other personnel from the Treasury Department and the IRS participated in its development.

List of Subjects

26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 5

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 301

Employment taxes, Estate taxes, Excise taxes, Gift taxes, Income taxes, Penalties, Reporting and recordkeeping requirements.

26 CFR Part 602

Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR parts 1, 5, 301, and 602 are amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by removing the entries for §§ 1.1503–2, 1.1502–9A, 1.1502–15A, 1.1502–21A, 1.1502–22A, 1.1502–23A, 1.1502–41A, 1.1502–79A, 1.1502–91A, 1.1502–92A, 1.1502–93A, 1.1502–94A, 1.1502–95A, 1.1502–96A, 1.1502–98A, and 1.1502–99A to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.52–1 is amended by revising paragraphs (c)(1)(i) and (ii) and adding paragraph (i) to read as follows:

§ 1.52–1 Trades or businesses that are under common control.

* * * * *

- (c) * * *
(1) * * *

(i) A controlling interest in each of the organizations, except the common

parent organization, is owned (directly and with the application of § 1.414(c)–4(b)(1), (2), and (3)) by one or more of the other organizations; and

(ii) The common parent organization owns (directly and with the application of § 1.414(c)–4(b)(1), (2), and (3)) a controlling interest in at least one of the other organizations, excluding, in computing the controlling interest, any direct ownership interest by the other organizations.

* * * * *

(i) **Applicability date.** This section applies to taxable years beginning on or after January 1, 2025. *See* 26 CFR 1.52–1, as revised April 1, 2024, for taxable years beginning before January 1, 2025.

■ **Par. 3.** Section 1.57–1 is amended by revising paragraph (b)(4)(ii) to read as follows:

§ 1.57–1 Items of tax preference defined.

* * * * *

(b) * * *

(4) * * *

(ii) Where the taxpayer acquires property in a transaction to which section 381(a) applies or from another member of an affiliated group during a consolidated return year and an “accelerated” method of depreciation as described in section 167(b)(2), (3), or (4) or section 167(j)(1)(B) or (C) is permitted (*see* § 1.381(c)(6)–1), the depreciation which would have been allowable under the straight line method is determined as if the property had been depreciated under the straight line method since depreciation was first taken on the property by the transferor of such property. In such cases, references in this paragraph to the period for which the property is held or useful life of the property are treated as including the period beginning with the commencement of the original use of the property.

* * * * *

■ **Par. 4.** Section 1.167(c)–1 is amended by revising paragraph (a)(5) to read as follows:

§ 1.167(c)–1 Limitations on methods of computing depreciation under section 167(b)(2), (3), and (4).

(a) * * *

(5) *See* §§ 1.1502–13 and 1.1502–68 for provisions dealing with depreciation of property received by a member of an affiliated group from another member of the group during a consolidated return period.

* * * * *

■ **Par. 5.** Section 1.279–6 is amended by revising and republishing paragraph (d) to read as follows:

§ 1.279–6 Application of section 279 to certain affiliated groups.

* * * * *

(d) **Aggregate projected earnings.** In the case of an affiliated group of corporations (whether or not such group files a consolidated return under section 1501), the aggregate projected earnings of such group is computed by separately determining the projected earnings of each member of such group under paragraph (d) of § 1.279–5, and then adding together such separately determined amounts, except that—

(1) A dividend (a distribution which is described in section 301(c)(1) other than a distribution described in section 243(c)(1)) distributed by one member to another member is eliminated;

(2) In determining the earnings and profits of any member of an affiliated group, there is eliminated any amount of interest income received or accrued, and of interest expense paid or incurred, which is attributable to intercompany indebtedness; and

(3) No gain or loss is recognized in any transaction between members of the affiliated group.

* * * * *

§ 1.382–8 [Amended]

■ **Par. 6.** Section 1.382–8 is amended by removing and reserving paragraph (i).

■ **Par. 7.** Section 1.414(c)–2 is amended by revising paragraphs (b)(1)(i) and (ii) to read as follows:

§ 1.414(c)–2 Two or more trades or businesses under common control.

* * * * *

(b) * * *

(1) * * *

(i) A controlling interest in each of the organizations, except the common parent organization, is owned (directly and with the application of § 1.414(c)–4(b)(1), (2), and (3)) by one or more of the other organizations; and

(ii) The common parent organization owns (directly and with the application of § 1.414(c)–4(b)(1), (2), and (3)) a controlling interest in at least one of the other organizations, excluding, in computing such controlling interest, any direct ownership interest by such other organizations.

* * * * *

■ **Par. 8.** Section 1.414(c)–6 is amended by revising and republishing paragraph (a) and adding paragraph (g) to read as follows:

§ 1.414(c)–6 Effective date.

(a) **General rule.** Except as provided in paragraph (b), (c), (e), (f), or (g) of this section, the provisions of § 1.414(b)–1 and §§ 1.414(c)–1 through 1.414(c)–4

apply for plan years beginning after September 2, 1974.

* * * * *

(g) *Special rule.* Notwithstanding paragraph (a), (b), or (c) of this section, § 1.414(c)-2(b)(1) applies to plan years beginning on or after January 1, 2025.

■ **Par. 9.** Section 1.1502-0 is revised to read as follows:

§ 1.1502-0 Effective/applicability dates.

(a) *In general.* Except as provided in paragraph (b) of this section, the consolidated return regulations (as defined in § 1.1502-1(g)) are applicable to taxable years beginning after December 31, 1965.

(b) *Exceptions.* The applicability date described in paragraph (a) of this section does not apply to any provision of the consolidated return regulations with an applicability or effective date different than the date provided by paragraph (a) of this section.

■ **Par. 10.** Section 1.1502-1 is amended by:

- a. Adding introductory text;
- b. Revising and republishing paragraphs (f)(2) and (3) and (g);
- c. Redesignating paragraph (l) as paragraph (m); and
- d. Adding a new paragraph (l).

The additions and revisions read as follows:

§ 1.1502-1 Definitions.

For purposes of the consolidated return regulations (and any provision of this chapter that refers to the consolidated return regulations):

* * * * *

(f) * * *

(2) *Exceptions.* The term *separate return limitation year* (or SRLY) does not include:

(i) A separate return year of the corporation which is the common parent for the consolidated return year to which the tax attribute is to be carried (except as provided in § 1.1502-75(d)(2)(ii) and paragraph (f)(3) of this section);

(ii) A separate return year of any corporation which was a member of the group for each day of such year; or

(iii) A separate return year of a predecessor of any member if such predecessor was a member of the group for each day of such year.

(3) *Reverse acquisitions.* In the event of an acquisition to which § 1.1502-75(d)(3) applies, all taxable years of the first corporation and of each of its subsidiaries ending on or before the date of the acquisition are treated as separate return limitation years, and the separate return years (if any) of the second corporation and each of its subsidiaries

are not treated as separate return limitation years (unless they were so treated immediately before the acquisition). For example, if corporation P merges into corporation T, and the persons who were stockholders of P immediately before the merger, as a result of owning the stock of P, own more than 50 percent of the fair market value of the outstanding stock of T, then a loss incurred before the merger by T (even though it is the common parent), or by a subsidiary of T, is treated as having been incurred in a separate return limitation year. Conversely, a loss incurred before the merger by P, or by a subsidiary of P in a separate return year during all of which such subsidiary was a member of the group of which P was the common parent, is treated as having been incurred in a year which is not a separate return limitation year.

(g) *Consolidated return regulations.* The term *consolidated return regulations* means the regulations issued under the authority of section 1502.

* * * * *

(l) *U.S. territory.* The term *U.S. territory* means—

- (1) American Samoa;
- (2) The Commonwealth of the Northern Mariana Islands;
- (3) The Commonwealth of Puerto Rico;
- (4) Guam; and
- (5) The U.S. Virgin Islands.

* * * * *

§ 1.1502-3 [Amended]

■ **Par. 11.** Section 1.1502-3 is amended by removing and reserving paragraph (e).

■ **Par. 12.** Section 1.1502-4 is amended by revising paragraph (d)(1) to read as follows:

§ 1.1502-4 Consolidated foreign tax credit.

* * * * *

(d) * * *

(1) *Allowance of unused foreign tax as consolidated carryover or carryback.*

The consolidated group's carryovers and carrybacks of unused foreign tax (as defined in § 1.904-2(c)(1)) to the taxable year is determined on a consolidated basis under the principles of section 904(c) and § 1.904-2 and is deemed to be paid or accrued to a foreign country or U.S. territory (as defined in § 1.1502-1(l)) for that year. The consolidated group's unused foreign tax carryovers and carrybacks to the taxable year consist of any unused foreign tax of the consolidated group, plus any unused foreign tax of members for separate return years, which may be carried over or back to the taxable year under the

principles of section 904(c) and § 1.904-2. The consolidated group's unused foreign tax carryovers and carrybacks do not include any unused foreign taxes apportioned to a corporation for a separate return year pursuant to § 1.1502-79(d). A consolidated group's unused foreign tax in each separate category is the excess of the foreign taxes paid, accrued or deemed paid under section 960 by the consolidated group over the limitation in the applicable separate category for the consolidated return year. See paragraph (c) of this section.

* * * * *

■ **Par. 13.** Section 1.1502-5 is revised to read as follows:

§ 1.1502-5 Estimated tax.

(a) *General rule.*—(1) *Consolidated estimated tax.* If a group files a consolidated return for two consecutive taxable years, it must make payments of estimated tax on a consolidated basis for each subsequent taxable year until separate returns are filed. When filing on a consolidated basis, the group is generally treated as a single corporation for purposes of section 6655 (relating to payment of estimated tax by corporations). If separate returns are filed by the members for a taxable year, the amount of any estimated tax payments made with respect to a consolidated estimated tax for the year is credited against the separate tax liabilities of the members in any reasonable manner designated by the common parent.

(2) *First two consolidated return years.* For its first two consolidated return years, a group may make payments of estimated tax on either a consolidated or a separate member basis. The amount of any separate estimated tax payments is credited against the consolidated tax liability of the group.

(b) *Addition to tax for failure to pay estimated tax under section 6655.*—(1) *Consolidated return filed.* For its first two consolidated return years, a group may compute the amount of the penalty (if any) under section 6655 on a consolidated basis or a separate member basis, regardless of the method of payment. Thereafter, the group must compute the penalty for any consolidated return year on a consolidated basis.

(2) *Computation of penalty on consolidated basis.*—(i) *In general.* This paragraph (b)(2) provides rules for computing the penalty under section 6655 on a consolidated basis.

(ii) *Preceding taxable year.* The tax shown on the return for the preceding

taxable year referred to in section 6655(d)(1)(B)(ii) is, if a consolidated return was filed for that preceding year, the tax shown on the consolidated return for that preceding year or, if a consolidated return was not filed for that preceding year, the aggregate of the taxes shown on the separate returns of the common parent and any other corporation that was a member of the same affiliated group as the common parent for that preceding year.

(iii) *Aggregate of payments made by all members.* If estimated tax was not paid on a consolidated basis, the amount of the group's payments of estimated tax for the taxable year is the aggregate of the payments made by all members for the year.

(iv) *Required annual payment rule.* If the common parent is otherwise eligible to use the section 6655(d)(1)(B)(ii) required annual payment rule, that rule applies only if the group's consolidated return, or each member's separate return if the group did not file a consolidated return, for the preceding taxable year was a taxable year of 12 months.

(3) *Computation of penalty on separate member basis.* To compute any penalty under section 6655 on a separate member basis, for purposes of section 6655(d)(1)(B)(i), the "tax shown on the return" for the taxable year is the portion of the tax shown on the consolidated return allocable to the member under paragraph (b)(6) of this section. If the member was included in the consolidated return filed by the group for the preceding taxable year, for purposes of section 6655(d)(1)(B)(ii), the "tax shown on the return" for the preceding taxable year for any member is the portion of the tax shown on the consolidated return for the preceding year allocable to the member under paragraph (b)(6) of this section.

(4) *Consolidated payments if separate returns filed.* If the group does not file a consolidated return for the taxable year but makes payments of estimated tax on a consolidated basis, for purposes of section 6655(b)(1)(B), the "amount (if any) of the installment paid" by any member is an amount apportioned to the member in any reasonable manner designated by the common parent. If a member was included in the consolidated return filed by the group for the preceding taxable year, the amount of the member's penalty under section 6655 is computed on the separate member basis described in paragraph (b)(3) of this section.

(5) *Tax defined.* For purposes of this section, the term *tax* means the excess of—

(i) The sum of—

(A) The consolidated tax imposed by section 11 or subchapter L of chapter 1, whichever applies;

(B) The tax imposed by section 55(a); plus

(C) The tax imposed by section 59A; over

(ii) The credits against tax provided by part IV of subchapter A of chapter 1 of the Internal Revenue Code.

(6) *Allocation of consolidated tax liability for determining earnings and profits.* For purposes of this section, the tax shown on a consolidated return is allocated to the members of the group by allocating any tax described in paragraph (b)(5)(i) of this section, net of allowable credits under paragraph (b)(5)(ii) of this section, under the method that the group has elected pursuant to section 1552 and § 1.1502–33(d).

(c) *Examples.* The provisions of this section are illustrated by the following examples.

(1) *Example 1.* Corporations P and S1 file a consolidated return for the first time for calendar year 2021. P and S1 also file consolidated returns for calendar year 2022 and calendar year 2023. Under paragraph (a)(2) of this section, for the 2021 and 2022 taxable years, P and S1 may pay estimated tax on either a separate or consolidated basis. Under paragraph (a)(1) of this section, for the 2023 taxable year, the group must pay its estimated tax on a consolidated basis. In determining whether P and S1 come within the exception provided in section 6655(d)(1)(B)(ii) for 2023, the "tax shown on the return" is the tax shown on the consolidated return for the 2022 taxable year.

(2) *Example 2.* Corporations P, S1, and S2 file a consolidated return for the first time for calendar year 2021 and file their second consolidated return for calendar year 2022. S2 ceases to be a member of the group on September 15, 2023. Under paragraph (b)(2) of this section, in determining whether the group (which no longer includes S2) comes within the exception provided in section 6655(d)(1)(B)(ii) for 2023, the "tax shown on the return" is the tax shown on the consolidated return for calendar year 2022.

(3) *Example 3.* Corporations P and S1 file a consolidated return for the first time for calendar year 2021 and file their second consolidated return for calendar year 2022. Corporation S2 becomes a member of the group on July 1, 2023, and joins in the filing of the consolidated return for calendar year 2023. Under paragraph (b)(2) of this section, in determining whether the group (which now includes S2) comes

within the exception provided in section 6655(d)(1)(B)(ii) for 2023, the "tax shown on the return" is the tax shown on the consolidated return for calendar year 2022. Any tax of S2 for any separate return year is not included as a part of the "tax shown on the return" for purposes of applying section 6655(d)(1)(B)(ii).

(4) *Example 4.* Corporations X and Y file consolidated returns for the calendar years 2021 and 2022 and separate returns for calendar year 2023. Under paragraph (b)(3) of this section, in determining whether X or Y comes within the exception provided in section 6655(d)(1)(B)(ii) for 2023, the "tax shown on the return" is the amount of tax shown on the consolidated return for 2022 allocable to X and to Y in accordance with paragraph (b)(6) of this section.

(d) *Cross-references.*—(1) For provisions relating to quick refunds of corporate estimated tax payments, see §§ 1.1502–78 and 1.6425–1 through 1.6425–3.

(2) For provisions relating to depositing estimated taxes, see § 1.6302–1(b).

(e) *Applicability date.* This section applies to any taxable year for which the due date of the income tax return (without regard to extensions) is after December 30, 2024. For prior years, see § 1.1502–5 (as contained in the 26 CFR edition revised as of April 1, 2024).

■ **Par. 14.** Section 1.1502–6 is amended by revising paragraph (b) to read as follows:

§ 1.1502–6 Liability for tax.

* * * * *

(b) *Liability of subsidiary after withdrawal.* If a subsidiary has ceased to be a member of the group and in such cessation resulted from a bona fide sale or exchange of its stock for fair value and occurred prior to the date upon which any deficiency is assessed, the Commissioner may, if the Commissioner believes that the assessment or collection of the balance of the deficiency will not be jeopardized, make assessment and collection of such deficiency from such former subsidiary in an amount not exceeding the portion of such deficiency which the Commissioner may determine to be allocable to it. If the Commissioner makes assessment and collection of any part of a deficiency from such former subsidiary, then for purposes of any credit or refund of the amount collected from such former subsidiary the agency of the common parent under the provisions of § 1.1502–77 does not apply.

* * * * *

■ **Par. 15.** Section 1.1502–9 is amended by revising and republishing paragraphs (a), (b)(1), and (c)(2)(ii) and (iii) to read as follows:

§ 1.1502–9 Consolidated overall foreign losses, separate limitation losses, and overall domestic losses.

(a) *In general.* This section provides rules for applying section 904(f) and (g) (including its definitions and nomenclature) to a group and its members. Generally, section 904(f) concerns rules relating to overall foreign losses (OFLs) and separate limitation losses (SLLs) and the consequences of such losses. Under section 904(f)(5), losses are computed separately in each category of income described in section 904(d)(1) or § 1.904–5(a)(4)(v) (separate category). Section 904(g) concerns rules relating to overall domestic losses (ODLs) and the consequences of such losses. Paragraph (b) of this section defines terms and provides computational and accounting rules, including rules regarding recapture. Paragraph (c) of this section provides rules that apply to OFLs, SLLs, and ODLs when a member becomes or ceases to be a member of a group. Paragraph (d) of this section provides a predecessor and successor rule. Paragraph (e) of this section provides effective dates.

(b) * * *

(1) *Computation of CSLI or CSLL and consolidated U.S.-source taxable income or CDL.* The group computes its consolidated separate limitation income (CSLI) or consolidated separate limitation loss (CSLL) for each separate category under the principles of § 1.1502–11 by aggregating each member's foreign-source taxable income or loss in such separate category computed under the principles of § 1.1502–12, and taking into account the foreign portion of the consolidated items described in § 1.1502–11(a)(2) through (a)(6) for such separate category. The group computes its consolidated U.S.-source taxable income or consolidated domestic loss (CDL) under similar principles.

* * * * *

(c) * * *

(2) * * *

(ii) *Departing member's portion of group's account.* A departing member's portion of a group's COFL, CSLL or CODL account for a loss category is computed based upon the member's share of the group's assets that generate income subject to recapture at the time that the member ceases to be a member. Under the characterization principles of §§ 1.861–9T(g)(3), 1.861–12, and 1.861–13, the group identifies the assets of the

departing member and the remaining members that generate U.S.-source income (domestic assets) and foreign-source income (foreign assets) in each separate category. The assets are characterized based upon the income that the assets are reasonably expected to generate after the member ceases to be a member. The member's portion of a group's COFL or CSLL account for a loss category is the group's COFL or CSLL account, respectively, multiplied by a fraction, the numerator of which is the value of the member's foreign assets for the loss category and the denominator of which is the value of the foreign assets of the group (including the departing member) for the loss category. The member's portion of a group's CODL account for each income category is the group's CODL account multiplied by a fraction, the numerator of which is the value of the member's domestic assets and the denominator of which is the value of the domestic assets of the group (including the departing member). The value of the domestic and foreign assets is determined under the asset valuation rules of § 1.861–9(g)(1) and (2) using either tax book value or alternative tax book value under the method chosen by the group for purposes of interest apportionment as provided in § 1.861–9(g)(1)(ii). For purposes of this paragraph (c)(2)(ii), § 1.861–9T(g)(2)(iv) (assets in intercompany transactions) applies, but § 1.861–9T(g)(2)(iii) (adjustments for directly allocated interest) does not apply. The member's portions of COFL, CSLL, and CODL accounts are limited by paragraph (c)(2)(iii) of this section. In addition, for purposes of this paragraph (c)(2)(ii), the tax book value of assets transferred in intercompany transactions is determined without regard to previously deferred gain or loss that is taken into account by the group as a result of the transaction in which the member ceases to be a member. The assets should be valued at the time the member ceases to be a member, but values on other dates may be used unless this creates substantial distortions. For example, if a member ceases to be a member in the middle of the group's consolidated return year, an average of the values of assets at the beginning and end of the year (as provided in § 1.861–9(g)(2)) may be used or, if a member ceases to be a member in the early part of the group's consolidated return year, values at the beginning of the year may be used, unless this creates substantial distortions.

(iii) *Limitation on member's portion.* If the aggregate of a member's portions

of COFL and CSLL accounts for a loss category (with respect to one or more income categories) determined under paragraph (c)(2)(ii) of this section exceeds 150 percent of the actual fair market value of the member's foreign assets in the loss category, the member's portion of the COFL or CSLL accounts for the loss category is reduced (proportionately, in the case of multiple accounts) by such excess. In addition, if the aggregate of a member's portions of CODL accounts (with respect to one or more income categories) determined under paragraph (c)(2)(ii) of this section exceeds 150 percent of the actual fair market value of the member's domestic assets, the member's portion of the CODL accounts is reduced (proportionately, in the case of multiple accounts) by such excess. This rule does not apply in the case of COFL or CSLL accounts if the departing member and all other members that cease to be members as part of the same transaction own all (or substantially all) the foreign assets in the loss category. In the case of CODL accounts, this rule does not apply if the departing member and all other members that cease to be members as part of the same transaction own all (or substantially all) the domestic assets.

* * * * *

■ **Par. 16.** Section 1.1502–11 is amended by:

■ 1. Revising and republishing paragraph (a).

■ 2. In paragraph (b)(2)(iii), redesignating *Examples 1* through 3 as paragraphs (b)(2)(iii)(A) through (C), respectively.

■ 3. In newly redesignated paragraphs (b)(2)(iii)(A) through (C), further redesignating the paragraphs in the first column as the paragraphs in the second column:

Old paragraphs	New paragraphs
(b)(2)(iii)(A)(a), (b), and (c).	(b)(2)(iii)(A)(1), (2), and (3).
(b)(2)(iii)(B)(a), (b), (c), and (d).	(b)(2)(iii)(B)(1), (2), (3), and (4).
(b)(2)(iii)(C)(a), (b), (c), (d), and (e).	(b)(2)(iii)(C)(1), (2), (3), (4), and (5).

■ 4. Revising newly redesignated paragraphs (b)(2)(iii)(A)(3) and (b)(2)(iii)(B)(4).

■ 5. Revising and republishing paragraph (c)(7).

The revisions read as follows:

§ 1.1502–11 Consolidated taxable income.

(a) *In general.* The consolidated taxable income (CTI) for a consolidated return year is determined by taking into account:

(1) The separate taxable income of each member of the group (*see* § 1.1502–

12 for the computation of separate taxable income);

(2) Any consolidated net operating loss (CNOL) deduction (*see* § 1.1502–21 for the computation of the CNOL deduction);

(3) Any consolidated capital gain net income (*see* § 1.1502–22 for the computation of consolidated capital gain net income);

(4) Any consolidated section 1231 net loss (*see* § 1.1502–23 for the computation of consolidated section 1231 net loss);

(5) Any consolidated charitable contributions deduction (*see* § 1.1502–24 for the computation of the consolidated charitable contributions deduction); and

(6) Any consolidated dividends received deduction (*see* § 1.1502–26 for the computation of the consolidated dividends received deduction).

(b) * * *

(2) * * *

(iii) * * *

(A) * * *

(3) Because \$30 of S's loss is absorbed in the determination of consolidated taxable income under paragraph (b)(2)(ii) of this section, P's basis in S's stock is reduced under § 1.1502–32(b) from \$500 to \$470 immediately before the disposition. Consequently, P recognizes a \$50 gain from the sale of S's stock and the group has consolidated taxable income of \$50 for Year 1 (P's \$30 of ordinary income and \$50 gain from the sale of S's stock, less the \$30 of S's loss). In addition, S's limited loss of \$50 is treated as a separate net operating loss attributable to S and, because S ceases to be a member, the loss is apportioned to S under § 1.1502–21 and carried to its first separate return year.

(B) * * *

(4) Under paragraph (b)(2)(ii) of this section, S's \$40 ordinary loss from Year 2 that is limited under this paragraph (b) is treated as a separate net operating loss arising in Year 2. Similarly, \$40 of the consolidated net capital loss from Year 1 attributable to S is treated as a separate net capital loss carried over from Year 1. Because S ceases to be a member, the \$40 net operating loss from Year 2 and the \$40 consolidated net capital loss from Year 1 are allocated to S under §§ 1.1502–21 and 1.1502–22, respectively and are carried to S's first separate return year.

* * * * *

(c) * * *

(7) *Effective date.* This paragraph (c) applies to dispositions of subsidiary stock that occur after March 22, 2005.

* * * * *

■ **Par. 17.** Section 1.1502–12 is amended by:

■ a. Revising paragraph (b);

■ b. Removing and reserving paragraphs (e), (g), and (m);

■ c. Revising paragraph (n); and

■ d. Removing and reserving paragraph (q).

The revisions read as follows:

§ 1.1502–12 Separate taxable income.

* * * * *

(b) Any deduction that is disallowed under § 1.1502–15 must be taken into account as provided in that section.

* * * * *

(n) No deduction under section 243(a)(1) or section 245 (relating to deductions with respect to dividends received) is taken into account;

* * * * *

■ **Par. 18.** Section 1.1502–13 is amended by:

■ a. Revising and republishing paragraphs (a)(3)(i), (a)(6)(ii), (c)(4)(i)(B), (c)(5), (d)(3), (e)(1)(v), (f)(5)(ii)(B)(2), (f)(5)(ii)(F), (f)(6)(ii) and (v), (f)(7), and (g)(7)(ii). b. Redesignating paragraphs (h)(2)(v)(a) and (b) as paragraphs (h)(2)(v)(A) and (B).

■ c. Revising paragraph (l)(6).

■ d. Adding paragraphs (l)(8) through (10).

■ e. Removing paragraph (m).

The revisions and additions read as follows:

§ 1.1502–13 Intercompany transactions.

(a) * * *

(3) * * *

(i) *In general.* The timing rules of this section are a method of accounting for intercompany transactions, to be applied by each member in addition to the member's other methods of accounting. *See* §§ 1.1502–17 and 1.446–1(c)(2)(iii). To the extent the timing rules of this section are inconsistent with a member's otherwise applicable methods of accounting, the timing rules of this section control. For example, if S sells property to B in exchange for B's note, the timing rules of this section apply instead of the installment sale rules of section 453. S's or B's application of the timing rules of this section to an intercompany transaction clearly reflects income only if the effect of that transaction as a whole (including, for example, related costs and expenses) on consolidated taxable income is clearly reflected.

* * * * *

(6) * * *

(ii) *Table of examples.* This section contains the following examples:

Rule	General location	Paragraph	Example
(A) Matching rule	§ 1.1502–13(c)(7)(ii)	(A)	Example 1. Intercompany sale of land followed by sale to a nonmember.
		(B)	Example 2. Dealer activities.
		(C)	Example 3. Intercompany section 351 transfer.
		(D)	Example 4. Depreciable property.
		(E)	Example 5. Intercompany sale followed by installment sale.
		(F)	Example 6. Intercompany sale of installment obligation.
		(G)	Example 7. Performance of services.
		(H)	Example 8. Rental of property.
		(I)	Example 9. Intercompany sale of a partnership interest.
		(J)	Example 10. Net operating losses subject to section 382 or the SRLY rules.
		(K)	Example 11. Section 475.
		(L)	Example 12. Section 1092.
		(M)	Example 13. [Reserved]
		(N)	Example 14. Source of income under section 863.
		(O)	Example 15. Section 1248.
		(P)	Example 16. Intercompany stock distribution followed by section 332 liquidation.

Rule	General location	Paragraph	Example
(B) Acceleration rule	§ 1.1502–13(d)(3)	(Q)	Example 17. Intercompany stock sale followed by section 355 distribution.
		(R)	Example 18. Redetermination of attributes for section 250 purposes.
		(i)	Example 1. Becoming a nonmember—timing.
		(ii)	Example 2. Becoming a nonmember—attributes.
		(iii)	Example 3. Selling member's disposition of installment note.
(C) Simplifying rules—inventory	§ 1.1502–13(e)(1)(v)	(iv)	Example 4. Cancellation of debt and attribute reduction under section 108(b).
		(v)	Example 5. Section 481.
		(A)	Example 1. Increment averaging method.
(D) Stock of members	§ 1.1502–13(f)(7)	(B)	Example 2. Increment valuation method.
		(C)	Example 3. Other reasonable inventory methods.
		(i)	Example 1. Dividend exclusion and property distribution.
(E) Obligations of members	§ 1.1502–13(g)(7)(ii)	(ii)	Example 2. Excess loss accounts.
		(iii)	Example 3. Intercompany reorganization.
		(iv)	Example 4. All cash intercompany reorganization under section 368(a)(1)(D).
		(v)	Example 5. Stock redemptions and distributions.
		(vi)	Example 6. Intercompany stock sale followed by section 332 liquidation.
		(vii)	Example 7. Intercompany stock sale followed by section 355 distribution.
		(A)	Example 1. Interest on intercompany obligation.
		(B)	Example 2. Intercompany obligation becomes nonintercompany obligation.
		(C)	Example 3. Loss or bad debt deduction with respect to intercompany obligation.
		(D)	Example 4. Intercompany nonrecognition transactions.
		(E)	Example 5. Assumption of intercompany obligation.
		(F)	Example 6. Extinguishment of intercompany obligation.
		(G)	Example 7. Exchange of intercompany obligations.
		(H)	Example 8. Tax benefit rule.
		(I)	Example 9. Issuance at off-market rate of interest.
(F) Anti-avoidance rules	§ 1.1502–13(h)(2)	(J)	Example 10. Nonintercompany obligation becomes intercompany obligation.
		(K)	Example 11. Notional principal contracts.
		(i)	Example 1. Sale of a partnership interest.
		(ii)	Example 2. Transitory status as an intercompany obligation.
		(iii)	Example 3. Corporate mixing bowl.
(G) Miscellaneous operating rules	§ 1.1502–13(j)(10)	(iv)	Example 4. Partnership mixing bowl.
		(v)	Example 5. Sale and leaseback.
		(vi)	Example 6. Section 163(j) interest limitation.
		(i)	Example 1. Intercompany sale followed by section 351 transfer to member.
		(ii)	Example 2. Intercompany sale of member stock followed by recapitalization.
		(iii)	Example 3. Back-to-back intercompany transactions—matching.
		(iv)	Example 4. Back-to-back intercompany transactions—acceleration.
		(v)	Example 5. Successor group.
		(vi)	Example 6. Liquidation—80% distributee.
		(vii)	Example 7. Liquidation—no 80% distributee.
		(viii)	Example 8. Loan by section 987 QBU.
		(ix)	Example 9. Sale of property by section 987 QBU.

* * * * *

(c) * * *

(4) * * *

(i) * * *

(B) *B controls unreasonable*. To the extent the results under paragraph (c)(4)(i)(A) of this section are inconsistent with treating S and B as divisions of a single corporation, the

attributes of the offsetting items must be redetermined in a manner consistent with treating S and B as divisions of a single corporation. To the extent, however, that B's corresponding item on a separate entity basis is excluded from gross income, is a noncapital, nondeductible amount, or is otherwise permanently disallowed or eliminated,

the attributes of B's corresponding item always control the attributes of S's offsetting intercompany item.

* * * * *

(5) *Special status*. Notwithstanding the general rule of paragraph (c)(1)(i) of this section, to the extent an item's attributes determined under this section

are permitted or not permitted to a member under the Internal Revenue Code or regulations by reason of the member's special status, the attributes required under the Internal Revenue Code or regulations apply to that member's items (but not the other member). For example, if S is a bank to which section 582(c) applies, and sells debt securities at a gain to B, a nonbank, the character of S's intercompany gain is ordinary as required under section 582(c), but the character of B's corresponding item as capital or ordinary is determined under paragraph (c)(1)(i) of this section without the application of section 582(c). For other special status issues, *see*, for example, sections 818(b) (life insurance company treatment of capital gains and losses) and 1503(c) (limitation on absorption of certain losses).

* * * * *

(d) * * *

(3) *Examples.* The acceleration rule of this paragraph (d) is illustrated by the following examples.

(i) *Example 1. Becoming a nonmember—timing—(A) Facts.* S owns land with a basis of \$70. On January 1 of Year 1, S sells the land to B for \$100. On July 1 of Year 3, P sells 60% of S's stock to X for \$60 and, as a result, S becomes a nonmember.

(B) *Matching rule.* Under the matching rule, none of S's \$30 gain is taken into account in Years 1 through 3 because there is no difference between B's \$0 gain or loss taken into account and the recomputed gain or loss.

(C) *Acceleration of S's intercompany items.* Under the acceleration rule of paragraph (d) of this section, S's \$30 gain is taken into account in computing consolidated taxable income (and consolidated tax liability) immediately before the effect of treating S and B as divisions of a single corporation cannot be produced. Because the effect cannot be produced once S becomes a nonmember, S takes its \$30 gain into account in Year 3 immediately before becoming a nonmember. S's gain is reflected under § 1.1502–32 in P's basis in the S stock immediately before P's sale of the stock. Under § 1.1502–32, P's basis in the S stock is increased by \$30, and therefore P's gain is reduced (or loss is increased) by \$18 (60% of \$30). *See also* §§ 1.1502–33 and 1.1502–76(b). (The results would be the same if S sold the land to B in an installment sale to which section 453 would otherwise apply, because S must take its intercompany gain into account under this section.)

(D) *B's corresponding items.* Notwithstanding the acceleration of S's

gain, B continues to take its corresponding items into account under its accounting method. Thus, B's items from the land are taken into account based on subsequent events (for example, its sale of the land).

(E) *Sale of B's stock.* The facts are the same as in paragraph (d)(3)(i)(A) of this section (*Example 1*), except that P sells 60% of B's stock (rather than S stock) to X for \$60 and, as a result, B becomes a nonmember. Because the effect of treating S and B as divisions of a single corporation cannot be produced once B becomes a nonmember, S takes its \$30 gain into account under the acceleration rule immediately before B becomes a nonmember. (The results would be the same if S sold the land to B in an installment sale to which section 453 would otherwise apply, because S must take its intercompany gain into account under this section.)

(F) *Discontinue filing consolidated returns.* The facts are the same as in paragraph (d)(3)(i)(A) of this section (*Example 1*), except that the P group receives permission under § 1.1502–75(c) to discontinue filing consolidated returns beginning in Year 3. Under the acceleration rule, S takes its \$30 gain into account on December 31 of Year 2.

(G) *No subgroups.* The facts are the same as in paragraph (d)(3)(i)(A) of this section (*Example 1*), except that P simultaneously sells all of the stock of both S and B to X (rather than 60% of S's stock), and S and B become members of the X consolidated group. Because the effect of treating S and B as divisions of a single corporation in the P group cannot be produced once S and B become nonmembers, S takes its \$30 gain into account under the acceleration rule immediately before S and B become nonmembers. (Paragraph (j)(5) of this section does not apply to treat the X consolidated group as succeeding to the P group because the X group acquired only the stock of S and B.) However, so long as S and B continue to join with each other in the filing of consolidated returns, B continues to treat S and B as divisions of a single corporation for purposes of determining the attributes of B's corresponding items from the land.

(ii) *Example 2. Becoming a nonmember—attributes—(A) Facts.* S holds land for investment with a basis of \$70. On January 1 of Year 1, S sells the land to B for \$100. B holds the land for sale to customers in the ordinary course of business, and expends substantial resources over a two-year period subdividing, developing, and marketing the land. On July 1 of Year 3, before B has sold any of the land, P sells

60% of S's stock to X for \$60 and, as a result, S becomes a nonmember.

(B) *Attributes.* Under the acceleration rule, the attributes of S's gain are redetermined under the principles of the matching rule as if B sold the land to an affiliated corporation that is not a member of the group for a cash payment equal to B's adjusted basis in the land (because the land continues to be held within the group). Thus, whether S's gain is capital gain or ordinary income depends on the activities of both S and B. Because S and B no longer join with each other in the filing of consolidated returns, the attributes of B's corresponding items (for example, from its subsequent sale of the land) are redetermined under the principles of the matching rule as if the S division (but not the B division) were transferred by the single corporation to an unrelated person at the time of P's sale of the S stock. Thus, B continues to take into account the activities of S with respect to the land before the intercompany transaction.

(C) *Depreciable property.* The facts are the same as in paragraph (d)(3)(ii)(A) of this section (*Example 2*), except that the property sold by S to B is depreciable property. Section 1239 applies to treat all of S's gain as ordinary income because it is taken into account as a result of B's deemed sale of the property to an affiliated corporation that is not a member of the group (a related person within the meaning of section 1239(b)).

(iii) *Example 3. Selling member's disposition of installment note—(A) Facts.* S owns land with a basis of \$70. On January 1 of Year 1, S sells the land to B in exchange for B's \$110 note. The note bears a market rate of interest in excess of the applicable Federal rate, and provides for principal payments of \$55 in Year 4 and \$55 in Year 5. On July 1 of Year 3, S sells B's note to X for \$110.

(B) *Timing.* S's intercompany gain is taken into account under this section, and not under the rules of section 453. Consequently, S's sale of B's note does not result in its intercompany gain from the land being taken into account (for example, under section 453B). The sale does not prevent S's intercompany items and B's corresponding items from being taken into account in determining the group's consolidated taxable income under the matching rule, and X does not reflect any aspect of the intercompany transaction (X has its own cost basis in the note). S will take the intercompany gain into account under the matching rule or acceleration rule based on subsequent events (for example, B's sale of the land). *See also* paragraph (g) of this section for additional rules

applicable to B's note as an intercompany obligation.

(iv) *Example 4. Cancellation of debt and attribute reduction under section 108(b)*—(A) *Facts.* S holds land for investment with a basis of \$0. On January 1 of Year 1, S sells the land to B for \$100. B also holds the land for investment. During Year 3, B is insolvent and B's nonmember creditors discharge \$60 of B's indebtedness. Because of insolvency, B's \$60 discharge is excluded from B's gross income under section 108(a), and B reduces the basis of the land by \$60 under sections 108(b) and 1017.

(B) *Acceleration rule.* As a result of B's basis reduction under section 1017, \$60 of S's intercompany gain will not be taken into account under the matching rule (because there is only a \$40 difference between B's \$40 basis in the land and the \$0 basis the land would have if S and B were divisions of a single corporation). Accordingly, S takes \$60 of its gain into account under the acceleration rule in Year 3. S's gain is long-term capital gain, determined under paragraph (d)(1)(ii) of this section as if B sold the land to an affiliated corporation that is not a member of the group for \$100 immediately before the basis reduction.

(C) *Purchase price adjustment.* Assume instead that S sells the land to B in exchange for B's \$100 purchase money note, B remains solvent, and S subsequently agrees to discharge \$60 of the note as a purchase price adjustment to which section 108(e)(5) applies. Under applicable principles of tax law, \$60 of S's gain and \$60 of B's basis in the land are eliminated and never taken into account. Similarly, the note is not treated as satisfied and reissued under paragraph (g) of this section.

(v) *Example 5. Section 481*—(A) *Facts.* S operates several trades or businesses, including a manufacturing business. S receives permission to change its method of accounting for valuing inventory for its manufacturing business. S increases the basis of its ending inventory by \$100, and the related \$100 positive section 481(a) adjustment is to be taken into account ratably over six taxable years, beginning in Year 1. During Year 3, S sells all of the assets used in its manufacturing business to B at a gain. Immediately after the transfer, B does not use the same inventory valuation method as S. On a separate entity basis, S's sale results in an acceleration of the balance of the section 481(a) adjustment to Year 3.

(B) *Timing and attributes.* Under paragraph (b)(2) of this section, the balance of S's section 481(a) adjustment

accelerated to Year 3 is intercompany income. However, S's \$100 basis increase before the intercompany transaction eliminates the related difference for this amount between B's corresponding items taken into account and the recomputed corresponding items in subsequent periods. Because the accelerated section 481(a) adjustment will not be taken into account in determining the group's consolidated taxable income (and consolidated tax liability) under the matching rule, the balance of S's section 481 adjustment is taken into account under the acceleration rule as ordinary income at the time of the intercompany transaction. (If S's sale had not resulted in accelerating S's section 481(a) adjustment on a separate entity basis, S would have no intercompany income to be taken into account under this section.)

* * * * *

(e) * * *

(1) * * *

(v) *Examples.* The inventory rules of this paragraph (e)(1) are illustrated by the following examples.

(A) *Example 1. Increment averaging method*—(1) *Facts.* Both S and B use a double-extension, dollar-value LIFO inventory method, and both value inventory increments using the earliest acquisitions cost valuation method. During Year 2, S sells 25 units of product Q to B on January 15 at \$10/unit. S sells another 25 units on April 15, on July 15, and on September 15, at \$12/unit. S's earliest cost of product Q is \$7.50/unit and S's most recent cost of product Q is \$8.00/unit. Both S and B have an inventory increment for the year. B's total inventory costs incurred during Year 2 are \$6,000 and the LIFO value of B's Year 2 layer of increment is \$600.

(2) *Intercompany inventory income.* Under paragraph (e)(1)(iii) of this section, S must use a reasonable method of allocating its LIFO inventory costs to intercompany transactions. Because S has an inventory increment for Year 2 and uses the earliest acquisitions cost method, a reasonable method of determining its intercompany cost of goods sold for product Q is to use its most recent costs. Thus, its intercompany cost of goods sold is \$800 (\$8.00 most recent cost, multiplied by 100 units sold to B), and its intercompany inventory income is \$350 (\$1,150 sales proceeds from B minus \$800 cost).

(3) *Timing.* (i) Under the increment averaging method of paragraph (e)(1)(ii)(B) of this section, \$35 of S's \$350 of intercompany inventory income

is not taken into account in Year 2, computed as follows: LIFO value of B's Year 2 layer of increment/B's total inventory costs for year 2, or \$600/\$6,000 = 10%. 10% × S's \$350 intercompany inventory income = \$35.

(ii) Thus, \$315 of S's intercompany inventory income is taken into account in Year 2 (\$350 of total intercompany inventory income minus \$35 not taken into account).

(4) *S incurs a decrement.* The facts are the same as in paragraph (e)(1)(v)(A)(1) of this section (*Example 1*), except that in Year 2, S incurs a decrement equal to 50% of its Year 1 layer. Under paragraph (e)(1)(iii) of this section, S must reasonably allocate the LIFO cost of the decrement to the cost of goods sold to B to determine S's intercompany inventory income.

(5) *B incurs a decrement.* The facts are the same as in paragraph (e)(1)(v)(A)(1) of this section (*Example 1*), except that B incurs a decrement in Year 2. S must take into account the entire \$350 of Year 2 intercompany inventory income because all 100 units of product Q are deemed sold by B in Year 2.

(B) *Example 2. Increment valuation method*—(1) *Facts.* The facts are the same as in paragraph (e)(1)(v)(A)(1) of this section (*Example 1*). In addition, B's use of the earliest acquisition's cost method of valuing its increments results in B valuing its year-end inventory using costs incurred from January through March. B's costs incurred during the year are: \$1,428 in the period January through March; \$1,498 in the period April through June; \$1,524 in the period July through September; and \$1,550 in the period October through December. S's intercompany inventory income for these periods is: \$50 in the period January through March ((25 × \$10) – (25 × \$8)); \$100 in the period April through June ((25 × \$12) – (25 × \$8)); \$100 in the period July through September ((25 × \$12) – (25 × \$8)); and \$100 in the period October through December ((25 × \$12) – (25 × \$8)).

(2) *Timing.* (i) Under the increment valuation method of paragraph (e)(1)(ii)(C) of this section, \$21 of S's \$350 of intercompany inventory income is not taken into account in Year 2, computed as follows: LIFO value of B's Year 2 layer of increment/B's total inventory costs from January through March of Year 2, or \$600/\$1,428 = 42%. 42% × S's \$50 intercompany inventory income for the period from January through March = \$21.

(ii) Thus, \$329 of S's intercompany inventory income is taken into account in Year 2 (\$350 of total intercompany inventory income minus \$21 not taken into account).

(3) *B incurs a subsequent decrement.* The facts are the same as in paragraph (e)(1)(v)(B)(1) of this section (*Example 2*). In addition, assume that in Year 3, B experiences a decrement in its pool that receives intercompany purchases from S. B's decrement equals 20% of the base-year costs for its Year 2 layer. The fact that B has incurred a decrement means that all of its inventory costs incurred for Year 3 are included in cost of goods sold. As a result, S takes into account its entire amount of intercompany inventory income from its Year 3 sales. In addition, S takes into account \$4.20 of its Year 2 layer of intercompany inventory income not already taken into account (20% of \$21).

(C) *Example 3. Other reasonable inventory methods—(1) Facts.* Both S and B use a dollar-value LIFO inventory method for their inventory transactions. During Year 1, S sells inventory to B and to X. Under paragraph (e)(1)(iv) of this section, to compute its intercompany inventory income and the amount of this income not taken into account, S computes its intercompany inventory income using the transfer price of the inventory items less a FIFO cost for the goods, takes into account these items based on a FIFO cost flow assumption for B's corresponding items, and the LIFO methods used by S and B are ignored for these computations. These computations are comparable to the methods used by S and B for financial reporting purposes, and the book methods and results are used for tax purposes. S adjusts the amount of intercompany inventory items not taken into account as required by section 263A.

(2) *Reasonable method.* The method used by S is a reasonable method under paragraph (e)(1)(iv) of this section if the cumulative amount of intercompany inventory items not taken into account by S is not significantly greater than the cumulative amount that would not be taken into account under the methods specifically described in paragraph (e)(1) of this section. If, for any year, the method results in a cumulative amount of intercompany inventory items not taken into account by S that significantly exceeds the cumulative amount that would not be taken into account under the methods specifically provided, S must take into account for that year the amount necessary to eliminate the excess. The method is thereafter applied with appropriate adjustments to reflect the amount taken into account (for example, to prevent the amount from being taken into account more than once).

(f) * * *
(5) * * *
(ii) * * *
(B) * * *

(2) *Time limitation and adjustments.* The transfer of old T's assets to new T qualifies under paragraph (f)(5)(ii)(B)(1) of this section only if B has entered into a written plan, on or before the due date of the group's consolidated income tax return (including extensions) for the tax year that includes the date of old T's liquidation, to transfer the old T assets to new T, and the statement described in paragraph (f)(5)(ii)(E) of this section is included on or with a timely filed consolidated income tax return (including extensions) for the tax year that includes the date of the liquidation. The transfer of substantially all of T's assets to new T must be completed within 12 months of the filing of the return. Appropriate adjustments are made to reflect any events occurring before the formation of new T and to reflect any assets not transferred to new T, or liabilities not assumed by new T. For example, if B retains an asset of old T, the asset is treated under paragraph (f)(3) of this section as acquired by new T but distributed to B immediately after the reorganization.

* * * * *

(F) *Applicability date.* Paragraphs (f)(5)(ii)(B)(1) and (2) of this section apply to transactions in which old T's liquidation into B occurs on or after October 25, 2007.

(6) * * *

(ii) *Gain stock.* For dispositions of P stock, see § 1.1032–3.

* * * * *

(v) *Applicability date.* This paragraph (f)(6) applies to gain or loss taken into account on or after July 12, 1995, and to transactions occurring on or after July 12, 1995.

(7) *Examples—In general.* The application of this section to intercompany transactions with respect to stock of members is illustrated by the following examples.

(i) *Example 1. Dividend exclusion and property distribution—(A) Facts.* S owns land with a \$70 basis and \$100 value. On January 1 of Year 1, P's basis in S's stock is \$100. During Year 1, S declares and makes a dividend distribution of the land to P. Under section 311(b), S has a \$30 gain. Under section 301(d), P's basis in the land is \$100. On July 1 of Year 3, P sells the land to X for \$110.

(B) *Dividend elimination and stock basis adjustments.* Under paragraph (b)(1) of this section, S's distribution to P is an intercompany distribution. Under paragraph (f)(2)(ii) of this section, P's \$100 of dividend income is not

included in gross income. Under § 1.1502–32, P's basis in S's stock is reduced from \$100 to \$0 in Year 1.

(C) *Matching rule and stock basis adjustments.* Under the matching rule (treating P as the buying member and S as the selling member), S takes its \$30 gain into account in Year 3 to reflect the \$30 difference between P's \$10 gain taken into account and the \$40 recomputed gain. Under § 1.1502–32, P's basis in S's stock is increased from \$0 to \$30 in Year 3.

(D) *Loss property.* The facts are the same as in paragraph (f)(7)(i)(A) of this section (*Example 1*), except that S has a \$130 (rather than \$70) basis in the land. Under paragraph (f)(2)(iii) of this section, the principles of section 311(b) apply to S's loss from the intercompany distribution. Thus, S has a \$30 loss that is taken into account under the matching rule in Year 3 to reflect the \$30 difference between P's \$10 gain taken into account and the \$20 recomputed loss. (The results are the same under section 267(f).) Under § 1.1502–32, P's basis in S's stock is reduced from \$100 to \$0 in Year 1, and from \$0 to a \$30 excess loss account in Year 3. (If P had distributed the land to its shareholders, rather than selling the land to X, P would take its \$10 gain under section 311(b) into account, and S would take its \$30 loss into account under the matching rule with \$10 offset by P's gain and \$20 recharacterized as a noncapital, nondeductible amount.)

(E) *Entitlement rule.* The facts are the same as in paragraph (f)(7)(i)(A) of this section (*Example 1*), except that, after P becomes entitled to the distribution but before the distribution is made, S issues additional stock to the public and becomes a nonmember. Under paragraph (f)(2)(i) of this section, the determination of whether a distribution is an intercompany distribution is made under the entitlement rule of paragraph (f)(2)(iv) of this section. Treating S's distribution as made when P becomes entitled to it results in the distribution being an intercompany distribution. Under paragraph (f)(2)(ii) of this section, the distribution is not included in P's gross income. S's \$30 gain from the distribution is intercompany gain that is taken into account under the acceleration rule immediately before S becomes a nonmember. Thus, there is a net \$70 decrease in P's basis in its S stock under § 1.1502–32 (\$100 decrease for the distribution and a \$30 increase for S's \$30 gain). Under paragraph (f)(2)(iv) of this section, P does not take the distribution into account again under separate return rules when received, and P is not entitled to a dividends received deduction.

* * * * *

(ii) *Example 2. Excess loss accounts—*(A) *Facts.* S owns all of T's only class of stock with a \$10 basis and \$100 value. S has substantial earnings and profits, and T has \$10 of earnings and profits. On January 1 of Year 1, S declares and distributes a dividend of all of the T stock to P. Under section 311(b), S has a \$90 gain. Under section 301(d), P's basis in the T stock is \$100. During Year 3, T borrows \$90 and declares and makes a \$90 distribution to P to which section 301 applies, and P's basis in the T stock is reduced under § 1.1502–32 from \$100 to \$10. During Year 6, T has \$5 of earnings that increase P's basis in the T stock under § 1.1502–32 from \$10 to \$15. On December 1 of Year 9, T issues additional stock to X and, as a result, T becomes a nonmember.

(B) *Dividend exclusion.* Under paragraph (f)(2)(ii) of this section, P's \$100 of dividend income from S's distribution of the T stock, and its \$10 of dividend income from T's \$90 distribution, are not included in gross income.

(C) *Matching and acceleration rules.* Under § 1.1502–19(b)(1), when T becomes a nonmember P must include in income the amount of its excess loss account (if any) in T stock. P has no excess loss account in the T stock. Therefore P's corresponding item from the deconsolidation of T is \$0. Treating S and P as divisions of a single corporation, the T stock would continue to have a \$10 basis after the distribution, and the adjustments under § 1.1502–32 for T's \$90 distribution and \$5 of earnings would result in a \$75 excess loss account. Thus, the recomputed corresponding item from the deconsolidation is \$75. Under the matching rule, S takes \$75 of its \$90 gain into account in Year 9 as a result of T becoming a nonmember, to reflect the difference between P's \$0 gain taken into account and the \$75 recomputed gain. S's remaining \$15 of gain is taken into account under the matching and acceleration rules based on subsequent events (for example, under the matching rule if P subsequently sells its T stock, or under the acceleration rule if S becomes a nonmember).

(D) *Reverse sequence.* The facts are the same as in paragraph (f)(7)(ii)(A) of this section (*Example 2*), except that T borrows \$90 and makes its \$90 distribution to S before S distributes T's stock to P. Under paragraph (f)(2)(ii) of this section, T's \$90 distribution to S (\$10 of which is a dividend) is not included in S's gross income. The corresponding negative adjustment under § 1.1502–32 reduces S's basis in the T stock from \$10 to an \$80 excess

loss account. Under section 311(b), S has a \$90 gain from the distribution of T stock to P. Under section 301(d) P's initial basis in the T stock is \$10 (the stock's fair market value), and the basis increases to \$15 under § 1.1502–32 as a result of T's earnings in Year 6. The timing and attributes of S's gain are determined in the manner provided in paragraph (f)(7)(ii)(C) of this section (*Example 2*). Thus, \$75 of S's gain is taken into account under the matching rule in Year 9 as a result of T becoming a nonmember, and the remaining \$15 is taken into account under the matching and acceleration rules based on subsequent events.

(E) *Partial stock sale.* The facts are the same as in paragraph (f)(7)(ii)(A) of this section (*Example 2*), except that P sells 10% of T's stock to X on December 1 of Year 9 for \$1.50 (rather than T's issuing additional stock and becoming a nonmember). Under the matching rule, S takes \$9 of its gain into account to reflect the difference between P's \$0 gain taken into account (\$1.50 sale proceeds minus \$1.50 basis) and the \$9 recomputed gain (\$1.50 sale proceeds plus \$7.50 excess loss account).

(F) *Loss, rather than cash distribution.* The facts are the same as in paragraph (f)(7)(ii)(A) of this section (*Example 2*), except that T retains the loan proceeds and incurs a \$90 loss in Year 3 that is absorbed by the group. The timing and attributes of S's gain are determined in the same manner provided in paragraph (f)(7)(ii)(C) of this section (*Example 2*). Under § 1.1502–32, the loss in Year 3 reduces P's basis in the T stock from \$100 to \$10, and T's \$5 of earnings in Year 6 increase the basis to \$15. Thus, \$75 of S's gain is taken into account under the matching rule in Year 9 as a result of T becoming a nonmember, and the remaining \$15 is taken into account under the matching and acceleration rules based on subsequent events. (The timing and attributes of S's gain would be determined in the same manner provided in paragraph (f)(7)(ii)(D) of this section (*Example 2*) if T incurred the \$90 loss before S's distribution of the T stock to P.)

(G) *Stock sale, rather than stock distribution.* The facts are the same as in paragraph (f)(7)(ii)(A) of this section (*Example 2*), except that S sells the T stock to P for \$100 (rather than distributing the stock). The timing and attributes of S's gain are determined in the same manner provided in paragraph (f)(7)(ii)(C) of this section (*Example 2*). Thus, \$75 of S's gain is taken into account under the matching rule in Year 9 as a result of T becoming a nonmember, and the remaining \$15 is taken into account under the matching

and acceleration rules based on subsequent events.

(iii) *Example 3. Intercompany reorganization—*(A) *Facts.* P forms S and B by contributing \$200 to the capital of each. During Years 1 through 4, S and B each earn \$50, and under § 1.1502–32 P adjusts its basis in the stock of each to \$250. (See § 1.1502–33 for adjustments to earnings and profits.) On January 1 of Year 5, the fair market value of S's assets and its stock is \$500, and S merges into B in a tax-free reorganization. Pursuant to the plan of reorganization, P receives B stock with a fair market value of \$350 and \$150 of cash.

(B) *Treatment as a section 301 distribution.* The merger of S into B is a transaction to which paragraph (f)(3) of this section applies. P is treated as receiving additional B stock with a fair market value of \$500 and, under section 358, a basis of \$250. Immediately after the merger, \$150 of the stock received is treated as redeemed, and the redemption is treated under section 302(d) as a distribution to which section 301 applies. Because the \$150 distribution is treated as not received as part of the merger, section 356 does not apply and no basis adjustments are required under section 358(a)(1)(A) and (B). Because B is treated under section 381(c)(2) as receiving S's earnings and profits and the redemption is treated as occurring after the merger, \$100 of the distribution is treated as a dividend under section 301 and P's basis in the B stock is reduced correspondingly under § 1.1502–32. The remaining \$50 of the distribution reduces P's basis in the B stock. Section 301(c)(2) and § 1.1502–32. Under paragraph (f)(2)(ii) of this section, P's \$100 of dividend income is not included in gross income. Under § 1.302–2(c), proper adjustments are made to P's basis in its B stock to reflect its basis in the B stock redeemed, with the result that P's basis in the B stock is reduced by the entire \$150 distribution.

(C) *Depreciated property.* The facts are the same as in paragraph (f)(7)(iii)(A) of this section (*Example 3*), except that property of S with a \$200 basis and \$150 fair market value is distributed to P (rather than cash of B). As in paragraph (f)(7)(iii)(B) of this section (*Example 3*), P is treated as receiving additional B stock in the merger and a \$150 distribution to which section 301 applies immediately after the merger. Under paragraph (f)(2)(iii) of this section, the principles of section 311(b) apply to B's \$50 loss and the loss is taken into account under the matching and acceleration rules based on subsequent events (for example, under

the matching rule if P subsequently sells the property, or under the acceleration rule if B becomes a nonmember). The results are the same under section 267(f).

(D) *Divisive transaction.* Assume instead that, pursuant to a plan, S distributes the stock of a lower-tier subsidiary in a spin-off transaction to which section 355 applies together with \$150 of cash. The distribution of stock is a transaction to which paragraph (f)(3) of this section applies. P is treated as receiving the \$150 of cash immediately before the section 355 distribution, as a distribution to which section 301 applies. Section 356(b) does not apply and no basis adjustments are required under section 358(a)(1) (A) and (B). Because the \$150 distribution is treated as made before the section 355 distribution, the distribution reduces P's basis in the S stock under § 1.1502–32, and the basis allocated under section 358(c) between the S stock and the lower-tier subsidiary stock received reflects this basis reduction.

(iv) *Example 4. All cash intercompany reorganization under section 368(a)(1)(D).*—(A) *Facts.* P owns all of the stock of M and B. M owns all of the stock of S with a basis of \$25. On January 1 of Year 2, the fair market value of S's assets and its stock is \$100, and S sells all of its assets to B for \$100 cash and liquidates. The transaction qualifies as a reorganization described in section 368(a)(1)(D). Pursuant to § 1.368–2(l), B will be deemed to issue a nominal share of B stock to S in addition to the \$100 of cash actually exchanged for the S assets, and S will be deemed to distribute all of the consideration to M. M will be deemed to distribute the nominal share of B stock to P.

(B) *Treatment as a section 301 distribution.* The sale of S's assets to B is a transaction to which paragraph (f)(3) of this section applies. In addition to the nominal share issued by B to S under § 1.368–2(l), S is treated as receiving additional B stock with a fair market value of \$100 (in lieu of the \$100) and, under section 358, a basis of \$25 which S distributes to M in liquidation. Immediately after the sale, the B stock (with the exception of the nominal share which is still held by M) received by M is treated as redeemed for \$100, and the redemption is treated under section 302(d) as a distribution to which section 301 applies. M's basis of \$25 in the B stock is reduced under § 1.1502–32(b)(3)(v), resulting in an excess loss account of \$75 in the nominal share. (See § 1.302–2(c)). M's deemed distribution of the nominal share of B stock to P under § 1.368–2(l) will result

in M generating an intercompany gain under section 311(b) of \$75, to be subsequently taken into account under the matching and acceleration rules.

(v) *Example 5. Stock redemptions and distributions.*—(A) *Facts.* Before becoming a member of the P group, S owns P stock with a \$30 basis. On January 1 of Year 1, P buys all of S's stock. On July 1 of Year 3, P redeems the P stock held by S for \$100 in a transaction to which section 302(a) applies.

(B) *Gain under section 302.* Under paragraph (f)(4) of this section, P's basis in the P stock acquired from S is treated as eliminated. As a result of this elimination, S's intercompany item will never be taken into account under the matching rule because P's basis in the stock does not reflect S's intercompany item. Therefore, S's \$70 gain is taken into account under the acceleration rule in Year 3. The attributes of S's item are determined under paragraph (d)(1)(ii) of this section by applying the matching rule as if P had sold the stock to an affiliated corporation that is not a member of the group at no gain or loss. Although P's corresponding item from a sale of its stock would have been excluded from gross income under section 1032, paragraph (c)(6)(ii) of this section prevents S's gain from being treated as excluded from gross income; instead S's gain is capital gain.

(C) *Gain under section 311.* The facts are the same as in paragraph (f)(7)(v)(A) of this section (*Example 5*), except that S distributes the P stock to P in a transaction to which section 301 applies (rather than the stock being redeemed), and S has a \$70 gain under section 311(b). The timing and attributes of S's gain are determined in the manner provided in paragraph (f)(7)(v)(B) of this section (*Example 5*).

(D) *Loss stock.* The facts are the same as in paragraph (f)(7)(v)(A) of this section (*Example 5*), except that S has a \$130 (rather than \$30) basis in the P stock and has a \$30 loss under section 302(a). The limitation under paragraph (c)(6)(ii) of this section does not apply to intercompany losses. Thus, S's loss is taken into account in Year 3 as a noncapital, nondeductible amount.

(vi) *Example 6. Intercompany stock sale followed by section 332 liquidation.*—(A) *Facts.* S owns all of the stock of T, with a \$70 basis and \$100 value, and T's assets have a \$10 basis and \$100 value. On January 1 of Year 1, S sells all of T's stock to B for \$100. On July 1 of Year 3, when T's assets are still worth \$100, T distributes all of its assets to B in an unrelated complete liquidation to which section 332 applies.

(B) *Timing and attributes.* Under paragraph (b)(3)(ii) of this section, B's unrecognized gain or loss under section 332 is a corresponding item for purposes of applying the matching rule. In Year 3 when T liquidates, B has \$0 of unrecognized gain or loss under section 332 because B has a \$100 basis in the T stock and receives a \$100 distribution with respect to its T stock. Treating S and B as divisions of a single corporation, the recomputed corresponding item would have been \$30 of unrecognized gain under section 332 because B would have succeeded to S's \$70 basis in the T stock. Thus, under the matching rule, S's \$30 intercompany gain is taken into account in Year 3 as a result of T's liquidation. Under paragraph (c)(1)(i) of this section, the attributes of S's gain and B's corresponding item are redetermined as if S and B were divisions of a single corporation. Although S's gain ordinarily would be redetermined to be treated as excluded from gross income to reflect the nonrecognition of B's gain under section 332, S's gain remains capital gain because B's unrecognized gain under section 332 is not permanently and explicitly disallowed under the Code. See paragraph (c)(6)(ii) of this section. However, relief may be elected under paragraph (f)(5)(ii) of this section.

(C) *Intercompany sale at a loss.* The facts are the same as in paragraph (f)(7)(vi)(A) of this section (*Example 6*), except that S has a \$130 (rather than \$70) basis in the T stock. The limitation under paragraph (c)(6)(ii) of this section does not apply to intercompany losses. Thus, S's intercompany loss is taken into account in Year 3 as a noncapital, nondeductible amount. However, relief may be elected under paragraph (f)(5)(ii) of this section.

(vii) *Example 7. Intercompany stock sale followed by section 355 distribution.*—(A) *Facts.* S owns all of the stock of T with a \$70 basis and a \$100 value. On January 1 of Year 1, S sells all of T's stock to M for \$100. On June 1 of Year 6, M distributes all of its T stock to its nonmember shareholders in a transaction to which section 355 applies. At the time of the distribution, M has a basis in T stock of \$100 and T has a value of \$150.

(B) *Timing and attributes.* Under paragraph (b)(3)(ii) of this section, M's \$50 gain not recognized on the distribution under section 355 is a corresponding item. Treating S and M as divisions of a single corporation, the recomputed corresponding item would be \$80 of unrecognized gain under section 355 because M would have succeeded to S's \$70 basis in the T

stock. Thus, under the matching rule, S's \$30 intercompany gain is taken into account in Year 6 as a result of the distribution. Under paragraph (c)(1)(i) of this section, the attributes of S's intercompany item and M's corresponding item are redetermined to produce the same effect on consolidated taxable income as if S and M were divisions of a single corporation.

Although S's gain ordinarily would be redetermined to be treated as excluded from gross income to reflect the nonrecognition of M's gain under section 355(c), S's gain remains capital gain because M's unrecognized gain under section 355(c) is not permanently and explicitly disallowed under the Code. See paragraph (c)(6)(ii) of this section. Because M's distribution of the T stock is not an intercompany transaction, relief is not available under paragraph (f)(5)(ii) of this section.

(C) *Section 355 distribution within the group.* The facts are the same as under paragraph (f)(7)(vii)(A) of this section (*Example 7*), except that M distributes the T stock to B (another member of the group), and B takes a \$75 basis in the T stock under section 358. Under paragraph (j)(2) of this section, B is a successor to M for purposes of taking S's intercompany gain into account, and therefore both M and B might have corresponding items with respect to S's intercompany gain. To the extent it is possible, matching with respect to B's corresponding items produces the result most consistent with treating S, M, and B as divisions of a single corporation. See paragraphs (j)(3) and (j)(4) of this section. However, because there is only \$5 difference between B's \$75 basis in the T stock and the \$70 basis the stock would have if S, M, and B were divisions of a single corporation, only \$5 can be taken into account under the matching rule with respect to B's corresponding items. (This \$5 is taken into account with respect to B's corresponding items based on subsequent events.) The remaining \$25 of S's \$30 intercompany gain is taken into account in Year 6 under the matching rule with respect to M's corresponding item from its distribution of the T stock. The attributes of S's remaining \$25 of gain are determined in the same manner as in paragraph (f)(7)(vii)(B) of this section (*Example 7*).

(D) *Relief elected.* The facts are the same as in paragraph (f)(7)(vii)(C) of this section (*Example 7*) except that P elects relief pursuant to paragraph (f)(5)(ii)(D) of this section. As a result of the election, M's distribution of the T stock is treated as subject to sections 301 and 311 instead of section 355. Accordingly, M recognizes \$50 of intercompany gain

from the distribution, B takes a basis in the stock equal to its fair market value of \$150, and S and M take their intercompany gains into account with respect to B's corresponding items based on subsequent events. (None of S's gain is taken into account in Year 6 as a result of M's distribution of the T stock.)

* * * * *

(g) * * *

(7) *Examples*—(i) *In general.* For purposes of the examples in this paragraph (g), unless otherwise stated, interest is qualified stated interest under § 1.1273–1(c), and the intercompany obligations are capital assets and are not subject to section 475.

(ii) The application of this section to obligations of members is illustrated by the following examples:

(A) *Example 1. Interest on intercompany obligation*—(1) *Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 5. B fully performs its obligations. Under their separate entity methods of accounting, B accrues a \$10 interest deduction annually under section 163, and S accrues \$10 of interest income annually under section 61(a)(4) and § 1.446–2.

(2) *Matching rule.* Under paragraph (b)(1) of this section, the accrual of interest on B's note is an intercompany transaction. Under the matching rule, S takes its \$10 of income into account in each of years 1 through 5 to reflect the \$10 difference between B's \$10 of interest expense taken into account and the \$0 recomputed expense. S's income and B's deduction are ordinary items. (Because S's intercompany item and B's corresponding item would both be ordinary on a separate entity basis, the attributes are not redetermined under paragraph (c)(1)(i) of this section.)

(3) *Original issue discount.* The facts are the same as in paragraph (g)(7)(ii)(A)(1) of this section (*Example 1*), except that B borrows \$90 (rather than \$100) from S in return for B's note providing for \$10 of interest annually and repayment of \$100 at the end of year 5. The principles described in paragraph (g)(7)(ii)(A)(2) of this section (*Example 1*) for stated interest also apply to the \$10 of original issue discount. Thus, as B takes into account its corresponding expense under section 163(e), S takes into account its intercompany income under section 1272. S's income and B's deduction are ordinary items.

(4) *Tax-exempt income.* The facts are the same as in paragraph (g)(7)(ii)(A)(1) of this section (*Example 1*), except that

B's borrowing from S is allocable under section 265 to B's purchase of state and local bonds to which section 103 applies. The timing of S's income is the same as in paragraph (g)(7)(ii)(A)(2) of this section (*Example 1*). Under paragraph (c)(4)(i) of this section, the attributes of B's corresponding item of disallowed interest expense control the attributes of S's offsetting intercompany interest income. Paragraph (c)(6) of this section does not prevent the redetermination of S's intercompany item as excluded from gross income because section 265(a)(2) permanently and explicitly disallows B's corresponding deduction and because, under paragraph (g)(4)(i)(B) of this section, paragraph (c)(6)(ii) of this section does not apply to prevent any intercompany income from the B note from being excluded from gross income. Accordingly, S's intercompany income is treated as excluded from gross income.

(B) *Example 2. Intercompany obligation becomes nonintercompany obligation*—(1) *Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 5. As of January 1 of year 3, B has paid the interest accruing under the note and S sells B's note to X for \$70, reflecting an increase in prevailing market interest rates. B is never insolvent within the meaning of section 108(d)(3).

(2) *Deemed satisfaction and reissuance.* Because the B note becomes an obligation that is not an intercompany obligation, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(2) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its fair market value of \$70 immediately before S's sale to X. As a result of the deemed satisfaction of the note for less than its adjusted issue price, B takes into account \$30 of discharge of indebtedness income under § 1.61–12. On a separate entity basis, S's \$30 loss would be a capital loss under section 1271(a)(1). Under the matching rule, however, the attributes of S's intercompany item and B's corresponding item must be redetermined to produce the same effect as if the transaction had occurred between divisions of a single corporation. Under paragraph (c)(4)(i) of this section, the attributes of B's \$30 of discharge of indebtedness income control the attributes of S's loss. Thus, S's loss is treated as ordinary loss. B is also treated as reissuing, immediately after the satisfaction, a new note to S with a \$70 issue price, a \$100 stated

redemption price at maturity, and a \$70 basis in the hands of S. S is then treated as selling the new note to X for the \$70 received by S in the actual transaction. Because S has a basis of \$70 in the new note, S recognizes no gain or loss from the sale to X. After the sale, the new note held by X is not an intercompany obligation, it has a \$70 issue price, a \$100 stated redemption price at maturity, and a \$70 basis. The \$30 of original issue discount will be taken into account by B and X under sections 163(e) and 1272.

(3) *Creditor deconsolidation.* The facts are the same as in paragraph (g)(7)(ii)(B)(1) of this section (*Example 2*), except that P sells S's stock to X (rather than S selling B's note to X). Because the B note becomes an obligation that is not an intercompany obligation, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(2) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its \$70 fair market value immediately before S becomes a nonmember. The treatment of S's \$30 of loss and B's \$30 of discharge of indebtedness income is the same as in paragraph (g)(7)(ii)(B)(2) of this section (*Example 2*). The new note held by S upon deconsolidation is not an intercompany obligation, it has a \$70 issue price, a \$100 stated redemption price at maturity, and a \$70 basis. The \$30 of original issue discount will be taken into account by B and S under sections 163(e) and 1272.

(4) *Debtor deconsolidation.* The facts are the same as in paragraph (g)(7)(ii)(B)(1) of this section (*Example 2*), except that P sells B's stock to X (rather than S selling B's note to X). The results to S and B are the same as in paragraph (g)(7)(ii)(B)(3) of this section (*Example 2*).

(5) *Subgroup exception.* The facts are the same as in paragraph (g)(7)(ii)(B)(1) of this section (*Example 2*), except that P owns all of the stock of S, S owns all of the stock of B, and P sells all of the S stock to X, the parent of another consolidated group. Because B and S, members of an intercompany obligation subgroup, cease to be members of the P group in a transaction that does not cause either member to recognize an item with respect to the B note, and such members constitute an intercompany obligation subgroup in the X group, P's sale of S stock is not a triggering transaction under paragraph (g)(3)(i)(B)(8) of this section, and the note is not treated as satisfied and reissued under paragraph (g)(3)(ii) of this section. After the sale, the note held by S has a \$100 issue price, a \$100

stated redemption price at maturity, and a \$100 basis. The results are the same if the S stock is sold to an individual and the S-B affiliated group elects to file a consolidated return for the period beginning on the day after S and B cease to be members of the P group.

(6) *Section 338 election.* The facts are the same as in paragraph (g)(7)(ii)(B)(1) of this section (*Example 2*), except that P sells S's stock to X and a section 338 election is made with respect to the stock sale. Under section 338, S is treated as selling all of its assets to new S, including the B note, at the close of the acquisition date. The aggregate deemed sales price (within the meaning of § 1.338-4) allocated to the B note is \$70. Because the B note becomes an obligation that is not an intercompany obligation, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(2) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued immediately before S's deemed sale to new S for \$70, the amount realized with respect to the note (the aggregate deemed sales price allocated to the note under § 1.338-6). The results to S and B are the same as in paragraph (g)(7)(ii)(B)(2) of this section (*Example 2*).

(7) *Appreciated note.* The facts are the same as in paragraph (g)(7)(ii)(B)(1) of this section (*Example 2*), except that S sells B's note to X for \$130 (rather than \$70), reflecting a decline in prevailing market interest rates. Because the B note becomes an obligation that is not an intercompany obligation, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(2) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its fair market value of \$130 immediately before S's sale to X. As a result of the deemed satisfaction of the note for more than its adjusted issue price, B takes into account \$30 of repurchase premium under § 1.163-7(c). On a separate entity basis, S's \$30 gain would be a capital gain under section 1271(a)(1). Under the matching rule, however, the attributes of S's intercompany item and B's corresponding item must be redetermined to produce the same effect as if the transaction had occurred between divisions of a single corporation. Under paragraph (c)(4)(i) of this section, the attributes of B's premium deduction control the attributes of S's gain. Accordingly, S's gain is treated as ordinary income. B is also treated as reissuing, immediately after the satisfaction, a new note to S with a \$130 issue price, \$100 stated redemption price at maturity, and \$130

basis in the hands of S. S is then treated as selling the new note to X for the \$130 received by S in the actual transaction. Because S has a basis of \$130 in the new note, S recognizes no gain or loss from the sale to X. After the sale, the new note held by X is not an intercompany obligation, it has a \$130 issue price, a \$100 stated redemption price at maturity, and a \$130 basis. The treatment of B's \$30 of bond issuance premium under the new note is determined under § 1.163-13.

(8) *Deferral of loss or deduction with respect to nonmember indebtedness acquired in debt exchange.* The facts are the same as in paragraph (g)(7)(ii)(B)(1) of this section (*Example 2*), except that S sells B's note to X for a non-publicly traded X note with an issue price and face amount of \$100 and a fair market value of \$70, and that, subsequently, S sells the X note for \$70. Because the B note becomes an obligation that is not an intercompany obligation, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(2) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued immediately before S's sale to X for \$100, the amount realized with respect to the note (determined under section 1274). As a result of the deemed satisfaction, neither S nor B take into account any items of income, gain, deduction, or loss. S is then treated as selling the new B note to X for the X note received by S in the actual transaction. Because S has a basis of \$100 in the new note, S recognizes no gain or loss from the sale to X. After the sale, the new B note held by X is not an intercompany obligation, it has a \$100 issue price, a \$100 stated redemption price at maturity, and a \$100 basis. S also holds an X note with a basis of \$100 but a fair market value of \$70. When S disposes of the X note, S's loss on the disposition is deferred under paragraph (g)(4)(iv) of this section, until B retires its note (the former intercompany obligation in the hands of X).

(C) *Example 3. Loss or bad debt deduction with respect to intercompany obligation—(1) Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 5. On January 1 of year 3, the fair market value of the B note has declined to \$60 and S sells the B note to P for property with a fair market value of \$60. B is never insolvent within the meaning of section 108(d)(3). The B note is not a security within the meaning of section 165(g)(2).

(2) *Deemed satisfaction and reissuance.* Because S realizes an amount of loss from the assignment of the B note, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(1) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its fair market value of \$60 immediately before S's sale to P. As a result of the deemed satisfaction of the note for less than its adjusted issue price (\$100), B takes into account \$40 of discharge of indebtedness income under § 1.61–12. On a separate entity basis, S's \$40 loss would be a capital loss under section 1271(a)(1). Under the matching rule, however, the attributes of S's intercompany item and B's corresponding item must be redetermined to produce the same effect as if the transaction had occurred between divisions of a single corporation. Under paragraph (c)(4)(i) of this section, the attributes of B's \$40 of discharge of indebtedness income control the attributes of S's loss. Thus, S's loss is treated as ordinary loss. B is also treated as reissuing, immediately after the satisfaction, a new note to S with a \$60 issue price, \$100 stated redemption price at maturity, and \$60 basis in the hands of S. S is then treated as selling the new note to P for the \$60 of property received by S in the actual transaction. Because S has a basis of \$60 in the new note, S recognizes no gain or loss from the sale to P. After the sale, the note is an intercompany obligation, it has a \$60 issue price and a \$100 stated redemption price at maturity, and the \$40 of original issue discount will be taken into account by B and P under sections 163(e) and 1272.

(3) *Partial bad debt deduction.* The facts are the same as in paragraph (g)(7)(ii)(C)(1) of this section (*Example 3*), except that S claims a \$40 partial bad debt deduction under section 166(a)(2) (rather than selling the note to P). Because S realizes a deduction from a transaction comparable to an assignment of the B note, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(1) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its fair market value of \$60 immediately before section 166(a)(2) applies. The treatment of S's \$40 loss and B's \$40 of discharge of indebtedness income are the same as in paragraph (g)(7)(ii)(C)(2) of this section (*Example 3*). After the reissuance, S has a basis of \$60 in the new note. Accordingly, the application of section 166(a)(2) does not result in any additional deduction for S. The \$40 of

original issue discount on the new note will be taken into account by B and S under sections 163(e) and 1272.

