FEDERAL REGISTER

Vol. 90 Wednesday,
No. 82 April 30, 2025

Pages 17885–18626

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 90 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

The President

Proclamation 10924 of April 26, 2025

World Intellectual Property Day, 2025

By the President of the United States of America

A Proclamation

More than 200 years ago, our Founding Fathers recognized the profound importance of intellectual property, enshrining government-granted legal protections in the Constitution to safeguard American innovation. On World Intellectual Property Day, we renew our resolve to protect and secure the creative triumphs of American inventors and artists as they work to pull the future into the present and turn their dreams into our reality.

Americans have always been leaders in the realms of technology and ideas—and under my Administration, we are driving innovation in every sector, including emerging digital technologies like artificial intelligence. I recently signed an Executive Order on Removing Barriers to American Leadership in Artificial Intelligence to slash red tape and ensure our continued leadership in this and other critical industries like automation, blockchain, data analytics, and cybersecurity.

For this reason, I established the Council of Advisors on Science and Technology, which is bringing together the best and brightest to shape the United States' innovation policy and ensure our continued technological leadership. My Administration will not waver in protecting and securing emerging, next-generation technologies that will drive progress and growth in the 21st century.

My Administration is taking strong action to protect the promise of American innovation. For too long, our adversaries and allies alike have sapped our strength and exploited American advancements. Through the strategic use of tariffs, we are recentering our trade policy and securing stronger intellectual property protections in new and existing trade deals. Just as we protect our physical property, we will not tolerate the theft of our intellectual property, and we will defend our businesses and people from those who are seeking to steal American jobs and wealth.

As President Calvin Coolidge once said in an immortal maxim that remains true to this day, ''The business of America is business.'' Our economy is the greatest in the world because we, more than any other country, incentivize individuals to dream big, take risks, and make the impossible possible. Through our promotion and protection of intellectual property, we are empowering musicians, writers, authors, scientists, and inventors to focus on what they do best.

The future of our great Nation depends on the continued safeguarding of our intellectual property, which fuels economic growth, technological progress, and global competitiveness. This World Intellectual Property Day, we reaffirm our unwavering commitment to protecting and promoting the innovative spirit that continues to make America great.

NOW, THEREFORE, I, DONALD J. TRUMP, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim April 26, 2025, as World Intellectual Property Day. I encourage Americans to celebrate the extraordinary achievements of our creators and inventors and the contributions they have made and will continue making to our country.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-sixth day of April, in the year of our Lord two thousand twenty-five, and of the Independence of the United States of America the two hundred and forty-ninth.

Rules and Regulations

Federal Register
Vol. 90, No. 82
Wednesday, April 30, 2025

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

OFFICE OF SPECIAL COUNSEL

5 CFR Part 1800

Correction to Statutory Citation

AGENCY: U.S. Office of Special Counsel (OSC)

ACTION: Final rule; technical amendment.

SUMMARY: The U.S. Office of Special Counsel is issuing this technical amendment to correct a statutory citation in its regulation governing the filing of complaints of prohibited personnel practices and other prohibited activities.

DATES: This rule is effective April 30, 2025.

FOR FURTHER INFORMATION CONTACT: Barbara Wheeler Jones, Chief, Case Review Division, U.S. Office of Special Counsel, by telephone at (202) 804–7000.

SUPPLEMENTARY INFORMATION: This amendment is directed to the public in general, particularly current and former federal employees and applicants for federal employment who may seek to file complaints alleging prohibited personnel practices or other violations of civil service law, rule, or regulation by a federal agency.

OSC is correcting an erroneous statutory reference in 5 CFR 1800.2(d) concerning alternative dispute resolution. The current regulation incorrectly cites the Administrative Dispute Resolution Act of 1998, 5 U.S.C. 571–573. The correct citation is the Administrative Dispute Resolution Act of 1996, 5 U.S.C. 571–574.

This technical amendment is issued under the authority of 5 U.S.C. 1212(e), which authorizes the Special Counsel to publish regulations in the **Federal Register**. Pursuant to 5 U.S.C. 553(b)(3)(B) of the Administrative Procedure Act, OSC finds good cause to waive notice and public comment requirements. The agency has determined that this rulemaking is non-substantive, purely technical in nature, and that delay in correction would be contrary to the public interest, as the public benefits from the prompt correction of an incorrect citation.

This rule is also effective upon publication in accordance with 5 U.S.C. 808(2) of the Congressional Review Act, which allows rules to take effect immediately when an agency finds good cause. OSC finds that good cause exists for immediate effectiveness based on the reasons stated above.

List of Subjects in 5 CFR Part 1800

Administrative practice and procedure, Government employees.

For the reasons stated in the preamble, OSC amends 5 CFR part 1800 as follows:

PART 1800—FILING OF COMPLAINTS AND ALLEGATIONS

■ 1. The authority citation for part 1800 continues to read as follows:

Authority: 5 U.S.C. 301, 1212(e).

§ 1800.2 [Amended]

■ 2. In § 1800.2, in paragraph (d), remove the citation ''Administrative Dispute Resolution Act of 1998, 5 U.S.C. 571–573'' and add in its place ''Administrative Dispute Resolution Act of 1996, 5 U.S.C. 571–574''.

Dated: April 25, 2025.

Barbara Wheeler Jones,

Chief, Case Review Division.

BILLING CODE P

NUCLEAR REGULATORY COMMISSION

10 CFR Part 51

Policy Statement on the Treatment of Environmental Justice Matters in NRC Regulatory and Licensing Actions; Environmental Justice Strategy

AGENCY: Nuclear Regulatory Commission.

ACTION: Policy statement; withdrawal.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is withdrawing its Policy Statement on the Treatment of Environmental Justice Matters in NRC Regulatory and Licensing Actions (Environmental Justice Policy Statement) and its Environmental Justice Strategy. The NRC is withdrawing these documents to reflect a recent executive order on Environmental Justice.

DATES: Effective April 30, 2025, the NRC withdraws the Environmental Justice Policy Statement published at 69 FR 52040 on August 24, 2004, and Environmental Justice Strategy.

ADDRESSES: You may obtain publicly available information related to this action by any of the following methods. Address questions about NRC dockets to: Bridget Curran; telephone: 301–415–1003; email: *Bridget.Curran@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov*.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Maxwell C. Smith, Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–1856, email: *Maxwell.Smith@nrc.gov.*

SUPPLEMENTARY INFORMATION: The NRC's Policy Statement on the Treatment of Environmental Justice Matters in NRC Regulatory and Licensing Actions (Environmental Justice Policy Statement) and Environmental Justice Strategy reflected the NRC's voluntary commitments on environmental justice (69 FR 52040). The NRC made these commitments in response to the policies stated in Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income

Populations (59 FR 7629). The Environmental Justice Policy Statement recognized that the NRC primarily considered Environmental Justice through its reviews under the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 *et seq.* On January 21, 2025, the President issued Ending Illegal Discrimination and Restoring Merit-Based Opportunity, Executive Order No. 14173, which rescinded Executive Order 12898 (90 FR 8339). Therefore, the NRC is withdrawing its Environmental Justice Policy Statement and Environmental Justice Strategy. The NRC will continue to ensure that it fully meets its obligations under NEPA.

Dated: April 25, 2025.

For the Nuclear Regulatory Commission.

Carrie Safford,

Secretary of the Commission.

[FR Doc. 2025–07449 Filed 4–29–25; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

10 CFR Part 72

[NRC–2024–0215]

RIN 3150–AL24

List of Approved Spent Fuel Storage Casks: HI–STORM 100, Certificate of Compliance No. 1014, Renewed Amendment No. 19

AGENCY: Nuclear Regulatory Commission.

ACTION: Direct final rule; confirmation of effective date.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is confirming the effective date of May 27, 2025, for the direct final rule that was published in the **Federal Register** on March 13, 2025. This direct final rule amended the Holtec International HI–STORM 100 Cask System listing within the ''List of approved spent fuel storage casks'' to include Renewed Amendment No. 19 to Certificate of Compliance No. 1014. Renewed Amendment No. 19 revises the certificate of compliance to update the acceptance criteria and method of evaluation (MOE) for the HI–STORM 100 system tipover accident for equipment combinations involving multi-purpose canisters with Metamic-HT baskets. This involves applying a new stress-based criteria and completing new evaluations consistent with the new tipover acceptance criteria and MOE and involves some adjustments of the existing deflection criteria.

DATES: The effective date of May 27, 2025, for the direct final rule published March 13, 2025 (90 FR 11891), is confirmed.

ADDRESSES: Please refer to Docket ID NRC–2024–0215 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2024–0215. Address questions about NRC dockets to Helen Chang; telephone: 301–415–3228; email: *Helen.Chang@nrc.gov*. For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The revision of Certificate of Compliance No. 1014, the associated changes to the technical specifications, and the final safety evaluation report are available in ADAMS under Accession No. ML25002A187.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Yen-Ju Chen, Office of Nuclear Material Safety and Safeguards, telephone: 301–415–1018; email: *Yen-Ju.Chen@nrc.gov* or Caylee Kenny, Office of Nuclear Material Safety and Safeguards, telephone: 301–415–7150; email: *Caylee.Kenny@nrc.gov.* Both are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION: On March 13, 2025 (90 FR 11891), the NRC published a direct final rule amending its regulations in part 72 of title 10 of the *Code of Federal Regulations* to amend its spent fuel regulations by revising the Holtec International HI–STORM 100 Cask System listing within the ''List of approved spent fuel storage casks'' to include Renewed Amendment No. 19 to Certificate of Compliance No. 1014. In the direct final rule, the NRC stated that if no significant adverse comments were received, the direct final rule would become effective on May 27, 2025. The NRC did not receive any comments on the direct final rule. Therefore, this direct final rule will become effective as scheduled.

Dated: April 24, 2025.

For the Nuclear Regulatory Commission.

Ronald Raunikar,

Acting Chief, Regulatory Analysis and Rulemaking Support Branch, Division of Rulemaking, Environmental, and Financial Support, Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2025–0745; Project Identifier MCAI–2025–00187–T; Amendment 39–23028; AD 2025–09–07]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Airbus SAS Model A330–243, –243F, –841, and –941 airplanes. This AD was prompted by reports of loss of data synchronization between radio management panels (RMPs) and the audio management unit (AMU). This AD requires revising the existing airplane flight manual (AFM) by providing instructions to address dual loss of RMP data synchronization, and the existing minimum equipment list (MEL) by removing relief for an inoperative RMP 3. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective May 15, 2025.

The FAA must receive comments on this AD by June 16, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2025–0745; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT: James Clary, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 817–222–5138; email: *James.Clary@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2025–0745; Project Identifier MCAI–2025–00187–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the final rule, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to James Clary, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 817–222–5138; email: *James.Clary@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The European Union Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2025–0043, dated February 19, 2025 (EASA AD 2025–0043) (also referred to as ''the MCAI''), to correct an unsafe condition for Airbus SAS Model A330–243, –243F, –841, and –941 airplanes with the digital RMP function installed by modification 207423. The MCAI states loss of data synchronization between the RMPs and the AMU were reported. Such loss of data synchronization can lead to the loss of radio communication, uncommanded changes of transponder and traffic alert and collision avoidance system (TCAS) settings, and activation of standby navigation mode on all RMPs. This condition, if not corrected, could result in total loss of radio communication if RMP 3 is inoperative prior to dispatch, including loss of transponder functionality and standby navigation.

Accordingly, EASA AD 2025–0043 describes procedures for revising the existing AFM by providing instructions to address dual loss of RMP data synchronization. EASA AD 2025–0043 also specifies procedures for revising the master minimum equipment list (MMEL) by adding relief to allow airplane dispatch with an inoperative RMP 1 or RMP 2 (instead of only RMP 2) and removing the relief that allows airplane dispatch with an inoperative RMP 3.

The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2025–0745.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this AD after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Requirements of This AD

This AD requires accomplishing the actions specified in EASA AD 2025–0043 described previously, except as discussed under ''Differences Between This AD and the MCAI.''

Compliance With AFM and MEL Revisions

EASA AD 2025–0043 requires operators to ''inform all flight crews'' of revisions to the AFM and MEL, and thereafter to ''operate the aeroplane accordingly.'' However, this AD does not specifically require those actions as those actions are already required by FAA regulations.

FAA regulations require that operators furnish to pilots any changes to the AFM (for example, 14 CFR 121.137) and that pilots are familiar with the AFM (for example, 14 CFR 91.505). As with any other flightcrew training requirement, training on the updated AFM content is tracked by the operators and recorded in each pilot's training record, which is available for the FAA to review. FAA regulations also require pilots to follow the procedures in the AFM including all updates. Section 91.9 requires that any person operating a civil aircraft must comply with the operating limitations specified in the AFM.

FAA regulations (14 CFR 121.628(a)(2)) require operators to provide pilots with access to all of the information contained in the operator's MEL. Further, § 121.628(a)(5) requires airplanes to be operated under all applicable conditions and limitations contained in the operator's MEL.

Therefore, including a requirement in this AD to operate the airplane according to the revised AFM or MEL would be redundant and unnecessary.

Differences Between This AD and the MCAI

The Airbus MMEL update referenced in EASA AD 2025–0043 allows airplane dispatch with an inoperative RMP 1 or RMP 2. This AD, however, does not allow dispatch with an inoperative RMP 1. According to FAA MMEL Policy Letter 63, revision 4, dated July 5, 2012, the MMEL/MEL may not provide relief for instruments and equipment that are

necessary for accomplishing an emergency procedure. However, relief may be considered for redundant instruments or equipment powered by the same power source used for accomplishing the emergency procedure.

The digital RMP function consists of three RMPs, but only RMP 1 functions in an emergency electrical configuration (*i.e.,* RMP 2 and RMP 3 are not available if the flightcrew needs to switch to emergency power). Therefore, the FAA has determined that an airplane cannot be dispatched with an inoperative RMP 1 because it is essential for safe operation under emergency conditions.

Interim Action

The FAA considers that this AD is an interim action. The design approval holder is currently developing a modification that will address the unsafe condition identified in this AD. Once this modification is developed, approved, and available, the FAA might consider additional rulemaking.

Justification for Immediate Adoption and Determination of the Effective Date

Section 553(b) of the Administrative Procedure Act (APA) (5 U.S.C. 551 *et seq.*) authorizes agencies to dispense with notice and comment procedures for rules when the agency, for ''good cause,'' finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under this section, an agency, upon finding good cause, may issue a final rule without providing notice and seeking comment prior to issuance. Further, section 553(d) of the APA authorizes agencies to make rules effective in less than thirty days, upon a finding of good cause.

An unsafe condition exists that requires the immediate adoption of this AD without providing an opportunity for public comments prior to adoption. The FAA has found that the risk to the flying public justifies forgoing notice and comment prior to adoption of this rule because dual loss of data synchronization between RMP 1/RMP 2 and the AMU during flight, in combination with an inoperative RMP 3 prior to takeoff, could result in total loss of radio communication, transponder functionality, and standby navigation, impacting the flightcrew's ability to safely navigate, avoid air traffic collisions, and safely land the airplane. In addition, the compliance time for the required actions is 7 days, which is a shorter time period than the time necessary for the public to comment and for publication of the final rule. Accordingly, notice and opportunity for prior public comment are impracticable and contrary to the public interest pursuant to 5 U.S.C. 553(b).

In addition, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days, for the same reasons the FAA found good cause to forgo notice and comment.

Regulatory Flexibility Act (RFA)

The requirements of the RFA do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because the FAA has determined that it has good cause to adopt this rule without notice and comment, RFA analysis is not required.

Costs of Compliance

The FAA estimates that this AD affects 86 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
AFM Revision	1 work-hour × $85 per hour = $85	$0	$85	$7,310
MEL Revision	1 work-hour × $85 per hour = $85	0	85	7,310

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866, and

(2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2025–09–07 Airbus SAS: Amendment 39–23028; Docket No. FAA–2025–0745; Project Identifier MCAI–2025–00187–T.

(a) Effective Date

This airworthiness directive (AD) is effective May 15, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus SAS Model A330–243, –243F, –841, and –941 airplanes, certificated in any category, with the digital

radio management panel (RMP) function installed by Airbus modification 207423.

(d) Subject

Air Transport Association (ATA) of America Code 23, Communications.

(e) Unsafe Condition

This AD was prompted by reports of loss of data synchronization between RMPs and the audio management unit (AMU). The FAA is issuing this AD to address loss of radio communication, uncommanded changes of transponder and traffic alert and collision avoidance system (TCAS) settings, and activation of standby navigation mode on all RMPs. This condition, if not corrected, could result in total loss of radio communication if RMP 3 is inoperative prior to dispatch, including loss of transponder functionality and standby navigation.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Airplane Flight Manual (AFM) Revision

Within 7 days after the effective date of this AD, revise the Emergency Procedures section of the existing AFM to include the information in figure 1 to paragraph (g) of this AD. This may be done by inserting a copy of figure 1 to paragraph (g) of this AD into the existing AFM. Using a different document with information identical to that contained in figure 1 to paragraph (g) of this AD is acceptable for compliance with the requirements of this paragraph.

Figure 1 to Paragraph (g)—AFM Procedure

Dual Loss of RMP Data Synchronization

Switch off RMP 1 and RMP 2.

Note: *When RMP 1 and RMP 2 are switched off:*

- The aural alerts are not available on loudspeakers.

- The communication is only available on RMP 3.

Check communication, transponder, TCAS and radio navigation settings.

(h) Minimum Equipment List (MEL) Revision

Before further flight after accomplishing the requirements of paragraph (g) of this AD, revise the existing FAA-approved MEL to prohibit airplane dispatch (operation) with an inoperative RMP 3 under the MEL item equivalent to FAA master minimum equipment list (MMEL) 23–81–01.

(i) Credit for Previous Actions

(1) This paragraph provides credit for the AFM revision required by paragraph (g) of this AD, if the revision was performed before the effective date of this AD using Airbus A330/A340 Operations Engineering Bulletin (OEB) 58, issue 1.0, dated February 7, 2025.

(2) This paragraph provides credit for the AFM revision required by paragraph (g) of this AD, if the revision was performed before the effective date of this AD using Airbus A330 Airplane Flight Manual Temporary Revision TR819, Issue 1, dated March 6, 2025.

(j) Additional AD Provisions4

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of AIR–520, Continued Operational Safety Branch, FAA, send it to the attention of the person identified in paragraph (k)(1) of this AD and email to: *AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, AIR–520, Continued Operational Safety Branch, FAA; or European Union Aviation Safety Agency (EASA); or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(k) Additional Information

(1) For more information about this AD, contact James Clary, Aviation Safety Engineer, FAA, 2200 South 216th St., Des Moines, WA 98198; phone: 817–222–5138; email: *James.Clary@faa.gov.*

(2) Material identified in this AD that is not incorporated by reference is available at Airbus SAS, Airworthiness Office—EAL, Rond-Point Emile Dewoitine No: 2, 31700 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 45 80; email *airworthiness.A330-A340@airbus.com;* website *airbus.com.*

(l) Material Incorporated by Reference

None.

Issued on April 25, 2025.

Peter A. White,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2025–0125]

Safety Zone; Recurring Events in Captain of the Port Duluth Zone—Pointe to La Pointe Swim

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the safety zone for the Pointe to La Pointe Swim event in Bayfield, WI from 7 a.m. through 12 noon on August 2, 2025. This action is necessary to protect participants and spectators during the event. During the enforcement period, entry into, transiting, or anchoring within the safety zone is prohibited

unless authorized by the Captain of the Port, Duluth or a designated on-scene representative.

DATES: The regulations in 33 CFR 165.943 will be enforced as listed in table 1, Event (9) to 33 CFR 165.943 from 7 a.m. through 12 noon on August 2, 2025.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email LT Zachary Fedak, Marine Safety Unit Duluth, U.S. Coast Guard; telephone (218) 725–3818, email *DuluthWWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zone for the annual Pointe to La Pointe Swim event in 33 CFR 165.943, table 1, Event (9) from 7 a.m. through 12 noon on August 2, 2025 on all waters between Bayfield, WI and Madeline Island, WI within a polygon formed by straight lines using the following coordinates: Starting Position 46°48′50″ N, 090°48′44″ W, moving southeast to 46°46′44″ N, 090°47′33″ W, then moving northeast to 46°46′52″ N, 090°47′17″ W, then moving northwest to 46°49′03″ N, 090°48′25″ W, and finally returning to the starting position.

Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Duluth or a designated on-scene representative.

This notice of enforcement is issued under authority of 33 CFR 165.943 and 5 U.S.C. 552 (a). In addition to this publication in the **Federal Register**, the Coast Guard will provide the maritime community with advance notification of the enforcement of this safety zone via Broadcast Notice to Mariners or Local Notice to Mariners. The Captain of the Port Duluth may be contacted via Channel 16, VFH–FM or at (218) 428–9357.

Dated: April 15, 2025.

J.P. Botti,

Commander, U.S. Coast Guard, Captain of the Port Duluth.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 25–84; RM–11995; DA 25–336; FR ID 290347]

Television Broadcasting Services Silver City and Truth or Consequences, New Mexico

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This document amends the Table of TV Allotments (table) of the Federal Communications Commission's (Commission) rules by deleting channel 12 at Silver City, New Mexico and reallotting channel 12 from Silver City to Truth or Consequences, New Mexico in response to a Petition for Rulemaking filed by TV–49, Inc., the permittee of an unbuilt full power television station KKAB on channel 12 allotted to Silver City, New Mexico. The staff engineering analysis finds that the proposal is in compliance with the Commission's principal community coverage and technical requirements. TV–49, Inc. also requested modification of its construction permit to specify Truth or Consequences as its community of license.

DATES: Effective April 30, 2025.

FOR FURTHER INFORMATION CONTACT: Emily Harrison, Media Bureau, at *Emily.Harrison@fcc.gov,* (202) 418–1665, or Mark Colombo, Media Bureau, at *Mark.Colombo@fcc.gov,* (202) 418–7611.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's *Report and Order,* MB Docket No. 25–84; RM–11995; DA 25–336, adopted April 11, 2025, and released April 11, 2025. The proposed rule was published at 90 FR 10044 on February 21, 2025. The full text of this document is available online at *https://www.fcc.gov/edocs.*

This document does not contain information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, therefore, it does not contain any proposed information collection burden ''for small business concerns with fewer than 25 employees,'' pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4). Provisions of the Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, do not apply to this proceeding.

The Commission will send a copy of this *Report and Order* in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

BILLING CODE 6712–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 250416–0069; RTID 0648–XE865]

Fisheries of the Northeastern United States; Atlantic Sea Scallop Fishery; Final 2025 Closure of the Northern Gulf of Maine Scallop Management Area to the Limited Access General Category Fishery

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS announces the closure of the Northern Gulf of Maine Scallop Management Area for the remainder of the 2025 fishing year. Regulations require this action once the Northern Gulf of Maine Set-Aside has been reached. Subject to specific enumerated exceptions, possession, retention, or landing of scallops is prohibited in the Northern Gulf of Maine Scallop Management Area once the Regional Administrator publishes a notice in the **Federal Register** that the Northern Gulf of Maine Set-Aside has been reached. This action is intended to prevent the overharvest of the 2025 Northern Gulf of Maine Set-Aside.

DATES: Effective 0001 hours local time, April 28, 2025 through March 31, 2026.

FOR FURTHER INFORMATION CONTACT: Ashley Trudeau, Fishery Resource Management Specialist, (978) 281–9252.

SUPPLEMENTARY INFORMATION: The regulations governing fishing activity in the Northern Gulf of Maine (NGOM) Scallop Management Area are located in 50 CFR 648.54 and 648.62. These regulations authorize vessels issued a valid Federal scallop permit to fish in the NGOM Scallop Management Area under specific conditions, including the NGOM Set-Aside for the 2025 fishing year, and a State Waters Exemption Program for the State of Maine and Commonwealth of Massachusetts. Section 648.62(b)(2) requires the NGOM Scallop Management Area to be closed to scallop vessels issued Federal Limited Access General Category (LAGC) scallop permits, except as provided below, once the NMFS Greater Atlantic Regional Administrator provides notice that 100 percent of the NGOM Set-Aside has been reached. Any vessel that holds a Federal NGOM (LAGC B) or Individual Fishing Quota (IFQ) (LAGC A) permit may continue to fish in the Maine or Massachusetts state waters portion of the NGOM Scallop Management Area under the State Waters Exemption Program found in § 648.54 provided it has a valid Maine or Massachusetts state scallop permit and fishes only in that state's respective waters.

Based on trip declarations by federally permitted LAGC scallop vessels fishing in the NGOM Scallop Management Area and an analysis of fishing effort, NMFS projects that the 2025 NGOM Set-Aside will be harvested as of April 28, 2025. Thus, in accordance with § 648.62(b)(2), the NGOM Scallop Management Area is closed to all federally permitted LAGC scallop vessels as of April 28, 2025. As of this date, no vessel issued a Federal LAGC scallop permit may fish for, possess, or land scallops in or from the NGOM Scallop Management Area after the effective date and time of this action, unless the vessel is fishing exclusively in state waters and is participating in an approved state waters exemption program as specified in § 648.54. Any federally permitted LAGC scallop vessel that has declared into the NGOM Scallop Management Area, complied with all trip notification and observer requirements, and crossed the vessel monitoring system demarcation line on the way to the area before the effective date and time of this action, may complete its trip and land scallops. This closure is in effect until the end of the 2025 scallop fishing year, through March 31, 2026.

Classification

This action is required by 50 CFR part 648 and is exempt from review under Executive Order 12866.

The Assistant Administrator for Fisheries finds good cause pursuant to 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment because it would be contrary to the public interest and impracticable. NMFS also finds, pursuant to 5 U.S.C. 553(d)(3), good cause to waive the 30-day delayed effectiveness period. Exigent circumstances necessitate this closure action and any delay would harm the public interest. Applicable regulations at § 648.60(b)(2) require this closure to ensure that federally permitted scallop vessels do not harvest more than the allocated NGOM Set-Aside. However, NMFS can only make projections for the NGOM closure date as trips into the area occur on a real-time basis and as activity trends appear. As a result, accurate projections are only available shortly before the set-aside is harvested. The NGOM Scallop Management Area opened for the 2025 fishing year on April 1, 2025, under default measures implemented under Framework Adjustment 38 (89 FR 20341, March 22, 2024). Between April 1, 2025, and the first NGOM closure on April 11, 2025 (90 FR 15938), an estimated 405,163 lb (183,779 kg) of scallops were harvested, exceeding the default Set-Aside amount for the 2025 fishing year (315,449 lb; 143,085 kg). Upon implementation of Framework Adjustment 39 (90 FR 16644, April 21, 2025), the NGOM Set-Aside amount was adjusted to 675,563 lb (306,430 kg). After the NGOM Scallop Management Area reopened on April 21, 2025, under Framework Adjustment 39, scallops were harvested at an average rate of 35,000 lb (15,876 kg) per day resulting in an additional estimated harvest of 70,000 lb (3,175 kg) as of April 22, 2025; 26 percent of the remaining NGOM Set-Aside. The rapid harvest rate that has occurred does not allow for projections far enough in advance that would allow for notice of a proposed rule, a comment period, or a delay in rule effectiveness. Earlier rule publication was not possible. Allowing federally permitted LAGC scallop vessels to continue taking trips in the NGOM Scallop Management Area during the period necessary to publish and receive comments on a proposed rule, or delay rule effectiveness, would result in vessels harvesting more than the 2025 NGOM Set-Aside for the NGOM Scallop Management Area. This would result in excessive fishing effort in the area thereby undermining conservation and management objectives of the Atlantic Sea Scallop Fishery Management Plan and requiring more restrictive future management measures to make up for the excessive harvest. Applicable regulations at § 648.62(b)(3) require that overages of the NGOM set-aside are subject to pound-for-pound payback in a subsequent fishing year. In addition, reductions in NGOM scallop biomass associated with excessive harvest would result in lower NGOM total allowable landings in future years. As such, delaying this closure action to afford the public with a comment period or a delay in effectiveness would harm the public. The public had prior notice and full opportunity to comment on this closure process during notice and comment rulemaking for Framework 39. Stakeholders are also aware that NMFS closes the NGOM Scallop Management Area when the NGOM Set-Aside is fully harvested. This process occurs annually dating back to the adoption of Amendment 11 to the Scallop FMP in 2007. As stated above, any scallop

vessel that has declared into the NGOM Scallop Management Area, complied with all trip notification and observer requirements, and crossed the vessel monitoring system demarcation line on the way to the area before the effective date of this closure, may complete its trip and land scallops. Therefore, those affected by this regulation are given the reasonable opportunity to complete a trip in progress, and those who have not begun any such trip do not need additional days to comply with the effective date of this closure because the rule prohibits them from taking action they have not yet taken.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 24, 2025.

Karen H. Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 90, No. 82
Wednesday, April 30, 2025

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

10 CFR Parts 429 and 430

[EERE–2024–BT–TP–0011]

Energy Conservation Program: Notification of Petition for Rulemaking

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Notification of petition for rulemaking; request for comment.

SUMMARY: On September 11, 2024, the Department of Energy (''DOE'') received a petition from Dyson Inc. for DOE to revoke the procedures by which manufacturers must measure and represent to consumers the effective room size coverage and integrated energy factor of their air cleaner products. If the provisions are not revoked, Dyson Inc. requested that DOE stay enforcement of these provisions pending a new notice and comment period regarding potential amendments to these provisions. DOE is not revoking or staying enforcement of the test procedure and representations provisions raised in Dyson's petition at this time. Through this notification, DOE is seeking views on whether it should grant the petition and undertake a rulemaking to consider the proposal contained in the petition, as well as any data or information that could be used in DOE's determination whether to grant the petition.

DATES: Written comments and information are requested and will be accepted on or before May 30, 2025.

ADDRESSES: Interested persons are encouraged to submit comments using the Federal eRulemaking Portal at *www.regulations.gov* under docket number EERE–2024–BT–TP–0011. Follow the instructions for submitting comments. Alternatively, interested persons may submit comments, identified by docket number EERE–2024–BT–TP–0011, by any of the following methods:

Email: AirCleanersPetition2024TP0011@ee.doe.gov. Include the docket number and/or RIN in the subject line of the message.

Postal Mail: Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. If possible, please submit all items on a compact disc (''CD''), in which case it is not necessary to include printed copies.

Hand Delivery/Courier: Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 287–1445. If possible, please submit all items on a CD, in which case it is not necessary to include printed copies.

No telefacsimiles (''faxes'') will be accepted. For detailed instructions on submitting comments and additional information on this process, see the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: The docket for this activity, which includes **Federal Register** notices, public meeting attendee lists and transcripts (if a public meeting is held), comments, and other supporting documents/materials, is available for review at *www.regulations.gov*. All documents in the docket are listed in the *www.regulations.gov* index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

The docket web page can be found at *www.regulations.gov/docket/EERE-2024-BT-TP-0011*. The docket web page contains instructions on how to access all documents, including public comments, in the docket.

FOR FURTHER INFORMATION CONTACT:

Dr. Carl Shapiro, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (240) 315–4339. Email: *ApplianceStandardsQuestions@ee.doe.gov*.

Mr. Uchechukwu ''Emeka'' Eze, U.S. Department of Energy, Office of the General Counsel, Mail Stop GC–33, Forrestal Building, 1000 Independence Avenue SW, Washington, DC 20585–0103. Telephone: (202) 586–4798. Email: *uchechukwu.eze@hq.doe.gov*.

SUPPLEMENTARY INFORMATION: The Administrative Procedure Act (''APA''), 5 U.S.C. 551 *et seq.,* provides among other things, that ''[e]ach agency shall give an interested person the right to petition for the issuance, amendment, or repeal of a rule.'' (5 U.S.C. 553(e)) The Energy Policy and Conservation Act, as amended (''EPCA''), also specifically permits test procedures petitions. (See, 42 U.S.C. 6293(b)(2))[1] If the Secretary determines, on his own behalf or in response to a petition by any interested person, that a test procedure should be prescribed or amended, the Secretary shall promptly publish in the **Federal Register** proposed test procedures and afford interested persons an opportunity to present oral and written data, views, and arguments with respect to such procedures. The comment period shall not be less than 60 days and may be extended for good cause shown to not more than 270 days. In prescribing or amending a test procedure, the Secretary shall take into account such information as the Secretary determines relevant to such procedure, including technological developments relating to energy use or energy efficiency of the type (or class) of covered products involved. (42 U.S.C. 6293(b)(2)) When DOE determines that test procedure revisions are not appropriate, DOE's practice is to publish its determination not to amend the test procedures.

DOE received a petition from Dyson Inc. (''Dyson'') as described in this document and set forth verbatim below,[2] requesting that DOE amend its regulations to revoke the following regulatory text from the Code of Federal Regulations (''CFR''): (1) 10 CFR 429.68(a)(4), which specifies that any represented value of the effective room size of an air cleaner basic model must be calculated as the product of 1.55 and the represented smoke clean air delivery rate (''CADR'') value of the basic model; and, (2) 10 CFR 430.23(hh)(4), which specifies that the annual energy consumption and integrated energy factor (''IEF'') of a conventional room air

[1] All references to EPCA in this document refer to the statute as amended through the Energy Act of 2020, Public Law 116–260 (Dec. 27, 2020), which reflects the last statutory amendments that impact Parts A and A–1 of EPCA.

[2] Dyson's petition for rulemaking is available in the docket at *www.regulations.gov/document/EERE-2024-BT-TP-0011-0001*.

cleaner is measured in accordance with section 7 of 10 CFR part 430, subpart B, appendix FF (''appendix FF''). In its petition, Dyson also requests that if DOE does not revoke the provisions as requested in the petition, that DOE stay enforcement of those provisions pending a period of notice and comment to consider further changes to the test procedure.

In a final rule published on March 6, 2023 (88 FR 14014), DOE established the air cleaners test procedure at appendix FF and 10 CFR 430.23(hh) and sampling and representation requirements at 10 CFR 429.68. These test procedure requirements were established through a rulemaking process that included a notice of proposed rulemaking (''NOPR'') published on October 18, 2022. 87 FR 63324. Following publication of the NOPR, on August 23, 2022, DOE received a letter titled ''Joint Statement of Joint Stakeholder Proposal on Recommended Energy Conservation Standards and Test Procedure for Consumer Room Air Cleaners'' (hereafter referred to as the ''Joint Proposal'') [3] submitted by the American Council for an Energy-Efficient Economy, Appliance Standards Awareness Project, Association of Home Appliance Manufacturers (''AHAM''),[4] Consumer Federation of America, Natural Resources Defense Council, New York State Energy Research and Development Authority, and Pacific Gas and Electric Company, collectively, the ''Joint Stakeholders.'' In the Joint Proposal, the signatories recommended DOE adopt a Federal test procedure by incorporating by reference industry standards AHAM AC–7–2022 [5] and AHAM AC–1–2020.[6] In the March 2023 test procedure final rule, DOE considered comments received in response to the test procedure NOPR as well as the Joint Proposal in adopting the current air cleaners test procedures.

In announcing this petition for public comment, DOE is seeking views on whether it should grant the petition and undertake a rulemaking to consider the proposal contained in the petition. DOE welcomes comments on any aspect of the petition. By seeking comment on whether to grant this petition, DOE takes no position at this time regarding the merits of the suggested rulemaking or the assertions in Dyson's petition. Accordingly, DOE is not revoking or staying enforcement of the provisions referenced in Dyson's petition.

Submission of Comments

DOE will accept comments, data, and information regarding this petition no later than the date provided in the **DATES** section at the beginning of this document. Interested parties may submit comments, data, and other information using any of the methods described in the **ADDRESSES** section at the beginning of this document.

Submitting comments via www.regulations.gov. The *www.regulations.gov* web page will require you to provide your name and contact information. Your contact information will be viewable to DOE Building Technologies staff only. Your contact information will not be publicly viewable except for your first and last names, organization name (if any), and submitter representative name (if any). If your comment is not processed properly because of technical difficulties, DOE will use this information to contact you. If DOE cannot read your comment due to technical difficulties and cannot contact you for clarification, DOE may not be able to consider your comment.

However, your contact information will be publicly viewable if you include it in the comment or in any documents attached to your comment. Any information that you do not want to be publicly viewable should not be included in your comment, nor in any document attached to your comment. If this instruction is followed, persons viewing comments will see only first and last names, organization names, correspondence containing comments, and any documents submitted with the comments.

Do not submit to *www.regulations.gov* information for which disclosure is restricted by statute, such as trade secrets and commercial or financial information (hereinafter referred to as Confidential Business Information (''CBI'')). Comments submitted through *www.regulations.gov* cannot be claimed as CBI. Comments received through the website will waive any CBI claims for the information submitted. For information on submitting CBI, see the Confidential Business Information section.

DOE processes submissions made through *www.regulations.gov* before posting. Normally, comments will be posted within a few days of being submitted. However, if large volumes of comments are being processed simultaneously, your comment may not be viewable for up to several weeks. Please keep the comment tracking number that *www.regulations.gov* provides after you have successfully uploaded your comment.

Submitting comments via email, hand delivery/courier, or postal mail. Comments and documents submitted via email, hand delivery/courier, or postal mail also will be posted to *www.regulations.gov*. If you do not want your personal contact information to be publicly viewable, do not include it in your comment or any accompanying documents. Instead, provide your contact information on a cover letter. Include your first and last names, email address, telephone number, and optional mailing address. The cover letter will not be publicly viewable as long as it does not include any comments.

Include contact information each time you submit comments, data, documents, and other information to DOE. If you submit via postal mail or hand delivery/courier, please provide all items on a CD, if feasible, in which case it is not necessary to submit printed copies. Faxes will not be accepted.

Comments, data, and other information submitted to DOE electronically should be provided in PDF (preferred), Microsoft Word or Excel, WordPerfect, or text (ASCII) file format. Provide documents that are not secured, written in English and free of any defects or viruses. Documents should not contain special characters or any form of encryption and, if possible, they should carry the electronic signature of the author.

Campaign form letters. Please submit campaign form letters by the originating organization in batches of between 50 to 500 form letters per PDF or as one form letter with a list of supporters' names compiled into one or more PDFs. This reduces comment processing and posting time.

Confidential Business Information. According to 10 CFR 1004.11, any person submitting information that he or she believes to be confidential and exempt by law from public disclosure should submit via email two well-

It is DOE's policy that all comments may be included in the public docket, without change and as received, including any personal information provided in the comments (except information deemed to be exempt from public disclosure).

Signing Authority

This document of the Department of Energy was signed on April 21, 2025, by Louis Hrkman, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 24, 2025.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

PETITION FOR AMENDMENT

Before the

UNITED STATES DEPARTMENT OF ENERGY

Office of Energy Efficiency and Renewable Energy

In the Matter of: Energy Conservation Program: Test Procedure for Air Cleaners
Docket No. EERE–2021–BT–TP–0036

Petition for Amendment

I. Executive Summary
II. Background
A. DOE Has Adopted A Test Procedure Poorly Suited To Determining Room Size Coverage And IEF Scores for Air Cleaners
B. In Reliance On DOE, FTC Has Proposed To Adopt The Same Poorly Suited Test Procedure
C. Dyson Has Confirmed That Room Size Coverage Claims And IEF Scores Based On The Test Procedure Are Inaccurate And Inconsistent
III. Grounds for Petition
A. The Room Size Coverage Rule And IEF Rule Require Manufacturers To Display Product Claims That Are Inaccurate And Inconsistent
B. The Room Size Coverage Rule And IEF Rule Mislead Consumers
C. The Room Size Coverage Rule And IEF Rule Stifle Innovation
D. The Room Size Coverage Rule And IEF Rule Result In Increased Energy Consumption
E. The Room Size Coverage Rule And IEF Rule Should Be, At Minimum, Stayed To Provide Time For Notice And Comment On Whether To Revoke Or Modify The Rules
IV. Conclusion

Dyson Inc. (''Dyson'') respectfully petitions the United States Department of Energy (''DOE'') pursuant to 5 U.S.C. 553(e) to:

1. amend part 429 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations to remove section 429.68(a)(4), a section which requires that ''[a]ny represented value of the effective room size, in square feet, of a[n air cleaner] must be calculated as the product of 1.55 and the represented smoke CADR value of the [air cleaner]'' (the ''Room Size Coverage Rule''); and,

2. amend part 430 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations to remove section 430.23(hh)(4), a section which requires that ''[t]he annual energy consumption, expressed in kilowatt-hours per year, and the integrated energy factor, expressed in CADR per watts (CADR/W), for conventional room air cleaners, shall be measured in accordance with section 7 of appendix FF of this subpart'' (the ''IEF Rule'').

I. Executive Summary

DOE implemented the Room Size Coverage Rule and the IEF Rule on March 6, 2023 (effective December 31, 2023) to establish standard procedures by which manufacturers may measure and represent to consumers the effective room size coverage and integrated energy factor (''IEF'') scores of their air cleaner products. In enacting these rules, DOE stated that it ''considers room size [and IEF, which is a 'function of the room size that the unit is expected to operate in'] to be an important metric that must be represented accurately and consistently to provide meaningful information to consumers.'' [7] Dyson agrees. It is important for consumers to have accurate information about the efficacy and efficiency with which different air cleaners clean various sized rooms. Unfortunately, the Room Size Coverage Rule and the IEF Rule do exactly the opposite.

Dyson, therefore, petitions DOE to revoke the Room Size Coverage Rule and the IEF Rule because they: (1) obligate manufacturers to make frequently inaccurate and misleading claims about the efficacy and efficiency with which their products operate, (2) stifle innovation by manufacturers to develop products that operate better where it counts—in consumers' homes—rather than in a highly stylized test chamber, and (3) undermine energy efficient consumer purchasing decisions in violation of DOE's broader mandate to properly ''regulate the energy efficiency of [ ] consumer products . . . .'' [8]

More particularly, the Room Size Coverage Rule and the IEF Rule should be revoked because they obligate manufacturers to express air cleaner room size coverage and IEF scores using clean air delivery rates (''CADR'') measured in reliance on the test procedure AHAM–AC–1–2020 (the ''AHAM CADR Test''), incorporated by reference into Appendix FF to Subpart B of Part 430, Title 10. As explained herein, the AHAM CADR Test suffers from severe flaws that result in CADRs that do not have real-world validity and, when used to calculate room size coverage and IEF scores, result in misleading information reaching consumers about the absolute and relative capabilities of different air cleaners to effectively and efficiently clean various sized rooms.

These concerns are not new to DOE. Manufacturers, including Dyson, submitted comments during the notice and comment period in December 2022 urging DOE not to adopt mandates that would result in inaccurate and inconsistent measures of room size coverage and energy efficiency. DOE rejected these comments on the basis that, in summary, 'something is better than nothing.' Dyson disagrees when the 'something' results in misleading consumers, stifling innovation and wasteful energy consumption.

Dyson has subsequently developed test data and retained external experts to review Dyson's test data and perform a literature review. The expert report of Dr. Timothy Morse, Ph.D., and Dr. Khaled Hashad, Ph.D., of Exponent, is annexed hereto as Exhibit A (the ''Exponent Report''). Like Dyson,

[7] Energy Conservation Program: Test Procedures for Air Cleaners, 88 FR 14014 at 8 (Mar. 6, 2023), at 21.

[8] 42 U.S.C. 6291–6317.

experts Morse and Hashad conclude that the AHAM CADR Test does not produce reliable CADRs that can be used to measure the efficacy and efficiency with which air cleaners can clean various sized rooms.

Based upon this new and accumulating body of evidence, Dyson urges DOE to revoke the Room Size Coverage Rule and IEF Rule or, to the extent that DOE after full consideration of this Petition still wishes to impose a one-size-fits-all test for room size coverage claims and IEF scores, stay enforcement of the Room Size Coverage Rule and IEF Rule and open a period of notice and comment so the public can submit their views on how, if at all, DOE can mandate a test procedure with greater real-world validity.

The importance of this petition is underscored by the recent proposed rulemaking by the United States Federal Trade Commission (''FTC''), which has proposed to add room size coverage claims to its required EnergyGuide labels on air cleaners, and to mandate that room size coverage numbers must be calculated using the standard adopted by DOE—*i.e.,* the Room Size Coverage Rule.[9] Dyson has opposed the FTC's rulemaking in written comments [10] and will present its critiques during a hearing scheduled for September 19, 2024. FTC has not yet issued a final rule and DOE can take this opportunity to revoke the Room Size Coverage Rule and IEF Rule and avoid agencies like FTC ''doubling down'' on DOE's flawed approach.

II. Background

A. DOE Has Adopted a Test Procedure Poorly Suited To Determining Room Size Coverage and IEF Scores for Air Cleaners

On March 6, 2023, DOE published a final rule entitled Energy Conservation Program: Test Procedure for Air Cleaners.[11] The final rule, incorporating the Room Size Coverage Rule and IEF Rule, mandated that all representations to consumers concerning the room size coverage capabilities of air cleaners and all IEF scores must be calculated using CADRs measured in reliance on the AHAM CADR Test.[12] DOE implemented the final rule over the objections of Dyson and other air cleaner manufacturers on the ground that it is important to require a standard method for substantiation of room size coverage claims and IEF scores. The final rule went into effect on December 31, 2023.

CADR is not a measure of room size coverage or energy consumption. Likewise, the AHAM CADR Test is not designed to measure the size of the room that an air cleaner is capable of cleaning or its energy consumption. CADR is a measure of the clean air volume that an air cleaner can provide in a fixed amount of time and space. It is the air cleaner equivalent of a vehicle's 0–60 mph acceleration test, as it measures an air cleaner's purification speed on the maximum fan mode within a 28 m^3 chamber. In practical terms, it measures how quickly an air cleaner can remove a pollutant from a room (*e.g.,* how quickly can it remove the smell of burnt toast from a kitchen). Consumers are not using air cleaners primarily, let alone exclusively, for such a narrow purpose.

[11] Energy Conservation Program: Test Procedures for Air Cleaners, 88 FR 14014 (Mar. 6, 2023).

[12] *Id.* at 8.

The AHAM CADR Test is a nearly 40-year-old test procedure (albeit updated from time to time) developed by the Association of Home Appliance Manufacturers (''AHAM''). The test is performed in a small chamber (28 m^3) equipped with a single sensor to monitor the particle count in the air and two fans to circulate the air: a ceiling fan and a powerful wall-mounted recirculation fan. Before the test begins, the test subject air cleaner is placed in the center of the chamber, manually set to maximum speed and both the ceiling and wall mounted recirculation fans are switched on. The air cleaner remains operating at full speed throughout the duration of the test; there is no provision made for automatic sensor-response or standby modes. A controlled amount of pollutant is then pumped into the room, allowing the fans in the chamber to mix and homogenize the pollutant concentration before pollutant levels in this ''well-mixed'' room are measured by the single sensor. At the start of the test, the ceiling fan is turned off, but the recirculation fan remains running. The test lasts for 20 minutes. Following the test, a 'CADR Score' is calculated by measuring how much faster the air cleaner removed particles from the air compared to how fast the particles would naturally have 'decayed' or dropped and settled on surfaces but for the air cleaner, which is then multiplied by the volume of the test chamber. The below image at Figure 1 illustrates the setup of a CADR test chamber.

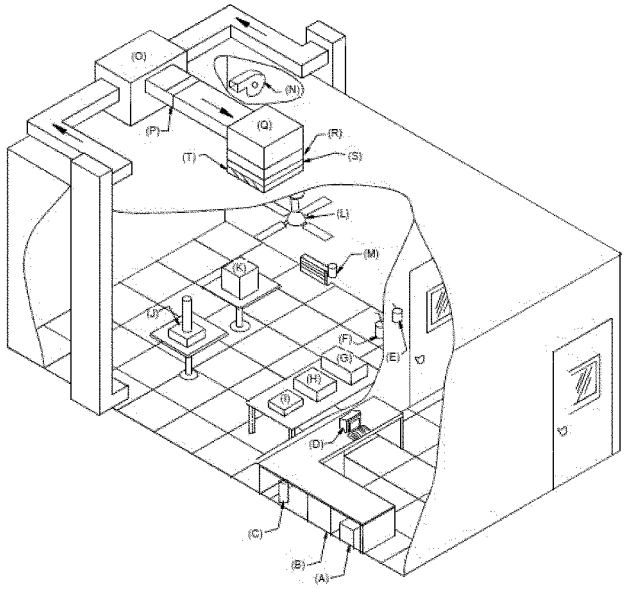

Figure 1.[13]

There are a number of problems with the design of the AHAM CADR Test which render it inapt to measure CADRs used for determining room size coverage or energy consumption. For example, the AHAM CADR Test:

• *Measures short-term performance only.* The AHAM CADR Test measures how quickly an air cleaner can clean the air in a standardized room (*e.g.,* how quickly it can remove the smell of burnt toast from a kitchen) when the contaminated air is pressurized by the recirculation fan and 'fed' to the air cleaner. The test does not measure *whether* an air cleaner can clean a room of a given size and keep it clean over a sustained period under real-world conditions, which is the typical application of an air cleaner.

• *Uses a high-powered fan to homogenize the air and move it toward the air cleaner.* The AHAM CADR Test uses an active system (a high-powered recirculation fan), which homogenizes and pushes the air toward the air cleaner. The active system obscures important distinctions between air cleaners that do and do not have lateral whole-room air distribution technology (their own powerful, built-in fans), giving air cleaners without consumer-benefiting lateral air distribution artificial boosts in performance relative to those that do.

• *Places the air cleaner in the center of the test chamber.* The AHAM CADR Test requires that the tester place the air cleaner in the center of the test chamber with only one sensor in the chamber testing how well the air cleaner has cleaned the chamber, rather than placing the air cleaner against a wall or in a corner—where consumers typically place air cleaners—and using multiple sensors to evaluate how well the air cleaner is cleaning the whole test chamber. These aspects of the test procedure obscure material differences in technology like lateral whole-room air distribution, which help to ensure wider coverage of a room by an air cleaner even when placed (as is typical) against a wall or in a corner.

• *Uses a small test chamber.* The AHAM CADR Test chamber is considerably smaller than most rooms in consumers' homes. This is significant since the AHAM CADR Test is highly sensitive to different size chambers, resulting in arbitrary room size coverage claims when results are extrapolated to larger size rooms.

• *Operates air cleaners in maximum power mode.* The AHAM CADR Test requires that air cleaners remain at maximum fan speed during the entirety of the test, which ignores air cleaner sensor technologies in many but not all modern air cleaners that match the speed of the internal fan to the level of pollutants in the air. This test requirement undermines energy efficient purchasing decisions by consumers, who in the real world will run their air cleaners on ''normal'' or ''automatic'' modes both as a matter of energy efficiency and comfort (maximum power modes are loud), which modes are not reflected in room size coverage claims made based on CADR.

On October 18, 2022, DOE published a Notice of Proposed Rulemaking (''NOPR'') [14] and opened a comment period which ended on December 19, 2022. In the NOPR, DOE requested, among other things, comments on a proposal to use CADR to calculate the effective room size that can be serviced by an air cleaner and ''whether it is appropriate to use smoke CADR as the metric to calculate effective room size or if it should be based on $PM_{2.5}$ CADR instead [which includes smoke and other pollutants].'' [15] DOE presented the choice as binary (smoke vs. a mix of

[15] *2022–11–09 Presentation: Air Cleaners Test Procedure: Notice of Proposed Rulemaking Public Meeting—REGULATIONS.GOV* (Nov. 9, 2022), at 49, *https://www.regulations.gov/document/EERE-2021-BT-TP-0036-0024.*

smoke and other pollutants) and did not ask whether CADR itself is suitable for calculating effective room size or IEF score or whether the AHAM CADR Test was an appropriate procedure to calculate CADR for these purposes.

Dyson opposed DOE's adoption of CADR, stating in a comment that the range of air cleaner technologies and home environments precludes a one-size-fits-all room size calculation—particularly in a mandatory regulatory context.[16] Dyson cautioned DOE not to base room size coverage determinations on CADR, as the metric and performance output from the AHAM CADR Test methodology does not accurately reflect real-life performance.[17] In particular, Dyson urged that CADR is unsuitable for calculating room size coverage because:

1. Manufacturers already offer nuanced estimates of room size coverage customized for different environments and technologies, and collapsing the measurement of room size coverage claims to a single methodology withholds consumer relevant information tailored to consumers' differing needs and manufacturers' differing offerings.

2. The AHAM CADR Test uses a recirculation fan that is not present in real-world spaces and gives air cleaners with poor or no lateral whole-room air circulation an artificial boost in room size coverage.

3. The AHAM CADR Test runs all models on maximum and does not account for automatic sensor-response modes, which are common in today's marketplace and impact real-world room size coverage capabilities.

4. Room size coverage claims calculated using CADR do not scale properly and are inaccurate.

Similarly, Synexis LLC submitted a comment asserting that ''CADR ratings do not reflect actual usage under real-world conditions.'' [18] Synexis' criticism focused on the size of the test chambers, which ''are not representative of actual room sizes.'' [19] Synexis instead advocated for ''[t]esting in large chambers,'' as such chambers are ''more appropriate . . . [and] more representative of real world conditions.'' [20] Synexis expressed concern that ''using CADR[] alone . . . might be misleading with regard to overall energy consumption required to achieve maximum effectiveness.'' [21] Likewise, Molekule, Inc. criticized CADR for failing to account for the benefits of different technologies offered with different air cleaners.[22] Molekule expressed concern that using a standard test method would be bad for consumers and for achieving energy efficiency, asserting that ''energy standards based solely on traditional [AHAM CADR Test]-based testing methods that only focus on particulate capture are likely to hinder the development and distribution of innovative devices . . . .'' [23]

DOE acknowledged in its final rulemaking that the AHAM CADR Test does not reflect real-world spaces (in particular, the use of a powerful recirculation fan) and does not account for commonplace modern air cleaner technologies (for example, automatic sensor-response mode and built-in lateral whole-room air circulation). Further, DOE admitted that there is no current test procedure for air cleaners in automatic mode that measures energy efficiency.[24] Nevertheless, DOE adopted the final rule as DOE initially proposed.

B. In Reliance on DOE, FTC Has Proposed To Adopt the Same Poorly Suited Test Procedure

On February 2, 2024, FTC published a Notice of Proposed Rulemaking (89 FR 7566),[25] proposing to adopt the Room Size Coverage Rule for room size coverage claims on EnergyGuide Labels,[26] which manufacturers are *required* to include on air cleaner product packaging. The proposed rule has the potential to magnify the harm to consumers and innovators already being caused by DOE's Room Size Coverage Rule and—to the extent DOE determines that it should revoke the Room Size Coverage Rule—to create administrative headaches across multiple agencies and impose otherwise unnecessary economic burdens on manufacturers.

Dyson submitted two comments to FTC on March 18, 2024,[27] and April 19, 2024.[28] In its comments, Dyson emphasized its concerns that adoption of the Room Size Coverage Rule would lead to consumer confusion and stifle innovation in the market for air cleaners. Dyson urged FTC not to ''double down'' on a flawed approach to substantiation of room size coverage claims until DOE has had an opportunity to consider this petition. Fortunately, FTC has not acted on its proposal and has granted Dyson's request for a hearing, scheduled for September 19, 2024. The potential for agency action resulting in additional consumer, manufacturer and regulatory harm stemming from the Room Size Coverage Rule and IEF Rule nevertheless underscores the need for DOE to take a second look at the Rules now.

C. Dyson Has Confirmed That Room Size Coverage Claims and IEF Scores Based on CADR are Inaccurate

After DOE's issuance of the Room Size Coverage Rule, Dyson has performed additional testing on a range of air cleaner models sold by manufacturers in the US (1) using the AHAM CADR Test, (2) using the AHAM CADR Test with corrections for certain of its flaws, and (3) under simulated real-world conditions. The data from testing performed by Dyson demonstrate that the Room Size Coverage Rule and IEF Rule obligate manufacturers who make room size coverage and IEF claims to publish inaccurate and inconsistent representations about their products that inevitably result in misleading consumers, stifling innovation and increasing energy inefficiency. Dyson retained Dr. Tim Morse, Ph.D., and Dr. Khaled Hashad, Ph.D., of Exponent to perform an evaluation of Dyson's data and the relevant literature. Drs. Morse

and Hashad came to the same conclusions, as discussed herein and in the attached Exponent Report.

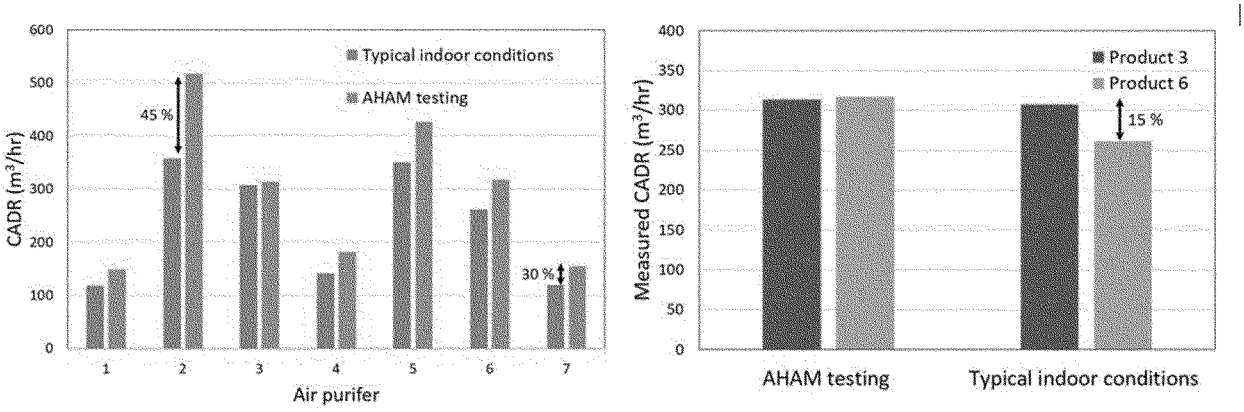
III. Grounds for Petition

For the reasons highlighted below and in the Exponent Report, Dyson petitions DOE to amend 29 CFR 429 and 430 to revoke the Room Size Coverage Rule and IEF Rule. DOE intended to provide consumers with benchmarks to select the most effective and efficient air cleaner for their rooms. However, room size coverage claims and IEF scores calculated with CADR measured using the AHAM CADR Test are inaccurate and inconsistent, and result in consumer confusion, stifled innovation and increased energy consumption.

If, however, DOE believes that these claims must be standardized via regulation, Dyson respectfully submits that the Room Size Coverage Rule and IEF Rule should be stayed pending a new notice and comment period concerning proposed substitutions for, or modifications to, the AHAM CADR Test that would allow CADRs used in determining room size coverage claims and IEF scores to have greater real world validity, and thus, give consumers more relevant and less deceptive information about the energy efficacy and efficiency of air cleaners.

A. The Room Size Coverage Rule and IEF Rule Require Manufacturers To Display Product Claims That are Inaccurate and Inconsistent, Thereby Misleading Consumers About the Right Air Cleaners for Their Homes

Dyson tested seven name-brand air cleaner units with varying features using the chamber prescribed by the AHAM CADR Test and using chambers better reflecting real-world conditions (*e.g.,* larger chambers, air cleaners in the corners of the chambers, and no high-powered recirculation fans in the chambers). As shown in the data and summarized in Figure 2(a), below and to the left, for most air cleaners (5 out of 7 that were tested), the AHAM CADR Test artificially inflates the CADR scores by as much as 45%. Moreover, there is no consistency across tested units in terms of inflation (or deflation for 1 out of 7). Thus, AHAM CADR Test-based CADR scores are not only inaccurate, but also inconsistent and cannot serve as a basis to discern relative performance. This is problematic for consumers as the energy efficiency and efficacy of an air cleaner may be significantly lower than the efficiency and efficacy purportedly measured using the AHAM CADR Test and advertised on the product pursuant to the Room Size Coverage Rule and IEF Rule.



Figures 2(a) and (b).[29]

The inaccuracy and lack of consistency among CADR scores is because the AHAM CADR Test is an inappropriate test method for determining room size coverage (and, therefore, IEF scores, which DOE has said are ''inherently a function of the room size that the unit is expected to operate in'' [30]). The AHAM CADR Test was designed to enable scientific, repeatable testing of an air cleaner's speed of cleaning in isolated laboratory conditions. It was not designed to provide an accurate representation of how these products perform in larger rooms under real-world conditions—*i.e.,* in consumers' homes. This is evident from the prescribed test environment, which is not relevant to, or reflective of, real-world environments in which consumers will use the tested air cleaners, as follows:

1. The Test Chamber Contains a High-Powered Fan [31]

The AHAM CADR Test chamber contains a powerful, wall-mounted recirculation fan which operates continuously during testing to achieve artificial mixing. The fan circulates and mixes particles introduced into the test chamber, evenly spreading the particles to create a homogeneous environment so that readings taken by the single sensor approximate particle concentrations across the chamber. This is highly stylized and unrealistic. Many consumer homes do not have any fans at all [32] and are unlikely to have an 'even spread' of pollutants. Moreover, fans used in real-world spaces are not comparable to the recirculation fan used in a CADR test—as the latter is extremely powerful, requires a substantial amount of energy to operate and essentially 'feeds' the polluted air to the air cleaner, which may have limited ability to circulate and push the air itself. Figure 3, below, illustrates the significant power of the recirculation fan recommended in the AHAM CADR Test standard.

BILLING CODE 6450–01–P

[29] *See* Exponent Report at 26–27. CADR obtained for various air cleaner products tested using the AHAM standard and tested under typical indoor conditions (larger chamber (81 m³), air cleaner at the corner, and no external mixing). (a) For most air cleaners the AHAM standard test resulted in an increase in CADR that can reach up to 45%, (b) products 3 and 7 had similar CADR in the AHAM test but product 7 had a 15% decrease in CADR compared to product 6 when tested in typical indoor conditions.

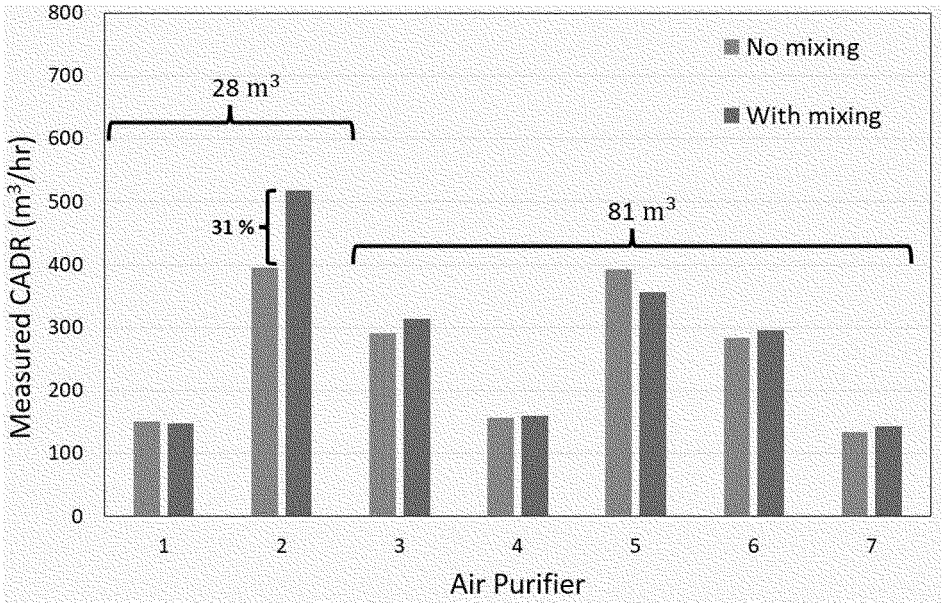
[32] A 2020 Residential Energy Consumption Survey by the U.S. Energy Information Administration found that most U.S. apartments did not have any ceiling fan, and of 123.53m U.S. homes surveyed (of all sizes) 34.08m had no ceiling fans. Source: *https://www.eia.gov/consumption/residential/data/2020/hc/pdf/HC%207.1.pdf.*

				CADR Recirculation Fan	**Ceiling Fan**	**Dyson Big + Quiet Air Cleaner**
Power (Watts).	147W (Model recommended in AHAM CADR Test standard)	33.2W (Model recommended in AHAM CADR Test standard)	36W (Dyson's most powerful air cleaner)
Estimated annual energy cost.[33]	$64.43	$14.55	$15.78

Figure 3.

Figure 4 below displays the CADR for various air cleaners tested with and without artificial mixing and in two different chamber sizes (28 m^3 and 81 m^3). The test data indicate that for air cleaners with builtin lateral whole-room air circulation technology (that ensures whole-room air circulation in the real world in consumers' homes) the artificial mixing has no impact on the CADR score (1 and 3). However, for air cleaners that do not have technology sufficient to circulate the air in consumers' homes (2, 5–7),[34] the artificial mixing can erroneously increase the CADR by up to 32%, rendering room size coverage claims and IEF scores calculated using CADR absolutely and relatively inaccurate.[35]



BILLING CODE 6450–01–C

[33] Assumed 8 hours daily use on maximum power at $0.15 per kWh.

[34] Air cleaner 4 performed near-equally well on both tests, despite not being equipped with lateral whole-room air circulation technology. Why that model performed differently than similarly situated models 2, 5, 6 and 7 is beyond the scope of this petition, but the disparity further illustrates the unreliability of CADR for predicting realworld performance.

[35] *See* Exponent Report at 8. Moreover, an air cleaner can only clean air that passes through its filter. Without the presence of a powerful recirculation fan to circulate air (and the pollutants), natural air movement may never be powerful enough to move pollutants from the far side of a room to an air cleaner unless the air cleaner has builtin air circulation and mixing technology.

Figure 4.[36]

This flaw results in a perverse outcome where the more effective and technologically advanced air cleaners score worse relative to other air cleaners. The high-powered recirculation fan is essentially giving all air cleaners ''credit'' for having lateral whole-room air circulation technology that enables more effective cleaning of the room. The fan is doing the work for the air cleaners that do not do it themselves.

2. The Air Cleaner is Placed in the Center of the Test Chamber [37]

The AHAM CADR Test places the air cleaner in the center of the testing chamber. However, consumers are much more likely to place an air cleaner in the corner of a room or against a wall than in the center of a room. Placement against a wall or in a corner is not only logical from a practical and common sense perspective (as this is where outlets are usually located and consumers will generally not want an air cleaner 'getting in the way' by placing it in the center of a room), but Dyson has undertaken owner surveys which found that only a small minority (17%) of users placed an air cleaner in the center of their room, whereas 43% placed it in the corner and 40% placed it up against a wall, as reflected in Figure 5, below.

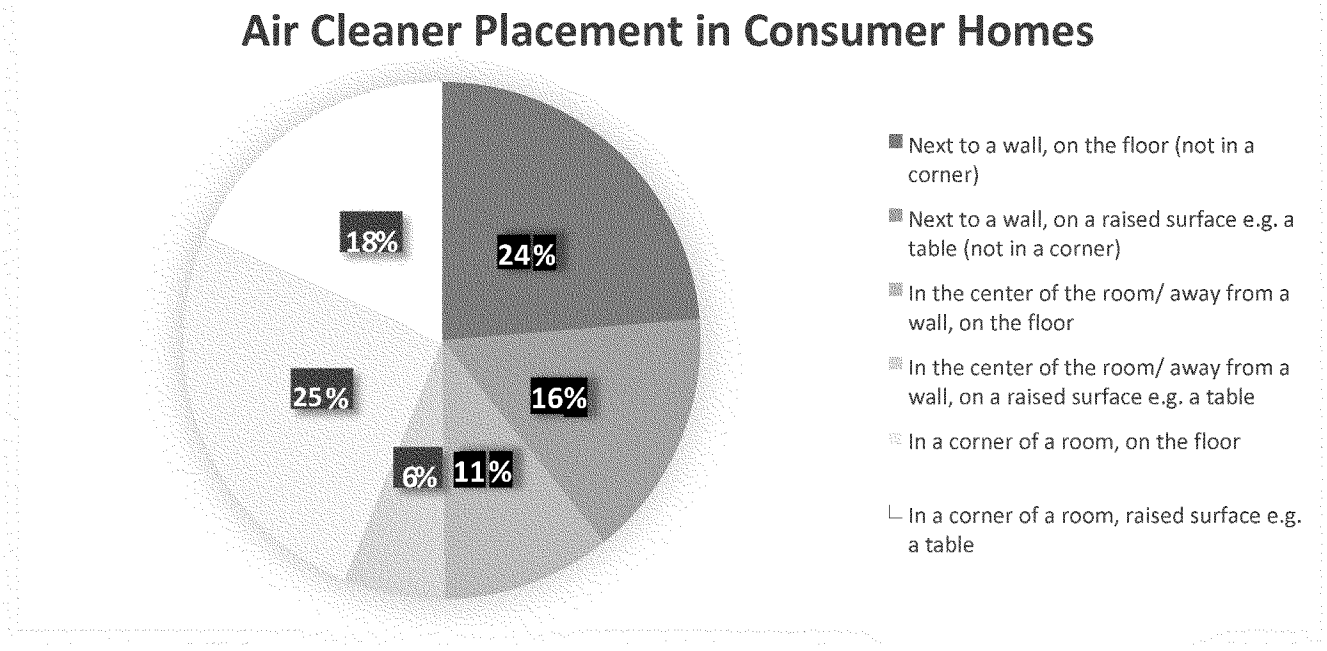


Figure 5.[38]

Location matters. Indeed, a study that investigated the CADR of an air cleaner located at four different locations in an office space showed that the CADR can vary by up to 27% (compared to the average) depending on its location in the room.[39] Thus, testing with an air cleaner in the center of the room is not reflective of likely usage conditions and could materially skew results.

Dyson tested air cleaners in both 81 m^3 and 169 m^3 test chambers with no mixing and different cleaner locations (center or corner). As shown in Figure 6, below, placing an air cleaner in the corner of the chamber instead of the center can result in a significantly lower CADR. In the most extreme case, placing the air cleaner in the center, instead of the corner, resulted in a 34% increase in CADR.

[36] *See* Exponent Report at 20. The CADR for various air cleaner products tested in two different test chamber sizes, 28 m^3 and 81 m^3, with and without mixing. For some products the use of a recirculation fan (mixing) resulted in minimal changes in CADR, while for other products it resulted in an increase of CADR by up to 32%.

[37] See Exponent Report, Section 4.3 at 23–25.

[38] Survey data from 584 Dyson air cleaner owners across Canada, France, and Australia relating to air cleaner placement in consumer homes. Conducted in 2016.

[39] Küpper, M., Asbach, C., Schneiderwind, U., Finger, H., Spiegelhoff, D., & Schumacher, S. (2019). *Testing of an indoor air cleaner for particulate pollutants under realistic conditions in an office room.* Aerosol and Air Quality Research, 19(8), 1655–1665.

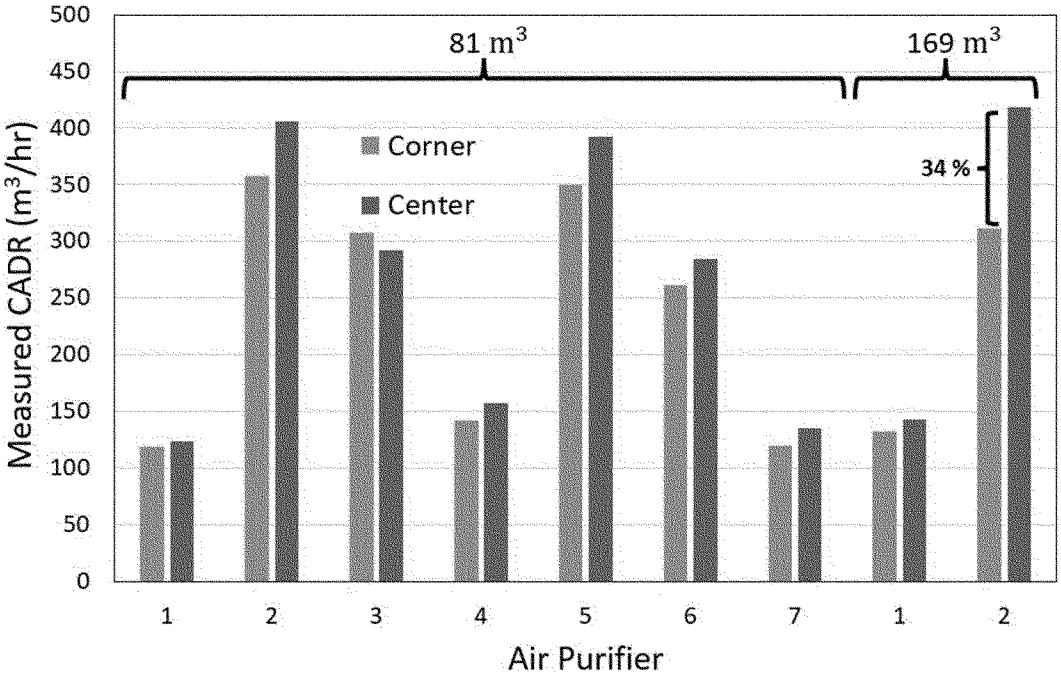

Figure 6.[40]

Thus, placement of the air cleaner in the center of the test chamber is both misleading (because it artificially increases the CADR) and unfair (because it benefits some air cleaners that do not have lateral whole-room air circulation more than air cleaners that do).

3. The Test Chamber is Smaller Than Consumers' Average Rooms and Relies on a Single Sensor[41]

Consumer survey data obtained by Dyson found that, in the U.S., 52% of homes had a family room larger than 360 square feet (19 m^2).[42] In addition, it is generally accepted that an 'average' family room in the U.S. is approximately 400 square feet (20 m^2).[43] The AHAM CADR Test chamber is considerably smaller; it is the equivalent of only 125 square feet (12 m^2). Furthermore, houses (and rooms in houses) have become larger over the last 30–40 years, compared to when the AHAM CADR Test was first developed in the 1980s. According to data from the Census Bureau, family homes built in 1990 were 2,080 ft^2 (193 m^2) on average. By 2015, family homes had increased to an average of 2,687 ft^2 (250 m^2) and for 2022 the average family home was 2,383 ft^2 (221 m^2).[44]

It is easier for an air cleaner to clean and remove pollutants contained in a smaller space than a larger one. In a CADR chamber-sized space (125 square feet), even with pollutants at the furthest distance from an air cleaner, this will be a relatively short distance and relatively easy to clean.

The larger a room, the further away pollution events (*e.g.,* fumes from cooking or pollen or pollution from outside) may be. Without the aid of a powerful recirculation fan (as discussed above), an air cleaner will need to bring these pollutants to it via its own means, in addition to natural circulation, to filter them.

Figure 7, below, demonstrates that CADR for different air cleaners in test chambers 28 m^3 and 81 m^3 with ''mixing'' (aka a powerful recirculation fan) can vary by up to 16%. These differences are likely to lead to misidentification of the air cleaner with the best CADR performance.[45]

[40] *See* Exponent Report at 25. The CADR for various air cleaner products tested by Dyson in two different test chamber sizes, 81 and 169 m^3, without mixing, with the air cleaner placed in the corner and center of the test chamber. For some products the placement of the air cleaner resulted in minimal changes in CADR, while for other products it resulted in an increase of CADR by up to 34% when the air cleaner was moved from the corner to center of the room.

[41] *See* Exponent Report, Section 4.2 at 20–23.

[42] Survey of Dyson product owners based in the US conducted in 2016, with 361 respondents.

[45] See Exponent Report at 22.

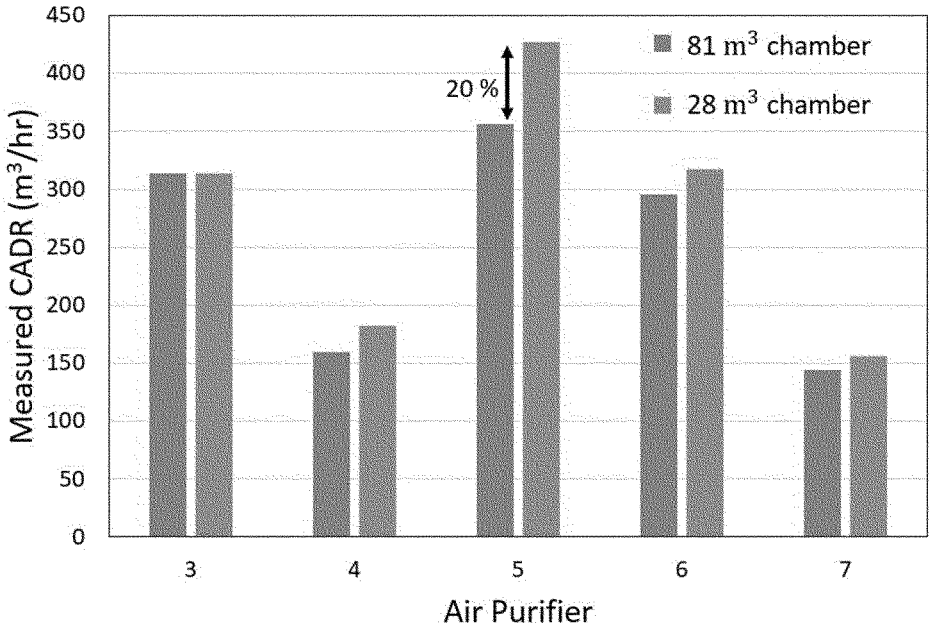

Figure 7.[46]

For example, for the 28 m^3 size test chamber (the size prescribed by the AHAM CADR Test), air cleaner #6 performs better, *i.e.,* has a higher CADR than air cleaner #3. However, when the test chamber size is closer to real room sizes (81 m^3), air cleaner #3 performs better, *i.e.,* has the higher CADR. Thus, with respect to CADR in a real-world room, air cleaner #3 is the better appliance but the AHAM standard would identify air cleaner #6 as the higher-performing appliance—and, pursuant to the Room Size Coverage Rule and IEF Rule—air cleaner #6 also would be identified to consumers as covering a larger-sized room than air cleaner #3 and with a potentially higher IEF score.

As discussed above, to achieve more effective large room cleaning, certain air cleaners have builtin lateral whole-room air circulation and mixing technology to ensure that pollutants on one side of a large room are moved around the room and towards the air cleaner. An air cleaner without such technology will not be able to do this effectively. Built-in air circulation and mixing technology are not standard in air cleaners, and products with such technology widely range in terms of their strength and capacity. Testing in a small 28 m^3 chamber does not enable such capability or technology to be properly tested, as even an air cleaner without built-in air circulation and mixing technology will be able to more easily clean the chamber at that size. This makes the small AHAM CADR Test chamber unsuitable for measuring an air cleaner's ability to clean larger spaces. In some scenarios, an air cleaner simply will be unable to clean a room greater than a certain size (regardless of CADR score) because it has insufficient lateral air circulation to push faroff pollutants into its filter.

The problems with using a small test chamber are compounded by using only one sensor to test purification and having the cleaner in the center of the room. Again, these components of the AHAM CADR Test fail to give the resulting CADR relevance to consumers in real world spaces. In real world spaces, most consumers will place cleaners in the corner of (larger) rooms, and will want to know not how clean the room is right next to the air cleaner (as tested by the single sensor in the AHAM CADR Test chamber), but rather, how clean the room is in various locations, including most importantly where people are located in the room. Studies have shown that the CADR can change up to 35.7% based on the test chamber volume.[47] Notably, other international standards [48] specify a test chamber size based on the air cleaners' CADR, which better accounts for the impact of chamber volume on CADR measurement.

4. The Test Fails To Account for Automatic Sensor-Response Technology [49]

The AHAM CADR Test requires the tested air cleaner to operate at maximum fan speed throughout the duration of the test and, therefore, does not account for increasingly prevalent automatic sensor-response mode technology, which adjusts fan speed based on the level of pollution in the room in order to conserve energy and increase consumer comfort.

In the same way that a thermostat regulates a home's heating system depending on the temperature, an air cleaner with automatic sensor-response technology monitors and senses the air quality in a room and intelligently adjusts fan speed to respond to 'pollution events' (for example: fumes from cooking or using cleaning products). This technology is now widely adopted by modern air cleaners and is a driver of consumer purchasing decisions. Of the top 50 selling air cleaners in the U.S. by revenue share, over 56% of this revenue is from products with some form of automatic response technology.[50] The consumer benefits from automatic sensor-response technology because the air cleaner uses no more energy than necessary to clean the room. There also is an acoustic benefit offered by the lower fan speeds of ''smart'' air cleaners using this technology, which reduces noise pollution.

[46] See id. CADR for various air cleaners tested in a 28 and 81 m3 chamber. Testing in different test chamber sizes can result in a 16% difference in CADR.

[47] Fan, Y., Liu, J., Zhao, L., Wang, C., Moon, D., & Song, S. (2024). Study on the test accuracy of the high-air-volume cleaner under different test chamber volumes. Journal of Cleaner Production, 448, 141684.

[48] E.g., (GB/T18801–2022) and (SPS–KACA002–132:2021).

[49] Exponent Report, Section 6 at 34–35.

[50] Based on air cleaner sales data in the United Sates for the 12 months between January 2023 and December 2023.

If an air cleaner is always run at the maximum fan speed it will inevitably 'overclean' the space, as it will keep running even once a pollution event has been cleaned, thereby wasting energy. It is also not reflective of how many air cleaner products available on the market today operate, and thus not reflective of what a large proportion of consumers owning air cleaners will experience.

The Room Size Coverage Rule and IEF Rule are intended to measure and encourage more energy efficient choices by consumers, ensuring that consumers have an accurate representation of how large a space an air cleaner can effectively clean and how energy efficient it is in doing the cleaning. However, by running all tested air cleaners at maximum fan speed, the AHAM CADR Test fails to account for the energy-saving and other consumer benefits of air cleaners with this technology.

B. The Room Size Coverage Rule and IEF Rule Mislead Consumers

In its response to Dyson's previous comments, DOE acknowledged that it was willing to accept inaccurate and inconsistent data because it was nevertheless important to have a test that DOE considered scientific, repeatable and easy to administer. DOE's decision, born of expedience at the cost of accuracy and consumer welfare, does not achieve DOE's goal of giving consumers relevant information about the energy efficacy and efficiency with which different air cleaners can clean various size rooms. To the contrary, it promotes consumer confusion by ignoring material differences in product features like active versus passive systems and systems that promote efficiency of use versus those that do not, as demonstrated by the new data highlighted by Dyson above and by Drs. Morse and Hashad in the Exponent Report.

While Dyson sympathizes with DOE's desire to have a test that all industry participants can be held to that is repeatable, objective and capable of being implemented to ensure that manufacturers are not making claims lacking in scientific substantiation, the test must nevertheless provide relevant and accurate information to inform consumer purchasing decisions. A bad standardized test is worse than no standardized test. Consumers should be given accurate and reliable information that helps them answer two questions: (1) how effectively will the air cleaner clean the room where I will be using it, and (2) how efficiently will the air cleaner do that cleaning and at what cost in terms of its energy consumption? Room size coverage claims and IEF scores calculated using CADRs measured by the AHAM CADR Test—as mandated by the Room Size Coverage Rule and IEF Rule—fail to accurately answer either question.

As is evident from Figure 8, below, as flaws in the AHAM CADR Test are corrected, the CADR scores for different products (and, therefore, room size coverage claims and IEF scores) vary dramatically. The significant variance (and drop in CADR scores for many products without features such as lateral whole-room air circulation technology) as real-world conditions are introduced into the test chamber, demonstrates that the gap between what consumers experience in 'real life' vs. performance in the AHAM CADR Test chamber can be substantial. The Room Size Coverage Rule and IEF Rule inhibit a consumers' ability to identify an air cleaner that is the right size for their space in the real world, and to consider the energy consumption, cost and environmental impact of one air cleaner versus another.

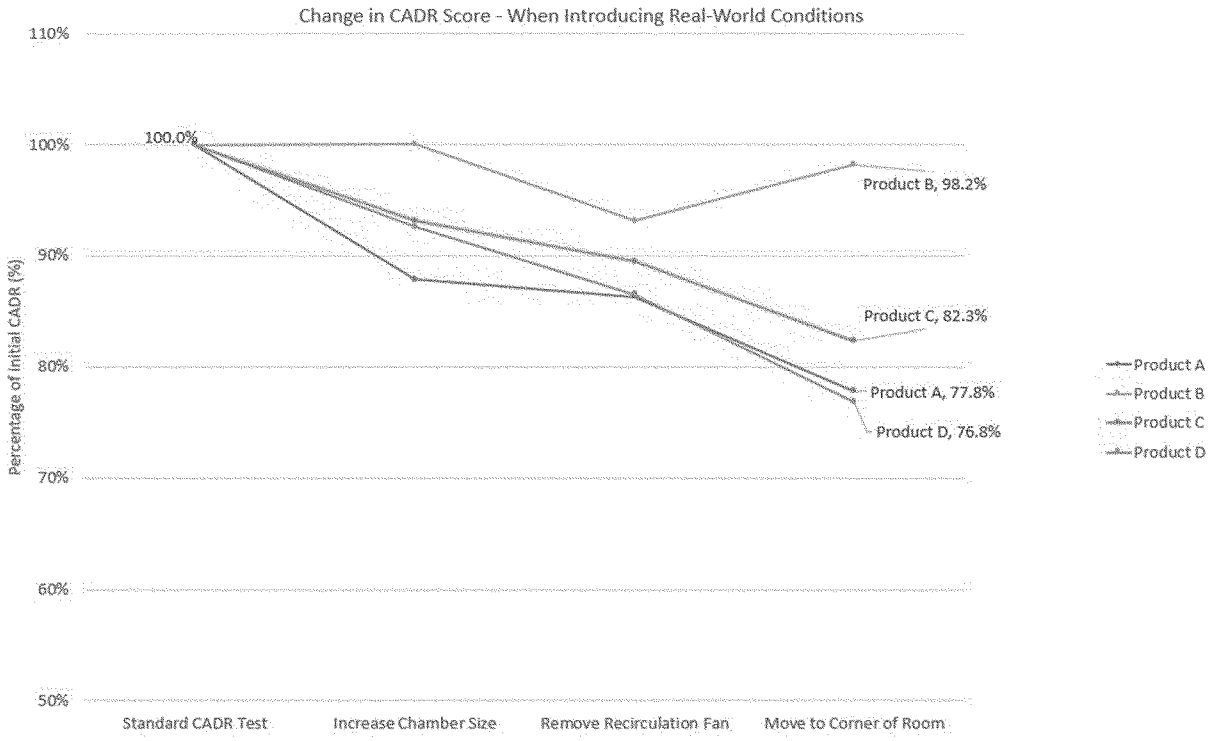

Figure 8.

	Room size capability (AHAM CADR TEST method) ft²	Room size capability when real world conditions are introduced ft²
Product A ..	166	129
Product B ..	285	281
Product C ..	290	234
Product D ..	142	109

For example, if a consumer wishes to purchase an air cleaner for his 280 ft² living room, he would be influenced by Product C's claimed room size figure of 290 ft² and perhaps purchase this product. However, when this consumer uses Product C in his home, he will not be using the product in the same conditions as found in the AHAM CADR Test chamber: he will not have a powerful recirculation fan and will likely place the product in the corner of an average-sized room—introducing simple real-world conditions that are not accounted for by the AHAM CADR Test and not reflected in room size coverage claims and IEF scores calculated using CADR.

The performance experienced by the consumer using Product C in his home will be materially worse than what the consumer has been led to believe would be the performance by the air cleaner. Product C may only be able to effectively clean a space of 234 ft²—far smaller than what the consumer believed would be the effective room size coverage when purchasing the air cleaner in reliance on DOEmandated product performance claims. This mismatch between claims and reality will result in Product C taking a longer time to effectively clean the room it was advertised as being suited for, leading to increased energy consumption and energy costs when compared to what the consumer will have anticipated, as well as poorer performance. In some scenarios, the undersized air cleaner may not be able to clean the room at all.

Product B (which scored slightly worse than Product C under AHAM CADR Test conditions and yet maintained the same score despite introduction of real-world conditions (dropping only from 285 ft² to 281 ft²)), will perform as well in the consumers' home as advertised pursuant to the Room Size Coverage Rule and IEF Rule. However, this does not help the consumer who has already purchased Product C, erroneously believing it will perform as well, or better than, Product B (and may have been sold at a lower price than Product B because it did not need to incorporate built-in air mixing and circulating technologies used by Product B in order to score comparatively well on the AHAM CADR Test).

This is a problem. As DOE has acknowledged, the inability of consumers to select the right-sized air cleaners for their homes results in, among other things, energy inefficiency and increased energy consumption, in violation of DOE's remit to establish standards for energy efficiency:

Room size would strongly impact the capacity of the air cleaner that would be required to clean the air in the desired room. For instance, if the air cleaner is too small compared to the size of the room it is being used in, it will be ineffective, thus providing low efficiency. Conversely, if an air cleaner is too big for the room that it is operated in, it will clean the air very quickly and continue operating, leading to increased energy use. Therefore, it is important that an air cleaner be selected such that its capacity (expressed in terms of its CADR) is appropriate for the size of the room that it is intended to be used in.[51]

C. The Room Size Coverage Rule And IEF Rule Stifle Innovation

By failing to account for real-world conditions and, in particular, providing undeserved ''extra credit'' to air cleaners without lateral whole-room air circulation fans, room size coverage claims and IEF scores calculated using CADRs measured by the AHAM CADR Test provide insufficient and inaccurate differentiation between the performance of air cleaners that do have such technology and the performance of air cleaners that do not have such technology. Likewise, by not accounting for features like automatic sensor-response technologies that enable certain air cleaners to be more energy efficient, room size coverage claims and IEF scores calculated using the AHAM CADR Test prevent brands from competing for consumers based on those consumer- and environmentally-friendly technologies. This perverse situation not only leads to frustration of a consumers' ability to choose the right air cleaner for their homes, but also reduces manufacturers' incentive to continue to innovate to create better products that enhance consumer welfare. Why invest in innovation if, under the Room Size Coverage Rule and IEF Rule, air cleaners without performance and energy efficiency-improving technologies appear to consumers to be equally effective and efficient as those products whose manufacturers have invested in researching and developing improved technologies?

D. The Room Size Coverage Rule and IEF Rule Result in Increased Energy Consumption

The Energy Policy and Conservation Act of 1975 (''EPCA'') requires that any test procedures prescribed or amended by DOE shall be reasonably designed to produce test results which measure energy efficiency, energy use or estimated annual operating cost of a covered product, including air cleaners. (*See* 42 U.S.C. 6293(b)(3)). The Room Size Coverage Rule and IEF Rule fail to comply with the EPCA.

Room size coverage claims and IEF scores compliant with the Room Size Coverage Rule and IEF Rule do not provide accurate information to consumers concerning the efficiency and efficacy of different air cleaners due to the multiple flaws in the AHAM CADR Test discussed above. As a result, consumers will unknowingly choose the wrong products for their rooms, resulting in increased energy consumption, as DOE itself acknowledged in the final rule.[52]

Likewise, the Room Size Coverage Rule and IEF Rule perversely encourage rather than prevent greenwashing (*i.e.,* false, deceptive or exaggerated claims about the environmental *bona fides* of a product that are apt to mislead consumers). The purported rationale for the Room Size Coverage Rule and IEF Rule is energy efficiency: ensuring that accurate room size claims and energy efficiency metrics are available to consumers so that they can make more informed purchasing decision and have clarity around expected energy consumption. This information inevitably also influences a consumer's perception of how 'green' a particular product is, an important factor for many consumers today. As long as the Room Size Coverage Rule and IEF Rule rely on CADRs measured using the AHAM CADR Test, certain manufacturers and distributors of air cleaners will have an easy route to promote their products as 'greener' than they are and claim that their products will achieve a level of performance that they will, in fact,

[51] Energy Conservation Program: Test Procedures for Air Cleaners, 88 FR 14014 at 21 (Mar. 6, 2023).

[52] *Id.* (''Room size would strongly impact the capacity of the air cleaner that would be required to clean the air in the desired room. For instance, if the air cleaner is too small compared to the size of the room it is being used in, it will be ineffective, thus providing low efficiency. Conversely, if an air cleaner is too big for the room that it is operated in, it will clean the air very quickly and continue operating, leading to increased energy use. Therefore, it is important that an air cleaner be selected such that its capacity (expressed in terms of its CADR) is appropriate for the size of the room that it is intended to be used in.'').

never achieve in a larger space (absent the purchase of a second air cleaner)—to the detriment of consumer welfare and DOE's remit to promote energy efficiency.

E. The Room Size Coverage Rule and IEF Rule Should Be, at Minimum, Stayed To Provide Time for Notice and Comment on Whether To Revoke or Modify the Rules

Dyson recognizes that it is not possible to 'exactly' replicate consumer conditions in every given scenario when designing a laboratory-based test method which is reliable, repeatable, and scalable for mass testing. To the extent DOE wants to maintain a standard rule for substantiation of room size coverage claims that is repeatable and scalable for mass testing yet more reliable in terms of giving consumers meaningful information about the efficacy and energy efficiency with which different air cleaners will clean various sized rooms, Dyson urges DOE to revoke the Room Size Coverage Rule and IEF Rule and open a period of notice and comment concerning alternative approaches to testing CADR. If, however, DOE is not inclined to revoke the Rules before opening a new period of notice and comment, DOE should, at minimum, stay enforcement of the Room Size Coverage Rule and IEF Rule.

As discussed in detail in the Exponent Report, there may be relatively simple alterations to CADR testing that would narrow the gap between lab-based testing that is repeatable yet lacking in real-world relevancy, and testing which is more reflective of consumer environments, without compromising the ability to have a test that is repeatable and scalable. The Exponent Report discusses in Section 4.5 the following types of modifications that would improve its real-world validity, among others:

- Adjustable chamber sizing.[53]
- Elimination of the recirculation fan and installation of multiple sensors.[54]
- Placement of the air cleaner in a corner of the chamber.[55]

Dyson has concerns that the desire to provide a one-size-fits-all test for room size coverage claims and IEF scores will always create more harm than good, and that any calculation relying on the AHAM CADR Test as its methodological foundation will fail to generate accurate and meaningful information that helps consumers discern which air cleaners on the market will most effectively and efficiently clean rooms of various sizes. Nevertheless, if DOE is inclined to require a standard test for room size coverage claims (if something truly is better than nothing in this context), Dyson respectfully submits that DOE revoke or, failing that, stay the Room Size Coverage Rule and IEF Rule and open a period of notice and comment so that interested parties can provide inputs to DOE concerning changes or substitutions that can be made to give room size coverage claims and IEF scores greater real-world validity.

IV. Conclusion

The Room Size Coverage Rule and IEF Rule require air cleaner manufacturers to make product claims that are neither accurate nor consistent, and that do not support energy efficiency. The Rules rely upon a test methodology that has significant shortcomings which result in inflated, inaccurate performance and energy efficiency claims, frustrating consumers' ability to make informed purchasing decisions and choose an air cleaner which is suitable for their homes. Further, the difference between the inflated performance and energy efficiency claims communicated to consumers under the Room Size Coverage Rule and IEF Rule, and the actual performance of air cleaners in real world conditions, results in consumers using more energy, and incurring more costs, to clean their spaces than they were led to believe.

DOE needs to act now to reverse course on the Room Size Coverage Rule and IEF Rule and avoid continued misleading of consumers, stifling of innovation and wasteful energy consumption, as well as avoid the Rules' adoption by other regulators, including FTC, which would amplify the negative impact of the mandates and make them more difficult to unwind in the future.

Accordingly, Dyson respectfully requests that DOE:

1. Amend part 429 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations to remove section 429.68(a)(4), and,

2. Amend part 430 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations to remove section 430.23(hh)(4), or in the alternative,

3. Stay enforcement of 429.68(a)(4) and 430.23(hh)(4), and open a period of notice and comment to receive public comments on potential substitutions for room size coverage claims and IEF scores based on CADRs calculated using the AHAM CADR Test, or potential revisions that can be made to the AHAM CADR Test to better approximate real-world performance of air cleaners and to promote greater energy efficiency.

Sincerely,

Elena Stein,

General Counsel Dyson, Inc.

Notices

Federal Register
Vol. 90, No. 82
Wednesday, April 30, 2025

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Tribal Advisory Committee

AGENCY: Office of Tribal Relations, USDA.

ACTION: Notice of public, hybrid meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the US Department of Agriculture (USDA) and the Federal Advisory Committee Act (FACA), the Office of Tribal Relations is announcing a meeting of the Tribal Advisory Committee. The committee is authorized under the Agriculture Improvement Act of 2018 (the 2018 Farm Bill) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to provide advice and guidance to USDA on matters related to Tribal and Indian affairs.

DATES: An in-person meeting with a virtual webinar with a call-in option will be held on Wednesday, May 7, 2025, from 9:00 a.m. to approximately 5:00 p.m. Eastern Time (ET), as well as Thursday, May 8, 2025, from 9:00 a.m. to approximately 12:00 p.m. ET. The meeting will be held in the Lincoln Room of the USDA Whitten Building; 1400 Jefferson Avenue SW, Washington, DC 20250. Because this meeting will be hosted in a secured facility, members of the public wishing to attend in-person must register in advance by Monday, May 5, 2025, at 11:59 p.m. ET.

Webinar Participation Information: Registration to attend this meeting, including to provide oral public comments, is available at *https://www.zoomgov.com/webinar/register/WN_TodgP5RlRmyiG8bOtoMiLg#/registration.*

Public Comments: The public may file written comments to the Tribal Advisory Committee by Friday, May 2, 2025, at 11:59 p.m. ET via email at *Tribal.Relations@usda.gov.* These comments will be included in the public record.

Members of the public are invited to join the Tribal Advisory Committee meeting to listen to deliberations each day and will be invited to give oral comments to the Committee from 2:00–3:00 p.m. ET on May 7, 2025. Members of the public who request to give oral comments must arrive by 2:00 p.m. and will be given no more than five (5) minutes to provide their comment.

Register for the Meeting: The meeting is hosted in a public facility, registration for in-person attendance will be required by Monday, May 5, 2025, at 11:59 p.m. ET. Your registration must provide your name; title or position; Tribe or organization represented; whether you intend to provide public comment; and whether you require special accommodations.

Registration for in-person attendance can be found at *https://forms.office.com/g/hKXHNmyEk6.* Registration for virtual attendance can be found at *https://www.zoomgov.com/webinar/register/WN_TodgP5RlRmyiG8bOtoMiLg#/registration.*

FOR FURTHER INFORMATION CONTACT: General information about the committee can also be found at *https://www.usda.gov/tribalrelations/advisory-committee.* Questions may be directed to Josiah Griffin, Designated Federal Officer, by phone at 202–205–2249 or via email at *Tribal.Relations@usda.gov.*

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: An agenda and more information for this meeting will be available at *https://www.usda.gov/tribalrelations/advisory-committee.* The Secretary established the Committee pursuant to Section 12303 of the Agriculture Improvement Act of 2018 (7 U.S.C. 6921(b)) and will be managed in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. 10.

Meeting Agenda: Agenda items discussed may include, but are not limited to, welcome and introductions; administrative matters; administration priorities; and member deliberation on recommendations. The full agenda will be posted on the Tribal Advisory Committee web page (*https://www.usda.gov/about-usda/general-information/staff-offices/office-tribal-relations/tribal-advisory-committee*) at least 48 hours in advance of this meeting.

Availability of Materials for the Meeting: All written public comments will be compiled into a binder and available for review at the meeting. Duplicate comments from multiple individuals will appear as one comment, with a notation that multiple copies of the comment were received. Please visit *https://www.usda.gov/tribalrelations/advisory-committee* to learn more about the agenda for or reports resulting from this meeting.

Please be advised that anyone calling into the Zoom teleconference system or participating in-person that is interested in providing public comment will be asked to provide their names, their title, and their tribal or organizational affiliations. Callers can expect to incur charges for calls they initiate over wireless lines, and the USDA will not refund any incurred charges.

Equal opportunity practices, in accordance with USDA policies, will be followed in all membership appointments to the Committee.

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (*e.g.,* Braille, large print, audiotape, American Sign Language, etc.) should contact the State or local Agency that administers the program or contact USDA through the Telecommunications Relay Service at 711 (voice and TTY). Additionally, program information may be made

available in languages other than English.

This meeting notice is being published late due to additional administrative matters of the USDA Department.

Dated: April 25, 2025.

Cikena Reid,

USDA Committee Management Officer.

BILLING CODE 3420–AG–P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Commonwealth of the Northern Mariana Islands Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Notice of public meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the Commonwealth of the Northern Mariana Islands Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a public meeting via Zoom at 9:30 a.m. ChST on Wednesday, May 14, 2025 (7:30 p.m. ET on Tuesday, May 13, 2025). The purpose of this meeting is to discuss the Committee's report on the topic, *Access to Adequate Health Care for Incarcerated Individuals in the CNMI Judicial System.*

DATES: Wednesday, May 14, 2025, 9:30 a.m.–11:00 a.m. Chamorro Standard Time (Tuesday, May 13, 2025, 7:30 p.m.–9:00 p.m. Eastern Time).

ADDRESSES: The meeting will be held via Zoom Webinar.

Registration Link (Audio/Visual): https://www.zoomgov.com/webinar/register/WN_nVzPxgtyQwq9OadodSceNQ.

Join by Phone (Audio Only): (833) 435–1820 USA Toll-Free; Meeting ID: 160 206 6187.

FOR FURTHER INFORMATION CONTACT: Kayla Fajota, Designated Federal Officer, at *kfajota@usccr.gov* or (434) 515–2395.

SUPPLEMENTARY INFORMATION: This committee meeting is available to the public through the registration link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning will be available for individuals who are deaf, hard of hearing, or who have certain cognitive or learning impairments. To request additional accommodations, please email Liliana Schiller, Support Services Specialist, at *lschiller@usccr.gov* at least 10 business days prior to the meeting.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be emailed to Kayla Fajota at *kfajota@usccr.gov.* Persons who desire additional information may contact the Regional Programs Coordination Unit at (434) 515–2395.

Records generated from this meeting may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the meeting. Records of the meetings will be available via the file sharing website, *www.box.com.* Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at the above phone number.

Agenda

I. Welcome & Roll Call
II. Approval of Prior Minutes
III. Committee Discussion and Vote: Findings and Recommendations Sections
IV. Vote: Draft Report
V. Next Steps
VI. Public Comment
VII. Adjournment

Dated: April 24, 2025.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Texas Advisory Committee

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of virtual business meetings.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act (FACA) that the Texas Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold virtual business meetings via ZoomGov on the following dates and times listed below. The purpose of these meetings is to review the latest draft of their report on racial disparities in maternal mortality.

DATES: These meetings will take place on:

- Wednesday, June 4th, from 12:00 p.m.–1:00 p.m. CT
- Wednesday, June 25th, from 12:00 p.m.–1:00 p.m. CT
- Wednesday, July 23rd, from 12:00 p.m.–1:00 p.m. CT

Zoom Webinar Link to Join (Audio/Visual): https://www.zoomgov.com/webinar/register/WN_w1HLv8DYRhiikVEx9UXeYA.

FOR FURTHER INFORMATION CONTACT: Brooke Peery, Designated Federal Officer (DFO) at *bpeery@usccr.gov* or by phone at (202) 701–1376.

SUPPLEMENTARY INFORMATION: Committee meetings are available to the public through the videoconference link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Closed captioning will be available for individuals who are deaf, hard of hearing, or who have certain cognitive or learning impairments. To request additional accommodations, please email Angelica Trevino, Support Services Specialist, *atrevino@usccr.gov* at least 10 business days prior to the meeting.

Members of the public are entitled to make comments during the open period at the end of the meeting. Members of the public may also submit written comments; the comments must be received in the Regional Programs Unit within 30 days following the meeting. Written comments can be sent via email to Brooke Peery (DFO) at *bpeery@usccr.gov.*

Records generated from this meeting may be inspected and reproduced at the

Regional Programs Coordination Unit Office, as they become available, both before and after the meeting. Records of the meetings will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Texas Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at *atrevino@usccr.gov.*

Agenda

I. Welcome & Roll Call
II. Approval of Minutes
III. Committee Discussion
IV. Public Comment
V. Adjournment

Dated: April 24, 2025.

[FR Doc. 2025–07390 Filed 4–29–25; 8:45 am]

BILLING CODE 6335–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE708]

Endangered Species; File No. 27918

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that Kristen Hart, Ph.D., U.S. Geological Survey, Wetlands and Aquatic Research Center, 3321 College Avenue, Davie, FL 33314, has applied in due form for a permit to take green (*Chelonia mydas*), Kemp's ridley (*Lepidochelys kempii*), loggerhead (*Caretta caretta*), and hawksbill (*Eretmochelys imbricata*) sea turtles for purposes of scientific research.

DATES: Written comments must be received on or before May 30, 2025.

ADDRESSES: The application and related documents are available for review by selecting ''Records Open for Public Comment'' from the ''Features'' box on the Applications and Permits for Protected Species home page, *https://apps.nmfs.noaa.gov,* and then selecting File No. 27918 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File No. 27918 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Amy Hapeman or Erin Markin, Ph.D., (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226).

The applicant proposes to determine sea turtle habitat use, movement, and behavioral patterns in study sites across the northern Gulf of America, Atlantic Ocean, and U.S. Virgin Islands. Researchers would capture sea turtles by hand, dip net, strike net, tangle net, cast net, or trawl and perform the following procedures prior to release: epibiota removal; instrument attachment (drill carapace or epoxy); gastric lavage; temporary carapace marking; flipper and passive integrated transponder tagging; measurements; photographs; biological sampling (blood, fecal, tissue, and swabs); tracking; and weighing. Some animals may receive up to 3 transmitter attachments at a time; such gear may be removed from animals during opportunistic recaptures. In addition, in lieu of directed captures, researchers may perform these methods on animals legally caught during relocation trawling efforts. See the application's take table for take numbers by species. The permit would be valid for 10 years.

Dated: April 25, 2025.

Julia M. Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

[FR Doc. 2025–07461 Filed 4–29–25; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE843]

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of America (formerly Gulf of Mexico)

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of modification to expiration date of letter of authorization.

SUMMARY: In accordance with the Marine Mammal Protection Act (MMPA), as amended, its implementing regulations, and NMFS' MMPA regulations for taking marine mammals incidental to geophysical surveys related to oil and gas activities in the Gulf of America, originally published as ''Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico,'' notification is hereby given that NMFS has modified the expiration date of a Letter of Authorization (LOA) issued to WesternGeco for the taking of marine mammals incidental to geophysical survey activity in the Gulf of America (GOA).

DATES: This LOA is effective through June 30, 2025.

ADDRESSES: The LOA, LOA request, and supporting documentation are available online at: *https://www.fisheries.noaa.gov/marine-mammal-protection/issued-letters-authorization-oil-and-gas-industry-geophysical-survey.* In case of problems accessing these documents, please call the contact listed below (**FOR FURTHER INFORMATION CONTACT**).

FOR FURTHER INFORMATION CONTACT: Jenna Harlacher, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed

authorization is provided to the public for review.

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined ''negligible impact'' in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: any act of pursuit, torment, or annoyance which: (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

On January 19, 2021, we issued a final rule with regulations to govern the unintentional taking of marine mammals incidental to geophysical survey activities conducted by oil and gas industry operators, and those persons authorized to conduct activities on their behalf (collectively ''industry operators''), in U.S. waters of the GOA [1] over the course of 5 years (86 FR 5322, January 19, 2021). The rule was based on our findings that the total taking from the specified activities over the 5-year period will have a negligible impact on the affected species or stock(s) of marine mammals and will not have an unmitigable adverse impact on the availability of those species or stocks for subsistence uses. The rule became effective on April 19, 2021.

The regulations at 50 CFR 217.180 *et seq.* allow for the issuance of LOAs to industry operators for the incidental take of marine mammals during geophysical survey activities and prescribe the permissible methods of taking and other means of effecting the least practicable adverse impact (LPAI) on marine mammal species or stocks and their habitat (often referred to as mitigation), as well as requirements pertaining to the monitoring and reporting of such taking. Under 50 CFR 217.186(e), issuance of an LOA shall be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under these regulations and a determination that the amount of take authorized under the LOA is of no more than small numbers.

NMFS subsequently discovered that the 2021 rule was based on erroneous take estimates. We conducted another rulemaking using correct take estimates and other newly available and pertinent information relevant to the analyses supporting some of the findings in the 2021 final rule and the taking allowable under the regulations. We issued a final rule in April 2024, effective May 24, 2024 (89 FR 31488, April 24, 2024).

The 2024 final rule made no changes to the specified activities or the specified geographical region in which those activities would be conducted, nor to the original 5-year period of effectiveness. In consideration of the new information, the 2024 rule presented new analyses supporting affirmance of the negligible impact determinations for all species, and affirmed that the existing regulations, which contain mitigation, monitoring, and reporting requirements, are consistent with the LPAI standard of the MMPA.

NMFS issued a LOA to WesternGeco on March 28, 2024, for the take of marine mammals incidental to a three-dimensional (3D) ocean bottom node (OBN) survey over Walker Ridge and Green Canyon areas, effective May 1, 2024, through April 30, 2025. Please see the **Federal Register** notice of issuance (89 FR 23981, April 5, 2024) for additional detail regarding the LOA and the survey activity.

WesternGeco has requested that the April 30, 2025, expiration date be extended to June 30, 2025, due to weather delays causing changes in survey timing. Since we issued the LOA to WesternGeco, we have updated the final rule to include corrected take estimates and new information as discussed above; therefore, we have updated the authorized take numbers accordingly based on this new information. There are no other changes to the planned survey, as described in the previous notice of issuance (89 FR 23981, April 5, 2024), including the planned location and duration of the survey.

The Gemini source was not included in the acoustic exposure modeling developed in support of the rule. However, the Gemini was described and evaluated in support of a previous LOA and we rely on that analysis here (88 FR 72739, October 23, 2023). We have determined there will be no effects of a magnitude or intensity different from those evaluated in support of the rules. NMFS expects that use of modeling results supporting the final rule are conservative as a proxy for use in evaluating potential impacts of use of the Gemini.

As discussed in the previous notice of issuance (89 FR 23981, April 5, 2024), no 3D OBN surveys were included in the modeled survey types, thus the coil proxy was selected. WesternGeco plans to cover approximately 69 square kilometers (km^2) per day compared to the 144 km^2 in the coil proxy, and although WesternGeco is not proposing to perform a survey using the coil geometry, the coil proxy is most representative of the effort planned by WesternGeco in terms of predicted Level B harassment exposures. Additionally, WesternGeco anticipates using a single dual source vessel, either towing airgun array sources consisting of 28 elements, with a total volume of 5,240 cubic inches (in^3; 0.086 cubic meters (m^3)), or a Gemini enhanced frequency source (EFS) array. Therefore, the 5,110 in^3 proxy was selected.

The survey plan includes approximately 65 days, with 43 days in Zone 5 and 22 days in Zone 7. The monthly distribution of survey days is not known in advance, though we assume that the planned 65 days of source operation will occur contiguously. Take estimates for each species are based on the time period that produces the greatest value. There are no other changes to WesternGeco's planned activity.

For the Rice's whale, recent survey data, sightings, and acoustic data support Rice's whale occurrence in waters throughout the GOA between approximately 100 m and 400 m depth along the continental shelf break, and associated habitat-based density modeling has identified similar habitat (*i.e.,* approximately 100 to 400 m water depths along the continental shelf break) as being Rice's whale habitat (Garrison *et al.,* 2023; Soldevilla *et al.,* 2022, 2024). NMFS' 2024 final rule provided detailed discussion regarding Rice's whale habitat (see, *e.g.,* 89 FR 31508, 31519).

Although Rice's whales may occur outside of the general depth range expected to provide suitable habitat, we expect that any such occurrence would be rare. WesternGeco's planned activities will occur in water depths of

[1] Pursuant to Executive Order 14172, ''Restoring Names That Honor American Greatness,'' and Department of the Interior Secretarial Order 3423, ''The Gulf of America,'' the body of water formerly known as the Gulf of Mexico is now called the Gulf of America. Accordingly, this **Federal Register** notice hereafter refers to the Gulf of America.

approximately 700 to 3,000 m in the central GOA. Thus, NMFS does not expect there to be the reasonable potential for take of Rice's whale in association with this survey and, accordingly, does not authorize take of Rice's whale through the LOA.

Based on the results of our analysis, NMFS has determined that the level of taking expected for this survey and authorized through the LOA is consistent with the findings made for the total taking allowable under the regulations. See table 1 in this notice and table 6 of the rule (89 FR 31488, April 24, 2024).

Small Numbers Determination

Under the rule, NMFS may not authorize incidental take of marine mammals in an LOA if it will exceed ''small numbers.'' In short, when an acceptable estimate of the individual marine mammals taken is available, if the estimated number of individual animals taken is up to, but not greater than, one-third of the best available abundance estimate, NMFS will determine that the numbers of marine mammals taken of a species or stock are small (see 89 FR 31535, May 24, 2024). For more information please see NMFS' discussion of small numbers in the 2021 final rule (86 FR 5438, January 19, 2021).

The take numbers for authorization are determined as described above. Subsequently, the total incidents of harassment for each species are multiplied by scalar ratios to produce a derived product that better reflects the number of individuals likely to be taken within a survey (as compared to the total number of instances of take), accounting for the likelihood that some individual marine mammals may be taken on more than 1 day (see 86 FR 5404, January 19, 2021). The output of this scaling, where appropriate, is incorporated into adjusted total take estimates that are the basis for NMFS' small numbers determinations, as depicted in table 1.

This product is used by NMFS in making the necessary small numbers determinations through comparison with the best available abundance estimates (see discussion at 86 FR 5391, January 19, 2021). For this comparison, NMFS' approach is to use the maximum theoretical population, determined through review of current stock assessment reports (SAR; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and model-predicted abundance information (*https://seamap.env.duke.edu/models/Duke/GOM/*). Information supporting the small numbers determinations is provided in table 1.

TABLE 1—TAKE ANALYSIS

Species	Authorized take	Scaled take [1]	Abundance [2]	Percent abundance
Rice's whale	0	n/a	51	0
Sperm whale	402	170	2,451	6.9
Kogia spp.	[3] 167	50	1,385	4.4
Beaked whales	709	72	1,038	6.9
Rough-toothed dolphin	1,257	361	4,853	7.4
Bottlenose dolphin	1,152	331	166,538	0.2
Clymene dolphin	385	111	6,136	1.8
Atlantic spotted dolphin	367	105	21,506	0.5
Pantropical spotted dolphin	12,569	3607	50,209	7.2
Spinner dolphin	245	70	2,991	2.3
Striped dolphin	1,253	360	16,102	2.2
Fraser's dolphin	490	141	1,665	8.4
Risso's dolphin	359	106	1,974	5.4
Blackfish [4]	1,611	475	9,535	5.0
Short-finned pilot whale	332	98	3,277	3.0

[1] Scalar ratios were applied to ''Authorized Take'' values as described at 86 FR 5322 and 86 FR 5404 (January 19, 2021) to derive scaled take numbers shown here.

[2] Best abundance estimate. For most taxa, the best abundance estimate for purposes of comparison with take estimates is considered here to be the model-predicted abundance (Garrison *et al.,* 2023). For Rice's whale, Atlantic spotted dolphin, spinner dolphin, and Risso's dolphin, the SAR abundance estimate is used.

[3] Includes 11 takes by Level A harassment and 156 takes by Level B harassment. Scalar ratio is applied to takes by Level B harassment only; small numbers determination made on basis of scaled Level B harassment take plus authorized Level A harassment take.

[4] The ''blackfish'' guild includes melon-headed whales, false killer whales, pygmy killer whales, and killer whales.

Based on the analysis contained herein of WesternGeco's proposed survey activity described in its LOA application, as subsequently modified by WesternGeco, and the anticipated take of marine mammals, NMFS finds that small numbers of marine mammals will be taken relative to the affected species or stock sizes (*i.e.,* less than one-third of the best available abundance estimate) and therefore the taking is of no more than small numbers.

Authorization

NMFS has determined that the level of taking for this LOA request is consistent with the findings made for the total taking allowable under the incidental take regulations and that the amount of take authorized under the LOA is of no more than small numbers. Accordingly, we have issued a modification to the LOA to WesternGeco authorizing the take of marine mammals incidental to its geophysical survey activity, as described above.

Dated: April 24, 2025.

Catherine Marzin,

Acting Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF EDUCATION

National Assessment Governing Board

Committee and Quarterly Board Meetings

AGENCY: National Assessment Governing Board, Department of Education.

ACTION: Notice of open and closed meetings.

SUMMARY: This notice sets forth the agenda, time, and instructions to access the National Assessment Governing Board's (hereafter referred to as the

Board or Governing Board) standing committee meetings and quarterly Governing Board meeting. This notice provides information to members of the public who may be interested in attending the meetings and/or providing written comments related to the work of the Governing Board. The meetings will be held in person and virtually for Board members. Members of the public may attend virtually and must register in advance to attend, as noted below. A registration link will be posted on the Governing Board's website, *www.nagb.gov,* five (5) business days prior to each meeting.

DATES: The Quarterly Board Meeting will be held on the following dates:

- May 15, 2025, from 8 a.m. to 6 p.m., ET
- May 16, 2025, from 9 a.m. to 12 p.m., ET

ADDRESSES: Lyndon Baines Johnson (LBJ) Department of Education Building, 400 Maryland Avenue SW, Washington, DC 20202.

FOR FURTHER INFORMATION CONTACT: Angela Scott, Designated Federal Officer (DFO) for the Governing Board, 400 Maryland Avenue SW, Washington, DC 20202, telephone: (202) 245–6234, email: *Angela.Scott@ed.gov.*

SUPPLEMENTARY INFORMATION:

Statutory Authority and Function: The Governing Board is established under the National Assessment of Educational Progress Authorization Act (20 U.S.C. 9621). Information on the Governing Board and its work can be found at *www.nagb.gov.* Notice of the meetings is required under section 1009(a)(2) of 5 U.S.C. chapter 10 (commonly known as the Federal Advisory Committee Act). The Governing Board formulates policy for the National Assessment of Educational Progress (NAEP) administered by the National Center for Education Statistics (NCES). The Governing Board's responsibilities include:

(1) selecting the subject areas to be assessed; (2) developing appropriate student achievement levels; (3) developing assessment objectives and testing specifications that produce an assessment that is valid and reliable, and are based on relevant widely accepted professional standards; (4) developing a process for review of the assessment which includes the active participation of teachers, curriculum specialists, local school administrators, parents, and concerned members of the public; (5) designing the methodology of the assessment to ensure that assessment items are valid and reliable, in consultation with appropriate technical experts in measurement and assessment, content and subject matter, sampling, and other technical experts who engage in large scale surveys; (6) measuring student academic achievement in grades 4, 8, and 12 in the authorized academic subjects; (7) developing guidelines for reporting and disseminating results; (8) developing standards and procedures for regional and national comparisons; (9) taking appropriate actions needed to improve the form, content use, and reporting of results of an assessment; and (10) planning and executing the initial public release of NAEP results.

Standing Committee Meetings

The Governing Board's standing committees will meet to conduct regularly scheduled work. Standing committee meeting agendas and meeting materials will be posted on the Governing Board's website, *www.nagb.gov,* no later than five (5) business days prior to the meetings. Minutes of prior standing committee meetings are available at *https://www.nagb.gov/governing-board/quarterly-board-meetings.html.*

Standing Committee Meetings

Friday, May 9, 2025

Reporting and Dissemination Committee (Virtual)

2:45 p.m.–4:15 p.m. (ET), Open Session

The Reporting and Dissemination Committee will meet on Friday, May 9, 2025, in open session from 2:45 p.m. to 4:15 p.m. The committee will receive an update on Strategic Communications and discuss the release plan for the 2024 NAEP Science results.

Thursday, May 15, 2025

Executive Committee (Hybrid)

8 a.m.–9 a.m. (ET), Closed Session

The Executive Committee will meet in closed session on Thursday, May 15, 2025, from 8 a.m. to 9 a.m. to receive updates from the Executive Director on Board priorities and key activities and discuss the NAEP budget and contracts. The session must be closed to the public because the discussions pertain to the federal budget and acquisition process. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government in the Sunshine Act, 5 U.S.C. 552b.

Friday, May 16, 2025

Assessment Development Committee (Hybrid)

9 a.m.–11:30 a.m. (ET), Closed Session

The Assessment Development Committee will meet in closed session on Friday, May 16, 2025, from 9 a.m. to 11:30 a.m. to review items for the 2026 Reading and Mathematics assessment. This review must be conducted in closed session because the content includes assessment items that have not been released to the public. Public disclosure of this information would significantly impede the implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government in the Sunshine Act, 5 U.S.C. 552b.