(4) *Insolvent debtor.* The facts are the same as in paragraph (g)(7)(ii)(C)(1) of this section (*Example 3*), except that B is insolvent within the meaning of section 108(d)(3) at the time that S sells the note to P. As explained in paragraph (g)(7)(ii)(C)(2) of this section (*Example 3*), the transaction is a triggering transaction and the B note is treated as satisfied and reissued for its fair market value of \$60 immediately before S's sale to P. On a separate entity basis, S's \$40 loss would be capital, B's \$40 income would be excluded from gross income under section 108(a), and B would reduce attributes under section 108(b) or section 1017 (*see also* § 1.1502–28). However, under paragraph (g)(4)(i)(C) of this section, section 108(a) does not apply to characterize B's income as excluded from gross income. Accordingly, the attributes of S's loss and B's income are redetermined in the same manner as in paragraph (g)(7)(ii)(C)(2) of this section (*Example 3*).

(D) *Example 4. Intercompany nonrecognition transactions—(1) Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 5. As of January 1 of year 3, B has fully performed its obligations, but the note's fair market value is \$130, reflecting a decline in prevailing market interest rates. On January 1 of year 3, S transfers the note and other assets to a newly formed corporation, Newco, for all of Newco's common stock in an exchange to which section 351 applies.

(2) *No deemed satisfaction and reissuance.* Because the assignment of the B note is an exchange to which section 351 applies and neither S nor B recognize gain or loss, the transaction is not a triggering transaction under paragraph (g)(3)(i)(B)(1) of this section, and the note is not treated as satisfied and reissued under paragraph (g)(3)(ii) of this section.

(3) *Receipt of other property.* The facts are the same as in paragraph (g)(7)(ii)(D)(1) of this section (*Example 4*), except that the other assets transferred to Newco have a basis of \$100 and a fair market value of \$260, and S receives, in addition to Newco common stock, \$15 of cash. Because S would recognize \$15 of gain under section 351(b), the assignment of the B note is a triggering transaction under paragraph (g)(3)(i)(A)(1) of this section. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its fair market value of

\$130 immediately before the transfer to Newco. As a result of the deemed satisfaction of the note for more than its adjusted issue price, B takes into account \$30 of repurchase premium under § 1.163–7(c). On a separate entity basis, S's \$30 gain would be a capital gain under section 1271(a)(1). Under the matching rule, however, the attributes of S's intercompany item and B's corresponding item must be redetermined to produce the same effect as if the transaction had occurred between divisions of a single corporation. Under paragraph (c)(4)(i) of this section, the attributes of B's premium deduction control the attributes of S's gain. Accordingly, S's gain is treated as ordinary income. B is also treated as reissuing, immediately after the satisfaction, a new note to S with a \$130 issue price, \$100 stated redemption price at maturity, and \$130 basis in the hands of S. S is then treated as transferring the new note to Newco for the Newco stock and cash received by S in the actual transaction. Because S has a basis of \$130 in the new B note, S recognizes no gain or loss with respect to the transfer of the note in the section 351 exchange, and S recognizes \$10 of gain with respect to the transfer of the other assets under section 351(b). After the transfer, the note has a \$130 issue price and a \$100 stated redemption price at maturity. The treatment of B's \$30 of bond issuance premium under the new note is determined under § 1.163–13.

(4) *Transferee loss subject to limitation.* The facts are the same as in paragraph (g)(7)(ii)(D)(1) of this section (*Example 4*), except that T is a member with a loss from a separate return limitation year that is subject to limitation under § 1.1502–21(c) (a SRLY loss), and on January 1 of year 3, S transfers the assets and the B note to T in an exchange to which section 351 applies. Because the transferee, T, has a loss that is subject to a limitation, the assignment of the B note is a triggering transaction under paragraph (g)(3)(i)(A)(1) of this section (the exception in paragraph (g)(3)(i)(B)(1) of this section does not apply). Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its fair market value, immediately before S's transfer to T. As a result of the deemed satisfaction of the note for more than its adjusted issue price, B takes into account \$30 of repurchase premium under § 1.163–7(c). On a separate entity basis, S's \$30 gain would be a capital gain under section 1271(a)(1). Under the matching rule, however, the attributes of S's intercompany item and B's

corresponding item must be redetermined to produce the same effect as if the transaction had occurred between divisions of a single corporation. Under paragraph (c)(4)(i) of this section, the attributes of B's premium deduction control the attributes of S's gain. Accordingly, S's gain is treated as ordinary income. B is also treated as reissuing, immediately after the satisfaction, a new note to S with a \$130 issue price, \$100 stated redemption price at maturity, and \$130 basis in the hands of S. The treatment of B's \$30 of bond issuance premium under the new note is determined under § 1.163-13. S is then treated as transferring the new note to T as part of the section 351 exchange. Because T will have a fair market value basis in the reissued B note immediately after the exchange, T's intercompany item from the subsequent retirement of the B note will not reflect any of S's built-in gain (and the amount of T's SRLY loss that may be absorbed by such item will be limited to any appreciation in the B note accruing after the exchange).

(5) *Intercompany obligation transferred in section 332 transaction.* The facts are the same as paragraph (g)(7)(ii)(D)(1) of this section (*Example 4*), except that S transfers the B note to P in complete liquidation under section 332. Because the transaction is an exchange to which section 332 and section 337(a) applies, and neither S nor B recognize gain or loss, the transaction is not a triggering transaction under paragraph (g)(3)(i)(B)(1) of this section, and the note is not treated as satisfied and reissued under paragraph (g)(3)(ii) of this section.

(E) *Example 5. Assumption of intercompany obligation—(1) Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 5. The note is fully recourse and is incurred for use in Business Z. As of January 1 of year 3, B has fully performed its obligations, but the note's fair market value is \$110 reflecting a decline in prevailing market interest rates. Business Z has a fair market value of \$95. On January 1 of year 3, B transfers all of the assets of Business Z and \$15 of cash (substantially all of B's assets) to member T in exchange for the assumption by T of all of B's obligations under the note in a transaction in which gain or loss is recognized under section 1001. The terms and conditions of the note are not modified in connection with the sales transaction, the transaction does not result in a change in payment expectations, and no

amount of income, gain, deduction, or loss is recognized by S, B, or T with respect to the note.

(2) *No deemed satisfaction and reissuance.* Because all of B's obligations under the B note are assumed by T in connection with the sale of the Business Z assets, the assignment of B's obligations under the note is not a triggering transaction under paragraph (g)(3)(i)(B)(2) of this section, and the note is not treated as satisfied and reissued under paragraph (g)(3)(ii) of this section.

(F) *Example 6. Extinguishment of intercompany obligation—(1) Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 20. The note is a security within the meaning of section 351(d)(2). As of January 1 of year 3, B has fully performed its obligations, but the fair market value of the B note is \$130, reflecting a decline in prevailing market interest rates, and S transfers the note to B in exchange for \$130 of B stock in a transaction to which both section 351 and section 354 applies.

(2) *No deemed satisfaction and reissuance.* As a result of the satisfaction of the note for more than its adjusted issue price, B takes into account \$30 of repurchase premium under § 1.163-7(c). Although the transfer of the B note is a transaction to which both section 351 and section 354 applies, under paragraph (g)(4)(i)(C) of this section, any gain or loss from the intercompany obligation is not subject to either section 351(a) or section 354, and therefore, S has a \$30 gain under section 1001. Because the note is extinguished in a transaction in which the adjusted issue price of the note is equal to the creditor's basis in the note, and the debtor's and creditor's items offset in amount, the transaction is not a triggering transaction under paragraph (g)(3)(i)(B)(5) of this section, and the note is not treated as satisfied and reissued under paragraph (g)(3)(ii) of this section. On a separate entity basis, S's \$30 gain would be a capital gain under section 1271(a)(1). Under the matching rule, however, the attributes of S's intercompany item and B's corresponding item must be redetermined to produce the same effect as if the transaction had occurred between divisions of a single corporation. Under paragraph (c)(4)(i) of this section, the attributes of B's premium deduction control the attributes of S's gain. Accordingly, S's gain is treated as ordinary income. Under paragraph (g)(4)(i)(D) of this section, section 108(e)(7) does not apply

upon the extinguishment of the B note, and therefore, the B stock received by S in the exchange will not be treated as section 1245 property.

(G) *Example 7. Exchange of intercompany obligations—(1) Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 20. As of January 1 of year 3, B has fully performed its obligations and, pursuant to a recapitalization to which section 368(a)(1)(E) applies, B issues a new note to S in exchange for the original B note. The new B note has an issue price, stated redemption price at maturity, and stated principal amount of \$100, but contains terms that differ sufficiently from the terms of the original B note to cause a realization event under § 1.1001-3. The original B note and the new B note are both securities (within the meaning of section 354(a)(1)).

(2) *No deemed satisfaction and reissuance.* Because the original B note is extinguished in exchange for a newly issued B note and the issue price of the new B note is equal to both the adjusted issue price of the original B note and S's basis in the original B note, the transaction is not a triggering transaction under paragraph (g)(3)(i)(B)(6) of this section, and the note is not treated as satisfied and reissued under paragraph (g)(3)(ii) of this section. B has neither income from discharge of indebtedness under section 108(e)(10) nor a deduction for repurchase premium under § 1.163-7(c). Although the exchange of the original B note for the new B note is a transaction to which section 354 applies, under paragraph (g)(4)(i)(C) of this section, any gain or loss from the intercompany obligation is not subject to section 354. Under section 1001, S has no gain or loss from the exchange of notes.

(H) *Example 8. Tax benefit rule—(1) Facts.* On January 1 of year 1, B borrows \$100 from S in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 5. As of January 1 of year 3, B has fully performed its obligations, but the note's fair market value has depreciated, reflecting an increase in prevailing market interest rates. On that date, S transfers the B note to member T as part of an exchange for T common stock which is intended to qualify for nonrecognition treatment under section 351 but with a view to sell the T stock at a reduced gain. On February 1 of year 4, all of the stock of T is sold at a reduced gain.

(2) *Deemed satisfaction and reissuance.* Because the assignment of

the B note does not occur within 12 months of the sale of T stock, paragraph (g)(3)(i)(B)(1)(vi) of this section does not apply to treat the assignment as a triggering transaction. However, because the assignment of the B note was engaged in with a view to shift built-in loss from the obligation in order to secure a tax benefit that the group or its members would not otherwise enjoy, under paragraph (g)(3)(i)(C) of this section, the assignment of the B note is a triggering transaction to which paragraph (g)(3)(ii) of this section applies. Under paragraph (g)(3)(ii) of this section, B's note is treated as satisfied and reissued for its fair market value, immediately before S's transfer to T. As a result of the deemed satisfaction of the note for less than its adjusted issue price, B takes into account discharge of indebtedness income and S has a corresponding loss which is treated as ordinary loss. B is also treated as reissuing, immediately after the deemed satisfaction, a new note to S with an issue price and basis equal to its fair market value. S is then treated as transferring the new note to T as part of the section 351 exchange. Because S's basis in the T stock received with respect to the transferred B note is equal to its fair market value, S's gain with respect to the T stock will not reflect any of the built-in loss attributable to the B note. (This example does not address common law doctrines or other authorities that might apply to recharacterize the transaction or to otherwise affect the tax treatment of the transaction.)

(I) *Example 9. Issuance at off-market rate of interest—(1) Facts.* T is a member with a SRLY loss. T's sole shareholder, P, borrows an amount of cash from T in return for a P note that provides for a materially above market rate of interest. The P note is issued with a view to generate additional interest income to T over the term of the note to facilitate the absorption of T's SRLY loss.

(2) *With a view.* Because the P note is issued with a view to shift interest income from the off-market obligation in order to secure a tax benefit that the group or its members would not otherwise enjoy, under paragraph (g)(4)(iii) of this section, the intercompany obligation is treated, for all Federal income tax purposes, as originally issued for its fair market value so T is treated as purchasing the note at a premium. The difference between the amount loaned and the fair market value of the obligation is treated as transferred from P to T as a capital contribution at the time the note is issued. Throughout the term of the note, T takes into account interest income and bond

premium and P takes into account interest deduction and bond issuance premium under generally applicable Internal Revenue Code sections. The adjustment under paragraph (g)(4)(iii) of this section is made without regard to the application of, and in lieu of any adjustment under, section 482 or 1274.

(J) *Example 10. Nonintercompany obligation becomes intercompany obligation—(1) Facts.* On January 1 of year 1, B borrows \$100 from X in return for B's note providing for \$10 of interest annually at the end of each year, and repayment of \$100 at the end of year 5. As of January 1 of year 3, B has fully performed its obligations, but the note's fair market value is \$70, reflecting an increase in prevailing market interest rates. On January 1 of year 3, P buys all of X's stock. B is solvent within the meaning of section 108(d)(3).

(2) *Deemed satisfaction and reissuance.* Under paragraph (g)(5)(ii) of this section, B's note is treated as satisfied for \$70 (determined under the principles of § 1.108–2(f)(2)) immediately after it becomes an intercompany obligation. Both X's \$30 capital loss (under section 1271(a)(1)) and B's \$30 of discharge of indebtedness income (under § 1.61–12) are taken into account in determining consolidated taxable income for year 3. Under paragraph (g)(6)(i)(B) of this section, the attributes of items resulting from the satisfaction are determined on a separate entity basis. *But see* section 382 and § 1.1502–15 (as appropriate). B is also treated as reissuing a new note to X. The new note is an intercompany obligation, it has a \$70 issue price and \$100 stated redemption price at maturity, and the \$30 of original issue discount will be taken into account by B and X in the same manner as provided in paragraph (g)(7)(ii)(A)(3) of this section (*Example 1*).

(3) *Amortization of repurchase premium.* The facts are the same as in paragraph (g)(7)(ii)(J)(1) of this section (*Example 10*), except that on January 1 of year 3, the B note has a fair market value of \$130 and rather than P purchasing the X stock, P purchases the B note from X by issuing its own note. The P note has an issue price, stated redemption price at maturity, stated principal amount, and fair market value of \$130. Under paragraph (g)(5)(ii) of this section, B's note is treated as satisfied for \$130 (determined under the principles of § 1.108–2(f)(1)) immediately after it becomes an intercompany obligation. As a result of the deemed satisfaction of the note, P has no gain or loss and B has \$30 of repurchase premium. Under paragraph (g)(6)(iii) of this section, B's \$30 of

repurchase premium from the deemed satisfaction is amortized by B over the term of the newly issued P note in the same manner as if it were original issue discount and the newly issued P note had been issued directly by B. B is also treated as reissuing a new note to P. The new note is an intercompany obligation, it has a \$130 issue price and \$100 stated redemption price at maturity, and the treatment of B's \$30 of bond issuance premium under the new B note is determined under § 1.163–13.

(4) *Election to file consolidated returns.* Assume instead that B borrows \$100 from S during year 1, but the P group does not file consolidated returns until year 3. Under paragraph (g)(5)(ii) of this section, B's note is treated as satisfied and reissued as a new note immediately after the note becomes an intercompany obligation. The satisfaction and reissuance are deemed to occur on January 1 of year 3, for the fair market value of the obligation (determined under the principles of § 1.108–2(f)(2)) at that time.

(K) *Example 11. Notional principal contracts—(1) Facts.* On April 1 of year 1, M1 enters into a contract with counterparty M2 under which, for a term of five years, M1 is obligated to make a payment to M2 each April 1, beginning in year 2, in an amount equal to the London Interbank Offered Rate (LIBOR), as determined by reference to LIBOR on the day each payment is due, multiplied by a \$1,000 notional principal amount. M2 is obligated to make a payment to M1 each April 1, beginning in year 2, in an amount equal to 8 percent multiplied by the same notional principal amount. LIBOR is 7.80 percent on April 1 of year 2, and therefore, M2 owes \$2 to M1.

(2) *Matching rule.* Under § 1.446–3(d), the net income (or net deduction) from a notional principal contract for a taxable year is included in (or deducted from) gross income. Under § 1.446–3(e), the ratable daily portion of M2's obligation to M1 as of December 31 of year 1 is \$1.50 (\$2 multiplied by 275/365). Under the matching rule, M1's net income for year 1 of \$1.50 is taken into account to reflect the difference between M2's net deduction of \$1.50 taken into account and the \$0 recomputed net deduction. Similarly, the \$.50 balance of the \$2 of net periodic payments made on April 1 of year 2 is taken into account for year 2 in M1's and M2's net income and net deduction from the contract. In addition, the attributes of M1's intercompany income and M2's corresponding deduction are redetermined to produce the same effect as if the transaction had occurred between divisions of a single

corporation. Under paragraph (c)(4)(i) of this section, the attributes of M2's corresponding deduction control the attributes of M1's intercompany income. (Although M1 is the selling member with respect to the payment on April 1 of year 2, it might be the buying member in a subsequent period if it owes the net payment.)

(3) *Dealer.* The facts are the same as in paragraph (g)(7)(ii)(K)(1) of this section (*Example 11*), except that M2 is a dealer in securities, and the contract with M1 is not inventory in the hands of M2. Under section 475, M2 must mark its securities to fair market value at year-end. Assume that under section 475, M2's loss from marking to fair market value the contract with M1 is \$10. Because M2 realizes an amount of loss from the mark to fair market value of the contract, the transaction is a triggering transaction under paragraph (g)(3)(i)(A)(1) of this section. Under paragraph (g)(3)(ii) of this section, M2 is treated as making a \$10 payment to M1 to terminate the contract immediately before a new contract is treated as reissued with an up-front payment by M1 to M2 of \$10. M1's \$10 of income from the termination payment is taken into account under the matching rule to reflect M2's deduction under § 1.446–3(h). The attributes of M1's intercompany income and M2's corresponding deduction are redetermined to produce the same effect as if the transaction had occurred between divisions of a single corporation. Under paragraph (c)(4)(i) of this section, the attributes of M2's corresponding deduction control the attributes of M1's intercompany income. Accordingly, M1's income is treated as ordinary income. Under § 1.446–3(f), the deemed \$10 up-front payment by M1 to M2 in connection with the issuance of a new contract is taken into account over the term of the new contract in a manner reflecting the economic substance of the contract (for example, allocating the payment in accordance with the forward rates of a series of cash-settled forward contracts that reflect the specified index and the \$1,000 notional principal amount). (The timing of taking items into account is the same if M1, rather than M2, is the dealer subject to the mark-to-market requirement of section 475 at year-end. However in this case, because the attributes of the corresponding deduction control the attributes of the intercompany income, M1's income from the deemed termination payment from M2 might be ordinary or capital). Under paragraph (g)(3)(ii)(A) of this section, section 475 does not apply to

mark the notional principal contract to fair market value after its deemed satisfaction and reissuance.

* * * * *

(1) * * *

(6) *Applicability date regarding paragraph (f)(7)(iv) of this section (Example 4).* Paragraph (f)(7)(iv) of this section (*Example 4*) applies to transactions occurring on or after December 18, 2009.

* * * * *

(8) *Election to apply paragraph (f)(5)(ii) of this section to an intercompany transaction.* Paragraph (f)(5)(ii)(E) of this section applies to any original consolidated Federal income tax return due (without extensions) after June 14, 2007.

(9) *Election to reduce basis of parent stock under paragraph (f)(6) of this section.* Paragraph (f)(6)(i)(C)(2) of this section applies to any original consolidated Federal income tax return due (without extensions) after June 14, 2007.

(10) *Certain qualified stock dispositions.* Paragraph (f)(5)(ii)(C) of this section applies to any qualified stock disposition (as defined in § 1.336–1(b)(6)) for which the disposition date (as defined in § 1.336–1(b)(8)) is on or after May 15, 2013.

■ **Par. 19.** Section 1.1502–17 is amended by revising and republishing paragraphs (a) and (e) to read as follows:

§ 1.1502–17 Methods of accounting.

(a) *General rule.* The method of accounting to be used by each member of the group is determined in accordance with the provisions of section 446 as if such member filed a separate return.

* * * * *

(e) *Effective dates.* Paragraph (b) of this section applies to changes in method of accounting effective for years beginning on or after July 12, 1995. Paragraphs (c) and (d) of this section apply with respect to acquisitions occurring or activities undertaken in years beginning on or after July 12, 1995.

§ 1.1502–18 [Removed]

■ **Par. 20.** Section 1.1502–18 is removed.

■ **Par. 21.** Section 1.1502–21 is amended by:

- a. Revising paragraphs (b)(3)(i) and (b)(4);
- b. Removing and reserving paragraph (d); and
- c. Revising paragraphs (h)(6) and (8).

The revisions read as follows:

§ 1.1502–21 Net operating losses.

* * * * *

(b) * * *

(3) * * *

(i) *In general.* A group may make an irrevocable election under section 172(b)(3) to relinquish the entire carryback period with respect to a CNOL for any consolidated return year. Except as provided in paragraphs (b)(4) and (5) of this section, the election may not be made separately for any member (whether or not it remains a member), and must be made in a separate statement titled “THIS IS AN ELECTION UNDER § 1.1502–21(b)(3)(i) TO WAIVE THE ENTIRE CARRYBACK PERIOD PURSUANT TO SECTION 172(b)(3) FOR THE [insert consolidated return year] CNOLs OF THE CONSOLIDATED GROUP OF WHICH [insert name and employer identification number of common parent] IS THE COMMON PARENT.” The statement must be filed with the group's income tax return for the consolidated return year in which the loss arises. The election may be made in an unsigned statement.

* * * * *

(4) *General split-waiver election.* If one or more members of a consolidated group becomes a member of another consolidated group, the acquiring group may make an irrevocable election to relinquish, with respect to all consolidated net operating losses attributable to the member, the portion of the carryback period for which the corporation was a member of another group, provided that any other corporation joining the acquiring group that was affiliated with the member immediately before it joined the acquiring group is also included in the waiver. This election is not a yearly election and applies to all losses that would otherwise be subject to a carryback to a former group under section 172. The election must be made in a separate statement titled “THIS IS AN ELECTION UNDER § 1.1502–21(b)(4) TO WAIVE THE PRE- [insert first taxable year for which the member (or members) was not a member of another group] CARRYBACK PERIOD FOR THE CNOLs attributable to [insert names and employer identification number of members].” The statement must be filed with the acquiring consolidated group's original income tax return for the year the corporation (or corporations) became a member. The election may be made in an unsigned statement.

* * * * *

(h) * * *

(6) *Certain prior periods.* Paragraphs (b)(1), (b)(2)(iv)(A), (b)(2)(iv)(B)(1), and (c)(2)(vii) of this section apply to taxable

years for which the due date of the original return (without regard to extensions) is after March 21, 2005.

* * * * *

(8) *Losses treated as expired under § 1.1502-35(f)(1).* For rules regarding losses treated as expired under § 1.1502-35(f) on or after March 10, 2006, see § 1.1502-21(b)(3)(v) as contained in 26 CFR part 1 in effect on April 1, 2006.

* * * * *

§ 1.1502-22 [Amended]

■ **Par. 22.** Section 1.1502-22 is amended by removing and reserving paragraph (d).

■ **Par. 23.** Section 1.1502-24 is amended by revising paragraphs (a)(2) and (c) to read as follows:

§ 1.1502-24 Consolidated charitable contributions deduction.

(a) * * *

(2) The percentage limitation on the total charitable contribution deduction provided in section 170(b)(2)(A) applied to adjusted consolidated income as determined under paragraph (c) of this section.

* * * * *

(c) *Adjusted consolidated taxable income.* For purposes of this section, the adjusted consolidated taxable income of the group for any consolidated return year is the consolidated taxable income computed without regard to this section, section 243(a)(2) and (3), and § 1.1502-26, and without regard to any consolidated net operating or net capital loss carrybacks to such year.

■ **Par. 24.** Section 1.1502-26 is amended by revising paragraphs (a) and (c) to read as follows:

§ 1.1502-26 Consolidated dividends received deduction.

(a) *In general.* The consolidated dividends received deduction for the taxable year is the lesser of—

(1) The aggregate of the deduction of the members of the group allowable under sections 243(a)(1), 245(a) and (b), and 250 (computed without regard to the limitations provided in section 246(b)), or

(2) The aggregate amount described in section 246(b), determined by substituting, wherever it appears—

(i) The term *consolidated taxable income for taxable income*,

(ii) The term *consolidated net operating loss* for *net operating loss*, and

(iii) The term *consolidated net capital loss for capital loss*.

* * * * *

(c) *Examples.* The provisions of this section may be illustrated by the following examples:

(1) *Example 1.* (i) Corporations P, S, and S-1 filed a consolidated return for the calendar year 2023 showing consolidated taxable income of \$100,000 (determined without regard to the consolidated net operating loss deduction, and the consolidated dividends received deduction). These corporations received dividends during such year from less than 20-percent owned domestic corporations as follows:

TABLE 1 TO PARAGRAPH (c)(1)(i)

Corporation	Dividends
P	\$6,000
S	10,000
S-1	34,000
Total	50,000

(ii) The dividends received deduction allowable to each member under section 243(a)(1) (computed without regard to the limitation in section 246(b)) is as follows: P has \$3,000 (50 percent of \$6,000), S has \$5,000 (50 percent of \$10,000), and S-1 has \$17,000 (50 percent of \$34,000), or a total of \$25,000. Since \$25,000 is less than \$50,000 (50 percent of \$100,000), the consolidated dividends received deduction is \$25,000.

(2) *Example 2.* Assume the same facts as in paragraph (c)(1)(i) of this section (*Example 1*), except that consolidated taxable income (computed without regard to the consolidated net operating loss deduction and the consolidated dividends received deduction) was \$40,000. The aggregate of the dividends received deductions, \$42,500, computed without regard to section 246(b), results in a consolidated net operating loss of \$2,500. See section 172(d)(5). Therefore, paragraph (a)(2) of this section does not apply and the consolidated dividends received deduction is \$42,500.

§ 1.1502-27 [Removed]

■ **Par. 25.** Section 1.1502-27 is removed.

■ **Par. 26.** Section 1.1502-32 is amended by:

■ a. Revising paragraphs (b)(4)(v) and (vii).

■ b. Revising and republishing paragraphs (b)(5), (h)(2)(i), and (h)(5) through (8).

■ c. Redesignating paragraph (j) as paragraph (h)(10) and revising newly designated paragraph (h)(10).

■ d. Removing paragraph (k).

The revisions read as follows:

§ 1.1502-32 Investment adjustments.

* * * * *

(b) * * *

(4) * * *

(v) *Special rule for loss carryovers of a subsidiary acquired in a transaction for which an election under § 1.1502-20(i)(2) is made.* See paragraph (b)(4)(v) of this section as contained in 26 CFR part 1 revised as of April 1, 2005.

* * * * *

(vii) *Special rules for amending waiver of loss carryovers from separate return limitation year relating to the acquisition of a subsidiary in a transaction subject to § 1.1502-20.* See paragraph (b)(4)(vii) of this section as contained in 26 CFR part 1 revised as of April 1, 2005.

(5) *Examples—(i) In general.* For purposes of the examples in this section, unless otherwise stated, M owns all of the only class of S's stock, the stock is owned for the entire year, S owns no stock of lower-tier members, the tax year of all persons is the calendar year, all persons use the accrual method of accounting, the facts set forth the only corporate activity, preferred stock is described in section 1504(a)(4), all transactions are between unrelated persons, and tax liabilities are disregarded.

(ii) *Stock basis adjustments.* The principles of this paragraph (b) are illustrated by the following examples.

(A) *Example 1. Taxable income—(1) Current taxable income.* For Year 1, the M group has \$100 of taxable income when determined by including only S's items of income, gain, deduction, and loss taken into account. Under paragraph (b)(1) of this section, M's basis in S's stock is adjusted under this section as of the close of Year 1. Under paragraph (b)(2) of this section, M's basis in S's stock is increased by the amount of the M group's taxable income determined by including only S's items taken into account. Thus, M's basis in S's stock is increased by \$100 as of the close of Year 1.

(2) *Intercompany gain that is not taken into account.* The facts are the same as in paragraph (b)(5)(ii)(A)(1) of this section (*Example 1*), except that S also sells property to another member at a \$25 gain in Year 1, the gain is deferred under § 1.1502-13 and taken into account in Year 3, and M sells 10% of S's stock to nonmembers in Year 2. Under paragraph (b)(3)(i) of this section, S's deferred gain is not additional taxable income for Year 1 or 2 because it is not taken into account in determining the M group's consolidated taxable income for either of those years. The deferred gain is not tax-exempt income under paragraph (b)(3)(ii) of this section because it is not permanently excluded from S's gross income. The

deferred gain does not result in a basis adjustment until Year 3, when it is taken into account in determining the M group's consolidated taxable income. Consequently, M's basis in the S shares sold is not increased to reflect S's gain from the intercompany sale of the property. In Year 3, the deferred gain is taken into account, but the amount allocable to the shares sold by M does not increase their basis because these shares are held by nonmembers.

(3) *Intercompany gain taken into account.* The facts are the same as in paragraph (b)(5)(ii)(A)(2) of this section (*Example 1*), except that M sells all of S's stock in Year 2 (rather than only 10%). Under § 1.1502–13, S takes the \$25 gain into account immediately before S becomes a nonmember. Thus, M's basis in S's stock is increased to reflect S's gain from the intercompany sale of the property.

(B) *Example 2. Tax loss—(1) Current absorption.* For Year 2, the M group has a \$50 consolidated net operating loss when determined by taking into account only S's items of income, gain, deduction, and loss. S's loss is absorbed by the M group in Year 2, offsetting M's income for that year. Under paragraph (b)(3)(i)(A) of this section, because S's loss is absorbed in the year it arises, M has a \$50 negative adjustment with respect to S's stock. Under paragraph (b)(2) of this section, M reduces its basis in S's stock by \$50. Under paragraph (a)(3)(ii) of this section, if the decrease exceeds M's basis in S's stock, the excess is M's excess loss account in S's stock.

(2) *Interim determination from stock sale.* The facts are the same as in paragraph (b)(5)(ii)(B)(1) of this section (*Example 2*), except that S's Year 2 loss arises in the first half of the calendar year, M sells 50% of S's stock on July 1 of Year 2, and M's income for Year 2 does not arise until after the sale of S's stock. M's income for Year 2 (exclusive of the sale of S's stock) is offset by S's loss, even though the income arises after the stock sale, and no loss remains to be apportioned to S. See §§ 1.1502–11 and 1.1502–21(b). Under paragraph (b)(3)(i)(A) of this section, because S's \$50 loss is absorbed in the year it arises, it reduces M's basis in the S shares sold by \$25 immediately before the stock sale. Because S becomes a nonmember, the loss also reduces M's basis in the retained S shares by \$25 immediately before S becomes a nonmember.

(3) *Loss carryback.* The facts are the same as in paragraph (b)(5)(ii)(B)(1) of this section (*Example 2*), except that M has no income or loss for Year 2, S's \$50 loss is carried back and absorbed by the M group in Year 1 (offsetting the income

of M or S), and the M group receives a \$17 tax refund in Year 2 that is paid to S. Under paragraph (b)(3)(i)(B) of this section, because the \$50 loss is carried back and absorbed in Year 1, it is treated as a tax loss for Year 2 (the year in which it arises). Under paragraph (b)(3)(ii) of this section, the refund is treated as tax-exempt income of S. Under paragraph (b)(3)(iv)(C) of this section, the tax-exempt income is taken into account in Year 2 because that is the year it would be taken into account under S's method of accounting if it were subject to Federal income taxation. Thus, under paragraph (b)(2) of this section, M reduces its basis in S's stock by \$33 as of the close of Year 2 (the \$50 tax loss, less the \$17 tax refund).

(4) *Loss carryforward.* The facts are the same as in paragraph (b)(5)(ii)(B)(1) of this section (*Example 2*), except that M has no income or loss for Year 2, and S's loss is carried forward and absorbed by the M group in Year 3 (offsetting the income of M or S). Under paragraph (b)(3)(i)(A) of this section, the loss is not treated as a tax loss under paragraph (b)(2) of this section until Year 3.

(C) *Example 3. Tax-exempt income and noncapital, nondeductible expenses—(1) Facts.* For Year 1, the M group has \$500 of consolidated taxable income. However, the M group has a \$100 consolidated net operating loss when determined by including only S's items of income, gain, deduction, and loss taken into account. Also for Year 1, S has \$80 of interest income that is permanently excluded from gross income under section 103, and S incurs \$60 of related expense for which a deduction is permanently disallowed under section 265.

(2) *Analysis.* Under paragraph (b)(3)(i)(A) of this section, S has a \$100 tax loss for Year 1. Under paragraph (b)(3)(ii)(A) of this section, S has \$80 of tax-exempt income. Under paragraph (b)(3)(iii)(A) of this section, S has \$60 of noncapital, nondeductible expense. Under paragraph (b)(3)(iv)(C) of this section, the tax-exempt income and noncapital, nondeductible expense are taken into account in Year 1 because that is the year they would be taken into account under S's method of accounting if they were subject to Federal income taxation. Thus, under paragraph (b) of this section, M reduces its basis in S's stock as of the close of Year 1 by an \$80 net amount (the \$100 tax loss, less \$80 of tax-exempt income, plus \$60 of noncapital, nondeductible expenses).

(D) *Example 4. Discharge of indebtedness—(1) Facts.* M forms S on January 1 of Year 1 and S borrows \$200. During Year 1, S's assets decline in value and the M group has a \$100

consolidated net operating loss. Of that amount, \$10 is attributable to M and \$90 is attributable to S under the principles of § 1.1502–21(b)(2)(iv). None of the loss is absorbed by the group in Year 1, and S is discharged from \$100 of indebtedness at the close of Year 1. M has a \$0 basis in the S stock. M and S have no attributes other than the consolidated net operating loss. Under section 108(a), S's \$100 of discharge of indebtedness income is excluded from gross income because of insolvency. Under section 108(b) and § 1.1502–28, the consolidated net operating loss is reduced to \$0.

(2) *Analysis.* Under paragraph (b)(3)(iii)(A) of this section, the reduction of \$90 of the consolidated net operating loss attributable to S is treated as a noncapital, nondeductible expense in Year 1 because that loss is permanently disallowed by section 108(b) and § 1.1502–28. Under paragraph (b)(3)(ii)(C)(1) of this section, all \$100 of S's discharge of indebtedness income is treated as tax-exempt income in Year 1 because the discharge results in a \$100 reduction to the consolidated net operating loss. Consequently, the loss and the cancellation of the indebtedness result in a net positive \$10 adjustment to M's basis in its S stock.

(3) *Insufficient attributes.* The facts are the same as in paragraph (b)(5)(ii)(D)(1) of this section (*Example 4*), except that S is discharged from \$120 of indebtedness at the close of Year 1. Under section 108(a), S's \$120 of discharge of indebtedness income is excluded from gross income because of insolvency. Under section 108(b) and § 1.1502–28, the consolidated net operating loss is reduced by \$100 to \$0 after the determination of tax for Year 1. Under paragraph (b)(3)(iii)(A) of this section, the reduction of \$90 of the consolidated net operating loss attributable to S is treated as a noncapital, nondeductible expense. Under paragraph (b)(3)(ii)(C)(1) of this section, only \$100 of the discharge is treated as tax-exempt income because only that amount is applied to reduce tax attributes. The remaining \$20 of discharge of indebtedness income excluded from gross income under section 108(a) has no effect on M's basis in S's stock.

(4) *Purchase price adjustment.* Assume instead that S buys land in Year 1 in exchange for S's \$100 purchase money note (bearing interest at a market rate of interest in excess of the applicable Federal rate, and providing for a principal payment at the end of Year 10), and the seller agrees with S in Year 4 to discharge \$60 of the note as a purchase price adjustment to which

section 108(e)(5) applies. S has no discharge of indebtedness income that is treated as tax-exempt income under paragraph (b)(3)(ii) of this section. In addition, the \$60 purchase price adjustment is not a noncapital, nondeductible expense under paragraph (b)(3)(iii) of this section. A purchase price adjustment is not equivalent to a discharge of indebtedness that is offset by a deduction or loss. Consequently, the purchase price adjustment results in no net adjustment to M's basis in S's stock under paragraph (b) of this section.

(E) *Example 5. Distributions—(1) Amounts declared and distributed.* For Year 1, the M group has \$120 of consolidated taxable income when determined by including only S's items of income, gain, deduction, and loss taken into account. S declares and makes a \$10 dividend distribution to M at the close of Year 1. Under paragraph (b) of this section, M increases its basis in S's stock as of the close of Year 1 by a \$110 net amount (\$120 of taxable income, less a \$10 distribution).

(2) *Distributions in later years.* The facts are the same as in paragraph (b)(5)(ii)(E)(1) of this section (*Example 5*), except that S does not declare and distribute the \$10 until Year 2. Under paragraph (b) of this section, M increases its basis in S's stock by \$120 as of the close of Year 1, and decreases its basis by \$10 as of the close of Year 2. (If M were also a subsidiary, the basis of its stock would also be increased in Year 1 to reflect M's \$120 adjustment to basis of S's stock; the basis of M's stock would not be changed as a result of S's distribution in Year 2, because M's \$10 of tax-exempt dividend income under paragraph (b)(3)(ii) of this section would be offset by the \$10 negative adjustment to M's basis in S's stock for the distribution.)

(3) *Amounts declared but not distributed.* The facts are the same as in paragraph (b)(5)(ii)(E)(1) of this section (*Example 5*), except that, during December of Year 1, S declares (and M becomes entitled to) another \$70 dividend distribution with respect to its stock, but M does not receive the distribution until after it sells all of S's stock at the close of Year 1. Under § 1.1502-13(f)(2)(iv), S is treated as making a \$70 distribution to M at the time M becomes entitled to the distribution. (If S is distributing an appreciated asset, its gain under section 311 is also taken into account under paragraph (b)(3)(i) of this section at the time M becomes entitled to the distribution.) Consequently, under paragraph (b) of this section, M increases its basis in S's stock as of the

close of Year 1 by only a \$40 net amount (\$120 of taxable income, less two distributions totaling \$80). Any further adjustments after S ceases to be a member and the \$70 distribution is made would be duplicative, because the stock basis has already been adjusted for the distribution. Accordingly, the distribution will not result in further adjustments or gain, even if the distribution is a payment to which section 301(c)(2) or (3) applies.

(F) *Example 6. Reorganization with boot—(1) Facts.* M owns all the stock of S and T. M owns ten shares of the same class of common stock of S and ten shares of the same class of common stock of T. The fair market value of each share of S stock is \$10 and the fair market value of each share of T stock is \$10. On January 1 of Year 1, M has a \$5 basis in each of its ten shares of S stock and a \$10 basis in each of its ten shares of T stock. S and T have no items of income, gain, deduction, or loss for Year 1. S and T each have substantial earnings and profits. At the close of Year 1, T merges into S in a reorganization described in section 368(a)(1)(A) (and in section 368(a)(1)(D)). M receives no additional S stock, but does receive \$10 which is treated as received by M in a separate transaction occurring immediately after the merger of T into S.

(2) *Analysis.* The merger of T into S is a transaction to which § 1.1502-13(f)(3) applies. Under §§ 1.1502-13(f)(3) and 1.358-2(a)(2)(iii), M is deemed to receive ten additional shares of S stock with a total fair market value of \$100 (the fair market value of the T stock surrendered by M). Under § 1.358-2(a)(2)(i), M will have a basis of \$10 in each share of S stock deemed received in the reorganization. Under § 1.358-2(a)(2)(iii), M is deemed to surrender all twenty shares of its S stock in a recapitalization under section 368(a)(1)(E) in exchange for the ten shares of S stock, the number of shares of S stock held by M immediately after the transaction. Thus, under § 1.358-2(a)(2)(i), M has five shares of S stock each with a basis of \$10 and five shares of S stock each with a basis of \$20. The \$10 M received is treated as a dividend distribution under section 301 and, under paragraph (b)(3)(v) of this section, the \$10 is a distribution to which paragraph (b)(2)(iv) of this section applies. Accordingly, M's total basis in the S stock is decreased by the \$10 distribution.

(G) *Example 7. Tiering up of basis adjustments.* M owns all of S's stock, and S owns all of T's stock. For Year 1, the M group has \$100 of consolidated taxable income when determined by

including only T's items of income, gain, deduction, and loss taken into account, and \$50 of consolidated taxable income when determined by including only S's items taken into account. S increases its basis in T's stock by \$100 under paragraph (b) of this section. Under paragraph (a)(3) of this section, this \$100 basis adjustment is taken into account in determining M's adjustments to its basis in S's stock. Thus, M increases its basis in S's stock by \$150 under paragraph (b) of this section.

(H) *Example 8. Allocation of items—(1) Acquisition in mid-year.* M is the common parent of a consolidated group, and S is an unaffiliated corporation filing separate returns on a calendar-year basis. M acquires all of S's stock and S becomes a member of the M group on July 1 of Year 1. For the entire calendar Year 1, S has \$100 of ordinary income and under § 1.1502-76(b) \$60 is allocated to the period from January 1 to June 30 and \$40 to the period from July 1 to December 31. Under paragraph (b) of this section, M increases its basis in S's stock by \$40.

(2) *Sale in mid-year.* The facts are the same as in paragraph (b)(5)(ii)(H)(1) of this section (*Example 8*), except that S is a member of the M group at the beginning of Year 1 but ceases to be a member on June 30 as a result of M's sale of S's stock. Under paragraph (b) of this section, M increases its basis in S's stock by \$60 immediately before the stock sale. (M's basis increase would be the same if S became a nonmember because S issued additional shares to nonmembers.)

(3) *Absorption of loss carryovers.* Assume instead that S is a member of the M group at the beginning of Year 1 but ceases to be a member on June 30 as a result of M's sale of S's stock, and a \$100 consolidated net operating loss attributable to S is carried over by the M group to Year 1. The consolidated net operating loss may be apportioned to S for its first separate return year only to the extent not absorbed by the M group during Year 1. Under paragraph (b)(3)(i) of this section, if the loss is absorbed by the M group in Year 1, whether the offsetting income arises before or after M's sale of S's stock, the absorption of the loss carryover is included in the determination of S's taxable income or loss for Year 1. Thus, M's basis in S's stock is adjusted under paragraph (b) of this section to reflect any absorption of the loss by the M group.

(I) *Example 9. Gross-ups—(1) Facts.* M owns all of the stock of S, and S owns all of the stock of T, a newly formed controlled foreign corporation that is not a passive foreign investment

company. In Year 1, T has \$100 of subpart F income and pays \$34 of foreign income tax, leaving T with \$66 of earnings and profits. The M group has \$100 of consolidated taxable income when determined by taking into account only S's items (the inclusion under section 951(a), taking into account the section 78 gross-up). As a result of the section 951(a) inclusion, S increases its basis in T's stock by \$66 under section 961(a).

(2) *Analysis.* Under paragraph (b)(3)(i) of this section, S has \$100 of taxable income. Under paragraph (b)(3)(iii)(B) of this section, the \$34 gross-up for taxes paid by T that S is treated as having paid is a noncapital, nondeductible expense (whether or not any corresponding amount is claimed by the M group as a tax credit). Thus, M increases its basis in S's stock under paragraph (b) of this section by the net adjustment of \$66.

(3) *Subsequent distribution.* The facts are the same as in paragraph (b)(5)(ii)(I)(1) of this section (*Example 9*), except that T distributes its \$66 of earnings and profits in Year 2. The \$66 distribution received by S is excluded from S's income under section 959(a) because the distribution represents earnings and profits attributable to amounts that were included in S's income under section 951(a) for Year 1. In addition, S's basis in T's stock is decreased by \$66 under section 961(b). The excluded distribution is not tax-exempt income under paragraph (b)(3)(ii) of this section because of the corresponding reduction to S's basis in T's stock. Consequently, M's basis in S's stock is not adjusted under paragraph (b) of this section for Year 2.

(J) *Example 10. Recapture of tax-exempt items—(1) Facts.* S is a life insurance company. For Year 1, the M group has \$200 of consolidated taxable income, determined by including only S's items of income, gain, deduction, and loss taken into account (including a \$300 small company deduction under section 806). In addition, S has \$100 of tax-exempt interest income, \$60 of which is S's company share. The remaining \$40 of tax-exempt income is the policyholders' share that reduces S's deduction for increase in reserves.

(2) *Tax-exempt items generally.* Under paragraph (b)(3)(i) of this section, S has \$200 of taxable income for Year 1. Also for Year 1, S has \$100 of tax-exempt income under paragraph (b)(3)(ii)(A) of this section, and another \$300 is treated as tax-exempt income under paragraph (b)(3)(ii)(B) of this section because of the deduction under section 806. Under paragraph (b)(3)(iii) of this section, S has \$40 of noncapital, nondeductible

expenses for Year 1 because S's deduction under section 807 for its increase in reserves has been permanently reduced by the \$40 policyholders' share of the tax-exempt interest income. Thus, M increases its basis in S's stock by \$560 under paragraph (b) of this section.

(3) *Recapture.* Assume instead that S is a property and casualty company and, for Year 1, S accrues \$100 of estimated salvage recoverable under section 832. Of this amount, \$87 (87% of \$100) is excluded from gross income because of the "fresh start" provisions of Sec. 11305(c) of Public Law 101-508 (the Omnibus Budget Reconciliation Act of 1990). Thus, S has \$87 of tax-exempt income under paragraph (b)(3)(ii)(A) of this section that increases M's basis in S's stock for Year 1. (S also has \$13 of taxable income over the period of inclusion under section 481.) In Year 5, S determines that the \$100 salvage recoverable was overestimated by \$30 and deducts \$30 for the reduction of the salvage recoverable. However, S has \$26.10 (87% of \$30) of taxable income in Year 5 due to the partial recapture of its fresh start. Because S has no basis corresponding to this income, S is treated under paragraph (b)(3)(iii)(B) of this section as having a \$26.10 noncapital, nondeductible expense in Year 5. This treatment is necessary to reflect the elimination of the erroneous fresh start in S's stock basis and causes a decrease in M's basis in S's stock by \$30 for Year 5 (a \$3.90 taxable loss and a \$26.10 special adjustment).

* * * * *

(h) * * *

(2) * * *

(i) *In general.* If M disposes of stock of S in a consolidated return year beginning before January 1, 1995, the amount of M's income, gain, deduction, or loss, and the basis reflected in that amount, are not redetermined under this section.

* * * * *

(5) *Continuing basis reductions for certain deconsolidated subsidiaries.* If a subsidiary ceases to be a member of a group in a consolidated return year beginning before January 1, 1995, and its basis was subject to reduction under § 1.1502-32T or § 1.1502-32(g) as contained in the 26 CFR part 1 edition revised as of April 1, 1994, its basis remains subject to reduction under those principles. For example, if S ceased to be a member in 1990, and M's basis in any retained S stock was subject to a basis reduction account, the basis remains subject to reduction. Similarly, if an election could be made to apply § 1.1502-32T instead of § 1.1502-32(g),

the election remains available. However, §§ 1.1502-32T and 1.1502-32(g) do not apply as a result of a subsidiary ceasing to be a member in tax years beginning on or after January 1, 1995.

(6) *Loss suspended under § 1.1502-35(c) or disallowed under § 1.1502-35(g)(3)(iii).* Paragraphs (a)(2), (b)(3)(iii)(C) and (D), and (b)(4)(vi) of this section are applicable on and after March 10, 2006.

(7) *Rules related to discharge of indebtedness income excluded from gross income.* Paragraphs (b)(1)(ii), (b)(3)(ii)(C)(1), (b)(3)(iii)(A), and (b)(5)(ii), *Example 4*, paragraphs (a), (b), and (c) of this section apply with respect to determinations of the basis of the stock of a subsidiary in consolidated return years the original return for which is due (without regard to extensions) after March 21, 2005. However, groups may apply those provisions with respect to determinations of the basis of the stock of a subsidiary in consolidated return years the original return for which is due (without regard to extensions) on or before March 21, 2005, and after August 29, 2003.

(8) *Determination of stock basis in reorganization with boot.* Paragraph (b)(5)(ii)(F) of this section (*Example 6*) applies only with respect to determinations of the basis of the stock of a subsidiary on or after January 23, 2006.

* * * * *

(10) *Election to treat loss carryover as expiring.* Paragraph (b)(4)(iv) of this section applies to any original consolidated Federal income tax return due (without extensions) after June 14, 2007. For original consolidated Federal income tax returns due (without extensions) after May 30, 2006, and on or before June 14, 2007, see § 1.1502-32T as contained in 26 CFR part 1 in effect on April 1, 2007.

* * * * *

■ **Par. 27.** Section 1.1502-34 is revised to read as follows:

§ 1.1502-34 Special aggregate stock ownership rules.

(a) *Determination of stock ownership.* For purposes of the consolidated return regulations, in determining the stock ownership of a member of a group in another corporation (issuing corporation) for purposes of determining the application of section 165(g)(3)(A), 332(b)(1), 351(a), 732(f), or 904(f) in a consolidated return year, stock in the issuing corporation owned by all other members of the group is included. For the determination of whether a member of the group is an 80-

percent distributee, *see* section 337(c) (providing that, for purposes of section 337, the determination of whether any corporation is an 80-percent distributee is made without regard to any consolidated return regulation).

(b) *Example regarding liquidation of member.* The following example illustrates the stock ownership aggregation rule set forth in paragraph (a) of this section.

(1) *Facts.* P wholly owns A, B, and C, each of which is a member of the P group. A, B, and C each owns 33⅓ percent of the stock of D. D liquidates in a transaction purported to qualify under section 332.

(2) *Analysis.* For purposes of determining satisfaction of the 80-percent stock ownership requirement under section 332(b)(1), under the stock ownership aggregation rule set forth in paragraph (a) of this section: A is treated as owning all of the D stock owned by B and C; B is treated as owning all of the D stock owned by A and C; and C is treated as owning all of the D stock owned by A and B. Therefore, each of A, B, and C is treated as owning 100 percent of the stock of D and thus meeting the 80-percent stock ownership requirement for purposes of section 332. However, none of A, B, or C is treated as an 80-percent distributee for purposes of section 337. *See* section 337(c). Therefore, section 337(a) does not apply.

§ 1.1502-42 [Removed]

■ **Par. 28.** Section 1.1502-42 is removed.

■ **Par. 29.** Section 1.1502-43 is amended by revising paragraphs (b)(2)(iii) through (viii) and (e) to read as follows:

§ 1.1502-43 Consolidated accumulated earnings tax.

* * * * *

(b) * * *

(2) * * *

(iii) Under section 535(b)(3), the deduction determined under § 1.1502-26 is not allowed.

(iv) Under section 535(b)(4), the consolidated net operating loss deduction described in § 1.1502-21(a) is not allowed.

(v) Under section 535(b)(5), there is allowed as a deduction the consolidated net capital loss, determined under § 1.1502-22(a).

(vi) Under section 535(b)(6), there is allowed as a deduction an amount equal to—

(A) The consolidated capital gain net income for the taxable year (determined under § 1.1502-22(a) and without the consolidated net capital loss carryovers

and carrybacks to the taxable year), minus

(B) The taxes attributable to such gain.

(vii) Under section 535(b)(7), the consolidated net capital loss carryovers and carrybacks are not allowed. *See* § 1.1502-22(b).

(viii) Section 1.1502-15 does not apply.

* * * * *

(e) *Effective/applicability date.* This section applies to any consolidated Federal income tax return due (without extensions) on or after December 21, 2009.

■ **Par. 30.** Section 1.1502-44 is amended by revising paragraph (b) to read as follows:

§ 1.1502-44 Percentage depletion for independent producers and royalty owners.

* * * * *

(b) *Adjusted consolidated taxable income.* For purposes of this section, adjusted consolidated taxable income is an amount (not less than zero) equal to the group's consolidated taxable income determined without—

(1) Any depletion with respect to an oil or gas property (other than a gas property with respect to which the depletion allowance for all production is determined pursuant to section 613A(b)) for which percentage depletion would exceed cost depletion in the absence of the depletable quantity limitations contained in section 613A(c)(1) and (6) and the consolidated taxable income limitation contained in paragraph (a) of this section;

(2) Any consolidated net operating loss carryback to the consolidated return year under § 1.1502-21; and

(3) Any consolidated net capital loss carryback to the consolidated return year under § 1.1502-22.

* * * * *

■ **Par. 31.** Section 1.1502-45 is added to read as follows:

§ 1.1502-45 Limitation on losses to amount at risk.

(a) *In general.*—(1) *Scope.* This section applies to a loss of any subsidiary if the common parent's stock meets the stock ownership requirement described in section 465(a)(1)(B).

(2) *Limitation on use of losses.* Except as provided in paragraph (a)(4) of this section, a loss from an activity of a subsidiary during a consolidated return year is includible in the computation of consolidated taxable income (or consolidated net operating loss) and consolidated capital gain net income (or consolidated net capital loss) only to the extent the loss does not exceed the amount that the parent is at risk in the

activity at the close of that subsidiary's taxable year. In addition, the sum of a subsidiary's losses from all its activities is includible only to the extent that the parent is at risk in the subsidiary at the close of that year. Any excess may not be taken into account for the consolidated return year but will be treated as a deduction allocable to that activity of the subsidiary in the first succeeding taxable year.

(3) *Amount parent is at risk in subsidiary's activity.* The amount the parent is at risk in an activity of a subsidiary is the lesser of the amount the parent is at risk in the subsidiary, or the amount the subsidiary is at risk in the activity. These amounts are determined under paragraph (b) of this section and the principles of section 465. *See* section 465 and the regulations thereunder and the examples in paragraph (e) of this section.

(4) *Excluded activities.* The limitation on the use of losses in paragraph (a)(2) of this section does not apply to a loss attributable to an activity described in section 465(c)(4).

(5) *Substance over form.* Any transaction or arrangement between members (or between a member and a person that is not a member) which does not cause the parent to be economically at risk in an activity of a subsidiary will be treated in accordance with the substance of the transaction or arrangement notwithstanding any other provision of this section.

(b) *Rules for determining amount at risk.*—(1) *Excluded amounts.* The amount a parent is at risk in an activity of a subsidiary at the close of the subsidiary's taxable year does not include any amount that would not be taken into account under section 465 were the subsidiary not a separate corporation. Thus, for example, if the amount a parent is at risk in the activity of a subsidiary is attributable to nonrecourse financing, the amount at risk is not more than the fair market value of the property (other than the subsidiary's stock or debt or assets) pledged as security.

(2) *Guarantees.* If a parent guarantees a loan by a person other than a member to a subsidiary, the loan increases the amount the parent is at risk in the activity of the subsidiary.

(c) *Application of section 465.* This section applies in a manner consistent with the provisions of section 465. Thus, for example, the recapture of losses provided in section 465(e) applies if the amount the parent is at risk in the activity of a subsidiary is reduced below zero.

(d) *Other consolidated return provisions unaffected.* This section

limits only the extent to which losses of a subsidiary may be used in a consolidated return year. This section does not apply for other purposes, such as §§ 1.1502–32 and 1.1502–19, relating to investment in stock of a subsidiary and excess loss accounts, respectively. Thus, a loss which reduces a subsidiary's earnings and profits in a consolidated return year, but is disallowed as a deduction for the year by reason of this section, may nonetheless result in a negative adjustment to the basis of an owning member's stock in the subsidiary or create (or increase) an excess loss account.

(e) *Examples.* The provisions of this section may be illustrated by the examples in this paragraph (e). In each example, the stock ownership requirement of section 465(a)(1)(B) is met for the stock of the parent (P), and each affiliated group files a consolidated return on a calendar year basis and comprises only the members described.

(1) *Example 1.* In 2022, P forms S with a contribution of \$200 in exchange for all of S's stock. During the year, S borrows \$400 from a commercial lender and P guarantees \$100 of the loan. S uses \$500 of its funds to acquire a motion picture film. S incurs a loss of \$120 for the year with respect to the film. At the close of 2022, the amount P is at risk in S's activity is \$300 (\$200 contribution plus \$100 guarantee). If S has no gain or loss in 2023, and there are no contributions from or distributions to P, at the close of 2023 P's amount at risk in S's activity will be \$180.

(2) *Example 2.* P forms S–1 with a capital contribution of \$1 on January 1, 2023. On February 1, 2023, S–1 borrows \$100 with full recourse and contributes all \$101 to its newly formed subsidiary S–2. S–2 uses the proceeds to explore for natural oil and gas resources. S–2 incurs neither gain nor loss from its explorations during the taxable year. As of December 31, 2023, P is at risk in the exploration activity of S–2 only to the extent of \$1.

(f) *Applicability date.* This section applies to consolidated return years for which the due date of the income tax return (without regard to extensions) is after December 30, 2024.

■ **Par. 32.** Section 1.1502–47 is amended by revising and republishing paragraphs (a)(3), (b)(14)(iii), (c)(2)(ii), (h)(3)(i), (ii), and (x), (h)(4) introductory text, (h)(4)(ii) and (iii), (k), (l), and (m)(1)(i), (iv), and (v) to read as follows:

§ 1.1502–47 Consolidated returns by life-nonlife groups.

(a) * * *

(3) *Other provisions.* The provisions of the consolidated return regulations apply unless this section provides otherwise. Further, unless otherwise indicated in this section, a term used in this section has the same meaning as in sections 801–848.

(b) * * *

(14) * * *

(iii) *Example 3.* Since 2012, L has owned all the stock of L₁, which has owned all the stock of S₁, a nonlife insurance company. L₁ writes some accident and health insurance business. In 2018, L₁ transfers this business, and S₁ transfers some of its business, to a new nonlife insurance company, S₂, in a transaction described in section 351(a). The property transferred to S₂ by L₁ had a fair market value of \$50 million. The property transferred by S₁ had a fair market value of \$40 million. S₂ is ineligible for 2020 because the tacking rule in paragraph (b)(12)(v) of this section does not apply. The old corporations (L₁ and S₁) and the new corporation (S₂) do not all have the same tax character. See paragraph (b)(12)(v)(B) and (D) of this section. The result would be the same if L₁ transferred other property (for example, stock and securities) with the same value, rather than accident and health insurance contracts, to S₂.

* * * * *

(c) * * *

(2) * * *

(ii) *Special rule.* Notwithstanding the general rule, however, if the nonlife members in the group filed a consolidated return for the immediately preceding taxable year and had executed and filed a Form 1122 (or successor form) that is effective for the preceding year, then such members will be treated as if they filed a Form 1122 (or successor form) when they join in the filing of a consolidated return under section 1504(c)(2) and they will be deemed to consent to the regulations under this section. However, an affiliation schedule (Form 851, or any successor form) must be filed by the group and the life members must execute a Form 1122 (or successor form) in the manner prescribed in § 1.1502–75(h)(2).

* * * * *

(h) * * *

(3) * * *

(i) *Separate return years.* The carryovers in paragraph (h)(2)(ii) of this section may include net operating losses and net capital losses of the nonlife members arising in separate return years, that may be carried over to a succeeding year under the principles (including limitations) of §§ 1.1502–21

and 1.1502–22. *But see* paragraph (h)(3)(ix) of this section.

(ii) *Capital loss.* Nonlife consolidated net capital loss sets off consolidated LICTI only to the extent of life consolidated capital gain net income (as determined under paragraph (g)(3) of this section) and this setoff applies before any nonlife consolidated net operating loss sets off consolidated LICTI.

* * * * *

(x) *Percentage limitation.* The offsetable nonlife consolidated net operating losses that may be set off against consolidated LICTI in a particular year may not exceed a percentage limitation. This limitation is the applicable percentage in section 1503(c)(1) of the lesser of two amounts—

(A) The first amount is the sum of the offsetable nonlife consolidated net operating losses under paragraph (h)(2) of this section that may serve in the particular year (determined without this limitation) as a setoff against consolidated LICTI.

(B) The second amount is consolidated LICTI in the particular year reduced by any nonlife consolidated net capital loss that sets off consolidated LICTI in that year.

* * * * *

(4) *Examples.* The following examples illustrate the principles of this paragraph (h). In the examples, L indicates a life company, S is a nonlife insurance company, another letter indicates a nonlife company that is not an insurance company, no company has farming losses (within the meaning of section 172(b)(1)(B)(ii)), and each corporation uses the calendar year as its taxable year.

* * * * *

(ii) *Example 2.* (A) The facts are the same as in paragraph (h)(4)(i) of this section (*Example 1*), except that, for 2021, S's separate net operating loss is \$200. Assume further that L's consolidated LICTI is \$200. Under paragraph (h)(3)(vi) of this section, the offsetable nonlife consolidated net operating loss is \$100 (the nonlife consolidated net operating loss computed under paragraph (f)(2)(ii) of this section (\$200), reduced by the separate net operating loss of I (\$100)). The offsetable nonlife consolidated net operating loss that may be set off against consolidated LICTI in 2021 is \$35 (35 percent of the lesser of the offsetable \$100 or consolidated LICTI of \$200). See section 1503(c)(1) and paragraph (h)(3)(x) of this section. S carries over a loss of \$65, and I carries over a loss of \$100, to 2022 under paragraph (f)(2) of

this section to be used against nonlife consolidated taxable income (consolidated net operating loss (\$200) less amount used in 2021 (\$35)). Under

paragraph (h)(2)(ii) of this section, the offsetable nonlife consolidated net operating loss that may be carried to 2022 is \$65 (\$100 minus \$35). The facts

and results are summarized in the following table.

TABLE 1 TO PARAGRAPH (h)(4)(ii)(A)

	Facts (a)	Offsetable (b)	Limit (c)	Unused loss (d)
P	100			
S	(200)	(100)		(65)
I	(100)			(100)
Nonlife subgroup	(200)	(100)	(100)	(165)
L	200		200	
35% of the lower of line 4(c) or 5(c)			35	
Unused offsetable loss				(65)

(B) Accordingly, under paragraph (e) of this section, consolidated taxable income is \$165 (line 5(a) minus line 6(c)).

(iii) *Example 3.* The facts are the same as in paragraph (h)(4)(ii) of this section (*Example 2*), with the following additions for 2022. The nonlife subgroup has nonlife consolidated taxable income of \$50 (all of which is attributable to I) before the nonlife consolidated net operating loss deduction under paragraph (f)(2) of this section. Consolidated LICTI is \$100. Under paragraph (f)(2) of this section, \$50 of the nonlife consolidated net operating loss carryover (\$165) is used in 2022 and, under paragraph (h)(3)(vi) and (vii) of this section, the portion used in 2022 is attributable to I, the ineligible nonlife member. Accordingly, the offsetable nonlife consolidated net operating loss from 2021 under paragraph (h)(3)(ii) of this section is \$65, the unused loss from 2021. The offsetable nonlife consolidated net operating loss in 2022 is \$22.75 (35 percent of the lesser of the offsetable loss of \$65 or consolidated LICTI of \$100). Accordingly, under paragraph (e) of this section, consolidated taxable income is \$77.25 (consolidated LICTI of \$100 minus the offsetable loss of \$22.75).

* * * * *

(k) *Preemption.* The rules in this section preempt any inconsistent rules in other sections of the consolidated return regulations. For example, the rules in paragraph (h)(3)(vi) of this section apply notwithstanding § 1.1502–21.

(l) *Other consolidation principles.* The fact that this section treats the life and nonlife members as separate groups in computing, respectively, consolidated LICTI (or life consolidated net operating loss) and nonlife consolidated taxable income (or loss) does not affect the usual rules in the consolidated return

regulations unless this section provides otherwise. Thus, the usual rules in § 1.1502–13 (relating to intercompany transactions) apply to both the life and nonlife members by treating them as members of one affiliated group.

(m) * * *

(1) * * *

(i) File the applicable consolidated corporate income tax return: a Form 1120–L, *U.S. Life Insurance Company Income Tax Return*, where the common parent is a life insurance company; a Form 1120–PC, *U.S. Property and Casualty Insurance Company Income Tax Return*, where the common parent is an insurance company, other than a life insurance company; a Form 1120, *U.S. Corporation Income Tax Return*, where the common parent is any other type of corporation; or any successor form;

* * * * *

(iv) Report separately the nonlife consolidated taxable income or loss, determined under paragraph (f) of this section, on a Form 1120 or 1120–PC (or any successor forms) (whether filed by the common parent or as an attachment to the consolidated return), as the case may be, of all nonlife members of the consolidated group; and

(v) Report separately the consolidated Life Insurance Company Taxable Income or life consolidated net operating loss, on a Form 1120–L (or any successor form) (whether filed by the common parent or as an attachment to the consolidated return), of all life members of the consolidated group.

* * * * *

■ **Par. 33.** Section 1.1502–75 is amended by:

■ a. Revising and republishing paragraphs (b)(1) through (3), (c)(1)(i), and (c)(2)(i) and (ii);

■ b. Removing paragraph (d)(5); and

■ c. Revising and republishing paragraphs (h)(1) and (2).

The revisions read as follows:

§ 1.1502–75 Filing of consolidated returns.

* * * * *

(b) * * *

(1) *General rule.* The consent of a corporation referred to in paragraph (a)(1) of this section is made by such corporation joining in the making of the consolidated return for such year. A corporation is deemed to have joined in the making of such return for such year if it files a Form 1122 (or successor form) in the manner specified in paragraph (h)(2) of this section.

(2) *Consent under facts and circumstances—(i) In general.* If a member of the group fails to file Form 1122 (or successor form), the Commissioner may under the facts and circumstances determine that such member has joined in the making of a consolidated return by such group. The following circumstances, among others, will be taken into account in making this determination—

(A) Whether or not the income and deductions of the member were included in the consolidated return;

(B) Whether or not a separate return was filed by the member for that taxable year; and

(C) Whether or not the member was included in the affiliations schedule, Form 851 (or successor form).

(ii) *Treatment of member.* If the Commissioner determines that the member described in paragraph (b)(1)(i) of this section has joined in the making of the consolidated return, such member is treated as if it had filed a Form 1122 (or successor form) for such year for purposes of paragraph (h)(2) of this section.

(3) *Failure to consent due to mistake.*

If any member has failed to join in the making of a consolidated return under either paragraph (b)(1) or (2) of this section, then the tax liability of each member of the group is determined on the basis of separate returns unless the common parent corporation establishes to the satisfaction of the Commissioner

that the failure of such member to join in the making of the consolidated return was due to a mistake of law or fact, or to inadvertence. In such case, such member is treated as if it had filed a Form 1122 (or successor form) for such year for purposes of paragraph (h)(2) of this section, and thus joined in the making of the consolidated return for such year.

(c) * * *

(1) * * *

(i) *In general.* Notwithstanding that a consolidated return is required for a taxable year, the Commissioner, upon application by the common parent, may for good cause shown grant permission to a group to discontinue filing consolidated returns. Any such application must be made through a letter ruling request filed not later than the 90th day before the due date of the consolidated return for the taxable year (including extensions). In addition, if an amendment of the Code, or other law affecting the computation of tax liability, is enacted and the enactment is effective for a taxable year ending before or within 90 days after the date of enactment, then application for such a taxable year may be made not later than the 180th day after the date of enactment, and if the application is approved the permission to discontinue filing consolidated returns will apply to such taxable year notwithstanding that a consolidated return has already been filed for such year.

* * * * *

(2) * * *

(i) *Permission to all groups.* The Commissioner, in the Commissioner's discretion, may grant all groups permission to discontinue filing consolidated returns if any provision of the Code or regulations has been amended and such amendment is of the type which could have a substantial adverse effect on the filing of consolidated returns by substantially all groups, relative to the filing of separate returns. Ordinarily, the permission to discontinue applies with respect to the taxable year of each group which includes the effective date of such an amendment.

(ii) *Permission to a class of groups.* The Commissioner, in the Commissioner's discretion, may grant a particular class of groups permission to discontinue filing consolidated returns if any provision of the Code or regulations has been amended and such amendment is of the type which could have a substantial adverse effect on the filing of consolidated returns by substantially all such groups relative to the filing of separate returns. Ordinarily,

the permission to discontinue applies with respect to the taxable year of each group within the class which includes the effective date of such an amendment.

* * * * *

(h) * * *

(1) *Consolidated return made by common parent or agent.* The consolidated return must be made on Form 1120, *U.S. Corporation Income Tax Return* (or any successor form), for the group by the common parent or the agent for the group as provided in § 1.1502-77(c). The consolidated return, with Form 851, *Affiliations Schedule* (or any successor form), attached, must be filed with the service center with which the common parent would have filed a separate return.

(2) *Filing of Form 1122 for first year.* If, under the provisions of paragraph (a)(1) of this section, a group wishes to file a consolidated return for a taxable year, then a Form 1122 (*Authorization and Consent of Subsidiary Corporation To Be Included in a Consolidated Income Tax Return*) (or successor form) must be executed by each subsidiary. The group must attach either executed Forms 1122 (or successor forms) or unsigned copies of the completed Forms 1122 (or successor forms) to the consolidated return. If the group submits unsigned Forms 1122 (or successor forms) with its return, it must retain the signed originals in its records in the manner required by § 1.6001-1(e). Form 1122 (or any successor form) is not required for a taxable year if a consolidated return was filed (or was required to be filed) by the group for the immediately preceding taxable year.

* * * * *

■ **Par. 34.** Section 1.1502-76 is amended by revising and republishing paragraphs (a), (b)(1)(ii)(A)(2), (b)(2)(v), (b)(6), (c)(3), and (d) to read as follows:

§ 1.1502-76 Taxable year of members of group.

(a) *Taxable year of members of group.* The consolidated return of a group must be filed on the basis of the common parent's taxable year, and each subsidiary must adopt the common parent's annual accounting period for the first consolidated return year for which the subsidiary's income is includible in the consolidated return. If any member is on a 52-53-week taxable year, the rule of the preceding sentence will, with the advance consent of the Commissioner, be deemed satisfied if the taxable years of all members of the group end within the same 7-day period. Any request for such consent must be requested at the time and in the

manner that the Commissioner of Internal Revenue may prescribe by Internal Revenue Service forms and instructions or by publication in the Internal Revenue Bulletin (see § 601.601(d)(2)(ii) of this chapter).

(b) * * *

(1) * * *

(ii) * * *

(A) * * *

(2) *Special rule for former S corporations.* If S becomes a member in a transaction other than in a qualified stock purchase for which an election under section 338(g) is made, and immediately before becoming a member an election under section 1362(a) was in effect, then S will become a member at the beginning of the day the termination of its S corporation election is effective. S's tax year ends for all Federal income tax purposes at the end of the preceding day.

* * * * *

(2) * * *

(v) *Acquisition of S corporation.* If a corporation is acquired in a transaction to which paragraph (b)(1)(ii)(A)(2) of this section applies, then paragraphs (b)(2)(ii) and (iii) of this section do not apply and items of income, gain, loss, deduction, and credit are assigned to each short taxable year on the basis of the corporation's normal method of accounting as determined under section 446.

* * * * *

(6) *Applicability date.* Except as provided in paragraphs (b)(1)(ii)(A)(2) and (b)(2)(v) of this section, this paragraph (b) applies to corporations becoming or ceasing to be members of consolidated groups on or after January 1, 1995.

(c) * * *

(3) *Examples.* The provisions of this paragraph (c) may be illustrated by the following examples:

(i) *Example 1.* Corporation P, which filed a separate return for the calendar year 2022, acquires all of the stock of corporation S as of the close of December 31, 2022. Corporation S reports its income on the basis of a fiscal year ending March 31. On July 15, 2023, the due date for the filing of a separate return by S (assuming no extensions of time), a consolidated return has not been filed for the group (P and S). On such date S may either file a return for the period April 1, 2022, through December 31, 2022, or it may file a return for the complete fiscal year ending March 31, 2023. If S files a return for the short period ending December 31, 2022, and if the group elects not to file a consolidated return for the calendar year 2023, S, on or

before April 15, 2024 (the due date of P's return, assuming no extensions of time), must file a substituted return for the complete fiscal year ending March 31, 2023, in lieu of the return previously filed for the short period. Interest is computed from July 15, 2023. If, however, S files a return for the complete fiscal year ending March 31, 2023, and the group elects to file a consolidated return for the calendar year 2023, then S must file an amended return covering the period from April 1, 2022, through December 31, 2022, in lieu of the return previously filed for the complete fiscal year. Interest is computed from July 15, 2023.

(ii) *Example 2.* Assume the same facts as in paragraph (c)(3)(i) of this section (*Example 1*), except that corporation P

acquires all of the stock of corporation S at the close of September 30, 2023, and P files a consolidated return for the group for 2023 on April 15, 2024 (not having obtained any extensions of time). Since a consolidated return has been filed on or before the due date (July 15, 2024) for the filing of the separate return for the taxable year ending March 31, 2024, the return of S for the short taxable year beginning April 1, 2023, and ending September 30, 2023, should be filed no later than April 15, 2024.

(d) *Applicability date*—(1) *Taxable years of members of group applicability date.* Paragraph (a) of this section applies to any original consolidated Federal income tax return due (without extensions) after July 20, 2007.

(2) *Election to ratably allocate items applicability date.* Paragraph (b)(2)(ii)(D) of this section applies to any original consolidated Federal income tax return due (without extensions) after July 20, 2007.

§ 1.1502–77 [Amended]

■ **Par. 35.** Section 1.1502–77 is amended by:

■ a. Designating *Examples 1* through *15* in paragraph (g) as paragraphs (g)(1) through (15), respectively.

■ b. In paragraph (g), for each newly redesignated paragraph listed in the “Paragraph” column, removing the text indicated in the “Remove” column and adding in its place the text indicated in the “Add” column:

Paragraph	Remove	Add
(g)(2)(i)	<i>Example 1</i>	paragraph (g)(1)(i) of this section (<i>Example 1</i>).
(g)(4)(i)	<i>Example 3</i>	paragraph (g)(3)(i) of this section (<i>Example 3</i>).
(g)(5)(i)	<i>Example 4</i>	paragraph (g)(4) of this section (<i>Example 4</i>).
(g)(11)(i)(B)(1)	His	the Commissioner's.
(g)(11)(ii)(A)	paragraph (i)(A) of this <i>Example 11</i> .	paragraph (g)(11)(i)(A) of this section.
(g)(12)(i)	paragraph (ii)(A) of <i>Example 11</i>	paragraph (g)(11)(ii)(A) of this section (<i>Example 11</i>).
(g)(13)(i)	March 15	April 15.

■ **Par. 36.** Section 1.1502–77A is amended by revising and republishing paragraph (d) to read as follows:

§ 1.1502–77A Common parent agent for subsidiaries applicable for consolidated return years beginning before June 28, 2002.

* * * * *

(d) *Effect of dissolution of common parent corporation.* If the common parent corporation contemplates dissolution, or is about to be dissolved, or if for any other reason its existence is about to terminate, it must forthwith notify the Commissioner of such fact and designate, subject to the approval of the Commissioner, another member to act as agent in its place to the same extent and subject to the same conditions and limitations as are applicable to the common parent. If the notice thus required is not given by the common parent, or the designation is not approved by the Commissioner, the remaining members may, subject to the approval of the Commissioner, designate another member to act as such agent, and notice of such designation must be given to the Commissioner. Until a notice in writing designating a new agent has been approved by the Commissioner, any notice of deficiency or other communication mailed to the common parent will be considered as having been properly mailed to the agent of the group; or, if the

Commissioner has reason to believe that the existence of the common parent has terminated, the Commissioner may deal directly with any member in respect of its liability.

* * * * *

■ **Par. 37.** Section 1.1502–77B is amended by revising and republishing paragraphs (a)(6)(i) and (ii) to read as follows:

§ 1.1502–77B Agent for the group applicable for consolidated return years beginning on or after June 28, 2002, and before April 1, 2015.

(a) * * *

(6) * * *

(i) *Several liability.* The Commissioner may, upon issuing to the common parent written notice that expressly invokes the authority of this provision, deal directly with any member of the group with respect to its liability under § 1.1502–6 for the consolidated tax of the group, in which event such member has sole authority to act for itself with respect to that liability. However, if the Commissioner believes or has reason to believe that the existence of the common parent has terminated, the Commissioner may deal directly with any member with respect to that member's liability under § 1.1502–6 without giving the notice required by this provision.

(ii) *Information requests.* The Commissioner may, upon informing the

common parent, request information relevant to the consolidated tax liability from any member of the group. However, if the Commissioner believes or has reason to believe that the existence of the common parent has terminated, the Commissioner may request such information from any member of the group without informing the common parent.

* * * * *

■ **Par. 38.** Section 1.1502–78 is amended by revising paragraph (f) to read as follows:

§ 1.1502–78 Tentative carryback adjustments.

* * * * *

(f) *Applicability date.* This section applies to taxable years to which a loss or credit may be carried back and for which the due date (without extensions) of the original return is after June 28, 2002, except that the provisions of paragraph (e)(2) of this section apply for applications by new members of consolidated groups for tentative carryback adjustments resulting from net operating losses, net capital losses, or unused business credits arising in separate return years of new members that begin on or after January 1, 2001.

■ **Par. 39.** Section 1.1502–79 is amended by revising paragraphs (a), (b), (d), and (e)(1) and (2) to read as follows:

§ 1.1502–79 Separate return years.

(a) *Carryover and carryback of consolidated net operating losses to separate return years.* For rules regarding the carryover and carryback of consolidated net operating losses to separate return years, see § 1.1502–21(b).

(b) *Carryover and carryback of consolidated net capital loss to separate return years.* For rules regarding the carryover and carryback of consolidated net capital losses to separate return years, see § 1.1502–22(b).

(d) *Carryover and carryback of consolidated unused foreign tax—(1) In general.* If a consolidated unused foreign tax can be carried under the principles of section 904(c) and § 1.1502–4(d) to a separate return year of a corporation (or could have been so carried if such corporation were in existence) that was a member of the group in the year in which the unused foreign tax arose, then the portion of the consolidated unused foreign tax attributable to the corporation (as determined under paragraph (d)(2) of this section) is apportioned to the corporation (and any successor to that corporation in a transaction to which section 381(a) applies) under the principles of § 1.1502–21(b) and is deemed paid or accrued in such separate return year to the extent provided in section 904(c).

(2) *Portion of consolidated unused foreign tax attributable to a member.* The portion of a consolidated unused foreign tax for any year attributable to a member is an amount equal to the consolidated unused foreign tax multiplied by a fraction. The numerator of the fraction is the foreign taxes paid or accrued by the member for the year (including those taxes deemed paid or accrued, other than by reason of section 904(c)). The denominator of the fraction is the aggregate of all such taxes paid or accrued for the year (including those taxes deemed paid or accrued, other than by reason of section 904(c)) by all members of the group.

(e) * * *

(1) *In general.* If the consolidated excess charitable contributions for any taxable year can be carried under the principles of section 170(b)(2) and § 1.1502–24(b) to a separate return year of a corporation (or could have been so carried if such corporation were in existence) which was a member of the group in the year in which such excess contributions arose, then the portion of such consolidated excess charitable contributions attributable to such corporation (as determined under

paragraph (e)(2) of this section) is apportioned to such corporation (and any successor to such corporation in a transaction to which section 381(a) applies) under the principles of § 1.1502–21(b) and is a charitable contribution carryover to such separate return year.

(2) *Portion of consolidated excess charitable contributions attributable to a member.* The portion of the consolidated excess charitable contributions for any year attributable to a member is an amount equal to the consolidated excess contributions multiplied by a fraction. The numerator of the fraction is the charitable contributions paid by the member for the year. The denominator of the fraction is the aggregate of all charitable contributions paid for the year by all members of the group.

* * * * *

■ **Par. 40.** Section 1.1502–80 is amended by revising and republishing paragraph (c)(2) to read as follows:

§ 1.1502–80 Applicability of other provisions of law.

* * * * *

(c) * * *

(2) *Cross reference.* See § 1.1502–36 for additional rules relating to worthlessness of subsidiary stock.

* * * * *

§ 1.1502–81T [Removed]

■ **Par. 41.** Section 1.1502–81T is removed.

■ **Par. 42.** Section 1.1502–90 is amended by revising the entry for § 1.1502–99 to read as follows:

§ 1.1502–90 Table of contents.

* * * * *

§ 1.1502–99 *Effective/applicability dates.*

(a) In general.

(b) Reattribution of losses under § 1.1502–36(d)(6).

(c) Application to section 163(j).

(1) Sections 1.382–2 and 1.382–5.

(2) Sections 1.382–6 and 1.383–1.

§ 1.1502–91 [Amended]

■ **Par. 43.** Section 1.1502–91 is amended by removing paragraph (b)(3).

■ **Par. 44.** Section 1.1502–92 is amended by:

■ a. Designating *Examples 1* through *3* in paragraph (b)(3)(iii) as paragraphs (b)(3)(iii)(A) through (C), respectively.

■ b. In newly redesignated paragraphs (b)(3)(iii)(A) through (C), further redesignating paragraphs in the first column as paragraphs in the second column:

Old paragraphs	New paragraphs
(b)(3)(iii)(A)(i) and (ii)	(b)(3)(iii)(A)(1) and (2).

Old paragraphs	New paragraphs
(b)(3)(iii)(B)(i), (ii), (iii), and (iv).	(b)(3)(iii)(B)(1), (2), (3), and (4).
(b)(3)(iii)(C)(i) and (ii)	(b)(3)(iii)(C)(1) and (2).

■ c. Revising newly redesignated paragraphs (b)(3)(iii)(B)(2) through (4). The revisions read as follows:

§ 1.1502–92 Ownership change of a loss group or a loss subgroup.

* * * * *

(b) * * *

(3) * * *

(iii) * * *

(B) * * *

(2) For purposes of determining if the L loss group has an ownership change on November 22, Year 3, the day of the merger, P is treated as a continuation of L so that the testing period for P begins on January 1, Year 2, the first day of the taxable year of the L loss group in which the consolidated net operating loss that is carried over to Year 3 arose. Immediately after the close of November 22, Year 3, D is the only 5-percent shareholder that has increased its ownership interest in P during the testing period (from zero to 10 percentage points).

(3) The facts are the same as in paragraph (b)(3)(iii)(B)(1) of this section (*Example 2*), except that A has held 23 $\frac{1}{3}$ shares (23 $\frac{1}{3}$ percent) of L's stock for five years, and A purchased an additional 10 shares of L stock from E two years before the merger. Immediately after the close of the day of the merger (a testing date), A's ownership interest in P, the common parent of the L loss group, has increased by 6 $\frac{2}{3}$ percentage points over A's lowest percentage ownership during the testing period (23 $\frac{1}{3}$ percent to 30 percent).

(4) The facts are the same as in paragraph (b)(3)(iii)(B)(1) of this section (*Example 2*), except that P has a net operating loss arising in Year 1 that is carried to the first consolidated return year ending after the day of the merger. Solely for purposes of determining whether the L loss group has an ownership change under paragraph (b)(1)(i) of this section, the testing period for P commences on January 1, Year 2. P does not determine the earliest day for its testing period by reference to its net operating loss carryover from Year 1, which §§ 1.1502–1(f)(3) and 1.1502–75(d)(3)(i) treat as arising in a SRLY. See § 1.1502–94 to determine the application of section 382 with respect to P's net operating loss carryover.

* * * * *

■ **Par. 45.** Section 1.1502–99 is amended by:

■ a. Revising paragraphs (a) and (b).

- b. Removing paragraph (c).
- c. Redesignating paragraph (d) as paragraph (c).

The revisions read as follows:

§ 1.1502–99 Effective/applicability dates.

(a) *In general.* Sections 1.1502–91 through 1.1502–96 and § 1.1502–98 apply to any testing date that is on or after June 25, 1999. Sections 1.1502–94 through 1.1502–96 also apply to a corporation that becomes a member of a group or ceases to be a member of a group (or loss subgroup) on or after June 25, 1999.

(b) *Reattribution of losses under § 1.1502–36(d)(6).* Section 1.1502–96(d) applies to reattributions of net operating loss carryovers, capital loss carryovers, and deferred deductions in connection with a transfer of stock to which § 1.1502–36 applies, and the election under § 1.1502–96(d)(5) (relating to an election to reattribute section 382 limitation) can be made with an election under § 1.1502–36(d)(6) to reattribute a loss to the common parent that is filed at the time and in the manner provided in § 1.1502–36(e)(5)(x).

* * * * *

■ **Par. 46.** Section 1.1502–100 is amended by revising and republishing paragraphs (a)(2), (c)(2), and (d) to read as follows:

§ 1.1502–100 Corporations exempt from tax.

(a) * * *

(2) *Applicability of other consolidated return provisions.* The provisions of the consolidated return regulations are applicable to an exempt group to the extent they are not inconsistent with the provisions of this section or the provisions of subchapter F of chapter 1 of the Code. For purposes of applying the provisions of the consolidated return regulations to an exempt group, the following substitutions must be made—

(i) The term “exempt group” is substituted for the term “group”;

(ii) The terms “unrelated business taxable income”, “separate unrelated business taxable income”, and “consolidated unrelated business taxable income” are substituted for the terms “taxable income”, “separate taxable income”, and “consolidated taxable income”; and

(iii) The term *consolidated liability for tax determined under § 1.1502–2* (or an equivalent term) means the consolidated liability for tax of an exempt group determined under paragraph (b) of this section.

* * * * *

(c) * * *

(2) Any consolidated net operating loss deduction (determined under § 1.1502–21) subject to the limitations provided in section 512(b)(6);

* * * * *

(d) *Separate unrelated business taxable income—*(1) *In general.* The separate unrelated business taxable income of a member of an exempt group must be computed in accordance with the provisions of section 512 covering the determination of unrelated business taxable income of separate corporations, except that:

(i) The provisions of paragraphs (a) through (d), (f) through (k), and (o) of § 1.1502–12 apply; and

(ii) No charitable contributions deduction is taken into account under section 512(b)(10).

(2) *Section 501(c)(2) organizations.* See sections 511(c) and 512(a)(3)(C) for special rules applicable to organizations described in section 501(c)(2).

§§ 1.1502–9A, 1.1502–15A, 1.1502–21A, 1.1502–22A, 1.1502–23A, 1.1502–41A, 1.1502–79A, 1.1502–90A, 1.1502–91A, 1.1502–92A, 1.1502–93A, 1.1502–94A, 1.1502–95A, 1.1502–96A, 1.1502–97A, 1.1502–98A, 1.1502–99A, and 1.1503–2 [Removed]

■ **Par. 47.** Sections 1.1502–9A, 1.1502–15A, 1.1502–21A, 1.1502–22A, 1.1502–23A, 1.1502–41A, 1.1502–79A, 1.1502–90A, 1.1502–91A, 1.1502–92A, 1.1502–93A, 1.1502–94A, 1.1502–95A, 1.1502–96A, 1.1502–97A, 1.1502–98A, 1.1502–99A, and 1.1503–2 are removed.

■ **Par. 48.** Section 1.1503(d)–1 is amended by revising and republishing paragraph (b)(7) to read as follows:

§ 1.1503(d)–1 Definitions and special rules for filings under section 1503(d).

* * * * *

(b) * * *

(7) *Foreign country* includes any U.S. territory (as defined in § 1.1502–1(l)).

* * * * *

■ **Par. 49.** Section 1.1503(d)–8 is amended by:

■ a. Revising and republishing paragraph (a).

■ b. Removing and reserving paragraphs (b)(1) and (2), (b)(3)(ii) and (iii), and (b)(4).

The revision and republication read as follows:

§ 1.1503(d)–8 Effective dates.

(a) *General rule.* Except as provided in paragraph (b) of this section, this paragraph (a) provides the dates of applicability of §§ 1.1503(d)–1 through 1.1503(d)–7. Sections 1.1503(d)–1 through 1.1503(d)–7 apply to dual consolidated losses incurred in taxable years beginning on or after April 18,

2007. However, a taxpayer may apply §§ 1.1503(d)–1 through 1.1503(d)–7, in their entirety, to dual consolidated losses incurred in taxable years beginning on or after January 1, 2007, by filing its return and attaching to such return the domestic use agreements, certifications, or other information in accordance with these regulations. For purposes of this section, the term application date means either April 18, 2007, or, if the taxpayer applies these regulations pursuant to the preceding sentence, January 1, 2007. Section 1.1503–2, as contained in 26 CFR part 1, revised as of April 1, 2024, applies for dual consolidated losses incurred in taxable years beginning on or after October 1, 1992, and before the application date.

* * * * *

■ **Par. 50.** Section 1.1504–3 is amended by revising and republishing paragraph (d)(1)(ii) to read as follows:

§ 1.1504–3 Treatment of stock in a QOF C corporation for purposes of consolidation.

* * * * *

(d) * * *

(1) * * *

(ii) *Analysis.* Under paragraph (b)(1) of this section, stock of a QOF C corporation (qualifying or otherwise) is not treated as stock for purposes of determining whether the QOF C corporation may join in the filing of a consolidated return. Thus, because no election has been made under paragraph (b)(2) of this section, once Q1 becomes a QOF, Q1 ceases to be affiliated with the P group members for purposes of section 1501, and it deconsolidates from the P group. See the consolidated return regulations generally for the consequences of deconsolidation.

* * * * *

■ **Par. 51.** Section 1.1552–1 is amended by:

■ a. Redesignating paragraphs (a)(1)(ii)(a) through (d) as paragraphs (a)(1)(ii)(A) through (D), respectively.

■ b. Revising newly redesignated paragraph (a)(1)(ii)(B).

■ c. Redesignating paragraphs (a)(2)(ii)(a) through (f) as paragraphs (a)(2)(ii)(A) through (I), respectively.

■ d. Removing and reserving newly redesignated paragraph (a)(2)(ii)(B).

■ e. Revising newly redesignated paragraph (a)(2)(ii)(I).

■ f. Adding paragraph (g).

The revisions and addition read as follows:

§ 1.1552–1 Earnings and Profits.

(a) * * *

(1) * * *

(ii) * * *

(B) Such member's capital gain net income (determined without regard to any net capital loss carryover attributable to such member);

* * * * *

(2) * * *

(ii) * * *

(I) For purposes of subtitle A of the Code, if two or more taxable income brackets are set forth in section 11(b) of the Code, the amount in each taxable income bracket is divided by the number of members (or such portion of each bracket which is apportioned to the member pursuant to a schedule attached to the consolidated return for the consolidated return year). However, if for the taxable year some or all of the members are component members of a controlled group of corporations (within the meaning of section 1563) and if there are other such component members which do not join in filing the consolidated return for such year, the amount to be divided among the members filing the consolidated return is (in lieu of the taxable income brackets) the sum of the amounts apportioned to the component members which join in filing the consolidated return.

* * * * *

(g) *Applicability date.* This section applies to taxable years beginning on or after January 1, 2025. See 26 CFR 1.1552-1, as revised April 1, 2024, for rules applicable prior to January 1, 2025.

■ **Par. 52.** Section 1.1563-1 is amended by:

■ a. Revising and republishing paragraphs (a)(2)(i)(A) and (B) and (a)(6);

■ b. In paragraph (b)(4), designating *Examples 1 through 4* as paragraphs (b)(4)(i) through (iv), respectively;

■ c. Revising newly designated paragraph (b)(4)(i); and

■ d. Revising paragraph (e).

The revisions read as follows:

§ 1.1563-1 Definition of controlled group of corporations and component members and related concepts.

(a) * * *

(2) * * *

(i) * * *

(A) Stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote or at least 80 percent of the total value of shares of all classes of stock of each of the corporations, except the common parent corporation, is owned (directly and with the application of § 1.1563-3(b)(1), (2), and (3)) by one or more of the other corporations; and

(B) The common parent corporation owns (directly and with the application

of § 1.1563-3(b)(1), (2), and (3)) stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote or at least 80 percent of the total value of shares of all classes of stock of at least one of the other corporations, excluding, in computing such voting power or value, stock owned directly by such other corporations.

* * * * *

(6) *Voting power of stock.* For purposes of this section, and §§ 1.1563-2 and 1.1563-3, in determining whether the stock owned by a person (or persons) possesses a certain percentage of the total combined voting power of all classes of stock entitled to vote of a corporation, consideration will be given to all the facts and circumstances of each case. A share of stock will generally be considered as possessing the voting power accorded to such share by the corporate charter, by-laws, or share certificate. On the other hand, if there is any agreement, whether express or implied, that a shareholder will not vote the shareholder's stock in a corporation, the formal voting rights possessed by the shareholder's stock may be disregarded in determining the percentage of the total combined voting power possessed by the stock owned by other shareholders in the corporation, if the result is that the corporation becomes a component member of a controlled group of corporations. Moreover, if a shareholder agrees to vote the shareholder's stock in a corporation in the manner specified by another shareholder in the corporation, the voting rights possessed by the stock owned by the first shareholder may be considered to be possessed by the stock owned by such other shareholder if the result is that the corporation becomes a component member of a controlled group of corporations.

* * * * *

(b) * * *

(4) * * *

(i) *Example 1.* B, an individual, owns all of the stock of corporations W and X on each day of 1964. W and X each use the calendar year as their taxable year. On January 1, 1964, B also owns all the stock of corporation Y (a fiscal year corporation with a taxable year beginning on July 1, 1964, and ending on June 30, 1965), which stock B sells on October 15, 1964. On December 1, 1964, B purchases all the stock of corporation Z (a fiscal year corporation with a taxable year beginning on September 1, 1964, and ending on August 31, 1965). On December 31, 1964, W, X, and Z are members of the same controlled group. However, the

component members of the group on such December 31st are W, X, and Y. Under paragraph (b)(2)(i) of this section, Z is treated as an excluded member of the group on December 31, 1964, since Z was a member of the group for less than one-half of the number of days (29 out of 121 days) during the period beginning on September 1, 1964 (the first day of its taxable year) and ending on December 30, 1964. Under paragraph (b)(3) of this section, Y is treated as an additional member of the group on December 31, 1964, since Y was a member of the group for at least one-half of the number of days (107 out of 183 days) during the period beginning on July 1, 1964 (the first day of its taxable year) and ending on December 30, 1964.

* * * * *

(e) *Applicability dates—(1) In general.* Except as provided in paragraph (e)(2) of this section, this section applies to taxable years beginning on or after May 26, 2009. However, taxpayers may apply this section to taxable years beginning before May 26, 2009. For taxable years beginning before May 26, 2009, see § 1.1563-1T as contained in 26 CFR part 1 in effect on April 1, 2009.

(2) *Exceptions.* (i) Paragraph (a)(1)(ii) of this section applies to taxable years beginning on or after April 11, 2011.

(ii) Paragraphs (a)(2)(i)(A) and (B), (a)(6), and (b)(4) of this section apply to taxable years beginning on or after December 30, 2024.

■ **Par. 53.** Section 1.1563-2 is amended by:

■ a. Revising and republishing paragraphs (b)(2)(iii) and (b)(4)(ii);

■ b. In paragraph (b)(7), designating *Examples 1 through 3* as paragraphs (b)(7)(i) through (iii), respectively;

■ c. Revising newly designated paragraph (b)(7)(ii) and (iii); and

■ d. Adding paragraph (d).

The revisions and addition read as follows:

§ 1.1563-2 Excluded stock.

* * * * *

(b) * * *

(2) * * *

(iii) *Employees.* Stock in the subsidiary corporation owned (directly and with the application of the rules contained in § 1.1563-3(b)) by an employee of the subsidiary corporation if such stock is subject to conditions which substantially restrict or limit the employee's right (or if the employee constructively owns such stock, the direct owner's right) to dispose of such stock and which run in favor of the parent or subsidiary corporation. In general, any condition which extends, directly or indirectly, to the parent

corporation or the subsidiary corporation preferential rights with respect to the acquisition of the employee's (or direct owner's) stock will be considered to be a condition described in the preceding sentence. It is not necessary, in order for a condition to be considered to be in favor of the parent corporation or the subsidiary corporation, that the parent or subsidiary be extended a discriminatory concession with respect to the price of the stock. For example, a condition whereby the parent corporation is given a right of first refusal with respect to any stock of the subsidiary corporation offered by an employee for sale is a condition which substantially restricts or limits the employee's right to dispose of such stock and runs in favor of the parent corporation. Moreover, any legally enforceable condition which prohibits the employee from disposing of the employee's stock without the consent of the parent (or a subsidiary of the parent) will be considered to be a substantial limitation running in favor of the parent corporation.

* * * * *

(4) * * *
(ii) *Employees.* Stock in such corporation owned (directly and with the application of the rules contained in § 1.1563–3(b)) by an employee of such corporation if such stock is subject to conditions which run in favor of a common owner of such corporation (or in favor of such corporation) and which substantially restrict or limit the employee's right (or if the employee constructively owns such stock, the record owner's right) to dispose of such stock. The principles of paragraph (b)(2)(iii) of this section apply in determining whether a condition satisfies the requirements of the preceding sentence. Thus, in general, a condition which extends, directly or indirectly, to a common owner or such corporation preferential rights with respect to the acquisition of the employee's (or record owner's) stock will be considered to be a condition which satisfies such requirements. For purposes of this paragraph (b)(4)(ii), if a condition which restricts or limits an employee's right (or record owner's right) to dispose of the employee's (or record owner's) stock also applies to the stock in such corporation held by such common owner pursuant to a bona fide reciprocal stock purchase arrangement, such condition is not treated as one which restricts or limits the employee's (or record owner's) right to dispose of such stock. An example of a reciprocal stock purchase arrangement is an agreement whereby a common owner

and the employee are given a right of first refusal with respect to stock of the employer corporation owned by the other party. If, however, the agreement also provides that the common owner has the right to purchase the stock of the employer corporation owned by the employee in the event that the corporation should discharge the employee for reasonable cause, the purchase arrangement would not be reciprocal within the meaning of this paragraph (b)(4)(ii).

* * * * *

(7) * * *
(ii) *Example 2.* The facts are the same as in paragraph (b)(7)(i) of this section (*Example 1*), except that Jones owns 15 shares of the 100 shares of the only class of stock of corporation S–1, and corporation S owns 75 shares of such stock. P satisfies the 50 percent stock ownership requirement of paragraph (b)(1) of this section with respect to S–1 since P is considered as owning 52.5 percent (70 percent × 75 percent) of the S–1 stock with the application of § 1.1563–3(b)(4). Since Jones is an officer of P, under paragraph (b)(2)(ii) of this section, the S–1 stock owned by Jones is treated as not outstanding for purposes of determining whether S–1 is a member of the parent-subsidiary controlled group of corporations. Thus, S is considered to own stock possessing 88.2 percent (75 ÷ 85) of the voting power and value of the S–1 stock. Accordingly, P, S, and S–1 are members of a parent-subsidiary controlled group of corporations.

(iii) *Example 3.* Corporation X owns 60 percent of the only class of stock of corporation Y. D, the president of Y, owns the remaining 40 percent of the stock of Y. D has agreed that, if D offers D's stock in Y for sale, D will first offer the stock to X at a price equal to the fair market value of the stock on the first date the stock is offered for sale. Since D is an employee of Y within the meaning of section 3306(i) of the Code, and D's stock in Y is subject to a condition which substantially restricts or limits D's right to dispose of such stock and runs in favor of X, under paragraph (b)(2)(iii) of this section such stock is treated as if it were not outstanding for purposes of determining whether X and Y are members of a parent-subsidiary controlled group of corporations. Thus, X is considered to own stock possessing 100 percent of the voting power and value of the stock of Y. Accordingly, X and Y are members of a parent-subsidiary controlled group of corporations. The result would be the same if D's spouse, instead of D, owned directly the 40 percent stock interest in

Y and such stock was subject to a right of first refusal running in favor of X.

* * * * *

(d) *Applicability date.* This section applies to taxable years beginning on or after December 30, 2024. For taxable years beginning before December 30, 2024, see § 1.1563–2 as contained in 26 CFR part 1 in effect on April 1, 2024.

■ **Par. 54.** Section 1.1563–3 is amended by revising and republishing paragraphs (b)(2)(i) and (ii), (b)(3)(i) and (ii), (b)(4)(ii), (b)(5)(i) and (ii), (b)(6)(i), (ii), and (iv), (c)(2) and (4), (d)(3), and (e) to read as follows:

§ 1.1563–3 Rules for determining stock ownership.

* * * * *

(b) * * *

(2) * * *

(i) *Rule.* Stock owned, directly or indirectly, by or for a partnership is considered as owned by any partner having an interest of 5 percent or more in either the capital or profits of the partnership in proportion to the partner's interest in capital or profits, whichever such proportion is the greater.

(ii) *Example—(A) Facts.* Green, Jones, and White are unrelated individuals and are partners in the GJW partnership. The partners' interests in the capital and profits of the partnership are as follows:

TABLE 1 TO PARAGRAPH (b)(2)(ii)(A)

Partner	Capital percent	Profit percent
Green	36	25
Jones	60	71
White	4	4

(B) *Analysis.* The GJW partnership owns the entire outstanding stock (100 shares) of X Corporation. Under this paragraph (b)(2), Green is considered to own the X stock owned by the partnership in proportion to Green's interest in capital (36 percent) or profits (25 percent), whichever such proportion is the greater. Therefore, Green is considered to own 36 shares of the X stock. However, since Jones has a greater interest in the profits of the partnership, Jones is considered to own the X stock in proportion to Jones's interest in such profits. Therefore, Jones is considered to own 71 shares of the X stock. Since White does not have an interest of 5 percent or more in either the capital or profits of the partnership, White is not considered to own any shares of the X stock.

(3) * * *

(i) Stock owned, directly or indirectly, by or for an estate or trust is considered

as owned by any beneficiary who has an actuarial interest of 5 percent or more in such stock, to the extent of such actuarial interest. For purposes of this paragraph (b)(3)(i), the actuarial interest of each beneficiary is determined by assuming the maximum exercise of discretion by the fiduciary in favor of such beneficiary and the maximum use of such stock to satisfy the beneficiary's rights as a beneficiary. A beneficiary of an estate or trust who cannot under any circumstances receive any interest in stock held by the estate or trust, including the proceeds from the disposition thereof, or the income therefrom, does not have an actuarial interest in such stock. Thus, where stock owned by a decedent's estate has been specifically bequeathed to certain beneficiaries and the remainder of the estate is bequeathed to other beneficiaries, the stock is attributable only to the beneficiaries to whom it is specifically bequeathed. Similarly, a remainderman of a trust who cannot under any circumstances receive any interest in the stock of a corporation which is a part of the corpus of the trust (including any accumulated income therefrom or the proceeds from a disposition thereof) does not have an actuarial interest in such stock. However, an income beneficiary of a trust does have an actuarial interest in stock if that beneficiary has any right to the income from such stock even though under the terms of the trust instrument such stock can never be distributed to that beneficiary. The factors and methods prescribed in § 20.2031-7 of this chapter (Estate Tax Regulations) for use in ascertaining the value of an interest in property for estate tax purposes must be used for purposes of this paragraph (b)(3)(i) in determining a beneficiary's actuarial interest in stock owned directly or indirectly by or for a trust.

(ii) For the purposes of this paragraph (b)(3), property of a decedent is considered as owned by the decedent's estate if such property is subject to administration by the executor or administrator for the purposes of paying claims against the estate and expenses of administration notwithstanding that, under local law, legal title to such property vests in the decedent's heirs, legatees or devisees immediately upon death. With respect to an estate, the term *beneficiary* includes any person entitled to receive property of the decedent pursuant to a will or pursuant to laws of descent and distribution. A person no longer is considered a beneficiary of an estate when all the property to which the person is entitled

has been received by the person, when the person no longer has a claim against the estate arising out of having been a beneficiary, and when there is only a remote possibility that it will be necessary for the estate to seek the return of property or to seek payment from the person by contribution or otherwise to satisfy claims against the estate or expenses of administration. When pursuant to the preceding sentence, a person ceases to be a beneficiary, stock owned by the estate is not thereafter considered owned by the person.

* * * * *

(4) * * *

(ii) *Example.* Brown, an individual, owns 60 shares of the 100 shares of the only class of outstanding stock of corporation P. Smith, an individual, owns 4 shares of the P stock, and corporation X owns 36 shares of the P stock. Corporation P owns, directly and indirectly, 50 shares of the stock of corporation S. Under this paragraph (b)(4), Brown is considered to own 30 shares of the S stock ($60/100 \times 50$), and X is considered to own 18 shares of the S stock ($36/100 \times 50$). Since Smith does not own 5 percent or more in value of the P stock, Smith is not considered as owning any of the S stock owned by P. If, in this example, Smith's spouse had owned directly 1 share of the P stock, Smith (and Smith's spouse) would each own 5 shares of the P stock, and therefore Smith (and Smith's spouse) would be considered as owning 2.5 shares of the S stock ($5/100 \times 50$).

(5) * * *

(i) Except as provided in paragraph (b)(5)(ii) of this section, an individual is considered to own the stock owned, directly or indirectly, by or for the individual's spouse, other than a spouse who is legally separated from the individual under a decree of divorce, whether interlocutory or final, or a decree of separate maintenance.

(ii) An individual is not considered to own stock in a corporation owned, directly or indirectly, by or for the individual's spouse on any day of a taxable year of such corporation, provided that each of the following conditions are satisfied with respect to such taxable year:

(A) Such individual does not, at any time during such taxable year, own directly any stock in such corporation.

(B) Such individual is not a member of the board of directors or an employee of such corporation and does not participate in the management of such corporation at any time during such taxable year.

(C) Not more than 50 percent of such corporation's gross income for such

taxable year was derived from royalties, rents, dividends, interest, and annuities.

(D) Such stock in such corporation is not, at any time during such taxable year, subject to conditions which substantially restrict or limit the spouse's right to dispose of such stock and which run in favor of the individual or the individual's children who have not attained the age of 21 years. The principles of § 1.1563-2(b)(2)(iii) apply in determining whether a condition is a condition described in the preceding sentence.

* * * * *

(6) * * *

(i) An individual is considered to own the stock owned, directly or indirectly, by or for the individual's children who have not attained the age of 21 years, and, if the individual has not attained the age of 21 years, the stock owned, directly or indirectly, by or for the individual's parents.

(ii) If an individual owns (directly, and with the application of the rules of this paragraph but without regard to this paragraph (b)(6)(ii)) stock possessing more than 50 percent of the total combined voting power of all classes of stock entitled to vote or more than 50 percent of the total value of shares of all classes of stock in a corporation, then such individual is considered to own the stock in such corporation owned, directly or indirectly, by or for the individual's parents, grandparents, grandchildren, and children who have attained the age of 21 years. In determining whether the stock owned by an individual possesses the requisite percentage of the total combined voting power of all classes of stock entitled to vote of a corporation, see § 1.1563-1(a)(6).

* * * * *

(iv) *Example—(A) Facts.* Individual B owns directly 40 shares of the 100 shares of the only class of stock of Z Corporation. B's child, M (20 years of age), owns directly 30 shares of such stock, and B's child, A (30 years of age), owns directly 20 shares of such stock. The remaining 10 shares of the Z stock are owned by an unrelated person.

(B) *B's ownership.* Individual B owns 40 shares of the Z stock directly and is considered to own the 30 shares of Z stock owned directly by M. Since, for purposes of the more-than-50-percent stock ownership test contained in paragraph (b)(6)(ii) of this section, B is treated as owning 70 shares or 70 percent of the total voting power and value of the Z stock, B is also considered as owning the 20 shares owned by B's adult child, A.

Accordingly, B is considered as owning a total of 90 shares of the Z stock.

(C) *M's ownership.* Minor child, M, owns 30 shares of the Z stock directly, and is considered to own the 40 shares of Z stock owned directly by B. However, M is not considered to own the 20 shares of Z stock owned directly by M's sibling, A, and constructively by B, because stock constructively owned by B by reason of family attribution is not considered as owned by M for purposes of making another member of B's family the constructive owner of such stock. See paragraph (c)(2) of this section. Accordingly, M owns and is considered as owning a total of 70 shares of the Z stock.

(D) *A's ownership.* Adult child, A, owns 20 shares of the Z stock directly. Since, for purposes of the more-than-50-percent stock ownership test contained in paragraph (b)(6)(ii) of this section, A is treated as owning only the Z stock which A owns directly, A does not satisfy the condition precedent for the attribution of Z stock from B. Accordingly, A is treated as owning only the 20 shares of Z stock which A owns directly.

(c) * * *

(2) *Members of family.* Stock constructively owned by an individual by reason of the application of paragraph (b)(5) or (6) of this section is not treated as owned by the individual for purposes of again applying such paragraphs in order to make another the constructive owner of such stock.

* * * * *

(4) *Examples.* The provisions of this paragraph (c) may be illustrated by the following examples:

(i) *Example 1.* A, 30 years of age, has a 90 percent interest in the capital and profits of a partnership. The partnership owns all the outstanding stock of corporation X and X owns 60 shares of the 100 outstanding shares of corporation Y. Under paragraph (c)(1) of this section, the 60 shares of Y constructively owned by the partnership by reason of paragraph (b)(4) of this section is treated as actually owned by the partnership for purposes of applying paragraph (b)(2) of this section. Therefore, A is considered as owning 54 shares of the Y stock (90 percent of 60 shares).

(ii) *Example 2.* The facts are the same as in paragraph (c)(4)(i) of this section (*Example 1*), except that that B, who is 20 years of age and the sibling of A, directly owns 40 shares of Y stock. Although the stock of Y owned by B is considered as owned by C (the parent of A and B) under paragraph (b)(6)(i) of this section, under paragraph (c)(2) of

this section such stock may not be treated as owned by C for purposes of applying paragraph (b)(6)(ii) of this section in order to make A the constructive owner of such stock.

(iii) *Example 3.* The facts are the same as in paragraph (c)(4)(ii) of this section (*Example 2*), except that that C has an option to acquire the 40 shares of Y stock owned by B. The rule contained in paragraph (c)(2) of this section does not prevent the reattribution of such 40 shares to A because, under paragraph (c)(3) of this section, C is considered as owning the 40 shares by reason of option attribution and not by reason of family attribution. Therefore, since A satisfies the more-than-50-percent stock ownership test contained in paragraph (b)(6)(ii) of this section with respect to Y, the 40 shares of Y stock constructively owned by C are reattributed to A, and A is considered as owning a total of 94 shares of Y stock.

(d) * * *

(3) *Examples.* The provisions of this paragraph (d) may be illustrated by the following examples, in which each corporation referred to uses the calendar year as its taxable year and the stated facts are assumed to exist on each day of 1970 (unless otherwise provided in the example):

(i) *Example 1.* Jones owns all the stock of corporation X and has an option to purchase from Smith all the outstanding stock of corporation Y. Smith owns all the outstanding stock of corporation Z. Since the Y stock is considered as owned by two or more persons, under paragraph (d)(2)(ii) of this section, the Y stock is treated as owned only by Smith since Smith has direct ownership of such stock. Therefore, on December 31, 1970, Y and Z are component members of the same brother-sister controlled group. If, however, Smith had owned Smith's stock in corporation Z for less than one-half of the number of days of Z's 1970 taxable year, then under paragraph (d)(1) of this section, the Y stock would be treated as owned only by Jones since Jones's ownership results in Y being a component member of a controlled group on December 31, 1970.

(ii) *Example 2.* Individual A owns directly all the outstanding stock of corporation M. B (the spouse of A) owns directly all the outstanding stock of corporation N. Neither spouse is considered as owning the stock directly owned by the other because each of the conditions prescribed in paragraph (b)(5)(ii) of this section is satisfied with respect to each corporation's 1970 taxable year. A owns directly 60 percent of the only class of stock of corporation P and B owns the remaining 40 percent of the P stock. Under paragraph

(d)(2)(iii) of this section, the stock of P is treated as owned only by A since A owns (directly and with the application of the rules contained in paragraphs (b)(1) through (4) of this section) the stock possessing the greatest percentage of the total value of shares of all classes of stock of P. Accordingly, on December 31, 1970, P is treated as a component member of a brother-sister group consisting of M and P.

(iii) *Example 3.* Unrelated individuals A and B each own 49 percent of all the outstanding stock of corporation R, which in turn owns 70 percent of the only class of outstanding stock of corporation S. The remaining 30 percent of the stock of corporation S is owned by unrelated individual C. C also owns the remaining 2 percent of the stock of corporation R. Under the attribution rule of paragraph (b)(4) of this section, A and B are each considered to own 34.3 percent of the stock of corporation S. Accordingly, since five or fewer persons own at least 80 percent of the stock of corporations R and S and also own more than 50 percent identically (A's and B's identical ownership each is 34.3 percent, C's identical ownership is 2 percent), on December 31, 1970, corporations R and S are treated as component members of the same brother-sister controlled group for purposes of § 1.1563-1(a)(3)(ii).

* * * * *

(e) *Applicability dates.* This section applies to taxable years beginning on or after December 30, 2024. For taxable years beginning before December 30, 2024, see § 1.1563-3 as contained in 26 CFR part 1 in effect on April 1, 2024.

PART 5—TEMPORARY INCOME TAX REGULATIONS UNDER THE REVENUE ACT OF 1978

■ **Par. 55.** The authority citation for part 5 continues to read as follows:

Authority: 26 U.S.C. 7805.

§ 5.1502-45 [Removed]

■ **Par. 56.** Section 5.1502-45 is removed.

PART 301—PROCEDURE AND ADMINISTRATION

■ **Par. 57.** The authority citation for part 301 continues to read in part as follows:

Authority: 26 U.S.C. 7805. * * *

■ **Par. 58.** Section 301.6402-7 is amended by revising and republishing paragraph (g)(2)(iii) to read as follows:

§ 301.6402–7 Claims for refund and applications for tentative carryback adjustments involving consolidated groups that include insolvent financial institutions.

* * * * *

- (g) * * *
- (2) * * *

(iii) *Absorption of net operating losses.* The absorption of net operating losses generally is determined under applicable principles of the Code and regulations, including the principles of section 172 and § 1.1502–21(b) of this chapter. Notwithstanding any contrary rule or principle of the Code or regulations, if an institution and another member of the carryback year group

have net operating losses that arise in taxable years ending on the same date and are carried to the same consolidated carryback year, the carryback year group’s consolidated taxable income for that year is treated as offset first by the loss attributable to the institution to the extent thereof.

* * * * *

PART 602—OMB CONTROL NUMBERS UNDER THE PAPERWORK REDUCTION ACT

■ **Par. 59.** The authority citation for part 602 continues to read as follows:

Authority: 26 U.S.C. 7805.

§ 602.101 [Amended]

■ **Par. 60.** Section 602.101 is amended in the table in paragraph (b) by removing the entries for §§ 1.1502–9A, 1.1502–18, 1.1502–76T, 1.1502–95A, 1.1503–2, and 1.1503–2A.

Douglas W. O'Donnell,
Deputy Commissioner,

Approved: November 14, 2024.

Aviva R. Aron-Dine,
Deputy Assistant Secretary of the Treasury (Tax Policy).

BILLING CODE 4830–01–P

Proposed Rules

Federal Register

Vol. 89, No. 249

Monday, December 30, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[REG–134420–10]

RIN 1545–BJ87

Revising Consolidated Return Regulations and Controlled Group of Corporations Regulations To Reflect Statutory Changes, Modernize Language, and Enhance Clarity

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document contains proposed regulations that affect affiliated groups of corporations that file consolidated Federal income tax returns. These regulations would modify the consolidated return regulations to clarify that, in the case of certain transfers between members of a consolidated group, a transferee's assumption of certain liabilities will not reduce the transferor's basis in the transferee's stock received in the transfer. Final regulations modifying other consolidated return regulations are published in the Rules section of this issue of the **Federal Register**.

DATES: Written or electronic comments as well as requests for a public hearing must be received by March 31, 2025. Requests for a public hearing must be submitted as prescribed in the "Comments and Requests for a Public Hearing" section.

ADDRESSES: Commenters are strongly encouraged to submit public comments electronically. Submit electronic submissions via the Federal eRulemaking Portal at <http://www.regulations.gov> (indicate IRS and REG–134420–10). Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The Department of the Treasury (Treasury Department) and the IRS will publish for public availability any comment

submitted electronically or on paper to its public docket.

Send paper submissions to:
CC:PA:01:PR (REG–134420–10), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT:

Concerning the proposed regulations, contact William W. Burhop at (202) 317–5363 or Kelton P. Frye at (202) 317–5135 (not toll-free numbers); concerning the submission of comments and/or requests for a public hearing, contact the Publications and Regulations Section of the Office of Associate Chief Counsel (Procedure and Administration) by email at publichearings@irs.gov (preferred) or by phone at (202) 317–5306 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Authority

Section 1502 authorizes the Secretary of the Treasury or her delegate (Secretary) to prescribe consolidated return regulations for an affiliated group of corporations that join in filing (or that are required to join in filing) a consolidated return (consolidated group) to clearly reflect the Federal income tax liability of the consolidated group and to prevent avoidance of such tax liability. *See* § 1.1502–1(h) (defining the term "consolidated group"). For purposes of carrying out those objectives, section 1502 also permits the Secretary to prescribe rules that may be different from the provisions of chapter 1 of the Code (chapter 1) that would apply if the corporations composing the consolidated group filed separate returns. Additionally, section 7805(a) of the Code authorizes the Secretary to "prescribe all needful rules and regulations for the enforcement of [the Code], including all rules and regulations as may be necessary by reason of any alteration of law in relation to internal revenue."

Background

This notice of proposed rulemaking contains proposed regulations under section 1502 of the Internal Revenue Code (Code) that would revise the Income Tax Regulations (26 CFR part 1) issued under section 1502 (consolidated return regulations). Terms used in the consolidated return regulations generally are defined in § 1.1502–1.

I. Section 357(c) and § 1.1502–80(d)

Section 1.1502–80 provides generally that: (i) the Code, or other law, is applicable to a consolidated group to the extent the consolidated return regulations do not exclude its application; and (ii) to the extent not excluded, other rules operate in addition to, and may be modified by, the consolidated return regulations. *See* § 1.1502–80(a)(1). Section 1.1502–80(d) provides that section 357(c) of the Code does not apply to any transaction to which § 1.1502–13 and other specified sections of the consolidated return regulations apply.

As discussed in the preamble to proposed regulations (REG–137519–01) published in the **Federal Register** (66 FR 57021, 57022) on November 14, 2001 (proposed consolidated section 357(c) regulations), because section 357(c) does not apply to certain intragroup section 351 exchanges (that is, exchanges between members of a consolidated group to which section 351 of the Code applies) under § 1.1502–80(d), a concern arose that no liabilities can technically be excluded under section 357(c)(3). Therefore, in such an intragroup section 351 exchange, the transferor's basis in the stock of the transferee received in the transfer first would be reduced by liabilities assumed by the transferee, including those liabilities described in section 357(c)(3) that would not have reduced basis had section 357(c) applied. The transferor's basis in the stock of the transferee then would be reduced a second time under the principles of § 1.1502–32 at the time the liability does in fact give rise to a deduction on the part of the transferee and is taken into account on the consolidated return. This result ultimately could cause the transferor to recognize an amount of gain on the sale of the stock of the transferee that does not clearly reflect income.

The Treasury Department and the IRS published the proposed consolidated section 357(c) regulations to eliminate potential duplicative stock basis reductions arising from such transactions. As discussed in the preamble to the proposed consolidated section 357(c) regulations, those proposed regulations were published to clarify that, in certain transfers described in section 351 of the Code between members of a consolidated group, a transferee's assumption of

liabilities described in section 357(c)(3)(A), other than those also described in section 357(c)(3)(B), will not reduce the transferor's basis in the transferee's stock received in the exchange.

II. 2023 Proposed Regulations

On August 7, 2023, the Treasury Department and the IRS published a notice of proposed rulemaking (REG–134420–10) in the **Federal Register** (88 FR 52057) under sections 52(a), 414(b), 1502, 1503, 1552, and 1563 of the Code (2023 proposed regulations). The 2023 proposed regulations primarily would revise the consolidated return regulations and the controlled group of corporations regulations (i) to eliminate obsolete or otherwise outdated provisions, (ii) to modernize the language and improve the clarity of the regulations, and (iii) to facilitate taxpayer compliance. The 2023 proposed regulations are adopted as final regulations (T.D. 10018) published in the Rules section in this issue of the **Federal Register**.

The preamble to the 2023 proposed regulations stated that the proposed rule in the proposed consolidated section 357(c) regulations is unnecessary because §§ 1.1502–32 and 1.1502–80 prevent any duplicative stock basis reduction. Accordingly, the 2023 proposed regulations withdrew the proposed consolidated section 357(c) regulations.

III. Comment Received

A commenter stated that, in light of the withdrawal of the proposed consolidated section 357(c) regulations, it is unclear whether the transferor's basis in the transferee stock should be reduced for an assumed section 357(c)(3)(A) liability: (i) at the time of the section 351 exchange under section 358 of the Code, with no further basis reduction under § 1.1502–32(b) when the assumed section 357(c)(3)(A) liability generates a deduction that is absorbed (front-end adjustment); or (ii) at the time the deduction for the assumed section 357(c)(3)(A) liability is absorbed that reduces basis under § 1.1502–32(b), with no prior basis reduction under section 358 at the time of the section 351 exchange (back-end adjustment). The commenter recommended the back-end adjustment approach for various reasons, including the additional compliance costs and complexity associated with tracking and monitoring the transferee's § 1.1502–32(b) basis adjustments (potentially over multiple years, and potentially across multiple groups) under the front-end adjustment approach. The commenter

also expressed the view that the back-end adjustment approach is the prevailing approach currently applied by taxpayers.

Explanation of Provisions

The withdrawal of the proposed consolidated section 357(c) regulations was not intended to suggest that a front-end adjustment approach is required. To reflect the Treasury Department's and the IRS's view regarding the appropriate timing for the single basis reduction for an assumed section 357(c)(3)(A) liability, and to clarify that a back-end adjustment is appropriate, this document would repropose the proposed consolidated section 357(c) regulations in modified form.

Proposed Applicability Date

Pursuant to section 1503(a) of the Code, these proposed regulations would apply to consolidated return years for which the due date of the return (without regard to extensions) is after [date of publication of final regulations in the **Federal Register**].

Special Analyses

I. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

These regulations update the regulations under section 1502 to clarify the timing of a single basis adjustment required by statute. Therefore, the proposed regulations would not impose additional reporting burden beyond what is otherwise required by existing statutes, regulations, and forms. The total burden associated with the proposed regulations, if finalized in their current form, would be \$0.

III. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), the Secretary of the Treasury certifies that the proposed regulations would not have a significant economic impact on a substantial number of small entities. This certification is based on the fact that the proposed regulations would apply only to corporations that file consolidated Federal income tax returns, and that such corporations tend to be larger businesses. Therefore, the proposed regulations would not create additional obligations for, or impose an

economic impact on, small entities. Accordingly, the Secretary certifies that these proposed regulations will not have significant economic impact on a significant number of small entities.

Pursuant to section 7805(f) of the Code, the proposed regulations have been submitted to the Chief Counsel for the Office of Advocacy of the Small Business Administration for comment on its impact on small business.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of \$100 million in 1995 dollars, updated annually for inflation. The proposed regulations do not propose any rule that would include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. The proposed regulations do not propose rules that would have federalism implications, impose substantial direct compliance costs on State and local governments, or preempt State law within the meaning of the Executive order.

Comments and Requests for a Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any comments that are submitted timely to the IRS as prescribed in this preamble under the **ADDRESSES** heading. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. All commenters are strongly encouraged to submit comments electronically. The Treasury Department and the IRS will publish for public availability any comment submitted electronically or on paper to its public docket on <https://www.regulations.gov>.

A public hearing will be scheduled if requested in writing by any person who

timely submits electronic or written comments. Requests for a public hearing are encouraged to be made electronically. If a public hearing is scheduled, a notice of the date and time for the public hearing will be published in the **Federal Register**.

Drafting Information

The principal authors of this document are William W. Burhop and Kelton P. Frye of the Office of Associate Chief Counsel (Corporate). Other personnel from the Treasury Department and the IRS participated in its development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, the Treasury Department and the IRS propose to amend 26 CFR part 1 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.1502–80 is amended by revising paragraph (d)(1) and adding paragraphs (d)(3) and (4) to read as follows:

§ 1.1502–80 Applicability of other provisions of law.

* * * * *

(d) * * *

(1) *In general.* Section 357(c) does not apply to any transaction to which § 1.1502–13 applies if it occurs in a consolidated return year beginning on or after [date of publication of final regulations in the **Federal Register**]. Notwithstanding the foregoing, for

purposes of determining the transferor's basis in property under section 358(a) received in a transfer described in section 351, section 358(d)(2) operates to exclude liabilities described in section 357(c)(3)(A), other than those also described in section 357(c)(3)(B), from the computation of the amount of liabilities assumed that is treated as money received under section 358(d)(1), if the transfer occurs in a consolidated return year beginning after [date of publication of final regulations in the **Federal Register**]. This paragraph (d) does not apply to a transaction if the transferor or transferee becomes a nonmember as part of the same plan or arrangement. The transferor (or transferee) is treated as becoming a nonmember once it is no longer a member of a consolidated group that includes the transferee (or transferor). For purposes of this paragraph (d), any reference to a transferor or transferee includes, as the context may require, a reference to a successor or predecessor.

* * * * *

(3) *Examples.* The principles of paragraph (d)(1) of this section are illustrated by the following examples.

(i) *Example 1—(A) Facts.* P, S, and T are members of a consolidated group. P owns all the stock of S and T with bases of \$30 and \$20, respectively. S has a \$30 basis in its assets and \$40 of liabilities. S merges into T in a transaction described in section 368(a)(1)(A) (and in section 368(a)(1)(D)).

(B) *Analysis.* Section 357(c) does not apply to the merger. P's basis in T's stock increases to \$50 (\$30 + \$20), and T succeeds to S's \$30 basis in the assets transferred subject to the \$40 liability. Similarly, if S instead transferred its assets and liabilities to a newly formed subsidiary in a transaction to which section 351 applies, section 357(c) does not apply, and S's basis in the

subsidiary's stock is a \$10 excess loss account.

(ii) *Example 2—(A) Facts.* P owns all the stock of S1. S1 has assets with a total fair market value equal to \$100 and an aggregate basis of \$30. S1 has \$40 of liabilities, \$5 of which are described in section 357(c)(3)(A), but not section 357(c)(3)(B), and \$35 of which are not described in section 357(c)(3)(A). S1 transfers its assets to a newly formed subsidiary, S2, in exchange for stock of S2 and S2's assumption of the liabilities of \$40 in a transaction to which section 351 applies. P, S1, and S2 are members of a consolidated group.

(B) *Analysis.* Section 357(c) does not apply to cause S1 to recognize gain in connection with the transfer. For purposes of determining S1's basis in the S2 stock it received in the exchange, section 358(d)(2) operates to exclude \$5 of the liabilities from the computation of the amount of liabilities assumed that are treated as money received under section 358(d)(1). S1's basis in the S2 stock received in the exchange is a \$5 excess loss account (reflecting its \$30 basis in the assets transferred reduced by \$35, the amount of liabilities assumed that are not described in section 357(c)(3)(A)).

(4) *Applicability dates.* Paragraphs (d)(1) and (3) of this section apply to consolidated return years for which the due date of the return (without regard to extensions) is after [date of publication of final regulations in the **Federal Register**]. For rules that apply to earlier taxable years, see § 1.1502–80(d) as contained in 26 CFR part 1, revised April 1, 2024.

* * * * *

Douglas W. O'Donnell,
Deputy Commissioner.

Part IV

Securities and Exchange Commission

Self-Regulatory Organizations; Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Various Phlx Rules in Connection With a Technology Migration; Notice

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–101989; File No. SR–Phlx–2024–71]

Self-Regulatory Organizations; Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Various Phlx Rules in Connection With a Technology Migration

December 19, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that on December 12, 2024, Nasdaq PHLX LLC (“Phlx” or “Exchange”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Options 2, Section 6, Market Maker Orders. The Exchange also proposes to amend the following Options 3 Rules: Section 4, Entry and Display of Quotes; Section 6, Firm Quotations; Section 7, Types of Orders and Order and Quote Protocols; Section 8, Opening Process; Section 9, Trading Halts; Section 10, Electronic Execution Priority and Processing in the System; Section 15, Simple Order Risk Protections; Section 23, Data Feeds and Trade Information; and Section 28, Optional Risk Protections. The Exchange also proposes to amend Options 5, Section 4, Order Routing; Options 6, Section 1, Authorization to Give-Up; Options 7, Section 9, B, Port Fees; and Options 8, Section 32, Types of Floor-Based (Non-System) Orders.

The text of the proposed rule change is available on the Exchange’s website at <https://listingcenter.nasdaq.com/rulebook/phlx/rules>, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for

the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In connection with a technology migration to an enhanced Nasdaq, Inc. (“Nasdaq”) functionality which will result in higher performance, scalability, and more robust architecture, the Exchange intends to adopt certain trading functionality currently utilized at Nasdaq affiliate exchanges. As further discussed below, the Exchange is proposing to adopt such functionality substantially in the same form as currently on the Nasdaq affiliated options exchanges, while retaining certain intended differences between it and its affiliates. The Exchange also proposes a number of changes to memorialize existing functionality, add more granularity in its rules to describe how existing functionality operates today, and to harmonize the Exchange’s rules where appropriate with the rules of its affiliated options exchanges by using consistent language to describe identical functionality.

Specifically, the Exchange proposes to amend Options 2, Section 6, Market Maker Orders and the following Options 3 Rules: Section 4, Entry and Display of Quotes; Section 6, Firm Quotations; Section 7, Types of Orders and Order and Quote Protocols; Section 8, Opening Process; Section 9, Trading Halts; and Section 10, Electronic Execution Priority and Processing in the System;³ Section 15, Simple Order Risk Protections; Section 23, Data Feeds and Trade Information; and Section 28,

³ Phlx Options 1, Section 1(b)(57) provides, [t]he term “System” shall mean the automated system for order execution and trade reporting owned and operated by the Exchange which comprises: (i) an order execution service that enables members to automatically execute transactions in option series; and provides members with sufficient monitoring and updating capability to participate in an automated execution environment; (ii) a trade reporting service that submits “locked-in” trades for clearing to a registered clearing agency for clearance and settlement; transmits last-sale reports of transactions automatically to the Options Price Reporting Authority (“OPRA”) for dissemination to the public and industry; and provides participants with monitoring and risk management capabilities to facilitate participation in a “locked-in” trading environment; and (iii) the data feeds described at Options 3, Section 23.

Optional Risk Protections. The Exchange also proposes to amend Options 5, Section 4, Order Routing; Options 7, Section 9, B, Port Fees; and Options 8, Section 32, Types of Floor-Based (Non-System) Orders. Each rule change is described below.

Options 2, Section 6

Options 2, Section 6(a) currently states that Market Makers⁴ and Lead Market Makers⁵ may enter all order types defined in Options 3, Section 7(b) in the options classes to which they are appointed and non-appointed, except for Market Orders as provided in Options 3, Section 7(b)(1), Stop Orders as provided in Options 3, Section 7(b)(4), All-or-None Orders as provided in Options 3, Section 7(b)(5), Directed Orders as provided for in Options 2, Section 10, and Public Customer-to-Public Customer Cross Orders subject to Options 3, Section 13(a) and (f).

The Exchange proposes to remove the Market Maker restrictions related to Market Orders,⁶ Stop Orders,⁷ All-or-None Orders⁸ and Directed Orders⁹ so as not to restrict the ability of a Lead Market Maker or Market Maker from entering orders they may enter today on

⁴ A “Market Maker” means a Streaming Quote Trader or a Remote Streaming Quote Trader who enters quotations for his own account electronically into the System. See Options 1, Section 1(b)(28).

⁵ A “Lead Market Maker” means a member who is registered as an options Lead Market Maker pursuant to Options 2, Section 12(a). A Lead Market Maker includes a Remote Lead Market Maker which is defined as a Lead Market Maker in one or more classes that does not have a physical presence on the Exchange’s Trading Floor and is approved by the Exchange pursuant to Options 2, Section 11. See Options 1, Section 1(b)(27).

⁶ A Market Order is an order to buy or sell a stated number of options contracts that is to be executed at the best price obtainable when the order reaches the Exchange. Lead Market Makers, Market Makers, and Off-Floor Broker-Dealers may not submit Market Orders. See Phlx Options 3, Section 7(b)(1).

⁷ A Stop Order is a Limit Order or Market Order to buy or sell at a limit price when interest on the Exchange for a particular option contract reaches a specified price. A Stop Order shall be cancelled if it is immediately electable upon receipt. A Stop Order shall not be elected by a trade that is reported late or out of sequence or by a Complex Order trading with another Complex Order. Lead Market Makers and Market Makers may not submit a Stop Order. Off-Floor Broker-Dealers may not enter a Stop Market Order. See Phlx Options 3, Section 7(b)(4).

⁸ An All-or-None Order is a Limit Order or Market Order that is to be executed in its entirety or not at all. An All-or None Order may only be submitted by a Public Customer as an Immediate-or-Cancel Order. The Acceptable Trade Range protection in Options 3, Section 15(a) is not applied to All-Or-None Orders. See Phlx Options 3, Section 7(b)(5).

⁹ The term “Directed Order” means any order to buy or sell which has been directed to a particular Lead Market Maker, RSQT, or SQT by an Order Flow Provider, as defined below. To qualify as a Directed Order, an order must be delivered to the Exchange via the System. See Phlx Options 2, Section 10.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b–4.

other options markets.¹⁰ With this proposed change, Market Makers would be permitted to enter Market Orders, Stop Orders and All-or-None Orders similar to other market participants, and similar to market makers on ISE, GEMX and MRX, as explained below in greater detail. Also, today, Market Makers may enter all Complex Order types. To make this clear in the rule text, the Exchange proposes to reference Options 3, Section 14, which governs Complex Orders, in addition to referencing Options 3, Section 7(b), which governs simple orders.¹¹

Additionally, as currently noted in Options 3, Section 7(e), Off-Floor Broker-Dealers may not enter All-or-None Orders, Market Orders, Stop Market Orders, and public customer-to-public customer cross orders subject to Options 3, Section 13(a) and (f). The Exchange is also proposing to remove the restrictions applicable to Off-Floor Broker-Dealers. Today, Nasdaq ISE, LLC ("ISE"), Nasdaq GEMX, LLC ("GEMX") and Nasdaq MRX, LLC ("MRX") Options 2, Section 6 do not provide similar restrictions as Phlx for Market Orders, Stop Orders and All-or-None Orders.

The Exchange proposes to permit Lead Market Makers, Market Makers, and Off-Floor Broker Dealers to enter Market Orders and Stop Orders similar to all other market participants on Phlx. Today, all market participants, including Lead Market Makers, Market Makers and Off-Floor Broker Dealers¹² may transact Market Orders and Stop Orders on other options markets.¹³ The Exchange does not believe there is any reason to restrict Lead Market Makers, Market Makers and Off-Floor Broker Dealers from entering Market Orders or Stop Orders. Previously, in a 2019 rule change¹⁴ Phlx noted that it believed

that prohibiting Market Makers from entering Market Orders was consistent with the Act because Market Orders are designed to remove liquidity from the Order Book. Further, that rule change noted that Stop Orders are non-displayed order types until they are triggered which does not benefit the role of a Market Makers in displaying liquidity on the Order Book.¹⁵ Stop Orders are triggered by either the occurrence of a transaction or posting on the order book. Once triggered, the order becomes displayed as either a Market Order or Limit Order as described in greater detail below in the discussion of Stop Orders in Options 3, Section 7. At this time, the Exchange proposes to permit Lead Market Makers, Market Makers, and Off-Floor Broker Dealers to enter both Market Orders and Stop Orders. Today, ISE, GEMX and MRX do not prohibit Lead Market Makers, Market Makers, and Off-Floor Broker Dealers from entering a Market Order and Stop Order on those markets, and those markets have not observed any adverse consequences. Also, current Phlx Options 2, Section 6 restricts the number of contracts that a Market Maker may enter in a quarter,¹⁶ thereby preventing Market Makers from entering an unlimited quantity of orders. In addition, the Exchange would no longer prohibit an Off-Floor Broker Dealer from entering a Market Order for the same reasons.¹⁷ All Market Makers, including away market makers, are restricted to a total number of contracts executed during a quarter in options series to which it is not appointed of twenty-five percent (25%) of the total number of contracts executed by the Market Maker and Lead Market Maker in options series as all options markets impose this restriction on market makers. The Exchange does not believe there is any reason to restrict Off-Floor Broker Dealers from entering Market Orders in options classes, rather, the Exchange

proposes to permit all member organizations to be able to enter Market Orders. Finally, the Exchange believes that harmonizing the ability for Lead Market Makers, Market Makers, and Off-Floor Broker Dealers to enter both Market Orders and Stop Orders across ISE, GEMX, MRX and Phlx will allow market participants to enter equivalent order types on all these markets. For these reasons, Phlx believes Lead Market Makers, Market Makers and Off-Floor Broker Dealers should be permitted to utilize Market Orders and Stop Orders to remove liquidity from its order book without impacting their ability to provide liquidity.

Today, Phlx restricts all market participants from entering All-or-None Orders except Public Customers.¹⁸ Similar to other options markets, the Exchange proposes to permit all market participants to enter All-or-None Orders. The Exchange is proposing to amend the All-or-None Order type in Options 3, Section 7 to reflect this proposed change as explained further below. By way of background, in 2019, the Exchange amended its All-or-None Order to no longer offer the order type to Professionals.¹⁹ At the time, the Exchange noted that permitting Public Customers to enter All-or-None Orders with specific size limitations that rest on the Order Book would continue to allow Public Customers the opportunity to obtain fills for their orders when the market moves even if the All-Or-None Order was not immediately executable upon entry. The Exchange notes that in 2023, it amended All-or-None Orders so that they would no longer rest on the order book, rather the order type would be executed in its entirety, or it will cancel if it cannot execute.²⁰ With this change, the prior reasoning is no longer a reason to restrict the order type to Public Customer use only. The Exchange proposes to remove the restriction that only permits Public Customers to enter the order type and allow all market participants to utilize the All-or-None Order which now does not rest on the order book. The

¹⁰ The Exchange proposes to delete the term "Lead Market Makers" in Options 2, Section 6(a) as the term "Market Makers" includes "Lead Market Makers." Both terms are not necessary. Additionally, removing the term "Lead Market Makers" harmonizes the rule text in Phlx Options 2, Section 6(a) to ISE, GEMX, MRX and BX Options 2, Section 6(a).

¹¹ Today, Options 3, Section 14 includes all Complex Order Types that may be traded by any market participant.

¹² Phlx Options 1, Section 1(b)(33) provides, [t]he term "Off-Floor Broker-Dealer Order" means an order delivered from off the floor of the Exchange by or on behalf of a broker-dealer for the proprietary account(s) of such broker-dealer, including an order for a market maker located on an exchange or trading floor other than the Exchange's trading floor delivered electronically for the proprietary account(s) of such market maker.

¹³ See Nasdaq ISE, LLC ("ISE"), Nasdaq GEMX, LLC ("GEMX") and Nasdaq MRX, LLC ("MRX") Options 2, Section 6 and NYSE Arca, Inc. Rule 6.37B-O and NYSE American LLC Rule 925.2NY.

¹⁴ See Securities Exchange Act Release No. 87691 (December 9, 2019), 85 FR 68197 (December 13,

2019) (SR-Phlx-2019-52) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Order Types and Remove and Relocate Certain Rule Text Currently Located Within Rule 1080).

¹⁵ *Id.*

¹⁶ Pursuant to Phlx Options 2, Section 6, the total number of contracts executed during a quarter by a Market Maker and Lead Market Maker in options series to which it is not appointed may not exceed twenty-five percent (25%) of the total number of contracts executed by the Market Maker and Lead Market Maker in options series.

¹⁷ Current Phlx Options 3, Section 7(e) provides that, an off-floor broker-dealer order may be entered for a minimum size of one contract. Off-floor broker-dealers may enter all order types defined in Options 3, Section 7(b) except for All-or-None Orders, Market Orders, Stop Market Orders, and public customer-to-public customer cross orders subject to Options 3, Section 13(a) and (f).

¹⁸ This includes Off-Floor Broker Dealers as noted in current Options 3, Section 7(e).

¹⁹ See Securities Exchange Act Release No. 85262 (March 7, 2019), 84 FR 9192 (March 13, 2019) (SR-Phlx-2019-03) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Option Floor Procedure Advice A-9 and Phlx Rules 1000 and 1066 and To Adopt a New Phlx Rule 1078). Prior to this rule change, All-or-None Orders were available to Public Customers and Professionals, ("2019 AON Rule Change").

²⁰ See Securities Exchange Act Release No. 98142 (August 16, 2023), 88 FR 57140 August 22, 2023) (SR-Phlx-2023-34) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Phlx's All-or-None Order) ("2023 AON Rule Change").

Exchange proposes to reflect the removal of the restriction in Options 2, Section 6 to reflect the fact that Market Makers would be able to trade All-or-None Orders. The Exchange also explains this change below in Options 3, Section 7 with respect to the order type amendments for All-or-None Orders. Permitting all market participants to enter an AON Order will harmonize the order type to ISE, GEMX and MRX Options 3, Section 7(c) which also permit all market participants to utilize this order type.

The Exchange notes that Directed Orders are orders directed to a Market Maker by an Order Flow Provider. An order becomes a Directed Order when it interacts with a Market Maker quote that is at the NBBO at the time of receipt of the Directed Order. The Exchange believes it is misleading to include a Directed Order in this list because a Directed Order may be executed by a Market Maker.

Third, the Exchange proposes to amend “Public Customer-to-Public Customer Cross Orders” to “Customer Cross Orders” to align with the name of this order type on ISE, GEMX and MRX Options 3, Section 7(i). The Exchange proposes to relocate the definition of Public Customer-to-Public Customer Cross Orders” from Options 3, Section 13 to proposed Options 3, Section 7(i). A Customer Cross Order cannot be entered by a Market Maker. The Exchange believes noting this exception in this order type will bring greater transparency to Options 2, Section 6. Additionally, the Exchange proposes to adopt a Reserve Order at Options 3, Section 7(g). A Reserve Order is a limit order with a displayed and non-displayed portion.

The Exchange believes that Market Maker liquidity should be displayed liquidity.²¹ For these reasons, and to remain competitive with other markets, the Exchange proposes to permit Market Makers to enter all orders they are eligible to submit, with the exception of Reserve Orders, and restrict Reserve Orders in the non-appointed classes similar to ISE, GEMX and MRX Options 2, Section 6. As noted above, Market Makers are not able to enter Reserve Orders.

The Exchange also proposes to amend the rule citations to align with the relocated rule text. Finally, the Exchange proposes to renumber the remainder of the text within Options 2, Section 6, related to total number of

contracts that may be executed in a quarter, as new “b.” The proposed rule text of Options 2, Section 6 will align with ISE, GEMX and MRX Options 2, Section 6.

Options 3, Section 4

With respect to quotes, today, as set forth in Options 3, Section 4(b)(6), if, at the time of entry, a quote would cause a locked or crossed market violation or would cause a trade-through violation, it will either be re-priced to the current national best offer (for bids) or the current national best bid (for offers) as non-displayed and displayed at one minimum price variance above (for offers) or below (for bids) the national best price.

The Exchange now proposes to amend the quote re-pricing mechanism currently described in Phlx Options 3, Section 4(b)(6) by harmonizing it with ISE, GEMX and MRX Options 3, Section 4(b)(6). As amended, the quote re-pricing language in Options 3, Section 4(b)(6) would be amended to provide: “If, at the time of entry, a quote would cause a locked or crossed market violation or would cause a trade-through violation, it will be re-priced to the current national best offer (for bids) or the current national best bid (for offers) as non-displayed, and displayed at one minimum price variance above (for offers) or below (for bids) the national best price, or *immediately cancelled, as configured by the member organization.*” With this amendment, Phlx would permit member organizations to configure their ports to instruct the Exchange to immediately cancel a quote that would otherwise cause a locked or crossed market violation in lieu of re-pricing the quote. The Exchange believes this functionality will provide member organizations with more flexibility in handling their quotes.

Further, the Exchange proposes to remove the Quote Exhaust functionality which is explained further below. In connection with the removal of that functionality, the Exchange proposes to amend Options 2, Section 6(b)(8) to remove a reference to the Quote Exhaust.

Options 3, Section 6

Currently, Options 3, Section 6, Firm Quotations, describes the Exchange’s Quote Exhaust functionality that was adopted in 2009.²² Quote Exhaust

occurs when the Exchange’s disseminated market at a particular price level includes a quote, and such market is exhausted by an inbound contra-side quote or order (“initiating quote or order”), and following such exhaustion, contracts remain to be executed from the initiating quote or order through the initial execution price.²³ The initial execution price that gives rise to Quote Exhaust is known as the “reference price.”²⁴ Under Quote Exhaust, any order volume that is routed to away markets will be marked as an ISO.²⁵ When a Quote Exhaust occurs, the System will initiate a “Quote Exhaust Timer” that applies to all options traded on the System, not to exceed one second, during which any participant (including any participant(s) whose size was exhausted) may submit quotes, sweeps or orders at any price level.²⁶ Today, during the Quote Exhaust Timer, the Exchange will disseminate the reference price for the remaining size, provided that such price does not lock an away market, in which case, the Exchange will disseminate a bid and offer that is one MPV from the away market price. Today, the Exchange will disseminate, on the opposite side of the market from remaining unexecuted contracts: (i) a non-firm bid for the price and size of the next available bid(s) on the Exchange if the remaining size is a seller, or (ii) a non-firm offer for the price and size of the next available offer(s) on the Exchange if the remaining size is a buyer. If the remaining contracts in the initiating quote or order are either traded or cancelled during the Quote Exhaust Timer, the Quote Exhaust Timer will be terminated, and normal trading will resume.²⁷

Today, if the Exchange receives an order, quote or sweep on the opposite side of the market from the initiating quote or order during the Quote Exhaust Timer that locks or crosses the reference price at any time during the Quote Exhaust Timer, it will execute immediately against the initiating quote or order at the reference price. If the initiating quote or order that caused the Quote Exhaust is exhausted, the Quote Exhaust Timer will be terminated. Today, with respect to any order, quote or sweep received on the opposite side of the market from the initiating quote or order during the Quote Exhaust Timer that is inferior to the reference price, the system will place any non-IOC order onto the book. Such non-IOC

²¹ While Stop Orders are not displayed until triggered, the Exchange notes that once triggered a Stop Order would be displayed as either a Market or Limit Order.

²² See Securities Exchange Act Release No. 59721 (April 9, 2009), 74 FR 17245 (April 14, 2009) (SR-Phlx-2009-32) (Notice of Filing of Proposed Rule Change Relating to the Exchange’s Enhanced Electronic Trading Platform for Options, Phlx XL II).

²³ See Phlx Options 3, Section 6(a)(2)(B)(2).

²⁴ *Id.*

²⁵ *Id.*

²⁶ See Phlx Options 3, Section 6(a)(2)(B)(2)(a).

²⁷ See Phlx Options 3, Section 6(a)(2)(B)(2)(b).

order on the book will be included in the first PBBO calculation following the end of the Quote Exhaust Timer. All non-marketable sweeps and IOC orders will be cancelled immediately if not executed and will not participate in the Quote Exhaust process.²⁸ Today, if the Exchange receives an order, quote or sweep on the same side of the market as the initiating quote or order during the Quote Exhaust Timer, the System will cancel any such sweep or IOC order. If such new quote or order, other than an IOC order, is a market or marketable Limit Order or marketable quote (*i.e.*, priced at or through the reference price) the System will display it at the reference price, with a disseminated size that is the sum of such order and/or quote plus the remaining contracts in the initiating order or quote.²⁹

Today, at the end of the Quote Exhaust Timer, if there are still unexecuted contracts remaining in the initiating quote or order or any new interest on the same side of the market, the System will calculate a new Phlx Best Bid/Offer ("PBBO"). The PBBO includes the remaining unexecuted portion of the initiating quote or order plus any new interest received on the same side of the market at the reference price, or if locking or crossing the ABBO, at one minimum trading increment away from the ABBO, for the full available size. The other side of the PBBO will be the actual Exchange interest at the best price.³⁰

Today, the System will conduct an Acceptable Range Test to determine if the next available price on the Exchange is within an Acceptable Range.³¹ The System will first determine whether to trade at the next available Phlx price by comparing it to the Acceptable Range price (defined as, with respect to an initiating buy order, the highest price of the Acceptable Range, and, with respect to an initiating sell order, the lowest price of the Acceptable Range) and the Away Best Bid/Offer ("ABBO") price to establish a "Best Price".³² Current Options 3, Section 6(g)(1) describes the Best Price. The current rules review the various potential scenarios including where the initiating quote or order does not lock the Best Price, locks the Best Price, crosses the Best Price, the order is not routable, and remainders.³³ The current rule also considers scenarios where there are no offers on the

Exchange and on away markets in the affected series, or no bids or a zero priced bid on Exchange.³⁴

Today, with Quote Exhaust, the Exchange disseminates an updated bid and offer prices together with the size associated with such bid and offer in certain cases.³⁵ All quotations made available by the Exchange and displayed by quotation vendors shall be firm for customer and broker-dealer orders³⁶ at the disseminated price in an amount up to the disseminated size,³⁷ except in certain cases.³⁸ Finally, today, responsible brokers or dealers that receive an order to buy or sell a listed option at the disseminated price in an amount greater than the disseminated size shall, within thirty (30) seconds of receipt of the order, (i) execute the entire order at the disseminated price (or better), or (ii) execute that portion of the order equal to the disseminated size

³⁴ See Phlx Options 3, Section 6(a)(2)(B)(3).

³⁵ See Phlx Options 3, Section 6(a)(2)(C).

³⁶ Phlx Supplementary .01 to Options 3, Section 6 provides, "Broker-dealer orders" includes orders for the account(s) of market makers on another exchange and Market Makers on the Exchange.

³⁷ Phlx Options 3, Section 6(b)(1) provides in pertinent part that, except as provided in paragraph (c) of this Rule, all quotations made available by the Exchange and displayed by quotation vendors shall be firm for customer and broker-dealer orders at the disseminated price in an amount up to the disseminated size. If the responsible broker or dealer is representing (as agent) a Limit Order, such responsible broker or dealer shall be responsible (as agent) up to the size of such Limit Order, but may be responsible as principal for all or a portion of the excess of the disseminated size over the size of such Limit Order to the extent provided in General 2, Section 17. Phlx Options 2, Section 6(b)(2) provides in pertinent part that, in the event an SQT, RSQT or Lead Market Maker in a Streaming Quote Option has electronically submitted on the Exchange bids or offers for a Streaming Quote Option, each such SQT, RSQT or Lead Market Maker member shall be considered a "responsible broker or dealer" for that bid or offer, up to the size associated with such responsible broker or dealer's bid or offer.

³⁸ Phlx Options 2, Section 6(c) provides in pertinent part that, the requirements of paragraph (b) or (d) of this Rule shall not apply to displayed quotations: (i) when the level of trading activities or the existence of unusual market conditions is such that the Exchange is incapable of collecting, processing, and making available to quotation vendors the data for a subject security required to be made available pursuant to the SEC Quote Rule in a manner that accurately reflects the current market on the Exchange as determined by an Options Exchange Official; (ii) during a trading rotation; (iii) if any of the circumstances provided in paragraph (c)(3) of the SEC Quote Rule exist; or (iv) on a case by case basis where it is determined that an exemption is warranted for an obvious error in the posting of the disseminated price or disseminated size due to reporter error or system malfunction. The Exchange shall immediately notify all specified persons of such a determination. Regular trading procedures shall be resumed when an Options Exchange Official determines that the conditions supporting that declaration no longer exist. The Exchange shall immediately notify all specified persons of such a determination.

at the disseminated price (or better), and revise its bid or offer.³⁹

Quote Exhaust was designed to enhance the process for refreshing a Market Maker's quote that has been fully exhausted by an incoming quote or order that has, after exhausting the Phlx quote at a particular price level, remaining size to be executed at a price through the reference price. The Quote Exhaust functionality was intended to provide an opportunity for remaining portions of incoming quotes or orders to be executed on the Exchange at prices that are equal to or better than away markets by allowing Market Makers to refresh their quotes before routing away, thus potentially providing better prices at which to execute such remaining portions. Quote Exhaust is intended to provide an opportunity for such quote or order to receive a price for that order better than the next price that would otherwise be available on Phlx whether by executing on the Phlx or by routing to applicable away markets. This functionality implements price checks to limit executions at far away prices.

At this time, Phlx proposes to discontinue Quote Exhaust. Today, the Exchange offers various risk protections in its System to limit executions at far away prices. Phlx offers an Acceptable Trade Range protection at Options 3, Section 15(b)(1) and an Automated Quotation Adjustments protection at Options 3, Section 15(c)(2). In light of these additional protections and other risk protections that the Exchange is adding with this proposal within Options 3, Section 15, the Exchange does not believe that the Quote Exhaust protection is required any longer. Other Nasdaq affiliated exchanges do not offer Quote Exhaust. Once discontinued, the Exchange's quoting functionalities will continue to abide by Phlx's Options 3, Section 4 rules governing the entry and display of orders and the allocation methodology in Options 3, Section 10. By way of example, Market Maker quotes $1.00 (100) \times 1.10 (100)$

FIX Order to Sell 101 @0.95 arrives
Order trades 100 @1.00 with the quote
The quote purges as its entire bid side volume were exhausted

The remaining 1 contract books
Today, the Quote Exhaust timer begins—the reference price is displayed for the remaining 1 contract of the initiating sell order, and the displayed bid is disseminated to OPRA with a 'non-firm' indicator; Dissemination is $0.00 (0) \times 1.00 (1)$, bid not firm
Quote Exhaust timer concludes

³⁹ See Phlx Options 2, Section 6(d).

²⁸ See Phlx Options 3, Section 6(a)(2)(B)(2)(c).

²⁹ See Phlx Options 3, Section 6(a)(2)(B)(2)(d).

³⁰ See Phlx Options 3, Section 6(a)(2)(B)(2)(e).

³¹ See Phlx Options 3, Section 6(a)(2)(B)(2)(f).

³² See Phlx Options 3, Section 6(a)(2)(B)(2)(g).

³³ See Phlx Options 3, Section 6(a)(2)(B)(2)(g)(1)–(6).

Today, a firm quote is now disseminated to OPRA; dissemination is $0.00 (0) \times 0.95 (1)$

As proposed, without Quote Exhaust, there will be no period during which the order is disseminated at the Quote Exhaust Reference Price; instead, the order's remainder will book and display at its limit price right away. The Exchange will continue to purge the other side of the quote due to one side being exhausted, as is the case today on ISE, GEMX, MRX that do not have a similar quote exhaust mechanism.