Committee on Standards, Design and Methodology (Hybrid)

9 a.m.–9:05 a.m. (ET), Open Session

9:05 a.m.–10:15 a.m. (ET), Closed Session

10:15 a.m.–11 a.m. (ET), Open Session

The Committee on Standards, Design and Methodology will meet on Friday, May 16, 2025, from 9 a.m. to 11:00 a.m. The committee chair will open the meeting and provide updates from 9 a.m. to 9:05 a.m. The committee will meet in closed session from 9:05 a.m. to 10:15 a.m. to receive information and discuss the NAEP Bridge Studies: Science and Grade 12. This session must be closed because the data has not been shared with the public. Disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government in the Sunshine Act, 5 U.S.C. 552b. The committee will transition to open session, which will be held from 10:15 a.m. to 11 a.m. to receive updates and provide feedback on methodology for updating Reporting Achievement Level Descriptions.

Quarterly Governing Board Meeting

The plenary sessions of the Governing Board's May 2025 quarterly meeting will be held on the following dates and times:

Thursday, May 15, 2025

9:05 a.m.–6 p.m. (ET) (Hybrid Meeting)

9:05 a.m.–10:45 a.m. (ET), Open Session

10:45 a.m.–5 p.m. (ET), Closed Session

5 p.m.–6 p.m. (ET) Open Session

On Thursday, May 15, 2025, the plenary session of the quarterly

Governing Board meeting will convene in open session from 9:05 a.m. to 10:45 a.m., in closed session from 10:45 a.m. to 5 p.m., and in open session from 5–6 p.m. From 9:05 a.m. to 9:15 a.m., Beverly Perdue, Chair of the Governing Board, will welcome members, make remarks, review and approve the May 15–16, 2025, quarterly Governing Board meeting agenda, and approve the minutes from the March 6, 2025, Governing Board meeting.

From 9:15 a.m. to 9:30 a.m., Lesley Muldoon, Governing Board Executive Director, will provide updates on the Board's work and priorities. Representatives from the Council of Chief State School Officers (CCSSO) and the Council of the Great City Schools will discuss the work of the task forces the Board leads jointly with them—State Policy Task Force and Trial Urban District Assessment (TUDA) Task Force respectively—from 9:30 a.m. to 10:30 a.m. Following a fifteen-minute transitional break, the Board will meet in closed session from 10:45 a.m. to 12 p.m. to receive an update on the NAEP Budget and Contracting from IES Director, Matt Soldner, and NCES Director for Strategic Partnerships, Gina Broxterman. The Board will continue in closed session from 12:15 p.m. to 3:30 p.m., to discuss the NAEP Budget and Contracting. From 3:45 p.m. to 5 p.m. the Board will receive an embargoed briefing on the 2024 NAEP Science Results. These sessions must be closed because they will include information on the budget and the federal acquisition process and embargoed assessment results, both of which cannot be released to the public at this time. Public disclosure of this confidential information would significantly impede implementation of the NAEP assessment program if conducted in open session. Such matters are protected by exemption 9(B) of the Government Sunshine Act, 5 U.S.C. 552b.

Following a short transitional break, the Board will convene in open session from 5:15 p.m. to 5:45 p.m. to discuss topics of interest raised by members. From 5:45 p.m. to 6 p.m., the Board will discuss and take action on the release plan for 2024 NAEP Science. The Thursday, May 15, 2024, session of the Governing Board meeting will adjourn at 6 p.m.

Instructions for Accessing and Attending the Meetings

Registration: Members of the public may attend the May 15–16, 2024, meetings of the full Governing Board and standing committee meetings virtually. A link to the final meeting agenda and information on how to register for virtual attendance for the open sessions will be posted on the Governing Board's website, *www.nagb.gov,* no later than five (5) business days prior to the meeting. Registration is required to join the meeting virtually.

Public Comment: Written comments related to the work of the Governing Board and its standing committees may be submitted to the attention of the DFO, either via email to *Angela.Scott@ed.gov* or in hard copy to the address listed above. Written comments related to the May 15–16, 2025 Governing Board meeting should be submitted no later than close of business on May 8, 2025, and should reference the relevant agenda item.

Access to Records of the Meeting: Pursuant to 5 U.S.C. 1009, the public may inspect the meeting materials and other Governing Board records at 400 Maryland Avenue SW, Washington, DC 20202, by emailing *Angela.Scott@ed.gov* to schedule an appointment. The official verbatim transcripts of the open meeting sessions will be available for public inspection no later than 30 calendar days following each meeting. Requests for the verbatim transcriptions may be made via email to the DFO.

Reasonable Accommodations: The meeting location is accessible to individuals with disabilities. If you will need an auxiliary aid or service to participate in the meeting (*e.g.,* interpreting service, assistive listening device, or materials in an alternate format), notify the DFO listed in this notice by close of business on May 8, 2025.

Electronic Access to this Document: The official version of this document is published in the **Federal Register**. Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the Adobe website. You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Authority: Pub. L. 107–279, title III, section 301—National Assessment of Educational Progress Authorization Act (20 U.S.C. 9621).

Lesley Muldoon,

Executive Director, National Assessment Governing Board (NAGB), U.S. Department of Education.

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings in Existing Proceedings

Docket Numbers: PR19–9–001.

Applicants: Lobo Pipeline Company LLC.

Description: Compliance filing 2025 to be effective N/A.

Filed Date: 4/23/25.

Accession Number: 20250423–5256.

Comment Date: 5 p.m. ET 5/14/25.

Docket Numbers: PR20–52–002.

Applicants: ETC Katy Pipeline, Ltd.

Description: ETC Katy Pipeline, LLC submits tariff filing per 284.123(b)(1)/.: Compliance filing 2025 to be effective N/A.

Filed Date: 4/23/25.

Accession Number: 20250423–5251.

Comment Date: 5 p.m. ET 5/14/25.

Docket Numbers: PR25–35–001.

Applicants: Liberty Utilities (Midstates Natural Gas) Corp.

Description: § 284.123 Rate Filing: Supplement Filing—Revised Statement of Rates (PR25–35–) to be effective 1/8/2025.

Filed Date: 4/23/25.

Accession Number: 20250423–5144.

Comment Date: 5 p.m. ET 5/7/25.

Any person desiring to protest in any the above proceedings must file in accordance with Rule 211 of the Commission's Regulations (18 CFR 385.211) on or before 5:00 p.m. Eastern time on the specified comment date.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov*.

Dated: April 24, 2025.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 1971–079]

Idaho Power Company; Notice of Revised Procedural Schedule for the Supplemental Environmental Impact Statement for the Hells Canyon Project

On July 29, 2003, Idaho Power Company (Idaho Power) filed an application for a new license to continue to operate and maintain the Hells Canyon Project No. 1971.[1] On August 31, 2007, the Commission issued a final Environmental Impact Statement (EIS) for the Hells Canyon Project. On December 30, 2019, Idaho Power filed an Offer of Settlement (settlement) with the Commission for the Hells Canyon Project.[2] The settlement, which was executed on April 22, 2019, includes, among other items, spring Chinook salmon and summer steelhead fish passage measures. In addition, the Oregon and Idaho Departments of Environmental Quality each issued a water quality certification under section 401 of the Clean Water Act for the Hells Canyon Project on May 24, 2019.

On July 8, 2020, Idaho Power supplemented the final license application for the project with additional information on its proposal, including an analysis of the new and revised fish-related protection, mitigation, and enhancement measures proposed under the settlement, and updated information on environmental resources. Additionally, Idaho Power filed on October 14, 2020, draft biological assessments for species managed by the U.S. Fish and Wildlife Service and the National Marine Fisheries Service, which included an analysis of the effects of the new and revised measures on fish and wildlife listed under the Endangered Species Act (ESA).[3]

On June 13, 2022, Commission staff issued a notice of intent to prepare a draft and final EIS to assess the new and revised fish-related protection, mitigation, and enhancement measures proposed under the settlement, the Oregon and Idaho water quality certifications, and the draft biological assessments. The notice of intent included a schedule for preparing a draft and final supplemental EIS.

By notices issued October 12, 2023 and May 17, 2024, Commission staff revised the procedural schedule for issuing the draft and final supplemental EIS. The revised date for issuing the draft supplemental EIS was to be July 2024. On October 23, 2024, Idaho Power filed a settlement with the Commission on behalf of itself and the U.S. Forest Service (Forest Service), which was executed on October 22, 2024. The settlement resolves, between the signatories, the appropriate terms and conditions pursuant to section 4(e) of the Federal Power Act to be incorporated into any new license, if issued for the project, for the protection and utilization of federal lands administered by the Forest Service within and adjacent to the project boundary.[4] Additionally, Idaho Power is currently revising several draft biological assessments, which are tentatively scheduled to be filed with the Commission in June 2025.

By this notice, Commission staff is updating the procedural schedule for completing the draft and final supplemental EIS to provide sufficient time for staff to analyze the October 23, 2024, settlement and any revised draft biological assessments in the draft supplemental EIS. Further revisions to the schedule may be made as appropriate.

Milestone	Target date
Issue draft supplemental EIS	September 2025.
Comments on draft supplemental EIS due.	November 2025.
Commission issues final supplemental EIS.	May 29, 2026.

Any questions regarding this notice may be directed to Aaron Liberty at (202) 502–6862 or *aaron.liberty@ferc.gov.*

Dated: April 24, 2025.

Debbie-Anne A. Reese,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP25–205–000]

Golden Pass LNG Terminal LLC; Notice Of Application and Establishing Intervention Deadline

Take notice that on April 11, 2025, Golden Pass LNG Terminal LLC (Golden Pass LNG), 811 Louisiana Street, Suite 1500, Houston, Texas 77002, filed an application under section 3 of the Natural Gas Act (NGA) and Part 153 of the Commission's regulations requesting authorization to amend its existing authorization for the Export Terminal Project granted by the Commission on December 21, 2016.[1] Specifically, Golden Pass LNG requests approval to construct an approximately 1.1-miles of 42-inch-diameter natural gas supply lateral pipeline and associated receipt manifold at its existing LNG terminal located in Sabine Pass, Texas (Supply Lateral Project or Project). The proposed lateral will connect with the Trident Intrastate Pipeline LLC facilities at the receipt manifold. Golden Pass LNG also requests authority to construct a receipt point tie-in and meter that would connect to a new interstate header being developed by Kinder Morgan Louisiana Pipeline LLC (KMLP Receipt Point Project).[2] Together, the projects would provide supply security and flexibility to the LNG terminal, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to

[1] The current license expired on July 31, 2005, and the project is operating under an annual license.

[2] On January 7, 2020, the Commission issued a public notice that was published in the **Federal Register** indicating the settlement had been filed. 85 FR 2,128 (Jan. 14, 2020).

[3] Idaho Power is the Commission's designated non-federal representative for carrying out informal consultation pursuant to section 7 of the ESA.

[4] On October 30, 2024, the Commission issued a public notice that was published in the **Federal Register** indicating the settlement had been filed. 89 FR 88,752 (Nov. 8, 2024).

[1] *Golden Pass Products LLC and Golden Pass Pipeline LLC,* 157 FERC ¶ 61,222 (2016) (December 2016 Order).

[2] Golden Pass LNG would not plan to construct the Phase II Project until KMLP receives authorization from the Commission to construct the interstate header facilities.

view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov*.

Any questions regarding the proposed project should be directed to, S. Diane Neal, Assistant General Counsel, Golden Pass LNG, 811 Louisiana Street, Suite 1500, Houston, Texas 77002, by phone at (713) 324–6703, or by email at *diane.neal@goldenpasslng.com*.

Pursuant to section 157.9 of the Commission's Rules of Practice and Procedure,[3] within 90 days of this Notice the Commission staff will either: complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Water Quality Certification

Golden Pass LNG stated that a water quality certificate under section 401 of the Clean Water Act is required for the project from Railroad Commission of Texas (RRC). When available, Golden Pass LNG should submit to the Commission a copy of the request for certification for the Commission authorization, including the date the request was submitted to the certifying agency, and either (1) a copy of the certifying agency's decision or (2) evidence of waiver of water quality certification.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file comments on the project, you can protest the filing, and you can file a motion to intervene in the proceeding. There is no fee or cost for filing comments or intervening. The deadline for filing a motion to intervene is 5:00 p.m. Eastern Time on May 15, 2025. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov*.

Comments

Any person wishing to comment on the project may do so. Comments may include statements of support or objections, to the project as a whole or specific aspects of the project. The more specific your comments, the more useful they will be.

Protests

Pursuant to sections 157.10(a)(4)[4] and 385.211[5] of the Commission's regulations under the NGA, any person[6] may file a protest to the application. Protests must comply with the requirements specified in section 385.2001[7] of the Commission's regulations. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

To ensure that your comments or protests are timely and properly recorded, please submit your comments on or before May 15, 2025.

There are three methods you can use to submit your comments or protests to the Commission. In all instances, please reference the Project docket number CP25–205–000 in your submission.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments or protests electronically by using the eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Comment on a Filing''; or

(3) You can file a paper copy of your comments or protests by mailing them to the following address below. Your written comments must reference the Project docket number (CP25–205–000).

To file via USPS: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of comments (options 1 and 2 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov*.

Persons who comment on the environmental review of this project will be placed on the Commission's environmental mailing list, and will receive notification when the environmental documents (EA or EIS) are issued for this project and will be notified of meetings associated with the Commission's environmental review process.

The Commission considers all comments received about the project in determining the appropriate action to be taken. *However, the filing of a comment alone will not serve to make the filer a party to the proceeding.* To become a party, you must intervene in the proceeding. For instructions on how to intervene, see below.

Interventions

Any person, which includes individuals, organizations, businesses,

[3] 18 CFR 157.9.

[4] 18 CFR 157.10(a)(4).

[5] 18 CFR 385.211.

[6] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[7] 18 CFR 385.2001.

municipalities, and other entities,[8] has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure [9] and the regulations under the NGA [10] by the intervention deadline for the project, which is May 15, 2025. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

There are two ways to submit your motion to intervene. In both instances, please reference the Project docket number CP25–205–000 in your submission.

(1) You may file your motion to intervene by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Intervention.'' The eFiling feature includes a document-less intervention option; for more information, visit *https://www.ferc.gov/docs-filing/efiling/document-less-intervention.pdf;* or

(2) You can file a paper copy of your motion to intervene, along with three copies, by mailing the documents to the address below. Your motion to intervene must reference the Project docket number CP25–205–000.

To file via USPS: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of motions to intervene (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail at: S. Diane Neal, Assistant General Counsel, Golden Pass LNG, 811 Louisiana Street, Suite 1500, Houston, Texas 77002 or by email (with a link to the document) at *diane.neal@goldenpasslng.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online. Service can be via email with a link to the document.

All timely, unopposed [11] motions to intervene are automatically granted by operation of Rule 214(c)(1).[12] Motions to intervene that are filed after the intervention deadline are untimely and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations.[13] A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

Intervention Deadline: 5:00 p.m. Eastern Time on May 15, 2025.

Dated: April 24, 2025.

Debbie-Anne A. Reese,

Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG25–295–000.

Applicants: Enbridge Energy, Limited Partnership.

Description: Enbridge Solar (Sequoia I), LLC submits Notice of Self–Certification of Exempt Wholesale Generator Status.

Filed Date: 4/22/25.

Accession Number: 20250422–5215.

Comment Date: 5 p.m. ET 5/13/25.

Docket Numbers: EG25–302–000.

Applicants: Bypass BESS LLC.

Description: Bypass BESS LLC submits Notice of Self–Certification of Exempt Wholesale Generator Status.

Filed Date: 4/24/25.

Accession Number: 20250424–5064.

Comment Date: 5 p.m. ET 5/15/25.

Docket Numbers: EG25–303–000.

Applicants: Shallow Basket Energy, LLC.

Description: Shallow Basket Energy, LLC submits Notice of Self–Certification of Exempt Wholesale Generator Status.

Filed Date: 4/24/25.

Accession Number: 20250424–5152.

Comment Date: 5 p.m. ET 5/15/25.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER25–1343–002.

Applicants: Alliant Energy Corporate Services, Inc.

Description: Compliance filing: Withdraw Supplement to be effective 4/24/2025.

Filed Date: 4/24/25.

Accession Number: 20250424–5043.

Comment Date: 5 p.m. ET 5/15/25.

Docket Numbers: ER25–1421–000.

Applicants: Greenleaf Energy Unit 2 LLC.

Description: Tariff filing per 385.602: 2025–02–26—Offer of Settlement and Request for Waiver to be effective 4/28/2025.

Filed Date: 2/26/25.

Accession Number: 20250226–5214.

Comment Date: 5 p.m. ET 5/14/25.

Docket Numbers: ER25–2026–000.
Applicants: American Electric Power Service Corporation.
Description: § 205(d) Rate Filing: AEPSC submits a revised ILDS w/City of St Clairsville SA No. 1427 to be effective 7/1/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5026.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2027–000.
Applicants: AEP Texas Inc.
Description: § 205(d) Rate Filing: AEPTX-Big Country EC-Golden Spread EC (Wahpekute) FDA Cancellation to be effective 6/24/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5078.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2028–000.
Applicants: Tri-State Generation and Transmission Association, Inc.
Description: Tariff Amendment: Notice of Cancellation of Service Agreement FERC No. 905 to be effective 6/24/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5088.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2029–000.
Applicants: PJM Interconnection, L.L.C.
Description: § 205(d) Rate Filing: Original GIA, Service Agreement No. 7640; AE2–305/AF1–053/AF1–054 to be effective 3/25/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5090.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2030–000.
Applicants: Roadrunner Solar LLC.
Description: Initial Rate Filing: LGIA Co-Tenancy Agreement among Roadrunner Solar, Battery and BESS SF to be effective 7/1/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5159.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2031–000.
Applicants: Roadrunner Solar SF LLC.
Description: § 205(d) Rate Filing: Shared Facilities Agreement Among Roadrunner Solar SF and BESS SF to be effective 7/1/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5162.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2032–000.
Applicants: Roadrunner Battery Storage LLC.
Description: Initial Rate Filing: Certificate of Concurrence with Roadrunner Solar LLC to be effective 7/1/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5164.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2033–000.
Applicants: Roadrunner BESS SF LLC.
Description: § 205(d) Rate Filing: Certificate of Concurrence with Roadrunner Solar and Solar SF to be effective 7/1/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5167.
Comment Date: 5 p.m. ET 5/15/25.
Docket Numbers: ER25–2034–000.
Applicants: Public Service Company of Colorado.
Description: § 205(d) Rate Filing: 2025–04–24—PSC—WAPA Exhibit No. 1—Meter Facilities—359—0.1.0 to be effective 6/23/2025.
Filed Date: 4/24/25.
Accession Number: 20250424–5185.
Comment Date: 5 p.m. ET 5/15/25.

Take notice that the Commission received the following electric securities filings:

Docket Numbers: ES25–35–000.
Applicants: Startrans IO, L.L.C.
Description: Amendment to Application Under Section 204 of the Federal Power Act for Authorization to Issue Securities of Startrans IO, L.L.C.
Filed Date: 4/23/25.
Accession Number: 20250423–5280.
Comment Date: 5 p.m. ET 5/5/25.
Docket Numbers: ES25–40–000.
Applicants: MidAmerican Energy Company.
Description: Application Under Section 204 of the Federal Power Act for Authorization to Issue Securities of MidAmerican Energy Company.
Filed Date: 4/23/25.
Accession Number: 20250423–5281.
Comment Date: 5 p.m. ET 5/14/25.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf*. For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov*.

Dated: April 24, 2025.

Carlos D. Clay,

Deputy Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–12758–01–OA]

2025 Request for Nominations of Experts to the EPA's Human Studies Review Board Advisory Committee

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA), the Environmental Protection Agency (EPA) invites nominations from a diverse range of qualified candidates with expertise in the areas of toxicology, bioethics, and statistics to be considered for appointment to its Human Studies Review Board (HSRB). The HSRB is a statutory Federal advisory committee required by Public Law 109–54 and 40 CFR part 26 to review and comment on all proposed and completed research involving intentional human subject exposure that is subject to the coverage of EPA's regulations (see subparts K–L). Submission of nominations will be made via the HSRB website at: *https://www.epa.gov/osa/human-studies-review-board.*

DATES: Nominations should be submitted by May 30, 2025, per instructions below.

ADDRESSES: Instructions on how to submit nominations will be provided at the HSRB website at *https://www.epa.gov/osa/human-studies-review-board.*

FOR FURTHER INFORMATION CONTACT: Any member of the public needing additional information regarding this Notice and Request for Nominations may contact Ms. Emily Sokol, Office of Science Advisor, Policy and Engagement, Mail Code 8101R, 1200 Pennsylvania Avenue NW, Washington,

DC 20460; via phone/voice mail at: (202) 564–1451; or via email at: *sokol.emily@epa.gov.* General information concerning the HSRB can be found at the following website: *https://www.epa.gov/osa/human-studies-review-board.*

SUPPLEMENTARY INFORMATION:

Background

On February 6, 2006, the Agency published a final rule for the protection of human subjects in research (71 FR 6138) per Public Law 109–54, which called for creating a new, independent human studies review board (*i.e.,* HSRB). The HSRB is a Federal advisory committee operating in accordance with the Federal Advisory Committee Act (FACA) 5 U.S.C. 10 (Pub. L. 92–463). The HSRB provides advice, information, and recommendations to EPA on issues related to scientific and ethical aspects of human subjects research. The major objectives of the HSRB are to provide advice and recommendations on: (1) research proposals and protocols that include human subjects; and (2) reports of completed research with human subjects. Typically, the HSRB reviews protocols and completed studies involving pesticide studies, such as worker exposure studies with agricultural handlers applying pesticides in field conditions; janitorial maintenance personnel applying antimicrobial pesticides in commercial settings; and field efficacy studies for skin applied insect repellent products. The HSRB reports to the EPA Administrator through EPA's Human Subjects Research Review Official (HSRRO). General information concerning the HSRB, including its charter, current membership, and activities can be found on the EPA website at *https://www.epa.gov/osa/human-studies-review-board.*

HSRB members serve as special government employees or regular government employees. Members are appointed by the EPA Administrator for either two- or three-year terms with the possibility of reappointment for additional terms, for a maximum of six years of service. The HSRB convenes on average four times a year, with all of the meetings being virtual. The average workload for HSRB members is approximately 20 hours per meeting, including the time spent at the meeting. Responsibilities of HSRB members include reviewing extensive background materials prior to meetings of the Board, preparing draft responses to Agency charge questions, attending Board meetings, participating in the discussion and deliberations at these meetings, drafting assigned sections of meeting reports, and assisting with the finalization of HSRB reports. EPA compensates special government employees for their time and provides reimbursement for travel and other incidental expenses associated with official government business related to the HSRB meetings. EPA encourages nominations from a variety of backgrounds (*e.g.,* industry, non-profit organizations, academia, and government).

Candidates not selected for HSRB membership at this time may be considered for HSRB membership as vacancies arise in the future or for service as consultants to the HSRB. Members of the HSRB are subject to the provisions of 5 CFR part 2634, Executive Branch Financial Disclosure, as supplemented by the EPA in 5 CFR part 6401. In anticipation of this requirement, each nominee will be asked to submit confidential financial information that fully discloses, among other financial interests, the candidate's employment, stocks and bonds, and where applicable, sources of research support. The information provided is strictly confidential and will not be disclosed to the public. Before a candidate is considered further for service on the HSRB, EPA will evaluate each candidate to assess whether there is any conflict of financial interest, appearance of a lack of impartiality, or prior involvement with matters likely to be reviewed by the Board.

Nominations will be evaluated on the basis of several criteria, including: professional background, expertise, and experience that would contribute to the variety of perspectives of the committee; interpersonal, oral, and written communication skills and other attributes that would contribute to the HSRB's collaborative process; consensus building skills; absence of any financial conflicts of interest or the appearance of a lack of impartiality, or lack of independence, or bias; and the availability to participate in meetings and administrative sessions, participate in teleconferences, develop policy recommendations to the Administrator, and prepare recommendations and advice in reports.

Nominations should include a resume or curriculum vitae providing the nominee's educational background, qualifications, leadership positions in national associations or professional societies, relevant research experience and publications along with a short (one page) biography describing how the nominee meets the above criteria and other information that may be helpful in evaluating the nomination, as well as the nominee's current business address, email address, and daytime telephone number. Interested candidates may self-nominate.

To help the Agency in evaluating the effectiveness of its outreach efforts, nominees are requested to inform the Agency of how you learned of this opportunity.

Final selection of HSRB members is a discretionary function of the Agency and will be announced as soon as selections are made on the HSRB website at *https://www.epa.gov/osa/human-studies-review-board.*

Kathleen Deener,

Director, Office of Science Advisor, Policy and Engagement.

[FR Doc. 2025–07460 Filed 4–29–25; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2025–0097; FRL–12673–01–OAR]

Agency Information Collection Activities; Proposed Information Collection Request; Comment Request; Renewable Fuel Standard (RFS) Program, EPA ICR No. 2546.04, OMB Control Number 2060–0725

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is planning to submit an information collection request (ICR), Renewable Fuel Standard (RFS) Program (EPA ICR Number 2546.04, OMB Control Number 2060–0725), to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. Before doing so, EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of the ICR, which is currently approved through November 30, 2025. This notice allows for 60 days for public comments.

DATES: Comments must be submitted on or before June 30, 2025.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OAR–2025–0097, to EPA online using *www.regulations.gov* (our preferred method), by email to *a-and-r-docket@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be

included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Anne-Marie C. Pastorkovich, Office of Air and Radiation, Mail Code 6405A, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202–343–9623; email address: *pastorkovich.anne-marie@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through November 30, 2025. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

This document allows 60 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Pursuant to section 3506(c)(2)(A) of the PRA, EPA is soliciting comments and information to enable it to: (i) evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate forms of information technology. EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract

This ICR is for general registration, recordkeeping, and reporting under the Renewable Fuel Standard (RFS) program, required by Clean Air Act and implementing regulations in 40 CFR parts 80 and 1090. The RFS program relies upon marketable credits (RINs) to function, which necessitates recordkeeping and reporting to establish type and number of RINs generated, sold, retired, etc. EPA provides the secure systems that respondents use to register, submit compliance reports, and transact RINs, which removes a burden from industry. EPA uses the information to monitor compliance with RFS and to ensure the integrity of the RIN market and to ensure the integrity of the RIN market.

Form Numbers: RFS0107 (5900–631), RFS0304 (5900–492), RFS0500(5900–493), RFS0602 (5900–290), RFS0702 (5900–289), RFS0801 (5900–293), RFS0902 (5900–278), RFS1000 (5900–335), RFS1200 (5900–337), RFS1300 (5900–262), RFS1400 (5900–354), RFS1500 (5900–355), RFS1600 (5900–356), RFS1701 (5900–632), RFS2001 (5900–633), RFS2101 (5900–634), RFS2201 (5900–635), RFS2301 (5900–636), RFS2400 (5900–361), RFS2500 (5900–374), RFS2700 (5900–373).

Respondents/affected entities: RIN Generators, Obligated Parties, RIN Owners, Exporters, QAP Providers, Petitioners for Aggregate Compliance, Third Parties.

Respondent's obligation to respond: mandatory under 40 CFR parts 80 and 1090.

Estimated number of respondents: 29,103 (total).

Frequency of response: quarterly, annually, on occasion.

Total estimated burden: 755,763 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $21,126,078 (per year), which includes $0 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease of 105,207 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is due to several factors. First, some of the burden in the existing ICR was for one-time burdens, such as initially programming codes, which existing parties will have already performed. Second, some of the burden in the existing ICR has been reduced through improvements in reporting methods initiated by EPA—for example, EPA has greatly improved its unified reporting format (URF) used for data entry in a manner that provides feedback to respondents and reduces errors and resubmissions. Third, EPA has reduced complexity by removing reporting steps and certain stand-alone forms.

Byron Bunker,

Director, Implementation, Analysis and Compliance Division.

FARM CREDIT ADMINISTRATION

Sunshine Act Meetings

TIME AND DATE: 10 a.m., Thursday, May 8, 2025.

PLACE: You may observe the open portions of this meeting in person at 1501 Farm Credit Drive, McLean, Virginia 22102–5090, or virtually. If you would like to observe, at least 24 hours in advance, visit F*CA.gov*, select ''Newsroom,'' then select ''Events.'' From there, access the linked ''Instructions for board meeting visitors'' and complete the described registration process.

STATUS: Parts of this meeting will be open to the public. The rest of the meeting will be closed to the public.

MATTERS TO BE CONSIDERED: The following matters will be considered:

PORTIONS OPEN TO THE PUBLIC:

- Approval of April 10, 2025, Minutes
- Update on Farm Credit System Funding Conditions

PORTIONS CLOSED TO THE PUBLIC:

- Impact of Tariffs on Agriculture and the Farm Credit System [1]

CONTACT PERSON FOR MORE INFORMATION: If you need more information or assistance for accessibility reasons, or have questions, contact Ashley Waldron, Secretary to the Board. Telephone: 703–883–4009. TTY: 703–883–4056.

Ashley Waldron,

Secretary to the Board.

FEDERAL COMMUNICATIONS COMMISSION

[DA 25–333; FR ID 290735]

Notice of Suspension and Commencement of Proposed Debarment Proceedings; Schools and Libraries Universal Service Support Mechanism

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: The Enforcement Bureau (the ''Bureau'') gives notice of the suspension of Susan Klein from the schools and libraries universal service support mechanism (or ''E-Rate Program'') and all universal service support mechanisms. Additionally, the Bureau gives notice that debarment proceedings are commencing against Ms. Klein. Ms. Klein, or any person who has an existing contract with or intends to contract with Ms. Klein to provide or receive services in matters arising out of activities associated with or related to the schools and libraries support, may respond by filing an opposition request, supported by documentation.

DATES: Opposition requests must be submitted within 30 days of receiving the suspension letter or by May 30, 2025, whichever comes first. The Bureau will decide on any opposition request within 90 days.

ADDRESSES: Federal Communications Commission, Enforcement Bureau, Investigations and Hearings Division, 45 L Street NE, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Christina Thomas, Federal Communications Commission, Enforcement Bureau, Investigations and Hearings Division, 45 L Street NE, Washington, DC 20554. Christina Thomas may be contacted by phone at (202) 418–1879 or email at *Christina.Thomas@fcc.gov.* If Ms. Thomas is unavailable, you may contact Mr. Christopher J. Sova, Chief, Investigations and Hearings Division, by telephone at (202) 418–1868 or by email at *Christopher.Sova@fcc.gov.*

SUPPLEMENTARY INFORMATION: The Bureau has suspension and debarment authority pursuant to 47 CFR 54.8 and 47 CFR 0.111(a)(14). Suspensions ensure that suspended parties cannot continue to benefit from the schools and libraries mechanism pending resolution of the debarment process. Attached is the suspension letter, DA 25–333, which was mailed to Ms. Klein and released on April 30, 2025. The complete text of the notice of suspension and initiation of debarment proceedings is available on the FCC's website at *https://docs.fcc.gov/public/attachments/DA-25-333A1.pdf.*

Re: Notice of Suspension and Initiation of Debarment Proceeding
File No. EB-IHD-24-00036792

Dear Ms. Klein:

The Enforcement Bureau (Bureau) of the Federal Communications Commission (Commission or FCC) received notice of your conviction of conspiracy to commit wire fraud, in violation of 18 U.S.C. § 371, arising out of activities associated with the federal schools and libraries universal service support mechanism (E-Rate program).[1] The conspiracy involved "transmit[ting] false documents and certifications across state lines via the internet to obtain payment from the Universal Service Administrative Company (USAC), a non-profit corporation which is in turn regulated and funded by the Commission, under the E-Rate program."[2] Consequently, pursuant to 47 CFR § 54.8, this letter constitutes official notice of your suspension from the E-Rate program and all federal universal service support mechanisms.[3] While suspended, you are prohibited from participating in or receiving any benefit associated with all federal universal service support mechanisms, including the E-Rate program. Additionally, in accordance with its rules, the Bureau is commencing a proceeding to debar you from future participation in all federal universal service support mechanisms for three years.[4]

[1] Any further reference in this letter to "your conviction" refers to your guilty plea and subsequent sentencing in *United States v. Goldbrener et al.*, Case No. 7:18-cr-00614, Plea Agreement (S.D.N.Y., filed Jul. 18, 2022) (*Plea Agreement*).

[2] *United States v. Goldbrener et al.*, Case No. 7:18-cr-00614, Indictment (S.D.N.Y., filed Aug. 27, 2018). (*Indictment*).

[3] 47 CFR § 54.8.

[4] *Id.*; 47 CFR § 0.111 (delegating to the Enforcement Bureau authority to resolve universal service suspension and debarment proceedings). The Commission adopted debarment rules for the E-Rate program in 2003. *See Schools and Libraries Universal Service Support Mechanism*, Second Report and Order and Further Notice of Proposed Rulemaking, 18 FCC Rcd 9202 (2003) (*Second Report and Order*) (adopting section 54.521 to suspend and debar parties from the E-Rate program). In 2007, the Commission extended the debarment rules to apply to all federal universal service support mechanisms. *See Comprehensive Review of the Universal Service Fund Management, Administration, & Oversight*, Report and Order, 22 FCC Rcd 16372, 16410–12 (2007) (*Program Management Order*) (renumbering section 54.521 of the universal service debarment rules as section 54.8 and amending subsections (a)(1), (a)(5), (c), (d), (e)(2)(i), (e)(3), (e)(4), and (g)).

I. Notice of Suspension

The Commission has established procedures to prevent persons who have "defrauded the government or engaged in similar acts through activities associated with or related to the [E-Rate program]" from receiving the benefits associated with that program.[5] The statutory provisions and Commission rules relating to the E-Rate program are designed to ensure E-Rate funds are used for their intended purpose.[6] Schools may receive E-Rate program funding for eligible goods and services by filing application forms, seeking competitive bids, and selecting the most cost-effective vendor.[7] The E-Rate program rules prohibit an E-Rate vendor or anyone associated with an E-Rate vendor from participating in the application process or vendor selection.[8] Solicitations for E-Rate services must be based on fair and open competitive bidding free from any conflicts of interest.[9]

You pleaded guilty to a wire fraud conspiracy that involved knowingly and willfully devising a scheme to obtain money from the E-Rate program fraudulently.[10] For more than five years, you and your co-conspirators charged the E-Rate program for services and equipment supposedly provided to certain private and religious schools in Rockland County, New York, and other areas.[11] You and your co-conspirators controlled corporations that bypassed the fair bidding process by falsifying E-Rate documents and FCC forms, resulting in them being awarded numerous contracts. Together, you and your co-conspirators materially overbilled for services and equipment provided through E-Rate funds, requested hundreds of thousands of dollars of technology equipment for the schools, and falsely claimed that the equipment and services were provided to the schools.[12] However, in some instances, the schools never received millions of dollars' worth of equipment and services that you attested to providing. Your scheme resulted in the fraudulent award of more than $14 million paid to corporations which in turn paid hundreds of thousands of dollars to co-conspirators for participating in the scheme.[13] You enriched yourself at the expense of the underprivileged children the program was designed to serve by accepting millions of dollars for services and equipment you did not provide.[14]

In June 2022, the United States District Court for the Southern District of New York sentenced you to a term of "time served" followed by one year of supervised release.[15] The court also ordered you to pay $1,144,288.37 in restitution and a $100 special assessment fee.[16]

Pursuant to section 54.8(d) of the Commission's rules,[17] your conviction requires the Bureau to suspend you from: (a) participating in any activities associated with or related to the E-Rate program, including the receipt of funds or discounted services through the E-Rate program, or consulting with, assisting, or advising applicants or service providers regarding the E-Rate program; and (b) participating in any activities associated with or related to all federal universal service support mechanisms.[18] Your

suspension becomes effective upon either your receipt of this letter or its publication in the Federal Register, whichever comes first.[19]

In accordance with the Commission's suspension and debarment rules, you may contest this suspension or the scope of this suspension by filing arguments, with any relevant documents, within thirty (30) calendar days of your receipt of this letter or its publication in the Federal Register, whichever comes first.[20] Such requests, however, will not ordinarily be granted.[21] The Bureau may reverse or limit the scope of a suspension only upon a finding of extraordinary circumstances.[22] The Bureau will decide any request to reverse or modify a suspension within ninety calendar days of its receipt of such request.[23]

II. Initiation of Debarment Proceedings

In addition to requiring your immediate suspension from all federal universal service support mechanisms, including the E-Rate program, your conviction is cause for debarment as defined in section 54.8(c) of the Commission's rules.[24] Therefore, pursuant to section 54.8(b) of the Commission's rules, your conviction requires the Bureau to commence debarment proceedings against you.[25]

As with the suspension process, you may contest the proposed debarment or the scope of the proposed debarment by filing arguments and any relevant documentation within thirty calendar days of receipt of this letter or its publication in the Federal Register, whichever comes first.[26] The Bureau, in the absence of extraordinary circumstances, will notify you of its decision to debar within ninety calendar days of receiving any information you may have filed.[27] If the Bureau decides to debar you, its decision will become effective upon either your receipt of a debarment notice or publication of the decision in the Federal Register, whichever comes first.[28]

If and when your debarment becomes effective, you will be prohibited from participating in activities associated with or related to all federal universal service support mechanisms, including the E-Rate program for three (3) years from the date of debarment.[29] The Bureau may set a longer debarment period or extend an existing debarment period if necessary to protect the public interest.[30] Pursuant to the Commission's rules, should you choose to contest the scope or length of any such debarment, you must file arguments and any relevant documentation within thirty calendar days of receipt of notice or publication in the Federal Register of such debarment, whichever is earlier.[31]

Notice of Suspension and Commencement of Proposed Debarment Proceedings; Schools and Libraries Universal Service Support Mechanism

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: The Enforcement Bureau (the ''Bureau'') gives notice of the suspension of Simon Goldbrener from the schools and libraries universal service support mechanism (or ''E-Rate Program'') and all universal service support mechanisms. Additionally, the Bureau gives notice that debarment proceedings are commencing against Mr. Goldbrener. Mr. Goldbrener, or any person who has an existing contract with or intends to contract with him to provide or receive services in matters arising out of activities associated with or related to the schools and libraries support, may respond by filing an opposition request, supported by documentation.

DATES: Opposition requests must be submitted within 30 days of receiving the suspension letter or by May 30, 2025, whichever comes first. The Bureau will decide on any opposition request within 90 days.

ADDRESSES: Federal Communications Commission, Enforcement Bureau, Investigations and Hearings Division, 45 L Street NE, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Christina Thomas, Federal Communications Commission, Enforcement Bureau, Investigations and Hearings Division, 45 L Street NE, Washington, DC 20554. Christina Thomas may be contacted by phone at (202) 418–1879 or email at *Christina.Thomas@fcc.gov*. If Ms. Thomas is unavailable, you may contact Mr. Christopher J. Sova, Chief, Investigations and Hearings Division, by telephone at (202) 418–1868 or by email at *Christopher.Sova@fcc.gov*.

SUPPLEMENTARY INFORMATION: The Bureau has suspension and debarment authority pursuant to 47 CFR 54.8 and 47 CFR 0.111(a)(14). Suspensions ensure that suspended parties cannot continue to benefit from the schools and libraries mechanism pending resolution of the debarment process. Attached is the suspension letter, DA 25–332, which was mailed to Mr. Goldbrener and released on April 30, 2025. The complete text of the notice of suspension and initiation of debarment proceedings is available on the FCC's website at *https://docs.fcc.gov/public/attachments/DA-25-332A1.pdf*.

BILLING CODE 6712–01–C

FEDERAL MARITIME COMMISSION

Notice of Agreements Filed

The Commission hereby gives notice of the filing of the following agreements under the Shipping Act of 1984. Interested parties may submit comments, relevant information, or documents regarding the agreements to the Secretary by email at *Secretary@fmc.gov,* or by mail, Federal Maritime Commission, 800 North Capitol Street, Washington, DC 20573. Comments will be most helpful to the Commission if received within 12 days of the date this notice appears in the **Federal Register**, and the Commission requests that comments be submitted within 7 days on agreements that request expedited review. Copies of agreements are available through the Commission's website (*www.fmc.gov*) or by contacting the Office of Agreements at (202)–523–5793 or *tradeanalysis@fmc.gov.*

Agreement No.: 201103–018.
Agreement Name: Memorandum Agreement of December 14, 1983 Concerning Assessments to Pay ILWU–PMA Employee Benefit Costs.
Parties: International Longshoremen's and Warehousemen's Union; Pacific Maritime Association.
Filing Party: Robert Magovern, Cozen O'Connor.
Synopsis: The amendment revises the divisor for the man-hour base assessment rate in the agreement, and also accordingly revises various figures set forth in Appendix 1.
Proposed Effective Date: 4/23/2025.
Location: https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/10164.
Agreement No.: 201175–008.
Agreement Name: Port of NY/NJ Sustainable Services Agreement.
Parties: APM Terminals Elizabeth, LLC; Port Liberty Bayonne, LLC; Port Liberty New York LLC; Port Newark Container Terminal LLC; Red Hook Container Terminal, LLC.
Filing Party: Carol Lambos, The Lambos Firm LLP.
Synopsis: The Amendment deletes Maher Terminals LLC as a member of the Agreement.
Proposed Effective Date: 4/21/2025.
Location: https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/8136.
Agreement No.: 201210–004.
Agreement Name: Port of NY/NJ—Port Authority/Marine Terminal Operators Agreement.
Parties: APM Terminals Elizabeth, LLC; Port Liberty Bayonne, LLC; Port Newark Container Terminal LLC; Red Hook Container Terminal, LLC.
Filing Party: Carol Lambos, The Lambos Firm LLP.
Synopsis: The Amendment deletes Maher Terminals LLC as a member of the Agreement.
Proposed Effective Date: 4/21/2025.
Location: https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/2135.
Agreement No.: 201391–004.
Agreement Name: South Atlantic Multiport Chassis Pool Agreement.
Parties: Ocean Carrier Equipment Management Association, Inc.; South Atlantic Consolidated Chassis Pool LLC; Consolidated Chassis Management LLC; UIE Pools LLC; United Intermodal Enterprises LLC; Georgia Ports Authority; Jacksonville Port Authority; North Carolina State Ports Authority; American President Lines, LLC; CMA CGM S.A.; COSCO SHIPPING Lines Co., Ltd.; Evergreen Line Joint Service Agreement FMC No. 011982; Hapag-Lloyd AG and Hapag-Lloyd USA LLC

(acting as a single party); HMM Company Limited; Maersk A/S and Hamburg Sud (acting as a single party); MSC Mediterranean Shipping Company S.A.; Ocean Network Express Pte., Ltd.; Wan Hai Lines Ltd.; and Zim Integrated Shipping Services Ltd.

Filing Party: Joshua Stein; Cozen O'Connor.

Synopsis: The Amendment 1) extends the term to run through September 30, 2038 and modifies the provisions relating to withdrawal at the end of the Term to reflect same; 2) clarifies that rate stability, the impact of a proposed Rental Rate on the competitiveness of the Pool, and achieving Pool revenue objectives are factors considered in developing Pool Rental Rates; and 3) increases the Pool Target Utilization to 75%.

Proposed Effective Date: 6/5/2025.

Location: https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/65506.

Dated: April 25, 2025.

Alanna Beck,

Federal Register Alternate Liaison Officer.

BILLING CODE 6730–02–P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, with revision, the Census of Finance Companies and Other Lenders and Survey of Finance Companies (FR 3033p and FR 3033s; OMB No. 7100–0277).

DATES: The information collection revisions are effective for May 2025.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements (which contain more detailed information about the information collections and burden estimates than this notice), and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportingforms/review* or may be requested from the agency clearance officer, whose name appears above. On the page displayed at the link above, you can find the supporting information by referencing the collection identifier, FR 3033p or FR 3033s.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, With Revision, of the Following Information Collections

Collection title: Census of Finance Companies and Other Lenders and Survey of Finance Companies.

Collection identifier: FR 3033p and FR 3033s.

OMB control number: 7100–0277.

General description of collection: The FR 3033p is the first part of a two-stage survey series, which is a census survey designed to identify the universe of finance companies eligible for potential inclusion in the FR 3033s. It gathers limited information including total assets, areas of specialization, and information on the corporate structure of such companies. The second part of these information collections, the FR 3033s, collects balance sheet data on major categories of consumer and business credit receivables and major liabilities, along with income and expenses, and is used to gather information on the scope of a company's operations and loan and lease servicing activities. The data collected from this voluntary survey will be used for two purposes: to benchmark the consumer and business finance series collected on the Board's monthly Domestic Finance Company Report of Consolidated Assets and Liabilities (FR 2248; OMB No. 7100–0005) and to increase the Federal Reserve's understanding of an important part of the financial system.

Frequency: Quinquennially.

Respondents: Finance companies.

Total estimated number of respondents: 8,900.

Total estimated change in burden: (1,584).

Total estimated annual burden hours: 3,540.

Current actions: On December 23, 2024, the Board published a notice in the **Federal Register** (89 FR 104541) requesting public comment for 60 days on the extension, with revision, of the FR 3033p and FR 3033s. The Board proposed to revise the FR 3033p by removing an opt-in option and mortgage companies from the respondent panel, revising the wording of several questions, and adding the request of RSSD ID and the Nationwide Multistate Licensing System & Registry ID, when applicable. There were no proposed revisions to the FR 3033s as part of this clearance. The comment period for this notice expired on February 21, 2025. The Board did not receive any comments. The revisions will be implemented as proposed.

Board of Governors of the Federal Reserve System.

Benjamin W. McDonough,

Deputy Secretary and Ombuds of the Board.

FEDERAL RESERVE SYSTEM

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice, request for comment.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) invites comment on a proposal to extend for three years, with revision, the Recordkeeping and Disclosure Requirements Associated with Regulation CC (FR CC; OMB No. 7100–0235).

DATES: Comments must be submitted on or before June 30, 2025.

ADDRESSES: You may submit comments, identified by FR CC, by any of the following methods:

- *Agency Website: https://www.federalreserve.gov/.* Follow the instructions for submitting comments, including attachments. *Preferred method.*
- *Mail:* Ann E. Misback, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.
- *Hand Delivery/Courier:* Same as mailing address.

• *Other Means: publiccomments@frb.gov.* You must include the OMB number or the FR number in the subject line of the message.

Comments received are subject to public disclosure. In general, comments received will be made available on the Board's website at *https://www.federalreserve.gov/apps/proposals/* without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure. Public comments may also be viewed electronically or in person in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9 a.m. and 5 p.m. during Federal business weekdays.

Additionally, commenters may send a copy of their comments to the Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. In exercising this delegated authority, the Board is directed to take every reasonable step to solicit comment. In determining whether to approve a collection of information, the Board will consider all comments received from the public and other agencies.

During the comment period for this proposal, a copy of the proposed PRA OMB submission, including the draft reporting form and instructions, supporting statement (which contains more detail about the information collection and burden estimates than this notice), and other documentation, will be made available on the Board's public website at *https://www.federalreserve.gov/apps/reportingforms/review* or may be requested from the agency clearance officer, whose name appears above. On the page displayed at the link above, you can find the supporting information by referencing the collection identifier, FR CC. Final versions of these documents will be made available at *https://www.reginfo.gov/public/do/PRAMain,* if approved.

Request for Comment on Information Collection Proposal

The Board invites public comment on the following information collection, which is being reviewed under authority delegated by the OMB under the PRA. Comments are invited on the following:

a. Whether the proposed collection of information is necessary for the proper performance of the Board's functions, including whether the information has practical utility;

b. The accuracy of the Board's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used;

c. Ways to enhance the quality, utility, and clarity of the information to be collected;

d. Ways to minimize the burden of information collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

e. Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

At the end of the comment period, the comments and recommendations received will be analyzed to determine the extent to which the Board should modify the proposal.

Proposal Under OMB Delegated Authority To Extend for Three Years, With Revision, the Following Information Collection

Collection title: Recordkeeping and Disclosure Requirements Associated with Regulation CC.

Collection identifier: FR CC.

OMB control number: 7100–0235.

General description of collection: Regulation CC requires banks to make funds deposited in transaction accounts available within specified time periods, disclose their funds availability policies to customers, begin accruing interest on such deposits promptly, and provide certain notices in connection with the nonpayment of certain checks. Regulation CC also requires banks to provide consumer awareness disclosures and other notices regarding substitute checks. Regulation CC includes model disclosure forms, clauses, notices, and commentary to ease compliance with these requirements.

Proposed revisions: The Board proposes to revise the FR CC to take into account sections 229.10(c)(3), 229.31(f), and 229.32(d) of Regulation CC, which contain information collection provisions but had not been included in previous clearances.

Section 229.10(c)(3) Special Deposit Slip

As a condition to making the funds available for withdrawal not later than the business day after the banking day on which the funds are deposited, a depositary bank may require that certain types of checks be deposited with a special deposit slip or deposit envelope that identifies the type of check. If a depositary bank requires the use of a special deposit slip or deposit envelope, the bank must either provide the special deposit slip or deposit envelope to its customers or inform its customers how the slip or envelope may be prepared or obtained and make the slip or envelope reasonably available.

229.31(f) and 229.32(d) Notices of Nonpayment

Paying bank notice in lieu of return—If a check is unavailable for return, the paying bank may send in its place a copy of the front and back of the returned check, or, if no such copy is available, a written notice of nonpayment containing the information specified in section 229.31(c)(2) of Regulation CC.

Returning bank notice in lieu of return—If a check is unavailable for return, the returning bank may send in its place a copy of the front and back of the returned check, or, if no such copy is available, a written notice of nonpayment containing the information specified in section 229.31(c) of Regulation CC.

Frequency: Event-generated.

Respondents: State member banks and uninsured state branches and agencies of foreign banks.

Total estimated number of respondents: 668 (except for Special deposit slip and Notice of changes in policy, 100).

Total estimated change in burden: 25.

Total estimated annual burden hours: 134,352.

Board of Governors of the Federal Reserve System.

Benjamin W. McDonough,

Deputy Secretary and Ombuds of the Board.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, Without Revision, of the Following Information Collection

Collection title: Semiannual Report of Derivatives Activity.

Collection identifier: FR 2436.

OMB control number: 7100–0286.

General description of collection: The FR 2436 collects derivatives market statistics from the eight largest U.S. dealers of over-the-counter (OTC) derivatives. Data are collected on the notional amounts and gross fair values of the volumes outstanding of broad categories of foreign exchange, interest rate, equity, commodity-linked, and credit default swap OTC derivatives contracts across a range of underlying currencies, interest rates, and equity markets. The FR 2436 is part of the U.S. portion of a global data collection conducted by central banks. The primary objective of the Board's participation in this collection is to obtain reasonably comprehensive and internationally consistent data on the size and structure of global OTC financial derivatives markets.

Frequency: Semiannually.

Respondents: U.S. dealers of OTC derivatives.

Total estimated number of respondents: 8.

Total estimated annual burden hours: 3,898.

Current actions: On December 23, 2024, the Board published a notice in the **Federal Register** (89 FR 104538) requesting public comment for 60 days on the extension, without revision, of the FR 2436. The comment period for this notice expired on February 21, 2025. The Board did not receive any comments.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, Without Revision, of the Following Information Collection

Collection title: Senior Credit Officer Opinion Survey on Dealer Financing Terms.

Collection identifier: FR 2034.

OMB control number: 7100–0325.

General description of collection: The FR 2034 is a voluntary, partially ad hoc survey that collects qualitative and limited quantitative information from senior credit officers at responding financial institutions on (1) stringency of credit terms, (2) credit availability and demand across the entire range of securities financing and over-the-counter derivatives transactions, and (3) the evolution of market conditions and conventions applicable to such activities. The FR 2034 survey is conducted quarterly and contains 79 core questions divided into three broad sections, one optional question, as well as additional questions on topics of timely interest.

Frequency: Quarterly.

Respondents: 25 U.S. banking institutions and U.S. branches and

agencies of foreign banks. Other types of respondents, such as other depository institutions, bank holding companies, or other financial entities, may be surveyed when appropriate.

Total estimated number of respondents: 25.

Total estimated annual burden hours: 688.

Current actions: On January 13, 2025, the Board published a notice in the **Federal Register** (90 FR 2701) requesting public comment for 60 days on the extension, without revision, of the FR 2034. The comment period for this notice expired on March 14, 2025. The Board did not receive any comments.

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, with revision, the Central Bank Survey of Foreign Exchange and Derivatives Market Activity (FR 3036; OMB No. 7100–0285).

DATES: The revisions are effective April 2025.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements (which contain more detailed information about the information collections and burden estimates than this notice), and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportingforms/review* or may be requested from the agency clearance officer, whose name appears above. On the page displayed at the link above, you can find the supporting information by referencing the collection identifier, FR 3036.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, With Revision, of the Following Information Collection

Collection title: Central Bank Survey of Foreign Exchange and Derivatives Market Activity.

Collection identifier: FR 3036.

OMB control number: 7100–0285.

General description of collection: The FR 3036 is a component of the U.S. portion of a global data collection that is conducted by central banks once every three years and captures information relating to the volume of foreign exchange (FX) transactions. The Bank for International Settlements (BIS), of which the Board is a member, compiles aggregate national data from each central bank to produce and publish global market statistics. More than 50 central banks plan to conduct this global data collection in 2025 (the 2025 Survey). Aggregated data from the FR 3036 is compiled and forwarded to the BIS, which uses the data to produce and publish these statistics. The data compiled by the BIS is the Federal Reserve's primary source of information on the role of the U.S. dollar in the global foreign exchange market. The data informs the conduct of Federal Reserve and U.S. Treasury foreign exchange operations and management of the Federal Reserve's international dollar liquidity facilities.

Frequency: Triennially.

Respondents: Large commercial banks, brokers and dealers, and U.S. offices of foreign banking offices with dealing operations in the U.S.

Total estimated number of respondents: 21.

Estimated average hours per response: Reporting dealers, 66; reporting dealers for FX settlements only, 75.

Total estimated change in burden: 93.

Total estimated annual burden hours: 1,458.

Current actions: On December 23, 2024, the Board published a notice in the **Federal Register** (89 FR 104539) requesting public comment for 60 days on the extension, with revision, of the FR 3036. The Board proposed including a significant revision to the Settlement of FX Transactions schedule; revising Tables A1, A2, A4, A5, B1, and B2; and revising the FR 3036 instructions to be more in alignment with the BIS's 2025 Survey guidelines. The comment period for this notice expired on February 21, 2025. The Board received one comment.

Detailed Discussion of Public Comments

The commenter argues that the FR 3036 does not provide timely data for assessing rapidly evolving risks, such as those arising from repledging in derivative swaps and the accumulation of off-balance-sheet debt. The Board believes that the triennial cadence and scope of the survey, considered in conjunction with other data available to the Federal Reserve, strike an appropriate balance between the purposes of the survey (understanding market developments and trends and contributing to the BIS's effort to publish aggregate global statistics) and the burden on respondents. The commenter also asks the Board to adopt compulsory real-time capture of foreign exchange transactions and associated stress testing and scenario analysis to preserve the market's integrity under Generally Accepted Accounting Principles. The Board considers this request outside the scope of the proposal. The Board will adopt the extension, with revision, of the FR 3036 as originally proposed.

Board of Governors of the Federal Reserve System.

Benjamin W. McDonough,

Deputy Secretary and Ombuds of the Board.

BILLING CODE P

FEDERAL TRADE COMMISSION

Agency Information Collection Activities; Proposed Collection; Comment Request; Extension

AGENCY: Federal Trade Commission (FTC).

ACTION: Notice and request for comment.

SUMMARY: The FTC requests that the Office of Management and Budget (OMB) extend for three years the current Paperwork Reduction Act (PRA) clearance for information collection requirements contained in the agency's shared enforcement with the Consumer Financial Protection Bureau (CFPB) of the CFPB's rule on Duties of Consumer Reporting Agencies Regarding Disclosures to Consumers (Rule). That clearance expires on April 30, 2025.

DATES: Comments must be received by May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. The *reginfo.gov* web link is a United States Government website produced by OMB and the General Services Administration (GSA). Under PRA requirements, OMB's Office of Information and Regulatory Affairs (OIRA) reviews Federal information collections.

FOR FURTHER INFORMATION CONTACT: Ryan Mehm, Attorney, Bureau of Consumer Protection, (202) 326–2918, *rmehm@ftc.gov,* Federal Trade Commission, 600 Pennsylvania Avenue NW, Washington, DC 20580.

SUPPLEMENTARY INFORMATION:

Title: Regulation V, Subpart N (12 CFR 1022.130—1022.138).

OMB Control Number: 3084–0128.

Type of Review: Extension of a currently approved collection.

Annual Burden: After halving the updated estimates to split the PRA burden with the CFPB regarding the Rule, the FTC's burden totals are 121,818 hours, $3,135,077 in associated labor costs,[1] and $4,010,500 in capital/non-labor costs.

[1] This estimate is updated from the prior estimate of $2,973,410 that was included in the 60-Day **Federal Register** notice and is based on more current information from the Bureau of Labor Statistics. See Table 1, National employment and wage data from the Occupational Employment Statistics survey by occupation, May 2024, at *https://www.bls.gov/news.release/ocwage.t01.htm,* which was made publicly available on April 2, 2025.

Abstract: The FTC shares enforcement authority with the CFPB for subpart N of Regulation V. Subpart N requires nationwide consumer reporting agencies and nationwide consumer specialty reporting agencies to provide to consumers, upon request, one free file disclosure within any 12-month period. Generally, it requires the nationwide consumer reporting agencies, as defined in Section 603(p) of the Fair Credit Reporting Act (FCRA), 15 U.S.C. 1681a(p), to create and operate a centralized source that provides consumers with the ability to request their free annual file disclosures from each of the nationwide consumer reporting agencies through a centralized internet website, toll-free telephone number, and postal address. Subpart N also requires the nationwide consumer reporting agencies to establish a standardized form for internet and mail requests for annual file disclosures and provides a model standardized form that may be used to comply with that requirement. It additionally requires nationwide specialty consumer reporting agencies, as defined in Section 603(w) of the FCRA, 15 U.S.C. 1681a(w), to establish a streamlined process for consumers to request annual file disclosures. This streamlined process must include a toll-free telephone number for consumers to make such requests.

Request for Comment

On February 13, 2025, the FTC sought public comment on the information collection requirements associated with the Rule. 90 FR 9549. The Commission received no comments. Pursuant to the OMB regulations, 5 CFR part 1320, that implement the PRA, 44 U.S.C. 3501 *et seq.,* the FTC is providing this second opportunity for public comment while seeking OMB approval to renew the pre-existing clearance for the Rules.

Your comment—including your name and your state—will be placed on the public record of this proceeding. Because your comment will be made public, you are solely responsible for making sure that your comment does not include any sensitive personal information, such as anyone's Social Security number; date of birth; driver's license number or other state identification number, or foreign country equivalent; passport number; financial account number; or credit or debit card number. You are also solely responsible for making sure that your comment does not include any sensitive health information, such as medical records or other individually identifiable health information. In addition, your comment should not

include any ''trade secret or any commercial or financial information which . . . is privileged or confidential''—as provided by Section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2)—including in particular competitively sensitive information such as costs, sales statistics, inventories, formulas, patterns, devices, manufacturing processes, or customer names.

Josephine Liu,

Assistant General Counsel for Legal Counsel.

[FR Doc. 2025–07400 Filed 4–29–25; 8:45 am]

BILLING CODE 6750–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Agency for Healthcare Research and Quality, HHS.

ACTION: Information collection notice.

SUMMARY: This notice announces the intention of the Agency for Healthcare Research and Quality (AHRQ) to request that the Office of Management and Budget (OMB) approve the revision of the currently approved information collection project ''Online Application Order Form for Products from the Healthcare Cost and Utilization Project (HCUP),'' OMB # 0935–0206.

DATES: Comments on this notice must be received by June 30, 2025.

ADDRESSES: Written comments should be submitted to: Doris Lefkowitz, Reports Clearance Officer, AHRQ, by email at *REPORTSCLEARANCEOFFICER@ahrq.hhs.gov.*

Copies of the proposed collection plans, data collection instruments, and specific details on the estimated burden can be obtained from the AHRQ Reports Clearance Officer.

FOR FURTHER INFORMATION CONTACT: Doris Lefkowitz, AHRQ Reports Clearance Officer, (301) 427–1477, or by email at *REPORTSCLEARANCEOFFICER@ahrq.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Proposed Project

Online Application Order Form for Products From the Healthcare Cost and Utilization Project (HCUP)

The Healthcare Cost and Utilization Project is a vital resource helping AHRQ achieve its research agenda, thereby furthering its goal of improving the delivery of health care in the United States. HCUP is a family of health care databases developed through a Federal-State-Industry partnership and sponsored by AHRQ. HCUP includes the largest collection of longitudinal hospital care data in the United States, with all-payer, encounter-level information beginning in 1988. The HCUP databases are annual files that contain anonymous information from hospital discharge records for inpatient care and certain components of outpatient care, such as emergency care and ambulatory surgeries.

The project currently creates eight types of restricted access public release databases and related files that are released to authorized users under the terms of the HCUP Data Use Agreement (DUA). These HCUP databases and files are used by researchers for a broad range of health issues, including cost and quality of health services, medical practice patterns, access to health care programs, and outcomes of treatments at the national, State, and local market levels.

This project has the following goal:

- Allow restricted access public release and tracking of the eight HCUP databases.

To achieve this goal the following data collections and activities are required:

1. HCUP DUA Training Course—All purchasers and users of HCUP data must complete this training prior to signing the DUA. This Web-based training course outlines important terms of the DUA. The purpose of the course is to emphasize the importance of data protection, reduce the risk of inadvertent violations, and describe an individual's responsibility when using HCUP data. After completing the training course, an HCUP DUA Training Course certification code is received. This code is required to purchase or gain access to HCUP data.

2. HCUP DUA for the Nationwide Databases—The HCUP Nationwide databases include the National (Nationwide) Inpatient Sample (NIS), Kids' Inpatient Database (KID), Nationwide Ambulatory Surgery Sample (NASS), Nationwide Emergency Department Sample (NEDS), and Nationwide Readmissions Database (NRD). Any person seeking permission from AHRQ to access HCUP Nationwide Databases must sign and submit this Agreement to AHRQ.

3. HCUP DUA for the State Databases—The HCUP State databases include the State Inpatient Databases (SID), State Ambulatory Surgery and Services Databases (SASD), and State Emergency Department Databases (SEDD). Any person seeking permission from AHRQ to access HCUP State Databases must sign and submit this Agreement to AHRQ.

4. Online Application Form—The application form collects relevant applicant information, shipping and billing address, and the payment method.

This project is being conducted by AHRQ through its contractors, National Opinion Research Center and TurningPoint-DS Federal J.V., L.L.C., pursuant to AHRQ's statutory authority to conduct and support research on health care and on systems for the delivery of such care, including activities with respect to the outcomes, cost, cost-effectiveness, and use of health care services and access to such services. 42 U.S.C 299a(a)(3).

Proposed Revisions:

Revisions include a redesigned HCUP application form and reducing the number of DUAs to one state and one nationwide version. The current expiration date for 0935–0206 is 5/31/2025 and AHRQ is requesting a new expiration date, 3 years from approval of this information collection request.

Method of Collection

Information collected in the HCUP Online Application Form process will be used for two purposes only:

1. Business Transaction: In order to deliver the HCUP databases to the applicants, contact information is necessary for shipping the data on disk (or any other media used in the future) and payment collection.

2. Enforcement of the HCUP Data Use Agreement (DUA): The HCUP DUA contains several restrictions on use of the data. Most of these restrictions have been put in place to safeguard the privacy of individuals and establishments represented in the data. For example, data users can only use the data for research, analysis, and aggregate statistical reporting and are prohibited from attempting to identify any persons in the data. Contact information on HCUP DUAs is retained in the event that a violation of the HCUP DUA takes place requiring legal remedy.

Estimated Annual Respondent Burden

Exhibit 1 shows the estimated annualized burden associated with the applicants' time to order any of the HCUP databases. An estimated 1,800 persons will order HCUP data annually. To complete the ordering process, each of these persons will complete the HCUP DUA Training Course, review and sign both DUAs, and complete the

HCUP Data Purchase Ordering Form. The total burden to complete these four steps to purchase HCUP data is estimated to be 1,050 hours annually.

Exhibit 2 shows the estimated annualized cost burden associated with the applicants' time to purchase HCUP data. The total cost burden is estimated to be $78,252 annually.

EXHIBIT 1—ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Number of respondents	Number of responses per respondent	Hours per response	Total burden hours
1. HCUP DUA Training Course	1,800	1	15/60	450
2. HCUP DUA for the Nationwide Databases	1,800	1	5/60	150
3. HCUP DUA for the State Databases	1,800	1	5/60	150
4. HCUP Data Purchase Ordering Form	1,800	1	10/60	300
Total	7,200	NA	NA	1,050

EXHIBIT 2—ESTIMATED ANNUALIZED COST BURDEN

	Total burden hours	Average hourly wage rate *	Total cost burden
1. HCUP DUA Training Course	450	$48.81	$21,965
2. HCUP DUA for the Nationwide Databases	150	48.81	7,322
3. HCUP DUA for the State Databases	150	48.81	7,322
4. HCUP Data Purchase Ordering Form	300	48.81	41,643
Total	1,050	NA	78,252

Request for Comments

In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501–3520, comments on AHRQ's information collection are requested with regard to any of the following: (a) whether the proposed collection of information is necessary for the proper performance of AHRQ's health care research and health care information dissemination functions, including whether the information will have practical utility; (b) the accuracy of AHRQ's estimate of burden (including hours and costs) of the proposed collection(s) of information; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information upon the respondents, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the Agency's subsequent request for OMB approval of the proposed information collection. All comments will become a matter of public record.

Dated: April 24, 2025.

Jeffrey P. Toven,

Executive Officer.

BILLING CODE 4160–90–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; 60-Day Comment Request; National Cancer Institute (NCI) Generic Clearance for Application Information From Fellows, Interns, and Trainees

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995 to provide an opportunity for public comment on proposed data collection projects, the National Cancer Institute (NCI) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

DATES: Comments regarding this information collection are best assured of having their full effect if received within 60 days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments, submit comments in writing, or request more information on the proposed project, contact Melissa Park, PRA Liaison, Office of Management Policy and Compliance, National Cancer Institute, 9609 Medical Center Drive, Room 2E196, Bethesda, Maryland 20892 or call non-toll-free number (240) 276–5717 or email your request, including your address to: *melissa.park@nih.gov*. Formal requests for additional plans and instruments must be requested in writing.

SUPPLEMENTARY INFORMATION: Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires: written comments and/or suggestions from the public and affected agencies are invited to address one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Proposed Collection Title: Generic Clearance for Application Information from Fellows, Interns, and Trainees, 0925–0761, Expiration Date 07/31/2025, EXTENSION, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: The ''Generic Clearance for Application Information from Fellows, Interns, and Trainees'' request supports research experiences for high school, post-baccalaureate (including post-masters) individuals, graduate students, and postdoctoral fellows, interns, and trainees in a multidisciplinary environment at the NCI. This information collection request is for applications, reference letters, letters of intent and interest, and other related documentation necessary for various Divisions, Offices, and Centers at NCI to evaluate the eligibility, merits, and quality of potential candidates. The applications will also assist in matching potential candidates to various training and internship programs. The information is for internal use to make decisions about candidates invited to visit and attend NCI fellowships, internships, and other training opportunities.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 22,215 hours.

ESTIMATED ANNUALIZED BURDEN HOURS

Category of respondent	Number of respondents	Number of responses per respondent	Average time per response (in hours)	Total annual burden hours
Individuals (Applicants)	9,873	1	45/60	7,405
Individuals (Reference Letters)	29,619	1	30/60	14,810
Totals		39,492		22,215

Dated: April 24, 2025.

Melissa M. Park,

Project Clearance Liaison, National Cancer Institute, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; 60-Day Comment Request; Generic Clearance for National Cancer Institute (NCI) Resources, Software and Data Sharing Forms

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995 to provide an opportunity for public comment on proposed data collection projects, the National Cancer Institute (NCI) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

DATES: Comments regarding this information collection are best assured of having their full effect if received within 60 days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments, submit comments in writing, or request more information on the proposed project, contact Melissa Park, Office of Management Policy and Compliance, National Cancer Institute, 9609 Medical Center Drive, Rockville, Maryland 20850 or call non-toll-free number (240) 276–5717 or Email your request, including your address to: *melissa.park@nih.gov.* Formal requests for additional plans and instruments must be requested in writing.

SUPPLEMENTARY INFORMATION: Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires written comments and/or suggestions from the public, and affected agencies are invited to address one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Proposed Collection Title: Generic Clearance for National Cancer Institute (NCI) NCI Resources, Software and Data Sharing Forms, 0925–0775, Expiration Date 06/30/2025, REVISION, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: This is a request for OMB to approve the revision of the collection titled ''Generic Clearance for National Cancer Institute (NCI) NCI Resources, Software and Data Sharing Forms'' for an additional three years of data collection. In preparation for dissemination and sharing of data sets, forms requesting or applying for access, upload, share, and store data will be needed. The purpose of data sharing allows data generated from one research study to be used to answer questions beyond the original study. It reinforces open scientific inquiry, encourages diversity of analysis, supports studies on data collection methods and measurement, facilitates the education of new researchers, and enables the exploration of topics not envisioned by the initial investigators. Biomedical researchers and data scientists can use the NCI cloud resources, web interface, and computational workspaces to query, submit data, analyze, and visualize data. The forms would be used to register a scientist's research data, apply for data storage, and submit a request to access and use the data. In addition to these forms, forms related to metadata information (*i.e.,* related to the collection of the research data; how the data was collected) would be collected for some research. This revision is updated to include a newer version of one of the Data Submission Request Forms.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden is 5,775 hours.

ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Type of respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total annual burden hours
Request Data Access/Use					
Data Access Request-Submitter	Individuals	1,500	1	45/60	1,125
Institutional Certification	Individuals	1,500	1	30/60	750
Data Submission/Storage					
Data Submission/Storage Request	Individuals	1,500	1	30/60	750
Institutional Certification	Individuals	1,500	1	30/60	750
Request Access to/Use NCI Resources/Software					
Data Resources	Individuals	1,500	1	30/60	750
Project Renewal or Project Close-out					
Project Renewal or Project Close-out form	Individuals	1,500	2	15/60	750
Institutional Certification	Individuals	1,500	2	18/60	900
Totals		10,500	13,500		5,775

Dated: April 24, 2025.

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Integrative, Functional and Cognitive Neuroscience Integrated Review Group; Sensory-Motor Neuroscience Study Section.

Date: May 29–30, 2025.

Time: 10:00 a.m. to 7:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Alena Valeryevna Savonenko, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 1009J, Bethesda, MD 20892, (301) 594–3444, *savonenkoa2@csr.nih.gov*.

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA Panel: Interdisciplinary Team Science RM1 Review.

Date: May 29, 2025.

Time: 10:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Tatiana Pasternak, Ph.D., Scientific Review Officer, Scientific Review Branch, Division of Extramural Activities, NINDS/NIH NSC, 6001 Executive Blvd., Suite 3208, MSC 9529, Bethesda, MD 20892, (301) 496–9223, *tatiana.pasternak@nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; Developing Regulated Therapeutic and Diagnostic Solutions for Patients Affected by Opioid and/or Stimulants Use Disorders (OUD/StUD).

Date: June 3–4, 2025.

Time: 10:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Sudhirkumar U Yanpallewar, MD, Scientific Review Officer, Scientific Review Branch, National Institute on Drug Abuse, 301 North Stonestreet Avenue, Bethesda, MD 20892, (301) 443–4577, *sudhirkumar.yanpallewar@nih.gov*.

Name of Committee: Genes, Genomes, and Genetics Integrated Review Group; Maximizing Investigators' Research Award—F Study Section.

Date: June 9–10, 2025.

Time: 9:00 a.m. to 8:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Quarterly IRS Interest Rates Used in Calculating Interest on Overdue Accounts and Refunds of Customs Duties

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: General notice.

SUMMARY: This notice advises the public that the quarterly Internal Revenue Service interest rates used to calculate interest on overdue accounts (underpayments) and refunds (overpayments) of customs duties will remain the same from the previous quarter. For the calendar quarter beginning April 1, 2025, the interest rates for underpayments will be 7 percent for both corporations and non-corporations. The interest rate for overpayments will be 7 percent for non-corporations and 6 percent for corporations. This notice is published for the convenience of the importing public and U.S. Customs and Border Protection personnel.

DATES: The rates announced in this notice are applicable as of April 1, 2025.

FOR FURTHER INFORMATION CONTACT: Bruce Ingalls, Revenue Division, Collection Refunds & Analysis Branch, 8899 E 56th Street, Mail Stop 203J, Indianapolis, IN 46249; telephone (317) 298–1107.

SUPPLEMENTARY INFORMATION:

Background

Pursuant to 19 U.S.C. 1505 and Treasury Decision 85–93, published in the **Federal Register** on May 29, 1985 (50 FR 21832), the interest rate paid on applicable overpayments or underpayments of customs duties must be in accordance with the Internal Revenue Code rate established under 26 U.S.C. 6621 and 6622. Section 6621 provides different interest rates applicable to overpayments: one for corporations and one for non-corporations.

The interest rates are based on the Federal short-term rate and determined by the Internal Revenue Service (IRS) on behalf of the Secretary of the Treasury on a quarterly basis. The rates effective for a quarter are determined during the first-month period of the previous quarter.

In Revenue Ruling 2025–7, the IRS determined the rates of interest for the calendar quarter beginning April 1, 2025, and ending on June 30, 2025. The interest rate paid to the Treasury for underpayments will be the Federal short-term rate (4%) plus three percentage points (3%) for a total of seven percent (7%) for both corporations and non-corporations. For overpayments made by non-corporations, the rate is the Federal short-term rate (4%) plus three percentage points (3%) for a total of seven percent (7%). For corporate overpayments, the rate is the Federal short-term rate (4%) plus two percentage points (2%) for a total of six percent (6%). These interest rates used to calculate interest on overdue accounts (underpayments) and refunds (overpayments) of customs duties remain the same as the previous quarter. These interest rates are subject to change for the calendar quarter beginning July 1, 2025, and ending on September 30, 2025.

For the convenience of the importing public and U.S. Customs and Border Protection personnel, the following list of IRS interest rates used, covering the period from July of 1974 to date, to calculate interest on overdue accounts and refunds of customs duties, is published in summary format.

Beginning date	Ending date	Underpayments (percent)	Overpayments (percent)	Corporate overpayments (eff. 1–1–99) (percent)

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[OMB Control Number 1651–0086]

Agency Information Collection Activities; Extension; Distribution of Continued Dumping and Subsidy Offset to Affected Domestic Producers (CBP Form 7401)

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 30-Day Notice and request for comments.

SUMMARY: The Department of Homeland Security, U.S. Customs and Border Protection (CBP) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). The information collection is published in the **Federal Register** to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and must be submitted (no later than May 30, 2025) to be assured of consideration.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Please submit written comments and/or suggestions in English. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional PRA information should be directed to Seth Renkema, Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, 90 K Street NE, 10th Floor, Washington, DC 20229–1177, Telephone number 202–325–0056 or via email *CBP_PRA@cbp.dhs.gov.* Please note that the contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs should contact the CBP National Customer Service Center at 877–227–5511, (TTY) 1–800–877–8339, or CBP website at *https://www.cbp.gov/.*

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on the proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This proposed information collection was previously published in the **Federal Register** (90 FR 11179) on March 04, 2025, allowing for a 60-day comment period. This notice allows for

an additional 30 days for public comments. This process is conducted in accordance with 5 CFR 1320.8. Written comments and suggestions from the public and affected agencies should address one or more of the following four points: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) suggestions to enhance the quality, utility, and clarity of the information to be collected; and (4) suggestions to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The comments that are submitted will be summarized and included in the request for approval. All comments will become a matter of public record.

Overview of This Information Collection

Title: Distribution of Continued Dumping and Subsidy Offset to Affected Domestic Producers.

OMB Number: 1651–0086.

Form Number: 7401.

Current Actions: Extension with a decrease in burden hours. No change to the information collected or method of collection.

Type of Review: Extension (with change).

Affected Public: Businesses.

Abstract: This collection of information is used by CBP to make distributions of funds pursuant to the Continued Dumping and Subsidy Offset Act of 2000 (CDSOA). 19 U.S.C. 1675c (repealed by the Deficit Reduction Act of 2005, Pub. L. 109–171, title VII, sec. 7601(a) (Feb. 8, 2006)). This Act prescribes the administrative procedures under which antidumping and countervailing duties assessed on imported products are distributed to affected domestic producers (ADPs) that petitioned for or supported the issuance of the order under which the duties were assessed. The amount of any distribution afforded to these domestic producers is based on certain qualifying expenditures that they incur after the issuance of the order or finding up to the effective date of the CDSOA's repeal, October 1, 2007. This distribution is known as the continued dumping and subsidy offset. The claims process for the CDSOA program is provided for in 19 CFR 159.61 and 159.63.

In order to make a claim under the CDSOA, CBP Form 7401 may be used. This form is accessible at: *https://www.pay.gov/paygov/forms/formInstance.html?agencyFormId=8776895.*

Type of Information Collection: CBP Form 7401.

Estimated Number of Respondents: 300.

Estimated Number of Annual Responses per Respondent: 2.

Estimated Number of Total Annual Responses: 600.

Estimated Time per Response: 1 hour.

Estimated Total Annual Burden Hours: 600.

Dated: April 25, 2025.

Seth D. Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2025–0012; OMB No. 1660–0062]

Agency Information Collection Activities: Proposed Collection; Comment Request; State/Local/Tribal Hazard Mitigation Plans

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 60-Day notice of revision and Request for comments.

SUMMARY: The Federal Emergency Management Agency (FEMA), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public to take this opportunity to comment on a revision of a currently approved information collection. In accordance with the Paperwork Reduction Act of 1995, this notice seeks comments concerning the nature of the information collection, the categories of respondents, the estimated burden (*i.e.,* the time, efforts and resources used by respondents to respond) and cost, and actual data collection instruments FEMA will use regarding the State, local, and Tribal hazard mitigation plan development or update process.

DATES: Comments must be submitted on or before June 30, 2025.

ADDRESSES: To avoid duplicate submissions to the docket, please submit comments at *www.regulations.gov* under Docket ID FEMA–2025–0012. Follow the instructions for submitting comments.

All submissions received must include the agency name and Docket ID. Regardless of the method used for submitting comments or material, all submissions will be posted, without change, to the Federal eRulemaking Portal at *http://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to read the Privacy and Security Notice that is available via a link on the homepage of *www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Kathleen Smith, Acting Division Director, Community Planning Division, Risk Analysis, Planning & Information Directorate, Resilience, FEMA; (202) 646–4372; *Kathleen.Smith2@fema.dhs.gov*. You may contact the Information Management Division for copies of the proposed collection of information at email address: *FEMA-Information-Collections-Management@fema.dhs.gov*.

SUPPLEMENTARY INFORMATION: Section 322 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), 42 U.S.C. 5165, as amended by the Disaster Mitigation Act of 2000 (DMA 2000) (Pub. L. 106–390), provided the initial framework for linking pre-and post-disaster mitigation planning and initiatives with public and private interests to ensure an integrated, comprehensive approach to disaster loss reduction. Since DMA 2000 amended the Stafford Act, additional laws have passed that help to shape hazard mitigation policy. These revisions are included in the Sandy Recovery Improvement Act of 2013, the National Flood Insurance Act of 1968, and the Water Infrastructure Improvements for the Nation Act of 2016. Title 44 Code of Federal Regulations (CFR) Part 201 provide the mitigation planning requirements for State, local, territorial, and Tribal governments to identify the natural hazards that impact them, to identify actions and activities to reduce any losses from hazards, and to establish a coordinated process to implement the plan, taking advantage of a wide range of resources. State, local, and tribal mitigation planning policies provide further guidance regarding mitigation plan development or update, review, and approval.

Collection of Information

Title: State/Local/Tribal Hazard Mitigation Plans.

Type of Information Collection: Revision of a currently approved information collection.

OMB Number: 1660–0062.

FEMA Forms: Not applicable.

Abstract: In order to be eligible for certain types of Federal Emergency Management Agency non-emergency assistance, State, local, territorial and Tribal governments are required to have a current FEMA-approved hazard mitigation plan that meets the criteria established in 44 CFR part 201 and applicable mitigation planning policies.

Affected Public: State, local, territorial, or Tribal Government.

Estimated Number of Respondents: 224.

Estimated Number of Responses: 1,243.

Estimated Total Annual Burden Hours: 219,156.

Estimated Total Annual Respondent Cost: $14,670,303.

Estimated Respondents' Operation and Maintenance Costs: $53,393,717.

Estimated Respondents' Capital and Start-Up Costs: $8,855,000.

Estimated Total Annual Cost to the Federal Government: $2,072,906.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the Agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Maile Rasco-Arthur,

Acting Records Management Branch Chief, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

[FR Doc. 2025–07443 Filed 4–29–25; 8:45 am]

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2025–0010; OMB No. 1660–0153]

Agency Information Collection Activities: Proposed Collection; Comment Request; National Business Emergency Operation Center (NBEOC) Membership Agreement Form

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 60-Day Notice of Extension and Request for Comments.

SUMMARY: The Federal Emergency Management Agency (FEMA), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public to take this opportunity to comment on an extension of a currently approved information collection. In accordance with the Paperwork Reduction Act of 1995, this notice seeks comments concerning FEMA's compilation and information sharing leveraging the National Business Emergency Operation Center (NBEOC) stakeholder listing. FEMA seeks to voluntarily continue the standing practice of collecting entity specific information during an event to assist in response/recovery operations.

DATES: Comments must be submitted on or before June 30, 2025.

ADDRESSES: To avoid duplicate submissions to the docket, please submit comments at *www.regulations.gov* under Docket ID FEMA–2025–0010. Follow the instructions for submitting comments.

All submissions received must include the agency name and Docket ID. Regardless of the method used for submitting comments or material, all submissions will be posted, without change, to the Federal eRulemaking Portal at *http://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to read the Privacy and Security Notice that is available via a link on the homepage of *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Matthew Scott, Management and Program Analyst, Logistics Management Directorate, Office of Response and Recovery, (202) 812–6418 or *matthew.scott@fema.dhs.gov.* You may contact the Information Management Division for copies of the proposed collection of information at email address: *FEMA-Information-Collections-Management@fema.dhs.gov.*

SUPPLEMENTARY INFORMATION: FEMA collects this information to facilitate communication between FEMA and the participants of FEMA's National Business Emergency Operations Center (NBEOC). Written consent is requested pursuant to the Privacy Act of 1974, 5 U.S.C. 552a(b). The information on this form in the ''NBEOC Contact Information'' section may be disclosed internally within Department of Homeland Security (DHS) as generally permitted under 5 U.S.C. 552a(b)(1) of the Privacy Act of 1974, as amended, and will not be shared outside of DHS. The program for which this form may be used is authorized by the Robert T. Stafford Disaster Relief and Emergency Assistance Act as amended, 42 U.S.C. 5121–5207; The Homeland Security Act of 2002, 6 U.S.C. 311–321j; 44 CFR 206.2(a)(27); the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (Pub. L. 104–193); and E.O. 13411, Improving Assistance for Disaster Victims. Information collected is as follows: Representative's Name, Business Entity Name, Representative's Signature, Representative's Title, Business E-Mail Address, and Business Category *(ex: Small Business, Large Business, Non-Profit, etc.)*

Collection of Information

Title: National Business Emergency Operation Center (NBEOC) Membership Agreement.

Type of Information Collection: Extension of a currently approved information collection.

OMB Number: 1660–0153.

FEMA Form: FEMA Form FF–145–FY–21–101, National Business Emergency Operation Center (NBEOC) Membership Agreement Form.

Abstract: FEMA's NBEOC collects this data for the primary purpose of maintaining a private sector stakeholder roster and mailing list for information dissemination, outreach, and coordination. FEMA leverages this information to engage stakeholders to coordinate disaster response operations, garner donations, and gain situational awareness around private sector actions that will help inform FEMA Leadership and assist evidence-based decision making.

Affected Public: Business or other for profit, Not-for-profit institutions, Federal Government, and State, local or Tribal Government.

Estimated Number of Respondents: 232.

Estimated Number of Responses: 232.

Estimated Total Annual Burden Hours: 116.

Estimated Total Annual Respondent Cost: $7,577.

Estimated Respondents' Operation and Maintenance Costs: $0.

Estimated Respondents' Capital and Start-Up Costs: $0.

Estimated Total Annual Cost to the Federal Government: $16,664.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the Agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Maile Rasco-Arthur,

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2024–0037; OMB No. 1660–0011]

Agency Information Collection Activities: Submission for OMB Review, Comment Request; Debt Collection Financial Statement

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 30-Day Notice of Extension and Request for Comments.

SUMMARY: The Federal Emergency Management Agency (FEMA) will submit the information collection abstracted below to the Office of Management and Budget for review and clearance in accordance with the requirements of the Paperwork Reduction Act of 1995. FEMA invites the general public to take this opportunity to comment on an extension of a currently approved information collection. In accordance with the requirements of the Paperwork Reduction Act of 1995, this notice seeks comments concerning the collection of information related to disaster program accounts and debts owed to FEMA by individuals.

DATES: Comments must be submitted on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection should be made to Director, Information Management Division, 500 C Street SW, Washington, DC 20472, email address *FEMA-Information-Collections-Management@fema.dhs.gov* or Andrew McCormick, Section Chief, Accounts Receivable, FEMA Finance Center, (540) 532–7501, *drew.mccormick@fema.dhs.gov.*

SUPPLEMENTARY INFORMATION: This proposed information collection previously published in the **Federal Register** at 90 FR 4759, Jan. 16, 2025 with a 60-day public comment period. No comments were received. The purpose of this notice is to notify the public that FEMA will submit the information collection abstracted below to the Office of Management and Budget for review and clearance.

Collection of Information

Title: Debt Collection Financial Statement.

Type of Information Collection: Extension, without change, of a currently approved information collection.

OMB Number: 1660–0011.

FEMA Forms: Debt Collection Financial Statement, FEMA Form FF–600–FY–22–102 (formerly 127–0–1).

Abstract: FEMA Form FF–600–FY–22–102 (formerly 127–0–1) is used to collect information provided voluntarily by the debtor to evaluate the debtor's financial abilities to determine if they qualify for a payment plan and set repayment terms, or determine a compromise to write-off a debt in part or in full. Financial information obtained is essential to evaluate the debtor's ability for the payment of the debt in part or in full. Debt may be a recoupment of an ineligible disaster assistance payment or improper payment to an employee.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 140.

Estimated Number of Responses: 140.

Estimated Total Annual Burden Hours: 105.

Estimated Total Annual Respondent Cost: $4,793.

Estimated Respondents' Operation and Maintenance Costs: $0.

Estimated Respondents' Capital and Start-Up Costs: $0.

Estimated Total Annual Cost to the Federal Government: $23,877.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the Agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Maile Rasco-Arthur,

Acting Records Management Branch Chief, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

BILLING CODE 9111–19–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Immigration and Customs Enforcement

[OMB Control Number 1653–0043]

Agency Information Collection Activities; Extension, Without Change, of a Currently Approved Collection: Electronic Funds Transfer Waiver Request

AGENCY: U.S. Immigration and Customs Enforcement, Department of Homeland Security.

ACTION: 60-Day notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department of Homeland Security (DHS), U.S. Immigration and Customs Enforcement (ICE) will submit the following Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and clearance.

DATES: Comments are encouraged and will be accepted until June 30, 2025.

ADDRESSES: All submissions received must include the OMB Control Number 1653–0043 in the body of the correspondence, the agency name and Docket ID ICEB–2009–0005. All comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

(1) *Online.* Submit comments via the Federal eRulemaking Portal website at *http://www.regulations.gov* under e-Docket ID number ICEB–2009–0005.

FOR FURTHER INFORMATION CONTACT: If you have questions related to this collection, call or email Qamar Syed, Vendor Maintenance, (214) 915–6041, email *qamar.syed@ice.dhs.gov.*

SUPPLEMENTARY INFORMATION:

Comment

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension, Without Change, of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Electronic Funds Transfer Waiver Request.

(3) *Agency form number, if any, and the applicable component of the Department of Homeland Security sponsoring the collection:* Form 10–002; U.S. Immigration and Customs Enforcement.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: State, Local, or Tribal Government. Section 404(b) of the Immigration and Nationality Act (8 U.S.C. 1101 note) provides for the reimbursement to States and localities for assistance provided in meeting an immigration emergency. This collection of information allows for State or local governments to request reimbursement.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 50 responses at 30 minutes (.50 hours) per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* 25 annual burden hours.

Dated: April 24, 2025.

Scott Elmore,

PRA Clearance Officer.

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

[Docket No. TSA–2005–20118]

Extension of Agency Information Collection Activity Under OMB Review: Maryland Three Airports: Enhanced Security Procedures for Operations at Certain Airports in the Washington, DC, Metropolitan Area Flight Restricted Zone

AGENCY: Transportation Security Administration, DHS.

ACTION: 30-Day Notice.

SUMMARY: This notice announces that the Transportation Security Administration (TSA) has forwarded the Information Collection Request (ICR), Office of Management and Budget (OMB) control number 1652–0029, abstracted below to OMB for review and approval of an extension of the currently approved collection under the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden. The collection is necessary to comply with a requirement for individuals to successfully complete a security threat assessment before operating an aircraft or serving as an airport security coordinator at one of the Maryland Three airports.

DATES: Send your comments by May 30, 2025. A comment to OMB is most effective if OMB receives it within 30 days of publication.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the find function.

FOR FURTHER INFORMATION CONTACT: Christina A. Walsh, TSA PRA Officer, Information Technology, TSA–11, Transportation Security Administration, 6595 Springfield Center Drive, Springfield, VA 20598–6011; telephone (571) 227–2062; email *TSAPRA@tsa.dhs.gov.*

SUPPLEMENTARY INFORMATION: TSA published a **Federal Register** notice, with a 60-day comment period soliciting comments, of the following collection of information on November 12, 2024, 89 FR 89022. TSA did not receive any comments on the notice.

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation will be available at *https://www.reginfo.gov* upon its submission to OMB. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Information Collection Requirement

Title: Maryland Three Airports: Enhanced Security Procedures for Operations at Certain Airports in the Washington, DC, Metropolitan Area Flight Restricted Zone.

Type of Request: Extension of a currently approved collection.

OMB Control Number: 1652–0029.

Forms(s): TSA Form No. 418, MD–3 PIN Application.

Affected Public: Airports and pilots operating an aircraft to or from one of three Maryland airports, and airport employees who serve as an airport security coordinator at one of these three Maryland airports.

Abstract: TSA's regulations set forth security measures that apply to flight operations at the Maryland Three airports.[1] *See* 49 CFR part 1562. Under these regulations, the following individuals must provide personal information and fingerprints to TSA to conduct a security threat assessment: (1) pilots who fly to or from the Maryland Three airports; and (2) airport employees who serve as security coordinators at one of these airports. A successfully-completed security threat assessment is required for a pilot to fly to or from the Maryland Three airports, or for an airport employee to serve as a security coordinator at one of these airports. TSA provides an electronic option for the submission of the Federal Aviation Administration Flight Standards District Offices vetting information and for final approval of the application.

Estimated Number of Respondents: 262.[2]

Estimated Annual Burden Hours: 1,506.5.

Dated: April 25, 2025.

Christina A. Walsh,

Paperwork Reduction Act Officer, Office of Information Technology, Transportation Security Administration.

[FR Doc. 2025–07480 Filed 4–29–25; 8:45 am]

BILLING CODE 9110–05–P

[1] The Maryland Three Airports are: College Park Airport, Potomac Airfield, and Washington Executive/Hyde Field. However, on November 30, 2022, Washington Executive/Hyde Field ceased operations following a bankruptcy sale of the airport property. Nevertheless, TSA will continue to use TSA Form 418 to collect the information as required by 49 CFR part 1562, subpart A.

[2] Since the publication of the 60-day notice, TSA adjusted the annual respondents from 369 to 262 and the annual burden hours from 2,121.75 to 1,506.5.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R4–ES–2024–N019; FXES11140400000–256–FF04E00000]

Marine Mammal Protection Act; Receipt of Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), have received applications for permits to conduct activities with marine mammal species for which the Service has jurisdiction under the Marine Mammal Protection Act (MMPA). We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

DATES: We must receive written data or comments on the applications by May 30, 2025.

ADDRESSES:

Reviewing Documents: Submit requests for copies of applications and other information submitted with the applications to Karen Marlowe (see **FOR FURTHER INFORMATION CONTACT**). All requests and comments should specify the applicant name and application number (*e.g.,* Mary Smith, ESPER0001234).

Submitting Comments: If you wish to comment, you may submit comments by one of the following methods:

- *Email (preferred method): permitsR4ES@fws.gov.* Please include your name and return address in your email message. If you do not receive a confirmation from the U.S. Fish and Wildlife Service that we have received your email message, contact us directly at the telephone number listed in **FOR FURTHER INFORMATION CONTACT**.
- *U.S. mail:* U.S. Fish and Wildlife Service Regional Office, Ecological Services, 1875 Century Boulevard, Atlanta, GA 30345 (Attn: Karen Marlowe, Permit Coordinator).

FOR FURTHER INFORMATION CONTACT: Karen Marlowe, Permit Coordinator, 404–679–7097 (telephone) or *karen_marlowe@fws.gov* (email). Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: We, the U.S. Fish and Wildlife Service, invite review and comment from the public and local, State, Tribal, and Federal agencies on applications we have received for permits to conduct certain activities with marine mammals under section 104 of the Marine Mammal Protection Act, as amended (16 U.S.C. 1361 *et seq.*), and our regulations in the Code of Federal Regulations (CFR) at 50 CFR part 18. Documents and other information submitted with the applications are available for review, subject to the requirements of the Privacy Act of 1974, as amended (5 U.S.C. 552a), and the Freedom of Information Act (5 U.S.C. 552).

Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 104(c) of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), we invite public comments on permit applications before final action is taken. With some exceptions, the MMPA prohibits certain activities with listed species unless Federal authorization is issued that allows such activities. Service regulations regarding permits for any activity otherwise prohibited by the MMPA with respect to any marine mammals are available in title 50 of the Code of Federal Regulations in part 18.

Permit Applications Available for Review and Comment

The MMPA requires that we invite public comment before issuing these permits. Accordingly, we invite local, State, Tribal, and Federal agencies, and the public to submit written data, views, or arguments with respect to these applications. The comments and recommendations that will be most useful and likely to influence agency decisions are those supported by quantitative information or studies.

Permit application No.	Applicant	Species	Location	Activity	Type of take	Permit action
PER9200956	Caribbean Stranding Network; Bayamon, PR.	West Indian manatee (*Trichechus manatus*).	Puerto Rico	Scientific research and population monitoring.	Capture; handle; photograph; measure; radio tag; collect blood and tissue samples; PIT-tag; tail-notch biopsy mark; release; and necropsy and post-mortem tissue analysis.	New.
MA773494–12	Florida Fish and Wildlife Conservation Commission; St. Petersburg, FL.	West Indian manatee (*Trichechus manatus*).	Florida	Scientific research and population monitoring.	Capture, handle, PIT-tag, freeze brand, and attach external tracking and monitoring equipment; take blood, milk, and tissue samplings; ultrasound, swab, take measurements and temperatures, photograph, restrict small seagrass plots with exclosures, replace external equipment, and salvage carcasses.	Renewal.

Public Availability of Comments

Written comments we receive become part of the administrative record associated with this action. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. All submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

Next Steps

If we decide to issue a permit to an applicant listed in this notice, we will publish a notice in the **Federal Register**.

Authority

We publish this notice under section 104(d) of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and its implementing regulations.

Mike Oetker,

Regional Director, Southeast Region.

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Office of the Secretary

[256D0102DM, DS6CS00000, DLSN00000.000000, DX6CS25; OMB Control Number 1093–0013]

Agency Information Collection Activities; Access and Consent Forms

AGENCY: Office of the Secretary, Office of the Chief Information Officer, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Office of the Chief Information Officer, Office of the Secretary, Department of the Interior are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before June 30, 2025.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to Jeffrey Parrillo, Departmental Information Collection Clearance Officer, U.S. Department of the Interior, 1849 C Street NW, Washington, DC 20240, or by email at *DOI_PRA@ios.doi.gov.* Please reference Office of Management and Budget (OMB) Control Number 1093–0013 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Jeffrey Parrillo, Departmental Information Collection Clearance Officer, U.S. Department of the Interior, 1849 C Street NW, Washington, DC 20240, or by email at *DOI_PRA@ios.doi.gov,* or by telephone at 202–208–7072. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personally identifiable information (PII) in your comment, you should be aware that your entire comment—including your PII—may be made publicly available at any time. While you can ask us in your comment to withhold your PII from public review, we cannot guarantee that we will be able to do so.

Abstract: The Department of the Interior (DOI) developed the DI–4016, Request for Individual Access to Records Protected under the Privacy Act, and DI–4017, Consent for Disclosure of Records Protected under the Privacy Act, forms for individuals to submit requests for accessing, and consenting to the disclosure of, records protected under the Privacy Act of 1974, as amended, 5 U.S.C. 552a. The DI–4016, Request for Individual Access to Records Protected under the Privacy Act, form is used by individuals seeking access to their records and any information pertaining to them that are maintained in DOI's systems of records. The DI–4017, Consent for Disclosure of Records Protected under the Privacy Act, form provides written consent of the individual to whom the record pertains when disclosing records to another person or an agency. The Privacy Act provides that ''the parent of any minor, or the legal guardian of any individual who has been declared to be incompetent due to physical or mental incapacity or age by a court of competent jurisdiction, may act on behalf of the individual.'' Therefore, these forms may also be used by a parent or legal guardian.

These forms were based on the templates provided in the OMB Memorandum M–21–04, Modernizing Access to and Consent for Disclosure of Records Subject to the Privacy Act, issued on November 12, 2020, which implements the requirements of the Creating Advanced Streamlined Electronic Services for Constituents Act of 2019 (''CASES Act''). The CASES Act was issued in an effort to modernize the Privacy Act request process by requiring agencies to accept access and consent forms from individuals properly identity-proofed and authenticated remotely through a digital service option in addition to an agency's existing process. The CASES Act also requires the forms to be posted on the agency website's privacy program page and the website updated to include instructions on how individuals may submit requests digitally.

Title of Collection: Access and Consent Forms.

OMB Control Number: 1093–0013.

Form Number: DI–4016 and DI–4017.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Individuals or households.

Total Estimated Number of Annual Respondents: 1,325.

Total Estimated Number of Annual Responses: 1,325.

Estimated Completion Time per Response: 15 minutes.

Total Estimated Number of Annual Burden Hours: 331 hours.

Respondent's Obligation: Voluntary.

Frequency of Collection: Once.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Jeffrey Parrillo,

Departmental Information Collection Clearance Officer.

AGENCY: Office of the Secretary, Office of Acquisition and Property Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Office of Acquisition and Property Management are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before June 30, 2025.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to Jeffrey Parrillo, 1849 C Street NW, Washington, DC 20240; or by email to *PRA-DOI@ios.doi.gov.* Please reference OMB Control Number 1084–0010 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, Jeffrey Parrillo, 1849 C Street NW, Washington, DC 20240; by email to *PRA-DOI@ios.doi.gov;* or by telephone at 202–208–7072. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of

information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Regulations at 42 U.S.C. 4601, promulgated under the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Uniform Relocation Act), Public Law 91–646, as amended, require Federal agencies acquiring real estate interests to provide relocation benefits to individuals and businesses displaced as a result of the acquisition. Forms DI–381, Claim For Relocation Payments—Residential, and DI–382, Claim For Relocation Payments—Nonresidential, along with the associated Schedules A, B, C, and D, permit the applicant to present allowable moving expenses and certify occupancy status, after having been displaced because of Federal acquisition of their real property.

The information required is obtained through application made by the displaced person or business to the funding agency for determination as to the specific amount of monies due under the law. The forms, through which application is made, require specific information since the Uniform Relocation Assistance and Real Property Acquisition Act allows for various amounts based upon each actual circumstance. Minor revisions were made to allow for proper documentation of eligible costs associated with incidental expenses incurred by the property owners in furtherance of the acquisition which are unrelated to replacement housing. Failure to make application to the agency would eliminate any basis for payment of claims.

Title of Collection: Claim for Relocation Payments—Residential, DI–381 and Claim for Relocation Payments—Nonresidential, DI–382.

OMB Control Number: 1084–0010.

Form Number: Forms DI–381 and DI–382, associated Schedules A, B, C, and D.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Individuals and businesses who are displaced because of Federal acquisitions of their real property.

Total Estimated Number of Annual Respondents: 24.

Total Estimated Number of Annual Responses: 24.

Estimated Completion Time per Response: 50 minutes.

Total Estimated Number of Annual Burden Hours: 20 hours.

Respondent's Obligation: Required to Obtain or Retain a Benefit.

Frequency of Collection: As needed.

Total Estimated Annual Nonhour Burden Cost: This collection does not have a nonhour cost burden.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Signed:

Jeffrey Parrillo,

Departmental Information Collection Clearance Officer.

Notice of Intended Repatriation: Los Angeles County Museum of Natural History, Los Angeles, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Los Angeles County Museum of Natural History (LACMNH) intends to repatriate certain cultural items that meet the definition of unassociated funerary objects and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 30, 2025.

ADDRESSES: Amy E. Gusick, Los Angeles County Museum of Natural History, 900 Exposition Boulevard, Los Angeles, CA 90007, telephone (213) 763–3370, email *agusick@nhm.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the LACMNH, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of four lots of cultural items have been requested for repatriation. The four lots of unassociated funerary objects are lithics, faunal bones, shells, and flora. The unassociated funerary objects were removed from the Vasquez Rocks (CA–LAN–361) site in northern Los Angeles County, CA. Owners of the land on which the site now rests, Dr. Ascher and family, spent many years digging at the site in the mid-1900s. In 1966, the location was bulldozed by vandals. Between 1967–1970, LACNHM curator Dr. Charles Rozaire, as part of the California State University, Northridge Archaeological School, held field schools at the site, where students and supervisors excavated the bulldozed site and recovered artifacts and bone originally identified as faunal (non-human) bone. As a result of the looting and bulldozing, the artifacts and bones recovered from the site were not in original context and were highly fragmented.

In consultation with representatives of the Yuhaaviatam of San Manuel Nation (also known as the San Manuel Band of Mission Indians) and non-federally recognized California Tribes including the Fernandeño Tataviam Band of Mission Indians, in 2021, LACMNH conducted a detailed bioarcheological assessment of the bone recovered from CA–LAN–361 resulting in the identification and separation of human remains from these cultural items.

Based on archaeological context and information learned from consultations, these unassociated funerary objects are Native American. Based on artifact assemblage typologies, obsidian hydration readings and one radiocarbon date, archaeological evidence demonstrates that Vasquez Rocks (LAN–361) was used as a cemetery between 2315 BCE–79 BCE (Caruso 1988, Garza 2012, King et al. 1974), the Middle Holocene Period. Archaeologists have asserted that Serrano and Tataviam peoples have continuously occupied the

San Gabriel Mountains and the surrounding areas for up to 5,000–6,000 years BP. Linguistic sources demonstrate a strong continuous shared group identity between those people using Vasquez Rocks roughly 3000 years ago and modern Native Americans of Serrano and Tataviam descent. Ethnographic evidence and Traditional Knowledge document the Agua Dulce and Sierra Pelona regions as home to Serrano and Tataviam peoples since time immemorial.

Determinations

The LACMNH has determined that:

- The four lots of unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.
- There is a reasonable connection between the cultural items described in this notice and the Morongo Band of Mission Indians, California and the Yuhaaviatam of San Manuel Nation (*previously* listed as San Manuel Band of Mission Indians, California).

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the LACMNH must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The LACMNH is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: April 15, 2025

[NPS–WASO–NAGPRA–NPS0040022; PPWOCRADN0–PCU00RP14.R50000]

Notice of Inventory Completion Amendment: Hood Museum of Art, Dartmouth College, Hanover, NH

AGENCY: National Park Service, Interior.

ACTION: Notice; amendment.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Hood Museum of Art, Dartmouth College has amended a notice of inventory completion published in the **Federal Register** on May 2, 1996. This notice amends the Indian Tribes or Native Hawaiian organizations with cultural affiliation.

DATES: Repatriation of the human remains may occur on or after May 30, 2025.

ADDRESSES: Jami C. Powell, Associate Director of Curatorial Affairs & Curator of Indigenous Art, Hood Museum of Art, 6 East Wheelock Street Hanover, NH 03755, telephone (603) 646.2822, email *hood.NAGPRA@dartmouth.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Hood Museum of Art, Dartmouth College, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Amendment

This notice amends the determination of cultural affiliation published in a notice of inventory completion in the **Federal Register** (61 FR 19635, May 2, 1996). Repatriation of the human remains in the original notice of inventory completion has not occurred.

Determinations

The Hood Museum of Art, Dartmouth College has determined that:

- There is a connection between the human remains described in the original notice and the Miccosukee Tribe of Indians; Poarch Band of Creek Indians; Seminole Tribe of Florida; The Muscogee (Creek) Nation; and The Seminole Nation of Oklahoma.

Requests for Repatriation

Written requests for repatriation of the human remains in the original notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in the original notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Hood Museum of Art, Dartmouth College must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Hood Museum of Art, Dartmouth College is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Notice of Inventory Completion: Mercyhurst University, Erie, PA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), Mercyhurst University has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after May 30, 2025.

ADDRESSES: Anne Marjenin, Mercyhurst University, 501 East 38th Street, Erie, PA 16546, telephone (814) 824–2012, email *nagpra@mercyhurst.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of Mercyhurst University, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. On an unknown date, the individual (VM–090) was removed from an unknown geographic location in Florida. The individual may have been removed from or near a mound. On an unknown date, the individual was obtained by Raymond C. Vietzen (1907–1995). Vietzen, an avocational archaeologist, collector, and author, established the Indian Ridge Museum in Elyria, Ohio, and the Archaeological Society of Ohio (formerly the Ohio Indian Relic Collectors Society). The Indian Ridge Museum, founded in the 1930s, served as Vietzen's laboratory and repository, and it remained in operation until the mid-1990s. After Vietzen's death, the facility fell into disrepair, and most of the items he had acquired and housed at the museum were sold. In 1998, the Ohio Historical Society (presently the Ohio History Connection) removed ancestral human remains and some of the remaining items from the facility and temporarily housed them at the Ohio Historical Society. In October of 2003, these remains were transferred from the Ohio Historical Society to Mercyhurst College (presently Mercyhurst University).

While there is no record regarding potentially hazardous substances having been used to treat the human remains, an unidentified adhesive is present. It is unknown when the adhesive was applied. The human remains have also been treated with an unidentified preservative coating, consolidant, or sealant. It is unknown when this unidentified substance was applied.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains described in this notice.

Determinations

Mercyhurst University has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- There is a connection between the human remains described in this notice and the Miccosukee Tribe of Indians; Seminole Tribe of Florida; and The Seminole Nation of Oklahoma.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, Mercyhurst University must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. Mercyhurst University is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Intended Repatriation: University of California, Berkeley, Berkeley, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of California, Berkeley intends to repatriate certain cultural items that meet the definition of unassociated funerary objects, sacred objects, and/or objects of cultural patrimony and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 30, 2025.

ADDRESSES: Alexandra Lucas, University of California, Berkeley, 200 California Hall, Berkeley, CA 94720, telephone (510) 570–0964, email *nagpra-ucb@berkeley.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of California, Berkeley, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of 168 lots of cultural items have been requested for repatriation. Between 1899 and 1962, 168 lots of cultural items were removed from multiple locations in Sacramento County, California by various individuals and later accessioned into the University of California, Berkeley's Museum of Anthropology (now known as Phoebe A. Hearst Museum of Anthropology) between 1904 and 1962.

Of the cultural items requested, 123 lots are unassociated funerary

belongings removed from CA–SAC–47, CA–SAC–92, CA–SAC–101, CA–SAC–132, CA–SAC–207, Ledbedder Mound, Franklin, unknown burial areas, and the Sacramento River. The unassociated funerary belongings include beads, cups, charmstones, projectile points, stone tools, lithics, sinkers, worked bone, ornaments, pendants, faunal remains, pipes, and ground stone.

Of the cultural items requested, 45 lots are objects of cultural patrimony removed from CA–SAC–137, CA–SAC–142, CA–SAC–143, Linda Creek, Loupe Ranch, and Sylvan. The objects of cultural patrimony include ground stone, mullers, hammerstones, baked clay, awls, lithics, scrapers, and faunal remains.

Collections and collection spaces at the Phoebe A Hearst Museum of Anthropology were treated with substances for preservation and pest control, some potentially hazardous. No records have been found to date at the Museum to indicate whether or not chemicals or natural substances were used prior to 1960.

Determinations

The University of California, Berkeley has determined that:

- The 123 unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.
- The 45 objects of cultural patrimony described in this notice have ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.
- There is a reasonable connection between the cultural items described in this notice and the Wilton Rancheria, California.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the University of California, Berkeley must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The University of California, Berkeley is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Inventory Completion: University of Florida, Florida Museum of Natural History, Gainesville, FL

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of Florida, Florida Museum of Natural History has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2025.

ADDRESSES: Megan Fry, University of Florida, Florida Museum of Natural History, 1659 Museum Road, Gainesville, FL 32611, telephone (352) 273–1921, email *megan.fry@floridamuseum.ufl.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of Florida, Florida Museum of Natural History, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, two individuals have been identified from the Unknown Name (8SO16), in Sarasota County, Florida. The 196 associated funerary objects are pottery, lithics, shell, and fossilized faunal bone. The site is located in Englewood, Sarasota County, Florida. It is an unnamed site that contains a shell midden that lies on the shore near Palm Grove Ave. This site was excavated by J. M. Goggin. The midden was referred to Goggin by a local, Fred Kruea. This collection was a part of a bulk transfer from the University of Florida Anthropology department in 1971. The artifacts consist of pottery, lithics, and fossilized faunal bone. The Florida Master Site File (FMSF) has the site listed as being subsumed by 8SO23, Paulsen Point site. That site is described as a ''rare multi-component midden''. Immediately adjacent to the 8SO16/8SO23 site is Paulsen Cemetery 8SO1360, a prehistoric cemetery site.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains and associated funerary objects described in this notice to be associated with the Seminole Tribe of Florida.

Determinations

The University of Florida, Florida Museum of Natural History has determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- The 196 objects described in this notice are reasonably believed to have

been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.

• There is a connection between the human remains and associated funerary objects described in this notice and the Seminole Tribe of Florida.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the University of Florida, Florida Museum of Natural History must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The University of Florida, Florida Museum of Natural History is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Intended Repatriation: California State University, Los Angeles, Los Angeles, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the California State University, Los Angeles intends to repatriate a certain cultural item that meets the definition of an object of cultural patrimony and that has a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural item in this notice may occur on or after May 30, 2025.

ADDRESSES: Gregorio Pacheco, California State University, Los Angeles, 5151 State University Drive, Los Angeles, CA 90032, telephone (323) 343–2002, email *gpache15@calstatela.edu*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the California State University Los Angeles, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of one cultural item has been requested for repatriation. The one object of cultural patrimony is a willow conical basket with a leather tip. Despite an exhaustive search of available records, no documentation has been found regarding its geographical origin, collection history, acquisition details, or other relevant information about the basket. As a result, we consulted with Dr. Jan Timbrook, a basketry specialist, to examine the object. Dr. Timbrook provided her expertise to help identify potential culturally affiliated Tribes based on the basket's style, type, and materials. She concluded that the willow conical basket with a leather tip may have originated from the Arizona region and could be associated with either the Havasupai or Paiute Tribes.

Determinations

California State University, Los Angeles has determined that:

• The one object of cultural patrimony described in this notice has ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.

• There is a reasonable connection between the cultural item described in this notice and the Havasupai Tribe of the Havasupai Reservation, Arizona.

Requests for Repatriation

Additional, written requests for repatriation of the cultural item in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural item in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the California State University Los Angeles must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural item are considered a single request and not competing requests. The California State University Los Angeles is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: April 15, 2025.

[NPS–WASO–NAGPRA–NPS0040024; PPWOCRADN0–PCU00RP14.R50000]

Notice of Intended Repatriation: Peabody Museum of Archaeology and Ethnology, Harvard University, Cambridge, MA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Peabody Museum of Archaeology and Ethnology, Harvard University (PMAE) intends to repatriate certain cultural items that meet the definition of objects

of cultural patrimony and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 30, 2025.

ADDRESSES: Deanna Byrd, Peabody Museum of Archaeology and Ethnology, Harvard University, 11 Divinity Avenue, Cambridge, MA 02138, telephone (617) 384–0672, email *deannabyrd@fas.harvard.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the PMAE, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of two cultural items have been requested for repatriation. The two objects of cultural patrimony are one medicine rattle and one headdress belonging to Chief Yellow Calf, Northern Arapaho. Joseph Swaim acquired these items from Chief Yellow Calf of the Northern Arapaho Tribe of the Wind River Reservation, Wyoming in 1931. Swaim's son Loring T. Swaim donated these cultural items to the PMAE in 1957.

Determinations

The PMAE has determined that:

- The two objects of cultural patrimony described in this notice have ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.
- There is a reasonable connection between the cultural items described in this notice and the Northern Arapaho Tribe of the Wind River Reservation, Wyoming.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the PMAE must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The PMAE is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: April 15, 2025

Melanie O'Brien,

Manager, National NAGPRA Program.

Notice of Intended Repatriation: History Colorado, Denver, CO

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), History Colorado intends to repatriate certain cultural items that meet the definition of sacred objects and objects of cultural patrimony and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 30, 2025.

ADDRESSES: Chance Ward, History Colorado, 1200 N Broadway, Denver, CO 80203, telephone (303) 866–5751, email *chance.ward@state.co.us.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of History Colorado, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of one cultural item has been requested for repatriation. The sacred object/object of cultural patrimony is a headdress that belonged to Chief Black Coal of the Northern Arapaho Tribe. The headdress was taken from the Wind River reservation in Wyoming by Major Allen H. Jackson, when he was stationed at Fort Washakie in about 1882–1890. Major Jackson then gave the headdress to his daughter, Mary Jackson-English. Mary donated the headdress permanently to History Colorado (then the Colorado Historical Society) in 1968. The headdress was tested for hazardous materials in 2010 with results showing low amounts of bromine, arsenic, lead, and mercury.

Determinations

History Colorado has determined that:

- The one sacred object/object of cultural patrimony described in this notice are, according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization, specific ceremonial objects needed by a traditional Native American religious leader for present-day adherents to practice traditional Native American religion, and have ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision).
- There is a clear connection between the cultural items described in this notice and the Northern Arapaho Tribe of the Wind River Reservation, Wyoming.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, History Colorado must determine the most appropriate requestor prior to

repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. History Colorado is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Inventory Completion: Santa Barbara Museum of Natural History, Santa Barbara, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Santa Barbara Museum of Natural History, has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after May 30, 2025.

ADDRESSES: Luke Swetland, Santa Barbara Museum of Natural History, 2559 Puesta del Sol, Santa Barbara, CA 93105, telephone (805) 682–4711, email *lswetland@sbnature2.org*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Santa Barbara Museum of Natural History, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. The human remains are four cranial fragments. These cranial fragments were collected by Dr. Albert Chase, circa 1994, on a cattle ranch belonging to Frank Wylie near North Fork, Madera County, CA. These remains were donated to the Santa Barbara Museum of Natural History in 1996.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains described in this notice.

Determinations

The Santa Barbara Museum of Natural History has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- There is a connection between the human remains described in this notice and the Big Sandy Rancheria of Western Mono Indians of California; Northfork Rancheria of Mono Indians of California; and the Tule River Indian Tribe of the Tule River Reservation, California.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Santa Barbara Museum of Natural History must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The Santa Barbara Museum of Natural History is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Notice of Inventory Completion: University of Tennessee, Department of Anthropology, Knoxville, TN, and Kansas State Historical Society, Topeka, KS

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of Tennessee, Department of Anthropology (UTK) and the Kansas State Historical Society (KSHS) have completed an inventory of human remains and associated funerary objects and have determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2025.

ADDRESSES: Dr. Ellen Lofaro, University of Tennessee, 5723 Middlebrook Pike, Knoxville, TN 37921, telephone (865) 974–3370, email *nagpra@utk.edu* and Dr. Nicole Klarmann, Kansas State Historical Society, 6425 SW 6th Avenue, Topeka, KS 66615, telephone (785) 272–8681, email *nikki.klarmann@ks.gov*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of UTK and KSHS, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, two individuals have been identified. These individuals were removed from the Kansas Monument site, 14RP1, in

Republic County, KS at an unknown date by an unknown individual. The first known excavations of the 14RP1 site occurred in 1926 and many additional excavations occurred after this date. The 14RP1 site is a known Pawnee village site occupied by the Kitkahahki Band. The 14RP1 site dates to circa 1770–1830 CE with possible earlier occupations. Based on a past pattern of practice, it is likely that William Bass brought these human remains with him from the University of Kansas when he began working at UTK in 1971.

The 22 associated funerary objects are pieces of sandstone and chert. In March of 2024, loaned collections from site 14RP1 were returned to KSHS by an emeritus professor from the University of Kansas. A small bag of lithics from the 'burial and burial area' was included (UBS 2024–02). A graduate student had analyzed these items for a thesis but failed to notify the professor of their context and location after analysis. They were later found and returned to KSHS to be included with other 14RP1 items. Human remains from this site have already been repatriated by KSHS. To our knowledge, no potentially hazardous substances have been used to treat any of the associated funerary objects.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains and associated funerary objects described in this notice. Cultural affiliation between the human remains and Indian Tribes listed in this notice was established via archaeological, geographical, and historical information, oral tradition, and Native American Traditional knowledge/Expert Opinion. Republic County, KS is part of the aboriginal lands of Kaw Nation, Oklahoma and Pawnee Nation of Oklahoma.

Determinations

UTK and KSHS have determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- The 22 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Kaw Nation, Oklahoma and the Pawnee Nation of Oklahoma.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the UTK and KSHS must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The UTK and KSHS are responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Notice of Inventory Completion: California State University Northridge, Northridge, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), California State University Northridge (CSUN) has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after May 30, 2025.

ADDRESSES: Dayle Bingham, NAGPRA Coordinator, CSUN1811 Nordoff Street, Northridge, CA 91330, telephone (818) 677–6355, email *dayle.bingham@csun.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the CSUN, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, 28 individuals have been identified. No associated funerary objects are present. The individuals were removed from the Vasquez Rocks (CA–LAN–361, CA–LAN–369, CA–LAN–360, CA–LAN–373) sites in northern Los Angeles County, CA. These sites were originally located on land owned by Dr. Ascher, where his family regularly dug up cultural material throughout the mid-1900s. Further vandalization occurred in 1966 where bulldozers were used through parts of the sites. CSUN Archaeological Field School Director and Los Angeles County Natural History Museum (LACNHM) curator Dr. Charles Rozaire held field schools at these sites during the years 1967–1970. At these field schools, students under supervision, excavated and removed cultural items and ancestral human remains. Due to the history of vandalism and previous amateur excavations conducted at these sites, the context of the recovered cultural items and ancestral remains were unknown, incomplete, or partially known and documented.

In 2012, CSUN Anthropology Graduate student Sebastian Cristobal Garza conducted a bioarchaeological study of the ancestral remains housed at CSUN excavated from CA–LAN–361. Between 2012–2018, further bioarchaeological assessments were conducted to aid in the identification of human remains within the faunal material excavated from these Vasquez Rocks associated sites. The MNI for CA–LAN–361 is 20 individuals; three neonates (0–1 year), 11 children and adolescents (1–19 years), and six adults (20+ years). MNI for CA–LAN–360 is one, unknown age. MNI for CA–LAN–

369 is five, unknown ages. MNI for CA–LAN–373 is one, unknown age. All human remains present are highly fragmented from previous vandalism including bulldozing and looting, exposure to the elements, and possible cremation heat exposure.

Archaeological evidence shows that Vasquez Rocks and associated sites located in Agua Dulce (CA–LAN–361, CA–LAN–369, CA–LAN–360, CA–LAN–373) were used as a cemetery complex between 2315 BCE–79 BCE (Caruso 1988, Garza 2012, King et al. 1974). Research has shown that Serrano and Tataviam peoples have continuously occupied the San Gabriel Mountains and the surrounding areas for 5,000–6,000 years BP. Linguistic evidence supports the notion of a continuous shared group identity between those people using Vasquez Rocks roughly 3000 years ago and modern Native Americans of Serrano and Tataviam descent. Using ethnographic evidence and Traditional Knowledge, the Serrano and Tataviam peoples have known the area of the Agua Dulce region as a part of their homeland since time immemorial.

Human remains representing, at least, one individual has been identified. No associated funerary objects are present. The individual was removed from Hughes-Elizabeth Lakes School, Lake Hughes, Los Angeles County, CA. This was originally identified as a human bone fragment during an archaeological salvage and survey excavation in 1969 by Herrick Hanks and L. Hubernack on behalf of California State University Northridge Archaeological Research Center at the time. Since then, this human bone fragment has been stored on campus and confirmed to be human. No other human remains are present from this salvage survey excavation.

This excavation, as noted, was salvage survey work for Hughes-Elizabeth Lakes School, Lake Hughes in Los Angeles County, where construction on school grounds was already underway. According to reports, bulldozers on site uncovered archaeological material near school building, and Herrick Hanks and L. Hubernack from CSUN were called upon to assist. Since being brought back to CSUN campus in 1969 for storage, no further research or archaeological assessments have been conducted.

Using archaeological and geographical information, the human remains are determined to be Native American. Archaeologists have asserted that Serrano and Tataviam peoples have continuously occupied the areas surrounding the Antelope Valley as well as the San Gabriel Mountains for 5,000–6,000 years BP. Serrano Traditional Knowledge identifies Lake Hughes as home to Serrano peoples since time immemorial.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains described in this notice.

Determinations

The CSUN has determined that:

- The human remains described in this notice represent the physical remains of 28 individuals of Native American ancestry.
- There is a connection between the human remains described in this notice and the Morongo Band of Mission Indians, California and the Yuhaaviatam of San Manuel Nation (*previously* listed as San Manuel Band of Mission Indians, California).

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the CSUN must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The CSUN is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

[NPS–WASO–NAGPRA–NPS0040023; PPWOCRADN0–PCU00RP14.R50000]

Notice of Intended Repatriation: Berkshire Museum, Pittsfield, MA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Berkshire Museum intends to repatriate a certain cultural item that meets the definition of an object of cultural patrimony and that has a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural item in this notice may occur on or after May 30, 2025.

ADDRESSES: Jason Vivori, Berkshire Museum, 39 South Street, Pittsfield, MA 01201, telephone (413) 443–7171 Ext. 341, email *jvivori@berkshiremuseum.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Berkshire Museum, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of one cultural item has been requested for repatriation. The one object of cultural patrimony is a splint basket. The Berkshire Museum, in consultation with the Stockbridge Munsee Community, has identified a splint basket and cover, item number C1987.3a,b. residing in the museum's collection which satisfies the definition of cultural patrimony. The constructive methodologies employed in weaving the basket, as well as the potato stamped design adorning its perimeter, are congruent with the cultural practices of Stockbridge-Munsee Mohican ancestors preserved in other affiliated examples of Mohican basketry traditions during the 1800s. Furthermore, museum documentation designates this basket as a ''Stockbridge Mohican splint basket and cover, circa 1860.'' Therefore, there is reasonable basis that the object is culturally affiliated to the Stockbridge-

Munsee people, that the type of object was collectively harvested, and that the museum cannot establish right of possession based on lack of documentation indicating that the free, prior, and informed consent of the Mohican maker was obtained.

Determinations

The Berkshire Museum has determined that:

- The one object of cultural patrimony described in this notice has ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.
- There is a reasonable connection between the cultural item described in this notice and the Stockbridge Munsee Community, Wisconsin.

Requests for Repatriation

Additional, written requests for repatriation of the cultural item in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural item in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Berkshire Museum must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural item are considered a single request and not competing requests. The Berkshire Museum is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Inventory Completion: University of California, Berkeley, Berkeley, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of California, Berkeley has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2025.

ADDRESSES: Alexandra Lucas, University of California, Berkeley, 200 California Hall, Berkeley, CA 94720, telephone (510) 570–0964, email *nagpra-ucb@berkeley.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of California, Berkeley, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, ancestral remains representing at least 1,299 individuals have been reasonably identified. The 17,785 lots of associated funerary objects include abraders, acorns, faunal remains, arrow straighteners, projectile points, lithics, ash, bone tools, baked clay, ground stone, basket impressions, basketry, beads, worked bone, samples, botanicals, minerals, fragments, stone tools, vessels, fasteners, pipes, ornaments, jewelry, weapons, cordage, figurines, whistles, fishing implements, worked stone, mullers, piercing tools, soil, porcelain, shell, and pottery.

Beginning in at least 1890 and through to 1994, various individuals removed at minimum, 1,299 ancestors and 17,785 lots of associated funerary objects from the following sites and areas in Sacramento County, California: CA–SAC–1, CA–SAC–10, CA–SAC–100, CA–SAC–103, CA–SAC–104, CA–SAC–105, CA–SAC–106, CA–SAC–107, CA–SAC–109, CA–SAC–11, CA–SAC–111, CA–SAC–112, CA–SAC–113, CA–SAC–115, CA–SAC–116, CA–SAC–117, CA–SAC–119, CA–SAC–120, CA–SAC–121, CA–SAC–122, CA–SAC–124, CA–SAC–125, CA–SAC–126, CA–SAC–134, CA–SAC–145, CA–SAC–151, CA–SAC–152, CA–SAC–158, CA–SAC–161, CA–SAC–162, CA–SAC–165, CA–SAC–168, CA–SAC–187, CA–SAC–188, CA–SAC–19, CA–SAC–191, CA–SAC–2, CA–SAC–20, CA–SAC–21, CA–SAC–211, CA–SAC–24, CA–SAC–240, CA–SAC–247, CA–SAC–248, CA–SAC–25, CA–SAC–262, CA–SAC–263, CA–SAC–265, CA–SAC–35, CA–SAC–43, CA–SAC–45, CA–SAC–49, CA–SAC–52, CA–SAC–53, CA–SAC–54, CA–SAC–56, CA–SAC–59, CA–SAC–6, CA–SAC–60, CA–SAC–62, CA–SAC–63, CA–SAC–64, CA–SAC–66, CA–SAC–68, CA–SAC–7, CA–SAC–71, CA–SAC–72, CA–SAC–73, CA–SAC–75, CA–SAC–8, CA–SAC–83, CA–SAC–84, CA–SAC–85, CA–SAC–86, CA–SAC–87, CA–SAC–88, CA–SAC–9, CA–SAC–91, CA–SAC–93, CA–SAC–94, CA–SAC–95, CA–SAC–96, Sacramento Valley, Delta, Sacramento County, Thistle Mound, Tyler Island, and 16 unspecified locations in Sacramento County documented within museum records under: CA–SAC–NL–10 (Dalton site 1), CA–SAC–NL–12 (Dalton site 2), CA–SAC–NL–14 (Dalton site 3), CA–SAC–NL–17, CA–SAC–NL–19, CA–SAC–NL–20, CA–SAC–NL–3 (Freeport District), CA–SAC–NL–4, CA–SAC–NL–5 Walnut Grove, CA–SAC–NL–6 (Rosebud Ranch), CA–SAC–NL–7 (Dalton Mound), CA–SAC–NL–8 (Tyler Island). The 1,299 ancestors and 17,785 lots of associated funerary objects were accessioned by the University of California, Berkeley's Museum of Anthropology (Phoebe A. Hearst Museum of Anthropology) between 1903 and 1994.

Collections and collection spaces at the Phoebe A Hearst Museum of Anthropology were treated with substances for preservation and pest control, some potentially hazardous. No records have been found to date at the Museum to indicate whether or not chemicals or natural substances were used prior to 1960.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and

associated funerary objects described in this notice.

Determinations

The University of California, Berkeley has determined that:

- The human remains described in this notice represent the physical remains of, at minimum, 1,299 individuals of Native American ancestry.
- The 17,785 lots of objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a reasonable connection between the human remains and associated funerary objects described in this notice and the Buena Vista Rancheria of Me-Wuk Indians of California; Ione Band of Miwok Indians of California; Jackson Band of Miwuk Indians; Shingle Springs Band of Miwok Indians, Shingle Springs Rancheria (Verona Tract), California; United Auburn Indian Community of the Auburn Rancheria of California; and the Wilton Rancheria, California.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the University of California, Berkeley must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The University of California, Berkeley is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Notice of Inventory Completion: University of California, Berkeley, Berkeley, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of California, Berkeley has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2025.

ADDRESSES: Alexandra Lucas, University of California, Berkeley, 200 California Hall, Berkeley, CA 94720, telephone (510) 570–0964, email *nagpra-ucb@berkeley.edu*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of California, Berkeley, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, 1,382 individuals have been identified. 7,662 associated funerary objects have been identified.

Between 1939 and 1956, ancestral remains representing, at least, 62 individuals (one missing) and 1,057 associated funerary belongings were removed from 12 Fresno County sites by various individuals and subsequently accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum). The ancestors and their associated funerary belongings were removed from the following sites in Fresno County: CA–Fre–27, CA–Fre–30, CA–Fre–42, CA–Fre–45, CA–Fre–47, CA–Fre–48, CA–Fre–49, CA–Fre–67, CA–Fre–73, CA–Fre–74, CA–Fre–103, and CA–Fre–125. The 1,057 associated funerary belongings are abraders, acorn anvils, awls, baked clay objects, bangles, beads (one missing), blades, bone tools, botanical remains, bottle fragments, bowls, cartridges (ammunition cases), charmstones, choppers, cores, corks (stoppers), dice, drills, faunal remains (four missing), flakers, flakes, glass shards, gravers, ground stone, hammerstones, knives, mammal bones, manos, metates, mineral and rock samples, mortars, nails, ornaments, paint, pendants, pestles, pins, potsherds, projectile points, rings, saws, scrapers, soil samples (two missing), vessels, weights, worked bone, worked shell, and worked stone.

Between 1899 and 1965, ancestral remains representing, at least, 475 individuals (two missing) and 2,163 associated funerary belongings were removed from 24 sites in Kern County by various individuals and subsequently accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum). The ancestors and their associated funerary belongings were removed from the following sites in Kern County: CA–Ker–30, CA–Ker–31, CA–Ker–33, CA–Ker–34, CA–Ker–35, CA–Ker–36, CA–Ker–39, CA–Ker–40, CA–Ker–41, CA–Ker–45, CA–Ker–46, CA–Ker–47, CA–Ker–49, CA–Ker–51, CA–Ker–52, CA–Ker–53, CA–Ker–74, and seven unspecified locations (identifiable within museum records under CA–Ker–NL–3, CA–Ker–NL–4, CA–Ker–NL–5, CA–Ker–NL–6, CA–Ker–NL–10, CA–Ker–NL–11, and CA–Ker–NL–14). The 2,163 associated funerary belongings are abraders, arrow straighteners, awls, bags, baked clay and baked clay objects, basket impressions, basketry and baskets (one missing), beads (13 missing), buttons, blades, bone tools and tubes, botanical remains, bowls, brushes, charcoal samples, charmstones, cores, dishes, drills, ear ornaments, faunal remains, flakers, flakes, ground stone, hammerstones, harpoons, knives, labrets, mammal bones, mats, metates, mineral and rock samples, mortars, mullers, nets, ornaments, paint and painting supplies, pendants, pestles, pins, potsherds and pottery, projectile points (one missing), rings, ropes, scrapers, shell samples, soil samples (18 missing), spearheads, stone axes (one missing), stone drills, textile samples, vessels, whistles, wooden

objects, worked bone, worked shell, and worked stone.

In June 1939, 43 associated funerary belongings were removed from 15 Kings County sites CA–Kin–1, CA–Kin–2, CA–Kin–4, CA–Kin–6, CA–Kin–8, CA–Kin–10, CA–Kin–11, CA–Kin–12, CA–Kin–13, CA–Kin–15, CA–Kin–16, CA–Kin–17, CA–Kin–18, CA–Kin–19, and CA–Kin–20 by various individuals and subsequently accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum). The 43 associated funerary belongings are beads, buttons, faunal remains, flakes, knives, manos, mineral and rock samples, mortars, painting supplies, pendants, potsherds, projectile points, rings, shell samples, and soil samples.

In June and July of 1939, ancestral remains representing, at least, four individuals and 20 associated funerary belongings were removed from Madera County sites CA–Mad–3, CA–Mad–4, CA–Mad–11, and one unknown site (known by CA–Mad–NL–1 in museum records) by various individuals and subsequently accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum). The 20 associated funerary belongings are awls, baked clay objects, flakes, manos, metates, mineral and rock samples, mortars, pestles, potsherds, projectile points, and worked stone.

In April 1928, ancestral remains representing, at least, 11 individuals were removed from two unspecified Mariposa County sites (documented as CA–Mrp–NL–1 and CA–Mrp–NL–2 within museum records), by various individuals and subsequently accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum).

In 1939 and 1956, ancestral remains representing, at least, seven individuals and 12 associated funerary belongings were removed from Merced County sites CA–Mer–7, CA–Mer–45, CA–Mer–48, CA–Mer–59, and CA–Mer–69, by various individuals and subsequently accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum). The 12 associated funerary belongings are beads, flakes, hammerstones, manos, metates, mineral and rock samples, mortars, ornaments, pestles, and projectile points.

Between 1899 and 1975, ancestral remains representing, at least, 750 individuals (one missing) and 3,731 associated funerary belongings were removed from 20 San Joaquin County sites by various individuals and subsequently accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum). The ancestors and their associated funerary belongings were removed from CA–SJo–3, CA–SJo–4, CA–SJo–5, CA–SJo–6, CA–SJo–9, CA–SJo–10, CA–SJo–42, CA–SJo–43, CA–SJo–56, CA–SJo–68, CA–SJo–69, CA–SJo–70, CA–SJo–83, CA–SJo–94, CA–SJo–105, CA–SJo–145, CA–SJo–148 and three unknown sites (documented as CA–SJo–NL–3, CA–SJo–NL–4, CA–SJo–NL–5 in museum records). The 3,731 associated funerary belongings are abraders, acorn anvils, awls, baked clay objects (one missing), bangles, basket impressions, baskets, beads (two missing), bifaces, blades (one missing), bone samples, bone tools, bone tubes, botanical remains, bowls, charmstones (one missing), choppers, cooking stones, cores, dice, dishes, drills, ear ornaments, faunal remains (nine missing), figurines, fishhooks, flakers, flakes (two missing), glass shards, gorge hooks, gorgets/ornaments (one missing), gouges, ground stone (one missing), hammerstones, harpoons, knives, manos, metates, mineral and rock samples (eight missing), mortars, mullers, needles, ornaments (nine missing), paint, palettes, pendants (two missing), pestles (one missing), pins, pipes, projectile points (nine missing), rings, saws, scrapers, shell beads, shell samples, slate pencils, soil samples, spearheads (one missing), spoons, Stockton curves (three missing), stone tools, weights, whistles, worked bone, worked shell, and worked stone (one missing).

Between 1912 and 1961, ancestral remains representing, at least, 24 individuals and 593 associated funerary belongings were removed from seven Stanislaus County sites CA–Sta–10, CA–Sta–26, CA–Sta–27, CA–Sta–28, CA–Sta–29, CA–Sta–44 (also known by CA–Sta–45), and one unknown site (documented as CA–Sta–NL–1 within museum records), by various individuals and accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum). The 593 associated funerary belongings are awls, baked clay objects, beads, bifaces, blades, bone tools, botanical remains, charmstones, choppers, cooking stones, cores, faunal remains (one missing), flakes, flakes, hammerstones, knives, manos, mineral and rock samples, mortars, pendants, pestles, pins, pipes, projectile points, scrapers, slate pencils, soil samples, stone picks, stone tools, weights, worked bone, and worked stone (one missing).

Between 1904 and 1964, ancestral remains representing, at least, 49 individuals and 43 associated funerary belongings were removed from seven Tulare County sites CA–Tul–18, CA–Tul–151, and five unknown sites (documented as CA–Tul–NL–1, CA–Tul–NL–2, CA–Tul–NL–3, CA–Tul–NL–4, and CA–Tul–NL–5 within museum records), by various individuals and accessioned into the Lowie Museum of Anthropology (Phoebe A. Hearst Museum).

The 43 associated funerary belongings are beads, bowls, manos, metates, mortars, ornaments, pestles, potsherds, soil samples, and spoons.

Collections and collection spaces at the Phoebe A Hearst Museum of Anthropology were treated with substances for preservation and pest control, some potentially hazardous. No records have been found to date at the Museum to indicate whether or not chemicals or natural substances were used prior to 1960.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

The University of California, Berkeley has determined that:

- The human remains described in this notice represent the physical remains of 1,382 individuals of Native American ancestry.
- The 7,662 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Big Sandy Rancheria of Western Mono Indians of California; Buena Vista Rancheria of Me-Wuk Indians of California; California Valley Miwok Tribe, California; Chicken Ranch Rancheria of Me-Wuk Indians of California; Ione Band of Miwok Indians of California; Jackson Band of Miwuk Indians; Northfork Rancheria of Mono Indians of California; Picayune Rancheria of Chukchansi Indians of California; Santa Rosa Indian Community of the Santa Rosa Rancheria, California; Shingle Springs Band of Miwok Indians, Shingle Springs Rancheria (Verona Tract), California; Table Mountain Rancheria; Tejon Indian Tribe; Tule River Indian Tribe of the Tule River Reservation, California; Tuolumne Band of Me-Wuk Indians of the Tuolumne Rancheria of California; United Auburn Indian Community of the Auburn Rancheria of California; and the Wilton Rancheria, California.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the University of California, Berkeley must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The University of California, Berkeley is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NAGPRA–NPS0040017; PPWOCRADN0–PCU00RP14.R50000]

Notice of Intended Repatriation: Roseland School District, Santa Rosa, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Roseland School District intends to repatriate certain cultural items that meet the definition of unassociated funerary objects, sacred objects, and/or objects of cultural patrimony and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 30, 2025.

ADDRESSES: Raúl Guerrero, Roseland School District, 1691 Burbank Avenue, Santa Rosa, CA 95407, telephone (707) 545–0102, email *rguerrero@roselandsd.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Roseland School District, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of 43 lots of cultural items have been requested for repatriation. The 37 lots of unassociated funerary objects are shell, bone, clay and glass beads; shell ornaments; unmodified shells; a flaked stone tool; a stone sphere; and a charmstone. The six lots of objects of cultural patrimony are two scale replicas of traditional roundhouse buildings; a feather hair ornament; wood whistles; and a leather and glass bead medicine bag. The items were collected by Roseland School District Indian Museum staff over a period of time between 1975 and 2021, and were housed at the Museum on Roseland School District property until 2024. In 2024, the items were transferred to Sonoma State University for temporary housing due to mold and water damage in the Museum building. No documentation regarding the acquisition or geographic origin of the items has been found. The two roundhouse scale replicas have been identified as made by esteemed Pomo Elder Milton Bun Lucas. The remaining items are typical of those used by Pomo people in the Sonoma County region. The age of the items is uncertain, due to lack of information regarding their acquisition. The presence of potentially hazardous substances used to treat any of the cultural items is unknown, due to lack of documentation concerning the origins and history of the items. However, recent treatment with hazardous preservatives is unlikely, as the items in the museum were intended to be in close proximity to young children. Additionally, insects were found on or in the vicinity of some items, suggesting that chemicals had not been used to deter such infestations.

Determinations

The Roseland School District has determined that:

- The 37 unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.
- The six objects of cultural patrimony described in this notice have ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.
- There is a reasonable connection between the cultural items described in this notice and the Kashia Band of Pomo Indians of the Stewarts Point Rancheria, California.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Roseland School District must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The Roseland School District is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Inventory Completion: U.S. Department of the Interior, Reclamation, Great Plains Region, Oklahoma-Texas Area Office, Oklahoma City, OK

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the U.S. Department of the Interior, Reclamation, Oklahoma-Texas Area Office (OTAO) has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after May 30, 2025.

ADDRESSES: Kate Ellison, Bureau of Reclamation, Oklahoma-Texas Area Office, 5924 NW 2nd Street, Suite 200, Oklahoma City, OK 73127, telephone (405) 470–4816, email *kellison@usbr.gov.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the OTAO, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, two individuals have been identified. No associated funerary objects are present. The human remains were recovered by a local collector from archeological site 34JK18 in Jackson County, Oklahoma before 1990. These human remains were brought into the Museum of the Great Plains along with artifacts in 2017; OTAO took control of the human remains at this time. There is no known presence of any potentially hazardous substances used to treat any of the human remains.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains described in this notice.

Determinations

The OTAO has determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- There is a connection between the human remains described in this notice and the Wichita and Affiliated Tribes (Wichita, Keechi, Waco, & Tawakonie), Oklahoma.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the OTAO must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The OTAO is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Notice of Inventory Completion: University of California, Berkeley, Berkeley, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of California, Berkeley has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2025.

ADDRESSES: Alexandra Lucas, University of California, Berkeley, 200 California Hall, Berkeley, CA 94720, telephone (510) 570–0964, email *nagpra-ucb@berkeley.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of California, Berkeley, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, ancestral remains representing at least 48 individuals have been reasonably identified. The two lots of associated funerary objects include faunal remains.

In 1948, the ancestral remains were donated by the Gila Pueblo Museum in Arizona to the University of California, Berkeley Museum of Anthropology (now the Phoebe A. Hearst Museum of Anthropology). The ancestors were removed between 1930 and 1948 by Jeremiah B. Lillard, Sacramento Junior College, and various other individuals from one or more of the following sites: CA–SAC–16, CA–SAC–43, CA–SAC–60, CA–SAC–66, CA–SAC–107, CA–SAC–121, CA–SAC–126, CA–SAC–151, CA–SAC–165, and Dalton in Sacramento County, CA and CA–SJO–56 in San Joaquin County, CA.

Collections and collection spaces at the Phoebe A. Hearst Museum of Anthropology were treated with substances for preservation and pest control, some potentially hazardous. No records have been found to date at the Museum to indicate whether or not chemicals or natural substances were used prior to 1960.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

The University of California, Berkeley has determined that:

- The human remains described in this notice represent the physical remains of, at minimum, 48 individuals of Native American ancestry.
- The two lots of objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a reasonable connection between the human remains and associated funerary objects described in this notice and the Buena Vista Rancheria of Me-Wuk Indians of California; California Valley Miwok Tribe, California; Chicken Ranch Rancheria of Me-Wuk Indians of California; Ione Band of Miwok Indians of California; Jackson Band of Miwuk Indians; Picayune Rancheria of Chukchansi Indians of California; Santa Rosa Indian Community of the Santa Rosa Rancheria, California; Shingle Springs Band of Miwok Indians, Shingle Springs Rancheria (Verona Tract), California; Table Mountain Rancheria; Tejon Indian Tribe; Tule River Indian Tribe of the Tule River Reservation, California; Tuolumne Band of Me-Wuk Indians of the Tuolumne Rancheria of California; United Auburn Indian Community of the Auburn Rancheria of California; and the Wilton Rancheria, California.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the University of California, Berkeley must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The University of California, Berkeley is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Melanie O'Brien,

Manager, National NAGPRA Program.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NAGPRA–NPS0040033; PPWOCRADN0–PCU00RP14.R50000]

Notice of Inventory Completion: California Department of Transportation, Oakland, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the California Department of Transportation (Caltrans) has completed an inventory of associated funerary objects and has determined that there is a cultural affiliation between the associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary objects in this notice may occur on or after May 30, 2025.

ADDRESSES: Lindsay Busse PQS Principal Investigator, Prehistoric Archaeology, California Department of Transportation, District 4, 111 Grand Avenue, Oakland, CA 94612, telephone (510) 847–1977, email *lindsay.busse@dot.ca.gov* and Althea Asaro, PQS Principal Investigator, Prehistoric Archaeology, California Department of Transportation, District 4, 111 Grand Avenue, Oakland, CA 94612, telephone (510) 847–2178, email *althea.asaro@dot.ca.gov.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Caltrans, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Associated funerary objects have been identified totaling 1,182 catalog entries representing lithics, paleobotanicals, soil samples, faunal remains, shell, shell beads, light fraction samples, ground stone, baked clay, and post-contact historic artifacts. Of the 1,182 associated funerary objects, eight catalog numbers are missing and Caltrans and Sonoma State University (SSU) continue to look for them. These collections, known as the ''Gleason Beach Collections,'' are from Sonoma County along Highway 1 and are housed at SSU. The collections are the result of Caltrans project-delivery related excavations at the following sites between 1977 and 2020: CA–SON–346 (Acc. 2013–024); CA–SON–347 (Acc. 77–016, 2013–028, 2019–061, 2020–005, and an unaccessioned 2003 collection); CA–SON–2585 (Acc. 2013–026); CA–SON–2612 (Acc. 2013–027); and CA–SON–465/H (Acc. 2013–025). There are no known/documented potentially hazardous substances used to treat any of the cultural items. As a result of consultation, the Kashia Band of Pomo Indians of the Stewarts Point Rancheria deferred to the Federated Indians of Graton Rancheria.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the associated funerary objects described in this notice.

Determinations

Caltrans has determined that:

- The 1,182 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.

• There is a connection between the associated funerary objects described in this notice and the Federated Indians of Graton Rancheria, California.

Requests for Repatriation

Written requests for repatriation of the associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the associated funerary objects described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, Caltrans must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary objects are considered a single request and not competing requests. Caltrans is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Melanie O'Brien,

Manager, National NAGPRA Program.

BILLING CODE 4312–52–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NAGPRA–NPS0040019; PPWOCRADN0–PCU00RP14.R50000]

Notice of Intended Repatriation: Kansas City, Kansas Public Library, Kansas City, KS

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Kansas City, Kansas Public Library intends to repatriate certain cultural items that meet the definition of unassociated funerary objects, sacred objects, and/or objects of cultural patrimony and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 30, 2025.

ADDRESSES: Anne Lacey, Kansas City, Kansas, Public Library, 625 Minnesota Avenue, Kansas City, KS 66101, telephone (913) 295–8250, email *alacey@kckpl.org*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Kansas City, Kansas Public Library and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of seven cultural items have been requested for repatriation. The seven sacred objects/objects of cultural patrimony are one conch shell, traditionally used to call meetings to order, and six strings of wampum, stored in a small wooden box labeled ''Wampum of the Wyandott.''

The items were purchased by the USD 500 Board of Education from the estate of William E. Connelley in 1935 to be housed in the local history collections of the Kansas City, Kansas Public Library.

Determinations

The Kansas City, Kansas Public Library has determined that:

• The seven sacred objects/objects of cultural patrimony described in this notice are, according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization, specific ceremonial objects needed by a traditional Native American religious leader for present-day adherents to practice traditional Native American religion, and have ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision).

• There is a reasonable connection between the cultural items described in this notice and the Wyandotte Nation.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Kansas City, Kansas Public Library must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The Kansas City, Kansas Public Library is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: April 15, 2025.

Melanie O'Brien,

Manager, National NAGPRA Program.

Notice of Intended Repatriation: Fernbank Museum of Natural History, Atlanta, GA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Fernbank Museum of Natural History intends to repatriate certain cultural items that meet the definition of unassociated funerary objects and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 30, 2025.

ADDRESSES: Wil Grewe-Mullins, Fernbank Museum of Natural History, 767 Clifton Road NE, Atlanta, GA 30307, telephone (404) 929–6312, email *wil.grewe-mullins@fernbankmuseum.org*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Fernbank Museum of Natural History, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of 68,682 cultural items have been requested for repatriation. The 68,682 unassociated funerary objects are ceramic disks and figures; ceramic pipe fragments; ceramic sherds; copper sheets; decorative glass items; glass beads; groundstone tools; gun flints; jet beads; lithic tools and debitage; metal beads; metal shot; metal nails and spikes; metal crosses and religious items; modified and unmodified faunal remains; molten and fragmented glass; shell beads; soil samples; stone beads; textile fragments; unmodified marine shell; unmodified rocks and minerals; whole and partial ceramic vessels; and a wooden cross fragment. The objects were recovered from the Mission Santa Catalina de Guale (9Li274) cemetery on St. Catherines Island, Liberty County, Georgia. Human remains representing 431 individuals were removed from the cemetery site during archaeological excavations conducted by the American Museum of Natural History (1982–1986) under direction of Dr. David Hurst Thomas and Dr. Clark S. Larsen. After periods of analysis, the remains were reburied at the cemetery site. In May 1984, three coffins were reburied in conjunction with a ceremony led by Bishop Raymond Lessard to reconsecrate the Catholic church site. All other remains were reburied in 2000 in a ceremony presided over by an ordained Presbyterian minister. The objects recovered from the cemetery excavations are considered unassociated funerary objects. They were stored for intervals at the American Museum of Natural History and on St. Catherines Island for analysis before they were transferred to Fernbank Museum of Natural History by the St. Catherines Island and Edward John Noble Foundations between 2004 and 2010. Based on the information available and the results of consultation, cultural affiliation is reasonably identified by historical information and the geographical location or acquisition history of the human remains and unassociated funerary objects described in this notice.

Determinations

The Fernbank Museum of Natural History has determined that:

- The 68,682 unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.
- There is a reasonable connection between the cultural items described in this notice and the Seminole Tribe of Florida and The Muscogee (Creek) Nation.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Fernbank Museum of Natural History must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The Fernbank Museum of Natural History is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

[NPS–WASO–NAGPRA–NPS0040021; PPWOCRADN0–PCU00RP14.R50000]

Notice of Inventory Completion: Hood Museum of Art, Dartmouth College, Hanover, NH

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Hood Museum of Art has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after May 30, 2025.

ADDRESSES: Jami C. Powell, Hood Museum of Art, 6 East Wheelock Street, Hanover, NH 03755, telephone (603) 646–2822, email *hood.nagpra@dartmouth.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Hood Museum of Art and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. This ancestor was brought to Dartmouth College in 1939 by Professor F.D. Lord, who stated that it was ''given to [him] by a man in Iowa.'' No further information about that ancestor has been uncovered in archival records.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains described in this notice.

Determinations

The Hood Museum of Art has determined that:

- The human remains described in this notice represent the physical remains of at least one individual of Native American ancestry.
- There is a connection between the human remains described in this notice and the Ho-Chunk Nation of Wisconsin; Iowa Tribe of Kansas and Nebraska; Iowa Tribe of Oklahoma; Kickapoo Traditional Tribe of Texas; Kickapoo Tribe of Indians of the Kickapoo Reservation in Kansas; Kickapoo Tribe of Oklahoma; Otoe-Missouria Tribe of Indians, Oklahoma; Sac & Fox Nation of Missouri in Kansas and Nebraska; Sac & Fox Nation, Oklahoma; Sac and Fox Tribe of the Mississippi in Iowa; Three Affiliated Tribes of the Fort Berthold Reservation, North Dakota; Winnebago Tribe of Nebraska; and the Yankton Sioux Tribe of South Dakota.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Hood Museum of Art must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The Hood Museum of Art is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Notice of Inventory Completion: Bruce Museum, Inc., Greenwich, CT

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Bruce Museum has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 30, 2025.

ADDRESSES: Kirsten J. Reinhardt, Bruce Museum, Inc., 1 Museum Drive, Greenwich, CT 06830, telephone (203) 413–06779, email *kreinhardt@brucemuseum.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Bruce Museum, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. The two associated funerary objects are two sea mammal bones, possibly manatee phalanges. All were recovered from a sand mound burial in 1894 or 1895 on the east shore of Terra Ceia Bay, in Manatee County, Florida. Age and sex unknown. Donated to the Bruce in 1938 by Wilbur Smith. Related to and recovered from the same burial mound as the Ancestor repatriated to the Seminole in 2021. These three objects were not located in 2021 and were identified during a later collection move/rehousing project. The known historical presence of the Seminole Tribe of Florida in the area now known as the State of Florida, combined with the established legal and archaeological information, provides a reasonable basis upon which the Bruce Museum has made the determination that the Seminole Tribe of Florida has established, with acceptable evidence, cultural affiliation with a minimum of one individual and two AFOs having been removed from the undocumented Terra Ceia Bay Shore site located in Seminole County, Florida. No treatment with hazardous material has been performed.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

The Bruce Museum has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- The two objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Seminole Tribe of Florida.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after May 30, 2025. If competing requests for repatriation are received, the Bruce Museum must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Bruce Museum is responsible for sending a copy of this notice to the Indian Tribes and Native

Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Inventory Completion: Mercyhurst University, Erie, PA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), Mercyhurst University has completed an inventory of human remains and has determined that there is no lineal descendant and no Indian Tribe or Native Hawaiian organization with cultural affiliation.

DATES: Upon request, repatriation of the human remains in this notice may occur on or after May 30, 2025.

ADDRESSES: Anne Marjenin, Mercyhurst University, 501 East 38th Street, Erie, PA 16546, telephone (814) 824–2012, email *nagpra@mercyhurst.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of Mercyhurst University, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. The individual (VM–024, V–MAN–0206) was removed from an unknown geographic location in North Carolina, likely in 1967 or 1969. On an unknown date, the individual was obtained by Raymond C. Vietzen (1907–1995). Vietzen, an avocational archaeologist, collector, and author, established the Indian Ridge Museum in Elyria, Ohio, and the Archaeological Society of Ohio (formerly the Ohio Indian Relic Collectors Society). The Indian Ridge Museum, founded in the 1930s, served as Vietzen's laboratory and repository, and it remained in operation until the mid-1990s. After Vietzen's death, the facility fell into disrepair, and most of the items he had acquired and housed at the museum were sold. In 1998, the Ohio Historical Society (presently the Ohio History Connection) removed ancestral human remains and some of the remaining items from the facility and temporarily housed them at the Ohio Historical Society. In October of 2003, these remains were transferred from the Ohio Historical Society to Mercyhurst College (presently Mercyhurst University).

While there is no record regarding potentially hazardous substances having been used to treat the human remains, unidentified adhesives and an unidentified foam are present. It is unknown when the adhesives and foam were applied.

Consultation

Invitations to consult were sent to the Absentee-Shawnee Tribe of Indians of Oklahoma; Catawba Indian Nation; Cherokee Nation; Chickahominy Indian Tribe; Chickahominy Indian Tribe-Eastern Division; Eastern Band of Cherokee Indians; Eastern Shawnee Tribe of Oklahoma; Monacan Indian Nation; Nansemond Indian Nation; Pamunkey Indian Tribe; Rappahannock Tribe, Inc.; Shawnee Tribe; The Muscogee (Creek) Nation; Tuscarora Nation; United Keetoowah Band of Cherokee Indians in Oklahoma; and the Upper Mattaponi Tribe.

The following Indian Tribes participated in consultation: Cherokee Nation; Eastern Band of Cherokee Indians; Nansemond Indian Nation; Shawnee Tribe; and The Muscogee (Creek) Nation. The Chickahominy Indian Tribe-Eastern Division provided a response on a later date.

Cultural Affiliation

The following types of information about the cultural affiliation of the human remains in this notice are available: geographical. The information, including the results of consultation, identified:

1. No earlier group connected to the human remains.

2. No Indian Tribe or Native Hawaiian organization connected to the human remains.

3. No relationship of shared group identity between the earlier group and the Indian Tribe or Native Hawaiian organization that can be reasonably traced through time.

Determinations

Mercyhurst University has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- No known lineal descendant who can trace ancestry to the human remains in this notice has been identified.
- No Indian Tribe or Native Hawaiian organization with cultural affiliation to the human remains in this notice has been clearly or reasonably identified.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Upon request, repatriation of the human remains described in this notice may occur on or after May 30, 2025. If competing requests for repatriation are received, Mercyhurst University must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. Mercyhurst University is responsible for sending a copy of this notice to any consulting lineal descendant, Indian Tribe, or Native Hawaiian organization.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2025.

Melanie O'Brien,

Manager, National NAGPRA Program.

BILLING CODE 4312–52–P

DEPARTMENT OF THE INTERIOR

Bureau of Ocean Energy Management

[Docket No. BOEM–2025–0014]

Revising the Outer Continental Shelf Planning Areas To Address Jurisdictional Changes

AGENCY: Bureau of Ocean Energy Management, Interior.

ACTION: Revising outer continental shelf planning areas to address jurisdictional changes.

SUMMARY: This notice informs the public that the Bureau of Ocean Energy Management (BOEM) has made modifications to its Outer Continental Shelf (OCS) planning areas, which are geographic subdivisions of the OCS that BOEM uses for planning and administrative purposes for oil and gas activities. The OCS Lands Act (OCSLA) is the primary authority that provides BOEM with jurisdiction covering the entire OCS. As described below, changes to the boundaries of this jurisdiction have occurred since BOEM last established these subdivisions, and BOEM has modified its planning areas to account for these changes. As a result, the total number of OCS planning areas has increased from 26 to 27. The total acreage for the OCS planning areas has decreased, from approximately 1.72 billion acres to 1.68 billion acres, which does not include the OCS offshore the U.S. Territories and Hawaii. The U.S. Territories and Hawaii OCS areas, accounting for approximately 1.48 billion acres, are not considered for oil and gas leasing, so have not been designated as ''planning areas.'' Additional information can be found at *https://www.boem.gov/oil-gas-energy/leasing/outer-continental-shelf.*

FOR FURTHER INFORMATION CONTACT: Allison Stork, Leasing Policy and Management Division, telephone 571–265–2994 or email *allison.stork@boem.gov.*

SUPPLEMENTARY INFORMATION: In 1986, BOEM's predecessor agency, the Minerals Management Service, established four OCS regions that were originally comprised of 26 OCS planning areas. The four OCS regions are Alaska, Pacific, Gulf of America (formerly the Gulf of Mexico), and Atlantic. Administratively, the Pacific Region includes the State of Hawaii, although Hawaii has never had an OCS planning area.

An OCS planning area is a large, but more manageable contiguous portion of a broader OCS region that is considered an entity for BOEM planning and administrative purposes for oil and gas activities. OCS planning areas are also used in the analysis for development of the National OCS Oil and Gas Leasing Program, as well as for coordination with state and local governments. Not all of the OCS is subdivided into planning areas; the areas surrounding Hawaii and the U.S. territories are distinct and manageable portions of the OCS that do not require a planning area designation for differentiation purposes.

On December 21, 2023, the U.S. Department of State provided updated information in the **Federal Register** pertaining to the outer limits of the U.S. continental shelf in Public Notice 12244: Continental Shelf and Maritime Boundaries; Notice of Limits, 88 FR 88470 (Dec. 21, 2023).

Due to the U.S. Department of State's announcement regarding the outer limits of the continental shelf beyond 200 miles and amendments to OCSLA, BOEM has reassessed the jurisdictional limits of the OCS and recomputed acreages by OCS Region. The boundaries of the OCS Regions now extend from the Submerged Lands Act boundary to the outer limits of the continental shelf beyond 200 miles, or, as appropriate, to the 200-nautical-mile (nm) limit, Treaty Boundary, or Territorial Sea limit, depending on location. BOEM also updated the three Gulf of America OCS planning areas to reflect the name change announced in Executive Order 14172, ''Restoring Names That Honor American Greatness'' (January 20, 2025). A new planning area, the High Arctic Planning Area, has been created, increasing the total number of OCS planning areas from 26 to 27. Figure 1 shows the revised OCS jurisdiction, including the revised OCS planning areas and the remaining OCS areas not part of any planning area.

BILLING CODE 4340–98–C

DEPARTMENT OF THE INTERIOR

Bureau of Ocean Energy Management

[Docket No. BOEM–2025–0015]

Request for Information and Comments on the Preparation of the 11th National Outer Continental Shelf Oil and Gas Leasing Program MAA104000

AGENCY: Bureau of Ocean Energy Management, Interior.

ACTION: Request for information and comments.

SUMMARY: Section 18 of the Outer Continental Shelf (OCS) Lands Act requires the Department of the Interior (DOI) to invite and solicit information from interested and affected parties during the preparation of a National OCS Oil and Gas Leasing Program (National OCS Program). The 10th National OCS Program, for 2024 to 2029, was approved on December 14, 2023, and went into effect on July 1, 2024. The Bureau of Ocean Energy Management (BOEM) is soliciting information on the preparation of a new, 11th National OCS Program to, upon completion, replace the 10th National OCS Program.

DATES: BOEM must receive all comments and information by June 16, 2025.

ADDRESSES: Comments on this RFI may be submitted in one of the following ways:

1. Through the *regulations.gov* web portal: Navigate to *http://www.regulations.gov* and under the Search tab, in the space provided, type in Docket ID: BOEM–2025–0015 to submit comments and to view other comments already submitted.

2. Mailed in an envelope labeled ''Comments for the 11th National OCS Oil and Gas Leasing Program'' and mailed or sent by delivery service to Ms. Kelly Hammerle, Bureau of Ocean Energy Management (VAM–LD), 45600 Woodland Road, Sterling, VA 20166–9216.

FOR FURTHER INFORMATION CONTACT: Ms. Kelly Hammerle, Program Manager, at (703) 342–8867.

SUPPLEMENTARY INFORMATION: The OCS Lands Act declares that it is the policy of the United States that the OCS ''is a vital national resource reserve held by the Federal Government for the public, which should be made available for expeditious and orderly development, subject to environmental safeguards, in a manner which is consistent with the maintenance of competition and other national needs.'' BOEM requests information and comments from Tribal, state, and local governments, Native American and Native Alaskan organizations, Federal agencies, environmental and other public interest organizations, the oil and gas industry, non-energy industries, other interested organizations and entities, and the public, for use in the preparation of the 11th National OCS Program. BOEM is seeking a wide array of information, including but not limited to information associated with the economic, social, and environmental values of all OCS resources, as well as the potential impact of oil and gas exploration and

development on OCS resources and the marine, coastal, and human environments.

Public Comment Procedure

BOEM will accept comments via the internet commenting system on *regulations.gov,* or by regular U.S. mail. Comments submitted by other means may not be considered. BOEM's strong preference is to receive comments via *regulations.gov,* except when a comment contains proprietary information. Comments should include full names and addresses of the individual submitting the comment(s). Before including personal identifying information in your comment, be aware that your entire comment—including your personal identifying information—may be made publicly available. While you can ask BOEM in your comment to withhold your personal identifying information from public review, BOEM cannot guarantee that we will be able to do so. Even if BOEM withholds your information in the context of this RFI, your submission is subject to the Freedom of Information Act (FOIA), and if your submission is requested under the FOIA, your information will only be withheld if a determination is made that one of the FOIA's exemptions to disclosure applies. Such a determination will be made in accordance with the Department's FOIA regulations and applicable law.

Background Information

Section 18 of the OCS Lands Act requires the Secretary of the Interior (Secretary) to ''prepare and periodically revise, and maintain an oil and gas leasing program. . . .'' The Program must ''consist of a schedule of proposed lease sales indicating, as precisely as possible, the size, timing, and location of leasing activity, which [the Secretary] determines will best meet national energy needs for the five-year period following its approval. . . .'' Section 18 also requires the completion of a multi-step process of public consultation and analysis before the Secretary may approve a new National OCS Program. The process to develop a new National OCS Program includes the following steps: (1) issuance of a request for information (RFI); (2) development of a Draft Proposed Program (DPP), (3) development of a Proposed Program, (4) development of a Proposed Final Program; and (5) Secretarial approval of the Program. The public will have additional opportunities to comment on the DPP and the Proposed Program documents. Note that this RFI requests information and comments on all 27 OCS Planning Areas, including the areas that are restricted from leasing by Presidential withdrawal or Congressional moratorium, as discussed below.

The National OCS Program sets forth the proposed schedule of lease sales for the subsequent five-year period, and enables the Federal Government, states, industry, and other interested parties to begin planning for the later steps in the leasing process. The Secretary decides whether to proceed with each specific lease sale on the schedule included in an approved National OCS Program.

The initiation of a new National OCS Program development process is a key aspect of implementing President Donald Trump's Executive Order (E.O) 14154, ''Unleashing American Energy'' (January 20, 2025), and the Secretary's Order 3418, ''Unleashing American Energy'' (February 3, 2025). The E.O. states that it is ''in the national interest to unleash America's affordable and reliable energy and natural resources'' and that it ''is the policy of the United States . . . to encourage energy exploration and production on Federal lands and waters, including on the [OCS], in order to meet the needs of our citizens and solidify the United States as a global energy leader long into the future.''

The OCS is a significant source of oil and gas for the Nation's energy supply. As of April 1, 2025, BOEM administers 2,227 active oil and gas leases covering approximately 12.1 million acres, with 469 leases currently producing hydrocarbons (oil and gas). Production from these leases generates billions of dollars in revenue each year for the U.S. Treasury and state governments, while supporting hundreds of thousands of jobs. In fiscal year 2024, oil and gas leases on the OCS accounted for approximately 14 percent of domestic oil production and 2 percent of domestic natural gas production. The offshore areas of the United States are estimated to contain significant quantities of resources in yet-to-be-discovered fields. In its 2021 National Assessment of Undiscovered Oil and Gas Resources of the U.S. Outer Continental Shelf (2021 National Assessment, available at: *https://www.boem.gov/2021-assessment-undiscovered-oil-and-gas-resources-nations-outer*), BOEM reported that the mean estimate of undiscovered, technically recoverable oil and gas resources in the U.S. OCS consists of 68.79 billion barrels of oil and 229.03 trillion cubic feet of natural gas.

Gulf of America OCS Region

Section 50265(b)(2) of the Inflation Reduction Act (IRA) required BOEM to hold three lease sales (Cook Inlet Sale 258, Gulf of America (GOA) Sale 259, and GOA Sale 261) that were scheduled under the 2017–2022 Program but had been cancelled by the previous administration. In accordance with the IRA, BOEM held GOA Lease Sale 259 on March 29, 2023, and GOA Lease Sale 261 on December 20, 2023 (We report on Cook Inlet Sale 258 in the next section related to the Alaska OCS Region). As of April 1, 2025, there are 2,186 active leases in the GOA, 436 of which are producing hydrocarbons. BOEM assesses a mean undiscovered oil and gas resource volume of nearly 40 billion barrels of oil equivalent (BBOE) in the GOA.

The 10th National OCS Oil and Gas Leasing Program (the 2024–2029 Program), approved by the previous administration on December 14, 2023, includes three potential oil and gas lease sales, all in the GOA Program Area.

On April 1, 2024, BOEM published the Notice of Availability (NOA) of the Area Identification (Area ID) for proposed GOA Oil and Gas Lease Sales 262, 263, and 264 (89 FR 22444), and BOEM published the NOA for the Draft Programmatic Environmental Impact Statement on December 13, 2024 (89 FR 101044). Final decisions regarding any areas offered for leasing will be made after BOEM completes the required environmental review, environmental consultations, Tribal and state consultations, Coastal Zone Management Act consistency determinations, and other statutory requirements, including publishing both a Proposed and Final Notice of Sale, as required under the OCS Lands Act.

For more information on the lease sale schedule, visit: *https://www.boem.gov/oil-gas-energy/lease-sales.*

Alaska OCS Region

In accordance with the IRA, BOEM held Cook Inlet Lease Sale 258, offshore Alaska, on December 30, 2022.

The 10th National OCS Oil and Gas Leasing Program does not include any lease sales in the Alaska Region. However, the Arctic holds substantial oil and gas potential. In the Chukchi Sea and Beaufort Sea OCS planning areas, BOEM assesses a mean volume of 29.88 BBOE and 8.61 BBOE, respectively, of undiscovered oil and gas resource potential. As of April 1, 2025, there are three active leases in the Beaufort Sea OCS Planning Area, all of which are producing hydrocarbons, and eight active leases in the Cook Inlet OCS Planning Area, none of which are producing hydrocarbons.

Atlantic OCS Region

The 10th National OCS Oil and Gas Leasing Program does not include any lease sales in the Atlantic Region. BOEM analysis suggests that portions of the Atlantic OCS could contain significant oil and gas resource potential, with a mean undiscovered resource volume of more than 10 BBOE; however, current geological and geophysical (G&G) information regarding that potential is based largely on data collected in the 1970s and early 1980s. Tremendous advances in instrumentation and technology to acquire and analyze G&G data have been made in the intervening decades.

In recognition of these advances in G&G data acquisition and processing technology, and the need to better understand the scope of existing resources, on July 11, 2014, BOEM published a Record of Decision for the Programmatic Environmental Impact Statement for Atlantic OCS G&G activities (79 FR 42815), which established a path forward for G&G activities off the Mid- and South Atlantic coast. With the initiation of a new National OCS Program development process and, with it, the renewed potential for a lease sale in the Atlantic region, BOEM may receive new G&G permit applications in the near future. The last lease sale held in the Atlantic OCS was in 1983, and there are no active oil and gas leases in the Atlantic OCS Region.

Pacific OCS Region

No oil and gas lease sales in the four planning areas in the Pacific Region were included in the 10th National OCS Program. Eleven OCS oil and gas lease sales were held in the Pacific Region between 1963 and 1984. A total of 470 leases were issued in the 11 sales. As of April 1, 2025, there are 30 active leases offshore Southern California, all of which are producing hydrocarbons. BOEM estimates a mean undiscovered oil and gas resource volume of 13.06 BBOE on the Pacific OCS.

As a result of Congressional moratoria, subsequent Presidential actions, and consistent opposition by the States of Washington, Oregon, and California to any activity off their coasts, the Pacific OCS has not been included in any National OCS Program since the 1987–1992 Program.

Areas Made Unavailable by Congressional or Presidential Action

Not all unleased land on the OCS is available for oil and gas leasing. Under Section 12(a) of the OCS Lands Act, 43 U.S.C. 1341, the President of the United States may, from time to time, withdraw from disposition any of the unleased lands of the OCS. Restrictions on leasing may also be imposed through other means, such as Presidential proclamations pursuant to existing statutes, acts of Congress, regulatory restrictions, and management plans. BOEM maintains a list of restrictions applicable to the OCS on its ''Areas Under Restriction'' web page. For more information, please visit BOEM's Areas Under Restriction page at *https://www.boem.gov/oil-gas-energy/leasing/areas-under-restriction*.

In the DPP, BOEM will analyze all 27 OCS planning areas, including areas that may be currently unavailable for leasing. An area that is currently unavailable for leasing could still be part of a National OCS Program but could not be offered for sale until Congress and/or the President, as applicable, makes it available.

National Energy Needs

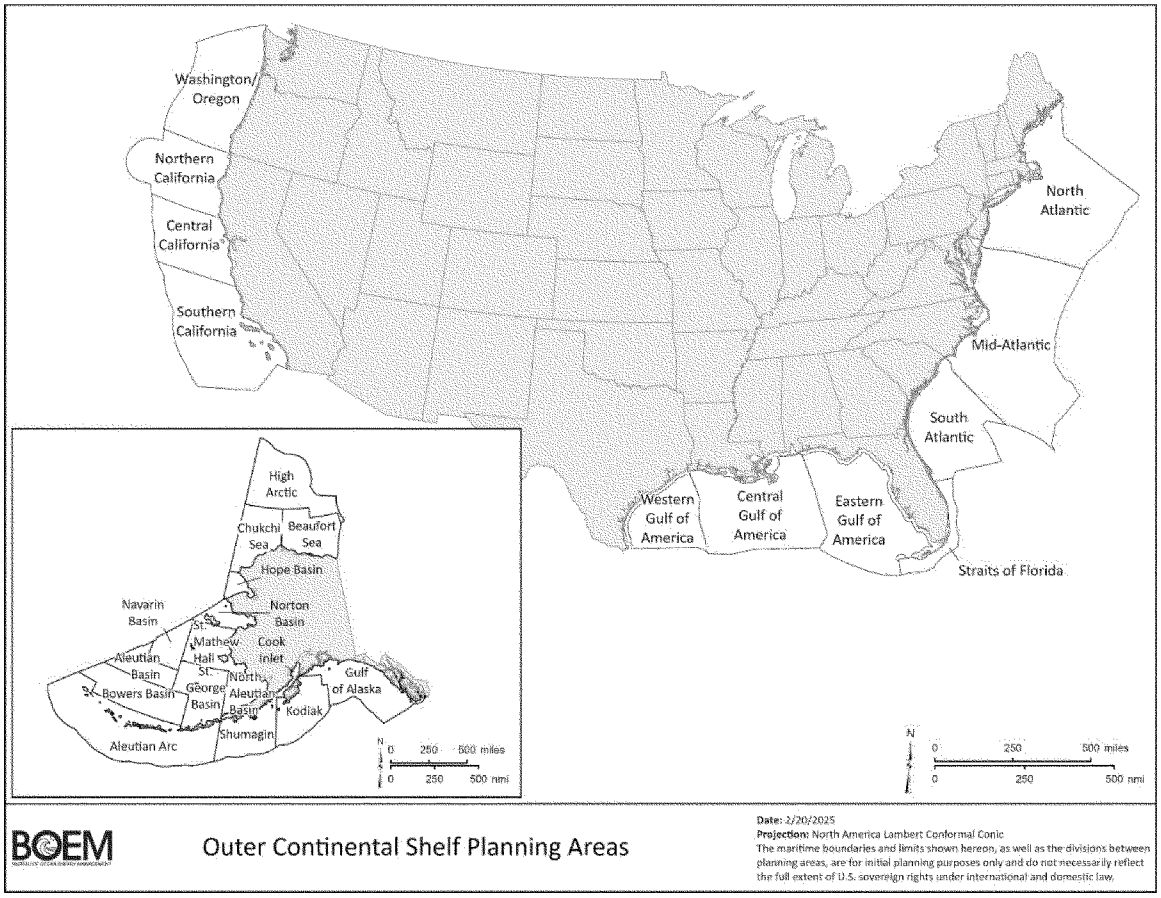
Section 18 of the OCS Lands Act requires that the Secretary consider national energy needs in formulating the National OCS Program. In developing the 11th National OCS Program, BOEM will present an analysis of the contribution of OCS oil and natural gas to the U.S. economy and the Nation's anticipated energy needs. The analysis will include discussions of the U.S. Energy Information Administration's projections of national energy needs in the Annual Energy Outlook, the potential contribution of OCS oil and natural gas production in meeting those needs, alternative sources of production, and considerations relating to national and regional energy markets. BOEM invites comments that provide information related to the Nation's future energy needs or national and regional energy markets for consideration in determining the appropriate size, timing, and location of OCS oil and gas lease sales for the 11th National OCS Program.

OCS Planning Areas To Be Considered and Analyzed

Section 18 of the OCS Lands Act requires the National OCS Program to be based on a consideration of a comparative analysis of the oil- and gas-bearing regions of the OCS. For the 11th National OCS Program, BOEM has divided the OCS into 27 planning areas, which are depicted in Figure 1. The depicted maritime boundaries and limits, as well as divisions between planning areas, where shown, are for planning and administrative purposes only. Note that precise maritime boundaries between the United States and nearby or adjacent nations have not been determined in all cases. These depictions do not affect or prejudice in any manner the position of the United States, or its individual states, with respect to the nature or extent of internal waters or of sovereign rights or jurisdiction.

BILLING CODE 4340–98–P

Figure 1. OCS Planning Areas



BILLING CODE 4340–98–C

Please note that changes to BOEM's jurisdiction have occurred since BOEM last established these planning area subdivisions, and BOEM modified its planning areas to account for these changes. The number of total OCS planning areas has increased by one. More information on these changes was announced in the **Federal Register** on April 30, 2025, in a notice entitled, ''Revising the Outer Continental Shelf Planning Areas to Address Jurisdictional Changes,'' published in the Notices section of this issue of the **Federal Register**.

This RFI requests information on all 27 planning areas, including areas that are currently under moratorium, have been withdrawn, or are otherwise unavailable. As set forth in more detail later in this RFI, the information requested is wide-ranging, including information on other uses of the sea and seabed, marine productivity, and environmental sensitivity. Accordingly, this RFI invites and provides an opportunity for Tribal governments, governors of affected states, Native American and Native Alaskan organizations, local governments, industry, Federal agencies, and the general public to provide suggestions and any other information they believe BOEM should evaluate during the development of the 11th National OCS Program.

The information solicited in this RFI will be considered in light of the factors specified by Section 18 of the OCS Lands Act, which are discussed later herein. Based on consideration of the analysis of those factors, the Secretary will prepare the DPP and decide which areas to include therein. Pursuant to Section 18 of the OCS Lands Act, areas included in the DPP decision will be subject to further analysis.

Section 18 of the OCS Lands Act

As previously noted, the National OCS Program preparation process will follow all the procedural and substantive requirements of Section 18 of the OCS Lands Act. This RFI solicits information and comments early in the preparation process pursuant to Section 18(c)(1) of the OCS Lands Act, 43 U.S.C. 1344(c)(1). BOEM will prepare an analysis based on consideration of the information and comments received and analysis of the principles and factors specified in Section 18 of the OCS Lands Act. Based on that analysis, the Secretary will prepare a Draft Proposal, which is called the DPP, that outlines a preliminary schedule of proposed lease sales and potential decision options. The DPP will be made available for review and comment.

Section 18 of the OCS Lands Act provides that, for purposes of preparing a National OCS Program, the Secretary should take into consideration the economic, social, and environmental values of all OCS resources, as well as the potential impact of oil and gas exploration and development on resource values of the OCS and the marine, coastal, and human environments. The eight factors that must be considered in determining the timing and location of leasing under the National OCS Program are set forth in Section 18(a)(2) of the OCS Lands Act, 43 U.S.C. 1344(a)(2). They are (1) existing information on the geographical, geological, and ecological characteristics of OCS regions; (2) an equitable sharing of developmental benefits and environmental risks among the various regions; (3) the location of

such regions with respect to, and the relative needs of, regional and national energy markets; (4) the location of such regions with respect to other uses of the sea and seabed, including fisheries, navigation, existing or proposed sea lanes, potential sites of deepwater ports, and other anticipated uses of the resources and space of the OCS; (5) the interest of potential oil and gas producers in the development of oil and gas resources as indicated by exploration or nomination; (6) laws, goals, and policies of affected States, which have been specifically identified by Governors of such States as relevant matters for the Secretary's consideration; (7) the relative environmental sensitivity and marine productivity of different areas of the OCS; and (8) relevant environmental and predictive information for different areas of the OCS.

Section 18(a)(3) of the OCS Lands Act (43 U.S.C. 1344(a)(3)) requires the Secretary to obtain a proper balance among the potential for environmental damage, the potential for discovery of oil and gas, and the potential for adverse impact on the coastal zone, for which BOEM will provide a cost-benefit analysis, as appropriate, to supplement qualitative consideration of these factors. The OCS Lands Act also requires that leasing activities assure the receipt of fair market value for the lands leased and rights conveyed by the Federal government in the OCS (Section 18(a)(4) of the OCS Lands Act, 43 U.S.C. 1344(a)(4)).

Environmental Analysis

For previous National OCS Program development cycles, BOEM has prepared a Programmatic Environmental Impact Statement (EIS) pursuant to the National Environmental Policy Act (NEPA) to support the Section 18 analysis described above. BOEM has done this even though environmental analysis under NEPA is not required for a National OCS Program. Accordingly, for the 11th National OCS Program, in lieu of a NEPA analysis, BOEM will prepare an environmental analysis document that will contain those Section 18 analyses that involve environmental considerations to inform the Secretary of the potential environmental impacts of the Program. This approach aligns with two recent decisions from the United States Court of Appeals for the District of Columbia (D.C. Circuit) (*Center for Biological Diversity* v. *Department of the Interior,* 563 F.3d 466 (D.C. Cir. 2009); *Center for Sustainable Economy* v. *Jewell,* 779 F.3d 588 (D.C. Cir. 2015)) that found that NEPA was unripe at the National OCS Program stage. While this standalone analysis will not be a NEPA document, it will provide, in some ways, substantively similar content to what would be included in a Programmatic EIS but will focus on the Section 18 factors and analyses. The document will not include an analysis of alternatives, but the analysis will focus on the potential environmental impacts of oil and gas development in the areas of the OCS where leasing may occur and discuss how those impacts may vary among areas.

In the environmental analysis document, BOEM will consider environmentally sensitive areas that could be considered for exclusion from leasing as part of the Section 18 winnowing process, where only those areas that the Secretary decides are appropriate to carry forward for further consideration are analyzed in the next phase of the Program development process. Therefore, BOEM plans to solicit nominations for areas that may be considered for exclusion during the public comment period for the DPP. These areas may be analyzed in the environmental analysis document to disclose whether the exclusion of that area could result in fewer potential impacts to environmental resources. During the Program development process, BOEM already considers the entirety of each oil and gas planning area in its analyses; ideally, additional nominations for areas to exclude from leasing would be discrete geographic areas that are smaller than a planning area (*e.g.,* areas of sensitive bottom habitat in the GOA).

Types of Information and Comments Requested

BOEM invites comments from anyone who would like to submit information and/or suggestions for consideration in determining, among other things, the appropriate size, timing, and location of potential OCS oil and gas lease sales under the 11th National OCS Program. Please note that BOEM invites all private and public stakeholders, Tribes or Tribal Governments, as well as the general public, to comment or provide any information that they believe should be taken into consideration by BOEM during the preparation of the 11th National OCS Program.

General Information Requested

BOEM would like to receive comments and suggestions of national or regional application that would be useful in formulating the 11th National OCS Program. The types of information that would be most useful in conducting the analysis, pursuant to Section 18 of the OCS Lands Act, relate to the following factors:

(1) National energy needs for the five year period relevant to the 11th National OCS Program, in particular, the role of OCS oil and gas leasing and resulting exploration, development, and production activities in achieving national energy policy goals; the economic, social, and environmental values of the non-renewable and renewable resources contained in the OCS; and the potential impact of oil and gas exploration and development on OCS resource values and the marine, coastal, and human environments;

(2) Existing information concerning geographical, geological, and ecological characteristics of the OCS planning areas and near-shore and coastal environments;

(3) Equitable sharing of developmental benefits and environmental risks among the various planning areas;

(4) Location of planning areas with respect to, and the relative needs of, regional and national energy markets;

(5) Other uses of the sea and seabed, including commercial and recreational fisheries; navigation; military activities; existing or proposed sea lanes; potential sites of deepwater ports (including liquefied natural gas facilities); subsea cables; satellite launch activities; potential offshore wind, wave, current, or other alternative energy sites; and other anticipated uses of OCS resources and locations;

(6) Relative environmental sensitivity and marine productivity of the different planning areas and/or a specific section(s) of a given OCS planning area;

(7) Environmental and predictive information pertaining to offshore and coastal areas potentially affected by OCS oil and gas development including, but not limited to, socio-cultural and archaeological information; and

(8) Methods and procedures for assuring the receipt of fair market value for lands leased.

Fair Market Value Information Requested

In developing the methods and procedures for assuring the receipt of fair market value for lands leased under Section 18(a)(4) of the OCS Lands Act, 43 U.S.C. 1344(a)(4), BOEM sets lease fiscal and temporal terms, and other features relevant to bidding. Given BOEM's responsibility to ensure fair market value for the U.S. Government, BOEM is seeking information in response to the following questions:

(1) If DOI continues leasing in the GOA planning areas, are there changes to the lease terms that BOEM has offered

in previous GOA sales that would better meet the objectives of the OCS Lands Act and are permissible under 43 U.S.C. 1337? Lease terms that could be subject to change include:

a. Minimum bids.

b. Rental rates.

c. Royalty rates, royalty structures (*e.g.,* flat or price-based). (Noting that the IRA sets the minimum royalty rate at 16⅔ percent and the maximum royalty rate at 18¾ percent).

d. Primary term and extended primary term (*e.g.,* 5 years plus 3 years more if certain drilling conditions are met).

(2) If DOI offers acreage for lease in planning areas outside the GOA, what lease terms (see items 1a. through 1d. above) for each planning area would best meet the objectives and limitations of the OCS Lands Act?

a. Is there an alternative design (*e.g.,* auction-type design) that may be better suited to achieve fair market value, either by changing the bidding variable or some other aspect of the competitive lease sale while still meeting the requirements of 43 U.S.C. 1337?

b. Should BOEM consider the use of alternative and/or non-traditional fiscal terms, primary lease terms, auction formats, or tract offering sizes during the development of the 11th National OCS Program? Please state which of these features of the leasing process merit consideration for future use, and where and under what conditions those changes might be useful, and explain why such a change would be necessary or beneficial (*e.g.,* demonstrate that exploration would not occur in selected frontier areas without larger than traditionally sized tracts in lease sales).

Please note that BOEM is requesting information on these topics to inform its continuing evaluation of market conditions, available resources, bidding patterns (if applicable), and competitiveness of OCS lease terms with respect to each proposed sale. BOEM is asking for public input regarding lease terms or potential changes to lease terms concerning acreage offered during the 11th National OCS Program.

Specific Information Requested

From States

For coastal states, pursuant to Section 18(f)(5) of the OCS Lands Act (43 U.S.C. 1344(f)(5)) and BOEM's implementing regulations at 30 CFR 556.202, BOEM requests information concerning the relationship between OCS oil and gas activity and the states' coastal zone management programs that are being developed, or are administered, under Section 305 or Section 306 of the Coastal Zone Management Act of 1972, as amended, (16 U.S.C. 1454, 1455). BOEM also requests that non-coastal and coastal states submit information concerning environmental risk and potential for damage to coastal and marine resources associated with OCS development, information related to other uses of the sea and seabed, and any information that is relevant to equitable sharing of developmental benefits and environmental risks associated with OCS oil and gas activity (or the likely energy substitutes in the absence of new OCS leasing). In addition, for non-coastal and coastal states, information is requested on the impacts of additional OCS leasing, exploration, production, and the associated economic impact on the state and national economies and citizens, including impacts to employment, existing and new industries, and state taxes.

From Oil and Gas Industry

Pursuant to Section 18(a)(2)(E) of the OCS Lands Act (43 U.S.C. 1344(a)(2)(E)), during the preparation of the 11th National OCS Program, BOEM will take into account the interest of potential oil and gas producers in the development of oil and gas resources, as indicated by exploration or nomination. Industry respondents should base this information upon their expectations as of 2025. For each planning area in which industry respondents are interested, they should submit information concerning unleased hydrocarbon potential, future oil and gas price expectations, and other relevant information that the industry respondent uses in making OCS oil and gas leasing decisions. BOEM requests that industry respondents provide additional information, as specified below:

(1) Indicate the OCS planning area(s) where the industry respondent would be interested in acquiring oil and gas leases, regardless of whether the area currently is unavailable. If more than one planning area is of interest, rank all areas of interest in order of preference.

(2) Indicate the number and timing of lease sales in the period that would be appropriate for each planning area. If only one lease sale in a planning area is appropriate, indicate whether that area should be considered for leasing early or late in the five-year schedule. If more than one lease sale in a planning area is suggested, indicate the preferred interval between lease sales.

(3) Indicate the expected lead time to production in areas that currently do not have infrastructure or production, relative to lead times to new production in previously leased areas like the Central and Western GOA planning areas.

(4) Section 18(g) of the OCS Lands Act (43 U.S.C.1344(g)) authorizes confidential treatment of privileged or proprietary information. To ensure security and confidentiality of proprietary information to the maximum extent possible, BOEM requests that proprietary information only be sent by U.S. mail. In addition to prominently stating that proprietary information is contained in the comment at the beginning of the submission, comments should be sent in a plain outer envelope with an inner envelope stating that proprietary information is contained within.

From the U.S. Department of Commerce

Pursuant to Section 18(f)(5) of the OCS Lands Act (43 U.S.C.1344(f)(5)) and the Department's implementing regulations at 30 CFR 556.202, BOEM requests information concerning relationships between affected states' coastal zone management programs and OCS oil and gas activities. Concurrent with the publication of this RFI, BOEM will also send a letter to the Secretary of Commerce soliciting such information.

From the U.S. Department of Energy

Pursuant to BOEM's regulations at 30 CFR 556.202, BOEM requests information concerning regional and national energy markets and transportation networks. Concurrent with the publication of this RFI, BOEM will also send a letter to the Secretary of Energy soliciting such information.

From the U.S. Department of Defense

BOEM respects the needs of the Department of Defense (DOD) in its mission to protect the United States and continues to work closely with DOD to understand and identify potential measures to address any conflicts on the OCS. Multiple use challenges are a concern in many OCS areas, in particular, the military's use of portions of the Mid- and South Atlantic planning areas. As in the past, BOEM requests that the DOD provide textual and graphic information as to the areas where DOD believes there may be overlap between DOD activities and oil and gas operations. BOEM and DOD are committed to working through multiple use challenges so that each of our important missions are accomplished. Such detailed cooperation already occurs in the GOA and offshore California. During preparation of the 2017–2022 Program, DOD identified 95 percent of the proposed Atlantic

Program Area as largely compatible with oil and gas activities, as long as appropriate mitigation measures are applied.

Walter D. Cruickshank,

Acting Director, Bureau of Ocean Energy Management.

[FR Doc. 2025–07479 Filed 4–29–25; 8:45 am]

BILLING CODE 4340–98–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–760–763 and 731–TA–1743–1746 (Preliminary)]

Silicon Metal From Angola, Australia, Laos, Norway, and Thailand; Institution of Antidumping and Countervailing Duty Investigations and Scheduling of Preliminary Phase Investigations

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the institution of investigations and commencement of preliminary phase antidumping and countervailing duty investigation Nos. 701–TA–760–763 and 731–TA–1743–1746 (Preliminary) pursuant to the Tariff Act of 1930 (''the Act'') to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports of silicon metal from Angola, Australia, Laos, and Norway, provided for in subheading 2804.69.10 and 2804.69.50 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value, and imports of silicon metal from Australia, Laos, Norway, and Thailand that are alleged to be subsidized by the Governments of Australia, Laos, Norway, and Thailand. Unless the Department of Commerce (''Commerce'') extends the time for initiation, the Commission must reach a preliminary determination in antidumping and countervailing duty investigations in 45 days, or in this case by June 9, 2025. The Commission's views must be transmitted to Commerce within five business days thereafter, or by June 16, 2025.

DATES: April 24, 2025.

FOR FURTHER INFORMATION CONTACT: Jesse Sanchez (202–205–2402), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—These investigations are being instituted, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), in response to a petition filed on April 24, 2025, by Ferroglobe USA, Inc., Beverly, Ohio, and Mississippi Silicon LLC, Burnsville, Mississippi.

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Participation in the investigations and public service list.—Persons (other than petitioners) wishing to participate in the investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in §§ 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations have the right to appear as parties in Commission antidumping duty and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference.—The Office of Investigations will hold a staff conference in connection with the preliminary phase of these investigations beginning at 9:30 a.m. on May 15, 2025. Requests to appear at the conference should be emailed to *preliminaryconferences@usitc.gov* (DO NOT FILE ON EDIS) on or before noon on May 13, 2025. Please provide an email address for each conference participant in the email. Information on conference procedures, format, and participation, including guidance for requests to appear as a witness via videoconference, will be available on the Commission's Public Calendar (Calendar (USITC) | United States International Trade Commission). A nonparty who has testimony that may aid the Commission's deliberations may request permission to participate by submitting a short statement.

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Written submissions.—As provided in §§ 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before 5:15 p.m. on May 20, 2025, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties shall file written testimony and supplementary material in connection with their presentation at the conference no later than 4:00 p.m. on May 14, 2025. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with these investigations must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that any information that it submits to the Commission during these investigations may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of these or related investigations or reviews, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.12 of the Commission's rules.

By order of the Commission.

Issued: April 24, 2025.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2025–07458 Filed 4–29–25; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Prohibited Transaction Class Exemptions for Multiple Employer Plans and Multiple Employer Apprenticeship Plans—PTE 1976–1, PTE 1977–10, PTE 1978–6

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The three prohibited transaction class exemptions (PTEs) included in this ICR, (1) PTE 76–1, (2) PTE 77–10, and (3) PTE 78–6, exempt certain types of transactions commonly entered into by ''multiemployer'' plans from certain of the prohibitions contained in sections 406 and 407(a) of ERISA. The Department determined that, in the absence of these exemptions, the affected plans would not be able to operate efficiently or to enter into routine types of transactions necessary for their operations. In order to ensure that the class exemptions for these necessary transactions meet the statutory standards, the Department imposed conditions contained in the exemptions that are information collections. The information collections consist of recordkeeping and third-party disclosures. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 9, 2024 (89 FR 56416).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–EBSA.

Title of Collection: Prohibited Transaction Class Exemptions for Multiple Employer Plans and Multiple Employer Apprenticeship Plans—PTE 1976–1, PTE 1977–10, PTE 1978–6.

OMB Control Number: 1210–0058.

Affected Public: Private sector, Businesses or other for-profits, Not-for-profit institutions.

Total Estimated Number of Respondents: 3,126.

Total Estimated Number of Responses: 3,260.

Total Estimated Annual Time Burden: 815 hours.

Total Estimated Annual Other Costs Burden: $0.

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Affordable Care Act Grandfathered Health Plan Disclosure, Recordkeeping Requirement, and Change in Carrier Disclosure

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open

for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Patient Protection and Affordable Care Act, Public Law 111–148, (the Affordable Care Act or the Act) was enacted on March 23, 2010. Section 1251 of the Act provides that certain plans and health insurance coverage in existence as of March 23, 2010, known as grandfathered health plans, are not required to comply with certain statutory provisions in the Act. On November 18, 2015, the Departments issued final regulations the contain the information collections (80 FR 72191).

To maintain its status as a grandfathered health plan, plans must maintain records documenting the terms of the plan in effect on March 23, 2010, and any other documents that are necessary to verify, explain, or clarify status as a grandfathered health plan. The plan must make such records available for examination upon request by participants, beneficiaries, individual policy subscribers, or a State or Federal agency official.

In addition, grandfathered health plans must include a statement in plan materials provided to participants or beneficiaries describing the benefits provided under the plan or health insurance coverage, that the plan or coverage believes it is a grandfathered health plan within the meaning of section 1251 of the Affordable Care Act, that being a grandfathered health plan means that the plan does not include certain consumer protections of the Affordable Care Act, providing contact information for participants to direct questions regarding which protections apply and which protections do not apply to a grandfathered health plan, and what might cause a plan to change from grandfathered health plan status and to file complaints. However, grandfathered health plans are not required to provide the disclosure statement every time they send out a communication, such as an explanation of benefits, to a participant or beneficiary. Instead, grandfathered health plans will comply with this disclosure requirement if they include the model disclosure language provided in the Departments' interim final grandfather regulations (or a similar statement) whenever a summary of the benefits under the plan is provided to participants and beneficiaries.

Finally, grandfathered group health plans that change health insurance issuers must provide the succeeding health insurance issuer (and the succeeding health insurance issuer must require) documentation of plan terms (including benefits, cost sharing, employer contributions, and annual limits) under the prior health insurance coverage sufficient to make a determination whether the standards of paragraph (g)(1) of the final regulations are exceeded. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 9, 2024 (89 FR 56416).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Affordable Care Act Advance Notice of Rescission

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Patient Protection and Affordable Care Act, Public Law 111–148, (the Affordable Care Act or the Act) was enacted on March 23, 2010. Section 2712 of the Public Health Service Act (PHS Act), as added by the Affordable Care Act, and the Department's final regulation (26 CFR 54.9815–2712, 29 CFR 2590.715–2712, 45 CFR 147.2712) provides rules regarding rescissions of health coverage for group health plans and health insurance issuers offering group or individual health insurance coverage (80 FR 72191). Under the statute and final regulations, a group health plan, or a health insurance issuer offering group or individual health insurance coverage, generally must not rescind coverage except in the case of fraud or an intentional misrepresentation of a material fact.

This standard applies to all rescissions, whether in the group, or individual insurance market, or for self-insured coverage. These rules also apply regardless of any contestability period of the plan or issuer.

The PHS Act section 2712 mandated a new advance notice requirement when coverage is rescinded where still permissible. Specifically, the second sentence in section 2712 provides that coverage may not be cancelled unless prior notice is provided, and then only as permitted under PHS Act sections 2702(c) and 2742(b). Under these final regulations, even if prior notice is provided, rescission is only permitted in cases of fraud, or an intentional misrepresentation of a material fact as permitted under the cited provisions.

These final regulations provide that a group health plan, or health insurance issuer offering group health insurance coverage, must provide at least 30 days advance notice to an individual before coverage may be rescinded. The notice must be provided regardless of whether the rescission is of group or individual coverage; or whether, in the case of group coverage, the coverage is insured or self-insured, or the rescission applies to an entire group or only to an individual within the group. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 9, 2024 (89 FR 56416).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Summary of Benefits and Coverage and Uniform Glossary Required Under the Affordable Care Act

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Patient Protection and Affordable Care Act, Public Law 111–148, was signed into law on March 23, 2010, and the Health Care and Education Reconciliation Act of 2010, Public Law 111–152, was signed into law on March 30, 2010 (collectively known as the ''Affordable Care Act''). The Affordable Care Act amends the Public Health Service Act (PHS Act) by adding section 2715 ''Development and Utilization of Uniform Explanation of Coverage Documents and Standardized Definitions.''

Each group health plan and health insurance issuer offering group insurance coverage must provide a summary of benefits and coverage to plans and participants at specified points in the enrollment process. This disclosure must include, among other things, coverage examples that illustrate common benefits scenarios and related cost sharing. Additionally, plans and issuers must make the uniform glossary available in electronic form, with paper upon request, and provide 60 days advance notice of any material modifications in the plan or coverage. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 9, 2024 (89 FR 56416).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3)

years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Representative Fee Request

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Office of Workers' Compensation Programs (OWCP)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: Nicole Bouchet by telephone at 202–693–0213, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Individuals filing for compensation benefits with OWCP may be represented by an attorney or other representative. The representative is entitled to request a fee for services under the Federal Employees' Compensation Act (FECA). The fee must be approved by the OWCP before any demand for payment can be made by the representative. This information collection request sets forth the criteria for the information, which must be presented by the respondent in order to have the fee approved by OWCP. The information collection does not have a particular form or format; the respondent must present the information in any format which is convenient, and which meets all of the required criteria. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on December 18, 2024 (89 FR 102957).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Affordable Care Act Internal Claims and Appeals and External Review Procedures for ERISA Plans

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Patient Protection and Affordable Care Act, Public Law 111–148, (the Affordable Care Act or the Act) was enacted on March 23, 2010. As part of the Act, Congress added Public Health Service Act (the PHS Act) section 2719, which provides rules relating to internal claims and appeals and external review processes. The Department of Labor, Internal Revenue Service, and the Health and Human Services Department

(the Departments) issued final regulations (80 FR 72191) that set forth rules implementing PHS Act section 2719 for internal claims and appeals and external review processes. With respect to internal claims and appeals processes for group health coverage, PHS Act section 2719 and paragraph (b)(2)(i) of the final regulations provide that group health plans and health insurance issuers offering group health insurance coverage must comply with the internal claims and appeals processes set forth in 29 CFR 2560.503–1 (the DOL claims procedure regulation) and update such processes in accordance with standards established by the Secretary of Labor in paragraph (b)(2)(ii) of the regulations.

The DOL claims procedure regulation requires plans to provide every claimant who is denied a claim with a written or electronic notice that contains the specific reasons for denial, a reference to the relevant plan provisions on which the denial is based, a description of any additional information necessary to perfect the claim, and a description of steps to be taken if the participant or beneficiary wishes to appeal the denial. The regulation also requires that any adverse decision upon review be in writing (including electronic means) and include specific reasons for the decision, as well as references to relevant plan provisions. Paragraph (b)(2)(ii)(C) of the final regulations adds a requirement that non-grandfathered ERISA-covered group health plans provide to the claimant, free of charge, any new or additional evidence considered relied upon, or generated by the plan or issuer in connection with the claim.

In addition, the PHS Act section 2719 and the final regulations provide that group health plans and issuers offering group health insurance coverage must comply either with a State external review process or a Federal review process. The regulations provide a basis for determining when plans and issuers must comply with an applicable State external review process and when they must comply with the Federal external review process.

The No Surprises Act extends the balance billing protection related to external reviews to grandfathered plans. The definitions of group health plan and health insurance issuer that are cited in section 110 of the No Surprises Act include both grandfathered and non-grandfathered plans and coverage. Accordingly, the practical effect of section 110 of the No Surprises Act is that grandfathered health plans must provide external review for adverse benefit determinations involving benefits subject to these surprise billing protections.

The claims procedure regulation imposes information collection requirements as part of the reasonable procedures that an employee benefit plan must establish regarding the handling of a benefit claim. These requirements include third-party notice and disclosure requirements that the plan must satisfy by providing information to participants and beneficiaries of the plan. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 9, 2024 (89 FR 56416).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–EBSA.

Title of Collection: Affordable Care Act Internal Claims and Appeals and External Review Procedures for ERISA Plans.

OMB Control Number: 1210–0144.

Affected Public: Private sector, Businesses or other for-profits, Not-for-profit institutions.

Total Estimated Number of Respondents: 1,294,150.

Total Estimated Number of Responses: 187,601.

Total Estimated Annual Time Burden: 18,370 hours.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[NASA Document Number: 25–004; NASA Docket Number: NASA–2025–0001]

Name of Information Collection: NASA Contractor Financial Management Records

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of a renewal information collection.

SUMMARY: NASA, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995 (PRA).

DATES: Comments are due by June 30, 2025.

ADDRESSES: Written comments and recommendations for this information collection should be sent within 60 days of publication of this notice at *http://www.regulations.gov* and search for NASA Docket NASA–2025–0001.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to NASA PRA Clearance Officer, Stayce Hoult, NASA Headquarters, 300 E Street SW, JC0000, Washington, DC 20546, phone 256–714–8575, or email *stayce.d.hoult@nasa.gov* or *hq-ocio-pra-program@mail.nasa.gov*.

SUPPLEMENTARY INFORMATION:

I. Abstract

The NASA Contractor Financial Management Reporting System is the basic financial medium for contractor reporting of estimated and incurred costs, providing essential data for projecting costs and hours to ensure that contractor performance is realistically planned and supported by dollar and labor resources. The data provided by these reports is an integral part of the

Agency's accrual accounting and cost-based budgeting system. Respondents are reimbursed for associated cost to provide the information, per their negotiated contract price and associated terms of the contract. There are no ''total capital and start-up'' or ''total operation and maintenance and purchase of services'' costs associated since NASA policy requires that data reported is generated from the contractors' existing system. The contractors' internal management system shall be relied upon to the maximum extent possible.

NASA is committed to effectively performing the Agency's communication function in accordance with the Space Act Section 203 (a)(3) to ''provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof,'' and to enhance public understanding of, and participation in, the nation's aeronautical and space program in accordance with the NASA Strategic Plan.

II. Methods of Collection

NASA collects this information electronically and that is the preferred manner, however information may also be collected via mail or fax.

III. Data

Title: NASA Contractor Financial Management Reports.

OMB Number: 2700–0003.

Type of Review: Renewal of a previously approved collection.

Affected Public: Business or other for profit or not-for-profit institutions.

Estimated Annual Number of Activities: 500.

Estimated Number of Respondents per Activity: 12.

Annual Responses: 6,000.

Estimated Time per Response: 9 hours.

Estimated Total Annual Burden Hours: 54,000 hours.

IV. Request for Comments

Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of NASA, including whether the information collected has practical utility; (2) the accuracy of NASA's estimate of the burden (including hours and cost) of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including automated collection techniques or the use of other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval of this information collection. They will also become a matter of public record.

Stayce Hoult,

PRA Clearance Officer, National Aeronautics and Space Administration.

BILLING CODE 7710–12–P

SECURITIES AND EXCHANGE COMMISSION

[OMB Control No. 3235–0691]

Proposed Collection; Comment Request; Extension: Form Custody

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) (''PRA''), the Securities and Exchange Commission (''Commission'') is soliciting comments on the existing collection of information provided for in Form Custody (17 CFR 249.639) under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*) (''Exchange Act''). The Commission plans to submit this existing collection of information to the Office of Management and Budget (''OMB'') for extension and approval.

Section 17(a)(1) of the Exchange Act provides that broker-dealers registered with the Commission must make and keep records, furnish copies of the records, and make and disseminate reports as the Commission, by rule, prescribes. Pursuant to this authority, the Commission adopted Rule 17a–5 (17 CFR 240.17a–5), which is one of the primary financial and operational reporting rules for broker-dealers.[1] Paragraph (a)(5) of Rule 17a–5 requires every broker-dealer registered with the Commission to file Form Custody (17 CFR 249.639) with its designated examining authority (''DEA'') within 17 business days after the end of each calendar quarter and within 17 business days after the end of the broker-dealer's fiscal year if that date is not the end of a calendar quarter. Form Custody is designed to elicit information about whether a broker-dealer maintains

[1] Rule 17a–5 is subject to a separate PRA filing (OMB Control Number 3235–0123).

custody of customer and non-customer assets, and, if so, how such assets are maintained.

The Commission estimates that there are approximately 3,470 broker-dealers registered with the Commission. As noted above, all broker-dealers registered with the Commission are required to file Form Custody with their DEA once each calendar quarter. Based on staff experience, the Commission estimates that, on average, it would take a broker-dealer approximately 12 hours to complete and file Form Custody, for an annual industry-wide reporting burden of approximately 166,560 hours.[2] Assuming an average cost per hour of approximately $344 for a compliance manager, the total internal cost of compliance for the respondents is approximately $57,296,640 per year.[3]

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number.

Written comments are invited on: (a) whether this proposed collection of information is necessary for the proper performance of the functions of the SEC, including whether the information will have practical utility; (b) the accuracy of the SEC's estimate of the burden imposed by the proposed collection of information, including the validity of the methodology and the assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated, electronic collection techniques or other forms of information technology.

Please direct your written comment to Austin Gerig, Director/Chief Data Officer, Securities and Exchange Commission, c/o Tanya Ruttenberg, 100 F Street NE, Washington, DC 20549 and send it by email to *PaperworkReductionAct@sec.gov* within 60 days of publication of this notice, by June 30, 2025.

Dated: April 24, 2025.

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2025–07401 Filed 4–29–25; 8:45 am]

BILLING CODE 8011–01–P

[2] 3,470 brokers-dealers × 4 times per year × 12 hours = 166,560 hours.

[3] 166,560 hours × $344 per hour = $57,296,640. $344 per hour for a compliance manager is from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff for an 1800-hour work-year and to account for bonuses, firm size, employee benefits, and overhead, and adjusted for inflation.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–102925; File No. SR–NYSEARCA–2025–15]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change To List and Trade Shares of the Bitwise Bitcoin and Ethereum ETF Under NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares)

April 24, 2025.

On February 19, 2025, NYSE Arca, Inc. (''NYSE Arca'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares of the Bitwise Bitcoin and Ethereum ETF under NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares). The proposed rule change was published for comment in the **Federal Register** on March 12, 2025.[3]

Section 19(b)(2) of the Act [4] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is April 26, 2025. The Commission is extending this 45-day time period.

The Commission finds it appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change and the issues raised therein. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[5] designates June 10, 2025, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change (File No. SR–NYSEARCA–2025–15).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[6]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–102927; File No. SR–PEARL–2025–18]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 2613 Usage of Data Feeds To Reflect a Name Change

April 24, 2025.

Notice is hereby given that on April 21, 2025, MIAX PEARL, LLC (''MIAX Pearl'' or the ''Exchange''),[1] pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I and II below, which Items have been prepared by MIAX Pearl. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Exchange Rule 2613(a), Usage of Data Feeds, to reflect the name change of ''NYSE Chicago, Inc.,'' to ''NYSE Texas, Inc.''

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-equities/pearl-equities/rule-filings,* at MIAX Pearl's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, MIAX Pearl included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the

[1] All references to ''MIAX Pearl'' in this filing are to MIAX Pearl Equities, the equities trading facility of MIAX PEARL, LLC. *See* Exchange Rule 1901.

[2] 15 U.S.C. 78s(b)(1).

[3] 17 CFR 240.19b–4.

places specified in Item IV below. MIAX Pearl has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Exchange Rule 2613(a) to reflect the name change of ''NYSE Chicago, Inc.,'' to ''NYSE Texas, Inc.''

NYSE Chicago, Inc. (''NYSE Chicago'') recently converted from a corporation organized under the laws of the state of Delaware to one organized under the laws of the state of Texas and changed its name to ''NYSE Texas, Inc.'' (''NYSE Texas'').[4] The Exchange accordingly proposes a conforming change to its rule to reflect the name change of NYSE Chicago to NYSE Texas. Specifically, the Exchange proposes to replace one reference to ''Chicago'' in Exchange Rule 2613(a) with ''Texas.''

The proposed change is conforming and non-substantive in nature.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,[5] in general, and furthers the objectives of Section 6(b)(1)[6] in particular, in that it enables the Exchange to be so organized as to have the capacity to be able to carry out the purposes of the Act and to comply, and to enforce compliance by its exchange members and persons associated with its exchange members, with the provisions of the Act, the rules and regulations thereunder, and the rules of the Exchange. The Exchange also believes that the proposed rule change is consistent with Section 6(b)(5)[7] of the Act in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The proposed non-substantive change would enable the Exchange to continue to be so organized as to have the capacity to carry out the purposes of the Act and comply and enforce compliance with the provisions of the Act by its members and persons associated with its members, because it would ensure that the Exchange's rule accurately reflects the correct name of the market center from which the Exchange utilize direct data feeds when performing order handling, order execution, routing, and related compliance for equity securities and therefore contribute to the orderly operation of the Exchange by adding clarity and transparency. In addition, the proposed rule change would reduce potential investor and market participant confusion and therefore remove impediments to and perfect the mechanism of a free and open market and a national market system by ensuring that investors and market participants can more easily navigate, understand and comply with the Exchange's rules. The Exchange also believes that the proposed rule change would remove impediments to and perfects the mechanism of a free and open market by ensuring that persons subject to the Exchange's jurisdiction, regulators, and the investing public can more easily navigate and understand the Exchange's rules. The proposed rule change would not be inconsistent with the public interest and the protection of investors because investors will not be harmed and in fact would benefit from the increased transparency and clarity, thereby reducing potential confusion.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intramarket Competition

The Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change is not intended to address competitive issues but rather is concerned solely with updating the Exchange's rule to reflect the name change of NYSE Chicago to NYSE Texas.

Intermarket Competition

The Exchange believes the proposed rule change does not impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change is not intended to address competitive issues but rather is concerned solely with updating the Exchange's rule to reflect the name change of NYSE Chicago to NYSE Texas.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[8] and subparagraph (f)(6) of Rule 19b–4 thereunder.[9]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act[10] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii)[11] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may be operative immediately. The Commission believes that the proposed rule change raises no novel issues because it merely proposes a non-substantive conforming change to reflect the name change of NYSE Chicago to NYSE Texas and that waiver of the operative delay is consistent with the protection of investors and the public interest. Therefore, the Commission hereby waives the operative delay and designates the proposal operative upon filing.[12]

[4] *See* Securities Exchange Act Release No. 102507 (February 28, 2025), 90 FR 11445 (March 6, 2025) (SR–NYSECHX–2025–01) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Repeal the Exchange's Certificate of Incorporation; Adopt the Certificate of Formation of NYSE Texas, Inc.; Amend the Exchange's By-Laws, Rules, and Certain Fee Schedules; and Amend the Certificate of Incorporation and By-Laws of the Exchange's Holding Company To Reflect the Conversion of the Exchange to a Texas Corporation and the Renaming of NYSE Chicago Holdings, Inc.).

[8] 15 U.S.C. 78s(b)(3)(A)(iii).

[9] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[10] 17 CFR 240.19b–4(f)(6).

[11] 17 CFR 240.19b–4(f)(6)(iii).

[12] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on

At any time within 60 days of the filing of this proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–PEARL–2025–18 on the subject line.

Paper Comments

- Send paper comments in triplicate to Vanessa Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–PEARL–2025–18. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–PEARL–2025–18 and should be submitted on or before May 21, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[13]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–102924; File No. SR–NASDAQ–2025–018]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Designation of a Longer Period for Commission Action on a Proposed Rule Change, as Modified by Amendment No. 1, To List and Trade Shares of the Canary HBAR ETF Under Nasdaq Rule 5711(d) (Commodity-Based Trust Shares)

April 24, 2025.

On February 21, 2025, The Nasdaq Stock Market LLC (''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] a proposed rule change to list and trade shares of the Canary HBAR ETF under Nasdaq Rule 5711(d). On March 4, 2025, the Exchange filed Amendment No. 1 to the proposed rule change, which replaced and superseded the original filing in its entirety. The proposed rule change, as modified by Amendment No. 1, was published for comment in the **Federal Register** on March 13, 2025.[4]

Section 19(b)(2) of the Act[5] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is April 27, 2025. The Commission is extending this 45-day time period.

The Commission finds it appropriate to designate a longer period within which to take action on the proposed rule change, as modified by Amendment No. 1, so that it has sufficient time to consider the proposed rule change and the issues raised therein. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[6] designates June 11, 2025, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change, as modified by Amendment No. 1 (File No. SR–NASDAQ–2025–018).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[7]

[3] 17 CFR 240.19b–4.

the **Federal Register** on March 13, 2025.[4]

Section 19(b)(2) of the Act[5] provides that within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is April 27, 2025. The Commission is extending this 45-day time period.

The Commission finds it appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change and the issues raised therein. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[6] designates June 11, 2025, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change (File No. SR–NASDAQ–2025–019).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[7]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #21059 and #21060; INDIANA Disaster Number IN–20008]

Administrative Declaration of a Disaster for the State of Indiana

AGENCY: U.S. Small Business Administration.

ACTION: Notice.

SUMMARY: This is a notice of an Administrative declaration of a disaster for the State of Indiana dated April 22, 2025.

Incident: Severe Storms and Tornadoes.

DATES: Issued on April 22, 2025.

Incident Period: March 15, 2025.

Physical Loan Application Deadline Date: June 23, 2025.

Economic Injury (EIDL) Loan Application Deadline Date: January 22, 2026.

ADDRESSES: *Visit the MySBA Loan Portal at https://lending.sba.gov* to apply for a disaster assistance loan.

FOR FURTHER INFORMATION CONTACT: Sharon Henderson, Office of Disaster Recovery & Resilience, U.S. Small Business Administration, 409 3rd Street SW, Suite 6050, Washington, DC 20416, (202) 205–6734.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the Administrator's disaster declaration, applications for disaster loans may be submitted online using the MySBA Loan Portal *https://lending.sba.gov* or other locally announced locations. Please contact the SBA disaster assistance customer service center by email at *disastercustomerservice@sba.gov* or by phone at 1–800–659–2955 for further assistance.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties: Harrison, Orange.

Contiguous Counties:

Indiana: Crawford, Dubois, Floyd, Lawrence, Martin, Washington.

Kentucky: Hardin, Jefferson, Meade.

The Interest Rates are:

	Percent
For Physical Damage:	
Homeowners with Credit Available Elsewhere	5.500
Homeowners without Credit Available Elsewhere	2.750
Businesses with Credit Available Elsewhere	8.000
Businesses without Credit Available Elsewhere	4.000
Non-Profit Organizations with Credit Available Elsewhere	3.625
Non-Profit Organizations without Credit Available Elsewhere	3.625
For Economic Injury:	
Business and Small Agricultural Cooperatives without Credit Available Elsewhere	4.000
Non-Profit Organizations without Credit Available Elsewhere	3.625

The number assigned to this disaster for physical damage is 21059C and for economic injury is 210600.

The States which received an EIDL Declaration are Indiana, Kentucky.

(Catalog of Federal Domestic Assistance Number 59008)

James Stallings,

Associate Administrator, Office of Disaster Recovery and Resilience.

DEPARTMENT OF STATE

[Public Notice: 12707]

Notice of Determinations; Culturally Significant Objects Being Imported for Exhibition—Determinations: ''Hokusai & Ukiyo-e, The Floating World, Artworks From the Chissone Collection'' Exhibition

SUMMARY: Notice is hereby given of the following determinations: I hereby determine that certain objects being imported from abroad pursuant to an agreement with their foreign owner or custodian for temporary display in the exhibition ''Hokusai & Ukiyo-e, The Floating World, Artworks from the Chissone Collection'' at the College of DuPage, Cleve Carney Museum of Art, Glen Ellyn, Illinois, and at possible additional exhibitions or venues yet to be determined, are of cultural significance, and, further, that their temporary exhibition or display within the United States as aforementioned is in the national interest. I have ordered that Public Notice of these determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Reed Liriano, Program Coordinator, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: *section2459@state.gov*). The mailing address is U.S. Department of State, L/PD, 2200 C Street NW (SA–5), Suite 5H03, Washington, DC 20522–0505.

SUPPLEMENTARY INFORMATION: The foregoing determinations were made pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000, and Delegation of Authority No. 574 of March 4, 2025.

Mary C. Miner,

Managing Director for Professional and Cultural Exchanges, Bureau of Educational and Cultural Affairs, Department of State.

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36828]

California Northern Railroad Company—Lease and Operation Exemption Including Interchange Commitment—Union Pacific Railroad Company

California Northern Railroad Company (CFNR), a Class III railroad, has filed a verified notice of exemption pursuant to 49 CFR 1150.41, to exempt from regulation CFNR's entry into a lease amendment that will extend the term of, and make other changes to, a lease (the Original Lease) that CFNR entered into with the predecessor to Union Pacific Railroad Company (UP), Southern Pacific Transportation Company (SP).[1] The rail lines subject to the lease amendment (Leased Lines) include the following segments, totaling approximately 183 route miles: (i) the Schellville Branch, from milepost 48.97 (east leg of wye) and milepost 48.93 (west leg of wye), at Suisun, Cal., to milepost 63.40, near Lombard, Cal.; (ii) the Napa Branch, from milepost 61.61, at Lombard, to the bumper near Rocktram, Cal., at milepost 67.50; (iii) the Vallejo Branch, from milepost 61.42, at Napa Jct., Cal., to milepost 68.87, at Vallejo, Cal.; (iv) the West Valley Line, from milepost 75.66 (east leg of wye) and milepost 75.58 (west leg of wye), at Davis, Cal., to milepost 186.30 (east leg of wye toward Portland, Cal.) and milepost 186.33 (west leg of wye toward Roseville), at Tehema, Cal.; (v) the Hamilton Branch, from milepost 180.40, at Wyo, Cal., to milepost 169.00, at Hamilton, Cal.; (vi) the Los Banos Branch, from milepost 83.00, at Tracy, Cal., to milepost 140.07 at Los Banos, Cal.;[2] (vii) the Sugarfield Industrial Lead, from milepost 85.56 at Woodland, Cal., to milepost 88.25 at Sugarfield, Cal.; and (viii) the Johns Manville Industrial Lead, from milepost 150.0 at Willows, Cal., to the end of UP's track ownership at milepost 152.68.[3]

CFNR states that it has leased the Leased Lines since 1993 when it entered into the Original Lease with UP's predecessor, SP. *See Cal. N. R.R.,* FD 32353. According to CFNR, the Original Lease was for a term of ten years and renewed automatically thereafter. The verified notice states that CFNR and UP have agreed to amend the Original Lease to extend the term and make other commercial changes, and that CFNR will continue to be the operator after the transaction.[4]

CFNR certifies that the Original Lease includes an existing interchange commitment that potentially affects interchange with carriers other than SP (now UP). CFNR has provided additional information regarding the interchange commitment, as required by 49 CFR 1150.43(h).[5]

CFNR certifies that its projected revenues as a result of this transaction will not exceed will not exceed those that would qualify it as a Class III carrier, but also certifies that its revenues currently exceed $5 million. Pursuant to 49 CFR 1150.42(e), if a carrier's projected annual revenues will exceed $5 million, it must, at least 60 days before this exemption is to become effective, post a notice of its intent to undertake the proposed transaction at the workplace of the employees on the affected lines, serve a copy of the notice on the national offices of the labor unions with employees on the affected lines, and certify to the Board that it has done so. However, CFNR's verified notice of exemption includes a request for waiver of the 60-day advance labor notice requirement so that the exemption can become effective 30 days after it is filed. CFNR's waiver request will be addressed in a separate decision. The Board will establish the effective date of the exemption in its separate decision on the waiver request.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be filed no later than May 7, 2025.

All pleadings, referring to Docket No. FD 36828, must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on CFNR's representative, Justin J. Marks, Clark Hill PLC, 1001 Pennsylvania Ave. NW, Suite 1300 South, Washington, DC 20004.

According to CFNR, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available at *www.stb.gov.*

Decided: April 24, 2025.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

[FR Doc. 2025–07417 Filed 4–29–25; 8:45 am]

BILLING CODE 4915–01–P

[1] CFNR originally submitted its verified notice of exemption on April 2, 2025, but supplemented it on April 14, 2025. In light of CFNR's supplement, April 14, 2025, is considered the filing date of the verified notice.

[2] The original grant of authority for the Los Banos Branch extended to milepost 141.17. *Cal. N. R.R.—Lease & Operation Exemption—Certain Lines of S. Pac. Transp. Co.,* FD 32353, slip op. at 2 (ICC served Oct. 5, 1993). UP and CFNR obtained authority to abandon and discontinue the segment of rail line from milepost 140.07 to milepost 141.17 in 2001. *Union Pac. R.R.—Aban. Exemption—in Merced Cnty., Cal.,* AB 33 (Sub-No. 179X) et al., slip op. at 3 (STB served Sept. 7, 2001). The original lease authority also included SP's Northwestern Pacific (NWP) Line from NWP milepost 142.50, near Outlet, Cal., to NWP milepost 40.60, near Schellville, Cal., to SPT milepost 63.40, near Lombard. *Cal. N. R.R.,* FD 32353, slip op. at 1. CFNR assigned its rights to the NWP Line to the North Coast Railroad Authority in 1996. *N. Coast R.R. Auth.—Lease & Operation Exemption—Cal. N. R.R.,* FD 33115, slip op. at 1 n. 2 (STB served Sept. 27, 1996).

[3] The Sugarfield Industrial Lead and the Johns Manville Industrial Lead were not included in the original lease authority. *Cal. N. R.R.,* FD 32353, slip op. at 2

[4] CFNR represents that this is the sixth amendment to the Original Lease. CFNR does not indicate whether it believes authority from the Board was necessary for the previous amendments. The class exemption invoked by CFNR does not provide for retroactive effectiveness. *See Cent. N.Y. R.R.—Lease & Operation Exemption Including Interchange Commitment—Norfolk S. Ry.,* FD 36825, slip op. at 2 n.3 (STB served Mar. 28, 2025).

[5] Concurrent with the initial filing of its verified notice of exemption, CFNR filed, under seal, portions of the amended lease. *See* 49 CFR 1150.43(h)(1) (providing that certain information related to interchange commitments, such as copies of agreements, will be kept confidential without an accompanying motion for a protective order). In its April 14 supplement, CFNR provided, under seal, the full amended agreement.

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36827]

Willamette & Pacific Railroad, Inc.—Lease and Operation Exemption Including Interchange Commitment—Union Pacific Railroad Company

Willamette & Pacific Railroad, Inc. (WPRR), a Class III railroad, has filed a verified notice of exemption under 49 CFR 1150.41 to amend and extend its lease originally entered into with a predecessor to Union Pacific Railroad Company (UP), Southern Pacific Transportation Company (SP).[1] The railroad lines subject to the lease amendment include the following segments, totaling approximately 160.95 miles (collectively referred to as the Leased Lines): (1) the Toledo Branch between milepost 691.61 near Albany, Or., and milepost 766.70 at the end of

[1] WPRR originally submitted its verified notice of exemption on April 4, 2025, but supplemented it on April 14, 2025. In light of WPRR's supplement, April 14, 2025, is considered the filing date of the verified notice.

the track, near Toledo, Or.; (2) that portion of the Newberg Branch between milepost 738.00 near St. Joseph, Or., and milepost 749.67 near Newberg, Or.; (3) that portion of the West Side Branch between milepost 738.00 near St. Joseph and milepost 687.6 near Corvalis, Or.; (4) the Dallas Branch between milepost 729.01 near Gerlinger, Or., and milepost 733.80 at the end of the track, near Dallas, Or.; and (5) the Willamina Branch between milepost 730.46 near Whiteson, Or., and milepost 749.46 at the end of the track, near Willamina, Or.

According to the verified notice, WPRR is the current freight rail operator on the Leased Lines, having received authority to lease and operate the Leased Lines from SP in 1993. *See Willamette & Pac. R.R.—Lease & Operation Exemption—S. Pac. Transp. Co.,* FD 32245 (ICC served Feb. 26, 1993). The verified notice indicates that WPRR and UP have now agreed to amend the lease to further extend its term and make other commercial changes, and that WPRR will continue to be the operator after the transaction.[2]

As required under 49 CFR 1150.43(h)(1), WPRR certifies in its verified notice that the lease contains an interchange commitment. The interchange commitment was amended by a sixth amendment to the lease agreement, dated as of August 1, 2003. WPRR has provided additional information regarding the interchange commitment as required by 49 CFR 1150.43(h).[3]

WPRR certifies that its projected revenues as a result of the transaction will not result in the creation of a Class II or Class I rail carrier, but that its current annual revenues exceed, and are expected to continue to exceed, $5 million. Pursuant to 49 CFR 1150.42(e), if a carrier's projected annual revenues will exceed $5 million, it must, at least 60 days before the exemption is to become effective, post a notice of its intent to undertake the proposed transaction at the workplace of the employees on the affected lines, serve a copy of the notice on the national offices of the labor unions with employees on the affected lines, and certify to the Board that it has done so. WPRR, however, has petitioned for waiver of the 60-day advance labor notice requirements. WPRR's waiver request will be addressed in a separate decision in which the Board will establish the effective date of the exemption. WPRR is currently operating the Leased Lines under the terms of the original lease, as amended, and will continue to do so until the amendment becomes effective. WPRR states that the amended lease will become effective upon the effective date of the exemption, which is 30 days after filing, or upon the grant of its requested labor notice waiver.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be filed no later than May 7, 2025.

All pleadings, referring to Docket No. FD 36827, must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on WPRR's representative, Justin J. Marks, Clark Hill PLC, 1001 Pennsylvania Avenue NW, Suite 1300 South, Washington, DC 20004.

According to WPRR, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available at *www.stb.gov.*

Decided: April 24, 2025.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

[FR Doc. 2025–07416 Filed 4–29–25; 8:45 am]

BILLING CODE 4915–01–P

[2] WPRR represents that this is the ninth amendment to the original lease. WPRR does not indicate whether it believes authority from the Board was necessary for the previous amendments. The class exemption invoked by WPRR does not provide for retroactive effectiveness. *See Cent. N.Y. R.R.—Lease & Operation Exemption Including Interchange Commitment—Norfolk S. Ry.,* FD 36825, slip op. at 2 n.3 (STB served Mar. 28, 2025).

[3] Concurrent with the initial filing of its verified notice of exemption, WPRR filed, under seal, portions of the amended lease. *See* 49 CFR 150.43(h)(1) (providing that certain information related to interchange commitments, such as copies of agreements, will be kept confidential without an accompanying motion for a protective order). In its April 14 supplement, WPRR provided, under seal, the full amended agreement.

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2024–0165]

Agency Information Collection Activities; Revision of an Approved Information Collection Request: Financial Responsibility Motor Carriers, Freight Forwarders, and Brokers

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FMCSA announces its plan to submit the Information Collection Request (ICR) described below to the Office of Management and Budget (OMB) for review and approval. FMCSA requests approval to renew an ICR titled, ''Financial Responsibility Motor Carriers, Freight Forwarders, and Brokers.'' The purpose of this ICR is to provide registered motor carriers, property brokers, and freight forwarders a means of meeting financial responsibility filing requirements. This ICR sets forth the financial responsibility documentation requirements for motor carriers, freight forwarders, and brokers as a result of Agency jurisdictional statutes. On January 6, 2025, FMCSA published a 60-day notice in the **Federal Register** announcing its intention to submit this ICR to OMB for renewal. FMCSA received two comments in response to the published notice.

DATES: Comments on this notice must be received on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be submitted within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Ana Alvarez, Financial Analyst, Office of Registration, Financial Responsibility Filings Division, DOT, FMCSA, 1200 New Jersey Avenue SE, Washington, DC 20590–0001; 202–366–0401; *ana.alvarez@dot.gov.*

SUPPLEMENTARY INFORMATION:

Title: Financial Responsibility Motor Carriers, Freight Forwarders, and Brokers.

OMB Control Number: 2126–0017.

Type of Request: Revision of currently approved ICR.

Respondents: For-hire motor carriers, brokers, and freight forwarders.

Estimated Number of Respondents: 200,147.

Estimated Time per Response: The estimated average burden per response for Form BMC–40 is 40 hours. The estimated average burden per response for forms BMC–34, 35, 82, 83, 91, and 91X is 10 minutes per form. In addition, form BMC–32 takes 10 minutes. Forms BMC 36, 84, and 85 are affected by the implementation of the Broker Freight Forward Financial Responsibility rule. For the 6 months prior to the rule implementation the estimated average burden per response for these three forms is 10 minutes per form. For the remaining 2.5 year after the rule is implemented the estimated average burden per response for the revised forms is 12 minutes per form.

Expiration Date: June 30, 2025.

Frequency of Response: Certificates of insurance, surety bonds, and trust fund agreements are required when the transportation entity first registers with FMCSA and then when such coverages are changed or replaced by these entities. Notices of cancellation are required only when such certificates of insurance, surety bonds, and trust fund agreements are cancelled. The BMC–40 is filed only when a carrier seeks approval from FMCSA to self-insure its bodily injury and property damage (BI and PD) and/or cargo liability coverage.

Estimated Total Annual Burden: 49,722 hours. The annual burden was revised for Forms BMC–84, BMC–85, and BMC–36. The initial collection period for those forms is the 6-month period prior to the compliance date of the Broker and Freight Forward Financial Responsibility rule where the estimated average burden per response is 10 minutes. The second collection period is a revision for the 2.5 years following the January 16, 2026, rule compliance date where the estimated average burden per response is 12 minutes. The annual burden hours for the revised forms equal 2,249. The annual burden hours for the remaining forms are unchanged at 47,473.

Background

The Secretary of Transportation (Secretary) is authorized to register for-hire motor carriers of property and passengers under the provisions of 49 U.S.C. 13902, surface freight forwarders under the provisions of 49 U.S.C. 13903, and property brokers under the provisions of 49 U.S.C. 13904. These persons may conduct transportation services only if they are registered pursuant to 49 U.S.C. 13901. The Secretary has delegated authority pertaining to these registration requirements to the FMCSA (49 CFR 1.87) and the regulations implementing these requirements may be found at 49 CFR part 387. The registration remains valid only as long as these transportation entities maintain, on file with FMCSA, evidence of the required levels of financial responsibility pursuant to 49 U.S.C. 13906. FMCSA regulations governing the financial responsibility requirements for these entities are found at 49 CFR part 387. The information collected from these forms are summarized and displayed in the Licensing and Information system.

Forms for Endorsements, Certificates of Insurance and Other Evidence of Bodily Injury and Property Damage Liability and Cargo Liability Financial Responsibility

Forms BMC–91 and BMC–91X, titled ''Motor Carrier Automobile Bodily Injury and Property Damage Liability Certificate of Insurance,'' and Form BMC–82, titled ''Motor Carrier Bodily Injury Liability and Property Damage Liability Surety Bond Under 49 U.S.C. 13906,'' provide evidence of the required coverage for BI and PD liability. A Form BMC–91X filing is required when a carrier's insurance is provided by multiple companies instead of just one. Form BMC–34, titled ''Household Goods Motor Carrier Cargo Liability Certificate of Insurance,'' and Form BMC–83, titled ''Household Goods Motor Carrier Cargo Liability Surety Bond Under 49 U.S.C. 13906,'' establish a carrier's compliance with the Agency's cargo liability requirements. Only household goods motor carriers are required to file evidence of cargo insurance with FMCSA (§ 387.303(c)). Form BMC–90, titled ''Endorsement for Motor Carrier Policies of Insurance for Automobile Bodily Injury and Property Damage Liability Under Section 13906, Title 49 of the United States Code,'' and Form BMC–32, titled ''Endorsement for Motor Common Carrier Policies of Insurance for Cargo Liability Under 49 U.S.C. 13906,'' are executed by the insurance company, attached to BI and PD or cargo liability insurance policies, respectively, and forwarded to the motor carrier or freight forwarder.

Requirement To Obtain Surety Bond or Trust Fund Agreement

Form BMC–84, titled ''Broker's or Freight Forwarder's Surety Bond Under 49 U.S.C. 13906,'' and Form BMC–85, titled ''Broker's or Freight Forwarder's Trust Fund Agreement Under 49 U.S.C. 13906 or Notice of Cancellation of the Agreement,'' are filed by brokers or freight forwarders to comply with the requirement that they must have a $75,000 surety bond or trust fund agreement in effect before FMCSA will issue property broker or freight forwarder operating authority registration. Both forms are being revised due to the implementation of the Broker and Freight Forwarder Financial Responsibility rule (88 FR 78656, Nov. 16, 2023). As originally published in 2023, the rule had two compliance dates, January 16, 2025, and January 16, 2026. In anticipation of the January 16, 2025, compliance date, a 60-day **Federal Register** notice was published on August 1, 2024 (89 FR 62842) to revise the current information collection. However, FMCSA subsequently extended the compliance date for all requirements to January 16, 2026, creating a single compliance date for all provisions of the rule. FMCSA issued a second 60-day notice on January 6, 2025 (90 FR 720) to reflect the extended compliance date (see discussion below). The implementation of the Broker and Freight Forwarder Financial Responsibility rule 6 months after the forms are set to expire necessitates the use of two versions of forms BMC–36, BMC–84, and BMC–85. The first version of the forms will apply to the 6 months prior to the implementation of the rule on January 16, 2026. The second version will apply to the 2.5 years following the implementation of the Broker and Freight Forwarder Financial Responsibility rule after January 16, 2026.

Cancellation of Prior Filings

Form BMC–35, titled ''Notice of Cancellation Motor Carrier Insurance under 49 U.S.C. 13906,'' Form BMC–36, titled ''Motor Carrier and Broker's Surety Bonds under 49 U.S.C. 13906 Notice of Cancellation,'' and Form BMC–85, titled ''Broker's or Freight Forwarder's Trust Fund Agreement Under 49 U.S.C. 13906 or Notice of Cancellation of the Agreement,'' can be used to cancel prior filings. Forms BMC–36 and BMC–85 are being revised due to the implementation of the Broker and Freight Forwarder Financial Responsibility rule's extended compliance date of January 16, 2026.

Self-Insurance

Motor carriers can also apply to FMCSA to self-insure BI and PD and/or cargo liability in lieu of filing certificates of insurance with the FMCSA, as long as the carrier maintains a satisfactory safety rating (see

§ 387.309.) Form BMC–40 is the application used by carriers to apply for self-insurance authority.

On January 6, 2025, FMCSA published a 60-day notice in the **Federal Register** (90–FR 720) with a 60-day public comment period to announce its intention to submit this ICR to OMB for the proposed revision. FMCSA received two comments in response to the published notice. One of the comments was not related to this ICR and was removed from the docket because it contained possible personally identifiable information.

The second commenter opposed the Broker and Freight Forwarder Responsibility rule, stating that the $75,000 financial responsibility requirement imposes a financial burden on smaller brokers and freight forwarders. Additionally, the comment implied that the rule would impose 49,722 burden hours on the participants.

In response, FMCSA notes that the minimum amount of financial responsibility is set by statute and the Agency has no discretion to change it (see 49 U.S.C. 13906(b)(3)).

The commenter's calculation of burden hours is inaccurate, as it represents the annual burden of hours for all 11 forms included in this ICR, not just the three forms updated here.

The commenter did not address whether the proposed collection is necessary for the accuracy of the estimated burden; nor the ways the burden could be minimized without reducing the quality of the collected information.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) whether the proposed collection is necessary for the performance of FMCSA's functions; (2) the accuracy of the estimated burden; (3) ways for FMCSA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized without reducing the quality of the collected information.

Issued under the authority of 49 CFR 1.87.

Kenneth Riddle,

Acting Associate Administrator, Office of Research and Registration.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2010–0181]

Notice of Petition for Extension of Waiver of Compliance

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: This document provides the public notice that Durbin & Greenbrier Valley Railroad, Inc. (DGVR) petitioned FRA for an extension of relief from certain regulations concerning stenciling of rail cars.

DATES: FRA must receive comments on the petition by May 30, 2025. FRA will consider comments received after that date to the extent practicable.

ADDRESSES:

Comments: Comments related to this docket may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and docket number. All comments received will be posted without change to *https://www.regulations.gov*; this includes any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov* and follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT: John Brahaney, Railroad Safety Specialist, FRA Motive Power & Equipment Division, telephone: 202–493–6134, email: *john.brahaney@dot.gov*.

SUPPLEMENTARY INFORMATION: Under part 211 of title 49 Code of Federal Regulations (CFR), this document provides the public notice that by letter dated February 12, 2025, DGVR petitioned FRA to extend a special approval pursuant to 49 CFR part 215 (Railroad Freight Car Safety Standards), and to extend a waiver of compliance from certain provisions of the Federal railroad safety regulations contained in part 215. The relevant Docket Number is FRA–2010–0181.

Specifically, DGVR requests to extend the previous special approval pursuant to § 215.203, *Restricted cars,* in this docket for 15 cars (DGVR 1–15) that are (1) more than 50 years from the dates of original construction, and (2) equipped with a component listed in part 215, appendix A (K Style Air Brake). DGVR also seeks to extend relief from § 215.303, *Stenciling of restricted cars.* In its petition, DGVR explains that the cars will be used in excursion service and will be operated at a maximum speed of 10 miles per hour.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at *www.regulations.gov*.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

Communications received by May 30, 2025 will be considered by FRA before final action is taken. Comments received after that date will be considered if practicable.

Privacy Act

Anyone can search the electronic form of any written communications and comments received into any of FRA's dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). Under 5 U.S.C. 553(c), DOT solicits comments from the public to inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See also *https://www.regulations.gov/privacy-notice* for the privacy notice of *regulations.gov*.

Issued in Washington, DC.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2025–0030]

Notice of Petition for Waiver of Compliance

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: This document provides the public notice that Sonoma-Marin Area Rail Transit (SMART) District petitioned FRA for relief from certain regulations concerning safety appliances.

DATES: FRA must receive comments on the petition by May 30, 2025. FRA will consider comments received after that date to the extent practicable.

ADDRESSES:

Comments: Comments related to this docket may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and docket number. All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov* and follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT: Harry Weisinger, Railroad Safety Specialist, FRA Motive Power & Equipment Division, telephone: 202–493–0036, email: *harold.weisinger@dot.gov.*

SUPPLEMENTARY INFORMATION: Under part 211 of title 49 Code of Federal Regulations (CFR), this document provides the public notice that by letter received February 7, 2025, SMART petitioned FRA for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 231 (Railroad Safety Appliance Standards). FRA assigned the petition Docket Number FRA–2025–0030.

Specifically, SMART seeks relief from § 231.14(f)(4)(i), *Passenger-train cars without end platforms,* which states that side door steps ''exceeding 18 inches in depth shall have an additional tread and be laterally braced.'' SMART's 18 Nippon Sharyo diesel multiple units (DMUs) operating in passenger service each currently have four compliant, 2-ring sill steps that occasionally cause crews to enter and exit cars where they must step more than 24 inches to the ground, which increases safety risks. SMART explains that it has tested a 3-ring sill step that reduces the distance to the ground to 14 inches, but SMART finds that lateral bracing on these steps ''is impractical and would make repairs and maintenance on the equipment mounted behind the sill steps more difficult.'' SMART proposes ''to add a third step to the existing two step configuration'' to ''reduce injury risk for our employees that have to mount/dismount the equipment outside of the maintenance facility.''

A copy of the petition, as well as any written communications concerning the petition, is available for review online at *www.regulations.gov.*

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

Communications received by May 30, 2025 will be considered by FRA before final action is taken. Comments received after that date will be considered if practicable.

Privacy Act

Anyone can search the electronic form of any written communications and comments received into any of FRA's dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2012–0079]

Notice of Petition for Extension of Waiver of Compliance

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: This document provides the public notice that Long Island Rail Road (LIRR) petitioned FRA for an extension of relief from certain regulations concerning hours of service.

DATES: FRA must receive comments on the petition by May 30, 2025. FRA will consider comments received after that date to the extent practicable.