Without Quote Exhaust:

Market Maker quotes $1.00 (100) \times 1.10 (100)$

FIX Order to Sell 101 @0.95 arrives
Order trades 100 @1.00 with the quote
The quote purges as its entire bid side volume were exhausted

The remaining 1 contract books
A firm quote is disseminated to OPRA; dissemination is $0.00 (0) \times 0.95 (1)$

With respect to the interaction between the Quote Exhaust and risk protections, the Exchange notes that instead of first being posted at the Quote Exhaust Reference Price, aggressively priced orders can instead post right away at the Acceptable Trade Range Threshold⁴⁰, allowing for quicker order execution while still providing order exposure and pauses between price bands, which continues to allow for risk mitigation. By way of example, Note that the configured Acceptable Trade Range (ATR) price band is \$0.07 in the price range used in this example.

Market Maker1 quotes $2.00 (10) \times 2.12 (10)$

Firm enters FIX Order to Buy 10 @1.80
Public Customer enters FIX Market Order to Sell 20 @MKT

Trades 10 @2.00 with Market Maker1's quote

Market Maker 1's quote is purged as its entire bid side volume has been exhausted

Quote exhaust commences and displays the remainder of the Public Customer's market order at the quote exhaust reference price, disseminating to OPRA: $1.80 (10) \times 2.00 (10)$, bid not firm

Quote exhaust timer passes

The remainder of the Public Customer's market order now posts at the Acceptable Trade Range (ATR) Threshold of 1.93, disseminating to OPRA: $1.80 (10) \times 1.93 (10)$, bid not firm

ATR Posting Period (iteration #1) passes
The remainder of the Public Customer's market order now posts at the new

ATR Threshold of 1.86, disseminating to OPRA: $1.80 (10) \times 1.86 (10)$, bid not firm

ATR Posting Period (iteration #2) passes
The remainder of the Public Customer's market order now trades with the Firm FIX order on the book, 10 @1.80

With this proposal, Quote Exhaust will no longer occur; after trading with Market Maker 1's quote, the remainder of the Public Customer Market Order will go straight into its first ATR Posting Period, displaying at the ATR Threshold of 1.93—it will no longer first display at the Quote Exhaust reference price of 2.00, but the remainder of the behavior will remain the same due to applicability of ATR.

Similar to ISE, GEMX and MRX, the Exchange proposes to amend Options 3, Section 6 to rename it "Collection and Dissemination of Quotes" and adopt a rule identical to ISE, GEMX and MRX Options 3, Section 6. The proposed new rule will specify, as is the case today, that each Market Maker shall communicate to the Exchange its bid and offers in accordance with the requirements of Rule 602 of Regulation NMS under the Exchange Act and the Rules of the Exchange.⁴¹ Further, as is the case today, the Exchange will disseminate to quotation vendors the highest bid and the lowest offer, and the aggregate quotation size associated therewith that is available to Public Customer Orders, in accordance with the requirements of Rule 602 of Regulation NMS under the Exchange Act.⁴²

The Exchange proposes in Options 3, Section 6(c) to adopt rules around unusual market conditions. Today, Options 3, Section 6(c) notes that "when the level of trading activities or the existence of unusual market conditions is such that the Exchange is incapable of collecting, processing, and making available to quotation vendors the data for a subject security required to be made available pursuant to the SEC Quote Rule in a manner that accurately reflects the current market on the Exchange as determined by an Options Exchange Official." The Exchange proposes to continue to provide that in proposed Options 3, Section 6(c)(1),

An Exchange official designated by the Board shall have the power to determine that the level of trading activities or the existence of unusual market conditions is such that the Exchange is incapable of collecting, processing, and making available to quotation vendors the data for the option in a manner that accurately reflects the current state of the market on the Exchange. Upon

making such a determination, the Exchange shall designate the market in such option to be "fast." When a market for an option is declared fast, the Exchange will provide notice that its quotations are not firm by appending an appropriate indicator to its quotations.

Further, the Exchange proposes to state in proposed Options 3, Section 6(c)(2) that if a market is declared fast, designated Exchange officials shall have the power to: (i) direct that one or more trading rotations be employed pursuant to Options 3, Section 8; (ii) suspend the minimum size requirement of Options 2, Section 5(c)(1); or (iii) take such other actions as are deemed in the interest of maintaining a fair and orderly market. Today, Options 3, Section 9(b) provides certain manual trading halt authority deemed necessary in the interests of maintaining a fair and orderly market in such class or series of options and to protect investors.

Proposed Options 3, Section 6(c)(3) provides that the Exchange will monitor the activity or conditions that caused a fast market to be declared, and a designated Exchange official shall review the condition of such market at least every thirty (30) minutes. Regular trading procedures shall be resumed by the Exchange when a designated Exchange official determines that the conditions supporting a fast market declaration no longer exist. The Exchange will provide notice that its quotations are once again firm by removing the indicator from its quotations. Finally, the Exchange proposes to state in Options 3, Section 6(c)(4) that if the conditions supporting a fast market declaration cannot be managed utilizing one or more of the procedures described above, then a designated Exchange official shall halt trading in a class, or classes so affected. Today, ISE, GEMX and MRX have the same authority in Options 3, Section 6(c)(3) to protect those markets in the event of unusual market conditions. The Exchange believes that it should be able to manage trading on Phlx in the same manner as ISE, GEMX and MRX in the event of unusual market conditions.

Options 3, Section 7

Phlx proposes to align its order types to those of ISE, GEMX and MRX Options 3, Section 7 and utilize the same numbering as those markets.⁴³

⁴³ The Exchange also proposes to separately file rule changes related to Complex Orders, Qualified Contingent Cross Orders and auctions. The Exchange notes that those filing will also add order types to Options 3, Section 7 to mirror ISE, GEMX and MRX Options 3, Section 7 order types.

⁴⁰ See Phlx Options 3, Section 15(b)(1) which describes the Acceptable Trade Range.

⁴¹ See proposed Phlx Options 3, Section 6(a).

⁴² See proposed Phlx Options 3, Section 6(b).

Phlx proposes to relocate Options 3, Section 7(f)⁴⁴ to the first paragraph of Options 3, Section 7.

Market Orders

The Exchange proposes to amend the description of Market Orders. Today, Options 3, Section 7(b)(1) states, “A Market Order is an order to buy or sell a stated number of options contracts that is to be executed at the best price obtainable when the order reaches the Exchange. Lead Market Makers, Market Makers and Off-Floor Broker-Dealers may not submit Market Orders.” The Exchange proposes to amend the definition of Market Orders to introduce a cancel timer feature, which will allow member organizations to designate Market Orders that do not execute after a certain period of time to be cancelled back to the member organization. Specifically, the Exchange proposes to add that member organizations can designate their Market Orders not executed after a pre-established period of time, as established by the Exchange,⁴⁵ will be cancelled back to the member organization once an options series has opened for trading. Nasdaq BX, Inc. currently has an identical timer feature for BX Market Orders.⁴⁶ Similar to BX, the proposed timer would be available once the intra-day trading session begins for an options series, as the Exchange already has a separate opening delay timer that provides protection to the market during the Opening Process.⁴⁷ In particular, the Exchange would cancel orders (if consistent with the member organization’s instructions) if an options series has not opened before the conclusion of the opening delay timer.⁴⁸ As such, the Exchange is proposing that the pre-established period of time for the proposed timer feature would commence once the intra-day trading session begins for that options series. In other words, while the Opening Process is on-going, and the intra-day trading session has not commenced, the pre-established period of time for the proposed timer feature would not commence. Further, the Exchange

proposes to note that Market Orders on the order book would be immediately cancelled if an options series is halted, provided the member organization designated the cancellation of Market Orders.⁴⁹ The proposed changes are intended to make clear that in the event there is a Market Order in a zero bid market while the Market Order was resting on the order book, the Member has an option to designate the cancellation of that Market Order pursuant to the proposed cancel timer feature. In this case, those Market Orders to sell, which were resting on the order book, would immediately cancel upon a trading halt instead of waiting until the end of the pre-established timer period. ISE, GEMX, MRX and BX also has identical language governing its Market Orders today.⁵⁰ Like ISE, GEMX, MRX and BX, the Exchange believes that the proposed intra-day timer feature will provide additional flexibility for member organizations that wish to cancel unexecuted Market Orders after a certain period of time.

As noted above in Options 2, Section 6, the Exchange would no longer prohibit Market Makers (and Lead Market Makers)⁵¹ from entering Market Orders. In addition, the Exchange would no longer prohibit an Off-Floor Broker Dealer⁵² from entering a Market Order for the same reasons as expressed above in Options 2, Section 6.⁵³ All Market Makers, including away market makers, are restricted to a total number of contracts executed during a quarter in options series to which it is not appointed of twenty-five percent (25%) of the total number of contracts executed by the Market Maker and Lead Market Maker in options series as all options markets impose this restriction on market makers. The Exchange does not believe there is any reason to restrict

Off-Floor Broker Dealers from entering Market Orders in options classes, rather, the Exchange proposes to permit all member organizations to be able to enter Market Orders as is the case on The Nasdaq Options Market LLC (“NOM”), BX, ISE, GEMX and MRX.

Limit Orders

The Exchange proposes to relocate “Limit Orders” from current Options 3, Section 7(b)(2) to proposed Options 3, Section 7(b) without change.⁵⁴ The Exchange proposes to define three types of Limit Orders similar to ISE, GEMX and MRX. First, the Exchange proposes to define a “Marketable Limit Order” as a Limit Order to buy (sell) at or above (below) the best offer (bid) on the Exchange. Next, the Exchange proposes to define a Fill-or-Kill Orders as a Limit Order that is to be executed in its entirety as soon as it is received and, if not so executed, treated as cancelled. Finally, the Exchange proposes to relocate an Intermarket Sweep Order from current Options 3, Section 7(b)(3) to proposed Options 3, Section 7(b)(3) with some additions. The Exchange proposes to reorder some sentences to closely resemble ISE, GEMX and MRX Options 3, Section 7(b)(3). The Exchange proposes to add an additional sentence to make clear that ISOs must have a TIF designation of IOC. Additionally, the Exchange proposes to define the “regular order book” as the “single-leg order book.”

All-or-None Orders

The Exchange proposes to relocate the All-or-None Orders from current Options 3, Section 7(b)(5) to proposed Options 3, Section 7(c) and amend it. Today, Phlx restricts All-or-None Orders to be entered only by Public Customers. At this time, the Exchange proposes to permit any member organization to submit an All-or-None Order similar to ISE, GEMX, and MRX Options 3, Section 7(c). The Exchange would not apply the Acceptable Trade Range protection in Options 3, Section 15(a) to All-Or-None Orders, similar to other orders. Finally, similar to ISE, GEMX and MRX, the Exchange proposes to modify All-or-None Orders so that they would execute against multiple, aggregated orders if the executions would occur simultaneously. Additionally, as is the case today, an All-or-None Order would not be submitted during the Opening Process similar to any other order that does not

⁴⁴ Current Phlx Options 3, Section 7(f) states, Orders may not be unbundled, nor may a firm solicit a customer to unbundle an order for this purpose.

⁴⁵ The Exchange will initially set the pre-established period of time at 4 seconds, identical to BX. This specification will be set out in the ISE System settings document on a publicly available website. The Exchange would issue an Options Trader Alert notifying all member organizations if it determined to amend that timeframe.

⁴⁶ See BX Options 3, Section 7(a)(5).

⁴⁷ See Phlx Options 3, Section 8 for the Opening Process.

⁴⁸ See Phlx Options 3, Section 8(k).

⁴⁹ Member organizations may make the designation to cancel their Market Orders through their FIX and port settings.

⁵⁰ See ISE, GEMX and MRX Options 3, Section 7(a) and BX Options 3, Section 7(a)(5).

⁵¹ As explained above, Market Makers is a broad term that covers Lead Market Makers so both terms are not needed.

⁵² Phlx Options 1, Section 1(b)(33) provides, [t]he term “Off-Floor Broker-Dealer Order” means an order delivered from off the floor of the Exchange by or on behalf of a broker-dealer for the proprietary account(s) of such broker-dealer, including an order for a market maker located on an exchange or trading floor other than the Exchange’s trading floor delivered electronically for the proprietary account(s) of such market maker.

⁵³ Current Phlx Options 3, Section 7(e) provides that An off-floor broker-dealer order may be entered for a minimum size of one contract. Off-floor broker-dealers may enter all order types defined in Options 3, Section 7(b) except for All-or-None Orders, Market Orders, Stop Market Orders, and public customer-to-public customer cross orders subject to Options 3, Section 13(a) and (f).

⁵⁴ Phlx Options 3, Section 7(b)(2) states, A Limit Order is an order to buy or sell a stated number of options contracts at a specified price or better.

rest as there is no order book during the Opening Process.

Stop Orders

The Exchange proposes to relocate the Stop Order description from Options 3, Section 7(b)(4)⁵⁵ to proposed Options 3, Section 7(d) and (e). Today, Phlx's Stop Order may be a Limit or Market Order. Also, the Stop Order may not be elected by a trade that is reported late or out of sequence or by a Complex Order trading with another Complex Order. Phlx restricts Lead Market Makers, Maker Makers, and Off-Floor Broker-Dealers from entering Stop Market Orders. At this time, the Exchange proposes to amend its Stop Order to mirror the order type that is in use on ISE, GEMX and MRX at Options 3, Section 7(d) and (e). First, Phlx will permit all member organizations to utilize a Stop Order and Stop Limit Order and not restrict Maker Makers (including Lead Market Makers) as noted in the discussion of Options 2, Section 6 above. Further, the category of "Off-Floor Broker-Dealer Orders" is being eliminated as described below with this rule change. Second, the Exchange will not separately specify a Stop Market Limit Order, rather it will describe an elected Stop Order as a Market Order. The Exchange proposes to describe a Stop Order as an order that becomes a Market Order when the stop price is elected. A Stop Order to buy is elected when the option is bid or trades on the Exchange at, or above, the specified stop price. A Stop Order to sell is elected when the option is offered or trades on the Exchange at, or below, the specified stop price. A Stop Order shall be cancelled if it is immediately electable upon receipt. Stop Orders may only be entered through FIX. The rule text that currently provides, "A Stop Order shall not be elected by a trade that is reported late or out of sequence or by a Complex Order trading with another

Complex Order" will be relocated to the end of the sentence. The Exchange proposes to provide that a Stop Limit Order is an order that becomes a Limit Order when the stop price is elected. A Stop Limit Order to buy is elected when the option is bid or trades on the Exchange at, or above, the specified stop price. A Stop Limit Order to sell becomes a sell limit order when the option is offered or trades on the Exchange at, or below, the specified stop price. A Stop Limit Order shall be cancelled if it is immediately electable upon receipt. The Exchange is removing the rule text that states that a Stop Order is a non-displayed, contingency order until elected because the proposed rule text makes clear that the Stop Order does not become a Market or Limit Order until it is elected. Finally, similar to a Stop Order, a Stop Limit Order shall not be elected by a trade that is reported late or out of sequence or by a Complex Order trading with another Complex Order.

Cancel or Replace Orders

The Exchange proposes to relocate the Cancel and Replace Order description from Options 3, Section 7(b)(7)⁵⁶ to proposed Options 3, Section 7(f). The Exchange proposes to modify the Cancel and Replace Order so that it mirrors the functionality on ISE, GEMX and MRX at Options 3, Section 7(f). The Exchange would state at the beginning that "Cancel and Replace Orders shall mean" to conform the text to the other changes to the order types. The Exchange would remove the phrase "with new terms and conditions" and instead note that the replacement order will retain the priority of the cancelled order, if the order posts to the Order Book, provided the price is not amended or size is not increased. In the case of Reserve Orders, which the Exchange is adopting as noted further below, the replacement order will retain the priority of the cancelled order, if the order posts to the Order Book, provided the price is not amended or size (displayed and non-displayed) is not changed. This new text specifically notes that amending the price or increasing the size will result in a loss of priority. Further the Exchange proposes to state that if the replacement portion of a Cancel and Replace Order

does not satisfy the System's price or other reasonability checks (e.g., Options 3, Section 15(a)(1) and Options 3, Section 15(a)(2)) the existing order shall be cancelled and not replaced. Today, the Exchange utilizes the simple order checks in Options 3, Section 15(a)(1), Order Price Protection, and Options 3, Section 15(b)(1), Acceptable Trade Range, for each order entered into the System, including replacement orders. This additional language brings more clarity to the rule text.

Reserve Orders

The Exchange proposes to adopt a Reserve Order at Options 3, Section 7(g) that is identical to the order type in ISE, GEMX and MRX Options 3, Section 7(g). As proposed, a Reserve Order would be a limit order that contains both a displayed portion and a non-displayed portion. Both the displayed and non-displayed portions of a Reserve Order would be available for potential execution against incoming marketable orders. A non-marketable Reserve Order would rest on the order book. The displayed portion of a Reserve Order would be ranked at the specified limit price and the time of order entry. The displayed portion of a Reserve Order would trade in accordance with Options 3, Section 10(a)(1)(A) for Public Customer Orders, and Options 3, Section 10(a)(1)(F) for non-Public Customer Orders. Reserve Orders would be entered with an instruction for the displayed portion of the order to be refreshed: (A) upon full execution of the displayed portion or upon any partial execution; and (B) up to the initial size of the displayed portion or with a random refresh quantity within a range determined by the member organization. When the displayed portion of a Reserve Order is decremented, either in full or in part, it would be refreshed from the non-displayed portion of the resting Reserve Order. If the displayed portion is refreshed in part, the new displayed portion would include the previously displayed portion. Upon any refresh, the entire displayed portion would be ranked at the specified limit price and obtain a new time stamp, i.e., the time that the new displayed portion of the order was refreshed. The new displayed portion would trade in accordance with Options 3, Section 10(a)(1)(A) for Public Customer Orders, and Options 3, Section 10(a)(1)(F) for non-Public Customer Orders. The initial non-displayed portion of a Reserve Order rests on the order book and would be ranked based on the specified limit price and time of order entry. Thereafter, non-displayed portions, if any, always obtain the same time stamp

⁵⁵ Phlx Options 3, Section 7(b)(4), states, A Stop Order is a Limit Order or Market Order to buy or sell at a limit price when interest on the Exchange for a particular option contract reaches a specified price. A Stop Order shall be cancelled if it is immediately electable upon receipt. A Stop Order shall not be elected by a trade that is reported late or out of sequence or by a Complex Order trading with another Complex Order. Lead Market Makers and Maker Makers may not submit a Stop Order. Off-Floor Broker-Dealers may not enter a Stop Market Order. (A) A Stop-Limit Order to buy becomes a Limit Order executable at the limit price or better when the option contract trades or is bid on the Exchange at or above the stop-limit price. A Stop-Limit Order to sell becomes a Limit Order executable at the limit price or better when the option contract trades or is offered on the Exchange at or below the stop-limit price. (B) A Stop Market Order is similar to a stop-limit except it becomes a Market Order when the option contract reaches a specified price. (C) A Stop Order is a non-displayed, contingency order until elected.

⁵⁶ Phlx Options 3, Section 7(b)(7) provides, A Cancel-Replacement Order is a single message for the immediate cancellation of a previously received order and the replacement of that order with a new order with new terms and conditions. If the previously placed order is already filled partially or in its entirety, the replacement order is automatically canceled or reduced by the number of contracts that were executed. The replacement order will result in a loss of priority.

as that of the new displayed portion as described in proposed Options 3, Section 7(g)(5). The non-displayed portion of any Reserve Order would be available for execution only after all displayed interest has been executed. The non-displayed portion of any Reserve Order would trade in accordance with Options 3, Section 10(a)(1)(A) for Public Customer Orders, and Options 3, Section 10(a)(1)(F) for non-Public Customer Orders. The Exchange believes that the adoption of this new order type will allow all member organizations the ability to trade their orders with displayed and non-displayed portions similar to ISE, GEMX and MRX Options 3, Section 7(g).

Attributable Orders

The Exchange proposes to adopt Attributable Orders at Options 3, Section 7(h) that is identical to the order type in ISE, GEMX and MRX Options 3, Section 7(h). An Attributable Order would be a market or limit order which displays the user firm ID for purposes of electronic trading on the Exchange. Use of Attributable Orders is voluntary. Attributable Orders may not be available for all Exchange Systems. The Exchange will issue an Options Regulatory Alert specifying the Systems for which the Attributable Order type shall be available. The Exchange believes that the availability of this order type will allow member organizations the ability to display their firm identification if they elect to do so.

Directed Orders ⁵⁷

The Exchange proposes to relocate the reference to Directed Orders currently in Options 3, Section 7(b)(11) ⁵⁸ to Options 3, Section 7(l) without change. The Exchange proposes to reserve Options 3, Section 7(m).

Add Liquidity Orders

The Exchange proposes to adopt an Add Liquidity Order (“ALO”) at Options 3, Section 7(n) that is identical to ISE, GEMX and MRX Options 3, Section 7(n). ALOs are limit orders that will only be executed as a “maker” on the Exchange. An Add Liquidity Order is a limit order that is to be executed in whole or in part on the Exchange (i) only after being displayed on the Exchange’s limit order book; and (ii) without routing any portion of the order

to another market center. Member organizations may specify whether an Add Liquidity Order shall be cancelled or re-priced to the minimum price variation above the national best bid price (for sell orders) or below the national best offer price (for buy orders) if, at the time of entry, the order (i) is executable on the Exchange; or (ii) the order is not executable on the Exchange, but would lock or cross the national best bid or offer. If at the time of entry, an Add Liquidity Order would lock or cross one or more non-displayed orders or quotes on the Exchange, the Add Liquidity Order shall be cancelled or re-priced to the minimum price variation above the best non-displayed bid price (for sell orders) or below the best non-displayed offer price (for buy orders). Notwithstanding the aforementioned, if an Add Liquidity Order would not lock or cross an order or quote on the System but would lock or cross the NBBO, the order will be handled pursuant to Options 3, Section 5(d).⁵⁹ An Add Liquidity Order will be ranked in the Exchange’s limit order book in accordance with Options 3, Section 10 which governs priority and allocation. Add Liquidity Orders may only be submitted when an options series is open for trading. This order type would give market participants greater control over the circumstances in which their orders are executed.

Below are some examples of the Add Liquidity Order.

Add Liquidity Only Order Re-Price Example

- Non-Penny Program MPV Option in open trading state
- Market Maker A quote \$0.90 (10) × \$1.00 (10)
- ABBO \$0.85 × \$1.05
- Firm A sends Add Liquidity Only Order to buy 5 arrives at \$1.00
- Reprices on book to \$0.95
- Displays on \$0.95 bid, which is National Best displayed bid with a quantity of 5

⁵⁹ Phlx Options 3, Section 5(d) provides, An order will not be executed at a price that trades through another market or displayed at a price that would lock or cross another market. An order that is designated by the member as routable will be routed in compliance with applicable Trade-Through and Locked and Crossed Markets restrictions. An order that is designated by a member as non-routable will be re-priced in order to comply with applicable Trade-Through and Locked and Crossed Markets restrictions. If, at the time of entry, an order that the entering party has elected not to make eligible for routing would cause a locked or crossed market violation or would cause a trade-through violation, it will be re-priced to the current national best offer (for bids) or the current national best bid (for offers) as non-displayed, and displayed at one minimum price variance above (for offers) or below (for bids) the national best price.

- Order to sell 10 arrives at \$0.90
- 5 execute with Firm A @\$0.95
- 5 execute with Market Maker A @ \$0.90
- NBBO updates back to \$0.90 × \$1.00

Add Liquidity Only Reject Example

- Non-Penny Program MPV Option in open trading state
 - Market Maker A quote \$0.90 (10) × \$1.00 (10)
 - ABBO \$0.85 × \$1.05
 - Firm A sends Add Liquidity Only Order to buy 5 arrives at \$1.00
 - Order is rejected back to sender because the sender configured the order for reject instead of re-price
- The Exchange notes that it proposes to reserve Options 3, Section 7(o), (p), (q), (r), (s) and (t).

Opening Sweep

The Exchange proposes to relocate the Opening Sweep order type at Options 3, Section 7(b)(6)⁶⁰ to Options 3, Section 7(u) and amend it. The Exchange proposes to replace references to “Lead Market Makers” and “Market Makers” to simply “Market Makers” as all Lead Market Makers are also Market Makers.⁶¹ Additionally, the Exchange proposes to note that with the technology migration, that Opening Sweeps would be subject to the new Market Wide Risk Protection proposed in Options 3, Section 15. The Exchange is proposing to add a Market Wide Risk Protection to its rules with this proposal as described below. Finally, the Exchange proposes to add a precise citation to the Opening Process in the last sentence of Options 3, Section 7(u) by including “(b)(i)” after Options 3, Section 8.

The Exchange proposes to reserve Options 3, Section 7(x) and (y).

PIXL Order

The Exchange proposes to relocate the description of a PIXL Order from Options 3, Section 7(b)(9)⁶² to Options 3, Section 7(y) without substantive

⁵⁷ The Exchange is skipping certain letters in this rule to account for other rule changes that will be filed that impact Options 3, Section 7(i), (j), (k), (t) and (v). Where the Exchange is reserving letters, it is to align to the lettering in ISE, GEMX and MRX Options 3, Section 7.

⁵⁸ Phlx Options 3, Section 7(b)(11) provides, A Directed Order is as described in Options 2, Section 10.

⁶⁰ Phlx Options 3, Section 7(b)(6) provides, An Opening Sweep is a one-sided order entered by a Lead Market Maker or Market Maker through SQF for execution against eligible interest in the System during the Opening Process. This order type is not subject to any protections listed in Options 3, Section 15, except for Automated Quotation Adjustments. The Opening Sweep will only participate in the Opening Process pursuant to Options 3, Section 8 and will be cancelled upon the open if not executed.

⁶¹ See Phlx Options 1, Section 1(b)(28) which defines a Market Maker as a Streaming Quote Trader or a Remote Streaming Quote Trader who enters quotations for his own account electronically into the System.

⁶² Phlx Options 3, Section 7(b)(9) provides, A PIXL Order is as described in Options 3, Section 13.

change.⁶³ The Exchange proposes to populate Supplementary Material .01 to Options 3, Section 7 in a separate rule change.

Time in Force Provisions

The Exchange proposes to relocate the rule text concerning Time in Force from current Options 3, Section 7(c) to Supplementary Material .02 to Options 3, Section 7 without change. Phlx Options 3, Section 7(c) provides, “Time in Force or “TIF.” The term “Time in Force” shall mean [sic] the period of time that the System will hold an order for potential execution, and shall include:”

Day Order

The Exchange proposes to relocate Day Order from current Options 3, Section 7(c)(1)⁶⁴ to Supplementary Material .02(a) to Options 3, Section 7 and make minor amendments to the description. The Exchange proposes to amend the first sentence which states, “If not executed, an order entered with a TIF of “Day” expires at the end of the day on which it was entered.” The Exchange proposes to instead provide, “An order to buy or sell entered with a TIF of “DAY,” which, if not executed, expires at the end of the day on which it was entered.” The Exchange is rewording the rule text of Day Order to mirror the text in ISE, GEMX and MRX Supplementary Material .02(a) to Options 3, Section 7. The Exchange notes that Phlx does not have the Precise or OTTO protocols today.

Good-Till-Cancelled

The Exchange proposes to relocate Good Till Cancelled from Options 3, Section 7(c)(4)⁶⁵ to Supplementary Material .02(b) to Options 3, Section 7 and amend the description. Currently, Supplementary Material .02(b) to Options 3, Section 7 provides that a Good Til Cancelled (“GTC”) Order entered with a TIF of GTC, if not fully executed, will remain available for potential display and/or execution unless cancelled by the entering party,

or until the option expires, whichever comes first. GTC Orders shall be available for entry from the time prior to market open specified by the Exchange until market close. The Exchange proposes to instead provide that an order to buy or sell entered with a TIF of “GTC” remains in force until the order is filled, canceled or the option contract expires; provided, however, that GTC orders will be canceled in the event of a corporate action that results in an adjustment to the terms of an option contract. The first sentence of the current text is simply worded differently. Also, all order types are available throughout the trading day unless specified otherwise. The Exchange proposes to add language concerning a corporate event, noting that GTC orders are canceled in the event of a corporate action that results in an adjustment to the terms of an option contract. This is also true today. The Exchange is adding this rule text to clarify the current System behavior. The proposed GTC description is identical to the rule text in ISE, GEMX and MRX Supplementary Material .02(b) to Options 3, Section 7. There is no System change as a result of the change to the description of the GTC order.

Good-Till-Date

The Exchange proposes to adopt a new TIF designation, Good-Till-Date or “GTD” at Supplementary Material .02(c) to Options 3, Section 7 which is identical to ISE, GEMX and MRX’s Good-Till-Date TIF at Supplementary Material .02(c) to Options 3, Section 7. A Good-Till-Date TIF is an order to buy or sell entered with a TIF of “GTD,” which, if not executed, would be cancelled at the sooner of the end of the expiration date assigned to the order, or the expiration of the series; provided, however, that GTD orders would be canceled in the event of a corporate action that results in an adjustment to the terms of an option contract. The Exchange believes this additional TIF will provide member organizations with additional opportunities when trading on Phlx.

Immediate-or-Cancel

The Exchange proposes to relocate Immediate-or-Cancel from Options 3, Section 7(c)(2)⁶⁶ to Supplementary

Material .02(d) to Options 3, Section 7 and amend the description. Supplementary Material .02(d) to Options 3, Section 7 currently states, “An Immediate-or-Cancel (“IOC”) Order entered with a TIF of “IOC” is a Market Order or Limit Order to be executed in whole or in part upon receipt. Any portion not so executed is cancelled.” The Exchange proposes a non-substantive amendment to instead provide, “Immediate-or-Cancel. An order entered with a TIF of “IOC” that is to be executed in whole or in part upon receipt. Any portion not so executed is to be treated as cancelled.” The Exchange proposes to relocate the rule text in Options 3, Section 7(c)(A) to Supplementary Material .02(d)(1) to Options 3, Section 7 without change. The Exchange proposes to relocate the rule text in Options 3, Section 7(c)(B) to Supplementary Material .02(d)(2) to Options 3, Section 7 and remove the reference to “Lead Market Maker” to simply “Market Makers” as all Lead Market Makers are also Market Makers.⁶⁷ The Exchange proposes to amend “SQF is not subject to” to “the SQF protocol will not be subject to”. The Exchange proposes to add an “(A)” before Order Price Protection, and change “or Size Limitation in Options 3, Section 15(a)(1), (a)(2), and (b)(2), respectively, or Size Limitation within Options 3, Section 16(e)” to “and Size Limitation Protection as defined in Options 3, Section 15(a)(1), (a)(2), and (b)(2) respectively, for single leg orders.” These modifications are non-substantive and simply bring more clarity to the rule text. The Exchange proposes to relocate the rule text in current Phlx Options 3, Section 7(c)(2)(C) in a separate rule change. These changes align with rule text in ISE, GEMX and MRX Supplementary Material .02(d) to Options 3, Section 7.

Opening Only

The Exchange proposes to relocate Opening Only from Options 3, Section 7(c)(3)⁶⁸ to proposed Supplementary

Market Order Spread Protection, or Size Limitation in Options 3, Section 15(a)(1), (a)(2), and (b)(2), respectively, or Size Limitation within Options 3, Section 16(e). (C) Orders entered into the Price Improvement XL (“PIXL”) Mechanism and Qualified Contingent Cross (“QCC”) Mechanism are considered to have a TIF of IOC. By their terms, these orders will be: (1) executed either on entry or after an exposure period, or (2) cancelled.

⁶⁷ See Phlx Options 1, Section 1(b)(28) which defines a Market Maker as a Streaming Quote Trader or a Remote Streaming Quote Trader who enters quotations for his own account electronically into the System.

⁶⁸ Phlx Options 3, Section 7(c)(3) provides, An Opening Only (“OPG”) order is entered with a TIF of “OPG”. This order can only be executed in the Opening Process pursuant to Options 3, Section 8.

⁶³ The Exchange proposes to remove “A” before the words “PIXL Order.”

⁶⁴ Phlx Options 3, Section 7(c)(1) provides, If not executed, an order entered with a TIF of “Day” expires at the end of the day on which it was entered. All orders by their terms are Day Orders unless otherwise specified. Day orders may be entered through FIX.

⁶⁵ Phlx Options 3, Section 7(c)(4) provides, A Good Til Cancelled (“GTC”) Order entered with a TIF of GTC, if not fully executed, will remain available for potential display and/or execution unless cancelled by the entering party, or until the option expires, whichever comes first. GTC Orders shall be available for entry from the time prior to market open specified by the Exchange until market close.

⁶⁶ Phlx Options 3, Section 7(c)(2) provides, An Immediate-or-Cancel (“IOC”) Order entered with a TIF of “IOC” is a Market Order or Limit Order to be executed in whole or in part upon receipt. Any portion not so executed is cancelled. (A) Orders entered with a TIF of IOC are not eligible for routing. (B) IOC orders may be entered through FIX or SQF, provided that an IOC Order entered by a Market Maker or Lead Market Maker through SQF is not subject to the Order Price Protection, the

Material .02(e) of Options 3, Section 7. The Exchange is proposing to add Phlx's new Market Wide Risk Protection to the list of risk protections that would apply to Opening Only. The Exchange proposes a new Market Wide Risk Protection as explained below in this proposal. Also, the Exchange proposes to capitalize "orders" in the last sentence.

Order Entry Protocols

The Exchange proposes to amend the rule text currently in Supplementary Material .03(a)(i) of Options 3, Section 7. With respect to the FIX protocol, within proposed Supplementary Material .03(A) of Options 3, Section 7,⁶⁹ the Exchange proposes to add "post trade allocation messages" to the list of features that will be included in FIX. A post trade allocation message allows market participants to specify how an order should be subdivided among one or more accounts.⁷⁰ Today, ISE, GEMX and MRX provide post trade allocation messages through FIX.⁷¹ The Exchange does not propose to amend the SQF protocol within Supplementary Material .03(B) of Options 3, Section 7⁷² or the FBMS protocol within Supplementary

This order type is not subject to any protections listed in Options 3, Section 15, except Size Limitation. Any portion of the order that is not executed during the Opening Process is cancelled. OPQ orders may not route.

⁶⁹ Phlx Supplementary Material .03(A) of Options 3, Section 7 provides, "Financial Information eXchange" or "FIX" is an interface that allows members and their Sponsored Customers to connect, send, and receive messages related to orders and auction orders and responses to and from the Exchange. Features include the following: (1) execution messages; (2) order messages; and (3) risk protection triggers and cancel notifications."

⁷⁰ For example, a member may specify the account(s) and their respective order quantities which make up the order.

⁷¹ See ISE, GEMX and MRX Supplementary Material .03(a)(i) of Options 3, Section 7.

⁷² Phlx Supplementary Material .03(A) of Options 3, Section 7 provides, "Specialized Quote Feed" or "SQF" is an interface that allows Lead Market Makers, Streaming Quote Traders ("SQTs") and Remote Streaming Quote Traders ("RSQTs") to connect, send, and receive messages related to quotes, Immediate-or-Cancel Orders, and auction responses into and from the Exchange. Features include the following: (1) options symbol directory messages (e.g., underlying and complex instruments); (2) system event messages (e.g., start of trading hours messages and start of opening); (3) trading action messages (e.g., halts and resumes); (4) execution messages; (5) quote messages; (6) Immediate-or-Cancel Order messages; (7) risk protection triggers and purge notifications; (8) opening imbalance messages; (9) auction notifications; and (10) auction responses. The SQF Purge Interface only receives and notifies of purge requests from the Lead Market Maker, SQT or RSQT. Lead Market Makers, SQTs and RSQTs may only enter interest into SQF in their assigned options series. Immediate-or-Cancel Orders entered into SQF are not subject to the Order Price Protection, the Market Order Spread Protection, or Size Limitation in Options 3, Section 15(a)(1), (a)(2) and (b)(2), respectively.

Material .03(C) of Options 3, Section 7.⁷³

Routing

The Exchange proposes to relocate the rule text at Options 3, Section 7(d)⁷⁴ to Supplementary Material .04 of Options 3, Section 7 without change.

Options 3, Section 8

The Exchange proposes to amend Options 3, Section 8, Options Opening Process, at Options 3, Section 8(b) to note the eligible interest that will be included in the Opening Process. The Exchange currently provides at Options 3, Section 8(b) that, "Eligible interest during the Opening Process includes Valid Width Quotes, Opening Sweeps, and orders. Quotes, other than Valid Width Quotes, will not be included in the Opening Process. Non-SQT Market Makers may submit orders." The Exchange proposes to note that "Eligible interest during the Opening Process includes Valid Width Quotes, Opening Sweeps, and orders, *including Opening Only Orders, but excluding orders with a Time-In-Force of "Immediate or Cancel" and Add Liquidity Orders.* Quotes, other than Valid Width Quotes, will not be included in the Opening Process. *The displayed and non-displayed portions of the Reserve Orders are considered for execution and in determining the Opening Price throughout the Opening Process.* Non-SQT Market Makers may submit orders."⁷⁵ The Exchange would exclude Add Liquidity Orders and consider Reserve Orders (displayed and non-displayed portions) for execution in the Opening Process as well as when

⁷³ Phlx Supplementary Material .03(C) of Options 3, Section 7 provides, Options Floor Based Management System or ("FBMS") is a component of the System designed to enable members and/or their employees to enter, route and report transactions stemming from options orders received on the Exchange. The FBMS also is designed to establish an electronic audit trail for options orders negotiated, represented and executed by members on the Exchange, to the extent permissible pursuant to Options 8, Section 22(a), such that the audit trail provides an accurate, time-sequenced record of electronic and other orders, quotations and transactions on the Exchange, beginning with the receipt of an order by the Exchange, and further documenting the life of the order through the process of execution, partial execution, or cancellation of that order. The features of FBMS are described in Options 8, Sections 28(e) and 29. In addition, a non-member or member may utilize an FBMS FIX interface to create and send an order into FBMS to be represented by a Floor Broker for execution.

⁷⁴ Phlx Options 3, Section 7(d) provides, Routing Strategies. Orders may be entered on the Exchange with a routing strategy of FIND, SRCH or Do-Not-Route ("DNR") as provided in Options 5, Section 4 through FIX only.

⁷⁵ Today, Opening Only Orders are eligible for the Opening Process but not Immediate or Cancel Orders.

considering the Opening Price. The Exchange proposes to amend the rule text to note how those order types are accepted by the System for processing during the Opening Process. The proposed eligibility of these orders mirror ISE, GEMX and MRX Options 3, Section 8(b).

Also, similar to ISE, GEMX and MRX Options 3, Section 8(g), the Exchange proposes to account for the addition of Reserve Orders with respect to the Potential Opening Price⁷⁶ in Phlx Options 3, Section 8(h). The Exchange notes that to calculate the Potential Opening Price, the System will take into consideration all Valid Width Quotes and orders (including Opening Sweeps *and displayed and non-displayed portions of Reserve Orders*) for the option series and identify the price at which the maximum number of contracts can trade ("maximum quantity criterion"). The addition of this rule text will make clear the manner in which the System will handle a Reserve Order during the Opening Process.

The Exchange proposes to amend Options 3, Section 8(h)(A), which currently describes how the Potential Opening Price would be calculated when there is more than one Potential Opening Price. Today, Phlx Options 3, Section 8(h)(A) provides that when two or more Potential Opening Prices would satisfy the maximum quantity criterion and leave no contracts unexecuted, the System takes the highest and lowest of those prices and takes the mid-point; if such mid-point is not expressed as a permitted minimum price variation, it will be rounded to the minimum price variation that is closest to the closing price for the affected series from the immediately prior trading session. If there is no closing price from the immediately prior trading session, the System will round up to the minimum price variation to determine the Opening Price. The Exchange proposes to no longer round in the direction of the previous trading day's closing price, rather it would round up to the minimum price variation if the mid-point of the high/low is not expressed as a permitted minimum price variation with this technology migration. The proposed changes are intended to simplify and bring greater transparency to the Opening Process, as market participants can now have a better sense of how the Potential Opening Price will be calculated without having to account for the closing price of each options series. This proposed change will mirror

⁷⁶ The Potential Opening Price indicates a price where the System may open once all other Opening Process criteria is met.

the functionality on ISE, GEMX and MRX.⁷⁷

The Exchange further proposes to amend Phlx Options 3, Section 8(j)(7), which currently describes the determination of Opening Quote Range ("OQR") boundaries in certain scenarios.⁷⁸ Specifically, the Exchange proposes to amend the last sentence of Options 3, Section 8(j)(7) which currently states, "The System will route routable Public Customer and Professional interest pursuant to Options 3, Section 10(a)(1)(A)." The Exchange proposes to remove the current limitation that only allows routable Public Customer⁷⁹ and Professional⁸⁰ interest to route during the Opening Process. Instead, all routable market participant interest will be allowed to route to align the Exchange's opening functionality with ISE, GEMX and MRX Options 3, Section 8, which does not limit orders that may route in the Opening Process. Specifically, the Exchange proposes to remove the reference to Public Customer and Professional to allow all routable interest to route in the Opening Process. The Exchange proposes to update the cross-cite to Phlx Options 3, Section 10(a)(1)(A), that currently points to the Public Customer priority overlay. Instead, the Exchange would amend the citation to point to the more general priority rule in Phlx Options 3, Section 10(a).

Similar to other changes noted herein, the Exchange proposes to amend Phlx Options 3, Section 8(k)(C)(6) to note how Reserve Orders will be handled in the Opening Process for purposes of execution. The Exchange proposes to state, "The System will execute orders at the Opening Process that have contingencies (*such as without limitation, Reserve Orders*) and non-routable orders, such as a "Do Not Route" or "DNR" Orders, to the extent possible. This rule text will add transparency to Phlx's rule text, and mirror rule text in ISE, GEMX and MRX Options 3, Section 8(j)(6). Additionally,

⁷⁷ See ISE, GEMX and MRX Options 3, Section 8(g).

⁷⁸ OQR is an additional type of boundary used in the Opening Process, and is intended to limit the opening price to a reasonable, middle ground price, thus reducing the potential for erroneous trades during the Opening Process.

⁷⁹ The term "Public Customer" means a person or entity that is not a broker or dealer in securities and is not a Professional as defined within Options 1, Section (b)(45). See Option 1, Section 1(b)(46).

⁸⁰ The term "Professional" means any person or entity that (i) is not a broker or dealer in securities, and (ii) places more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). Member organizations must indicate whether orders are for Professionals. See Option 1, Section 1(b)(45).

the Exchange proposes an amendment to the last sentence of Phlx Options 3, Section 8(k)(C)(6) which currently states, "The System will only route non-contingency Public Customer and Professional orders." In line with proposed amendments to permit the System to route all market participant interest, thereby removing the limitation that only allows routable Public Customer and Professional interest to route, and in line with the addition of rule text related to the handling of Reserve Orders, the Exchange proposes to instead provide, "The System will only route non-contingency orders, except Reserve Orders may route up to their full volume." With this proposal, Phlx would have the following contingency orders that will not route: a Stop Order, an All-or-None Order and a Fill-or-Kill Order.

The Exchange proposes to amend current Phlx Options 3, Section 8(k)(D) to mirror rule text in ISE, GEMX and MRX Options 3, Section 8(j)(6)(A) which states, "The System will cancel any order or quote that is priced through the Opening Price. All other interest will be eligible for trading after opening." Today, the Phlx System will cancel any order or quote priced through the Opening Price. Also, today, all other interest will be eligible for trading after the Opening Process and will remain on the order book. The Exchange believes that this rule text will bring greater transparency to Phlx's Opening Process.

Finally, the Exchange proposes to amend rule text in the Opening Process Cancel Timer at Phlx Options 3, Section 8(l). With the retention of the "Good-Till-Cancel Order" and adoption of the "Good-Till-Date Order," the Exchange proposes to amend the order types in the last sentence of Options 3, Section 8(l) for consistency.

Options 3, Section 9

The Exchange proposes to amend Phlx Options 3, Section 9, Trading Halts. Specifically, the Exchange proposes to amend Options 3, Section 9(d)(3) to amend the manner in which a Stop Order will be treated during a trading halt. The Exchange proposes to mirror the treatment of Stop Orders in ISE, GEMX and MRX Options 3, Section 9(d)(3). Today, the rule text notes that "[a]fter the opening, the Exchange shall elect Stop Orders, as defined in Options 8, Section 32(c)(2), and, because they become Market Orders, shall cancel them back and notify member organizations of the reason for such rejection." The Exchange proposes to amend the rule text to instead provide, "After the Opening Process, if a Stop

Order is elected, as defined in Options 3, Section 7(d) because they become Market Orders, the System shall cancel them back and notify market participants of the reason for such cancellation." Stop Orders would become elected as provided for in proposed Options 3, Section 7(d).⁸¹ The Exchange currently cites Phlx Options 8, Section 32 erroneously, as those rules refer to Stop Order types on the trading floor. The Exchange proposes to instead cite proposed new Options 3, Section 7(d) which describes the electronic Stop Order type. The Exchange proposes to note that the System cancels orders. Also, the Exchange proposes to change the word rejection to cancellation because the order would be cancelled not rejected. The Exchange also proposes to amend Phlx Options 3, Section 9(f) which currently states, "During a halt, the Exchange will maintain existing orders on the book (but not existing quotes), except as noted in Options 5, Section 4, accept orders and quotes, and process cancels. During a halt, existing quotes are cancelled and auction orders and auction responses, as well as Crossing Orders, are rejected." The Exchange notes that this exception in Phlx Options 3, Section 9(f) to potential exceptions to this rule within Options 5, Section 4 is not necessary as the Exchange follows the trading halt processes in Options 3, Section 9. Options 5, Section 4 does not change the manner in which Options 3, Section 9 operates.

Options 3, Section 10

The Exchange proposes to amend Phlx Options 3, Section 10, Electronic Execution Priority and Processing in the System. Today, generally, Phlx's System rounds down. With this technology migration, the Exchange proposes to amend Phlx's rounding methodology to round up to the nearest integer. Today, ISE, GEMX and MRX Options 3, Section 10(c) provide for a Size Pro-Rata allocation with the same rounding methodology as proposed for Phlx. The Exchange is opting to round up and not down, uniformly, and disclose that rounding methodology directly within Options 3, Section 10, so that all member organizations are aware of the rounding methodology that would be utilized by the System. In addition, if the result of an allocation is not a whole

⁸¹ As proposed in Options 3, Section 7(d) a Stop Order becomes a Market Order when the stop price is elected. A Stop Order to buy is elected when the option is bid or trades on the Exchange at, or above, the specified stop price. A Stop Order to sell is elected when the option is offered or trades on the Exchange at, or below, the specified stop price.

number, it will now be rounded up to the nearest whole number instead of down. Finally, with respect to rounding, because the System is rounding up, the provisions which describe allocations for remainders of less than one contract are being deleted because they cannot mathematically occur. The Exchange believes that rounding up uniformly is consistent with the Act because it provides for the equitable allocation of contracts among the Exchange's market participants. The Exchange proposes to provide market participants with transparency as to the number of contracts that they are entitled to receive as the result of rounding. Further, the Exchange believes that this methodology produces an equitable outcome during allocation that is consistent with the protection of investors and the public interest because all market participants are aware of the methodology that will be utilized to calculate outcomes for allocation purposes. By way of example, Broker/Dealer Order to Buy 20 @1.00 Firm Order to Buy 10 @1.00 Customer Order to Sell 7 @1.00

Today, this order would allocate as follows: 4 contracts to the Broker/Dealer Order (BD receives 20/30 of the incoming 7 = 4.667, rounds down to 4 contracts)

Today, this order allocates 2 contracts to the Firm Order (Firm receives 10/30 of the incoming 7 = 2.33, rounds down to 2 contracts)

Today, this order allocates 1 contract (the odd lot) to the Broker/Dealer Order

With this proposal, allocation will round up instead of down, meaning the Broker/Dealer order would instead be allocated 5 contracts and the Firm order would receive the remaining 2 contracts.

To that end, the Exchange proposes to amend Options 3, Section 10(a) to instead provide that "If the result is not a whole number, it will be rounded up to the nearest whole number. Size Pro-Rata Priority shall mean that resting orders and quotes in the order book are prioritized according to price. If there are two or more resting orders or quotes at the same price, the System allocates contracts from an incoming order or quote to resting orders and quotes beginning with the resting order or quote displaying the largest size proportionally according to displayed size, based on the total number of contracts displayed at that price. Pursuant to Size Pro-Rata, if there are still contracts to be allocated after the displayed size of all orders at that price has been executed, the remaining size

from the incoming order will be allocated proportionally against non-displayed interest according to remaining total size of each resting order at such price, beginning with the order which has the largest total size remaining. The Exchange is proposing to allocate similar to ISE, GEMX and MRX Options 3, Section 10(c). The Size Pro-Rata allocation divides the remainder proportionally among the non-displayed interest. Both the displayed and non-displayed portions of a Reserve Order are available for potential execution against incoming marketable orders or quotes. The non-displayed portion of any Reserve Order is available for execution only after all displayed interest on the single-leg order book has been executed. The Odd Lot Allocation within Phlx Options 3, Section 10(a)(1)(F) is also being removed because the Exchange would no longer utilize the random assignment discussed in that paragraph, rather the Exchange would simply round up any allocation which does not result in a whole number, and thus would have no Odd Lot contracts remaining to be allocated.

The Exchange proposes to amend Phlx Options 3, Section 10(a)(1)(B) to change a reference to "DROT" to "Directed Market Maker" for consistency.

The Exchange proposes to amend Phlx Options 3, Section 10(a)(1)(C) to provide that "After all Public Customer orders have been fully executed, upon receipt of a Directed Order pursuant to Options 2, Section 10, provided the Directed Market Maker's quote is at the better of the internal PBBO or the NBBO, the Directed Market Maker will be afforded a participation entitlement. This participation entitlement will be considered after the Opening Process." Today, a Directed Market Maker's quote or market maker order must be at the better of the internal PBBO or NBBO. The Exchange believes that similar to ISE, GEMX and MRX Options 3, Section 10(c)(1)(C), that Market Maker orders should not be considered when offering Directed Market Maker priority enhancements. Phlx Options 2, Section 10 provides that when the Exchange's disseminated price is the NBBO at the time of receipt of the Directed Order, and the Directed Lead Market Maker, SQT or RSQT is *quoting* at the better of the internal PBBO or the NBBO, the Directed Order shall be automatically executed and allocated in accordance with Options 3, Section 10(a)(1)(C). The Exchange proposes to only offer the Directed Market Maker enhanced allocation if a Directed Market Maker's quote is at the better of the internal

PBBO or the NBBO and not its order. Consistent with this change, the Exchange proposes to remove "or order(s)" after quote throughout Options 3, Section 10(a)(1)(C). Consistent with its proposal to round up, the Exchange proposes to remove the last sentence of Options 3, Section 10(a)(1)(C) that provides, "If rounding would result in an allocation of less than one contract, the Directed Market Maker shall receive one contract."

The Exchange proposes to amend the Phlx's Entitlement for Orders of 5 contracts or fewer at Options 3, Section 10(a)(1)(D) to align with ISE, GEMX and MRX Options 3, Section 10(a)(1)(D). The Exchange proposes to amend the last sentence to provide, "On a quarterly basis, the Exchange will evaluate what percentage of the volume executed on the Exchange is comprised of orders for 5 contracts or fewer allocated to Lead Market Makers, and will reduce the size of the orders included in this provision if such percentage is over 40%." Today, Phlx's percentage for the reduction is 25%. The Exchange believes that utilizing the higher percentage continues to restrict Lead Market Makers with respect to the percentage of the volume executed on Phlx that is comprised of orders for 5 contracts or fewer allocated to Lead Market Makers. The Exchange will continue to evaluate the percentage on a quarterly basis. The Exchange monitors ISE, GEMX and MRX Lead Markets' orders for 5 contracts or fewer based on this percentage today and this has not raised any concerns. Finally, this proposal will align this percentage to 40% identical to ISE, GEMX and MRX Options 3, Section 10(a)(1)(D) so that Market Makers have the same compliance across the Nasdaq affiliated exchanges.⁸² Phlx notes that currently Lead Market Makers are not approaching the 25% threshold noted in Options 3, Section 10(a)(1)(D)(ii) related to the quarterly review of 5 contracts or fewer by the Exchange, which percentage is based on total volume executed. With this proposal, Phlx will monitor the frequency in which Lead Market Makers receive orders for 5 contracts or fewer. Specifically, the Exchange will review the proposed provision quarterly and will maintain the orders for 5 contracts or fewer at a level that will not allow these small size orders executed by Lead Market Makers to account for more than 40% of the volume executed on the Exchange. The Exchange does not believe the proposal raises any new or novel issues as other options exchanges also offer the same

⁸² BX also utilizes 40%. See Options 3, Sections 10(a)(1)(C)(1)(c) and 10(a)(2)(iii).

allocation for orders for 5 contracts or fewer.⁸³ The Exchange believes that providing this benefit offers Lead Market Makers an incentive for vigorous quoting since a Lead Market Maker must be quoting at the NBBO in order to receive the allocation. Incentivizing Lead Market Makers to provide liquidity on Phlx, in turn, provides greater opportunity for executions, tighter spreads, and better pricing for all member organizations. While the Commission has, in the past, been concerned about locking up larger portions of order flow from intra-market price competition, the Exchange believes that the enhancement would remain adequately balanced by the increased 40% threshold that limits the volume of orders of five contracts or fewer that are executed by Lead Market Makers to account for no more than 40% of the volume executed on the Exchange. The proposed increased limitation of 40% continues to strike a reasonable balance between encouraging vigorous price competition by Lead Market Makers and rewarding those Lead Market Makers for their unique duties. Lead Market Maker are also subject to the heightened quoting requirements specified in Options 2, Section 5(c)(2)(B). As noted above, consistent with proposed rounding, the Exchange proposes to remove the Phlx Odd Lot Allocation in Phlx Options 3, Section 10(a)(1)(F)⁸⁴ because Phlx will round up which would not result in remaining contracts to be allocated after rounding. There is no net benefit or negative to electing to round up versus utilizing any other method of rounding (down, banker's rounding, etc.) provided the rounding is handling uniformly and applied in the same manner to each trade executed by the System. The Exchange will uniformly apply its proposed rounding methodology, rounding up, to all transactions executed on Phlx. The Exchange also proposes to remove the reference to this paragraph at the end of Phlx Options 3, Section 10(a)(1)(D)(ii).

Similar to ISE, GEMX and MRX Options 3, Section 10(c)(1)(E), the Exchange proposes to account for Reserve Orders in proposed Phlx Options 3, Section 7(g)(3). The

Exchange proposes to state that, "If there are contracts remaining after all Market Maker interest has been fully executed, notwithstanding Options 3, Section 7(g)(3), such contracts shall be executed based on the Size Pro-Rata execution algorithm as described in Options 3, Section 10(a)." The Exchange proposes to cite to proposed Phlx Options 3, Section 7(g)(3) which provides that the displayed portion of a Reserve Order will trade in accordance with Options 3, Section 10(a)(1)(A) for Public Customer Orders and this subparagraph (F) for non-Public Customer Orders. The displayed portion of a Reserve Order will be allocated the same as other order types. Both the displayed and non-displayed portions of a Reserve Order are available for potential execution against incoming marketable orders or quotes. The non-displayed portion of any Reserve Order is available for execution only after all displayed interest on the single-leg order book has been executed. The proposed rule text related to allocation of a Reserve Order is identical to ISE, GEMX and MRX at Options 3, Section 10(g). The Exchange also proposes to add a citation to Options 3, Section 10(a) in this paragraph for clarity.

Finally, the Exchange proposes to amend Phlx Options 3, Section 10(a)(2) to capitalize "market maker" and remove the Market Maker order at the end of this paragraph because, as proposed above, the Exchange proposes to only offer the Directed Market Maker allocation if a Directed Market Maker's quote is at the better of the internal PBBO or the NBBO and not an order.

Options 3, Section 15

The Exchange proposes to amend Options 3, Section 15, Simple Order Risk Protections.

Order Price Protection

The Exchange proposes to amend its Order Price Protection ("OPP," also known as the fat finger check) in Phlx Options 3, Section 15(a)(1) to align certain features with the OPP functionality currently offered by its affiliate, NOM and BX. The Exchange's proposal will introduce an alternative method to determine parameters for this risk protection. The Exchange notes that OPP is intended to prevent erroneous executions of orders on Phlx. This proposal seeks to further this objective by introducing a fixed dollar threshold that, in combination with the existing percentage threshold, will provide a modified approach to order rejection based on the price of the order.

The Exchange's current OPP feature prevents certain day limit, good til

cancelled, and immediate or cancel orders at prices outside of pre-set standard limits from being accepted by the System. OPP applies to all options but currently does not apply to Stop-Limit Orders, Intermarket Sweep Orders or Complex Orders. Today, OPP is operational each trading day after the opening until the close of trading, except during trading halts. OPP assists member organizations in controlling risk by checking each order, before it is accepted into the System, against certain parameters. Today, as set forth in Phlx Options 3, Section 15(a)(1)(B), OPP rejects incoming orders that exceed certain parameters according to the following algorithm:

- (i) If the better of the NBBO or the internal market BBO (the "Reference BBO") on the contra-side of an incoming order is greater than \$1.00, orders with a limit more than 50% through such contra-side Reference BBO will be rejected by the System upon receipt.
- (ii) If the Reference BBO on the contra-side of an incoming order is less than or equal to \$1.00, orders with a limit more than 100% through such contra-side Reference BBO will be rejected by the System upon receipt.

With this technology migration, the Exchange proposes to expand the algorithm for OPP to introduce a fixed dollar threshold as an alternative to the percentage specified within the current rule. To effect this change, the Exchange proposes to amend Phlx Options 3, Section 15(a)(1)(B) to provide that OPP will reject incoming orders that exceed certain parameters according to the following algorithm:

- (i) If the better of the NBBO or the internal market BBO (the "Reference BBO") on the contra-side of an incoming order is greater than \$1.00, orders with a limit more than the greater of the below will cause the order to be rejected by the System upon receipt.

(A) 50% through such contra-side Reference BBO; or

(B) a configurable dollar amount not to exceed \$1.00 through such contra-side Reference BBO as specified by the Exchange announced via an Options Trader Alert.

- (ii) If the Reference BBO on the contra-side of an incoming order is less than or equal to \$1.00, orders with a limit more than the greater of the below will cause the order to be rejected by the System upon receipt.

(A) 100% through such contra-side Reference BBO; or

(B) a configurable dollar amount not to exceed \$1.00 through such contra-side Reference BBO as specified by the Exchange announced via an Options Trader Alert.

The proposed alternative would permit for a range of prices to be executed where the incoming order is up to \$1.00 from the Reference BBO. The parameters are identical to NOM and BX Options 3, Section 15(a)(1)(B). Similar to NOM and BX, the Exchange

⁸³ See ISE, GEMX and MRX Options 3, Section 10(a)(1)(D).

⁸⁴ Phlx Options 3, Section 10(a)(1)(F) provides, [i]f there are contracts remaining after Market Maker Priority is applied, such contracts shall be allocated by randomly assigning all Market Makers (including the Lead Market Maker or Directed Market Maker) an order of allocation each trading day, and allocating orders, quotes and sweeps in accordance with the trading day's order assignment, provided the Market Maker, is at the best price at which the order, quote or sweep is being traded.

believes that utilizing the greater of a fixed dollar amount or percentage would expand the applicability of OPP while still providing a reasonable limit to the range where orders will be accepted. By implementing a functionality that applies the greater of a fixed dollar amount not to exceed \$1.00 or a percentage, the Exchange would ensure that this protection would be able to accommodate all orders based on a determination of how far from the Reference BBO the order is priced.

The Exchange notes that certain securities in lower price ranges would not benefit from the application of a percentage as would securities with higher prices. For instance, the application of a 50% threshold to a \$50 security would provide a rejection if a limit order was priced \$75 or greater compared to a 100% threshold for a \$0.02 security which would be rejected if a limit order was priced \$0.04 or greater. As such, certain orders could be rejected under the current framework because the percentage threshold is applied to the contra-side of an incoming order, including in cases where the order is not erroneously priced. Below are additional examples to illustrate the application of the current and proposed rule:

Example: An Option Priced Less Than \$1.00

For a penny MPV option with a BBO on Phlx of $\$0.01 \times \$0.02$, consider that the configurable dollar amount is set to \$0.05.

Current Rule: Reject buy orders of more than \$0.04 bid if incoming order was less than \$1.00, and it was more than 100% through the contra-side of the Reference BBO.

Proposed Rule: A buy order priced up to \$0.07 ($\$0.02$ offer + $\$0.05$ configuration) would not be rejected because a configurable dollar amount from \$0.00 to \$0.05 would allow the order to be entered into the System for execution.

This order was marketable upon entry and was not priced far from the current bid. The Exchange believes in this example, the order should be permitted to trade instead of being rejected.

Example: An Option Priced Greater Than \$1.00

For a penny MPV option with a BBO on Phlx of $\$1.01 \times \$1.02$, consider that the configurable dollar amount is set to \$0.60.

Current Rule: Reject buy orders 50% through \$1.02—orders priced greater than \$1.53 ($\$1.02 + \$0.51$).

Proposed Rule: A buy order priced up to \$1.62 would not be rejected (this would be greater than 50% through 1.02).

This order was marketable upon entry and was not priced far from the current bid. The Exchange believes in this example, the order should be permitted to trade instead of being rejected.

As the above examples illustrate, the Exchange believes that securities in the lower price range could benefit by the proposed alternative method because the fixed amount provides for additional executions in certain situations where a percentage would reject an order that was intentional and not erroneous. This approach has been successful for NOM and BX in limiting erroneous executions while permitting intentional executions at reasonable prices, and the Exchange therefore proposes to adopt this approach for its options market as well. Similar to NOM and BX, the Exchange will post the configurable amount on its website and announce any changes to the amount in an Options Trader Alert.

The Exchange also proposes to add language similar to NOM and BX, which would provide the Exchange with discretion to temporarily deactivate OPP from time to time on an intra-day basis if it determined that unusual market conditions warranted deactivation in the interest of a fair and orderly market. Like NOM and BX, the Exchange believes that it will be useful to have the flexibility to temporarily disable OPP intra-day in response to an unusual market event (for example, if dissemination of data was delayed and resulted in unreliable underlying values needed for the Reference BBO). Member organizations would be notified of intra-day OPP deactivation and any subsequent reactivation by the Exchange through the issuance of System status messages. Specifically, the Exchange proposes to add in Phlx Options 3, Section 15(a)(1)(A) that OPP may be temporarily deactivated on an intra-day basis at the Exchange's discretion.

Lastly, the Exchange proposes to amend Options 3, Section 15(a)(1) to remove the current exclusion of Intermarket Sweep Orders ("ISOs") and Complex Orders from the OPP rule. With the proposed amendment, OPP will apply to ISOs. With respect to ISOs, the intent of an ISO is to sweep as many prices as possible at the top of the book, so market participants need to cast as wide a net as possible to get those prices and fill the ISO. With the current OPP functionality, lower priced ISOs are more likely to get rejected for the reasons discussed above, and the Exchange determined at the time to exclude ISOs when adopting OPP. The proposal to add a fixed dollar threshold as an alternative OPP parameter, however, would provide more flexibility for more lower-priced options (including lower-priced ISOs) to get executed, and the Exchange therefore believes it is no longer necessary to exclude ISOs from OPP going forward. The Exchange further believes

extending the protection to ISOs will promote the goal of limiting erroneous executions on the Exchange while permitting intentional executions at reasonable prices, and in general, extend more protections to ISOs. The Exchange is removing Complex Orders from the list of order types noted in Options 3, Section 15(a) because Section 15 applies to single-leg orders. The Exchange notes Complex Order risk protections in Options 3, Section 16. Finally, the Exchange proposes to add "until elected" after Stop-Limit Orders. Once the Stop-Limit Order is elected, the Exchange checks the Limit Order against the OPP bounds and will cancel the order back to the entering member if the order falls outside of the OPP bounds at the time of its election.

Market Wide Risk Protection

The Exchange proposes to introduce new order entry and execution rate checks identical to those on BX at Options 3, Section 15(a)(3) for Market Wide Risk Protection. These new risk protections are designed to aid member organizations in their order risk management by supplementing current price reasonability checks with activity based order protections.⁸⁵ The Exchange proposes to detail these risk protections in proposed Options 3, Section 15(a)(3), entitled "Market Wide Risk Protection" or "MWRP". As proposed, the System will maintain one or more counting programs for each member organization that count orders entered and contracts traded on Phlx. Member organizations may use multiple counting programs to separate risk protections for different groups established within the member organization. The counting programs will maintain separate counts, over rolling time periods specified by the member organization for each count, of: (1) the total number of orders entered in the order book; and (2) the total number of contracts traded.⁸⁶

All member organizations must provide parameters for the order entry and execution rate protections as described in (1) and (2) above. While the MWRP is mandatory for all member organizations, the Exchange is not proposing to establish minimum or maximum values for the order entry and execution parameters described above. The Exchange believes that this

⁸⁵ The Exchange currently provides members organizations with price protections for orders such as the OPP and the Market Order Spread Protection, which prevent limit orders and market orders from being executed at far away and potentially erroneous prices.

⁸⁶ Phlx will also provide Market Wide Risk Protections for Complex Orders in a separate rule change.

approach will give member organizations the flexibility needed to appropriately tailor the MWRP to their respective risk management needs. In this regard, the Exchange notes that each member organization is in the best position to determine risk settings appropriate for their firm based on the member organization's trading activity and business needs. In the interest of maintaining a fair and orderly market, however, the Exchange will also establish default values for each of these parameters that apply to member organizations that do not submit their own parameters for the MWRP, and will announce these default values in an Options Trader Alert to be distributed to member organizations. The Exchange notes that this approach is consistent with BX's current functionality and would provide Phlx member organizations with the flexibility to establish their own MWRP order entry and execution rate parameters. The Exchange also notes that similar to BX, Phlx member organizations will have the discretion to establish the applicable time period for each of the counts maintained under the proposed MWRP, provided that the selected time period must be within the minimum and maximum duration of the applicable time period established by the Exchange and announced via an Options Trader Alert.⁸⁷

Pursuant to proposed Phlx Options 3, Section 15(a)(3)(A)–(C), if, during the applicable time period, the member organization exceeds the thresholds that it has set for any of the order entry or execution counts described above on Phlx, the System will automatically reject all subsequent incoming orders entered by the member organization. Member organizations may also choose to have the System automatically cancel all of their existing orders on Phlx when the MWRP is triggered. The MWRP will remain engaged until the member organization manually notifies the Exchange to enable the acceptance of new orders. For member organizations that still have open orders on the order book that have not been cancelled pursuant to proposed subparagraph (B), the System will continue to allow those member organizations to interact with existing orders entered before the protection was triggered, including sending cancel order messages and receiving trade executions for those orders. The action taken in proposed subparagraphs (A)–(C) is substantially similar to BX Options 3, Section

15(a)(3)(C), except that BX does not have complex order functionality.

The Exchange believes that the proposed MWRP will assist member organizations in better managing their risk when trading on Phlx. In particular, the proposed rule change provides functionality that allows member organizations to set risk management thresholds for the number of orders or contracts executed on the Exchange during a specified period. As discussed above, this is similar to how BX has implemented the MWRP, and the Exchange believes this functionality will likewise be beneficial for Phlx member organizations.

The examples below illustrate how the MWRP would work both for order entry and order execution protections:

Example: Order Entry Rate Protection

Broker Dealer 1 (“BD1”) designates an allowable order rate of 499 orders/1 second.

@0 milliseconds, BD1 enters 200 orders. (Order total: 200 orders).

@450 milliseconds, BD1 enters 250 orders. (Order total: 450 orders).

@950 milliseconds, BD1 enters 50 orders. (Order total: 500 orders).

Market Wide Risk Protection is triggered on Phlx due to exceeding 499 orders in 1 second. All subsequent orders are rejected, and if BD1 has opted in to this functionality, all existing orders are cancelled. BD1 must contact the Exchange to resume trading.

Example: Order Execution Rate Protection

BD1 designates an allowable execution rate of 15,000 contracts/2 seconds.

@0 milliseconds, BD1 receives executions for 5,000 contracts. (Execution total: 5,000 contracts).

@600 milliseconds, BD1 receives executions for 10,000 contracts. (Execution total: 15,000 contracts).

@1550 milliseconds, BD1 receives executions for 2,000 contracts. (Execution total: 17,000 contracts).

Market Wide Risk Protection is triggered on Phlx due to exceeding 15,000 contracts in 2 seconds. All subsequent orders are rejected, and if BD1 has opted in to this functionality, all existing orders are cancelled. BD1 must contact the Exchange to resume trading.

Acceptable Trade Range

The Exchange proposes to amend the Acceptable Trade Range or “ATR” at Phlx Options 3, Section 15(b)(1) to note that ATR will not be available for All-or-None Orders. The Exchange notes that it would be difficult, from a

technical standpoint, to apply this feature to those orders because their particular contingency makes it difficult to automate their handling.⁸⁸ In 2023, the Exchange filed a rule change⁸⁹ to amend Phlx's All-or-None Orders so that they may only be submitted as an Immediate-or-Cancel Order. As a result of the 2023 rule change, All-or-None Orders no longer rest on the order book and instead execute in their entirety or are cancelled if it cannot execute.⁹⁰ The Exchange should have noted at that time that because of that change that ATR would not be available for All-or-None Orders. The Exchange is proposing this rule text to note similar to, ISE, GEMX and MRX Options 3, Section 15(a)(2)(A)(i) that the Acceptable Trade Range is not available for All-or-None Orders.⁹¹

Additionally, the Exchange proposes to account for quotes, in addition to orders in Options 3, Section 15(b)(1)(B) in the sentence that provides, “If the order/quote remains unexecuted after the Posting Period, a New Acceptable Trade Range will be calculated and the order/quote will execute, route, or post up to the new Acceptable Trade Range Threshold Price, unless a member organization has requested that their orders be returned if posted at the outer limit of the Acceptable Trade Range (in which case, the order will be returned).” In addition to orders, quotes are also subject to a request to be returned if posted at the outer limit of the Acceptable Trade Range. The addition of quotes clarifies the current System functionality.

The Exchange also proposes to remove the following phrase in Options 3, Section 15(b)(1)(B), “. . . unless a Quote Exhaust has occurred, in which case the Quote Exhaust process in Options 3, Section 6(a)(ii)(B)(3) will ensue, triggering a new Reference Price.” As noted above in this proposal, the Exchange would no longer have the Quote Exhaust functionality. Therefore, the Exchange notes that a Quote Exhaust would not impact the ATR functionality as a result of its removal.

⁸⁸ See Securities Exchange Act Release No. 79677 (December 22, 2016), 81 FR 96114 (December 29, 2016) (SR-ISEGemini-2016-17) (Notice of Filing of Proposed Rule Change To Amend Various Rules in Connection With a System Migration to Nasdaq INET Technology).

⁸⁹ See Securities Exchange Act Release No. 98142 (August 16, 2023), 88 FR 57140 (August 22, 2023) (SR-Phlx-2023-34) (Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Phlx's All-or-None Order) (“SR-Phlx-2023-34”).

⁹⁰ *Id.*

⁹¹ Similar to Phlx, ISE, GEMX and MRX All-or-None Orders are immediate or cancel. See ISE, GEMX and MRX Options 3, Section 7(c).

⁸⁷ See proposed Options 3, Section 15(a)(3). See also BX Options 3, Section 15(a)(3).

Anti-Internalization

The Exchange proposes to enhance the anti-internalization (“AIQ”) functionality at Phlx Options 3, Section 15(c)(1), provided to Market Makers on the Exchange by giving member organizations the flexibility to choose to have this protection apply at the market participant identifier (*i.e.*, existing functionality), at the Exchange account level, or at the firm level. The Exchange believes that this enhancement will provide helpful flexibility for Market Makers that wish to prevent trading against all quotes and orders entered by their firm, or Exchange account, instead of just quotes and orders that are entered under the same market participant identifier. Similar functionality is currently available on ISE, MRX and GEMX at Options 3, Section 15(a)(3)(A).

Currently, as provided in Phlx Options 3, Section 15(c)(1), the Exchange provides mandatory AIQ functionality that prevents Market Makers from trading against their own quotes and orders. In particular, quotes and orders entered by Market Makers using the same market participant identifier will not be executed against quotes and orders entered on the opposite side of the market by the same Market Maker using the same identifier. In such a case, the System cancels the oldest of the quotes or orders back to the entering party prior to execution. This functionality does not apply in any auction.

Today, this protection prevents Market Makers from trading against their own quotes and orders at the market participant identifier level. The proposed enhancement to this functionality would allow member organizations to choose to have this protection applied at the Market Maker identifier level (existing functionality), at the Exchange account level, or at the firm level. If member organizations choose to have this protection applied at the Exchange account level, AIQ would prevent quotes and orders from different market participant identifiers associated with the same Exchange account from trading against one another. Similarly, if the member organizations choose to have this protection applied at the member organization firm level, AIQ would prohibit quotes and orders from different market participant identifiers within the member organization firm from trading against one another. The Exchange believes that the proposed AIQ enhancement will provide member organizations with more tailored functionality that allows them to manage their trading as appropriate

based on the member organizations’ business needs. While the Exchange believes that some firms may want to restrict AIQ to trading against interest from the same Market Maker identifier (*i.e.*, as implemented today), other firms may find it helpful to be able to configure AIQ to apply at the Exchange account level or at the firm level so that they are protected regardless of which Market Maker identifier the order or quote originated from. ISE, GEMX and MRX Options 3, Section 15(a)(3)(A) offer identical flexibility.

The examples below illustrate how AIQ would operate based on the market participant identifier level protection, the Exchange account level, or for member organizations that choose to apply AIQ at the firm level:

Example: Market Participant Identifier Level

ABC (market participant identifiers 123A & 555B) with AIQ configured at the market participant identifier level.

123A Quote: \$1.00 (5) × \$1.10 (20).

555B Buy Order entered for 10 contracts at \$1.10.

555B Buy Order executes 10 contracts against 123A Quote. 123A and 555B are not prevented by the System from trading against one another because member organization ABC has configured AIQ to apply at the market participant identifier level. This is the same as existing functionality.

Example: Exchange Account Level

ABC (Account 999 with market participant identifiers 123A and 555B, and Account 888 with market participant identifier 789A) with AIQ configured at the Exchange account level.

123A Quote: \$1.00 (5) × \$1.10 (20).

789A Quote: \$1.05 (10) × \$1.10 (20).

555B Buy Order entered for 30 contracts at \$1.10.

555B Buy Order executes against 789A Quote but 555B Buy Order does not execute against 123A Quote. AIQ purges the 123A Quote and the remaining contracts of the 555B Buy Order rests on the book at \$1.10. 123A and 555B are not permitted trade against one another because member organization ABC has configured AIQ to apply at the Exchange account level. This is new functionality as the member organization has opted to have AIQ operate at the Exchange account level.

Example: Firm Level

ABC (Account 999 with market participant identifiers 123A and 555B, and Account 888 with market participant identifier 789A) with AIQ configured at the firm level.

123A Quote: \$1.00 (5) × \$1.10 (20).

789A Quote: \$1.05 (10) × \$1.10 (20).

555B Buy Order entered for 30 contracts at \$1.10.

AIQ purges the 123A Quote and the 789A Quote and the 555B Buy Order rests on the book at \$1.10. This is new functionality as the member organization has opted to have AIQ operate at the member organization firm level.

Quotation Adjustments

The Exchange proposes to amend Phlx Options 3, Section 15(c)(2), which sets forth the Exchange’s “Rapid Fire” risk protection for quotes, to expand existing functionality by introducing optional Delta and Vega (as defined below) curtailment measures in addition to the current percentage-based and volume-based curtailments. The new curtailment measures will be functionally similar to the Delta and Vega thresholds currently offered by BX pursuant to Options 3, Section 15(c)(2). The proposed new Delta and Vega thresholds are optional risk protections. In connection with this change, the Exchange also proposes to restructure its rules regarding Rapid Fire and “Multi-Trigger” risk protections to more closely align with the BX’s rule structure which has identical language to the proposed Phlx rule text.⁹² With the proposed changes, Rapid Fire and Multi-Trigger will be triggered only when a Market Maker exceeds its designated thresholds similar to BX’s approach, instead of when the thresholds are met or exceeded (as is currently the case).

Today, Rapid Fire is a risk protection that removes a Market Maker’s quotes and SQF interest⁹³ in all options series

⁹² As presently set forth in Phlx Options 3, Section 15(c)(2)(C), the Exchange’s Multi-Trigger functionality removes Market Maker quotes in all options series in all underlying issues when a specified number of Rapid Fire thresholds are triggered over a chosen interval.

⁹³ Today, the exchange’s SQF protocol permits Market Makers to submit both quotes and Immediate-or-Cancel or “IOC” Orders to the Exchange. Phlx Supplementary Material .03(A) of Options 3, Section 7 provides, “Specialized Quote Feed” or “SQF” is an interface that allows Lead Market Makers, Streaming Quote Traders (“SQTs”) and Remote Streaming Quote Traders (“RSQTs”) to connect, send, and receive messages related to quotes, Immediate-or-Cancel Orders, and auction responses into and from the Exchange. Features include the following: (1) options symbol directory messages (*e.g.*, underlying and complex instruments); (2) system event messages (*e.g.*, start of trading hours messages and start of opening); (3) trading action messages (*e.g.*, halts and resumes); (4) execution messages; (5) quote messages; (6) Immediate-or-Cancel Order messages; (7) risk protection triggers and purge notifications; (8) opening imbalance messages; (9) auction notifications; and (10) auction responses. The SQF

of an underlying security from the marketplace when certain designated percentage-based or volume-based thresholds are met or exceeded. Market Makers are required to utilize either the percentage-based threshold or the volume-based threshold.⁹⁴ The Exchange proposes to amend the current Rapid Fire functionality to no longer remove IOC Orders submitted through SQF and continue to remove quotes. Today, ISE, GEMX, MRX and BX only remove quotes through SQF and do not remove IOC Orders submitted through SQF.⁹⁵ The Exchange believes that preserving an IOC Order submitted through SQF is consistent with the Act as Market Makers quote to provide liquidity on the Exchange and the risk protection is intended to provide a protection to those participants when acting as liquidity providers. Market Makers utilizing IOC Orders may also provide liquidity but to a lesser extent. The Exchange believes that limiting the risk protection to quotes, similar to other Nasdaq affiliated markets, continues to protect investors while not also purging IOC orders which may interact against other interest on the Exchange.

The Exchange now proposes to introduce two optional thresholds which, in addition to the existing percentage-based and volume-based thresholds, will make up the suite of Rapid Fire thresholds that will be offered to Market Makers upon the technology migration. First, in new subparagraph (c)(2)(A)(iii) of Phlx Options 3, Section 15, the Exchange proposes to add:

(iii) Delta Threshold. A Market Maker may provide a Delta Threshold by which the System will automatically remove a Market Maker's quotes in all series of an options class. For each class of options, the System will maintain a Delta counter, which tracks the absolute value of the difference between (1) purchased call contracts plus sold put contracts and (2) sold call contracts plus purchased put contracts. If the Delta counter exceeds the Delta Threshold established by the member organization, the System will automatically remove a Market Maker's quotes in all series of the options class.

Purge Interface only receives and notifies of purge requests from the Lead Market Maker, SQT or RSQT. Lead Market Makers, SQTs and RSQTs may only enter interest into SQF in their assigned options series. Immediate-or-Cancel Orders entered into SQF are not subject to the Order Price Protection, the Market Order Spread Protection, or Size Limitation in Options 3, Section 15(a)(1), (a)(2) and (b)(2), respectively.

⁹⁴ See Phlx Options 3, Section 15(c)(2)(G). In contrast, the Multi-Trigger threshold is optional.

⁹⁵ See ISE, GEMX and MRX Options 3, Section 15(a)(3)(B)(i). See also BX Options 3, Section 15(c)(2)(A).

The proposed rule text for Delta Threshold is identical to BX Options 3, Section 15(c)(2)(A)(iii).

Second, in new subparagraph (c)(2)(A)(iv) of Phlx Options 3, Section 15, the Exchange proposes to add:

Vega Threshold. A Market Maker may provide a Vega Threshold by which the System will automatically remove a Market Maker's quotes in all series of an options class. For each class of options, the System will maintain a Vega counter, which tracks the absolute value of purchased contracts minus sold contracts. If the Vega counter exceeds the Vega Threshold established by the Member, the System will automatically remove a Market Maker's quotes in all series of the options class.

The proposed rule text for Vega Threshold is identical to BX Options 3, Section 15(c)(2)(A)(iv).

With the proposed changes to add the Delta and Vega Thresholds described above, the Exchange also proposes to amend its Rapid Fire and Multi-Trigger rules to align the rule structure with BX Options 3, Section 15(a)(2)(C). In restructuring these rules, the existing Phlx functionality will remain unchanged except with respect to when the Rapid Fire and Multi-Trigger thresholds will be triggered, and a minor change to the specified time period. Each will be discussed in more detail below. The Exchange will separately describe the Active Quote Protection amendment proposed in Options 3, Section 15(c)(2)(B) below.

To effect this change, the Exchange proposes to adopt new rule text in Phlx Options 3, Section 15(c)(2)(A), which will provide that Market Makers are required to utilize the Percentage Threshold or Volume Threshold. The Exchange will also replace each instance of "Percentage-Based Threshold" and "Volume-Based Threshold" with "Percentage Threshold" and "Volume Threshold" throughout Options 3, Section 15(c)(2) to align with BX terminology. The Exchange further proposes to add that Market Makers may utilize the new Delta and Vega Thresholds to make clear that these thresholds are optional for Market Makers. The Exchange has determined not to make the new Delta and Vega Thresholds mandatory under this proposal, and will continue to require Market Makers to utilize either the Percentage or Volume Threshold, for Market Makers who do not elect to use the Active Quote Protection discussed below in lieu of the Rapid Fire protections.

For each of these features, the System will automatically remove a Market Maker's quotes in all series in an options class when any of the

Percentage Threshold, Volume Threshold, Delta Threshold or Vega Threshold has been exceeded. As noted above, this is a change from current functionality where as amended, Rapid Fire will be triggered only when the Market Maker exceeds any of the designated thresholds. Currently, Rapid Fire is triggered when the designated thresholds are met or exceeded.⁹⁶ In addition, a Market Maker is required to specify a period of time not to exceed 30 seconds ("Specified Time Period") during which the System will automatically remove a Market Maker's quotes in all series of an options class. This is another change from current functionality where today, the Specified Time Period established by the Market Maker for the Percentage and Volume Thresholds must not exceed 15 seconds.⁹⁷ The proposed changes on Phlx relating to when Rapid Fire will be triggered and the Specified Time Periods will align with BX Options 3, Section 15(c)(2)(A). By harmonizing Phlx's Rapid Fire rule to BX's rule in this manner, the Exchange seeks to simplify the regulatory requirements and increase the understanding of the Exchange's operations related to Rapid Fire for market participants on Phlx and on BX. The Exchange believes more consistent rules with its affiliated exchange will contribute to less complexity for market participants and more efficient regulatory compliance.

Otherwise, the new rule text in Phlx Options 3, Section 15(c)(2)(A) will not change existing Rapid Fire functionality. In particular, the Specified Time Period will commence for an options class every time an execution occurs in any series in such option class and will continue until the System removes quotes as described in the Rule or the Specified Time Period expires. The Specified Time Period operates on a rolling basis among all series in an options class in that there may be Specified Time Periods occurring simultaneously for each Threshold and such Specified Time Periods may overlap. The Specified Time Periods will be the same value for each of the Percentage Threshold, Volume Threshold, Delta Threshold, and Vega Threshold.⁹⁸

The Exchange also proposes to replace the description of the existing Percentage Threshold in Phlx Options 3, Section 15(c)(2)(A) with new rule text in Options 3, Section 15(c)(2)(A)(i) as follows:

⁹⁶ See Phlx Options 3, Section 15(c)(2)(A) and (B).

⁹⁷ See Phlx Options 3, Section 15(c)(2)(A) and (B).

⁹⁸ See *id.* for similar features in the current Percentage and Volume Thresholds.

Percentage Threshold. A Market Maker must provide a specified percentage (“Percentage Threshold”), of not less than 1%, by which the System will automatically remove a Market Maker’s quotes in all series of an options class. For each series in an options class, the System will determine (1) during a Specified Time Period and for each side in a given series, a percentage calculated by dividing the size of a Market Maker’s quote size executed in a particular series (the numerator) by the Market Maker’s quote size available at the time of execution plus the total number of the Market Maker’s quote size previously executed during the unexpired Specified Time Period (the denominator) (“Series Percentage”); and (2) the sum of the Series Percentage in the options class (“Issue Percentage”) during a Specified Time Period. The System tracks and calculates the net impact of positions in the same options class; long call percentages are offset by short call percentages, and long put percentages are offset by short put percentages in the Issue Percentage. If the Issue Percentage exceeds the Percentage Threshold the System will automatically remove a Market Maker’s quotes in all series of the options class during the Specified Time Period.

With the proposed changes, the Percentage Threshold will be applied in the same manner as today, except with respect to the differences discussed above (*i.e.*, when the Percentage Threshold will be triggered and the threshold’s Specified Time Period). The proposed rule text is identical to BX Options 3, Section 15(c)(2)(A)(i).

The Exchange also proposes to replace the description of the existing Volume Threshold in Phlx Options 3, Section 15(c)(2)(A)(ii) with new rule text in Options 3, Section 15(c)(2)(A)(ii) as follows:

Volume Threshold. A Market Maker must provide a Volume Threshold by which the System will automatically remove a Market Maker’s quotes in all series of an options class when the Market Maker executes a number of contracts which exceeds the designated number of contracts in all series in an options class.

With the proposed changes, the Volume Threshold will be applied in the same manner as today, except with respect to the differences discussed above (*i.e.*, when the Volume Threshold will be triggered and the threshold’s Specified Time Period). The proposed rule text is identical to BX Options 3, Section 15(c)(2)(A)(ii).

In connection with the foregoing changes, current Phlx Options 3, Section 15(c)(2)(C), which describes the Exchange’s Multi-Trigger risk protection, will be amended throughout to add the Delta and Vega Thresholds wherever the Rule references Percentage and Volume Thresholds. In addition, the Exchange proposes to amend the

Multi-Trigger Specified Time Period from 15 seconds to 30 seconds to align with the Specified Time Periods proposed above. The Exchange further proposes in the Multi-Trigger rule to amend when Multi-Trigger will be triggered to align with the Rapid Fire changes proposed above. Specifically, the Exchange proposes to amend the provision, “[o]nce the System determines that the number of triggers equals or exceeds a number. . .” to instead state, “[o]nce the System determines that the number of triggers exceeds a number. . .” to make clear that Multi-Trigger will no longer remove Market Maker quotes when the Multi-Trigger threshold is met (and not exceeded).

Phlx Options 3, Section 15(c)(2)(D), which explains how the System purges quotes once the Rapid Fire and Multi-Trigger thresholds are triggered, will be amended to conform with the changes proposed above. In particular, the Exchange proposes conforming changes to add the Delta and Vega Thresholds wherever these provisions reference Percentage and Volume Thresholds, and to replace “reached” with “exceeded” in each instance where the language indicates that the Rapid Fire and Multi-Trigger thresholds have been reached.⁹⁹

Phlx Options 3, Section 15(c)(2)(E) will likewise be amended to add references to the Delta and Vega Thresholds, and will state that if a Market Maker requests the System to remove quotes in all options series in an underlying issue, the System will automatically reset the Specified Time Period(s) for the Percentage, Volume, Delta, or Vega Threshold.¹⁰⁰ As is the case today, the Multi-Trigger Specified Time Period(s) will not automatically reset for the Multi-Trigger Threshold.

Phlx Options 3, Section 15(c)(2)(F), which sets forth the re-entry process once Rapid Fire and Multi-Trigger are triggered, the Exchange will likewise add references to the Delta and Vega Thresholds wherever the provision refers to the Percentage and Volume Thresholds. The Exchange also proposes a clarifying change in the first sentence to add, “[w]hen the System removes quotes as a result of *exceeding* . . .” in order to align with BX Options 3, Section 15(c)(2)(F). The Exchange further proposes a non-substantive change in the first sentence to amend “reentry” to “re-entry”

⁹⁹ The Exchange will describe the amendments to proposed Options 3, Section 15(c)(2)(D)(i) and (ii) further below.

¹⁰⁰ The Specified Time Period(s) will also be automatically reset if Rapid Fire is triggered (and the System automatically removes quotes).

Lastly, Options 3, Section 15(c)(2)(G), will be amended to specify that the Exchange will require Phlx Market Makers to utilize either the Percentage Threshold, the Volume Threshold, or the Contract Limit. For Market Makers that elect to utilize the Contract Limit, the Percentage Threshold, Volume Threshold, Delta Threshold, and Vega Threshold will not be available for use on the Market Maker’s badge. The Delta, Vega, and Multi-Trigger Thresholds are optional. The Exchange is adding “Contract Limit” to the required risk protections that must be utilized by a Phlx Market Maker.

The following are examples to illustrate how the proposed Delta and Vega Thresholds would apply:

Example: Delta Threshold

MM1 has Delta Threshold set to 10 contracts
MM1 quotes IBM Call Option 2.55 (100) x 3.00 (1000)
FIX Order to Sell 11 @MKT trades with MM quote
Trade occurs for 11 @2.55, triggers Rapid Fire for MM1 since 11 calls purchased for MM1 > MM1’s Delta Threshold of 10

Example: Vega Threshold

MM1 has Vega Threshold set to 10 contracts
MM1 quotes IBM Call Option 2.55 (100) x 3.00 (1000)
FIX Order to Sell 11 @MKT trades with MM quote
Trade occurs for 11 @2.55, triggers Rapid Fire for MM1 since 11 calls purchased for MM1 > MM1’s Vega Threshold of 10

Active Quote Protection

The Exchange proposes to adopt an active risk counter functionality called active quote protection (“Active Quote Protection”), at Phlx Options 3, Section 15(c)(2)(B), which will be available to Market Makers as an alternative to existing passive risk counter functionality described in Options 3, Section 15(c)(2)(A) (*i.e.*, “Automated Quotation Adjustments” or Rapid Fire).¹⁰¹ The proposed Active Quote Protection functionality will be identical to BX Options 3, Section 15(c)(2)(B). Today, the Exchange requires Market Makers to configure risk exposure thresholds based on either percentage of executed quotes (“Percentage Threshold”) or total number of executed contracts (“Volume Threshold”). Also, as proposed herein,

¹⁰¹ As described below, the Exchange will specifically define this passive risk counter functionality as “Rapid Fire” within this Rule.

the Exchange proposes two optional risk exposure thresholds based on the absolute value of the difference between long and short positions (“Delta Threshold”), and absolute value of the difference between contracts bought and contracts sold (“Vega Threshold”) (collectively, “Thresholds”).¹⁰² As set forth in Options 3, proposed Section 15(c)(2)(A), the System tracks each Threshold with a corresponding risk counter over a Market Maker-specified rolling time period not to exceed 30 seconds. Furthermore, Section 15(c)(2)(A) describes that when a risk counter exceeds the corresponding Threshold during the specified time period, the System would automatically remove the Market Maker’s quotes in all series of the applicable options class (each, a “Purge Event”). As a result of a Purge Event, the corresponding risk counter and Threshold would reset upon such removal. The Exchange also notes that pursuant to Section 15(c)(2)(E) today, the Thresholds and risk counters can be completely reset if the Market Maker specifically requests the System to remove quotes in all options series in an underlying issue. This risk protection is passive in that the risk counters wait to reset until the expiry of a specified time period, a Purge Event, or when the Market Maker otherwise sends a specific instruction to the Exchange to remove quotes to completely reset the counters.

The Exchange now proposes to introduce a new risk protection, which is an alternative to Rapid Fire, called Active Quote Protection that would enable Market Makers to actively manage their executed contract limit (“Contract Limit”) by sending an electronic instruction to the Exchange to decrement their executed contract limit counter (“Limit Counter”) by a specified amount at any time, rather than waiting until the expiry of a defined time period, when the risk limit is exceeded (like a Purge Event), or when the Market Maker otherwise sends a specific instruction to purge quotes to completely reset the risk counter.¹⁰³

The Contract Limit, as set by the Market Maker, would apply for the duration of the trading day. Once the Market Maker’s Limit Counter exceeds

the Contract Limit set by the Market Maker, the System would automatically remove quotes in all series of the applicable options class submitted through the Exchange’s Specialized Quote Feed protocol,¹⁰⁴ identical to how the quote removal mechanism works for a Purge Event today.¹⁰⁵ Today, Purge Events are triggered under the existing Quotation Adjustments on the first execution that exceeds the applicable Threshold. Once an execution occurs, the System checks all Thresholds to see if they have been exceeded. If exceeded, the Market Maker’s quote would be purged pursuant to Phlx Options 3, Section 15(c)(2)(C). In order to remain consistent with the firm quote obligations of a broker-dealer pursuant to Rule 602 of Regulation NMS, any marketable orders or quotes that are executable against a Market Maker’s quotes that are received¹⁰⁶ prior to the time the applicable Threshold is triggered will be automatically executed up to the size of the Market Maker’s quote, regardless of whether the execution would cause the Market Maker to exceed their pre-set Percentage Threshold, Volume Threshold, Delta Threshold, or Vega Threshold.¹⁰⁷

Under Active Quote Protection, the System would similarly handle the Market Maker’s quote in that the quote could be filled one execution over the Contract Limit before the Market Maker’s remaining quotes are cancelled by the System in order to be consistent with the firm quote obligations under Rule 602 of Regulation NMS. Specifically, the Exchange notes that any marketable orders or quotes that are executable against a Market Maker’s quotes that are received¹⁰⁸ prior to the time the Contract Limit is triggered will be automatically executed up to the size of the Market Maker’s quote, regardless of whether the execution would cause the Market Maker to exceed the Contract Limit.¹⁰⁹

¹⁰⁴ Specialized Quote Feed or “SQF” is an interface that only Market Makers may use to submit quotes to the Exchange at renumbered Supplementary Material .03(B) to Options 3, Section 7.

¹⁰⁵ See Options 3, Section 15(c)(2)(C).

¹⁰⁶ The time of receipt for an order or quote is the time such message is processed by the Exchange’s order book.

¹⁰⁷ See proposed Phlx Options 3, Section 15(c)(2)(D)(ii).

¹⁰⁸ The time of receipt for an order or quote is the time such message is processed by the Exchange’s order book.

¹⁰⁹ For both the current Quotation Adjustments and proposed Active Quote Protection, the System will execute marketable interest up to the size of the Market Maker’s quote, but cannot guarantee interest will be fully executed, as is the case with any execution in the Exchange’s order book. There is

Additionally, under Active Quote Protection, Market Makers will be able to submit a request (i) to decrement their Limit Counter by a specified number of contracts, or (ii) to fully decrement their Limit Counter to zero.¹¹⁰ Market Makers that elect to use the proposed Active Quote Protection on a badge¹¹¹ will not be able to use the existing Threshold risk protections described above on the same badge (*i.e.*, the active and passive risk counter functionality would be mutually exclusive per badge) given that it would be unnecessarily complex to implement from a technology standpoint. Market Makers may be associated with multiple badges today, so if they want to use both risk protections for their activity on the Exchange, they will be able to set either the active or passive risk counter functionality on each badge.

To effectuate the foregoing changes, the Exchange proposes to set forth the new risk protection in paragraph (B) of Phlx Options 3, Section 15(c)(2), as follows:

In lieu of Rapid Fire, a Market Maker may provide an executed contract limit (“Contract Limit”) that, if exceeded, the System will automatically remove the Market Maker’s quotes in all series of an options class submitted through SQF. The System will apply the Contract Limit for the duration of the trading day. For each class of options, the System will maintain an active limit counter that will track the current number of contracts executed through the Market Maker’s quotes (“Limit Counter”). If the Limit Counter exceeds the Contract Limit established by the Market Maker, the System will automatically remove the Market Maker’s quotes as described in Section 15(c)(2)(D). Market Makers may submit a request (i) to decrement their Limit Counter by a specified number of contracts, or (ii) to fully decrement their Limit Counter to zero, including to re-enter the System as described in Section 15(c)(2)(E). For Market Makers that elect to utilize the Contract Limit, the Percentage Threshold, Volume Threshold, Delta Threshold, and Vega Threshold will not be available for use on the Market Maker’s badge.

The Exchange also proposes to amend proposed paragraph (G) of Phlx Options 3, Section 15(c)(2) to specify that the

always the possibility that the Market Maker’s quote size (and/or Market Maker’s quote plus other interest on the order book) may not be sufficient volume to fill the incoming interest.

¹¹⁰ As discussed later in this rule change, in order to re-enter the System after their quotes are purged pursuant to the Active Quote Protection, Market Makers will need to submit the same request to fully decrement their Limit Counter to zero.

¹¹¹ Phlx Options 1, Section 1(b)(6) provides that the term “badge” means an account number, which may contain letters and/or numbers, assigned to Lead Market Makers and Market Makers. A Lead Market Maker or Market Maker account may be associated with multiple badges.

¹⁰² The proposed Thresholds are described in detail in Phlx Options 3, Section 15(c)(2)(A)(i)—(iv). If a Market Maker does not provide a parameter for each Threshold, the Exchange will apply default parameters announced to member organizations.

¹⁰³ If the Market Maker opting to use Active Quote Protection does not provide a Contract Limit at the outset, the Exchange will apply a default parameter for the Active Quote Protection Contract Limit (which would be announced to member organizations). The Exchange will initially set the default Contract Limit at 100 contracts.

active and passive risk counter functionality will be mutually exclusive per badge). As amended, proposed paragraph (G) will provide:

The Exchange will require Phlx Market Makers to utilize either the Percentage Threshold, the Volume Threshold, or the Contract Limit. For Market Makers that elect to utilize the Contract Limit, the Percentage Threshold, Volume Threshold, Delta Threshold, and Vega Threshold will not be available for use on the Market Maker's badge. The Delta, Vega, and Multi-Trigger Thresholds are optional.

As described above, once the Limit Counter exceeds the Contract Limit set by the Market Maker under the proposed Active Quote Protection, the System would automatically remove quotes in the same manner as currently specified for a Purge Event in proposed paragraph (D) of Phlx Options 3, Section 15(c)(2). Accordingly, the Exchange proposes to add Active Quote Protection's Contract Limit throughout the proposed Rule as noted herein. Specifically, proposed paragraph (D) will provide that the System will automatically remove quotes in all series of an options class in an underlying security when the Percentage Threshold, Volume Threshold, Delta Threshold, Vega Threshold, or the Contract Limit has been exceeded. The System will automatically remove quotes in all series of an option class in all underlying securities when the Multi-Trigger Threshold¹¹² has been exceeded. The System will send a Purge Notification Message to the Market Maker for all affected options when the above thresholds have been exceeded. Proposed subparagraph (D)(i) will provide that the Percentage Threshold, Volume Threshold, Delta Threshold, Vega Threshold, Contract Limit, and Multi-Trigger Threshold are considered independently of each other.

Further, as discussed above, any marketable orders or quotes that are executable against a Market Maker's quotes that are received¹¹³ prior to the time the applicable Threshold or Contract Limit is triggered will be automatically executed up to the size of the Market Maker's quote, even if such execution would cause the Market Maker to exceed any of their pre-set risk

limits with respect to any of the foregoing risk parameters. The Exchange notes that proposed subparagraph (D)(ii) only mentions that quotes will execute up to the Market Maker's size, and is silent on marketable orders. In addition, the current Rule does not specify the time of receipt of such marketable interest that is executable against the size of the Market Maker's quote. As such, the Exchange proposes to add this specificity in proposed subparagraph (D)(ii) to better describe how the System operates today for Quotation Adjustments and how the System will operate for proposed Active Quote Protection. In particular, subparagraph (D)(ii) will provide:

The System will execute any marketable orders or quotes that are executable against a Market Maker's quote and received prior to the time the Percentage Threshold, Volume Threshold, Delta Threshold, Vega Threshold, or Contract Limit is triggered up to the size of the Market Maker's quote, even if such execution results in executions in excess of the Market Maker's applicable Threshold or Contract Limit with respect to any parameter.

In addition, when the System removes quotes as a result of exceeding the Contract Limit under Active Quote Protection, the Exchange proposes to require the Market Maker to submit a request to re-enter the System. This request will be the same type of message as the request described in proposed paragraph (B) where the Market Maker must request to fully decrement their Limit Counter back to zero in order to re-enter the System. This requirement will be added in proposed paragraph (F) of Phlx Options 3, Section 15(c)(2), and will be similar to how the existing quote purge mechanism works for the Thresholds today, except the Market Maker needs to send a separate message (*i.e.*, a re-entry indicator) to re-enter the System when their quotes are purged as a result of exceeding any of the existing Thresholds.

The Exchange also proposes that the new Active Quote Protection would leverage the existing and amended multi-trigger ("Multi-Trigger") functionality proposed in Phlx Options 3, Section 15(c)(2)(C). Today, Multi-Trigger is a risk protection offered alongside the current Quotation Adjustments. A Market Maker or Market Maker Group, which is defined as multiple affiliated Phlx Market Makers,¹¹⁴ may provide the specified

time period and number of allowable Purge Events by which the Exchange will automatically remove quotes in all options series in all underlying issues submitted through designated Phlx protocols as specified by the Exchange ("Multi-Trigger Threshold"). As proposed, Multi-Trigger is triggered when during a time period established by the Market Maker not to exceed 30 seconds, the total number of Quotation Adjustment Purge Events exceeds the Multi-Trigger Threshold provided to the Exchange by the Phlx Market Maker or Phlx Market Maker Group. When Multi-Trigger is triggered, the System automatically purges all of the Market Maker's or Group's quotes in all options series in an underlying issue. As set forth in proposed Phlx Options 3, Section 15(c)(2)(F), when the System removes quotes as a result of the Multi-Trigger Threshold, the Market Maker must manually request re-entry to the System by contacting the Exchange. Exchange staff must then set a re-entry indicator in this case to enable re-entry, which will cause the System to send a Reentry Notification Message to the Phlx Market Maker or Group for all options series in all underlying issues. The Market Maker's Clearing Firm will be notified regarding the trigger and re-entry into the System after quotes are removed as a result of the Multi-Trigger Threshold, provided the Market Maker's Clearing Firm has requested to receive such notification.

Today, Multi-Trigger is meant to provide Market Makers or a Group with protection from the risk of multiple executions across multiple series of an option or across multiple options. This risk protection recognizes that risk to Market Makers is not limited to a single series in an option or even to all series in an option; Market Makers that quote in multiple series of multiple options have significant exposure, requiring them to offset or hedge their overall positions. Market Makers are required to continuously quote in assigned options, and quoting across many series in an option or multiple options creates the possibility of executions that can create large, unintended principal positions that could expose Market Makers to unnecessary risk. Multi-Trigger is therefore intended to assist Market Makers or Groups in managing their market risk by tracking the number of Purge Events relative to the Multi-Trigger Threshold set by the Market Maker or Group. The Exchange believes that tracking the number of Active Quote Protection Purge Events for a

a list of such affiliated Phlx Market Makers to the Exchange.

¹¹² Multi-Trigger Threshold is defined in current paragraph (C) of Section 15(c)(2) as the number of allowable triggers by which the Exchange will automatically remove quotes in all options series in all underlying issues submitted through designated Phlx protocols as specified by the Exchange. This threshold is part of the Exchange's Multi-Trigger risk protection.

¹¹³ The time of receipt for an order or quote is the time such message is processed by the Exchange's order book.

¹¹⁴ This would be more than one Phlx Market Maker, but does not require the aggregation of all of the member organization's Market Makers. A Group would be comprised of Phlx Market Makers affiliated with one member organization (*i.e.*, one options member firm). The member organization would be required to define a Group by providing

Market Maker or Group against its Multi-Trigger Threshold would be similarly useful for managing market risk.

To that end, the Exchange proposes to further update Multi-Trigger to add purge events under Active Quote Protection to the Multi-Trigger counter such that Active Quote Protection purge events and Purge Events under the current Quotation Adjustments will be aggregated together as counting toward the specified Multi-Trigger Threshold. Accordingly, the Exchange proposes to add references to the Active Quote Protection rule (*i.e.*, proposed paragraph (B) of Options 3, Section 15(c)(2)) throughout the Multi-Trigger rule in proposed paragraph (C), specifically:

A Market Maker or Market Maker Group (multiple affiliated Market Makers is a “Group” as defined by a Phlx member and provided by such member to the Exchange) may provide a Specified Time Period and number of allowable triggers by which the Exchange will automatically remove quotes in all options series in all underlying issues submitted through designated Phlx protocols, as specified by the Exchange (“Multi-Trigger Threshold”). During a specified time period established by the Phlx Market Maker not to exceed 30 seconds (“Multi-Trigger Specified Time Period”), the number of times the System automatically removes the Phlx Market Maker’s or Group’s quotes in all options series will be based on the number of triggers of the Percentage Threshold described in paragraph (A)(i) above, the Volume Threshold described in paragraph (A)(ii) above, the Delta Threshold described in paragraph (A)(iii) above, the Vega Threshold described in paragraph (A)(iv) above, and the Contract Limit described in paragraph (B) above. Once the System determines that the number of triggers exceeds a number established by either the Phlx Market Maker or Group, during a Multi-Trigger Specified Time Period, the System will automatically remove all quotes in all options series in all underlying issues for that Phlx Market Maker or Group, during a Multi-Trigger Specified Time Period, the System will automatically remove all quotes in all options series in all underlying issues for that Phlx Market Maker or Group. A trigger is defined as the event which causes the System to automatically remove quotes in all options series in an underlying issue. A Multi-Trigger Specified Time Period will commence after every trigger of the Percentage Threshold, Volume Threshold, Delta Threshold, Vega Threshold, or Contract Limit and will continue until the System removes quotes as described in paragraph (D) below or the Multi-Trigger Specified Time Period expires. The System counts triggers within the Multi-Trigger Specified Time Period across all triggers for the Phlx Market Maker or Group. A Multi-Trigger Specified Time Period operates on a rolling basis in that there may be multiple Multi-Trigger Specified Time Periods occurring simultaneously and such Multi-Trigger Specified Time Periods may overlap.

The following example illustrates the proposed behavior of the Active Quote Protection risk protection:

Active Quote Protection Example

Market Maker AAPL

Contract Limit: 100

Market Maker trades a transaction for 10 contracts in AAPL; Limit Counter goes from 0 to 10.

Market Maker sends a request to decrement its Limit Counter in AAPL for 10 contracts; Limit Counter goes from 10 to 0.

Market Maker trades a transaction for 20 contracts in AAPL; Limit Counter goes from 0 to 20.

Market Maker trades a transaction for 50 contracts in AAPL; Limit Counter goes from 20 to 70.

Market Maker sends a request to decrement its Limit Counter in AAPL for 20 contracts; Limit Counter goes from 70 to 50.

Market Maker trades a transaction for 60 contracts in AAPL; Limit Counter goes from 50 to 110 and all Market Maker quotes in AAPL are automatically purged after the execution because the Limit Counter exceeded the Market Maker’s Contract Limit of 100 executed contracts.

At this point, the Market Maker must send a request to fully decrement its Limit Counter in AAPL back to zero in order to begin quoting again.

Multi-Trigger Active Quote Protection Example

Assume Market Maker in AAPL and SPY has Quotation Adjustments set for AAPL and Active QP set for SPY.

Market Maker sets its Multi-Trigger Threshold so that it is triggered at 25 purge events within a 20 second time period.

On a given trading day, if an Active Quote Protection Purge Event is triggered 15 times in SPY and a Quotation Adjustment Purge Event is triggered 11 times in AAPL, all within 20 seconds, then the Exchange will automatically remove all of the Market Maker’s quotes AAPL and SPY because 26 purge events were triggered for the Market Maker.

Lastly, the Exchange proposes to title paragraph (A) as “Rapid Fire” and paragraph (C) as “Multi-Trigger” to more clearly identify which rules apply to which risk protections.

Post-Only Quoting Protection

The Exchange proposes to adopt an optional quoting protection for Market Makers at Phlx Options 3, Section 15(c)(3) that will be identical to BX Options 3, Section 15(c)(3). This optional risk protection would allow

Market Makers to prevent their quotes from removing liquidity from the Exchange’s order book upon entry. As proposed, Market Makers may elect to configure their SQF protocols to prevent their quotes from removing liquidity (“Post-Only Quote Configuration”). A Post-Only Quote Configuration would re-price or cancel a Market Maker’s quote that would otherwise lock or cross any resting order or quote¹¹⁵ on the order book upon entry. Market Makers may elect whether to re-price or cancel their quotes with this functionality. When configured for re-price, quotes would be re-priced and displayed by the System to one MPV below the current best offer (for bids) or above the current best bid (for offers). Notwithstanding the aforementioned, if a quote with a Post-Only Quote Configuration would not lock or cross an order or quote on the System but would lock or cross the NBBO, the quote will be handled pursuant to Options 3, Section 4(b)(6).¹¹⁶ When configured for cancel, Market Makers will have their quotes cancelled whenever the quote would lock or cross the NBBO or be placed on the book at a price other than its limit price. Finally, the Exchange notes that similar to BX, this risk protection will not apply during an Opening Process because the order book is established once options series are open for trading. Below are some Post-Only Quote Configuration examples.

Re-Priced Post-Only Quote Configuration—Penny Interval Program Display and Execution Example

Penny Interval Program MPV in open trading state

Market Makers A and C do not have Post-Only Quote Configuration risk protection configured

Market Maker B is configured for Post-Only Quote Configuration re-price

Market Maker A quote \$0.98 (10) × \$1.00 (10)

ABBO \$0.96 × \$1.03

Market Maker B quote \$1.00 (10) × \$1.01 (10) arrives

¹¹⁵ This would include any re-priced orders pursuant to Phlx Options 3, Section 5(d), ALOs as described in proposed Options 3, Section 7(n), and any re-priced quotes as described in Phlx Options 3, Section 4(b)(6). As described above, ALOs may re-price.

¹¹⁶ Phlx Options 3, Section 4(b)(6) provides that a quote will not be executed at a price that trades through another market or displayed at a price that would lock or cross another market. If, at the time of entry, a quote would cause a locked or crossed market violation or would cause a trade-through violation, it will either be re-priced and displayed at one minimum price variance above (for offers) or below (for bids) the national best price, or immediately cancelled, as configured by the Member.

- Bid side of quote re-prices onto order book @0.99 and sets displayed NBBO to 10 quantity
- Offer side rests at 1.01 without issue

Market Maker C quote \$0.97 (20) × \$0.98 (20) arrives

Trades 10 with Market Maker B @\$0.99 and 10 with Market Maker A @\$0.98

Market Maker B avoids taking liquidity while Market Maker C, who chose not to be configured for such, removes liquidity by interacting with re-priced interest on Phlx's order book.

Re-Priced Post-Only Quote Configuration—Non-Penny Interval Program Display and Execution Example

Non-Penny Interval Program MPV in open trading state

Market Maker A quote \$0.95 (10) × \$1.00 (10)

ABBO \$0.85 × \$1.05

Market Maker B (configured for Post-Only Quote Configuration and selection of re-price upon quote) quote arrives \$1.00 (5) × \$1.05 (5)

- Bid side quote re-prices on order book to \$0.95
 - Displays on order book @\$0.95 (bid), which now shows (15 quantity)
 - Offer side quote books and displays in Depth of Market Feed at \$1.05
- Order to sell 10 contracts arrives @\$0.95
- 7 contracts execute with Market Maker A @\$0.95
 - 3 contracts execute with Market Maker B @\$0.95

In this example, the Market Maker avoided taking liquidity by deploying the Post-Only Quote Configuration with re-price.

Options 3, Section 23

The Exchange proposes to amend Phlx Options 3, Section 23, Data Feeds and Trade Information. The Exchange proposes to rename various market data feeds in Phlx Options 3, Section 23(a) to harmonize the names of the feeds to ISE, GEMX and MRX market data feeds at Options 3 Section 23(a). Specifically, the Exchange proposes to rename "Top of Phlx Options" to "Nasdaq Phlx Top of Market" but continue to utilize "TOPO" as the acronym. The Exchange proposes to rename "Phlx Orders" as "Nasdaq Phlx Order Feed." Finally, the Exchange proposes to rename "Phlx Depth of Market" as "Nasdaq Phlx Depth of Market." The Exchange proposes similar amendments to the name of the feeds at Options 7, Section 9, B.

The Exchange proposes to no longer offer TradeInfo, which is a user interface set forth in Phlx Options 3, Section 23(b)(2) that permits a member to: (i) search all orders submitted in a particular security or all orders of a

particular type, regardless of their status (open, canceled, executed, etc.); (ii) view orders and executions; and (iii) download orders and executions for recordkeeping purposes. Due to the lack of demand for this interface by member organizations the Exchange is retiring the interface. The Exchange seeks to decommission the TradeInfo interface when the Exchange migrates over to the enhanced technology platform with the technology migration. The Exchange notes that FIX and the Clearing Trade Interface ("CTI"),¹¹⁷ which are available to all member organizations, can be used today to obtain order information that is currently available within TradeInfo, and FIX can be used to cancel orders today.

Additionally, the Exchange proposes to remove the \$95 per user, per month TradeInfo Interface Fee in the Pricing Schedule at Options 7, Section 9, B. The fee would not be necessary once TradeInfo is discontinued.

Options 3, Section 28

The Exchange proposes to introduce optional quantity and notional value checks in new Phlx Options 3, Section 28, entitled "Optional Risk Protections." The proposed optional order risk protections will be identical to the protections currently offered by ISE, GEMX and MRX Options 3, Section 28. Member organizations may use this voluntary functionality through their FIX protocol to limit the quantity and notional value they can send per order and on aggregate for the day. Specifically, member organizations may establish limits for the following parameters, as set forth in proposed subparagraphs (a)(1)–(4):

- (1) Notional dollar value per order, which will be calculated as quantity multiplied by limit price multiplied by number of underlying shares;
- (2) Daily aggregate notional dollar value;
- (3) Quantity per order; and
- (4) Daily aggregate quantity

Proposed paragraph (b) will provide that member organizations may elect one or more of the above optional risk protections by contacting Market Operations and providing a per order value (for (a)(1) and (a)(3)) or daily

aggregate value (for (a)(2) and (a)(4)) for each order protection. Member organizations may modify their settings through Market Operations. Proposed paragraph (c) will provide that the System will reject all incoming aggregated member organization orders for any of the (a)(2) and (a)(4) risk protections after the value configured by the member organization is exceeded. Proposed paragraph (d) will provide that the System will reject all incoming member organization orders for any of the (a)(1) and (a)(3) risk protections upon arrival if the value configured by the member organization is exceeded by the incoming order. The Exchange notes that the difference in handling between aggregate and individual order protections is necessary to allow for complete processing of the final order that puts a member organization's configured value over the aggregate values configured. While individual orders can be directly measured against the configured values for (a)(1) and (a)(3), the aggregate values must be calculated after complete processing of an order and thus the rejection of orders begins upon the arrival of the next order after the aggregate values in (a)(2) or (a)(4) have been exceeded.

The following example shows how the System will reject all subsequent incoming aggregated orders after the (a)(2) or (a)(4) values configured by the member organization have been exceeded.

Optional Risk Protection Example

Aggregate Quantity Limit = 800.

Member organization enters an order to Buy 500—Accepted.

Member organization enters an order to Buy 400—Accepted (member organization did not meet the configured limit of 800 with the first order of 500 at the time Member organization entered the second order).

Member organization enters an order to Buy 1—Rejected (member organization already exceeded the configured limit of 800 with the second order of 400).

The following example shows how the System will reject all incoming orders upon arrival if the (a)(1) or (a)(3) values configured by the member organization have been exceeded by the arriving order:

Quantity per Order Limit = 800.

Member organization enters an order to Buy 801—Rejected (member organization exceeded the Quantity per order limit upon arrival with the order to buy 801 contracts).

Proposed paragraph (e) will provide that if a member organization sets a notional dollar value, a Market Order

¹¹⁷ CTI is a real-time clearing trade update message that is sent to a member after an execution has occurred and contains trade details specific to that member. The information includes, among other things, the following: (i) The Clearing Member Trade Agreement or "CMTA" or "OCC" number; (ii) Exchange badge or house number; (iii) the Exchange internal firm identifier; (iv) an indicator which will distinguish electronic and non-electronically delivered orders; (v) liquidity indicators and transaction type for billing purposes; and (vi) capacity. See Options 3, Section 23(b)(1).

would not be accepted from that member organization. This is because notional dollar value is calculated by using an order's specified limit price, and Market Orders by definition are priced at the best available price upon execution. Lastly, proposed paragraph (f) will provide that the proposed risk protections are only available for orders entered through FIX. Additionally, all of the proposed settings will be firm level.

Options 5, Section 4

The Exchange proposes to amend Options 5, Section 4, Order Routing, to align Phlx's routing to ISE Options 4, Section 5.

The Exchange proposes to amend Phlx Options 5, Section 4(a) to include Stop-Limit Orders in addition to Stop Orders in the list of order types that are not included in the PBBO because they have not been triggered. Today, Phlx's Stop Order description refers to both a market and limit order. The Exchange's proposal adopts the Stop Order at ISE Options 3, Section 7(d) and Stop Limit Order at ISE Options 3, Section 7(e). The Exchange proposes to reflect both order types. As is the case today, the Exchange proposes to note, similar to ISE Options 4, Section 5(a), that when checking the Order Book, the System will seek to execute at the price at which it would send the order to an away market. The Exchange believes that this sentence will bring greater clarity to the Exchange's rule. Similarly, the Exchange proposes to add text to clarify its current System behavior for TIFs. Today, routing options may be combined with all available order types and times-in-force, with the exception of order types and times-in-force whose terms are inconsistent with the terms of a particular routing option. The Exchange also believes this sentence will clarify the current operation of the routing System. Finally, as is the case today, the Exchange proposes to note the time the routing System is available, the ability to list an order as non-routable and cross-reference the locked and crossed rules. The Exchange would state, "The order routing process shall be available to members from 9:30 a.m. Eastern Time until market close and shall route orders as described below. Member organizations can designate orders as either available for routing or not available for routing. All routing of orders shall comply with Options 5, Options Order Protection and Locked and Crossed Market Rules." This proposed rule text provides greater transparency to the Exchange's current System operation and harmonizes Phlx's rule text to ISE Options 4, Section 5(a).

The Exchange proposes some modifications to its FIND Order in Phlx Options 5, Section 4(iii)(B) to conform to ISE Options 5, Section 4(iii)(B). By way of background, a FIND Order is an order that is: (i) routable at the conclusion of an Opening Process; and (ii) routable upon receipt during regular trading, after an option series is open. Phlx proposes to add the following language to the end of Options 5, Section 4(iii)(B) to reflect its current routing functionality, "FIND Orders that are not marketable with the ABBO upon receipt will be treated as DNR for the remainder of the trading day *and post to the order book, even in the event that there is a new Opening Process after a trading halt.*" Phlx also proposes to add rule text to the end of Phlx Options 5, Section 4(a)(iii)(B) which states, ". . . and post to the Order book, even in the event that there is a new Opening Process after a trading halt" to make clear that the FIND Order would post to the Order Book and not route again, even if there were a new Opening Process.¹¹⁸

The Exchange proposes to amend Phlx Options 5, Section 4(iii)(B)(1). The Exchange proposes to remove the following sentences, "With respect to an Opening Process, only a Public Customer and Professional FIND Order on the Order Book, whether it is received prior to the opening or it is a GTC FIND Order from a prior day, may be routed at the conclusion of an Opening Process. Non-Public Customer and non-Professional FIND Orders are not eligible for routing at the conclusion of an Opening Process." Phlx proposes to amend its routing functionality to permit all market participants to route, not just Public Customer and Professional FIND Orders. To this end, Phlx proposes to remove this limitation. The Exchange proposes to amend the next sentence which state, "At the end of an Opening Process, any FIND Order that is priced through the Opening Price, pursuant to Phlx Options 3, Section 8(a)(iii), will be cancelled, and any FIND Order that is at or inferior to the Opening Price will be executed pursuant to Options 3, Section 8(k)." The Exchange proposes to instead

provide, "At the end of an Opening Process, any FIND Order that is priced through the Opening Price, pursuant to Phlx Options 3, Section 8(a)(iii), will be cancelled, and any FIND Order that is at or inferior to the Opening Price *will execute or book* pursuant to Options 3, Section 8(k)." The Exchange noted in proposed Phlx Options 5, Section 4(iii)(B) that a FIND Order may post to the order book in certain cases. This rule text adds clarity to the rules by naming all possible scenarios. Finally, the Exchange proposes to remove the last sentence of this paragraph which states, "Such FIND Order will not be eligible for routing until the next time the option series is subject to a new Opening Process." The Exchange is removing this sentence because of the addition to the end of Options 5, Section 4(a)(iii)(B). The Opening Process at Phlx Options 3, Section 8(k), describes the manner in which orders route at the end of that process. This sentence is not necessary within this routing rule. FIND Orders that are not marketable with the ABBO upon receipt will be treated as DNR for the remainder of the trading day, and will not be subject to routing even in the event that there is a new Opening Process after a trading halt.¹¹⁹

Phlx Options 5, Section 4(iii)(B)(2) currently states,

With respect to an Opening Process, if during a route timer at the conclusion of an Opening Process pursuant to Options 3, Section 8(k) markets move such that the FIND Order is executable against Exchange interest, the FIND Order will immediately execute. If during a route timer, ABBO markets move such that the FIND Order is no longer marketable against the ABBO nor marketable against the PBBO, the FIND Order will post at its limit price. If the FIND Order is locked or crossed by away quotes, it will route at the completion of the route timer. If the ABBO worsens but remains better than the PBBO, the FIND Order will reprice and be reexposed at the new price(s) without interrupting the route timer.

In order to more efficiently display the various potential routing scenarios, without repeating certain rule text several times throughout the rule, the Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(B)(2), similar

¹¹⁸ FIND Orders that are not marketable with the ABBO upon receipt are handled differently than FIND Orders that are marketable with the ABBO upon receipt. FIND Orders that are marketable with the ABBO upon receipt would be eligible for routing the next time the option series is subject to a new Opening Process, which may include a re-opening after a trading halt. FIND Orders that are not marketable with the ABBO upon receipt will not be subject to routing even in the event that there is a new Opening Process after a trading halt. The handling of FIND Orders on Phlx is identical to ISE Options 5, Section 4(a)(iii)(B).

¹¹⁹ Orders that route during an Opening Process route at the end of the Opening Process, when the Exchange simultaneously opens an options series and routes. Thereafter, FIND Orders that were submitted after the Opening Process would attempt once to route until the FIND Order rests on the Order Book. Once it rests on the Order Book, the FIND Order would not route until the next Opening Process. Finally, an Opening Process may occur intra-day if there was a trading halt. After a trading halt BX would reopen with an Opening Process and the FIND Order would be eligible to route once again.

to ISE Options 5, Section 4(a)(iii)(B)(2), to describe the potential scenarios that may occur for a FIND Order. The proposed paragraph provides,

Generally, a FIND Order will be included in the displayed PBBO at its limit price, unless the FIND Order locks or crosses the ABBO, in which case it will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO. If there exists a locked ABBO when the FIND Order is entered onto the Order Book, the FIND Order will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO. If during a Route Timer, ABBO markets move such that the FIND Order is no longer marketable against the ABBO nor marketable against the BBO, the FIND Order will post at its limit price. If the FIND Order is locked or crossed by away quotes, it will route at the completion of the Route Timer. If the ABBO worsens but remains better than the BBO, the FIND Order will reprice and be re-exposed at the new price(s) without interrupting the Route Timer. If, during the Route Timer, any new interest arrives opposite the FIND Order that is equal to or better than the ABBO price, the FIND Order will trade against such new interest at the ABBO price, unless the ABBO is improved to a price which crosses the FIND Order's already displayed price, in which case the incoming order will execute at the previous ABBO price as the away market crossed a displayed price.

This paragraph utilizes the term "generally" because it always applies to FIND Orders. The Exchange proposes to state that a FIND Order will be included in the displayed BBO at its limit price, unless the FIND Order locks or crosses the ABBO, in which case it will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO.¹²⁰ This statement will provide context to the FIND Order and would apply consistently to FIND Orders. The Exchange further proposes to provide that if there exists a locked ABBO when the FIND Order is entered onto the Order Book, the FIND Order will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO.¹²¹ The Exchange further proposes to describe the possible scenarios that may occurring during a Route Timer, when ABBO markets move such that the FIND Order is no longer marketable against the ABBO nor marketable against the BBO, the FIND Order will always post at its limit price. If the FIND Order is locked or crossed by away quotes, it will route each time at the completion of the Route Timer. In the situation where an ABBO worsens, but remains better than the BBO, the FIND Order will reprice and be re-

exposed at the new price(s) without interrupting the Route Timer, each time. If, during the Route Timer, any new interest arrives opposite the FIND Order that is equal to or better than the ABBO price, the FIND Order will trade always against such new interest at the ABBO price, unless the ABBO is improved to a price which crosses the FIND Order's already displayed price, in which case the incoming order will execute at the previous ABBO price as the away market crossed a displayed price.¹²² The Exchange believes that describing these scenarios in this introductory paragraph will provide a basis to understand certain FIND Order behaviors in certain circumstances and eliminate the need to have these circumstances repeated throughout the rule. The Exchange proposes to remove the first sentence of Phlx Options 5, Section 4(a)(iii)(B)(2) because it is covered within Phlx Options 3, Section 8(k), which describes the Opening Process. The Exchange believes that this paragraph, as amended, will provide greater clarity as to all the possible scenarios and will harmonize Phlx's rule to ISE's rule.

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(B)(3) to add "A FIND Order received after an Opening Process that is not marketable against the PBBO or the ABBO will be entered into the Order Book at its limit price. The FIND Order will be treated as DNR for the remainder of the trading day, *even in the event that there is a new Opening Price after a trading halt*" to the end of the paragraph. This text is similar to ISE Options 5, Section 4(a)(iii)(B)(3). Phlx treats FIND Orders received after an Opening Process that are not marketable against the BBO or the ABBO in the same manner as ISE. Phlx is adding this rule text to make clear that the FIND Order will not route, even if there is a new Opening Process to reflect current System functionality. The Exchange will not allow a non-marketable order to route. The same sentence is being added to Phlx Options 5, Section 4(a)(iii)(B)(4) for clarity.

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(B)(5) to remove sentences that were relocated to Phlx Options 5, Section 4(a)(iii)(B)(2) as noted above.

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(B)(6) to amend the penultimate sentence to note that an Opening Process may occur after a trading halt. An Opening Process would occur intra-day if there was a trading halt. After a trading halt, Phlx would reopen with an Opening Process.

This is the case today and this rule text accounts for this potential scenario. The Exchange is removing the final sentence which states, "The remaining size of a non-Public Customer and non-Professional FIND Order will be cancelled upon an intra-day trading halt." As noted above, Phlx proposes to amend its routing functionality to permit all market participants to route, not just Public Customer and Professional FIND Orders. The Exchange is removing this sentence which is unnecessary as orders of all market participants will route. The same amendments were also made to Phlx Options 5, Section 4(a)(iii)(B)(8).

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(B)(7) to remove the final sentence as that concept was relocated to Phlx Options 5, Section 4(a)(iii)(B)(2) in the section that generally describes routing.

The Exchange proposes some modifications to its SRCH Order in Phlx Options 5, Section 4(iii)(C) to conform to ISE Options 5, Section 4(iii)(C). By way of background, a SRCH Order is routable at any time the option series is open for trading. Similar to the removal of restrictions related to Public Customer and Professional order for a FIND Order, the Exchange proposes to remove these limitations as to SRCH Order. The Exchange is adding a Good-Till-Date Order or GTD at proposed Supplementary Material .02(c) to Phlx Options 3, Section 7. Today, the Exchange does not offer a GTD Order. The GTD Order would be identical to ISE, GEMX and MRX's Good-Till-Date TIF at Supplementary Material .02(c) to Options 3, Section 7. The Exchange proposes to add GTD to into Phlx Options 5, Section 4(iii)(C), similar to ISE Options 5, Section 4(iii)(C), to reflect how a GTD TIF would be handled by the System for a SRCH Order.¹²³

The Exchange proposes to amend Phlx Options 5, Section 4(iii)(C)(1) to add a citation to the Opening Price at Options 3, Section 8(a)(iii). The Exchange also proposes to amend the rule text similar to the FIND Order to indicate that the SRCH Order would execute or book to account for all the scenarios that are possible today. The proposed rule text reflects current System functionality.

Similar to the FIND Order proposal, the Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(C)(2) to provide general guidelines for the behavior of SRCH Orders which apply consistently. This proposed paragraph

¹²⁰ This sentence is currently located in Phlx Options 5, Section 4(iii)(B)(5).

¹²¹ This sentence is currently located in Phlx Options 5, Section 4(iii)(B)(5).

¹²² This sentence is currently located in Phlx Options 5, Section 4(iii)(B)(5).

¹²³ A GTD SRCH Order may be routed as part of the Opening Process.

will allow the Exchange to more efficiently display the various potential scenarios without repeating certain rule text several times. The Exchange believes that describing these scenarios in this introductory paragraph will provide a basis to understand certain SRCH Order behaviors in certain circumstances and eliminate the need to have these circumstances repeated throughout the rule. Proposed Phlx Options 5, Section 4(a)(iii)(C)(2) provides,

Generally, a SRCH Order will be included in the displayed BBO at its limit price, unless the SRCH Order locks or crosses the ABBO, in which case it will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO. If there exists a locked ABBO when the SRCH Order is entered onto the Order Book, the SRCH Order will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO. Once on the Order Book, the SRCH Order is eligible for routing if it is locked or crossed by an away market. If during a Route Timer, ABBO markets move such that the SRCH Order is no longer marketable against the ABBO nor marketable against the PBBO, the SRCH Order will book at its limit price. If, during the Route Timer, any new interest arrives opposite the SRCH Order that is equal to or better than the ABBO price, the SRCH Order will trade against such new interest at the ABBO price, unless the ABBO is improved to a price which crosses the SRCH Order's already displayed price, in which case the incoming order will execute at the previous ABBO price as the away market crossed a displayed price. If the ABBO worsens but remains better than the BBO, the SRCH Order will reprice and be re-exposed at the new price(s) without interrupting the Route Timer. If an ABBO locks or crosses the SRCH Order during a new Route Timer, which would subsequently initiate at the conclusion of any Route Timer if interest remains, the SRCH Order may route to the away market at the ABBO at the conclusion of such Route Timer. If the SRCH Order is locked or crossed by away quotes, it will route at the completion of the Route Timer. The System will route and execute contracts contemporaneously at the end of the Route Timer.

Generally, a SRCH Order will be included in the displayed PBBO at its limit price, unless the SRCH Order locks or crosses the ABBO, in which case it will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO, similar to other routing order types. Also, if there is a locked ABBO when the SRCH Order is entered onto the Order Book, the SRCH Order will be entered into the Order Book at the ABBO price and displayed one MPV inferior to the ABBO to avoid locking the away market. The Exchange proposes to generally state, "Once on the Order Book, the SRCH Order is eligible for routing if it is locked or

crossed by an away market." This provision is always true of SRCH Orders.

Next, the Exchange provides scenarios that generally may occur during a Route Timer. The first scenario is if during a Route Timer, ABBO markets move such that the SRCH Order is no longer marketable against the ABBO nor marketable against the PBBO. In this case, the SRCH Order will book at its limit price. The next scenario is whether during the Route Timer, any new interest arrives opposite the SRCH Order that is equal to or better than the ABBO price, the SRCH Order will trade against such new interest at the ABBO price, unless the ABBO is improved to a price which crosses the SRCH Order's already displayed price, in which case the incoming order will execute at the previous ABBO price as the away market crossed a displayed price. If new interest arrives that is equal to or better than the ABBO price, the SRCH Order will trade at the ABBO price. If new interest arrives that is marketable against the SRCH Order it will trade at the ABBO price unless the ABBO is improved to a price which crosses the SRCH Order's already displayed price, in which case the incoming order will execute at the previous ABBO price as the away market crossed a displayed price. This last sentence makes clear that the SRCH Order would execute at the previous ABBO price as the away market crossed a displayed price. Better priced incoming interest will execute against the SRCH Order, unless the ABBO crosses the SRCH Order, in which case any new interest will execute at the SRCH Order price. In this scenario, Phlx's price was already displayed when an away market subsequently crossed Phlx's displayed price. If the ABBO worsens but remains better than the BBO, the SRCH Order will reprice and be re-exposed at the new price(s) without interrupting the Route Timer. Also, if an ABBO locks or crosses the SRCH Order during a new Route Timer, which would subsequently initiate at the conclusion of any Route Timer if interest remains, the SRCH Order may route to the away market at the ABBO at the conclusion of such Route Timer, each time. Finally, if the SRCH Order is locked or crossed by away quotes, it will route at the completion of the Route Timer. The Exchange notes that the System will route and execute contracts contemporaneously at the end of the Route Timer. The proposed rule text is identical to ISE Options 5, Section 4(a)(iii)(C)(2).

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(C)(3),

which is being renumbered, to add "at its limit price" to specify at which price the SRCH Order would be entered on the Order Book if not marketable.

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(C)(4), which is being renumbered, to make a technical amendment to change "at" to "on". The Exchange also proposes to remove "price equal to the" because it is unnecessary. Finally, the Exchange proposes to remove the last sentence, "Once on the Order Book, the SRCH Order is eligible for routing if it is locked or crossed by an away market." This sentence was relocated to Phlx Options 5, Section 4(a)(iii)(C)(2).

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(C)(5), which is being renumbered, to make a technical amendment to change "at" to "on". The Exchange also proposes to add "the remainder of the" to make clear that this sentence is about size remaining on the order after exhausting the PBBO. Finally, the Exchange proposes to remove the last two sentences that were relocated to Phlx Options 5, Section 4(a)(iii)(C)(2).

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(C)(6), which is being renumbered, to add "to an away market" to more clearly state where the order is being routed to. The Exchange proposes to remove "locked or crossed by away quotes, it will route at the completion of the Route Timer. If the ABBO worsens but remains better than the PBBO, the SRCH Order will reprice and be re-exposed at the new price(s) without interrupting the Route Timer. If the SRCH Order" because this scenario was relocated to Phlx Options 5, Section 4(a)(iii)(C)(2). The Exchange is updating citations and capitalizing book and adding Order before it. The Exchange proposes to remove the last sentence that was relocated to Phlx Options 5, Section 4(a)(iii)(C)(2).

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(C)(7), which is being renumbered, to remove the second, fourth, fifth and final sentence that were relocated to Phlx Options 5, Section 4(a)(iii)(C)(2).

The Exchange proposes to amend Phlx Options 5, Section 4(a)(iii)(C)(8), which is being renumbered, to update citations and pluralize "price". The Exchange proposes to remove the last sentence that was relocated to Phlx Options 5, Section 4(a)(iii)(C)(2). The Exchange also proposes to remove current Phlx Options 5, Section 4(a)(iii)(C)(8) and (9) which were relocated to Phlx Options 5, Section 4(a)(iii)(C)(2). Finally, the Exchange proposes to renumber current relocated

to Phlx Options 5, Section 4(a)(iii)(C)(10) as “9”.

Options 6, Section 1

The Exchange proposes to amend Options 6, Section 1, Authorization to Give Up, to align Phlx’s process to that of ISE, GEMX and MRX Options 6, Section 1. The Exchange proposes to remove “with respect to floor trading only” from Options 6, Section 1(a). With this technology migration, for each transaction in which a member organization participates, the member organization may indicate, at the time of the trade, or through post trade allocation, any Options Clearing Corporation number of a Clearing Member through which a transaction will be cleared (“Give Up”), provided the Clearing Member has not elected to Opt In, as defined and described in paragraph (b) below, and restrict one or more of its OCC number(s) (“Restricted OCC Number”). With this change, the provision for “at time of trade” will apply to both floor and electronic trading, therefore, electronic only members may indicate a Give-Up at the time of trade. Today, electronic trading members indicate a Give-Up in the post allocation process. The Exchange’s automation of the Give-Up process will permit it to prevent an unauthorized Give-Up of a Restricted OCC Number that is submitted to the System from being processed. The Exchange proposes to amend Options 6, Section 1(c) to add the following sentence, “If an unauthorized Give Up with a Restricted OCC Number is submitted to the System, the System will process that transaction using the Member’s default OCC clearing number.” Because the Exchange is adding this automated feature, it proposes to remove the rule text in Options 6, Section 1(c)(ii) that provides, “For all other orders, the System will not allow an unauthorized Give Up with a Restricted OCC Number to be submitted at the firm mnemonic level at the point of order entry.” The Exchange will be able to prevent unauthorized Give Ups of Restricted OCC Numbers systematically, similar to ISE, GEMX and MRX Options 6, Section 1, and would not need this restriction in Options 6, Section 1(c)(ii).

Options 8, Section 32

The Exchange proposes some minor numbering amendments to Options 8, Section 32, Types of Floor-Based (Non-System) Orders. The Exchange proposes to renumber Options 8, Section 32(b), Contingency Order, as “5.” The Exchange proposes to renumber Options 8, Section 32(b)(1), Stop-Limit Order as “i.” The Exchange proposes to

renumber Options 8, Section 32(b)(2), Stop (stop-loss) Order as “ii.” The Exchange proposes to renumber Options 8, Section 32(b)(3), All or None Order as “iii.” The Exchange proposes to renumber Options 8, Section 32(b)(4), Cancel-Replacement Order as “iv.” The Exchange proposes to renumber Options 8, Section 32(b)(5), Immediate or Cancel Order as “v.” The Exchange proposes to renumber Options 8, Section 32(c), Time in Force or “TIF” as “b”. Finally, the Exchange proposes to re-letter current Options 8, Section 32(d), Not Held Orders, as “c” and reserve “d”.

The Exchange proposes to amend All-Or-None Orders at current Phlx Options 8, Section 32(b)(3) to remove the restriction that only a Public Customer can only submit it. Consistent with the amendment to electronic All-or-None Orders, Phlx proposes to remove this restriction so that any market participant may enter an All-or-None Order. The Exchange also proposes to add an OPG TIF as an available TIF for the trading floor. Today, the TIF is available for floor participants. Any floor participant may enter the TIF of OPG on the trading floor. The Exchange’s proposal to add the OPG TIF will provide greater clarity to the Exchange’s rules.

Implementation

The Exchange will implement this rule change on or before December 20, 2025. Phlx would commence its implementation with a limited symbol migration and continue to migrate symbols over several weeks. The Exchange will issue an Options Trader Alert to Members to provide notification of the symbols that will migrate and the relevant dates.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,¹²⁴ in general, and furthers the objectives of Section 6(b)(5) of the Act,¹²⁵ in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest. As it relates to the elimination of fees for TradeInfo, the Exchange believes that its proposal is consistent with Section 6(b) of the Act,¹²⁶ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5)

of the Act,¹²⁷ in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

Generally, the Exchange’s proposal is intended to add or align certain System functionality with functionality currently offered on ISE, GEMX, MRX, BX or NOM in order to provide a more consistent technology offering across affiliated Nasdaq options exchanges. A more harmonized technology offering, in turn, will simplify technology implementation, changes, and maintenance by market participants of the Exchange that are also participants on Nasdaq affiliated options exchanges. The Exchange’s proposal also seeks to provide greater harmonization between the rules of the Exchange and its affiliates, which would result in greater uniformity, and less burdensome and more efficient regulatory compliance by market participants. As such, the proposal would foster cooperation and coordination with persons engaged in facilitating transactions in securities and would remove impediments to and perfect the mechanism of a free and open market and a national market system. The Exchange believes that more consistent rules will increase the understanding of the Exchange’s operations for market participants that are also participants on the Nasdaq affiliated options exchanges, thereby contributing to the protection of investors and the public interest. The proposal also seeks to memorialize existing functionality and add more granularity in the Exchange’s rules to describe how existing functionality operates today. The Exchange believes that such changes would remove impediments to and perfect the mechanism of a free and open market and a national market system because the proposed changes would promote transparency in Exchange rules and reducing potential confusion, thereby ensuring that members, regulators, and the public can more easily navigate the Exchange’s Rulebook and better understand how options trading is conducted on the Exchange.

Options 2, Section 6

The Exchange believes that permitting Market Makers to enter all eligible order types, except Reserve Orders, in both appointed and non-appointed options classes is consistent with the Act. Today, ISE, GEMX and MRX Options 2,

¹²⁴ 15 U.S.C. 78f(b).

¹²⁵ 15 U.S.C. 78f(b)(5).

¹²⁶ 15 U.S.C. 78f(b).

¹²⁷ 15 U.S.C. 78f(b)(4) and (5).

Section 6 only restricts Market Makers from entering Reserve Orders. The Exchange proposes to permit Market Makers to enter Market Orders and Stop Orders similar to all other market participants on Phlx. Today, all market participants, including Market Makers, may transact Market Orders and Stop Orders on other options markets.¹²⁸ The Exchange does not believe there is any reason to restrict Market Makers from entering Market Orders or Stop Orders. In 2019, Phlx noted in its rule change¹²⁹ that it believes that continuing the practice of prohibiting Market Makers from entering Market Orders is consistent with the Act because Market Orders are designed to remove liquidity from the Order Book. Further, Stop Orders are non-displayed order types until they are triggered which does not benefit the role of a Market Makers in displaying liquidity on the Order Book. At this time, the Exchange believes that because there are restrictions on the number of contracts that a Market Maker may enter in a quarter,¹³⁰ Market Makers should be permitted to utilize Market Orders and Stop Orders to remove liquidity from its order book without impacting their ability to provide liquidity.

Today, Phlx restricts all market participants from entering All-or-None Orders except Public Customers. Similar to other options markets, the Exchange proposes to permit all market participants to enter All-or-None Orders. The Exchange is proposing to amend the All-or-None Order type in Options 3, Section 7 to reflect this proposed change. In 2019, the Exchange amended its All-or-None Order to no longer offer the order type to Professionals.¹³¹ At the time, the Exchange noted that permitting Public

Customers to enter All-or-None Orders with specific size limitations that rest on the Order Book would continue to allow Public Customers the opportunity to obtain fills for their orders when the market moves even if the All-Or-None Order was not immediately executable upon entry. The Exchange notes since the 2019 rule change, the All-or-None Order was amended so that it would no longer rest on the order book, rather the order type would be executed in its entirety, or it will cancel if it cannot execute. The Exchange notes that with the change to an immediate-or-cancel order there is no longer a need to permit the All-or-None Orders to be limited to Public Customers. At this time, the Exchange also proposes to reflect in Phlx Options 2, Section 6 the ability of Market Makers to also trade All-or-None Orders. The Exchange notes that Directed Orders are orders directed to a Market Maker by an Order Flow Provider. An order becomes a Directed Order when it interacts with a Market Maker quote that is at the NBBO at the time of receipt of the Directed Order. The Exchange believes it is misleading to include a Directed Order in this list because a Directed Order may be executed by a Market Maker.

Today, Market Makers execute certain orders directed to them pursuant to Phlx Options 2, Section 10, provided they were quoting at the NBBO at the time the order arrived. Upon execution, these orders are treated as Directed Orders pursuant to Phlx rules. A two-sided order with a Public Customer on both sides may by its own terms only be entered by a Public Customer. That restriction remains in the rules. The Exchange notes that there is no reason to restrict Market Makers in entering order types, except for the restriction related to Reserve Orders, in options classes in which they are appointed and non-appointed. Unlike other order types, the Reserve Order is a limit order that contains both a displayed portion and a non-displayed portion. Both the displayed and non-displayed portions of a Reserve Order are available for potential execution against incoming marketable orders. When the displayed portion of a Reserve Order is decremented, either in full or in part, it shall be refreshed from the non-displayed portion of the resting Reserve Order. The Exchange believes that because a Reserve Order contains a non-displayed portion, Market Makers should not be permitted to enter this order type. Market Makers are required to make markets that, absent changed market conditions, will be honored for the number of contracts entered into the

Exchange's System in all series of options classes to which the market maker is appointed. The Exchange believes that markets should be transparent.

Market Makers continue to be obligated to add liquidity on the Exchange. Options 2, Section 6(b) restricts the number of contracts that a Market Maker may enter in an options class to which the Market Maker is not appointed. Options 2, Section 5 requires Market Makers to abide by certain quoting requirements, in the options classes in which they are appointed, in order to maintain the status of a Market Maker. The Exchange believes that permitting a Market Maker to enter additional eligible order types, except Reserve Orders, in their appointed options class will permit Market Makers additional latitude to conduct business on the Exchange and effectively compete with other market makers on other options exchanges. Quotes and orders entered by a Market Maker may not interact against quotes and orders entered on the opposite side of the market by the same Market Maker.

Options 3, Section 4

Phlx's proposal to amend Options 3, Section 4(b)(6) to permit member organizations to configure their ports to instruct the Exchange to immediately cancel a quote that would otherwise cause a locked or crossed market violation in lieu of re-pricing the quote is consistent with the Act. This proposal would continue to protect investors and the public interest because the functionality would prevent a quote from locking and crossing an away market while also providing member organization with more flexibility in handling their quotes.

Options 3, Section 6

The Exchange's proposal to discontinue Quote Exhaust is consistent with the Act because, today, Phlx offers various risk protections in its System limit executions at far away prices. Phlx offers an Acceptable Trade Range protection at Options 3, Section 15(b)(1), an Anti-Internalization protection at Options 3, Section 15(c)(1), and an Automated Quotation Adjustments protection at Options 3, Section 15(b)(2). Phlx is also proposing additional risk protections with this proposal. Other Nasdaq affiliated exchanges do not offer Quote Exhaust. Once discontinued, the Exchange's quoting functionalities will abide by Phlx's Options 3, Section 4 rules governing the entry and display of orders and the allocation methodology in Phlx Options 3, Section 10.

¹²⁸ See Nasdaq ISE, LLC ("ISE"), Nasdaq GEMX, LLC ("GEMX") and Nasdaq MRX, LLC ("MRX") Options 2, Section 6 and NYSE Arca, Inc. Rule 6.37B-O and NYSE American LLC Rule 925.2NY.

¹²⁹ See Securities Exchange Act Release No. 87691 (December 9, 2019), 85 FR 68197 (December 13, 2019) (SR-Phlx-2019-52) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Order Types and Remove and Relocate Certain Rule Text Currently Located Within Rule 1080).

¹³⁰ Pursuant to Phlx Options 2, Section 6, the total number of contracts executed during a quarter by a Market Maker and Lead Market Maker in options series to which it is not appointed may not exceed twenty-five percent (25%) of the total number of contracts executed by the Market Maker and Lead Market Maker in options series.

¹³¹ See Securities Exchange Act Release No. 85262 (March 7, 2019), 84 FR 9192 (March 13, 2019) (SR-Phlx-2019-03) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Option Floor Procedure Advice A-9 and Phlx Rules 1000 and 1066 and To Adopt a New Phlx Rule 1078). Prior to this rule change, All-or-None Orders were available to Public Customers and Professionals.

The Exchange's proposal to adopt a new rule in Phlx Options 3, Section 6 that is identical to ISE, GEMX and MRX Options 3, Section 6 is consistent with the Act and will protect investors and the general public by stating in its rules the manner in which Phlx would comply with Rule 602 of Regulation NMS. Additionally, providing Phlx with the ability to act in the case of unusual market conditions to maintain fair and orderly markets is consistent with the Act and would allow Phlx to manage trading in the same manner as ISE, GEMX and MRX in the event of unusual market conditions.

Options 3, Section 7

The Exchange believes that the proposed changes to the rules governing Exchange order types are consistent with the Act. As discussed above, the proposed changes consist of several functional enhancements to align the Exchange's order types to existing ISE, GEMX and MRX order types, and rule adjustments that add more specificity and clarity to existing order types.

Market Orders

The Exchange believes that the proposed changes to the definition of Market Orders in proposed Options 3, Section 7(a) are consistent with the Act. The proposed intra-day cancel timer feature mirrors existing ISE, GEMX and MRX functionality at Options 3, Section 7(a)(5), and would provide member organizations with additional flexibility and control to bring the Market Order back to the member organization so they can get an execution on another venue by canceling unexecuted Market Orders after a certain period of time. The Exchange believes it is appropriate to offer this feature intra-day because the Exchange already has a separate opening delay timer that provides protection to the market during the Opening Process as discussed above.

In addition to the amendments to the definition of Market Orders, the Exchange proposes to permit Lead Market Makers, Market Makers, and Off-Floor Broker Dealers to enter Market Orders similar to all other market participants on Phlx. The Exchange's proposal to no longer restrict Lead Market Makers, Market Makers, and Off-Floor Broker Dealers from transacting Market Orders on Phlx is consistent with the Act because it would permit all market participants on the Exchange to enter Market Orders. Today, ISE, GEMX and MRX do not prohibit Lead Market Makers, Market Makers, and Off-Floor Broker Dealers from entering Market Orders and those markets have not observed any adverse consequences.

Also, current Phlx Options 2, Section 6 restricts the number of contracts that a Market Maker (or Lead Market Maker) may enter in a quarter,¹³² thereby preventing Market Makers from entering an unlimited quantity of orders. The Exchange does not believe there is any reason to restrict Lead Market Makers, Market Makers, or Off-Floor Broker Dealers from entering Market Orders.

Limit Orders

The Exchange's proposal to relocate "Limit Orders" from current Options 3, Section 7(b)(2) to proposed Options 3, Section 7(b) without change. The Exchange also proposes to break out Limit Order further to define a Marketable Limit Order at proposed Options 3, Section 7(b)(1) as a Limit Order to buy (sell) at or above (below) the best offer (bid) on the Exchange. Finally, the Exchange proposes to define a Fill-or-Kill Order at proposed Options 3, Section 7(b)(2) as a Limit Order that is to be executed in its entirety as soon as it is received and, if not so executed, treated as cancelled. This proposed new rule text aligns this Phlx order type to ISE, GEMX and MRX Options 3, Section 7(b)(2) and will provide Phlx member organizations the same ability to send this type of IOC order as ISE, GEMX and MRX Members.

Intermarket Sweep Orders

The Exchange's proposal to relocate an Intermarket Sweep Order from current Options 3, Section 7(b)(3) to proposed Options 3, Section 7(b)(3) with some additions is consistent with the Act. The Exchange proposes to reorder some sentences to closely resemble ISE, GEMX and MRX Options 3, Section 7(b)(3). The Exchange proposes to add an additional sentence to make clear that ISOs must have a TIF designation of IOC. Additionally, the Exchange proposes to define the "regular order book" as the "single-leg order book." The Exchange believes that its proposal will promote transparency in the Exchange's rules and consistency across the rules of the Nasdaq affiliated options exchanges. Furthermore, the proposed changes do not amend current ISO functionality except for the proposed stipulation that ISOs must have a TIF designation of IOC. Today, Options 5, Section 1(h) provides that ISOs may be either an IOC or an order that expires on the day it is entered. The

Exchange believes it is appropriate to no longer allow non-IOC ISOs, as an ISO is generally used when trying to sweep a price level across multiple exchanges in an effort to post the balance of an order without locking an away market. The Exchange therefore believes that ISOs have a limited purpose and should be cancelled if they do not execute or do not entirely execute. This is also consistent with how ISE, GEMX and MRX currently handle ISOs in that they only allow ISOs to be entered as IOC.

All-or-None Orders

The Exchange's proposal to relocate and amend the All-or-None Orders from current Options 3, Section 7(b)(5) to proposed Options 3, Section 7(c) is consistent with the Act. Today, Phlx restricts All-or-None Orders to be entered only by Public Customers. At this time, the Exchange proposes to permit any member or member organization to submit an All-or-None Order similar to ISE, GEMX, and MRX Options 3, Section 7(c). The Exchange believes that allowing all member organizations to utilize an All-or-None Order removes impediments to and perfects the mechanism of a free and open market and a national market system. Similar to ISE, GEMX and MRX, the Exchange proposes to modify All-or-None Orders so that they would execute against multiple, aggregated orders if the executions would occur simultaneously. The proposed description of the handling of All-or-None Orders is consistent with the Exchange's allocation methodology in Options 3, Section 10 by making clear that because of the size contingency of the All-or-None Order (*i.e.*, executed in its entirety or not at all), those orders must be satisfied simultaneously to avoid any priority conflict on the order book, which considers current displayed NBBO prices to avoid locked and crossed markets as well as trade-throughs. Finally, the proposed changes to add that AON Orders may not be submitted during the Opening Process will better articulate current System behavior, and aligns to the level of detail currently in ISE, MRX, and GEMX Options 3, Section 7(c).

Stop and Stop Limit Orders

The Exchange believes that the proposed changes to the definition of Stop Orders and Stop Limit Orders in Options 3, Sections 7(d) and 7(e), respectively, are consistent with the Act. Today, Phlx's Stop Order may be a Limit or Market Order. Also, the Stop Order may not be elected by a trade that is reported late or out of sequence or by a Complex Order trading with another

¹³² Pursuant to Phlx Options 2, Section 6, the total number of contracts executed during a quarter by a Market Maker and Lead Market Maker in options series to which it is not appointed may not exceed twenty-five percent (25%) of the total number of contracts executed by the Market Maker and Lead Market Maker in options series.

Complex Order. At this time, the Exchange proposes to amend its Stop Order to mirror the order type that is in use on ISE, GEMX and MRX at Options 3, Section 7(d) and (e). Phlx will permit all member organizations to utilize a Stop Order and Stop Limit Order and not restrict Lead Market Makers, Maker Makers, and Off-Floor Broker-Dealers from using the order type which removes impediments to and perfects the mechanism of a free and open market and a national market system. Also, the Exchange will not separately specify a Stop Market Limit Order, rather it will describe an elected Stop Order as a Market Order. Therefore, the Exchange will describe a Stop Order and Stop Limit Order. Aligning Phlx's current functionality for a Stop Order and Stop Market Order to that of ISE, GEMX and MRX will create consistent rules and will increase the understanding of the Exchange's operations for market participants that are also participants on the Nasdaq affiliated options exchanges, thereby contributing to the protection of investors and the public interest.

Cancel and Replace Orders

The Exchange's proposal to relocate the Cancel and Replace Order description from Options 3, Section 7(b)(7) to proposed Options 3, Section 7(f) and mirror the functionality on ISE, GEMX and MRX at Options 3, Section 7(f). Aligning Phlx's current functionality for a Cancel and Replace Order to that of ISE, GEMX and MRX will create consistent rules and will increase the understanding of the Exchange's operations for market participants that are also participants on the Nasdaq affiliated options exchanges, thereby contributing to the protection of investors and the public interest.