ADDRESSES:

Comments: Comments related to this docket may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and docket number. All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov* and follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT: Bill Smith, Railroad Safety Specialist, FRA Operating Practices Division, telephone: 682–305–6709, email: *william.smith@dot.gov.*

SUPPLEMENTARY INFORMATION: Under part 211 of title 49 Code of Federal Regulations (CFR), this document provides the public notice that by letter dated April 3, 2025, LIRR petitioned FRA for an extension of a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 228 (Passenger Train Employee Hours of Service;

Recordkeeping and Reporting; Sleeping Quarters). The relevant Docket Number is FRA–2012–0079.

Specifically, LIRR seeks an extension of relief from the on-duty requirements in § 228.405(a)(3), *Limitations on duty hours of train employees engaged in commuter or intercity rail passenger transportation,* which states that a train employee may not go on duty, under certain circumstances, including in a series of at most 14 consecutive calendar days. The existing relief allows LIRR employees to ''reset'' the series of at most 14 consecutive calendar days after a ''general pick'' (a biannual event allowing train employees to bid on jobs, with jobs being awarded based on an employee's seniority) or a large timetable revision. In its petition, LIRR explains that the relief is needed during the general picks, which occur in May and November of each year, and the timetable revisions, also occurring about twice per year.

In support of its request, LIRR states that the unions representing employees impacted by the relief (the International Association of Sheet Metal, Air, Rail and Transportation Workers—General Committee of Adjustment 505 and the Brotherhood of Locomotive Engineers and Trainmen—General Committee of Adjustment) support the request for extension.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at *www.regulations.gov.*

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

Communications received by May 30, 2025 will be considered by FRA before final action is taken. Comments received after that date will be considered if practicable.

Privacy Act

Anyone can search the electronic form of any written communications and comments received into any of FRA's dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2013–0059]

Notice of Petition for Extension of Waiver of Compliance

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: This document provides the public notice that Long Island Rail Road (LIRR) petitioned FRA for an extension of relief from certain regulations concerning material modification of railroad interlocking systems.

DATES: FRA must receive comments on the petition by May 30, 2025. FRA will consider comments received after that date to the extent practicable.

ADDRESSES:

Comments: Comments related to this docket may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and docket number. All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

Docket: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov* and follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT: Scott Johnson, Railroad Safety Specialist, FRA Signal, Train Control, and Crossings Division, telephone: 406–210–3608, email: *scott.j.johnson@dot.gov.*

SUPPLEMENTARY INFORMATION: Under part 211 of title 49 Code of Federal Regulations (CFR), this document provides the public notice that by letter dated February 4, 2025, LIRR petitioned FRA for an extension of a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 236 (Rules, Standards, and Instructions Governing the Installation, Inspection, Maintenance, and Repair of Signal and Train Control Systems, Devices, and Appliances). The relevant Docket Number is FRA–2013–0059.

Specifically, LIRR seeks an extension of relief from § 236.312, *Movable bridge, interlocking of signal appliances with bridge devices,*[1] pertaining to the DB drawbridge on the Montauk Branch in Long Island City, New York. The existing relief applies to the previous removal of ''all associated locking devices from the interlocking signal circuitry due to the installation of straight rail over both bridge[s,] which permanently rendered the bridges fixed in place and no longer operable.'' LIRR states that the locking devices are therefore no longer necessary.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at *www.regulations.gov.*

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

Communications received by May 30, 2025 will be considered by FRA before final action is taken. Comments received after that date will be considered if practicable.

Privacy Act

Anyone can search the electronic form of any written communications and comments received into any of FRA's dockets by the name of the individual submitting the comment (or signing the document, if submitted on

[1] In its February 4, 2025, petition, LIRR requested relief from § 235.5(a)(3), which provides changes of signal systems that require filing of an application. In FRA's April 27, 2020, decision letter, LIRR was granted relief from § 236.312, and FRA assumes that LIRR is requesting relief from this same regulation.

behalf of an association, business, labor union, etc.). Under 5 U.S.C. 553(c), DOT solicits comments from the public to inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See also *https://www.regulations.gov/privacy-notice* for the privacy notice of *regulations.gov.*

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2024–0054]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Request for Comment; Limousine Crashworthiness Safety Research

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice and request for comments on a request for approval of a new collection of information.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (PRA), this notice announces that the Information Collection Request (ICR) summarized below will be submitted to the Office of Management and Budget (OMB) for review and approval. The ICR describes the nature of the information collection and its expected burden. This ICR is a new information collection by NHTSA for the purpose of researching limousine crash safety. A **Federal Register** Notice with a 60-day comment period soliciting comments on the information collection was published on October 7, 2024. One comment was received expressing support; thus, there are no changes to the planned collection from that proposed in the previous notice.

DATES: Comments must be submitted on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection, including suggestions for reducing burden, should be submitted to the Office of Management and Budget at *www.reginfo.gov/public/do/PRAMain.* To find this particular information collection, select ''Currently under Review—Open for Public Comment'' or use the search function.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact Ian Hall, Structures and Restraints Research Division (NSR–210), (202) 366–4714, National Highway Traffic Safety Administration, W46–443, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590. Please identify the relevant collection of information by referring to its OMB Control Number.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501 *et seq.*), a Federal agency must receive approval from the Office of Management and Budget (OMB) before it collects certain information from the public, and a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. In compliance with these requirements, this notice announces that the following information collection request will be submitted OMB.

Title: Limousine Crashworthiness Safety Research.

OMB Control Number: New.

Form Number(s): NHTSA Form 1802 Interview Guide—OEM; NHTSA Form 1803 Interview Guide—OEM Program Non-Participant; NHTSA Form 1804 Interview Guide—OEM Program Participant.

Type of Request: New.

Type of Review Requested: Regular.

Length of Approval Requested: 3 years from date of approval.

Summary of the Collection of Information:

In an effort to comply with a Congressional mandate and understand the limousine market and the characteristics of limousine vehicles with respect to crashworthiness and occupant safety, NHTSA is seeking approval for a new ICR.

Many federal safety regulations (*e.g.,* Federal Motor Vehicle Safety Standards [FMVSS] Nos. 207, 208, 209, and 210) do not currently apply to limousines; as a result, the extent of limousine crash safety features and performance is not well known. Since limousine manufacturers fall into one of three categories (vehicle original equipment manufacturers [OEM], OEM program participants, and OEM program nonparticipants), each of which uses distinct methods for vehicle fabrication and vehicle design, NHTSA must conduct this research with survey tools targeting each of those specific categories. The research approach consists of one-time voluntary interviews with members of the three groups related to the limousine market: (a) vehicle OEMs, (b) OEM program participants, and (c) OEM program nonparticipants. The interviews will consist of open-ended questions regarding limousine fabrication and are intended to report on safety characteristics related to evacuation, crashworthiness, occupant seating, and restraints. Three versions of the interview will be used, one for each category of manufacturer. Interview results will be collected and summarized in a final report available for public consumption via the National Transportation Library, and the data will help inform NHTSA actions in alignment with the Infrastructure Investment and Jobs Act (IIJA).

Description of the Need for the Information and Proposed Use of the Information:

On November 15, 2021, Public Law 117–58, also known as IIJA, became law. Sections 23015 and 23023 of IIJA mandate that the Secretary of Transportation, NHTSA through delegation, conduct a variety of research and actions. These include research into the development of motor vehicle safety standards for side impact protection, roof crush resistance, and air bag systems for the protection of occupants in limousines with alternative seating positions—including perimeter seating arrangements; safety features and standards that aid evacuation in the event that an exit in the passenger compartment of a limousine is blocked; and amending FMVSS Nos. 207, 208, 209, and 210 such that they apply to limousines for each designated seating position, including side-facing seats. This information collection will also aid in any cost-benefit analyses that would be required for promulgating new federal safety regulation and other regulatory alternative considerations if those actions are deemed necessary and appropriate.

60-Day Notice:

A **Federal Register** notice with a 60-day comment period soliciting public comments on the following information collection was published on October 7, 2024 (89 FR 81134). NHTSA received one comment during the 60-day comment period. The comment came from the National Association of Mutual Insurance Companies (NAMIC) and expressed support for NHTSA's information collection. Specifically, the comment stated that ''NAMIC supports

this effort and the intended safety goal. The proposed collection of information seems reasonably necessary to assist in safety determinations and to have practical utility.'' Additionally, NHTSA notified the public about the research and the opportunity to comment on the information collection at the NHTSA Safety Research Portfolio Public Meeting,[1] which had an approximate attendance of 1,228. NHTSA opened docket NHTSA–2024–0040 to announce and receive comments regarding the NHTSA Safety Research Portfolio Public Meeting at which this research was discussed. Four comments were received to this docket; however, none of the comments referenced the Limousine Study.[2] With no specific feedback to the information requested during the study nor comments regarding the burden estimates, no changes were made to the study.

Affected Public:

This includes selected limousine manufacturers/fabricators who will fall into one of three categories, including vehicle OEMs, limousine fabricators associated with an OEM limousine program (OEM program participants), and limousine fabricators not associated with an OEM program (OEM program nonparticipants). Participation is voluntary.

Estimated Annual Number of Respondents: 53.

Frequency: Once.

Estimated Annual Number of Responses: 53.

Estimated Annual Burden Hours: 53 hours.

This information collection will consist of interviews conducted across three categories of limousine manufacturers: vehicle OEMs, OEM program participants, and OEM program nonparticipants. The interviews in this ICR will be one-time responses of limousine manufacturers. For each manufacturer type, the target for minimum number of responses is 10, plus an approximately equal distribution of the 11 remaining planned interviews to arrive at a total of a minimum of 41 successful responses. Respondents in some of the groups may be more difficult for interview completion than others; thus, the target maximum respondent outreach of 160 contacts is as follows: a maximum of 20 OEMs will be contacted in total with an annual average of seven OEMs contacted (greatest expected response rate), a maximum of 40 OEM program participants will be contacted in total with an annual average of 13 OEM program participants contacted (mid-range expected response), and a maximum of 100 OEM program nonparticipants will be contacted in total with an annual average of 33 OEM program nonparticipants contacted (these will be the smaller businesses, and response rate is expected to be low).

While each interview guide varies slightly, the time to complete the interview is not expected to vary greatly with an average of 60 minutes per interview. While NHTSA and the research team will discontinue the interview process after a minimum of 41 successful responses is complete across a relatively equal distribution of the categories, there is no similar study to calculate response rates or average completion time of an incomplete response or declined interview. Therefore, for calculation of burden, NHTSA and the research team have used the maximum number of contacts to provide an absolute maximum burden. The table below provides estimated burden costs and hours, both total burden and annual burden. Based on the average interview time from a preliminary round of nine interviews with limousine manufacturers, the time required to complete each interview is expected to be 60 minutes. This results in a total burden to respondents of 160 hours over the three-year study and an annual burden of 53 hours.

The database of respondents for limousine manufacturers will be from S&P Global Mobility and their extensive canvasing of the automotive industry. The respondents in each category will be selected at random and given the opportunity to accept or decline the interview before moving on to the subsequent outreach effort.

Table 1 provides a summary of the estimated burden hours associated with those submissions. Note there are slight variations between the total and the annual figures based on rounding.

TABLE 1—BURDEN ESTIMATES

Information collection	Number of respondents (total/annual)	Frequency of response	Time (minutes)	Burden hours
Interview Guide—OEM (NHTSA Form 1802)	20 total/7 annual	1	60	20 total/7 annual.
Interview Guide—OEM Program Participant (NHTSA Form 1804).	40 total/13 annual	1	60	40 total/13 annual.
Interview Guide—OEM Program Nonparticipant (NHTSA Form 1803).	100 total/33 annual	1	60	100 total/33 annual.
Total Burden				160.
Annualized Burden				53.

Estimated Total Annual Cost Burden: $0.

There will be no start-up or record-keeping costs to respondents to complete the interviews. Respondents are completing the interview in-person or via phone, and no equipment or software is required for completion.

Public Comments Invited: You are asked to comment on any aspects of this information collection, including (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2024–0024]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Motorcycle Crash Avoidance Technology Review

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice and request for comments on a request for approval of a new information collection.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (PRA), this notice announces that the Information Collection Request (ICR) summarized below will be submitted to the Office of Management and Budget (OMB) for review and approval. This document describes a new collection of information for which NHTSA intends to seek OMB approval titled ''Motorcycle Crash Avoidance Technology Review.'' The new information collection would be a one-time, voluntary, and anonymous survey of motorcycle riders to obtain consumer-reported feedback and perspectives on the use and availability of advanced crash avoidance motorcycle technologies. A **Federal Register** Notice with a 60-day comment period soliciting comments on the following information collection was published on June 12, 2024. Three comments were received during the comment period. This 30-day notice includes a summary of those comments and responses. NHTSA has addressed these comments, but there are no resulting changes to the estimated burden.

DATES: Comments must be submitted on or before May 30, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection, including suggestions for reducing burden, should be submitted to the Office of Management and Budget at *www.reginfo.gov/public/do/PRAMain.* To find this particular information collection, select ''Currently under Review—Open for Public Comment'' or use the search function.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact Mr. Ryan Rahimpour, NHTSA, Office of Vehicle Safety Research, (202) 366–8756, W46–432, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590, *Ryan.rahimpour@dot.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501 *et seq.*), a Federal agency must receive approval from OMB before it collects certain information from the public, and a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. In compliance with these requirements, this notice announces that the following information collection request will be submitted OMB.

Title: Motorcycle Crash Avoidance Technology Review.

OMB Control Number: New.

Form Number(s): Eligibility Questionnaire, NHTSA Form 1811; Informed Consent, NHTSA Form 1812; Full Questionnaire, NHTSA Form 1813.

Type of Request: New information collection.

Type of Review Requested: Regular.

Length of Approval Requested: One year from date of approval.

Summary of the Collection of Information: NHTSA is seeking approval to conduct three voluntary, one-time information collections that would be part of a survey of motorcycle riders to obtain consumer-reported feedback and perspectives on the use and availability of advanced crash avoidance motorcycle technologies. These information collections will be administered to a convenience sample of motorcycle riders and will collect information on current consumer perceptions of the utility and availability of the technologies, including consumer willingness to use advanced safety technology on motorcycles and how various contextual factors will impact that willingness to use. This collection is part of a larger effort to gather data and summarize the scope of motorcycle crashes, estimate the prevalence of different crash avoidance technologies available in the fleet, understand the crash avoidance technologies under development, and identify perspectives on advanced motorcycle technologies.

The three information collections include (1) an eligibility questionnaire; (2) an informed consent form; and (3) the survey questionnaire. The survey will ask respondents for background information on themselves (demographics, riding behavior, and safety habits like helmet use) to gauge whether knowledge and beliefs about motorcycle systems differ by any of these variables. The survey will ask respondents about their knowledge and beliefs regarding motorcycle safety technology using open-ended questions. These questions will assess consumer willingness to use various motorcycle technologies and their perspectives on the impact of various contextual factors (*e.g.,* personal beliefs, mandates, costs).

- Technologies include braking systems (anti-lock braking, combined braking, automatic emergency braking); warning systems (lane departure, blind spot, curve speed, forward collision, and rear collision); and control systems (stability control and wheelie control).
- Open-ended questions aim to gather unbiased perspectives and allow a measure of accuracy of information available to consumers and users. Additionally, overall thoughts on technologies provide insight into user acceptance and can be evaluated by demographics and user characteristics.
- Willingness to purchase and use technologies provides perspective for incentivized incorporation of technologies and potential disengagement or modification to make inoperative.
- Cost considerations provide insight for potential policy decisions as they relate to cost-benefit analyses.

Description of the Need for the Information and Proposed Use of the Information: NHTSA's mission is to save lives, prevent injuries, and reduce the economic costs of road traffic crashes through education, research, safety standards, and enforcement activity. Subchapter V of Chapter 301 of Title 49 of the United States Code (U.S.C.) authorizes the Secretary of Transportation to conduct ''motor vehicle safety research, development, and testing programs and activities, including activities related to new and emerging technologies that impact or may impact motor vehicle safety'' (49 U.S.C. 30182). Pursuant to Section 1.95 of Title 49 of the Code of Federal Regulations (CFR), the Secretary has delegated this authority to NHTSA.

As crash avoidance technologies advance, they have the potential to reduce the loss of life in roadway crashes. NHTSA is looking to gather information regarding consumer use and understanding of current advanced safety technology on motorcycles. The results of the information collection will help NHTSA better understand consumer-based barriers and facilitators

to advanced motorcycle crash avoidance technology deployment. By understanding these barriers and facilitators, NHTSA can better develop related policy and consumer education materials to improve safety through the increased uptake and safe use of advanced technologies for motorcycles.

60-Day Notice: A **Federal Register** notice with a 60-day comment period soliciting public comments on the following information collection was published on June 12, 2024 (89 FR 50042) to which NHTSA received three comments.

The Insurance Institute for Highway Safety (IIHS) welcomed ''any addition to the current state of knowledge in motorcyclist safety, [and they] strongly discourage[d] NHTSA from delaying possible rulemaking on motorcycle ABS by waiting for these survey results.'' IIHS further supported public comment in the opportunity for individuals or organizations to provide feedback, regardless of selection for participation in the survey. IIHS referenced and appended its existing petition for rulemaking on FMVSS No. 122 and requested that the petition be granted. IIHS did not comment on the burden calculations or methodology of the information collection at hand.

Response: NHTSA acknowledges support for the collection of additional information regarding motorcyclist safety. The results of the consumer survey may be considered during contemplation of future research and Agency activities. NHTSA is reviewing the IIHS petition as part of the standard regulatory process. Because IIHS did not comment regarding burden calculation or methodology, no changes have been made to the survey design or instrument based on IIHS's comment.

The American Motorcyclist Association (AMA) provided a written comment in which they ''support the National Highway Traffic Safety Administration seeking public comments on issues regarding motorcycle safety and safety technology.'' The AMA emphasized the importance of direct feedback from the motorcycling community and expressed some previously stated concerns regarding emerging technology and interactions with motorcycles and motorcyclists. Specifically, AMA highlighted the concern regarding a lack of data on how AEB systems would respond to other vehicle types such as heavy vehicles or motorcycles, as included in NHTSA's May 2024 Final Rule on automatic emergency braking. Additionally, AMA suggested that information to be collected in the survey and motorcycle safety recommendations are available through other efforts organized by NHTSA. AMA referenced the first of seven meetings to update the National Agenda for Motorcycle Safety (NAMS). They also referenced the newly reestablished Motorcyclist Advisory Council (MAC), which will ''coordinate and advise the Secretary of Transportation, NHTSA, and the Federal Highway Administration on transportation issues specific to motorcyclists.''

Regarding survey design, the AMA stated the previous notice did not indicate a survey design that equal distributes participants across segments of the motorcycling community. They noted that responses may differ depending on the number of years riding, number of miles traveled per year, type of motorcycle, on or off-road riding, engine size, safety training history, and crash history.

Response: The MAC and NAMS are part of NHTSA's overall strategy for improving motorcycle safety. These initiatives work together to ensure that the diverse motorcycling community is well-represented, including fair and comprehensive inclusion of all riding segments. Both efforts were at the initial stages of activity in 2024 and scope and expected deliverables for each are currently pending review in the Office of the Secretary. The Agency benefits by initiating this collection of information from consumers while the NAMS update and the MAC are underway. This survey will collect consumer feedback on new and emerging safety technologies for motorcycles—information currently unavailable to the agency. The efforts and breadth of information collected through this survey, the NAMS update and the MAC can complement and support one another.

As stated, the AMA noted concerns regarding differences in response based on segments of the motorcycling community. The survey is not designed to stratify respondents by population segments, but the survey is collecting information about specific rider characteristics and history. The analysis will take these data into consideration post collection. Table 1 below identifies the data of interest discussed by the AMA, whether the survey originally included this information for collection and analysis, if the survey instrument has been adjusted to accommodate for that data, and if not, the justification for not including that data collection.

TABLE 1—RECOMMENDATIONS BY THE AMERICAN MOTORCYCLIST ASSOCIATION

AMA data of interest	Originally in survey	Change to survey
Number of years respondent has ridden.	No	Added to the survey instrument.
Miles travelled per year.	No	Added to the survey instrument.
Type of motorcycle	Yes.	
On- or off-road riding.	Yes.	
Engine size	No	Added to the survey instrument.
Safety training history.	No	Added to the survey instrument.
Crash history	Yes.	

NHTSA and its research partner have modified the survey questionnaire based on the above feedback from AMA. While four questions were added to the instrument, NHTSA does not believe this will change the average time of survey completion; therefore, these modifications will not result in any changes in the burden estimates.

The Motorcycle Riders Foundation (MRF) ''applauds the National Highway Traffic Safety Administration for attempting to understand the views of motorcyclists regarding crash avoidance technology.'' Noting that ''motorcyclists are an afterthought,'' the organization states appreciation in seeking to survey riders.

The MRF subsequently offers two key points regarding the proposed survey. The first is that they believed that questions or phrasing that push respondents to side with certain safety features should be avoided, encouraging a fair and neutral survey. Secondly, the MRF noted the diversity of the motorcycling community and suggests that the respondents be selected to include specific rider characteristics. Table 2 provides those data of interest included in the MRF comment. In a related statement, the MRF stated concern with the selected sample size of 300 as potentially not representing segments of the motorcycling community. The MRF did not directly request an increase in sample size but acknowledged the increase in

information if the sample size were expanded.

Response: NHTSA has coordinated with its research partner to ensure that the survey questions are objective, unbiased, and representative. With regard to inclusion of a broad representation of the motorcycling community, NHTSA is not collecting data in a stratified sampling methodology; rather, the agency is using a self-selection method of riders that collects characteristics to be used during data analysis. The information collection is a convenience sample and not designed as a nationally representative sample, thus the 300 completed surveys are believed to be sufficient to meet the objectives of the study. Table 2 shows the data of interest included in the MRF comment, an indication of whether that data was included for collection in the original survey instrument, and whether the survey instrument will change based on this comment.

TABLE 2—RECOMMENDATIONS BY THE MOTORCYCLE RIDERS FOUNDATION

MRF data of interest	Originally in survey	Change to survey
Type of motorcycles the respondent currently rides.	Yes.	
Engine size	No	Added to the survey instrument.
Number of motorcycles owned.	Yes.	
Number of years riding.	No	Added to the survey instrument.
Average number of miles ridden annually.	No	Added to the survey instrument.
Motorcycle safety training history.	No	Added to the survey instrument.
Geographic location.	Yes.	
Age	Yes.	
Crash history	Yes.	

NHTSA and its research partner will modify the survey questionnaire based on the above feedback from MRF. The four questions added to the survey instrument are the same questions identified by the AMA. There are no additional questions added in response to the MRF comments beyond those; therefore, no additional modifications have been made to the questionnaire, and no resulting changes have been made to the burden estimates.

Affected Public: General public with motorcycle experience.

Estimated Number of Respondents: Initial outreach for respondents is targeted to reach 700 individuals. 420 individuals will move forward to the informed consent document and the survey questionnaire.

Frequency: Once.

Estimated Annual Burden Hours: 124 hours.

This information collection request involves three information collections: (1) an eligibility questionnaire; (2) an informed consent form; and (3) the survey questionnaire. The administration of each of these information collections is completely electronic as well as the solicitation of respondents through targeted advertisements and motorcycle community web pages. The survey involves a convenience sample and will remain available for completion until a sample size of 300 completed surveys is achieved.

Initial outreach for respondents is targeted to reach 700 individuals willing to initiate the survey (in order to arrive at the final desired sample size of 300). The landing page for the survey is a three-question eligibility questionnaire, with an estimated time for completion of one minute. Because this is a new format for gathering this type of information from this community, the research team estimates that 60 percent of the individuals who take the eligibility questionnaire will qualify to move forward. Therefore, 420 individuals will move forward to the informed consent document. It is assumed that all 420 individuals will complete the informed consent, which is also expected to take an average of one minute.

While all 420 respondents are expected to move forward for the survey questionnaire, the research team expects some non-response and some attrition of respondents. The research team is looking for 300 completed questionnaires, so the 420 respondents are considered the maximum number of respondents needed to arrive at 300 completed questionnaires. A completed survey questionnaire is estimated to take on average 15 minutes. As noted in the discussion of the public comments, four questions were added to the survey questionnaire in response to the comments. However, these questions are not expected to change the estimated average completion time of the survey. The estimate of an average of 15 minutes of completion was, and remains, a generous estimate of expected time.

Full administration of the survey is expected to be completed within one year, and therefore, burden hours are both total and annual estimates.

TABLE 3—BURDEN ESTIMATES

NHSTA Form No.	Information collection	Number of respondents	Time per response (min)	Frequency of response	Time burden (hours)
1811	Eligibility Questionnaire	700	1	1	12
1812	Informed Consent	420	1	1	7
1813	Full Questionnaire	420	15	1	105
Annual Burden					124

The annual burden for administration of the survey is 124 hours.

Estimated Annual Burden Cost: $0.

There is no cost to the respondents for this information collection. Respondents will not incur travel expenses nor be required to obtain equipment for completion of the survey.

Public Comments Invited: You are asked to comment on any aspect of this

information collection, including (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; 49 CFR 1.49; and DOT Order 1351.29A.

Cem Hatipoglu,

Associate Administrator, Office of Vehicle Safety Research.

BILLING CODE 4910–59–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Agency Collection Activities; Requesting Comments on Form 13751

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Form 13751, Waiver of Right to Consistent Agreement of Partnership Items and Partnership-Level Determinations as to Penalties, Additions to Tax, and Additional Amounts.

DATES: Written comments should be received on or before June 30, 2025 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Include OMB Control No. 1545–1969 in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form should be directed to Jason Schoonmaker, (801) 620–2128, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *jason.m.schoonmaker@irs.gov.*

SUPPLEMENTARY INFORMATION: The IRS is currently seeking comments concerning the following information collection tools, reporting, and record-keeping requirements:

Title: Waiver of Right to Consistent Agreement of Partnership Items and Partnership-Level Determinations as to Penalties, Additions to Tax, and Additional Amounts.

OMB Number: 1545–1969.

Form Number: 13751.

Abstract: Form 13751 is used to determine the eligibility for participation in the settlement initiative of taxpayers related through TEFRA partnerships to ineligible applicants. Such determinations will involve partnership items and partnership-level determinations, as well as the calculation of tax liabilities resolved under this initiative, including penalties and interest.

Current Actions: There is no change to the burden previously approved by OMB. This submission is for renewal purposes.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, Business or other for-profit organizations, not-for-profit institutions.

Estimated Number of Respondents: 100.

Estimated Time Per Respondent: 1 hours.

Estimated Total Annual Burden Hours: 100 hours.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: April 24, 2025.

Jason M. Schoonmaker,

Tax Analyst.

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would revise the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals; make changes relating to Medicare graduate medical education (GME) for teaching hospitals; update the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs); update and make changes to requirements for certain quality programs; and make other policy-related changes.

DATES: To be assured consideration, comments must be received at one of the addresses provided in the **ADDRESSES** section, no later than 5 p.m. EDT on June 10, 2025.

ADDRESSES: In commenting, please refer to file code CMS–1833–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may (and we encourage you to) submit electronic comments on this regulation to *https://www.regulations.gov*. Follow the instructions under the ''submit a comment'' tab.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1833–P, P.O. Box 8013, Baltimore, MD 21244–8013.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments via express or overnight mail to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1833–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, we refer readers to the beginning of the **SUPPLEMENTARY INFORMATION** section.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *https://www.regulations.gov*. Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Plain Language Summary: In accordance with 5 U.S.C. 553(b)(4), a

plain language summary of this proposed rule may be found at *https://www.regulations.gov/*.

Deregulation Request for Information (RFI): On January 31, 2025, President Trump issued Executive Order (E.O.) 14192 ''Unleashing Prosperity Through Deregulation,'' which states the Administration policy to significantly reduce the private expenditures required to comply with Federal regulations to secure America's economic prosperity and national security and the highest possible quality of life for each citizen. We would like public input on approaches and opportunities to streamline regulations and reduce administrative burdens on providers, suppliers, beneficiaries, and other interested parties participating in the Medicare program. CMS has made available an RFI at *https://www.cms.gov/medicare-regulatory-relief-rfi.* Please submit all comments in response to this RFI through the provided weblink.

Tables Available on the CMS Website

The IPPS tables for this fiscal year (FY) 2026 proposed rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled ''FY 2026 IPPS Proposed rule Home Page'' or ''Acute Inpatient—Files for Download.'' The LTCH PPS tables for this FY 2026 proposed rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* under the list item for Regulation Number CMS–1833–P. For further details on the contents of the tables referenced in this proposed rule, we refer readers to section VI. of the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites, as previously identified, should contact *Michael Treitel, DAC@cms.hhs.gov*.

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This FY 2026 IPPS/LTCH PPS proposed rule would make payment and policy changes under the Medicare inpatient prospective payment system (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it would make payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This proposed rule also would make policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. We are also proposing changes relating to Medicare graduate medical education (GME) for teaching hospitals.

We are proposing several changes across pay for performance programs. In the Hospital Value-Based Purchasing (VBP) Program, we are proposing modifications to the Hospital-Level Total Hip Arthroplasty/Total Knee Arthroplasty (THA/TKA) Complications measure beginning with the FY 2033 program year. We are also providing notice of the technical update to the five National Healthcare Safety Network (NHSN) Healthcare Associated Infection (HAI) measures beginning with the FY 2028 program year, and the technical update to remove the COVID–19 exclusion from the six measures in the Clinical Outcomes domain beginning with the FY 2027 program year. Lastly, we provide previously and newly established performance standards for the FY 2028 through FY 2031 program years for the Hospital VBP Program. In the Hospital Acquired-Conditions (HAC) Reduction Program, we are also providing notice of the technical update to the five Centers for Disease Control National Control (CDC) NHSN healthcare-associated infection (HAI) measures. In the Hospital Readmissions Reduction Program, we are proposing to add Medicare Advantage (MA) beneficiaries to the six Hospital Readmissions Reduction Program (HRRP) measures and make corresponding administrative updates.

In the PPS-Exempt Cancer Hospital Quality Reporting Program (PCHQR), we are proposing to modify the public reporting requirements and remove three existing measures.

In the Hospital Inpatient Quality Reporting (IQR) Program, we are proposing to modify four existing quality measures and remove four existing measures.

We also are proposing to update and codify the Extraordinary Circumstances Exception (ECE) policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital in the Hospital IQR, Hospital Readmissions Reduction, PCHQR, HAC Reduction, and Hospital VBP Programs.

In the Medicare Promoting Interoperability Program, we are proposing to define the electronic health record (EHR) reporting period in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that calendar year for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program and to make corresponding revisions at 42 CFR 495.4. We are proposing to modify the Security Risk Analysis measure beginning with the EHR reporting period in CY 2026. We are proposing to modify the Safety Assurance Factors for EHR Resilience (SAFER) Guides measure beginning with the EHR reporting period in CY 2026. We are proposing to add an optional bonus measure under the Public Health and Clinical Data Exchange objective for reporting data to a public health agency (PHA) using the Trusted Exchange Framework and Common Agreement (TEFCA) beginning with the EHR reporting period in CY 2026.

In the LTCH Quality Reporting Program (QRP), we are proposing to remove one item from the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) with respect to patients who have expired in the LTCH. We are also proposing to remove four Social Determinant of Health (SDOH) standardized patient assessment data elements from the LCDS. Next, we are proposing to amend the reconsideration request process in the LTCH QRP. Finally, we include Requests for Information (RFIs) on: (1) future measure concepts for the LTCH QRP; (2) revisions to the data submission deadlines for assessment data collected for the LTCH QRP; and (3) advancing digital quality measurement (dQM) in the LTCH QRP.

The Transforming Episode Accountability Model (TEAM), a mandatory alternative payment model that was finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), aims to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass graft (CABG), lower extremity joint replacement (LEJR), major bowel procedure, surgical hip/femur fracture treatment (SHFFT), and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. In this proposed rule, we are proposing updates to TEAM that would modify policies affecting participation of new hospitals, quality measure and assessment, the construction of target prices, the removal of certain health reporting elements, the expansion of the Skilled

Nursing Facility (SNF) 3-Day Rule, and the removal of the Decarbonization and Resilience Initiative (DRI). Additionally, the policies in this proposed rule reflect our commitment to ensuring TEAM's incentives help to drive beneficiary quality of care improvements and reductions in Medicare spending.

Under various statutory authorities, we either discuss continued program implementation or propose to make changes to the Medicare IPPS, the LTCH PPS, other related payment methodologies and programs for FY 2026 and subsequent fiscal years, and other policies and provisions included in this proposed rule. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals; and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of the Balanced Budget Refinement Act of 1999 (BBRA) (Public Law (Pub. L.) 106–113) and section 307(b)(1) of the Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.
- Section 1814(l)(4) of the Act requires, beginning with FY 2015, that CAHs that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for an EHR reporting period for a cost reporting period shall be paid 100 percent of reasonable costs rather than 101 percent of reasonable costs.
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. Hospitals paid under the IPPS with approved GME programs are paid for the indirect costs of training residents in accordance with section 1886(d)(5)(B) of the Act.
- Section 1886(d)(5)(F) of the Act provides for additional Medicare IPPS payments to subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. These payments are known as the Medicare disproportionate share hospital (DSH) adjustment. Section 1886(d)(5)(F) of the Act specifies the methods under which a hospital may qualify for the DSH payment adjustment.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1886(b)(3)(B)(ix) of the Act, which requires downward adjustments to the applicable percentage increase, beginning with FY 2015 (and beginning with FY 2022 for subsection (d) Puerto Rico hospitals), for eligible hospitals that do not successfully demonstrate meaningful use of CEHRT for an EHR reporting period for a payment adjustment year.
- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(n) of the Act, which establishes the requirements for an eligible hospital to be treated as a meaningful EHR user for an EHR reporting period for a payment year or, for purposes of subsection (b)(3)(B)(ix) of the Act, for a fiscal year.
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year.
- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act directs the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries in determining the extent of excess readmissions.
- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for an additional uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act if subsection (r) did not apply (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act, in the absence of section 1886(r) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) the hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.
- Section 1886(m)(5) of the Act, which requires the Secretary to reduce by 2 percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data on quality measures in the form, manner, and at a time, specified by the Secretary.
- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub.

L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.

- Section 1899B of the Act, which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.
- Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program (CHIP) beneficiaries while reducing program expenditures.

2. Summary of the Major Provisions

The following is a summary of the major provisions in this proposed rule. In general, these major provisions are being proposed as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the changes in this proposed rule is presented in section I.D. of the preamble of this proposed rule.

a. Proposed Transition for the Discontinuation of the Low Wage Index Hospital Policy

To help mitigate growing wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We also stated we intended to revisit the issue of the duration of this policy in future rulemaking as we gained experience under the policy. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69301 through 69308), we adopted an extension of the low wage index hospital policy and the related budget neutrality adjustment effective for at least three more years, beginning in FY 2025, in order for sufficient wage data from after the end of the COVID–19 Public Health Emergency to become available.

As discussed in section III.F.5. of the preamble of this proposed rule, on July 23, 2024, the Court of Appeals for the D.C. Circuit held that the Secretary lacked authority under section 1886(d)(3)(E) of the Act or under the ''adjustments'' language of section 1886(d)(5)(I)(i) of the Act to adopt the low wage index hospital policy for FY 2020, and that the policy and related budget neutrality adjustment must be vacated. *Bridgeport Hosp.* v. *Becerra,* 108 F.4th 882, 887–91 & n.6 (D.C. Cir. 2024). After considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* in the FY 2025 IFC (89 FR 80405 through 80421), we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. In addition, we established an interim transition policy for hospitals significantly impacted by the removal of the FY 2025 low wage index hospital policy using our authority under section 1886(d)(5)(I) of the Act.

For FY 2026 and subsequent fiscal years, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are proposing to discontinue the low wage index hospital policy and would no longer apply a low wage index budget neutrality factor to the standardized amounts. As discussed in section III.F.7. of the preamble of this proposed rule, we are proposing to use our authority under section 1886(d)(5)(I)(i) of the Act to adopt a narrow transitional exception to the calculation of FY 2026 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy, that would be implemented in a budget neutral manner. This proposed transitional exception policy would apply to hospitals that benefitted from the FY 2024 low wage index hospital policy and would compare the hospital's proposed FY 2026 wage index to the hospital's FY 2024 wage index. If the hospital's proposed FY 2026 wage index is decreasing by more than 9.75 percent from the hospital's FY 2024 wage index, then the proposed transitional payment exception for FY 2026 for that hospital would be equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent of its FY 2024 wage index. We proposed to make this policy budget neutral through an adjustment applied to the standardized amounts for all hospitals.

b. Proposed Update to the IPPS Labor-Related Share

As discussed in section IV. of the preamble of this proposed rule, we are proposing to rebase and revise the 2018-based IPPS market basket to reflect a 2023 base year. In addition, using the cost category weights from the proposed 2023-based IPPS market basket, we calculated a labor-related share of 66.0 percent, which we are proposing to use for discharges occurring on or after October 1, 2025. The proposed labor-related share of 66.0 percent is 1.6 percentage points lower than the current labor-related share of 67.6 percent. As discussed in section IVB.3. of the preamble of this proposed rule, this downward revision to the labor-related share is primarily the result of incorporating the more recent 2023 Medicare cost report data for Wages and Salaries, Employee Benefits, and Contract Labor costs. This is partially offset by an increase in the Professional Fees: Labor-Related cost weight.

c. Hospital Readmission Reduction Program

We are proposing to make changes to policies for the Hospital Readmissions Reduction Program, which was established under section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions. In this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing the following policies: (1) Refine all six readmission measures to add Medicare Advantage patient cohort data; (2) remove the COVID–19 diagnosed patients measure denominator exclusion from the all six readmission measures, beginning with the FY 2026 program year; (3) reduce the applicable period from 3-years to 2-years and update codified regulation language; (4) modify the diagnosis-related group (DRG) payment ratios in the payment adjustment formula to include MA beneficiaries; and (5) update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital.

d. Hospital Acquired Condition (HAC) Reduction Program

Section 1886(p) of the Act establishes the HAC Reduction Program under which payments to applicable hospitals are adjusted to provide an incentive to

reduce hospital-acquired conditions. In this FY 2026 IPPS/LTCH PPS proposed rule, we are making a technical update to the NHSN Healthcare Associated Infection (HAI) measures baseline. We are also proposing to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital.

e. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing modifications to the THA/TKA Complications measure beginning with the FY 2033 program year. We are also providing notice of the technical update to remove the COVID–19 exclusion from the six measures in the Clinical Outcomes domain beginning with the FY 2027 program year and the technical update to the five NHSN Healthcare Associated Infection (HAI) measures beginning with the FY 2028 program year. We also are proposing to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital. We are also proposing to remove the Program's Health Equity Adjustment. Lastly, we provide previously and newly established performance standards for the FY 2028 through FY 2031 program years for the Hospital VBP Program.

e. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase. In this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing several changes to the Hospital IQR Program. We are proposing refinements to four measures currently in the Hospital IQR Program measure set: (1) Hospital-Level, Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) beginning with the April 1, 2023–March 30, 2025 Reporting Period/2027 Payment Determination; (2) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Ischemic Stroke Hospitalization with Claims-Based Risk Adjustment for Stroke Severity beginning with the July 1, 2023–June 30, 2025 Reporting Period/2027 Payment Determination; (3) the Hybrid Hospital-Wide Readmission (HWR) measure beginning with the July 1, 2025, through June 30, 2026 Reporting Period/FY 2028 Payment Determination; and (4) the Hybrid Hospital-Wide All-Cause Risk Standardized Mortality (HWM) measure beginning with the July 1, 2025, through June 30, 2026 Reporting Period/FY 2028 Payment Determination. We are also proposing to remove four measures: (1) the Hospital Commitment to Health Equity measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (2) the COVID–19 Vaccination Coverage among HCP measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (3) the Screening for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination; and (4) the Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. We are proposing to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital. Additionally, we seek comments regarding measure concepts related to well-being and nutrition for future consideration. We also seek comments on the path forward for digital quality measurement and use of Fast Healthcare Interoperability Resources (FHIR).

f. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. In the FY 2026 IPPS/LTCH PPS proposed rule, we are proposing to publicly report PCH data on both the Provider Data Catalog and on Care Compare and to make corresponding changes to regulatory text to replace references to ''Provider Data Catalog'' with ''CMS website''. We are also proposing to remove the (1) Hospital Commitment to Health Equity, (2) the Screening for Social Drivers of Health measure; and (3) the Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. Lastly, we are proposing to update and codify the ECE policy to clarify that CMS has the discretion to grant an extension in response to an ECE request from a hospital.

g. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In the LTCH QRP, we are proposing to remove five items from the LCDS. We are also proposing to amend the reconsideration request process in the LTCH QRP. Finally, we include Requests for Information (RFIs) on: (1) future measure concepts for the LTCH QRP; (2) revisions to the data submission deadlines for assessment data collected for the LTCH QRP; and (3) advancing digital quality measurement (dQM) in the LTCH QRP.

h. Medicare Promoting Interoperability Program

Under sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act, respectively, eligible hospitals and CAHs are required to submit data in accordance with section 1886(n) to successfully demonstrate meaningful use of CEHRT for an EHR reporting period to avoid a downward payment adjustment under Medicare for the associated fiscal year. We are proposing several changes to the Medicare Promoting Interoperability Program. Specifically, we are proposing: (1) to amend the definition of ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4 for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program to define the EHR reporting period in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that calendar year; (2) to modify the Security Risk Analysis measure to require eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management in addition to the existing measure requirement to attest ''yes'' to having conducted security risk analysis, beginning with the EHR reporting period in CY 2026; (3) to modify the SAFER Guides measure by requiring eligible hospitals and CAHs to attest ''yes'' to completing an annual self-assessment using the eight SAFER Guides published in January 2025, beginning with the EHR reporting period in CY 2026; and (4) to add an optional bonus measure to the Public Health and Clinical Data Exchange objective for eligible hospitals and CAHs that submit health information to a public health agency (PHA) using the Trusted Exchange Framework and Common Agreement™ (TEFCA), and consistent with other measure requirements, beginning with the EHR reporting period in CY 2026.

i. Transforming Episode Accountability Model (TEAM)

In section XI.A. of the preamble of this proposed rule, we propose changes to the Transforming Episode Accountability Model (TEAM). TEAM is a 5-year mandatory model that will be tested under the authority of section 1115A of the Act, beginning on January 1, 2026, and ending on December 31, 2030. We are proposing changes to multiple areas of the model, including: (1) a limited deferment period for certain hospitals; (2) addressing the expiration of the Medicare Dependent Hospital program; (3) adding the Information Transfer Patient Reported Outcome-based Performance Measure (Information Transfer PRO–PM); (4) applying a neutral quality measure score for TEAM participants with insufficient quality data; (5) a methodology to construct target prices when there are coding changes; (6) reconstructing the normalization factor and prospective trend factor; (7) replacing the Area Deprivation Index (ADI) with the Community Deprivation Index (CDI); (8) using a 180-day lookback period and Hierarchical Condition Categories (HCC) version 28 for beneficiary risk adjustment; (9) aligning the date range used for episode attribution; (10) removing health equity plans and health related social needs data reporting; (11) expanding the Skilled Nursing Facility (SNF) 3-day rule waiver; and (12) removing the Decarbonization and Resilience Initiative (DRI).

3. Summary of Costs and Benefits

The following table provides a summary of the costs, savings, and benefits associated with the major provisions described in section I.A.2. of the preamble of this proposed rule.

Provision description	Description of costs, transfers, savings, and benefits
Proposed Transition for the Discontinuation of the Low Wage Index Hospital Policy.	As discussed in section III.F.7. of the preamble of this proposed rule, we are proposing to use our authority under section 1886(d)(5)(I)(i) of the Act to adopt a narrow transitional exception to the calculation of FY 2026 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy, that would be implemented in a budget neutral manner. We proposed to make this policy budget neutral through an adjustment applied to the standardized amounts for all hospitals.
Proposed Update to the IPPS Labor-Related Share.	As discussed in section IV. of the preamble of this proposed rule, we are proposing to rebase and revise the 2018-based IPPS market basket to reflect a 2023 base year. In addition, using the cost category weights from the proposed 2023-based IPPS market basket, we calculated a labor-related share of 66.0 percent, which we are proposing to use for discharges occurring on or after October 1, 2025. The proposed labor-related share of 66.0 percent is 1.6 percentage points lower than the current labor-related share of 67.6 percent. This proposed change is budget neutral.
Proposed Update to the IPPS Payment Rates and Other Payment Policies.	As discussed in Appendix A of this proposed rule, acute care hospitals are estimated to experience an increase of approximately $4.0 billion in FY 2026, primarily driven by the changes in FY 2026 operating payments, uncompensated care payments, and capital payments and the expiration of the temporary changes in the low-volume hospital program and the expiration of the MDH program on October 1, 2025.
Proposed Update to the LTCH PPS Payment Rates and Other Payment Policies.	As discussed in Appendix A of this proposed rule, based on the best available data for the 328 LTCHs in our database, we estimate that the proposed changes to the payment rates and factors that we present in the preamble of and Addendum of this proposed rule, which reflect the proposed update to the LTCH PPS standard Federal payment rate for FY 2026, would result in an estimated increase in payments in FY 2026 of approximately $61 million.
Changes to the Hospital Readmission Reduction Program.	We estimated that our changes for the Hospital Readmissions Reduction Program will result in no financial impact for the FY 2027 payment determination or subsequent years.
Changes to the Value-Based Incentive Payments under the Hospital VBP Program.	We estimated that there will be no net financial impact to the Hospital VBP Program for the FY 2026 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS–DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS–DRG payment amount reductions for the FY 2026 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2026 discharges is approximately $1.7 billion.
Proposed Changes to the HAC Reduction Program.	We estimated that our changes for the HAC Reduction Program will result in no financial impact for the FY 2027 payment determination or subsequent years.
Changes to the Hospital IQR Program.	Across 3,050 IPPS hospitals, we estimated that our changes for the Hospital IQR Program will result in a maximum decrease of 660,577 hours and $18,008,959 to the information collection burden for the FY 2026 payment determination or subsequent years.
Proposed Changes to the PCHQR Program.	Across 11 PCHs, we estimated that our changes for the PCHQR Program will result in a maximum decrease of 153 hours and $7,765 to the information collection burden for the FY 2026 program year or subsequent years.
Changes to the LTCH QRP	Across 330 LTCHs, we estimated that our proposed changes for the FY 2026 LTCH QRP would result in a total information collection burden increase of 4 hours and $187.60 associated with updates to our reconsideration policy. We estimated that our proposed changes for the FY 2028 LTCH QRP would result in a decrease of 2,633.51 hours associated with our policies and updated burden estimates and a total cost decrease of approximately $180,016.80.
Changes to the Medicare Promoting Interoperability Program.	Across 4,550 eligible hospitals and CAHs, we estimated that our changes for the Medicare Promoting Interoperability Program will not result in a change to the information collection burden for the EHR reporting period in CY 2026 and subsequent years.
Transforming Episode Accountability Model (TEAM).	We estimate for the TEAM proposals included in this proposed rule that there would be no significant change from the savings estimate in the FY 2025 IPPS/LTCH PPS final rule. Therefore, we estimate testing TEAM would result in saving the Medicare program $481 million across the 5 performance years.

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment (COLA) factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income

patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for an additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments and, beginning in FY 2023 for IHS and Tribal hospitals and hospitals located in Puerto Rico, the new supplemental payment.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

With the recent enactment of section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025, under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through September 30, 2025. For discharges occurring on or after October 1, 2007, but before October 1, 2025, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). As section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through FY 2025 only, beginning on October 1, 2025, the MDH program will no longer be in effect absent a change in law. Because the MDH program is not authorized by statute beyond September 30, 2025, beginning October 1, 2025, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the IPPS Federal rate.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); Inpatient psychiatric hospitals (IPF) and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH's cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413. Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved GME program receive an additional payment for each Medicare discharge to reflect the higher patient care costs of teaching hospitals relative to non-teaching hospitals. The additional payment is based on the indirect medical education (IME) adjustment factor, which is calculated using a hospital's ratio of residents to beds and a multiplier, which is set by Congress. Section 1886(d)(5)(B)(ii)(XII) of the Act provides that, for discharges occurring during FY 2008 and fiscal years thereafter, the IME formula multiplier is 1.35. The regulations regarding the indirect medical education (IME) adjustment are located at 42 CFR 412.105.

C. Summary of Provisions of Recent Legislation That Would Be Implemented in This Proposed Rule

1. The Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4)

Section 2201 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended through FY 2025 the modified definition of a low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals that had been in effect for FYs 2019 through 2024. Specifically, under section 1886(d)(12)(C)(i) of the Act, as amended, for FYs 2019 through 2025, a subsection (d) hospital qualifies as a low-volume hospital if it is more than 15 road miles from another subsection (d) hospital and has less than 3,800 total discharges during the fiscal year. Under section 1886(d)(12)(D) of the Act, as amended, for discharges occurring in FYs 2019 through September 30, 2025, the Secretary determines the applicable percentage increase using a continuous, linear sliding scale ranging from an additional 25 percent payment adjustment for low-volume hospitals with 500 or fewer discharges to a zero percent additional payment for low-volume hospitals with more than 3,800 discharges in the fiscal year.

Section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 amended sections 1886(d)(5)(G)(i) and 1886(d)(5)(G)(ii)(II) of the Act to provide for an extension of the MDH program through FY 2025 (that is, through September 30, 2025).

D. Summary of the Proposed Provisions

In this proposed rule, we set forth proposed payment and policy changes to the Medicare IPPS for FY 2026 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2026.

The following is a general summary of the changes that we are proposing to make in this proposed rule.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of this proposed rule, we include the following:

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2026.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2026 status of new technologies approved for add-on payments for FY 2025, a presentation of our evaluation and analysis of the FY 2026 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) Public Law 108–173, obtained in a town hall meeting for applications not submitted under an alternative pathway), and a discussion of the proposed status of FY 2026 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of this proposed rule, we propose revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

- The proposed FY 2026 wage index update using wage data from cost reporting periods beginning in FY 2022.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2026 based on the 2022 Occupational Mix Survey.
- Proposed application of the rural, imputed and frontier State floors, and proposed transition for the discontinuation of the low wage index hospital policy.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed adjustment to the wage index for acute care hospitals for FY 2026 based on commuting patterns of

hospital employees who reside in a county and work in a different area with a higher wage index.

- Proposed labor-related share for applying the FY 2026 wage index.

3. Proposed Rebasing and Revising of the IPPS Market Baskets

In section IV. of the preamble of this proposed rule, we propose to rebase and revise the IPPS market baskets to reflect a 2023 base year. In section IV.B.3. of the preamble of this proposed rule, using the cost category weights from the proposed 2023-based IPPS market basket, we propose to use a labor-related share of 66.0 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000.

4. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2026

In section V. of the preamble of this proposed rule, we discuss the following:

- Proposed calculation of Factor 1 and Factor 2 of the uncompensated care payment methodology.
- Proposed methodological approach for determining Factor 3 of the uncompensated care payment for FY 2026, which is the same methodology that was used for FY 2025.
- Proposed methodological approach for determining the amount of interim uncompensated care payments using the average of the most recent 3 years of discharge data.

5. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section VI. of the preamble of this proposed rule, we discuss proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital market basket update for FY 2026.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- Proposed conforming amendments to reflect the statutory extension of the temporary changes to the low-volume hospital payment adjustment through September 30, 2025.
- Proposed conforming amendments to reflect the statutory extension of the MDH program through September 30, 2025.
- A direct graduate medical education (GME) and indirect medical education (IME) policy proposal for calculating full-time equivalent counts and caps for cost reporting periods other than 12 months; and a notice of closure of two teaching hospitals and opportunities to apply for available slots.
- Proposed nursing and allied health education (NAHE) program Medicare Advantage (MA) add-on rates and direct GME MA percent reductions for CY 2024; and proposed regulatory changes regarding the calculation of net cost of NAHE.
- Proposed update to and revision to the payment adjustment for certain immunotherapy cases.
- Proposed changes to the requirements of the Hospital Readmissions Reduction Program—Updating the proposed estimate of the financial impacts for the FY 2026 Hospital Readmissions Reduction Program.
- Proposed changes to the requirements of the Hospital Value-Based Purchasing Program—Updating the proposed estimate of the financial impacts for the FY 2026 Hospital Value-Based Purchasing Program.
- Proposed changes to the requirements of the Hospital-Acquired Conditions Reduction Program—Updating the proposed estimate of the financial impacts for the FY 2026 Hospital-Acquired Conditions Reduction Program.
- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2025.

6. Proposed FY 2026 Policy Governing the IPPS for Capital-Related Costs

In section VII. of the preamble of the proposed rule, we discuss the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2025.

7. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VIII. of the preamble of the proposed rule, we discuss the following:

- Proposed changes to payments to certain excluded hospitals for FY 2026.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

8. Proposed Changes to the LTCH PPS

In section IX. of the preamble of the proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2026.

9. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section X. of the preamble of the proposed rule, we addressed the following:

- Solicitation of comment on adopting measures across the hospital quality reporting and value-based purchasing programs which capture more forms of unplanned post-acute care and encourage hospitals to improve discharge processes.
- Proposed changes to the requirements for the Hospital IQR Program.
- Proposed changes to the requirements for the PCHQR Program.
- Proposed changes to the requirements for the LTCH QRP, and requests for information on future measure concepts, revisions to the data submission deadlines for assessment data collection, and advancing digital quality measurement (dQM) in the LTCH QRP.
- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

10. Other Proposals and Comment Solicitations Included in the Proposed Rule

Section XI. of the preamble of the proposed rule includes proposed changes to TEAM that would affect participation, quality measure and assessment, pricing methodology, health data reporting, waivers of Medicare Program requirements, and the Decarbonization and Resilience Initiative.

11. Other Provisions of the Proposed Rule

Section XII.A. of the preamble of the proposed rule includes our discussion of the MedPAC Recommendations.

Section XII.B. of the preamble of the proposed rule includes a descriptive listing of the public use files associated with this proposed rule.

Section XIII. of the preamble of the proposed rule includes the collection of information requirements for entities based on our proposals.

Section XIV. of the preamble of the proposed rule includes information regarding our responses to public comments.

12. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the

proposed FY 2026 prospective payment rates for operating costs and capital-related costs for acute care hospitals, including cost-of-living adjustment (COLA) factors for IPPS hospitals located in Alaska and Hawaii. We are proposing to establish the threshold amounts for outlier cases. In addition, in section IV. of the Addendum of the proposed rule, we address the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2026 for certain hospitals excluded from the IPPS.

13. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2026 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2026. We are proposing to establish the adjustments for the wage index, labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

14. Impact Analysis

In Appendix A of this proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, LTCHs, and other entities.

15. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of this proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provide our recommendations of the appropriate percentage changes for FY 2026 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

16. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2025 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We address these recommendations in Appendix B of this proposed rule. For further information relating specifically to the MedPAC March 2024 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at *https://www.medpac.gov*.

II. Proposed Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS–DRGs and MS–DRG Reclassifications

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2025 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085; 83 FR 41158 through 41258; 84 FR 42058 through 42165; 85 FR 58445 through 58596; 86 FR 44795 through 44961; 87 FR 48800 through 48891; 88 FR 58654 through 58787; and 89 FR 69000 through 69109, respectively).

For discussion regarding our previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case mix, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48799 through 48800).

C. Proposed Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for Proposed FY 2026 MS–DRG Updates

a. International Classification of Diseases, 10th Revision (ICD–10)

Providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting.

b. Basis for Proposed FY 2026 MS–DRG Updates

The deadline for interested parties to submit MS–DRG classification change requests for FY 2026 was October 20, 2024. All requests are submitted to CMS via Medicare Electronic Application Request Information System™ (MEARIS™), accessed at *https://mearis.cms.gov.* Specifically, as indicated on the MEARIS™ site, the MS–DRG classification change request process may be used for requests to create, modify, or delete MS–DRGs,

change ICD–10–CM diagnosis code(s) severity level designations, change ICD–10–PCS procedure code(s) Operating Room (O.R.) designations, or to review the CC Exclusions List or the surgical hierarchy.

Within MEARIS™, we have built in several resources to support users, including a ''Resources'' section available at *https://mearis.cms.gov/public/resources* with technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding the MEARIS™ system can be submitted to CMS using the form available under ''Contact'', also at the bottom of the MEARIS™ site.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the request for MS–DRG classification changes to CMS. The aforementioned burden is subject to the Paperwork Reduction Act (PRA) of 1995 and approved under OMB control number 0938–1431 and has an expiration date of 09/30/2025.

Interested parties should submit any MS–DRG classification change requests, including any comments and suggestions for FY 2027 consideration by October 20, 2025 via MEARIS™ at: *https://mearis.cms.gov/public/home.*

As we have discussed in prior rulemaking, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking. We further note that we also received recommendations and feedback that did not involve requests to create, modify, or delete MS–DRGs, change code designations, or to review the CC Exclusions List or the surgical hierarchy, which therefore are not summarized or addressed in this discussion of the MS–DRG classification change requests received for FY 2026.

We received requests to modify the GROUPER logic in several MS–DRGs under MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) and a request to modify the GROUPER logic for MS–DRG 794 (Neonate with Other Significant Problems) under MDC 15 (Newborns and Other Neonates with Conditions Originating in Perinatal Period). Specifically, we received requests to—

- Modify the GROUPER logic of new MS–DRG 426 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC or Custom-Made Anatomically Designed Interbody Fusion Device), new MS–DRG 427 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC), and new MS–DRG 428 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC); new MS–DRG 447 (Multiple Level Spinal Fusion Except Cervical with MCC or Custom-Made Anatomically Designed Interbody Fusion Device) and new MS–DRG 448 (Multiple Level Spinal Fusion Except Cervical without MCC); and MS–DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) by reassigning cases with an ICD–10–PCS code that describes fusion of a sacroiliac joint using an internal fixation device with tulip connector or insertion of an internal fixation device with tulip connector into a pelvic bone with another spinal fusion procedure code that currently map to the lower severity level MS–DRG to the highest severity level (with MCC) MS–DRG.
- Modify the GROUPER logic of MS–DRGs 463, 464, and 465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC, with CC, and without CC/MCC, respectively); MS–DRGs 466, 467, and 468 (Revision of Hip or Knee Replacement with MCC, with CC, and without CC/MCC, respectively); and MS–DRGs 492, 493, and 494 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur with MCC, with CC, and without CC/MCC, respectively) by reassigning cases with ICD–10–PCS code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) that currently map to the lower severity level MS–DRG to the highest severity level (with MCC) MS–DRG.
- Modify the GROUPER logic of MS–DRG 794. The requestor recommended that ICD–10–CM diagnosis codes P09.6 (Abnormal findings on neonatal screening for neonatal hearing loss), Z13.0 (Encounter for screening for diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism), Z82.5 (Family history of asthma and other chronic lower respiratory diseases) and Z82.79 (Family history of other congenital malformations, deformations and chromosomal abnormalities), be added to the MS–DRG 795 (Normal Newborn) ''only secondary diagnosis'' list so that they would result in assignment to MS–DRG 795 when coded with a principal diagnosis code from ICD–10–CM category Z38 (Liveborn infants according to place of birth and type of delivery) instead of MS–DRG 794.

We appreciate the submissions and related analyses provided by the requestors for our consideration as we review MS–DRG classification change requests for FY 2026; however, we note the complexity of the GROUPER logic for these MS–DRGs in connection with these requests requires more extensive analyses to identify and evaluate all the data relevant to assessing these potential modifications. Specifically, we note that MS–DRGs 426, 427, 428, 447, and 448 recently became effective October 1, 2024 (FY 2025) and as discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35982 through 35983) and final rule (89 FR 69049 through 69053) in consideration of any future modifications to the current structure of the logic for case assignment to MS–DRGs 456, 457, and 458 we noted that additional analysis would be needed because the logic is also defined by diagnosis code logic as well as extensive fusions. We also note that, as discussed further in section II.C.5.c. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, we identified additional inconsistencies related to the diagnosis code logic for MS–DRGs 456, 457, and 458 for which we are proposing modifications. In addition, analyzing the impact of restructuring the logic in these MS–DRGs with respect to procedure codes describing fusion of a sacroiliac joint using an internal fixation device with tulip connector necessitates evaluating the impact across numerous other MS–DRGs in MDC 08, as well as MS–DRG 028 (Spinal Procedures with MCC), MS–DRG 029 (Spinal Procedures with CC or Spinal Neurostimulators), and MS–DRG 030 (Spinal Procedures without CC/MCC) under MDC 01 (Diseases and Disorders of the Nervous System) since the procedure codes describing fusion of a sacroiliac joint using an internal fixation device with tulip connector also map to these MS–DRGs.

With respect to the request to reassign cases reporting procedure code XW0V0P7 from the lower severity level to the highest (with MCC) severity level in the previously listed MS–DRGs, we note that the procedure to insert a bone void filler is designated as a non-operating room (Non-O.R.) procedure and believe that the key factor that

would contribute to resource utilization in these cases is the fact that the patients have an infection(s) which require additional resources. As discussed in section II.C.5.a. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, we also received an MS–DRG request related to cases reporting a hip or knee procedure with a diagnosis of periprosthetic joint infection (PJI) in MS–DRGs 463, 464, and 465. In our review of the claims data to address that request we noted that a subset of the cases also reported procedure code XW0V0P7. Consistent with our established process, we must also consider if there are additional factors, such as the severity of illness with other secondary CC/MCC conditions reported and any other O.R. procedures or services provided, such as mechanical ventilation, that may be contributing to the consumption of resources for these cases. For these reasons and those previously described, we believe additional time is needed to review and evaluate potential extensive modifications to the structure of these MS–DRGs.

With respect to the request to modify the GROUPER logic of MS–DRG 794, as discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69061 through 69065), we acknowledged that MS–DRG 794 utilizes ''fall-through'' logic, meaning if a diagnosis code is not assigned to any of the other MS–DRGs, then assignment ''falls-through'' to MS–DRG 794. As discussed in the FY 2025 IPPS/LTCH PPS rule, we stated we have started to examine the GROUPER logic that would determine the assignment of cases to the MS–DRGs in MDC 15, including MS–DRGs 794 and 795, to determine where further refinements could potentially be made to better account for differences in clinical complexity and resource utilization. However, as we have noted in prior rulemaking (72 FR 47152), we stated we cannot adopt the same approach to refine the newborn MS–DRGs because of the extremely low volume of Medicare patients there are in these MS–DRGs. We believe it is appropriate to consider the request to add ICD–10–CM diagnosis codes P09.6 (Abnormal findings on neonatal screening for neonatal hearing loss), Z13.0 (Encounter for screening for diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism), Z82.5 (Family history of asthma and other chronic lower respiratory diseases) and Z82.79 (Family history of other congenital malformations, deformations and chromosomal abnormalities) to the MS–DRG 795 (Normal Newborn) ''only secondary diagnosis'' list in connection with our continued examination of the GROUPER logic that would determine the assignment of cases to the MS–DRGs in MDC 15 in future rulemaking, rather than proposing to change the MS–DRG assignment of individual ICD–10–CM diagnosis codes at this time. Additional time is needed to fully and accurately evaluate cases currently grouping to the MS–DRGs in MDC 15 to consider if restructuring the current MS–DRGs would better recognize the clinical distinctions of these patient populations.

We will continue to monitor the data as we consider these issues in connection with future rulemaking. As we continue the analysis of the claims data with respect to MS–DRGs in MDC 08, MDC 01, and MDC 15, we welcome public comments and feedback on other factors that should be considered in the potential restructuring of these MS–DRGs. Feedback and other suggestions may be directed to MEARIS™ at: *https://mearis.cms.gov/public/home.* As noted, interested parties should submit any MS–DRG classification change requests, including any comments and suggestions for FY 2027 consideration by October 20, 2025 via MEARIS™ at: *https://mearis.cms.gov/public/home.*

As we did for the FY 2025 IPPS/LTCH PPS proposed rule, for this FY 2026 IPPS/LTCH PPS proposed rule we are providing a test version of the ICD–10 MS–DRG GROUPER Software, Version 43, so that the public can better analyze and understand the impact of the proposals included in this FY 2026 IPPS/LTCH PPS proposed rule. We note that this test software reflects the proposed GROUPER logic for FY 2026. Therefore, it includes the new diagnosis and procedure codes that are effective for FY 2026 as reflected in Table 6A.—New Diagnosis Codes—FY 2026 and Table 6B.—New Procedure Codes—FY 2026 associated with this FY 2026 IPPS/LTCH PPS proposed rule and does not include the diagnosis codes that are invalid beginning in FY 2026 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2026 and Table 6D.—Invalid Procedure Codes—FY 2026 associated with this FY 2026 IPPS/LTCH PPS proposed rule. These tables are not published in the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule. Because the diagnosis and procedure codes no longer valid for FY 2026 are not reflected in the test software, we are making available a supplemental file in Table 6P.1a that includes the mapped Version 43 FY 2026 ICD–10–CM codes and the deleted Version 42 FY 2025 ICD–10–CM codes and Table 6P.1b that includes the mapped Version 43 FY 2026 ICD–10–PCS codes and the deleted Version 42.1 FY 2025 ICD–10–PCS codes that should be used for testing purposes with users' available claims data. Therefore, users will have access to the test software allowing them to build case examples that reflect the proposals included in this FY 2026 IPPS/LTCH PPS proposed rule. In addition, users will be able to view the draft version of the ICD–10 MS–DRG Definitions Manual, Version 43 that contains the documentation for proposed FY 2026 ICD–10 MS–DRG GROUPER Version 43 logic changes and will also be able to view a draft version of the Definitions of Medicare Code Edits (MCE) Manual to review any changes that will become effective October 1 for FY 2026. As a result of new and modified code updates approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, any further changes to the MCE will be reflected in the finalized Definitions of Medicare Code Edits (MCE) Manual, made available in association with the annual IPPS/LTCH PPS final rule. We are making available the draft FY 2026 ICD–10 MCE Version 43 Manual file on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.*

The MCE manual is comprised of two chapters: *Chapter 1: Edit code lists* provides a listing of each edit, an explanation of each edit, and as applicable, the diagnosis and/or procedure codes for each edit, and *Chapter 2: Code list changes* summarizes the changes in the edit code lists (for example, additions and deletions) from the prior release of the MCE software. The public may submit any questions, comments, concerns, or recommendations regarding the MCE to the CMS mailbox at *MSDRGClassificationChange@cms.hhs.gov* for our review and consideration.

The test version of the ICD–10 MS–DRG GROUPER Software, Version 43, the draft version of the ICD–10 MS–DRG Definitions Manual, Version 43, the draft version of the Definitions of Medicare Code Edits Manual, Version 43, and the supplemental mapping files in Tables 6P.1a and 6P.1b of the FY 2025 and FY 2026 ICD–10–CM

diagnosis codes and ICD–10–PCS procedure codes are available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

The following are the changes that we are proposing to the MS–DRGs for FY 2026. We are inviting public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in this FY 2026 IPPS/LTCH PPS proposed rule. In some cases, we are proposing changes to the MS–DRG classifications based on our analysis of claims data and clinical appropriateness. In other cases, we are proposing to maintain the existing MS–DRG classifications based on our analysis of claims data and clinical appropriateness. For this FY 2026 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2024 update of the FY 2024 MedPAR file, which contains hospital bills received from October 1, 2023 through September 30, 2024. In our discussion of the proposed MS–DRG reclassification changes, we refer to these claims data as the ''September 2024 update of the FY 2024 MedPAR file.''

In deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on clinical factors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated we believed that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661), we continue to apply the criteria to create subgroups, including application of the NonCC subgroup criteria, in our annual analysis of MS–DRG classification requests, consistent with our approach since FY 2021 when we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. Accordingly, in our analysis of the MS–DRG classification requests for FY 2026 that we received by October 20, 2024, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.

Criteria No.	Three-way split 123 (MCC vs CC vs NonCC)	Two-way split 1_23 MCC vs (CC+NonCC)	Two-way split 12_3 (MCC+CC) vs NonCC
1. At least 500 cases in the MCC/CC/NonCC group.	500+ cases for MCC group; and 500+ cases for CC group; and 500+ cases for NonCC group.	500+ cases for MCC group; and 500+ cases for (CC+NonCC) group.	500+ cases for (MCC+CC) group; and 500+ cases for NonCC group.
2. At least 5% of the patients are in the MCC/CC/NonCC group.	5%+ cases for MCC group; and 5%+ cases for CC group; and 5%+ cases for NonCC group.	5%+ cases for MCC group; and 5%+ cases for (CC+NonCC) group.	5%+ cases for (MCC+CC) group; and 5%+ cases for NonCC group.
3. There is at least a 20% difference in average cost between subgroups.	20%+ difference in average cost between MCC group and CC group; and 20%+ difference in average cost between CC group and NonCC group.	20%+ difference in average cost between MCC group and (CC+NonCC) group.	20%+ difference in average cost between (MCC+CC) group and NonCC group.
4. There is at least a $2,000 difference in average cost between subgroups.	$2,000+ difference in average cost between MCC group and CC group; and $2,000+ difference in average cost between CC group and NonCC group.	$2,000+ difference in average cost between MCC group and (CC+NonCC) group.	$2,000+ difference in average cost between (MCC+CC) group and NonCC group.
5. The R2 of the split groups is greater than or equal to 3.	R2 >3.0 for the three-way split within the base MS–DRG	R2 >3.0 for the two-way 1_23 split within the base MS–DRG.	R2 >3.0 for the two-way 12_3 split within the base MS–DRG.

In general, once the decision has been made to propose to make further modifications to the MS–DRGs as described previously, such as creating a new base MS–DRG, or in our evaluation of a specific MS–DRG classification request to split (or subdivide) an existing base MS–DRG into severity levels, all five criteria must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS–DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, we stated earlier that for this FY 2026 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2024 update of the FY 2024 MedPAR file. However, in our evaluation of requests to split an existing base MS–DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent two years of data. This analysis includes two years of MedPAR claims data to compare the data results from one year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS–DRG is warranted is to determine if all the criteria is satisfied for a three-way split. In applying the criteria for a three-way split, a base MS–DRG is initially subdivided into the three subgroups: MCC, CC, and NonCC. Each

subgroup is then analyzed in relation to the other two subgroups using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria fail, the next step is to determine if the criteria are satisfied for a two-way split. In applying the criteria for a two-way split, a base MS–DRG is initially subdivided into two subgroups: ''with MCC'' and ''without MCC'' (1_23) or ''with CC/MCC'' and ''without CC/MCC'' (12_3). Each subgroup is then analyzed in relation to the other using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria for both of the two-way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS–DRG. If the three-way split fails on any one of the five criteria and all five criteria for both two-way splits (1_23 and 12_3) are met, we would apply the two-way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS–DRG into severity levels specifies the request is for either one of the two-way splits (1_23 or 12_3), in response to the specific request, we will evaluate the criteria for both of the two-way splits; however, we do not also evaluate the criteria for a three-way split.

2. Pre-MDC MS–DRG 018 Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies

We received a request to review the recent MS–DRG assignments to Pre-MDC MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies) and to clarify how decisions for the assignment of cell and gene therapies will be made moving forward. According to the requestor, for FY 2025, CMS did not assign prademagene zamikeracel (PZ), an autologous genetically engineered cell-based gene therapy, to MS–DRGs that would create clinical homogeneity and therefore, the mapping of these cases to MS–DRG 018 instead implied that estimated post-approval product pricing takes precedent for cell and gene therapies over clinical homogeneity principles. The requestor acknowledged that CMS has previously clarified that therapies mapped to Pre-MDC MS–DRG 018 do not need to be CAR T-cell products or utilized in the treatment of cancer and stated it concurs with that approach. However, the requestor indicated that the mapping of PZ to Pre-MDC MS–DRG 018 for FY 2025 also raised the following questions:

- Why was PZ mapped to Pre-MDC MS–DRG 018 when a different product (eladocagene exuparvovec) that is also delivered via operating room administration methods was mapped to other non-pre-MDC MS–DRGs?
- Why did CMS indicate that Lantidra, a recently approved cellular therapy, would map to the same MS–DRGs as existing insulin delivery therapies and technologies used to treat the subset of patients with hard-to-control Type 1 diabetes complicated by severe hypoglycemia who cannot receive a whole pancreas transplant instead of to Pre-MDC MS–DRG 018?
- Does CMS intend a future split of Pre-MDC MS–DRG 018 between medical and surgical cell and gene therapies to recognize the clinical resource differential between the two modalities, even if the 500 case volume threshold is not reached?
- Why was a product delivered via allogeneic stem cell transplant procedure (Orca-T) mapped to Pre-MDC MS–DRG 018 instead of Pre-MDC MS–DRG 014 (Allogeneic Bone Marrow Transplant)?
- If products delivered via stem cell transplant should be mapped to Pre-MDC MS–DRG 018 based on resource use, per the Orca-T example, why are multiple gene therapy products delivered via stem cell transplant instead mapped to Pre-MDC MS–DRGs 016 and 017 (Autologous Bone Marrow Transplant with CC/MCC and without CC/MCC, respectively)?

The requestor stated the previously listed questions illustrate examples of inconsistencies with the MS–DRG mappings of cell and gene therapy products in recent years. The requestor recommended that CMS review recent MS–DRG assignments for these products and consider refinements to the approach. The requestor also urged CMS to clarify how decisions for cell and gene therapies will be made in the future. The requestor stated that if the intent of CMS is for Pre-MDC MS–DRG 018 to be a broad cell and gene therapy MS–DRG then a modification to the title of Pre-MDC MS–DRG 018 should be proposed and therapies currently assigned to other MS–DRGs should be re-mapped.

The requestor also suggested that CMS clarify the process by which interested parties can submit comments on potential or proposed procedure code mappings to the MS–DRGs for code proposals discussed at the Spring ICD–10 Coordination and Maintenance (C&M) Committee meeting since, given the timing, proposed code assignments are not published in association with the annual IPPS/LTCH PPS proposed rule. Specifically, the requestor stated there is no opportunity for interested parties to provide feedback to CMS about the assignment of new codes to Pre-MDC MS–DRG 018. The requestor stated that because MS–DRG 018 is a Pre-MDC MS–DRG with a limited number of procedure codes mapping to it, it is important for interested parties to have the ability to preview potential assignments to this MS–DRG and provide feedback to CMS prior to any final mapping decisions being made. The requestor acknowledged that CMS previously responded to prior comments regarding the process of commenting on the assignment of newly created codes; however, the requestor suggested that CMS provide additional clarification. Specifically, the requestor stated that the primary comment period with respect to the Spring procedure code requests is the timeframe following the ICD–10 C&M Committee meeting and that the materials provided in association with the meeting do not contain mapping requests submitted by the code requestor. The requestor indicated that if it is to assume any new procedure code request could potentially be mapped to Pre-MDC MS–DRG 018 and submits comments accordingly, that would create an undue burden. The requestor submitted the following questions regarding the process by which interested parties may submit comments on potential procedure code mappings to MS–DRGs:

- Can mapping requests be submitted as part of the request for a new ICD–10–PCS procedure code or do mapping requests need to go through the MS–DRG modification process with an annual October deadline?
- Can CMS provide information on mapping requests as part of the ICD–10 C&M Committee meeting materials?
- Will comments submitted to the ICD–10 C&M Committee about potential mappings be shared with the CMS teams associated with MS–DRG mapping decisions?
- Should interested parties include the same comments that are submitted to the ICD–10 C&M Committee in their proposed rule comments?
- Will comments submitted as part of the proposed rule be considered within scope for proposed codes presented during the spring meeting that are subsequently finalized but not listed in Table 6A.—New Diagnosis codes and Table 6B.—New Procedure Codes with proposed mappings?
- Do CMS' prior responses indicate that interested parties who submit comments on procedure code mappings should request code proposals presented at the spring meeting be delayed until the fall meeting?

The requestor recommended that CMS address the previously listed

questions and seek input on the process by which interested parties may submit comments on potential procedure code mappings.

We appreciate the requestor's feedback and suggestions regarding the classification of therapies to Pre-MDC MS–DRG 018 and the broader topic of MS–DRG mappings of cell and gene therapy products for the future. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69008 through 69010), we summarized and responded to comments regarding the mapping of procedure codes describing the application of PZ and other newly established procedure codes to Pre-MDC MS–DRG 018. We note that we previously addressed similar comments in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48806 through 48807), and we also noted that we provided detailed summaries and responses to these same or similar comments in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806). We also refer the reader to the discussion in section II.D. of this FY 2026 IPPS/LTCH PPS proposed rule, regarding the proposed relative weight methodology for cases mapping to Pre-MDC MS–DRG 018 effective October 1, 2025, for FY 2026.

With respect to the requestor's suggestion that a modification to the title of Pre-MDC MS–DRG 018 be proposed, we note that the requestor did not provide a specific recommendation for FY 2026 consideration; however, we acknowledge that there has been discussion related to requests to revise the title to Pre-MDC MS–DRG 018 in prior rulemaking, most recently in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69008 through 69010), and we continue to be interested in obtaining input from members of the public on options to consider, recognizing there are additional types of cell and gene therapies now mapping to Pre-MDC MS–DRG 018. We will continue to review additional feedback and suggestions in connection with future rulemaking.

In response to the requestor's assertion that there is no opportunity for interested parties to submit feedback about MS–DRG assignments, as we have discussed in prior rulemaking (87 FR 48807 through 48808) and as noted in the request, interested parties may use current coding information as shown in the ICD–10 C&M Committee meeting materials to consider the potential MS–DRG assignments for any procedure codes that may be finalized after the Spring meeting and submit public comments for consideration. As we have noted in prior rulemaking, because the diagnosis and procedure code proposals that are presented at the Spring ICD–10–CM C&M Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. In response to the question regarding the inclusion of information on mapping requests as part of the ICD–10 C&M Committee meeting materials, we note that, as announced at each ICD–10 C&M Committee meeting, there is no discussion of MS–DRGs, payment, coverage, or billing at the ICD–10 C&M Committee meetings; therefore, we do not include such information in the meeting materials made publicly available in association with the meeting. Rather, we state that any issues related to MS–DRGs or payment are addressed through IPPS rulemaking. The purpose of the ICD–10 C&M Committee meeting is to present code proposals based on requests received regarding coding updates (that is, additions, deletions, or revisions). Therefore, while mapping requests may be included in the submission of an ICD–10–PCS procedure code request, that information is not included in the meeting materials, nor is there any discussion about any mapping request(s) during the meeting.

In response to the requestor's question regarding whether comments submitted to the ICD–10 C&M Committee about potential mappings are shared with the CMS staff associated with MS–DRG mapping decisions, we note that the comments are shared. With respect to whether interested parties should include the same comments submitted to the ICD–10 C&M Committee in the comments submitted in response to the proposed rule, we note that what comments to include and submit for each process is up to the commenter. In response to the question of whether comments submitted in response to the proposed rule would be considered within scope for proposed codes presented during the Spring meeting that are subsequently finalized but not listed in Table 6A.—New Diagnosis codes and Table 6B.—New Procedure Codes with proposed mappings, we note that the procedure code update files reflecting the newly finalized codes are made publicly available following the receipt and review of public comments received by the established deadline for the Spring coding topics, and that interested parties may choose to submit public comments on MS–DRG assignment for the agency's consideration. Lastly, in response to the question of whether interested parties considering submitting comments on procedure code mappings should request code proposals associated with the Spring meeting be delayed until the Fall meeting, we similarly note that the decision on what comments a commenter decides to include and submit in response to a code proposal is up to the commenter. We refer the reader to section II.C.11. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule for additional information regarding the ICD–10 C&M Committee meeting process.

In connection with the comments and questions about how products are grouped under the IPPS MS–DRGs, specifically with respect to cell and gene therapies under Pre-MDC MS–DRG 018, for FY 2026, we also received a request to create a new neurosurgical gene therapy MS–DRG to more accurately reflect the clinical characteristics and resource intensity required for the administration of neurosurgical gene therapies, including eladocagene exuparvovec, for patients diagnosed with Aromatic L-amino acid decarboxylase (AADC) deficiency. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895) and the FY 2023 IPPS/LTCH PPS final rule (87 FR 48853 through 48854) for discussion regarding eladocagene exuparvovec.

The requestor (the manufacturer), expressed its appreciation for CMS' efforts to reassign cases reporting procedure code XW0Q316 (Introduction of eladocagene exuparvovec into cranial cavity and brain, percutaneous approach, new technology group 6) to a surgical MS–DRG as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895). According to the requestor, the decision appropriately reclassified cases involving eladocagene exuparvovec from a Non-O.R. procedure to an operating room (O.R.) procedure due to

the requirement for intraputaminal administration via a burr hole in the skull. However, the requestor did not agree with the current assignment to MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 10, or MS–DRGs 987, 988, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without MCC/CC, respectively). According to the requestor, the clinical characteristics and average costs of the cases currently assigned to MS–DRGs 628, 629, and 630 are significantly different from those associated with eladocagene exuparvovec neurosurgical gene therapy for rare disease.

The requestor stated that CMS denied the request to create a new MS–DRG for FY 2023, stating that it would continue to explore appropriate mechanisms to address low volume MS–DRGs indicated for rare diseases; however, after receiving responses to the Request for Information (RFI), the requestor stated that there have not been any changes proposed to the IPPS. The requestor stated its belief that assigning cases for this gene therapy and the rare disease indicated to a new MS–DRG is both appropriate and warranted. According to the requestor, the current MS–DRGs that eladocagene exuparvovec cases group to do not adequately reflect the clinical characteristics or resource needs associated with treatment which may deter hospitals from providing this therapy.

The requestor also stated there are approximately 68 gene therapy trials in the U.S. for central nervous system disorders for which over 30 of the 68 trials involve the gene therapy being administered directly into the brain parenchyma. According to the requestor, gene therapies administered surgically, including with neurosurgery, are extremely complicated, resource-intensive procedures for hospitals to undertake. These procedures require highly specialized surgeons, surgical equipment, and staff. Patients undergoing these procedures may also require continuous monitoring and longer hospital stays. The requestor stated the more intensive needs of these patients are not adequately captured in existing MS–DRGs and the creation of a new MS–DRG for neurosurgical gene therapy would help CMS proactively shape payment policy for this evolving class of therapies, thus allowing appropriate payment to support patient access to these treatments.

Our analysis of the September 2024 update of the FY 2024 MedPAR file yielded zero cases reporting the administration of eladocagene exuparvovec, therefore, we believe it would be premature to consider the creation of a new neurosurgical gene therapy MS–DRG at this time. We appreciate the detailed clinical information that the requestor provided and acknowledge that cases involving neurosurgery are technically complex and that patients undergoing these procedures tend to be critically ill, many with rare diseases.

We note that we did receive a new procedure code request to identify and describe the Smartflow® Neuro Cannula as the delivery mechanism to administer eladocagene exuparvovec that was included as a topic in the Spring 2025 ICD–10 Coordination and Maintenance Committee Update materials. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, and the related materials.

We continue to welcome additional feedback and comments on other options to consider on how to appropriately address low volume, high-cost treatments for rare diseases.

We also note, as discussed in prior rulemaking, that this category of therapies continues to evolve, and we are in the process of carefully considering the feedback we have previously received about ways in which we can continue to appropriately reflect resource utilization while maintaining clinical coherence and stability in the relative weights under the IPPS MS–DRGs. We appreciate the recommendations and suggestions for consideration we have received and will continue to examine these complex issues in connection with future rulemaking. We acknowledge that there may be distinctions to account for as we continue to gain more experience in the use of these therapies and have additional claims data to analyze.

3. MDC 01 (Diseases and Disorders of the Nervous System)

a. Logic for MS–DRGs 023 Through 027

For this FY 2026 IPPS/LTCH PPS proposed rule, we received three separate but related requests to review the MS–DRG assignments for a subset of procedures assigned to MS–DRGs 023 through 027. In this section of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, we discuss each of these separate, but related requests.

The first request was to create a new MS–DRG for cases involving ''chemotherapy implants'' and cases involving ''epilepsy with neurostimulator.'' The requestor noted chemotherapy implants are used to treat patients with brain tumors. They are implanted into the brain during the craniotomy procedure at the time of tumor resection. Upon implantation, these devices immediately release radiation or chemotherapeutic agents. This approach enables treatment to be initiated at the time of tumor resection without undue delay. ''Epilepsy with neurostimulator'' cases involve devices used in the treatment of medically intractable epilepsy. The neurostimulator is implanted in the skull via a craniotomy and is connected to electrodes that are implanted on the surface of the brain or in the brain through either a craniotomy or a burr hole(s). According to the requestor, like the procedure to insert a chemotherapy implant, the craniotomy procedure to insert the neurostimulator lead is performed under general anesthesia and the procedure typically takes four hours.

The requestor performed their own analysis of Medicare claims data and stated they found that the average costs of cases involving chemotherapy implants and cases involving epilepsy with neurostimulators are significantly higher than the average costs of other procedures currently grouped within MS–DRG 023. The requestor asserted that as a result, these cases are not being adequately paid under the current MS–DRG. Therefore, given the limited options within the existing MS–DRG structure, the requestor recommended that CMS extract cases reporting the insertion of a chemotherapy implant and cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain, and a principal diagnosis of epilepsy from MS–DRG 023 and create a new MS–DRG for these cases with a payment rate that better aligns with the resource utilization associated with these procedures. The requestor stated that this recommendation appeared to be reasonable, given that CMS has already determined that these two subsets of cases are clinically coherent by virtue of them being currently assigned to the same MS–DRG.

To begin our analysis, we reviewed the GROUPER logic for MS–DRGs 023 and 024. The requestor is correct that currently, cases involving ''chemotherapy implants'' and cases involving ''epilepsy with neurostimulator'' are assigned to the higher severity level MS–DRG 023. MS–

DRGs 023 and 024 contain a logic list referred to as ''Chemotherapy Implant.'' This logic list includes the following four ICD–10–PCS codes:

ICD–10–PCS code	Description
00H004Z	Insertion of radioactive element, cesium-131 collagen implant into brain, open approach.
3E0Q005	Introduction of other antineoplastic into cranial cavity and brain, open approach.
3E0Q305	Introduction of other antineoplastic into cranial cavity and brain, percutaneous approach.
3E0Q705	Introduction of other antineoplastic into cranial cavity and brain, via natural or artificial opening.

The ''Chemotherapy Implant'' logic list was created for cases reporting the implantation of a chemotherapeutic agent and devices implanted in the brain, such as implantable chemotherapeutic wafers. Additionally, MS–DRGs 023 and 024 contain a logic list referred to as ''Epilepsy Principal Diagnosis'' that includes 58 ICD–10–CM diagnosis codes that describe epilepsy, and a logic list referred to as ''Neurostimulator'' that includes the following three ICD–10–PCS procedure code combinations:

- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach); and
- 0NH00NZ (Insertion of neurostimulator generator into skull, open approach), in combination with 00H04MZ (Insertion of neurostimulator lead into brain, percutaneous endoscopic approach).

These two logic lists were created to capture cases involving the use of the RNS® neurostimulator, a treatment option for persons diagnosed with medically intractable epilepsy. The RNS® neurostimulator includes a cranially implanted programmable neurostimulator connected to one or two depth and/or subdural cortical strip leads that are surgically placed in or on the brain at the seizure focus. The implanted neurostimulator continuously monitors brain electrical activity and is programmed by a physician to detect abnormal patterns of electrical activity that the physician believes may lead to seizures (epileptiform activity).

We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 023 and 024.

We then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRG 023 and compared the results to cases reporting one of the four procedure codes that appear under the logic list referred to as ''Chemotherapy Implant'' in MS–DRG 023 and for all cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator), and a principal diagnosis of epilepsy. The following table shows our findings:

MS–DRG 023—All Cases Compared to Cases Reporting the Insertion of a Chemotherapy Implant and Cases Reporting a Neurostimulator Generator Inserted Into the Skull With the Insertion of a Neurostimulator Lead Into the Brain and a Principal Diagnosis of Epilepsy

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 023—All cases	12,136	10	$51,132
Cases reporting the insertion of a chemotherapy implant	176	6.4	49,743
Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	68	2.4	66,303

As shown in the table, for MS–DRG 023, we identified a total of 12,136 cases, with an average length of stay of 10 days and average costs of $51,132. Of the 12,136 cases in MS–DRG 023, there were 176 cases reporting the insertion of a chemotherapy implant with an average length of stay of 6.4 days and average costs of $49,743. Additionally, there were 68 cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) that had a principal diagnosis of epilepsy with an average length of stay of 2.4 days and average costs of $66,303.

As the data show, the 68 cases in MS–DRG 023 describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have average costs that are higher than the average costs of all cases in MS–DRG 023 ($66,303 compared to $51,132), and they have an average length of stay that is shorter (2.4 days compared to 10 days). The 176 cases in MS–DRG 023 reporting the insertion of a chemotherapy implant have average costs that are lower than the average costs of all cases in MS–DRG 023 ($49,743 compared to $51,132), and they have an average length of stay that is shorter (6.4 days compared to 10 days).

We reviewed the claims data, and do not believe the data support creating a new MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy. The results of the claims analysis as

previously summarized indicate the cases reporting the insertion of a chemotherapy implant demonstrate comparable resource utilization with other cases in their currently assigned MS–DRG. Further, the claims data analysis indicates that these two subsets of cases, that is cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy and cases reporting the insertion of a chemotherapy implant, do not demonstrate comparable resource utilization. The cases in MS–DRG 023 reporting the insertion of a chemotherapy implant have average costs that are lower than the average costs of cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain and a principal diagnosis of epilepsy ($49,743 compared to $66,303), and they have an average length of stay that is longer (6.4 days compared to 2.4 days).

Therefore, based on review of the claims data, we are not proposing to create a new-MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy for FY 2026. However, while our analysis of the claims data does not support creating a new MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy, as discussed, cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have average costs that are higher than the average costs of all cases in MS–DRG 023, with a shorter average length of stay. Accordingly, we determined that further analysis of cases reporting a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator), and a principal diagnosis of epilepsy is needed in conjunction with the separate but related requests we received to review the MS–DRG assignments for a subset of procedures also assigned to MS–DRGs 023 through 027 for this FY 2026 IPPS/LTCH PPS proposed rule to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped, as discussed later in this section.

As noted previously, MS–DRGs 023 and 024 contain a logic list referred to as ''Chemotherapy Implant'' that includes the following four ICD–10–PCS codes:

ICD–10–PCS code	Description
00H004Z	Insertion of radioactive element, cesium-131 collagen implant into brain, open approach.
3E0Q005	Introduction of other antineoplastic into cranial cavity and brain, open approach.
3E0Q305	Introduction of other antineoplastic into cranial cavity and brain, percutaneous approach.
3E0Q705	Introduction of other antineoplastic into cranial cavity and brain, via natural or artificial opening.

During our review of the GROUPER logic for MS–DRGs 023 and 024, we identified that the following four ICD–10–PCS procedure codes describing the insertion of a radioactive element were inadvertently excluded from the ''Chemotherapy Implant'' logic list:

ICD–10–PCS code	Description
00H001Z	Insertion of radioactive element into brain, open approach.
00H005Z	Insertion of radioactive element, palladium-103 collagen implant into brain, open approach.
00H031Z	Insertion of radioactive element into brain, percutaneous approach.
00H041Z	Insertion of radioactive element into brain, percutaneous endoscopic approach.

In review of this finding, we analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 023, 024, 025, 026, and 027 for all cases and for cases reporting procedure codes 00H001Z, 00H005Z, 00H031Z, or 00H041Z. The findings from our analysis are shown in the following table.

MS–DRG		Number of cases	Average length of stay	Average costs
023	All cases	12,136	10	$51,132
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0	0	0
024	All cases	4,624	5	35,516
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0		0
025	All cases	21,059	8.6	40,215
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	4	3.8	40,199
026	All cases	5,833	4.1	28,404
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0	0	0
027	All cases	7,049	1.9	23,059
	Cases reporting 00H001Z, 00H005Z, 00H031Z, or 00H041Z	0	0	0

As the data show, we found four cases reporting procedure code 00H001Z, 00H005Z, 00H031Z, or 00H041Z in MS–DRG 025, with average costs of $40,199 and an average length of stay of 3.8 days. We reviewed this issue and note radioactive elements are inserted into the brain to deliver a targeted concentrated dose of radiation directly to a brain tumor or tumor bed. They are primarily used to treat recurrent brain metastases or other aggressive brain cancers, as it allows for high-dose radiation delivery specifically to the tumor site while minimizing damage to surrounding healthy brain tissue. Although we did not identify many cases, we believe the four procedure codes describing the insertion of a radioactive element into the brain are clinically aligned with the procedure codes currently included in the ''Chemotherapy Implant'' logic list in MS–DRGs 023 and 024.

Therefore, for clinical consistency we are proposing to add procedure codes 00H001Z, 00H005Z, 00H031Z, and 00H041Z to the ''Chemotherapy Implant'' logic list in MS–DRGs 023 and 024, effective October 1, 2025, for FY 2026. We are also proposing to change the description of the logic list in MS–DRGs 023 and 024 from ''Chemotherapy Implant'' to ''Antineoplastic Implant'' to better reflect the GROUPER logic that includes ICD–10–PCS procedure codes describing antineoplastic agents implanted in the brain.

As mentioned previously, for this FY 2026 IPPS/LTCH PPS proposed rule, we received three separate but related requests to review and reconsider the MS–DRG assignments for a subset of procedures assigned to MS–DRGs 023 through 027. The second and third request involve the MS–DRG assignment of cases reporting procedure codes describing the insertion of deep brain stimulators (DBS). Deep brain stimulation is a surgical treatment that involves the implantation of a neurostimulator, used in the treatment of essential tremor, Parkinson's disease, dystonia, epilepsy, obsessive-compulsive disorder and chronic pain. A DBS system consists of one or two leads that are placed stereotactically at defined targets deep within the brain via one or two burr holes created in the skull. The lead is then connected to an extension that is tunneled under the skin, down the neck, and connected to a programmable neurostimulator generator that is placed under the skin.

The second request we received was to reassign cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023, even if there is no MCC reported. The requestor suggested that if finalized, the title for MS–DRG 023 should be revised to reflect ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant or Major Device Implant or Epilepsy with Neurostimulator.''

The requestor performed their own analysis and stated they found that the majority of cases reporting the implantation of a DBS system are assigned to the lower severity level MS–DRG 024. The requestor also stated that in their analysis, the cases reporting the implantation of a DBS system assigned to MS–DRG 024 have average costs that are 20% greater than all cases in MS–DRG 024. The requestor asserted that reassigning cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (with MCC) severity level MS–DRG 023, even if there is no MCC reported, would better recognize hospital resource utilization when the DBS systems are inserted.

The requestor identified cases reporting the implantation of a DBS system by the presence of the following procedure code combinations:

- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach);
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach); and
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach).

To begin our analysis, we again reviewed the GROUPER logic for MS–DRGs 023 and 024. The GROUPER logic for MS–DRGs 023 and 024 also contains 78 procedure code combinations representing the insertion of neurostimulator generator and a neurostimulator lead that are captured under a list referred to as ''Major Device Implant.'' The procedure codes describing the insertion of a neurostimulator generator on this list describe insertion of the neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen, as well as into the skull. The procedure codes describing the insertion of a neurostimulator lead describe the insertion of the lead into the brain or the cerebral ventricle. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 023 and 024.

In our analysis of this issue, we agree that the four procedure code combinations discussed previously that were identified by this requestor are included in the ''Major Device Implant'' logic list of MS–DRGs 023 and 024, but we note that 32 additional procedure code combinations exist on the ''Major Device Implant'' logic list that also describe the implantation of a DBS system by describing the insertion of a neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain. We refer the reader to Table 6P.2a associated with this FY 2026 IPPS/LTCH PPS proposed rule (and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the list of the 36 ICD–10–PCS procedure code combinations in the logic of MS–DRGs 023 and 024 in the ''Major Device Implant'' logic list that we identified that describe the implantation of a DBS system and therefore were included in our analysis.

We then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRGs 023 and 024 and compared the results to cases reporting the implantation of a DBS system by reporting a procedure code combination that describes the insertion of a neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain. The following table shows our findings:

MS–DRGs 023 and 024—All Cases Compared to Cases Reporting the Insertion of a Deep Brain Stimulation System

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 023—All cases	12,136	10	$51,132
Cases reporting the implantation of a DBS system	26	8.3	81,947
MS–DRG 024—All cases	4,624	5	35,516
Cases reporting the implantation of a DBS system	432	1.7	43,032

As shown in the table, for MS–DRG 023, we identified a total of 12,136 cases, with an average length of stay of 10 days and average costs of $51,132. Of the 12,136 cases in MS–DRG 023, there were 26 cases reporting the implantation of a DBS system with an average length of stay of 8.3 days and average costs of $81,947. For MS–DRG 024, we identified a total of 4,624 cases, with an average length of stay of 5 days and average costs of $35,516. Of the 4,624 cases in MS–DRG 024, there were 432 cases reporting the implantation of a DBS system with an average length of stay of 1.7 days and average costs of $43,032.

We reviewed the claims data, and the data do not support reassignment of the cases reporting the implantation of a DBS system from MS–DRG 024 to MS–DRG 023 even if there is no MCC reported. The results of the claims analysis as previously summarized indicate the cases reporting the implantation of a DBS system, without reporting a secondary diagnosis designated as an MCC, that are currently assigned to MS–DRG 024, have average costs that are lower than the average costs of all cases in MS–DRG 023 ($43,032 compared to $51,132), and they have an average length of stay that is shorter (1.7 days compared to 10 days). While the average costs of these cases are higher than the average costs of all cases in MS–DRG 024 ($43,032 compared to $35,516), we believe it would not be appropriate to reassign these cases into the higher severity level MS–DRG 023, even if there is no MCC reported, because the cases would not be coherent with regard to resource utilization. The cases reporting the implantation of a DBS system, without reporting a secondary diagnosis designated as an MCC, that are currently assigned to MS–DRG 024 have average costs that are $8,100 lower than the average costs of all cases in MS–DRG 023. Therefore, we are not proposing to reassign cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (with MCC) severity level MS–DRG 023, even if there is no MCC reported. However, while the analysis of the claims data does not support reassigning the cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023 even if there is no MCC reported, as discussed, our analysis of the claims data found the average costs of the cases reporting the implantation of a DBS system are higher than all cases in their respective MS–DRGs, while the average lengths of stay are shorter. Accordingly, and as discussed later in this section, we determined that further analysis of cases reporting the implantation of a DBS system is needed in conjunction with the separate but related requests we received to review the MS–DRG assignments for a subset of procedures also assigned to MS–DRGs 023 through 027 for this FY 2026 IPPS/LTCH PPS proposed rule to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped.

The third request we received was to have all cases reporting the concomitant insertion of a DBS generator and lead assigned to MS–DRGs 023 and 024. This requestor performed their own analysis and stated they found 76 claims reporting procedure codes describing the insertion of a DBS generator and a lead assigned to MS–DRGs 026 and 027 (Craniotomy and Endovascular Intracranial Procedures with CC, and without CC/MCC, respectively) and found that the average costs of these cases were 54% and 63% higher than the average of all cases in MS–DRGs 026 and 027, respectively. The requestor stated that placement of a complete DBS system, which requires placement of both the generator and the lead, during a single procedure, appears to be an efficacious and well-tolerated procedure. The requestor asserted that the relatively low reimbursement in MS–DRGs 026 and 027 can limit patient access to a single stage procedure.

This requestor identified cases reporting the implantation of a DBS system by the presence of the following procedure code combinations:

- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach);
- 0JH60DZ (Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach);
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach); and
- 0JH60EZ (Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach);
- 0JH60BZ (Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H00MZ (Insertion of neurostimulator lead into brain, open approach); and
- 0JH60BZ (Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach), in combination with 00H03MZ (Insertion of neurostimulator lead into brain, percutaneous approach).

To begin our analysis, we again reviewed the GROUPER logic for MS–DRG 023 and 024. As mentioned previously, the GROUPER logic for MS–DRGs 023 and 024 contains 78 procedure code combinations representing the insertion of neurostimulator generator and a neurostimulator lead that are captured under a list referred to as ''Major Device Implant.'' The procedure codes describing the insertion of a neurostimulator generator on this list describe insertion of the neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen, as well as into the skull.

In reviewing this request, we noted that the procedure code combinations in MS–DRG 023 and 024 captured under the ''Major Device Implant'' logic list that describe the insertion of a neurostimulator generator into the subcutaneous areas of the chest, back, or abdomen, all describe the insertion of a multiple array stimulator generator or a rechargeable multiple array stimulator generator. Procedure code combinations describing the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen and a neurostimulator lead are not captured under the ''Major Device Implant'' logic list, therefore MS–DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) are assigned based on the reporting of the ICD–10–PCS procedure code describing the insertion of the neurostimulator into the brain. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 023, 024, 025, 026, and 027.

We identified 36 ICD–10–PCS procedure code combinations that would describe the implantation of a DBS system with a single array stimulator generator or a rechargeable single array stimulator generator and the insertion of a neurostimulator lead into the brain. We refer the reader to Table 6P.2b associated with this FY 2026 IPPS/LTCH PPS proposed rule (and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the list of the 36 ICD–10–PCS procedure code combinations we identified that describe the implantation of a DBS system with a single array stimulator generator or a rechargeable single array stimulator generator and the insertion of a neurostimulator lead into the brain.

We then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRGs 025, 026, and 027 and compared the results to cases reporting a procedure code combination that describes the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain. The following table shows our findings:

MS–DRGs 025, 026, and 027—All Cases Compared to Cases Reporting the Insertion of a Single Array Generator and Insertion of Neurostimulator Lead Into Brain

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 025—All cases	21,059	8.6	$40,215
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain	5	5	73,168
MS–DRG 026—All cases	5,833	4.1	28,404
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain	25	2.3	42,002
MS–DRG 027—All cases	7,049	1.9	23,059
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain	78	1.4	39,381

As shown in the table, for MS–DRG 025, we identified a total of 21,059 cases, with an average length of stay of 8.6 days and average costs of $40,215. Of those 21,059 cases, there were 5 cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 025 ($73,168 compared to $40,215) and a shorter average length of stay (5 days compared to 8.6 days). In MS–DRG 026, we identified a total of 5,833 cases, with an average length of stay of 4.1 days and average costs of $28,404. Of the 5,833 cases in MS–DRG 026, there were 25 cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 026 ($42,002 compared to $28,404) and a shorter average length of stay (2.3 days compared to 4.1 days). In MS–DRG 027, we identified a total of 7,049 cases, with an average length of stay of 1.9 days and average costs of $23,059. Of the 7,049 cases in MS–DRG 027, there were 78 cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 027 ($39,381 compared to $23,059) and a shorter average length of stay (1.4 days compared to 1.9 days). As the data show, the cases in MS–DRGs 025, 026, and 027 reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher than the average costs of all cases in their respective MS–DRGs.

We reviewed the clinical issues and note a deep brain stimulator typically has one or two leads implanted in the brain, depending on whether one or both sides of the brain need treatment. A single array stimulator generator has one port where one lead can be connected. A multiple array stimulator generator has two or more ports where two or more leads can be connected. We believe the procedure code combinations that describe the insertion of a single array stimulator generator or a rechargeable single array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain are clinically coherent with the procedure code combinations in MS–DRG 023 and 024 captured under the ''Major Device Implant'' logic list that describe the insertion of a multiple array stimulator generator or a rechargeable multiple array stimulator generator into the subcutaneous areas of the chest, back, or abdomen in combination with a code describing the insertion of a neurostimulator lead into the brain.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 023 and 024 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 023 and 024. Our findings are shown in this table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 023—All cases	12,136	10	$51,132
MS–DRG 024—All cases	4,624	5	35,516

We reviewed the data and note the cases in MS–DRGs 025, 026, and 027 reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher and the average length of stay is shorter than all cases in MS–DRGs 023 and 024. We agree with the requestor that cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain are more resource intensive and are clinically distinct from other cases currently assigned to MS–DRGs 025, 026, and 027. However, we do not believe proposing to reassign all cases reporting the procedure code combination describing a single array generator and insertion of neurostimulator lead into brain to MS–DRGs 023 and 024, would fully address the difference in resource utilization in these cases.

To explore other mechanisms to address this request, we then reexamined the separate but related requests discussed previously to review the MS–DRG assignments for a subset of procedures assigned to MS–DRGs 023 through 027. In examining these requests, we note that the first request was to reassign cases involving ''chemotherapy implants'' and cases involving ''epilepsy with neurostimulator'' from MS–DRG 023 and to create a new MS–DRG for these cases. While analysis of the claims data do not support creating a new MS–DRG for cases reporting the insertion of a chemotherapy implant and cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy, our analysis of that request found cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulator) and a principal diagnosis of epilepsy have average costs that are higher than the average costs of all cases in MS–DRG 023, with a shorter average length of stay.

The second request we received was to reassign cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023 even if there is no MCC reported. While analysis of the claims data does not support reassigning the cases reporting the implantation of a DBS system from the lower (without MCC) severity level MS–DRG 024 to the higher (MCC) severity level MS–DRG 023 even if there is no MCC reported, our analysis of that request found the average costs of the cases reporting the implantation of a DBS system are higher than all cases in their respective MS–DRGs, while the average lengths of stay are shorter. Lastly, our analysis of the third request demonstrates the cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain have average costs that are higher than the average costs of all cases in their respective MS–DRGs, while the average lengths of stay are shorter.

We reviewed these issues and note intracranial neurostimulator implants, such as deep brain stimulators and RNS® neurostimulators, are similar in that these intracranial neurostimulators are implanted surgically and include placement of a neurostimulator generator and insertion of leads into specific brain regions to deliver electrical stimulation. Additionally, based on our data analysis, cases reporting the insertion of intracranial neurostimulator implants are clinically coherent in that they are similar in terms of technical complexity and hospital resource use as reflected by the similarity in average costs and average lengths of stay.

We explored creating a new base MS–DRG for cases reporting the insertion of an intracranial neurostimulator implant and compared the analysis discussed previously using the claims data from the September 2024 update of the FY 2024 MedPAR file. The following table illustrates our findings for all 654 cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant.

CASES REPORTING THE INSERTION OF AN INTRACRANIAL NEUROSTIMULATOR IMPLANT

	Number of cases	Average length of stay	Average costs
Cases with principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain	68	2.4	$66,303
Cases reporting the implantation of a DBS system (insertion of a multiple array generator and insertion of neurostimulator lead into brain)—with MCC	26	8.3	81,947
Cases reporting the insertion of a multiple array generator and insertion of neurostimulator lead into cerebral ventricle—with MCC	1	9	44,475
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain—with MCC	5	5	73,168
Cases reporting the insertion of a multiple array generator and insertion of neurostimulator lead into cerebral ventricle—with CC	5	2.2	81,517
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain—with CC	25	2.3	42,002
Cases reporting the implantation of a DBS system (insertion of a multiple array generator and insertion of neurostimulator lead into brain)—without MCC	432	1.7	43,032
Cases reporting the insertion of a multiple array generator and insertion of neurostimulator lead into cerebral ventricle—without CC/MCC	14	1.7	48,258

CASES REPORTING THE INSERTION OF AN INTRACRANIAL NEUROSTIMULATOR IMPLANT—Continued

	Number of cases	Average length of stay	Average costs
Cases reporting the insertion of a single array generator and insertion of neurostimulator lead into brain—without CC/MCC	78	1.4	39,381
Total	654	2.1	47,163

We reviewed these data and do not believe proposing a new base MS–DRG for these cases would better reflect hospital resource use. Because there were only 654 cases identified, the analysis demonstrates both a three-way and a two-way split of a new base MS–DRG would fail the criterion that there be at least 500 cases for each subgroup. The analysis also demonstrates the cases reporting a principal diagnosis of epilepsy with neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain, and cases reporting the insertion of a single or multiple array generator with a secondary diagnosis designated as an MCC, would continue to have average costs that are higher when compared to all other cases reporting the insertion of an intracranial neurostimulator implant in a new MS–DRG. We therefore explored an alternative mechanism to address these requests.

We note that in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38015 through 38019), the FY 2021 IPPS/LTCH PPS final rule (85 FR 58459 through 58462) and the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661 through 58667), we discussed requests we received to reassign cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain from MS–DRG 023 to MS–DRG 021 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with CC). While acknowledging the cases in MS–DRG 023 describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulators) and a principal diagnosis of epilepsy have average costs that are similar to the average costs of cases in MS–DRG 021, we have stated we did not support reassigning the cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain (including cases involving the use of the RNS® neurostimulators) and a principal diagnosis of epilepsy from MS–DRG 023 to MS–DRGs 020, 021, and 022 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage, with MCC, with CC, without CC/MCC, respectively), as the cases in MS–DRGs 020, 021, and 022 are defined by a principal diagnosis of a hemorrhage. We stated that RNS® neurostimulators are not used to treat patients with diagnosis of a hemorrhage and that we believe that it is inappropriate to reassign cases representing a principal diagnosis of epilepsy to a MS–DRG that contains cases that represent the treatment of intracranial hemorrhage.

However, after further consideration, to explore other mechanisms to address this request, we examined MS–DRGs 020, 021, and 022 to reconsider the possibility of reassigning the cases reporting the insertion of an intracranial neurostimulator implant as we have been unable to identify another MS–DRG in MDC 01 that would be a more appropriate MS–DRG assignment for these cases based on the indication for and complexity of the procedures.

The GROUPER logic for MS–DRGs 020, 021, and 022 contains a list of procedure codes describing intracranial vascular procedures that are captured under a logic list referred to as ''Intracranial Vascular Procedures'' and a list of diagnosis codes describing a diagnosis of a hemorrhage that are captured under a logic list referred to as ''Hemorrhage Principal Diagnosis.'' During our review of MS–DRGs 020, 021, and 022, we identified 57 ICD–10–PCS procedure codes describing the intracranial vascular procedures and 66 diagnosis codes describing a diagnosis of intracranial hemorrhage that were inadvertently excluded from these logic lists. We refer the reader to Table 6P.2c and Table 6P.2d associated with this FY 2026 IPPS/LTCH PPS proposed rule (and available at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*) for the lists of the 57 ICD–10–PCS procedure codes and 66 ICD–10–CM diagnosis codes that we identified.

As these 57 procedure codes describe the intracranial vascular procedures and the 66 diagnosis codes describe a diagnosis of intracranial hemorrhage, we believe these codes are clinically aligned with the codes currently included in the ''Intracranial Vascular Procedures'' and the ''Hemorrhage Principal Diagnosis'' logic lists, respectively in MS–DRGs 020, 021, and 022. Therefore, for clinical consistency we are proposing to add the 57 procedure codes ''Intracranial Vascular Procedures'' logic list, and the 66 diagnosis codes to the ''Hemorrhage Principal Diagnosis'' logic list of MS–DRGs 020, 021, and 022, effective October 1, 2025, for FY 2026.

In reviewing the claims data from the September 2024 update of the FY 2024 MedPAR file and examining the clinical considerations, we believe that the cases reporting the insertion of an intracranial neurostimulator implant could more suitably group to MS–DRGs 020, 021, and 022 and would lead to a grouping that is more coherent and better reflects the clinical severity and resource use involved in these cases. While we previously have stated that we believe it would be inappropriate to reassign cases representing a principal diagnosis of epilepsy to a MS–DRG that contains cases that represent the treatment of intracranial hemorrhage, after further consideration, we no longer believe maintaining a difference in assignment based on the indication is warranted in this subset of cases based on the fact that both treatments involve intracranial procedures and demonstrate comparable resource utilization.

We also believe that cases reporting the insertion of an intracranial neurostimulator implant, regardless of principal diagnosis, share similar resource utilization such that it is no longer necessary to subdivide these cases based on the diagnosis codes reported. Accordingly, we believe it is appropriate to remove the special logic defined as ''Epilepsy Principal Diagnosis'' from the definition for assignment to the proposed modified MS–DRGs, as the cases can be appropriately grouped along with cases reporting any MDC 01 diagnosis when reported with qualifying procedures, as part of the proposed restructured MS–DRGs.

Therefore, we are proposing to add 114 procedure code combinations to a new ''Intracranial Neurostimulator

Implant'' logic list in MS–DRGs 020, 021, and 022 that describe (1) the insertion of multiple or single array neurostimulator generators with the insertion of a neurostimulator lead into the brain or the cerebral ventricle and (2) the insertion of neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain. We are also proposing to delete the ''Major Device Implant,'' ''Epilepsy Principal Diagnosis,'' ''Neurostimulator'' logic lists from MS–DRGs 023 and 024. We refer the reader to Table 6P.2e associated with this FY 2026 IPPS/LTCH PPS proposed rule (and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the list of the 114 ICD–10–PCS procedure code combinations we propose to add to a new ''Intracranial Neurostimulator Implant'' logic list in MS–DRGs 020, 021, and 022.

To compare and analyze the impact of these potential modifications, we ran a simulation using the claims data from the September 2024 update of the FY 2024 MedPAR file. The following table reflects the simulation of our proposed changes in MS–DRGs 020, 021, and 022.

MS–DRG		Number of cases	Average length of stay	Average costs
020	All Cases	2,322	12.5	$71,9167
	—add cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant.	100	4.1	70,495
	—add cases reporting one of the 57 procedure codes describing an intracranial vascular procedure with one of the 66 diagnosis codes describing hemorrhage as principal diagnosis.	140	13.6	73,810
	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC.	2,562	12.2	71,964
021	All Cases	642	7.8	48,421
	—add cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant.	134	2.2	47,421
	—add cases reporting one of the 57 procedure codes describing an intracranial vascular procedure with one of the 66 diagnosis codes describing hemorrhage as principal diagnosis.	45	9.3	54,617
	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with CC.	821	7	48,597
022	All Cases	385	2.4	28,243
	—add cases reporting procedure codes describing the insertion of an intracranial neurostimulator implant.	420	1.5	41,525
	—add cases reporting one of the 57 procedure codes describing an intracranial vascular procedure with one of the 66 diagnosis codes describing hemorrhage as principal diagnosis.	1	1	24,744
	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant without CC/MCC.	806	1.9	35,160

We believe that this simulation supports that the resulting MS–DRG assignments would be more clinically homogeneous, coherent and better reflect hospital resource use. As the table shows, for MS–DRG 020, there were a total of 2,322 cases with an average length of stay of 12.5 days and average costs of $71,916. For MS–DRG 021, there were a total of 642 cases with an average length of stay of 7.8 days and average costs of $48,421. For MS–DRG 022, there were a total of 385 cases with an average length of stay of 2.4 days and average costs of $28,243. A review of this simulation shows that adding a new ''Intracranial Neurostimulator Implant'' logic list, while also adding 57 procedure codes to the ''Intracranial Vascular Procedures'' logic list, and 66 diagnosis codes to the ''Hemorrhage Principal Diagnosis'' logic list in MS–DRGs 020, 021 and 022 has a limited effect on the average costs of these MS–DRGs, while leading to a grouping that is more coherent and better reflects the clinical severity and resource use involved in these cases.

In summary, for FY 2026, to more appropriately reflect utilization of resources for these procedures, we are proposing to add 114 procedure code combinations to a new ''Intracranial Neurostimulator Implant'' logic list in MS–DRGs 020, 021, and 022 that describe (1) the insertion of multiple or single array neurostimulator generators with the insertion of a neurostimulator lead into the brain or the cerebral ventricle and (2) the insertion of neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain. We are also proposing to add 57 procedure codes to the ''Intracranial Vascular Procedures'' logic list, and 66 diagnosis codes to the ''Hemorrhage Principal Diagnosis'' logic list of MS–DRGs 020, 021, and 022.

Additionally, we are also proposing to delete the ''Major Device Implant,'' ''Epilepsy Principal Diagnosis,'' ''Neurostimulator'' logic lists from MS–DRGs 023 and 024. Lastly, for consistency, we are proposing to change the titles of MS–DRGs 020, 021, and 022 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with MCC, with CC, and without CC/MCC, respectively'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC, with CC, and without CC/MCC, respectively,'' proposing to change the title of MS–DRG 023 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis with MCC or Antineoplastic Implant,'' and proposing to change the title of MS–DRG 024 from ''Craniotomy with Major Device Implant or Acute Complex Central Nervous System Principal Diagnosis without MCC'' to ''Craniotomy with Acute Complex Central Nervous System Principal Diagnosis without MCC'' to better reflect the assigned procedures effective October 1, 2025, for FY 2026.

b. Hypertensive Encephalopathy

For this FY 2026 IPPS/LTCH PPS proposed rule, we received a request to delete MS–DRGs 077, 078, and 079 (Hypertensive Encephalopathy with MCC, with CC, and without CC/MCC, respectively). Hypertensive encephalopathy refers to brain dysfunction that occurs when the brain's blood vessels can no longer regulate blood flow due to severe or sudden rises in blood pressure, causing brain swelling and damage. It is characterized by the insidious onset of headache, nausea, and vomiting, followed by non-localizing neurologic symptoms such as restlessness, confusion, and, if the hypertension is not treated, seizures and coma. The diagnosis is based on clinical presentation, elevated blood pressure, and neurological examination, often supported by brain imaging like CT or MRI. The treatment involves immediate and rapid lowering of blood pressure with appropriate medications administered in a controlled setting. ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) is used to report this diagnosis.

The requestor noted that effective FY 2025, a ''use additional code'' instructional note was added under diagnosis code I16.1 (Hypertensive emergency) in the ICD–10–CM Tabular List of Diseases and Injuries. Specifically, the instructional note states, ''use additional code, if applicable, to identify specific organ dysfunction, such as:'' and lists I67.4 as well as eight other ICD–10–CM diagnosis codes. The requestor stated that the addition of this ''use additional code'' instructional note has sequencing implications and requires I67.4 to be sequenced as a secondary diagnosis when hypertensive emergency and hypertensive encephalopathy are documented. As the GROUPER logic for MS–DRGs 077, 078, and 079 is defined by only diagnosis code I67.4, the requestor stated there will no longer be cases grouping to medical MS–DRGs 077, 078, and 079 because I67.4 will only be sequenced as a secondary diagnosis and I16.1 will have to be sequenced as the principal diagnosis. Instead, these cases will group to MDC 05 (Diseases and Disorders of the Circulatory System) medical MS–DRGs 304 and 305 (Hypertension with MCC and without MCC, respectively) since I16.1 is assigned to those MS–DRGs.

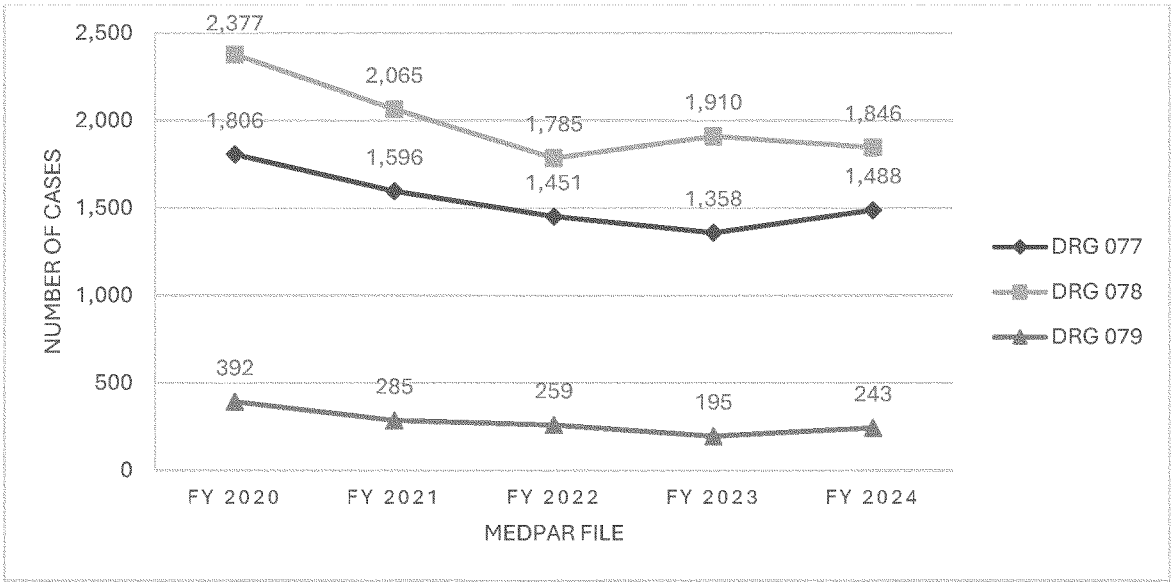
To begin our analysis, we reviewed the ICD–10–CM Tabular List of Diseases and Injuries. The requestor is correct a ''use additional code'' instructional note was added under diagnosis code I16.1 (Hypertensive emergency) in the ICD–10–CM Tabular List of Diseases and Injuries, effective FY 2025. According to the ICD–10–CM Official Guidelines for Coding and Reporting, ''certain conditions have both an underlying etiology and multiple body system manifestations due to the underlying etiology. For such conditions the ICD–10–CM has a coding convention that requires the underlying condition be sequenced first followed by the manifestation. Wherever such a combination exists there is a 'use additional code' note at the etiology code, and a 'code first' note at the manifestation code. These instructional notes indicate the proper sequencing order of the codes, etiology followed by manifestation.'' We note that no such ''code first'' note appears at ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) in the ICD–10–CM Tabular List of Diseases and Injuries meaning the sequencing depends on the circumstances of the encounter when hypertensive emergency and hypertensive encephalopathy are documented. If providers have cases involving hypertensive emergency and hypertensive encephalopathy for which they need ICD–10 coding assistance, we encourage them to submit their questions to the American Hospital Association's Central Office on ICD–10 at *https://www.codingclinicadvisor.com/*.