Reserve Orders

The Exchange's proposal to adopt a Reserve Order at Options 3, Section 7(g) that is identical to the order type in ISE, GEMX and MRX Options 3, Section 7(g) is consistent with the Act as it will align Phlx's current functionality for a Reserve Order to that of ISE, GEMX and MRX will create consistent rules and will increase the understanding of the Exchange's operations for market participants that are also participants on the Nasdaq affiliated options exchanges, thereby contributing to the protection of investors and the public interest. Both the displayed and non-displayed portions of a Reserve Order would be available for potential execution against incoming marketable orders. A non-marketable Reserve Order would rest on the order book. The displayed portion of

a Reserve Order would be ranked at the specified limit price and the time of order entry. This new order type will be available to all member organizations, except Market Makers as noted herein. The proposed rule change will promote competition as Reserve Orders will provide member organizations with additional flexibility to manage and display their orders and additional control over their executions on the Exchange. This may encourage market participants to bring additional liquidity to the market, which benefits all investors.

Attributable Orders

The Exchange's proposal to adopt Attributable Orders at Options 3, Section 7(h) that is identical to the order type in ISE, GEMX and MRX Options 3, Section 7(h) is consistent with the Act. An Attributable Order would be a market or limit order which displays the user firm ID for purposes of electronic trading on the Exchange. Use of Attributable Orders is voluntary. Attributable Orders may not be available for all Exchange Systems. This new order type will be available to all member organizations and the proposed rule change will promote competition, as Attributable Orders will provide member organizations with additional flexibility to manage their orders on the Exchange. This new order type may encourage market participants to bring additional liquidity to the market, which benefits all investors.

Directed Orders

The Exchange proposes to relocate the reference to Directed Orders currently in Options 3, Section 7(b)(11) to Options 3, Section 7(l) without change aligns the Phlx order type to ISE, GEMX and MRX Options 3, Section 7(l).

Add Liquidity Orders

The Exchange's proposal to adopt ALOs at Options 3, Section 7(n) that are identical to ISE, GEMX and MRX Options 3, Section 7(n) is consistent with the Act. ALOs are limit orders that will only be executed as a "maker" on the Exchange. An Add Liquidity Order is a limit order that is to be executed in whole or in part on the Exchange (i) only after being displayed on the Exchange's limit order book; and (ii) without routing any portion of the order to another market center. The ALO order type would provide market participants greater control over the circumstances in which their orders are executed. The purpose of an ALO is to provide liquidity. For investors and market participants that elect only to provide liquidity in certain

circumstances, such as to receive a maker fee (or rebate) upon execution of an order, the Exchange believes that ALOs will accommodate this strategy. This new order type will be available to all member organizations. This new order type may encourage market participants to bring additional liquidity to the market, which benefits all investors.

PIXL Order

The Exchange's proposal to relocate the description of a PIXL Order from Options 3, Section 7(b)(9) to Options 3, Section 7(y) without change aligns the Phlx order type to ISE, GEMX and MRX Options 3, Section 7(y).

Day Order

The Exchange's proposal to relocate Day Order from current Options 3, Section 7(c)(1) to Supplementary Material .02(a) to Options 3, Section 7 with minor amendments is consistent with the Act. The Exchange is rewording the rule text of Day Order to mirror the text in ISE, GEMX and MRX Supplementary Material .02(a) to Options 3, Section 7.

Good-Till-Cancelled

The Exchange's proposal to relocate Good Till Cancelled from Options 3, Section 7(c)(4) to Supplementary Material .02(b) to Options 3, Section 7 and amend the description is consistent with the Act. The Exchange's proposal to provide that a Good-Till-Canceled Order is an order to buy or sell entered with a TIF of "GTC" and remains in force until the order is filled, canceled or the option contract expires; provided, however, that GTC orders will be canceled in the event of a corporate action that results in an adjustment to the terms of an option contract would address a corporate event, noting that GTC orders are canceled in the event of a corporate action that results in an adjustment to the terms of an option contract. This rule text clarifies the current System behavior. The proposed GTC description is identical to the rule text in ISE, GEMX and MRX Supplementary Material .02(b) to Options 3, Section 7. There is no System change as a result of the change to the description of the GTC order.

Good-Till-Date

The Exchange's proposal to adopt a new TIF designation, Good-Till-Date Supplementary Material .02(c) to Options 3, Section 7 which is identical to ISE, GEMX and MRX's Good-Till-Date TIF at Supplementary Material .02(c) to Options 3, Section 7 is consistent with the Act. A Good-Till-

Date TIF is an order to buy or sell entered with a TIF of “GTD,” which, if not executed, would be cancelled at the sooner of the end of the expiration date assigned to the order, or the expiration of the series; provided, however, that GTD orders would be canceled in the event of a corporate action that results in an adjustment to the terms of an option contract. GTD orders may be entered through FIX. The Exchange believes this additional TIF will provide member organizations with additional opportunities when trading on Phlx.

Immediate-or-Cancel

The Exchange’s proposal to relocate Immediate-or-Cancel from Options 3, Section 7(c)(2) to Supplementary Material .02(d) to Options 3, Section 7 and amend the description is consistent with the Act. These modifications are non-substantive and simply bring more clarity to the text. These changes align with rule text in ISE, GEMX and MRX, as applicable.

Opening Only

The Exchange’s proposal to relocate Opening Only from Options 3, Section 7(c)(3) to proposed Supplementary Material .02(e) of Options 3, Section 7 is consistent with the Act. Opening Only Orders would be subject to the Size Limitation and Market Wide Risk Protections thereby protecting investors and the general public. Of note, the Market Wide Risk Protection is a new protection being adopted by this proposal.

Order Entry Protocols

The Exchange’s proposal to amend the rule text currently in Supplementary Material .03(a) of Options 3, Section 7 is consistent with the Act. The addition of post trade allocation messages to the list of features that will be included in FIX will enhance that feature at no cost. Today, ISE, GEMX and MRX provides for post trade allocation messages through FIX.¹³³

Routing

The Exchange’s proposal to relocate the rule text at Options 3, Section 7(d) to Supplementary Material .04 of Options 3, Section 7 without change is a non-substantive amendment.

Options 3, Section 8

The Exchange’s proposal to amend Options 3, Section 8, Options Opening Process, at Options 3, Section 8(b) to note the eligible interest that will be included in the Opening Process, is

consistent with the Act. The Exchange proposes to note that “Eligible interest during the Opening Process includes Valid Width Quotes, Opening Sweeps, and orders, *including Opening Only Orders, but excluding orders with a Time-In-Force of “Immediate or Cancel” and Add Liquidity Orders.* Quotes, other than Valid Width Quotes, will not be included in the Opening Process. *The displayed and non-displayed portions of the Reserve Orders are considered for execution and in determining the Opening Price throughout the Opening Process.* Non-SQT Market Makers may submit orders.” The Exchange notes that today, Opening Only Orders are eligible for the Opening Process but not Immediate or Cancel Orders. With the addition of the Add Liquidity Orders and the Reserve Orders, the Exchange is proposing to note how those order types are accepted by the System for the Opening Process. The proposed eligibility of these orders mirror ISE, GEMX and MRX Options 3, Section 8(b). Also, similar to ISE, GEMX and MRX Options 3, Section 8(g), the Exchange proposes to account for the addition of Reserve Orders with respect to the Potential Opening Price¹³⁴ in Phlx Options 3, Section 8(h). The Exchange notes that to calculate the Potential Opening Price, the System will take into consideration all Valid Width Quotes and orders (including Opening Sweeps *and displayed and non-displayed portions of Reserve Orders*) for the option series and identify the price at which the maximum number of contracts can trade (“maximum quantity criterion”). The Exchange believes that the addition of this rule text will make clear the manner in which the System will handle a Reserve Order during the Opening Process.

The Exchange’s proposal to amend Options 3, Section 8(h)(A), which currently describes how the Potential Opening Price would be calculated when there is more than one Potential Opening Price is consistent with the Act. Today, Section 8(h)(A) provides that when two or more Potential Opening Prices would satisfy the maximum quantity criterion and leave no contracts unexecuted, the System takes the highest and lowest of those prices and takes the mid-point; if such mid-point is not expressed as a permitted minimum price variation, it will be rounded to the minimum price variation that is closest to the closing price for the affected series from the immediately prior trading session. If

there is no closing price from the immediately prior trading session, the System will round up to the minimum price variation to determine the Opening Price. The Exchange now proposes to no longer round in the direction of the previous trading day’s closing price and simply round up to the minimum price variation if the mid-point of the high/low is not expressed as a permitted minimum price variation. The proposed changes are intended to simplify and bring greater transparency to the Opening Process, as market participants can now have a better sense of how the Potential Opening Price will be calculated without having to account for the closing price of each options series.

Amending Options 3, Section 8(j)(7), which currently describes the determination of Opening Quote Range (“OQR”) boundaries, in certain scenarios is consistent with the Act. Specifically, the Exchange proposes to amend the last sentence of Options 3, Section 8(j)(7) which currently states, “The System will route routable Public Customer and Professional interest pursuant to Options 3, Section 10(a)(1)(A).” The Exchange proposes to remove the current limitation that only allows routable Public Customer and Professional interest to route during the Opening Process thereby permitting all market participants to route and removes the impediments to and perfects the mechanism of a free and open market and a national market system. All routable market participant interest will be allowed to route to align the Exchange’s opening functionality with ISE, GEMX and MRX which does not limit orders that may route in the Opening Process within Options 3, Section 8. The Exchange will also update the cross-cite to Options 3, Section 10(a)(1)(A), currently pointing to the Public Customer priority overlay, to the more general priority rule in Options 3, Section 10(a).

Similar to other changes noted herein, the Exchange proposes to amend Options 3, Section 8(k)(C)(6) to note how Reserve Orders will be handled in the Opening Process for purposes of execution. This rule text will add transparency to Phlx’s rule text similar to ISE, GEMX and MRX Options 3, Section 8(j)(6). Additionally, the Exchange proposes an amendment to the last sentence of Options 3, Section 8(k)(C)(6) which currently states, “The System will only route non-contingency Public Customer and Professional orders.” In line with proposed amendments to permit the System to route all market participant interest, thereby removing the limitation that

¹³³ See Supplementary Material .03(a) of Options 3, Section 7.

¹³⁴ The Potential Opening Price indicates a price where the System may open once all other Opening Process criteria is met.

only allows routable Public Customer and Professional interest to route, and in line with the addition of rule text related to the handling of Reserve Orders.

The Exchange proposes to amend Options 3, Section 8(k)(D) to mirror rule text in Options 3, Section 8(j)(6)(i) which states, “The System will cancel any order or quote that is priced through the Opening Price. All other interest will be eligible for trading after opening.” Today, the System will cancel any order or quote priced through the Opening Price on Phlx. Also, today, all other interest will be eligible for trading after the Opening Process and will remain on the order book. The Exchange believes that this rule text will bring greater transparency to Phlx’s Opening Process.

Finally, the Exchange proposes to amend rule text in the Opening Process Cancel Timer in Options 3, Section 8(l). With the adoption of the Good-Til-Cancel Order and Good-Till-Date Order, the Exchange proposes to rename the order types in the last sentence of Options 3, Section 8(l) for consistency.

Options 3, Section 9

The Exchange’s proposal to amend Options 3, Section 9, Trading Halts, at (d)(3) to amend the manner in which a Stop Order will be treated during a trading halt is consistent with the Act. The Exchange proposes to mirror the treatment of Stop Orders in ISE, GEMX and MRX Options 3, Section 9(d)(3). Today, after the opening, the Exchange will elect Stop Orders, as defined in Options 8, Section 32(c)(2), and, because they become Market Orders, shall cancel them back and notify member organizations of the reason for such cancellation. The Exchange proposes to note that Stop Orders become elected as provided for in proposed Options 3, Section 7(d).¹³⁵ The Exchange currently cites to Options 8, Section 32 erroneously, as those rules refer to Stop Orders on the trading floor. The Exchange proposes to instead cite proposed new Options 3, Section 7(d) which describes electronic Stop Orders. The Exchange also proposes to note that the System cancels orders. Also, the Exchange proposes to change the word rejection to cancellation because the order would be cancelled not rejected. These proposed changes are intended to

bring greater clarity to the Exchange’s rules.

Options 3, Section 10

The Exchange’s proposal to amend Options 3, Section 10, Electronic Execution Priority and Processing in the System, is consistent with the Act. Phlx proposes to amend its rounding methodologies to round up to the nearest integer throughout the Rule. The Exchange is opting to round up and not down, uniformly, and disclose that rounding methodology directly within Options 3, Section 10, so that all member organizations are aware of the rounding methodology that would be utilized by the System. In addition, if the result of an allocation is not a whole number, it will now be rounded up to the nearest whole number instead of down. Finally, with respect to rounding, because it is rounding up, the provisions which describe allocations for remainders of less than one contract cannot occur and therefore this rule text is being removed, as such remainders would not be mathematically possible. The Exchange believes that rounding up uniformly is consistent with the Act because it provides for the equitable allocation of contracts among the Exchange’s market participants. The Exchange proposes to provide market participants with transparency as to the number of contracts that they are entitled to receive as the result of rounding. Further, the Exchange believes that this methodology produces an equitable outcome during allocation that is consistent with the protection of investors and the public interest because all market participants are aware of the methodology that will be utilized to calculate outcomes for allocation purposes. The Exchange proposes to amend Options 3, Section 10(a)(1)(B) to change a reference to “DROT” to “Directed Market Maker” for consistency.

The Exchange proposes to amend Options 3, Section 10(a)(1)(C) to provide that “After all Public Customer orders have been fully executed, upon receipt of a Directed Order pursuant to Options 2, Section 10, provided the Directed Market Maker’s quote is at the better of the internal PBBO or the NBBO, the Directed Market Maker will be afforded a participation entitlement. This participation entitlement will be considered after the Opening Process.” Today, a Directed Market Maker’s quote or market maker order must be at the better of the internal PBBO or NBBO. The Exchange believes that similar to ISE, GEMX and MRX Options 3, Section 10(c)(1)(C), that market maker orders should not be considered when offering

Directed Market Maker Priority. The Exchange proposes to only offer the Directed Market Maker allocation if a Directed Market Maker’s quote is at the better of the internal PBBO or the NBBO and not an order. Consistent with this change, the Exchange proposes to remove “or order(s)” after quote throughout Options 3, Section 10(a)(1)(C). Only offering a Directed Market Maker an enhanced allocation on quotes is consistent with the obligations of a Directed Market Maker, to be quoting at the better of the internal PBBO or the NBBO at the time of receipt of the Directed Order.¹³⁶

The Exchange’s proposal to amend the Entitlement for Orders of 5 contracts or fewer to align with ISE, GEMX and MRX Options 3, Section 10(a)(1)(D) is consistent with the Act. The Exchange proposes to amend the last sentence to provide, “On a quarterly basis, the Exchange will evaluate what percentage of the volume executed on the Exchange is comprised of orders for 5 contracts or fewer allocated to Lead Market Makers, and will reduce the size of the orders included in this provision if such percentage is over 40%.” Today, the percentage is 25%. Phlx notes that currently Lead Market Makers are not approaching the 25% threshold noted in Options 3, Section 10(a)(1)(D)(ii) related to the quarterly review of 5 contracts or fewer by the Exchange, which percentage is based on total volume executed. With this proposal, Phlx will monitor the frequency in which Lead Market Makers receive orders for 5 contracts or fewer. Specifically, the Exchange will review the proposed provision quarterly and will maintain the orders for 5 contracts or fewer at a level that will not allow these small size orders executed by Lead Market Makers to account for more than 40% of the volume executed on the Exchange. The Exchange does not believe the proposal raises any new or novel issues as other options exchanges also offer the same allocation for orders for 5 contracts or fewer.¹³⁷ The Exchange believes that providing this benefit offers Lead Market Makers an incentive for vigorous quoting since a Lead Market Maker must be quoting at the NBBO in order to receive the allocation. Incentivizing Lead Market Makers to provide liquidity on Phlx, in turn, provides greater opportunity for executions, tighter spreads, and better pricing for all member organizations. While the Commission has, in the past, been concerned about locking up larger

¹³⁵ As proposed in Phlx Options 3, Section 7(d) a Stop Order becomes a Market Order when the stop price is elected. A Stop Order to buy is elected when the option is bid or trades on the Exchange at, or above, the specified stop price. A Stop Order to sell is elected when the option is offered or trades on the Exchange at, or below, the specified stop price.

¹³⁶ See Phlx Options 2, Section 10.

¹³⁷ See ISE, GEMX and MRX Options 3, Section 10(a)(1)(D).

portions of order flow from intra-market price competition, the Exchange believes that the enhancement would remain adequately balanced by the increased 40% threshold that limits the volume of orders of five contracts or fewer that are executed by Lead Market Makers to account for no more than 40% of the volume executed on the Exchange. The proposed increased limitation of 40% continues to strike a reasonable balance between encouraging vigorous price competition by Lead Market Makers and rewarding those Lead Market Makers for their unique duties. Lead Market Maker are also subject to the heightened quoting requirements specified in Options 2, Section 5(c)(2)(B). Finally, changing the percentage from 25% to 40% will align Phlx with ISE, GEMX and MRX and permit market makers to have the same compliance across the Nasdaq exchanges.¹³⁸

Similar to ISE, GEMX and MRX Options 3, Section 10(c)(1)(E), the Exchange proposes to account for Reserve Orders in proposed Options 3, Section 7(g)(3). The Exchange proposes to cite to proposed Section 7(g)(3) which provides that the displayed portion of a Reserve Order will trade in accordance with Options 3, Section 10(a)(1)(A) for Public Customer Orders and this subparagraph (F) for non-Public Customer Orders. The Exchange also proposes to add a citation to 10(a) in this paragraph for clarity.

Options 3, Section 15

Order Price Protection

The Exchange's proposal to amend its Order Price Protection or "OPP" (also known as the fat finger check) in Options 3, Section 15(a)(1) to align certain features with the OPP functionality currently offered by its affiliates, NOM and BX, is consistent with the Act. The Exchange believes that the proposed changes to OPP to introduce an alternative threshold that uses a configurable dollar amount, as discussed above, will allow Phlx to establish appropriate boundaries for rejecting potentially erroneous orders while continuing to allow member organizations to access liquidity. As discussed above, OPP is intended to prevent orders entered at clearly unintended prices from executing in the System to the detriment of market participants. OPP was not intended to reject legitimate orders which are otherwise capable of executing at a fair price. The Exchange's proposal will establish a fixed dollar amount as an

alternative threshold in addition to the current percentage-based threshold, similar to NOM and BX Options 3, Section 15(a)(1). The Exchange believes its proposal will continue to protect investors and the public interest against erroneous executions while also allowing orders, including lower-priced orders, to execute where appropriate.

The Exchange believes that its proposal is consistent with the Act because the fixed amount provides for a larger range of executions that would otherwise be rejected by the application of a percentage which would not capture the potential incremental executions. As illustrated above, orders could be rejected that were intentional and not erroneous. Similar to NOM and BX, the Exchange believes that the proposed approach will accomplish the goal of limiting erroneous executions while permitting intentional executions at reasonable prices.

The Exchange also believes that its proposal to add rule text relating to Exchange discretion to temporarily deactivate OPP on an intra-day basis is consistent with the Act. As noted above, NOM and BX have identical language in Options 3, Section 15(a)(1)(A), and similar to NOM and BX, the Exchange believes that having this discretion will be useful if the Exchange determined that unusual market conditions warranted deactivation in the interest of a fair and orderly market. Like NOM and BX, the Exchange believes that it will be useful to have the flexibility to temporarily disable OPP intra-day in response to an unusual market event (for example, if dissemination of data was delayed and resulted in unreliable underlying values needed for the Reference BBO) to maintain a fair and orderly market. This will promote just and equitable principles of trade and ultimately protect investors.

Lastly, the Exchange's proposal to amend Options 3, Section 15(a)(1) to remove the current exclusion of ISOs and Complex Orders from the OPP rule is consistent with the Act. The proposed changes to remove the exclusion of ISOs so that OPP would apply to them going forward is consistent with the Act as this will promote the goal of limiting erroneous executions on the Exchange and in general, extend more protections to ISOs. As discussed above, the Exchange believes this is appropriate given that the proposed alternative threshold will permit more lower-priced ISOs to execute at reasonable prices. Finally, the Exchange is removing Complex Orders as the simple risk protections do not apply to Complex Orders, rather the Complex Order risk

protections in Options 3, Section 16 would apply.

Market Wide Risk Protection

The Exchange believes that the proposed rule change to adopt MWRP would assist with the maintenance of a fair and orderly market by establishing new activity based risk protections for orders. The proposed MWRP is similar to risk management functionality provided in ISE, GEMX and MRX Options 3, Section 15(a)(1)(C). Similar to ISE, GEMX and MRX, the Exchange believes that the proposed rule change may reduce member organization risk by allowing them to effectively manage their exposure to excessive risk. In particular, the proposed rule change would implement two new risk protections based on the rate of order entry and order execution, respectively. The Exchange believes that both of these new protections, which together encompass the proposed MWRP, would enable member organizations to better manage their risk when trading options on the Exchange by limiting the member organization's risk exposure when systems or other issues result in orders being entered or executed at a rate that exceeds predefined thresholds. In today's market, the Exchange believes that robust risk management is becoming increasingly more important for all member organizations. The proposed rule change would provide an additional layer of risk protection for market participants that trade on the Exchange.

In particular, the MWRP is designed to reduce risk associated with system errors or market events that may cause member organizations to send a large number of orders, or receive multiple, automatic executions, before they can adjust their exposure in the market. Without adequate risk management tools, such as those proposed in this filing, member organizations could reduce the amount of order flow and liquidity that they provide. Such actions may undermine the quality of the markets available to customers and other market participants. Accordingly, the proposed functionality is designed to encourage member organizations to submit additional order flow and liquidity to the Exchange, thereby removing impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, protecting investors and the public interest.

Anti-Internalization

The Exchange believes that the proposed rule change to enhance AIQ is consistent with the protection of

¹³⁸ BX also utilizes 40%. See Options 3, Sections 10(a)(1)(C)(1)(c) and 10(a)(2)(iii).

investors and the public interest as it is designed to provide Market Makers with additional flexibility with respect to how to implement self-trade protections provided by AIQ. Currently, all Market Makers are provided functionality that prevents quotes and orders from one market participant identifier from trading with quotes and orders from the same market participant identifier. This allows Market Makers to better manage their order flow and prevent undesirable executions where the Market Maker, using the same market participant identifier, would be on both sides of the trade. While this functionality is helpful to member organizations, some member organizations may prefer not to trade with quotes and orders entered by different market participant identifiers within the same Exchange account or member organization firm. The Exchange is therefore proposing to provide member organizations with flexibility with respect to how AIQ is implemented. As such, member organizations can continue to use current functionality, or member organizations that prefer to prevent self-trades across different market participant identifiers within the same Exchange account or at the member organizations firm level will now be provided with the means to do so under this proposal. Similar flexibility is offered on ISE, GEMX and MRX.¹³⁹ Similar to ISE, GEMX and MRX, the Exchange believes that flexibility to apply AIQ at the Exchange account or member organization firm level would be useful for the Exchange's member organizations as well. The Exchange believes that the proposed rule change is designed to promote just and equitable principles of trade and will remove impediments to and perfect the mechanisms of a free and open market as it will further enhance self-trade protections provided to Market Makers similar to those protections provided on other markets.

Quotation Adjustments

The Exchange believes that the proposed rule change is consistent with the Act because it will enhance the risk protection tools available to Market Makers by introducing new Delta and Vega Thresholds that will be offered in conjunction with the current Percentage and Volume Thresholds, thereby strengthening a Market Maker's ability to manage their risk on the Exchange. The proposed thresholds are functionally identical to the Delta and

Vega Thresholds provided in ISE, GEMX and MRX Options 3, Section 15(a)(3)(B). Similar to ISE, GEMX and MRX, the Exchange believes that the proposed rule change may reduce Market Maker risk by allowing them to effectively manage their exposure to excessive risk. Accordingly, the Exchange believes that the proposal removes impediments to, and perfects the mechanism of, a free and open market and a national market system, and protects investors and the public interest.

The proposed changes to amend when Rapid Fire and Multi-Trigger will be triggered and the modification to the Specified Time Periods, as discussed above, will bring greater harmonization between the Exchange's rules and ISE's, GEMX's and MRX's rules. Amending the current Rapid Fire functionality to no longer remove IOC Orders submitted through SQF, identical to ISE, GEMX, MRX and BX, is consistent with the Act as Market Makers quote to provide liquidity on the Exchange and the risk protection is intended to provide a protection to those participants when acting as liquidity providers. Market Makers utilizing IOC Orders may also provide liquidity but to a lesser extent. The Exchange believes that limiting the risk protection to quotes, similar to other Nasdaq affiliated markets, continues to protect investors while not also purging IOC orders which may interact against other interest on the Exchange. With the proposed changes, Phlx's Rapid Fire and Multi-Trigger will be triggered when their respective thresholds are exceeded (instead of when they are met or exceeded, as is currently the case) and the Specified Time Periods will be amended from 15 to 30 seconds, all of which will be substantially similar to ISE's, GEMX's and MRX's current approach. The Exchange believes that having more consistent rules will result in greater uniformity as well as less burdensome and more efficient regulatory compliance. In addition, offering more consistent functionality across Phlx, ISE, GEMX and MRX will contribute to less complexity and reduce potential confusion for market participants on Phlx that are also participants on ISE, GEMX and MRX. As such, the Exchange believes that the proposed changes would foster cooperation and coordination with persons engaged in facilitating transactions in securities and would remove impediments to and perfect the mechanism of a free and open market and a national market system.

Active Quote Protection

The Exchange believes that the proposed Active Quote Protection risk protection is consistent with the Act because it will enhance the risk protection tools available to Market Makers and Groups by introducing a new method of establishing and monitoring for risk parameters that will be offered as an alternative to existing Rapid Fire risk parameters, thereby supporting a Market Maker's ability to manage their risk on the Exchange, and also providing them with flexibility to use additional tools to manage risk. As noted above, while the passive (Rapid Fire) and active (Active QP) risk counter functionality will be mutually exclusive on each badge, Market Makers will still be able to use both to cover their activity on the Exchange by getting multiple badges and setting each risk counter by badge. The Exchange believes that offering more risk management tools to Market Makers would mitigate their exposure to excessive risk. The Exchange further believes that having the new Active Quote Protection functionality leverage the existing Multi-Trigger functionality will similarly support a Market Maker's ability to manage their risk on the Exchange by including Active Quote Protection purge events to the Multi-Trigger counter. As noted above, the risk to Market Makers is not limited to a single series in an option or even multiple series in an option as Market Makers that quote in multiple series of multiple options have significant exposure, requiring them to offset or hedge their overall positions. Market Makers are required to continuously quote in assigned options, and quoting across many series in an option or multiple options creates the possibility of executions that can create large, unintended principal positions that could expose Market Makers to unnecessary risk. Today, Multi-Trigger is designed to assist Market Makers or a Group in managing their market risk by tracking the number of Purge Events relative to the market-wide parameter set by the Market Maker or the Group. The Exchange therefore believes that tracking the number of Active Quote Protection purge events for a Market Maker against its Multi-Trigger Threshold would be similarly useful for managing market risk so that they can provide deep and liquid markets to the benefit of all investors. Ultimately, the Exchange believes that providing Market Makers with additional tools in the manner described above to manage their risk parameters serves to perfect the mechanism of a free and open

¹³⁹ See ISE Options 3, Section 15(a)(3)(A). See also NOM and BX Options 3, Section 15(c)(1), which provide similar flexibility.

market and a national market system, and, in general to protect investors and the public interest because Market Makers will be better able to manage risks with these tools.

The Exchange further represents that its proposal will continue to operate consistently with the firm quote obligations of a broker-dealer pursuant to Rule 602 of Regulation NMS. Specifically, any marketable interest that is executable against a Market Maker's quotes that are received¹⁴⁰ by the Exchange prior to the time this functionality is triggered will be automatically executed at the price up to the Market Maker's size, regardless of whether such execution results in executions in excess of the Market Maker's pre-set Contract Limit.¹⁴¹ As discussed above, this is also in line with how current Rapid Fire operates today. The Exchange believes that the proposed changes in proposed subparagraph (D)(ii) to specify that this Rule will apply to marketable orders and quotes (currently silent on marketable orders), and to specify the time of receipt of such marketable interest that is executable against the size of the Market Maker's quote, will promote clarity in how the System currently operates for Rapid Fire and will operate for Active Quote Protection. As noted above, the proposed Active Quote Protection functionality is similar to existing active risk counter functionality on ISE, GEMX and MRX Options 3, Section 15(c)(2)(B).

Post-Only Quoting Protection

The Exchange's proposal to amend Options 3, Section 15, Risk Protections, to codify new paragraph (c)(3) to permit Phlx Market Makers to prevent their quotes from removing liquidity from the Exchange's order book promotes equitable principles of trade and protects investors and the public interest by enhancing the risk protections available to Phlx Market Makers. The proposal also promotes the policy goals of the Commission which has encouraged execution venues, exchanges, and non-exchanges alike, to enhance risk protection tools and other mechanisms to decrease risk and increase stability. While Market Makers may manage their risk by utilizing the Post-Only Quote Configuration to avoid removing liquidity from the Exchange's order book if their quote would otherwise lock or cross any resting order or quote on the Phlx order book upon

entry, there are also downstream benefits to market participants. Additionally, the benefits of enhanced risk protections flow downstream to counterparties both within and away from the Exchange, thereby increasing systemic protections as well.

The proposed risk protection allows Market Makers the ability to avoid removing liquidity from the Exchange's order book if their quote would otherwise lock or cross any resting order or quote on Phlx's order book upon entry, thereby protecting investors and the general public as Phlx Market Makers transact a large number of orders on the Exchange and bring liquidity to the marketplace. Market Makers would utilize the proposed risk protection to avoid unexpectedly taking liquidity off of the order book. As a result of taking liquidity, Market Makers would incur a taker fee that may impact the Market Maker's ability to provide liquidity and meet quoting obligations. Phlx Market Makers are required to add liquidity on the Exchange and, in turn, are rewarded with lower pricing and enhanced allocations. Specifically, the risk protection would permit Market Makers to add liquidity only and avoid removing interest on the order book thereby maximizing the benefit of their quoting to bring liquidity to Phlx by allowing Market Makers to provide as much liquidity as possible, thereby removing impediments to and perfecting the mechanism of a free and open market and a national market system and protecting investors and the public interest. There is no impact to other market participants by introducing this Post-Only Quote Configuration as other non-Market Makers may utilize the proposed Add Liquidity Only order type that will continue to benefit downstream counterparties, both within and away from the Exchange, who may interact with interest on Phlx's order book and thereby interact with order flow that is priced better than the NBBO. Also, other market participants may interact with the liquidity provided by Market Makers.

Unlike other market participants, Market Makers have certain obligations on the market. Market Makers are required to provide continuous two-sided quotes on a daily basis¹⁴² and are subject to various obligations associated with providing liquidity on the market.¹⁴³ Market Makers are the sole liquidity providers on the Exchange and, therefore, are offered certain quote risk protections noted within Phlx Options 3, Section 15 to allow them to

manage their risk more effectively. The proposed Post-Only Quote Configuration is another risk protection afforded to Market Makers to assist them in managing their risk while continuing to comply with their obligations. The Exchange notes that enhancing the ability of Market Makers to add liquidity and avoid taking liquidity from the order book promotes just and equitable principles of trade on the Exchange and protects investors and the public interest, thereby enhancing market structure by allowing Market Makers to add liquidity only. Greater liquidity benefits all market participants by providing more trading opportunities and attracting greater participation by Market Makers. Also, an increase in the activity of Market Makers in turn facilitates tighter spreads.

Options 3, Section 23

The Exchange's proposal to amend Phlx Options 3, Section 23, Data Feeds and Trade Information, is consistent with the Act. Amending the name of various market data feeds in Phlx Options 3, Section 23(a) is a non-substantive amendment that will harmonize the names of the feeds to ISE, GEMX and MRX Options 3 Section 23(a).

The Exchange believes that it is consistent with the Act to no longer offer TradeInfo when the Exchange migrates over the enhanced Nasdaq functionality, as there is a lack of demand from member organizations.¹⁴⁴ As noted above, member organizations use FIX and CTI to obtain order information currently available in TradeInfo, and to cancel orders through FIX. The Exchange further believes that the proposed decommission of TradeInfo will remove impediments to and perfect the mechanism of a free and open market and a national market system by allowing the Exchange to reallocate System capacity and resources currently used to maintain this functionality to the development and maintenance of other business initiatives and risk management products.

Further, the Exchange's proposal to eliminate TradeInfo pricing from Options 7, Section 9B in its entirety is reasonable, equitable, and not unfairly discriminatory because TradeInfo would no longer be available to any member organization. It is reasonable to remove all references to TradeInfo pricing from the Exchange's Pricing Schedule as the Exchange is removing this functionality

¹⁴⁰ The time of receipt for an order or quote is the time such message is processed by the Exchange's order book.

¹⁴¹ See proposed subparagraph (D)(ii) of Phlx Options 3, Section 15(c)(2).

¹⁴² See Phlx Options 2, Section 5.

¹⁴³ See Phlx Options 2, Section 4.

¹⁴⁴ As noted above, the Exchange will provide prior notice of the decommission to all member organizations through an Options Trader Alert.

from its Rulebook. Additionally, it is equitable and not unfairly discriminatory to remove the references to TradeInfo pricing from the Pricing Schedule because no member organization would be able to utilize this functionality once it is removed from the System.

Options 3, Section 28

The Exchange believes that introducing the optional risk protections as described above will protect investors and the public interest, and maintain fair and orderly markets, by providing market participants with another tool to manage their order risk. In addition, providing member organizations with more tools for managing risk will facilitate transactions in securities because member organizations will have more confidence that risk protections are in place. As a result, the new functionality has the potential to promote just and equitable principles of trade. ISE, GEMX and MRX offer identical optional risk protections at Options 3, Section 28.

Options 5, Section 4

The Exchange's proposal to amend Options 5, Section 4, Order Routing, to align Phlx's routing to ISE Options 4, Section 5 is consistent with the Act. The Exchange's proposal to align its rules with ISE will provide Phlx member organizations the same flexibility for routing orders that is afforded to ISE Members today.

With respect to FIND and SRCH, the Exchange is adding more detail to its routing rule to provide market participants with greater transparency. The Exchange believes the added scenarios will provide more context to routing in general and for the specific routing strategies for the benefit of investors and the public interest. The Exchange continues to offer various choices to its market participants with respect to routing. A member organization may elect either (1) to not route their orders and mark those orders "DNR"; or (2) to route their orders. If a member organization elects to route their orders, then a member organization may select to mark their orders as "FIND" or "SRCH" Orders, as proposed herein. Once booked, a FIND Order that is not marketable with the ABBO upon receipt will be treated as DNR for the remainder of the trading day, *even in the event that there is a new Opening Price after a trading halt.*

The FIND Order would route once and then post to the Order Book. A SRCH Order may route during and after an Opening Process. A SRCH Order on the Order Book may be routed to an

away market if it is locked or crossed by an away market. With respect to the addition of FIND Orders, the Exchange proposes various scenarios related to FIND Orders to account for various routing scenarios, as is the case today with respect to SEEK Orders. Various scenarios are also proposed to explain System functionality in locked and crossed markets and organized in such a manner to make the rule text efficient and organized. The Exchange also accounts for scenarios both during and after the Opening Process. The Exchange notes that it is consistent with the Act to account for the behavior of FIND Orders with respect to locked and crossed markets. The Exchange will not trade-through an away market's price. This behavior is consistent with the protection of investors and the general public because it affords member organizations the ability to obtain the best price offered among the various options markets.

The Exchange's proposal to amend Options 5, Section 4(a) to include Stop-Limit Orders in addition to Stop Orders in the list of order types that are not included in the PBBO because they have not been triggered is consistent with the Act as the Exchange's proposal adopts the Stop Order at ISE Options 3, Section 7(d) and Stop Limit Order at ISE Options 3, Section 7(e). The Exchange proposes to reflect both order types. As is the case today, the Exchange proposes to note, similar to ISE Options 4, Section 5(a) that when checking the order book, the System will seek to execute at the price at which it would send the order to an away market. The Exchange believes that this sentence will bring greater clarity to the Exchange's rule. Similarly, the Exchange proposes to add text to clarify its current System behavior for TIFs. Today, routing options may be combined with all available order types and times-in-force, with the exception of order types and times-in-force whose terms are inconsistent with the terms of a particular routing option. The Exchange also believes this sentence will clarify the current operation of the routing System. Finally, as is the case today, the Exchange proposes to note the time the routing System is available, the ability to list an order as non-routable and cross-reference the locked and crossed rules. The Exchange would state, "The order routing process shall be available to members from 9:30 a.m. Eastern Time until market close and shall route orders as described below. Member organizations can designate orders as either available for routing or not available for routing. All routing of

orders shall comply with Options 5, Options Order Protection and Locked and Crossed Market Rules." This proposed rule text merely provides greater transparency to the Exchange's current System operation and harmonizes Phlx's rule text to ISE Options 4, Section 5(a).

Options 6, Section 1

The Exchange's proposal to amend Options 6, Section 1, Authorization to Give Up, to align Phlx's process to that of ISE, GEMX and MRX Options 6, Section 1 by permitting electronic only members to systematically indicate a Give-Up at the time of trade, instead of in the post allocation process, is consistent with the Act as it will remove impediments to and perfect the mechanism of a free and open market and a national market system and align the process for electronic members to that of floor members while continuing to honor the Clearing Member's instruction. The Exchange's alignment of its process will continue to provide proper safeguards and protections for Clearing Members as well as controls for Clearing Members to restrict access to their OCC clearing numbers, allowing access only to those Authorized Members upon their request. The proposal will harmonize Phlx's Options 6, Section 1 rule to ISE, GEMX and MRX Options 6, Section 1.

Options 8, Section 32

The Exchange's proposal to amend an All-Or None Order at current Options 8, Section 32(b)(3) to remove the restriction that only a Public Customer can submit it is consistent with the Act. The Exchange proposes to remove this restriction so that any market participant may enter this order type. The Exchange believes that making these order types available to all market participants removes impediments to and perfects the mechanism of a free and open market and a national market system. The Exchange's proposal to add an OPG TIF as an available TIF for the trading floor will provide greater clarity to the Exchange's rules as this TIF is available on the trading floor and was erroneously omitted from the list of order types. Today, the TIF is available for floor participants. Any floor participant may enter the TIF of OPG on the trading floor. The remainder of the proposed changes are non-substantive numbering amendments.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not

necessary or appropriate in furtherance of the purposes of the Act. As discussed above, the Exchange is re-platforming its System in connection with the technology migration to enhanced Nasdaq functionality, which the Exchange believes would promote competition among options exchanges by potentially attracting additional order flow to the Exchange with the enhanced trading platform. The basis for the majority of the proposed rule changes are the rules of the Nasdaq affiliated options exchanges, which have been previously filed with the Commission as consistent with the Act.

Options 2, Section 6

The Exchange believes that this proposal does not impose an undue burden on inter-market competition because each options exchange generally determines permissible order types for market makers in its trading environment based on the exchange's individual business policy, objectives, and trading system.

The Exchange's proposal reflects its policy and objectives, and does not impose an undue burden on intra-market competition because it treats all Market Makers uniformly with respect to permissible order types. Market Makers, unlike other market participants, are required to abide by certain quoting requirements in the options classes in which they are appointed pursuant to Options 2, Section 5, in order to maintain the status of a Market Maker. The Exchange also notes that Options 2, Section 6(b) restricts the number of orders that a Market Maker may enter in an options class to which the Market Maker is not appointed. The Exchange believes that permitting a Market Maker to enter additional eligible order types, except Customer Cross Orders and Reserve Orders, in their appointed options class will permit Market Makers additional latitude to conduct business on Phlx and effectively compete with other market makers on other options exchanges.

Options 3, Section 4

Phlx's proposal to amend Options 3, Section 4(b)(6) to permit member organizations to configure their ports to instruct the Exchange to immediately cancel a quote that would otherwise cause a locked or crossed market violation in lieu of re-pricing the quote does not impose an undue burden on inter-market competition because other options exchanges may offer similar functionality.

The proposal does not impose an undue burden on intra-market

competition because all Market Makers may utilize the functionality when entering quotes into the System.

Options 3, Section 6

The Exchange's proposal to discontinue Quote Exhaust does not impose an inter-market burden on competition as other exchanges may determine to adopt or discontinue a similar functionality.

The Exchange's proposal to discontinue Quote Exhaust does not impose an intra-market burden on competition as no member organization would be subject to the Quote Exhaust functionality. Further, with respect to the interaction between the Quote Exhaust and risk protections, the proposal does not impose an intra-market burden on competition because instead of first being posted at the Quote Exhaust Reference Price, aggressively priced orders would be able to post to the order book immediately at the ATR Threshold, which would allow for quicker order execution while still providing order exposure and pauses between price bands, which continues to allow for risk mitigation. Once discontinued, the Exchange's quoting functionalities will abide by Phlx Options 3, Section 4 which governs the entry and display of orders and the allocation methodology in Options 3, Section 10. Finally, Phlx offers other risk protections to member organizations including an Acceptable Trade Range protection at Options 3, Section 15(b)(1), an Anti-Internalization protection at Options 3, Section 15(c)(1), and an Automated Quotation Adjustments protection at Options 3, Section 15(b)(2).

The Exchange's proposal to adopt a new rule in Options 3, Section 6 that is identical to ISE, GEMX and MRX Options 3, Section 6 does not impose an inter-market burden on competition as other exchanges may adopt a similar rule.

The Exchange's proposal to adopt a new rule in Options 3, Section 6 that is identical to ISE, GEMX and MRX Options 3, Section 6 does not impose an intra-market burden on competition as this rule will apply uniformly to all quotations entered on the Exchange.

Options 3, Section 7

The Exchange's proposal to amend Phlx's existing order types so that they are identical to order types available on ISE, GEMX and MRX Options 3, Section 7 and to adopt new order types such as a Fill-or-Kill Order, Reserve Order, and Attributable Order does not impose an inter-market burden on competition as

other exchanges may determine to adopt similar order types.

The Exchange's proposal to amend Phlx's existing order types so that they are identical to order types available on ISE, GEMX and MRX Options 3, Section 7 and to adopt new order types such as a Fill-or-Kill Order, Reserve Order, and Attributable Order does not impose an intra-market burden because all market participants would be able to utilize all of the order types, except Market Makers with respect to Reserve Orders. The Exchange's proposal would permit Market Makers (and Lead Market Makers) to enter Market Orders and Stop Orders. All non-Public Customers would be permitted to enter AON Orders and Off-Floor Broker Dealers would not be restricted from entering AON Orders, Market Orders, Stop Market Orders, and public customer-to-public customer cross orders. Restricting Market Makers (and Lead Market Makers) from entering Reserve Orders does not impose an intra-market burden on competition because Market Maker (and Lead Market Maker) liquidity should be displayed, and Reserve Orders have non-displayed portions of liquidity.

Finally, the Exchange would no longer classify a market participant as an Off-Floor Broker Dealer because it is eliminating that category.

Options 3, Section 8

The Exchange's proposal to amend Options 3, Section 8, Options Opening Process, to make clarifying rule changes, add System detail concerning new order types, and adjust rounding does not impose an inter-market burden because other exchanges may adopt similar functionality. Today, ISE, GEMX and MRX Options 3, Section 8 contains similar functionality.

The Exchange's proposal to amend Options 3, Section 8, Options Opening Process, to make clarifying rule changes, add System detail concerning new order types, and adjust rounding does not impose an intra-market burden because all market participants would be subject to the Opening Process. The Exchange is removing limitations to routing Public Customer and Professional interest from the Opening Process.

Options 3, Section 9

The Exchange's proposal to amend Options 3, Section 9, Trading Halts, to mirror the treatment of Stop Orders in ISE, GEMX and MRX Options 3, Section 9(d)(3) and make other minor changes does not impose an inter-market burden because other exchanges may adopt similar functionality.

The Exchange's proposal to amend Options 3, Section 9, Trading Halts, to mirror the treatment of Stop Orders in ISE, GEMX and MRX Options 3, Section 9(d)(3) and make other minor changes does not impose an intra-market burden because all market participants would be subject to the Trading Halts rule.

Options 3, Section 10

The Exchange's proposal to amend Options 3, Section 10, Electronic Execution Priority and Processing in the System, to round up does not impose an inter-market burden because other exchanges may adopt similar rounding. The Exchange's proposal to amend Options 3, Section 10, to only offer the Directed Market Maker allocation if a Directed Market Maker's quote is at the better of the internal PBBO or the NBBO and not an order does not impose an inter-market burden because ISE, GEMX and MRX Options 3, Section 10(c)(1)(C) also allocate the Directed Market Maker enhancement in this manner. The Exchange's proposal to amend the Entitlement for Orders of 5 contracts or fewer to increase the percentage from 25% to 40% does not impose an inter-market burden on competition because ISE, GEMX and MRX Options 3, Section 10(a)(1)(D) provides for the same percentage.

The Exchange's proposal to amend Options 3, Section 10, Electronic Execution Priority and Processing in the System, to round up does not impose an intra-market burden because the Exchange is opting to round up and not down, uniformly and the proposed rounding methodology provides for the equitable allocation of contracts among the Exchange's market participants. The Exchange's proposal to amend Options 3, Section 10, to only offer the Directed Market Maker allocation if a Directed Market Maker's quote is at the better of the internal PBBO or the NBBO and not an order does not impose an intra-market burden because the Directed Market Maker only has corresponding obligations related to quoting. The Exchange's proposal to amend the Entitlement for Orders of 5 contracts or fewer to increase the percentage from 25% to 40% does not impose an intra-market burden on competition because the Exchange will continue to evaluate all Market Makers in accordance with the proposed new obligation which is the same obligation that exists on other options exchanges today such as ISE, GEMX and MRX Options 3, Section 10(a)(1)(D). If Phlx were to continue to review its member organizations for compliance with the 25% threshold it would remain at a competitive disadvantage to other options markets

that have a 40% threshold thereby making Phlx a less attractive venue for market making.

Options 3, Section 15

As it relates to inter-market competition, the Exchange notes that the basis for the majority of the proposed rule changes in this filing are aligning with the rules of BX, NOM, ISE, GEMX or MRX, which have been previously filed with the Commission, and therefore promotes fair competition among the options exchanges. As noted above, the proposed changes to the risk protections will provide more consistent technology offerings across the Nasdaq affiliated exchanges, and for this reason, the Exchange does not believe its proposal will impose an undue burden on intermarket competition. The Exchange also notes that market participants on other exchanges are welcome to become participants on the Exchange if they determine if this proposed rule change has made Phlx a more attractive or favorable venue.

All of the proposed changes related to the risk protections (OPP, MWRP, Acceptable Trade Range, Anti-Internalization, Quotation Adjustments, Post-Only Quoting Protection and Active Quote Protection) do not impose an undue burden on intra-market competition as they are all aimed at mitigating market participant risk associated with trading on the Exchange. The proposed changes are designed to benefit market participants in that they will provide a more consistent technology offering for market participants on Nasdaq affiliated exchanges. The Exchange also notes that some of the proposed risk controls (e.g., Delta and Vega Thresholds and Post Only Quoting Protection) are completely voluntary. The Post-Only Quoting Protection proposal does not impose a burden on inter-market competition, because member organizations may choose to become market makers on a number of other options exchanges, which may have similar but not identical features. The Exchange does not believe that the proposed Active Quote Protection functionality will impose any undue burden on intra-market competition as it is aimed at mitigating exposure to excessive risk when trading on the Exchange. While the Exchange will offer the proposed functionality to Market Makers only, the proposed risk protection is intended to provide Market Makers with an additional tool to manage their risk parameters in a manner they deem appropriate. As such, the Exchange believes that the proposed functionality may facilitate Market Makers' provision

of liquidity on the Exchange, thereby benefitting all market participants through additional execution opportunities at potentially improved prices. Offering Market Makers the ability to configure their quotes as Post-Only will allow all market participants on Phlx to add liquidity only if desired. Further, the proposed risk protection allows Market Makers the ability to avoid removing liquidity from the Exchange's order book if their quote would otherwise lock or cross any resting order or quote on the order book upon entry, thereby protecting investors and the general public as Market Makers transact a large number of orders on the Exchange and bring liquidity to the marketplace. Market Makers are required to add liquidity on the Exchange and, in turn, are rewarded with lower pricing and enhanced allocations. Specifically, the risk protection would permit Market Makers to add liquidity only and avoid removing interest on the order book thereby maximizing the benefit of their quoting to bring liquidity to Phlx by allowing Market Makers to provide as much liquidity as possible. Unlike other market participants, Market Makers have certain obligations on the market. Market Makers are required to provide continuous two-sided quotes on a daily basis¹⁴⁵ and are subject to various obligations associated with providing liquidity on the market.¹⁴⁶ Market Makers are the sole liquidity providers on the Exchange and, therefore, are offered certain quote risk protections noted within Options 3, Section 15 to allow them to manage their risk more effectively.

Options 3, Section 23

As it relates to the elimination of fees for TradeInfo from Options 7, the Exchange believes that its proposal does not impose an undue burden on competition because TradeInfo would no longer be available to any Members. The Exchange notes that members can continue to receive similar information through CTI, which is available to all member organizations, and FIX can be used to cancel orders today, which is also available to all members.

Options 3, Section 28

The Exchange believes that introducing the optional quantity and notional value risk protections does not impose an undue burden on inter-market competition as the identical functionality exists on ISE, GEMX and MRX at Options 3, Section 28.

¹⁴⁵ See Phlx Options 2, Section 5.

¹⁴⁶ See Phlx Options 2, Section 4.

The Exchange believes that introducing the optional quantity and notional value risk protections does not impose an undue burden on intra-market competition as it will provide market participants with another tool to manage their order risk.

Options 5, Section 4

The Exchange's proposal to amend its routing rule, similar to ISE Options 5, Section 4, with respect to FIND Orders and SRCH Orders, does not impose an undue burden on inter-market competition because the Exchange will provide Phlx member organizations the same choices with respect to routing that is afforded to ISE members today.

The Exchange's proposal to amend its routing rule, similar to ISE Options 5, Section 4, with respect to FIND Orders and SRCH Orders does not impose an undue burden on intra-market competition because the proposed routing rules apply to all market participants including routing during an Opening Process. The Exchange believes that adding greater detail to its rules does not impose an undue burden on intra-market competition, rather it provides greater transparency as to the potential outcomes when utilizing different routing strategies. As is the case today, market participants may elect not to route their orders.

Options 6, Section 1

The Exchange's proposal to amend Options 6, Section 1, Authorization to Give Up, does not impose an undue burden on inter-market competition because other market today have the same Give-Up process.¹⁴⁷

The Exchange's proposal to amend Options 6, Section 1, Authorization to Give Up, does not impose an undue burden on intra-market competition, rather it will permit both floor and electronic members to indicate a Give-Up at the time of trade. Today, electronic trading members indicate a Give-Up in the post allocation process. The proposal will create a uniform process for Give-Up for all member organizations and harmonize Phlx's Options 6, Section 1 rule to ISE, GEMX and MRX Options 6, Section 1.

Options 8, Section 32

The Exchange's proposal to amend an All-Or None Order at current Options 8, Section 32(b)(3) to remove the restriction that it can only be submitted by a Public Customer does not impose an undue burden on inter-market competition because other markets

today offer the All-or-None Order to all market participants.¹⁴⁸

The Exchange's proposal to amend an All-Or None Order at current Options 8, Section 32(b)(3) to remove the restriction that it can only be submitted by a Public Customer does not impose an undue burden on intra-market competition because all Phlx members will be able to utilize this order type. The Exchange's proposal to add an OPC TIF as an available TIF for the trading floor does not impose an undue burden on intra-market competition because all Phlx members will be able to utilize this TIF.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act¹⁴⁹ and subparagraph (f)(6) of Rule 19b-4 thereunder.¹⁵⁰

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule

change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-Phlx-2024-71 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-Phlx-2024-71. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-Phlx-2024-71 and should be submitted on or before January 21, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁵¹

Vanessa A. Countryman,
Secretary.

26 CFR Part 1

Gross Proceeds Reporting by Brokers That Regularly Provide Services
Effectuating Digital Asset Sales; Final Rule

DEPARTMENT OF THE TREASURY**Internal Revenue Service****26 CFR Part 1**

[TD 10021]

RIN 1545–BR39

Gross Proceeds Reporting by Brokers That Regularly Provide Services Effectuating Digital Asset Sales**AGENCY:** Internal Revenue Service (IRS), Treasury.**ACTION:** Final regulations.

SUMMARY: This document contains final regulations regarding information reporting by brokers that regularly provide services effectuating certain digital asset sales and exchanges. The final regulations require these brokers to file information returns and furnish payee statements reporting gross proceeds on dispositions of digital assets effected for customers in certain sale or exchange transactions.

DATES:

Effective date: These regulations are effective on February 28, 2025.

Applicability dates: For dates of applicability, see § 1.6045–1(q).

FOR FURTHER INFORMATION CONTACT:

Roseann Cutrone or Jessica Chase of the Office of the Associate Chief Counsel (Procedure and Administration) at (202) 317–5436 (not a toll-free number).

SUPPLEMENTARY INFORMATION:**Authority**

This document contains amendments to the Income Tax Regulations (26 CFR part 1) by adding final regulations under section 6045 of the Internal Revenue Code (Code) to require certain decentralized finance industry participants to file and furnish information returns as brokers. Section 6045(a) provides an express delegation of authority to the Secretary of the Treasury or her delegate (Secretary) to require every person doing business as a broker to make returns, in accordance with such regulations as the Secretary may prescribe, showing the name and address of each customer, with such details regarding gross proceeds and such other information as the Secretary may by forms or regulations require. Section 80603 of the Infrastructure Investment and Jobs Act, Public Law 117–58, 135 Stat. 429, 1339 (2021) (Infrastructure Act) amended section 6045 clarify the definition of broker as it relates to persons responsible for regularly providing services effectuating transfers of digital assets, to expand the categories of assets for which basis

reporting is required to include all digital assets, and to provide a definition for the term digital assets. Finally, the Infrastructure Act provided that these amendments apply to returns required to be filed, and statements required to be furnished, after December 31, 2023, and provided a rule of construction stating that these statutory amendments shall not be construed to create any inference for any period prior to the effective date of the amendments with respect to whether any person is a broker under section 6045(c)(1) or whether any digital asset is property which is a specified security under section 6045(g)(3)(B).

The final regulations are also issued under the express delegation of authority under section 7805(a) of the Code. Section 7805(a) authorizes the Secretary to “prescribe all needful rules and regulations for the enforcement of [the Code], including all rules and regulations as may be necessary by reason of any alteration of law in relation to internal revenue.” The Infrastructure Act amended section 6045, and the Secretary has determined that these final regulations are needful for the enforcement of the Code because tax compliance would be increased if brokers were required to file information returns, and furnish payee statements, under section 6045. See Proposed Rules, Gross Proceeds and Basis Reporting by Brokers and Determination of Amount Realized and Basis for Digital Asset Transactions, 88 FR 59576 (August 29, 2023) (describing need for regulation and its anticipated impact on tax administration).

Background

On August 29, 2023, the Treasury Department and the IRS published in the **Federal Register** (88 FR 59576) proposed regulations (REG–122793–19) (proposed regulations) relating to information reporting under section 6045 by brokers. These proposed regulations included rules that would apply to brokers that generally act as agents and dealers in transactions with their customers involving digital assets, which are defined generally as any digital representation of value that is not cash and is recorded on a cryptographically secured distributed ledger (that is, a database that records transactions across multiple computers) or any similar technology. The proposed regulations also included rules that would apply to brokers that act as digital asset middlemen, a new category of broker proposed to address the use of digital assets to make certain payments and to reflect the clarified definition of broker under the Infrastructure Act.

This proposed new category of broker would include certain participants that operate within the segment of the digital assets industry that is commonly referred to as decentralized finance (DeFi).¹ The DeFi industry offers services that allow for transactions that use automatically executing software commonly referred to as smart contracts based on distributed ledger technology without any participant in the DeFi industry (DeFi participant) taking custody of the private keys used for accessing the digital asset customer’s digital assets on a distributed ledger. Additionally, the proposed regulations included specific rules under section 1001 of the Code for determining the amount realized in a sale, exchange, or other disposition of digital assets and under section 1012 of the Code for calculating the basis of digital assets.

The proposed regulations stated that written or electronic comments provided in response to the proposed regulations must be received by October 30, 2023. The due date for comments was extended until November 13, 2023. In response to the proposed regulations, the Treasury Department and the IRS received over 44,000 written comments.² All posted comments were considered and are available at <https://www.regulations.gov> or upon request. A public hearing was held on November 13, 2023. In addition, the Treasury Department and the IRS continued to accept late comments through noon eastern time on April 5, 2024.

On July 9, 2024, the Treasury Department and the IRS published in the **Federal Register** (89 FR 56480) final regulations (REG–122793–19) (TD 10000) regarding information reporting by certain brokers and the determination of amount realized and basis for certain digital asset sales and exchanges. TD 10000 generally applies to digital asset brokers that act as agents for a party in the transaction, such as operators of custodial digital asset trading platforms, certain digital asset hosted wallet providers, and certain processors of digital asset payments (PDAPs), as well as persons that interact with their customers as counterparties to transactions, such as owners of digital asset kiosks, brokers who accept digital

¹ This preamble’s use of the DeFi term is not intended to create any inference as to whether or not this segment of the digital assets industry operates without any centralized participants.

² Although <https://www.regulations.gov> indicated that over 125,000 comments were received, the Treasury and the IRS did not actually receive over 125,000 comments. Instead, 125,000 reflects the number of “submissions” that each comment self-reported as being included in the comment, whether or not the comment actually included such separate submissions.

assets as payment for commissions and certain other property, brokers that transact as dealers in digital assets, and certain issuers of digital assets who regularly offer to redeem those digital assets. Additionally, TD 10000 finalized specific rules under section 1001 for determining the amount realized in a sale, exchange, or other disposition of digital assets and under section 1012 for calculating the basis of digital assets.

TD 10000 did not finalize the definition of digital asset middleman from the proposed regulations as applied to DeFi participants (referred to in the preamble to TD 10000 as non-custodial industry participants) because the Treasury Department and the IRS determined that additional consideration of the issues and comments received with respect to these participants was warranted. Instead, TD 10000 reserved on the proposed definition of digital asset middleman that would have treated these participants as brokers. The preamble to TD 10000 also indicated that the Treasury Department and the IRS intend to expeditiously issue separate final regulations with respect to these participants.

The *Summary of Comments and Explanation of Revisions* of these final regulations summarizes the digital asset middleman provisions in the proposed regulations that were reserved in TD 10000, which provisions are explained in greater detail in the preamble to the proposed regulations. After considering the comments to these provisions, the reserved portion of the proposed regulations relating to the definition of a digital asset middleman is adopted as amended by this Treasury decision in response to such comments as described in the *Summary of Comments and Explanation of Revisions*.

These final regulations concern Federal tax laws under the Internal Revenue Code only. No inference is intended with respect to any other legal regime, including the Federal securities laws and the Commodity Exchange Act, or the Bank Secrecy Act and its implementing regulations, which are outside the scope of these regulations.

Summary of Comments and Explanation of Revisions

I. Comparison of the Decentralized Digital Asset Ecosystem With the Securities Industry

A few comments received in response to the proposed regulations asserted that the definition of broker in the final regulations should not extend beyond the scope of the definition of broker in the regulations that apply to securities

industry participants in carrying out securities transactions. The Treasury Department and the IRS disagree with these comments and address them in Part II of this *Summary of Comments and Explanation of Revisions*. Before turning to that discussion, however, the Treasury Department and the IRS believe that a comparison of the functions carried out by brokers and other participants in the securities industry with the functions carried out by DeFi participants is useful in analyzing how the broker definition should apply to DeFi participants.

A. The Securities Industry

In the securities industry, the sale of a security typically involves three fundamental functions, each of which is necessary for the trade to take place. First, a customer will give a trade order to sell its securities to a securities broker, specifying the details of the order, such as the quantity and identity of the securities to be sold. Second, the securities broker will route the order details to a trading center, such as a national securities exchange or an alternative trading center, for example in the case of U.S. equities the New York Stock Exchange (NYSE) or the Nasdaq Stock Market, to execute the order. Third, once the exchange or other trading center finds a counterparty to the customer's order, the matched trade will be sent to a clearing organization that will record and settle the transaction by moving the traded securities and funds between the accounts of the two brokers representing the matched customers. While other financial institutions may be involved in the sale transaction, and the functions involved may involve additional steps, these three functions are core functions.³

The securities broker that receives the customer's order may offer additional services. For example, while retail customers many years ago held physical stock and bond certificates themselves

or with third-party custodians, today a securities broker or affiliate of that broker typically will hold a retail customer's securities as a custodian, although there are still limited circumstances under which an individual may hold physical securities certificates. For institutional customers, it is common for a financial institution other than the securities broker that receives the customer's trade order to hold the customer's securities. In some cases, for example in the case of an insurance company or pension plan, the customer's securities may be held by a bank that offers specialized custodial services. In other cases, for example in the case of a hedge fund, the customer's securities may be held by its primary securities broker, referred to as a prime broker, but the customer may give the order to a different broker, referred to as an executing broker, that offers lower fees or other terms preferred by the customer. If the securities broker taking the customer's order does not hold the customer's securities, the executing broker and the financial institution holding the customer's securities will communicate with each other to ensure that the trade is executed smoothly by the exchange or other trading center.

The market that executes the transaction may be a national securities exchange, as described above. Alternatively, the trade may be executed on an alternative trading center or by a single-dealer platform or wholesale broker. The function of all these trading centers is to match a sale order with a buy order.⁴ Another possibility is that the securities broker may not go to an external trading center to execute the trade. Instead, if the securities broker is also a dealer in those securities, it may fill the order by acting as the counterparty to the customer's trade. Alternatively, the securities broker may match the sell order with a buy order from another customer.

The last step in the transaction is for the sale to be cleared and settled. Clearing and settlement of a sale of securities involves verifying that the terms of the buy and sell orders match and carrying out the movement of securities from the account of the seller's securities broker to the account of the buyer's securities broker (which credits those securities to the buyer) and the movement of cash in the reverse direction. This function is carried out by a specialized financial institution that may be referred to as a clearing organization.

⁴ See FINRA, *Where Do Stocks Trade?* (September 28, 2023), available at <https://www.finra.org/investors/insights/where-do-stocks-trade>.

Historically, communications between securities brokers and their customers took place in person or by telephone. Customers now may communicate a trade order to a securities broker through a mobile device application (mobile device app) or a website accessible via a computer or mobile device. The mobile device app or website provides a user interface with visual elements that enable customers to see the services offered and buttons and fill-in screens to enable customers to communicate trading instructions to the broker through the mobile device app or website. For example, a customer may access a mobile device app or website offered by a securities broker to select among a number of possible transactions, make its selection via buttons and fill-in screens, and authorize the purchase or sale of securities by clicking a button. Doing so generates a trade order in the form of software code which is transmitted to the broker's systems and used to initiate the remaining steps in the transaction. Similarly, each of the other steps in the sale of a security typically now take place electronically, through specialized software.

B. The Decentralized Digital Asset Ecosystem

DeFi service providers use distributed ledger technologies to offer investment and other financial services, similar to those provided in the securities industry by securities brokers and exchanges, that enable customers to carry out trades of digital assets using applications,⁵ sometimes referred to as DeFi applications or dApps, without relying on a traditional centralized financial intermediary. The services provided generally involve multiple DeFi participants performing various functions throughout the process in order to complete a customer's transaction, including: the intake of a customer's trade order details and communication of that order to the validation network for execution of the trade using the automatically executing contracts of the DeFi protocol and for recordation and settlement of the trade via a consensus mechanism. Because these steps do not require the involvement of a centralized financial intermediary (although some participants may in fact be structured as such), they rely on software programs. Additional services and/or service providers may also be involved in the

transaction. For example, another type of DeFi application, commonly referred to as a DeFi aggregator, may communicate the customer's trade to the DeFi protocol with the most favorable trade execution terms.

Several comments received in response to the proposed regulations referenced or described a model, referred to by some in the DeFi industry as the DeFi technology stack model or the DeFi stack reference model, which describes the components and functions involved in the communication, execution, and settlement of a typical DeFi transaction. This DeFi technology stack model is also described in several scholarly papers.⁶ The DeFi technology stack model classifies the technologies involved in the communication, execution, and settlement of a typical DeFi transaction into different technology layers, with each layer representing the performance of a different function in carrying out the overall transaction. In its simplest form, the DeFi technology stack model describes three primary technology layers—the interface layer, the application layer, and the settlement layer—even though these layers can be further subdivided into sub-layers. See BIS Paper at 4 (describing the application layer as having three sublayers). Other scholars describe the DeFi technology stack model as having more than three primary technology layers without subdivision within each layer. See e.g., FRB Review at 155 (describing five primary layers). Regardless of the number of layers described by any given model, the functionality provided by each layer is generally needed to complete the communication, execution, and settlement of a digital asset transaction involving DeFi participants. See BIS Paper at 4. For simplicity's sake, this preamble describes the DeFi technology stack model with three primary layers because that model is sufficient for the purpose of analyzing the issues raised by the comments received in response to the proposed regulations.

In general terms, the three-layer DeFi technology stack model places the interface layer at the top of the DeFi

technology stack model because this is the layer with which most users of digital assets interact. The interface layer is the layer that enables digital asset users to communicate with DeFi participants operating on the other layers for ultimate execution and settlement of the transaction. The interface layer does so by providing software (sometimes referred to as front-end services) that provides the digital asset user with tools—including screens, buttons, forms, and other visual elements incorporated in websites, mobile device apps, and browser extensions—that users can use to trade digital assets in their unhosted wallets⁷ using DeFi protocols or DeFi aggregators operating on the application layer. The application layer is the layer that executes the user's trade order as part of the validation process. It is comprised of DeFi protocols that consist of automatically executing software programs or smart contracts that, when called upon, perform a predetermined series of actions, for example exchanging digital asset A for digital asset B, when certain conditions are met. Finally, the settlement layer is generally responsible for recording financial transactions on the distributed ledger, including transactions conducted by users that trade digital assets using DeFi protocols. Each of these layers are described in more detail in Parts I.B.1., 2., and 3. of this *Summary of Comments and Explanation of Revisions*.

While not included in the three-layer model described in the BIS Paper, an important component of a DeFi transaction is the use of an unhosted wallet by digital asset users. A wallet is a means of storing, electronically or otherwise, a user's private keys to digital assets (more technically, the private keys to distributed ledger digital asset addresses as defined in § 1.6045–1(a)(20)) held by or for the user. Private keys are required to conduct transactions with the digital assets associated with those keys and are sometimes analogized to a password to a bank or investment account. In contrast to a hosted wallet, in which a custodial service electronically stores the private keys to digital assets held on behalf of digital asset users, an unhosted wallet is a non-custodial means of storing a user's private keys to digital assets held by or for the user. See § 1.6045–1(a)(25)(i) and (iii). A broadly

⁵ In the context of the DeFi ecosystem, these final regulations use the term *execute* to refer to the activation of the automatically executing contracts of DeFi applications and not to the simultaneous activities of validators that initiate this activation.

⁶ See e.g., R. Auer, B. Haslhofer, S. Kitzler, P. Saggese, and F. Victor, *The Technology of Decentralized Finance (DeFi)*, Bank for International Settlements (January 2023) (BIS Paper), at 3, available at: <https://www.bis.org/publ/work1066.htm>, and F. Schär, *Decentralized Finance: On Blockchain—and Smart Contract-Based Financial Markets*, Federal Reserve Bank of St. Louis Review, at 153, 156 (2d Qtr. 2021) (FRB Review), available at: <https://research.stlouisfed.org/publications/review/2021/02/05/decentralized-finance-on-blockchain-and-smart-contract-based-financial-markets>.

⁷ References in this preamble to an owner holding digital assets generally or holding digital assets in a wallet are meant to refer to holding or controlling the keys to the digital assets and, thus, the ability to transfer those digital assets. See § 1.6045–1(a)(25)(iv).

analogous fact pattern (disregarding the technological differences) in the securities industry would be the use of a home safe by an investor to store the investor's securities certificates, so that only the investor controls what happens with those certificates. Unhosted wallets also typically include software that enables digital asset users to use their private keys, generally by signing or authorizing a transaction. Unhosted wallets may also provide wallet users with other services, such as tools that enable users to interact with the DeFi marketplace.

1. The Interface Layer

While DeFi protocols execute exchanges of digital assets, interacting directly with a DeFi protocol requires the ability to write software code that will communicate with other participants in the DeFi ecosystem. Although some digital asset users possess these technical skills, most retail digital asset users do not. Instead, most retail digital asset users use the services provided by other participants in the DeFi ecosystem that offer a more user-friendly way to specify the details of the transaction they wish to carry out and to communicate that order so that it can be carried out. These services are generally referred to as front-end services because they are provided at the front end of a transaction and are classified as the interface layer because they are the services that most users face.

Providers of front-end services typically offer a suite of services that enable their customers to view the market conditions relating to a customer's proposed trade, to input their proposed trade, and then to initiate the additional steps necessary to trade their digital assets (trading front-end services). Providers of these trading front-end services are referred to here as trading front-end service providers. This suite of services may be offered as part of the enhanced services offered by an unhosted wallet or alternatively by a website or mobile app to which customers connect their unhosted wallets. In either case, this service is provided through software that assists customers in initiating digital asset transactions, such as an exchange of digital asset A for digital asset B using a DeFi protocol. For example, when digital asset user C seeks to trade digital assets in C's unhosted wallet using a DeFi protocol, C may use a mobile device app or a website accessible via computer or mobile device that is designed for that purpose. Embedded in that mobile device app or website is software that provides C with visual

elements that enable C to see the services offered, such as screens to view the distributed ledger market and potential trade transactions and buttons for C to press to communicate C's desired transaction order.

When customers use trading front-end services, they will typically be provided with an array of available digital asset trading pairs applicable to the digital assets they hold in their unhosted wallets. For example, a customer that wishes to exchange a digital asset will be shown a menu of the trading pairs available for exchange of the customer's digital asset for different digital assets as well as the current exchange rate for each potential trade. Some trading front-end services also offer customers the ability to choose the DeFi trading application that will execute their transaction. After a customer reviews the available trading pairs and decides on a potential transaction, the customer will input the necessary trade order information. Thereafter, the trading front-end service will typically ask the customer to confirm the specific trade order details. If the trade order details are confirmed by the customer, the trading front-end service will convert that trade order information into software code in the form of a data object, referred to here as coded trade order instructions. The coded trade order instructions include all of the details of the transaction, including how many digital assets to remove from the customer's unhosted wallet, the fees (if any) payable to the trading front-end service provider, and whether these fees will be withheld from the amount of digital assets disposed or the digital assets received in the trade. The coded trade order instructions must specify the particular DeFi trading protocol that will execute the customer's trade. The coded trade order instructions also specify the type of digital assets the customer will receive at the completion of the transaction and may specify the digital asset address into which the received digital assets should be transferred. In advance of certain transactions requested by the customer, the provider of trading front-end services will also obtain the customer's permission for the particular DeFi protocol to move digital assets out of the customer's wallet in one or more transactions. Without this service, many customers' trades cannot be executed.

After the coded trade order instructions are complete, the next step is for the customer to authorize or sign the transaction, for example by clicking a button in the customer's wallet. Once the customer authorizes the transaction in their wallet, the unhosted wallet then

forwards the signed transaction to a communication node for broadcast to the distributed ledger network, where it will stay as a pending transaction until a validator chooses to include it in a block, and the block is added to the distributed ledger. As part of the validator's processing of a DeFi protocol transaction, the coded trade order instructions provided through the trading front-end services call the applicable DeFi protocol's automatically executing smart contracts, which execute the transaction by performing the operations it was coded to perform without human intervention. In less technical terms, once the customer authorizes the transaction, the coded trade order instructions determine the subsequent steps in the transaction as it is processed. In short, trading front-end services permit a customer to select, confirm, and communicate the details of a trade transaction that it wishes to carry out using a DeFi protocol so that the transaction can be executed and settled by other DeFi participants. Notwithstanding differences in the technology used and the details of the mechanisms by which a customer's order is carried out, these services are similar to those provided to a customer by a traditional securities broker that does not hold or custody a customer's assets.

In some cases, a trading front-end service provider might take control of the customer's digital assets by routing the customer's digital assets to an address controlled by the trading front-end service provider, for example, where the trading front-end services include DeFi aggregator services.

Unhosted wallet providers do not necessarily offer the trading front-end services described in the previous paragraphs. Unhosted wallet providers may offer only more limited, basic wallet services or they may offer both basic wallet services and trading front-end services. As discussed in Part III.A.2. of this *Summary of Comments and Explanation of Revisions*, a core function of an unhosted wallet is to store private keys to distributed ledger digital asset addresses, so that wallet users can securely hold their digital assets at those addresses. In addition, as part of the basic wallet services, unhosted wallet providers typically include software that enables their customers to use those private keys to sign or authorize a transaction, similar to inputting a password or passcode to authorize other types of online transactions. Many providers of unhosted wallets also provide basic wallet services that enable their customers to transfer digital assets from

one wallet to another wallet. A customer that wishes to use trading front-end services but whose unhosted wallet provider does not offer the desired services or does not offer them at a competitive price, can use the trading front-end services provided by a third-party website or a mobile device app by connecting their unhosted wallet to that third-party website. To carry out any transaction that will be recorded on the distributed ledger, the unhosted wallet will broadcast the signed transaction to the distributed ledger network, often through the use of specialized communication nodes. The basic wallet services described in this paragraph can be distinguished from the enhanced wallet services in which the trading front-end services used to interact with a DeFi protocol (described in the previous paragraphs in this part) or a DeFi aggregator that communicates the customer's trade to the DeFi protocol with the most favorable trade execution terms are provided by the unhosted wallet.

2. The Application Layer

The application layer is in the middle of the three-layer DeFi technology stack model. One of the core functions of the application layer is to provide DeFi protocols that users can interact with to trade digital assets. DeFi protocols provide a function that is analogous to the function provided by a stock exchange or other trading center for matching buy and sell orders in the securities industry, although there are technological differences as to how that function is carried out.

A DeFi protocol is comprised of computer software that utilizes distributed ledger technology to provide digital asset exchange services through automatically executing software that performs a predetermined series of actions when certain conditions are met. BIS Paper at 2. One type of DeFi protocol is an automated market maker. BIS Paper at 4. Some DeFi protocols create an exchange marketplace by pooling digital assets provided by multiple digital asset users to create market liquidity. *Id.*

As discussed in I.B. of this *Summary of Comments and Explanation of Revisions*, another type of DeFi application relevant to the purchase and sale of digital assets is a DeFi aggregator. DeFi aggregators interact with, and use the services of, other DeFi protocols. BIS Paper at 4. A DeFi aggregator communicates a user's trade order to a DeFi protocol that may offer the most favorable trade execution terms.

Although DeFi applications can facilitate many types of activities, such

as non-custodial staking and re-staking, this preamble focuses only on DeFi protocols and DeFi aggregators that enable digital asset users to exchange digital assets for different digital assets, referred to respectively as DeFi trading protocols and DeFi trading aggregators and collectively as DeFi trading applications.

Many of the comments describe DeFi trading applications as having immutable software that cannot be changed. However, many of these DeFi trading applications can simply be replaced by other applications that have new or different features, thus allowing for software upgrades in practice. In other cases, a DeFi trading application may have an "administration key" or similar tool that allows developers, founders, or other persons to modify the software, such as by changing or updating certain variables within the software. The details of the changes that can be made to the software, and who can make them, however, are different with each DeFi trading application.

3. The Settlement Layer

The settlement layer is at the bottom of the three-layer DeFi technology stack model. The settlement layer is generally responsible for completing financial transactions and discharging the obligations of all involved parties. BIS Paper at 4. Settlement involves recording financial transactions on the distributed ledger. This function is comparable to the clearing and settling of securities transactions, some of which are now being settled through distributed ledger technology. Settlement of a digital asset transaction is achieved by validators including the transaction in a block and adding that block to the blockchain through a consensus mechanism that resolves potential conflicts using consensus standards developed by the distributed ledger network. *Id.* In addition to validators, there are other DeFi participants, such as block builders, that may participate in this process. Once recorded, transactions are generally immutable, meaning they cannot be reversed. The recording of a transaction on the settlement layer generally effects a "state change" in a distributed ledger.

II. Statutory Authority To Treat DeFi Participants as Brokers

A. Background

Before the amendments made to the Infrastructure Act, the definition of broker in section 6045(c)(1) included a dealer, a barter exchange, and a person who (for consideration) regularly acts as a middleman with respect to property or

services. See section 6045(c)(1)(A), (B), and (C). The Infrastructure Act, in section 6045(c)(1)(D), added a new clause to the definition of broker: any person who (for consideration) is responsible for regularly providing any service effectuating transfers of digital assets on behalf of another person.

Section 1.6045-1(a)(1)⁸ defines brokers that are required to report under section 6045. Under this section, "any person . . . that, in the ordinary course of a trade or business during the calendar year, stands ready to effect sales to be made by others" is a broker obligated to file information returns under section 6045. Section 1.6045-1(a)(10) of the pre-TD 10000 regulations defined effect for this purpose to mean either to act as a principal with respect to a sale (for example, a dealer in securities who buys a security from one customer and then sells that security to another customer) or to act as an agent with respect to a sale if the nature of the agency is such that the agent ordinarily would know the gross proceeds of the sale. Because the regulatory definition of the term broker includes a reference to effecting sales, the definition of the term effect affects the types of persons who are treated as brokers. In addition, § 1.6045-1(a)(4) further defines a barter exchange that is a broker under section 6045(c)(1)(B) as any person with members or clients that contract either with each other or with such person to trade or barter property or services either directly or through such person.

In § 1.6045-1(a)(10)(i)(D), TD 10000 added to the definition of effect: to act as a digital asset middleman for a party in a sale of digital assets. Section 1.6045-1(a)(21)(i) defined a digital asset middleman for this purpose as any person who, with respect to a sale of digital assets, provides a facilitative service. Section 1.6045-1(a)(21)(iii)(B)(1) through (4) defined a facilitative service by referencing five specific services in which the broker acts either as an agent or a counterparty in a digital asset sale.

Proposed § 1.6045-1(a)(21)(iii)(A) would have also included in the facilitative services definition any service that directly or indirectly effectuates a sale of digital assets, such as providing a party in the sale with access to an automatically executing contract or protocol, providing access to digital asset trading platforms, providing an automated market maker

⁸ Unless otherwise qualified, regulation section references refer to the final regulations in effect before the effective date of these final regulations. The final regulations in effect before the effective date of TD 10000 will collectively be referred to as the pre-TD 10000 regulations.

system, providing order matching services, providing market making functions, providing services to discover the most competitive buy and sell prices, or providing escrow or escrow-like services to ensure both parties to an exchange act in accordance with their obligations. To be covered by this proposed rule, under proposed § 1.6045–1(a)(21)(i), the person providing facilitative services would have to ordinarily know or be in a position to know the identity of the party making the sale and the nature of the transaction. Proposed § 1.6045–1(a)(21)(iii)(A) would have excepted from the definition of facilitative services certain validation services if conducted by a person engaged in the business of providing distributed ledger validation services and certain sales of hardware or licenses of software by persons engaged in the business of selling hardware or licensing software, for which the sole function is to permit persons to control private keys which are used for accessing digital assets on a distributed ledger. TD 10000 reserved on both the facilitative service definition under proposed § 1.6045–1(a)(21)(iii)(A) and the definition of the ordinarily would know or position to know standard (together referred to herein as the position to know standard) under proposed § 1.6045–1(a)(21)(ii). The proposed text for these provisions is discussed more fully in Parts III.A.2., III.A.3., and III.A.4. of this *Summary of Comments and Explanation of Revisions*.

B. Comments Received

1. The Statutory Language

The Treasury Department and the IRS received numerous comments directed at the facilitative services definition under the proposed new digital asset middleman rules. As a threshold matter, several comments argued that this definition is inconsistent with the plain meaning of the broker definition under section 6045(c)(1)(D). Other comments asserted that the broker definition under section 6045(c)(1)(D) is limited to persons acting as agents in digital asset transactions. One comment cited Merriam-Webster Dictionary's definition of broker, as "someone who acts as an intermediary: such as . . . an agent who negotiates contracts of purchase and sale . . . [or] an agent who arranges marriages,"⁹ as support for this assertion. Other comments reasoned that the term effectuate was meant to be synonymous with the term "effect" in

§ 1.6045–1(a)(10) of the pre-TD 10000 regulations, which, the comment stated, for over 35 years has required the broker to act as an agent (or principal) in the transaction. *See* TD 7873, 48 FR 10302 (March 11, 1983). Another comment also focused on the definition of "customers" in the pre-TD 10000 regulations to similarly argue that section 6045(c)(1)(D) should not expand the scope of the broker definition beyond persons acting as agents or principals in a transaction. Specifically, the term customer is defined in § 1.6045–1(a)(2) to mean the person that makes the sale if the broker acts as an agent for such person in the sale, as a principal in the sale, or as a participant in the sale responsible for paying to such person or crediting to such person's account the gross proceeds on the sale. Because the definition of customer under the pre-TD 10000 regulations requires that the broker-customer relationship be an agency, principal, or payor relationship, this comment argued that section 6045(c)(1)(D) should similarly be limited to persons acting as agents or principals in the sale.

As discussed in Parts II.B.1.a. and II.B.1.b. of this *Summary of Comments and Explanation of Revisions*, the Treasury Department and the IRS do not agree that the statutory language defining broker under section 6045(c)(1)(D) is limited only to persons that act as the customer's agent (or as a principal/dealer) in a digital asset transaction.

a. The Definition of Broker Prior to the Infrastructure Act

For over 35 years, the Code has set forth a broad definition of broker under section 6045(c)(1). Under this definition, the term broker is not limited to conventional securities brokers. Rather, the statutory language defines the term broker to include several other types of market participants. First, section 6045(c)(1)(A) treats a dealer as a broker. Dealers typically hold inventory and act as principals in sale transactions. *George R. Kemon v. Commissioner*, 16 T.C. 1026 (1951).

Second, under section 6045(c)(1)(B), the term broker includes a barter exchange, which is defined in section 6045(c)(3) to mean any organization of members providing property or services who jointly contract to trade or barter such property or services. Long-standing regulations define a barter exchange to mean any person with members or clients that contract either with each other or with such person to trade or barter property or services either directly or through such person. *See*

§ 1.6045–1(a)(4). The regulations require these barter exchanges to report an exchange of property or services if the barter exchange arranges a direct exchange of property or services among its members or clients. *See* § 1.6045–1(e)(2). That is, a barter exchange is treated as a broker if it merely provides the service of bringing together the parties to the exchange, without acting as either an agent or a principal to the exchange.

Third, under section 6045(c)(1)(C), the statutory broker definition includes certain middlemen with respect to property or services. Because the statutory language must be given meaning, the term middleman must include persons who would not otherwise be considered brokers under the definition without section 6045(c)(1)(C). Pursuant to this authority, the section 6045 regulations treat certain payors and agents as brokers, including professional custodians as well as dividend reinvestment agents that do not take custody of customer securities. *See* § 1.6045–1(b)(1)(ii) and (v) (*Example 1*). Additionally, the flush language in section 6045(c) expressly exempts a person that manages a farm on behalf of another person from the definition of broker with respect to their farm management activities. *See* H.R. Rep. No. 100–795, at 360 (1988) (the bill exempts farm managers from the requirement of filing a Form 1099–B with respect to their farm management activities because this information must already be filed, in a more useful format, by these farm managers on a Schedule F, thus, making the Form 1099–B duplicative). This farm-manager exemption shows that Congress broadly construed the term middleman beyond conventional securities brokers. In addition, § 1.6045–1(b)(2)(ii) and (vii) (*Example 2*) provide specific exclusions for stock exchanges and clearing organizations, which, absent those exclusions, would be middlemen treated as brokers. Indeed, virtually all other persons that § 1.6045–1(b)(2) (*Example 2*) illustrates as non-brokers, including certain stock transfer agents for a corporation, certain escrow agents or nominees, and certain floor brokers on a commodities exchange, are examples of persons that could be considered middlemen.

Thus, prior to the Infrastructure Act, the term broker under section 6045(c)(1) included specified types of principals, custodial agents, non-custodial agents, payors, and service providers, pursuant to the statute and long-standing implementing regulations. *See e.g.*, § 1.6045–1(c)(3)(iv) and (c)(4)(iii), (iv), and (v) (*Examples 3, 4, and 5*) (multiple

⁹ Merriam-Webster Dictionary, "broker," accessed October 25, 2023, <https://www.merriam-webster.com/dictionary/broker>.

broker examples involving one broker that holds the customer's assets and another broker that does not hold the customer's assets). The term broker was not defined by reference to any particular type of property or services. Accordingly, statutory authority existed before the enactment of the Infrastructure Act to treat centralized digital asset exchanges that act as traditional brokers or dealers as brokers for purposes of section 6045(c)(1).

In addition, section 6045(c)(1) also provided statutory authority to treat as a broker any other person that satisfied the definition of broker, dealer, or a middleman with respect to property or services if the middleman regularly acted as such for consideration. See Part II.B.2. of this *Summary of Comments and Explanation of Revisions*, for a discussion of the scope of this authority with respect to DeFi participants.

b. The Definition of Broker Under Section 6045(c)(1)(D) as Enacted by the Infrastructure Act

Section 6045(c)(1)(D) treats as a broker any person who (for consideration) is responsible for regularly providing any service effectuating transfers of digital assets on behalf of another person. This statutory language explicitly addresses certain types of activities not previously addressed expressly by section 6045(c)(1) that are relevant to determining broker status. Section 6045(c)(1)(D) refers to persons who provide specified types of digital asset services, when regularly provided for consideration on behalf of another person. The relevant services are those that effectuate transfers of digital assets. The statutory language treats the person providing those services as a broker.

Statutory language must be construed to avoid rendering it as surplusage. See *TRW, Inc. v. Andrews*, 534 U.S. 19, 31 (2001) (noting the “cardinal principle” of statutory interpretation requires that “if it can be prevented, no clause, sentence, or word shall be superfluous, void, or insignificant.”). Accordingly, the Treasury Department and the IRS understand the statutory language to define the term broker in a manner that does not merely restate what was the law prior to the Infrastructure Act.

One comment asserted that the text in section 6045(c)(1)(D) merely expands the broker definition with respect to the new types of assets (digital assets) that must be reported and clarifies that the persons reporting these new types of digital asset transactions must be conducting otherwise similar activities to brokers included in the existing definition of broker. The Treasury

Department and the IRS do not agree that section 6045(c)(1)(D) applies only to digital asset brokers that fall within the broker definition under section 6045(c)(1) prior to the Infrastructure Act amendments. As described in Part II.B.1.a. of this *Summary of Comments and Explanation of Revisions*, section 6045(c)(1) already provided authority to address at least some digital asset brokers prior to the Infrastructure Act amendments. Section 6045(c)(1)(D) was added to the Code because Congress recognized that, in certain respects, the digital asset industry works differently from the securities industry and that explicit statutory language providing that certain additional digital asset service providers should be treated as brokers was essential to providing clarity on how information reporting rules apply to transactions involving digital assets. Nothing in the text of section 6045(c)(1)(D) limits the scope of digital asset brokers to those that fall within the broker definition under section 6045(c)(1) prior to the Infrastructure Act. Additionally, section 6045(c)(1)(D) does not limit the scope of digital asset brokers to persons who act as agents, because by its terms the statutory language refers to service providers. A person providing services to a customer may or may not be acting as an agent for the customer. Many service providers are not agents for their customers. Section 6045(c)(1)(D) refers to persons providing services and, therefore, is not limited to persons providing services only as agents. Moreover, because persons acting as agents are already included in the broker definition under section 6045(c)(1)(C), limiting section 6045(c)(1)(D) to persons providing services as agents for digital asset transactions would render its text entirely superfluous.

Section 6045(c)(1)(D) also is not limited to persons who effectuate transfers of digital assets. Section 6045(c)(1)(D) applies to any person who provides “any service effectuating transfers,” not “any person who effectuates transfers.” That is, the statutory language in section 6045(c)(1)(D) applies to persons who provide services to others, which services effectuate digital asset transfers. Given this textual distinction, the Treasury Department and the IRS have determined that section 6045(c)(1)(D) properly applies to persons that supply customers with services that are used by those customers to carry out digital asset transactions. As described in Part I.B.1. of this *Summary of Comments and Explanation of Revisions*, that is exactly

the function provided by trading front-end service providers. For the reasons described in that part, most digital asset users could not easily carry out a DeFi sale or exchange of digital assets without the services of a trading front-end service provider. Although trading front-end service providers may not act as agents for their customers in these transactions, the services provided by these trading front-end service providers with respect to digital assets enable their customers to trade their digital assets through other DeFi participants, just as the services provided by securities brokers enable their customers to trade their securities through other securities market participants. That is, both trading front-end service providers and securities brokers make it possible for a customer to review a range of options for possible transactions, to make a selection and confirm that selection, and to communicate the details of the transaction that the customer wishes to carry out so that the transaction can be executed and settled by other market participants. Similarly, in both cases, the means by which those services are provided may include a website or mobile device app that provides a series of visual elements, such as forms, buttons that initiate actions, and dynamic page updates, that enable customers to view the market conditions relating to their proposed trades and to interact with that market by inputting their trade orders.

Several comments argued that merely providing customers with software that the customer can use to engage in digital asset transactions does not constitute a “service effectuating transfers.” The Treasury Department and the IRS do not agree that the definition of broker should turn on the technological implementation of the services provided because the statute makes no reference to a particular form of technology. Instead, the definition should turn on what those services do. For example, the fact that, currently, a securities broker or dealer takes customer orders or routes these orders electronically does not change the nature of the services that the securities broker or dealer provides. The provision of a suite of software that enables a customer to interact with a distributed ledger network and effectuate transactions using DeFi trading applications is an example of providing a service that effectuates transfers.

Numerous comments argued that the term effectuate in section 6045(c)(1)(D) prevents the application of the broker definition to DeFi participants because these participants do not control the

private keys to the customer's digital assets being traded. As support for this argument, one comment cited a dictionary's definition of effectuate as "to cause or bring about (something)" and a Supreme Court interpretation of the meaning of "effect" as requiring a "reasonably close causal relationship between a change in the physical environment and the effect." See *Effectuate*, *Merriam-Webster Online*, <https://www.merriam-webster.com/dictionary/effectuate>; *Metro. Edison Co. v. People Against Nuclear Energy*, 460 U.S. 766, 774 (1984). This comment also compared transactions in which DeFi participants do not control the private keys to the customer's digital assets with those carried out by traditional securities brokers in which the brokers hold custody of the customer's securities and then asserted that the definition of effectuate cannot apply to the services provided by DeFi participants. Other comments argued that the word effectuate was meant to apply only to the one person who carries out the transaction. These comments concluded that expansion of the reporting regime under section 6045 to persons that do not possess traditional characteristics of a broker in carrying out transactions exceeds the scope of the statute.

The Treasury Department and the IRS do not agree that the actions of only one person, whether within the traditional securities industry or within the DeFi industry, causes a transaction to be carried out (or effectuated), which is why the pre-TD 10000 regulations contain a multiple broker rule. The Treasury Department and the IRS do agree, however, that a comparison of the persons involved in the steps necessary to carry out a securities transaction with the services involved in the steps necessary to carry out a DeFi transaction is helpful to understanding what it means to effect or effectuate a transaction. For purposes of this analysis as well as throughout these final regulations, the term person has the meaning provided by section 7701(a)(1) of the Code, which provides that the term generally includes an individual, a legal entity, and an unincorporated group or organization through which any business, financial operation or venture is carried on, such as a partnership. The term person includes a business entity that is treated as an association or a partnership for Federal tax purposes under § 301.7701-3(b). Accordingly, a group of persons providing services that together carry out a customer's digital asset transaction may be treated as a broker whether or

not the group operates through a legal entity if the group is treated as a partnership or other person for U.S. Federal income tax purposes.

As discussed in Part I.A. of this *Summary of Comments and Explanation of Revisions*, in the securities industry, the steps of a transaction typically begin when an investor communicates a trade order to a securities broker, who may or may not have custody of the investor's securities, and authorizes the securities broker to carry out the trade. The securities broker generally will assess how to obtain the best execution for the customer. That assessment could lead the broker to fill the order from its own account or match the trade with an offsetting trade order from another customer. The broker could also decide to route the investor's order to a trading center, such as a national securities exchange, an alternative trading system, or a dealer. The exchange or other trading center generally will attempt to find a counterparty to the investor's order. If the order is executed, transaction information typically will be sent to a clearing organization that will move the funds and securities between the appropriate accounts at the clearing organization to settle the transaction. The regulations under section 6045 treat only one of these securities industry participants as the broker with reporting obligations. See § 1.6045-1(b)(2)(ii) and (vii) (*Example 2*) (not treating certain stock exchanges and clearing organization as brokers). Notwithstanding this rule, each of these participants technically meets the definition of a person who effects (or "act[s] as . . . an agent for a party [albeit not the customer] in the sale" if it ordinarily would know from its services the gross proceeds from the sale). See § 1.6045-1(a)(10)(i)(A). Accordingly, it is the actions of all these securities industry participants—along with those of the customer—that collectively cause the transaction to be carried out.

Similarly, as discussed in Parts I.B. and I.B.1. through I.B.3. of this *Summary of Comments and Explanation of Revisions*, the DeFi technology stack model shows that, in addition to the customer, there are multiple DeFi participants involved in causing a digital asset transaction to be carried out. In the DeFi industry, when a customer inputs a trade order on a mobile device app or a website accessible via computer or mobile device, a trading front-end service provider receives that trade order and has the customer confirm the trade order details. Once the trade order

details are confirmed by the customer on the customer's computer or mobile device, the trading front-end services translate those details into coded trade order instructions which are sent to the customer's unhosted wallet to obtain the customer's signature or authorization. Thereafter, the wallet transmits the coded trade order instructions to the distributed ledger network for the eventual interaction with the applicable DeFi trading application for matching and for settlement pursuant to the services of DeFi participants operating at the settlement layer. Importantly, like the traditional securities transaction, the actions of the customer and all these DeFi participants collectively cause the transaction to be carried out. Accordingly, like in the securities industry, in which the customer, the securities broker, the securities exchange, and the clearing organization are all typically needed to carry out a securities transaction, in a DeFi transaction, the customer, the trading front-end service provider, the DeFi application, and the validator are all typically needed to carry out the DeFi transaction.

Regarding the comment that the definition of effectuate cannot apply to DeFi participants that do not control the private keys to the customer's digital assets, as discussed in Part II.B.5. of this *Summary of Comments and Explanation of Revisions*, the Treasury Department and the IRS do not agree with this comment because the current broker rules as applied to the securities industry treat persons without custody of a customer's assets as a broker under section 6045. See e.g., § 1.6045-1(c)(3)(iv) and (c)(4)(iii), (iv), and (v) (*Examples 3, 4, and 5*) (examples treating persons that do not hold the customer's assets as brokers).

2. Title of the Broker Definition in the Infrastructure Act

Several comments argued that the existing scope of activities that give rise to treating a person as a broker should not be expanded to cover DeFi participants because section 80603(a) of the Infrastructure Act titled the new broker definition as a "clarification of [the] definition of broker." One comment stated that the definition of broker under section 6045(c)(1)(D) is limited to agents and principals. Another comment stated that a broker under section 6045(c)(1)(D) must be a middleman. Another comment stated that a middleman under section 6045(c)(1)(D) must be an intermediary. The Treasury Department and the IRS do not agree that limiting the meaning of section 6045(c)(1)(D) to persons

acting as the customer's agent or a principal in the transaction is required by the definition of broker under section 6045(c)(1)(A) through (C) because, except for section 6045(c)(1)(A), which is specifically limited to dealers, the definition of broker includes no such limitation. As discussed in Part II.B.1.a. of this *Summary of Comments and Explanation of Revisions*, under section 6045(c)(1)(B) and the regulations thereunder, the term broker includes a barter exchange that is not acting as a customer's agent or as a dealer or principal. Similarly, under section 6045(c)(1)(C), the term broker includes any other person who (for a consideration) regularly acts as a middleman with respect to property or services.

Although the term middleman is not defined in the statute, the term is used in other tax information reporting rules to refer generally to persons acting in a variety of capacities relevant to the particular function, for example, making payment. *See e.g.*, § 1.6049–4(a)(2)(ii) (the term “payor” includes a middleman as defined in § 1.6049–4(f)(4)); § 1.6049–4(f)(4)(i) (middleman means any person who makes payment of interest for, or collects interest on behalf of, another person, or who otherwise acts in a capacity as intermediary between a payor and a payee, and also includes a trustee). Outside tax law, however, the term is used more broadly to include persons that make referrals to others so that these others can negotiate a sale between themselves in addition to those that act as agents for others. *See e.g.*, *Dickson Marine Inc. v. Panalpina*, 179 F.3d 331 (5th Cir. 1999). In *Dickson Marine Inc.*, the court found that an intermediary making a referral was a middleman and not the agent of another person where that other person did not assert sufficient control over the intermediary to establish an agency relationship. *See also Rauscher Pierce Refsnes, Inc. v. Great Sw. Savs., F.A.*, 923 S.W2d 112, 115 (Tex. App. 1996) (middleman means a broker whose “duty consists merely of bringing the parties together so that, between themselves, they may negotiate a sale, . . . [without that broker] necessarily [acting as] the ‘agent’ of either party.”)

Thus, the middleman reference in section 6045(c)(1)(C) can be understood as broad enough to cover a person that is not an agent or principal to a transaction but brings parties together so that those parties can negotiate and finalize the transaction. That is, DeFi participants provide persons with technological services that enable those persons to carry out DeFi transactions.

Treating section 6045(c)(1)(D) as a clarification of section 6045(c)(1)(C) renders it unnecessary to determine the full scope of the term middleman in section 6045(c)(1)(C) as applied to digital asset brokers. The legislative history to section 6045(c)(1)(D) supports this interpretation of section 6045(c)(1)(D) as a clarifying change intended to eliminate the need to determine which digital asset participants might qualify as middlemen. *See* the Joint Committee on Taxation's description of section 6045(c)(1)(D) as a clarification of the then-existing broker definition to resolve uncertainty over whether certain market participants are brokers, as entered into the Congressional Record. 167 Cong. Rec. S5702, 5703 (daily ed. August 3, 2021) (Joint Committee on Taxation, Technical Explanation of Section 80603 of the Infrastructure Act). This conclusion is also supported by the fact that the clarified broker definition, along with the other changes made by the Infrastructure Act to sections 6045, 6045A, and 6050I, were estimated by the Joint Committee on Taxation to raise \$28 billion over 10 years.¹⁰ In contrast, an interpretation of section 6045(c)(1)(D) as confined to just middlemen acting as agents or principals would not have raised as much revenue because digital asset brokers acting in this capacity were already covered by the definition of broker under section 6045(c)(1)(C).

The policy behind the statute's clarification of the broker definition also supports this broader interpretation of section 6045(c)(1)(D). Congress extended the information reporting rules under section 6045 to digital assets to close or significantly reduce the income tax gap from unreported income and to provide information about these transactions to taxpayers. *See* 167 Cong. Rec. S5702, 5703 (daily ed. August 3, 2021) (Joint Committee on Taxation, Technical Explanation of Section 80603 of the Infrastructure Act). According to the Government Accountability Office (GAO), limits on third party information reporting to the IRS is an important factor contributing to the tax gap. GAO, *Tax Gap: Multiple Strategies Are Needed to Reduce Noncompliance*, GAO–19–558T at 6 (Washington, DC: May 9, 2019). Third party information reporting generally leads to higher

levels of taxpayer compliance because the income earned by taxpayers is made transparent to both the IRS and taxpayers. An information reporting regime requiring reporting to the IRS on digital asset transactions would benefit tax compliance by helping to close the information gap with respect to digital assets. *See* TIGTA, Ref. No. 2020–30–066, *The Internal Revenue Service Can Improve Taxpayer Compliance for Virtual Currency Transactions*, 10 (September 2020); GAO, *Virtual Currencies: Additional Information Reporting and Clarified Guidance Could Improve Tax Compliance*, 28, GAO–20–188 (Washington, DC: February 2020). Reducing the tax gap and providing information to taxpayers is no less important when a DeFi participant, acting as a middleman, provides parties with technological services that enable those parties to carry out the DeFi transaction. Indeed, clear information reporting rules that require reporting of gross proceeds from a sale of digital assets in DeFi transactions will help the IRS identify taxpayers who have engaged in these transactions. These rules will also remind taxpayers who engage in DeFi transactions that the transactions are taxable, thereby reducing the number of inadvertent errors or noncompliance on their Federal income tax returns. Any exception to the information reporting rules for DeFi participants that have access to the necessary information about the transactions simply because they are offering their services through software, instead of through human interaction, would reduce the effectiveness of the information reporting rules. Moreover, such an exception could have the unintended effect of incentivizing taxpayers to change how they undertake digital asset transactions, thus thwarting voluntary compliance and IRS enforcement efforts to identify taxpayers engaged in digital asset transactions that have not reported their income properly.

3. Legislative History

As support for interpreting section 6045(c)(1)(D) as applicable only to persons acting as agents (or principals/dealers), several comments cited to several statements made by Senators as the Infrastructure Act was being considered. For example, one comment cited Senator Portman's statements made during a colloquy with Senator Warner (the colloquy), which referred to the intended purpose of the reporting rule not being “to impose new reporting requirements on people who do not meet the definition of brokers.” 167 Cong. Rec. S6095 (daily ed. August 9,

¹⁰ *See* JCT, JCX–33–21, *Estimated Revenue Effects of the Provisions in Division H of an Amendment in the Nature of a Substitute to H.R. 3684*, Offered by Ms. Sinema, Mr. Portman, Mr. Manchin, Mr. Cassidy, Mrs. Shaheen, Ms. Collins, Mr. Tester, Ms. Murkowski, Mr. Warner and Mr. Romney, The “Infrastructure Investment and Jobs Act” (August 2, 2021).

2021). Several comments cited Senator Warner's statements made during the colloquy referencing the intended application of the reporting rule to "digital asset exchanges or hosted wallet providers, often called custodians, or other agents involved in effectuating digital asset transactions." 167 Cong. Rec. S6095 (daily ed. August 9, 2021). Finally, another comment argued that Congress meant to limit the definition of broker to custodial brokers and referenced as support an article that quoted Senator Toomey saying that the definition of broker in the legislation was overly broad and "sweeps in nonfinancial intermediaries like miners, network validators, and other service providers . . . [that] never take control of a consumer's assets and don't even have the personal-identifying information needed to file a 1099 with the IRS." ¹¹

The Treasury Department and the IRS do not agree that these statements limit the Secretary's authority under section 6045(c)(1)(D) to only persons acting as agents (or principals/dealers). The plain language of the statute is the authoritative statement of a statute's meaning, and that language does not impose any such limitation. Moreover, the Senators' statements referred to in these comments, when read in full, reflect a fundamental concern with the potential application of section 6045(c)(1)(D) to persons that do not have access to the information needed to be reported, such as certain validators and developers of computer hardware and software for unhosted wallets. This fundamental concern was also reflected in a compromise amendment the Senate considered that would have revised the broker definition to "any person who (for consideration) regularly effectuates transfers of digital assets on behalf of another person." Importantly, this compromise amendment also included two rules of construction providing that the amended definition of broker shall not be construed to create any inference that such definition includes any person "solely engaged in the business of—(A) validating distributed ledger transactions, without providing other functions or services, or (B) selling hardware or software for which the sole function is to permit persons to control private keys which are used for accessing digital assets on a distributed ledger." See 167 Cong. Rec. S6131–2 (daily ed. August 9, 2021) (Senate

Amendment 2656). See also 167 Cong. Rec. S6096 (daily ed. August 9, 2021) (Senator Warner's statement in the colloquy that persons solely engaged in validating transitions and persons solely engaged in selling hardware or software with the sole function of permitting someone to control private keys used to access digital assets will not be treated as brokers under the proposed compromise amendment).

Although this compromise amendment was not adopted due to issues unrelated to the broker definition, the Treasury Department and the IRS have long held the view that the broker definition under section 6045(c)(1) should not apply to ancillary parties who cannot get access to information that is useful to the IRS. Indeed, notwithstanding the authority provided by section 6045(c)(1)(C) to treat middlemen as brokers, the section 6045 regulations impose broker reporting obligations only on those market participants in the securities industry that have the requisite information about the securities sales of their customers even though other market participants that do not have this information also act as middlemen in carrying out these sales. See e.g., § 1.6045–1(b)(2)(i) (stock transfer agent that ordinarily would not know the gross proceeds from sales not treated as broker); 1.6045–1(b)(2)(v) (floor broker that maintains no records with respect to the terms of sales not treated as broker).

Several comments cited to private sector publications describing unenacted prior drafts of the Infrastructure Act legislation and in particular drafts of the broker definition to argue that the definition in section 6045(c)(1)(D) cannot be interpreted to apply to DeFi platforms. According to a source cited by one comment, one prior draft would have provided that a broker includes "any person who (for consideration) regularly provides any service responsible for effectuating transfers of digital assets, including any decentralized exchange or peer-to-peer marketplace." ¹² According to another source cited by a different comment, another prior draft would have provided that a broker includes "any person who (for consideration) regularly provides any service or application (even if noncustodial) to facilitate transfers of

digital assets, including any decentralized exchange or peer-to-peer marketplace." ¹³ The Treasury Department and the IRS do not agree that these reported drafts of the broker definition support the more limited definition proposed by the comments. The text of the bills referred to in these comments does not reflect consideration by any member of Congress because these draft bills were not introduced. As such, they are not legislative history for the enacted amendments to section 6045.

One comment referenced several proposals to amend the current definition of broker that were introduced after the Infrastructure Act was enacted. These post-enactment proposals would limit the broker definition to persons who effect sales at the direction of their customers rather than persons who provide services effectuating transfers. See e.g., Lummis-Gillibrand Responsible Financial Innovation Act, S. 2281, 118th Cong. 802 (2023) (defining the term "broker" to mean "any person who (for consideration) stands ready in the ordinary course of business to effect sales of crypto assets at the direction of their customers"); Keep Innovation in America Act, H.R. 1414, 118th Cong. 2 (2023) (defining "broker" to include "any person who (for consideration) stands ready in the ordinary course of a trade or business to effect sales of digital assets at the direction of their customers"). The comment argued that these proposals indicate an intent to clarify the meaning of the broker definition under section 6045(c)(1)(D) so that the provision does not apply to DeFi participants. The Treasury Department and the IRS do not agree that the language within proposals to amend a statute offered after that statute is enacted are persuasive authority for how to interpret the meaning of the enacted statute. If anything, if the purpose of the proposed legislation is to change the language of the statute to prevent the application of the broker definition to DeFi participants, that would support the interpretation that the statute as enacted applies to such participants.

4. Comparison of the Broker Definition With Standards Applied by Other Governmental Bodies

Several comments argued that the definition of broker as applied to digital assets should conform to standards developed by governmental bodies outside the purview of title 26. The Treasury Department and the IRS do not agree that rules or regulations outside the purview of title 26 should determine the scope of these final regulations.

Several comments argued that the definition of broker as applied to digital assets should be confined to persons acting as agents so that it would be consistent with the standard recommended by the Financial Action Task Force (FATF), an inter-governmental body that includes the United States and 39 other member nations and aims to prevent global money laundering and terrorist financing. In 2018, FATF modified its recommendations to member nations to address virtual assets and virtual asset service providers (VASPs).¹⁴ In 2021, FATF issued updated guidance intended to help national authorities and private sector entities to develop and understand anti-money laundering/counter-terrorism financing rules as applied to virtual asset activities and VASPs. This guidance specifically addresses DeFi arrangements.¹⁵ The Treasury Department and the IRS do not agree that the standard set forth in the 2021 FATF Guidance is limited to persons acting as agents. The 2021 FATF Guidance specifically states that creators, owners and operators, and some other persons who maintain control or sufficient influence in the DeFi arrangements, even if those arrangements seem decentralized, may fall under the FATF definition of a VASP when they provide or actively facilitate VASP services. Moreover, FATF's Targeted Update on Implementation of the FATF Standards on VAs and VASPs issued in June 2024 reports that nearly half of surveyed jurisdictions either require certain DeFi arrangements to be licensed or registered as VASPs. Over 40 percent of remaining surveyed jurisdictions

reported taking steps to identify and address risks in the DeFi ecosystem.¹⁶

Several comments suggested that the broker definition under section 6045(c)(1)(D) should be limited to custodial digital asset brokers so that it would be consistent with the broker reporting rules of other jurisdictions. As support, one comment cited the definition of "Reporting Crypto-Asset Service Provider" (RCASP) under the Crypto-Asset Reporting Framework (CARF),¹⁷ a framework for the automatic exchange of information between countries on crypto-assets developed by the Organisation for Economic Co-operation and Development (OECD), to which the United States is a party. Specifically, this comment argued that the proposed definition of broker would be inconsistent with the definition of RCASP, which provides that an RCASP includes someone that acts as a counterparty or intermediary in exchange transactions or that otherwise makes available a trading platform.¹⁸ Another comment argued that the definition of crypto asset services under the European Union's Markets in Crypto-Assets Regulation (MICA)¹⁹ also includes only centralized exchanges and custodial brokers.

The Treasury Department and the IRS do not agree that the CARF definition of RCASP is inapplicable to DeFi participants. Indeed, a frequently asked question (FAQ) relating to this issue was recently published by the OECD Committee on Fiscal Affairs' Working Party 10, which is the OECD group that developed the CARF. The question addressed in the FAQ is whether the definition of RCASP excludes non-custodial services that effectuate exchange transactions.²⁰ The term

RCASP is defined as "any individual or Entity that, as a business, provides a service effectuating Exchange Transactions for or on behalf of customers, including [. . .] by making available a trading platform."²¹ The FAQ answer explains that, for purposes of that definition, a trading platform may be made available by an individual or Entity with or without offering custodial services. Accordingly, the CARF definition of RCASP does not exclude DeFi participants.

Finally, the Treasury Department and the IRS do not agree that the MICA definition of crypto-asset services is limited only to centralized exchanges and custodial brokers. Title 1, Article 3 of MICA defines crypto-asset services to include the operation of a trading platform for crypto-assets and the custody and administration of crypto-assets on behalf of clients. Recital 22 of MICA makes it clear that crypto-asset services that are in part "performed in a decentralised manner" fall within its scope and excludes crypto-asset services only when they are "provided in a fully decentralised manner without any intermediary." To the extent that assertedly decentralized DeFi crypto-asset service providers in fact have a degree of centralized control, MICA treats those service providers as within its scope. Moreover, financial laws or regulations of a non-U.S. government or union of governments do not determine the scope of U.S. tax rules.

5. Miscellaneous Comments

One comment suggested that the broker definition under section 6045(c)(1)(D) is limited to custodial brokers because any application to non-custodial brokers would be an unprecedented expansion of the section 6045 reporting obligations. As support for this position, this comment stated that the application of the transfer statement requirements under section 6045A(a) to certain transfers of digital assets to brokers reflects Congress's focus on custodial brokers because those rules apply only to transfers to custodial brokers. Additionally, this comment argued that the new reporting obligation under section 6045A(d), which requires reporting on certain transfers of digital assets from accounts maintained by a broker, also reflects Congress's focus on custodial brokers. The Treasury Department and the IRS do not agree that the broker definition under section 6045(c)(1)(D) is limited to only custodial

²¹ See Rules, Section IV.B., Crypto-Asset Reporting Framework.

digital asset brokers. Section 6045A(a) cross references section 6045(c)(1) for the definition of broker, and there is no custodial broker limitation in the definition of broker in section 6045(c)(1). As discussed in the securities industry background in Part I.A. of this *Summary of Comments and Explanation of Revisions*, a securities broker may or may not hold customer assets in custody. The pre-TD 10000 regulations applied to securities brokers whether or not they provide custodial services. Additionally, dealers that are brokers under section 6045(c)(1)(A) can transact with customers without providing custodial services to those customers. Members of barter exchanges that are brokers under section 6045(c)(1)(B) can similarly exchange property or services with other members without the barter exchange holding custody of the traded property or services. See § 1.6045–1(e)(2)(i). Finally, the multiple broker rules under long-standing regulations illustrate fact patterns that demonstrate that not all persons treated as brokers under section 6045 are custodial brokers. See e.g., § 1.6045–1(c)(3)(iv) (cash on delivery) and (c)(4)(iii) and (iv) (*Examples 3 and 4*).

One comment suggested that the final regulations should treat as the broker only the DeFi participant that performs the actions without which the transaction could not be carried out. As the DeFi technology stack model shows, however, this proposed “but for” standard would most likely result in all the DeFi participants being treated as performing essential actions without which the transaction could not be carried out. The DeFi technology stack model shows that, in addition to the customer, there are multiple DeFi participants involved in causing a digital asset transaction to be carried out. Each of these DeFi participants provide services that are necessary to effectuate a transaction. The section 6045 regulations treat multiple parties in the securities industry that are involved in effecting a securities transaction as brokers and include a multiple broker rule to avoid duplicative reporting. As is discussed in Part III.A.1. of this *Summary of Comments and Explanation of Revisions*, however, these final regulations treat only one of these DeFi participants as the broker based on a determination of which DeFi participant is in the best position to provide the necessary reporting on the digital asset transactions of customers.

Several comments argued that retaining the broker definition in § 1.6045–1(a)(1) of the pre-TD 10000

regulations for digital asset broker reporting oversteps the statutory authority given to the Secretary because that definition fails to include a requirement that the broker’s activities be undertaken “regularly” and “for consideration” as required under section 6045(c)(1)(D). Another comment recommended that this “for consideration” requirement be added to the “trade or business” requirement in the broker definition under the regulations. The Treasury Department and the IRS do not agree that the broker definition fails to include these requirements. A broker is defined in § 1.6045–1(a)(1) as “any person . . . that, in the ordinary course of a trade or business during the calendar year, stands ready to effect sales to be made by others.” Under *Groetzinger v. Commissioner*, 480 U.S. 23 (1987), persons “engaged in a trade or business . . . must be involved in the activity with continuity and regularity . . . for income or profit.” Accordingly, the requirement that the person effect sales in the “ordinary course of a trade or business” is sufficient to ensure that the person treated as a broker under section 6045(c)(1)(D) “regularly” effects those sales “for consideration.”

One comment requested further guidance on what the “for consideration” requirement means in the context of the DeFi industry. Another comment argued that the “for consideration” requirement in the statute requires that the person providing the effectuating services earn consideration from each specific transaction effectuated to be included in the broker definition. The Treasury Department and the IRS do not agree that the text of the statute mandates such a narrow interpretation of this requirement or that it is necessary for these final regulations to address its meaning in the context of the DeFi industry. The same “for consideration” requirement has existed in the broker definition under section 6045(c)(1)(C) for over forty years, yet there is no exception for brokers providing services on an overall flat-fee basis or as a percentage of total invested assets. Moreover, such an exception would likely incentivize DeFi participants or other brokers to modify their fee models to avoid reporting, a result that would thwart the goals of information reporting.

III. Definitions of a Digital Asset Middleman and an Effectuating Service

Section 1.6045–1(a)(21)(i) defines a digital asset middleman as any person who, with respect to a sale of digital assets, provides a facilitative service.

Section 1.6045–1(a)(21)(iii)(B)(1) through (4) defines a facilitative service by referencing five specific services in which the broker acts either as an agent or a counterparty in a digital asset sale. As discussed in the *Background*, TD 10000 reserved on the portion of the facilitative services definition included in proposed § 1.6045–1(a)(21)(iii)(A) that would have defined a facilitative service as any service that directly or indirectly effectuates a sale of digital assets, such as providing a party in the sale with access to an automatically executing contract or protocol, providing access to digital asset trading platforms, providing an automated market maker system, providing order matching services, providing market making functions, providing services to discover the most competitive buy and sell prices, or providing escrow or escrow-like services to ensure both parties to an exchange act in accordance with their obligations.

Several comments argued that the proposed definition of facilitative services was too broad because it referred to services that both directly and indirectly effectuate sales of digital assets. Another comment argued that a standard that captures services that indirectly effectuate transactions would have no discernible limits. Several comments stated that this broad definition would apply the broker definition to internet browsers, smartphone manufacturers, internet service providers, and many other persons not even considered part of the DeFi industry because these participants arguably “indirectly” effectuate transactions. One comment said that the definition’s inclusion of services that “indirectly” effectuate transactions would treat as brokers persons who are not in the chain of proceeds settlement, such as fund administrators, which provide ancillary administrative services relating to a sale. Many of these comments recommended narrowing the definition of facilitative service to only include services that directly effectuate a sale.

The Treasury Department and the IRS agree that the proposed facilitative services definition’s reference to services that indirectly effectuate sales of digital assets is too broad. The Treasury Department and the IRS did not intend to include in the definition of broker persons not within the DeFi industry, such as internet service providers, internet browsers, or computer or smartphone manufacturers. Accordingly, to address this concern, as discussed in Parts III.A. through III.C. of this *Summary of Comments and Explanation of Revisions*, the final

regulations narrow the scope of DeFi participants that meet the definition of a digital asset middleman. Additionally, to make it clear that the reach of the digital asset middleman definition in this regard is not any broader than the broker definition under section 6045(c)(1)(D), the final regulations change the term facilitative services used in the proposed definition of digital asset middleman to the term effectuating services.

One comment stated that the definition of facilitative services would capture all participants described in the DeFi technology stack model resulting in duplicative reporting. Another comment stated that the facilitative services definition results in disparate treatment for DeFi participants in a digital asset transaction than is applied under current law to securities industry participants providing analogous services in a securities transaction. For example, this comment argued that the NYSE and Nasdaq are not brokers for section 6045 purposes, but analogous businesses in the DeFi industry would be brokers under the proposed facilitative services definition. Although, as discussed in Part II.B.1.b. of this *Summary of Comments and Explanation of Revisions*, the definition of broker under section 6045(c)(1)(D) is broad enough to include multiple DeFi participants involved in a DeFi transaction, the Treasury Department and the IRS have determined that such a broad definition could result in duplicative reporting. Accordingly, the Treasury Department and the IRS have determined that in these final regulations the only DeFi participants that should be treated as brokers are trading front-end service providers. This determination was made for several reasons, which are discussed in more detail in the remainder of this Part III. of this *Summary of Comments and Explanation of Revisions*. First, such providers are the DeFi participants that have the closest relationship to customers and therefore are in the best position to obtain customer identification information. Second, numerous commenters expressed concerns regarding, in the view of the comments, the difficulty in identifying operators of DeFi trading applications and the potential difficulty such operators would have in changing the potentially immutable code of those DeFi trading applications. Those concerns are not as salient to trading front-end service providers because those providers typically are legal entities or individuals and the software used to provide trading front-end

services is not immutable. Accordingly, the persons responsible for carrying out broker diligence and reporting will be easy for taxpayers and the IRS to identify, and those providers have the capability to modify their operations to comply with these regulations. Appropriately, these DeFi participants are also the participants that provide services that are most analogous to the functions performed by brokers in the securities industry.

A. Interface Layer Activities

1. In General

In addition to other listed services, the proposed regulations would have included in the definition of facilitative services certain services that are described in the DeFi technology stack model as interface layer services and which are referred to in this preamble as trading front-end services. Specifically, proposed § 1.6045–1(a)(21)(iii)(A) would have included in the definition of facilitative services any service that provides a party in the sale with access to an automatically executing contract or protocol or digital asset trading platform. To illustrate the meaning of providing a party with such access, proposed § 1.6045–1(b)(17) (*Example 17*) describes a website that matches buyers and sellers of digital assets and thereafter directs such buyers and sellers to use automatically executing contracts to settle their matched transactions and concludes that the website is an example of providing these access services.

One comment suggested that instead of referring to the services that provide “access to an automatically executing contract or protocol or digital asset trading platform,” the final regulations should refer to these services as “front-end services” because the front-end term captures not only the visual elements provided by a website that offers these services but also the software that powers the interactive features of the website or mobile app, such as forms, buttons that initiate actions, and dynamic page updates without full page refreshes. The Treasury Department and the IRS agree with this recommendation and have adopted the front-end services terminology referred to herein as trading front-end services.²²

One comment stated that DeFi systems, including those created by software developers, operators of DeFi

protocols, and trading front-end service providers, are purely software infrastructure used for communication and coordination. This comment argued that these services are akin to those of a phone service provider, and therefore none of these DeFi participants participate in the buying or selling of digital assets. Another comment asserted that the definition of facilitative services should not apply to trading front-end services used by customers to interact with DeFi trading applications because these services are merely informational services, much like those provided by Google, Yahoo! Finance, or Wikipedia to internet users seeking information. This comment argued that, in all these cases, the service provider is merely generating and displaying information in response to user inputs, and, as such, should not be treated as carrying out what the user does with the provided information. Another comment suggested that trading front-end services should not be treated as facilitative services because these services are merely tools that are used by customers to access the DeFi ecosystem. Another comment similarly argued that trading front-end service providers merely provide tools through which customers can participate on their own in a DeFi transaction. This comment likened coded trade order instructions to a torque wrench that a person purchases to repair their own car as opposed to engaging a licensed mechanic who already owns a torque wrench to repair the person's car. One comment argued that the final regulations should treat DeFi trading applications as brokers, not trading front-end service providers. In contrast to these comments, a few comments acknowledged that trading front-end service providers should be the DeFi participant treated as brokers that are required to report under section 6045. One comment requested that the final regulations clarify that trading front-end service providers are brokers. This comment also noted that the software used by trading front-end service providers to perform these services can be modified and customized to comply with regulatory requirements and are already being modified by some market participants to comply with anti-money laundering (AML) and Know Your Customer (KYC) obligations under the Bank Secrecy Act (BSA) (31 U.S.C. 5311 *et seq.*).

The Treasury Department and the IRS agree that the suite of services offered by a trading front-end service provider, including the generation of customized coded trade order instructions, are

²² This preamble also uses the trading front-end services term in describing the comments received even when those comments refer to these services using different terms, such as user interface services or application programming interface.

provided through software that is used for communication and coordination of functions on the distributed ledger network. The Treasury Department and the IRS do not agree, however, that persons providing trading front-end services that enable their customers to interact with DeFi trading applications are akin to those of a phone service provider or are merely providing informational services like that of a search engine or that such services are analogous to buying off-the-shelf tools to repair one's own car because trading front-end services enable customers to engage in DeFi transactions. As discussed in Part I.B.1. of this *Summary of Comments and Explanation of Revisions*, trading front-end service providers offer a suite of services that enable their customers to view an array of choices relating to their proposed trades, to input their proposed trades, and then to initiate the additional steps necessary to trade their digital assets by interacting with other DeFi participants operating within the distributed ledger network. The suite of trading front-end services also includes, in some cases, interacting with customers in advance of a trade order to obtain their permission for a DeFi trading protocol to move digital assets out of the customers' wallets and converting these customer permissions into software code that can later interact with the DeFi trading protocol when a transaction is executed by the DeFi trading protocol. Once the customer authorizes the transaction, the coded trade order instructions prepared by the trading front-end services determine the subsequent steps in the transaction as it is processed, including calling the applicable DeFi protocol's automatically executing contracts for automatic execution and settlement if the transaction is included in a block and added to the blockchain by a validator. Consequently, not only do the suite of services offered by the trading front-end service provider supply the customer with information, but these services are also essential and integral to enabling the customer's order to be communicated, understood, and executed by the other DeFi participants operating within the distributed ledger network. Accordingly, the suite of services provided by a trading front-end service provider are not analogous to a torque wrench used to repair one's own car because, once customers authorize or sign the transaction in their wallets, the functions conducted thereafter within the distributed ledger network are all initiated by the services provided by the trading front-end service provider

(including the coded trade order instructions) whereas buyers of torque wrenches need to use their own skill to repair their cars. In the former case, the services provided to the customer effectuate the transaction via the coded trade order instructions whereas in the latter case, the buyer of the torque wrench, not the torque wrench itself, repairs the car.

Additionally, it should be noted that trading front-end services are analogous to the services provided by securities brokers in the securities industry. When a securities broker receives an investor's order to sell securities, it will generally have some mechanism to verify the order details. The securities broker will then route the order to a securities exchange or other trading center for execution or fill or match the order internally. If a transaction is ultimately executed, the transaction information typically will be sent to a clearing organization that will record and settle the transaction by moving the traded securities and funds between the appropriate accounts. That is, once the customer has provided the trade order details to the securities broker and authorized the transaction, the remaining steps in a transaction that is executed by a securities exchange or other trading center take place pursuant to the securities broker's communications with other market participants. The securities broker functions as the recipient of the customer's order and the intermediary that typically communicates the customer's trade order to other market participants for eventual execution of that order.

Like the services provided by securities brokers in the securities industry, a trading front-end service provider receives a customer's trade order, verifies the order details, and obtains confirmation from the customer. Although the trading front-end service provider may not obtain the customer's final authorization for the transactions or transmit the coded trade order instructions to the distributed ledger network, the services provided by the trading front-end service provider enable the customer's trade order to be communicated to the other DeFi participants, including the specific DeFi trading protocol called by the coded instructions and the other DeFi participants operating on the settlement layer, to execute the transaction. Indeed, the coded trade order instructions provided by the trading front-end service provider are analogous to the coded trade order instructions that a securities broker sends to a securities exchange or other trading center in a

traditional securities transaction and are essential to carrying out the overall transaction. Accordingly, because these trading front-end services provide essential services that enable their customers to carry out DeFi transactions, the Treasury Department and the IRS have determined that it is also appropriate to treat these services as effectuating services.

Further, the Treasury Department and the IRS understand that trading front-end services are typically offered by a legal entity or individual, which means there is a person within the meaning of section 7701(a)(1) that would be obligated to comply with broker reporting. Additionally, because persons providing trading front-end services generally host websites, these persons provide services that interact directly with customers undertaking DeFi transactions. Indeed, there generally is an agreement between trading front-end service providers and their customers, under which, as part of customary onboarding procedures, customers are treated as having agreed to general terms and conditions. These agreements may be part of the compliance program used by trading front-end service providers to assess the customer's suitability with respect to economic sanctions programs administered and enforced by Treasury Department's Office of Foreign Assets Control (OFAC).²³ As such, a person providing trading front-end services is the DeFi participant that is closest to the customer. In contrast, as discussed in Part III.B. of this *Summary of Comments and Explanation of Revisions*, some comments argued that DeFi trading applications are not operated by persons within the meaning of section 7701(a) and do not interact directly with the customer undertaking DeFi transactions. Additionally, unlike the potentially immutable code used by DeFi trading applications, the suite of services provided by trading front-end service providers typically utilize software that is mutable. Accordingly, the Treasury Department and the IRS have determined that it is appropriate to treat trading front-end service providers as brokers under section 6045(c)(1)(D) for the following reasons. First, trading front-end service providers are the DeFi participants that have the closest relationship to the customers and therefore are in the best position to obtain customer identification information. Second, trading front-end

²³ See OFAC, *Frequently Asked Questions: Questions on Virtual Currency*; 560, available at: <https://home.treasury.gov/policy-issues/financial-sanctions/faqs/560> (discussing OFAC compliance obligations for transactions using digital currency).

service providers are legal entities or individuals that can be identified by taxpayers and the IRS. Third, trading front-end service providers typically do not utilize immutable code in providing these services and therefore can make changes to their operations to comply with these regulations. Therefore, with respect to any digital asset sales²⁴ effected by these brokers that are subject to reporting, these brokers must file Forms 1099-DA, *Digital Asset Proceeds From Broker Transactions*, to report the information required by that form as appropriate and must retain the information for seven years as required to be retained by § 1.6045-1(d)(11)(i), such as the transaction ID of the reported transaction and the digital asset address from which the digital asset was transferred in connection with the sale. In addition, the required information must also be made available for inspection upon request by the IRS. For a discussion of the reasons why the Secretary exercised discretion in not treating other DeFi participants, such as persons that operate DeFi trading applications and persons that perform functions on the settlement layer, as brokers under section 6045(c)(1)(D), see Parts III.B. and III.C. of this *Summary of Comments and Explanation of Revisions*.

Several comments argued that the facilitative services definition should not apply to trading front-end service providers (including certain unhosted wallet providers as discussed in Part III.A.2. of this *Summary of Comments and Explanation of Revisions*) because the customer must authorize the transaction in the customer's wallet after the wallet receives the coded trade order instructions from the trading front-end service provider and because it is the customer's wallet, not the trading front-end service provider, that sends the coded trade order instructions to the distributed ledger. One comment asserted that trading front-end service providers do not monitor whether a customer deploys the coded trade order instructions received from the trading front-end service provider, just as an encyclopedia does not monitor whether a reader uses information obtained from its pages. Another comment argued that, to be consistent with standards applied by other offices of the Treasury Department, these final regulations must adopt the standard used by the

Financial Crimes Enforcement Network (FinCEN)

in its guidance relating to virtual currencies. See Fin-2019-G001, *Application of FinCEN's Regulations to Certain Business Models Involving Convertible Virtual Currencies*, May 9, 2019 (2019 FinCEN Guidance). Specifically, in the view of this comment, FinCEN's 2019 Guidance looked to whether a user had "total independent control over the value [of digital assets]" in determining whether digital asset businesses providing services to that user are money services businesses subject to AML obligations under the BSA and FinCEN's implementing regulations. See 31 CFR chapter X.

The Treasury Department and the IRS considered these comments but do not agree that trading front-end service providers should be excluded from the broker definition for the following reasons. First, although it may be the wallet, and not the trading front-end service provider, that sends the coded trade order instructions to the distributed ledger network, it is the coded trade order instructions generated by the suite of services offered by the trading front-end service provider that ultimately call for the interaction with the DeFi trading protocol's automatically executing contracts and, once the transaction is selected for validation and included in a block, cause the validator to settle the transaction. These trading front-end services provide an essential communication function notwithstanding that the coded trade order instructions may not be broadcast to the distributed ledger network by the trading front-end service provider.

In addition, although the preamble to TD 10000 looked to the application of the BSA's AML obligations as support for the conclusion that operators of custodial digital asset trading platforms, digital asset hosted wallet providers, and digital asset kiosks have information about their customers, the Treasury Department and the IRS are not required to follow the BSA or the 2019 FinCEN Guidance in determining whether trading front-end service providers should be brokers under section 6045(c)(1)(D). The AML obligations in FinCEN's regulations issued under the BSA apply generally to financial institutions, whereas information reporting under section 6045 applies to persons included in the definition of broker under section 6045(c)(1). Because section 6045 did not condition the definition of broker on such person being a financial institution under the BSA, the extent to which

AML obligations apply to trading front-end service providers does not limit the Secretary's ability to treat such persons as brokers under section 6045(c)(1)(D). Cf. section 6050I(c)(1)(B) (explicit reference to BSA).

These final regulations are issued under title 26, and this preamble therefore does not address the proper interpretation of FinCEN's total independent control standard in the 2019 FinCEN Guidance. In any event, the Treasury Department and the IRS do not agree that a total independent control standard is the appropriate standard for determining whether a DeFi participant, such as a trading front-end service provider, provides a service that effectuates a transfer of digital assets as required by section 6045(c)(1)(D), or that a user of trading front-end services has sole control over its assets when it uses a trading front-end service. Trading front-end service providers offer a suite of services that include the translation of the customer's trade order input into coded trade order instructions that ultimately call for the interaction of the customer's digital assets with the DeFi trading application and, once the transaction is selected for validation and included in a block, cause the validator to settle the transaction. For example, these coded trade order instructions specify the number and type of digital assets to be removed from the customer's wallet and the type of digital assets to be deposited into the customer's wallet in exchange. Additionally, the trading front-end services also may include obtaining the customer's permission for the DeFi protocol to remove digital assets out of the customer's wallet and translating that permission into a separate set of instructions that will be broadcast to the distributed ledger for use by the DeFi protocol in future transactions authorized by the customer. Moreover, in some cases, a trading front-end service provider might take control of the customer's digital assets by routing the customer's digital assets to an address controlled by the trading front-end service provider. Accordingly, despite not holding the digital asset customer's private keys, once the customer authorizes or signs the transaction, the services provided by the trading front-end service provider exercise a degree of control over the customer's digital assets involved in transactions.

Numerous comments argued that trading front-end service providers should not be treated as brokers because they are unable to backup withhold from the digital assets disposed by the customer in the transaction or the

²⁴ Like centralized brokers, however, these trading front-end service providers treated as brokers are not required to report on the transactions identified in Notice 2024-57, 2024-29 I.R.B. 67 (July 15, 2024), for which brokers are not required to make a return under section 6045(a) until further guidance is issued.

digital assets received in the transaction because trading front-end service providers do not have custody of the private keys used for accessing a customer's digital assets. Another comment recommended that, if trading front-end service providers are treated as brokers, they should be exempt from any obligation to backup withhold in DeFi transactions. The final regulations do not adopt these comments. Backup withholding is an essential enforcement tool to ensure that complete and accurate information returns can be filed by brokers with respect to payments made to their customers. Accurate taxpayer identification numbers (TINs) provided by the customers of brokers and other information provided by brokers are critical to matching such information with income reported on a customer's Federal income tax return. Customers that fail to provide their TINs to a broker as requested may be liable for penalties under section 6723 of the Code. A complete exception from backup withholding for DeFi sales of digital assets would increase the likelihood that customers will not provide correct TINs to their brokers. Trading front-end service providers exercise a degree of control over their customer's digital assets once the transaction has been authorized or signed in the customer's unhosted wallet to withhold their fees from the customer's digital assets and can similarly satisfy their obligation to backup withhold from either the digital assets disposed by the customer in the transaction or the digital assets received in the transaction should the customer fail to provide its name, address, and TIN. The Treasury Department and the IRS are aware, however, that not all arrangements between trading front-end service providers and their customers currently provide for backup withholding. The Treasury Department and the IRS intend to publish a notice of proposed rulemaking under § 31.3406(h)-2(b) with proposed regulations that would provide trading front-end service providers with greater flexibility to satisfy their backup withholding obligations with respect to these transactions.

One comment argued that the delivery of application-programming interfaces is merely the provision of hardware or software that enables customers to access digital assets, and the legislative history is clear that such activities ought not cause a person to be a broker. The Treasury Department and the IRS agree that persons that provide application-programming interface services, which is another name for trading front-end

services, write the software code that translates the details of the customer's trade order into coded trade order instructions. The Treasury Department and the IRS do not agree that the definition of broker should turn on the technological nature of the services provided. Instead, the definition should turn on what those services do. Because trading front-end service providers provide services that their customers need in order to engage in DeFi transactions and that are designed specifically for that purpose, that is, by offering a menu of transactions for a customer to choose from and translating the details of the customer's trade order into coded trade order instructions that are used to communicate with other DeFi participants in order to engage in DeFi transactions, it is appropriate to treat these services as effectuating transfers of digital assets under section 6045(c)(1)(D).

Several comments argued that because some digital asset users can themselves write the software code that is included in the coded trade order instructions, trading front-end service providers that provide this software coding service should not be treated as brokers. The final regulations do not adopt this comment because trading front-end service providers offer a suite of services to customers that enable them to engage in DeFi transactions. Moreover, that some sophisticated digital assets users are able to interact with DeFi trading protocols without the services provided by trading front-end service providers should not affect the obligation of trading front-end service providers to report on the transactions of customers that do utilize their services. Additionally, as discussed in Part III.B. of this *Summary of Comments and Explanation of Revisions*, the IRS intends to evaluate the information reported by trading front-end service providers and the extent to which changes in the industry enable retail digital asset users to use DeFi trading applications without using trading front-end services.

In sum, for all these reasons, the Treasury Department and the IRS have concluded that trading front-end services that enable customers to interact with DeFi trading applications should be treated as effectuating services for purposes of the digital asset middleman rule. Accordingly, final § 1.6045-1(a)(21) defines a digital asset middleman as any person who is responsible for providing an effectuating service with respect to a sale of digital assets. Final § 1.6045-1(a)(21)(i) defines an effectuating service as any trading front-end service where the person

providing that service ordinarily would know or be in a position to know the nature of the transaction (as defined in final § 1.6045-1(a)(21)(iii)(B) and discussed in Part III.A.3. of this *Summary of Comments and Explanation of Revisions*) or any other service set forth in § 1.6045-1(a)(21)(iii)(B)(1) through (5) (previously referred to as a facilitative service in TD 10000). The final regulations use the term "trading front-end service" rather than "front-end service" to make it clear that only the front-end services that enable customers to interact with DeFi trading applications are included in the effectuating services definition. Specifically, final § 1.6045-1(a)(21)(iii)(A)(1) limits the definition of a trading front-end service to a service that, with respect to a sale of digital assets, receives a person's order to sell and processes that order for execution by providing user interface services, including graphic and voice user interface services, that are designed to: (i) enable such person to input order details with respect to transactions to be carried out or settled on a distributed ledger or similar technology; and (ii) transmit those order details so that the transaction can be carried out or settled on a distributed ledger or similar technology, including by transmitting the order details to the person's wallet in such form that, if authorized or signed by the person, causes the order details to be transmitted to a distributed ledger network for interaction with a digital asset trading protocol. The Treasury Department and the IRS are aware that technology evolves rapidly. Accordingly, this definition is intended to apply broadly to any front-end service that enables customers to input their order details for interaction with a digital asset trading protocol regardless of the order of the steps necessary to carry out that transaction on the distributed ledger network. It is also intended that this definition will apply to any front-end service that enables customers to interact with aggregation protocols as well as digital asset trading protocols.

Additionally, final § 1.6045-1(a)(21)(iii)(A)(2) provides additional rules for determining whether services are trading front-end services. First, services are defined as trading front-end services without regard to whether the digital assets received upon execution of the transaction at a digital asset address in the wallet controlled by the person using the trading front-end services to dispose of digital assets (first person) or at a digital asset address in a wallet controlled by a second person,

including the provider of the front-end services itself. Thus, for example, if a first person uses services that otherwise meet the definition of trading front-end services to exchange digital asset A for digital asset B and the order details include an instruction to deliver digital asset B to a digital asset address in a wallet controlled or owned by a second person, for example, as a payment, the services provided by the front-end service provider will be treated as trading front-end services.

Final § 1.6045–1(a)(21)(iii)(A)(2) also provides that the transmission of order details to a distributed ledger network for interaction with a digital asset trading protocol includes the direct or indirect transmission to a distributed ledger network of order details that call upon or otherwise invoke the functions of automatically executing contracts that comprise a digital asset trading protocol. Accordingly, the addition of intermediate steps before the digital asset customer's transaction can be broadcast to a distributed ledger network or before the transaction can otherwise cause the interaction with a digital asset trading protocol, whether for business purposes or in an attempt to avoid meeting the trading front-end services definition, will not prevent the services provided by the trading front-end service provider from being treated as trading front-end services. Thus, for example, the transmittal of a customer's order details for interaction with a DeFi aggregator application before interaction with a specific DeFi trading protocol that offers the most favorable transaction terms is an indirect transmission to a distributed ledger network for interaction with a digital asset trading protocol described in final § 1.6045–1(a)(21)(iii)(A)(1)(ii). This rule would not, however, treat basic speech-to-text interface services that merely translate customer's voice commanded trade orders to written text orders as trading front-end services because basic text-to-speech interface services do not invoke the functions of the DeFi protocol as required by final § 1.6045–1(a)(21)(iii)(A)(1)(ii). Instead, the translated speech-to-text trade order would be sent to a trading front-end service provider that would, in turn, convert that written trade order into coded trade order instructions.

In addition, final § 1.6045–1(a)(21)(iii)(C) provides exceptions for certain wallet services and validation services, which exceptions are discussed in Parts III.A.2. and III.C. of this *Summary of Comments and Explanation of Revisions*. Additionally, final § 1.6045–1(a)(21)(iii)(D) defines a digital asset trading protocol as a

distributed ledger application consisting of computer software, including automatically executing contracts, that exchange one digital asset for another digital asset pursuant to instructions from a user.

One comment requested guidance regarding whether persons that offer front-end services for users to provide liquidity to liquidity pools or users to stake their assets through staking pools that issue receipts or tokens in exchange for the users' digital assets would be treated as brokers under the broker definition. Although the definition of trading front-end services under these final regulations could apply to front-end services that enable users to contribute their digital assets to liquidity pools and to staking pools in exchange for receipts or tokens, brokers are not required to make returns on these transactions under section 6045 until a determination has been made that these transactions are subject to such reporting. See Sections 3.03 and 3.04 of Notice 2024–57, 2024–29 I.R.B. 67 (July 15, 2024). The Treasury Department and the IRS anticipate that any termination to the no-reporting relief in Notice 2024–57 for such transactions will take into account that the termination may cause persons not currently required to report to start doing so and therefore such persons would need some time to build or buy systems to comply with reporting. Finally, in response to the comment requesting clarification as to whether providing staking as a service could cause the provider to be treated as a broker, to the extent that such services do not give rise to the sale of a digital asset, the provision of those services would not cause the provider to be treated as a broker.

2. Unhosted Wallet Services

Proposed § 1.6045–1(a)(21)(iii)(A) included two sentences in the proposed definition of facilitative services that addressed the extent to which unhosted wallet services were included in the definition. The first sentence would have specifically excluded from the definition of facilitative services the selling of hardware or the licensing of software for which the sole function is to permit persons to control private keys which are used for accessing digital assets on a distributed ledger if such functions are conducted by a person solely engaged in the business of selling such hardware or licensing such software. The second sentence illustrated the limits of this proposed exclusion by stating that software that provides users with direct access to trading platforms from the wallet

platform is not an example of software with the sole function of providing users with the ability to control private keys to send and receive digital assets. Proposed § 1.6045–1(b)(23) (*Example 23*) illustrated the wallet exclusion rule by describing a wallet that neither provides “access” nor “connection services” to a digital asset trading platform, and proposed § 1.6045–1(b)(22) (*Example 22*) illustrated the limits of the wallet exclusion rule by describing a wallet that provides “access” to a digital asset trading platform.

One comment argued that the wallet exclusion rule's application only to wallets the “sole function” of which is to permit persons to control private keys was too narrow because the purpose of wallet software is to allow users to interact with other blockchain addresses (including smart contracts). The Treasury Department and the IRS do not agree that this exclusion is too narrow. The rationale behind the wallet exclusion was to exclude ancillary parties who cannot obtain information about sales of digital assets. Senator Warner's statements made during the colloquy make it clear that he intended this wallet exclusion to be limited to providers of those wallets for which the only function is to permit persons to control private keys which are used for accessing digital assets on a distributed ledger. 167 Cong. Rec. S6095–6 (daily ed. August 9, 2021). Senator Warner's expressed intent to provide only a limited exclusion for wallet providers is made even more clear when he said later in the colloquy, “[o]f course, if these [wallet providers] . . . provide additional services for consideration that would qualify as brokerage, the rules would apply to them as any other broker.” 167 Cong. Rec. S6096 (daily ed. August 9, 2021).

Many comments argued for a complete exclusion from the facilitative services definition for wallet services because, the comments stated, wallet providers and wallet developers typically do not have the information necessary to know the nature of transactions processed nor are they generally able to obtain that information. One comment stated that once the private key is exported, the wallet provider may not even be aware that a transaction happened if the transaction originates with a third-party trading front-end service provider, even though the digital assets disposed of in the transaction are removed from the user's wallet and the digital assets received in the transaction are received in the user's wallet. Another comment stated that unhosted wallet providers

may be able to see the digital assets leaving a wallet, but they cannot know the underlying details of the transaction. One comment stated that unhosted wallet providers do not typically know the functionality of a given protocol that a wallet user interacts with using the user's wallet.

As discussed in Part I.B. of this *Summary of Comments and Explanation of Revisions*, providers of unhosted wallets often provide customers with an assortment of services. Because the rationale behind the wallet exclusion is to exclude ancillary parties who cannot obtain information about sales of digital assets, it is important to examine each of these services to determine if they enable the person providing the wallet services to obtain information about customers' sales of digital assets contained in the wallet. Services provided by the wallet for key storage and transaction authorization are performed in every transaction undertaken with digital assets in the customer's wallet. These services, however, do not provide any information to the person providing the wallet services regarding the underlying nature of the transaction. Services enabling customers to transfer native and non-native digital assets on the distributed ledger similarly do not provide any information to the person providing the wallet services regarding the underlying nature of the transaction. Additionally, the connection that enables a customer to go to a third-party trading front-end service provider for trading front-end services also does not provide the person providing the wallet services with information with respect to the transaction because the coded trade order instructions in that case are created by the third-party trading front-end service provider. Thus, despite the transaction being sent to the customer's wallet for authorization or signature before it is then transmitted by the wallet to the distributed ledger for interaction with the DeFi trading application, the person providing the wallet services does not have visibility into the coded trade order instructions if the instructions are created by a third-party trading front-end service provider. Accordingly, the Treasury Department and the IRS have determined that it is appropriate to treat all these basic wallet services as excluded from the definition of effectuating services under the final regulation.

In contrast, when the person providing the wallet services also provides trading front-end services for a transaction, this wallet provider creates the coded trade order instructions that includes the specifics of the customer's

trade order. In that circumstance, the person providing these enhanced wallet services has the information about the underlying sale. Additionally, these persons also interact directly with their customers and, as such, can obtain the customer's identity. Accordingly, it is appropriate in these cases to treat these enhanced wallet trading front-end services as effectuating services under the final regulation and a person providing these enhanced wallet services as a digital asset middleman.

Several comments requested guidance regarding the extent to which a developer of wallet software that provides a service that is considered to be a "service effectuating" transfers should be treated as a provider of that service. The extent to which a software developer would be treated as the provider of the software's services is a question of fact that depends on how the software sale or licensing transaction is structured and the activities provided by the software developer thereafter. For example, if a developer licenses or sells the developed software to a third party, who thereafter uses the software without any continuing involvement by the software developer to provide wallet services to customers, the software developer would not be the provider of the wallet services. In contrast, if the software developer licenses the wallet services directly to customers, the developer would be the provider of the wallet services. The Treasury Department and the IRS disagree with the comment in so far as it can be read to suggest that the final regulations should incorporate additional guidance regarding each potential factual scenario.

One comment stated that persons providing unhosted wallet services do not know the identities of their customers taking part in the transaction. Another comment stated that these persons may have difficulty determining who is the beneficial owner of the digital assets held within the wallet, such as when more than one customer knows the private key or when one person opens an account on behalf of another person. The Treasury Department and the IRS do not agree that persons providing wallet services are not able to obtain the identities of their customers. On the contrary, a person providing wallet services is the DeFi participant in the best position to obtain that information because there generally is an agreement between the person providing wallet services and the customer under which, as part of customary onboarding procedures, such customers are treated as having agreed to general terms and conditions. Those

terms and conditions can address the need to obtain customer identification information. Although, as suggested by the comments, it may be difficult for the person providing wallet services to be certain that the person controlling the private keys in the wallet is the beneficial owner of the digital assets held within the wallet, this concern is no different from any other business that transacts with customers electronically.

Many comments stated that, taken together, the wallet exclusion in the proposed regulations would result in treating all providers of wallet software as brokers. Several comments argued that this wallet exclusion was too narrow because all wallet software provides users with "access" to digital asset trading platforms, thus, no wallet provider will qualify for the exclusion. Several comments stated that the wallet exception's reference to software that provides wallet users with "direct access to trading platforms from the wallet platform" made it difficult to understand how the overall wallet exclusion was intended to apply because "trading platform" and "wallet platform" were not defined in the proposed regulations. One comment argued that the wallet connection services referred to in proposed § 1.6045-1(b)(23) (*Example 23*) should not be considered a facilitative service because this software merely permits a wallet user to authorize transactions involving digital assets in the user's wallet with respect to a transaction initiated outside of the wallet. Some comments argued that this broad application of the facilitative services definition to persons providing wallet services was inconsistent with the stated intent of the proposed regulations and the legislative history of the amendment to section 6045.

Several comments argued that the wallet services described in the wallet exclusion rule should not be limited to persons "solely" engaged in the business of selling such hardware or licensing such software. These comments argued that even if a person is engaged in other activities that constitute acting as a broker with respect to one transaction, those activities should not affect whether the person is a broker with respect to the wallet services described in the wallet exclusion provided with respect to a second transaction. That is, when a person who is a wallet provider engages in broker activities with respect to the first transaction, this does not affect whether that wallet provider can obtain the information necessary to report the second transaction. Several comments

argued that a precise interpretation of the wallet exclusion rule as written would result in treating wallet providers that conduct any other activities (even non-business hobbies) as providing facilitative services and as brokers for all activities. Another comment argued that although a well-advised wallet provider could put exempt activities into different legal entities to achieve a more rational result, it would be more appropriate to modify the rule to remove this restriction. Another comment suggested that this requirement would create a “cliff effect” for wallet providers, whereby a wallet provider that offers one service that falls within the broker definition will be treated as a broker for all transactions undertaken by customers using that provider’s wallet services.

The Treasury Department and the IRS agree that the exclusion for wallet services should not be limited to persons that are “solely” engaged in the business of selling such hardware or licensing such software. Additionally, the requirement should not cause wallet providers to be brokers for all transactions undertaken by customers using that provider’s wallet services if the provider offers one service that falls within the broker definition. For that reason, final § 1.6045–1(a)(21)(iii)(C)(2) provides that if a person licenses software or sells hardware that provides unhosted wallet services that include both trading front-end services with respect to some sales of digital assets and other services that are not trading front-end services (or other effectuating services under final § 1.6045–1(a)(21)(iii)(B)) with respect to other sales of digital assets, then that person will be treated as providing effectuating services only with respect to the sales of digital assets that are carried out using the trading front-end services provided by the unhosted wallet. Accordingly, persons providing unhosted wallet services must make information returns with respect to customer sales that are undertaken using the wallet’s trading front-end services, but those persons are not required to make information returns with respect to customer sales that are undertaken using a third-party front-end service provider’s trading front-end services. A wallet provider that does not provide trading front-end services but provides other effectuating services described in final § 1.6045–1(a)(21)(iii)(B), however, would nonetheless be required to report on customer sales effected using those other services. Thus, for example, if a person providing unhosted wallet services also operates a digital asset

kiosk, that person would be required to report on sales of digital assets undertaken by customers using that kiosk even if the digital assets sold were stored in an unhosted wallet provided by that person. Additionally, § 1.6045–1(b)(2)(x) (*Example 2*) has been modified to conform to this final rule.

3. Position To Know

Under proposed § 1.6045–1(a)(21)(i), a person performing facilitative services with respect to a sale would meet the definition of a digital asset middleman only if the nature of the services arrangement is such that the person ordinarily would know or be in a position to know the identity of the party that makes the sale and the nature of the transaction potentially giving rise to gross proceeds from the sale.

a. Position To Know the Identity of the Customer

Proposed § 1.6045–1(a)(21)(ii)(A) would have treated a person as ordinarily knowing or in a position to know the identity of the party that makes the sale if that person maintains sufficient control or influence over the provided facilitative services so as to have the ability to set or change the terms under which its services are provided to request that the party making the sale provide that party’s name, address, and TIN, in advance of the sale. The proposed rule also would have treated this sufficient control or influence standard as being met if the person providing the facilitative services has the ability to change the fees charged for those services.

Several comments recommended that the final regulations retain only the ordinarily would know standard as applied to knowing the identity of the customer. Other comments stated that the position to know standard has no reasonable limitation because virtually any provider could theoretically request customer information or modify the terms of its arrangement or fee structure. Several comments criticized the new standard because it does not use an objective test but rather an “ability” standard which is not based on the DeFi participant’s business model but instead is based on hypothetical circumstances. One comment asserted that persons that provide wallet services and application-programming interface services do not meet the position to know standard with respect to a customer’s identity because, the comment stated, these providers have no information on the customer. In contrast, several comments stated that providers of user interface services have sufficient control or influence to add the services necessary to comply with the

position to know standard and the proposed broker reporting requirements. Indeed, one comment stated that these interfaces can be modified and customized to comply with regulatory requirements and are already being modified by some market participants to permit AML/KYC compliance.

As discussed in Part III.A.1. of this *Summary of Comments and Explanation of Revisions*, persons that provide trading front-end services work directly with customers to translate their trade order details into coded trade order instructions for later use. These services are provided pursuant to general terms and conditions that the customers agree to as part of customary onboarding procedures. Accordingly, trading front-end services can update these general terms and conditions as necessary to learn the identity of their customers. Given that trading front-end service providers have access to their customers and, therefore, can query them about their identity, the Treasury Department and the IRS have determined that it is not necessary in the final regulations to include the position to know standard as applied to the identity of the party that makes the sale. It should be noted that there is currently no knowledge standard for any other brokers regarding the identity of the customer because these rules only treat persons that have access to customers as brokers.

b. Position To Know the Nature of the Transaction

Proposed § 1.6045–1(a)(21)(ii)(B) would have treated a person as ordinarily knowing or in a position to know the nature of the transaction potentially giving rise to gross proceeds from a sale if that person maintains sufficient control or influence over the facilitative services provided to have the ability to determine whether and the extent to which the transfer of digital assets involved in a transaction gives rise to gross proceeds, including by reference to the consideration that the person receives or pursuant to the operations of, or modifications to, an automatically executing contract or protocol to which the person provides access. The proposed rule also would have treated this sufficient control or influence standard as being met if the person providing the facilitative services has the ability to change the fees charged for those services.