We then reviewed the GROUPER logic. The requestor is correct that diagnosis code I67.4 is the only diagnosis code listed under the heading of ''Principal Diagnosis'' in the ICD–10 MS–DRG Definitions Manual for MS–DRGs 077, 078, and 079. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, for complete documentation of the GROUPER logic for MS–DRGs 077, 078, and 079. We note that a DRG for a principal diagnosis of hypertensive encephalopathy (48 FR 39876) has existed since 1983 when Congress amended the Social Security Act to include a national DRG-based hospital prospective payment system for all Medicare patients.

We then examined claims data from the September 2024 update of the FY 2024 MedPAR file for all cases in MS–DRGs 077, 078, and 079 to consider the resources involved in the cases reporting a principal diagnosis of hypertensive encephalopathy. Our findings are shown in this table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 077—All cases	1,488	5.0	$13,176
MS–DRG 078—All cases	1,846	3.3	8,591
MS–DRG 079—All cases	243	2.4	6,729

The data reflect a moderately low volume of cases in MS–DRGs 077, 078, and 079, relatively. We then evaluated the reporting of hypertensive encephalopathy in the inpatient setting over the past few years in medical MS–DRGs 077, 078, and 079. We analyzed claims data for MS–DRGs 077, 078, and 079 from the FY 2020 through the FY 2024 MedPAR files, which were used in our analysis of claims data for MS–DRG reclassification requests effective for FY 2022 through FY 2026 to trend the number of cases assigned to these MS–DRGs over time. Our findings are shown in the following graph:



The data show a general decline in the number of cases reporting hypertensive encephalopathy as a principal diagnosis in medical MS–DRGs 077, 078, and 079 for the past 5 years. We note that as discussed in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. We generally seek to identify sufficient sets of claims data with demonstrated clinical similarity in developing diagnosis related groups rather than subsets based on single diagnoses. After review of the findings indicating a general decline in the number of cases reporting hypertensive encephalopathy as a principal diagnosis, and consideration of the intent of the MS–DRGs, we believe that there is no longer a clinical reason to maintain the MS–DRGs for hypertensive encephalopathy (MS–DRGs 077, 078, and 079) as they are defined by the reporting of one principal diagnosis code.

To explore mechanisms to ensure clinical coherence between cases reporting hypertensive encephalopathy as a principal diagnosis and the other cases with which they may potentially be grouped, we then conducted an examination of all the MS–DRGs where I67.4 was also reported as principal diagnosis to determine if the diagnosis was included in any other MS–DRGs outside of MDC 01, to assess the current MS–DRG assignment of this diagnosis code. Our findings are shown in the following table.

OTHER MS–DRGS REPORTING HYPERTENSIVE ENCEPHALOPATHY AS PRINCIPAL DIAGNOSIS

MDC	MS–DRG	Description	Number of cases	Average length of stay	Average costs
PRE	004	Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedures.	1	52	$128,406
01	025	Craniotomy and Endovascular Intracranial Procedures with MCC	1	16	114,582
01	026	Craniotomy and Endovascular Intracranial Procedures with CC	1	6	79,934
01	028	Spinal Procedures with MCC	1	26	58,049
01	037	Extracranial Procedures with MCC	4	5.5	27,923
01	038	Extracranial Procedures with CC	1	4	12,509
01	040	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC	5	8.2	29,325
01	041	Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator	8	4.9	14,909
	981	Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC	10	10.3	31,543
	982	Extensive O.R. Procedures Unrelated to Principal Diagnosis with CC	1	1	10,926
	987	Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC	2	8.5	28,020
		Total	35	9.3	32,956

As shown in the table, we found 35 cases reporting hypertensive encephalopathy as the principal diagnosis in MS–DRGs other than MS–DRGs 077, 078, and 079. We note that the majority of the listed MS–DRGs are assigned to MDC 01 with one exception: PreMDC MS–DRG 004 (Tracheostomy with MV >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedures). Additionally, there were 11 cases that grouped to MS–DRGs 981, and 982 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, and with CC, respectively) and two cases that grouped to MS–DRG 987 (Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC). After review of these data, we believe it would not be appropriate to reassign diagnosis code I67.4 to another MDC because it could inadvertently cause cases reporting a principal diagnosis of hypertensive encephalopathy with a nervous system procedure to be assigned to an unrelated MS–DRG. Further, we believe it is clinically appropriate to maintain the assignment of I67.4 in MDC 01 as the condition is consistent with other conditions reported by diagnosis codes assigned to MDC 01.

We then examined the MS–DRGs within MDC 01 to consider the possibility of reassigning the cases with a principal diagnosis of hypertensive encephalopathy to other MS–DRGs within MDC 01. In reviewing the claims data from the September 2024 update of the FY 2024 MedPAR file, and examining the clinical considerations, we believe that the cases reporting a principal diagnosis of hypertensive encephalopathy could suitably group to MS–DRGs 070, 071, and 072 (Nonspecific Cerebrovascular Disorders with MCC, with CC and, without CC/MCC, respectively), which contain other cerebrovascular diagnoses under the heading of ''Principal Diagnosis'' in the GROUPER logic list, noting that hypertensive encephalopathy is considered a cerebrovascular disorder, as it is a neurological condition directly caused by a sudden, severe elevation in blood pressure. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, for complete documentation of the GROUPER logic for MS–DRGs 070, 071, and 072.

To determine how the resources for the cases in MS–DRGs 077, 078, and 079 compared to cases in MS–DRGs 070, 071, and 072, we examined the average costs and length of stay for cases in MS–DRGs 070, 071, and 072. Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 070—All cases	16,979	6.4	$14,771
MS–DRG 071—All cases	16,596	4.5	9,381
MS–DRG 072—All cases	2,687	2.9	7,047

As reflected, the average costs of the 1,488 cases reporting a principal diagnosis of I67.4 with a secondary diagnosis designated as a MCC in MS–DRG 077 are slightly lower ($13,176 compared to $14,771) and the average length of stay is shorter (5 days compared to 6.4 days) than for all cases in MS–DRGs 070. The average costs of the 1,846 cases reporting a principal diagnosis of I67.4 with a secondary diagnosis designated as a CC in MS–DRG 078 are slightly lower ($8,591 compared to $9,381) and the average length of stay is shorter (3.3 days compared to 4.5 days) than for all cases in MS–DRGs 071. The average costs of the 243 cases reporting a principal diagnosis of I67.4 without reporting a secondary diagnosis designated as a CC or a MCC in MS–DRG 079 are slightly lower ($6,729 compared to $7,047) and the average length of stay is shorter (2.4 days compared to 2.9 days) than for all cases in MS–DRGs 072.

Our analysis demonstrates that the cases reporting a principal diagnosis of I67.4 currently grouping to medical MS–DRGs 077, 078, and 079 are generally aligned with the average costs for the cases currently grouping to MS–DRGs 070, 071, and 072. While the cases reporting a principal diagnosis code describing hypertensive encephalopathy have slightly lower costs and a shorter average length of stay than for cases in MS–DRGs 070, 071, and 072, we believe reassigning diagnosis code I67.4 to MS–DRGs 070, 071, and 072 will account for the subset of patients reporting this principal diagnosis, and will appropriately reflect the resources involved in evaluating and treating these patients.

During our review of this issue and the examination of the MS–DRGs within MDC 01, we noted that the title of MS–DRGs 067, 068, and 069 is ''Nonspecific CVA and Precerebral Occlusion without Infarction with MCC, with CC, and without CC/MCC, respectively'' and the title of MS–DRGs 070, 071, and 072 is ''Nonspecific Cerebrovascular Disorders, with MCC, with CC, and without CC/MCC, respectively.'' In examining the GROUPER logic for these MS–DRGs and reviewing the diagnoses listed under the heading of ''Principal Diagnosis'' in the ICD–10 MS–DRG Definitions Manual, we believe the titles for these MS–DRGs no longer accurately reflects the assigned diagnoses. Like MS–DRGs 077, 078, and 079, the titles of MS–DRGs 067, 068, 069, 070, 071, and 072 were established prior to the transition to ICD–10–CM. The terminology ''nonspecific'' in the titles for these MS–DRGs was appropriate to describe the ICD–9–CM diagnosis codes that were previously assigned to these DRGs, but as discussed in the HIPAA Administrative Simplification: Modification to Medical Data Code Set Standards To Adopt ICD–10–CM and ICD–10–PCS proposed rule (73 FR 49796 through 49803), in comparison to ICD–9–CM, ICD–10–CM diagnosis codes are very specific and that this specificity improves the richness of data for analysis and improves the accuracy of data used for medical research. Therefore, we believe it is appropriate to propose to revise the titles of these MS–DRGs for consistency.

In summary, for FY 2026, we are proposing to delete MS–DRGs 077, 078, and 079. Additionally, we are proposing to reassign ICD–10–CM diagnosis code I67.4 (Hypertensive encephalopathy) from MDC 01 MS–DRGs 077, 078, and 079 to MS–DRGs 070, 071, and 072. Lastly, for consistency, we are also proposing to change the titles of MS–DRGs 067, 068, and 069 from ''Nonspecific CVA and Precerebral Occlusion without Infarction with MCC, with CC, and without CC/MCC, respectively'' to ''Precerebral Occlusion without Infarction with MCC, with CC, and without CC/MCC, respectively'' and to change the titles of MS–DRGs 070, 071, and 072 from ''Nonspecific Cerebrovascular Disorders, with MCC, with CC, and without CC/MCC, respectively'' to ''Other Cerebrovascular Disorders with MCC, with CC, and without CC/MCC, respectively'' to better reflect the assigned diagnoses.

c. Encounter for Adjustment and Management of Implanted Devices of the Special Senses

We identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs regarding the assignment of four ICD–10–CM diagnosis codes that describe encounters for adjustment and management of implanted devices of the special senses. Under the Version 32 ICD–9–CM based MS–DRGs, ICD–9–CM diagnosis code V53.09 (Fitting and adjustment of other devices related to nervous system and special senses), as shown in the following table, was assigned medical MS–DRGs 091, 092, and 093 (Other Disorders of Nervous System with MCC, with CC, and without CC/MCC, respectively) in MDC 01 (Diseases and Disorders of the Nervous System). The four ICD–10–CM code translations also shown in the following table, that provide more detailed and specific information, also

currently group to MS–DRGs 091, 092, and 093 in the ICD–10 MS–DRGs Version 42.1. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 091, 092, and 093.

ICD–9–CM diagnosis code	Description	ICD–10–CM diagnosis code	Description
V53.09	Fitting and adjustment of other devices related to nervous system and special senses.	Z45.31	Encounter for adjustment and management of implanted visual substitution device.
		Z45.320	Encounter for adjustment and management of bone conduction device.
		Z45.321	Encounter for adjustment and management of cochlear device.
		Z45.328	Encounter for adjustment and management of other implanted hearing device.

During our review of this issue, we noted that under ICD–9–CM, diagnosis code V53.09 (Fitting and adjustment of other devices related to nervous system and special senses) did not further describe the type of device related to nervous system and special senses. This is in contrast to its four comparable ICD–10–CM code translations listed in the previous table that provide more detailed and specific information than the ICD–9–CM diagnosis code and do specify the type of device.

In reviewing the four ICD–10–CM diagnosis codes listed in the previous table and the devices they describe, we believe that that Z45.31 is more appropriately assigned to MDC 02 (Diseases and Disorders of the Eye) and codes Z45.320, Z45.321, and Z45.328 are more appropriately assigned to MDC 03 (Diseases and Disorders of the Ear, Nose, Mouth and Throat). We note that an ''implanted visual substitution device,'' also known as a ''visual prosthesis,'' is a medical implant designed to partially restore vision to a patient who is blind by directly stimulating the visual pathway in the retina or brain, essentially bypassing damaged photoreceptor cells in the eye and providing a basic visual perception through electrical stimulation. Bone conduction devices, also known as bone conduction hearing aids, amplify sound via bone conduction, or vibrations through the bones of the skull which directly stimulate a functioning cochlea. Cochlear devices and other implanted hearing devices are small electronic devices designed for patients with moderate to severe hearing loss caused by damage to the inner ear to help perceive sounds.

We analyzed claims data from the September 2024 update of the FY 2024 MedPAR file to determine if there were any cases reported with diagnosis codes Z45.31, Z45.320, Z45.321, or Z45.328. One case was found in MS–DRG 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis without CC/MCC) reporting principal diagnosis Z45.321 and procedure code 09PE0SZ (Removal of hearing device from left inner ear, open approach) with costs of $5,530 and a length of stay of one day.

We recognize that the volume of inpatient cases for patients with a principal diagnosis of Z45.31, Z45.320, Z45.321, or Z45.328 is low, however we believe that for clinical consistency, it is more appropriate for these cases to be assigned to MDCs that better describe the indication of the implanted devices of the special senses the codes describe. Accordingly, because the cases reporting principal diagnoses describing encounters for adjustment and management of implanted devices of the special senses are more clinically consistent in MDC 02 or MDC 03 depending on the type of device, and the diagnosis codes were initially assigned to MDC 01 MS–DRGs 091, 092, and 093 as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs, we are proposing to reassign ICD–10–CM diagnosis code Z45.31 from MS–DRGs 091, 092, and 093 to MDC 02 MS–DRG 123 (Neurological Eye Disorders). We are also proposing to reassign ICD–10–CM diagnosis codes Z45.320, Z45.321, and Z45.328 from MS–DRGs 091, 092, and 093 to MDC 03 MS–DRGs 154, 155, and 156 (Other Ear, Nose, Mouth and Throat Diagnoses with MCC, with CC, and without CC/MCC, respectively).

4. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Endovascular Aneurysm Repair (EVAR) With Iliac Branch Procedures

We received a request to create a new MS–DRG for cases reporting endovascular repair of abdominal aortic aneurysms that extend into at least one iliac artery to preserve blood flow to the external or internal iliac arteries. According to the requestor, aortic aneurysms extend into at least one of the iliac arteries in approximately 25% of patients with abdominal aortic aneurysms. The requestor (the manufacturer), stated that the GORE® EXCLUDER® Iliac Branch Endoprosthesis was approved by the Food and Drug Administration (FDA) in March of 2016 to be used exclusively with the GORE® EXCLUDER® Abdominal Aortic Aneurysm Endoprosthesis to isolate the common iliac artery from systemic blood flow and preserve blood flow in the external iliac and internal iliac arteries in patients with a common iliac or aortoiliac aneurysm, who have appropriate anatomy.[1] According to the requestor, maintaining flow to the internal iliac artery and pelvic circulation using iliac branch devices or alternative techniques aims to decrease complications associated with artery occlusion.[2] [3] [4] The requestor also stated that occluding the internal iliac artery can result in significant hip and/or

buttock claudication, erectile dysfunction, and colonic and spinal cord ischemia.

According to the requestor, endovascular aneurysm repair (EVAR) procedures that preserve blood flow to the iliac arteries are technically more challenging than conventional EVAR of the abdominal aorta, and they require increased procedure time, fluoroscopy time, and anesthesia time. The requestor stated that tortuosity and/or stenosis in the iliac territory may increase the complexity or even prevent the deployment of devices, leading to treatment failure or causing early occlusion of the branches. In such cases, some patients may develop symptoms of pelvic ischaemia.[5] [6] The requestor stated that current guidelines advocate the preservation of at least one internal iliac artery in patients with common iliac artery aneurysms, and iliac branched devices were developed to preserve the perfusion in the internal iliac artery.[7]

The requestor also expressed concern that hospitals who treat Medicare patients with aortoiliac and common iliac aneurysms using endovascular procedures with endoprostheses are not classified appropriately based on the current MS–DRG assignment and the resources required. The requestor performed its own data analysis and indicated it found differences in resource utilization when comparing cases reporting standard EVAR of the abdominal aorta to cases reporting EVAR of the abdominal aorta combined with procedures to preserve flow to an iliac branch. According to the requestor, the disparity in resource coherency under the current MS–DRG assignment may reduce access to Medicare beneficiaries who could benefit from these procedures. The requestor stated a new MS–DRG would enable more precise payments and better resource coherency under the MS–DRGs.

The procedure codes that describe EVAR using an abdominal aortic aneurysm (AAA) endoprosthesis and the procedure codes that describe EVAR using an iliac branch endoprosthesis (IBE) that are used to treat aortoiliac and iliac artery aneurysms, respectively, are listed in the following tables.

PROCEDURE CODES DESCRIBING EVAR USING AN ABDOMINAL AORTIC ANEURYSM (AAA) ENDOPROSTHESIS

ICD–10–PCS code	Description
04V03DZ	Restriction of abdominal aorta with intraluminal device, percutaneous approach.
04V03EZ	Restriction of abdominal aorta with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach.
04V03FZ	Restriction of abdominal aorta with branched or fenestrated intraluminal device, three or more arteries, percutaneous approach.

PROCEDURE CODES DESCRIBING EVAR USING AN ILIAC BRANCH ENDOPROSTHESIS (IBE)

ICD–10–PCS code	Description
04VC3DZ	Restriction of right common iliac artery with intraluminal device, percutaneous approach.
04VC3EZ	Restriction of right common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach.
04VD3DZ	Restriction of left common iliac artery with intraluminal device, percutaneous approach.
04VD3EZ	Restriction of left common iliac artery with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach.
04VE3DZ	Restriction of right internal iliac artery with intraluminal device, percutaneous approach.
04VF3DZ	Restriction of left internal iliac artery with intraluminal device, percutaneous approach.
04VH3DZ	Restriction of right external iliac artery with intraluminal device, percutaneous approach.
04VJ3DZ	Restriction of left external iliac artery with intraluminal device, percutaneous approach.

Cases reporting a combination of these procedure codes (that is, any one procedure code from each list) for the endovascular treatment of aortoiliac and iliac artery aneurysms are currently assigned to MS–DRGs 268 and 269 (Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC and without MCC, respectively). Based on its analysis of Medicare claims data using the previously listed codes in MS–DRGs 268 and 269, and to facilitate more precise payments for these procedures, the requestor recommended that CMS assign cases reporting a procedure code describing EVAR using an AAA endoprosthesis with a procedure code describing EVAR using an IBE to a proposed new MS–DRG titled, ''Concomitant Endovascular Abdominal Aorta and Iliac Branch Procedures''.

In review of this request, we analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 268 and 269 and for cases reporting standard EVAR using an AAA endoprosthesis compared to cases reporting EVAR using an AAA endoprosthesis with an IBE that are used to treat aortoiliac and iliac artery aneurysms with the previously listed procedure codes. The findings from our analysis are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 268—All cases	2,519	9.1	$62,984
MS–DRG 268—Cases reporting standard EVAR using an AAA endoprosthesis	1,500	7.4	63,877
MS–DRG 268—Cases reporting EVAR using an AAA endoprosthesis with an IBE	193	8.2	68,145
MS–DRG 269—All cases	10,108	2.0	39,165
MS–DRG 269—Cases reporting standard EVAR using an AAA endoprosthesis	8,655	1.8	38,562
MS–DRG 269—Cases reporting EVAR using an AAA endoprosthesis with an IBE	871	1.8	48,159

As shown in the table, we identified a total of 2,519 cases within MS–DRG 268 with an average length of stay of 9.1 days and average costs of $62,984. Of the 2,519 cases, we found 1,500 cases reporting standard EVAR using an AAA endoprosthesis with an average length of stay of 7.4 days and average costs of $63,877 and 193 cases reporting EVAR using an AAA endoprosthesis with an IBE with an average length of stay of 8.2 days and average costs of $68,145. The data show that the cases reporting standard EVAR using an AAA endoprosthesis have a shorter average length of stay (7.4 days versus 8.2 days) and lower average costs ($63,877 versus $68,145) compared to the average costs of the cases reporting EVAR using an AAA endoprosthesis with an IBE. The data further show that the 193 cases reporting EVAR using an AAA endoprosthesis with an IBE have a shorter average length of stay (8.2 days versus 9.1 days) and higher average costs ($68,145 versus $62,984) compared to the average length of stay and average costs of all the cases in MS–DRG 268.

For MS–DRG 269, we identified a total of 10,108 cases with an average length of stay of 2.0 days and average costs of $39,165. Of the 10,108 cases, we found 8,655 cases reporting standard EVAR using an AAA endoprosthesis with an average length of stay of 1.8 days and average costs of $38,562 and 871 cases reporting EVAR using an AAA endoprosthesis with an IBE with an average length of stay of 1.8 days and average costs of $48,159. The data show that the cases reporting standard EVAR using an AAA endoprosthesis have a comparable average length of stay (1.8 days versus 1.8 days) and lower average costs ($38,562 versus $48,159) compared to the cases reporting EVAR using an AAA endoprosthesis with an IBE. The data further show that the 871 cases reporting EVAR using an AAA endoprosthesis with an IBE have a shorter average length of stay (1.8 days versus 2.0 days) and higher average costs ($48,159 versus $39,165) compared to the average length of stay and average costs of all the cases in MS–DRG 269.

The findings suggest that the cases reporting EVAR using an AAA endoprosthesis with an IBE utilize greater resources compared to the cases reporting standard EVAR using an AAA endoprosthesis. We agree that patients who have aortoiliac and iliac aneurysms are a more complex population to treat, contributing to increased resource utilization.

Based on our review and analysis of the cases reporting standard EVAR using an AAA endoprosthesis compared to the cases reporting EVAR using an AAA endoprosthesis with an IBE to treat aortoiliac and iliac artery aneurysms in MS–DRGs 268 and 269, we believe new MS–DRGs are warranted to differentiate the utilization of resources between standard EVAR to treat AAA and EVAR to treat AAA extending into the iliac artery.

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG failed to meet the criterion that at least 500 or more cases are in each subgroup. It also failed to meet the criterion that there be at least a 20 percent difference in average costs between the CC and NonCC (without CC/MCC) subgroup and at least a $2,000 difference in average costs between the CC and NonCC (without CC/MCC) subgroup. The following table illustrates our findings.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With MCC	193	8.2	$68,145
With CC	419	2.3	48,415
Without CC/MCC	452	1.3	47,921

As discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in the with MCC subgroup.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With MCC	193	8.2	$68,145
Without MCC	871	1.8	48,159

We then applied the criteria for a two-way split for the ''with CC/MCC'' and ''without CC/MCC'' subgroups. As shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 or more cases in the without CC/MCC subgroup and at least a 20 percent difference in average costs between the with CC/MCC and without CC/MCC subgroup.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With CC/MCC	612	4.2	$54,637
Without CC/MCC	452	1.3	47,921

We note that because the criteria for both of the two-way splits failed, a split (or CC subgroup) is not warranted for the proposed new base MS–DRG. As a result, for FY 2026, we are proposing to create new base MS–DRG 213 (Endovascular Abdominal Aorta and Iliac Branch Procedures). The following table reflects a simulation of the proposed new base MS–DRG.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
Proposed MS–DRG 213	1,064	3.0	$51,784

b. Concomitant Single Valve Procedure With Open Surgical Ablation

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44836 through 44848), we discussed a two-part request we received to review the MS–DRG assignments for cases involving the surgical ablation procedure for atrial fibrillation. The first part of the request was to create a new classification of surgical ablation MS–DRGs to better accommodate the costs of open concomitant surgical ablations. The second part of the request was to reassign cases describing standalone percutaneous endoscopic surgical ablation. In the part of the request relating to the costs of open concomitant surgical ablations, the requestor identified the following potential procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure.

- Open coronary artery bypass graft (CABG) + open surgical ablation
- Open mitral valve repair or mitral valve replacement (MVR) + open surgical ablation
- Open aortic valve repair or mitral valve replacement (AVR) + open surgical ablation
- Open MVR + open AVR + open surgical ablation
- Open MVR + open CABG + open surgical ablation
- Open MVR + open AVR + open CABG + open surgical ablation
- Open AVR + open CABG + open surgical ablation

As discussed in the FY 2022 IPPS/LTCH PPS final rule, we examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting procedure code combinations describing open concomitant surgical ablations and stated our analysis showed while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found variation in the volume, length of stay, and average costs of the cases.

In the FY 2022 IPPS/LTCH PPS final rule, for the reasons discussed, we finalized our proposal to revise the surgical hierarchy for the MS–DRGs in MDC 05 (Diseases and Disorders of the Circulatory System) to sequence MS–DRGs 231–236 (Coronary Bypass, with or without PTCA, with or without Cardiac Catheterization or Open Ablation, with and without MCC, respectively) above MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively), effective October 1, 2021. In addition, we also finalized the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 and changed the titles of these MS–DRGs to ''Coronary Bypass with Cardiac Catheterization or Open Ablation with and without MCC, respectively'' to reflect this reassignment for FY 2022.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48845 through 48849), we discussed a request we received to again review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor stated they continue to believe that the average hospital costs for surgical ablation for atrial fibrillation demonstrates a cost disparity compared to all procedures within their respective MS–DRGs. The requestor suggested that when open surgical ablation is performed with MVR, or AVR or MVR/AVR + CABG that these procedures are either (1) assigned to a different family of MS–DRGs or (2) assigned to MS–DRGs 216 and 217 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC and with CC, respectively) similar to what CMS did with CABG and open ablation procedures in the FY 2022 rulemaking to better accommodate the added cost of open concomitant surgical ablation.

We stated our analysis using the September 2021 update of the FY 2021 MedPAR file reflected that the cases reporting an open concomitant surgical ablation code combination are predominately found in the higher (CC or MCC) severity level MS–DRGs of their current base MS–DRG assignment, suggesting that the patient's co-morbid conditions may also be contributing to the higher costs of these cases. Secondly, for the numerous procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure, the increase in average costs appeared to directly correlate with the number of procedures performed. For example, cases that describe ''Open MVR + Open surgical ablation'' generally demonstrated costs that were lower than cases that describe ''Open MVR + Open AVR + Open CABG + Open surgical ablation.''

Therefore, we stated we believe that additional time was needed to allow for further analysis of the claims data to

determine to what extent the patient's co-morbid conditions are also contributing to higher costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of these cases in these MS–DRGs. For the reasons summarized, and after consideration of the public comments we received, we did not make any MS–DRG changes for cases involving the open concomitant surgical ablation procedures for FY 2023.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58681 through 58690), we again received a request to review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor recommended that CMS reassign open concomitant surgical ablation procedures for atrial fibrillation (AF) from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218. The requestor further recommended that if CMS does not reassign cases involving open concomitant surgical ablation procedures to MS–DRGs 216, 217, and 218, in the alternative, CMS should create new MS–DRGs for all open mitral or aortic valve repair or replacement procedures with concomitant surgical ablation for AF to improve clinical coherence when three to four open heart procedures are performed in one setting.

The requestor stated that cases reporting open surgical ablation procedures for AF performed during open valve repair/replacement procedures are typically assigned to MS–DRGs 216, 217, 218, 219, 220, and 221, with the majority of the cases being assigned to MS–DRGs 219, 220, and 221 because of the surgical hierarchy in MDC 05 and because there is less of a need for cardiac catheterization in these cases. We stated in the final rule that the requestor performed its own data analysis, and stated their analysis showed that the data continues to demonstrate that claims with open surgical ablation procedures for AF are not clinically similar to the remaining cases in MS–DRGs 219, 220, and 221, and there are significant differences in resource utilization that reflect those clinical differences.

We noted in FY 2024 IPPS/LTCH PPS final rule that our analysis of the claims data suggested that it is the performance of an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure plus another concomitant procedure that is associated with increased hospital resource utilization, not solely the performance of open surgical ablation as suggested by the requestor, when compared to other cases in their respective MS–DRGs. Therefore, for the reasons discussed, we finalized our proposal to create MS–DRG 212 (Concomitant Aortic and Mitral Valve Procedures) in MDC 05 for cases reporting an aortic valve repair or replacement procedure, a mitral valve repair or replacement procedure, and another concomitant procedure.

For this FY 2026 IPPS/LTCH PPS proposed rule, we again received a request to review the MS–DRG assignment of cases involving a single open surgical valve procedure with an open surgical ablation. The requestor recommended that CMS reassign cases involving a single open surgical valve procedure with an open surgical ablation from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively). The requestor also suggested that if finalized, the title for MS–DRGs 216, 217, and 218 should be revised to ''Cardiac valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization or Open Ablation, with MCC, with CC or without CC/MCC, respectively.''

The requestor stated MS–DRGs primarily focus on the most resource intensive procedure, without fully accounting for the overall resource intensity and complexity of all procedures performed and stated treating AF as a secondary condition is one such example. The requestor stated that AF, if not treated early after diagnosis, continues to worsen and is associated with stroke and mortality risk, and significantly higher healthcare spending. According to the requestor, a majority of AF patients undergoing surgical ablation procedures are older and frailer than non-surgical ablation valvular patients, and these patients frequently require two or even three procedures during one hospital visit to treat multiple conditions (AF, valve disease, heart failure, blocked coronaries). The requestor further stated patients undergoing multiple cardiac procedures, including surgical ablation, typically require between two and four hours of additional time in the operating room, a longer length of stay, and are at an increased risk for adverse event in recovery and noted that much like cardiac catheterization procedures, in many instances adding surgical ablation to open valvular procedures also requires an atriotomy to better visualize the mitral valve and complete the surgical ablation, making these concomitant procedures significantly more complex than single valve procedures performed on their own. The requestor stated that the current MS–DRG assignments do not adequately pay hospitals for the resources associated with furnishing surgical ablation procedures and that therefore, it is increasingly becoming financially unviable for hospitals to perform these procedures to Medicare beneficiaries in a single admission.

The requestor asserted that reassigning cases involving a single open surgical valve procedure with an open surgical ablation, which are currently assigned in MS–DRGs 219, 220, and 221, to MS–DRGs 216, 217, and 218 would accommodate the clinical complexity of performing two or more open heart procedures, would enhance clinical coherence for patients undergoing multiple procedures within MDC 05, would more accurately reflect associated costs and resource utilization, and would help minimize the need for multiple patient admissions. The requestor performed its own data analysis of the Standard Analytical File (SAF) FY 2022 Q1—Q3 report and stated they identified 1,938 cases involving a single open surgical valve procedure with an open surgical ablation that were assigned to MS–DRGs 219, 220, and 221. The requestor stated their analysis showed that the impact of reassigning the 1,938 cases would result in better resource alignment with minimal relative weight changes. Specifically, the requestor stated that their analysis showed that if the cases involving a single open surgical valve procedure with an open surgical ablation that are currently assigned to MS–DRGs 219, 220, and 221 were reassigned to MS–DRGs 216, 217, and 218, the relative weights of MS–DRGs 216, 217, 218, 219, 220, and 221 would change by −5.35%, −4.48%, −2.59%, +0.47%, −0.93% and −0.12% respectively.

As previously noted, the requestor recommended that we consider cases involving a single open surgical valve procedure with an open surgical ablation, however the requestor did not provide a specific list of procedure codes for our consideration. Therefore, we reviewed the ICD–10–PCS classification and identified 81 procedure codes describing open surgical valve procedures and eight procedure codes describing open

surgical ablation procedures. We refer readers to Table 6P.3a associated with this FY 2026 IPPS/LTCH PPS proposed rule (which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*), which sets forth the list of ICD–10–PCS procedure codes describing open surgical valve procedures and open surgical ablation procedures that we examined.

To address this request and to understand the resource use for the subset of cases reporting procedure codes describing a single open surgical valve procedure with an open surgical ablation, without reporting a procedure code describing the performance of a cardiac catheterization, that are currently grouping to MS–DRGs 219, 220, and 221, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for the average length of stay and average costs for these cases. Our findings are shown in the following table:

MS–DRGs 219–221—Cases Reporting an Open Valve Procedure and an Open Surgical Ablation Procedure Without Reporting Cardiac Catheterization

MS–DRG		Number of cases	Average length of stay	Average costs
219	All cases	13,222	10	$69,728
	Cases reporting an open valve procedure and an open surgical ablation procedure without reporting cardiac catheterization.	1,657	10.1	67,532
220	All cases	9,636	6.2	49,514
	Cases reporting an open valve procedure and an open surgical ablation procedure without reporting cardiac catheterization.	999	6.9	53,603
221	All cases	1,146	3.6	46,900
	Cases reporting an open valve procedure and an open surgical ablation procedure without reporting cardiac catheterization.	41	5.6	48,353

As shown in the table, the data analysis performed indicates that the 1,657 cases in MS–DRG 219 reporting an open valve procedure and an open surgical ablation procedure, without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (10.1 days versus 10 days) and lower average costs when compared to all the cases in MS–DRG 219 ($67,532 versus $69,728). The difference in average costs is $2,196 ($69,728 − $67,532 = $2,196) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a MCC in MS–DRG 219 when compared to all the cases in MS–DRG 219.

In MS–DRG 220, the 999 cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 220 (6.9 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($53,603 versus $49,514). The difference in average costs is $4,089 ($53,603 − $49,514 = $4,089) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC in MS–DRG 220 when compared to all the cases in MS–DRG 220.

In MS–DRG 221, the 41 cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 221 (5.6 days versus 3.6 days) and higher average costs when compared to all the cases in MS–DRG 221 ($48,353 versus $46,900). The difference in average costs is $1,453 ($48,353 − $46,900 = $1,453) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC in MS–DRG 221 when compared to all the cases in MS–DRG 221.

We then examined the data for cases in MS–DRGs 216, 217, and 218, and our findings are shown in the following table:

MS–DRG	Description	Number of cases	Average length of stay	Average costs
216	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC.	5,137	13.6	$88,193
217	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with CC.	1,571	6.8	59,943
218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC.	251	2.9	61,733

The data analysis performed indicates that the cases in MS–DRGs 219, 220, and 221 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization have a generally longer average length of stay and lower average costs when compared to all cases in

MS–DRGs 216, 217, and 218. As shown in the table, the data analysis performed indicates that the 1,657 cases in MS–DRG 219 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have a shorter average length of stay (10.1 days versus 13.6 days) and lower average costs ($67,532 versus $88,193) when compared to all the cases in MS–DRG 216. The difference in average costs is $20,661 ($88,193 − $67,532 = $20,661) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a MCC in MS–DRG 219 when compared to all the cases in MS–DRG 216.

The 999 cases in MS–DRG 220 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC have a longer average length of stay (6.9 days versus 6.8 days) and lower average costs ($53,603 versus $59,943) when compared to all the cases in MS–DRG 217. The difference in average costs is $6,340 ($59,943 − $53,603 = $6,340) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC in MS–DRG 220 when compared to all the cases in MS–DRG 217.

The 41 cases in MS–DRG 221 reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have a longer average length of stay (5.6 days versus 2.9 days) and lower average costs ($48,353 versus $61,733) when compared to all the cases in MS–DRG 218. The difference in average costs is $13,380 ($61,733 − $48,353 = $13,380) for the cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC in MS–DRG 221 when compared to all the cases in MS–DRG 218.

While the data analysis reflects that cases that report an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization generally demonstrate slightly higher average costs in their respective MS–DRGs, we believe these cases are more suitably grouped to MS–DRGs 219, 220, and 221 where they are currently assigned, based on the closer similarities in resource utilization compared to all the cases in their respective MS–DRG. As discussed in prior rulemaking (86 FR 44878), the MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We also provide outlier payments to mitigate extreme loss on individual cases. Moreover, the data do not indicate cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization utilize similar resources when compared to the cases assigned to MS–DRGs 216, 217, and 218. The cases are not clinically coherent with regard to resource utilization as reflected in the greater differences in average costs.

Further, in examining this request, we note that the requestor suggested that CMS reassign cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218 for FY 2026, however, as discussed in prior rulemaking (86 FR 44830, 87 FR 48847, and 88 FR 58683), MS–DRGs 216, 217, and 218 are defined by the performance of cardiac catheterization. We continue to be concerned about the effect on clinical coherence of assigning cases reporting an open valve procedure and an open surgical ablation procedure that do not also have a cardiac catheterization procedure reported to MS–DRGs that are defined by the performance of that procedure. Our claims analysis for this FY 2026 IPPS/LTCH PPS proposed rule continues to reflect the difference in average costs demonstrated by the two cohorts, as cases reporting the performance of a cardiac catheterization in MS–DRGs 216, 217, and 218 continue to demonstrate higher average costs.

As stated previously, our analysis of the claims data continues to reflect that cases reporting an open valve procedure and an open surgical ablation procedure without a procedure code describing the performance of a cardiac catheterization are clinically coherent in their currently assigned MS–DRGs. Therefore, we are proposing to maintain the structure of MS–DRGs 216, 217, and 218 for FY 2026. We are also proposing to maintain the title of MS–DRGs 216, 217, and 218 as ''Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively'' for FY 2026.

c. Transcatheter Aortic Valve Replacement Procedures for Aortic Regurgitation

Transcatheter aortic valve replacement (TAVR) is a minimally invasive procedure that involves a catheter being inserted into an artery, without an incision for most cases, and then guided to the heart. The catheter delivers the new valve without the need for the chest or heart to be surgically opened. For this FY 2026 IPPS/LTCH PPS proposed rule, we received a request to reassign cases reporting TAVR procedures for aortic regurgitation (AR) from MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with or without MCC, respectively) to what the requester described as a more clinically and cost cohesive MS–DRG such as MS–DRG 215 (Other Heart Assist System Implant) and to revise the title of MS–DRG 215 to ''Other Heart Assist System Implant or Endovascular Cardiac Regurgitant Valve Replacement Procedures.''

According to the requestor, Medicare patients with severe, symptomatic AR often present with chronic, congestive heart failure, which equates to significantly greater diastolic heart failure, atrial fibrillation, and concomitant kidney, liver, and biventricular failure. As a result, managing this systemic damage requires a multidisciplinary care team, comprising of implanting physicians, cardiac surgeons, imaging cardiologists, and heart failure specialists, similar to the management required for cases currently assigned to MS–DRG 215. Further, the requestor stated TAVR procedures for AR prevent patients from devolving into heart failure and are clinically more comparable to short term heart assist device support. The requestor stated regurgitant valve disease, such as AR, is a whole-heart cardiac disease that has systemic manifestations that leads to biventricular heart failure and non-cardiac morbidity, while stenotic valve disease, such as aortic stenosis (AS), is less often associated with non-cardiac dysfunction. According to the requestor,

managing a diagnosis of AR leads to inpatient lengths of stay that are double the duration of the length of stay of patients with AS, as management of AS only requires the involvement of the implanting physician and the cardiac surgeon.

The requestor identified TAVR for AR with ICD–10–CM diagnosis code I35.1 (Nonrheumatic aortic (valve) insufficiency) and ICD–10–PCS procedure code 02RF38Z (Replacement of aortic valve with zooplastic tissue, percutaneous approach) and performed their own analysis of the FY2023 Final MedPAR data. The requestor stated they found the cases reporting a diagnosis of aortic regurgitation in MS–DRG 266 and 267 have 20% higher average costs (AR = $54,425 versus AS = $45,323), two times the length of stay (AR = 5 days versus AS = 2.5 days) and trigger outlier payments two times more often (AR = 11.43% versus AS = 5.82%) compared to the cases reporting a diagnosis of aortic stenosis in MS–DRGs 266 and 267. The requestor noted in order to perform their analysis, they excluded cases reporting procedure codes describing the insertion of a percutaneous short-term external heart assist device by removing cases that reported ICD–10–PCS procedure codes 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach) and 5A0221D (Assistance with cardiac output using impeller pump, continuous) from their analyses, as the requestor asserted those procedure codes were reassigned to MS–DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with MCC and without MCC, respectively) in FY 2024.

As stated previously, the requestor identified TAVR procedures for AR with ICD–10–CM diagnosis code I35.1 (Nonrheumatic aortic (valve) insufficiency) and ICD–10–PCS procedure code 02RF38Z (Replacement of aortic valve with zooplastic tissue, percutaneous approach). In reviewing this request, we identified five additional ICD–10–CM diagnosis codes that also describe aortic regurgitation and included these codes in our analysis. The five ICD–10–CM diagnosis codes we identified are listed in the following table.

ICD–10–CM code	Description
I06.1	Rheumatic aortic insufficiency.
I08.0	Rheumatic disorders of both mitral and aortic valves.
I08.2	Rheumatic disorders of both aortic and tricuspid valves.
I08.3	Combined rheumatic disorders of mitral, aortic and tricuspid valves.
I35.2	Nonrheumatic aortic (valve) stenosis with insufficiency.

Also, we identified eight additional ICD–10–PCS procedure codes that describe TAVR procedures as well, and similarly included these codes in our analysis. The eight ICD–10–PCS procedure codes we identified are listed in the following table.

ICD–10–PCS code	Description
02RF37H	Replacement of aortic valve with autologous tissue substitute, transapical, percutaneous approach.
02RF37Z	Replacement of aortic valve with autologous tissue substitute, percutaneous approach.
02RF38H	Replacement of aortic valve with zooplastic tissue, transapical, percutaneous approach.
02RF38N	Replacement of aortic valve with zooplastic tissue, using rapid deployment technique, percutaneous approach.
02RF3JH	Replacement of aortic valve with synthetic substitute, transapical, percutaneous approach.
02RF3JZ	Replacement of aortic valve with synthetic substitute, percutaneous approach.
02RF3KH	Replacement of aortic valve with nonautologous tissue substitute, transapical, percutaneous approach.
02RF3KZ	Replacement of aortic valve with nonautologous tissue substitute, percutaneous approach.

To begin our analysis, we reviewed the GROUPER logic. The requestor is correct that nine ICD–10–PCS codes that describe TAVR procedures mentioned previously are currently assigned to MS–DRGs 266 and 267. The requestor is also correct that in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58690 through 58696), we discussed a request we received to reassign certain cases reporting procedure codes describing the insertion of a short-term external heart assist device from MS–DRG 215 to MS–DRGs 001 and 002. We stated temporary heart assist devices are intended to support blood pressure and provide increased blood flow to critical organs in patients with cardiogenic shock, by drawing blood out of the heart and pumping it into the aorta, partially or fully bypassing the left ventricle to provide adequate circulation of blood (replace or supplement left ventricle pumping) while also allowing damaged heart muscle the opportunity to rest and recover in patients who need short-term support.

In the FY 2024 IPPS/LTCH PPS final rule, we stated that we examined the claims data and the data suggested that overall, cases reporting a procedure code describing the open insertion of a short-term external heart assist device may be more appropriately aligned with the average costs of the cases in MS–DRGs 001 and 002 in comparison to MS–DRG 215, even though the average length of stay is shorter. We also stated that we reviewed the clinical considerations along with this data analysis and agreed that cases reporting a procedure code that describes the open insertion of a short-term external heart assist device are generally more resource intensive and are clinically distinct from other cases reporting procedure codes describing the insertion of short-term external heart devices by other approaches currently assigned to MS–DRG 215. Therefore, for the reasons discussed and after consideration of the public comments we received, we finalized our proposal to reassign ICD–10–PCS code 02HA0RZ (Insertion of short-term external heart assist system into heart, open approach) from MS–DRG 215 in MDC 05 to Pre-MDC MS–DRGs 001 and 002 when reported as a standalone procedure for FY 2024. Under this finalization, procedure code 02HA0RZ no longer needs to be reported as part of a procedure code combination or procedure code ''cluster'' to satisfy the logic for assignment to MS–DRGs 001 and 002. We refer the reader to the ICD–

10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 001, 002, 215, 266 and 267.

While the requestor stated that procedure code 02HA3RZ (Insertion of short-term external heart assist system into heart, percutaneous approach) and procedure code 5A0221D (Assistance with cardiac output using impeller pump, continuous) were reassigned to MS–DRGs 001 and 002 (Heart Transplant or Implant of Heart Assist System with MCC and without MCC, respectively) in FY 2024, we note that our finalization in the FY 2024 IPPS/LTCH PPS final rule did not involve modifying the MS–DRG assignment of procedure code 02HA3RZ or procedure code 5A0221D. In Version 42.1, cases reporting procedure codes 02HA3RZ and 5A0221D, continue to be assigned to MS–DRG 215. We refer the reader to Appendix E of the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for the MS–DRG assignments of procedure codes 02HA0RZ, 02HA3RZ, and 5A0221D.

Next, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRG 266 and 267 to identify cases reporting one of the six ICD–10–CM codes listed previously that describe aortic regurgitation as a principal or a secondary diagnosis with one of the nine procedure codes that describe a TAVR procedure. Our findings are shown in the following table:

MS–DRGs 266–267—All Cases and Cases Reporting a Procedure Code Describing TAVR With a Principal or Secondary Diagnosis of Aortic Regurgitation

MS–DRG		Number of cases	Average length of stay	Average costs
266	All cases	22,083	4.5	$55,402
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation.	3,616	5.7	56,010
267	All Cases	36,405	1.5	43,282
	Cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation.	4,521	1.6	41,189

As shown in the table, in MS–DRG 266, we identified a total of 22,083 cases with an average length of stay of 4.5 days and average costs of $55,402. Of those 22,083 cases, there were 3,616 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation, with average costs higher than the average costs in the FY 2024 MedPAR file for MS–DRG 266 ($56,010 compared to $55,402) and a longer average length of stay (5.7 days compared to 4.5 days). In MS–DRG 267, we identified a total of 36,405 cases with an average length of stay of 1.5 days and average costs of $43,282. Of those 36,405 cases, there were 3,616 cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation, with average costs lower than the average costs in the FY 2024 MedPAR file for MS–DRG 267 ($41,189 compared to $43,282) and a longer average length of stay (1.6 days compared to 1.5 days).

We then examined claims data from the September 2024 update of the FY 2024 MedPAR for MS–DRG 215. Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
215	3,257	8.2	$87,701

Our analysis indicates that the cases assigned to MS–DRG 215 have much higher average costs ($87,701 versus $56,010 or $41,189) and a much longer length of stay (8.2 days versus 5.7 days or 1.6 days) than the cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation currently assigned to MS–DRGs 266 or 267, respectively. Instead, the average costs and average length of stay for cases reporting a procedure code describing TAVR with a principal or secondary diagnosis of aortic regurgitation appear to be generally more aligned with the average costs and average length of stay for all cases in MS–DRGs 266 and 267, where they are currently assigned.

In addition, based on our review of the clinical considerations, we do not believe the procedure codes describing a TAVR are clinically coherent with the procedure codes currently assigned to MS–DRG 215. Heart assist devices, such as ventricular assist devices and artificial heart systems, provide circulatory support by taking over most of the workload of the left ventricle. Blood enters the pump through an inflow conduit connected to the left ventricle and is ejected through an outflow conduit into the body's arterial system. Heart assist devices can provide temporary left, right, or biventricular support for patients whose hearts have failed and can also be used as a bridge for patients who are awaiting a heart transplant. While we agree that TAVR can be a treatment option for patients with severe AR who are at high risk for mortality or complications due to advanced age and multiple comorbidities, we do not believe the procedure codes describing TAVR should be assigned to MS–DRG 215. AR is a condition where the aortic valve doesn't close properly causing blood to leak back into the heart. While we acknowledge that if not treated AR can gradually worsen and lead to left ventricular enlargement and eventually heart failure, we believe that patients

with indications for heart assist devices tend to be more severely ill and these inpatient admissions are associated with greater resource utilization as evidenced by the higher average costs and longer lengths of stay. Therefore, for the reasons stated previously, we are proposing to maintain the GROUPER logic for MS–DRGs 266 and 267 for FY 2026. We are also proposing to maintain the title of MS–DRGs 215 as ''Other Heart Assist System Implant'' for FY 2026.

d. Percutaneous Coronary Atherectomy

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58704 through 58712), we discussed a request we received to review the MS–DRG assignment of cases describing percutaneous coronary intravascular lithotripsy (IVL). Coronary IVL is utilized in a subset of percutaneous coronary intervention (PCI) procedures when the artery is severely calcified. According to the requestor, PCIs involving coronary IVL are clinically more complex because coronary IVL is a therapy deployed exclusively in severely calcified coronary lesions, and these lesion types are associated with longer procedure times and increased utilization of hospital resources. In analyzing this request, we stated in the FY 2024 IPPS/LTCH PPS final rule that the data analysis showed that the average costs of cases reporting percutaneous coronary IVL, with or without involving the insertion of an intraluminal device, were higher than for all cases in their respective MS–DRG. Therefore for FY 2024, taking into consideration that it clinically requires greater resources to perform coronary intravascular lithotripsy, and after consideration of the public comments we received, we finalized our proposal to create MS–DRG 323 (Coronary Intravascular Lithotripsy with Intraluminal Device with MCC), MS–DRG 324 (Coronary Intravascular Lithotripsy with Intraluminal Device without MCC) and MS–DRG 325 (Coronary Intravascular Lithotripsy without Intraluminal Device) in MDC 05.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69000 through 69002), we discussed requests to modify the GROUPER logic in a number of cardiac MS–DRGs under MDC 05 (Diseases and Disorders of the Circulatory System) for which we stated further research and analysis were required, and which we would continue to consider in connection with future rulemaking. Specifically, we discussed requests we received to modify the GROUPER logic of MS–DRGs 323, 324, and 325. In two separate but related requests, the requestors suggested that we add procedure codes that describe additional PCI procedures, such as percutaneous coronary rotational, laser, and orbital atherectomy, to the GROUPER logic of new MS–DRGs 323, 324, and 325.

In the FY 2025 IPPS/LTCH PPS final rule, we noted that as stated in prior rule making (88 FR 58708), atherectomy is distinct from coronary lithotripsy in that each of these procedures are defined by clinically distinct definitions and objectives. We stated additional analysis to assess for unintended consequences across the classification was needed as we have made a distinction between the root operations used to describe atherectomy (Extirpation) and the root operation used to describe lithotripsy (Fragmentation) in evaluating other requests in rulemaking. We stated we would need to consider the application of these two root operations in other scenarios where we have also specifically stated that Extirpation is not the same as Fragmentation and do not warrant similar MS–DRG assignment (85 FR 58572 through 58573). Furthermore, as MS–DRGs 323, 324, and 325 had recently become effective on October 1, 2023 (FY 2024), we stated additional time was needed to review and evaluate extensive modifications to the structure of these MS–DRGs.

For this FY 2026 IPPS/LTCH PPS proposed rule, we received a request to reassign percutaneous coronary atherectomy procedures from MS–DRGs 250 and 251 (Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC and without MCC, respectively) and MS–DRGs 321 and 322 (Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices and without MCC, respectively) to MS–DRGs 323, 324, and 325 where cases reporting percutaneous coronary IVL are assigned. Atherectomy is a procedure used to remove plaque buildup from the inside of arteries. The requestor stated that coronary atherectomy and coronary IVL target the same step of the PCI treatment process (that is, reducing the burden of calcium by preparing the vessel prior to stent delivery). The requestor further stated that coronary atherectomy is more clinically similar to coronary IVL than other routine vessel preparation techniques (such as angioplasty) in that both coronary atherectomy and coronary IVL are used to modify severe coronary calcium, treat the same patient population, and have the same intended clinical use for complex vessel preparation. Complex vessel preparation is required to increase the diameter of an artery's lumen in severely calcified lesions and improves revascularization by debulking calcification which enables better intraluminal device deployment and improved drug uptake into the vessel wall. Similar to lithotripsy, after percutaneous atherectomy is performed, the provider can implant an intraluminal device, also called a stent, to keep the vessel open.

According to the requestor, removing percutaneous coronary atherectomy procedures from their current MS–DRG assignments and assigning them to MS–DRGs 323, 324, and 325 would reduce cost variance and improve clinical coherence across all PCI MS–DRGs. The requestor also stated that as atherectomy procedures involve more complex calcified lesions and require greater resources, it is not clinically or cost coherent to maintain their current MS–DRG assignments, therefore creating a new MS–DRG for all cases involving percutaneous coronary atherectomy procedures was a reasonable alternative option if CMS did not agree with the reassignment of these cases to MS–DRGs 323, 324, and 325.

The requestor identified eight ICD–10–PCS codes that they state describe percutaneous coronary atherectomy. The eight codes the requestor identified are listed in the following table.

ICD–10–PCS code	Description
02C03Z7	Extirpation of matter from coronary artery, one artery, orbital atherectomy technique, percutaneous approach.
02C03ZZ	Extirpation of matter from coronary artery, one artery, percutaneous approach.
02C13Z7	Extirpation of matter from coronary artery, two arteries, orbital atherectomy technique, percutaneous approach.
02C13ZZ	Extirpation of matter from coronary artery, two arteries, percutaneous approach.
02C23Z7	Extirpation of matter from coronary artery, three arteries, orbital atherectomy technique, percutaneous approach.
02C23ZZ	Extirpation of matter from coronary artery, three arteries, percutaneous approach.
02C33Z7	Extirpation of matter from coronary artery, four or more arteries, orbital atherectomy technique, percutaneous approach.

ICD–10–PCS code	Description
02C33ZZ	Extirpation of matter from coronary artery, four or more arteries, percutaneous approach.

While we agree with the requestor that the eight procedure codes listed in the previous table describe percutaneous coronary atherectomy, we note there are additional ICD–10–PCS codes that describe percutaneous coronary atherectomy in the GROUPER logic for MS–DRGs 250, 251, 321, and 322. Therefore, in reviewing this request, we identified 12 additional ICD–10–PCS procedure codes that also describe percutaneous or percutaneous endoscopic coronary atherectomy procedures and included these codes in our analysis. The 12 codes we identified are listed in the following table.

ICD–10–PCS code	Description
02C03Z6	Extirpation of matter from coronary artery, one artery, bifurcation, percutaneous approach.
02C04Z6	Extirpation of matter from coronary artery, one artery, bifurcation, percutaneous endoscopic approach.
02C04ZZ	Extirpation of matter from coronary artery, one artery, percutaneous endoscopic approach.
02C13Z6	Extirpation of matter from coronary artery, two arteries, bifurcation, percutaneous approach.
02C14Z6	Extirpation of matter from coronary artery, two arteries, bifurcation, percutaneous endoscopic approach.
02C14ZZ	Extirpation of matter from coronary artery, two arteries, percutaneous endoscopic approach.
02C23Z6	Extirpation of matter from coronary artery, three arteries, bifurcation, percutaneous approach.
02C24Z6	Extirpation of matter from coronary artery, three arteries, bifurcation, percutaneous endoscopic approach.
02C24ZZ	Extirpation of matter from coronary artery, three arteries, percutaneous endoscopic approach.
02C33Z6	Extirpation of matter from coronary artery, four or more arteries, bifurcation, percutaneous approach.
02C34Z6	Extirpation of matter from coronary artery, four or more arteries, bifurcation, percutaneous endoscopic approach.
02C34ZZ	Extirpation of matter from coronary artery, four or more arteries, percutaneous endoscopic approach.

We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 250, 251, 321, and 322.

To begin our analysis, we examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 250, 251, 321, and 322 to identify cases reporting a procedure code describing percutaneous or percutaneous endoscopic coronary atherectomy and compared the results to all cases in their respective MS–DRG. Our findings are shown in the following table.

MS–DRG		Number of cases	Average length of stay	Average costs
250	All cases	3,047	4.4	$21,383
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy.	493	4.6	25,139
251	All cases	2,515	2.4	14,521
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy.	340	2.5	18,121
321	All cases	32,517	5.0	26,309
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy.	3,307	5.1	31,886
322	All cases	46,600	2.4	16,792
	Cases reporting percutaneous or percutaneous endoscopic coronary atherectomy.	3,134	2.5	20,889

As shown by the table, in MS–DRG 250, we identified a total of 3,047 cases, with an average length of stay of 4.4 days and average costs of $21,383. Of those 3,047 cases, there were 493 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy without reporting the insertion of an intraluminal device, with higher average costs as compared to all cases in MS–DRG 250 ($25,139 compared to $21,383), and a longer average length of stay (4.6 days compared to 4.4 days). In MS–DRG 251, we identified a total of 2,515 cases with an average length of stay of 2.4 days and average costs of $14,521. Of those 2,515 cases, there were 340 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy without reporting the insertion of an intraluminal device, with higher average costs as compared to all cases in MS–DRG 251 ($18,121 compared to $14,521), and a longer average length of stay (2.5 days compared to 2.4 days).

In MS–DRG 321, we identified a total of 32,517 cases with an average length of stay of 5.0 days and average costs of $26,309. Of those 32,517 cases, there were 3,307 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an intraluminal device, with higher average costs as compared to all cases in MS–DRG 321 ($31,886 compared to $26,309), and a longer average length of stay (5.1 days compared to 5.0 days). In MS–DRG 322, we identified a total of 46,600 cases with an average length of stay of 2.4 days and average costs of $16,792. Of those 46,600 cases, there were 3,134 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an

intraluminal device, with higher average costs as compared to all cases in MS–DRG 322 ($20,889 compared to $16,792), and a longer average length of stay (2.5 days compared to 2.4 days). The data analysis shows that the average costs of cases reporting percutaneous or percutaneous endoscopic coronary atherectomy, with or without involving the insertion of an intraluminal device, are higher than for all cases in their respective MS–DRG.

We then examined claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 323, 324, and 325. Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
323	4,429	6.0	$39,047
324	4,877	2.9	28,809
325	646	3.9	29,362

In MS–DRG 323, we found a total of 4,429 cases with an average length of stay of 6.0 days and average costs of $39,047. In MS–DRG 324, we found a total of 4,877 cases with an average length of stay of 2.9 days and average costs of $28,809. In MS–DRG 325, we found a total of 646 cases with an average length of stay of 3.9 days and average costs of $29,362.

The average costs of the 3,307 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an intraluminal device in MS–DRG 321 are $7,161 less than the average costs of all cases in MS–DRG 323 ($39,047 − $31,886 = $7,161) and have an average length of stay that is less than the average length of stay of all cases in MS–DRG 323 (5.1 days versus 6.0 days). The average costs of the 3,134 cases reporting percutaneous or percutaneous endoscopic coronary atherectomy with the insertion of an intraluminal device in MS–DRG 322 are $7,920 less than the average costs of all cases in MS–DRG 324 ($28,809 − $20,899 = $7,920) and have an average length of stay that is less than the average length of stay of all cases in MS–DRG 324 (2.5 days versus 2.9 days). The average costs of the 493 cases in MS–DRG 250 and the 340 cases in MS–DRG 251 reporting percutaneous or percutaneous endoscopic coronary atherectomy without reporting a procedure code describing the insertion of an intraluminal device are $4,223 and $11,241 less than the average costs of all cases in MS–DRG 325 ($29,362 − $25,139 = $7,920; $29,362 − $18,121 = $11,241), respectively. These 493 cases in MS–DRG 250 have an average length of stay that is more than the average length of stay of all cases in MS–DRG 325 (4.6 days versus 3.9 days) while the 340 cases in MS–DRG 251 have an average length of stay that is less than the average length of stay of all cases in MS–DRG 325 (2.5 days versus 3.9 days).

Upon analysis of the claims data and our review of the request, we do not agree with reassigning cases reporting percutaneous or percutaneous endoscopic coronary atherectomy from MS–DRGs 250, 251, 321, and 322 to MS–DRGs 323, 324, and 325. While we agree that the performance of percutaneous or percutaneous endoscopic coronary atherectomy contributes to increased resource consumption for these PCI procedures, as previously noted, the data do not support that cases reporting percutaneous or percutaneous endoscopic coronary atherectomy, with or without involving the insertion of an intraluminal device, utilize similar resources when compared to coronary IVL procedures currently assigned to MS–DRGs 323, 324, and 325. Additionally, as stated previously and in prior rule making (88 FR 58708), coronary atherectomy is distinct from coronary lithotripsy in that each of these procedures are defined by clinically distinct definitions and objectives. We continue to believe that the root operation Extirpation is not the same as the root operation Fragmentation and do not warrant similar MS–DRG assignment (85 FR 58572 through 58573).

We then explored alternative options, as was requested. As discussed in prior rulemaking (88 FR 58706), we continue to agree that clinically, the presence of severe calcification can increase the treatment difficulty and complexity of service. The data analysis clearly shows that cases reporting percutaneous or percutaneous endoscopic coronary atherectomy, with or without involving the insertion of an intraluminal device, have higher average costs and longer lengths of stay compared to all the cases in their assigned MS–DRG. For these reasons, we are proposing to create new MS–DRGs for cases reporting procedure codes describing percutaneous or percutaneous endoscopic coronary atherectomy involving the insertion of an intraluminal device, as well as a new MS–DRG for cases reporting procedure codes describing percutaneous or percutaneous endoscopic coronary atherectomy without the insertion of an intraluminal device to address the differential in resource consumption.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the most recent claims data from the September 2024 update of the FY 2024 MedPAR file. The following table illustrates our findings for all 6,441 cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy involving the insertion of an intraluminal device.

Proposed new MS–DRG	Number of cases	Average length of stay	Average costs
Proposed new MS–DRG XXX Percutaneous Coronary Atherectomy with Intraluminal Device	6,441	3.8	$26,535

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule. As shown, a three-way split of the proposed new MS–DRG failed to meet the criterion that there be at least a 20% difference in average costs between the CC and NonCC subgroup.

Proposed new MS–DRG	Number of cases	Average length of stay	Average costs
With MCC	3,307	5.1	$31,886
With CC	1,861	2.8	21,961
Without CC/MCC	1,273	2	19,322

As discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups and found that all five criteria were met. The following table illustrates our findings.

Proposed new MS–DRG	Number of cases	Average length of stay	Average costs
With MCC	3,307	5.1	$31,886
Without MCC	3,134	2.5	20,889

For the proposed new MS–DRGs for cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy involving the insertion of an intraluminal device, there is at least (1) 500 cases in the MCC subgroup and 500 cases in the without MCC subgroup; (2) 5 percent of the cases in the MCC group and 5 percent in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

We then ran a simulation using the most recent claims data from the September 2024 update of the FY 2024 MedPAR file for all 833 cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy without the insertion of an intraluminal device. The following table illustrates our findings.

Proposed new MS–DRG	Number of cases	Average length of stay	Average costs
Proposed new MS–DRG XXX Percutaneous Coronary Atherectomy without Intraluminal Device	833	3.7	$22,275

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule. As shown, a three-way split of the proposed new MS–DRG failed to meet the criterion that there be at least 500 cases in the MCC subgroup, CC subgroup, and NonCC subgroup.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With MCC	493	4.6	$25,139
With CC	257	2.7	19,080
Without CC/MCC	83	2	15,151

As discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 500 cases in the with MCC and the without MCC subgroups.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With MCC	493	4.6	$25,139
Without MCC	340	2.5	18,121

We then applied the criteria for a two-way split for the ''with CC/MCC'' and ''without CC/MCC'' subgroups. As shown in the table that follows, a two-way split of this base MS–DRG also failed to meet the criterion that there be

at least 500 cases in the without CC/MCC subgroup.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With CC/MCC	750	3.9	$23,063
Without CC/MCC	83	2	15,151

We note that because the criteria for both of the two-way splits failed, a split (or CC subgroup) is not warranted for the proposed new base MS–DRG. As a result, for FY 2026, we are proposing to create a base MS–DRG for cases reporting procedure codes describing percutaneous or percutaneous endoscopic atherectomy without the insertion of an intraluminal device.

In summary, for FY 2026, taking into consideration that it clinically requires greater resources to perform percutaneous or percutaneous endoscopic coronary atherectomy, we are proposing to create two new MS–DRGs with a two-way severity level split for cases describing percutaneous or percutaneous endoscopic coronary atherectomy involving the insertion of an intraluminal device in MDC 05. We are also proposing to create a new base MS–DRG for cases describing percutaneous or percutaneous endoscopic coronary atherectomy without an intraluminal device. These proposed new MS–DRGs are proposed new MS–DRG 359 (Percutaneous Coronary Atherectomy with Intraluminal Device with MCC), proposed new MS–DRG 360 (Percutaneous Coronary Atherectomy with Intraluminal Device without MCC) and proposed new MS–DRG 318 (Percutaneous Coronary Atherectomy without Intraluminal Device). We refer the reader to Table 6P.4a and Table 6P.4b associated with this FY 2026 IPPS/LTCH PPS proposed rule (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*) for the list of procedure codes we are proposing to define in the logic for each of the proposed new MS–DRGs. We note that discussion of the surgical hierarchy for the proposed modification is discussed in section II.C.10. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule.

e. Complex Aortic Arch Procedures

For this FY 2026 IPPS/LTCH PPS proposed rule, we received two separate but related requests to review and reconsider the MS–DRG assignments for a subset of codes describing aortic arch procedures assigned to MS DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve & Other Major Cardiothoracic Procedure with and without Cardiac Catheterization, with MCC, with CC, without CC/MCC, respectively). In this section of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, we discuss each of these separate, but related requests.

The first request was to reassign cases reporting a procedure code describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRG 216 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC). Alternatively, the requestor stated CMS could consider reassigning other similar complex aortic arch branch procedures to MS–DRG 216. The requestor suggested that if finalized, the title for MS–DRG 216 should be revised to reflect ''Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC or with Aortic Arch Branch Intraluminal Device.''

According to the requestor, the manufacturer of the GORE® TAG® Thoracic Branch Endoprosthesis (TBE), reassignment of the procedure code describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device to MS–DRG 216 would result in higher payment and better account for the differences in resource use of the cases reporting this procedure than other cases in their respective MS–DRGs where they are currently assigned. The GORE® TAG® TBE provides endovascular repair of pathologies of the descending thoracic aorta requiring a proximal landing zone including the left subclavian artery. It is a modular device that consists of three implantable fabric tubes supported by a nitinol framework. The GORE® TAG® TBE is indicated for endovascular repair of lesions such as aortic aneurysms, traumatic transections, and dissections of the descending thoracic aorta with treatment extending to the aortic arch, while maintaining flow into the left subclavian artery (Zone 2 of the aortic arch), in patients who are at high risk for debranching subclavian procedures and who have appropriate anatomy. According to the requestor, patients with lesions in the aortic arch are often more clinically complex and more difficult to treat than patients with lesions in lower parts of the aorta due to vascular tortuosity, proximity to the heart, involvement of arch vessels that feed into the head and brain, and risk of stroke and paraplegia or paraparesis from emboli released into arteries that provide blood flow to the left arm and head. The requestor stated that for lesions involving the left subclavian artery, the only other treatment options available today include open surgical repair with a synthetic graft or a hybrid procedure which includes a non-branched endovascular device and an open surgical bypass procedure of the head vessels. Per the requestor, for arch lesions involving the brachiocephalic and left common carotid arteries, a TBE device enables hybrid treatment with one fewer bypass procedure.

The requestor identified cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device by the presence of ICD–10–PCS codes 02VX3EZ (Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach) and 02VW3DZ (Restriction of thoracic aorta, descending with intraluminal device, percutaneous approach) on the same claim and performed its own analysis of the claims data. The requestor stated they found 90 cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device, and these cases are 49% (+$32,326), 60% (+$27,727), and 38% (+$15,432) more costly compared to all cases in MS–DRGs 219, 220, and 221, respectively. While acknowledging that cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device typically do not require a cardiac catheterization procedure, the requestor asserted that this claims analysis

demonstrates cases reporting endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device require resources similar to cases in MS–DRG 216.

As mentioned previously, the requestor stated we could also consider reassigning cases reporting procedure codes describing other complex aortic arch branch procedures to MS–DRG 216. The requestor stated to be considered a similar ''complex aortic arch procedure'' the case should report an ICD–10–PCS code describing the endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device with an ICD–10–PCS code describing a Zone 0 or a Zone 1 Bypass procedure. Zone 0 is in the ascending aorta, proximal to the brachiocephalic artery and Zone 1 covers the portion of the aortic arch between the brachiocephalic artery and the left common carotid artery. The requestor identified cases reporting these ''other complex aortic arch procedures'' as cases reporting ICD–10–PCS codes as reflected in the following table.

ICD–10–PCS code	Description
02VX3EZ	Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach.
with one of the following:	
031409J	Bypass left subclavian artery to right extracranial artery with autologous venous tissue, open approach.
031409K	Bypass left subclavian artery to left extracranial artery with autologous venous tissue, open approach.
03140AJ	Bypass left subclavian artery to right extracranial artery with autologous arterial tissue, open approach.
03140AK	Bypass left subclavian artery to left extracranial artery with autologous arterial tissue, open approach.
03140JJ	Bypass left subclavian artery to right extracranial artery with synthetic substitute, open approach.
03140JK	Bypass left subclavian artery to left extracranial artery with synthetic substitute, open approach.
03140KJ	Bypass left subclavian artery to right extracranial artery with nonautologous tissue substitute, open approach.
03140KK	Bypass left subclavian artery to left extracranial artery with nonautologous tissue substitute, open approach.
03140ZJ	Bypass left subclavian artery to right extracranial artery, open approach.
03140ZK	Bypass left subclavian artery to left extracranial artery, open approach.
03LJ0CZ	Occlusion of left common carotid artery with extraluminal device, open approach.
03LJ0ZZ	Occlusion of left common carotid artery, open approach.
03LJ3BZ	Occlusion of left common carotid artery with bioactive intraluminal device, percutaneous approach.
03LJ3DZ	Occlusion of left common carotid artery with intraluminal device, percutaneous approach.
03LJ4CZ	Occlusion of left common carotid artery with extraluminal device, percutaneous endoscopic approach.
03LJ4ZZ	Occlusion of left common carotid artery, percutaneous endoscopic approach.
031J09J	Bypass left common carotid artery to right extracranial artery with autologous venous tissue, open approach.
031J09K	Bypass left common carotid artery to left extracranial artery with autologous venous tissue, open approach.
031J09Y	Bypass left common carotid artery to upper artery with autologous venous tissue, open approach.
031J0AJ	Bypass left common carotid artery to right extracranial artery with autologous arterial tissue, open approach.
031J0AK	Bypass left common carotid artery to left extracranial artery with autologous arterial tissue, open approach.
031J0AY	Bypass left common carotid artery to upper artery with autologous arterial tissue, open approach.
031J0JJ	Bypass left common carotid artery to right extracranial artery with synthetic substitute, open approach.
031J0JK	Bypass left common carotid artery to left extracranial artery with synthetic substitute, open approach.
031J0JY	Bypass left common carotid artery to upper artery with synthetic substitute, open approach.
031J0KJ	Bypass left common carotid artery to right extracranial artery with nonautologous tissue substitute, open approach.
031J0KK	Bypass left common carotid artery to left extracranial artery with nonautologous tissue substitute, open approach.
031J0KY	Bypass left common carotid artery to upper artery with nonautologous tissue substitute, open approach.
031J0ZJ	Bypass left common carotid artery to right extracranial artery, open approach.
031J0ZK	Bypass left common carotid artery to left extracranial artery, open approach.
031J0ZY	Bypass left common carotid artery to upper artery, open approach.

In analyzing this request, we note the requestor is correct that the following ICD–10–PCS codes specifically describe procedures involving the GORE® TAG® TBE: 02VX3EZ (Restriction of thoracic aorta, ascending/arch with branched or fenestrated intraluminal device, one or two arteries, percutaneous approach), in combination with 02VW3DZ (Restriction of thoracic aorta, descending with intraluminal device, percutaneous approach). The requestor is also correct that procedure codes 02VX3EZ and 02VW3DZ are assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. Additionally, we agree that the ICD–10–PCS codes as reflected in the previous table can describe other complex aortic arch procedures, and when reported MS–DRGs 216, 217, 218, 219, 220, and 221 would be assigned. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, for complete documentation of the GROUPER logic for MS–DRGs 216, 217, 218, 219, 220, and 221. We note that the GORE® TAG® TBE was approved for new technology add-on payments for FY 2023 (87 FR 48966 through 48969) FY 2024 (88 FR 58800), and FY 2025 (89 FR 69124). We refer readers to section II.E.5 of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule for a discussion regarding the proposed FY 2026 status of technologies approved for FY 2025 new technology add-on payments, including the GORE® TAG® TBE.

To explore mechanisms to address this request and to understand the resource use for the subset of cases reporting procedure codes 02VX3EZ and 02VW3DZ, and cases reporting

''other complex aortic arch procedures'', we began our analysis by examining claims data from the September 2024 update of the FY 2024 MedPAR file for cases assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. Our findings are shown in the following table:

MS–DRGS 216–221—CASES REPORTING ENDOVASCULAR RESTRICTION OF THE THORACIC AORTA WITH A BRANCHED OR FENESTRATED INTRALUMINAL DEVICE AND CASES REPORTING OTHER COMPLEX AORTIC ARCH PROCEDURES

MS–DRG		Number of cases	Average length of stay	Average costs
216	All cases	5,137	13.6	$88,193
	Cases reporting 02VX3EZ and 02VW3DZ	4	25.3	156,361
	Cases reporting other complex aortic arch procedures	0	0	0
217	All cases	1,571	6.8	59,943
	Cases with 02VX3EZ and 02VW3DZ	1	2	46,235
	Cases reporting other complex aortic arch procedures	0	0	0
218	All cases	251	2.9	61,733
	Cases with 02VX3EZ and 02VW3DZ	0	0	0
	Cases reporting other complex aortic arch procedures	0	0	0
219	All cases	13,222	10	69,728
	Cases with 02VX3EZ and 02VW3DZ	81	11.4	97,336
	Cases reporting other complex aortic arch procedures	10	20.7	112,213
220	All cases	9,636	6.2	49,514
	Cases with 02VX3EZ and 02VW3DZ	64	5.2	76,700
	Cases reporting other complex aortic arch procedures	10	6.9	87,003
221	All cases	1,146	3.6	46,900
	Cases with 02VX3EZ and 02VW3DZ	32	1.9	56,765
	Cases reporting other complex aortic arch procedures	0	0	0

As shown in the table, the data analysis performed indicates that the 4 cases in MS–DRG 216 reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 216 (25.3 days versus 13.6 days) and higher average costs when compared to all the cases in MS–DRG 216 ($156,361 versus $88,193). The difference in average costs is $68,168 ($156,361 − $88,193 = $68,168) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 216 when compared to all the cases in MS–DRG 216. There were zero cases reporting other complex aortic arch procedures in MS–DRG 216. In MS–DRG 217, the one case reporting procedure codes 02VX3EZ and 02VW3DZ has a length of stay that is shorter than the average length of stay for all the cases in MS–DRG 217 (2 days versus 6.8 days) and lower costs when compared to all the cases in MS–DRG 217 ($46,235 versus $59,943). The difference in average costs is $13,708 ($59,943 − $46,235 = $13,708) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 217 when compared to all the cases in MS–DRG 217. There were zero cases reporting other complex aortic arch procedures in MS–DRG 217. In MS–DRG 218, there were zero cases reporting procedure codes 02VX3EZ and 02VW3DZ or other complex aortic arch procedures.

The 81 cases in MS–DRG 219 reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (11.4 days versus 10 days) and higher average costs when compared to all the cases in MS–DRG 219 ($97,336 versus $69,728). The difference in average costs is $27,608 ($97,336 − $69,728 = $27,608) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 219 when compared to all the cases in MS–DRG 219. The 10 cases in MS–DRG 219 reporting procedure codes describing other complex arch procedures have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (20.7 days versus 10 days) and higher average costs when compared to all the cases in MS–DRG 219 ($112,213 versus $69,728). The difference in average costs is $42,485 ($112,213 − $69,728 = $42,485) for the cases reporting procedure codes describing other complex arch procedures in MS–DRG 219 when compared to all the cases in MS–DRG 219.

In MS–DRG 220, the 64 cases reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 220 (5.2 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($76,700 versus $49,514). The difference in average costs is $27,186 ($76,700 − $49,514 = $27,186) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 220 when compared to all the cases in MS–DRG 220. The 10 cases reporting procedure codes describing other complex arch procedures have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 220 (6.9 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($87,003 versus $49,514). The difference in average costs is $37,489 ($87,003 − $49,514 = $37,489) for the cases reporting procedure codes describing other complex arch procedures in MS–DRG 220 when compared to all the cases in MS–DRG 220.

In MS–DRG 221, the 32 cases reporting procedure codes 02VX3EZ and 02VW3DZ have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 221 (1.9 days versus 3.6 days) and higher average costs when compared to all the cases in MS–DRG 221 ($56,765 versus $46,900). The difference in average costs is $9,865 ($56,765 − $46,900 = $9,865) for the cases reporting procedure codes 02VX3EZ and 02VW3DZ in MS–DRG 221 when compared to all the cases in MS–DRG 221. There were zero cases reporting other complex aortic arch procedures in MS–DRG 221.

Our analysis of the claims data for cases reporting procedure codes 02VX3EZ and 02VW3DZ and cases reporting procedure codes describing other complex arch procedures demonstrated a relatively low volume of cases in comparison to all the cases in their respective MS–DRGs (that is, in 216, 217, 218, 219, 220, and 221). Analysis of the claims data also demonstrates that the cases had an average length of stay generally longer than all the cases in their respective MS–DRGs. The data analysis indicates that the average costs of the 182 cases reporting procedure codes 02VX3EZ and 02VW3DZ and the 20 cases reporting procedure codes describing other complex arch procedures are generally higher when compared to the average costs of all cases in MS–DRGs 216, 217, 218, 219, 220, and 221. Specifically, most of these cases have average costs that are considerably higher than the average costs of all cases in MS–DRG 216. We reviewed these data and do not believe that proposing to reassign the cases reporting procedure codes 02VX3EZ and 02VW3DZ and the cases reporting procedure codes describing other complex arch procedures to MS–DRG 216, even if there is no cardiac catheterization procedure reported and no secondary diagnosis designated as an MCC reported, would fully address the difference in resource utilization in these cases. Accordingly, we do not believe the data adequately support a potential reassignment of these cases to MS–DRG 216. Therefore we decided to further explore alternative options to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped in conjunction with the separate but related request we received to review and reconsider the MS–DRG assignments for another subset of codes describing aortic arch procedures, as discussed later in this section.

The second request we received was to reassign cases reporting thoracic aortic arch replacement combined with restriction of the descending thoracic aorta from MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively).

The requestor, the manufacturer of the Thoraflex™ Hybrid device (also known as the Terumo Aortic Hybrid device), stated that hospital resource utilization for cases involving the Thoraflex™ Hybrid device is significantly higher compared to all cases in MS–DRGs 216, 217, 218, 219, 220, and 221, creating substantial financial loss for the hospitals that offer this technology. The Thoraflex™ Hybrid device is a dual-purpose medical device that replaces the ascending aorta and aortic arch while also stabilizing and repairing the descending thoracic aorta in a single procedure. It is indicated for the open surgical repair or replacement of damaged or diseased vessels of the aortic arch and descending aorta with or without involvement of the ascending aorta in cases of aneurysm and/or dissection. According to the requestor, when the Thoraflex™ Hybrid device is implanted within the aorta, it creates a channel for the blood to bypass the damaged or diseased part of the vessel and keep flowing as the graft and stented sections of the implant replace the parts of the aorta that are not working properly.

The requestor stated that aortic pathologies such as aneurysms and dissections that involve the aortic arch and descending thoracic aorta continue to present surgical challenges and carry risks such as stroke, cerebral malperfusion, paralysis, and renal malperfusion. These risks must be mitigated by intense and patient specific goal-oriented care. According to the requestor, hospitals treating aortic arch pathologies must be able to deploy rapid neurology, neurosurgery, and nephrology all within hours to ensure a good patient outcome. According to the requestor, all these attributes attest to the difficulty and complexity of thoracic aortic arch replacement combined with restriction of the descending thoracic aorta and care of the patient.

The requestor identified cases reporting thoracic aortic arch replacement combined with restriction of the descending thoracic aorta by the presence of ICD–10–PCS code X2RX0N7 (Replacement of thoracic aorta, arch using branched synthetic substitute with intraluminal device, open approach, new technology group 7) in combination with X2VW0N7 (Restriction of thoracic aorta, descending using branched synthetic substitute with intraluminal device, open approach, new technology group 7) on the same claim and performed its own analysis of the claims data. The requestor stated they found that while the volume of cases reporting thoracic aortic arch replacement combined with restriction of the descending thoracic aorta is <1% of total volume in MS–DRGs 216, 217, 218, 219, 220, and 221, the average costs and average lengths of stay of these cases are significantly greater than all other cases in MS–DRG 216.

In analyzing this request, we note the requestor is correct that the following ICD–10–PCS codes specifically describe procedures involving the Thoraflex™ Hybrid device: X2RX0N7 (Replacement of thoracic aorta arch with branched synthetic substitute with intraluminal device, new technology group 7) in combination with X2VW0N7 (Restriction of thoracic descending aorta with branched synthetic substitute with intraluminal device, new technology group 7). The requestor is also correct that procedure codes X2RX0N7 and X2VW0N7 are assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*, for complete documentation of the GROUPER logic for MS–DRGs 216, 217, 218, 219, 220, and 221. The Thoraflex™ Hybrid device was approved for new technology add-on payments for FY 2023 (87 FR 48974 through 48976), FY 2024 (88 FR 58800), and FY 2025 (89 FR 69124). We refer readers to section II.E.5 of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule for a discussion regarding the proposed FY 2026 status of technologies approved for FY 2025 new technology add-on payments, including the Thoraflex™ Hybrid device.

To explore mechanisms to address this request and to understand the resource use for the subset of cases reporting procedure codes X2RX0N7 and X2VW0N7, we began our analysis by examining claims data from the September 2024 update of the FY 2024 MedPAR file for cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. Our findings are shown in the following table:

MS–DRGs 216–221—Cases Reporting Thoracic Aortic Arch Replacement Combined With Restriction of the Descending Thoracic Aorta

MS–DRG		Number of cases	Average length of stay	Average costs
216	All cases	5,137	13.6	$88,193
	Cases reporting X2RX0N7 and X2VW0N7	20	23	158,920
217	All cases	1,571	6.8	59,943
	Cases reporting X2RX0N7 and X2VW0N7	2	21.5	160,014
218	All cases	251	2.9	61,733
	Cases reporting X2RX0N7 and X2VW0N7	0	0	0
219	All cases	13,222	10	69,728
	Cases reporting X2RX0N7 and X2VW0N7	61	16.9	154,134
220	All cases	9,636	6.2	49,514
	Cases reporting X2RX0N7 and X2VW0N7	14	8.9	84,004
221	All cases	1,146	3.6	46,900
	Cases reporting X2RX0N7 and X2VW0N7	1	3	97,825

As shown in the table, the data analysis performed indicates that the 20 cases in MS–DRG 216 reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 216 (23 days versus 13.6 days) and higher average costs when compared to all the cases in MS–DRG 216 ($158,920 versus $88,193). The difference in average costs is $70,727 ($158,920 − $88,193 = $70,727) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 216 when compared to all the cases in MS–DRG 216. In MS–DRG 217, the 2 cases reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 217 (21.5 days versus 6.8 days) and higher average costs when compared to all the cases in MS–DRG 217 ($160,014 versus $59,943). The difference in average costs is $100,071 ($160,014 − $59,943 = $100,071) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 217 when compared to all the cases in MS–DRG 217. In MS–DRG 218, there were zero cases reporting procedure codes X2RX0N7 and X2VW0N7.

The 61 cases in MS–DRG 219 reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 219 (16.9 days versus 10 days) and higher average costs when compared to all the cases in MS–DRG 219 ($154,134 versus $69,728). The difference in average costs is $84,406 ($154,134 − $69,728 = $84,406) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 219 when compared to all the cases in MS–DRG 219. In MS–DRG 220, the 14 cases reporting procedure codes X2RX0N7 and X2VW0N7 have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 220 (8.9 days versus 6.2 days) and higher average costs when compared to all the cases in MS–DRG 220 ($84,004 versus $49,514). The difference in average costs is $34,490 ($84,004 − $49,514 = $34,490) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 220 when compared to all the cases in MS–DRG 220. In MS–DRG 221, the one case reporting procedure codes X2RX0N7 and X2VW0N7 has a length of stay that is shorter than the average length of stay for all the cases in MS–DRG 221 (3 days versus 3.6 days) and higher average costs when compared to all the cases in MS–DRG 221 ($97,825 versus $46,900). The difference in average costs is $50,925 ($97,825 − $46,900 = $50,925) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 in MS–DRG 221 when compared to all the cases in MS–DRG 221.

We reviewed these data and note the average costs of the 98 cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta are higher when compared to the average costs of all cases in MS–DRGs 216, 217, 218, 219, 220, and 221. The difference in average costs of the 98 cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta is $56,445 ($144,638 − $88,193 = $56,445) for the cases reporting procedure codes X2RX0N7 and X2VW0N7 when compared to all the cases in MS–DRG 216, which is the highest severity level ''with MCC'' MS–DRG. We reviewed these data and do not believe that proposing to reassign all cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta to MS–DRGs 216, 217, and 218, even if there is no cardiac catheterization procedure reported and no secondary diagnosis designated as an MCC reported, would fully address the difference in resource utilization in these cases as the average costs of the cases reporting procedure codes X2RX0N7 and X2VW0N7 are much higher when compared to all the cases in MS–DRG 216. Accordingly, we do not believe the data adequately support a potential reassignment of these cases to MS–DRGs 216, 217, and 218, respectively.

We also do not believe that the small subset cases that report the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta warrants the creation of a new MS–DRG at this time. As stated in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. We generally seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnosis related groups rather than smaller subsets. Moreover, as stated in prior rulemaking (85 FR 58472), we have concerns regarding making proposed MS–DRG changes based on a specific, single technology (the Thoraflex™ Hybrid device) identified by only one unique procedure code combination versus considering proposed changes based on a group of related procedure codes that can be reported to describe the same type or class of technology, which is more consistent with the intent of the MS–DRGs.

To explore other mechanisms to address this request, we then reexamined the separate but related request discussed previously to reassign cases reporting procedure codes describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device and cases reporting other complex aortic arch procedures. In examining these requests, we note that the first requestor suggested that CMS reassign cases reporting procedure codes describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device from MS–DRGs 219, 220, and 221 to MS–DRG 216 and the second requestor suggested that CMS reassign cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta without a procedure code describing the performance of a cardiac catheterization from MS–DRGs 219, 220, and 221 to MS–DRGs 216, 217, and 218 for FY 2026. As discussed in prior rulemaking (86 FR 44830, 87 FR 48847, and 88 FR 58683), MS–DRGs 216, 217, and 218 are defined by the performance of cardiac catheterization. We are concerned about the effect on clinical coherence of assigning cases that do not also have a cardiac catheterization procedure reported to MS–DRGs that are defined by the performance of that procedure.

However, we do note that in our examination of both requests, the data analysis indicates that the average costs of these complex aortic arch procedures, such as the cases reporting procedure codes describing endovascular restriction of the thoracic aorta with a branched or fenestrated intraluminal device, the cases reporting the procedure code combination describing thoracic aortic arch replacement combined with restriction of the descending thoracic aorta, and the cases reporting other complex aortic arch procedures, are higher when compared to the average costs of all cases in MS–DRGs 216, 217, 218, 219, 220, and 221. Analysis of the claims data also suggests that these cases reporting complex aortic arch procedures are associated with increased hospital resource utilization.

We reviewed these data and note, clinically, aortic arch pathologies are serious clinical conditions associated with an increased likelihood of death but also the potential for significant functional limitations. The aortic arch is the segment of the aorta that helps distribute blood to the head and upper extremities via the brachiocephalic trunk, the left common carotid, and the left subclavian artery. The aortic arch also plays a role in blood pressure homeostasis via baroreceptors found within the walls of the aortic arch that help prevent quick, drastic changes in blood pressure. Aortic aneurysms and aortic dissection that involve the aortic arch are associated with extremely high mortality and morbidity and the data analysis clearly shows that cases reporting complex aortic arch procedures have higher average costs and generally longer lengths of stay compared to all the cases in their assigned MS–DRG.

Therefore, based on our review of the clinical issues and the claims data, we are proposing to create a new MS–DRG to better differentiate these complex aortic arch procedures from other cases in their respective MS–DRGs, based on treatment difficulty, clinical similarity, and resource use. To compare and analyze the impact of our suggested modifications, we ran a simulation using the claims data from the September 2024 update of the FY 2024 MedPAR file.

Proposed new MS–DRG	Number of cases	Average length of stay	Average costs
Proposed new MS–DRG XXX Complex Aortic Arch Procedures	300	11.2	$104,826

For the cases reporting complex aortic arch procedures, we identified a total of 300 cases using the claims data from the September 2024 update of the FY 2024 MedPAR file, so the criterion that there are at least 500 or more cases in each subgroup could not be met. Therefore, we are not proposing to subdivide the proposed new MS–DRG for complex aortic arch procedures into severity levels.

In summary, for FY 2026, taking into consideration that it clinically requires greater resources to perform complex aortic arch procedures, we are proposing to create a new base MS–DRG for cases reporting complex aortic arch procedures in MDC 05. The proposed new MS–DRG is proposed new MS–DRG 209 (Complex Aortic Arch Procedures). We refer the reader to Table 6P.5a associated with this FY 2026 IPPS/LTCH PPS proposed rule (which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for the list of procedure codes we are proposing to define in the logic for the proposed new MS–DRG. We note that discussion of the surgical hierarchy for the proposed modification is discussed in section II.C.10. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule.

f. Deep Vein Thrombophlebitis

Consistent with our annual review of the MS–DRGs, we consider changes in resource consumption, treatment patterns, technology, and any other factors that may change the relative use of hospital resources. In our review of the claims data from the September 2024 update of the FY 2024 MedPAR file, we identified a low volume of cases for MS–DRGs 294 and 295 (Deep Vein Thrombophlebitis with CC/MCC and without CC/MCC, respectively). Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
294	146	4.1	$10,808
295	0	0	0

A deep vein thrombophlebitis (DVT) is a blood clot that forms in one of the deep veins of the body, most commonly occurring in the veins of the pelvis, calf, or thigh. The 35 ICD–10–CM diagnosis codes describing deep vein thrombophlebitis currently assigned to MS–DRGs 294 and 295 are shown in the following table.

DIAGNOSIS CODES DESCRIBING DEEP VENOUS THROMBOPHLEBITIS (DVT) IN MS–DRGS 294–295

ICD–10–CM code	Description
I80.10	Phlebitis and thrombophlebitis of unspecified femoral vein.
I80.11	Phlebitis and thrombophlebitis of right femoral vein.
I80.12	Phlebitis and thrombophlebitis of left femoral vein.
I80.13	Phlebitis and thrombophlebitis of femoral vein, bilateral.
I80.201	Phlebitis and thrombophlebitis of unspecified deep vessels of right lower extremity.
I80.202	Phlebitis and thrombophlebitis of unspecified deep vessels of left lower extremity.
I80.203	Phlebitis and thrombophlebitis of unspecified deep vessels of lower extremities, bilateral.
I80.209	Phlebitis and thrombophlebitis of unspecified deep vessels of unspecified lower extremity.
I80.211	Phlebitis and thrombophlebitis of right iliac vein.
I80.212	Phlebitis and thrombophlebitis of left iliac vein.
I80.213	Phlebitis and thrombophlebitis of iliac vein, bilateral.
I80.219	Phlebitis and thrombophlebitis of unspecified iliac vein.
I80.221	Phlebitis and thrombophlebitis of right popliteal vein.
I80.222	Phlebitis and thrombophlebitis of left popliteal vein.
I80.223	Phlebitis and thrombophlebitis of popliteal vein, bilateral.
I80.229	Phlebitis and thrombophlebitis of unspecified popliteal vein.
I80.231	Phlebitis and thrombophlebitis of right tibial vein.
I80.232	Phlebitis and thrombophlebitis of left tibial vein.
I80.233	Phlebitis and thrombophlebitis of tibial vein, bilateral.
I80.239	Phlebitis and thrombophlebitis of unspecified tibial vein.
I80.241	Phlebitis and thrombophlebitis of right peroneal vein.
I80.242	Phlebitis and thrombophlebitis of left peroneal vein.
I80.243	Phlebitis and thrombophlebitis of peroneal vein, bilateral.
I80.249	Phlebitis and thrombophlebitis of unspecified peroneal vein.
I80.251	Phlebitis and thrombophlebitis of right calf muscular vein.
I80.252	Phlebitis and thrombophlebitis of left calf muscular vein.
I80.253	Phlebitis and thrombophlebitis of calf muscular vein, bilateral.
I80.259	Phlebitis and thrombophlebitis of unspecified calf muscular vein.
I80.291	Phlebitis and thrombophlebitis of other deep vessels of right lower extremity.
I80.292	Phlebitis and thrombophlebitis of other deep vessels of left lower extremity.
I80.293	Phlebitis and thrombophlebitis of other deep vessels of lower extremity, bilateral.
I80.299	Phlebitis and thrombophlebitis of other deep vessels of unspecified lower extremity.
I80.3	Phlebitis and thrombophlebitis of lower extremities, unspecified.
I82.220	Acute embolism and thrombosis of inferior vena cava.
I82.221	Chronic embolism and thrombosis of inferior vena cava.

In light of the initial findings of only 146 cases for MS–DRG 294 and zero cases in MS–DRG 295, we further reviewed the MedPAR claims data for cases assigned to MS–DRGs 294 and 295 for the past 5 fiscal years. As reflected in the following tables, the data indicate that the number of cases grouping to MS–DRGs 294 and 295 has declined.

FY and MedPAR data reviewed for MS–DRG 294	Number of cases	Average length of stay	Average costs
FY 2022 (FY 2020 MedPAR)	222	4.3	$8,962
FY 2023 (FY 2021 MedPAR)	227	4.2	9,325
FY 2024 (FY 2022 MedPAR)	177	4.8	9,665
FY 2025 (FY 2023 MedPAR)	178	4.6	10,404
FY 2026 (FY 2024 MedPAR)	146	4.1	10,808

FY and MedPAR data reviewed for MS–DRG 295	Number of cases	Average length of stay	Average costs
FY 2022 (FY 2020 MedPAR)	20	3.4	$7,323
FY 2023 (FY 2021 MedPAR)	11	2.5	4,988
FY 2024 (FY 2022 MedPAR)	0	0	0
FY 2025 (FY 2023 MedPAR)	0	0	0
FY 2026 (FY 2024 MedPAR)	0	0	0

We note that, if, during our annual MS–DRG analysis we identify that there are only a few patients in a respective MS–DRG, consistent with our established process in deciding whether to propose to make further modifications, we consider if there have been potential changes in the clinical characteristics of the patients, treatment patterns, or resource utilization. A principle of the MS–DRGs and the characteristics of a meaningful DRG classification scheme is the ability to detect such changes and accordingly, propose clinically appropriate modifications that are also consistent with resource utilization. We have noted in prior rulemaking that we prefer to have a substantial number of cases in an MS–DRG because having larger clinical cohesive groups within an MS–DRG provides greater stability for annual updates to the relative payment weights. In light of these considerations, and the low volume of cases in MS–DRGs 294 and 295, we believed it was appropriate to further analyze how to potentially reclassify these cases.

Accordingly, using the September 2024 update of the FY 2024 MedPAR file, we examined whether there were other MS–DRGs to which these cases could appropriately be reassigned. As part of this analysis, we also reviewed the base DRG by severity claims data for MS–DRG 294 because the MS–DRG includes cases reporting an MCC as well as cases reporting a CC. As previously noted, there were zero cases identified in MS–DRG 295, which would only consist of NonCC cases. Therefore, we analyzed the claims data to determine the number of cases, the average length of stay, and average costs for the 146 cases in MS–DRG 294 by severity level (1=MCC and 2=CC). Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
294–1	45	5.4	$14,085
294–2	101	3.5	9,348
294 base DRG total	146	4.1	10,808

We note that medical MS–DRGs 299, 300, and 301 (Peripheral Vascular Disorders with MCC, with CC, and without CC/MCC, respectively) also include diagnoses describing other types of phlebitis and thrombophlebitis in the logic for case assignment, consistent with the diagnosis codes in the logic for case assignment to MS–DRGs 294 and 295. As such, we reviewed the claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 299, 300, and 301 to examine the resource utilization associated with cases assigned to these MS–DRGs. Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
299	14,129	5.5	$14,742
300	18,038	3.9	9,757
301	3,807	2.5	6,723

As shown in the data, the 45 cases reporting an MCC in MS–DRG 294 have an average length of stay of 5.4 days with average costs of $14,085, which is comparable to the cases in MS–DRG 299 reporting an MCC that have an average length of stay of 5.5 days with average costs of $14,742. The 101 cases reporting a CC in MS–DRG 294 have an average length of stay of 3.5 days with average costs of $9,348, which is comparable to the cases in MS–DRG 300 reporting an CC that have an average length of stay of 3.9 days with average costs of $9,757.

Based on our analysis and review of the cases grouping to MS–DRGs 294 and 295, we believe it is appropriate to delete these MS–DRGs and reassign the cases currently assigned to MS–DRGs 294 and 295 to MS–DRGs 299, 300, and 301, which are clinically consistent and also align with the resource utilization for these cases. Accordingly, for FY 2026, we are proposing to delete MS–DRGs 294 and 295 and reassign the previously listed 35 diagnosis codes describing deep vein thrombophlebitis to MS–DRGs 299, 300, and 301. We refer the reader to the ICD–10 MS–DRG Version 42.1 Definitions Manual (which is available via the internet on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) for complete documentation of the GROUPER logic for MS–DRGs 299, 300, and 301.

5. MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. Hip or Knee Procedures With Periprosthetic Joint Infection

We received a request to reassign cases reporting a hip or knee procedure with a principal diagnosis of periprosthetic joint infection (PJI) from the lower severity level ''without CC/MCC'' MS–DRG to the higher severity level ''with CC'' MS–DRG when there is no major complication or comorbidity (MCC) or complication or comorbidity (CC) reported. According to the requestor, PJI is a devastating healthcare condition that occurs in one percent to two percent (1% to 2%) of primary joint replacements.[8] PJI is also the primary cause for revision arthroplasty in most developed markets. The requestor stated that patients undergoing revision for PJI experience higher mortality rates ranging from 0.8 to 4 percent at 1 year and 12.9 to 25.9 percent at 5 years following revision surgery.

According to the requestor, management of PJI requires complex treatment strategies including multiple surgical revisions and long-term antimicrobial treatment, leading to substantially higher costs versus aseptic revision arthroplasty. The requestor asserted that when missed or undertreated, PJI leads to persistence of

[8] Corvec S, Portillo ME, Pasticci BM, Borens O, Trampuz A. Epidemiology and new developments in the diagnosis of prosthetic joint infection. Int J Artif Organs 2012;35:923–934.

infection and multiple surgical revisions causing poor function or disability, considerably impairing quality of life.

The requestor stated that current treatment options for PJI include chronic suppressive antibiotics; debridement, antibiotics, and implant retention (DAIR); one-stage revision; two-stage revision; and amputation. According to the requestor, regardless of the treatment option selected for the knee or hip, the presence of PJI as the principal diagnosis appears to significantly increase the length of stay and the resource utilization of these cases in comparison to all other cases assigned to the respective MS–DRGs.

Using the FY 2023 MedPAR file that informed FY 2025 rulemaking, the requestor stated it performed its own analysis of cases reporting PJI as the principal diagnosis. The requestor provided the following list of ICD–10–CM diagnosis codes it used to identify the presence of a PJI in the hip or knee joint.

ICD–10–CM code	Description
T84.51XA	Infection and inflammatory reaction due to internal right hip prosthesis, initial encounter.
T84.51XD	Infection and inflammatory reaction due to internal right hip prosthesis, subsequent encounter.
T84.51XS	Infection and inflammatory reaction due to internal right hip prosthesis, sequela.
T84.52XA	Infection and inflammatory reaction due to internal left hip prosthesis, initial encounter.
T84.52XD	Infection and inflammatory reaction due to internal left hip prosthesis, subsequent encounter.
T84.52XS	Infection and inflammatory reaction due to internal left hip prosthesis, sequela.
T84.53XA	Infection and inflammatory reaction due to internal right knee prosthesis, initial encounter.
T84.53XD	Infection and inflammatory reaction due to internal right knee prosthesis, subsequent encounter.
T84.53XS	Infection and inflammatory reaction due to internal right knee prosthesis, sequela.
T84.54XA	Infection and inflammatory reaction due to internal left knee prosthesis, initial encounter.
T84.54XD	Infection and inflammatory reaction due to internal left knee prosthesis, subsequent encounter.
T84.54XS	Infection and inflammatory reaction due to internal left knee prosthesis, sequela.

The requestor stated that cases involving the DAIR procedure are commonly assigned to MS–DRGs 463, 464, and 465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC, with CC, and without CC/MCC, respectively), MS–DRGs 480, 481, and 482 (Hip and Femur Procedures Except Major Joint with MCC, with CC, and without CC/MCC, respectively) or MS–DRG 485, 486, and 487 (Knee Procedures with Principal Diagnosis of Infection with MCC, with CC, and without CC/MCC, respectively). According to the requestor, in each of the scenarios reviewed, the average cost and average length of stay for cases with a principal diagnosis of PJI that grouped to the ''with CC'' or ''without CC/MCC'' MS–DRG are similar or higher and longer than the other cases assigned to the same MS–DRGs.

The requestor also stated that one-stage hip or knee revision procedures are typically assigned to MS–DRGs 466, 467, and 468 and the findings from their analysis showed the presence of a PJI as the principal diagnosis with a hip or knee revision procedure show a longer length of stay and a similar or higher average cost than for the other aseptic revision arthroplasties.

In addition, the requestor stated that its analysis of cases reporting PJI with the last treatment option, amputation, assigned to MS–DRGs 474, 475, and 476 (Amputation for Musculoskeletal System and Connective Tissue Disorders with MCC, with CC, and without CC/MCC, respectively) also showed a longer average length of stay and higher average costs compared to all other non-PJI cases in MS–DRGs 474, 475, and 476, further supporting the request to reassign cases to the ''with CC'' severity level MS–DRG.

In summary, the requestor specifically recommended the following modifications to the listed MS–DRGs for cases reporting a hip or knee procedure with a principal diagnosis of PJI:

Current MS–DRG assignment	Requested MS–DRG assignment
465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders without CC/MCC).	MS–DRG 464 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with CC).
MS–DRG 468 (Revision of Hip or Knee Replacement without CC/MCC)	MS–DRG 467 (Revision of Hip or Knee Replacement with CC).
MS–DRG 476 (Amputation for Musculoskeletal System and Connective Tissue Disorders without CC/MCC).	MS–DRG 475 (Amputation for Musculoskeletal System and Connective Tissue Disorders with CC).
MS–DRG 482 (Hip and Femur Procedures Except Major Joint without CC/MCC).	MS–DRG 481 (Hip and Femur Procedures Except Major Joint with CC).
MS–DRG 487 (Knee Procedures with Principal Diagnosis of Infection without CC/MCC).	MS–DRG 486 (Knee Procedures with Principal Diagnosis of Infection with CC).

We reviewed claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 463, 464, 465, 466, 467, 468, 474, 475, 476, 480, 481, 482, 485, 486, and 487 and for cases reporting a principal diagnosis of PJI with a hip or knee procedure. We refer the reader to Table 6P. 6a for the list of diagnosis codes we analyzed to identify a PJI and for the list of procedure codes we analyzed from the previously listed MS–DRGs to identify a hip or knee procedure. Findings from our analysis are shown in the following table.

MS–DRG	Description	Number of cases	Average length of stay	Average costs
463	All cases	3,909	14.2	$45,233
	Cases with principal diagnosis of PJI with hip or knee procedure	804	13.9	50,127
464	All cases	5,775	7.3	26,757

MS–DRG	Description	Number of cases	Average length of stay	Average costs
	Cases with principal diagnosis of PJI with hip or knee procedure	1,358	7.7	32,474
465	All cases	1,496	3.0	16,794
	Cases with principal diagnosis of PJI with hip or knee procedure	237	4.3	22,689
466	All cases	4,282	9.0	43,314
	Cases with principal diagnosis of PJI with hip or knee procedure	460	11.2	40,433
467	All cases	17,682	4.1	30,612
	Cases with principal diagnosis of PJI with hip or knee procedure	947	6.5	28,505
468	All cases	12,986	1.8	24,921
	Cases with principal diagnosis of PJI with hip or knee procedure	160	4	23,978
474	All cases	2,417	12.2	35,707
	Cases with principal diagnosis of PJI with hip or knee procedure	112	13.6	47,240
475	All cases	2,634	7.3	19,577
	Cases with principal diagnosis of PJI with hip or knee procedure	166	7	20,739
476	All cases	322	3.5	10,454
	Cases with principal diagnosis of PJI with hip or knee procedure	27	4.1	14,101
480	All cases	26,238	7.3	26,430
	Cases with principal diagnosis of PJI with hip or knee procedure	136	11.7	38,407
481	All cases	62,141	4.9	19,153
	Cases with principal diagnosis of PJI with hip or knee procedure	234	7.4	24,138
482	All cases	13,842	3.5	14,886
	Cases with principal diagnosis of PJI with hip or knee procedure	30	4.6	19,122
485	All cases	1,297	9.5	29,761
	Cases with principal diagnosis of PJI with hip or knee procedure	521	9.6	31,779
486	All cases	2,574	6.0	19,679
	Cases with principal diagnosis of PJI with hip or knee procedure	985	5.8	21,376
487	All cases	632	4.1	14,615
	Cases with principal diagnosis of PJI with hip or knee procedure	194	4	16,616

The findings show that the cases reporting a PJI with a hip or knee procedure in MS–DRGs 466, 467, and 468 have a slightly longer average length of stay and lower average costs compared to the average length of stay and average costs of all the cases in their respective MS–DRGs. Therefore, because the resource utilization of these cases is generally comparable to all the cases in their respective MS–DRGs, we believe the cases reporting a PJI in MS–DRGs 466, 467, and 468 appear to be grouping appropriately in their current MS–DRG assignment.

The findings show that for the cases reporting a PJI with a hip or knee procedure in MS–DRGs 463, 464, 465, 474, 475, 476, 485, 486, and 487, the average length of stay is comparable to the average length of stay of all the cases in their respective MS–DRGs, however, the average length of stay for the cases reporting a PJI with a hip or knee procedure in MS–DRGs 480, 481, and 482 are notably longer compared to the average length of stay of all the cases in their respective MS–DRGs. Findings from our analysis also show that the average costs of the cases reporting a PJI with a hip or knee procedure in MS–DRGs 463, 464, 465, 474, 475, 476, 480, 481, and 482 are higher compared to the average costs of all the cases in their respective MS–DRGs with a difference in average costs of approximately $5,459 for cases reporting a PJI with a hip or knee procedure across MS–DRGs 463, 464, and 465, a difference in average costs of approximately $5,190 for cases reporting a PJI with a hip or knee procedure across MS–DRGs 474, 475, and 476, and a difference in average costs of approximately $7,306 for cases reporting a PJI with a hip or knee procedure across MS–DRGs 480, 481 and 482. However, because MS–DRGs 485, 486, and 487 currently include a principal diagnosis of infection in the logic for case assignment to these MS–DRGs, the difference in average costs for the cases reporting a PJI with a hip or knee procedure compared to the average costs of all the cases in their respective MS–DRG is minimal ($2,018, $1,697, and $2,001, respectively).

Based on our review and analysis of the data, we disagree with the request to reassign PJI cases from the lower severity ''without CC/MCC'' level MS–DRG to the higher severity ''with CC'' level MS–DRG suggested by the requestor as the average costs of the PJI cases in the ''without CC/MCC'' level are not comparable and do not align with the average costs of all the cases at the ''with CC'' level. In addition, our findings show that other than for MS–DRGs 466, 467, and 468, the cases reporting a PJI with a hip or knee procedure at the higher ''with CC'' level and the highest ''with MCC'' level have higher average costs compared to all the cases in their respective MS–DRG. For example, as reflected in the findings of our analysis for MS–DRGs 463, 464, and 465, if we were to reassign the 237 cases reporting a PJI with a hip or knee procedure with an average length of stay of 4.3 days and average costs of $22,689 from MS–DRG 465 to MS–DRG 464 where we found a total of 5,775 cases with an average length of stay of 7.3 days and average costs of $26,757, the 1,358 cases reporting a PJI with a hip or knee procedure with an average length of stay of 7.7 days and average costs of $32,474 in MS–DRG 464 and the 804 cases reporting a PJI with a hip or knee procedure with an average length of stay of 13.9 days and average costs of $50,127 in MS–DRG 463 would continue to not be comparable from a resource perspective as compared to all the cases in their assigned MS–DRGs. We believe the data support proposing a new base MS–DRG for the cases reporting a PJI with a hip or knee procedure in MS–DRGs 463, 464, 465, 474, 475, 476, 480, 481, and 482 to better reflect the complexity of services, resource utilization, and severity of illness of these patients.

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to

create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG failed to meet the criterion that at least 500 or more cases are in the without CC/MCC subgroup. The following table illustrates our findings.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With MCC	1,052	13.6	$48,305
With CC	1,758	7.6	30,256
Without CC/MCC	293	4.3	21,505

As discussed in section II.C.1.b. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups and found that all five criteria were met. The following table illustrates our findings.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
With MCC	1,052	13.6	$48,305
Without MCC	2,051	7.1	29,006

For the proposed new MS–DRGs for cases reporting a PJI with a hip or knee procedure, there is at least (1) 500 cases in the MCC subgroup and 500 cases in the without MCC subgroup; (2) 5 percent of the cases in the MCC group and 5 percent in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

As a result, for FY 2026, we are proposing to create new MS–DRGs 403 and 404 (Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection with MCC and without MCC, respectively). The following table reflects a simulation of the proposed new MS–DRGs.

Proposed new MS–DRGs	Number of cases	Average length of stay	Average costs
Proposed MS–DRG 403	1,052	13.6	$48,305
Proposed MS–DRG 404	2,051	7.1	29,006

b. Arthroscopy

Consistent with our annual review of the MS–DRGs, we consider changes in resource consumption, treatment patterns, technology, and any other factors that may change the relative use of hospital resources. In our review of the claims data from the September 2024 update of the FY 2024 MedPAR file, we identified an extremely low volume of cases for MS–DRG 509 (Arthroscopy). Specifically, we found 16 cases with an average length of stay of 5.2 days and average costs of $18,239.

An arthroscopy is a surgical procedure that allows orthopaedic surgeons to see the inside of a joint through a small incision and with specialized instruments (for example, arthroscope). The ICD–10–PCS codes describing arthroscopy and currently assigned to MS–DRG 509 are shown in the following table.

PROCEDURE CODES DESCRIBING ARTHROSCOPY IN MS–DRG 509

ICD–10–PCS code	Description
0RJ04ZZ	Inspection of occipital-cervical joint, percutaneous endoscopic approach.
0RJ14ZZ	Inspection of cervical vertebral joint, percutaneous endoscopic approach.
0RJ34ZZ	Inspection of cervical vertebral disc, percutaneous endoscopic approach.
0RJ44ZZ	Inspection of cervicothoracic vertebral joint, percutaneous endoscopic approach.
0RJ54ZZ	Inspection of cervicothoracic vertebral disc, percutaneous endoscopic approach.
0RJ64ZZ	Inspection of thoracic vertebral joint, percutaneous endoscopic approach.
0RJ94ZZ	Inspection of thoracic vertebral disc, percutaneous endoscopic approach.
0RJA4ZZ	Inspection of thoracolumbar vertebral joint, percutaneous endoscopic approach.
0RJB4ZZ	Inspection of thoracolumbar vertebral disc, percutaneous endoscopic approach.
0RJE4ZZ	Inspection of right sternoclavicular joint, percutaneous endoscopic approach.
0RJF4ZZ	Inspection of left sternoclavicular joint, percutaneous endoscopic approach.
0RJG4ZZ	Inspection of right acromioclavicular joint, percutaneous endoscopic approach.
0RJH4ZZ	Inspection of left acromioclavicular joint, percutaneous endoscopic approach.

PROCEDURE CODES DESCRIBING ARTHROSCOPY IN MS–DRG 509—Continued

ICD–10–PCS code	Description
0RJJ4ZZ	Inspection of right shoulder joint, percutaneous endoscopic approach.
0RJK4ZZ	Inspection of left shoulder joint, percutaneous endoscopic approach.
0RJL4ZZ	Inspection of right elbow joint, percutaneous endoscopic approach.
0RJM4ZZ	Inspection of left elbow joint, percutaneous endoscopic approach.
0RJN4ZZ	Inspection of right wrist joint, percutaneous endoscopic approach.
0RJP4ZZ	Inspection of left wrist joint, percutaneous endoscopic approach.
0RJQ4ZZ	Inspection of right carpal joint, percutaneous endoscopic approach.
0RJR4ZZ	Inspection of left carpal joint, percutaneous endoscopic approach.
0RJS4ZZ	Inspection of right carpometacarpal joint, percutaneous endoscopic approach.
0RJT4ZZ	Inspection of left carpometacarpal joint, percutaneous endoscopic approach.
0RJU4ZZ	Inspection of right metacarpophalangeal joint, percutaneous endoscopic approach.
0RJV4ZZ	Inspection of left metacarpophalangeal joint, percutaneous endoscopic approach.
0RJW4ZZ	Inspection of right finger phalangeal joint, percutaneous endoscopic approach.
0RJX4ZZ	Inspection of left finger phalangeal joint, percutaneous endoscopic approach.
0SJ04ZZ	Inspection of lumbar vertebral joint, percutaneous endoscopic approach.
0SJ34ZZ	Inspection of lumbosacral joint, percutaneous endoscopic approach.
0SJ54ZZ	Inspection of sacrococcygeal joint, percutaneous endoscopic approach.
0SJ64ZZ	Inspection of coccygeal joint, percutaneous endoscopic approach.
0SJ74ZZ	Inspection of right sacroiliac joint, percutaneous endoscopic approach.
0SJ84ZZ	Inspection of left sacroiliac joint, percutaneous endoscopic approach.
0SJ94ZZ	Inspection of right hip joint, percutaneous endoscopic approach.
0SJB4ZZ	Inspection of left hip joint, percutaneous endoscopic approach.
0SJC4ZZ	Inspection of right knee joint, percutaneous endoscopic approach.
0SJD4ZZ	Inspection of left knee joint, percutaneous endoscopic approach.
0SJF4ZZ	Inspection of right ankle joint, percutaneous endoscopic approach.
0SJG4ZZ	Inspection of left ankle joint, percutaneous endoscopic approach.
0SJH4ZZ	Inspection of right tarsal joint, percutaneous endoscopic approach.
0SJJ4ZZ	Inspection of left tarsal joint, percutaneous endoscopic approach.
0SJK4ZZ	Inspection of right tarsometatarsal joint, percutaneous endoscopic approach.
0SJL4ZZ	Inspection of left tarsometatarsal joint, percutaneous endoscopic approach.
0SJM4ZZ	Inspection of right metatarsal-phalangeal joint, percutaneous endoscopic approach.
0SJN4ZZ	Inspection of left metatarsal-phalangeal joint, percutaneous endoscopic approach.
0SJP4ZZ	Inspection of right toe phalangeal joint, percutaneous endoscopic approach.
0SJQ4ZZ	Inspection of left toe phalangeal joint, percutaneous endoscopic approach.

In light of our initial findings of 16 cases for MS–DRG 509, we further reviewed the MedPAR claims data for cases assigned to MS–DRG 509 for the past 5 fiscal years. As reflected in the following table, the data indicate that the number of cases grouping to MS–DRG 509 has steadily declined.

FY and MedPAR data reviewed	Number of cases	Average lenth of stay	Average costs
FY 2022 (FY 2020 MedPAR)	25	3.9	$10,372
FY 2023 (FY 2021 MedPAR)	31	4.2	10,882
FY 2024 (FY 2022 MedPAR)	34	4.3	11,380
FY 2025 (FY 2023 MedPAR)	21	5.4	13,683
FY 2026 (FY 2024 MedPAR)	16	5.2	18,239

We note that, if, during our annual MS–DRG analysis we identify that there are only a few patients in a respective MS–DRG, consistent with our established process, we consider if there have been potential changes in the clinical characteristics of the patients, treatment patterns, or resource utilization. A principle of the MS–DRGs and the characteristics of a meaningful DRG classification scheme is the ability to detect such changes and accordingly, propose clinically appropriate modifications that are also consistent with resource utilization.

We believe that the volume of cases reporting the arthroscopy procedures in the inpatient setting has shifted to the outpatient setting over the years; it is usually performed as an outpatient procedure. Of the 16 cases found to report an arthroscopy procedure in the FY 2024 MedPAR data, 13 cases also reported another procedure. For example, one case that reported procedure code 0RJK4ZZ (Inspection of left shoulder joint, percutaneous endoscopic approach) also reported procedure code 0RBK4ZZ (Excision of left shoulder joint, percutaneous endoscopic approach). Procedure code 0RBK4ZZ is assigned to MS–DRGs 510, 511, and 512 (Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures with MCC, with CC, and without CC/MCC, respectively). However, because of the surgical hierarchy, the resulting assignment is MS–DRG 509.

Using the September 2024 update of the FY 2024 MedPAR file, we also reviewed the base DRG by severity claims data for MS–DRG 509 to determine the number of cases, average length of stay and average costs for the 16 cases by severity level (1=MCC, 2=CC and 3=NonCC). Our findings are shown in the following table.

MS–DRG	Number of cases	Average length of stay	Average costs
509–1	4	5.5	$15,196
509–2	7	6.1	27,880
509–3	5	3.6	7,177
509 base DRG total	16	5.2	18,239

Next, we reviewed the claims data from the September 2024 update of the FY 2024 MedPAR file for MS–DRGs 510, 511, and 512 (Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures with MCC, with CC, and without CC/MCC, respectively); MS–DRGs 513 and 514 (Hand or Wrist Procedures, Except Major Thumb or Joint Procedures with CC/MCC and without CC/MCC, respectively); and MS–DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) because these MS–DRGs are considered to be clinically appropriate and consistent with the arthroscopy procedure code descriptions in MS–DRG 509 previously listed that specify the anatomic site. Our findings are shown in the following tables.

MS–DRG	Number of cases	Average length of stay	Average costs
510	916	6.4	$25,000
511	2,538	4.3	18,701
512	1,303	2.6	14,582
513	1,335	5.0	14,219
514	317	2.6	9,556
515	4,095	8.4	28,466
516	10,522	5.0	18,832
517	5,951	2.9	14,067

Based on our analysis and review of the cases grouping to MS–DRG 509, we believe it is appropriate to delete MS–DRG 509 and reassign the 47 procedure codes describing arthroscopy of various anatomic sites to clinically appropriate MS–DRGs that also align with the resource utilization for these cases. For example, of the 16 cases found to group to MS–DRG 509, in addition to identifying 13 cases reporting additional procedures as previously discussed, we also identified 11 cases reporting diagnosis codes designated as a CC or MCC where the average length of stay and average costs of those cases are comparable with the average length of stay and average costs of the cases in the MS–DRGs considered clinically appropriate for their reassignment. Therefore, for FY 2026, of the 47 procedure codes previously listed describing arthroscopy of various anatomic sites, we are proposing to:

1. Reassign the 8 procedure codes describing arthroscopy of the shoulder or elbow joint to MS–DRGs 510, 511, and 512 (Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures with MCC, with CC, and without CC/MCC, respectively).

2. Reassign the 10 procedure codes describing arthroscopy of the hand or wrist joint to MS–DRGs 513 and 514 (Hand or Wrist Procedures, Except Major Thumb or Joint Procedures with CC/MCC and without CC/MCC, respectively).