One comment asserted that persons that provide application-programming interface services do not meet the position to know standard with respect to the nature of the transaction because these providers have no information on

whether the underlying transaction actually took place. Another comment agreed with the proposed position to know standard's reference to sufficient control or influence because it is consistent with the FATF standard, which provides that creators, owners, and operators or some other persons who "maintain control or sufficient influence" in the DeFi arrangements may fall under the FATF definition of a VASP where they are providing or actively facilitating VASP services. 2021 FATF Guidance at ¶ 67, p. 27. Several comments stated that trading front-end service providers do not have visibility into the nature of the transaction because they do not monitor whether a customer deploys, through the customer's wallet, the coded trade order instructions that they provided. One comment questioned whether a person meets this standard if the person needs to implement technological changes to be in a position to know the nature of the transaction. Several comments requested that the final regulations eliminate the position to know standard and instead only apply the ordinarily would know standard because the position to know standard would force trading front-end service providers to modify their services to comply with the final regulations. One comment explained that although some trading front-end service providers might receive contingent trade-based fees, others receive non-contingent payments for their services. For example, this comment stated that some trading front-end services provided by blockchain explorers provide services that require considerable sophistication for customers to use and, as a result, receive their compensation from sources other than these customers, such as advertising revenue, donations, or sales of blockchain data. Trading front-end service providers might alternatively receive non-contingent periodic payments under a services agreement with a DeFi governance organization, such as a foundation or decentralized autonomous organization (DAO). This comment stated that, in the case of a services agreement with a DeFi governance organization, a trading front-end service provider might collect data on protocol use (such as, the number of transactions and average transaction size) in setting its periodic fees. The comment argued that the reviewed data on the protocol is anonymized by the blockchain technology and not specific enough to the transactions undertaken pursuant to the front-end's services to provide definitive information about whether these transactions were

authorized or signed by the customer and then settled on the distributed ledger. Finally, regarding the proposed rule's reference to a person's ability to change its fees in determining whether a person has sufficient control or influence over its services, one comment requested that final regulations provide more guidance regarding what is meant by fees charged.

The Treasury Department and the IRS do not agree that trading front-end service providers do not have the ability to know if a transaction for which they provided coded trade order instructions was ultimately executed and settled on the distributed ledger. As stated by the referenced comment, trading front-end service providers may receive contingent, trade-based fees as consideration for their services. To ensure that these fees are paid, trading front-end service providers include in the coded trade order instructions a direction for the requisite fee (whether withheld from the traded-away digital assets or the traded-for digital assets) to be sent to a wallet address owned by the trading front-end service provider. Because this fee will not be paid unless the customer authorizes the transaction in the customer's wallet and the transaction is settled on the distributed ledger, the receipt of these fees provides the trading front-end service provider with the information necessary to know that the transaction took place. Trading front-end service providers that receive non-contingent fees for their services also have the ability to determine whether a transaction created through their trading front-end services was carried out. For example, these providers could include in the coded trade order instructions a direction to notify the trading front-end service provider when the transaction is settled on the distributed ledger similar to the way the sender of an email can receive a read receipt. Indeed, these providers inherently have more information about the transaction than other persons searching the blockchain, so they are in a better position to obtain relevant information from the blockchain. Although these final regulations may require trading front-end service providers receiving non-contingent consideration to make changes in the coded instructions solely for the purpose of complying with these broker reporting rules, this is not different from any other broker that makes changes in their operations to comply with these broker reporting rules. Accordingly, regardless of the structure of the trading front-end service provider's compensation, trading front-end service

providers maintain control or sufficient influence over the suite of services that they offer (including the coded trade order instructions) to have the ability to determine whether and the extent to which the transfer of digital assets involved in a transaction gives rise to gross proceeds.

Although trading front-end service providers should always be treated as maintaining control or sufficient influence over the suite of services that they offer (including the coded trade order instructions) to meet the position to know standard, the final regulations nevertheless have retained a modified version of the proposed position to know standard to ensure that other front-end service providers that might inadvertently be treated as providing trading front-end services under final § 1.6045-1(a)(21)(iii)(A) will not be treated as providing an effectuating service under this definition. Accordingly, pursuant to final § 1.6045-1(a)(21)(ii), a person providing a trading front-end service ordinarily would know or be in a position to know the nature of the transaction potentially giving rise to gross proceeds from a sale of digital assets if that person maintains control or sufficient influence over the trading front-end services to have the ability to determine whether and the extent to which the transfer of digital assets involved in a transaction gives rise to gross proceeds. The sufficient control or influence language used in the proposed regulations is modified to control or sufficient influence to draw from the language used in the 2021 FATF guidance. See 2021 FATF Guidance at ¶ 67, p. 27.

Final § 1.6045-1(a)(21)(ii) also adds three examples of when a person would meet this control or sufficient influence standard. These examples are not intended to be the exclusive examples that would meet this standard. First, the section provides that a person providing trading front-end services will be considered to maintain control or sufficient influence over such services if that person has the ability to amend, update, or otherwise substantively affect the terms under which the services are provided or the manner in which the order is processed. Second, similar to the proposed regulations' reference to a person's ability to change their fees in determining whether a person has sufficient control or influence over its services, final § 1.6045-1(a)(21)(ii) provides that a person that has the ability to collect the fees charged for the trading front-end services from the transaction flow (that is, from the digital assets disposed or the digital assets received in the trade order) would be

treated as a person that maintains control or sufficient influence over the trading front-end services provided. This result would apply whether or not the person providing trading front-end services actually collects fees in this manner for its services. Third, final § 1.6045–1(a)(21)(ii) provides that a person providing trading front-end services will be considered to maintain control or sufficient influence over such services if that person has the ability, in connection with processing the order, to add to the order a sequence of instructions to query the distributed ledger to determine if the processed order is, in fact, executed or to use another method of confirmation based on information known to that person as a result of providing the trading front-end services. In contrast, a front-end service provider that provides services that enable a website to be accessed on a computer or mobile device but does not translate the customer's trade order into coded trade order instructions that can be sent to the customer's wallet for authorization would not be considered maintaining sufficient control or influence over the services provided to know the nature of the transaction. Finally, to ensure that trading front-end service providers do not take steps to artificially avoid meeting the position to know standard, final § 1.6045–1(a)(21)(ii) provides that, except as provided by the Secretary, a contractual or other restriction not required by law that limits the ability of the person providing trading front-end services to amend, update, or otherwise substantively affect the terms under which the services are provided or the manner in which the order is processed will be disregarded for purposes of determining if a person meets the position to know standard. Thus, trading front-end service providers cannot contract with their customers or with operators of digital asset trading protocols to limit their coding ability to avoid falling within the effectuating services definition.

4. Other Policy Considerations

Several comments raised policy considerations in opposing the application of the digital asset middleman rules to DeFi participants. Some of these comments focused specifically on front-end service providers while others focused on DeFi trading applications or more generally on any DeFi participant that ultimately could be made subject to these rules. Several comments noted that because DeFi participants do not have custody of the digital asset user's private keys, they are not currently subject to any

comprehensive regulatory oversight, such as rules requiring the implementation of cyber-security programs, business continuity or disaster recovery programs, or comprehensive insurance policies. One comment suggested that not being required to turn over personally identifiable information (PII), including their names, addresses, and TINs, is a key reason why digital asset users engage with DeFi tools and that adding this requirement would deter these users from interacting with DeFi trading applications. One comment argued that developers of DeFi systems should not be treated as brokers because they face much steeper difficulties in setting up information collection and reporting regimes because they have historically focused on technology development rather than financial services.

The Treasury Department and the IRS do not agree that DeFi participants should be excluded from the information reporting rules under section 6045 because of a lack of financial services experience or because of a purported lack of comprehensive regulatory oversight. Persons with technology expertise that operate trades or businesses relating to financial services should comply with the same rules as any other person operating financial services businesses. Regarding the regulatory oversight comments, these final regulations concern Federal tax laws under the Internal Revenue Code only. The purported absence of regulatory oversight under any other legal regime that is outside the scope of these regulations does not govern the implementation of a provision under title 26. Therefore, the Treasury Department and the IRS are not bound to use those regimes as models in determining whether DeFi participants should be required to comply with an entirely separate set of information reporting rules under section 6045.

Several comments argued that the application of the final regulations to DeFi participants would jeopardize the security of millions of Americans' personal data because DeFi participants are too small and undercapitalized to be able to store PII safely. The Treasury Department and the IRS did not adopt this comment for the final regulations because traditional brokers, including smaller brokers, have operated for many years and have implemented their own security policies and protocols.

One comment stated that many DeFi participants are run by anonymous providers, which further increases the risk to customer PII. Another comment warned that if front-end service providers are treated as brokers under

the final regulations, well-meaning front-end service providers and their customers are likely to fall victim to security breaches. This comment predicted the proliferation of "spoof" front-end service providers set up by nefarious actors to harvest the personal data of digital asset users. The Treasury Department and the IRS do not agree that these supposed risks justify not applying the information reporting rules under section 6045 to the DeFi industry. Information reporting is essential to the integrity of the tax system. The argument offered by these comments could be applied to every industry required to file information returns. The fact that nefarious actors could "spoof" such persons or otherwise compromise customer PII systems is not a reason to entirely abandon a reporting regime that is essential to ensuring that the income (and resulting income tax) from these transactions are reported by taxpayers. Like other businesses that are obligated to collect PII and file information returns with the IRS, trading front-end service providers can build their own technologically innovative data collection and storage systems or they can contract with reliable third-party vendors with expertise in securing confidential data to do the same on their behalf.

One comment touted the policy benefits brought by the DeFi industry, including reduced dependence on traditional intermediaries, increased financial inclusion, stimulation of capital formation, and democratization of financial services for traditionally oppressed Americans. Another comment stated that the proposed rules reflect an anti-technology bias that would discourage the adoption of these innovative privacy-preserving peer-to-peer payment technologies and jeopardize America's competitiveness with foreign nations. Another comment suggested the application of the proposed reporting rules to DeFi was financial discrimination. One comment suggested that the recent collapse of digital asset custodial exchanges, such as FTX, supports not applying the reporting regulations to DeFi participants, such as unhosted wallets.

The Treasury Department and the IRS do not agree that these final regulations reflect a bias against the DeFi industry or that these regulations will discourage the adoption of this technology by law-abiding customers. The information reporting rules under section 6045 have been applied in some form to brokers in the securities industry for over 40 years. As Senator Portman's statements made in the colloquy make clear, the digital asset reporting provisions were "designed to

bring more clarity and legitimacy to the cryptocurrency industry by more closely aligning the reporting requirements with those of more traditional financial services, and . . . in doing so will help provide more certainty for people looking to invest in digital assets.” 167 Cong. Rec. S6096 (daily ed. August 9, 2021). Beginning for sale transactions on or after January 1, 2025, the regulations promulgated in TD 10000 will also apply to brokers acting as agents or counterparties in their customer’s digital asset transactions. The application of these final regulations to the DeFi industry merely treats this industry like these other industries and thereby provides a benefit to the overall industry and to people investing in digital assets. Moreover, in addition to closing or significantly reducing the income tax gap from unreported income, one goal behind information reporting by brokers is to remind taxpayers who engage in DeFi transactions that these transactions are taxable and need to be reported on their Federal income tax returns. Therefore, these rules will also reduce the number of inadvertent errors or intentional misstatements shown on these taxpayers’ Federal income tax returns. Accordingly, these final regulations will result in trading front-end service providers being able to provide to their customers the same useful information regarding gross proceeds as custodial brokers will provide because of the application of TD 10000. Finally, these final regulations concern Federal tax laws under the Internal Revenue Code only. The potential policy benefits brought by the DeFi industry raised by these comments are outside the purview of title 26.

Several comments argued that the final regulations should not apply to DeFi participants because these participants cannot report on the customer’s cost basis. One comment argued that the onus of reporting tax information in DeFi transactions should fall upon the customers of DeFi services, not DeFi participants providing those services. Other comments argued that the information reporting rules should not apply to DeFi transactions because these transactions are not so-called “off-ramp transactions” that convert the owner’s overall digital asset investment into a non-digital asset investment. The Treasury Department and the IRS do not adopt these comments. An exchange of one type of digital asset for another type of digital asset may be a taxable transaction despite it not being an off-ramp transaction. *See* Notice 2014–21, modified by Notice 2023–34, 2023–19

I.R.B. 837 (May 8, 2023). In addition, notwithstanding that DeFi participants generally do not provide custodial services for their customers and thus would not be required to report on the customer’s cost basis in a sale transaction, this does not lessen the importance of information reporting for gross proceeds. Clear information reporting rules that require reporting of gross proceeds for taxpayers who engage in digital asset transactions will help the IRS identify taxpayers who have engaged in these transactions, and thereby help to reduce the overall tax gap.

Several comments recommended that the final regulations take a more innovative approach to broker reporting. For example, one comment recommended that the final regulations create a third-party reporting person regime, partially modeled after existing regimes to streamline information reporting and withholding in the cross-border payment and employment contexts, with which DeFi trading applications and trading front-end service providers could contract to store customer PII and to file required information returns. One comment stated that it is possible to innovate and build AML compliant DeFi platforms. Another comment recommended the use of new types of digital asset tokens, called tax attestation tokens, that could support DeFi brokers in reporting the information required under section 6045. The final regulations do not prescribe the tools that brokers must use in complying with the reporting requirements under section 6045. The Treasury Department and the IRS welcome input from the DeFi industry regarding regulatory reform or market developments that could facilitate innovative approaches to reporting information required under section 6045.

B. DeFi Application Activities

Proposed § 1.6045–1(a)(21)(iii)(A) would have included in the definition of facilitative services any service that provides a party in the sale with an automated market maker system, order matching services, or market making functions.

Many comments argued that the definition of facilitative services should not apply to persons operating DeFi trading applications, for a variety of different reasons. One comment stated that DeFi trading applications operate using immutable automatically executing software that cannot be changed to accommodate broker reporting. Another comment similarly stated that DeFi trading applications

that are operated by DAOs cannot be altered because although these DAOs may allow votes by their governance token holders on smart contracts involving predetermined fee tiers and other predetermined matters, they do not allow votes on the overhaul of the entire application to build in the systems required for information reporting and backup withholding. In contrast, another comment stated that ownership of governance tokens is often concentrated among a small group of investors—perhaps even a majority held by a single investor—that can exercise complete control over the development of the protocol. Several comments stated that existing DeFi trading applications, which do not provide for information reporting, cannot start reporting or be shut down to avoid operating without complying with section 6045 requirements because the existing smart contracts cannot be modified. One comment stated that some of DeFi trading applications generally do not have operators that are persons within the meaning of section 7701(a)(1) as support for the assertion that they could not be expecting to file and furnish information returns. One comment argued that DAO governance token holders and other operators of DeFi trading applications should not be brokers because they do not have access to DeFi customers and do not have the ability to maintain practical control over customers’ transactions conducted using the DAO or DeFi trading applications. Another comment requested more guidance with clear, objective percentage standards regarding whether governance token holders have control over a DAO, such as those provided in other areas of the tax law. *See e.g.*, sections 957(a) (controlled foreign corporation); 267(f) (controlled group); 304(c) (control). One comment argued that DeFi trading applications would not be in a position to know the customer’s identity if the transaction made use of “zero-knowledge proof” technology. Another comment asserted that there is no privity of contract between DeFi trading applications and digital asset users; therefore, it would be inappropriate to treat those operating these applications as brokers. One comment stated that although persons are involved in writing the underlying software code and deploying that software code within DeFi trading applications, these persons are not involved in running those applications once the code has been deployed. One comment requested that the final regulations permit operators of DeFi protocols (other than those that are fully

decentralized) to employ third-party service providers to assist in tracking the information about transactions that take place on the platform to comply with tax reporting. This comment stated that at least one DeFi protocol operator has already supported a tax services provider with tax-ready data and reports for its customers to use in filing their Federal income tax returns.

The Treasury Department and the IRS do not agree with all of the assertions made by these comments. However, as discussed in Parts III. and III.A. of this Summary of Comments and Explanation of Revisions, the only DeFi participants that are treated as brokers in these final regulations are trading front-end service providers. As explained in Parts III. and III.A. of this *Summary of Comments and Explanation of Revisions*, trading front-end service providers typically are legal entities or individuals that can more easily be identified by taxpayers and the IRS; the software code they write is not immutable; they are best suited to obtain information from customers; and the services they provide are most analogous to the services provided by conventional securities brokers. Accordingly, the Treasury Department and the IRS have determined that operators of DeFi trading applications should not be treated as providing services that meet the definition of effectuating services under the final regulations, unless these DeFi trading application operators also provide other services that are determined to be included in the definition of effectuating services.

DeFi trading applications provide a function that contributes to carrying out DeFi sale transactions much like the functions provided by established stock exchanges (such as the NYSE or the Nasdaq) contribute to carrying out securities transactions in the securities industry. These services are not analogous to functions performed by securities brokers in the securities industry. It should be noted that DeFi trading applications are unlike stock exchanges in that DeFi trading applications permit any digital asset user to transact directly with the application whereas stock exchanges prohibit retail investors from trading directly on these exchanges and only permit persons that are regulated members of the exchange (that is, broker-dealers) to trade on these exchanges. Although § 1.6045–1(b)(2)(ii) excludes stock exchanges from being treated as brokers, that exclusion is conditioned on those stock exchanges providing “facilities in which others effect sales.” This condition—along with the underlying regulatory

requirements regarding membership in the exchanges—ensures that other brokers that are closer to the customer can provide the necessary reporting under section 6045. In contrast, operators of DeFi trading applications, including DAOs and their governance token holders, do not restrict access to the trading platform to regulated parties. The IRS intends to evaluate the information reported by trading front-end service providers and the extent to which changes in the industry enable digital asset users to use DeFi trading applications without using the services provided by trading front-end service providers. If the IRS learns that a significant amount of DeFi trading does not give rise to information reporting, the Treasury Department and the IRS may reconsider the scope of the definition of broker with respect to DeFi transactions.

In specific response to the comments, the Treasury Department and the IRS have concluded that it is not necessary to determine at this time whether and to what extent DeFi trading applications are truly decentralized, the extent to which operators of DeFi trading applications (including governance token holders) can make changes to the underlying smart contracts and protocols to comply with broker reporting or hire third party service providers to do so, or whether operators of DeFi applications may not ever qualify as persons, within the meaning of section 7701(a) because these final regulations have determined that trading front-end service providers should be the only DeFi participants that are treated as the brokers under section 6045(c)(1)(D) and required to file information returns under section 6045 with respect to DeFi sale transactions. For the same reason, it is not necessary for the Treasury Department and the IRS to determine the extent to which a DeFi trading protocol would be in a position to know their customers’ identities if the transaction makes use of technology that does not reveal the customer’s identity, such as zero-knowledge proofs or similar technology.

One comment argued that the counterparty to a transaction carried out using a DeFi trading application may be a liquidity pool and not the person providing that liquidity (liquidity provider). Another comment asserted that if liquidity providers are treated as engaging directly in the activities of the DeFi trading application, they could be brokers under the proposed regulations even though they would not have any way to determine the identity of the customer. The Treasury Department and the IRS considered these comments and

have concluded that it is also not necessary to determine at this time whether and to what extent liquidity providers are the counterparties in these transactions or can otherwise access information about the customer because these final regulations have determined that trading front-end service providers should be the only DeFi participants that are required to file information returns under section 6045 with respect to DeFi sale transactions.

Several comments argued that non-fungible token (NFT) marketplaces are the same as DeFi trading protocols and other DeFi trading applications. These comments stated that developers of NFT marketplaces are incapable of knowing the transactions that are carried out by customers that use their marketplaces and cannot update their software to require customers to comply with the broker reporting requirements. Because these final regulations have determined that trading front-end service providers should be the only type of DeFi participant that is required to file information returns under section 6045 with respect to DeFi sale transactions under these final regulations, the Treasury Department and the IRS have concluded that it is not necessary to determine at this time whether and to what extent NFT marketplaces operate like DeFi trading protocols. It should be noted, however, that persons that provide customers with trading front-end services to purchase or sell NFTs in exchange for other digital assets do provide effectuating services and are digital asset middlemen and brokers under these final regulations.

One comment raised a concern regarding the extent to which a DAO would be treated as a person that regularly offers to redeem digital assets that it created or issued if it redeems “receipt tokens” issued to help users track how much of a governance token has been placed into a smart contract for voting purposes, which receipt tokens have no value and serve only to allow the user to retrieve its governance tokens. The Treasury Department and the IRS did not intend for the redemption of receipt tokens used merely to keep track of voting history to be treated as sales subject to reporting under these regulations and will consider future guidance to clarify this intention.

C. Settlement Layer Activities

Proposed § 1.6045–1(a)(21)(iii)(A) would have provided that a facilitative service does not include validating distributed ledger transactions (whether through proof-of-work, proof-of-stake, or any other similar consensus

mechanism) without providing other functions or services if provided by a person solely engaged in the business of providing such validating services.

Many of the comments agreed that validation services should be excluded from the broker definition. Applying the DeFi technology stack model discussed in Part I.B. of this *Summary of Comments and Explanation of Revisions* to the effectuating services definition, the Treasury Department and the IRS continue to maintain that it is appropriate to exclude validation services from the definition of effectuating services. The functions performed by DeFi participants at the settlement layer, such as block building and validation services, which are responsible for settling financial transactions on the distributed ledger, contribute to the execution of digital asset transactions much in the same way as clearing organizations, such as The Depository Trust and Clearing Corporation (DTCC) and its subsidiaries, contribute to the execution of securities transactions on a securities exchange. Like clearing organizations in the securities industry, participants at the settlement layer do not interact with the ultimate customer and, as such, do not generally have access to the information that would enable them to associate the customer's identity with transactions settled by those participants. Indeed, in the securities industry, this lack of proximity to the customer—along with the fact that other participants are closer to the customer—supports not treating clearing organizations as brokers. See § 1.6045–1(b)(2)(vii). Consistent with this understanding that participants at the settlement layer do not interact with the ultimate customer, several Senators expressed a concern with treating persons that perform validation services as brokers in the deliberations leading up to the passage of the Infrastructure Act. For example, Senator Portman said during the colloquy, “[w]e want to be sure that miners and stakers and others who play a key role in validating transactions now or in the future . . . will not be subject to the [broker reporting] rules for those activities.”). 167 Cong. Rec. S6096 (daily ed. August 9, 2021).

Several comments focused on the “without providing other functions or services” limitation to the carve-out for validation services. One comment argued that when a validator performs other functions or services, it does not enhance a validator's ability to know the identities of the parties whose transactions it validated. Another comment referenced the DeFi technology stack model to argue that the

regulations should more clearly exempt all settlement layer service providers from the definition of broker. Numerous other comments provided descriptions of additional functions that they said either were a component of validation services or otherwise should be treated similarly to validation services. Specifically, these comments urged the Treasury Department and the IRS to exclude ordering services, block arranging services, block-proposing services, communication node operation services and other similar network services that operate on the settlement layer. One comment suggested that persons that record transactions on secondary networks that are built on top of (or beside) a primary distributed ledger (layer 2 blockchains) using sequencer software should be treated like validators for this purpose. Similarly, another comment pointed out that to facilitate more transactions, some distributed ledgers enable transactions to be aggregated on a layer 2 blockchain before being recorded as a single transaction on the primary distributed ledger. In these cases, this comment asserted that persons that validate transactions on this secondary network should be excluded. Another comment suggested excluding validators that participate in so-called liquid staking protocols. One comment argued that unhosted wallet providers, DeFi protocols, and price discovery services should be excluded as analogous to validators.

As discussed in Part III.A.1. of this *Summary of Comments and Explanation of Revisions*, the Treasury Department and the IRS have determined that the only DeFi participant that should be treated in these final regulations as providing effectuating services for purposes of the reporting rules under section 6045 in a sale is the DeFi participant that provides trading front-end services. Accordingly, an exclusion for validation services—which are not trading front-end services—is technically no longer necessary. Nevertheless, given the strong concern expressed by members of Congress and others in the industry that these ancillary services be excluded, the final regulations retain this exclusion for validation services and expand it to also include those services necessary to complete the validation. It is intended that block building as well as the operation of communication nodes would be included in the other services necessary to complete the validation, and thus excluded from the definition of effectuating services. Without expressing any view regarding the

extent to which the other services raised by the comments are analogous to these validation services, the Treasury Department and the IRS have determined that it is not appropriate to expand the exclusion from the definition of effectuating services for validation services any further. First, as noted, the exclusion is not necessary now that trading front-end services are the only DeFi services that are treated as effectuating services. As long as these other services do not fit within the definition of trading front-end services, they will not be treated as effectuating services under the final regulations. Second, the list of services that are not trading front-end services is potentially infinite and can change over time. It is not practical or appropriate to draft a list of all the services within the DeFi industry that do not fit within the definition of trading front-end services.

Several comments argued that the proposed carve-out for validation services is too narrow because it would be limited to persons “solely” engaged in the business of providing distributed ledger validation services. These comments argued that the exclusion should remain available even for persons who are engaged in more than one trade or business or providing more than one type of service. Another comment pointed out that, as drafted, the carve-out seemingly would not apply to persons conducting validation services only as a hobby or without a profit motive. One comment recommended that the exclusion instead be based on the functions or services conducted with respect to the transaction. Another comment requested additional examples to clarify the circumstances in which validation services would be considered facilitative services.

The Treasury Department and the IRS agree that the carve-out for validation services should not be limited to persons that are “solely” engaged in the business of performing such services. Rather, the intent of the carve-out was to exclude validators from reporting on sales for which they provide validation services unless those validators also performed other services with respect to those same sales that would be treated as effectuating services. Accordingly, final § 1.6045–1(a)(21)(iii)(C)(1) provides that providing distributed ledger transaction validation services (whether through proof-of-work, proof-of-stake, or any other similar consensus mechanism), including those services necessary to complete the validation, are not an effectuating service under final § 1.6045–1(a)(21)(i). Additionally, an example is added at final § 1.6045–

1(b)(24) to illustrate that the exclusion applies only to the validation services provided. It does not apply when validators also perform trading front-end services because those validators must report sales carried out as a result of those trading front-end services. Thus, if a validator, as part of its ordinary course of a trade or business, provides trading front-end services with respect to a sale for a customer and thereafter also validates that sale (likely without even knowing that validated block included the customer's sale), the validator would be required to report on the sale as a result of providing the trading front-end services notwithstanding that the validator also validated the sale.

IV. Multiple Broker Rule

The proposed regulations did not extend the multiple broker rule under § 1.6045–1(c)(3)(iii) of the pre-TD 10000 regulations to digital asset brokers, but instead asked for comments regarding the best way to apply a multiple broker rule. Comments overwhelmingly requested that the final regulations implement a multiple broker rule applicable to digital asset brokers to avoid burdensome and confusing duplicative reporting. In response, TD 10000 added a multiple broker rule under § 1.6045–1(c)(3)(iii)(B) that applies if more than one digital asset broker effects the same sale. Under that rule, the broker crediting the gross proceeds to the customer's wallet address or account (the crediting broker) must report the transaction to the IRS. The other broker can generally avoid reporting if it obtains proper documentation from the crediting broker that the crediting broker is a U.S. digital asset broker. The preamble to TD 10000 also indicated that the Treasury Department and the IRS are continuing to study the question of how a multiple broker rule would apply to the non-custodial (DeFi) digital asset industry.

Many comments pointed out that a customer engaging in any DeFi transaction may use the services of many DeFi participants, including interface providers, wallet software providers, and DeFi protocols. To the extent the final regulations deem all of these DeFi participants to be brokers, their overlapping reporting obligations would create duplicate reporting and unnecessary compliance costs. Because these final regulations treat only trading front-end service providers as a broker and because only one front-end service provider translates the customer's trade order details into coded trade order instructions, there should generally be only one DeFi participant that is a

broker under section 6045(c)(1)(D) in a DeFi transaction. The Treasury Department and the IRS are not aware of multiple broker fact patterns in which more than two types of brokers could be involved in a DeFi sale. If such a case did exist, however, the existing multiple broker rule in § 1.6045–1(c)(3)(iii)(B) would apply to ensure that only one of the two brokers report on the transaction. Further, the Treasury Department and the IRS intend to issue a notice of proposed rulemaking that will propose examples illustrating how the existing multiple broker rule would apply to transactions like this that are effected by both a front-end service provider and a custodial broker to obtain comments from the public regarding the application of the existing multiple broker rule in § 1.6045–1(c)(3)(iii)(B) to such transactions.

V. Comments Based on Constitutional Concerns

A. Major Questions Doctrine

Several comments alleged that the proposed regulations, if finalized, would raise major questions doctrine concerns under *West Virginia v. EPA*, 597 U.S. 697 (2022).²⁵ One comment alleged that the IRS “literally has no power to act . . . unless and until Congress confers power upon it,” *La. Pub. Serv. Comm'n v. FCC*, 476 U.S. 355, 374 (1986), and that Congress's use of the term “broker” did not authorize the IRS to impose onerous requirements on every person tangentially involved in cryptocurrency or other digital assets. The comment claimed that the proposed regulations, if finalized, would eliminate DeFi transactions and fundamentally transform non-custodial wallet services and that Congress withheld that authority from the Treasury Department and the IRS even though Congress amended section 6045 to allow for broker reporting on digital asset transactions. Another comment claimed that the Treasury Department and the IRS should be especially careful not to encroach on Congress's policymaking power in light of the ongoing congressional debate about how digital assets should be treated and regulated and the economic importance of the digital asset industry. The comment alleged that amended section 6045 does not provide any clear congressional authorization that could give the IRS the right to dictate

important policy decisions about digital assets.

The Treasury Department and the IRS do not agree that these final regulations are prohibited by the major questions doctrine. The major questions doctrine is only implicated when an agency claims an extraordinary grant of regulatory authority based on “modest words,” “vague terms,” or “subtle devices,” and the “history and the breadth” of the agency's asserted power provide a reason to hesitate before concluding that Congress meant to confer such authority. *West Virginia v. EPA*, 597 U.S. at 721 and 723.

Section 80603 of the Infrastructure Act made several changes to the broker reporting provisions under section 6045 to clarify the rules regarding how certain digital asset transactions should be reported by brokers. These clarifications are not mere “modest words,” “vague terms,” or “subtle devices.” Section 6045(c)(1)(D) provides that a broker includes “any person who (for consideration) is responsible for regularly providing any service effectuating transfers of digital assets on behalf of another person.” As discussed in Part II. of this *Summary of Comments and Explanation of Revisions*, this statutory language extends to treating DeFi industry participants as brokers.

Furthermore, these final regulations do not claim or exercise an extraordinary grant of regulatory authority. As discussed in Part III.A.1. of this *Summary of Comments and Explanation of Revisions*, the only DeFi participant treated as providing effectuating services for purposes of these final regulations is the DeFi participant that provides trading front-end services. These front-end services are analogous to the services provided by securities brokers in the securities industry, which are already subject to section 6045 broker reporting.

B. Comments Based on the First, Fourth, and Fifth Amendments

Multiple comments alleged that the proposed regulations, if finalized, would violate the First, Fourth, and Fifth Amendments to the U.S. Constitution on a variety of asserted bases, some of which apply to DeFi participants. As discussed in the preamble to TD 10000, the final regulations do not violate the First Amendment because they do not compel political or ideological speech by DeFi participants and merely require information reporting for Federal tax compliance purposes, a sufficiently important governmental interest. *See* 89 FR 56520. The final regulations also do not violate the Fourth Amendment as

²⁵ The major question doctrine is a canon of construction that bars agencies from resolving questions of “vast economic and political significance” without clear statutory authorization.

applied to DeFi participants because, as explained in the preamble to TD 10000, the Fourth Amendment's protections extend only to items or places in which a person has a constitutionally protected reasonable expectation of privacy. See 89 FR 56520, 56521.

As mentioned in the preamble to TD 10000, some comments stated that the definition of broker, effect, and digital asset middleman are unconstitutionally vague. See 89 FR 56521. The Due Process Clause of the Fifth Amendment provides that "no person shall . . . be deprived of life, liberty, or property, without due process of law." This provision has been interpreted to require that statutes, regulations, and agency pronouncements define conduct subject to penalty "with sufficient definiteness that ordinary people can understand what conduct is prohibited." See *Kolender v. Lawson*, 461 U.S. 352, 357 (1983). The relevant test is that a "regulation is impermissibly vague under the Due Process Clause of the Fifth Amendment if it 'fails to provide a person of ordinary intelligence fair notice of what is prohibited, or is so standardless that it authorizes or encourages seriously discriminatory enforcement.'" *United States v. Szabo*, 760 F.3d 997, 1003 (9th Cir. 2014) (quoting *Holder v. Humanitarian Law Project*, 561 U.S. 1, 18 (2010)).

The final regulations are not unconstitutionally vague. As discussed in Part II. of this *Summary of Comments and Explanation of Revisions*, the statutory definition of broker is broad enough to include multiple DeFi participants involved in a DeFi transaction. Despite this broad statutory definition of broker, the final regulations are more narrowly tailored so that they apply only to those DeFi participants that provide services analogous to those performed by brokers in the securities industry. Section 1.6045-1(a)(1) defines a broker as "any person . . . that, in the ordinary course of a trade or business during the calendar year, stands ready to effect sales to be made by others." Section 1.6045-1(a)(10)(i)(D) added to the definition of effect to act as a digital asset middleman for a party in a sale of digital assets. Digital asset middleman was defined in § 1.6045-1(a)(21)(i) as any person who, with respect to a sale of digital assets provides a facilitative service. Proposed § 1.6045-1(a)(21)(iii)(A) would have defined a facilitative service as any service that directly or indirectly effectuates a sale of digital assets. Rather than maintain this broad definition of a facilitative service, final § 1.6045-1(a)(21)(iii)(A)

defines an effectuating service as a trading front-end service and other narrowly identified effectuating services. Final § 1.6045-1(a)(21)(iii)(A)(1) defines these trading front-end services with sufficient specificity to avoid due process concerns.

VI. Applicability Dates and Penalty Relief

One comment, pointing to the safe harbor rules generally applicable under section 6721(c)(3) of the Code to *de minimis* transactions, requested penalty relief for persons who unknowingly and unintentionally engage in activities that result in such persons being brokers under the final regulations if such persons remain below a *de minimis* threshold for the number and/or value of transactions should have this relief effected during a start-up or transitional period. Alternatively, or potentially in addition to this request for a temporary *de minimis* threshold, this comment requested a permanently applicable "grace period" for any industry participant that has unintentionally violated the information reporting requirements under section 6045 after qualifying as a broker during which grace period such person can either come into compliance or adjust its activities so as to avoid qualifying as a broker, without immediately facing penalties. The IRS does not agree that it is appropriate to provide penalty relief for start-up brokers whose services effectuate transactions during a grace period or that fall below a *de minimis* threshold beyond that relief already in place under section 6721(c)(3) for *de minimis* reporting errors or under section 6724 of the Code for errors that are due to reasonable cause because this type of relief is not generally provided for other information reporting provisions. See e.g., section 6041 (applicable to all persons engaged in a trade or business making payments in the course of such trade or business). Persons providing trading front-end services to customers as a trade or business are expected to investigate all the legal requirements of conducting that trade or business. Relief for those that do not properly investigate beyond the existing *de minimis* rules or the reasonable cause penalty relief under section 6724 is, therefore, not appropriate.

The Treasury Department and the IRS received and considered many comments about the applicability dates contained in the proposed regulations. Multiple comments requested additional time beyond the proposed applicability date for gross proceeds

reporting by DeFi participants on transactions occurring on or after January 1, 2025, so that newly-reclassified brokers could build compliance programs properly. The comments generally asked for more time, ranging from one to five years after publication of the final rules, to prepare for reporting transactions, with the most common suggestion being an applicability date between 18 and 24 months after publication of the final regulations. Several comments suggested that broker reporting begin at the same time as CARF reporting, either for all brokers or for non-U.S. brokers. Multiple comments requested that the final regulations become applicable in stages, with many suggesting that custodial industry participants should be required to report during the first stage and that DeFi participants should begin reporting a year or more later. Comments generally pointed to the time needed to build information reporting systems and to adequately document customers to support their recommendation of later applicability dates. They also cited concerns about fulfilling backup withholding requirements and adapting to filing a new information return, the Form 1099-DA, *Digital Asset Proceeds From Broker Transactions*, and about the IRS's ability to receive and process a large number of new forms.

The Treasury Department and the IRS previously determined that a phased-in or staged approach to broker reporting is appropriate. Accordingly, TD 10000 requires gross proceeds reporting generally for sales occurring on or after January 1, 2025, for custodial industry participants (and certain brokers acting as counterparties in a transaction). Additionally, TD 10000 requires basis reporting for sales occurring on or after January 1, 2026, but only with respect to digital assets the customer acquired from, and held with, the same broker on or after January 1, 2026. The preamble to TD 10000 stated that the Treasury Department and the IRS intend to expeditiously issue separate final regulations describing information reporting rules for DeFi industry participants and these rules would be finalized with an appropriate, separate applicability date.

Although the applicability date proposed by the proposed regulations applied to gross proceeds reporting for sales of digital assets effected on or after January 1, 2025, the Treasury Department and the IRS agree that a delay is warranted for trading front-end service providers treated as brokers (DeFi brokers) under these final regulations. First, many of these DeFi

brokers may not have systems in place to collect and store customer identity information or contracts with third-party service providers to do the same. Second, many of these DeFi brokers also may not have systems in place to collect, store, and report customer transaction information or contracts with third-party service providers to do the same. Third, many of these DeFi brokers also do not have backup withholding systems that would enable these brokers to backup withhold and pay the backup withholding tax in cash. Based on these considerations, final § 1.6045-1(a)(21) applies to sales of digital assets occurring on or after January 1, 2027.

The IRS intends to work closely with stakeholders to ensure the smooth implementation of the reporting rules, including the mitigation of penalties in the early stages of implementation for all but particularly egregious cases involving intentional disregard of these rules. Accordingly, to promote industry readiness to comply with the backup withholding requirements that will apply to newly required reporting required by these final regulations, Notice 2025-3 is being issued contemporaneously with these final regulations to provide transitional relief from broker reporting penalties and backup withholding under section 3406 on these sales. This Notice, which will be published in the Internal Revenue Bulletin, provides that the effective date for backup withholding is postponed to January 1, 2028, for potential backup withholding obligations imposed under section 3406 for payments required to be reported by DeFi brokers on Forms 1099-DA, *Digital Asset Proceeds From Broker Transactions*, for sale transactions. Additionally, the Notice provides that the IRS will not assert penalties for a DeFi broker's failure to deduct, withhold, and pay any backup withholding tax with respect to calendar year 2028 that is caused by a decrease in the value of received digital assets between the time of the transaction giving rise to the backup withholding liability and the time the broker liquidates 24 percent of the received digital assets, provided the broker undertakes to effect that liquidation immediately after the transaction giving rise to the backup withholding liability. For sale transactions effected in 2028 for customers that have opened accounts with the broker prior to January 1, 2028, the Notice further provides that backup withholding will not apply with respect to any payee that furnishes a TIN to the broker, whether or not on a Form W-9 in the manner required in

§§ 31.3406(d)-1 through 31.3406(d)-5, provided the broker submits that payee's TIN to the IRS's TIN matching program and receives a response that the TIN furnished by the payee is correct. See § 601.601(d)(2).

In addition to this specific DeFi industry relief, the backup withholding relief provided in Notice 2024-56, 2024-29 I.R.B. 64 (July 15, 2024), also applies to the DeFi industry. For example, Notice 2024-56 applies to digital asset sales effected by a DeFi broker under these final regulations where the reportable proceeds is a specified NFT. Additionally, the backup withholding relief provided in Notice 2024-56 for PDAP sales effected by a PDAP will also be applicable to PDAP sales effected by a DeFi broker that is also PDAP. This relief for PDAP sales, however, does not apply to the extent the sale is also another type of sale described in § 1.6045-1(a)(9)(ii)(A) through (C), such as a sale of digital asset A for digital asset B, because § 1.6045-1(a)(9)(ii)(D) provides that a sale that is a PDAP sale and another type of digital asset sale is not treated as a PDAP sale.

Special Analyses

I. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6(b) of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520) (PRA) generally requires that an agency obtain the approval of the Office of Management and Budget (OMB) before collecting information from the public, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget.

In general, the collection of information in the regulations is required under section 6045 and the collection of information in these regulations is set forth in § 1.6045-1. The IRS intends that the collection of information pursuant to section 6045 and these regulations will be conducted by way of Form 1099-DA. In accordance

with the PRA, the reporting burden associated with the collection of information in these final regulations will be reflected in PRA submissions associated with Form 1099-DA (OMB control number pending). On April 22, 2024, the IRS published in the **Federal Register** (89 FR 29433) a Notice and request for comments on the collection of information requirements related to the broker regulations with a 60-day comment period. On October 7, 2024, the IRS published in the **Federal Register** (89 FR 81151) a second Notice and request for comments on the collection of information requirements related to the broker regulations with a 30-day comment period. To the extent there is a change in burden as a result of these final regulations, the change in burden will be reflected in an update to the burden estimate for Form 1099-DA prior to the collection of information required under these regulations.

The proposed regulations contained burden estimates regarding the collection of information with respect to the dispositions of digital assets. For the proposed regulations, the Treasury Department and the IRS estimated that approximately 600 to 9,500 brokers would be impacted by the proposed regulations, which would have applied to all digital asset brokers. The proposed regulations contained an estimate of 13 to 16 million customers that would have transactions subject to the proposed regulations. The proposed regulations also contained an estimate of the average time to complete the Form 1099-DA for each customer as between 7.5 minutes and 10.5 minutes, with a mid-point of 9 minutes (or 0.15 hours). Taking the midpoints of the ranges for the number of brokers expected to be impacted by the proposed regulations, the number of taxpayers expected to receive one or more Form 1099-DA, and the time to complete the Form 1099-DA (5,050 brokers, 14.5 million recipients, and 9 minutes respectively), the proposed regulations estimated the average broker would incur 425 hours of time burden and \$27,000 of monetized burden for the ongoing costs per year. The proposed regulations contained estimates of 2,146,250 total annual burden hours and \$136,350,000 in total monetized annual burden.

The proposed regulations estimated start-up costs to be between three to eight times annual costs. Given that the Treasury Department and the IRS expected the per-broker annual estimated burden hours to be 425 hours and \$27,000 of estimated monetized burden, the proposed regulations estimated per broker start-up aggregate burden hours to range from 1,275 to

3,400 hours and \$81,000 and estimated aggregate monetized burden of \$216,000. Using the midpoints, start-up total estimated aggregate burden hours was 11,804,375 and total estimated monetized burden was \$749,925,000.

Numerous comments were received on the estimates contained in the proposed regulations. In general, the comments claimed the proposed regulations underestimated the burden hours and monetized burden. The comments that were related to the burden associated with the specific information required to be reported on Form 1099-DA were addressed in the preamble to TD 10000. See 89 FR 56539–56541. In addition, multiple comments said that the estimated number of brokers impacted by the proposed regulations was too low. The comments that did not distinguish between centralized brokers or DeFi brokers under the proposed regulations were addressed in the preamble to TD 10000. *Id.*

Some of the comments specifically addressed DeFi participants. One comment said the estimated number of overall brokers identified in the proposed regulations was too low because it underestimated the impact on decentralized autonomous organizations, governance token holders, operators of web applications, and other similarly situated potential DeFi participants. As discussed in Part III. of this *Summary of Comments and Explanation of Revisions*, the Treasury Department and the IRS have determined that it is appropriate to treat DeFi participants that provide trading front-end services as brokers under section 6045. The Treasury Department and the IRS have also determined that it is not appropriate to treat decentralized autonomous organizations, governance token holders, or operators of web applications as brokers subject to the reporting requirements unless they also provide trading front-end services, and only with respect to the sales of digital assets that are carried out using the trading front-end services. Accordingly, this burden analysis does not attempt to include any of the DeFi participants that these final regulations do not treat as brokers.

Numerous comments expressed an overall concern with the reporting burden associated with the proposed

regulations but did not specifically address the estimated number of brokers, number of recipients, or time needed to complete the reports. Many of these comments expressed a concern that the reporting requirements in the proposed regulations would reduce the benefits of customers engaging in DeFi transactions. Several comments described the benefits of DeFi, with one comment specifically mentioning that these benefits include best execution, lower fees, faster transaction times, enhanced personal information protection greater privacy, and the avoidance of conflicts of interest. These comments generally claimed that the reporting required by the proposed regulations would place significant costs on DeFi participants thereby reducing the benefits of engaging in DeFi transactions.

Other comments stated that DeFi participants do not currently have systems in place to comply with tax recordkeeping requirements. One comment claimed that the proposed regulations would result in DeFi participants spending more resources requesting, collecting, managing, and securing information than they spend conducting their current businesses. Another comment claimed that it would be economically prohibitive for DeFi participants to build and maintain broker reporting infrastructure systems because the services these DeFi participants provide are typically offered at little cost compared to similar services offered by traditional securities brokers. In addition, this comment claimed that the proposed regulations, if finalized, would require DeFi participants to build infrastructure systems to collect private information on users despite never holding any customer assets.

The Treasury Department and the IRS understand that these final regulations will impose costs on DeFi participants. As discussed in Part III. of this *Summary of Comments and Explanation of Revisions*, however, the final regulations narrow the scope of DeFi participants that the proposed regulations treated as brokers required to report under section 6045 to those DeFi participants providing trading front-end services. The final regulations treat only trading front-end service providers as brokers (DeFi brokers) under section 6045 for several reasons,

including that these DeFi participants have the closest relationship to customers and therefore are in the best position to request, collect, and manage the information, including the personal identification information, required to be reported. Additionally, DeFi participants that provide trading front-end services provide functions that are most analogous to the functions provided by securities brokers. As discussed in Part II.B.A. of this *Summary of Comments and Explanation of Revisions*, the Treasury Department and the IRS have concluded that the definition of broker should not depend on the specific technology used to effect transfers of digital assets. While certain technologies may allow DeFi brokers to be more cost-effective in their business operations, their choice to use these technologies should not influence their inclusion in the definition of broker and their requirement to comply with the reporting obligations.

Books or records relating to a collection of information must be retained so long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by section 6103 of the Code.

III. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) (5 U.S.C. chapter 6) requires agencies to “prepare and make available for public comment an initial regulatory flexibility analysis,” which will “describe the impact of the proposed rule on small entities.” 5 U.S.C. 603(a). Unless an agency determines that a proposal will not have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires the agency to present a final regulatory flexibility analysis (FRFA) of the final regulations. The Treasury Department and the IRS have not conclusively determined whether these final regulations will have a significant economic impact on a substantial number of small entities. This uncertainty is based in part on a lack of sufficient information about the industry and therefore, any determination requires further study. Because there is a possibility of a significant impact on a substantial number of small entities, a FRFA is provided in these final regulations.

While the Treasury Department and the IRS were unable to find information to estimate the number of trading front-end service providers, there is some information that can be used to estimate the number of DeFi trading protocols. For example, one data aggregator states that it tracks more than 5,042 different protocols across 328 blockchains and trading volume for 613 DeFi trading protocols (which it calls DEX).²⁶ Another data aggregator states that it tracks 852 DeFi trading protocols (which it calls decentralized exchanges).²⁷ This data aggregator shows which website is used to access each DeFi trading protocol that it tracks and multiple DeFi trading protocols are accessed by the same website. Because information is not available on the number of trading front-end service providers, a conservative estimate of the number of trading front-end service providers can be made using the number of DeFi trading protocols. While this estimate does not reflect that one trading front-end service may provide access to multiple DeFi trading protocols, it also does not reflect unhosted wallet providers that provide trading front-end services which may also provide access to multiple DeFi trading protocols. Accordingly, based on the limited information available, the Treasury Department and the IRS have concluded that approximately 650 to 875 DeFi brokers, with a mid-point of approximately 765 DeFi brokers, will be impacted by these final regulations.

The expected number of impacted issuers of information returns under these final regulations is between 650 and 875 estimated DeFi brokers (mid-point of 765). Small Business Administration regulations provide small business size standards by NAICS Industry. See 13 CFR 121.201. The NAICS includes virtual currency exchange services in the NAICS code for Commodity Contracts Intermediation (52316). According to the Small Business Administration regulations, the maximum annual receipts for a concern and its affiliates to be considered small in this NAICS code is \$41.5 million. Based on external reporting on decentralized exchange activity, approximately 10 of the 875 DeFi brokers identified as impacted issuers in the upper bound estimate exceed the \$41.5 million threshold. This implies there could be up to 865 impacted small business issuers under

the Small Business Administration's small business size standards.

Pursuant to section 7805(f) of the Code, the notice of proposed rulemaking was submitted to the Chief Counsel of the Office of Advocacy of the Small Business Administration for comment on its impact on small business, and no comments were received.

A. Need for and Objectives of the Rule

Information reporting is essential to the integrity of the Federal tax system. The IRS estimated in its 2019 tax gap analysis that net misreporting as a percent of income for income with little to no third party information reporting is 55 percent. In comparison, misreporting for income with some information reporting, such as capital gains, is 17 percent, and for income with substantial information reporting, such as dividend and interest income, is just five percent.

Prior to TD 10000, many transactions involving digital assets were outside the scope of information reporting rules. Digital assets are treated as property for Federal income tax purposes. The regulations under section 6045 require brokers to file information returns for customers that sell certain types of property providing gross proceeds and, in some cases, adjusted basis. TD 10000 specifies that digital assets are a type of property for which information reporting is required by brokers. However, TD 10000 reserved on the rules for DeFi participants and thus did not include DeFi participants in the definition of broker required to file information returns for digital asset transactions.

Information reporting by DeFi brokers under section 6045 will lead to higher levels of taxpayer compliance because the income earned by taxpayers engaging digital assets transactions without a custodial broker will be made more transparent to both the IRS and taxpayers. Clear information reporting rules that require DeFi brokers to report gross proceeds for taxpayers who engage in digital asset transactions will help the IRS identify taxpayers who have engaged in these transactions, and thereby help to reduce the overall tax gap. These final regulations are also expected to facilitate the preparation of tax returns (and reduce the number of inadvertent errors or intentional misstatements shown on those returns) by and for taxpayers who engage in digital asset transactions.

B. Affected Small Entities

As discussed above, we anticipate a maximum of approximately 865 of the 875 (or 98.8 percent) impacted issuers

in the upper bound estimate could be small businesses.

1. Impact of the Rules

As previously stated in the Paperwork Reduction Act section of this preamble, the reporting of digital asset sales by DeFi brokers pursuant to § 1.6045-1 is on Form 1099-DA.

To estimate the impact of these final regulations on small DeFi brokers, the Treasury Department and the IRS first estimated the number of customers that will have transactions subject to these final regulations. To determine the number of customers that will have transactions subject to these final regulations, the Treasury Department and the IRS reviewed reports from several digital asset industry participants. While these reports indicate that there were over 196 million visits to the websites providing access to the DeFi trading protocols in the most recent month and \$1.9 trillion in 24-hour trading volume for the most recent 24-hour period, these amounts do not reflect the number of customers that will be impacted by these regulations because a single customer may visit a website providing access to the DeFi trading protocols more than once in a month and may or may not engage in a trade each time they visit the website and the customer may also engage in different size transactions.²⁸ Additionally neither the visits nor the trading volume were separately reported for U.S. and non-U.S. customers. In an attempt to narrow down this information to determine the number of customers that each DeFi protocol services, the Treasury Department and the IRS reviewed a recent analysis that found the North American cryptocurrency market is the largest cryptocurrency market, with an estimated \$1.2 trillion in value received on-chain between July 2022 and June 2023, which represents 24.4% of global transaction activity.²⁹ These on-chain transactions are likely correlated with DeFi transactions because many centralized brokers effect their customer transactions utilizing omnibus ledgers. Another analysis reported that the number of unique worldwide DeFi users reached a peak of 7.5 million in late

²⁷ CoinGecko, Top Decentralized Exchanges Ranked by 24H Trading Volume, <https://www.coingecko.com/en/exchanges/decentralized>, (last visited November 27, 2024).

2021, whereas in April 2024, the total number of DeFi users was only 5 million.³⁰ Based on this information, the Treasury Department and the IRS have determined that best-available estimate of the minimum number of customers impacted by these regulations is 20% of the peak users in 2024, which is an estimate of 1 million customers, and the maximum number of customers impacted by these regulations is 35% of the peak users in 2021, which is an estimated 2.625 million customers, with a mid-point of approximately 1,812,500 customers.³¹

Next, the Treasury Department and the IRS estimated the average time for a DeFi broker to complete the Form 1099-DA. These final regulations do not change the information required to be reported on the Form 1099-DA as provided in TD 10000. Therefore, the Treasury Department and the IRS have concluded that it is appropriate to use the average time to complete the Form 1099-DA estimate from TD 10000, which is between 7.5 minutes and 10.5 minutes, with a mid-point of 9 minutes (or 0.15 hours), for each customer. This estimate is based survey data collected from similar information return filers which include small businesses.

Finally, the Treasury Department and the IRS estimated the average start-up costs per broker. The proposed regulations estimated that initial start-up costs would be between three and eight times annual costs. Several comments said that these costs were underestimated because many of the persons treated as brokers under the proposed regulations are newer companies with limited funding and resources. One comment said the multiple applied was too low and a five to ten times annual costs would be a more reasonable estimate given the complexity of the reporting regime and would more closely align with prior start-up costs for similar reporting regimes. Consistent with TD 10000 and a continuing acknowledgment that it is difficult to estimate start-up costs, the Treasury Department and the IRS accept the comment to use a five to ten times annual cost multiplier to determine the estimate of these costs for DeFi brokers.

In summary, the Treasury Department and the IRS estimate that approximately

865 of the 875 (or 98.8 percent) impacted issuers in the upper bound estimate could be small businesses. The Treasury Department and the IRS estimate that 1,812,500 customers will be impacted by these final regulations. As previously noted, the number of DeFi brokers is based on the number of DeFi trading protocols, rather than the number of trading front-end service providers because the number of trading front-end service providers is not readily available. It is not possible to know how many DeFi users engage in transactions with each DeFi trading protocol. Given the lack of information available, the Treasury Department and the IRS have assumed that each customer uses one DeFi trading protocol, which results in an estimate of approximately 2,400 customers per broker. A reasonable estimate for the average time to complete these forms for each customer is 9 minutes (0.15 hours). Therefore, the Treasury Department and the IRS estimate the average time burden per broker will be approximately 360 hours. Additionally, start-up costs are estimated to be between five and ten times annual costs. Given the expected per-DeFi broker annual burden of 360 hours, the Treasury Department and the IRS estimate per-DeFi broker start-up burden between 1,800 to 3,600 in start-up costs to build processes to comply with the information reporting requirements.

Although small DeFi brokers may engage third party tax reporting services to complete, file, and furnish information returns to avoid the start-up costs associated with building an internal information reporting system for sales of digital assets, it remains difficult to predict whether the economies of scale efficiencies of using these services will offset the somewhat more burdensome ongoing costs associated with using third party contractors.

2. Alternatives Considered for Small Businesses

The Treasury Department and the IRS considered alternatives to these final regulations that would have created an exception to reporting, or a delayed applicability date, for small DeFi brokers but decided against such alternatives for several reasons. As discussed above, we anticipate that approximately 865 of the 875 (or 98.8 percent) impacted issuers in the upper bound estimate could be small businesses. One purpose of these regulations is to eliminate the overall tax gap. Any exception or delay to the information reporting rules for small DeFi brokers, which may comprise the

vast majority of impacted issuers, would reduce the effectiveness of these final regulations. In addition, such an exception or delay could have the unintended effect of incentivizing taxpayers to move their business to excepted small DeFi brokers, thus thwarting IRS efforts to identify taxpayers engaged in digital asset transactions. Additionally, because the information reported on statements furnished to customers will remind taxpayers who engage in DeFi transactions that the transactions are potentially taxable, thereby reducing the number of inadvertent errors or noncompliance on their Federal income tax returns, information reported by small DeFi brokers will be able to offer their customers the same amount of useful information as their larger DeFi competitors. Finally, to the extent investors in digital assets are themselves small businesses, these final regulations will also provide these businesses with the same reminders that the DeFi transactions are taxable.

3. Duplicate, Overlapping, or Relevant Federal Rules

These final regulations do not overlap or conflict with any relevant Federal rules.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of \$100 million in 1995 dollars, updated annually for inflation. This rule does not include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (entitled “Federalism”) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. This final rule does not have federalism implications, does not impose substantial direct compliance costs on State and local governments, and does not preempt State law within the meaning of the Executive order.

³¹ While country-specific information is difficult to obtain, information on the North American cryptocurrency market would include U.S. users. Treasury and IRS use this information even though it is an over-estimate of U.S. users.

VI. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as a major rule as defined by 5 U.S.C. 804(2).

Statement of Availability of IRS Documents

IRS Revenue Procedures, Revenue Rulings, Notices, and other guidance cited in this document are published in the Internal Revenue Bulletin and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at <https://www.irs.gov>.

Drafting Information

The principal authors of these regulations are Roseann Cutrone and Jessica Chase, Office of the Associate Chief Counsel (Procedure and Administration). However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Reporting and recordkeeping requirements.

Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by revising the entry for § 1.6045–1 to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Section 1.6045–1 also issued under 26 U.S.C. 6045(a).

* * * * *

■ **Par. 2.** Section 1.6045–0 is amended by:

■ 1. Revising the entries for § 1.6045–1(a)(21), (a)(21)(i) through (iii), and (a)(21)(iii)(A);

■ 2. Adding entries for § 1.6045–1(a)(21)(A)(iii)(1) and (2);

■ 3. Revising the entry for § 1.6045–1(a)(21)(iii)(B); and

■ 4. Adding entries for § 1.6045–1(a)(21)(iii)(C), (a)(21)(iii)(C)(1) and (2), and (a)(21)(iii)(D).

The revisions and additions read as follows:

§ 1.6045–0 Table of contents.

* * * * *

§ 1.6045–1 Returns of information of brokers and barter exchanges.

(a) * * *

(21) Digital asset middleman.

- (i) Effectuating service.
- (ii) Position to know.
- (iii) Trading front-end service and other effectuating services.
- (A) Trading front-end service.
- (1) In general.
- (2) Location of digital assets received in an exchange and indirect transmission of orders.
- (B) Other effectuating services.
- (C) Excluded activities.
- (1) Validation services.
- (2) Licensing of software or selling of hardware.
- (D) Digital asset trading protocol.

* * * * *

■ **Par. 3.** Section 1.6045–1 is amended by:

■ a. Revising and republishing paragraph (a)(21);

■ b. Revising paragraphs (b)(2)(ix) and (x);

■ c. Adding paragraphs (b)(2)(xi) and (b)(24) and (25); and

■ d. Adding a sentence to the end of paragraph (q).

The revisions and additions read as follows:

§ 1.6045–1 Returns of information of brokers and barter exchanges.

(a) * * *

(21) *Digital asset middleman.* The term *digital asset middleman* means any person who is responsible for providing an effectuating service as defined in paragraph (a)(21)(i) of this section with respect to a sale of digital assets.

(i) *Effectuating service.* The term *effectuating service* means any service, with respect to a sale of digital assets, that is:

(A) A trading front-end service described in paragraph (a)(21)(iii)(A) of this section wherein the nature of the service arrangement is such that the person providing that service ordinarily would know or be in a position to know within the meaning of paragraph (a)(21)(ii) of this section the nature of the transaction potentially giving rise to gross proceeds from the sale of digital assets; or

(B) Any other service described in paragraph (a)(21)(iii)(B) of this section.

(ii) *Position to know.* A person providing trading front-end services ordinarily would know or be in a position to know the nature of the transaction potentially giving rise to gross proceeds from a sale of digital assets if that person maintains control or sufficient influence over the trading front-end services to have the ability to determine whether and the extent to which the transfer of digital assets involved in a transaction gives rise to gross proceeds. A person providing trading front-end services will be considered to maintain control or sufficient influence over such services

as referred to in this paragraph (a)(21)(ii) if that person has the ability to amend, update, or otherwise substantively affect the terms under which the services are provided or the manner in which the order described in paragraph (a)(21)(iii)(A) of this section is processed. Additionally, a person providing trading front-end services will be considered to maintain control or sufficient influence over such services as referred to in this paragraph (a)(21)(ii) if that person has the ability to collect the fees charged for those services from the transaction flow (including from the digital assets disposed of or the digital assets received by the customer in the sale), whether or not the person actually collects fees in this manner. A person providing trading front-end services also will be considered to maintain control or sufficient influence over such services as referred to in this paragraph (a)(21)(ii) if that person has the ability, in connection with processing the order described in paragraph (a)(21)(iii)(A) of this section, to add to the order a sequence of instructions to query the cryptographically secured distributed ledger to determine if the processed order is, in fact, executed or to use another method of confirmation based on information known to that person as a result of providing the trading front-end services. Except as provided by the Secretary, a contractual or other restriction not required by law that limits the ability of the person providing trading front-end services to amend, update, or otherwise substantively affect the terms under which the services are provided (including the manner in which any fees are collected) or the manner in which the order is processed will be disregarded for purposes of this paragraph (a)(21)(ii).

(iii) *Trading front-end service and other effectuating services—(A) Trading front-end service—(1) In general.* A *trading front-end service* means a service that, with respect to a sale of digital assets, receives a person's order to sell and processes that order for execution by providing user interface services, including graphic and voice user interface services, that are designed to:

(i) Enable such person to input order details with respect to a transaction to be carried out or settled on a cryptographically secured distributed ledger (or any similar technology); and

(ii) Transmit those order details so that the transaction can be carried out or settled on a cryptographically secured distributed ledger (or any similar technology), including by transmitting the order details to the person's wallet in such form that, if

authorized by the person, causes the order details to be transmitted to a distributed ledger network for interaction with a digital asset trading protocol as defined in paragraph (a)(21)(iii)(D) of this section.

(2) *Location of digital assets received in an exchange and indirect transmissions of orders.* A service is a trading front-end service regardless of whether the digital assets received in the exchange are received in the wallet of the person providing the order details or in the wallet of another person pursuant to the first person's order details. The direct or indirect transmission to a distributed ledger network of order details that call upon or otherwise invoke the functions of automatically executing contracts that comprise a digital asset trading protocol is a transmission of order details to a distributed ledger network for interaction with a digital asset trading protocol.

(B) *Other effectuating services.* An effectuating service also means any of the services described in paragraphs (a)(21)(iii)(B)(1) through (5) of this section.

(1) The acceptance or processing of digital assets as payment for property of a type which when sold would constitute a sale under paragraph (a)(9)(i) of this section by a broker that is in the business of effecting sales of such property.

(2) Any service performed by a real estate reporting person as defined in § 1.6045-4(e) with respect to a real estate transaction in which digital assets are paid by the real estate buyer in full or partial consideration for the real estate, provided the real estate reporting person has actual knowledge or ordinarily would know that digital assets were used by the real estate buyer to make payment to the real estate seller. For purposes of this paragraph (a)(21)(iii)(B)(2), a real estate reporting person is considered to have actual knowledge that digital assets were used by the real estate buyer to make payment if the terms of the real estate contract provide for payment using digital assets.

(3) The acceptance or processing of digital assets as payment for any service provided by a broker described in paragraph (a)(1) of this section determined without regard to any sales under paragraph (a)(9)(ii)(C) of this section that are effected by such broker.

(4) Any payment service performed by a processor of digital asset payments described in paragraph (a)(22) of this section, provided the processor of digital asset payments has actual knowledge or ordinarily would know

the nature of the transaction and the gross proceeds therefrom.

(5) The acceptance of digital assets in return for cash, stored-value cards, or different digital assets, to the extent provided by a physical electronic terminal or kiosk.

(C) *Excluded activities—(1) Validation services.* Notwithstanding the definition of trading front-end services or other effectuating services in paragraphs (a)(21)(iii)(A) and (B) of this section, distributed ledger transaction validation services (whether through proof-of-work, proof-of-stake, or any other similar consensus mechanism), including those services necessary to complete the validation, are not effectuating services described in paragraph (a)(21)(i) of this section.

(2) *Licensing of software or selling of hardware.* If a person licenses software or sells hardware that provides unhosted wallet services that include both trading front-end services with respect to some sales of digital assets and other services that are not trading front-end services or other effectuating services under paragraph (a)(21)(iii)(B) of this section with respect to other sales of digital assets, that person is providing effectuating services only with respect to the sales of digital assets that are carried out using the trading front-end services provided by the unhosted wallet software licensed or hardware sold.

(D) *Digital asset trading protocol.* A digital asset trading protocol means a distributed ledger application consisting of computer software, including automatically executing contracts, that exchange one digital asset for another digital asset pursuant to instructions from a user.

* * * * *

(b) * * *

(2) * * *

(ix) A person engaged in validating distributed ledger transactions, through proof-of-work, proof-of-stake, or any other similar consensus mechanism, including a person that provides services necessary to complete the validation, without providing other functions or services that are effectuating services under paragraph (a)(21)(i) of this section.

(x) A person engaged in selling hardware or licensing of software, the sole function of which is to permit a person to control private keys which are used for accessing digital assets on a distributed ledger, without providing other functions or services that are effectuating services under paragraph (a)(21)(i) of this section.

(xi) An operator of a digital asset trading protocol defined in paragraph

(a)(21)(iii)(D) of this section that provides a distributed ledger application consisting of computer software, including automatically executing contracts, that exchange one digital asset for another digital asset pursuant to instructions from a user, without providing other functions or services that are effectuating services under paragraph (a)(21)(i) of this section.

* * * * *

(24) *Example 24: Effect, effectuating services, digital asset middleman, position to know, and customer—(i) Facts.* As part of B's trade or business, B stands ready to provide customers with trading front-end services in return for a 1% transaction fee withheld either from digital assets transferred or digital assets received by its customers in the trade. B provides these trading front-end services to digital asset user C for the sale of 200 units of digital asset DE in exchange for 1,500 units of digital asset ST (sale 1) and withholds 2 units of DE as a transaction fee. B also provides digital asset validation services for a distributed ledger network. B validates a transaction involving the sale of 20 units of digital asset DE for 150 units of digital asset ST (sale 2). B does not provide any services described in paragraph (a)(21)(iii) of this section with respect to sale 2.

(ii) *Analysis with respect to sale 1.* With respect to sale 1, B has the ability to collect fees charged for its trading front-end services from the transaction flow. Accordingly, B is in a position to know the nature of sale 1 under paragraph (a)(21)(ii) of this section because B maintains control or sufficient influence over the trading front-end services to have the ability to determine whether and the extent to which the transfer of digital assets involved in a transaction gives rise to gross proceeds. Because B provides a trading front-end service with respect to sale 1 and is in a position to know the nature of sale 1 under paragraph (a)(21)(ii) of this section, B provides an effectuating service under paragraph (a)(21)(i)(A) of this section. Accordingly, B is a digital asset middleman under paragraph (a)(21) of this section with respect to sale 1. Additionally, B effects sale 1 for C under paragraph (a)(10)(i)(D) of this section, and C is B's customer under paragraph (a)(2)(i)(D) of this section.

(iii) *Analysis with respect to sale 2.* Under paragraph (a)(21)(iii)(C) of this section, B's validation services with respect to sale 2 are not effectuating services. Accordingly, notwithstanding that B acts as a digital asset middleman

with respect to sale 1, B does not act as a digital asset middleman with respect to sale 2 or effect sale 2.

(25) *Example 25: Effect, effectuating services, position to know, digital asset middleman and customer—(i) Facts.* Corporation S is engaged in the business of operating and maintaining a website that licenses S-brand unhosted wallets (S-Wallets). S-Wallets are accessible online, allow users to control private keys to digital asset addresses, and allow users to transfer (and receive) digital assets directly from (into) their S-Wallets. S also offers trading front-end services (S-Trade) to each S-Wallet user. S charges S-Wallet users that dispose of digital assets held in their S-Wallets using the S-Trade service a 1% transaction fee that is withheld by S either from the digital assets transferred or the digital assets received by the user in the trade. S-Wallet users can use the S-Wallet’s private key control function and can transfer digital assets to and from their S-Wallets without using the S-Trade function. S-Wallet user K uses the S-Trade function within K’s S-Wallet to trade 200 units of digital asset DE for 1,500 units of digital asset ST (sale 1). S withholds 2 units of DE as a transaction fee with respect to this trade. K also uses the S-Wallet to transfer 5 units of DE directly to the

digital asset address of another person’s wallet in return for services provided by that other person (sale 2). S does not provide any other services described in paragraph (a)(21)(iii) of this section with respect to sale 2.

(ii) *Analysis with respect to sale 1.* With respect to sale 1, S has the ability to collect fees charged for its trading front-end services from the transaction flow. Accordingly, S is in a position to know the nature of sale 1 under paragraph (a)(21)(ii) of this section because S maintains control or sufficient influence over the trading front-end services to have the ability to determine whether and the extent to which the transfer of digital assets involved in a transaction gives rise to gross proceeds. Because S provides a trading front-end service with respect to sale 1 and is in a position to know the nature of sale 1 under paragraph (a)(21)(ii) of this section, S provides an effectuating service under paragraph (a)(21)(i)(A) of this section. Accordingly, S is a digital asset middleman under paragraph (a)(21) of this section with respect to sale 1. Finally, S effects sale 1 for K under paragraph (a)(10)(i)(D) of this section, and K is S’s customer under paragraph (a)(2)(i)(D) of this section.

(iii) *Analysis with respect to sale 2.* S’s services with respect to sale 2 are not effectuating services under paragraph (a)(21)(i) of this section because these services are not described in paragraph (a)(21)(iii)(B) of this section and are not trading front-end services under paragraph (a)(21)(iii)(A) of this section. Accordingly, notwithstanding that S acts as a digital asset middleman with respect to sale 1, S does not act as a digital asset middleman with respect to sale 2 or effect sale 2.

* * * * *

(q) * * * Paragraphs (a)(21), (b)(2)(ix) through (xi), and (b)(24) and (25) of this section apply to sales of digital assets on or after January 1, 2027. (For sales of digital assets before January 1, 2027, see 26 CFR 1.6045–1, as revised September 9, 2024.)

No. 249

December 30, 2024

Part VI

The President

Executive Order 14132—Adjustments of Certain Rates of Pay

Presidential Documents

Title 3—**Executive Order 14132 of December 23, 2024****The President****Adjustments of Certain Rates of Pay**

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

Section 1. *Statutory Pay Systems.* The rates of basic pay or salaries of the statutory pay systems (as defined in 5 U.S.C. 5302(1)), as adjusted under 5 U.S.C. 5303, are set forth on the schedules attached hereto and made a part hereof:

- (a) The General Schedule (5 U.S.C. 5332(a)) at Schedule 1;
- (b) The Foreign Service Schedule (22 U.S.C. 3963) at Schedule 2; and
- (c) The schedules for the Veterans Health Administration of the Department of Veterans Affairs (38 U.S.C. 7306, 7401, 7404; section 301(a) of Public Law 102–40) at Schedule 3.

Sec. 2. *Senior Executive Service.* The ranges of rates of basic pay for senior executives in the Senior Executive Service, as established pursuant to 5 U.S.C. 5382, are set forth on Schedule 4 attached hereto and made a part hereof.

Sec. 3. *Certain Executive, Legislative, and Judicial Salaries.* The rates of basic pay or salaries for the following offices and positions are set forth on the schedules attached hereto and made a part hereof:

- (a) The Executive Schedule (5 U.S.C. 5311–5318) at Schedule 5;
- (b) The Vice President (3 U.S.C. 104) and the Congress (2 U.S.C. 4501) at Schedule 6; and
- (c) Justices and judges (28 U.S.C. 5, 44(d), 135, 252, and 461(a)) at Schedule 7.

Sec. 4. *Uniformed Services.* The rates of monthly basic pay (37 U.S.C. 203(a)) for members of the uniformed services, as adjusted under 37 U.S.C. 1009, and the rate of monthly cadet or midshipman pay (37 U.S.C. 203(c)) are set forth on Schedule 8 attached hereto and made a part hereof.

Sec. 5. *Locality-Based Comparability Payments.*

(a) Pursuant to section 5304 of title 5, United States Code, and my authority to implement an alternative level of comparability payments under section 5304a of title 5, United States Code, locality-based comparability payments shall be paid in accordance with Schedule 9 attached hereto and made a part hereof.

(b) The Director of the Office of Personnel Management shall take such actions as may be necessary to implement these payments and to publish appropriate notice of such payments in the *Federal Register*.

Sec. 6. *Administrative Law Judges.* Pursuant to section 5372 of title 5, United States Code, the rates of basic pay for administrative law judges are set forth on Schedule 10 attached hereto and made a part hereof.

Sec. 7. *Effective Dates.* Schedule 8 is effective January 1, 2025. The other schedules contained herein are effective on the first day of the first applicable pay period beginning on or after January 1, 2025.

Sec. 8. *Prior Order Superseded.* Executive Order 14113 of December 21, 2023 (Adjustments of Certain Rates of Pay), is superseded as of the effective dates specified in section 7 of this order.

A handwritten signature in black ink, appearing to read "J. R. Biden Jr.", is positioned in the upper right quadrant of the page. The signature is written in a cursive, flowing style.

THE WHITE HOUSE,
December 23, 2024.

Schedule 1--General Schedule

**Schedule 3--Veterans Health Administration Schedules
Department of Veterans Affairs**

(Effective on the first day of the first applicable pay period
beginning on or after January 1, 2025)

Schedule for the Office of the Under Secretary for Health
(38 U.S.C. 7306) and Directors of Medical Centers and Veterans Integrated Service Networks (38 U.S.C.
7401(4))*

	<u>Minimum</u>	<u>Maximum</u>
	\$150,160	\$225,700**
Physician, Podiatrist, and Dentist Base and Longevity Pay Schedule***	<u>Minimum</u>	<u>Maximum</u>
Physician Grade	\$123,077	\$180,519
Dentist Grade	123,077	180,519
Podiatrist Grade	123,077	180,519
Chiropractor and Optometrist Schedule	<u>Minimum</u>	<u>Maximum</u>
Chief Grade	\$125,133	\$162,672
Senior Grade	106,382	138,296
Intermediate Grade	90,025	117,034
Full Grade	75,706	98,422
Associate Grade	63,163	82,108
Expanded-Function Dental Auxiliary Schedule****	<u>Minimum</u>	<u>Maximum</u>
Director Grade	\$125,133	\$162,672
Assistant Director Grade	106,382	138,296
Chief Grade	90,025	117,034
Senior Grade	75,706	98,422
Intermediate Grade	63,163	82,108
Full Grade	52,205	67,865
Associate Grade	44,924	58,397
Junior Grade	38,407	49,927

* Pursuant to 38 U.S.C. 7404(a)(2)(A) and (e), this schedule does not apply to the Director of Nursing Service or any incumbents who are physicians, podiatrists, or dentists. Pursuant to 38 U.S.C. 7404(a)(2)(B), this schedule also does not apply to the basic pay of any incumbents who are registered nurses or physician assistants if that basic pay is determined by the Secretary under subchapter IV of chapter 74 of title 38, United States Code.

** Pursuant to 38 U.S.C. 7404(a)(3)(B), for positions that are covered by a certified performance appraisal system, the maximum rate of basic pay may not exceed the rate of basic pay payable for level II of the Executive Schedule. For positions that are not covered by a certified performance appraisal system, the maximum rate of basic pay may not exceed the rate of basic pay payable for level III of the Executive Schedule.

*** Pursuant to 38 U.S.C. 7431, Veterans Health Administration physicians, podiatrists, and dentists paid under the Physician, Podiatrist, and Dentist Base and Longevity Pay schedule may also be paid market pay and performance pay.

**** Pursuant to section 301(a) of Public Law 102-40, these positions are paid according to the Nurse Schedule in 38 U.S.C. 4107(b), as in effect on August 14, 1990, with subsequent adjustments.

Schedule 4--Senior Executive Service(Effective on the first day of the first applicable pay period
beginning on or after January 1, 2025)

	<u>Minimum</u>	<u>Maximum</u>
Agencies with a Certified SES Performance Appraisal System	\$150,160	\$225,700
Agencies without a Certified SES Performance Appraisal System	\$150,160	\$207,500

Schedule 5--Executive Schedule(Effective on the first day of the first applicable pay period
beginning on or after January 1, 2025)

Level I	\$250,600
Level II	225,700
Level III	207,500
Level IV	195,200
Level V	183,100

Schedule 6--Vice President and Members Of Congress*(Effective on the first day of the first applicable pay period
beginning on or after January 1, 2025)

Vice President	\$289,400
Senators	174,000
Members of the House of Representatives	174,000
Delegates to the House of Representatives	174,000
Resident Commissioner from Puerto Rico	174,000
President pro tempore of the Senate	193,400
Majority leader and minority leader of the Senate	193,400
Majority leader and minority leader of the House of Representatives	193,400
Speaker of the House of Representatives	223,500

Schedule 7--Judicial Salaries(Effective on the first day of the first applicable pay period
beginning on or after January 1, 2025)

Chief Justice of the United States	\$317,500
Associate Justices of the Supreme Court	303,600
Circuit Judges	262,300
District Judges	247,400
Judges of the Court of International Trade	247,400

* This pay schedule assumes that Congress will continue to impose a freeze on the salaries of Members of Congress as it has since 2009, and so this schedule would be subject to further revisions if Congress proceeds differently.

* Basic pay is limited to the rate of basic pay for level II of the Executive Schedule in effect during calendar year 2025, which is \$18,808.20 per month for officers at pay grades O-7 through O-10. This includes officers serving as Chairman or Vice Chairman of the Joint Chiefs of Staff, Chief of Staff of the Army, Chief of Naval Operations, Chief of Staff of the Air Force, Commandant of the Marine Corps, Chief of Space Operations, Commandant of the Coast Guard, Chief of the National Guard Bureau, or commander of a unified or specified combatant command (as defined in 10 U.S.C. 161(c)).

** Basic pay is limited to the rate of basic pay for level V of the Executive Schedule in effect during calendar year 2025, which is \$15,258.30 per month, for officers at pay grades O-6 and below.

*** Does not apply to commissioned officers who have been credited with over 4 years of active duty service as an enlisted member or warrant officer.

**** Reservists with at least 1,460 points as an enlisted member, a warrant officer, or a warrant officer and an enlisted member, which are creditable toward reserve retirement, also qualify for these rates.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List December 26, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly

enacted public laws. To subscribe, go to https://portalguard.gsa.gov/__layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