3. Reassign the 29 procedure codes describing arthroscopy of various vertebral joints and other musculoskeletal joints to MS–DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

We refer the reader to Table 6P.7a for the detailed list of procedure codes with the proposed MS–DRG reassignments.

c. MS–DRG Logic for MS–DRGs 456, 457, and 458

We identified an inconsistency in the GROUPER logic for MS–DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) related to the ICD–10–CM diagnosis codes describing a principal diagnosis of infection. The logic for case assignment to MS–DRGs 456, 457, and 458 as displayed in the ICD–10 MS–DRG Definitions Manual Version 42.1 (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) is comprised of four logic lists. The first logic list is entitled ''Spinal Fusion Except Cervical'' and is defined by a list of procedure codes designated as O.R. procedures that describe spinal fusion procedures of the thoracic, thoracolumbar, lumbar, lumbosacral, sacrococcygeal, and sacroiliac joint. (We note that 12 procedure codes describing Fusion of coccygeal joint were deleted effective with discharges beginning April 1, 2025, in version 42.1). The second logic list is entitled ''Spinal Curvature/Malignancy/Infection'' and is defined by a list of diagnosis codes describing spinal curvature, spinal malignancy, and spinal infection that are used to define the logic for case assignment when any one of the listed diagnosis codes is reported as the principal diagnosis. The third logic list is entitled ''OR Secondary Diagnosis'' and is defined by a list of diagnosis codes describing curvature of the spine that are used to define the logic for case assignment when any one of the listed codes is reported as a secondary diagnosis. The fourth logic list is entitled ''Extensive Fusions'' and is defined by a list of procedure codes designated as O.R. procedures that describe extensive spinal fusion procedures. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 42.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for

complete documentation of the GROUPER logic for MS–DRGs 456, 457, and 458.

In the second logic list entitled ''Spinal Curvature/Malignancy/Infection'' there are a subset of diagnosis codes describing spinal infections. In our review and analysis of MS–DRGs 456, 457, and 458, we identified additional diagnosis codes within the ICD–10–CM classification describing spinal infections that are not currently listed in the logic for case assignment to MS–DRGs 456, 457, and 458. Specifically, we identified the following 47 diagnoses that we believe are clinically appropriate to add to the existing diagnosis codes describing spinal infections in MS–DRGs 456, 457, and 458.

ICD–10–CM code	Description
A02.24	Salmonella osteomyelitis.
A54.40	Gonococcal infection of musculoskeletal system, unspecified.
A54.41	Gonococcal spondylopathy.
A54.43	Gonococcal osteomyelitis.
A54.49	Gonococcal infection of other musculoskeletal tissue.
M46.21	Osteomyelitis of vertebra, occipito-atlanto-axial region.
M46.22	Osteomyelitis of vertebra, cervical region.
M46.23	Osteomyelitis of vertebra, cervicothoracic region.
M46.30	Infection of intervertebral disc (pyogenic), site unspecified.
M46.31	Infection of intervertebral disc (pyogenic), occipito-atlanto-axial region.
M46.32	Infection of intervertebral disc (pyogenic), cervical region.
M46.33	Infection of intervertebral disc (pyogenic), cervicothoracic region.
M46.34	Infection of intervertebral disc (pyogenic), thoracic region.
M46.35	Infection of intervertebral disc (pyogenic), thoracolumbar region.
M46.36	Infection of intervertebral disc (pyogenic), lumbar region.
M46.37	Infection of intervertebral disc (pyogenic), lumbosacral region.
M46.38	Infection of intervertebral disc (pyogenic), sacral and sacrococcygeal region.
M46.39	Infection of intervertebral disc (pyogenic), multiple sites in spine.
M46.50	Other infective spondylopathies, site unspecified.
M46.51	Other infective spondylopathies, occipito-atlanto-axial region.
M46.52	Other infective spondylopathies, cervical region.
M46.53	Other infective spondylopathies, cervicothoracic region.
M46.54	Other infective spondylopathies, thoracic region.
M46.55	Other infective spondylopathies, thoracolumbar region.
M46.56	Other infective spondylopathies, lumbar region.
M46.57	Other infective spondylopathies, lumbosacral region.
M46.58	Other infective spondylopathies, sacral and sacrococcygeal region.
M46.59	Other infective spondylopathies, multiple sites in spine.
M86.00	Acute hematogenous osteomyelitis, unspecified site.
M86.09	Acute hematogenous osteomyelitis, multiple sites.
M86.10	Other acute osteomyelitis, unspecified site.
M86.19	Other acute osteomyelitis, multiple sites.
M86.20	Subacute osteomyelitis, unspecified site.
M86.29	Subacute osteomyelitis, multiple sites.
M86.30	Chronic multifocal osteomyelitis, unspecified site.
M86.39	Chronic multifocal osteomyelitis, multiple sites.
M86.40	Chronic osteomyelitis with draining sinus, unspecified site.
M86.49	Chronic osteomyelitis with draining sinus, multiple sites.
M86.50	Other chronic hematogenous osteomyelitis, unspecified site.
M86.59	Other chronic hematogenous osteomyelitis, multiple sites.
M86.60	Other chronic osteomyelitis, unspecified site.
M86.69	Other chronic osteomyelitis, multiple sites.
M86.8X0	Other osteomyelitis, multiple sites.
M86.8X9	Other osteomyelitis, unspecified sites.
M86.9	Osteomyelitis, unspecified.
T84.63XA	Infection and inflammatory reaction due to internal fixation device of spine, initial encounter.
T84.69XA	Infection and inflammatory reaction due to internal fixation device of other site, initial encounter.

Therefore, for clinical consistency and because these codes describe spinal infections that could reasonably require a spinal fusion procedure, we are proposing to add the previously listed diagnosis codes to the logic list entitled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458, effective October 1, 2025, for FY 2026.

We also identified eight diagnosis codes currently listed in the second logic list entitled ''Spinal Curvature/Malignancy/Infection'' for case assignment to MS–DRGs 456, 457, and 458 that we believe are not clinically appropriate to maintain in the list. Specifically, we identified the following diagnoses.

ICD–10–CM code	Description
M4850XA	Collapsed vertebra, not elsewhere classified, site unspecified, initial encounter for fracture.
M4854XA	Collapsed vertebra, not elsewhere classified, thoracic region, initial encounter for fracture.
M4855XA	Collapsed vertebra, not elsewhere classified, thoracolumbar region, initial encounter for fracture.
M4856XA	Collapsed vertebra, not elsewhere classified, lumbar region, initial encounter for fracture.

ICD–10–CM code	Description
M4857XA	Collapsed vertebra, not elsewhere classified, lumbosacral region, initial encounter for fracture.
M4858XA	Collapsed vertebra, not elsewhere classified, sacral and sacrococcygeal region, initial encounter for fracture.
M8008XA	Age-related osteoporosis with current pathological fracture, vertebra(e), initial encounter for fracture.
M8088XA	Other osteoporosis with current pathological fracture, vertebra(e), initial encounter for fracture.

The previously listed diagnosis codes do not describe a spinal curvature, malignancy or infection, rather they describe compression fractures of various anatomic sites (for example, collapsed vertebra) and osteoporosis is a condition where the bones become weakened leading to an increased risk of bone fracture. Therefore, for clinical consistency and to ensure accuracy in the logic for case assignment, we are proposing to remove the eight previously listed diagnosis codes from the logic list entitled ''Spinal Curvature/Malignancy/Infection'' in MS–DRGs 456, 457, and 458, effective October 1, 2025, for FY 2026.

6. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

Based on the results of our review of the claims data from the September 2024 update of the FY 2024 MedPAR file of cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we are proposing to move the cases reporting the procedures and/or principal diagnosis codes described in this section of this proposed rule from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

1. Control of Bleeding in the Genitourinary Tract

During the review of the cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure codes describing the control of bleeding in the genitourinary tract are reported in conjunction with ICD–10–CM diagnosis codes in MDC 16 (Diseases and Disorders of Blood, Blood Forming Organs, and Immunologic Disorders), the cases group to MS–DRGs 981 through 983. The five ICD–10–CM procedure codes reviewed, as well as their current MDC assignments, are found in the table:

ICD–10–PCS code	Description	MDC
0W3R0ZZ	Control bleeding in genitourinary tract, open approach	05; 11; 12; 13; 17; 21; 24
0W3R3ZZ	Control bleeding in genitourinary tract, percutaneous approach	05; 11; 12; 13; 17; 21; 24
0W3R4ZZ	Control bleeding in genitourinary tract, percutaneous endoscopic approach	05; 11; 12; 13; 17; 21; 24
0W3R7ZZ	Control bleeding in genitourinary tract, via natural or artificial opening	05; 11; 12; 13; 17; 21; 24
0W3R8ZZ	Control bleeding in genitourinary tract, via natural or artificial opening endoscopic	05; 11; 12; 13; 17; 21; 24

We refer the reader to Appendix E of the ICD–10 MS–DRG Version 42.1 Definitions Manual, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html*, for the MS–DRG assignment for each procedure code listed and further discussion of how each procedure code may be assigned to multiple MDCs and MS–DRGs under the IPPS.

The principal diagnosis most frequently reported with the five ICD–10–PCS procedure codes describing the control of bleeding in the genitourinary tract in MDC 16 is ICD–10–CM code D68.32 (Hemorrhagic disorder due to extrinsic circulating anticoagulants). Hemorrhagic disorder due to extrinsic circulating anticoagulants is a condition that occurs when bleeding is caused by anticoagulants or antithrombotics, which are medicines commonly used to treat or prevent blood clots by decreasing the amount of clotting proteins in the blood.

We examined claims data from the September 2024 update of the FY 2024 MedPAR file to identify the average length of stay and average costs for cases reporting a procedure code describing the control of bleeding in the genitourinary tract with a principal diagnosis in MDC 16, which are currently grouping to MS–DRGs 981 through 983, as well as all cases in MS–DRGs 981 through 983. Our findings are shown in the following table.

MS–DRGs 981–983—All Cases and Cases Reporting a Procedure Code Describing the Control of Bleeding in the Genitourinary Tract and a Principal Diagnosis in MDC 16

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 981—All cases	19,155	11.7	$40,259
MS–DRG 981—Cases reporting procedure code describing the control of bleeding in the genitourinary tract and a principal diagnosis in MDC 16	23	9	27,900
MS–DRG 982—All cases	9,392	5.7	21,951
MS–DRG 982—Cases reporting procedure code describing the control of bleeding in the genitourinary tract and a principal diagnosis in MDC 16	64	4.3	13,462
MS–DRG 983—All cases	1,831	2.6	15,837
MS–DRG 983—Cases reporting procedure code describing the control of bleeding in the genitourinary tract and a principal diagnosis in MDC 16	5	2.8	9,416

We then examined the MS–DRGs within MDC 16 and determined that the cases reporting procedure codes describing the control of bleeding in the genitourinary tract with a principal diagnosis in MDC 16 would most suitably group to MS–DRGs 802, 803, and 804 (Other O.R. Procedures of the Blood and Blood Forming Organs with MCC, with CC, and without CC/MCC, respectively), which contains a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 802, 803, and 804 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 802, 803, and 804. Our findings are shown in this table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 802—All cases	417	11.6	$37,595
MS–DRG 803—All cases	452	5.3	16,762
MS–DRG 804—All cases	209	2.2	12,605

We reviewed the data and noted for this subset of cases, the average costs are lower and the average length of stays are generally shorter than for cases in MS–DRGs 802, 803, and 804. However, we believe that when an ICD–10–PCS procedure code describing the control of bleeding in the genitourinary tract is reported with a principal diagnosis in MDC 16 (typically hemorrhagic disorder due to extrinsic circulating anticoagulants), the procedure is related to the principal diagnosis. Because a procedure code describing the control of bleeding in the genitourinary tract would be expected to be related to a principal diagnosis describing a hemorrhagic disorder due to extrinsic circulating anticoagulants, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we are proposing to add the five procedure codes listed previously to MDC 16. Under this proposal, cases reporting a procedure code describing the control of bleeding in the genitourinary tract with a principal diagnosis of a hemorrhagic disorder due to extrinsic circulating anticoagulants (diagnosis code D68.32) in MDC 16 would group to MS–DRGs 802, 803, and 804.

2. Removal of Infusion Device From Peritoneal Cavity

During the review of the cases that group to MS–DRGs 981 through 983, we noted that when ICD–10–PCS procedure codes describing the removal of an infusion device from the peritoneal cavity are reported in conjunction with ICD–10–CM diagnosis codes in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs), the cases group to MS–DRGs 981 through 983. The three ICD–10–PCS procedure codes reviewed, as well as their current MDC assignments, are found in the table:

ICD–10–PCS code	Description	MDC
0WPG03Z	Removal of infusion device from peritoneal cavity, open approach	06; 21
0WPG33Z	Removal of infusion device from peritoneal cavity, percutaneous approach	06; 21
0WPG43Z	Removal of infusion device from peritoneal cavity, percutaneous endoscopic approach	06; 21

We refer the reader to Appendix E of the ICD–10 MS–DRG Version 42.1 Definitions Manual (which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html*) for the MS–DRG assignment for each procedure code listed and further discussion of how each procedure code may be assigned to multiple MDCs and MS–DRGs under the IPPS.

The principal diagnosis most frequently reported with the three ICD–10–PCS procedure codes describing the removal of an infusion device from the peritoneal cavity in MDC 21 is ICD–10–CM code T85.71XA (Infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter).

We examined claims data from the September 2024 update of the FY 2024 MedPAR file to identify the average length of stay and average costs for cases reporting a procedure code describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis in MDC 21, which are currently grouping to MS–DRGs 981 through 983, as well as all cases in MS–

DRGs 981 through 983. Our findings are shown in the following table.

MS–DRGs 981–983—All Cases and Cases Reporting a Procedure Code Describing the Removal of an Infusion Device From the Peritoneal Cavity and a Principal Diagnosis in MDC 21

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 981—All cases	19,155	11.7	$40,259
MS–DRG 981—Cases reporting procedure code describing the removal of an infusion device from the peritoneal cavity and a principal diagnosis in MDC 21	85	8.8	25,556
MS–DRG 982—All cases	9,392	5.7	21,951
MS–DRG 982—Cases reporting procedure code describing the removal of an infusion device from the peritoneal cavity and a principal diagnosis in MDC 21	1	4	11,845
MS–DRG 983—All cases	1,831	2.6	15,837
MS–DRG 983—Cases reporting procedure code describing the removal of an infusion device from the peritoneal cavity and a principal diagnosis in MDC 21	0	0	0

We then examined the MS–DRGs within MDC 21 and determined that the cases reporting procedure codes describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis in MDC 21 would most suitably group to MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively), which contains other operating room procedures performed for injuries as further detailed below.

To determine how the resources for this subset of cases compared to cases in MS–DRGs 907, 908, and 909 as a whole, we examined the average costs and length of stay for cases in MS–DRGs 907, 908, and 909. Our findings are shown in this table.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 907—All cases	7,754	9.4	$34,049
MS–DRG 908—All cases	6,625	4.8	17,938
MS–DRG 909—All cases	1,721	2.7	12,154

We reviewed the data and noted for the subset of cases reporting procedure codes describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis in MDC 21, the average costs are lower and the average length of stays are shorter than for cases in MS–DRGs 907, 908, and 909. However, we believe that when an ICD–10–PCS procedure code describing the removal of an infusion device from the peritoneal cavity is reported with a principal diagnosis in MDC 21 (typically infection and inflammatory reaction due to peritoneal dialysis catheter), the procedure is related to the principal diagnosis. Because a procedure code describing the removal of an infusion device from the peritoneal cavity would be expected to be related to a principal diagnosis describing an infected catheter used for peritoneal dialysis causing inflammation in the surrounding tissue, it is clinically appropriate for the procedures to group to the same MS–DRGs as the principal diagnoses. Therefore, we are proposing to add the three procedure codes listed previously to MDC 21. Under this proposal, cases reporting a procedure code describing the removal of an infusion device from the peritoneal cavity with a principal diagnosis of an infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter (diagnosis code T85.71XA) in MDC 21 would group to MS–DRGs 907, 908, and 909.

In addition to the internal review of procedures producing assignment to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned. We did not receive any requests suggesting reassignment.

We also review the list of ICD–10–PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS–DRGs to the other group of MS–DRGs based on average costs and the average length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS–DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS–DRGs clinically similar or to propose MS–DRG assignments for the cases in a similar manner. Generally, we propose to move only those procedures for which we have an adequate number of discharges to analyze the data.

Additionally, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS–DRG groups to the other. We did not receive any requests suggesting reassignment. Further, based on the results of our review of the claims data from the September 2024 update of the FY 2024 MedPAR file we did not identify any cases for reassignment. Therefore, for FY 2026 we are not proposing to move any cases reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

7. Operating Room (O.R.) and Non-O.R. Procedures

a. Background

Under the IPPS MS–DRGs (and former CMS MS–DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed.

Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.). Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS- DRG assignment (''O.R. procedures'') or is not designated as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non O.R. affecting the MS–DRG.'' For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS–DRG, we recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.C.13 of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, we are making Table 6B.—New Procedure Codes—FY 2026 available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html.* We also refer readers to the ICD–10 MS–DRG Version 42.1 Definitions Manual at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS- DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multiyear project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10.

We discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19230) that, as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. designation. We intend to consider the resources used and how a procedure should affect the MS–DRG assignment. We may also consider the effect of certain surgical approaches to evaluate whether to subdivide a subset of MS–DRGs based on a specific surgical approach. We stated we plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS–DRG assignment of the procedures and the current surgical hierarchy because both of these factor into the process of refining the ICD–10 MS–DRGs to better recognize complexity of service and resource utilization.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58540 through 58541), we provided a summary of the comments we had received in response to our request for feedback on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system for future consideration. We also stated that in consideration of the PHE, we believed it may be appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review.

For this FY 2026 IPPS/LTCH PPS proposed rule, we continue to believe additional time is necessary as we continue to develop our process and methodology. As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58749), we have signaled in prior rulemaking that the designation of an O.R. procedure encompasses more than the physical location of the hospital room in which the procedure may be performed; in other words, the performance of a procedure in an operating room is not the sole determining factor we will consider as we examine the designation of a procedure in the ICD–10–PCS classification system. We are exploring alternatives on how we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is available in the ICD–10 claims data. We are considering the feedback received on what factors and/or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system as we continue to develop our process and

methodology and will provide more detail on this analysis and the methodology for conducting this comprehensive review in future rulemaking. We encourage the public to continue to submit feedback and comments on any other factors in consideration of our refinement efforts to recognize and differentiate consumption of resources under the ICD–10 MS–DRGs.

For this FY 2026 IPPS/LTCH PPS proposed rule, we received requests regarding changing the designation of specific ICD–10–PCS procedure codes from non-O.R. to O.R. procedures. In this section of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, we detail and respond to those requests. In this section of the preamble of this proposed rule, we also discuss the proposal we are making based on our internal review and analysis and the process that was utilized for evaluating each procedure code. For each procedure, we considered—

- Whether the procedure would typically require the resources of an operating room;
- Whether it is an extensive or a non-extensive procedure; and
- To which MS–DRGs the procedure should be assigned.

We note that many MS–DRGs require the presence of any O.R. procedure. As a result, cases with a principal diagnosis associated with a particular MS–DRG would, by default, be grouped to that MS–DRG. Therefore, we do not list these MS–DRGs in our discussion in this section of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule. Instead, we only discuss MS–DRGs that require explicitly adding the relevant procedure codes to the GROUPER logic in order for those procedure codes to affect the MS–DRG assignment as intended.

For procedures that would not typically require the resources of an operating room, we determined if the procedure should affect the MS–DRG assignment. In cases where we are proposing to change the designation of procedure codes from non-O.R. procedures to O.R. procedures, we also are proposing one or more MS–DRGs with which these procedures are clinically aligned and to which the procedure code would be assigned.

In addition, cases that contain O.R. procedures will map to MS–DRGs 981, 982, or 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987, 988, or 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when they do not contain a principal diagnosis that corresponds to one of the MDCs to which that procedure is assigned. These procedures need not be assigned to MS–DRGs 981 through 989 in order for this to occur. Therefore, we did not specifically address that aspect in summarizing the request and our response to that request or the proposal we are making based on our internal review and analysis in this section of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule.

b. Non-O.R. Procedures to O.R. Procedures

(1) Open Drainage of the Mandible

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895 through 44896), we discussed a request we received to change the designation of procedure codes 0N9R0ZZ (Drainage of maxilla, open approach), 0N9T0ZZ (Drainage of right mandible, open approach), and 0N9V0ZZ (Drainage of left mandible, open approach), from non-O.R. to O.R. procedures. In the FY 2022 final rule, we stated that we disagreed that the procedures describing the open drainage of the maxilla or mandible typically require the resources of an operating room. We stated that if admission is required for the treatment of a jaw infection, the admission is quite likely due to the need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting. After consideration of the public comments we received, we finalized our proposal to maintain the non-O.R. designation of ICD–10–PCS procedure codes 0N9R0ZZ, 0N9T0ZZ, and 0N9V0ZZ, without modification, for FY 2022.

For this FY 2026 IPPS/LTCH PPS proposed rule, we again received a request to change the designation of ICD–10–PCS codes 0N9T0ZZ (Drainage of right mandible, open approach), and 0N9V0ZZ (Drainage of left mandible, open approach), from non-O.R. to O.R. The requestor identified procedure code 0W950ZZ (Drainage of lower jaw, open approach) that is currently designated as an O.R. procedure and stated that the body part value of mandible is more specific than body part value of lower jaw. The requestor also stated that in the ICD–10–PCS classification, other procedure codes that describe drainage procedures performed on body parts deeper than subcutaneous tissue, such as muscles, tendons, and bone, are designated as O.R. procedures. Therefore, the requestor stated that procedure codes 0N9T0ZZ and 0N9V0ZZ should also be recognized as O.R. procedures for purposes of MS–DRG assignment. The requestor did not provide a specific list of the procedure codes that describe drainage procedures performed on body parts deeper than subcutaneous tissue, such as muscles, tendons, and bone, that are currently designated as O.R. procedures for CMS to review.

In the ICD–10 MS–DRGs Definitions Manual Version 42.1, procedure codes 0N9T0ZZ and 0N9V0ZZ are currently designated as non-O.R. procedures for purposes of MS–DRG assignment. We reviewed this issue and continue to disagree that the procedures describing the open drainage of the mandible are typically performed in the operating room under general anesthesia. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44896), these procedures can be done in an oral surgeon's office, or an outpatient setting and are rarely performed in the inpatient setting. Therefore, we are proposing to maintain the current non-O.R. designation of ICD–10–PCS procedure codes 0N9T0ZZ and 0N9V0ZZ.

In our review of this issue, we agree with the requestor that in the ICD–10 MS–DRGs Definitions Manual Version 42.1, procedure code 0W950ZZ (Drainage of lower jaw, open approach) is currently designated as an O.R. procedure for purposes of MS–DRG assignment. While we have stated in prior rulemaking that a correlation cannot be made between procedures performed in general anatomic regions and procedures performed in specific body parts because these procedures coded with the general anatomic regions body part represent a broader range of procedures that cannot be coded to a specific body part, we continue to believe if admission is required for the treatment of a jaw infection, the admission is quite likely due to the need for IV antibiotics as opposed to the need for operating room resources in an inpatient setting. Like procedures that describe the open drainage of mandible, procedures to drain the lower jaw can also be done in an oral surgeon's office or an outpatient setting and are rarely performed in the inpatient setting. We agree that procedures that describe the open drainage of mandible consume resources comparable to the related ICD–10–PCS procedure code that describes the open drainage of the jaw. These procedures do not typically require the resources of an operating room and are not surgical in nature. Therefore, for clinical consistency, we are proposing to remove procedure code 0W950ZZ (Drainage of lower jaw, open approach) from the FY 2026 ICD–10 MS–DRGs Version 43 Definitions Manual in Appendix E—Operating

Room Procedures and Procedure Code/MS–DRG Index as an O.R. procedure. Under this proposal, this procedure would no longer impact MS–DRG assignment.

(2) Introduction of Paclitaxel-Coated Balloon Catheter Technology

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69094 through 69096), we summarized and responded to comments we received regarding the O.R. designation and MS–DRG assignment of 16 procedure codes that describe introduction of the AGENT™ Paclitaxel-Coated Balloon Catheter technology that is indicated to treat coronary in-stent restenosis (ISR) in patients with coronary artery disease. The following procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology were finalized following the March 19, 2024, ICD–10 Coordination and Maintenance Committee meeting and made available via the CMS website on June 5, 2024, at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*. We refer the reader to the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials.

ICD–10–PCS code	Description
XW0J3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, one artery, percutaneous approach, new technology group 10.
XW0J3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, one artery, percutaneous approach, new technology group 10.
XW0J3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, one artery, percutaneous approach, new technology group 10.
XW0J3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, one artery, percutaneous approach, new technology group 10.
XW0K3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, two arteries, percutaneous approach, new technology group 10.
XW0K3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, two arteries, percutaneous approach, new technology group 10.
XW0K3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, two arteries, percutaneous approach, new technology group 10.
XW0K3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, two arteries, percutaneous approach, new technology group 10.
XW0L3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, three arteries, percutaneous approach, new technology group 10.
XW0L3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, three arteries, percutaneous approach, new technology group 10.
XW0L3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, three arteries, percutaneous approach, new technology group 10.
XW0K3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, two arteries, percutaneous approach, new technology group 10.
XW0L3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, three arteries, percutaneous approach, new technology group 10.
XW0L3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, three arteries, percutaneous approach, new technology group 10.
XW0L3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, three arteries, percutaneous approach, new technology group 10.
XW0M3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, four or more arteries, percutaneous approach, new technology group 10.

For FY 2026, we received a request to reconsider the designation and MS–DRG assignment of the previously listed 16 procedure codes. Specifically, the requestor (the manufacturer) requested that the procedure codes be designated as O.R. procedures and assigned to the following surgical MS–DRGs:

- MS–DRG 250 Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC
- MS–DRG 251 Percutaneous Cardiovascular Procedures without Intraluminal Device without MCC
- MS–DRG 321 Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices
- MS–DRG 322 Percutaneous Cardiovascular Procedures with Intraluminal Device without MCC
- MS–DRG 323 Coronary Intravascular Lithotripsy with Intraluminal Device with MCC
- MS–DRG 324 Coronary Intravascular Lithotripsy with Intraluminal Device without MCC
- MS–DRG 325 Coronary Intravascular Lithotripsy without Intraluminal Device

According to the requestor, the root operation CMS identified as the most appropriate (that is, Introduction in the Administration section), and the predecessor code selected, (procedure code 3E073GC (Introduction of other therapeutic substance into coronary artery, percutaneous approach)), only involves a therapeutic substance being delivered via infusion or injection. The requestor stated that the procedure to administer the paclitaxel via the drug coated balloon (DCB) catheter is a surgical procedure as described in the instructions for use, with the drug delivery occurring using controlled prolonged balloon inflation during which the patient is monitored for signs of ischemia or arrythmia. The requestor stated that the procedure to deliver the paclitaxel is more appropriate as an O.R. procedure than a non-O.R. procedure. The requestor acknowledged that while the MS–DRG assignment for existing percutaneous coronary intervention (PCI) procedures is driven by vessel preparation or the use of an intraluminal device, it should not preclude the designation of the procedure codes identifying use of an AGENT™ Paclitaxel-Coated Balloon Catheter technology that describes the

delivery of the paclitaxel to the coronary vessel(s) as O.R. procedures.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69095 through 69096), we stated that under our established process, we reviewed the predecessor code and MS–DRG assignment most closely associated with the new procedure codes. We noted that because the procedure codes describing the use of an AGENT™ Paclitaxel-Coated Balloon Catheter are describing delivery of the paclitaxel to the coronary vessel(s), the predecessor code is 3E073GC, which is designated as a non-O.R. procedure and does not affect MS–DRG assignment. We also stated that, as discussed at the March 19, 2024, ICD–10 Coordination and Maintenance Committee meeting and in the commenters' feedback, a preparatory step (that is, vessel preparation by either angioplasty, atherectomy, or lithotripsy) is required to be performed first, before the AGENT™ Paclitaxel-Coated Balloon Catheter is deployed. We noted that each type of vessel preparation procedure is designated as an O.R. procedure and maps to one of the previously listed surgical MS–DRGs. We also noted that based on the surgical hierarchy, the reporting of one of the vessel preparation steps (that is, angioplasty, atherectomy, or lithotripsy), or placement of a new stent in connection with the use of the AGENT™ Paclitaxel-Coated Balloon Catheter would result in assignment to one of the previously listed surgical MS–DRGs. We noted that use of the AGENT™ Paclitaxel-Coated Balloon Catheter to deliver the paclitaxel to the coronary vessel(s) cannot occur in the absence of a surgical vessel preparation and therefore, it is the vessel preparation procedure that will determine the surgical MS–DRG assignment to one of the previously listed surgical MS–DRGs.

We reviewed the instructions for use submitted by the requestor regarding the procedure to insert the drug-coated balloon catheter. The instructions for use state:

> Note: For optimal DCB results, adequate lesion preparation is essential. This should include predilatation with a non-coated coronary balloon. Intravascular imaging to guide lesion preparation and to assess the adequacy of the final result is strongly recommended.
>
> Caution: Lesion preparation is necessary to prevent delamination of the balloon's drug coating while traversing patient anatomy. The TransPax coating is designed to facilitate drug transfer into the vessel wall upon contact. Do not use the AGENT Drug-Coated Balloon Catheter for lesion preparation.

We also note that the FDA-approved indication states, ''The AGENT™ Paclitaxel-Coated Balloon Catheter is intended to be used after appropriate vessel preparation in adult patients undergoing percutaneous coronary intervention (PCI) in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating in-stent restenosis (ISR).'' We further note that, as reflected in the March 19, 2024, ICD–10 Coordination and Maintenance Committee meeting materials, ''The AGENT™ Drug-Coated Balloon (DCB) has been designated by the FDA as an implant for PMA purposes. Per FDA guidance, the drug component is considered a permanent implant because it remains in the body for greater than 30 days.''

As such, we continue to disagree with designating the procedure to delivery paclitaxel to a coronary vessel as identified by any one of the previously listed 16 procedure codes as O.R. procedures. As stated earlier in this section, the MS–DRG assignment is dependent on the surgical vessel preparation procedure that would be reported when the AGENT™ Paclitaxel-Coated Balloon Catheter technology is used to deliver the paclitaxel to the coronary vessel(s) and result in assignment to one of the previously listed surgical MS–DRGs. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 42.1 available in association with this FY 2026 IPPS/LTCH PPS proposed rule on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* for complete documentation of the GROUPER logic for the previously listed surgical MS–DRGs under MDC 05. For the reasons discussed, we are maintaining the designation of the 16 procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter technology as non-O.R. for FY 2026.

(3) Endoscopic Drainage of the Ureter With Drainage Device

During our internal review, we noted that procedure codes that describe drainage of the ureter with a drainage device, via a natural or artificial opening endoscopic approach, are not recognized as O.R. procedures for purposes of MS–DRG assignment. We identified the following three related codes:

ICD–10–PCS code	Description
0T9680Z	Drainage of right ureter with drainage device, via natural or artificial opening endoscopic.
0T9780Z	Drainage of left ureter with drainage device, via natural or artificial opening endoscopic.
0T9880Z	Drainage of bilateral ureters with drainage device, via natural or artificial opening endoscopic.

Upon further review and consideration, we believe that procedure codes 0T9680Z, 0T9780Z, and 0T9880Z that describe the drainage of the ureter with a drainage device via a natural or artificial opening endoscopic approach warrant designation as O.R. procedures. These procedures involve the use of a cystoscope and include the insertion of a small tube (called a ureteral stent or drainage tube) into one or both of the ureters (the tubes that carry urine from the kidneys to the bladder) to drain urine from a blocked or partially blocked ureter and must be performed by a urologist who specializes in diagnosing and treating conditions of the urinary tract, genitals, and adrenal glands through surgery. These procedures are typically performed in an operating room under anesthesia, can take about 30 minutes or more, including preparation time, and require that a patient's vital signs be monitored by the health care team for the duration of the procedure.

Therefore, we are proposing to add procedure codes 0T9680Z, 0T9780Z, and 0T9880Z to the FY 2026 ICD–10 MS–DRG Version 43 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures assigned to MS–DRG 264 (Other Circulatory System O.R. Procedures) in MDC 05 (Diseases and Disorders of the Circulatory System); MS–DRGs 656, 657, and 658 (Kidney and Ureter Procedures for Neoplasm, with MCC, with CC, and without CC/MCC, respectively) and MS–DRGs 659, 660, and 661 (Kidney and Ureter Procedures for Non-Neoplasm, with MCC, with CC, and without CC/MCC, respectively) in

MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract); MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively) in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs); and MS–DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively) in MDC 24 (Multiple Significant Trauma).

8. Proposed Changes to the MS–DRG Diagnosis Codes for FY 2026

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (NonCC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as an MCC, a CC, or a NonCC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since the comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when assigning severity levels to new codes and when receiving requests to change the severity level of specific diagnosis codes.

We noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) that with the transition to ICD–10–CM and the significant changes that have occurred to diagnosis codes since the FY 2008 review, we believed it was necessary to conduct a comprehensive analysis once again. Based on this analysis, we proposed changes to the severity level designations for 1,492 ICD–10–CM diagnosis codes and invited public comments on those proposals. As summarized in the FY 2020 IPPS/LTCH PPS final rule, many commenters expressed concern with the proposed severity level designation changes overall and recommended that CMS conduct further analysis prior to finalizing any proposals. After careful consideration of the public comments we received, as discussed further in the FY 2020 IPPS/LTCH PPS final rule, we generally did not finalize our proposed changes to the severity designations for the ICD–10–CM diagnosis codes, other than the changes to the severity level designations for the diagnosis codes in category Z16 (Resistance to antimicrobial drugs) from a NonCC to a CC. We stated that postponing adoption of the proposed comprehensive changes in the severity level designations would allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review. We refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42150 through 42152) for a complete discussion of our response to public comments regarding the proposed severity level designation changes for FY 2020.

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTrasncriptandQandAsandAudioFile.zip* for the transcript and audio file of the listening session. We also refer readers to *https://www.cms.gov/Medicare/MedicareFee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for the supplementary file containing the mathematical data generated using claims from the FY 2018 MedPAR file describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), we discussed our plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles and plan to present the findings and proposals in future rulemaking. The nine guiding principles are as follows:

- Represents end of life/near death or has reached an advanced stage associated with systemic physiologic decompensation and debility.
- Denotes organ system instability or failure.
- Involves a chronic illness with susceptibility to exacerbations or abrupt decline.
- Serves as a marker for advanced disease states across multiple different comorbid conditions.
- Reflects systemic impact.
- Post-operative/post-procedure condition/complication impacting recovery.
- Typically requires higher level of care (that is, intensive monitoring, greater number of caregivers, additional testing, intensive care unit care, extended length of stay).
- Impedes patient cooperation or management of care or both.
- Recent (last 10 years) change in best practice, or in practice guidelines and review of the extent to which these changes have led to concomitant changes in expected resource use.

We refer readers to the FY 2021 IPPS/LTCH PPS final rule for a complete summation of the comments we received for each of the nine guiding principles and our responses to those comments.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175 through 25180), as another interval step in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, we requested public comments on a potential change to the severity level designations for ''unspecified'' ICD–10–CM diagnosis codes that we

were considering adopting for FY 2022. Specifically, we noted we were considering changing the severity level designation of ''unspecified'' diagnosis codes to a NonCC where there are other codes available in that code subcategory that further specify the anatomic site. As summarized in the FY 2022 IPPS/LTCH PPS final rule, many commenters expressed concern with the potential severity level designation changes overall and recommended that CMS delay any possible change to the designation of these codes to give hospitals and their physicians time to prepare. After careful consideration of the public comments we received, we maintained the severity level designation of the ''unspecified'' diagnosis codes currently designated as a CC or MCC where there are other codes available in that code subcategory that further specify the anatomic site for FY 2022. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44916 through 44926) for a complete discussion of our response to public comments regarding the potential severity level designation changes. Instead, for FY 2022, we finalized a new Medicare Code Editor (MCE) code edit for ''unspecified'' codes, effective with discharges on and after April 1, 2022. We stated we believe finalizing this new edit would provide additional time for providers to be educated while not affecting the payment the provider is eligible to receive. We refer the reader to section II.D.14.e. of the preamble of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943) for the complete discussion.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48866), we stated that as the new unspecified edit became effective beginning with discharges on and after April 1, 2022, we believed it was appropriate to not propose to change the designation of any ICD–10–CM diagnosis codes, including the unspecified codes that are subject to the ''Unspecified Code'' edit, as we continue our comprehensive CC/MCC analysis to allow interested parties the time needed to become acclimated to the new edit.

In the FY 2023 IPPS/LTCH proposed rule (87 FR 28177 through 28181), we also requested public comments on how the reporting of diagnosis codes in categories Z55–Z65 might improve our ability to recognize severity of illness, complexity of illness, and/or utilization of resources under the MS–DRGs. We stated we were also interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58755 through 58759), based on our analysis of the impact on resource use for the ICD–10–CM Z codes that describe homelessness and after consideration of public comments, we finalized changes to the severity levels for diagnosis codes Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness), and Z59.02 (Unsheltered homelessness), from NonCC to CC. We stated our expectation that finalizing the changes would encourage the increased documentation and reporting of the diagnosis codes describing social and economic circumstances and serve as an example for providers that, when they document and report SDOH codes, CMS can further examine the claims data and consider future changes to the designation of these codes when reported as a secondary diagnosis. We further stated CMS would continue to monitor and evaluate the reporting of the diagnosis codes describing social and economic circumstances.

In the FY 2025 proposed rule (89 FR 35995), we noted that since the FY 2021 IPPS/LTCH PPS final rule we have continued to solicit feedback regarding the nine guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We stated we had encouraged the public to provide a detailed explanation of how applying a suggested concept or principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code when providing feedback or comments. We also noted in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26748 through 26750) we illustrated how the nine guiding principles might be applied in evaluating changes to the severity designations of diagnosis codes in our discussion of our proposed changes to the severity level designation for certain diagnosis codes that describe homelessness. After consideration of the ongoing feedback and comments we had received, we proposed to finalize the nine guiding principles. After consideration of the public comments received, and for the reasons discussed, we finalized the nine guiding principles as listed previously in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69076 through 69078). Accordingly, we stated that our evaluations to determine the extent to which the presence of a diagnosis code as a secondary diagnosis results in increased hospital resource use will include a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of the nine guiding principles.

Additionally, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69079 through 69084), based on our analysis of the impact on resource use for the ICD–10–CM diagnosis codes that describe inadequate housing and housing instability, and after consideration of public comments, we finalized changes to the severity levels for seven diagnosis codes for FY 2025.

For this FY 2026 IPPS/LTCH PPS proposed rule, we did not receive any requests to change the severity level designations of specific ICD–10–CM diagnosis codes. At this time, we believe it is appropriate to continue to formulate future next steps in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, rather than proposing to change the designation of individual ICD–10–CM diagnosis codes. Therefore, we are not proposing any severity designation changes for FY 2026.

As we continue our comprehensive CC/MCC analysis, we may consider proposing changes for other diagnosis codes in the future based on our analysis of the impact on resource use, per our methodology, as previously described, and consideration of the guiding principles consistent with our annual process and will provide more detail in future rulemaking. We have updated the Impact on Resource Use Files on the CMS website so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 through the FY 2024 MedPAR files. These files are posted on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*.

For new diagnosis codes approved for FY 2026, consistent with our annual process for designating a severity level (MCC, CC, or NonCC) for new diagnosis codes, we first review the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process does not automatically result in the new diagnosis code having the same designation as the predecessor code. We refer the reader to section II.C.9 of the preamble of this FY 2026 IPPS/LTCH

PPS proposed rule for the discussion of the proposed changes to the ICD–10–CM and ICD–10–PCS coding systems for FY 2026.

c. Proposed Additions and Deletions to the Diagnosis Code Severity Levels for FY 2026

The following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2026 and are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*:

- Table 6I.1—Proposed Additions to the MCC List—FY 2026;
- Table 6I.2—Proposed Deletions to the MCC List—FY 2026;
- Table 6J.1—Proposed Additions to the CC List—FY 2026; and
- Table 6J.2—Proposed Deletions to the CC List—FY 2026.

d. Proposed CC Exclusions List for FY 2026

In the September 1, 1987, final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) to preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987, proposed notice (52 FR 18886) and the September 1, 1987, final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD–9–CM MS–DRGs.

The ICD–10 MS–DRGs Version 42.1 CC Exclusion List is included as Appendix C in the ICD–10 MS–DRG Definitions Manual (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) and includes three lists identified as Part 1, Part 2 and Part 3. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Part 2 is the list of diagnosis codes designated as an MCC only for patients discharged alive; otherwise, they are assigned as a NonCC. Part 3 is the list of diagnosis codes that are designated as a CC or MCC and included in the definition of the logic for the listed MS–DRGs. When reported as a secondary diagnosis and grouped to one of the listed MS–DRGs, the diagnosis is excluded from acting as a CC/MCC for severity in DRG assignment (that is, suppression logic).

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69093), we stated that, because commenters had raised concerns regarding the principal diagnoses listed under Part 1 of Appendix C—CC Exclusions List in Principal Diagnosis Collection Lists 1379 and 1380 that exclude diagnosis codes N18.5 (Chronic kidney disease, stage 5) and N18.6 (End stage renal disease) from acting as a CC or MCC under the CC exclusion logic in accordance with the list of five principles established in 1987, we intended to perform a broad review of the conditions in these lists to determine if any modifications are warranted and to ensure they continue to be clinically appropriate. We note that the Principal Diagnosis Collection List numbers may change because of updates that are made to the list annually through rulemaking. Therefore, while under Version 41.1 the principal diagnoses listed in Principal Diagnosis Collection List numbers 1379 and 1380 exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC, under Version 42.1, the principal diagnoses listed in Principal Diagnosis Collection List numbers 1330 and 1331 exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC. Accordingly, we reviewed the list of principal diagnosis codes listed in Principal Diagnosis Collection List numbers 1330 and 1331 that exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC to assess clinical appropriateness.

The findings from our review indicate several of the listed conditions, when reported as a principal diagnosis, are not applicable to exclude the designated N18.5 or N18.6 secondary CC/MCC diagnosis code under application of our five established principles finalized in the September 1, 1987, final notice (52 FR 33154) previously discussed. For example, diagnosis codes describing diabetes with other specified complications such as arthropathy, periodontal disease, or a foot ulcer, and diagnosis codes describing endometriosis, are not chronic and acute manifestations of, or closely related conditions to, chronic kidney disease, stage 5 (code N18.5) or end stage renal disease (code N18.6), nor are they describing codes for the same condition that cannot coexist.

As previously described, the Principal Diagnosis Collection List numbers may change because of updates that are made to the list annually through rulemaking. We note that, under proposed Version 43, the proposed Principal Diagnosis Collection List number to exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC is 1335. We are therefore proposing to remove the diagnosis codes listed in Table 6P.8a associated with this FY 2026 IPPS/LTCH PPS proposed rule and available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* from Principal Diagnosis Collection List number 1335 under proposed Version 43. Findings from our internal review also indicated that diagnosis code I12.9 (Hypertensive chronic kidney disease with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) is currently listed in Principal Diagnosis Collection List number 1331 and excludes diagnosis code N18.6 from acting as an MCC, however, diagnosis code I12.9 is not currently listed in the Principal Diagnosis Collection List number 1330 to exclude diagnosis code

N18.5. We believe it is clinically appropriate to add diagnosis code I12.9 to Principal Diagnosis Collection List number 1335 under Version 43 because it would not be expected that a secondary diagnosis of N18.5 would be reported with a principal diagnosis of I12.9. During our internal review we also identified diagnosis code I13.0 (Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) and diagnosis code I13.10 (Hypertensive heart and chronic kidney disease without heart failure, with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) that we believe are appropriate to add to Principal Diagnosis Collection List number 1335 to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC when reported because the conditions describe chronic kidney disease, stage 5 and end stage renal disease (ESRD) and it would not be clinically appropriate to have a principal diagnosis describing stage 1 through stage 4 chronic kidney disease reported with chronic kidney disease, stage 5 or ESRD.

In summary, we are proposing to add diagnosis code I12.9 to Principal Diagnosis Collection List number 1335 to exclude diagnosis code N18.5 from acting as a CC, proposing to remove the diagnosis codes listed in Table 6P.8a associated with this FY 2026 IPPS/LTCH PPS proposed rule and available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps* from Principal Diagnosis Collection List number 1335, and proposing to add diagnosis codes I13.0 and I13.10 to Principal Diagnosis Collection List number 1335 to exclude diagnosis codes N18.5 and N18.6 from acting as a CC/MCC.

We intend to continue this type of internal review to ensure all the other Principal Diagnosis Collection lists reflect the appropriate codes in connection with the CC/MCC secondary diagnosis code that is excluded from acting as a CC/MCC. Any proposed changes to the lists will be discussed in future rulemaking. To inform future rulemaking, feedback and other suggestions may be submitted by October 20, 2025, and directed to MEARIS™ at: *https://mearis.cms.gov/public/home*.

We also performed an internal review of the diagnoses listed in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive. The diagnoses listed in Part 2 of Appendix C are assigned as an MCC only for patients discharged alive, otherwise the codes are assigned as a NonCC. The diagnoses listed in Part 2 in Version 42.1 are shown in the following table.

ICD–10–CM code	Description
I46.2	Cardiac arrest due to underlying cardiac condition.
I46.8	Cardiac arrest due to other underlying condition.
I46.9	Cardiac arrest, cause unspecified.
I49.01	Ventricular fibrillation.
R09.2	Respiratory arrest.
R57.0	Cardiogenic shock.
R57.1	Hypovolemic shock.
R57.8	Other shock.

In developing Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive (72 FR 47161 through 47168), the claims data were evaluated to determine if there was a difference in resource use between cases in which the patient was discharged alive or died during the hospital stay. For most secondary diagnoses, the charges were similar for the two groups. There were, however, a few diagnoses where the difference in charges and clinical considerations supported a different CC designation for patients who died before discharge. For these diagnoses, the patients who were discharged alive required significantly more hospital resources than the patients who died. Therefore, when reported as a secondary diagnosis, each of the diagnoses is designated as an MCC in cases where the patient is discharged alive and as a NonCC in cases where the patient died.

We analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for the diagnoses currently listed in Appendix C—Part 2. Our findings are reflected in the following table:

ICD–10–CM code	Description	Patient discharged alive (without discharge status 20)			Patient expired (with discharge status 20)		
		Number of cases	Avg LOS	Average cost	Number of cases	Avg LOS	Average cost
I46.2	Cardiac arrest due to underlying cardiac condition.	8,241	11.6	$61,108	5,766	5.3	$33,173
I46.8	Cardiac arrest due to other underlying condition.	3,884	15.6	62,505	6,133	5.8	25,979
I46.9	Cardiac arrest, cause unspecified	13,121	13.3	59,732	28,437	5.2	24,933
I49.01	Ventricular fibrillation	10,705	9.9	52,118	6,788	4.6	28,949
R09.2	Respiratory arrest	367	8.7	33,536	375	5.5	17,280
R57.0	Cardiogenic shock	46,537	12.5	58,432	23,335	6.8	39,457
R57.1	Hypovolemic shock	32,614	10.8	39,051	6,476	8.3	38,697
R57.8	Other shock	37,728	12.4	50,374	11,570	8.4	43,215

As shown in the table, the data reflect that most of the conditions currently listed in Appendix C—Part 2, utilize hospital resources as expected, with the patients who were discharged alive (without discharge status 20) requiring significantly more hospital resources than the patients who expired (with discharge status 20), as demonstrated by the longer lengths of stay and higher average costs of these cases. We note however, that the resource utilization for cases reporting R57.1 (Hypovolemic shock) as a secondary diagnosis appear to be comparable whether the patient

was discharged alive or the patient expired. As reflected in the table, the claims data from the September 2024 update of the FY 2024 MedPAR file reflect that code R57.1 was reported as a secondary diagnosis in 32,614 cases where the patient was discharged alive. These cases had average costs of $39,051 and an average length of stay of 10.8 days. In the 6,476 cases where R57.1 was reported as a secondary diagnosis and the patient expired, the average costs were slightly lower ($38,697 versus $39,051) and the average length of stay was slightly shorter (8.3 days versus 10.8 days). We reviewed this issue and note clinically, the recommended treatment for hypovolemic shock is immediate intervention with fluid resuscitation with intravenous (IV) fluids, blood transfusions, and vasoactive drugs. Hypovolemic shock generally has a lower mortality rate and responds to timely treatment. As the claims data no longer reflect that patients reporting hypovolemic shock as secondary diagnosis that are discharged alive require significantly more hospital resources than the patients who expire, we are proposing to remove code R57.1 from the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive. Under this proposal, when reported as a secondary diagnosis, R57.1 (Hypovolemic shock) will be assigned as an MCC when the patient is discharged alive or if the patient expires.

Based on our review, we considered if it was appropriate to add other diagnosis codes describing shock to Appendix C—Part 2. Specifically, we considered code T79.4XXA (Traumatic shock, initial encounter). ICD–10–CM diagnosis code T79.4XXA is currently designated as an MCC when reported as secondary diagnoses. Traumatic shock represents a unique pathological condition that begins with multiple, usually blunt, trauma and may conclude with acute respiratory distress syndrome, coagulopathy, sepsis, multiple organ dysfunction syndrome and death.

We analyzed claims data from the September 2024 update of the FY 2024 MedPAR file for cases reporting T79.4XXA as a secondary diagnosis and our findings are reflected in the following table:

ICD–10–CM code	Description	Patient discharged alive (without discharge status 20)			Patient expired (with discharge status 20)		
		Number of cases	Avg LOS	Average cost	Number of cases	Avg LOS	Average cost
T79.4XXA	Traumatic shock, initial encounter	1,187	16.1	$79,218	553	6.5	$48,880

As reflected in the table, the claims data from the September 2024 update of the FY 2024 MedPAR file indicate that T79.4XXA was reported as a secondary diagnosis in 1,187 cases where the patient was discharged alive. These cases had average costs of $79,218 and an average length of stay of 16.1 days. In the 553 cases where T79.4XXA was reported as a secondary diagnosis and the patient expired, the average costs were considerably lower ($48,880 versus $79,218) and the average length of stay was much shorter (6.5 days versus 16.1 days).

As the data reflect that cases reporting traumatic shock, initial encounter, as a secondary diagnosis for patients that are discharged alive require significantly more hospital resources than the patients who expire, we are proposing to add code T79.4XXA to the list found in Appendix C—Part 2: Codes That are Major CC Only if Patient Discharged Alive. Under this proposal, when reported as a secondary diagnosis, T79.4XXA (Traumatic shock, initial encounter) would be assigned as an MCC only when the patient is discharged alive.

We are proposing changes to the ICD–10 MS–DRGs Version 43 CC Exclusion List based on the diagnosis code updates as discussed in section II.C.13. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule. Therefore, we have developed Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2026; Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2026; Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2026; and Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2026. For Table 6G.1, each secondary diagnosis code proposed for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses proposed to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions proposed for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code proposed for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the proposed deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Tables 6G.1., 6G.2., 6H.1., and 6H.2. associated with this FY 2026 IPPS/LTCH PPS proposed rule are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

9. Proposed Changes to the ICD–10–CM and ICD–10–PCS Coding Systems

To identify new, revised, and deleted diagnosis and procedure codes, for FY 2026, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this FY 2026 IPPS/LTCH PPS proposed rule.

These tables are not published in the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule. As discussed in section II.C.11. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, the code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee meeting process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

We are proposing the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. In

addition, the proposed severity level designations for the new diagnosis codes are set forth in Table 6A. and the proposed O.R. status for the new procedure codes are set forth in Table 6B. Consistent with our established process, we examined the MS–DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our proposed assignments and designations.

Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We note that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code.

We are making available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* the following tables associated with this FY 2026 IPPS/LTCH PPS proposed rule:

- Table 6A.—New Diagnosis Codes—FY 2026;
- Table 6B.—New Procedure Codes—FY 2026;
- Table 6C.—Invalid Diagnosis Codes—FY 2026;
- Table 6D.—Invalid Procedure Codes—FY 2026;
- Table 6E.—Revised Diagnosis Code Titles—FY 2026;
- Table 6F.—Revised Procedure Code Titles—FY 2026;
- Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2026;
- Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2026;
- Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2026;
- Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2026;
- Table 6I.1.—Proposed Additions to the MCC List—FY 2026;
- Table 6I.2.—Proposed Deletions to the MCC List—FY 2026;
- Table 6J.1.—Proposed Additions to the CC List—FY 2026; and
- Table 6J.2.—Proposed Deletions to the CC List—FY 2026.

10. Proposed Changes to the Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single MS–DRG (MS–DRG 652) and the class ''major bladder procedures'' consists of three MS–DRGs (MS–DRGs 653, 654, and 655).

Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRGs 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed in this FY 2026 IPPS/LTCH PPS proposed rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69100), we stated our intent to consider if the development of evaluation criteria would be useful for future proposed modifications to the surgical hierarchy for MS–DRGs that have meaningful changes to the clinical logic. We are continuing to examine what factors should be taken into account as we consider any future proposals. We welcome feedback and other suggestions to be submitted via the Medicare Electronic Application Request Information System™ (MEARIS™) at *https://mearis.cms.gov/public/home* by October 20, 2025.

Based on the changes that we are proposing to make for FY 2026, as discussed in section II.C. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, our proposal for Appendix D MS–DRG Surgical Hierarchy by MDC and MS–DRG of the proposed ICD–10 MS–DRG Definitions Manual Version 43 to modify the existing surgical hierarchy in MDC 05 and MDC 08 for FY 2026 is illustrated in the following tables. We note that because the current methodology involves weighing the average costs of each MS–DRG in the surgical class by

frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class, that the surgical hierarchy of other MS–DRGs in the MDC may need to be adjusted based on the MS–DRG classification changes that are proposed to ensure that the average weighted cost for each base MS–DRG in each MDC are monotonically decreasing. We further note that the proposed Version 43 surgical hierarchy as illustrated in the following tables may be subject to further modifications based on the finalized changes to the MS–DRG classifications for FY 2026.

		Current version 42 surgical hierarchy	Proposed version 43 surgical hierarchy
MDC 05 (Diseases and Disorders of the Circulatory System)			
Proposed New MS–DRG 209	Complex Aortic Arch Procedures	N/A	1
MS–DRG 212	Concomitant Aortic and Mitral Valve Procedures	2	2
MS–DRG 215	Other Heart Assist System Implant	1	3
MS–DRGs 216–218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization.	3	4
MS–DRGs 231–232	Coronary Bypass with PTCA	4	5
MS–DRG 275	Cardiac Defibrillator Implant with Cardiac Catheterization	6	6
MS–DRG 317	Concomitant Left Atrial Appendage Closure and Cardiac Ablation	5	7
MS–DRGs 219–221	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization.	3	8
MS–DRGs 233–234	Coronary Bypass with Cardiac Catheterization or Open Ablation	4	9
Proposed New MS–DRG 213	Endovascular Abdominal Aorta with Iliac Branch Procedures	N/A	10
MS–DRGs 266–267	Endovascular Cardiac Valve Replacement and Supplement Procedures	7	11
MS–DRGs 276–277	Cardiac Defibrillator Implant	6	12
MS–DRGs 268–269	Aortic and Heart Assist Procedures Except Pulsation Balloon	8	13
MS–DRGs 235–236	Coronary Bypass without Cardiac Catheterization	4	14
MS–DRG 245	AICD Generator Procedures	14	15
MS–DRGs 270–272	Other Major Cardiovascular Procedures	11	16
MS–DRGs 228–229	Other Cardiothoracic Procedures	9	17
MS–DRGs 319–320	Other Endovascular Cardiac Valve Procedures	10	18
MS–DRGs 278–279	Ultrasound Accelerated and Other Thrombolysis of Peripheral Vascular Structures.	20	19
MS–DRGs 323–324	Coronary Intravascular Lithotripsy with Intraluminal Device	17	20
MS–DRGs 239–241	Amputation for Circulatory System Disorders Except Upper Limb and Toe.	12	21
MS–DRG 265	AICD Lead Procedures	15	22
MS–DRGs 273–274	Percutaneous and Other Intracardiac Procedures	16	23
MS–DRG 325	Coronary Intravascular Lithotripsy without Intraluminal Device	17	24
MS–DRG 263	Vein Ligation and Stripping	25	25
MS–DRGs 252–254	Other Vascular Procedures	21	26
Proposed New MS–DRGs 359–360	Percutaneous Coronary Atherectomy with Intraluminal Device	N/A	27
MS–DRGs 242–244	Permanent Cardiac Pacemaker Implant	13	28
MS–DRGs 260–262	Cardiac Pacemaker Revision Except Device Replacement	24	29
Proposed New MS–DRG 318	Percutaneous Coronary Atherectomy without Intraluminal Device	N/A	30
MS–DRGs 321–322	Percutaneous Cardiovascular Procedures with Intraluminal Device	18	31
MS–DRGs 258–259	Cardiac Pacemaker Device Replacement	23	32
MS–DRGs 255–257	Upper Limb and Toe Amputation for Circulatory System Disorders	22	33
MS–DRGs 250–251	Percutaneous Cardiovascular Procedures without Intraluminal Device	19	34
MS–DRG 264	Other Circulatory System O.R. Procedures	26	35

MS–DRGs 429–430	Combined Anterior and Posterior Cervical Spinal Fusion	3	2
MS–DRGs 456–458	Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions.	4	3
MS–DRGs 447–448	Multiple Level Spinal Fusion Except Cervical	5	4
Proposed New MS–DRGs 403–404	Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection.	N/A	6
MS–DRGs 450–451	Single Level Spinal Fusion Except Cervical	6	7
MS–DRGs 461–462	Bilateral or Multiple Major Joint Procedures of Lower Extremity	7	10
MS–DRGs 463–465	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders.	8	8
MS–DRGs 466–468	Revision of Hip or Knee Replacement	9	9
MS–DRGs 521–522	Hip Replacement with Principal Diagnosis of Hip Fracture	10	18
MS–DRGs 469–470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity or Total Ankle Replacement.	11	21
MS–DRGs 471–473	Cervical Spinal Fusion	12	11

		Current version 42 surgical hierarchy	Proposed version 43 surgical hierarchy
MS–DRGs 474–476	Amputation for Musculoskeletal System and Connective Tissue Disorders.	13	12
MS–DRGs 477–479	Biopsies of Musculoskeletal System and Connective Tissue	14	14
MS–DRGs 480–482	Hip and Femur Procedures Except Major Joint	15	19
MS–DRG 483	Major Joint or Limb Reattachment Procedures of Upper Extremities	16	13
MS–DRGs 485–487	Knee Procedures with Principal Diagnosis of Infection	17	17
MS–DRGs 488–489	Knee Procedures without Principal Diagnosis of Infection	17	27
MS–DRGs 518–520	Back and Neck Procedures Except Spinal Fusion or Disc Device or Neurostimulator.	18	20
MS–DRGs 492–494	Lower Extremity and Humerus Procedures Except Hip, Foot and Femur	19	15
MS–DRGs 495–497	Local Excision and Removal of Internal Fixation Devices Except Hip and Femur.	20	25
MS–DRGs 498–499	Local Excision and Removal of Internal Fixation Devices of Hip and Femur.	21	16
MS–DRGs 500–502	Soft Tissue Procedures	22	24
MS–DRGs 503–505	Foot Procedures	23	23
MS–DRG 506	Major Thumb or Joint Procedures	24	29
MS–DRGs 507–508	Major Shoulder or Elbow Joint Procedures	25	26
MS–DRGs 510–512	Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures.	26	22
MS–DRGs 513–514	Hand or Wrist Procedures, Except Major Thumb or Joint Procedures	27	28
MS–DRGs 515–517	Other Musculoskeletal System and Connective Tissue O.R. Procedures	28	30

For issues pertaining to the surgical hierarchy, as with other MS–DRG related requests, we encourage interested parties to submit comments no later than October 20, 2025, via MEARIS™ at *https://mearis.cms.gov/public/home*, so that they can be considered for possible inclusion in the annual proposed rule.

11. Maintenance of the ICD–10–CM and ICD–10–PCS Coding Systems

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014, meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-9-cm-diagnosis-procedure-codes-abbreviated-and-full-code-titles*.

The official list of ICD–10–CM and ICD–10–PCS codes can be found on the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/index.html*.

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously mentioned process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. Members of the public may submit comments on the proposed procedure code topics to CMS at: *ICDProcedureCodeRequest@cms.hhs.gov* and may submit comments on the proposed diagnosis code topics to the CDC/NCHS at: *nchsicd10cm@cdc.gov*. After considering the opinions expressed during the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2026 at a public meeting held on September 10–11, 2024, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 15, 2024.

In lieu of holding its Spring 2025 meeting, the Committee solicited comments on the Spring 2025 ICD–10–PCS procedure code topics. The deadline for submitting comments on these code proposals is April 18, 2025. Any new diagnosis and procedure codes for which there is consensus of public support, and for which complete tabular and indexing changes would be made by June 2025 would be included in the October 1, 2025, update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets. As discussed in earlier sections of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code

Titles for this FY 2026 IPPS/LTCH PPS proposed rule, which are available on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*.

The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Therefore, although we make the code titles available for the IPPS proposed rule, they are not subject to comment in the proposed rule. Because of the length of these tables, they are not published in the Addendum to the proposed rule. Rather, they are available on the CMS website as discussed in section VI. of the Addendum to the proposed rule.

Recordings for the virtual meeting discussions of the procedure codes at the Committee's September 10–11, 2024, meeting and the materials for the Spring 2025 ICD–10–PCS procedure code topics can be obtained from the CMS website at: *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*. The materials for the topics relating to diagnosis codes discussed at the September 10–11, 2024, meeting can be found at: *https://www.cdc.gov/nchs/icd/icd-10-maintenance/meetings.html*. These websites also provide detailed information about the Committee, including information on requesting a new code, participating in a Committee meeting, timeline requirements, submitting comments, and meeting dates.

We encourage commenters to submit questions and comments on coding issues involving diagnosis codes via email to: *nchsicd10cm@cdc.gov*.

Questions and comments concerning the procedure codes should be submitted via email to: *ICDProcedureCodeRequest@cms.hhs.gov*.

CMS implemented 50 new procedure codes including cardiac stereotactic body radiotherapy (SBRT), transplantation of the larynx, repositioning of long bones using a ring external fixation device with automated strut adjustment, supplementing the right atrium with heterotopic bioprosthetic valve(s), the administration of emapalumab-Izsg anti-IFNy monoclonal antibody, and the administration of tarlatamab-dlle antineoplastic into the ICD–10–PCS classification effective with discharges on and after April 1, 2025. The procedure codes are as follows:

Procedure code	Description	O.R.	MDC	MS–DRG
D228DZZ**	Stereotactic other photon radiosurgery of conduction mechanism.	N	05	317
0B118D6*	Bypass trachea to esophagus with intraluminal device, via natural or artificial opening endoscopic.	N		
0CYS0Z0	Transplantation of larynx, allogeneic, open approach	Y	03	143–145
			04	166–168
			21	907–909
			24	957–959
0CYS0Z1	Transplantation of larynx, syngeneic, open approach	Y	03	143–145
			04	166–168
			21	907–909
			24	957–959
0DX80Z7	Transfer small intestine to vagina, open approach	Y	13	748
			21	907–909
			24	957–959
0DX84Z7	Transfer small intestine to vagina, percutaneous endoscopic approach.	Y	13	748
			21	907–909
			24	957–959
0TT00Z0	Resection of right kidney, open approach, allogeneic	Y	11	656–661
			21	907–909
			24	957–959
0TT00Z1	Resection of right kidney, open approach, syngeneic	Y	11	656–661
			21	907–909
			24	957–959
0TT00Z2	Resection of right kidney, open approach, zooplastic	Y	11	656–661
			21	907–909
			24	957–959
0TT10Z0	Resection of left kidney, open approach, allogeneic	Y	11	656–661
			21	907–909
			24	957–959
0TT10Z1	Resection of left kidney, open approach, syngeneic	Y	11	656–661
			21	907–909
			24	957–959
0TT10Z2	Resection of left kidney, open approach, zooplastic	Y	11	656–661
			21	907–909
			24	957–959
0U7C7DJ*	Dilation of cervix with intraluminal device, temporary, via natural or artificial opening.	N		
10D10ZZ	Extraction of products of conception, retained, open approach.	Y	14	770
				796–798
3E0U0GC*	Introduction of other therapeutic substance into joints, open approach.	N		
X2KA30A	Bypass left atrium using conduit through coronary sinus to right atrium, percutaneous approach, new technology group 10.	Y	05	270–272
			21	907–909
X2U93YA	Supplement right atrium with intraluminal device, heterotopic bioprosthetic valve(s), percutaneous approach, new technology group 10.	Y	05	266–267

Procedure code	Description	O.R.	MDC	MS–DRG
XNS40GA	Reposition right humeral shaft with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	492–494 907–909 957–959
XNS43GA	Reposition right humeral shaft with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	492–494 907–909 957–959
XNS50GA	Reposition left humeral shaft with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	492–494 907–909 957–959
XNS53GA	Reposition left humeral shaft with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	492–494 907–909 957–959
XNS60GA	Reposition right radius with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNS63GA	Reposition right radius with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNS70GA	Reposition left radius with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNS73GA	Reposition left radius with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNS80GA	Reposition right ulna with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNS83GA	Reposition right ulna with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNS90GA	Reposition left ulna with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNS93GA	Reposition left ulna with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	510–512 907–909 957–959
XNSA0GA	Reposition right upper femur with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSA3GA	Reposition right upper femur with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSB0GA	Reposition left upper femur with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSB3GA	Reposition left upper femur with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSC0GA	Reposition right lower femur with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSC3GA	Reposition right lower femur with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSD0GA	Reposition left lower femur with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSD3GA	Reposition left lower femur with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSE0GA	Reposition right femoral shaft with ring external fixation device with automated strut adjustment, open approach, new technology group 10.	Y	08 21 24	480–482 907–909 956
XNSE3GA	Reposition right femoral shaft with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	480–482 907–909 956

XNSH3GA	Reposition left tibia with ring external fixation device with automated strut adjustment, percutaneous approach, new technology group 10.	Y	08 21 24	492–494 907–909 957–959
XW033MA*	Introduction of emapalumab-lzsg anti-IFNy monoclonal antibody into peripheral vein, percutaneous approach, new technology group 10.	N		
XW033NA*	Introduction of tarlatamab-dlle antineoplastic into peripheral vein, percutaneous approach, new technology group 10.	N		
XW043MA*	Introduction of emapalumab-lzsg anti-IFNy monoclonal antibody into central vein, percutaneous approach, new technology group 10.	N		
XW043NA*	Introduction of tarlatamab-dlle antineoplastic into central vein, percutaneous approach, new technology group 10.	N		
XXE5X5A*	Measurement of immune response, whole blood cellular assessment via microfluidic deformability, new technology group 10.	N		

* As the procedure codes are designated as non-O.R. procedures, there is no assigned MDC or MS–DRG. The ICD–10 MS–DRG assignment is dependent on the reported principal diagnosis, any secondary diagnoses defined as a complication or comorbidity (CC) or major complication or comorbidity (MCC), procedures or services performed, age, sex, and discharge status.
** Non-O.R. procedure affecting the MS–DRG assignment.

The 50 procedure codes are also reflected in Table 6B.—New Procedure Codes, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. As with the other new procedure codes and MS–DRG assignments included in Table 6B in association with this FY 2026 IPPS/LTCH PPS proposed rule, we are soliciting public comments on the most appropriate MDC, MS–DRG, and operating room status assignments for these codes for FY 2026, as well as any other options for the GROUPER logic.

We note that Change Request (CR) 13917, Transmittal 12995, titled ''April 2025 Update to the Medicare Severity-Diagnosis Related Group (MS–DRG) Grouper and Medicare Code Editor (MCE) Version 42.1'' was issued on December 12, 2024 (available on the CMS website at: *https://www.cms.gov/medicare/regulations-guidance/transmittals/2024-transmittals/r12995cp*) regarding the release of an updated version of the ICD–10 MS–DRG GROUPER and Medicare Code Editor software, Version 42.1, effective with discharges on and after April 1, 2025, reflecting the new procedure codes. The updated software, along with the updated ICD–10 MS–DRG Version 42.1 Definitions Manual and the Definitions of Medicare Code Edits Version 42.1 manual is available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

In the September 7, 2001, final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of the Medicare Modernization Act (Pub. L. 108–173) included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting were considered for an April 1 update if a strong and convincing case was made by the requestor during the Committee's public meeting. The request needed to identify the reason why a new code was needed in April for purposes of the new technology process. Meeting participants and those reviewing the Committee meeting materials were provided the opportunity to comment on the expedited request. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950) for further discussion of the implementation of this prior April 1 update for purposes of the new technology add-on payment process.

However, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950 through 44956), we adopted an April 1 implementation date, in addition to the

annual October 1 update, beginning with April 1, 2022. We noted that the intent of this April 1 implementation date is to allow flexibility in the ICD–10 code update process. With this new April 1 update, CMS now uses the same process for consideration of all requests for an April 1 implementation date, including for purposes of the new technology add-on payment process (that is, the prior process for consideration of an April 1 implementation date only if a strong and convincing case was made by the requestor during the meeting no longer applies). We are continuing to use several aspects of our existing established process to implement new codes through the April 1 code update, which includes presenting proposals for April 1 consideration at the September ICD–10 Coordination and Maintenance Committee meeting, requesting public comments, reviewing the public comments, finalizing codes, and announcing the new codes with their assignments consistent with the new GROUPER release information. We note that under our established process, requestors indicate whether they are submitting their code request for consideration for an April 1 implementation date or an October 1 implementation date. The ICD–10 Coordination and Maintenance Committee makes efforts to accommodate the requested implementation date for each request submitted. However, the Committee determines which requests are to be presented for consideration for an April 1 implementation date or an October 1 implementation date. As discussed earlier in this section of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, there were code proposals presented for an April 1, 2025, implementation at the September 10–11, 2024, Committee meetings. Following the receipt of public comments, the code proposals were approved and finalized, therefore, there were new codes implemented April 1, 2025.

Consistent with the process we outlined for the April 1 implementation date, we announced the new codes in November 2024 and provided the updated code files in December 2024. The NCHS provided the ICD–10–CM Official Guidelines for Coding and Reporting in January 2025. By February 27, 2025, we made available the updated Version 42.1 ICD–10 MS–DRG GROUPER software and related materials on the CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*.

ICD–9–CM addendum and code title information are published on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/addendum*. ICD–10–CM and ICD–10–PCS addendum and code title information are published on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10*. CMS also sends electronic files containing all ICD–10–CM and ICD–10–PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers. Information on ICD–10–CM diagnosis codes, along with the Official ICD–10–CM Coding Guidelines, can be found on the CDC website at *https://www.cdc.gov/nchs/icd/icd-10-cm/files.html*. Additionally, information on new, revised, and deleted ICD–10–CM diagnosis and ICD–10–PCS procedure codes is provided to the AHA for publication in the Coding Clinic for ICD–10. The AHA also distributes coding update information to publishers and software vendors.

For FY 2025, there are currently 74,044 diagnosis codes and 78,986 procedure codes. As displayed in Table 6A.—New Diagnosis Codes and in Table 6B.—New Procedure Codes associated with this FY 2026 IPPS/LTCH PPS proposed rule (and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*), there are 487 new diagnosis codes and 14 new procedure codes that have been finalized for FY 2026 at the time of the development of this FY 2026 IPPS/LTCH PPS proposed rule and 50 new procedure codes that were effective with discharges on and after April 1, 2025. The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

12. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS–DRGs where the implantation of a device that subsequently failed or was recalled determined the base MS–DRG assignment. At that time, we specified that we would reduce a hospital's IPPS payment for those MS–DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Proposed Changes for FY 2026

As discussed in section II.C.3. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, for FY 2026, under MDC 01, we are proposing to add procedure code combinations that describe the insertion of multiple or single array generators and the insertion of neurostimulator lead into the brain or cerebral ventricle and the procedure code combinations that describe the insertion of a neurostimulator generator into the skull and the insertion of a neurostimulator lead into the brain to a new ''intracranial neurostimulator implant'' logic list in MS–DRGs 020, 021, and 022. A subset of the procedures currently assigned to MS–DRGs 023 and 024 are being proposed for reassignment to MS–DRGs 020, 021, and 022. We are also proposing to revise the title of MS–DRG 020 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with MCC'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC''; revise the title of MS–DRG 021 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with CC'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with CC''; revise the title of MS–DRG 022 from ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage without CC/MCC'' to ''Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant without CC/MCC''; revise the title of MS–DRG 023 from ''Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator'' to ''Craniotomy with Acute Complex CNS Principal Diagnosis with MCC or Antineoplastic Implant''; and revise the title of MS–DRG 024 from ''Craniotomy with Major Device Implant or Acute Complex CNS Principal

Diagnosis without MCC'' to ''Craniotomy with Acute Complex CNS Principal Diagnosis without MCC''.

Additionally, as discussed in section II.C.4. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, for FY 2026, under MDC 05, we are proposing new MS–DRG 209 (Complex Aortic Arch Procedures) and new MS–DRG 213 (Endovascular Abdominal Aorta with Iliac Branch Procedures). A subset of the procedures currently assigned to MS–DRGs 216, 217, 218, 219, 220 and 221 are being proposed for assignment to proposed new MS–DRG 209 and a subset of the procedures currently assigned to MS–DRGs 268, 269, 270, 271, and 272 are being proposed for assignment to proposed new MS–DRG 213.

As stated in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24409), we generally map new MS–DRGs onto the list when they are formed from procedures previously assigned to MS–DRGs that are already on the list. Currently, MS–DRGs 023, 024, 216, 217, 218, 219, 220, 221, 268, 269, 270, 271, and 272 are on the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit as shown in the following table. Therefore, we are proposing that if the applicable proposed MS–DRG changes are finalized, we also would add MS–DRGs 020, 021, and 022 and proposed new MS–DRGs 209 and 213 to the list of MS–DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit and make conforming changes to the titles of MS–DRGs 023 and 024 in the list of MS–DRGs subject to the policy as reflected in the following table. We are also proposing to continue to include the existing MS–DRGs currently subject to the policy as displayed in the following table.

MDC	MS–DRG	MS–DRG title
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC.
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC.
01	020	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with MCC.
01	021	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant with CC.
01	022	Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage or Intracranial Neurostimulator Implant without CC/MCC.
01	023	Craniotomy with Acute Complex CNS Principal Diagnosis with MCC or Antineoplastic Implant.
01	024	Craniotomy with Acute Complex CNS Principal Diagnosis without MCC.
01	025	Craniotomy and Endovascular Intracranial Procedures with MCC.
01	026	Craniotomy and Endovascular Intracranial Procedures with CC.
01	027	Craniotomy and Endovascular Intracranial Procedures without CC/MCC.
01	040	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC.
01	041	Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator.
01	042	Peripheral, Cranial Nerve and Other Nervous System Procedures without CC/MCC.
03	140	Major Head and Neck Procedures with MCC.
03	141	Major Head and Neck Procedures with CC.
03	142	Major Head and Neck Procedures without CC/MCC.
05	209	Complex Aortic Arch Procedures.
05	213	Endovascular Abdominal Aorta with Iliac Branch Procedures.
05	215	Other Heart Assist System Implant.
05	216	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with MCC.
05	217	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with CC.
05	218	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization without CC/MCC.
05	219	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with MCC.
05	220	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with CC.
05	221	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization without CC/MCC.
05	242	Permanent Cardiac Pacemaker Implant with MCC.
05	243	Permanent Cardiac Pacemaker Implant with CC.
05	244	Permanent Cardiac Pacemaker Implant without CC/MCC.
05	245	AICD Generator Procedures.
05	258	Cardiac Pacemaker Device Replacement with MCC.
05	259	Cardiac Pacemaker Device Replacement without MCC.
05	260	Cardiac Pacemaker Revision Except Device Replacement with MCC.
05	261	Cardiac Pacemaker Revision Except Device Replacement with CC.
05	262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC.
05	265	AICD Lead Procedures.
05	266	Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC.
05	267	Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC.
05	268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC.
05	269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC.
05	270	Other Major Cardiovascular Procedures with MCC.
05	271	Other Major Cardiovascular Procedures with CC.
05	272	Other Major Cardiovascular Procedures without CC/MCC.
05	275	Cardiac Defibrillator Implant with Cardiac Catheterization and MCC.
05	276	Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator.

MDC	MS–DRG	MS–DRG title
05	277	Cardiac Defibrillator Implant without MCC.
05	319	Other Endovascular Cardiac Valve Procedures with MCC.
05	320	Other Endovascular Cardiac Valve Procedures without MCC.
08	461	Bilateral or Multiple Major Joint Procedures of Lower Extremity with MCC.
08	462	Bilateral or Multiple Major Joint Procedures of Lower Extremity without MCC.
08	466	Revision of Hip or Knee Replacement with MCC.
08	467	Revision of Hip or Knee Replacement with CC.
08	468	Revision of Hip or Knee Replacement without CC/MCC.
08	469	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement.
08	470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC.
08	521	Hip Replacement with Principal Diagnosis of Hip Fracture with MCC.
08	522	Hip Replacement with Principal Diagnosis of Hip Fracture without MCC.

The final list of MS–DRGs subject to the IPPS policy for replaced devices offered without cost or with a credit will be included in the FY 2026 IPPS/LTCH PPS final rule and also will be issued to providers in the form of a Change Request (CR).

D. Recalibration of the FY 2026 MS–DRG Relative Weights

1. Data Sources for Developing the Relative Weights

Consistent with our established policy, in developing the MS–DRG relative weights for FY 2026, we are proposing to use two data sources: claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2024 MedPAR data used in this proposed rule include discharges occurring on October 1, 2023, through September 30, 2024, based on bills received by CMS through December 31, 2024, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS).

The FY 2024 MedPAR file used in calculating the relative weights includes data for approximately 6,860,436 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR ''GHO Paid'' indicator field on the claim record is equal to ''1'' or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR ''Indirect Medical Education (IME)'' payment field, indicating that the claim was an ''IME only'' claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the December 2024 update of the FY 2024 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called ''claim type.'' Claim type ''60'' indicates that the claim was an inpatient claim paid as fee-for-service. Claim types ''61'', ''62'', ''63'', and ''64'' relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2026 also excludes claims with claim type values not equal to ''60.'' The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. In addition, the data exclude Rural Emergency Hospitals (REHs), including hospitals that subsequently became REHs after the period from which the data were taken. We note that the proposed FY 2026 relative weights are based on the ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes from the FY 2024 MedPAR claims data, grouped through the ICD–10 version of the proposed FY 2026 GROUPER (Version 43).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the Healthcare Cost Report Information System (HCRIS). In general, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, for this proposed rule, we used the December 2024 update of the FY 2023 HCRIS for calculating the FY 2026 cost-based relative weights. Consistent with our historical practice, for this FY 2026 proposed rule, we are providing the version of the HCRIS from which we calculated these 19 cost-to charge-ratios (CCRs) on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. Click on the link on the left side of the screen titled ''FY 2026 IPPS Proposed Rule Home Page'' or ''Acute Inpatient Files for Download.''

2. Methodology for Calculation of the Relative Weights

a. General

We calculated the proposed FY 2026 relative weights based on 19 CCRs. The methodology we are proposing to use to calculate the FY 2026 MS–DRG cost-based relative weights based on claims data in the FY 2024 MedPAR file and data from the FY 2023 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the proposed FY 2026 MS–DRG classifications discussed in sections II.B. and II.C. of the preamble of this proposed rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS–DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2024 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis.

Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

Section 108 of the Further Consolidated Appropriations Act, 2020 provides that, for cost reporting periods beginning on or after October 1, 2020, costs related to hematopoietic stem cell acquisition for the purpose of an allogeneic hematopoietic stem cell transplant shall be paid on a reasonable

cost basis. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of the reasonable cost basis payment for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842). For FY 2022 and subsequent years, we subtract the hematopoietic stem cell acquisition charges from the total charges on each transplant bill that showed hematopoietic stem cell acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than $30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.
- At least 92.6 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.
- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS–DRG.
- Effective October 1, 2008, because hospital inpatient claims include a Present on Admission (POA) field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to ''Y'' for ''Yes'' for all claims that otherwise have an ''N'' (No) or a ''U'' (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a ''Y'' indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS–DRG). If the particular condition is not present on admission (that is, an ''N'' indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS–DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS–DRGs prior to the relative weight-setting process, the relative weights of these particular MS–DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS–DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to ''Y'' only for relative weight-setting purposes for all claims that otherwise have an ''N'' or a ''U'' in the POA field. This resetting ''forced'' the more costly HAC claims into the higher severity MS–DRGs as appropriate, and the relative weights calculated for each MS–DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals' participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI Initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS' Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/Bundled-Payments/index.html* and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the BPCI Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 1115A of the Act, is comprised of a single payment and risk track, which bundles payments for multiple services that beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/bpci-advanced*. Consistent with our policy for FY 2024, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2025, we continue to believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted previously, these hospitals are still receiving IPPS payments under section 1886(d) of the Act. Consistent with the FY 2025 IPPS/LTCH PPS final rule, we are also proposing to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS

payment modeling and ratesetting calculations.

The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS–DRG for each of the 19 cost groups so that each MS–DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the proposed national average CCRs developed from the FY 2023 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in a supplemental data file, Cost Center HCRIS Lines Supplemental Data File, posted via the internet on the CMS website for this final rule and available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*. The supplemental data file shows the lines on the cost report and the corresponding revenue codes that we used to create the 19 proposed national cost center CCRs. If we receive comments about the groupings in this supplemental data file, we may consider these comments as we finalize our policy.

Consistent with historical practice, we account for rare situations of non-monotonicity in a base MS–DRG and its severity levels, where the mean cost in the higher severity level is less than the mean cost in the lower severity level, in determining the relative weights for the different severity levels. If there are initially non-monotonic relative weights in the same base DRG and its severity levels, then we combine the cases that group to the specific non-monotonic MS–DRGs for purposes of relative weight calculations. For example, if there are two non-monotonic MS–DRGs, combining the cases across those two MS–DRGs results in the same relative weight for both MS–DRGs. The relative weight calculated using the combined cases for those severity levels is monotonic, effectively removing any non-monotonicity with the base DRG and its severity levels. For this FY 2026 proposed rule, this calculation was applied to address non-monotonicity for cases that grouped to the following: MS–DRG 016 and MS–DRG 017, MS–DRG 095 and MS–DRG 096, MS–DRG 504 and MS–DRG 505, MS–DRG 797 and MS–DRG 798. In the supplemental file titled AOR/BOR File, we include statistics for the affected MS–DRGs both separately and with cases combined.

We are inviting public comments on our proposals related to recalibration of the proposed FY 2026 relative weights and the changes in relative weights from FY 2025.

b. Relative Weight Calculation for MS–DRG 018

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58451 through 58453), we created MS–DRG 018 for cases that include procedures describing CAR T-cell therapies. We also finalized our proposal to modify our existing relative weight methodology to ensure that the relative weight for MS–DRG 018 appropriately reflects the relative resources required for providing CAR T-cell therapy outside of a clinical trial, while still accounting for the clinical trial cases in the overall average cost for all MS–DRGs (85 FR 58599 through 58600). Specifically, we stated that clinical trial claims that group to new MS–DRG 018 would not be included when calculating the average cost for MS–DRG 018 that is used to calculate the relative weight for this MS–DRG, so that the relative weight reflects the costs of the CAR T-cell therapy drug. We stated that we identified clinical trial claims as claims that contain ICD–10–CM diagnosis code Z00.6 or contain standardized drug charges of less than $373,000, which was the average sales price of KYMRIAH and YESCARTA, the two CAR T-cell biological products licensed to treat relapsed/refractory large B-cell lymphoma as of the time of the development of the FY 2021 final rule. In addition, we stated that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for new MS–DRG 018 to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will not be included when calculating the average cost for new MS–DRG 018 to the extent such cases can be identified in the historical data.

We also finalized our proposal to calculate an adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs and for purposes of budget neutrality and outlier simulations. We calculate this adjustor by dividing the average cost for cases that we identify as clinical trial cases by the average cost for cases that we identify as non-clinical trial cases, with the additional refinements that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for cases not determined to be clinical trial cases to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will be included when calculating the average cost for cases determined to be clinical trial cases to the extent such cases can be identified in the historical data. We stated that to the best of our knowledge, there were no claims in the historical data used in the calculation of this adjustment for cases involving a clinical trial of a different product, and to the extent the historical data contain claims for cases involving expanded access use of immunotherapy we believe those claims would have drug charges less than $373,000.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58842), we also finalized an adjustment to the payment amount for applicable clinical trial and expanded access use immunotherapy cases that group to MS–DRG 018, and indicated that we would provide instructions for identifying these claims in separate guidance. Following the issuance of the FY 2021 IPPS/LTCH PPS final rule, we issued guidance [9] stating that providers may enter a Billing Note NTE02 ''Expand Acc Use'' on the electronic claim 837I or a remark ''Expand Acc Use'' on a paper claim to notify the MAC of expanded access use of CAR T-cell therapy. In this case, the MAC would add payer-only condition code ''ZB'' so that Pricer will apply the payment adjustment in calculating payment for the case. In cases when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the provider may enter a Billing Note NTE02 ''Diff Prod Clin Trial'' on the electronic claim 837I or a remark ''Diff Prod Clin Trial'' on a paper claim. In this case, the MAC would add payer-only condition code ''ZC'' so that the Pricer will not apply the payment adjustment in calculating payment for the case.

In the FY 2022 IPPS/LTCH PPS final rule, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other

[9] *https://www.cms.gov/files/document/r10571cp.pdf.*

immunotherapies (86 FR 44798 through 44806). We also finalized our proposal to continue to use the proxy of standardized drug charges of less than $373,000 (86 FR 44965) to identify clinical trial claims. We also finalized use of this same proxy for the FY 2023 IPPS/LTCH PPS final rule (87 FR 48894).

Following the issuance of the FY 2023 IPPS/LTCH PPS final rule, we issued guidance [10] stating where there is expanded access use of immunotherapy, the provider may submit condition code ''90'' on the claim so that Pricer will apply the payment adjustment in calculating payment for the case. We stated that MACs would no longer append Condition Code 'ZB' to inpatient claims reporting Billing Note NTE02 ''Expand Acc Use'' on the electronic claim 837I or a remark ''Expand Acc Use'' on a paper claim, effective for claims for discharges that occur on or after October 1, 2022.

In the FY 2024 IPPS/LTCH PPS final rule, we explained that the MedPAR claims data now includes a field that identifies whether or not the claim includes expanded access use of immunotherapy. We stated that for the FY 2022 MedPAR claims data, this field identifies whether or not the claim includes condition code ZB, and for the FY 2023 MedPAR data and subsequent years, this field will identify whether or not the claim includes condition code 90. We further noted that the MedPAR files now also include a variable that indicates whether the claim includes the payer-only condition code ''ZC'', which identifies a case involving the clinical trial of a different product where the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner.

Accordingly, and as discussed further in the FY 2024 IPPS/LTCH PPS final rule, we finalized two modifications to our methodology for identifying clinical trial claims and expanded access use claims in MS–DRG 018 (88 FR 58791). First, we finalized to exclude claims with the presence of condition code ''90'' (or, for FY 2024 ratesetting, which was based on the FY 2022 MedPAR data, the presence of condition code ''ZB'') and claims that contain ICD–10–CM diagnosis code Z00.6 without payer-only code ''ZC'' that group to MS–DRG 018 when calculating the average cost for MS–DRG 018. Second, we finalized to no longer use the proxy of standardized drug charges of less than $373,000 to identify clinical trial claims and expanded access use cases when calculating the average cost for MS–DRG 018. Accordingly, we finalized that in calculating the relative weight for MS–DRG 018 for FY 2024, only those claims that group to MS–DRG 018 that (1) contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'' or (2) contain condition code ''ZB'' (or, for subsequent fiscal years, condition code ''90'') would be excluded from the calculation of the average cost for MS–DRG 018. Consistent with this, we also finalized modifications to our calculation of the adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs. We refer readers to the FY 2024 IPPS/LTCH PPS final rule for further discussion of these modifications (88 FR 58791).

Consistent with the FY 2025 IPPS/LTCH PPS final rule, in this proposed rule, for FY 2026 we are proposing to continue to use our methodology as modified in the FY 2024 IPPS/LTCH PPS final rule for identifying clinical trial claims and expanded access use claims in MS–DRG 018, with an additional modification as discussed in this section. First, we exclude claims with the presence of condition code ''90'' and claims that contain ICD–10–CM diagnosis code Z00.6 without payer-only code ''ZC'' that group to MS–DRG 018 when calculating the average cost for MS–DRG 018. Second, we no longer use the proxy of standardized drug charges of less than $373,000 to identify clinical trial claims and expanded access use cases when calculating the average cost for MS–DRG 018.

In section VI.H. of this proposed rule, we discuss our proposal to apply the payment adjustment for clinical trial and expanded access use immunotherapy cases to other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost. To mirror this proposed change within our relative weight methodology, we are proposing to also exclude claims with standardized drug charges below the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 (that is, claims that contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'') when we calculate the average cost for MS–DRG 018. For this proposed rule, based on the December 2024 update of the FY 2024 MedPAR file, we estimate that the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 (that is, claims that contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'') is $29,819. We are proposing to apply this policy for 2 years (that is, in our relative weight methodology for MS–DRG 018 for FYs 2026 and 2027), until the claims data reflects the addition of the condition code indicating that the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, which then would be able to be used to identify these cases such that they can be identified for exclusion from the calculation of the average cost of MS–DRG 018. We are also proposing, for the purpose of performing this trim, to update the median standardized drug charge of claims identified as clinical trials in MS–DRG 018 based on more recent data for the final rule.

Accordingly, we are proposing that in calculating the relative weight for MS–DRG 018 for FY 2026, in identifying clinical trial claims and expanded access use claims and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, only those claims that group to MS–DRG 018 that (1) contain ICD–10–CM diagnosis code Z00.6 and do not include payer-only code ''ZC'', (2) contain condition code ''90'', or (3) contain standardized drug charges below the median standardized drug charge of clinical trial cases in MS–DRG 018 would be excluded from the calculation of the average cost for MS–DRG 018.

With respect to claims that group to MS–DRG 018 and are identified as clinical trials or involve expanded access use of the CAR T-cell therapy or other immunotherapy, we note that there are some cases that appear to include drug charges similar to cases not identified as clinical trials or involving expanded access use. These charges are generally in revenue center 0891, Cell Therapy Drug Charges. We are seeking comments on potential reasons for why claims identified as clinical trials or involving expanded access use, in which the provider would typically receive the product at no cost, would have charges in revenue center 0891, Cell Therapy Drug Charges.

We are also proposing to continue to use the methodology as modified in the FY 2024 IPPS/LTCH PPS final rule to calculate the adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs, with the same proposed modification as described previously to identify other cases where the immunotherapy product is not

[10] *https://www.cms.gov/files/document/r11727cp.pdf.*

purchased in the usual manner, such as obtained at no cost:

- Calculate the average cost for cases assigned to MS–DRG 018 that (a) contain ICD–10–CM diagnosis code Z00.6 and do not contain condition code ''ZC'', (b) contain condition code ''90'', or (c) contain standardized drug charges below the median standardized drug charge of clinical trial cases in MS–DRG 018.
- Calculate the average cost for all other cases assigned to MS–DRG 018.
- Calculate an adjustor by dividing the average cost calculated in step 1 by the average cost calculated in step 2.
- Apply the adjustor calculated in step 3 to the cases identified in step 1 as applicable clinical trial or expanded access use cases, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, then add this adjusted case count to the non-clinical trial case count prior to calculating the average cost across all MS–DRGs.

Under our proposal to continue to apply this methodology, with the proposed modification as described, based on the December 2024 update of the FY 2024 MedPAR file used for this proposed rule, we estimated that the average costs of cases assigned to MS–DRG 018 that are identified as clinical trial cases ($88,484) were 23 percent of the average costs of the cases assigned to MS–DRG 018 that are identified as non-clinical trial cases ($385,147). Accordingly, as we did for FY 2025, we are proposing to adjust the transfer-adjusted case count for MS–DRG 018 by applying the proposed adjustor of 0.23 to the applicable clinical trial and expanded access use immunotherapy cases, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, and to use this adjusted case count for MS–DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of this proposed rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, was adjusted by 0.23. As we did for FY 2025, we are applying the same adjustor for the applicable cases that group to MS–DRG 018 for purposes of budget neutrality and outlier simulations. We are also proposing to update the value of the adjustor based on more recent data for the final rule.

d. Cap for Relative Weight Reductions

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. We also finalized a budget neutrality adjustment to the standardized amount for all hospitals to ensure that application of the permanent 10-percent cap does not result in an increase or decrease of estimated aggregate payments. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion of this policy. In the Addendum to this IPPS/LTCH PPS proposed rule, we present the proposed budget neutrality adjustment for reclassification and recalibration of the FY 2026 MS–DRG relative weights with application of this cap. We are also making available on the CMS website a supplemental file demonstrating the application of the permanent 10 percent cap for FY 2026. For a further discussion of the proposed budget neutrality adjustment for FY 2026, we refer readers to the Addendum of this proposed rule.

3. Development of National Average Cost-To-Charge Ratios (CCRs)

We developed the proposed national average CCRs as follows:

Using the FY 2023 cost report data, we removed CAHs, REHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. Then we created CCRs for each provider for each cost center (see the supplemental data file for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. Then we took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D–3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D–3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS–DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 ''costs'' across each MS–DRG to produce a total standardized cost for the MS–DRG. The average standardized cost for each MS–DRG was then computed as the total standardized cost for the MS–DRG divided by the transfer-adjusted case count for the MS–DRG. The average cost for each MS–DRG was then divided by the national average standardized cost per case to determine the relative weight. The proposed FY 2026 cost-based relative weights were then normalized by an adjustment factor of 1.92111 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act. We then applied the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year; specifically for those MS–DRGs for which the relative weight otherwise would have declined by more than 10 percent from the FY 2025 relative weight, we set the proposed FY 2026 relative weight equal to 90 percent of the FY 2025 relative weight. The proposed relative weights for FY 2026 as set forth in Table 5 associated with this proposed rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this cap.

The proposed 19 national average CCRs for FY 2026 are as follows:

NATIONAL AVERAGE CCRS

Group	CCR
Routine Days	0.395
Intensive Days	0.341
Drugs and Cellular Therapies	0.179
Supplies & Equipment	0.304
Implantable Devices	0.265
Inhalation Therapy	0.149
Therapy Services	0.26
Anesthesia	0.074
Labor & Delivery	0.367
Operating Room	0.156
Cardiology	0.087
Cardiac Catheterization	0.100
Laboratory	0.099
Radiology	0.124
MRIs	0.066
CT Scans	0.032
Emergency Room	0.141

NATIONAL AVERAGE CCRS—Continued

Group	CCR
Blood and Blood Products	0.238
Other Services	0.330

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS–DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We are proposing to use that same case threshold in recalibrating the proposed MS–DRG relative weights for FY 2026. Using data from the FY 2024 MedPAR file, there were 10 MS–DRGs that contain fewer than 10 cases. For FY 2026, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS–DRGs, we are proposing to compute relative weights for the low-volume MS–DRGs by adjusting their final FY 2025 relative weights by the percentage change in the average weight of the cases in other MS–DRGs from FY 2025 to FY 2026. The crosswalk table is as follows.

LOW-VOLUME MS–DRGS

Low-volume MS–DRG	MS–DRG title	Crosswalk to MS–DRG
010	Pancreas Transplant	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
096	Bacterial and Tuberculous Infections of Nervous System without CC/MCC.	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC.	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
789	Neonates, Died or Transferred to Another Acute Care Facility	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate.	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
791	Prematurity with Major Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
792	Prematurity without Major Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
793	Full-Term Neonate with Major Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
794	Neonate with Other Significant Problems	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
795	Normal Newborn	Final FY 2025 relative weight (adjusted by percent change in average weight of the cases in other MS–DRGs).

E. Add-On Payments for New Services and Technologies for FY 2026

1. Background

Effective for discharges beginning on or after October 1, 2001, section 1886(d)(5)(K)(i) of the Act requires the Secretary to establish a mechanism to recognize the costs of new medical services and technologies (sometimes collectively referred to in this section as ''new technologies'') under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. The regulations at 42 CFR 412.87 implement these provisions and § 412.87(b) specifies three criteria for a new medical service or technology to receive the additional payment: (1) the medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. In addition, certain transformative new devices and antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway, as set forth in the regulations at § 412.87(c) and (d).

We note that section 1886(d)(5)(K)(i) of the Act requires the Secretary to establish a mechanism to recognize the costs of new medical services and technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act. Therefore, as discussed in prior rulemaking (72 FR 47307 through 47308), we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs.

In this proposed rule, we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For further discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42300), and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58736 through 58742).

a. New Technology Add-On Payment Criteria

(1) Newness Criterion

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will no longer be considered ''new'' for purposes of new medical service or technology add-on payments after CMS has recalibrated the MS–DRGs, based on available data, to reflect the cost of the technology. We note that we do not consider a service

or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a new FDA marketing authorization, it may not necessarily be considered ''new'' for purposes of new technology add-on payments if it is ''substantially similar'' to another medical product that was market authorized by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically whether: (1) a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) a product is assigned to the same or a different MS–DRG; and (3) the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352) and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

(2) Cost Criterion

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges of the cases involving a new medical service or technology will exceed a threshold amount that is the lesser of 75 percent of the standardized amount (increased to reflect the difference between cost and charges) or 75 percent of one standard deviation beyond the geometric mean standardized charge for all cases in the MS–DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant MS–DRGs if the new medical service or technology occurs in many different MS–DRGs). The MS–DRG threshold amounts generally used in evaluating new technology add-on payment applications for FY 2026 are presented in a data file that is available, along with the other data files associated with the FY 2025 IPPS/LTCH PPS final rule, correction notice and interim final action with comment period, on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

We note that, under the policy finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58603 through 58605), beginning with FY 2022, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for all applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.

As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the proposed thresholds for applications for new technology add-on payments for FY 2027 are presented in a data file that is available on the CMS website, along with the other data files associated with this FY 2026 proposed rule, by clicking on the FY 2026 IPPS Proposed Rule Home Page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

In the September 7, 2001, final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed that applicants should submit a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Specifically, applicants should submit a sample of sufficient size to enable us to undertake an initial validation and analysis of the data. We also discussed in the September 7, 2001, final rule (66 FR 46917) the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR part 160 and subparts A and E of 45 CFR part 164, applies to claims information that providers submit with applications for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for further information on this issue.

(3) Substantial Clinical Improvement Criterion

Under the third criterion at § 412.87(b)(1), a medical service or technology must represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292), we prospectively codified in our regulations at § 412.87(b) the following aspects of how we evaluate substantial clinical improvement for purposes of new technology add-on payments under the IPPS:

- The totality of the circumstances is considered when making a determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries.
- A determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries means—

++ The new medical service or technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments;

++ The new medical service or technology offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable, or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods, and there must also be evidence that use of the new medical service or technology to make a diagnosis affects the management of the patient;

++ The use of the new medical service or technology significantly improves clinical outcomes relative to services or technologies previously available as demonstrated by one or more of the following: a reduction in at least one clinically significant adverse event, including a reduction in mortality or a clinically significant complication; a decreased rate of at least one subsequent diagnostic or therapeutic intervention; a decreased number of future hospitalizations or physician visits; a more rapid beneficial resolution of the disease process treatment including, but not limited to, a reduced length of stay or recovery time; an improvement in one or more activities of daily living; an

improved quality of life; or, a demonstrated greater medication adherence or compliance; or

++ The totality of the circumstances otherwise demonstrates that the new medical service or technology substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

• Evidence from the following published or unpublished information sources from within the United States or elsewhere may be sufficient to establish that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries: clinical trials, peer reviewed journal articles; study results; meta-analyses; consensus statements; white papers; patient surveys; case studies; reports; systematic literature reviews; letters from major healthcare associations; editorials and letters to the editor; and public comments. Other appropriate information sources may be considered.

• The medical condition diagnosed or treated by the new medical service or technology may have a low prevalence among Medicare beneficiaries.

• The new medical service or technology may represent an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of a subpopulation of patients with the medical condition diagnosed or treated by the new medical service or technology.

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292) for additional discussion of the evaluation of substantial clinical improvement for purposes of new technology add-on payments under the IPPS.

We note, consistent with the discussion in the FY 2003 IPPS final rule (67 FR 50015), that while FDA has regulatory responsibility for decisions related to marketing authorization (for example, approval, clearance, etc.), we do not rely upon FDA criteria in our evaluation of substantial clinical improvement for purposes of determining what services and technologies qualify for new technology add-on payments under Medicare. This criterion does not depend on the standard of safety and effectiveness on which FDA relies but on a demonstration of substantial clinical improvement in the Medicare population.

b. Alternative Inpatient New Technology Add-On Payment Pathway

Beginning with applications for FY 2021 new technology add-on payments, under the regulations at § 412.87(c), a medical device that is part of FDA's Breakthrough Devices Program may qualify for the new technology add-on payment under an alternative pathway. Additionally, under the regulations at § 412.87(d) for certain antimicrobial products, beginning with FY 2021, a drug that is designated by FDA as a Qualified Infectious Disease Product (QIDP), and, beginning with FY 2022, a drug that is approved by FDA under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD), may also qualify for the new technology add-on payment under an alternative pathway. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note that CMS reviews the application based on the information provided by the applicant only under the alternative pathway specified by the applicant at the time of application submission. To receive approval for the new technology add-on payment under that alternative pathway, the technology must have the applicable FDA designation and meet all other requirements in the regulations in § 412.87(c) and (d), as applicable.

(1) Alternative Pathway for Certain Transformative New Devices

For applications received for new technology add-on payments for FY 2021 and subsequent fiscal years, a medical device designated under FDA's Breakthrough Devices Program [11] that has received FDA marketing authorization will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to meet the requirement under § 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway, a medical device that has received a Breakthrough Device designation, and then received FDA marketing authorization (that is, has been approved or cleared by, or had a De Novo classification request granted by, FDA) for the indication covered by the Breakthrough Device designation, will need to meet the requirements of § 412.87(c). We note that in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736), we clarified our policy that a new medical device under this alternative pathway must receive marketing authorization for the indication covered by the Breakthrough Devices Program designation. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736) for further discussion regarding this clarification.

(2) Alternative Pathway for Certain Antimicrobial Products

For applications received for new technology add-on payments for certain antimicrobial products, beginning with FY 2021, if a technology is designated by FDA as a QIDP and received FDA marketing authorization, and, beginning with FY 2022, if a drug is approved under FDA's LPAD pathway and used for the indication approved under the LPAD pathway, it will be considered not substantially similar to an existing technology for purposes of new technology add-on payments and will not need to meet the requirement that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway for QIDPs and LPADs, a medical product that has received FDA marketing authorization and is designated by FDA as a QIDP or approved under the LPAD pathway will need to meet the requirements of § 412.87(d). We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy.

We note that, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739), we clarified that a new medical product seeking approval for the new technology add-on payment under the alternative pathway for QIDPs must receive FDA marketing authorization for the indication covered by the QIDP designation. We also finalized our policy to expand our alternative new technology add-on payment pathway for certain antimicrobial products to include products approved under the LPAD pathway and used for the indication approved under the LPAD pathway.

c. Additional Payment for New Medical Service or Technology

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high

[11] Breakthrough Devices Program *https://www.fda.gov/medical-devices/how-study-and-market-your-device/breakthrough-devices-program.*

costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. As noted previously, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (72 FR 47307 through 47308).

For discharges occurring before October 1, 2019, under § 412.88, if the costs of the discharge (determined by applying operating cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), CMS made an add-on payment equal to the lesser of: (1) 50 percent of the costs of the new medical service or technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment.

Beginning with discharges on or after October 1, 2019, for the reasons discussed in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300), we finalized an increase in the new technology add-on payment percentage, as reflected at § 412.88(a)(2)(ii). Specifically, for a new technology other than a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 65 percent of the costs of the new medical service or technology; or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product approved under FDA's LPAD pathway, beginning with discharges on or after October 1, 2020, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. As set forth in § 412.88(b)(2), unless the discharge qualifies for an outlier payment, the additional Medicare payment will be limited to the full MS–DRG payment plus 65 percent (or 75 percent for certain antimicrobial products (QIDPs and LPADs)) of the estimated costs of the new technology or medical service. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300) for further discussion on the increase in the new technology add-on payment beginning with discharges on or after October 1, 2019.

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69245 through 69252), we finalized an increase in the new technology add-on payment percentage, reflected at § 412.88(a)(2)(ii)(C) and (b)(2)(iv), that for certain gene therapies approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule that are indicated and used specifically for the treatment of sickle cell disease (SCD), effective with discharges on or after October 1, 2024 and concluding at the end of the 2- to 3-year newness period for such therapy, if the costs of a discharge (determined by applying CCRs as described in § 412.84(h)) involving the use of such therapy for the treatment of SCD exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. We noted that these payment amounts would only apply to Casgevy™ (exagamglogene autotemcel) and Lyfgenia™ (lovotibeglogene autotemcel), when indicated and used specifically for the treatment of SCD, which were approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69128 through 69135, and 89 FR 69188 through 69196).

We note that, consistent with the prospective nature of the IPPS, we finalize the new technology add on payment amount for technologies approved or conditionally approved for new technology add-on payments in the final rule for each fiscal year and do not make mid-year changes to new technology add-on payment amounts. Updated cost information may be submitted and included in rulemaking to be considered for the following fiscal year.

Section 503(d)(2) of the MMA (Pub. L. 108–173) provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of the MMA, add-on payments for new medical services or technologies for FY 2005 and subsequent years have not been subjected to budget neutrality.

d. Evaluation of Eligibility Criteria for New Medical Service or Technology Applications

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulation at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We specified that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. In the FY 2021 IPPS/LTCH PPS final rule, to more precisely describe the various types of FDA approvals, clearances and classifications that we consider under our new technology add-on payment policy, we finalized a technical clarification to the regulation to indicate that new technologies must receive FDA marketing authorization [12] [13] (such as pre-market approval (PMA); 510(k) clearance; the granting of a De Novo classification request; or approval of a New Drug Application (NDA) or Biologics License Application (BLA)) by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered (85 FR

[12] How to Study and Market Your Device *https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/how-study-and-market-your-device.*

[13] Types of Applications *https://www.fda.gov/drugs/how-drugs-are-developed-and-approved/types-applications.*

58742). Consistent with our longstanding policy, we consider FDA marketing authorization as representing that a product has received FDA approval or clearance, or has been granted a De Novo classification request when considering eligibility for the new technology add-on payment.

Additionally, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58739 through 58742), we finalized our proposal to provide conditional approval for new technology add-on payment for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products at § 412.87(d) that does not receive FDA marketing authorization by July 1 prior to the particular fiscal year for which the applicant applied for new technology add-on payments, provided that the technology otherwise meets the applicable add-on payment criteria. Under this policy, cases involving eligible antimicrobial products would begin receiving the new technology add-on payment sooner, effective for discharges the quarter after the date of FDA marketing authorization, provided that the technology receives FDA marketing authorization before July 1 of the fiscal year for which the applicant applied for new technology add-on payments.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958) and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69242 through 69245), beginning with the new technology add-on payment applications for FY 2025, for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance (for a 510k application or De Novo Classification request) or filing (for a PMA, NDA, or BLA) to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. See § 412.87(e) and further discussion in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958) and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69242 through 69245). As we have discussed in prior rulemaking, we consider the application to be complete when the full application has been submitted to FDA and FDA has provided documentation to the applicant indicating that FDA has determined that the application is sufficiently complete to allow for substantive review by FDA. We recognize that FDA processes and documentation may change over time, and the acceptance or filing documentation may vary depending on the type of FDA marketing authorization application the applicant has submitted to FDA. For example, we understand that FDA considers submission of a 510(k) or De Novo Classification request to be accepted for substantive review after the completion of either a refuse to accept (RTA) review or a technical screening process.[14] [15] Submissions of 510(k) and De Novo Classification requests undergo a technical screening process when they are submitted to FDA using the electronic Submission Template And Resource (eSTAR) process; 510(k) and De Novo Classification requests that are not submitted via eSTAR undergo an RTA review. Accordingly, FDA provides applicants using eSTAR with a review assignment notification to indicate that FDA has completed its technical screening process and has determined that the application is sufficiently complete to allow for substantive review. Therefore, new technology add-on payment applicants that have submitted a 510(k) application or De Novo Classification request to FDA through eSTAR must submit a copy of the review assignment notification to CMS (at the time of new technology add-on payment application) to establish the application is sufficiently complete to allow for substantive review by the FDA. We note that PMAs submitted using eSTAR that complete technical screening will still undergo a subsequent filing review by FDA, after which an application is determined to be sufficiently complete to allow for substantive review; therefore, we continue to require documentation of FDA filing for these applications.

In addition, we recognize that FDA does not conduct a new filing review for NDA or BLA applications that were the subject of a Complete Response Letter (CRL) and were subsequently resubmitted to FDA, even though resubmissions are considered a new review cycle.[16] [17] Therefore, beginning with the new technology add-on applications submitted for FY 2027, these new technology add-on payment applicants must provide to CMS a copy of the resubmission acknowledgement letter from FDA that indicates that FDA considers the resubmission to be sufficient to restart a review clock and provides the new goal date for FDA review of the application. We further note that if there are other processes not described here, or if there are further changes to FDA's review processes, consistent with our policy, applicants must provide to CMS the most up-to-date documentation that indicates FDA has determined that the application is sufficiently complete to allow for substantive review by FDA.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958), we also finalized that, beginning with FY 2025 applications, in order to be eligible for consideration for the new technology add-on payment for the upcoming fiscal year, an applicant for new technology add-on payments must have received FDA marketing authorization by May 1 (rather than July 1) of the year prior to the beginning of the fiscal year for which the application is being considered (except for an application that is submitted under the alternative pathway for certain antimicrobial products), as reflected at § 412.87(f)(2) and (3), as amended and redesignated in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958, 88 FR 59331).

e. Pharmaceutical & Technology Ombudsman (PTO)

Many interested parties (including device/biologic/drug developers or manufacturers, industry consultants, others) engage with CMS for coverage, coding, and payment questions or concerns. In order to streamline engagement by centralizing the different innovation pathways within CMS including new technology add-on payments, CMS utilizes the Pharmaceutical & Technology Ombudsman as an initial resource for interested parties. This Ombudsman is available to assist with all of the following:

- Help to point interested parties to or provide information and resources

[14] FDA and Industry Actions on Premarket Notification (510(k)) Submissions: Effect on FDA Review Clock and Goals Guidance for Industry and Food and Drug Administration Staff Document issued on October 3, 2022. *https://www.fda.gov/media/73507/download.*

[15] FDA and Industry Actions on De Novo Classification Requests: Effect on FDA Review Clock and Goals Guidance for Industry and Food and Drug Administration Staff Document issued on October 3, 2022. *https://www.fda.gov/media/107652/download.*

[16] SOPP 8405.1: Procedures for Resubmissions to an Application or Supplement. Version: 8 Effective Date: November 13, 2022. *https://www.fda.gov/media/84417/download.*

[17] 21 CFR 314.110, Complete response letter to the applicant *https://www.ecfr.gov/current/title-21/chapter-I/subchapter-D/part-314/subpart-D/section-314.110.*

where possible regarding process, requirements, and timelines.

- As necessary, coordinate and facilitate opportunities for interested parties to engage with various CMS components.
- Serve as a primary point of contact for interested parties and provide updates on developments where possible or appropriate.

We receive many questions from parties interested in pursuing new technology add-on payments who may not be entirely familiar with working with CMS. While we encourage interested parties to first review our resources available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech*, we know that there may be additional questions about the application process. Interested parties with further questions regarding Medicare's coverage, coding, and payment processes, and how they can navigate these processes, whether for new technology add-on payments or otherwise, should review the updated resource guide available at: *https://www.cms.gov/medicare/coding-billing/guide-medical-technology-companies-other-interested-parties*. Parties that would like to further discuss questions or concerns with CMS should contact the Pharmaceutical & Technology Ombudsman at *PharmTechOmbud@cms.hhs.gov*.

f. Application Information for New Medical Services or Technologies

Applicants for add-on payments for new medical services or technologies for FY 2027 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement (unless the application is under one of the alternative pathways as previously described), along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. CMS will review the application based on the information provided by the applicant under the pathway specified by the applicant at the time of application submission. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html*.

To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2027, once the application deadline has closed, CMS will post on its website a list of the applications submitted, along with a brief description of each technology as provided by the applicant.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990), we finalized our proposal to publicly post online new technology add-on payment applications, including the completed application forms, certain related materials, and any additional updated application information submitted subsequent to the initial application submission (except certain volume, cost and other information identified by the applicant as confidential), beginning with the application cycle for FY 2024, at the time the proposed rule is published. We also finalized that with the exception of information included in a confidential information section of the application, cost and volume information, and materials identified by the applicant as copyrighted or not otherwise releasable to the public, the contents of the application and related materials may be posted publicly, and that we will not post applications that are withdrawn prior to publication of the proposed rule. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990) for further information regarding this policy. Beginning with the new technology add-on applications submitted for FY 2027, we intend to include certain cost criterion information in this public posting; however, consistent with our current policy, cost and volume information will not be publicly posted. Consistent with current practice, certain cost and volume information may still be summarized and discussed in the proposed rule, but we intend to provide more succinct information as part of the summaries in the proposed and final rules regarding the applicant's assertions as to how the medical service or technology meets the cost criterion. Specifically, beginning with the FY 2027 applications, the public posting will include the applicant's explanation of the cost analysis methodology, including the step-by-step explanation of the columns used in the cost analysis spreadsheet attachment, any optional comments provided by the applicant, and information about the case weighted threshold and final inflated case weighted standardized charge per case, as is currently subject to discussion in the cost criterion analysis for each eligible application in the proposed rule. The cost analysis spreadsheet attachment and other charge values provided in the applicant's responses would not be included in the public posting. We believe that including the described cost criterion information in the public posting will further improve and streamline our evaluation process, while also further supporting transparency and engagement with interested parties.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the PRA and approved under OMB control number 0938–1347 and has an expiration date of December 31, 2026.

2. Public Input Before Publication of a Notice of Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of the MMA, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement. The process for evaluating new medical service and technology applications requires the Secretary to do all of the following:

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending.
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement.
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and

technologies for FY 2026 prior to publication of the FY 2026 IPPS/LTCH PPS proposed rule, we published a notice in the September 13, 2024, **Federal Register** (89 FR 74962) and held a virtual town hall meeting on December 11, 2024. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for the FY 2026 new medical service and technology add-on payment applications before the publication of the FY 2026 IPPS/LTCH PPS proposed rule.

Approximately 200 individuals attended the virtual town hall meeting. We posted the recordings of the virtual town hall on the CMS web page at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech*. We considered each applicant's presentation made at the town hall meeting, as well as written comments received by the December 16, 2024, deadline, in our evaluation of the new technology add-on payment applications for FY 2026 in the development of the FY 2026 IPPS/LTCH PPS proposed rule. In response to the published notice and the December 11, 2024, New Technology Town Hall meeting, we received written comments regarding the applications for FY 2026 new technology add on payments. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (89 FR 74962 through 74964), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion with regard to pending new technology add-on payment applications for FY 2026. Therefore, we are not summarizing any written comments in this proposed rule that are unrelated to the substantial clinical improvement criterion. In section II.E.5. of the preamble of this proposed rule, we summarize comments regarding individual applications, or, if applicable, indicate that there were no comments received in response to the New Technology Town Hall meeting notice or New Technology Town Hall meeting, at the end of each discussion of the individual applications.

3. ICD–10–PCS Section ''X'' Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD–10–PCS includes a new section containing the new Section ''X'' codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD–10–PCS Section ''X'' codes will be handled in the same manner as the decisions for all of the other ICD–10–PCS code changes. That is, proposals to create, delete, or revise Section ''X'' codes under the ICD–10–PCS structure will be referred to the ICD–10 Coordination and Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section ''X'' code within the structure of the ICD–10–PCS. We posted ICD–10–PCS Guidelines on the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes*, including guidelines for ICD–10–PCS Section ''X'' codes. We encourage providers to view the material provided on ICD–10–PCS Section ''X'' codes.

4. Proposed FY 2026 Status of Technologies Receiving New Technology Add-On Payments for FY 2025

In this section of the proposed rule, we discuss the proposed FY 2026 status of 42 technologies approved for 39 new technology add-on payments for FY 2025, as set forth in the tables that follow. Specifically, we present our proposals to continue the new technology add-on payments for FY 2026 for those technologies that were approved for the new technology add-on payment for FY 2025, and which are still considered ''new'' for purposes of new technology add-on payments for FY 2026. We also present our proposals to discontinue new technology add-on payments for FY 2026 for those technologies that were approved for the new technology add-on payment for FY 2025, and which are no longer considered ''new'' for purposes of new technology add-on payments for FY 2026.

Our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year, and, in general, we have extended new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69238 through 69242), we finalized that, beginning with new technology add-on payments for FY 2026, in assessing whether to continue the new technology add-on payments for those technologies that are first approved for new technology add-on payments in FY 2025 or a subsequent year, we will extend new technology add-on payments for an additional fiscal year when the 3-year anniversary date of the product's entry onto the U.S. market occurs on or after October 1 of that fiscal year. This change is effective beginning with those technologies that are initially approved for new technology add-on payments in FY 2025 or a subsequent year. For technologies that were first approved for new technology add-on payments prior to FY 2025, including for technologies we determine to be substantially similar to those technologies, we continue to use the midpoint of the upcoming fiscal year (April 1) when determining whether a technology would still be considered ''new'' for purposes of new technology add-on payments.

Table II.E–01.A lists the technologies that were first approved for new technology add-on payments prior to FY 2025, for which we are proposing to continue making new technology add-on payments for FY 2026 because they are still considered ''new'' for purposes of new technology add-on payments because the 3-year anniversary date of the product's entry onto the U.S. market occurs on or after April 1, 2026. This table also presents the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We refer readers to the cited final rules in the following table for a complete discussion of the new technology add-on payment application, coding, and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

Table II.E–01.B lists the technologies that were first approved for new technology add-on payments in FY 2025, for which we are proposing to continue making new technology add-on payments for FY 2026 because they are still considered ''new'' for purposes of new technology add-on payments because the 3-year anniversary date of

the product's entry onto the U.S. market occurs on or after October 1, 2025. This table also presents the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We refer readers to the cited final rules in the following table for a complete discussion of the new technology add-on payment application, coding, and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We are inviting public comments on our proposals to continue new technology add-on payments for FY 2026 for the technologies listed in Tables II.E.–01.A and II.E.–01.B.

TABLE II.E.–01.A—PROPOSED CONTINUATION OF TECHNOLOGIES APPROVED FOR FY 2025 NEW TECHNOLOGY ADD-ON PAYMENTS STILL CONSIDERED NEW FOR FY 2026 BECAUSE THE 3-YEAR ANNIVERSARY DATE WILL OCCUR ON OR AFTER APRIL 1, 2026

Technology	Newness start date	NTAP start date	3-Year anniversary date of entry onto U.S. market	Previous final rule citations	Proposed maximum NTAP amount for FY 2026	Coding used to identify cases eligible for NTAP

13. CASGEVY™ (exagamglogene autotemcel); Sickle Cell Disease indication.	12/08/2023	10/01/2024	12/08/2026	89 FR 69128 through 69135.	1,650,000.00	XW133J8 or XW143J8 in combination with one of the following: D57.1, D57.20, D57.40, D57.42, D57.44, or D57.80.
14. HEPZATO™ KIT (melphalan for injection/hepatic delivery system).	01/08/2024	10/01/2024	01/08/2027	89 FR 69158 through 69170.	118,625.00	XW053T9 in combination with 5A1C00Z.
15. LYFGENIA™ (lovotibeglogene autotemcel).	12/08/2023	10/01/2024	12/08/2026	89 FR 69188 through 69196.	2,325,000.00	XW133H9 or XW143H9.

Table II.E.–02 lists the technologies that were first approved for new technology add-on payments prior to FY 2025, including technologies determined to be substantially similar to such technologies, for which we are proposing to discontinue making new technology add-on payments for FY 2026 because they are no longer ''new'' for purposes of new technology add-on payments because the 3-year anniversary date of the product's entry onto the U.S. market occurs before April 1, 2026. This table also presents the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We refer readers to the cited final rules in the following table for a complete discussion of each new technology add-on payment application and the coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

As discussed in section II.E.6. of the preamble of this proposed rule, BONESUPPORT, Inc. is also seeking new technology add-on payments for CERAMENT® G for FY 2026 for use in defects in the extremities of skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement as part of the standard treatment approach to open fractures. As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48961 through 48966), CERAMENT® G was approved for new technology add-on payments with an indication for use as a bone void filler in skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement (standard treatment approach to a bone infection) as part of the surgical treatment of osteomyelitis in defects in the extremities. For this proposed rule, we are proposing to discontinue new technology add-on payments for FY 2026 for CERAMENT® G when used for bone infections, as the technology will no longer be considered new for this indication. We believe cases involving the use of CERAMENT® G related to bone infections, which would no longer be eligible for new technology add-on payment in FY 2026, would be identified by the ICD–10–PCS code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) in combination with the ICD–10–CM codes in category M86 (Osteomyelitis). We are inviting public comments on the use of these codes to exclude the indication for use of CERAMENT® G related to bone infections, which would not be eligible for the new technology add-on payment for FY 2026, if approved.

We are inviting public comments on our proposals to discontinue new technology add-on payments for FY 2026 for the technologies listed in Table II.E.–02 of the preamble of this proposed rule.

TABLE II.E.–02—PROPOSED DISCONTINUATION OF TECHNOLOGIES APPROVED FOR FY 2025 NEW TECHNOLOGY ADD-ON PAYMENTS NO LONGER CONSIDERED NEW FOR FY 2026 BECAUSE 3-YEAR ANNIVERSARY DATE WILL OCCUR PRIOR TO APRIL 1, 2026

5. Proposed FY 2026 Applications for New Technology Add-On Payments (Traditional Pathway)

As discussed previously, in the FY 2023 IPPS/LTCH PPS final rule, we finalized our policy to publicly post online applications for new technology add-on payment beginning with FY 2024 applications (87 FR 48986 through 48990). As noted in the FY 2023 IPPS/LTCH PPS final rule, we are continuing to summarize each application in this proposed rule. However, while we are continuing to provide discussion of the concerns or issues we identified with respect to applications submitted under the traditional pathway, we are providing more succinct information as part of the summaries in the proposed and final rules regarding the applicant's

[18] As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69149 through 69155), we determined that ELREXFIO™ (elranatamab-bcmm) and TALVEY™ (talquetamab-tgvs) were substantially similar to TECVAYLI® (teclistamab-cqyv), which was first approved for new technology add-on payment in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58885 through 58891). In accordance with our policy, because these technologies are substantially similar to each other, we use the earliest market availability date submitted as the beginning of the newness period for these technologies, November 9, 2022, the date TECVAYLI® became commercially available. As discussed previously in this section, for technologies that were first approved for new technology add-on payments prior to FY 2025, including for technologies we determine to be substantially similar to those technologies, we continue to use the midpoint of the upcoming fiscal year (April 1) when determining whether a technology would still be considered ''new'' for purposes of new technology add-on payments.

assertions as to how the medical service or technology meets the newness, cost, and substantial clinical improvement criteria. We refer readers to *https://mearis.cms.gov/public/publications/ntap* for the publicly posted FY 2026 new technology add-on payment applications and supporting information (with the exception of certain cost and volume information, and information or materials identified by the applicant as confidential or copyrighted), including tables listing the ICD–10–CM codes, ICD–10–PCS codes, and/or MS–DRGs related to the analyses of the cost criterion for certain technologies for the FY 2026 new technology add-on payment applications.

We received 19 applications for new technology add-on payments for FY 2026 under the new technology add-on payment traditional pathway. In accordance with the regulations under § 412.87(f), applicants for FY 2026 new technology add-on payments must have received FDA marketing authorization by May 1 of the year prior to the beginning of the fiscal year for which the application is being considered. As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958) and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69242 through 69245), we finalized that beginning with the new technology add-on payment applications for FY 2025, for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance or filing to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. See § 412.87(e) and further discussion in the FY 2024 and FY 2025 IPPS/LTCH PPS final rules (88 FR 58948 through 58958, 89 FR 69242 through 69245). Of the 19 applications received under the traditional pathway, 2 applicants were not eligible for consideration for new technology add-on payment because they did not meet these requirements, and 3 applicants withdrew their applications prior to the issuance of this proposed rule. We are addressing the remaining 14 applications.

a. AUCATZYL® (Obecabtagene Autoleucel)

Autolus Therapeutics, Inc. submitted an application for new technology add-on payments for AUCATZYL® for FY 2026. According to the applicant, AUCATZYL® is a fast off-rate cluster of differentiation 19 (CD19) autologous chimeric antigen receptor (CAR) T-cell therapy with tumor burden-guided dosing designed to improve persistence and reduce immune-mediated toxicity. Per the applicant, AUCATZYL® is indicated for the treatment of adults with relapsed or refractory (R/R) B-cell precursor acute lymphoblastic leukemia (B–ALL).

Please refer to the online application posting for AUCATZYL®, available at *https://mearis.cms.gov/public/publications/ntap/NTP241002GUJHV*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, AUCATZYL® was granted BLA approval from FDA on November 8, 2024, for the treatment of adults with R/R B–ALL. According to the applicant, AUCATZYL® was commercially available immediately after FDA approval. The applicant stated that a single treatment of AUCATZYL® consists of two intravenous infusions (given on Day 1 and Day 10 [±2]) administered via a syringe or gravity-assisted infusion through a central or peripheral venous line over a few minutes. Per the applicant, each infusion is packaged in three or more infusion bags containing a cell dispersion of the target tumor burden-guided dose of 410×10^6 CD19 CAR-positive viable T cells.[19]

[19] The applicant stated that the first dose, infused on Day 1, is determined by the patient's bone marrow disease burden within 7 days prior to lymphodepletion, and the second dose, infused on Day 10 [±2], is tailored for a total dose of 410×10^6 CAR T cells to complete the single treatment of AUCATYZL®.

The applicant stated that, effective October 1, 2024, the following ICD–10–PCS codes may be used to uniquely describe procedures involving the use of AUCATZYL:® XW0338A (Introduction of obecabtagene autoleucel into peripheral vein, percutaneous approach, new technology group 10) or XW0438A (Introduction of obecabtagene autoleucel into central vein, percutaneous approach, new technology group 10). The applicant stated that C91.00 (Acute lymphoblastic leukemia not having achieved remission), C91.01 (Acute lymphoblastic leukemia, in remission), or C91.02 (Acute lymphoblastic leukemia, in relapse) may be used to currently identify the R/R B–ALL indication for AUCATZYL® under the ICD–10–CM coding system.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that AUCATZYL® is not substantially similar to other currently available technologies because it has a distinct immune-modulating mechanism of action and first-in-class tumor burden-guided dosing indicated for the treatment of adults with R/R B–ALL, and that therefore, the technology meets the newness criterion. More specifically, the applicant asserted that AUCATZYL® is the only CAR T-cell therapy constructed using the differentiated 4–1BB co-stimulatory domain with a novel, proprietary low affinity, fast off-rate CAT19 binding domain, and tumor burden-guided dosing. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for AUCATZYL® for the applicant's complete statements in support of its assertion that AUCATZYL® is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	AUCATZYL® is not substantially similar to currently available T-cell therapies indicated for the treatment of adult R/R B–ALL, specifically TECARTUS® (brexucabtagene autoleucel), the only currently available CD19 CAR T-cell therapy for this population. Specifically, AUCATZYL® is designed to model physiological T-cell activation, and its CAR is constructed using the differentiated 4–1BB co-stimulatory domain along with a proprietary and unique CAT19 binding domain, specifically designed to improve potency and persistence and to reduce immune-mediated toxicity. Shorter cell-cell contact resulting from the >40-fold lower affinity of CAT19 (off-rate of 3.7 minutes) compared with the FMC63 antigen-binding domain (off-rate of 2.8 hours) used in currently available CAR T-cell therapy, including TECARTUS®, serves to reduce cytokine release and toxicity, reduces CAR T-cell exhaustion and enhances CAR T-cell persistence. The 4–1BB co-stimulatory domain is also highly differentiated from the CD28 co-stimulatory domain used in TECARTUS®; the 4–1BB distinct signaling pathway results in lower T-cell activation, increased mitochondrial biogenesis, greater oxidative metabolism, and sustained CAR T-cell persistence. AUCATZYL® is also specifically designed to follow a manageable, personalized tumor burden-guided dosing schedule to proactively mitigate risk of cytokine release syndrome (CRS) and immune effector cell-associated neurotoxicity syndrome (ICANS), addressing the potential for toxicity in older patients and for consideration of patients with higher disease burden. The first-in-class tumor burden-guided dosing of AUCATZYL® tailors administration based on the individual patient's disease burden and corresponding immunotoxicity risk and supports maximal control for the treating physician, while minimizing immune-related toxicities and maximizing treatment effect.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	CMS has made the determination that ICD–10–PCS procedure codes identifying all CAR T-cell therapies will map to Pre-MDC MS–DRG 018 (Chimeric antigen receptor (CAR) T-cell and other immunotherapies), including previously approved TECARTUS® indicated for adult R/R B–ALL. Patient claims for adult R/R B–ALL patients where AUCATZYL® is administered will also be mapped to Pre-MDC MS–DRG 018 and will be identified by unique, AUCATZYL®-specific ICD–10–PCS codes which have been approved by CMS with an effective date of October 1, 2024.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	Inpatient cases involving adults with r/r B–ALL are identified by existing ICD–10–CM diagnosis codes C91.00 (Acute lymphoblastic leukemia not having achieved remission), C91.01 (Acute lymphoblastic leukemia, in remission), and C91.02 (Acute lymphoblastic leukemia, in relapse). These same ICD–10–CM diagnosis codes will identify adult R/R B–ALL patient types eligible for treatment with AUCATZYL®, where the inpatient claims will be identified by unique AUCATZYL® ICD–10–PCS codes, XW0338A or XW0438A, effective October 1, 2024. Importantly, the eligible patient population for treatment with AUCATZYL® is expected to be expanded because of the substantial clinical benefits of its highly differentiated immune-modulating mechanism of action and the first-in-class tumor burden-guided dosing, namely because of a significantly improved safety profile with very low rates of severe CRS and ICANS and high, sustained remissions following the single treatment of AUCATZYL®. The promise of these clinically meaningful results after treatment with AUCATZYL® are especially important for the older Medicare population, the Hispanic population that faces worse survival outcomes than patients of other ethnicities, and others with overall poor health and high disease burden; today, these populations are either considered ineligible for currently available therapies or are at elevated risk following treatment or consolidation with allogenic hemopoietic stem cell transplant (HSCT).

We have the following concerns with regard to the newness criterion. We note that the applicant asserted that AUCATZYL® does not use the same or similar mechanism of action as existing technologies for R/R B–ALL in adults because AUCATZYL®'s co-stimulatory and binding domains differ from those of TECARTUS®, which the applicant stated is the only other currently available CD19-directed CAR T-cell immunotherapy for this population. However, we note that in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41285 through 41291), with regard to the CAR T-cell therapies KYMRIAH® (tisagenlecleucel) and YESCARTA® (axicabtagene ciloleucel), we stated that although the two technologies were not completely the same in terms of manufacturing processes, co-stimulatory domains, and clinical profiles, these differences did not result in different mechanisms of action, and therefore, inferred that the technologies' mechanisms of action were the same. Similarly, we question whether differences in the co-stimulatory and binding domains for AUCATZYL® and TECARTUS® result in the use of a different mechanism of action. In addition, we note that KYMRIAH® is also a CD19-directed CAR T-cell immunotherapy, and it is indicated for the treatment of patients up to 25 years of age with R/R B–ALL. We believe that the mechanism of action for all three therapies is the binding to CD19 by a CAR construct, which results in T-cell activation and killing of malignant cells in the treatment of B–ALL. Furthermore, while the applicant also stated that AUCATZYL®'s personalized tumor burden-guided dosing schedule is first in class and differentiates it from other technologies' mechanisms of action, we are unclear how a technology's dosing schedule is relevant to its mechanism of action. Accordingly, as it appears that AUCATZYL®, TECARTUS®, and KYMRIAH® may use the same or similar mechanism of action to achieve a therapeutic outcome, are assigned to the same MS–DRG, and treat the same or similar patient population and disease, that is, adult patients with R/R B–ALL, we believe that these technologies may be substantially similar to each other. We note that, per our policy, if these technologies are substantially similar to each other, we use the earliest market availability date as the beginning of the newness period for the technologies. Therefore, if AUCATZYL® is substantially similar to TECARTUS® and KYMRIAH®, we believe the newness period for this technology would begin on November 22, 2017, the date KYMRIAH® became commercially available.[20] In addition, because the 3-year anniversary date of the KYMRIAH®'s entry onto the U.S. market (November 22, 2020) occurred in FY 2021, AUCATZYL® would no longer be considered new and would not be eligible for new technology add-on payments for FY 2026. We are interested in information on how these technologies may differ from each other with respect to the substantial similarity criteria and newness criterion.

We are inviting public comment on whether AUCATZYL® meets the newness criterion, including whether AUCATZYL® is substantially similar to TECARTUS® and KYMRIAH® for purposes of new technology add-on payments.

[20] TECARTUS® received FDA approval on October 1, 2021, for treatment of adult patients with R/R B–ALL. *https://www.fda.gov/drugs/resources-information-approved-drugs/fda-approves-brexucabtagene-autoleucel-relapsed-or-refractory-b-cell-precursor-acute-lymphoblastic.*

With respect to the cost criterion, the applicant provided two analyses to demonstrate that AUCATZYL® meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

AUCATZYL® COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes, ICD–10–PCS codes, and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for AUCATZYL®.
Claims identified	Scenario 1: 349 claims mapping to 9 MS–DRGs, with 56.16% of claims mapping to MS–DRG 834 (Acute Leukemia with MCC). Scenario 2: 2,013 claims mapping to 74 MS–DRGs, with 20.22% of claims mapping to MS–DRG 838 (Chemotherapy with Acute Leukemia as Secondary Diagnosis with CC or High Dose Chemotherapy Agent).
Charges removed for prior technology.	Per the applicant, the utilization of AUCATZYL® would replace chemotherapy charges and other CAR–T therapy utilization. The applicant removed 36.2% and 49.4% of radiology charges for cases in scenario 1 and 2, respectively. Per the applicant, these percentages were derived based on an analysis of the revenue center file from the 100% Inpatient SAF in FY 2023, which represent the share of all radiology charges attributable to chemotherapy, based on percentage of charges classified as chemotherapy observed in the SAF when ALL was a diagnosis. In addition, the applicant identified cases with CAR–T therapies and removed an amount equal to the therapy's wholesale acquisition cost (WAC) inflated by its estimated CAR–T cost-to-charge ratio of 0.2643. Finally, the applicant removed all ''Pharmacy Charges'' for claims with ICD–10–PCS codes of 3E03305 (Introduction of other antineoplastic into peripheral vein, percutaneous approach) and 3E04305 (Introduction of other antineoplastic into central vein, percutaneous approach) for other antineoplastics. The applicant did not remove indirect charges related to the prior technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
Inflation factor	The applicant applied an inflation factor of 8.406% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the estimated cost of the new technology by its estimated average cost-to-charge ratio of 0.2643 for CAR T-cell therapies. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Average case-weighted threshold amount: $1,554,026. Final inflated average case-weighted standardized charge per case: —Scenario 1: $2,315,730. —Scenario 2: $2,131,832.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that AUCATZYL® meets the cost criterion.

We are inviting public comments on whether AUCATZYL® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that AUCATZYL® represents a substantial clinical improvement over existing technologies because the results of the phase IB/II FELIX clinical study demonstrated that the differentiated design of AUCATZYL® and its first-in-class tumor burden-guided dosing drive substantial short- and long-term clinically meaningful improvements in treatment outcomes of adults with R/R B–ALL, with superior immune-mediated toxicity, thereby, reducing the risk of patients experiencing life-threatening toxicities in need for intensive care. The applicant further asserted that AUCATZYL®, as a stand-alone therapy, may be considered standard of care for adults with R/R B–ALL. The applicant provided 3 published, peer-reviewed studies, six unpublished studies or presentations, and the AUCATZYL® prescribing information to support these claims, as well as 4 supplementary attachments and 7 background articles about CD19-directed CAR T-cell therapies, B–ALL-associated survival, and risk factors associated with access to B–ALL treatments.[21] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for AUCATZYL® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

[21] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
AUCATZYL® is the first and only autologous CD19 CAR T-cell therapy with a novel, distinct immune-modulating mechanism of action and first-in-class tumor burden-guided dosing indicated for treatment of adult r/r B–ALL.	Jabbour E, et al. Obecabtagene autoleucel (obe-cel) for relapsed/refractory adult B-cell acute lymphoblastic leukemia (r/r B–ALL): impact of chimeric antigen receptor T-cell (CAR T) and tumor burden-guided dosing in the FELIX Phase Ib/II study. Abstract. Society of Hematologic Oncology. 2024a. Jabbour E, et al. Obecabtagene Autoleucel (obe-cel, Auto1) in adults with relapsed/refractory B-cell acute lymphoblastic leukemia: overall survival, event-free survival and the potential impact of chimeric antigen receptor T-cell persistency and consolidative stem cell transplantation in the open-label single-arm FELIX phase Ib/II study. Oral presentation; American Society of Clinical Oncology Annual Meeting, 2024b. Roddie C, et al. Oral #222; American Society of Hematology Annual Meeting, 2023a. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
Following the single treatment of AUCATZYL®, adult patients with r/r B–ALL experienced high response rates, with superior immune-mediated toxicity compared to currently available CAR T-cell therapy.	AUCATZYL prescribing information. *www.autolus.com/media/aj4olbsd/aucatzyl-pi-08 nov2024.pdf.* Ghorashian S, et al. Enhanced CAR T cell expansion and prolonged persistence in pediatric patients with ALL treated with a low-affinity CD19 CAR. Nat Med. 2019;25(9):1408–1414. Poster 2114. American Society of Hematology Annual Meeting. 2023b. Roddie, 2024a, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
AUCATZYL® may be an important, definitive stand-alone treatment for adult r/r B–ALL versus use as a bridging therapy.	Jabbour, 2024b, *op. cit.* Park JH, et al. Relapsed/refractory B-Cell acute lymphoblastic leukemia (r/r B–ALL) obecabtagene autholeucel (obe-cel) consolidative allogeneic stem cell transplantation. Poster P–008 presented at Lymphoma, Leukemia and Myeloma Congress (LLM 2024). October 2024a. Roddie, 2023b, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for AUCATZYL®.

After review of the information provided by the applicant, we have the following concerns regarding whether AUCATZYL® meets the substantial clinical improvement criterion. First, we question whether there is any patient population with R/R B–ALL that is unresponsive to or ineligible for any of the currently available treatments for the condition. We note that under this assertion, the applicant stated that AUCATZYL® is the first and only autologous CD19-directed CAR T-cell therapy with a novel, distinct immune-modulating mechanism of action and first-in-class tumor burden-guided dosing indicated for the treatment of adult R/R B–ALL, which produces clinically advantageous results for these patients over currently available therapies, which the applicant stated is limited to TECARTUS® as it is the only CAR T-cell therapy approved for patients ≥26 years old. However, the comparison of clinical outcomes does not demonstrate that a technology offers a treatment option for patients who have no other options due to being ineligible for or unresponsive to existing therapies, nor does the type of technology or dosing regimen. We note that the applicant provided three abstracts/presentations describing unpublished results from the phase Ib/II FELIX trial of AUCATZYL® as well as various background studies to support its claim.[22] The FELIX trial is a multi-center, open-label, single-arm study that evaluates the efficacy and safety of AUCATZYL among R/R B–ALL patients, using complete remission (CR)

[22] Jabbour (2024a), *op. cit.;* Jabbour (2024b), *op. cit.;* Roddie (2023a), *op. cit.*

or complete remission with incomplete count recovery (CRi) per independent response review committee (IRRC) as the primary endpoint. In particular, the Jabbour et al. (2024a, 2024b) abstract and oral presentation provided the percent of patients with prior exposure to various existing treatments, and the Roddie et al. (2023b) presentation reported the subgroup analysis of clinical outcomes by prior treatments. However, none of the documents provided described patients who were unresponsive to or ineligible to receive TECARTUS®. Further, we note that being the first CAR T-cell therapy for a particular indication relates to mechanism of action and is not relevant to the demonstration of substantial clinical improvement. We also note that there are other treatments available for adult patients with R/R B–ALL such as Blincyto® (blinatumomab), Besponsa® (inotuzumab ozogamicin), and allogeneic stem cell transplant (allo-SCT), as well as KYMRIAH® which is FDA-approved in adults 18–25. Therefore, we are unclear which R/R B–ALL patients eligible for AUCATZYL® are unresponsive to or ineligible for treatment with any of these existing treatment options.

We also question the applicant's assertion that following the single treatment of AUCATZYL®, adult patients with r/r B–ALL experienced high response rates, with superior immune mediated toxicity compared to TECARTUS®. We note that the applicant provided the published FELIX trial which demonstrated overall remission [Complete Response (CR)/ Complete Response with incomplete recovery (CRi)] rate of 77 percent and CR of 55 percent in the efficacy-evaluable pivotal cohort 2A of (n=94) as well as unpublished presentations/ abstracts of the trial which included pooled data for all cohorts, different follow up periods, and subgroup analyses. The applicant stated that the response rates for AUCATZYL® were at least comparable to that reported for TECARTUS®, and provided the phase 2 single-arm, open-label ZUMA–3 trial of TECARTUS®, which demonstrated an overall remission rate and CR of 71 percent and 56 percent, respectively (n=55). The applicant also stated that the response rates seen with AUCATZYL® were achieved with superior immune-mediated toxicity with low rates of Grade ≥3 CRS (2 percent) and/or ICANS (7 percent) compared to TECARTUS®, where Grade ≥3 CRS and ICANS have been observed in 24 percent and 25 percent of patients, respectively, in clinical studies and 7 percent and 38 percent, respectively, in real-world studies. However, we question the use of historical controls for comparing the clinical outcomes of AUCATZYL® and TECARTUS® without adjustments for the differences between the clinical trials for the two technologies. For example, there were several differences in baseline demographic and clinical attributes between FELIX, the pivotal trials for AUCATZYL®, and ZUMA–3, the pivotal trial for TECARTUS®. These differences could confound the relationship between the intervention and clinical outcomes and reduce the validity of the results if they are not taken into account in the analysis of the findings. For example, AUCATZYL® recipients were in general older (median age: FELIX: 47 years; ZUMA–3: 40 years), had a higher percent Philadelphia chromosome positive (FELIX: 33 percent; ZUMA–3: 27 percent), had extramedullary disease at screening (FELIX: 25 percent; ZUMA–3: 11 percent); and had a lower tumor burden (median BM blast percent at screening: FELIX: 25 percent; ZUMA–3: 60 percent). AUCATZYL® recipients included a higher proportion of those previously treated with inotuzumab ozogamicin [23] (FELIX: 31 percent; ZUMA–3: 22 percent), or allo-SCT (FELIX: 58 percent; ZUMA–3: 42 percent), but a lower proportion of those previously exposed to blinatumomab (FELIX: 39 percent; ZUMA–3: 45 percent).[24] [25] We question whether these baseline patient attributes in the trials could have impacted outcomes to the extent that differences between these attributes would impact comparisons in clinical outcomes between AUCATZYL® and TECARTUS®.

With regard to the applicant's claim that AUCATZYL® may be an important, definitive stand-alone treatment for adult r/r B–ALL versus use as a bridging therapy, we note that among the 99 patients in the FELIX study who achieved CR or CRi, 40 (40 percent) experienced ongoing remission with subsequent stem cell transplant (SCT) or other therapy; 18 (18 percent) received subsequent SCT during remission, five (5 percent) started new anti-cancer therapy, and the remaining 36 patients (36 percent) either relapsed or died.[26] We are unclear why AUCATZYL® was not a stand-alone treatment for the 23 percent of patients who underwent SCT or anti-cancer therapy subsequently. We are interested in the criteria that were used to determine whether a patient in remission should undergo subsequent SCT or not. Per the applicant, 17 percent of the patients at high risk for immune effector cell-associated hematotoxicity (HT), the most common side effect of CAR T therapy, and 21 percent of those at lower risk for HT proceeded to undergo allogeneic SCT (allo-SCT).[27] We welcome information about factors besides HT that may also be used to inform decisions about the need for subsequent allo-SCT.

We are also concerned about potential confounders introduced by pooling the data from two independent trials with different study designs, and how those confounders might impact the validity of the findings related to AUCATZYL®'s impact on clinical outcomes. According to the applicant, Roddie et al. (2023b) pooled data from the ALLCAR19 (N=20) and FELIX trials (N=16).[28] Per the applicant, the former was a multicenter, non-randomized open-label Phase 1 study in patients aged 16 years or older with B-cell malignancies, including B–ALL. The latter was a global, open-label, single-arm Phase Ib/II study enrolling patients ages 18 years or older with R/R B–ALL. We are interested in the differences between the ALLCAR19 and FELIX trials in terms of eligibility criteria, patients' prior exposure to B–ALL treatments, co-morbidities, and reasons for attrition. We question whether, and how, differences were accounted for in the analysis of clinical outcomes associated with AUCATZYL®.

Moreover, we are concerned about the availability of evidence on AUCATZYL's effects on the outcomes of the Medicare population of those age 65 years or older. According to a study using National Cancer Institute's Surveillance, Epidemiology, and End Result (SEER) database, which drew its data from population-based cancer registries covering 48 percent of the US population,[29] between 1980 and 2017, while the majority (57 percent) of B–ALL patients were under the age of 15 years, 13 percent were 60 years of age or older.[30] We note that the patient sample in Ghorashian et al. (2019) included those age 19 years or younger,

[23] Jabbour (2024b), *op. cit.*

[24] Jabbour (2024a), *op. cit.*

[25] Shah (2021), *op. cit.*

[26] Jabbour (2024b), *op. cit.*

[27] Roddie (2024b), *op. cit.*

[28] Roddie (2023b), *op. cit.*

[29] National Cancer Institute. Division of Cancer Control & Population Sciences. Surveillance, Epidemiology, and End Results (SEER) Surveillance Research Program (*chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://seer.cancer.gov/about/factsheets/SEER_Overview.pdf*, accessed 1/23/2025).

[30] Sasaki K, Jabbour E, and Short NJ et al. Acute lymphoblastic leukemia: A population-based study of outcome in the United States based on the surveillance, epidemiology, and end results (SEER) database, 1980–2017. *American Journal of Hematology* 2021:96:650.

and the patient sample in Roddie et al. (2021) were age 16 years or older (median: 41.5 years, range: 17 to 62). We also note that the applicant's substantial clinical improvement claims for AUCATZYL® are specific to adults (18 years or older) with R/R B–ALL. However, the estimated five-year survival of B–ALL patients decreased from 85 percent for those under the age of 15, to 19 percent for those between the age of 60 and 69 years, and further to six percent for those age 70 years or older.[31] We welcome evidence about the clinical outcomes of R/R B–ALL patients age 65 years or older who received AUCATZYL®.

In addition, we are unclear whether the CD19-targeting CAR T therapy discussed in Ghorashian et al. (2019) was identical to AUCATZYL® or an earlier version of it. We note that Ghorashian et al. (2019) discussed a novel CD19 CAR (CAT–41BBz CAR),[32] and Roddie et al. (2021) stated that they developed a novel second generation CD19–CAR (CAT19–41BB–Z) with a fast off rate.[33] We welcome information about how the technology in Ghorashian et al. (2019) compares with AUCATZYL®.

With regard to the applicant's assertion that AUCATZYL® represents a substantial clinical improvement because it substantially improves CAR T-cell persistence, we note that this relates to surrogate endpoints rather than clinical outcomes. The applicant provided the Day presentation (2024) which examined the association between CAR T-cell persistence and event-free survival among patients who received AUCATZYL® at six month post infusion.[34] However, we note that while the applicant stated persistence of CAR T-cells is associated with improved event-free survival, CAR T-cell persistence is a surrogate measure and does not assess a clinical outcome as described under the regulations at § 412.87(b)(1)(ii)(C).

In addition, we note that the applicant only asserted improved outcomes for AUCATZYL® over TECARTUS®, and we did not receive any evidence comparing AUCATZYL® with other currently available treatments for adults with R/R B–ALL such as KYMRIAH® (approved in adults 18–25), as well as non-CAR T-cell therapies described previously, to demonstrate improved clinical outcomes. We welcome additional information comparing these therapies with AUCATZYL® in order to demonstrate that it provides a substantial clinical improvement over existing therapies.

We are inviting public comments on whether AUCATZYL® meets the substantial clinical improvement criterion.

b. AURLUMYN™ (Iloprost Injection)

SERB Pharmaceuticals submitted an application for new technology add-on payments for AURLUMYN™ for FY 2026. According to the applicant, AURLUMYN™ is an intravenous form of iloprost associated with immediate generalized vasodilation, immunomodulation, and anti-inflammation indicated for the treatment of severe frostbite in adults to reduce the risk of digit amputations.

Please refer to the online application posting for AURLUMYN™, available at *https://mearis.cms.gov/public/publications/ntap/NTP241007QK29V*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, FDA granted NDA approval for AURLUMYN™ on February 13, 2024, for the treatment of severe frostbite in adults to reduce the risk of digit amputations. Per the applicant, the commercial launch of AURLUMYN™ was delayed until the NDA sponsor could secure a capable commercial partner. Per the applicant, it acquired AURLUMYN™ globally on October 18, 2024, and prepared for launch aligned with the beginning of the winter season. The applicant stated that the technology became available for sale on November 12, 2024. We are interested in additional information regarding the cause of any delay in the technology's commercial availability, including additional details about the preparation for launch that aligned with the beginning of the winter season.

According to the applicant, AURLUMYN™ is administered as a continuous intravenous (IV) infusion over 6 hours per day, increased in increments up to a maximum dose of 2 ng/kg/minute, for up to a maximum of 8 consecutive days. The applicant expects that AURLUMYN™ will be dosed in the inpatient setting for 8 consecutive days using a total of eight single-use vials (one per day).

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify AURLUMYN™. We note that the applicant submitted a request for a unique ICD–10–PCS procedure code for AURLUMYN™ beginning in FY 2026. The applicant provided a list of diagnosis codes that may be used to currently identify the indication for AURLUMYN™ under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that AURLUMYN™ is not substantially similar to other currently available technologies because it is the first-ever FDA-approved treatment for frostbite of any grade and is specifically indicated for the treatment of severe frostbite in adults to reduce the risk of finger or toe amputation, and therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for AURLUMYN™ for the applicant's complete statements in support of its assertion that AURLUMYN™ is not substantially similar to other currently available technologies.

[31] Sasaki (2021), *op. cit.*

[32] Ghorashian (2019), *op. cit.*

[33] Roddie (2021), *op. cit.*

[34] Day (2024), *op. cit.*

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	AURLUMYN™ is the only IV form of iloprost available in the U.S. AURLUMYN™ is a stable synthetic analog of PGI2 and is a potent prostacyclin receptor agonist. Upon binding to the prostacyclin receptor, prostacyclin inhibits platelet activation and acts as a vasodilator. AURLUMYN™ is associated with immediate generalized vasodilation, immunodulation, and anti-inflammation. AURLUMYN™ has been associated with reductions in neutrophil adhesion and chemotaxis as well as downregulation of intracellular expression of IL–6 and TNF alpha in human monocytes. In addition, AURLUMYN™ has been shown to enhance fibrinolysis, increase red cell deformability, and reduce white cell adhesion to endothelial cells. AURLUMYN™ has also demonstrated activity with respect to increasing cAMP levels in human platelets via stimulation of adenylate cyclase, with resultant inhibition of platelet aggregation. AURLUMYN™ inhibits arachidonic acid-induced vasoconstriction, which may be explained by its ability to counteract thromboxane. As a result of these properties, AURLUMYN™ may mitigate vasoconstriction and microthrombosis to limit frostbite injury. Previously, access to medical frostbite treatment in the U.S. has been limited to agents not specifically studied or approved for frostbite. AURLUMYN™ is not substantially similar to those agents used in case study and anecdotal reports, including nonsteroidal anti-inflammatory drugs, heparin, antibiotics, dextran, tetanus toxoid, immune globulin, antiplatelet agents, and anticoagulant therapy. AURLYMN™ is also significantly differentiated from VENTAVIS® (iloprost) inhalation solution approved in 2004, and since discontinued, for the chronic treatment of pulmonary arterial hypertension and intended to be chronically administered.
Is the technology assigned to the same MS–DRG as existing technologies?	No	The 2023 MedPAR file contains no patient cases assigned to any MS–DRG representing frostbite cases treated with an FDA-approved therapy for severe frostbite. AURLUMYN™ is the first-ever FDA-approved treatment for frostbite of any grade. It is expected AURLUMYN™ administration cases will map to MS–DRGs based on the MS–DRG assignment logic for the case-specific diagnosis or procedural codes.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	AURLUMYN™ is the first-ever FDA-approved treatment for frostbite of any grade and is specifically approved for the treatment of severe frostbite in adults to reduce the risk of finger or toe amputation.

We note that the applicant asserted that AURLUMYN™ is not assigned to the same MS–DRG as existing technologies. However, as the applicant also stated that AURLUMYN™ will map to MS–DRGs based on diagnosis/procedure codes, we believe that the use of AURLUMYN™ will not change the MS–DRG assignment and will, therefore, map to the same MS–DRGs as other treatments for severe frostbite. In addition, while the applicant asserted that AURLUMYN™ does not treat the same or similar type of disease and the same or similar patient population as existing treatments because it is the first-ever FDA-approved treatment for frostbite, we note that there are other severe frostbite treatments that are commonly used including rapid rewarming, fasciotomy, thrombolysis, and sympathectomy.

We are inviting public comments on whether AURLUMYN™ is substantially similar to existing technologies and whether AURLUMYN™ meets the newness criterion.

With respect to the cost criterion, the applicant provided multiple analyses to demonstrate that AURLUMYN™ meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

AURLUMYN™ COST ANALYSIS

Inclusion/exclusion criteria ...	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for AURLUMYN™.
Claims identified	Scenario 1: 103 claims mapping to nine MS–DRGs, with none of the MS–DRGs exceeding 13.59% of the total identified cases. Scenario 2: 159 claims mapping to 11 MS–DRGs, with 22.64% of claims mapping to MS–DRG 923 (Other Injury, Poisoning and Toxic Effect Diagnoses without CC).
Charges removed for prior technology.	The applicant stated that no charges were removed for a prior technology as a result of using AURLUMYN™, and that there were no indirect charges related to a prior technology to be removed.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
Inflation factor	The applicant applied an inflation factor of 8.4% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	For both scenarios 1 and 2, the applicant added charges for the new technology by dividing the average cost of the new technology per inpatient stay by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.

AURLUMYN™ COST ANALYSIS—Continued

Cost analysis results	Scenario 1: —Average case-weighted threshold amount: $87,166. —Final inflated average case-weighted standardized charge per case: $353,509. Scenario 2: —Average case-weighted threshold amount: $73,762. —Final inflated average case-weighted standardized charge per case: $328,186.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that AURLUMYN™ meets the cost criterion.

We are inviting public comments on whether AURLUMYN™ meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that AURLUMYN™ represents a substantial clinical improvement over existing technologies because AURLUMYN™ substantially lowers the risk of digit amputation in severe frostbite cases. Additionally, the applicant claimed that, by reducing the risk of finger and toe amputations in adults with severe frostbite, AURLUMYN™ mitigates debilitating, lifelong health-related, functional, and work-related impacts associated with digit amputation. The applicant provided four documents, including two studies and clinical practice guidelines to support these claims, as well as two background articles about a classification system for frostbite severity and the prevention and clinical treatment of frostbite.[35] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for AURLUMYN™ for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
AURLUMYN™ is the first-ever medical treatment for frostbite approved by the FDA and is specifically approved for treatment of severe frostbite to reduce the risk of digit amputations.	Cauchy E, et al. A controlled trial of a prostacyclin and rt-PA in the treatment of severe frostbite. N Engl J Med 2011;364, 189–190. Crooks S, et al. Effectiveness of intravenous prostaglandin to reduce digital amputations from frostbite: an observational study. Canadian Journal of Emergency Medicine 2022;24, 622–629. McIntosh SE, et al. Wilderness Medical Society Clinical Practice Guidelines for the Prevention and Treatment of Frostbite. 2019 Update. Wilderness & Environmental Medicine 2019;30, S19–S32. McIntosh SE, et al. Wilderness Medical Society Clinical Practice Guidelines for the Prevention and Treatment of Frostbite: 2024 Update. Wilderness & Environmental Medicine 2024;35(2) 183–197. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
AURLUMYN™ reduces the risk of amputation of fingers and toes in adults with severe frostbite, mitigating debilitating, lifelong health-related, functional and work-related impacts of digit amputation.	Cauchy, 2011, *op. cit.* Crooks, 2022, *op. cit.* McIntosh, 2019, *op. cit.* McIntosh, 2024, *op. cit.*

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for AURLUMYN™.

After review of the information provided by the applicant, we have the following concerns regarding whether AURLUMYN™ meets the substantial clinical improvement criterion. With respect to the claim that AURLUMYN™ offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments, we note that the applicant stated that AURLUMYN™ is the first-ever FDA-approved medical treatment for severe frostbite to reduce the risk of digit amputations, but did not identify a patient group that is unresponsive to, or ineligible for, the standard-of-care treatment, where AURLUMYN™ does offer a treatment option.

The applicant provided two published studies that used AURLUMYN™ to support this claim (Cauchy et al., 2011; Crooks et al., 2022). Cauchy et al. (2011), which was published as a letter to the editor, is a single site, open-label trial which randomized 47 healthy patients (aged 18 to 55 years) with severe frostbite after mountain rescue in France to receive either buflomedil, AURLUMYN™, or AURLUMYN™ plus recombinant tPA (rtPA), and assessed treatment efficacy based on bone scan scintigraphy to determine risk of amputation. The second study (Crooks et al., 2022) was a retrospective cohort study consisting of a medical records review in Calgary, Canada, a large city inclusive of an unhoused population. The study excluded patients due to superficial or grade 1 frostbite, resulting in 90 patients

[35] Background articles are not included in the following table but can be accessed via the online posting for the technology.

with an interquartile age range of 31 to 53 years old. For frostbite treatment, these patients received either AURLUMYN™ or the standard of care, which consisted of the local best practice without AURLUMYN™. While these two studies compared treatment of patients with severe frostbite using AURLUMYN™ to other treatments, neither study described a patient group that is unresponsive to, or ineligible for, existing treatment options where AURLUMYN™ offers treatment. We further note that while the applicant also cited the Wilderness Medical Society Practice Guidelines (McIntosh et al., 2024) which included a strong recommendation for iloprost as the first-line treatment for severe (grades 3 and 4) frostbite less than 48 hours after thawing, and possibly for up to 72 hours post-thawing,[36] the full statement in the Guidelines is that intravenous iloprost should be considered first-line therapy for grade 3 and 4 frostbite <72 hours after injury, when tPA is contraindicated, and in austere environments where tPA infusion is considered risky or evacuation to a treatment facility will be delayed. Additionally, the guidelines include other recommendations for treatments such as sympathectomy, fasciotomy, and hydrotherapy. Therefore, it appears that there are other treatment options for frostbite other than AURLUMYN™. We would appreciate any additional information regarding which patient population AURLUMYN™ can treat for severe frostbite, for which other existing treatments could not be used.

With respect to the claim that AURLUMYN™ significantly improves clinical outcomes relative to services or technologies previously available, the applicant stated that AURLUMYN™ reduces the risk of amputation of fingers and toes in adults with severe frostbite, mitigating debilitating, lifelong health-related, functional, and work-related impacts of digit amputation. To support this claim, the applicant provided the two published studies and Wilderness Medical Society Practice Guidelines previously discussed (Cauchy et al., 2011; Crooks et al., 2022; McIntosh et al., 2024). The Cauchy et al. (2011) study found that the 16 patients treated with AURLUMYN™ without rtPA resulted in no amputations, whereas the risk of amputation was greater in patients treated with buflomedil (60 percent, 9 of 15 patients) and patients treated with AURLUMYN™ plus rtPA (19 percent, 3 of 16 patients). The Crooks et al. (2022) study found that 18 percent of grade 3 frostbite injuries and 46 percent of grade 4 frostbite injuries treated with AURLUMYN™ resulted in digital amputation, compared to the standard of care groups where 44 percent of grade 3 frostbite injuries and 95 percent of grade 4 frostbite injuries resulted in amputations. However, we question whether the composition of the AURLUMYN™ and standard of care treatment groups in these two published studies were sufficiently comparable and, consequently, whether outcomes demonstrated are clinically significant. Specifically, we question the accuracy of severity grading determinations and the resulting randomization process used to group patients in both studies due to the subjective nature of grading frostbite injuries that can evolve over time, and being that the grading of frostbite injuries in Crooks et al. (2022) was conducted using photographs and clinician health descriptions in the local electronic health record. We also note that, in Crooks et al. (2022), no patients in the control group were treated with tPA, despite tPA and heparin being available for severe injuries during the period of treatment with standard frostbite care. The absence of tPA in the control group raises questions about the adequacy of the comparator, given that the Wilderness Medical Society Practice Guidelines recommend tPA for select severe frostbite cases where timely administration is feasible. We also question the extent to which the quality of frostbite care in the control group may have varied, prior to the implementation of the protocol that implemented 5-day iloprost infusion. In addition, while the utility of recommendations in establishing evidence of clinically improved outcomes is limited, we further note that neither study provided direct comparison with therapies that are also strongly recommended by the Wilderness Medical Society, such as fasciotomy and hydrotherapy, or with other therapies that may have limited data availability, such as sympathectomy and hyperbaric oxygen therapy.

We also have concerns about the generalizability of the Cauchy et al. (2011) and Crooks et al. (2022) studies to the Medicare population. We note that Cauchy et al. (2011) studied AURLUMYN™ treatment in patients in France, whose mean age was 33.1 years and who had no notable medical or surgical history. As noted in the Crooks et al. (2022) study, which studied patients from a large Canadian city with a substantial unhoused population, the effects may not be as dramatic as results in other studies, owing to the differences in medical and social comorbidities in the study population. Similarly, the Medicare population may have significant differences from the Cauchy et al. (2011) study population, in physical and mental health and social complexities. We also question whether efficacy data from Cauchy et al. (2011) is generalizable to the Medicare population due to the study's location, small patient population, and patients' age. We note that these two published studies assessing AURLUMYN™ were both conducted outside of the U.S and primarily included patients under the age of 55 years (range: 18 to 55 and 29 to 54 years, respectively). As noted in the AURLUMYN™ prescribing information, clinical studies included insufficient numbers of patients aged 65 years and older to determine whether they respond differently than younger subjects.[37]

We are inviting public comments on whether AURLUMYN™ meets the substantial clinical improvement criterion.

c. BREYANZI® (Lisocabtagene Maraleucel)

Bristol Myers Squibb submitted an application for new technology add-on payments for BREYANZI® for FY 2026. According to the applicant, BREYANZI® is a CD19-directed, autologous CAR T-cell immunotherapy comprised of individually formulated CD8 and CD4 CAR T-cells, and it is indicated for the treatment of adult patients with relapsed/refractory (R/R) chronic lymphocytic leukemia or small lymphocytic lymphoma (CLL/SLL) who have received two or more prior lines of therapy (LOTs), including a Bruton tyrosine kinase inhibitor (BTKi) and a B-cell lymphoma 2 protein inhibitor (BCL2i). We note that BREYANZI® is also indicated for the treatment of adult patients with R/R large B-cell lymphoma, for which the applicant submitted an application for new technology add-on payments for FY 2021 and FY 2022, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44996 through 45008).

Please refer to the online application posting for BREYANZI®, available at *https://mearis.cms.gov/public/*

[36] McIntosh, S.E., Freer, L., Grissom, C.K., Rodway, G.W., Giesbrecht, G.G., McDevitt, M., Imray, C.H., Johnson, E.L., Pandey, P., Dow, J., & Hackett, P.H. (2024). Wilderness Medical Society Clinical Practice Guidelines for the Prevention and Treatment of Frostbite: 2024 Update. Wilderness & Environmental Medicine, 35(2). *https://doi.org/10.1177/10806032231222359.*

[37] Eicos Sciences, Inc. Prescribing Information for *AURLUMYN™ (iloprost) injection, for intravenous use* (revised 5/2024), section 8.5 Geriatric Use. Available at: *https://www.accessdata.fda.gov/drugsatfda_docs/label/2024/217933s000lbl.pdf.*

publications/ntap/NTP24100722KTJ, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, BREYANZI® was granted accelerated approval for its supplemental Biologics License Application (sBLA) by FDA on March 14, 2024 for the treatment of adult patients with R/R CLL or SLL who have received two or more prior LOTs including a BTKi and a BCL2i.[38] According to the applicant, BREYANZI® was commercially available immediately after FDA marketing authorization for the CLL/SLL indication. Per the applicant, for this indication, patients receive a one-time intravenous infusion of BREYANZI®, which contains 90 to 110 $\times 10^6$ CAR-positive viable T-cells consisting of 1:1 CAR-positive viable T-cells of the CD8 and CD4 components, with each component supplied separately in one or more single-dose vials.

The applicant stated that, effective October 1, 2021, the following ICD–10–PCS codes could be used to uniquely describe procedures involving the use of BREYANZI®: XW033N7 (Transfusion of lisocabtagene maraleucel immunotherapy into peripheral vein) or XW043N7 (Transfusion of lisocabtagene maraleucel immunotherapy into central vein). The applicant provided the following list of codes may be used to currently identify the R/R SLL/CLL indication for BREYANZI® under the ICD–10–CM coding system:

ICD–10–CM code	Description
C83.00	Small cell B-cell lymphoma, unspecified site.
C83.01	Small cell B-cell lymphoma, lymph nodes of head, face, and neck.
C83.02	Small cell B-cell lymphoma, intrathoracic lymph nodes.
C83.03	Small cell B-cell lymphoma, intra-abdominal lymph nodes.
C83.04	Small cell B-cell lymphoma, lymph nodes of axilla and upper limb.
C83.05	Small cell B-cell lymphoma, lymph nodes of inguinal region and lower limb.
C83.06	Small cell B-cell lymphoma, intrapelvic lymph nodes.
C83.07	Small cell B-cell lymphoma, spleen.
C83.08	Small cell B-cell lymphoma, lymph nodes of multiple sites.
C83.09	Small cell B-cell lymphoma, extranodal and solid organ sites.
C91.10	Chronic lymphocytic leukemia of B-cell type not having achieved remission.
C91.12	Chronic lymphocytic leukemia of B-cell type in relapse.

We are inviting public comments on the use of these ICD–10–CM diagnosis codes to identify the indication of R/R SLL or CLL for purposes of the new technology add-on payment, if approved.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that BREYANZI® is not substantially similar to other currently available technologies because BREYANZI® does not use the same or similar mechanism of action as other therapies approved for the treatment of R/R CLL/SLL, is not assigned to the same MS–DRG as other therapies currently approved for the treatment of R/R CLL/SLL, and does not involve treatment of the same or similar type of disease and patient population as other CAR T-cell therapies, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for BREYANZI® for the applicant's complete statements in support of its assertion that BREYANZI® is not substantially similar to other currently available technologies.

[38] Breyanzi. United States Prescribing Information (USPI), (revised 5/2024). According to the applicant, FDA has also approved BREYANZI® for several other indications, including for the treatment of adults with (1) R/R follicular lymphoma (FL) who have received two or more prior LOT (approved on 5/15/2024); (2) R/R mantle cell lymphoma (MCL) who have received at least two prior LOT, including a BTKi (approved on 5/30/2024); (3) R/R large B-cell lymphoma (LBCL) after two or more LOT, including diffuse large B-cell lymphoma (DLBCL) not otherwise specified (including DLBCL arising from indolent lymphoma), high-grade B-cell lymphoma, primary mediastinal LBCL, and FL grade 3B (approved on 2/5/2021); and (4) LBCL, including DLBCL, not otherwise specified (including DLBCL arising from indolent lymphoma), high-grade B-cell lymphoma, primary mediastinal LBCL, and FL grade 3B, who have either refractory disease to first-line chemoimmunotherapy or relapse within 12 months of first-line chemoimmunotherapy or refractory disease to first-line chemoimmunotherapy or relapse after first-line chemoimmunotherapy and are not eligible for hematopoietic stem cell transplant (HSCT) due to comorbidities or age (approved on 6/24/2022). (*https://www.fda.gov/vaccines-blood-biologics/cellular-gene-therapy-products/breyanzi-lisocabtagene-maraleucel*, accessed 3/27/2025).

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	BREYANZI® is the first CAR T-cell therapy indicated for the treatment of R/R CLL/SLL. This mechanism of action is not similar to any existing technology indicated for the treatment of R/R CLL/SLL. Existing therapies include BTKis and BCL2is either alone or in combination with CD20 monoclonal antibodies. These classes of therapies are typically sequenced with BTKi as the first line of therapy, then BCL2i as the second line or therapy or vice versa depending on the preference of the patient and treating physician. Patients who experience intolerance to or disease progression after a BTKi and a BCL2i are limited to treatment via recycling of previous agents (unless refractory), chemoimmunotherapy, non-covalent BTKi, or phosphatidylinositol 3-kinase inhibitors (PI3Ki). BTKis, including ibrutinib, acalabrutinib, zanubrutinib, pirtobrutinib, work by inhibiting the B-cell receptor signaling pathway through the Bruton Tyrosine Kinase protein. BCL2is, including venetoclax, work by binding to the BCL2 protein in the mitochondria leading to apoptosis sensitization. Used in combination with CD20 monoclonal antibodies, such as rituximab, obinutuzumab, the two drugs synergize to induce direct induction of apoptosis, antibody-dependent cell-mediated cytotoxicity and complement-dependent lysis. Chemoimmunotherapy works through a variety of mechanisms that disrupt cellular replication leading to cell death. PI3Kis (idelalisb, duvelisib) work through the inhibition of the PI3K signaling pathway which regulates multiple downstream cellular pathways and is often associated with the development of malignancies. In contrast, BREYANZI® is a CAR T-cell therapy. A CAR is an artificial construct introduced into the DNA of a patient's T cells. The patient's T cells will then transcribe and translate this DNA into a protein, which resides at the surface of the T cell, with the extracellular/targeting domain on the outside of the cell and the costimulatory and signaling domains, required for T-cell activation, on the inside of the cell. When the targeting domain binds to its target. CD19 in the case of BREYANZI®, a signal is transmitted from the activation and costimulatory domain, that initiates proliferation of the T cell and secrete compounds that direct the immune system to kill the cell that is expressing the target. CAR binding to CD19 expressed in CLL/SLL cells induces activation and proliferation of CAR T cells, release of pro-inflammatory cytokines, and cytotoxic killing of target cells. No other therapy indicated for the treatment of R/R CLL/SLL has this mechanism of action.
Is the technology assigned to the same MS–DRG as existing technologies?	No	ICD–10–PCS codes XW033N7 (Transfusion of lisocabtagene maraleucel immunotherapy into peripheral vein) and XW043N7 (Transfusion of lisocabtagene maraleucel immunotherapy into central vein) are assigned to MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies). No other therapies indicated for the treatment of patients with R/R CLL/SLL are assigned to MS–DRG 018. Thus, BREYANZI® is anticipated to be the only technology indicated for R/R CLL/SLL assigned to MS–DRG 018.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	BREYANZI® is the first CAR T-cell therapy approved for the treatment of R/R CLL/SLL. Other approved CAR T-cell therapies treat other myelomas or lymphomas but are not sufficiently analogous to R/R CLL/SLL to be considered the same or a similar disease or patient population, as described below. Because BREYANZI® is the first CAR T-cell therapy, regardless of target, indicated for the treatment of R/R CLL/SLL, it does not involve treatment of the same or similar type of disease and patient population when compared to existing CAR T-cell therapies.

We note that the applicant asserted that because BREYANZI® is the first CAR T-cell therapy, regardless of target, indicated for the treatment of R/R CLL/SLL, it does not involve treatment of the same or similar type of disease and patient population as existing technologies. However, there are other existing (non-CAR T-cell) treatments for patients with R/R CLL/SLL who have received two or more prior LOTs including a BTKi and a BCL2i, such as noncovalent BTKis, PI3Kis, or allogeneic HSCT, and therefore, we question whether BREYANZI® treats a different type of disease or patient population than existing technologies.

We are inviting public comments on whether BREYANZI® is substantially similar to existing technologies and whether BREYANZI® meets the newness criterion.

With respect to the cost criterion, the applicant provided an analysis to demonstrate that BREYANZI® meets the cost criterion. The analysis followed the order of operations summarized in the following table.

BREYANZI® COST ANALYSIS

Inclusion/exclusion criteria ...	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for BREYANZI®.
Claims identified	550 claims mapping to 11 MS–DRGs, with 30.00% of claims mapping to MS–DRG 840 (Lymphoma and Non-Acute Leukemia with MCC).

BREYANZI® COST ANALYSIS—Continued

Charges removed for prior technology.	Per the applicant, it is possible that BREYANZI® could replace other drug therapies during some patients' inpatient stays. The applicant removed 100% of drug charges from the identified cases, as it is difficult to identify the exact differences in drug regimens BREYANZI® patients would receive, both before and in conjunction with administration of BREYANZI®. The applicant stated this removal likely over-estimates charges for drugs that would be replaced by BREYANZI®, as patients may receive some ancillary drug treatments in conjunction with their BREYANZI® administration. The applicant did not remove indirect charges related to prior therapies.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS final rule.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Average case-weighted threshold amount: $1,554,026. Final inflated average case-weighted standardized charge per case: $2,759,094.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all scenarios, the applicant asserted that BREYANZI® meets the cost criterion.

We are inviting public comments on whether BREYANZI® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that BREYANZI® demonstrates a substantial clinical improvement because R/R CLL/SLL patients who have received a prior BTKi and BCL2i have limited treatment options and outcomes are extremely poor. The applicant also asserted that BREYANZI® is the first and only CAR T-cell therapy indicated for this population, and in clinical studies, 20 percent of patients treated with BREYANZI® achieved complete response or remission (CR) and remained in CR through 22.4 months of follow-up. The applicant provided one article and two conference presentations regarding one clinical trial, and the BREYANZI® package insert to support these claims, as well as 11 background articles about CLL, SLL, and current treatment options.[39] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for BREYANZI® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
BREYANZI® is the first and only CAR T-cell therapy specifically approved for the treatment of R/R CLL and SLL patients who have received a prior covalent BTKi and BCL2i.	BREYANZI® (lisocabtagene maraleucel) Prescribing Information. 2024. Siddiqi, T., Maloney, D.G., Kenderian, S.S., Brander, D.M., Dorritie, K., Soumerai, J., Riedell, P.A., Shah, N.N., Nath, R., Fakhri, B., Stephens, D.M., Ma, S., Feldman, T., Solomon, S.R., Schuster, S.J., Perna, S.K., Tuazon, S.A., Ou, S.S., Papp, E., Peiser. L., Chen, Y., & Wierda, W.G. (2023a, August 19). Lisocabtagene maraleucel in chronic lymphocytic leukaemia and small lymphocytic lymphoma (TRANSCEND CLL 004): a multicentre, open-label, single-arm, phase 1–2 study. *The Lancet, 402*(10402), 641–654. *https://doi.org/10.1016/S0140-6736(23)01052-8.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
R/R CLL and SLL patients who received a prior BTKi and BCL2i have limited treatment options.	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
R/R CLL/SLL patients who have received a prior BTKi and BCL2i experience poor outcomes on existing therapy.	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.
BREYANZI® is anticipated to significantly improve clinical outcomes in R/R CLL/SLL patients who have received prior BTKi and BCL2i therapy.	BREYANZI® (lisocabtagene maraleucel) Prescribing Information. 2024. Siddiqi, 2023a, *op. cit.* Siddiqi T, Maloney DG, Kenderian SS, et al. Lisocabtagene Maraleucel in Relapsed or Refractory Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma: 24-Month Median Follow-up of TRANSCEND CLL 004. Abstract presented at: 2023 ASH Annual Meeting; December 9–12, 2023b; San Diego, CA. Siddiqi T, Gauthier J, Kenderian SS, et al. Lisocabtagene Maraleucel (liso-cel) in Patients (pts) with Relapsed or Refractory (R/R) Chronic Lymphocytic Leukemia (CLL)/Small Lymphocytic Lymphoma (SLL): Updated Follow-up of Transcend CLL 004. Abstract presented at: 2024 ASH Annual Meeting; December 7–10, 2024; San Diego, CA.

[39] Background articles are not included in the following table but can be accessed via the online posting for the technology.

We also received a public comment in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for BREYANZI®, which we are summarizing in this section.

Comment: The applicant submitted a public comment in response to questions posed at the Town Hall meeting. With regard to a question asking about the discrepancy in the number of patients in the full efficacy set of the TRANSCEND CLL 004 trial in *The Lancet* article (Siddiqi et al., 2023a) versus the American Society of Hematology (ASH) conference slides (Siddiqi et al., 2023b), the applicant stated that, in the Siddiqi et al. article (2023a), the conforming status of CAR T-cell product for one patient was unavailable at data cutoff (September 29, 2022); therefore, the product for this patient was considered non-conforming, and the patient was excluded in the efficacy and safety analyses that required the receipt of conforming product. The applicant further explained that after data cutoff, the patient received conforming product, and thus, the ASH conference slides (Siddiqi et al., 2023b) included this patient in its safety and efficacy analyses.

With regard to a question asking the applicant to speak to the issue of CR and how the applicant thinks about CR with minimal residual disease (MRD) versus nodal response, the applicant stated that the TRANSCEND CLL 004 study in the Siddiqi et al., article (2023a) assessed participant responses using the 2018 International Workshop on Chronic Lymphocytic Leukemia (iwCLL) criteria, which are the regulatory standard and based on nodal response and hematopoietic recovery and do not include MRD. The applicant further explained that with CLL, patients may have bulky lymph nodes, where with treatment, these patients may see resolution of nodal burden, but it may not resolve to <1.5 cm, which would qualify as a partial response (PR), and not CR per the 2018 iwCLL criteria. The applicant stated that there may be no evidence of residual disease based on blood or bone marrow measures in these patients.

With regard to a question inquiring how efficacy (overall response rate (ORR) and progression-free survival (PFS)) with BREYANZI® compares to other existing therapies (such as Jaypirca® (pirtobrutinib)), and how the applicant considered treatment-emergent adverse events (TEAEs) for BREYANZI® versus other treatments for CLL/SLL, the applicant stated that there is limited real-world data using other agents in the post-BTKi and -BCL2i treatment setting. Per the applicant, these limited data suggest poor outcomes, details of which are included in the BREYANZI® application for new technology add-on payments. The applicant referred to the Siddiqi (2024) presentation slides, which discussed the effects of BREYANZI on the outcomes of all the TRANSCEND CLL 004 subjects (full population) and a subset of those with progression on a previously BTKi and venetoclax failure (referred to as the primary efficacy analysis set, or PEAS, in the rest of this review). According to the applicant, Siddiqi et al. (2024) reported the IRC-assessed CR rate of 20 percent and ORR of 48 percent for the full population treated with BREYANZI® at DL2, and the IRC-assessed CR of 20 percent and ORR of 44 percent for patients in the PEAS cohort. The applicant also noted that the Siddiqi (2024) presentation slides reported the median PFS (mPFS) of 18 months for the full population and 11.9 months for the PEAS cohort. The applicant stated that of the patients who achieved CR or incomplete count recovery (CRi), the mPFS was not reached (NR) for both the full population and the PEAS population. The applicant noted that this efficacy was a result of a single-dose, one-time infusion of BREYANZI®, rather than a continuous treatment, and that this resulted in favorable long-term outcomes. Regarding toxicities, the applicant stated that cytokine response syndrome (CRS) and neurological adverse events are unique to cellular therapies and were overall well-managed in the TRANSCEND CLL 004 study (Siddiqi et al., 2023a), as previously described. The applicant added that no new safety signals were observed in CLL patients. Per the applicant, other common toxicities with cellular therapy include hematologic toxicities, which are also inherent with other targeted agents and were managed with supportive care.

According to the applicant, Jaypirca® (pirtobrutinib), a non-covalent BTKi, is the other FDA-approved agent for patients with CLL/SLL who have received two or more prior LOTs, including a BTKi and BCL2i. Per the applicant, in the phase I–II Jaypirca® trial, the IRC-assessed ORR was reported as 70 percent, the CR rate reported as 0 percent, and the mPFS reported as 16.8 months.[40] According to the applicant, the trial reported any grade adverse events including fatigue (31.5 percent), bleeding (42.6 percent), infections (71.0 percent), and neutropenia (32.5 percent), which are characteristic of this type of targeted agent.

With regard to a question about the breakdown between rates of CR and CRi in the TRANSCEND CLL 004 study (Siddiqi et al., 2023a), the applicant stated that the study's primary analysis, which had a data cutoff of September 29, 2022, reported that the CR rate was 18.4 percent (in 9 of 49 patients) and that among the nine patients who achieved CR/CRi, eight were in CR and one was in CRi.

The applicant also reiterated that patients with R/R CLL/SLL who have failed prior BTKi and BCL2i treatment experience poor outcomes on existing therapy, and BREYANZI® substantially improved clinical outcomes for these patients. The applicant added that BREYANZI®'s outcomes were even more significant when considering the established safety profile and the fact that it is a one-time infusion treatment rather than continuous treatment.

Response: We thank the applicant for its comments. After review of the information provided by the applicant and the public comment received in response to the New Technology Town Hall meeting, we have the following concerns regarding whether BREYANZI® meets the substantial clinical improvement criterion. First, we question whether there is a particular subpopulation for which BREYANZI® offers a treatment option that is unresponsive to or ineligible for other existing therapies. While the applicant asserted that BREYANZI® is the first and only CAR T-cell therapy for this indication, it also stated that there are other treatment options for this patient population, including non-covalent BTKis, such as Jaypirca®, and PI3Ks, such as COPIKTRA®.[41] We note that being the first CAR T-cell therapy for a particular indication relates to mechanism of action and is not relevant to the demonstration of substantial clinical improvement.

[40] Mato, A.R., Woyach, J.A., Brown, J.R., Ghia, P., Patel, K., Eyre, T.A., Munir, T., Lech-Maranda, E., Lamanna, N., Tam, C.S., Shah, N.N., Coombs, C.C., Ujjani, C.S., Fakhri, B., Cheah, C.Y., Patel, M.R., Alencar, A.J., Cohen, J.B., Gerson, J.N., Flinn, I.W., Ma, S., Jagadeesh, D., Rhodes, J.M., Hernandez-Ilizaliturri, F., Zinzani, P.L., Seymour, J.F., Balbas, M., Nair, B., Abada, P., Wang, C., Ruppert, A.S., Wang, D., Tsai, D.E., Wierda, W.G., & Jurczak, W. (2023b, July 6). Pirtobrutinib after a Covalent BTK Inhibitor in Chronic Lymphocytic Leukemia. *New England Journal of Medicine, 389*(1), 33–44. *https://doi.org/10.1056/NEJMoa2300696.*

[41] National Comprehensive Cancer Network. (2024, October 1). *NCCN Clinical Practice Guidelines in Oncology (NCCN Guidelines®): Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma. https://www.nccn.org/professionals/physician_gls/pdf/cll.pdf.*

Secondly, while the applicant stated that BREYANZI® is anticipated to significantly improve clinical outcomes in R/R CLL/SLL patients who have received prior BTKi and BCL2i therapy, we have questions regarding the evidence provided in support of this claim. The applicant provided several studies based on the results of the TRANSCEND CLL 004 trial, including one published article (Siddiqi et al., 2023a), two conference presentations (Siddiqi et al., 2023b; Siddiqi et al., 2024), and the BREYANZI® package insert (2024). We note that the TRANSCEND CLL 004 trial was a single-arm study in which no historical controls were used to compare the effects of BREYANZI® on clinical outcomes. We also note that the applicant acknowledged the caveats inherent with direct cross-study comparisons due to differences between patient populations, baseline comorbidities, and the number and type of prior treatment regimens that subjects have received. In addition, the applicant stated that no head-to-head studies exist comparing BREYANZI® in CLL to currently available treatments. At the same time, the applicant asserted that BREYANZI®'s median time to next therapy was considerably longer than that observed in a real-world study of patients with CLL/SLL after prior treatment with a BTKi and B-cell lymphoma 2 inhibitors (6.6 months [95 percent CI, 3.6–10.a].[42] Also, the applicant noted that patients with prior BTKi exposure who were venetoclax-naïve would have improved outcomes had they received BREYANZI® earlier, before other early-line treatments.[43] We are concerned about the validity of comparing the clinical outcomes of BREYANZI® and existing therapies to the extent those clinical outcomes were results of trials with different designs, and the patients in those studies were selected based on different inclusion/exclusion criteria and may have different baseline clinical characteristics. These differences may have an impact on clinical outcomes that was independent of BREYANZI® or the comparator treatments. Moreover, we note the differing results between BREYANZI® and other existing therapies in terms of the clinical outcomes cited by the applicant. For example, as previously described, BREYANZI® demonstrated a CR rate of 20 percent and ORR of 44 percent for patients in the PEAS cohort. According to the applicant, in a trial in which patients with R/R CLL/SLL received Jaypirca®, the CR rate and ORR was 0 percent and 70 percent respectively.[44] Furthermore, according to the applicant, BREYANZI® resulted in PFS of 11.9 months for patients in the PEAS cohort in the TRASNCEND CLL 004 trial. However, we note that in the trial in which patients with R/R CLL/SLL received Jaypirca®, the PFS was 16.8 months.[45] We question how these mixed findings support the claim that BREYANZI® represents a substantial clinical improvement, given the higher values with respect to the existing therapies for particular outcome results.

In addition, with respect to the applicant's claims that R/R CLL/SLL patients who received prior BTKi and BCL2i therapies have limited treatment options, and that patients with R/R CLL/SLL have poor outcomes on existing therapy, we question whether these claims support that BREYANZI® improves clinical outcomes for this patient population.

We are inviting public comments on whether BREYANZI® meets the substantial clinical improvement criterion.

d. COBENFY™ (Xanomeline and Trospium Chloride)

Bristol Myers Squibb submitted an application for new technology add-on payments for COBENFY™ for FY 2026. According to the applicant, COBENFY™ is an oral combination drug consisting of xanomeline, a muscarinic agonist, and trospium chloride, a muscarinic antagonist, that is indicated for the treatment of schizophrenia in adults. Please refer to the online application posting for COBENFY™, available at *https://mearis.cms.gov/public/publications/ntap/NTP241007U99FM*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, COBENFY™ was granted NDA approval from FDA on September 26, 2024, for the treatment of schizophrenia in adults. The applicant stated that COBENFY™ became commercially available on October 9, 2024, and stated the delay in availability was due to a ramp-up period associated with distribution. We are interested in additional information regarding the cause of any delay in the technology's commercial availability, such as additional information about the ramp-up period for distribution.

COBENFY™ has 3 approved dose strengths (50 mg/20 mg, 100 mg/20 mg, and 125 mg/30 mg) in capsule form. The recommended starting dosage is one 50 mg/20 mg capsule orally twice daily for at least 2 days. The dosage is increased to one 100 mg/20 mg capsule orally twice daily for at least 5 days and may be increased thereafter to one 125 mg/30 mg capsule orally twice daily based on patient tolerability and response. The applicant stated the per day treatment cost is the same across all dosages and the average length of stay for patients taking COBENFY™ is 7.5 days.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify COBENFY™. We note that the applicant submitted a request for approval for a unique ICD–10–PCS procedure code for COBENFY™ beginning in FY 2026. The applicant provided the following list of diagnosis codes that may be used to currently identify the indication for COBENFY™ under the ICD–10–CM coding system: F20.0 (Paranoid schizophrenia), F20.1 (Disorganized schizophrenia), F20.3 (Undifferentiated schizophrenia), F20.89 (Other schizophrenia), F20.9 (Schizophrenia, unspecified), F25.0 (Schizoaffective disorder, bipolar type), F25.1 (Schizoaffective disorder, depressive type), F25.8 (Other schizoaffective disorders), and F25.9 (Schizoaffective disorder, unspecified).

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that COBENFY™ is not substantially similar to other currently available technologies because it is the first treatment for schizophrenia to target muscarinic receptors instead of dopamine. Per the applicant, COBENFY™ combines xanomeline, a muscarinic agonist, and trospium chloride, a muscarinic antagonist, which work together to stimulate muscarinic receptors in the brain while minimizing peripheral side effects; and its efficacy, safety, and tolerability have been established in acute and long-term trials providing a new option for patients; and therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for COBENFY™ for the applicant's complete statements in support of its assertion that COBENFY™ is not

[42] Siddiqi (2023b), *op.cit.*

[43] Siddiqi (2024), *op.cit.*

[44] Mato (2023b), *op.cit.*

[45] Mato (2023b), *op.cit.*

substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	COBENFY™ targets muscarinic receptors as opposed to dopamine receptors, which has long been the standard of care. This novel mechanism marks a significant breakthrough in schizophrenia treatment. COBENFY™ is a combination of xanomeline, a muscarinic agonist, and trospium chloride, a muscarinic antagonist, indicated for the treatment of schizophrenia in adults. Per the FDA label, the efficacy of COBENFY™ is thought to be due to xanomeline's agonist activity at M1 and M4 muscarinic acetylcholine receptors in the central nervous system. Meanwhile, trospium chloride antagonizes the muscarinic receptors primarily in the peripheral tissues and does not measurably cross the blood brain barrier. In contrast, typical and atypical antipsychotics antagonize the dopamine receptors as pure antagonists or partial agonists and antagonists. With its unique mechanism of action, COBENFY™ represents the first treatment in a distinct class of drugs for schizophrenia.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	The use of COBENFY™ should not impact the MS–DRG assignment and COBENFY™ should be assigned to the same MS–DRG as existing products.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	While COBENFY™ treats the same condition, schizophrenia in adults, as other available technologies, COBENFY™ stands apart due to the distinct patient population that could benefit from it. While the current standard of care can be effective in managing symptoms of schizophrenia, studies have shown that approximately 40% of people with schizophrenia do not respond to therapy, and up to 60% experience a partial or inadequate improvement or intolerable side effects during therapy. Side effects from existing antipsychotics can include sedation, vision impairments, seizures, neuroleptic malignant syndrome, and motor disturbances, such as tremors and rigidity. Similarly, atypical antipsychotics are associated with significant weight gain, hyperlipidemia, insulin resistance/diabetes, heart-rate corrected QT interval (QTc) prolongation, extrapyramidal symptoms, tardive dyskinesia, and sexual dysfunction due to prolactin elevation. Breaking this cycle of trial and error is critical and highlights the urgent need for new treatment options. COBENFY™'s unique mechanism of action and clinical profile provide a new therapeutic option for patients, many of whom have not responded to prior treatments. Its efficacy, safety, and tolerability have been demonstrated across both acute and long-term studies. In all placebo-controlled clinical trials, COBENFY™ demonstrated statistically significant reductions in schizophrenia symptoms compared to placebo as measured by the Positive and Negative Syndrome Scale (PANSS) total score, the primary endpoint in the trial. While common adverse reactions of COBENFY™ included nausea and dyspepsia, more severe gastrointestinal issues were rare. Additionally, COBENFY™ does not have atypical antipsychotic class warnings and precautions and does not have a boxed warning. COBENFY™'s favorable side effect profile, coupled with its efficacy, positions it as a valuable alternative for patients, including those who are unable or unwilling to take typical or atypical antipsychotics due to adverse events.

We are inviting public comments on whether COBENFY™ is substantially similar to existing technologies and whether COBENFY™ meets the newness criterion.

With respect to the cost criterion, the applicant provided an analysis to demonstrate that COBENFY™ meets the cost criterion. The analysis followed the order of operations summarized in the following table.

COBENFY™ COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for COBENFY™.
Claims identified	24,817 claims mapping to 9 MS–DRGs, with 93.45% of claims mapping to MS–DRG 885 (Psychoses).
Charges removed for prior technology.	The applicant did not remove direct or indirect charges related to the prior technology. Per the applicant, patients admitted to the hospital for schizophrenia treatment need to be stabilized. The applicant anticipated that patients will continue to receive their traditional treatments to maintain consistent care and that COBENFY™ will be an additive treatment during a switching period where prescribers transition from traditional treatments to COBENFY™ as a monotherapy.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS final rule.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the average cost of the new technology per inpatient stay (treatment cost per day multiplied by an average 7.5 days per inpatient stay) by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.

COBENFY™ COST ANALYSIS—Continued

Cost analysis results	Average case-weighted threshold amount: $43,788. Final inflated average case-weighted standardized charge per case: $44,511.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that COBENFY™ meets the cost criterion.

We are inviting public comments on whether COBENFY™ meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that COBENFY™ represents a substantial clinical improvement over existing technologies because it is a first-in-class muscarinic agonist offering a new approach to treating schizophrenia by selectively targeting muscarinic receptors in the brain without targeting dopamine. The applicant further asserted that COBENFY™ has the potential to improve outcomes by addressing both positive and negative symptoms, which current drugs often inadequately manage, and that its unique mechanism reduces the risk of dopamine-related side effects, such as tardive dyskinesia (TD). The applicant stated that for these reasons, COBENFY™ offers a treatment option for adult patients with schizophrenia who are unresponsive to, or ineligible for, currently available treatments and significantly improves clinical outcomes relative to existing treatments. The applicant provided six articles regarding five studies to support these claims. We also note that two additional articles (Cornett et al., 2017 and Lieberman et al., 2005) [46] submitted as supporting evidence would more appropriately be characterized as background articles because they do not directly assess the use of COBENFY™.[47] [48] Instead, Cornett, et al. (2017) is a literature review of medication-induced TD, and Lieberman, et al. (2005) is a study reviewing the efficacy and side effect profile of other antipsychotic drugs in chronic schizophrenia. The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for COBENFY™ for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
COBENFY™'s proven efficacy and side effect profile make it a valuable option for patients who respond inadequately to current treatments.	Amy Claxton, George Konis, Inder Kaul, Andrew C. Miller, Steven M. Paul, Stephen K. Brannan, Ronald Marcus (2024). Long-Term Metabolic Outcomes Associated With KarXT (Xanomeline and Trospium): Interim Results From Pooled, Long-Term Safety Studies EMERGENT–4 and EMERGENT–5. Presentation at the 2024 Annual Conference of the Schizophrenia International Research Society (SIRS), April 3–7, 2024, Florence, Italy. Kaul I, Sawchak S, Correll CU, Kakar R, Breier A, Zhu H, Miller AC, Paul SM, Brannan SK. Efficacy and safety of the muscarinic receptor agonist KarXT (xanomeline-trospium) in schizophrenia (EMERGENT–2) in the USA: results from a randomised, double-blind, placebo-controlled, flexible-dose phase 3 trial. Lancet. 2024a Jan 13;403(10422):160–170. doi: 10.1016/S0140–6736(23)02190–6. Epub 2023 Dec 14. Erratum in: Lancet. 2024a Jun 1;403(10442):2380. doi: 10.1016/S0140–6736(24)01041–9. PMID: 38104575. Kaul I, Sawchak S, Walling DP, Tamminga CA, Breier A, Zhu H, Miller AC, Paul SM, Brannan SK. Efficacy and Safety of Xanomeline-Trospium Chloride in Schizophrenia: A Randomized Clinical Trial. Applicant statements in support	Supporting evidence provided by the applicant
COBENFY™ offers a side-effect profile that addresses a significant gap in antipsychotic treatment and has the potential to enhance outcomes by improving tolerability and expanding treatment options.	Kaul, 2024a, *op. cit.* Kaul, 2024b, *op. cit.*
COBENFY™ has the potential to improve clinical outcomes due to its demonstrated efficacy in addressing both negative and positive symptoms of schizophrenia.	Brannan, 2021, *op. cit.* Kaul, 2024a, *op. cit.* Kaul, 2024b, *op. cit.* Weiden, 2022, *op. cit.*
COBENFY™ demonstrates statistically significant and clinically meaningful reductions in the severity of illness, as measured by the Clinical Global Impressions-Severity scale (CGI–S), compared to placebo.	Brannan, 2021, *op. cit.* Kaul, 2024b, *op. cit.*

We also received a public comment in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for COBENFY™, which we are summarizing in this section.

Comment: The applicant submitted a public comment in response to questions posed at the Town Hall meeting and provided additional information.

With regard to a question asking whether there was a statistically significant degree of long-term improvement for patients treated with COBENFY™ compared to placebo, the applicant referenced EMERGENT–4, a 52-week phase III outpatient, open-label extension clinical trial included with its application. The applicant stated that participants in this trial previously completed the treatment period of either the EMERGENT–2 or EMERGENT–3 trial, two 5-week, double-blind, placebo-controlled, phase III inpatient clinical trials and regardless of which treatment patients received in the EMERGENT–2 or EMERGENT–3 trial, all patients received COBENFY™ after week 5 during the open-label extension period (EMERGENT–4). The applicant noted that the EMERGENT–4 trial found that long-term treatment with COBENFY™ was associated with improvements in schizophrenia symptoms, regardless of participants' initial group during EMERGENT–2 and EMERGENT–3, and improvements were maintained throughout the study period. The applicant stated that, therefore, it expected no differences in symptom reduction between the two groups during the EMERGENT–4 study period. The applicant stated that the publication manuscript is currently in development with planned submission to a clinical journal in early 2025.

With regard to a request for clarification as to the source of effect size data referenced during the Town Hall meeting, the applicant stated there are two large meta-analyses that report effect size ranges for first-generation (typical) and second-generation (atypical) antipsychotics, and that in these analyses, the effect size of commonly used antipsychotics in the U.S. ranges from 0.3 to 0.56.[49] [50] We note that effect size in these studies refer to treatments' mean differences, standardized mean differences, or risk ratios with 95 percent CIs in comparison to placebo.

With regard to a question asking for additional information as to the clinical significance of a 1.0-point improvement in PANSS negative subscale, the applicant stated it is generally accepted that a mean reduction of 15 points or greater from baseline on the PANSS total score, which evaluates positive and negative symptoms of schizophrenia, is considered clinically meaningful. The applicant also stated that across EMERGENT–1, EMERGENT–2, and EMERGENT–3 clinical trials, patients treated with COBENFY™ demonstrated statistically significant improvements in symptoms compared to placebo, with a mean PANSS total score reduction of ≥15 points from baseline. Further, the applicant stated that all three trials evaluated the change in PANSS negative score from baseline as a secondary efficacy endpoint, and while there is less consensus regarding a clinically meaningful threshold for the PANSS negative subscale score, COBENFY™ demonstrated statistically significant PANSS negative subscale score reductions compared to placebo in the EMERGENT–1 and EMERGENT–2 clinical trials, with a least squares mean difference of -2.3 ($p<0.001$) and -1.8 ($p=0.0055$), respectively. The applicant noted that none of the three studies enrolled a patient population enriched for negative symptoms, and currently, there are no FDA-approved medications for the specific treatment of negative schizophrenia symptoms.

With regard to an inquiry for additional information on long-term medication adherence in adult patients treated with COBENFY™ compared to other schizophrenia treatments, the applicant stated that it will initiate a real-world, prospective, patient registry study to understand COBENFY™ usage patterns and COBENFY™'s potential impacts among U.S. adults with schizophrenia.

Response: We thank the applicant for its comments. After review of the information provided by the applicant and the public comment received in response to the New Technology Town Hall meeting, we have the following concerns regarding whether COBENFY™ meets the substantial clinical improvement criterion. We note that the applicant did not identify a patient population for which

[49] Leucht, S., Cipriani, A., Spineli, L., Mavridis, D., Örey, D., Richter, F., Samara, M., Barbui, C., Engel, R.R., Geddes, J.R., Kissling, W., Stapf, M.P., Lässig, B., Salanti, G., & Davis, J.M. (2013). Comparative efficacy and tolerability of 15 antipsychotic drugs in schizophrenia: a multiple-treatments meta-analysis. *The Lancet, 382*(9896), 951–962. *https://doi.org/10.1016/s0140-6736(13)60733-3.*

[50] Huhn, M., Nikolakopoulou, A., Schneider-Thoma, J., Krause, M., Samara, M., Peter, N., Arndt, T., Bäckers, L., Rothe, P., Cipriani, A., Davis, J., Salanti, G., & Leucht, S. (2019). Comparative Efficacy and Tolerability of 32 Oral Antipsychotics for the Acute Treatment of Adults with multi-episode schizophrenia: a Systematic Review and Network meta-analysis. *The Lancet, 394*(10202). *https://doi.org/10.1016/s0140-(19)31135-3.*

COBENFY™ could be used that is unresponsive to or ineligible for other available treatments. The applicant asserted that COBENFY™'s efficacy and side effect profile make it a valuable option for patients who respond inadequately to current treatments and that COBENFY™ may be an effective treatment option for patients experiencing disruptive negative symptoms. To support these assertions, we note that the applicant provided data on COBENFY™ from three 5-week, randomized, double-blind trials (EMERGENT–1, EMERGENT–2, and EMERGENT–3) that compared COBENFY™ to placebo and from two unpublished 52-week open-label trials (EMERGENT–4 and EMERGENT–5). While the exclusion criteria are unknown for EMERGENT–5, we note that the other trials excluded patients with a history of treatment resistance to schizophrenia medications, and we therefore question how the trials demonstrate that COBENFY™ can treat patients unresponsive to other therapies. In addition, we did not receive data indicating that other antipsychotics cannot manage negative symptoms. We also note that if a patient experiences a side effect on one antipsychotic, they may not experience the same side effect on another antipsychotic. Similarly, if one antipsychotic does not work for a patient, it does not necessarily mean another typical or atypical antipsychotic would not work for that patient. Therefore, we question if COBENFY™ is the only treatment option for patients with inadequate response to current treatments or for those experiencing negative symptoms.

The applicant also asserted that COBENFY™ significantly improves outcomes relative to previously available therapies. To support this assertion, the applicant provided data from three 5-week clinical trials (EMERGENT–1, EMERGENT–2, and EMERGENT–3) that compared COBENFY™ to placebo and a literature review on TD (Cornett et al., 2017). However, COBENFY™ was compared to placebo in these trials, and data was not provided comparing COBENFY™ to currently available therapies. We note that, per the applicant, there are more than 20 FDA-approved therapies for schizophrenia, and we are interested in additional information comparing clinical outcomes with COBENFY™ to these therapies, such as with regard to reduction in symptoms of schizophrenia and/or side effects, improved medication adherence, or other outcomes described under the regulations at § 412.87(b)(1)(ii)(C), to inform an assessment of whether COBENFY™ provides a substantial clinical improvement over existing treatment options.

In addition, with respect to the claim that COBENFY™ offers a side-effect profile that has the potential to enhance outcomes by improving tolerability and expanding treatment options, the applicant stated that the provided literature review on TD (Cornett et al., 2017) supports the theory that blockade of dopamine receptors by dopamine antagonists contributes to the development of TD, which COBENFY™ does not affect. We note that the study stated that typical antipsychotics are the most likely to cause TD while atypical antipsychotics may be associated with a decreased prevalence of TD, and we, therefore, are unclear if the applicant is stating that COBENFY™ may reduce the prevalence of TD only compared to typical antipsychotics. We also note that this literature review only discussed TD, which is one potential side effect of some schizophrenia treatments, and no other provided evidence related to rates of other potential side effects seen with existing schizophrenia treatment options such as cardiac arrhythmias, metabolic syndrome, and tremor were compared to the rates for COBENFY™. We would appreciate further information comparing the overall benefit-risk profile of COBENFY™ to previously available antipsychotics in order to assess if COBENFY™ provides a substantial clinical improvement over other available therapies. We also note that the applicant stated that the EMERGENT trials demonstrated that COBENFY™ is well-tolerated and that measures of extrapyramidal symptoms, weight gain, and somnolence were similar between groups. However, given that the trials were only 5 weeks in duration and some side effects, such as tardive dyskinesia, can take longer to occur, we question whether these rates of adverse events may increase over time. For these reasons, we question the assertion that COBENFY™ improves tolerability and side-effects relative to previously available therapies.

The applicant claimed that COBENFY™ demonstrates statistically significant and clinically meaningful reductions in the severity of illness compared to placebo, as measured by the Clinical Global Impression-Severity (CGI–S) scale. According to the applicant, the CGI–S is a global assessment tool used to rate the overall severity of a patient's illness, and rather than being specific to positive, negative, or cognitive symptoms, it instead gives an overall sense of how severe schizophrenia is perceived to be at a given time. However, we question long-term efficacy, given that the only data submitted for this claim was from two 5-week trials (EMERGENT–1 and EMERGENT–3).

We are inviting public comments on whether COBENFY™ meets the substantial clinical improvement criterion.

e. DuraGraft® (Vascular Conduit Solution)

Marizyme, Inc. submitted an application for new technology add-on payments for DuraGraft® for FY 2026. Per the applicant, DuraGraft® is a first-in-class product used during coronary artery bypass grafting surgery (CABG) in adult patients to protect the vascular endothelia of harvested vascular grafts during the ischemic graft storage interval. As noted in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26795), Somahlution, Inc., acquired by Marizyme, Inc. in 2020, submitted and withdrew applications for new technology add-on payments for DuraGraft® for FY 2018 and FY 2019. The applicant also submitted an application for new technology add-on payments for FY 2020 and FY 2024, as summarized in the FY 2020 and FY 2024 IPPS/LTCH PPS proposed rules (84 FR 19305 through 19312, 88 FR 26795 through 26803), that it withdrew prior to the issuance of the FY 2020 and FY 2024 IPPS/LTCH PPS final rules (84 FR 42194, 88 FR 58804), respectively. The applicant also submitted an application for new technology add-on payments for FY 2025, but its application was not approved in the FY 2025 IPPS/LTCH PPS final rule because we were unable to determine that DuraGraft® represents a substantial clinical improvement over existing therapies (89 FR 69149).

Please refer to the online application posting for DuraGraft® available at *https://mearis.cms.gov/public/publications/ntap/NTP241007PUDEH*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, DuraGraft® was granted De Novo classification from FDA on October 4, 2023, as a solution indicated for adult patients undergoing CABG and is intended for flushing and storage of the saphenous vein grafts from harvesting through grafting for up to 4 hours. The applicant also stated that it received clearance from FDA for a labeled storage temperature change from refrigerated to controlled room temperature for DuraGraft® through a Special 510(k) in May 2024 so that it

could be stored in the OR. The applicant stated that it chose to launch the DuraGraft® product upon this label change, and that DuraGraft® will become commercially available on March 31, 2025. The applicant stated the refrigerated product was not placed on the US market, nor will it be, as only the controlled room temperature DuraGraft® product will be placed on the market. The applicant further explained that manufacturing with the updated labels could not begin until new labels were allowed by FDA, ordered from suppliers, and accepted into the Contract Manufacturing Organization Quality Management System (CMO QMS), which, per the applicant, is a process that takes 3 to 4 months. We would appreciate additional information regarding the cause for any delay in the technology's commercial availability.

The applicant stated that, effective October 1, 2017, the following ICD–10–PCS code may be used to uniquely describe procedures involving the use of DuraGraft®: XY0VX83 (Extracorporeal introduction of endothelial damage inhibitor to vein graft, new technology group 3). The applicant provided a list of diagnosis codes that may be used to currently identify the indication for DuraGraft® under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that DuraGraft® is not substantially similar to other currently available technologies because DuraGraft® is a first-in-class product for use in adult patients undergoing CABG surgery and received FDA marketing authorization via a De Novo pathway. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for DuraGraft® for the applicant's complete statements in support of its assertion that DuraGraft® is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	DuraGraft® is a first-in-class product and there is no product that is similar with similar mechanism of action. Also, the response to FY2025 NTAP application concurred that DuraGraft met the Newness Criterion and since then there are still no other technologies or products that have been introduced into the market that are similar or with similar mechanism of action.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	MS–DRGs used during CABG surgery are aligned to the same MS–DRGs for which DuraGraft® is indicated.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	DuraGraft® is used in the CABG patient population; however, there are no existing products with the same indication as DuraGraft® nor are there existing products similar to DuraGraft® used during CABG surgery.

We note that in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69142 through 69143), we agreed that DuraGraft® has a unique mechanism of action compared to other vein graft storage solutions because it creates a reducing environment for vascular grafts to prevent oxidative damage which occurs during ischemic storage of grafts.

We are inviting public comments on whether DuraGraft® is substantially similar to existing technologies and whether DuraGraft® meets the newness criterion.

With respect to the cost criterion, the applicant provided an analysis to demonstrate that DuraGraft® meets the cost criterion. The analysis followed the order of operations summarized in the following table.

DURAGRAFT® COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes, ICD–10–PCS codes, and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for DuraGraft®.
Claims identified	32,602 claims mapping to 65 MS–DRGs, with none exceeding more than 22.69% of the total identified cases.
Charges removed for prior technology.	The applicant removed 100% of blood charges and 25% of the charges associated with medical/surgical supplies for each case. The applicant did not remove indirect charges related to the prior technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of DuraGraft® by the national average cost-to-charge ratio of 0.297 for Supplies & Equipment from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Average case-weighted threshold amount: $245,963. Final inflated average case-weighted standardized charge per case: $312,912.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that DuraGraft® meets the cost criterion.

We are inviting public comments on whether DuraGraft® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that DuraGraft® represents a substantial clinical improvement over existing technologies because DuraGraft® significantly improves clinical outcomes including reducing long-term adverse events and mortality, improving myocardial protection and event-free survival, and reducing vein graft wall thickness compared to other intraoperative vein-graft preservation solutions. The applicant provided six documents to support these claims, including five studies and a pre-publication version of one of the studies, as well as a supplemental attachment providing responses to CMS's concerns and decision regarding the applicant's FY 2025 application for new technology add-on payments for DuraGraft®, as discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69147 through 69149). The applicant also provided 44 background articles.[51] Please see the online posting for DuraGraft® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

We received a public comment in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for DuraGraft®, which we summarize in this section.

Comment: The applicant submitted a public comment to address questions raised at the Town Hall meeting. In response to questions asking about why DuraGraft® has an impact at 36-months and about results observed within 15 minutes post flushing and storage, the applicant referred to a peer-reviewed journal article by Pachuk et al. (2019) study, which compared the viability of human saphenous vein (HSV) segments flushed and submerged in either (a) DuraGraft® for one hour or heparinized saline (b) one hour, (c) 15 minutes or (d) 30 minutes and then stained for viability.[52] The applicant submitted this article as background information as part of its FYs 2024, 2025, and 2026 new technology add-on payment applications. Per the applicant, the data showed that storage in saline resulted in loss of cell viability within 15 minutes and almost complete loss of viability following 30 minutes exposure to saline. The applicant noted that in contrast, viability of HSV segments is maintained following one hour storage/flushing with DuraGraft® (and even after several hours), which means that the vein segments must also have been viable earlier at 15 and 30 minutes; a time at which vein segments were dying or dead in saline. Per the applicant, it is therefore concluded that DuraGraft® provides a benefit even at 15–30 minutes of storage and flushing. The applicant also clarified how a single intraoperative exposure to DuraGraft®

[51] Background articles are not included in the following table but can be accessed via the online posting for the technology.

[52] Pachuk, CJ, Rushton-Smith SK, & Emmert MY (2019). Intraoperative storage of saphenous vein grafts in coronary artery bypass grafting. *Expert review of medical devices, 16*(11), 989–997. *https://doi.org/10.1080/17434440.2019.1682996.*

can affect clinical outcomes years later. The applicant explained that DuraGraft® mitigates oxidative damage during bypass surgery, thereby reducing ischemia reperfusion injury (IRI) and its long-term effects.[53] [54] The applicant noted that IRI, characterized by oxidative stress and inflammation, leads to vein graft disease (VGD), which progresses through stages of intimal hyperplasia, stenosis, and occlusion.[55] [56] The applicant stated that clinical studies, which were included in its application and discussed in further detail later in this section, such as the Perrault et al. (2019) study, demonstrated that DuraGraft®-treated veins showed reduced wall thickening and lumen narrowing at 12 months. Additionally, the applicant stated that the Haime et al. (2018) study and the Caliskan et al. (2024) study [57] indicated improved clinical outcomes and lower mortality rates in DuraGraft® patients.

In response to our request for additional details on the study highlighting the impact of storage solutions on vein graft failure rates, based on a sub-analysis of the data from PREVENT IV trial (*ClinicalTrials.gov: NCT00042081*),[58] the applicant explained that the PREVENT IV study was a large-scale prospective trial aimed at assessing the safety and efficacy of edifoligide in preventing vein graft failure (VGF) after CABG by inhibiting neointimal hyperplasia (Alexander et al., 2005). The applicant noted that the sub-analyses of the study data revealed that the intraoperative graft storage solution had the most significant correlation with VGF, with buffered saline solutions like Plasmalyte, Normasol, or Lactated Ringer reducing failure rates by 28 percent compared to blood and saline.[59] [60] [61] The applicant stated that, despite this improvement, these solutions do not prevent ischemic or oxidative damage, as they merely maintain pH balance.[62] The applicant asserted that, in contrast, DuraGraft® offers a unique mechanism by creating a reducing environment to prevent oxidative damage during ischemic storage, using L-glutathione and L-Ascorbic acid, which has been associated with reduced graft wall thickening and a significant three-year mortality benefit, and therefore, in no way should these liquids be compared to or considered similar to DuraGraft®.

Response: We thank the applicant for its comment. After review of the information provided by the applicant and the public comment received in response to the new technology add-on payment town hall meeting, we continue to have concerns regarding whether DuraGraft® meets the substantial clinical improvement criterion, as described in the FY 2025 IPPS/LTCH final rule (89 FR 69144 through 69149). First, with regard to comparison with currently available treatments, as previously stated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69148), we are unclear how improvements demonstrated by use of DuraGraft® as compared to saline controls demonstrate substantial clinical improvement over other existing technologies without an assessment of comparative outcomes to the other vein graft preservation solutions. We note that all of the studies provided compared DuraGraft® to saline controls and not to other intraoperative buffered vein graft solutions such as PlasmaLyte, Normoscol, and Ringer's solution with respect to vein graft patency or clinical outcomes.[63] We note that in its response to this concern from the FY 2025 IPPS/LTCH PPS final rule, the applicant stated that it tested against saline as it is still the most preferred wetting solution amidst dozens used as wetting solutions by surgeons in the United States according to the result of a survey published in *JAMA*.[64] The applicant also stated that DuraGraft® was tested against other wetting solutions in preclinical and non-clinical studies with no difference seen in the results of mechanism compared to when saline was used as the control.[65] However, we note that according to the same survey, among the 100 top-performing medical centers that conduct CABG, 40 percent reported using pH-buffered solution (commercially available or homegrown), compared to 28.9 percent reporting the use of saline, and 25.6 percent autologous blood. In addition, we are unclear how the lack of differences in the mechanism in pre-clinical and non-clinical studies relates to a demonstration of substantial clinical improvement over those therapies in Medicare patients undergoing CABG. While the applicant stated in its Town Hall comment that Ringers Lactate, Plasmalyte or Normosol buffered solutions are only used to keep grafts from drying out between harvesting and implantation and should not be compared to or considered similar to DuraGraft®, as we noted in the FY 2025 IPPS/LTCH PPS final rule, studies have shown that vein graft storage solutions have differing effects on graft endothelium. We further note that previous studies have shown that saline alone is acidic and not beneficial for grafts, and that buffered solutions, such as PlasmaLyte, Normoscol, and Ringer's solution, are associated with lower VGF rates as compared to saline.[66] We note that whether or not these other buffered solutions are the same or similar to DuraGraft® does not determine if their use is part of the standard of care for

purposes of assessing whether DuraGraft® represents a substantial clinical improvement as compared to existing technologies. We welcome comments on the comparison of DuraGraft® to saline alone versus other storage solutions used in contemporary CABG standards of care in the U.S. As these other solutions are also existing vein graft storage options, we would appreciate evidence comparing DuraGraft® to these currently available standard of care options to demonstrate post-CABG clinical improvement.

Second, regarding interim or surrogate endpoints, as in previous years, the applicant stated that the use of DuraGraft® leads to reduced 12 month overall mean wall thickness and a decreased rate of change from 1 to 12 months (focal stenosis) for maximum graft narrowing (Perrault et al., 2021), and improved myocardial protection with lower troponin (hs-Tnl) values from 3 to 6 hours and up to 4 days (Szalkiewicz et al., 2022). However, as discussed previously in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69148), early anatomical changes associated with the development of VGD (such as changes in wall thickness and graft narrowing) are surrogate endpoints, and we similarly note that that hs-Tnl levels are also surrogate measure for peri-operative MI, and, therefore, they do not demonstrate a clinical outcome as described under the regulations at § 412.87(b)(1)(ii)(C).

We also remain concerned about the effects on the evidence provided of potential confounders that have not been taken into account in the study designs. We note that SVG failure is the result of a complex process involving multiple risk factors. Surgical risk factors other than the use of DuraGraft® may also contribute to post-CABG clinical outcomes. Thus, evidence about the effects of DuraGraft® on VGF may be confounded by factors related to pre-operative care (such as aspirin), intra-operative procedures and techniques (such as no touch harvesting, appropriate length of vein, vein graft storage, or transit time flow measurement, and post-CABG care management (such as lipid-lowering therapies and $P2Y_{12}$ inhibitors). For example, we are concerned about whether the Haime study (2018) accounted for potential confounding effects of risk factors such as whether patients received beta-blockers before surgery, were on ventilation support for more than 12 hours, developed pneumonia or post-operative atrial fibrillation,[67] were in pre-operative renal failure on dialysis or had a lower estimated glomerular filtration rate,[68] or the type of post-acute care facility that patients were referred to,[69] which may impact post-CABG outcomes. Similarly, we question whether the results of the Szalkiewicz (2022) study, based on a single-center study conducted in Austria, and the Lopez-Mendez (2023) study, based on a single-center study in Spain, could have been confounded by site-specific factors or by standard of CABG care specific to those two countries.

We also note that the only new study provided by the applicant in its application for FY 2026 was the Caliskan et al. (2024) study,[70] which is the published version of the Marizyme Internal Study Report (2023) that was also provided in its FY 2025 application. The applicant stated that this study demonstrates a three-year mortality benefit associated with the use of DuraGraft®. Per the applicant, the Caliskan et al. (2024) study compares patients in the European DuraGraft Registry (DuraGraft® cohort) who underwent isolated CABGs and were exposed to DuraGraft® between 2016 and 2019 to randomly selected patients in the U.S. Society of Thoracic Surgeons (STS) National Database™ (US Cohort) for the same period. Using a propensity score model (PSM), the authors examined the mortality rate of 2,400 patients matched from each registry at 30-day,
12-, 24-, and 36-month post CABG. However, we question whether any results seen may have been affected by potential confounders. According to Caliskan et al. (2024), more than 95 percent of the U.S. hospitals performing CABG surgery report data to the STS, which captured almost all (98 percent) of the CABG surgeries in the U.S. We are interested in similar information about the European DuraGraft Registry, including its clinical site-selection standards and patient inclusion and exclusion criteria. We question whether these factors may have confounded the relationship between DuraGraft® and post-CABG mortality. In addition, we note that due to data availability, intra-operative risk factors, like the use of Transit Time-Flow Measurement,[71] on-pump status, endoscopic harvest, and post-operative therapies known to minimize SVG failure, were not accounted for in the Caliskan (2024) study. The use of post-procedural therapies may also confound the effects of DuraGraft® on post-CABG outcomes. For example, SVG failure is up to five times more frequent in patients who are not treated with aspirin postoperatively, and lipid-lowering therapies, such as statin therapies, reduce SVG occlusion rates as well as adverse events after CABG.[72] Additionally, we note that according to Lopez-Menendez et al. (2023), every CABG patient in its institution is discharged home with dual antiplatelet therapy for a duration of three months, along with high-dose statins and that the study groups adhered to this institutional protocol, with a 100 percent completion rate. We question whether post-surgical protocols like this might have confounded the treatment effects of DuraGraft® on mortality rates, especially those after 30-day post CABG. We also question the Caliskan team's finding (2024) that DuraGraft® had significant effects on all-cause mortality rates at 36-month post-CABG but not at 30-day, 12-, or 24-months. Per the applicant, the 36-month all-cause mortality estimate for the DuraGraft® cohort was 7.37 percent [95 percent, CI 6.36 to 8.53], compared to 9.65 percent [95 percent, CI 8.37 to 11.10] for the US cohort (log-rank p-value = 0.016). However, there was no significant difference in survival between the DuraGraft® and U.S. cohorts throughout 2 years post-CABG. We therefore question whether mortality at 36 months post-CABG may be associated with risk factors that emerged long after the CABG surgery. Moreover, we note that in Lopez-Menendez et al. (2023), in which 90 CABG patients whose veins were treated with DuraGraft® were matched with another 90 whose veins were treated with saline solution, the three-year mortality rate of the DuraGraft® group was not significantly different from that of the saline group. We welcome information about the mixed evidence from the Caliskan et al. (2024) and Lopez-Menendez et al. (2023) studies.

[67] Ibrahim KS, Kheirallah KA, Rahman A, et al. Factors affecting duration of stay in the intensive care unit after coronary artery bypass surgery and its impact on in-hospital mortality: a retrospective study. *Journal of Cardiothoracic Surgery* February 2024. 19(45).

[70] Per the applicant, Caliskan et al. (2024) is based on the Marizyme internal study report.

[71] Lopez-Menendez (2023), *op. cit.*

[72] Willemsen, L, Janssen, P, Klein, P, Berg, JM, Therapies to improve vein graft patency after CABG, American College of Cardiology, February 8, 2021: Therapies to Improve Vein Graft Patency After CABG—American College of Cardiology.

Furthermore, the Caliskan study used all-cause mortality, rather than cardiac-related mortality, to represent clinical outcomes resulting from the use of DuraGraft®, which may include deaths by other acute or chronic conditions and cannot be attributed to the quality of CABG-related care, including the use of DuraGraft®. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69149), we expressed concern that the Marizyme Internal Study (2023), which has the same content as Caliskan et al. (2024), only reported all-cause mortality and does not specify how many patients had mortality due to other causes that could not be attributed to use of a vein preservation solution other than DuraGraft®. We continue to have the concern that all-cause mortality may include deaths resulting from other conditions rather than heart diseases. We remain unclear whether DuraGraft® was the only factor that contributed to the differences in all-cause mortality rates between the treatment (DuraGraft®) and control groups. We also remain unclear in what ways the results demonstrated how DuraGraft® brought about the reduction in all-cause mortality. While we acknowledge that the use of all-cause mortality as a clinical outcome may be the result of data availability, it is unclear that DuraGraft® was the only differing factor between the arms, and how this demonstrates that it was DuraGraft® that effected this difference in mortality, rather than some other factor. We welcome information about the choice of this outcome as an indicator of the effects of DuraGraft® on clinical outcome improvement.

We also note regarding the attrition rate for the DuraGraft® registry that, according to Caliskan et al. (2019),[73] patients were contacted via mail, email, or telephone at one month, one year, and annually thereafter up to five years post CABG to determine whether cardiac-related adverse events and/or hospitalizations have occurred. We are unclear about the number of patients who were lost to follow up, the reasons for dropping out, and how these reasons were mapped to the definition of clinical outcomes. We also welcome information about how attrition impacted the number of patients in the treatment (DuraGraft®) and control groups at prespecified points of the follow-up period.

We are inviting public comments on whether DuraGraft® meets the substantial clinical improvement criterion.

f. FIBRYGA® (Fibrinogen (Human))

Octapharma USA, Inc. submitted an application for new technology add-on payments for FIBRYGA® for FY 2026. According to the applicant, FIBRYGA® is a concentrated form of human fibrinogen, indicated for fibrinogen supplementation in bleeding patients with acquired fibrinogen deficiency and the treatment of acute bleeding episodes in patients with congenital fibrinogen deficiency, including afibrinogenemia and hypofibrinogenemia. We note that the applicant is seeking new technology add-on payments for FIBRYGA® for FY 2026 specific to the 2024 supplemental Biologics License Application (sBLA) indicated for the fibrinogen supplementation in bleeding adult and pediatric patients with acquired fibrinogen deficiency.

Please refer to the online application posting for FIBRYGA®, available at *https://mearis.cms.gov/public/publications/ntap/NTP241007YU8UR*, for additional detail describing the technology and acquired fibrinogen deficiency.

With respect to the newness criterion, according to the applicant, FIBRYGA® was granted supplemental BLA approval from FDA on July 31, 2024, expanding its previous BLA indication to include the fibrinogen supplementation in bleeding adult and pediatric patients with acquired fibrinogen deficiency indication and to update the U.S. prescribing information to include this indication.[74] According to the applicant, FIBRYGA® became commercially available immediately after FDA approval for this expanded indicated use. The applicant stated that FIBRYGA® is administered intravenously with a recommended dose of 4g for adults per inpatient stay.

According to the applicant, there are currently no ICD–10–PCS procedure codes to identify FIBRYGA®. We note that the applicant submitted a request for approval for a unique ICD–10–PCS procedure code for FIBRYGA® beginning in FY 2026. The applicant stated that D68.4 (Acquired coagulation factor deficiency) and O72.3 (Postpartum coagulation defects) may be currently used to identify the indication for FIBRYGA® under the ICD–10–CM coding system. We believe the relevant ICD–10–CM code to identify the indication of fibrinogen supplementation in bleeding adult and pediatric patients with acquired fibrinogen deficiency that is relevant to this new technology add-on payment application would be D68.4 (Acquired coagulation factor deficiency). We are inviting public comments on the use of this ICD–10–CM diagnosis code to identify this indication for purposes of the new technology add-on payment, if approved.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that FIBRYGA® is not substantially similar to other currently available technologies because it is the only FDA-approved therapy available to treat acquired fibrinogen deficiency in bleeding patients. According to the applicant, in patients experiencing a major bleeding event, acquired fibrinogen deficiency often goes untreated because cryoprecipitate cannot be delivered fast enough. The applicant further explained that FIBRYGA®'s storage and preparation characteristics allow it to be readily available, giving patients reliable access to therapy that is potentially lifesaving, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for FIBRYGA® for the applicant's complete statements in support of its assertion that FIBRYGA® is not substantially similar to other currently available technologies.

[73] Caliskan E, Sandner S, and Misfeld M, et al (2019) A novel endothelial damage inhibitor for the treatment of vascular conduits in coronary artery bypass grafting: protocol and rationale for the European, multicentre, prospective, observational DuraGraft registry. *Journal of Cardiothoracic Surgery https://doi.org/10.1186/s13019-019-1010-z.*

[74] Previous FDA approvals for FIBRYGA®: In 2017, FDA granted FIBRYGA® approval under a BLA application for the treatment of acute bleeding episodes in adults and adolescents ≥12 years of age with congenital fibrinogen deficiency, including afibrinogenemia and hypofibrinogenemia. On December 23, 2020, FDA granted FIBRYGA® approval under a sBLA application for on-demand treatment of acute bleeding episodes to pediatric patients <12 years of age with congenital fibrinogen deficiency.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	Yes	FIBRYGA® works by providing a source of fibrinogen the body can use to form blood clots to stop bleeding. This is the same mechanism used by cryoprecipitate; however, FIBRYGA® provides a faster, safer, and more consistent dosage as compared to cryoprecipitate.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	It is not expected that the use of FIBRYGA® will affect the MS–DRG assignment.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	FIBRYGA® is currently the only FDA-approved therapy for treating acquired fibrinogen deficiency as a result of major bleeding. Fibrinogen is a key component in blood clot formation and levels in the body drop fast and early during an emergent major bleeding event. Low levels of fibrinogen can lead to impaired blood clot formation which is life threatening. Cryoprecipitate, the current standard of care, requires long processing times and transport to the point of care. Because of this, patients suffering from acquired fibrinogen deficiency during this early, critical period of a major bleed are often not treated as clinicians do not have a quickly available option to supplement declining fibrinogen levels. This potentially leads to adverse outcomes ranging from longer ICU stays to exsanguination. FIBRYGA® can be stored at room temperature and reconstituted quickly. These two properties allow it to be stored near the point of care and delivered quickly to bleeding patients who might otherwise not have received therapy. For the first time, FIBRYGA® offers an FDA-approved rapid treatment option for acquired hypofibrinogenemia in emergent bleeds.

We note the following concerns with regard to the newness criterion. While the applicant asserted that FIBRYGA® is currently the only FDA-approved therapy for treating acquired fibrinogen deficiency as a result of major bleeding, we note that INTERCEPT® Fibrinogen Complex, which is the pathogen reduced cryoprecipitated fibrinogen complex (PRCFC) produced by the INTERCEPT® Blood System, is FDA-approved for the treatment and control of bleeding, including massive hemorrhage, associated with fibrinogen deficiency. The applicant further asserted that FIBRYGA® can be stored at room temperature, allowing it to be delivered quickly to bleeding patients and offering an FDA-approved rapid treatment option for acquired hypofibrinogenemia in emergent bleeds. However, we note that INTERCEPT® Fibrinogen Complex has a 5-day shelf life at room temperature and is immediately available in a ready-to-transfuse form as a fibrinogen source.[75] [76] Therefore, we question whether FIBRYGA® and INTERCEPT® Fibrinogen Complex involve the treatment of the same or similar type of disease and the same or similar patient population. In addition, we note that the applicant asserted that FIBRYGA® has the same mechanism of action used by cryoprecipitate and works by providing a source of fibrinogen the body can use to form blood clots to stop bleeding. We also note that INTERCEPT® Fibrinogen Complex provides a source of fibrinogen, and therefore, we question whether FIBRYGA® and INTERCEPT® Fibrinogen Complex have the same mechanism of action. We also note that the applicant asserted that use of FIBRYGA® is not expected to change the MS–DRG assignment for cases of acquired hypofibrinogenemia, and we therefore believe it would map to the same MS–DRGs as INTERCEPT® Fibrinogen Complex.

Therefore, as it appears that FIBRYGA® and INTERCEPT® Fibrinogen Complex may use the same or similar mechanism of action to achieve a therapeutic outcome, are assigned to the same MS–DRGs, and treat the same or similar patient population and disease, we believe that these technologies may be substantially similar to each other. We note that, per our policy, if these technologies are substantially similar to each other, we use the earliest market availability date as the beginning of the newness period for the technologies. Therefore, if FIBRYGA® is substantially similar to INTERCEPT® Fibrinogen Complex, we believe the newness period for this technology would begin on May 5, 2021, the date INTERCEPT® Fibrinogen Complex became commercially available.[77] In addition, because the 3-year anniversary date of the INTERCEPT® Fibrinogen Complex's entry onto the U.S. market (May 5, 2024) occurred in FY 2024, FIBRYGA® would not be considered new and would not be eligible for new technology add-on payments for FY 2026. We are interested in information on how these technologies may differ from each other with respect to the substantial similarity criteria and newness criterion.

We are inviting public comment on whether FIBRYGA® meets the newness criterion, including whether FIBRYGA® is substantially similar to INTERCEPT® Fibrinogen Complex for purposes of new technology add-on payments.

With respect to the cost criterion, the applicant provided an analysis to demonstrate that FIBRYGA® meets the cost criterion. The analysis followed the order of operations summarized in the following table.

FIBRYGA® COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for FIBRYGA®.

[75] Cerus Corporation. INTERCEPT® Blood System for Cryoprecipitation Package Insert For the manufacturing of Pathogen Reduced Cryoprecipitated Fibrinogen Complex. (Revised 5/2024). Available at: *www.fda.gov/media/143996/download.*

[76] *https://intercept-usa.com/products/intercept-fibrinogen-complex/#:~:text=INTERCEPT%C2%AE%20Fibrinogen%20Complex%20is,day%20post%2Dthaw%20shelf%20life.*

[77] INTERCEPT® Blood System received FDA approval on November 24, 2020, to produce PRCFC; however, as noted in FY 2022 IPPS/LTCH PPS final rule (86 FR 45149), the manufacturers stated that it was not available for sale until May 5, 2021.

FIBRYGA® COST ANALYSIS—Continued

Claims identified	18,037 claims mapping to 468 MS–DRGs, with none exceeding more than 12.55% of the total identified cases.
Charges removed for prior technology.	The applicant did not remove any direct or indirect charges related to the prior technology. Per the applicant, FIBRYGA® is expected to be additive to current treatments and no charges were removed from the claims used in the analysis.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS final rule.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.246 for Blood and Blood Products from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Average case-weighted threshold amount: $105,002. Final inflated average case-weighted standardized charge per case: $188,525.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that FIBRYGA® meets the cost criterion.

We are inviting public comments on whether FIBRYGA® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that FIBRYGA® represents a substantial clinical improvement over existing technologies because FIBRYGA® is the only currently available, FDA-approved, pharmaceutical-grade therapy for the treatment of acquired fibrinogen deficiency, and it provides a faster, more precise treatment option for patients with life-threatening bleeding. Additionally, the applicant asserted that patients receiving FIBRYGA® have better clinical outcomes relative to technologies previously available. The applicant provided four documents and the FIBRYGA® package insert to support these claims, as well as 17 background articles about the safety and efficacy of existing treatment options for fibrinogen supplementation. The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for FIBRYGA® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
FIBRYGA® is the only FDA approved therapy for the treatment of acquired fibrinogen deficiency.	FIBRYGA® Package Insert: *https://www.fda.gov/media/105864/download#:~:text=FIBRYGA%20is%20a%20human%20fibrinogen%20concentrate.*
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
Pathogen inactivation makes FIBRYGA® a potentially safer source for fibrinogen supplementation in the treatment of bleeding.	Callum J, Farkouh ME, Scales DC, Heddle NM, Crowther M, Rao V, Hucke HP, Carroll J, Grewal D, Brar S, Bussières J, Grocott H, Harle C, Pavenski K, Rochon A, Saha T, Shepherd L, Syed S, Tran D, Wong D, Zeller M, Karkouti K; FIBRES Research Group. Effect of Fibrinogen Concentrate vs Cryoprecipitate on Blood Component Transfusion After Cardiac Surgery: The FIBRES Randomized Clinical Trial. JAMA. 2019 Nov 26; 322(20):1966–1976. doi: 10.1001/jama.2019.17312. PMID: 31634905; PMCID: PMC6822637. FIBRYGA® Package Insert. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
As compared to cryoprecipitate, the current standard of care, FIBRYGA® permits rapid correction of low serum fibrinogen levels in bleeding patients. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
FIBRYGA® decreases the use of allogeneic blood products which are associated with higher rates of adverse events post-transfusion.	Lunde J, Stensballe J, Wikkelsø A, Johansen M, Afshari A. Fibrinogen concentrate for bleeding—a systematic review. Acta Anaesthesiol Scand. 2014 Oct;58(9):1061–74. doi: 10.1111/aas.12370. Epub 2014 Jul 24. PMID: 25059813. Callum, 2019, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

Applicant statements in support	Supporting evidence provided by the applicant
FIBRYGA® is highly purified and has consistent levels of fibrinogen, permitting precise serum fibrinogen correction without delivering unneeded components associated with adverse reactions.	Schulz PM, Gehringer W, Nöhring S, Müller S, Schmidt T, Kekeiss-Schertler S, Solomon C, Pock K, Römisch J. Biochemical characterization, stability, and pathogen safety of a new fibrinogen concentrate (fibryga®). Biologicals. 2018 Mar;52:72–77. doi: 10.1016/j.biologicals.2017.12.003. Epub 2018 Jan 12. PMID: 29336864. FIBRYGA® Package Insert. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for FIBRYGA®.

After review of the supporting evidence provided by the applicant, we have the following concerns regarding whether FIBRYGA® meets the substantial clinical improvement criterion. While the applicant asserted that FIBRYGA® is the only FDA-approved technology for the treatment of acquired fibrinogen deficiency, we note that there are other available treatments, including cryoprecipitate and INTERCEPT® Fibrinogen Complex, which is FDA-approved for the treatment and control of bleeding, including massive hemorrhage, associated with fibrinogen deficiency, including those with acquired fibrinogen deficiency.[78] We therefore question the assertion that FIBRYGA® offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments.

With respect to the assertion that FIBRYGA® significantly improves clinical outcomes relative to services or technologies previously available, we note that the applicant claimed that pathogen inactivation makes FIBRYGA® a potentially safer source for fibrinogen supplementation, FIBRYGA® permits rapid correction of fibrinogen levels, and FIBRYGA® has consistent levels of fibrinogen which allow for precise serum fibrinogen correction without delivering unneeded components associated with adverse reactions, and that these claims demonstrate that FIBRYGA® improves outcomes. However, while for each of these three claims the applicant inferred that they potentially improve safety or outcomes, it did not provide data that tested or demonstrated improvements. Therefore, we are unclear how these claims relate to a demonstration of substantial clinical improvement over existing technologies because they do not pertain to clinical outcomes described at § 412.87(b)(1)(ii)(C), such as a reduction in mortality or a decreased rate of at least one subsequent diagnostic or therapeutic intervention. For example, with regard to pathogen inactivation, while the applicant stated that the overall reduction in viral titers achieved with INTERCEPT® Fibrinogen Complex is lower than those achieved with FIBRYGA®'s manufacturing process, we note that the background studies that were provided discussed why pathogen activation is important but did not demonstrate reduced pathogen transmission as compared to existing options such as INTERCEPT® Fibrinogen Complex or cryoprecipitate in order to demonstrate improved outcomes. We further note that the FIBRES study, a randomized controlled trial of 827 patients requiring blood component transfusion after cardiac surgery at 11 Canadian hospitals, did not report differences between the FIBRYGA® and cryoprecipitate groups' adverse events associated with bloodborne pathogens, which may include fever, chills, nausea, vomiting, hypotension, tachycardia, abdominal pain, back pain, or disseminated intravascular coagulation, and we question if the length of patient follow-up (28 days) is sufficient to assess for bloodborne infection transmission.[79] [80] With regards to the claim that FIBRYGA® allows for precise serum fibrinogen correction without delivering unneeded components associated with adverse reactions, while the applicant provided a biochemical analysis of FIBRYGA® by Schulz et al. to demonstrate that FIBRYGA®'s manufacturing process leads to consistent levels of fibrinogen and low levels of von Willebrand factor, as well as background documents discussing levels of fibrinogen and other factors for cryoprecipitate and INTERCEPT® Fibrinogen Complex, these documents did not demonstrate precise fibrinogen correction using FIBRYGA® compared to other available treatment options. Also, while the applicant further stated that FIBRYGA®'s manufacturing process removes agents responsible for allergic transfusion reactions and transfusion related lung injury, the evidence provided did not assess these outcomes or otherwise demonstrate reduced incidence of these outcomes as compared to available standard of care treatments for the patient population.

In addition, we note that none of the studies submitted demonstrated improvements in clinical outcomes, such as treatment emergent adverse events (TEAEs), length of ICU stay, and duration of hospitalization between FIBRYGA® and cryoprecipitate study treatment groups. We note the FIBRES study found that TEAEs (acute kidney injury, hepatobiliary disorders, and thromboembolic adverse events) were similar between both groups and found no differences in clinical outcomes between the groups (duration of mechanical ventilation, duration of ICU stay, and duration of hospitalization). We further note that the study authors disclosed several limitations of the FIBRES study, including the lack of standardized transfusion protocols, lack of strict timing of laboratory assessments, and the variability in the amount of fibrinogen in cryoprecipitate that make it difficult to interpret true differences in clinical outcomes between the two groups. Regarding the FORMA–05 study, a single-center, prospective, randomized control phase 2 study of 45 patients undergoing cytoreductive surgery for peritoneal malignancy, we note that this study did not demonstrate any differences in clinical outcomes for the FIBRYGA® arm over the cryoprecipitate arm. Rather, per the study, the median durations of surgery, artificial ventilation in the ICU, ICU stay, hospitalization, and intraoperative blood loss were comparable between groups, and there was no bleeding in

[78] Cerus Corporation. INTERCEPT® Blood System for Cryoprecipitation Package Insert For the manufacturing of Pathogen Reduced Cryoprecipitated Fibrinogen Complex. (Revised 5/2024). Available at: *https://www.fda.gov/media/143996/download.*

[79] Association for the Advancement of Blood & Biotherapies. (2024). *Circular of information for the use of human blood and blood components.* American Red Cross, America's Blood Centers, Armed Services Blood Program. Retrieved on November 14, 2024, from *https://www.aabb.org/docs/default-source/default-document-library/resources/circular-of-information-watermark.pdf.*

[80] Bloch, E.M. (2024). Transfusion-transmitted bacterial infection. *UpToDate.* Retrieved December 16, 2024, from *https://www.uptodate.com/contents/transfusion-transmitted-bacterial-infection.*

patients in either treatment group post-operatively through the assessments at 24 and 48 hours. We also note that both studies were conducted outside of the U.S., and the study populations were specific groups of surgical patients, which may impact the generalizability of these results to broader, more diverse clinical use cases for FIBRYGA® in the U.S. Medicare patient population. In addition, both studies compared FIBRYGA® with cryoprecipitate, and no studies comparing to the currently available INTERCEPT® Fibrinogen Complex were provided. While the applicant included the INTERCEPT® package insert, it contains only in vitro data and does not offer clinical comparisons. We are interested in information on clinical outcomes of FIBRYGA® in comparison to INTERCEPT® Fibrinogen Complex in order to evaluate whether the use of FIBRYGA® significantly improves clinical outcomes compared to available treatments.

We also note regarding the applicant's claim that FIBRYGA® permits rapid correction of low serum fibrinogen levels in bleeding patients compared to cryoprecipitate, while the applicant stated that the FORMA–05 study demonstrated that FIBRYGA® was delivered to the patient 46 minutes faster than cryoprecipitate (0.90 hours (±0.23) versus 1.30 hours (±0.33), $p<0.0001$), this value does not measure the time to correction of fibrinogen levels. We further note that, in the study, the difference between arms decreased from 46 minutes to 24 minutes with regard to time to when the intervention was administered (2.02 hours ± 0.22 for FIBRYGA® and 2.42 hours ± 0.33 for cryoprecipitate), and the study did not measure time to correction of fibrinogen levels, though as noted, this is a surrogate measure and not a clinical outcome as described under the regulations at § 412.87(b)(1)(ii)(C). Further, while the applicant also provided background studies to demonstrate the correlation between low serum fibrinogen and poor patient outcomes, and that faster replenishment is important, as noted, the FORMA–05 study did not demonstrate any differences in clinical outcomes between arms. We also note that the applicant stated that FIBRYGA® allows for more rapid availability due to its powder form which allows long-term storage at room temperature in proximity to patients, while INTERCEPT® Fibrinogen Complex, which can be also stored at room temperature for up to 5 days, must be kept in regulated blood bank storage distant from the patient even when thawed. However, no data was provided to demonstrate that time to administration of FIBRYGA®, or time to serum fibrinogen correction with FIBRYGA®, is faster than that of INTERCEPT® Fibrinogen Complex.

In regard to the applicant's fourth claim that FIBRYGA® decreases the use of allogeneic blood products, which the applicant asserted are associated with higher rates of adverse events post-transfusion, we question whether the Lunde et al. (2014) and FIBRES studies provided in support of this claim showed that FIBRYGA® resulted in lower rates of post-transfusion adverse events. We note that Lunde et al. (2014) study was a systematic review of six RCTs that evaluated fibrinogen concentrate broadly to determine the evidence for its use and efficacy, but the studies included were varied in choice of comparator, including fresh frozen plasma (FFP), cryoprecipitate, or no comparator. We are also unclear whether the fibrinogen concentrate included in the study refers specifically to FIBRYGA®, and therefore question whether the study provides evidence that FIBRYGA® demonstrates improved outcomes compared to cryoprecipitate. We further note that the study authors determined that data on continuous outcomes such as quantity of FFP, RBC or platelet transfused were statistically skewed, often with the median equaling zero, and that the comparison of fibrinogen concentrate to any comparator with respect to adverse events was not statistically significant. We also note that the six RCTs that the study is based on are more than 10 years old, and thus, we question whether the findings adequately represent the current standard of care for this patient population that may have evolved over the last decade. We further note that, although the FIBRES study was provided to demonstrate that FIBRYGA® decreases the use of allogeneic blood products, the study did not specifically report transfusion-related adverse events. We would be interested in additional data regarding transfusion-related adverse events, such as urticaria, wheezing, hypotension, tachycardia, nausea, vomiting and/or diarrhea, abdominal pain, severe dyspnea, pulmonary and/or laryngeal edema, and bronchospasm and/or laryngospasm.[81]

We are inviting public comments on whether FIBRYGA® meets the substantial clinical improvement criterion.

[81] Association for the Advancement of Blood & Biotherapies, 2024, *op. cit.*

g. GRAFAPEX™ (Treosulfan)

Medexus Pharma, Inc. submitted an application for new technology add-on payments for GRAFAPEX™ for FY 2026. According to the applicant, GRAFAPEX™ is a novel conditioning agent for use in combination with fludarabine as a preparative regimen for allogeneic hematopoietic stem cell transplantation (allo-HSCT) in adult and pediatric patients one year of age and older with acute myeloid leukemia (AML) or myelodysplastic syndrome (MDS). We note that Medexus Pharma, Inc. submitted an application for new technology add-on payments for GRAFAPEX™ for FY 2023 under the name treosulfan, as summarized in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28296 through 28302), that it withdrew prior to the issuance of the FY 2023 IPPS/LTCH PPS final rule (87 FR 48920).

Please refer to the online application posting for GRAFAPEX™, available at *https://mearis.cms.gov/public/publications/ntap/NTP241007WE8D6*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, GRAFAPEX™ was granted NDA approval from FDA on January 21, 2025, for use in combination with fludarabine as a preparative regimen for allo-HSCT in adult and pediatric patients one year of age and older with either AML or MDS. The applicant stated that GRAFAPEX™ became commercially available on February 20, 2025, because the applicant required time after FDA marketing authorization to build inventory and stock the third-party logistic wholesalers prior to commercial launch. We are interested in additional information regarding the cause of any delay in the technology's commercial availability, such as additional information about building inventory and stocking logistic wholesalers.

According to the applicant, GRAFAPEX™ is administered via intravenous infusion in conjunction with fludarabine from either a 1g or 5g vial after reconstitution with a 20mL or 100mL solution. Per the package insert,[82] the recommended dosage of GRAFAPEX™ is 10g/m^2 body surface area per day, given as a 2-hour intravenous infusion on 3 consecutive days (day -4, -3, -2) in conjunction with fludarabine before hematopoietic stem cell infusion on day 0. Per the

[82] Oncotec Pharma Produktion GmbH. GRAFAPEX™ [package insert]. (Revised 2/2025). Available at: *https://www.accessdata.fda.gov/drugsatfda_docs/label/2025/214759s001lbl.pdf.*

applicant, based on the estimated average body size for Medicare patients being treated with GRAFAPEX™ and the labeling for a 3-day treatment, the estimated average dose per inpatient stay is 54g.

According to the applicant, effective October 1, 2022, the following ICD–10–PCS codes may be used to uniquely describe procedures involving the use of GRAFAPEX™: XW04388 (Introduction of treosulfan into central vein, percutaneous approach, new technology group 8) or XW03388 (Introduction of treosulfan into peripheral vein, percutaneous approach, new technology group 8). The applicant provided a list of diagnosis codes that may be used to currently identify the indication for GRAFAPEX™ under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that GRAFAPEX™ is not substantially similar to other currently available technologies because GRAFAPEX™ is a new chemical entity with a unique structure and unique mechanism of action that permits it to be metabolized without the liver, resulting in reduced toxicity while still delivering effective treatment, including for older and/or more comorbid patients who are ineligible for myeloablative conditioning (MAC) and face higher relapse risk if reduced intensity conditioning (RIC) is used. The applicant stated that GRAFAPEX™ addresses the unmet need in this patient population and is the only FDA-approved allo-HSCT conditioning agent for AML and MDS, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for GRAFAPEX™ for the applicant's complete statements in support of its assertion that GRAFAPEX™ is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	As a prodrug, GRAFAPEX™ is activated under normal physiological conditions with its own distinct cytotoxic activity toward hematopoietic precursor cells. GRAFAPEX™ has a unique mechanism of action that permits it to bypass the liver when it metabolizes, resulting in reduced toxicity while still delivering effective treatment, including for older patients and/or patients with significant comorbidities who are ineligible for MAC. Other alkylating agents used to date in allo-HSCT conditioning—for example, busulfan, melphalan, cyclophosphamide—are all metabolized by the liver, which results in higher toxicity and leads to excess regimen-related morbidity and mortality observed in older and comorbid patients. GRAFAPEX™'s mechanism of action differs from other agents in this class because no other alkylating agent has a mechanism of action that bypasses treated patients' liver. GRAFAPEX™ also has a unique chemical structure resulting from two hydroxide (OH) bonds not present in other alkylating agents. Due to these OH bonds, GRAFAPEX™'s mechanism of alkylation is entirely different compared to busulfan and other alkylating agents. Its distinct structure and unique mechanism of alkylation further distinguish GRAFAPEX™'s mechanism of action. GRAFAPEX™'s activity is due to the spontaneous, pH-dependent conversion into a monoepoxide intermediate and diepoxybutan that bypasses liver metabolism. These epoxides alkylate and crosslink nucleophilic centers of DNA and other biological molecules involved in various physiological functions and are responsible for its stem cell depleting, immunosuppressive, and antineoplastic effects. Because GRAFAPEX™ uniquely bypasses liver metabolism, it reduces treatment-related toxicity compared to other alkylating agents used to date for allo-HSCT conditioning.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	Medexus anticipates that inpatient cases involving administration of GRAFAPEX™ typically will be assigned to MS–DRG 014—Allogeneic Bone Marrow Transplant—because, in a majority of cases, it is anticipated that a patient would undergo GRAFAPEX™-based conditioning during the same inpatient admission as allo-HSCT itself. It is Medexus's understanding that other conditioning treatments prior to allo-HSCT also would typically be assigned to MS–DRG 014. Some cases also may be assigned to MS–DRG 004.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	GRAFAPEX™ offers a critical new treatment option for allo-HSCT conditioning for a different patient population compared to existing technologies. Many patients—especially older patients and/or patients with significant comorbidities who have AML or MDS—are ineligible for MAC and face higher relapse risk with RIC. Multiple studies discuss the unmet need for this patient population based on previously available regimens and show that GRAFAPEX™-based regimens are particularly well-suited and provide significant clinical benefits for this patient population. If approved, GRAFAPEX™ will be the only FDA-approved allo-HSCT conditioning agent for AML and MDS. A landmark multicenter RCT discusses how allo-HSCT conditioning regimens available to date are not suitable for all patients, especially older and/or more comorbid patients—an important population for Medicare. The limits of MAC and RIC create an unmet medical need particularly for the growing number of older or comorbid AML and MDS transplantation candidates. Peer-reviewed studies confirm GRAFAPEX™ addresses the unmet need for this patient population, including studies comparing GRAFAPEX™-based regimens to busulfan-, melphalan-, cyclophosphamide-, and TBI-based regimens. GRAFAPEX™-based conditioning thus involves treatment of a different patient population compared to previously existing conditioning regimens.

With respect to the substantial similarity criteria, we note that GRAFAPEX™ is an alkylating agent like other drugs used in conditioning, such as busulfan and melphalan. While the applicant stated that GRAFAPEX™ has a unique mechanism of action and unique structure that allows it to bypass liver metabolism, reducing toxicity, we question whether bypassing liver metabolism is the mechanism of action of a conditioning agent, or if it instead relates to clinical outcomes, such as the side effect profile of GRAFAPEX™. In regard to whether GRAFAPEX™ treats the same or similar type of disease and the same or similar patient population compared to existing technologies, we question whether GRAFAPEX™ treats a new patient population since MAC, nonmyeloablative conditioning (NMA), and RIC are all options for patients. Additionally, while MAC may not be preferred for older or comorbid patients, RIC and NMA may still be options for these patients.

We are inviting public comments on whether GRAFAPEX™ is substantially similar to existing technologies and whether GRAFAPEX™ meets the newness criterion.

With respect to the cost criterion, the applicant provided two analyses to demonstrate that GRAFAPEX™ meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

GRAFAPEX™ COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes, ICD–10–PCS codes, and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for GRAFAPEX™.
Claims identified	Scenario 1: 713 claims mapping to 2 MS–DRGs, with 98.46% of claims mapping to MS–DRG 014 (Allogeneic Bone Marrow Transplant) and 1.54% of claims mapping to MS–DRG 004 (Tracheostomy With MV >96 Hours Or Principal Diagnosis Except Face, Mouth And Neck Without Major O.R. Procedures). Scenario 2: 466 claims mapping to two MS–DRGs, with 97.64% of claims mapping to MS–DRG 014 (Allogeneic Bone Marrow Transplant) and 2.36% of claims mapping to MS–DRG 004 (Tracheostomy With MV >96 Hours Or Principal Diagnosis Except Face, Mouth And Neck Without Major O.R. Procedures).
Charges removed for prior technology.	The applicant removed 100% of charges associated with drugs and cellular therapies (revenue centers 025x, 026x, and 063x), as an estimate of the percentage of total charges that the technology would replace could not be determined. The applicant did not remove indirect charges related to the prior technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Scenario 1: —Average case-weighted threshold amount: $368,736. —Final inflated average case-weighted standardized charge per case: $559,537. Scenario 2: —Average case-weighted threshold amount: $368,795. —Final inflated average case-weighted standardized charge per case: $559,369.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that GRAFAPEX™ meets the cost criterion.

We are inviting public comments on whether GRAFAPEX™ meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that GRAFAPEX™ offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments because GRAFAPEX™ offers a critical new treatment option and addresses an unmet need for allo-HSCT conditioning for older and/or more comorbid patients who have AML or MDS and are ineligible for currently available MAC regimens and face higher relapse risk if a RIC regimen is used. Additionally, per the applicant, GRAFAPEX™ significantly improves clinical outcomes relative to existing technologies because GRAFAPEX™-based conditioning has shown superiority in survival (in terms of overall and event-free survival) and non-relapse mortality, as well as significant reductions in adverse events, such as graft-versus-host disease (GVHD), veno-occlusive disease (VOD), and infections, compared to previously available regimens. The applicant provided 10 studies to support these claims, as well as 1 background article that, per the applicant, indicates that many patients with AML or MDS, especially those who are older and/or have significant comorbidities, are ineligible for MAC regimens, and face higher risk of relapse with RIC regimens.[83] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for GRAFAPEX™ for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
GRAFAPEX™ offers a treatment option for allo-HSCT conditioning for older and/or more comorbid patients who have AML or MDS, who are ineligible for currently available MAC regimens. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

[83] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
GRAFAPEX™-based conditioning has shown superior outcomes for event-free survival (EFS), overall survival (OS), and non-relapse mortality (NRM), and significant reductions in several adverse events.	Beelen, 2024, *op. cit.* Wedge, 2020, *op. cit.* Fraccaroli, 2024, *op. cit.* Bug, 2023, *op. cit.* Nagler, 2017, *op. cit.* Gavriilaki, 2023, *op. cit.* Pasic, 2024, *op. cit.* Chichra, 2024, *op. cit.* Beelen, 2022, *op. cit.* Shimoni, 2021, *op. cit.*

We also received a public comment in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for GRAFAPEX™, which we summarize in this section.

Comment: The applicant submitted a public comment summarizing the claims from its application regarding why it believes GRAFAPEX™ meets the substantial clinical improvement criterion. Additionally, the applicant provided additional information related to questions raised at the Town Hall meeting. With regard to a question asking for clarification with respect to whether any of the studies cited by the applicant compared GRAFAPEX™-based conditioning to other reduced-toxicity conditioning (RTC) regimens, the applicant stated the classification concept of MAC and RIC regimens was defined around 2009. According to the applicant, Spyridonidis et al. (2020) introduced a new tool for measuring conditioning regimen intensity, called transplant conditioning intensity (TCI).[84] The applicant quoted Spyridonidis et al. (2020) and stated that TCI ''provides an improvement of the RIC/MAC classification'' and ''enable[s] the identification of a distinct subgroup of RIC and MAC conditioning regimens with an intermediate TCI [2.5–3.5] score that had identical outcomes and which are frequently referred [to] as 'reduced toxicity conditioning'.'' The applicant further noted that Spyridonidis et al. (2020) developed the TCI scoring tool to address limitations of the currently used RIC/MAC classification scheme. The applicant suggested that other conditioning regimens could also be categorized as RTC regimens based on this publication's TCI scoring methodology and classification system.[85] The applicant noted that although a number of publications continued to use the MAC/RIC classification system, rather than incorporating RTC terminology or other nomenclature reflecting the TCI scoring classification system, Spyridonidis et al. (2020) reflects a new paradigm shift in conditioning regimen classification. Based on the TCI scoring methodology, the applicant provided examples of peer-reviewed publications from its application where both the GRAFAPEX™ plus fludarabine arm and comparator arm in the study were conditioning regimens that the applicant believed would likely be scored as intermediate-intensity or RTC regimens, that is regimens with a TCI score of 2.5–3.5. The applicant provided the following three examples.

First, the applicant calculated TCI scores for the regimens compared in Gavriilaki et al. (2023) based on dosage and the Spyridonidis et al. (2020) methodology: fludarabine <160mg/m2 (0.5 TCI score) plus GRAFAPEX™ 42g (3 TCI score) equates to a TCI score of 3.5; fludarabine <160mg/m2 (0.5 TCI score) plus busulfan 12.8mg/kg (3 TCI score) equates to a TCI score of 3.5. The applicant reiterated that Gavriilaki et al. (2023) found that the GRAFAPEX™-based conditioning demonstrated superiority in overall survival (44.4 percent vs. 34 percent (p = 0.009)) and was similar in non-relapse mortality compared to the busulfan-based conditioning treatment in patients with relapsed or refractory AML.

Second, the applicant calculated TCI scores for the regimens compared in Pasic et al. (2024) based on dosage and the Spyridonidis et al. (2020) methodology: fludarabine 35mg/m2 x 4 (0.5 TCI score) plus GRAFAPEX™ (2 or 3 TCI score) (depending on dose) equals a TCI score of 2.5 or 3.5 (depending on the GRAFAPEX™ dosage); fludarabine 35mg/m2 x 4 (0.5 TCI score) plus busulfan 3.2mg/kg x 2 (1 TCI score) plus total body irradiation 2Gy (1 TCI score) equals a TCI score of 2.5. The applicant reiterated the results from this study, noting that the GRAFAPEX™-based conditioning regimen demonstrated superiority in overall survival, event-free survival, and non-relapse mortality at 2 years follow-up, 2-year superiority in GVHD relapse-free survival (GRFS), and a lower percentage of patients requiring at least one hospital readmission at 1 year compared to the comparison group (fludarabine+busulfan+total body irridation).

Third, the applicant calculated TCI scores for the regimens compared in Chichra et al. (2023) based on dosage and the Spyridonidis et al. (2020) methodology: fludarabine 30mg/m2 x 4 (0.5 TCI score) plus GRAFAPEX™ 12–14g/m2 (2 or 3 TCI) (depending on dose) equals a TCI score of 2.5 or 3.5 (depending on the GRAFAPEX™ dosage); fludarabine (0.5 TCI score) plus melphalan 140mg/m2 (2 TCI score) equals a TCI score of 2.5. The applicant restated the study's results, including that the GRAFAPEX™-based conditioning group had fewer acute toxicities and fewer cases of severe mucositis and diarrhea compared to the melphalan-based conditioning group.

The applicant also provided information related to the following three points from its slide presentation at the new technology add-on payment Town Hall: (1) previously available allo-HSCT conditioning agents and regimens create an unmet need for conditioning treatment that minimizes toxicity while maximizing efficacy, especially for older patients and/or those with significant comorbidities; (2) other conditioning agents used to date are all metabolized

[84] Spyridonidis, A., Labopin, M., Savani, B.N., Niittyvuopio, R., Blaise, D., Craddock, C., Socié, G., Platzbecker, U., Beelen, D., Milpied, N., Cornelissen, J.J., Ganser, A., Huynh, A., Griskevicius, L., Giebel, S., Brissot, E., Malard, F., Esteve, J., Peric, Z., Baron, F., . . . Mohty, M. (2020). Redefining and measuring transplant conditioning intensity in current era: a study in acute myeloid leukemia patients. *Bone Marrow Transplantation, 55*(6), 1114–1125. *https://doi.org/10.1038/s41409-020-0803-y.*

[85] See Figure 1b in Spyridonidis et al. (2020) for additional regimens with transplant conditioning intensity scores of 2.5–3.5 (intermediate/RTC range).

by the liver, which results in higher toxicity and leads to ''excess regimen-related morbidity and mortality observed in older and comorbid patients;'' [86] and (3) GRAFAPEX™ reduces treatment-related toxicity because it uniquely bypasses liver metabolism. The applicant restated information from its application, specifically citing the Beelan et al. (2022) study in which 27 percent of patients were ages 65 to 74 years. The applicant noted that this study did not analyze the liver metabolism of conditioning agents but that it found a GRAFAPEX™ and fludarabine conditioning regimen performed better than a busulfan and fludarabine conditioning regimen in regards to event-free survival, overall survival, and non-relapse mortality. The applicant also stated that other alkylating agents used to date in allo-HSCT conditioning, such as busulfan, melphalan, cyclophosphamide, are all metabolized by the liver and that such metabolism by the liver results in higher toxicity.[87]

Response: We thank the applicant for its comments. After review of the information provided by the applicant and the public comment received in response to the New Technology Town Hall meeting, we have the following concerns regarding whether GRAFAPEX™ meets the substantial clinical improvement criterion. The applicant stated GRAFAPEX™ offers a conditioning treatment regimen option for older and/or more comorbid patients with AML or MDS who are ineligible for currently available MAC regimens due to their high toxicity and higher relapse risk with RIC regimens. The applicant provided 11 studies which it stated show that GRAFAPEX™-based regimens reduce the toxicity, non-relapse related mortality, and treatment related mortality associated with MAC without resulting in the increased incidence of relapse associated with RIC. However, we note that in two studies provided by the applicant comparing a GRAFAPEX™-based regimen to RIC, there was a higher rate of relapse with the GRAFAPEX™-based regimen. Specifically, in Fraccaroli et al. (2024), patients treated with a GRAFAPEX™ regimen demonstrated a higher cumulative incidence of relapse compared to the melphalan treatment group (24 percent vs. 0 percent, p=0.006). Similarly, we note that Bug et al. (2023) found that a fludarabine plus GRAFAPEX™ conditioning regimen had a higher cumulative incidence of relapse (34.7 percent) compared to a fludarabine plus fractionated total body irradiation conditioning regimen (18.3 percent, p = 0.018).

Additionally, as the applicant noted in its Town Hall comment, GRAFAPEX™-based regimens are not the only intermediate-intensity or RTC regimens. Specifically, the applicant mentioned three additional RTC regimens in addition to GRAFAPEX™-based regimens: fludarabine <160mg/m2 plus busulfan 12.8mg/kg, fludarabine 35mg/m2 x 4 plus busulfan 3.2mg/kg x 2 plus total body irradiation 2Gy, and fludarabine plus melphalan 140mg/m2. We also note that RIC and NMA are additional options for these patients. Therefore, we question if GRAFAPEX™-based regimens are the only treatment options for patients ineligible for MAC.

With respect to the assertion that GRAFAPEX™ significantly improves clinical outcomes relative to services or technologies previously available, the applicant stated that GRAFAPEX™-based conditioning has shown superior outcomes for event-free survival, overall survival, and non-relapse mortality, as well as significant reductions in several adverse events. To support its statements, the applicant provided 1 randomized trial for GRAFAPEX™ and 9 retrospective studies, which were also cited in support of the prior claim. However, we question the generalizability of these studies to the Medicare population. First, none of the studies assessing GRAFAPEX™ evaluated the treatment in a U.S. population; rather, all of the studies were conducted outside the U.S, and we question whether differences in treatment guidelines and regimens between countries could affect generalizability to the Medicare population. Second, we note that, of the submitted studies directly assessing GRAFAPEX™, 7 had a majority of participants in the GRAFAPEX™ treatment arm under 65 years and 1 study (Wedge et al., 2020) did not include any participants over 66 years of age in the GRAFAPEX™ treatment group, and we therefore question whether outcomes seen in these studies are generalizable to the Medicare population. Third, relative to the number of Medicare patients with AML or MDS who may be eligible for allo-HSCT, two studies (Chichra et al., 2023; Fraccaroli et al., 2024) included small sample sizes among the GRAFAPEX™ treatment arms. In particular, Chichra et al. (2023) only contained 11 patients in the matched sibling donor/matched unrelated (MRD/MUD) donor fludarabine plus GRAFAPEX™ group and 16 patients in the haploidentical (Haplo) donor fludarabine plus GRAFAPEX™ group. Fraccaroli et al. (2024) included only 21 patients in the melphalan group and 21 patients in the GRAFAPEX™ group. Given these small sample sizes, we question whether these studies would be generalizable to the Medicare population due to the potential influence of confounding variables. We also note that in Beelen et al. (2024), about half of the data was missing for the comorbidity index and over half of the data was missing regarding the disease risk, which are characteristics that could impact efficacy, making it difficult to fully compare the treatment groups.

We further note that while some studies showed improved overall survival, a lower NRM, and reduced adverse events with the GRAFAPEX™-based regimen, there were some conflicting results across studies. First, while the applicant stated GRAFAPEX™-based regimens have shown improved overall survival (OS), we note that in Bug et al. 2023, Chichra et al. 2023, and Fraccaroli et al. 2024, OS was similar between the GRAFAPEX™-based regimen and RIC. Specifically, 2-year OS was 67.8 percent in the GRAFAPEX™-based regimen in Bug et al. 2023 and 66.9 percent in the fludarabine/TBI group (HR 1.08 (95 percent CI, 0.67–1.75)). In Chichra et al. 2023, 5-year OS was 53 percent in those treated with a GRAFAPEX™-based regimen (Flu-Treo) and 62 percent in those treated with fludarabine/melphalan (Flu-Mel) in the MRD/MUD transplant group (p=0.694) and 28 percent in Flu-Treo and 41 percent in Flu-Mel in the Haplo transplant group (p=0.770). In Fraccaroli et al. (2024), the 2-year survival was 66 percent in both the fludarabine-cyclophosphamide-melphalan and fludarabine-cyclophosphamide-GRAFAPEX™ groups (p=0.8).

Second, the applicant asserted superior outcomes for GRAFAPEX™ in non-relapse mortality (NRM). However, multiple studies showed that GRAFAPEX™ had a NRM rate that was higher than or similar to other technologies. Per Chichra et al. (2023), the 2-year NRM was similar between Flu-Treo and Flu-Mel in the MRD/MUD and Haplo groups, although the specific numbers were not provided in the

[86] Beelen, 2022, *op. cit.*

[87] Scheulen, M.E., Hilger, R.A., Oberhoff, C., Casper, J., Freund, M., Josten, K.M., Bornhäuser, M., Ehninger, G., Berdel, W.E., Baumgart, J., Harstrick, A., Bojko, P., Wolf, H.H., Schindler, A.E., & Seeber, S. (2000). Clinical phase I dose escalation and pharmacokinetic study of high-dose chemotherapy with treosulfan and autologous peripheral blood stem cell transplantation in patients with advanced malignancies. *Clinical Cancer Research, 6*(11), 4209–16. *https://aacrjournals.org/clincancerres/article/6/11/4209/199579/Clinical-Phase-I-Dose-Escalation-and.*

study. In Gavriilaki et al. (2023), NRM was similar between fludarabine/GRAFAPEX™ (FT14) (20.8 percent) and fludarabine/busulfan (FB4) (22.6 percent) (p=0.46). Shimoni et al. (2021) found that 5-year NRM was statistically highest among patients who received MAC (34 percent) followed by those who received fludarabine and GRAFAPEX™ (30 percent) and lowest among those who received RIC (27 percent) (p=0.008). In Wedge et al. (2020), 3-year NRM was not statistically different (p=0.425) with a NRM of 13.6 percent for fludarabine/GRAFAPEX™, 33.3 percent for standard myeloablative (SMA) conditioning, and 17.9 percent for nonmyeloablative (NMA) conditioning.

Third, the applicant claimed a significant reduction in several clinically significant adverse events and complications that often lead to treatment-related mortality (TRM), such as graft-versus-host disease (GVHD), veno-occlusive disease (VOD), life-threatening infections, and organ toxicities. However, some studies showed similar or higher rates of adverse effects with the GRAFAPEX™-based regimen. Specifically, Fraccaroli et al. (2024) reported a similar frequency of GVHD and renal failure, with no cases of VOD in either group and no statistical comparison of infection rates presented. Per Beelen et al. (2022), the frequencies of treatment-emergent adverse events and serious adverse events were equally distributed between the study arms. The incidence of acute GVHD and chronic GVHD was similar between treatment groups or higher with the GRAFAPEX™-based regimen in Chichra et al. (2023), Bug et al. (2023), Gavriilaki et al. (2023), and Pasic et al. (2024). In Shimoni et al. (2021), there was no statistical difference in chronic GVHD among the treatment groups and in Wedge et al. (2020), acute GVHD was similar between FluTreo and NMA.

We are inviting public comments on whether GRAFAPEX™ meets the substantial clinical improvement criterion.

h. IMDELLTRA™ (Tarlatamab-Dlle)

Amgen, Inc. submitted an application for new technology add-on payments for IMDELLTRA™ for FY 2026. According to the applicant, IMDELLTRA™ is a novel, first-in-class bispecific T-cell engager (BiTE®) molecule for the treatment of adult patients with extensive stage small cell lung cancer (ES–SCLC) with disease progression on or after platinum-based chemotherapy. According to the applicant, IMDELLTRA™ works by binding to the delta-like ligand 3 (DLL3) antigen expressed on the surface of SCLC tumor cells and the cluster of differentiation 3 (CD3) co-receptor expressed on the surface of T cells, causing T-cell activation, release of inflammatory cytokines, and lysis of DLL3-expressing cells.

Please refer to the online application posting for IMDELLTRA™, available at *https://mearis.cms.gov/public/publications/ntap/NTP241007BQ3UB*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, IMDELLTRA™ was granted accelerated approval of its BLA from FDA on May 16, 2024, for the treatment of adult patients with ES–SCLC with disease progression on or after platinum-based chemotherapy. According to the applicant, IMDELLTRA™ was commercially available immediately after FDA approval. The applicant stated that the first dose of IMDELLTRA™ is 1 mg and all subsequent doses are 10 mg, with all doses administered by a healthcare provider as a 1-hour intravenous (IV) infusion. Per the applicant, the average inpatient dose is 7.3 mg based on available data. The applicant noted the only inpatient data available is for patients who experience cytokine release syndrome (CRS) or immune effector cell-associated neurotoxicity syndrome (ICANS) after IMDELLTRA™ and it is unknown how many patients without these adverse events would receive IMDELLTRA™ on an inpatient basis.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify IMDELLTRA™. We note that the applicant submitted a request for approval for unique ICD–10–PCS procedure codes for IMDELLTRA™ beginning in FY 2026. The applicant provided a list of diagnosis codes that may be used to currently identify the indication for IMDELLTRA™ under the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM (and PCS) codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that IMDELLTRA™ is not substantially similar to other currently available technologies because it has a unique mechanism of action as a BiTE® that simultaneously binds DLL3 on SCLC cells and CD3 on T cells and because it is the only therapy specifically studied and shown to improve outcomes for patients who are relapsed or refractory to two or more other therapies and those with treated, stable brain metastases, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for IMDELLTRA™ for the applicant's complete statements in support of its assertion that IMDELLTRA™ is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	IMDELLTRA™ has a unique mechanism of action as the first and only approved BiTE® therapy targeting DLL3 across all patient populations and as the only BiTE® therapy approved for SCLC. IMDELLTRA™'s mechanism of action involves simultaneously binding the DLL3 antigen on a SCLC cell and the CD3 antigen on the patient's own T cells. The binding of IMDELLTRA™ results in the formation of a synapse between T cells and DLL3-expressing cells, including tumor cells, leading to T-cell activation causing the release of inflammatory cytokines and lysis of DLL3-expressing cells. Thus, IMDELLTRA™ is unique as the only T-cell directed immunotherapy approved for ES–SCLC. In contrast, other approved ES–SCLC treatments are cytotoxic chemotherapies that work by interfering with the ability of rapidly dividing cells to replicate and divide, which can lead to cell death in both cancerous and noncancerous cells. Lurbinectedin is an alkylating drug that binds to DNA, forming adducts that perturb the cell cycle and cause cell death in dividing cells. Topotecan and irinotecan are topoisomerase-1 inhibitors that bind topoisomerase-1–DNA complex and inhibit the repair of double-strand breaks in DNA in dividing cells. IMDELLTRA™ has a novel mechanism of action targeting DLL3 for the treatment of ES–SCLC and is differentiated from existing ES–SCLC treatments due to the uniqueness of both this target and its tissue expression profile, which results in activation of the T cell and lysis of DLL3-expressing SCLC cells.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	The use of IMDELLTRA™ to treat ES–SCLC is not expected to change the MS–DRG assignment of the case.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	IMDELLTRA™ does not involve the treatment of the same or similar type of disease or the same or similar patient population when compared to existing technology because IMDELLTRA™ is the first and only BiTE® therapy available for the treatment of patients with ES–SCLC who have had disease progression on or after platinum-based chemotherapy. Furthermore, although IMDELLTRA™ is indicated to treat patients after relapsing on first line (1L) platinum-based chemotherapy, for the subset of these patients who have become relapsed or refractory (R/R) to two or more therapies, IMDELLTRA™ is the only therapy that is approved by FDA and has been specifically studied and demonstrated improvements in this population. IMDELLTRA™ also is the only FDA-approved second line therapy (2L) that has been studied in SCLC patients with treated, stable brain metastases.

We note that while the applicant asserted that IMDELLTRA™ does not involve the treatment of the same or similar disease or patient population because it is the first BiTE® therapy for patients with ES–SCLC who have had disease progression on or after platinum-based chemotherapy, per the applicant, other FDA-approved therapies for the treatment of the same patient population (patients who have ES–SCLC with disease progression on or after platinum-based chemotherapy) are currently available, such as lurbinectedin and topotecan. Further, with respect to the applicant's statements that IMDELLTRA® is the only FDA-approved therapy that has been specifically studied and demonstrated improvements in the subset of ES–SCLC patients who have become R/R to two or more therapies or that have stable brain metastases, we believe that these assertions may be relevant to substantial clinical improvement rather than newness and these patients may still be treated with lurbinectedin or topotecan. Therefore, we question the applicant's assertion that IMDELLTRA™ treats a unique patient population compared to existing technology.

We are inviting public comments on whether IMDELLTRA™ is substantially similar to existing technologies and whether IMDELLTRA™ meets the newness criterion.

With respect to the cost criterion, the applicant provided two analyses to demonstrate that IMDELLTRA™ meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

IMDELLTRA™ COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes, ICD–10–PCS codes, and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for IMDELLTRA™.
Claims identified	Scenario 1: 788 claims mapping to 16 MS–DRGs, with 43.02% of claims mapping to MS–DRG 180 (Respiratory Neoplasms with MCC). Scenario 2: 459 claims mapping to 5 MS–DRGs, with 73.86% of claims mapping to MS–DRG 180 (Respiratory Neoplasms with MCC).
Charges removed for prior technology.	The applicant removed 100% of charges associated with drugs and cellular therapies to account for the chemotherapy agent IMDELLTRA™ will replace. The applicant noted there may be removed charges for non-chemotherapy agents, but was conservative by removing 100% of the drug and cellular therapy charges. The applicant did not remove indirect charges related to the prior technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardization file posted with the FY 2025 IPPS/LTCH PPS final rule and the impact file posted with FY 2023 IPPS/LTCH PPS final rule.
Inflation factor	The applicant applied an inflation factor of 12.9% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.

IMDELLTRA™ COST ANALYSIS—Continued

Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of a 10 mg dose of the new technology by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. Per the applicant, it repeated this calculation for the 1 mg step up dose to confirm that, even if this dose is administered in the inpatient setting, the final inflated average case-weighted standardized charge per case exceeds the average case-weighted threshold for the cost criterion. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Scenario 1: —Average case-weighted threshold amount: $102,317. —Final inflated average case-weighted standardized charge per case: $230,190. Scenario 2: —Average case-weighted threshold amount: $73,433. —Final inflated average case-weighted standardized charge per case: $203,476.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that IMDELLTRA™ meets the cost criterion.

We are inviting public comments on whether IMDELLTRA™ meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that IMDELLTRA™ represents a substantial clinical improvement over existing technologies because IMDELLTRA™ offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments and the technology significantly improves clinical outcomes relative to services or technologies previously available. Specifically, per the applicant, IMDELLTRA™ is a novel treatment option that offers substantial clinical improvement through deep and durable response for patients with ES–SCLC relapsed on platinum-based chemotherapy. The applicant further stated that IMDELLTRA™ is the only approved DLL3-directed-CD3 T-cell engager for the treatment of ES–SCLC, for which there is a profound unmet need in this population who suffer from devastating outcomes and suboptimal care from limited and ineffective treatment options. The applicant provided four articles regarding outcomes from the phase I DeLLphi-300 and phase II DeLLphi-301 trials and the IMDELLTRA™ prescribing information to support these claims, as well as 16 background articles about SCLC and existing treatments for the disease.[88] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for IMDELLTRA™ for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
The majority of ES–SCLC patients who are relapsed or refractory to 1L treatment are, or become, unresponsive to previously approved 2L treatments.	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.
There are limited treatment options for ES–SCLC patients who have relapsed, and IMDELLTRA™ is a new option for SCLC patients who have relapsed and are resistant to initial treatment options.	Ahn M, Cho B, et al. Tarlatamab for Patients with Previously Treated Small-Cell Lung Cancer. N Eng J Med. 2023;389:2063–75. IMDELLTRA™ (tarlatamab-dlle) injection, for intravenous use; Amgen, Inc., 2024. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
IMDELLTRA™ is the first therapy that has shown meaningful improvements in outcomes in the subset of patients who have failed two or more prior therapies.	Ahn, 2023, *op. cit.* Sands J, Cho BC, et al. Tarlatamab Sustained Clinical Benefit and Safety in Previously Treated SCLC: DeLLphi-301 Phase 2 Extended Follow-up. Oral presentation (#OA10.03) at 2024 World Conference on Lung Cancer in San Diego, California. September 9, 2024. Dingemans A, Ahn M, et al. DeLLphi-301: Tarlatamab phase 2 trial in small cell lung cancer (SCLC)—Efficacy and safety analyzed by presence of brain metastasis. J Clin Oncology. 2024;42:8015. Amgen, Inc., 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
Outcomes on existing therapies for ES–SCLC continue to be very poor, particularly as all previously approved therapies have high relapse rates.	The applicant provided background information to support this claim, which can be accessed via the online posting for the technology.

[88] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Applicant statements in support	Supporting evidence provided by the applicant
IMDELLTRA™ has shown substantial clinically meaningful improvement in outcomes relative to other available therapies for ES–SCLC patients.	Sands, 2024, *op. cit.* Ahn, 2023, *op. cit.* Amgen, Inc., 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
In ES–SCLC patients with stable brain metastases pre-treated with two or more prior therapies, IMDELLTRA™ showed similar clinical outcomes as patients without brain metastases in post-hoc analysis.	Ahn, 2023, *op. cit.* Dingemans, 2024, *op. cit.* Amgen, Inc., 2024, *op. cit.* Dowlati A, Hummel H–D, et al. Sustained Clinical Benefit and Intracranial Activity of Tarlatamab in Previously Treated Small Cell Lung Cancer: DeLLphi-300 Trial Update. J Clin Oncology. published online August 29, 2024. doi: 10.1200/JCO.24.00553. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
IMDELLTRA™ has a generally manageable safety profile and a low incidence of treatment-related neutropenia.	Amgen, Inc., 2024, *op. cit.* Ahn, 2023, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

We also received a public comment in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for IMDELLTRA™, which we are summarizing in this section.

Comment: The applicant submitted a comment responding to questions raised at the Town Hall meeting. In response to a question regarding how the applicant controlled for differences in patient demographics when comparing to other studies, the applicant stated there is reliable information about patient demographics and outcomes in ES–SCLC patients on currently available treatment supporting that IMDELLTRA™ is a substantial clinical improvement. The applicant referred to a number of studies included in its application to support the statement. First, the applicant noted that topotecan was evaluated in a randomized, multicenter study of patients with SCLC who had relapsed at least 60 days after completion of 1L therapy; patients with documented brain metastases were included and represented 11.2 percent of the topotecan arm of the study.[89] The applicant also stated that lurbinectedin was evaluated in a phase II single-arm, open-label basket trial with SCLC patients who had previously failed on platinum-based chemotherapy; the patient population had a median age of 60 years and patients with brain metastases were excluded.[90] Per the applicant, while topotecan and lurbinectedin registrational trials did not study a third line (3L) patient population, these therapies have been studied in the real-world setting for U.S. patients since their FDA approvals in 1996 and 2020, respectively, including analyses of real-world overall survival (rwOS).[91] [92] [93] The applicant further stated that IMDELLTRA™ was evaluated in a phase 2 multi-cohort, open-label trial in patients R/R to one platinum-based treatment and at least one other line of therapy, and were Eastern Cooperative Oncology Group (ECOG) performance-status grade < 2. Per the applicant, in this pre-treated population, approximately 33 percent of patients had received 3 or more therapies; of the 99 patients treated with IMDELLTRA™, 48 percent were 65 years of age or older and 10 percent were 75 years of age or older.[94] In addition, per the applicant, there is a post-hoc analysis of the 23 percent of patients with stable, treated brain metastases receiving the FDA-approved dose.[95]

With respect to a question regarding how the applicant compared IMDELLTRA™'s overall response rate (ORR) to other therapies without data that shows the populations studied match, the applicant stated that as previously noted, there is a significant amount of clinical literature available regarding outcomes for ES–SCLC patients on currently available treatment to support the applicant's claims of substantial clinical improvement for IMDELLTRA™ without the need for head-to-head studies, which are not required as part of the new technology add-on payment criteria. Further, the applicant noted that tumor response (for example, ORR) is considered a direct measure of drug antitumor activity, which can be adequately evaluated in a single-arm study. Additionally, the applicant stated that overall survival (OS) and progression-free survival (PFS) endpoints must be interpreted with caution in single-arm trials and confirmatory phase III trials are needed to confirm OS and PFS results.

The applicant stated that it is clear from currently available literature that patients with ES–SCLC after failing on chemotherapy have extremely poor outcomes on existing therapies, where response and survival are measured in just a few months. The applicant again referred to a number of studies included in its application to support the statement. The applicant summarized the registrational trial results for the other currently FDA-approved treatments for adult 2L ES–SCLC patients and noted that topotecan demonstrated an ORR of 24.3 percent, a duration of response (DOR) of 3.3 months (14.4 weeks), a median PFS (mPFS) of 3.1 months (13.3 weeks), and a median OS (mOS) of 5.8 months (25 weeks) in its pivotal trial (n=107).[96] The applicant stated lurbinectedin demonstrated an ORR of 35 percent, a DOR of 5.3 months, a mPFS of 3.5 months, and mOS of 9.3 months in its pivotal trial (n=105). The applicant noted, however, that this clinical trial data lacks evidence on patients with brain metastases per the trial's exclusion criteria.[97] In addition, the applicant

[90] Trigo J, Subbiah V, et al. Lurbinectedin as second-line treatment for patients with small-cell lung cancer: a single-arm, open-label, phase 2 basket trial. Lancet Oncol. 2020;21(5):645–654.

[91] Borghaei H, Pundole X, Sangaré L, et al. Natural history of SCLC patients treated in third-line and beyond: A retrospective real world study. *Lung Cancer.* 2024;193:10781. doi:10.1016/j.lungcan.2024.107819.

[92] Coutinho AD, Shah M, Lunacsek OE, Eaddy M, & Willey JP. Real-world treatment patterns and outcomes of patients with small cell lung cancer progressing after 2 lines of therapy. *Lung Cancer.* 2019;127:53–58.

[93] Desai A, Smith C, et al. Real-World Outcomes With Lurbinectedin in Second-Line Setting and Beyond for Extensive Stage Small Cell Lung Cancer. Clinical Lung Cancer. 2023;24(8):689–695.

[94] Anh, 2023, *op. cit.*

[95] Dingemans, 2024, *op. cit.*

[96] von Pawel, 1999, *op. cit.*

[97] Trigo, 2020, *op. cit.*

noted that lurbinectedin failed to reach its primary endpoint of OS in the confirmatory phase 3 ATLANTIS trial.[98] Further, the applicant referenced the real-world analysis of U.S. patients in the 3L setting by Borghaei et al. (2024), which found median rwOS was 5.3 months (n=326; 95 percent CI, 4.5–6.0) following initiation of 3L therapies (topotecan, lurbinectedin, immunotherapy, taxane monotherapy or platinum-based chemotherapy with immunotherapy). The applicant stated in addition that this analysis found the median time from SCLC diagnosis to 3L therapy initiation was 400 days.

Per the applicant, IMDELLTRA™ had an ORR of 40 percent and a mDOR of 9.7 months, with 43 percent of responses ongoing at data cutoff in an extended follow-up analysis. In addition, the applicant stated mOS was 15.2 months and was similar regardless of progression-free interval (<90 days or 90+ days) after 1L platinum-based chemotherapy (n=100).[99] The applicant further stated that based on a post-hoc analysis of the multi-cohort trial, efficacy outcomes were also similar for patients with stable, treated brain metastases and those without brain metastases.[100] The applicant noted that Dingemans et al. (2024) found stable, treated brain metastases patients in the trial had an ORR of 54.5 percent, mPFS of 7.1 months, and mOS of 14.3 months. The applicant noted that IMDELLTRA™ shows clinical improvement by allowing patients to possibly live for more than 4 to 6 months following initiation of 2L treatment. The applicant also noted that the American Society of Clinical Oncology (ASCO) recently came to a similar conclusion independently, as per the updated ASCO guideline on systemic therapy for SCLC submitted with respect to the substantial clinical improvement criteria.[101] The applicant stated ASCO had the same information available to it with respect to outcomes on lurbinectedin, topotecan, and IMDELLTRA™ as that provided by the applicant in its application, and updated ASCO guidelines stated that the cross-trial comparisons suggest that both lurbinectedin and IMDELLTRA™ are more effective than topotecan or other agents, although the DOR of >9 months reported with IMDELLTRA™ is substantially longer than that seen with other agents.

In addition to the studies submitted by the applicant in its application, the applicant noted that it has conducted an indirect treatment comparison (ITC) to evaluate the relative benefit in survival outcomes and response between IMDELLTRA™ versus real-world physicians' choice of therapy from a historical control cohort captured in the U.S. Flatiron electronic health records database.[102] The applicant provided the ITC's research protocol as additional background about how the ITC compared OS, PFS, and ORR,[103] and indicated that the study results are expected to be available in March 2025.

Response: We thank the applicant for its comments. After review of the information provided by the applicant and the public comment received in response to the New Technology Town Hall meeting, we have the following concerns regarding whether IMDELLTRA™ meets the substantial clinical improvement criterion. The applicant stated that IMDELLTRA™ offers a treatment option for patients with 2L+ ES–SCLC that are unresponsive to, or ineligible for, currently available treatments, however it is unclear that these patients are unresponsive or ineligible for existing 2L+ treatments for ES–SCLC, such as lurbinectedin and topotecan. The applicant claimed that the majority of ES–SCLC patients who are relapsed or refractory to 1L treatment are or become unresponsive to previously approved 2L treatments. For this claim, the applicant provided background articles regarding treatment of ES–SCLC, but did not indicate a patient population that IMDELLTRA™ treats that is ineligible or unresponsive to other 2L treatments. The applicant also claimed that there are limited treatment options for ES–SCLC patients who have relapsed and IMDELLTRA™ is a new option for these patients. However, we note that having limited treatment options does not demonstrate that these patients are unresponsive or ineligible for any available therapies. In addition, while the applicant provided results from the pivotal DeLLphi-301 study of IMDELLTRA™ stating that it is the first therapy that has shown meaningful outcome improvements in patients who have failed two or more prior therapies, the study did not list these therapies, and we also note that retreatment with platinum-based chemotherapy was considered an additional line of therapy per the study. Therefore, it is unclear that the study demonstrated that patients had failed existing 2L+ treatments, including lurbinectedin and topotecan. For these reasons, we question the assertion that IMDELLTRA™ offers a treatment for a patient population unresponsive to, or ineligible for, currently available treatments.

With respect to the applicant's statement that IMDELLTRA® improves clinical outcomes over existing technologies because outcomes on existing therapies for ES–SCLC continue to be very poor, particularly as all previously approved therapies have high relapse rates, and that, in the past 2 decades, relapsed ES–SCLC patients who have failed platinum-based chemotherapy have had few treatment options as only topotecan and lurbinectedin are FDA-approved and indicated for these patients, we note that the applicant provided outcome data for topotecan and lurbinectedin, in addition to highlighting that lurbinectedin, pembrolizumab, and nivolumab failed to show a benefit in OS in the confirmatory phase 3 clinical trials. However, the applicant did not provide relapse rates for current therapies, including IMDELLTRA™, and did not compare the provided outcome data to IMDELLTRA™, and therefore we question how this demonstrates that IMDELLTRA™ improves clinical outcomes relative to these therapies.

To support its other statements regarding improved outcomes for IMDELLTRA™, the applicant provided results from DeLLphi-301, a phase 2, single arm, open-label, international trial which evaluated antitumor activity and safety of IMDELLTRA™ in patients with advanced SCLC previously treated with two or more lines of therapy.[104] However, we note that, of the 134 patients treated with the target dose of IMDELLTRA™, only 14 were from North America (without further specification on the country), and we question whether differences in treatment guidelines between countries could affect generalizability to the

[104] Anh, 2023, *op. cit.*

Medicare population. We also note that 75 percent (101/134) of the patients who took the approved dose of 10 mg in DeLLphi-301 had a previous use of a programmed death ligand 1 (PD–L1) or programmed death 1 (PD–1) inhibitor,[105] which are recommended as part of the initial therapy for ES–SCLC, and we therefore question whether the results of the DeLLphi-301 study were different between the group of patients who previously received these therapies versus those who did not. We further note that the applicant also provided the Sands et al. (2024) presentation and the Dingemans et al. (2024) abstract which are unpublished overviews that do not provide full details on the study methods; therefore, we do not have sufficient information to evaluate these studies.

With respect to the claim that IMDELLTRA™ has shown substantial clinically meaningful improvement in outcomes relative to other available therapies for ES–SCLC patients, the applicant provided outcomes for IMDELLTRA™ from the DeLLphi-301 single arm, phase 2 trial and compared them to outcomes from trials for other approved treatments for patients who have relapsed on first-line chemotherapy. The applicant stated that IMDELLTRA™, lurbinectedin, and topotecan are FDA-approved and no treatments are specifically FDA-approved for 3L treatment. The applicant stated chemotherapy is a 3L treatment and has a mOS of 4.4 months, ORR of 21 percent, mDOR of 2.6 months, and mPFS of 2.3 months.[106] The applicant also noted that lurbinectedin can be used as a 3L agent, but mOS was 5.6 months according to real world data.[107] The applicant also stated IMDELLTRA™ had an ORR of 40 percent, mDOR of 9.7 months, mPFS of 4.9 months, and mOS of 14.3 months,[108] with an mOS of 15.2 months after extended follow-up.[109] The applicant further noted that in a subgroup analysis of 22 patients with stable, treated brain metastases, IMDELLTRA™ showed similar outcomes with an ORR of 54.5 percent, mPFS of 7.1 months, and mOS of 14.3 months.[110] The applicant stated the registrational study for topotecan included patients with brain metastases and reported a mOS of only 5.8 months,[111] while the pivotal phase II trial for lurbinectedin excluded patients with brain metastases and in a real-world analysis among 14 patients who received 3L therapy with lurbinectedin (11 of which with CNS metastases), the mOS was 5.6 months.[112] However, we note that the applicant also stated in its Town Hall comment that tumor response (for example, ORR) can be adequately evaluated in a single-arm study, while OS and PFS endpoints must be interpreted with caution in single-arm trials and confirmatory phase 3 trials are needed to confirm OS and PFS results. Therefore, we question the applicant's use of OS and PFS to support improved clinical outcomes with IMDELLTRA™ compared to previously available therapy. Additionally, the applicant stated that the trial demonstrated mOS of 14.3 months for IMDELLTRA™,[113] and compared it to lurbinectedin's mOS of 5.6 months according to real world data,[114] but we question whether it is appropriate to compare clinical trial and real world data. We note, for example, that the phase 2 single arm trial for lurbinectedin noted an OS of 9.3 months (Trigo et al. (2020)), and we therefore question how the applicant chose the historical control it used in these comparisons of outcomes. In addition, the applicant noted that ORR can be evaluated in a single-arm study and provides the ORR for IMDELLTRA™ (40 percent in 3L therapy [115] and 54.5 percent in patients with stable brain metastases [116]), but did not provide the ORR for topotecan or lurbinectedin in patients with stable brain metastases, nor in patients that are taking 3L therapy. Therefore, we question the applicant's assertion of improved clinical outcomes for IMDELLTRA™ compared to previously available therapy.

We agree with the applicant that head-to-head trials, while preferred, are not required for comparing currently available therapy. However, we note that among the clinical trial and real-world data provided for alternative therapies to IMDELLTRA™, there was no control for confounding variables to ensure similar patients were being compared to those who took IMDELLTRA™. Additionally, we note that the real-world data provided for lurbinectedin as third line therapy and the data for the subset of patients from DeLLphi-301 with brain metastases were small sample sizes of 14 and 22, respectively, which may limit generalizability of these results to the Medicare population as confounding variables could affect the results. We note that exclusion of patients with brain metastases from the pivotal phase 2 trial for lurbinectedin does not exclude use of this drug in this patient population.

We further question the use of von Pawel et al. (1999) study of topotecan as a comparator to IMDELLTRA™ since it was conducted approximately 25 years before the IMDELLTRA™ phase 2 trial (Ahn et al., 2023) and included some highly varied patient outcomes (such as topotecan duration of responses ranging from 9.4–50.1 weeks). We note that guidelines and treatment protocols for SCLC have evolved over this extended period and the resulting changes in care standards may have impacted the outcomes observed from the older study versus the more recent one.

In addition, the applicant stated that clinical trials of topotecan and lurbinectedin reported higher rates of ≥ Grade 3 neutropenia than reported in the DeLLphi-301 study with IMDELLTRA™ monotherapy, but did not consider other serious adverse events such as cytokine release syndrome (CRS) or immune effector cell-associated neurotoxicity syndrome (ICANS), which are possible side effects for IMDELLTRA™ but not for topotecan or lurbinectedin. We further note that there was no control for potential confounding variables in the patient populations in the comparisons of neutropenia rates, and it is therefore difficult to draw conclusions regarding relative side effect profiles among these different trials.

We are inviting public comments on whether IMDELLTRA™ meets the substantial clinical improvement criterion.

i. IntelliSep Test

Cytovale, Inc. submitted an application for new technology add-on payments for the IntelliSep® Test for FY 2026. According to the applicant, the IntelliSep® Test is a semi-quantitative test that assesses cellular host response via a microfluidic deformability cytometry of leukocyte biophysical properties and is intended for use in conjunction with clinical assessments and laboratory findings to aid in the early detection of sepsis with organ dysfunction for adults presenting to the Emergency Department (ED). The IntelliSep® Test generates an index value that falls within 1 of 3 discrete interpretation bands based on the probability of sepsis with organ dysfunction manifesting within the first 3 days after testing.

[115] Ahn, 2023, *op. cit.*
[116] Dingemans, 2024, *op. cit.*

Please refer to the online application posting for the IntelliSep® Test, available at *https://mearis.cms.gov/public/publications/ntap/NTP24100553685*, for additional detail describing the technology and the disease diagnosed in part by the technology.

With respect to the newness criterion, according to the applicant, the IntelliSep® Test was granted 510(k) clearance from FDA on December 20, 2022, for use in adult patients with signs and symptoms of infection who present to the ED. According to the applicant, the IntelliSep® Test was commercially available immediately after FDA marketing authorization. The applicant stated that one IntelliSep® Test is used per patient per inpatient stay.

The applicant stated that, effective April 1, 2025, the following ICD–10–PCS procedure code may be used to uniquely describe procedures involving the use of the IntelliSep® Test: XXE5X5A (Measurement of immune response, whole blood cellular assessment via microfluidic deformability, new technology group 10). The applicant provided a list of diagnosis codes that may be used to currently identify the indication for the IntelliSep® Test using the ICD–10–CM coding system. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that the IntelliSep® Test is not substantially similar to other currently available technologies because the IntelliSep® Test is the only FDA-cleared test that uses a microfluidic deformability cytometry technique for early detection of sepsis in the ED regardless of whether the patient is admitted to the hospital or not and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for the IntelliSep® Test for the applicant's complete statements in support of its assertion that the IntelliSep® Test is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	The IntelliSep® Test is the only test that uses a microfluidic deformability cytometry technique to measure the biophysical properties of thousands of individual leukocytes in rapid succession. These properties have been shown to differ in quiescent white blood cell populations when compared to those in septic patients, enabling for rapid assessment of the host response and the likelihood of having or developing sepsis. Other tests for sepsis exist, but these tests measure biomarker levels or gene expression to generate their signal.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	The use of any test to detect the presence of sepsis does not impact the MS–DRG assignment of the discharge.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	While other tests can be used to detect the presence of sepsis, the IntelliSep® Test is the first and only FDA-cleared test for early detection of sepsis with organ dysfunction in adult patients with signs and symptoms of infection who present to the ED, regardless of whether the patient is admitted to the hospital or not. Other tests indicated for early detection of sepsis can only be administered after the patient has been admitted to the hospital.

With respect to the substantial similarity criteria, we note the following concerns. We note that the applicant did not compare the IntelliSep® Test's mechanism of action to those of other sepsis tests or detection tools, such as the Early Sepsis Indicator for monocyte distribution width (MDW), SeptiCyte® RAPID, and Sepsis ImmunoScore™. We further note that MDW measurement involves the assessment of white blood cells to detect pathogen-induced infections. Specifically, MDW measures the variability in peripheral monocyte morphologic characteristics that increase during early phases of infection after pathogen-induced monocyte activation.[117] Notably, monocytes (measured for MDW) are one type of leukocyte, and the IntelliSep® Test also evaluates leukocytes in its mechanism of action.[118] While the techniques of leukocyte measurement may differ, the subject of measurement appears to be the same or similar. Therefore, we question whether the IntelliSep® Test's measurement of leukocytes and their deformities is a unique mechanism of action, particularly in comparison to the Early Sepsis Indicator. Further, we question whether the measurement of different biomarkers or gene expression to determine the risk of sepsis is different than the measurement of leukocyte properties to determine the risk of sepsis. We are interested in information regarding how the IntelliSep® Test's mechanism of action differs from other such sepsis tests and detection tools.

In addition, while the applicant stated that the use of the IntelliSep® Test does not involve treatment of the same or similar population and disease as existing technologies, we note that the IntelliSep® Test is a diagnostic tool to evaluate patients with suspected infection, as are other FDA-cleared sepsis diagnostic tools, such as those that calculate Quick Sequential Organ Failure Assessment (qSOFA) scores (for example, SpassageQ[119] or NAVOY CDS®[120]). Furthermore, there are also other means of assessment, including body temperature, respiratory rate, heart rate, blood counts, and blood cultures, that are used to diagnosis sepsis. We also question whether a patient's location, whether in the ED, admitted to the hospital, or in the intensive care

Monocyte Distribution Width as a Diagnostic Marker for Infection: A Systematic Review and Meta-analysis. *Chest, 164*(1), 101–113. *https://doi.org/10.1016/j.chest.2022.12.049.*

[118] U.S. Food and Drug Administration. (2022). *510(k) approval letter for IntelliSep Test, 21 CFR 866.3215, device to detect and measure non-microbial analyte(s) in human clinical specimens to aid in assessment of patients with suspected sepsis. https://www.accessdata.fda.gov/cdrh_docs/pdf22/K220991.pdf.*

[119] *https://www.accessdata.fda.gov/cdrh_docs/pdf23/K230386.pdf.*

[120] *https://www.accessdata.fda.gov/cdrh_docs/pdf24/K240558.pdf.*

unit (ICU) constitutes a different population. Further, we note that there are existing sepsis diagnostic technologies that are also approved for use in the ED such as the Early Sepsis Indicator and Sepsis ImmunoScore™, which were FDA market-authorized on March 18, 2019 and April 2, 2024, respectively.[121] [122] Therefore, it is unclear that there are no existing technologies other than the IntelliSep® Test that are involved with the diagnosis of sepsis in adult patients who have signs and symptoms of infection.

We are inviting public comments on whether the IntelliSep® Test is substantially similar to existing technologies and whether the IntelliSep® Test meets the newness criterion.

With respect to the cost criterion, the applicant provided an analysis to demonstrate that the IntelliSep® Test meets the cost criterion. The analysis followed the order of operations summarized in the following table.

INTELLISEP® TEST COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for the IntelliSep® Test.
Claims identified	2,708,804 claims mapping to 717 MS–DRGs, with 18.86% of claims mapping to MS–DRG 871 (Septicemia or Severe Sepsis without MV >96 Hours with MCC).
Charges removed for prior technology.	Per the applicant, the IntelliSep® Test is not replacing a prior technology as it provides additional information to the clinician to determine if the patient has sepsis. As such, the applicant did not remove any estimated charges for a prior technology. The applicant stated that 25% of charges associated with Room and Board (revenue centers 011X–015X) and ICU/CCU (021X, 022X) were removed as the use of this technology can reduce average length of stay.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.102 for Laboratory from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Average case-weighted threshold amount: $75,886. Final inflated average case-weighted standardized charge per case: $86,075.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the IntelliSep® Test meets the cost criterion.

We are inviting public comments on whether the IntelliSep® Test meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that the IntelliSep® Test represents a substantial clinical improvement over existing technologies because the IntelliSep® Test is the only technology that is FDA-cleared for use in the ED to rapidly assess immune activation and identify sepsis risk in approximately 10 minutes, providing actionable results that significantly impact clinical decision-making and patient outcomes. The applicant provided 9 studies to support these claims,[123] as well as 19 background articles about international sepsis guidelines, antimicrobial therapy initiation, timing of antibiotic administration, and other topics related to sepsis detection. We note that two other articles were submitted as supporting evidence (Kraus et al., 2023; Rhee et al., 2017), which we believe should be characterized as background articles because they do not directly assess the use of the IntelliSep® Test.[124] Instead, Kraus et al. (2023) focused on evaluating key attributes of rapid host response sepsis tests via an expert review panel, and Rhee et al. (2017) estimated the U.S. incidence of sepsis and sepsis trends using electronic health records. The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for the IntelliSep® Test for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods.	
IntelliSep® Test assists physicians in identifying patients where sepsis is unlikely, allowing for the more rapid pursuit of alternate diagnoses.	Sheybani, Roya, Matt Sorrells, Daniel Henning, et al. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
IntelliSep® Test aids in reducing risk of mortality amongst tested patients.	O'Neal, 2024a, *op. cit.* Jagneaux, 2024, *op. cit.* Thomas, 2025, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
IntelliSep® Test aids in reducing average length of stay (LOS) amongst tested patients.	O'Neal, 2024a, *op. cit.* Jagneaux, 2024, *op. cit.* Thomas CB, Hollis A, Teague L, et al. The fiscal impact of a rapid sepsis diagnostic in the Emergency Department (ED). Presented at: 44th International Symposium on Intensive Care and Emergency Medicine (ISICEM); 2024b; Brussels, Belgium. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
IntelliSep® Test aids improved compliance with the CMS SEP–1 and Surviving Sepsis Campaign 3-hour bundle compliance.	O'Neal, 2024a, *op. cit.* Jagneaux, 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
IntelliSep® Test aids sepsis antibiotic initiation consistent with current consensus guidelines.	O'Neal, 2024a, *op. cit.* Jagneaux, 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

We also received a public comment in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for the IntelliSep® Test, which we summarize in this section.

Comment: The applicant submitted a public comment in response to questions asked at the Town Hall regarding the comparison of the IntelliSep® Test to other sepsis tests, namely to technology that assesses MDW and SeptiCyte® RAPID. The applicant submitted an additional study (Sarani et al., 2024), which concluded that the IntelliSep® Test, along with von Willebrand factor (vWF)/ADAMTS13 ratios, may be useful and appear to be superior to the traditional marker, MDW, for the early diagnosis of sepsis in patients visiting the ED.[125] This 2024 study investigated the use of the IntelliSep® Test, MDW, and other biomarkers to diagnose sepsis in 44 patients (25 patients with a low probability of sepsis and 19 patients with a high probability of sepsis) who visited the ED at The University of Kansas Medical Center. The applicant noted that MDW is not widely used as a screening tool in the ED, which is where the IntelliSep® Test is indicated for use. Regarding comparison of the IntelliSep® Test to SeptiCyte® RAPID, the applicant stated that it believes a comparison between the two sepsis diagnostic tests is inappropriate given the differences in indicated uses for the tests, primarily the indicated location; IntelliSep® Test is indicated for use in the ED prior to the provider's decision to admit the patient, whereas SeptiCyte® RAPID is used first day post-admission to the ICU. The applicant cited a recent study that found only 16.1 percent of patients tested with the IntelliSep® Test are admitted to the ICU.[126]

Response: We thank the applicant for its comments. After review of the information provided by the applicant and the public comment received in response to the New Technology Town Hall meeting, we have the following concerns regarding whether the IntelliSep® Test meets the substantial clinical improvement criterion. Regarding the new study provided by the applicant in the Town Hall comment, we note that Sarani et al. (2024) does not compare the IntelliSep® Test and MDW with respect to the ability to diagnose sepsis earlier or resulting clinical outcomes (for example, length of stay or mortality).

The applicant made six claims in regard to the substantial clinical improvement assertion that the IntelliSep® Test offers the ability to diagnose sepsis in a patient population where the condition is currently undetectable or offers the ability to diagnose sepsis earlier in a patient population than allowed by currently available methods; however, we note that a number of these claims did not address this criterion. Specifically, the applicant stated that the IntelliSep® Test (1) allows clinicians to make early, appropriate antibiotic decisions in patients with suspected sepsis while pursuing antimicrobial stewardship targets; (2) outperforms current sepsis diagnostic tools available for use in the ED; (3) effectively differentiates sepsis from non-specific biomarker elevations in various clinical conditions; (4) is the only FDA-cleared test to assess dysregulated immune response to infection (sepsis) in patients presenting to the ED; and (5) has demonstrated a high NPV for sepsis and therefore allows for it to be ruled out where sepsis is unlikely. These claims discuss the reliability of the IntelliSep® Test outcomes or the potential benefits of sepsis risk stratification, or relate to not diagnosing sepsis, and do not address the ability of the IntelliSep® Test to diagnose a patient population where sepsis is currently undetectable or offer the ability to diagnose sepsis earlier than other technologies.

We further note that none of the claims made by the applicant under this assertion provided a comparison of time to diagnosis to currently available sepsis diagnostics in order to demonstrate that the IntelliSep® Test can diagnose sepsis earlier than currently available methods. While the applicant provided O'Neal et al. (2024b), which established the 7.2 minute testing turnaround time for the IntelliSep® Test to support the claim that it provides clinicians with actionable results sooner than pathogen-based detection systems, the only other testing time provided as a comparison was from a study comparing time to positivity between the BacT/Alert and BACTEC blood culture systems (Butler-Laporte et al., 2020). We would appreciate evidence comparing time to diagnosis for the IntelliSep® Test and other existing sepsis detection tools also developed to address the length of time to definite sepsis diagnosis with blood cultures, such as Early Sepsis Indicator or Sepsis ImmunoScore, in order to demonstrate the applicant's assertion that the IntelliSep® Test allows for faster detection of sepsis compared to existing technologies.

We further note that we did not receive any information demonstrating that clinicians changed the management of patients due to the use of the IntelliSep® Test. The Jagneaux et al. (2024) study measured time-to-bed assignment (TTB) when nurses at one medical center triaged patients in the ED waiting room, tested patients using the IntelliSep® Test, and placed patients with IntelliSep® Band 3 results in ED beds. The study showed that TTB for Band 3 was shorter than TTB for Band 1, but we question whether TTB between risk-stratified bands should be considered a change in management. The study did not include a control group or comparison to other sepsis tests or diagnostic tools to demonstrate differences in patient management between the use of the IntelliSep® Test and other standards of care. We further note that Jagneaux et al. (2024), which is an unpublished abstract, lacked details regarding the patient population, study protocol, and statistical analyses, and is only representative of a single medical center. We are therefore unclear whether the results may be influenced by potential confounding factors, and we question whether they are generalizable to other EDs or geographic regions as well as to the Medicare population.

The applicant also made seven claims in regard to the substantial clinical improvement assertion that the IntelliSep® Test significantly improves clinical outcomes relative to services or technologies previously available. However, we note that a number of these claims do not address this criterion. In particular, the applicant stated that the IntelliSep® Test (1) reduces door-to-bed time for patients presenting with occult sepsis who appear clinically stable by triage staff; (2) allows for prompt attention to infection source identification and control through its rapid turnaround time; (3) aids improved compliance with the CMS SEP–1 and Surviving Sepsis Campaign 3-hour bundle compliance; and (4) aids sepsis antibiotic initiation consistent with current consensus guidelines. First, we question whether the claim that the IntelliSep® Test reduces door-to-bed time is an appropriate proxy for timely

[125] Sarani, N., Dasgupta, A., Enders, M., Rowan, L., Elsarraj, H., Gralnek, S., Shay, M., Lemar, L.R., Simpson, S.Q., Cunningham, M.T., & Zheng, X.L. (2024). Clinical Utility of Recently Food and Drug Administration-Approved IntelliSep® Test (Sepsis Biomarker) for Early Diagnosis of Sepsis: Comparison with Other Biomarkers. *Journal of Clinical Medicine, 13*(16), 4852. *https://doi.org/10.3390/jcm13164852.*

[126] O'Neal, H.R., Jr, Sheybani, R., Kraus, C.K., Self, W.H., Shah, A.M., Thomas, C.B., Tse, H.T.K., & Scoggins, R. (2024b). Cellular host response sepsis test for risk stratification of patients in the emergency department: A pooled analysis. Academic Emergency Medicine, 31(9), 883–893. *https://doi.org/10.1111/acem.14923.*

antibiotic administration and the potential for subsequent clinical outcomes (such as mortality). The strength of the direct association between time from door-to-bed and clinical outcome improvement or whether any outcomes are inferred from surrogate endpoints is unclear. We also note that the provided evidence does not demonstrate whether the IntelliSep® Test is the driving factor, among all other tests and clinical practices, that allows timely infection source identification and control and, therefore, decreases mortality. Additionally, we are unclear about the direct association between the IntelliSep® Test and antibiotic initiation for sepsis consistent with current guidelines as this is also only inferred, and the IntelliSep® Test is one tool among others used to diagnose sepsis. We also question whether compliance with the CMS SEP–1 and Surviving Sepsis Campaign 3-hour bundles is intended as a proxy for decreased mortality that may occur from reducing the time to antibiotic administration. We note that a decrease in mortality is only inferred, and the provided evidence does not demonstrate that the IntelliSep® Test decreases mortality. We are unclear how these claims relate to a demonstration of substantial clinical improvement over existing technologies because these claims do not pertain to clinical outcomes described at § 412.87(b)(1)(ii)(C), such as a reduction in mortality or a decreased rate of at least one subsequent diagnostic or therapeutic intervention.

We also note that the claims and the provided evidence regarding the IntelliSep® Test's ability to significantly improve clinical outcomes relative to services or technologies previously available lack a comparison of the IntelliSep® Test to existing technologies used to diagnose sepsis, such as the previously discussed Early Sepsis Indicator, SeptiCyte® RAPID, and Sepsis ImmunoScore™. While the applicant stated in its Town Hall comment that a comparison between the IntelliSep® Test and SeptiCyte® RAPID is inappropriate due to the differences in indicated location, we question whether the impact of testing different patients in different environments within a hospital would be relevant to clinical outcomes such as timely antibiotic administration and mortality. In addition, we note that both Early Sepsis Indicator and Sepsis ImmunoScore™ are indicated for use in the ED. We are interested in comparative evidence for other sepsis diagnostic technologies in order to evaluate the IntelliSep® Test's clinical outcomes relative to other technologies. We also note that since much of the evidence provided across claims (Thomas et al. (2025); Thomas et al. (2024a); Thomas et al. (2024b)) is unpublished, the details provided do not include study protocols or statistical methods and measures. As such, we are unable to account for differences in the outcome measures or determine if the results are statistically significant. Further, because these study results are from one academic medical center, we question whether the results are generalizable to other hospitals and more broadly to the Medicare population. Where the Jagneaux et al. (2024) study was used to support claims regarding the IntelliSep® Test's ability to significantly improve clinical outcomes relative to services or technologies previously available, we also have the same concerns as previously discussed, including lack of details regarding the patient population, study protocol, and statistical analyses.

In addition, with respect to the claim that IntelliSep® Test results enable ED providers to decrease the use of diagnostic images and testing, resulting in decreased exposure and associated risks, while Thomas et al. (2024a) evaluated the impact of the IntelliSep® Test on blood culture orders, antibiotic usage, and patients' LOS for 1,275 patients who presented to an ED with signs or symptoms of infection, we note that the study did not determine whether a decrease in these measures resulted in patients experiencing decreased exposure and associated risks or a significant improvement in clinical outcomes relative to technologies previously available.

While the Jagneaux et al. (2024) study provided by the applicant did not measure mortality, the applicant provided the O'Neal, et al. (2024a) study, which did measure all-cause cumulative hospital mortality stratified by IntelliSep® bands; however, the study only compared the IntelliSep® Test to common traditional sepsis tests or detection tools, such as white blood cell count, procalcitonin, lactate, blood cultures, and the Sequential Organ Failure Assessment (SOFA). O'Neal et al. (2024a) did not provide hospital mortality data to demonstrate the IntelliSep® Test improved clinical outcomes relative to other technologies that are available, such as Early Sepsis Indicator, SeptiCyte® RAPID, and Sepsis ImmunoScore™.

Regarding the claim that the IntelliSep® Test aids in reducing average LOS among tested patients, the Thomas et al. (2024b) study submitted by the applicant found that incorporating the IntelliSep® Test and releasing its results to clinicians for 413 patients of a large U.S. academic medical center led to a reduction of 1.28 days for inpatients and 2.42 days for ICU patients, when compared to 196 patients in the control group for which the IntelliSep® Test was performed but not released to clinicians. We note that the study used control and intervention cohorts that were not concurrent, and we question the impact from varying confounders, such as changes in clinical policy. We note that the applicant also included background studies to demonstrate a positive association between longer hospital LOS and the probability of acquiring an infection, readmission, negative emotions, and increased hospital costs.[127] However, these studies did not assess the IntelliSep® Test's ability to affect LOS, rates of infection, readmission, or other clinical outcomes.

Lastly, we question how much capability should be attributed to the IntelliSep® Test when making clinical judgments and improving clinical outcomes, and we welcome additional information.

We are inviting public comments on whether the IntelliSep® Test meets the substantial clinical improvement criterion.

j. Neuroguard IEP® 3-in-1 Carotid Stent and Post-Dilation Balloon System With Integrated Embolic Protection

Contego Medical, Inc. submitted an application for new technology add-on payments for the Neuroguard IEP® 3-in-1 Carotid Stent and Post-Dilation Balloon System with Integrated Embolic Protection (Neuroguard IEP® System) for FY 2026. According to the applicant, the Neuroguard IEP® System combines a carotid stent with an integrated 40 µm embolic protection filter and post-dilation balloon. Per the applicant, the Neuroguard IEP® System restores and maintains vessel patency while stabilizing plaque, and by capturing small emboli during critical phases, it reduces the risk of stroke during the procedure and helps prevent future stroke.

Please refer to the online application posting for the Neuroguard IEP® System, available at *https://mearis.cms.gov/public/publications/ntap/NTP241004CNKB9*, for additional detail describing the technology and carotid artery disease.

[127] Hassan, M., Tuckman, H.P., Patrick, R.H., Kountz, D.S., & Kohn, J.L. (2010). Hospital length of stay and probability of acquiring infection. *International Journal of Pharmaceutical and Healthcare Marketing, 4*(4), 324–338. *https://doi.org/10.1108/17506121011095182.*

With respect to the newness criterion, according to the applicant, the Neuroguard IEP® System was granted premarket approval (PMA) from FDA on October 11, 2024 for improving the carotid luminal diameter in subjects at high risk for adverse events from a carotid endarterectomy who require carotid revascularization and meet the criteria outlined below: patients with symptomatic stenosis of the common or internal carotid artery with ≥50 percent as determined by angiography using North American Symptomatic Carotid Endarterectomy Trial (NASCET) methodology or patients with asymptomatic stenosis of the common or internal carotid artery with ≥80 percent as determined by angiography using NASCET methodology; and patients with reference vessel diameters 4.0 mm to 8.0 mm. The applicant and FDA approval letter stated that this technology is also indicated for post-dilation of the stent component with simultaneous capture and removal of embolic material. According to the applicant, the Neuroguard IEP® System is used in conjunction with an available primary distal embolic protection device as described in the Instructions for Use. According to the applicant, the Neuroguard IEP® System was commercially available immediately after its FDA approval. Per the applicant, one Neuroguard IEP® System typically is used per inpatient stay.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify the Neuroguard IEP® System. We note that the applicant submitted a request for approval for a unique ICD–10–PCS procedure code for the Neuroguard IEP® System beginning in FY 2026. The applicant stated that codes I65.21 (Occlusion and stenosis of right carotid artery), I65.22 (Occlusion and stenosis of left carotid artery), I65.23 (Occlusion and stenosis of bilateral carotid arteries), or I65.29 (Occlusion and stenosis of unspecified carotid artery) may be used to currently identify the indication for the Neuroguard IEP® System under the ICD–10–CM coding system.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that the Neuroguard IEP® System is not substantially similar to other currently available technologies because it is a first-in-class, novel device that uses a different mechanism of action compared to existing technologies by integrating a stent with a 40 μm (3 to 4 times smaller than pores of traditional filters) embolic protection filter and a post-dilation balloon, aiming to streamline the procedure and increase the effectiveness of embolic protection during carotid stenting, and that no other similar device is currently available in the U.S., and therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for the Neuroguard IEP® System for the applicant's complete statements in support of its assertion that the Neuroguard IEP® System is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	Multiple clinical studies have reported that the majority of debris released during carotid stenting is less than 100 microns (μm). The Neuroguard IEP® System features an innovative 40 μm embolic protection filter, with pores 3–4 times smaller than traditional filters used in carotid artery stenting (CAS), providing a substantial clinical improvement in capturing those microembolic particles. Traditional embolic protection devices (EPDs) have pore sizes of 100 to 150 μm, allowing smaller microemboli to pass through, which can result in strokes and cognitive impairment for patients. Unlike other technologies, the Neuroguard IEP® System offers continuous protection during the most critical phases of carotid stenting—stent deployment and balloon dilation—when the risk of plaque dislodgement is highest. Conventional EPDs cannot use smaller pores because they are open throughout the entire procedure and must permit sufficient flow to reduce the risk of thrombosis and complications. In contrast, the Neuroguard IEP® System integrated filter is open only during the critical phases allowing it to use smaller pores (40 μm) without increasing thrombosis risk, delivering enhanced protection while maintaining safety. Unlike conventional CAS systems that rely solely on separate EPDs, the Neuroguard IEP® System's filter is integrated into the device and dynamically adjusted to create a complete seal against the artery wall, ensuring even the smallest micro-emboli are captured. This greatly reduces the risk of embolic particles traveling to the brain, demonstrating a substantial clinical improvement over existing technologies in stroke prevention. The Neuroguard IEP® System stent incorporates a hybrid design that balances flexibility and radial strength, enabling precise deployment and secure vessel scaffolding. This helps to minimize risks such as restenosis or stent migration, challenges often seen with traditional stents that compromise either flexibility or strength. The Neuroguard IEP® System's flexible segments facilitate deployment in challenging anatomy while maintaining long-term vessel support. The stent is designed to enhance precision, reduce trauma or migration risks, and allow for predictable deployment, helping to reduce procedural complications. By integrating embolic protection, stenting, and dilation into one device, the Neuroguard IEP® System eliminates the need or multiple devices, reducing catheter exchanges and procedural complexity. While traditional distal embolic protection devices have larger pores that allow micro-emoli to reach the brain, potentionally causing stroke or cognitive impairment, the Neuroguard IEP® System addresses this risk by capturing micro emboli, reducing the likelihood of such adverse events. This new mechanism of action offers a safer and more effective approach to treating carotid artery stenosis, representing a substantial clinical improvement over existing technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	The Neuroguard IEP® System falls under the MS–DRGs related to procedures performed on the carotid arteries, which include stenting procedures. However, despite being assigned to the same MS–DRG, the Neuroguard IEP® System represents a distinct technological advancement that warrant separate consideration under the new technology add-on payment criteria. Its innovative approach to embolic protection and the demonstrated substantial clinical improvement over existing technologies justify the need for additional payment beyond the standard MS–DRG rates to ensure appropriate reimbursement and broader adoption of this superior technology.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	The Neuroguard IEP® System is used to treat the same disease, carotid artery stenosis, in the same patient population as existing carotid stent technologies. However, it offers substantial clinical improvements, particularly in reducing the risk of stroke during the procedure. Traditional CAS methods rely on separate EPDs, which have limitations in capturing small embolic particles, especially during the riskiest parts of the procedure—stent deployment and balloon dilation.

We have the following concerns with regard to the newness criterion. While the applicant asserted that the Neuroguard IEP® System is novel in that it uses a new mechanism of action because its 40 µm embolic protection filter has pores 3–4 times smaller than traditional filters used in CAS, we question whether this represents a new mechanism of action as both Neuroguard's filter and existing filters use a porous membrane to capture and remove embolic material while performing angioplasty and stenting procedures in carotid arteries. We note that the applicant asserted that this change in filter size may impact clinical outcomes, however, this is not relevant to mechanism of action. Furthermore, the Neuroguard IEP® System should always be used in conjunction with an available primary distal embolic protection device as described in the IFU,[128] which suggests that its filter would not impact the mechanism of action of the device. We also note that there are other existing embolic protection filters used during CAS procedures that have the same 40-micron pore size, such as the Paladin Carotid Post-Dilation Balloon System with Integrated Embolic Protection (Paladin System with IEP) from the same manufacturer, which received FDA 510(k) clearance on September 6, 2018.[129]

In addition, while the applicant asserted that the Neuroguard IEP® System has a new mechanism of action because it integrates a stent with an embolic protection filter that opens during stent deployment and balloon dilation to streamline the procedure and increase the effectiveness of embolic protection during CAS, we question how integrating existing procedural devices into one device to eliminate the need for multiple devices results in a different mechanism of action, as this appears to describe an ease-of-use feature rather than having an impact on the technology's therapeutic outcome of improving carotid luminal diameter for patients with stenosis of the carotid artery.[130] It is unclear how the way in which the Neuroguard IEP® System treats carotid artery stenosis is different from the way in which the many existing carotid artery stents, filters, and post-dilation balloons available on the market, used together or as part of a system, treat carotid artery stenosis. Therefore, it appears these technologies may have the same or a similar mechanism of action as the Neuroguard IEP® System. We further note that the applicant stated that the Neuroguard IEP® System treats the same disease, carotid artery stenosis, in the same patient population as existing carotid stent technologies, and that it maps to the same MS–DRGs for carotid artery stenting procedures.

Accordingly, as it appears that the Neuroguard IEP® System and existing carotid stents or stent systems, such as the GORE Carotid Stent, RX Acculink™ Carotid Stent System, or Carotid WALLSTENT® Monorail® Endoprosthesis, or the Paladin System with IEP used with any available carotid artery stent, may use the same or similar mechanism of action to achieve a therapeutic outcome, would be assigned to the same MS–DRG, and would treat the same or similar patient population and disease, we question whether these technologies may be substantially similar to one another. We note that, per our policy, if technologies are substantially similar to each other, we use the earliest market availability date as the beginning of the newness period for the technologies. Accordingly, if we determine that the Neuroguard IEP® System is substantially similar to existing carotid stents or systems as described previously, because the 3-year anniversary of the FDA clearance of all these current technologies occurred prior to FY 2026,[131] [132] [133] the Neuroguard IEP® System would not be considered new.

We are inviting public comment on whether the Neuroguard IEP® System is substantially similar to existing technologies and whether the Neuroguard IEP® System meets the newness criterion.

With respect to the cost criterion, the applicant provided two analyses to demonstrate that the Neuroguard IEP® System meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

[128] Neuroguard IEP® 3-in-1 Carotid Stent, Post-Dilation Balloon System with Integrated Embolic Protection (*https://www.accessdata.fda.gov/cdrh_docs/pdf24/P240009A.pdf*).

[129] FDA. Section 510(k) premarket notification. Paladin Carotid Post-Dilation Balloon System with Integrated Embolic Protection. K181128. September 6, 2018 (*https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/pmn.cfm?id=K181128*, accessed 2/5/2025).

[130] FDA. Neuroguard IEP® 3-in-1 Carotid Stent, Post-Dilation Balloon System with Integrated Embolic Protection. Pre-market approval. October 11, 2024.

[131] The 3-year anniversary of FDA PMA approval for the RX Acculink ™ Carotid Stent System was August 30, 2007. *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpma/pma.cfm?id=P040012.*

[132] The 3-year anniversary of FDA PMA approval for Carotid WALLSTENT® Monorail® Endoprosthesis was October 23, 2011. *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpma/pma.cfm?id=P050019.*

[133] The 3-year anniversary of FDA PMA approval for GORE Carotid Stent was November 1, 2021. *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpma/pma.cfm?ID=P180010.*

NEUROGUARD IEP® SYSTEM COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes, ICD–10–PCS codes, and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for the Neuroguard IEP® System.
Claims identified	Scenario 1: 13,115 claims mapping to 69 MS–DRGs, with 49.68% claims mapping to MS–DRG 036 (Carotid Artery Stent Procedure Without CC/MCC). Scenario 2: 11,876 claims mapping to 3 MS–DRGs, with 54.86% of claims mapping to MS–DRG 036 (Carotid Artery Stent Procedure Without CC/MCC).
Charges removed for prior technology.	Per the applicant, use of the technology would replace current existing stent and dilating balloon technologies used in traditional carotid artery stenting. The applicant removed charges for the existing stent and dilating balloon by dividing the estimated costs by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not remove indirect charges related to the prior technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Scenario 1: —Average case-weighted threshold amount: $101,119. —Final inflated average case-weighted standardized charge per case: $133,183. Scenario 2: —Average case-weighted threshold amount: $95,139. —Final inflated average case-weighted standardized charge per case: $116,240.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both analyses, the applicant asserted that the Neuroguard IEP® System meets the cost criterion.

We are inviting public comments on whether the Neuroguard IEP® System meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that the Neuroguard IEP® System represents a substantial clinical improvement over existing technologies because the Neuroguard IEP® System significantly improves clinical outcomes relative to technologies previously available by using a 40 μm embolic protection filter that captures microemboli, unlike traditional filters (100–150 μm) that miss smaller emboli, leading to higher stroke rates. Further, the applicant asserted that the Neuroguard IEP® System demonstrated a zero percent stroke rate in the PERFORMANCE I study, 1.3 percent at 30 days, and 1.8 percent at 12 months in the PERFORMANCE II study, demonstrating substantial clinical improvement compared to other CAS technologies. The applicant provided 2 studies to support its claims, as well as a supplemental document that presents the 30-day and 12-month stroke rates of carotid artery stents from clinical studies, and 8 background articles about other FDA-approved CAS or EPD technologies.[134] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for the Neuroguard IEP® System for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Substantial Clinical Improvement Assertion #1: The technology significantly improves clinical outcomes relative to services or technologies previously available

The Neuroguard IEP® System demonstrates a substantial clinical improvement over existing CAS technologies by integrating an embolic protection filter that minimizes the risk of stroke and cognitive impairment.	Langhoff R, Petrov I, Kedev S, et al., PERFORMACE 1 Study: Novel carotid stent system with integrated post-dilation balloon and embolic protection device. Catheter Cardiovasc Interv. 2022 Nov;100(6):1090–1099. Gray WA, Metzger DC, Zidar J, et al. The PERFORMANCE II Trial: A Prospective Multicenter Investigation of a Novel Carotid Stent System. JACC Cardiovasc Interv. Published online December 20, 2024. doi:10.1016/j.jcin.2024.10.031. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for the Neuroguard IEP® System.

After review of the information provided by the applicant, we have the following concerns regarding whether the Neuroguard IEP® System meets the substantial clinical improvement criterion. With respect to the claim that the Neuroguard IEP® System demonstrates a substantial clinical improvement over existing CAS technologies by integrating an embolic protection filter that minimizes the risk of stroke and cognitive impairment, we note that the applicant has provided evidence comparing the effects of the Neuroguard IEP® System to historical controls based on several clinical trials, including the Xact® Carotid Stent System of the SECURITY trial,[135] the ACCULINK carotid stent of the ARCHER

[134] Background articles are not included in the following table but can be accessed via the online posting for the technology.

[135] FDA. SECURITY: Xact® Carotid Stent System—P040038/S043. Summary of Safety and Effectiveness Data. Published August 5, 2004. (*https://www.fda.gov/medical-devices/recently-approved-devices/xact-carotid-stent-system-p040038s043*, accessed 1/24/2025).

trial,[136] the Carotid WALLSTENT and FilterWire EX/EZ of the BEACH trial,[137] the GORE Carotid Stent of the SCAFFOLD trial,[138] the S.M.A.R.T. or Precise stent with Angioguard or Angioguard XP, Cordis EPD of the SAPPHIRE trial,[139] and Accunet and Acculink Systems of the CREST trial.[140] However, we did not receive information comparing the Neuroguard IEP® System with other currently available treatments developed more recently, such as GORE Carotid Stent, Sterling SL Balloon Dilatation Catheters, or Paladin System, and we would appreciate additional information comparing these technologies in order to inform our assessment of substantial clinical improvement.

In addition, we note that the applicant compared the Neuroguard IEP® System with historical controls based on externally controlled trials from at least a decade ago. While the results of the SCAFFOLD trial were published more recently, in 2020, other externally controlled trials were published or completed at least a decade earlier (SAPPHIRE: 2004; SECURITY: 2005; ARCHER: 2006; BEACH: 2008; CREST: 2010; ROADSTER: 2015). In particular, SAPPHIRE was conducted when CAS was new.[141] We also note that the pre- and post-treatment protocols for the PERFORMANCE II trial were more comprehensive compared to those of the SAPPHIRE trial [142] and that this may reflect changes in standards of care over the past two decades. For example, we note that the patients in the PERFORMANCE II had been given clopidogrel 75 mg (or equivalent) and aspirin 75 mg daily for one week before surgery, and dual antiplatelet therapy was required for at least 30 days after the procedure (and thereafter, at the physician's discretion and standard of care), whereas the patients in the SAPPHIRE trial were given an aspirin at a dose of 81 or 325 mg per day for at least 72 hours before the procedure and indefinitely after the procedure, and with clopidogrel 75 mg per day starting 24 hours before the procedure and continuing for two to four weeks after the procedure. We are also concerned that observed differences between the Neuroguard IEP® System and the historical controls may also reflect improvements in stent devices, access approaches, and embolic protection methods over the past decade that aimed at reducing the risk of stroke associated with CAS.[143] Therefore, we question whether the observed lower stroke rate was at least partly the result of a more advanced and comprehensive treatment protocol. We also question whether growth in CAS volume, a multitude of commercially available FDA-approved carotid stents, changes in standard of care, and trends in the prevalence of diabetes and hypertension in the U.S. population during the last two decades were considered in the interpretation of the findings of the two PERFORMANCE trials.

We are also concerned about the use of historical controls, given the differences among the trials, and question how these differences were taken into account in the development of the performance goal and in the comparison with the Neuroguard IEP® System on improving clinical outcomes. First, those trials differed in study design (SECURITY: non-randomized; BEACH, SCAFFOLD: single-arm; SAPPHIRE: RCT; CREST: RCT permuted block design) and length of follow-up (SECURITY, BEACH, ARCHER: 365 days; other: 3 years). Because these trials were not uniform in study design, we question whether results from these trials are comparable to each other. We further question whether the applicable technologies can be compared based on the outcomes achieved across these trials without considering differences between the clinical trials with respect to whether randomization and/or blinding were used in the study protocols, how patients were recruited and enrolled, patients' baseline clinical attributes, or length of follow up.[144] We also note that these trials defined some of their endpoints differently. For example, the SECURITY and SCAFFOLD trials measured 12-month outcomes, while the SAPPHIRE and ARCHER trials examined 31- to 365-day outcomes. While most of these trials assessed non-fatal myocardial infection (MI) and all-cause deaths, the BEACH trial reported Q-wave MI and neurologic deaths. Furthermore, we note that different inclusion criteria for asymptomatic patients were used, with the SAPPHIRE, SECURITY, BEACH, and SCAFFOLD trials including asymptomatic patients with ≥80 percent stenosis, and the CREST trial ≥70 percent stenosis. Regarding heterogeneity in the baseline clinical attributes of the patient samples, we note that the SECURITY, ARCHER, and BEACH trials included patients at least 80 years of age, while other trials did not. We further note that differences in the study population comorbidities and lesion characteristics may impact outcomes. In particular, the PERFORMANCE II trial had a higher proportion of diabetic patients (43 percent) than the SAPPHIRE (25 percent), CREST (31 percent), SECURITY (31 percent), and SCAFFOLD (40 percent) trials. Its proportion of patients with hypertension (93 percent) was higher than that of other trials (ARCHER: 84 percent; CREST: 86 percent; SAPPHIRE: 86 percent: BEACH: 89 percent). Its proportion of symptomatic patients (20 percent) was higher than that of the SCAFFOLD trial (13 percent), and lower than that of the ARCHER trial (24 percent). We are concerned that without adjusting for these differences across the trials, their results may not be comparable. We also question whether the lack of adjustment could have impacted accuracy of the performance goal which was based on the results of these trials. We welcome information about how these differences were accounted for in the development of the performance goal. We also welcome comments on how to consider the use of historical controls to compare the Neuroguard IEP® System's effects on clinical outcome improvement. Moreover, we are interested in information about the weighted objective performance criteria approach. Per the applicant, this approach adjusted for comorbid and anatomic

high-risk factors and was calculated based on data from the ARCHER, SECURITY, BEACH, and SCAFFOLD trials. We also welcome information about how the comparative studies were selected.

We also question whether the observed differences in clinical outcomes between the Neuroguard IEP® System and the performance goal based on the historical comparator trials are statistically significant and clinically meaningful. For example, the applicant stated that the Neuroguard IEP® System demonstrated the result of zero percent for both 30-day and 12-month stroke rates in the PERFORMANCE I study, and 1.3 percent for the 30-day and 1.8 percent 12-month stroke rates in the PERFORMANCE II study. The applicant further stated that these rates were significantly lower than published clinical trials with similar symptomatic and asymptomatic patient populations, ARCHER (6.9 percent), BEACH (4.5 percent), SCAFFOLD (1.0 percent) SAPPHIRE (4.8 percent), and CREST (4.1 percent). We note that the SCAFFOLD trial reported a 30-day stroke rate of 1.1 percent for the primary analysis population, compared to the 1.3 percent rate in the PERFORMANCE II study. We welcome information about whether these differences were statistically significant and clinically meaningful, and how statistical significance was determined. We also welcome information about the weighted Z-test for the primary endpoint and how it may fully account for variability in patient comorbidities or procedural differences and enhance generalizability.

We are inviting public comments on whether the Neuroguard IEP® System meets the substantial clinical improvement criterion.

k. RYSTIGGO® (Rozanolixizumab-Noli)

UCB, Inc. submitted an application for new technology add-on payments for RYSTIGGO® for FY 2026. According to the applicant, RYSTIGGO® is a neonatal Fc receptor (FcRn) blocker indicated for the treatment of generalized myasthenia gravis (gMG) in adult patients who are anti-acetylcholine receptor (AChR) or anti-muscle-specific tyrosine kinase (MuSK) antibody positive (ab+). The applicant stated that gMG is a rare chronic autoimmune disorder in which antibodies destroy the communication between nerves and muscle, resulting in weakness of the skeletal muscles, particularly the eyes, mouth, throat, and limbs. Per the applicant, some gMG patients have MuSK ab+, a subtype of gMG that may lead to more severe symptoms and limited treatment options.

Please refer to the online application posting for RYSTIGGO®, available at *https://mearis.cms.gov/public/publications/ntap/NTP2410073H0PQ*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, RYSTIGGO® was granted BLA approval from FDA on June 26, 2023, for the treatment of gMG in adult patients who are AChR ab+ or MuSK ab+. According to the applicant, RYSTIGGO® was not available for sale until July 20, 2023, the date on which the product was released from U.S. Customs after being shipped from an overseas manufacturing facility. Per the applicant, RYSTIGGO® is administered as a subcutaneous infusion once each week for 6 weeks. Per the applicant, RYSTIGGO® is available in single-dose vials that contain 280 mg, 420 mg, 560 mg, or 840 mg of RYSTIGGO® at a concentration of 140 mg/mL. The applicant noted it used the following equation to calculate the weighted average cost per inpatient stay: [(percent of patients whose weight aligns to the 3mL vial × cost of the 3mL vial) + (percent of patients whose weight aligns to the 4mL vial × cost of the 4mL vial) + (percent of patients whose weight aligns to the 6mL vial × cost of the 6mL vial/100%] × 2 doses. The applicant stated that the typical inpatient stay for patients with gMG is 11 to 13 days, and thus, 2 doses would usually be administered during a typical inpatient stay.

According to the applicant, there are currently no ICD–10–PCS procedure codes to distinctly identify RYSTIGGO®. We note that the applicant submitted a request for approval for a unique ICD–10–PCS procedure code for RYSTIGGO® beginning in FY 2026. The applicant stated that G70.00 (Myasthenia gravis without (acute) exacerbation) and G70.01 (Myasthenia gravis with (acute) exacerbation) may be used to currently identify the indication for RYSTIGGO® under the ICD–10–CM coding system.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that RYSTIGGO® is not substantially similar to other currently available technologies because, while other treatments are available for gMG, about 40 percent of patients continue to experience exacerbations, and that RYSTIGGO® is the only treatment for patients with gMG who are AChR or MuSK ab+, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for RYSTIGGO® for the applicant's complete statements in support of its assertion that RYSTIGGO® is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	RYSTIGGO® is a subcutaneously infused monoclonal antibody (mAb) that specifically targets FcRn with high affinity, permitting the accelerated removal of all subclasses of immunoglobulin G (IgG). There are specific differences in FcRn affinities between RYSTIGGO® and other FcRn inhibitors. RYSTIGGO® is the only FcRn inhibitor that is FDA-approved for MuSK ab+ gMG in adults.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	The administration of RYSTIGGO® to treat gMG is not expected to change the MS–DRG assignment of the discharge.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	While other treatments are available for gMG, about 40% of patients continue to experience gMG exacerbation, suggesting an inadequate response to existing treatment. RYSTIGGO® is the only FDA-approved treatment for patients with gMG that are MuSK ab+.

With respect to the substantial similarity criteria, while the applicant stated that RYSTIGGO® does not use the same or a similar mechanism of action as compared to existing technologies because there are specific differences in FcRn affinities between RYSTIGGO® and other FcRn inhibitors, we are unclear as to what the specific differences are and whether they rise to the level of a new mechanism of action. We note that VYVGART® is also an FcRn inhibitor approved for use in patients with gMG, and per FDA prescribing information, both technologies bind to the FcRn resulting in the reduction of circulating IgG.[145] [146] We welcome additional information about how the mechanism of action for RYSTIGGO® differs from other existing FDA-approved therapies, including FcRn inhibitors such as VYVGART®. We note that the applicant also stated that RYSTIGGO® does not involve the treatment of the same or similar type of disease and the same or similar patient population when compared to an existing technology because while there are other treatments for gMG, about 40 percent of patients continue to experience gMG exacerbation, suggesting an inadequate response to existing treatment and RYSTIGGO® is the only FDA-approved treatment for patients with gMG that are MuSK ab+. However, we note there are other standard of care treatment options for patients with AChR ab+ and MuSK ab+ gMG, such as pyridostigmine, glucocorticoid therapy, and plasmapheresis. In addition, VYVGART®, ULTOMIRIS®, ZILBRYSQ®, and SOLIRIS® are also treatment options for patients with AChR ab+ gMG. Therefore, we question the assertion that RYSTIGGO® does not involve the treatment of the same or similar type of disease and the same or similar patient population when compared to existing technology.

We are inviting public comments on whether RYSTIGGO® is substantially similar to existing technologies and whether RYSTIGGO® meets the newness criterion.

With respect to the cost criterion, the applicant provided an analysis to demonstrate that RYSTIGGO® meets the cost criterion. The analysis followed the order of operations summarized in the following table.

RYSTIGGO® COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for RYSTIGGO®.
Claims identified	22,213 claims mapping to 641 MS–DRGs, with none exceeding more than 8.28% of the total identified cases.
Charges removed for prior technology.	Per the applicant, use of the technology may replace current drug charges for therapies. The applicant removed 100% of drug charges from the identified cases, which, as the applicant stated, is likely an overestimation of charges that would be replaced by RYSTIGGO® since patients may receive some ancillary drug treatments with RYSTIGGO®. The applicant did not remove indirect charges related to the new technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS interim final action with comment period.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Average case-weighted threshold amount: $80,760. Final inflated average case-weighted standardized charge per case: $236,731.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that RYSTIGGO® meets the cost criterion.

We are inviting public comments on whether RYSTIGGO® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that RYSTIGGO® represents a substantial clinical improvement over existing technologies because RYSTIGGO® is the only FDA-approved product for anti-MuSK ab+ gMG in adult patients, and is an option for patients unresponsive to, and not treated by, conventional therapies. The applicant also asserted that RYSTIGGO® significantly improves clinical outcomes relative to services or technologies previously available. The applicant provided seven articles regarding the MycarinG study and its open-label extension studies, as well as a meta-analysis regarding efficacy of newer therapies for MG, to support these claims. The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for RYSTIGGO® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

AAN 2024b.

We also received written public comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for RYSTIGGO®.

Comment: The applicant submitted a comment in response to questions raised at the Town Hall. Regarding a question on the differences in the sample sizes reported within the Bril et al. (2023a) study versus the FDA [147] integrated review, the applicant restated the patient population included in the MycarinG study, as described in Bril et al. (2023a) and Habib et al. (2024a). Per the applicant, the information from the MycarinG study aligns with the product label.[148] The applicant further noted that the number of study participants may vary based on the analysis conducted (intent to treat, data availability, study completion, etc.). The applicant emphasized that gMG is a rare disease, with the MuSK ab+ patient population being even rarer. According to the applicant, the number of patients in the MycarinG study is consistent with other rare disease treatment clinical trials and was acceptable to FDA.

Regarding a question asking about why the applicant used a post hoc 97.5 percent CI instead of a 95 percent CI for statistical significance in the MycarinG study, how such significance was found in the MuSK ab+ subgroup analysis when there were only 16 MuSK ab+ patients in the MycarinG study (discussed further later in this section), and how significance was only found in those treated in the 7mg/kg dose but not the 10mg/kg dose in the MG–ADL and not for either dose in the quantitative myasthenia gravis score (QMG) assessment, the applicant stated that the parallel gatekeeping approach was used for the primary and secondary endpoints. The applicant stated that this was a means of adjusting for multiple testing across the 2 dose arms and across the different endpoints, while maintaining an overall type 1 error rate of 5 percent. According to the applicant, in the primary endpoint, each dose arm was tested against placebo at two and a half percent. The applicant commented that the MuSK ab+ subgroup analysis was part of the planned efficacy analysis and that the results were clinically significant in having over a two-point reduction in MG–ADL, but noted that these results were not subject to planned statistical testing.

The applicant also responded to a question on the validity of the MG–ADL and QMG used in the MycarinG study, including why the MG–ADL was used as the primary endpoint. The applicant stated that objective assessments were the primary endpoint for clinical trials related to gMG prior to 2017. The applicant stated that the REGAIN trial (Howard et al., 2017),[149] evaluating eculizumab, was published in 2017 and was the first trial to introduce MG–ADL as a primary endpoint. According to the applicant, the current FDA standard evolved following the REGAIN trial, and, consistent with FDA direction to manufacturers, most ongoing phase 3 trials now rely on the MG–ADL as a primary endpoint, emphasizing patient-reported outcome measures which may be more sensitive to clinical change than QMG. The applicant further noted that currently available MG-specific outcome measures include objective,

[147] U.S. Food and Drug Administration, Center for Drug Evaluation and Research (2023). Integrated Review of BLA 761286 (RYSTIGGO®). U.S. Department of Health and Human Services. *https://www.accessdata.fda.gov/drugsatfda_docs/nda/2023/761286Orig1s000IntegratedR.pdf.*

[148] UCB, Inc., 2024, *op. cit.*

[149] Howard, J.F., Jr, Freimer, M., O'Brien, F., Wang, J.J., Collins, S.R., Kissel, J.T. and (2017), QMG and MG–ADL correlations: Study of eculizumab treatment of myasthenia gravis. Muscle Nerve, 56: 328–330. *https://doi.org/10.1002/mus.25529.*

patient-reported, and composite measures. Per the applicant, in the MycarinG study, patient-reported and objective measures were used as either primary or secondary endpoints. The applicant stated that several studies have been conducted to assess validity and correlation of different MG endpoints, and that expert consensus has recommended the use of standardized assessments such as MG–ADL or QMG scores in assessment of patients with gMG. The applicant included several articles on validation, correlation, and consensus on addressing variability in MG clinical trials.[150] [151] [152] [153] The applicant stated that it appreciates that CMS is not bound by FDA determinations, but asserted that it is practically impossible, particularly in rare disease trials, to use different assessment measures when government agencies suggest conflicting measurements.

Finally, in response to a question asking how RYSTIGGO® compares with existing standard of care therapies and specifically newer agents, the applicant stated that RYSTIGGO® was not compared against a treatment-naïve placebo group for ethical reasons. Per the applicant, in the MycarinG trial, patients in the placebo and treatment groups were allowed to remain on their standard of care therapies, such as non-steroidal immunosuppressive therapy (methothrexate, cyclosporine, azathioprine, tacrolimus), steroids, and pyridostigmine, such that they were randomized to either the RZL+standard-of-care group or the placebo+standard-of-care group. The applicant stated that the MycarinG study therefore looked at the benefits of RYSTIGGO® beyond standard of care therapies. According to the applicant, for the reasons previously explained, there is no head-to-head comparison against other biologics or newer therapies available in treatment-naïve patients. The applicant noted that currently available therapies also do not have an FDA indication for MuSK ab+ gMG.

We also received a few comments expressing general support for new technology add-on payments for RYSTIGGO® stating that RYSTIGGO® offers a new and significant clinical improvement in care for gMG patients who are MuSK ab+.

Response: We thank the applicant and commenters for their comments.

After review of the information provided by the applicant and the public comments received in response to the New Technology Town Hall meeting, we have the following concerns regarding whether RYSTIGGO® meets the substantial clinical improvement criterion. While the applicant stated that RYSTIGGO® is the only FDA-approved therapy for gMG in adult patients who are MuSK ab+, and that this subtype is challenging to treat, as patients are usually unresponsive and often intolerant of pyridostigmine (a standard first-line MG therapy), we note that the applicant also stated that 3,4-diaminopyridine treatments may have mild to moderate effect. We further note that, as mentioned previously, other therapies such as pyridostigmine, glucocorticoid therapy, and plasmapheresis are also available options for these patients, and we therefore question that RYSTIGGO® offers a treatment option for patients with MuSK ab+ gMG who have no other treatment options. The applicant also stated that RYSTIGGO® provides a treatment option for the approximately 10 to 20 percent of patients with gMG whose disease is not responsive to, and not treated by, conventional therapies due to inadequate response or intolerable side effects, however, we question whether the evidence provided demonstrates that there is a population of patients with gMG with no other treatment options. To support this claim, the applicant provided the double-blind, placebo-controlled, phase 3 MycarinG study, which randomized 200 patients (1:1:1) to receive RYSTIGGO® 7 mg/kg, RYSTIGGO® 10 mg/kg, or placebo in addition to their current gMG treatment (where permitted by the study inclusion criteria) for 6 weeks, as well as an abstract of a post hoc subgroup analysis of this study (Vu et al., 2023) which stratified trial results based on the number of prior therapies.[154] The applicant stated that the MycarinG study demonstrated RYSTIGGO®, in addition to standard of care, significantly improved clinical outcomes by reducing MG–ADL, QMG, and MG Composite (MGC) scores in adult patients with gMG, including those with prior standard of care treatments such as corticosteroids, parasympathomimetics, and non-steroidal immunosuppressants. We note that permitted concomitant medications were cholinesterase inhibitors, oral corticosteroids, azathioprine, ciclosporin, methotrexate, mycophenolate mofetil, and tacrolimus. All of these medications, except for cholinesterase inhibitors, required a stable dose. We question if the cholinesterase inhibitor dose may have affected the results of the study since the dose may not have been stable throughout the trial. In addition, other standard of care treatment options for patients were excluded, including rituximab products, VYVGART®, ULTOMIRIS®, ZILBRYSQ®, and SOLIRIS®, and we therefore question if RYSTIGGO® is the only treatment option for patients with gMG who have failed conventional therapy.

The applicant also provided an abstract of a subgroup analysis (Vu et al., 2023) of the MycarinG study and stated the subgroup analysis demonstrated that RYSTIGGO® significantly improved outcomes based on a reduction in MG–ADL in patients who had previously undergone myasthenia gravis standard treatments based on stratification on number of prior therapies, excluding acetylcholinesterase inhibitors, but including corticosteroids, non-steroidal immunosuppressants, IVIg, and plasma exchange. However, it is unclear how a subgroup analysis on the number of prior therapies provides evidence that RYSTIGGO® is the only treatment option for patients unresponsive to conventional therapies. We also note that acetylcholinesterase inhibitors were excluded from this subgroup analysis, but these are part of the standard of care for MG.

With respect to the applicant's assertion that RYSTIGGO® improves clinical outcomes over existing therapies, the applicant submitted three presentation posters (Bril et al., 2023b; Sacconi et al., 2023; Habib et al., 2024b) that provided efficacy and safety results from the MycarinG study and 2 open-label extension studies (MG0004 and MG007) which we note are not published or peer-reviewed. We note that two of the poster presentations (Bril et al., 2023b and Habib et al., 2024b) do not report the statistical significance of results and, therefore, we are uncertain as to how significant the results are. With regards to the MycarinG study, per the applicant's Town Hall comment, patients were allowed to remain on standard of care therapies such as non-

[154] Bril, 2023a, *op. cit.*

steroidal immunosuppressive therapy, steroids, and pyridostigmine. However, we note that various other standard of care therapies were excluded such as rituximab products, VYVGART®, ULTOMIRIS®, ZILBRYSQ®, and SOLIRIS®. Without a comparison to these therapies, we question whether RYSTIGGO® improves clinical outcomes relative to all previously available therapies. Given the 6-week duration of the trial, we also question how natural changes in symptoms were accounted for since symptoms can wax and wane in patients with gMG. We further note that the MycarinG and the open-label extension studies involved only 8 weeks (MycarinG and MG0004) or 16 weeks (MG0007) of observation, which makes it more difficult to assess the frequency of prolonged remission rates and how the adverse event rates, such as for cancer and infection, compare with existing therapies. We are also interested in more information on the lack of a dose-response effect with RYSTIGGO®. For instance, there was a least squares mean (LSM) in MG–ADL of −7.28 in the rozanolixizumab (RLZ) 7 mg/kg group and −4.16 in the RLZ 10 mg/kg group within the MuSK ab+ population and an LSM of −3.03 in the RLZ 7 mg/kg group and a similar LSM of −3.36 in the RLZ 10 mg/kg group within the AChR ab+ population. We also note there is only about a 2 to 2.5-point difference between RYSTIGGO® and placebo for MG–ADL in the AChR ab+ subpopulation and the overall population. Specifically, for the AChR ab+ population, the LSM difference versus placebo in the RLZ 7 mg/kg group was −1.94 and in the RLZ 10 mg/kg group was −2.26 and for the overall population, the LSM difference versus placebo was −2.59 in the RLZ 7 mg/kg group and −2.62 in the RLZ 10 mg/kg group. The applicant stated that these findings were statistically significant. We note that the study considered a 2-point difference in MG–ADL as a clinically meaningful improvement. We would appreciate clarification on how the study defined clinically meaningful improvement.

In addition, with respect to the MuSK ab+ population in the MycarinG trial, we note there were 21 MuSK ab+ patients in the studies submitted by the applicant. We further note that the FDA Integrated Review for RYSTIGGO® indicated that 16 patients tested positive for the MuSK ab+ and we would appreciate clarification regarding this discrepancy in numbers. We note in its Town Hall comment that the applicant emphasized that gMG, particularly MuSK positive gMG, is a rare disease and the number of patients in the study is consistent with other rare disease treatment clinical trials and was acceptable to the FDA. However, we question if the results are generalizable to the Medicare population since only 2 patients treated with RYSTIGGO were from the U.S. and only 1 patient treated was 65 years or older.[155] We also note that not all efficacy outcomes were statistically significant within the MuSK ab+ population. Specifically, the LSM difference in QMG between RYSTIGGO® and placebo was not statistically significant for either the RLZ 7 mg/kg group (97.5 percent confidence interval −14.24, 0.41) nor the RLZ 10 mg/kg group (97.5 percent confidence interval −9.73, 3.45). Further, we note there appears to be a difference in the disease severity between the MuSK ab+ patients in the placebo and treatment arms. For example, results from Habib et al. (2024a) indicated that among the MuSK ab+ population of the MycarinG study, all patients with severe (Class IV) disease at baseline per the Myasthenia Gravis Foundation of America (MGFA) classification system were in the placebo arm (3⁄8), while individuals in the treatment groups all had mild or moderate (Class II or Class III) disease at baseline. We question how this difference may have impacted the placebo group's outcomes relative to the those of the treatment groups. Additionally, a higher percentage of patients were taking corticosteroids in the RYSTIGGO® groups (80 percent in 7 mg/kg group and 87.5 percent in 10 mg/kg group) compared to placebo (62.5 percent) and we question if this difference in background therapy could have affected the outcomes since oral corticosteroids were a permitted concomitant medication in the trial. We also note that the trial excluded individuals with severe oropharyngeal or respiratory weakness, and we question whether this exclusion would affect the generalizability of the results for this MuSK ab+ subpopulation, as the applicant indicated that patients with MuSK ab+ gMG tend to have more severe disease with a potential unmet need for treatment options.

The applicant also provided a meta-analysis comparing innovative therapies in MG, stating that it demonstrated that anti-FcRn treatments such as RYSTIGGO® showed greater effects on QMG, MGC, and MG–QoL15 compared to complement inhibitors, with VYVGART® and RYSTIGGO® having the highest probabilities of being the most effective treatment for MG–ADL and QMG. However, we note that the same article indicated no significant difference in MG–ADL between complement inhibitors and anti-FcRn treatments. Additionally, we note that the analysis found that VYVGART® had the highest probability of being the best treatment, followed by RYSTIGGO®.[156] We note that we did not receive any other evidence comparing complement inhibitors or anti-FcRn treatments with RYSTIGGO® to demonstrate improved outcomes. Therefore, we would appreciate additional information comparing RYSTIGGO® to these other therapies in order to inform our assessment of whether RYSTIGGO® demonstrates a substantial clinical improvement over existing technologies. In addition, we note that the meta-analysis included seven clinical trials, only two of which included patients positive for MuSK ab+, MycarinG and ADAPT, a trial studying VYVGART®. The meta-analysis did not include trials studying other standard of care therapies in patients with MuSK ab+ gMG. Since the meta-analysis did not include a comparison of current therapies in patients with MuSK ab+ gMG, we question how this analysis demonstrates RYSTIGGO® improves clinical outcomes relative to previously available therapy for patients with MuSK ab+ gMG.

We also note that, while the applicant stated that RYSTIGGO® meets patient preferences for convenience by its ability to be administered via a subcutaneous infusion by a healthcare provider, either at an infusion clinic or at home with nurse assistance, the applicant does not provide a comparison of administration to other available therapies. We would further appreciate additional information on how the administration method for RYSTIGGO® demonstrates that the technology significantly improves one or more of the clinical outcomes described under the regulations at § 412.87(b)(1)(ii)(C).

We are inviting public comments on whether RYSTIGGO® meets the substantial clinical improvement criterion.

l. SYMVESS™ (Acellular Tissue Engineered Vessel-Tyod)

Humacyte, Inc. submitted an application for new technology add-on payments for SYMVESS™ for FY 2026. According to the applicant, SYMVESS™ is a bioengineered, implantable blood vessel indicated for use in adults as a vascular conduit for extremity arterial injury when urgent

[155] U.S. FDA CDER, 2023, *op. cit.*

[156] Saccà, 2023, *op. cit.*

revascularization is needed to avoid imminent limb loss and when autologous vein grafting is not feasible. The applicant stated that SYMVESS™ is composed of organized extracellular matrix proteins in the tubular form of a blood vessel and is used to repair, bypass, or replace arteries that have sustained traumatic injuries.

Please refer to the online application posting for SYMVESS™, available at *https://mearis.cms.gov/public/publications/ntap/NTP24100639G2M*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, SYMVESS™ was granted BLA approval from FDA on December 19, 2024, for use in adults as a vascular conduit for extremity arterial repair when urgent revascularization is needed to avoid imminent limb loss, and when autologous vein grafting is not feasible. The applicant stated that FDA required a lot release that shows results of all applicable tests prior to distribution of SYMVESS™ and that it submitted the required paperwork to FDA on December 26, 2024. The applicant stated that on February 26, 2025, FDA notified the applicant that the required review of commercial batch information was completed and authorized the applicant to commence commercial shipment; therefore, per the applicant, SYMVESS™ became commercially available as of February 26, 2025. Per the applicant, the average number of units of SYMVESS™ anticipated to be used per inpatient stay is 1 unit.

The applicant stated that, effective October 1, 2024, the following ICD–10–PCS codes may be used to uniquely describe procedures involving the use of SYMVESS™: X2R50WA (Replacement of right upper extremity artery using bioengineered human acellular vessel, open approach, new technology group 10), X2R60WA (Replacement of left upper extremity artery using bioengineered human acellular vessel, open approach, new technology group 10), X2R70WA (Replacement of right lower extremity artery using bioengineered human acellular vessel, open approach, new technology group 10), or X2R80WA (Replacement of left lower extremity artery using bioengineered human acellular vessel, open approach, new technology group 10).

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that SYMVESS™ is not substantially similar to other currently available technologies because it does not use the same or a similar mechanism of action compared to existing technologies, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for SYMVESS™ for the applicant's complete statements in support of its assertion that SYMVESS™ is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	SYMVESS™ uses a unique mechanism of action compared to existing guideline-recommended treatments for the anticipated indication. SYMVESS™ is a bioengineered implantable vessel that is grown from human cells and then decellularized. The resulting SYMVESS™ consists of extracellular matrix proteins, in the form of a tubular blood vessel, that stimulate patient cell recruitment after implantation. Cellular repopulation and remodeling of the SYMVESS™ result in a living, functional part of the vasculature. The autologous vein grafts' mechanism of action involves biological integration, promoting natural endothelial function, reducing thrombosis risk, and adapting to the arterial environment through arterialization. SYMVESS™'s mechanism of action offers several advantages: (1) reduces time to revascularization with an off-the-shelf option; (2) avoids vein harvesting complications; (3) provides a consistent conduit size; and (4) regenerates into a living blood vessel. The synthetic grafts' mechanism of action provides immediate revascularization but does not integrate into the host and is not remodeled by patient cells. Synthetic grafts are made of non-biodegradable polymers that often stimulate foreign body responses, fibrosis, and thrombosis when implanted into patients. Lacking native extracellular matrix proteins architecture, synthetic grafts also interact poorly with the patient's immune system, which raises the risk of graft infection in contaminated wound beds. SYMVESS™, which is comprised of human extracellular matrix proteins, repopulates with cells, has a low infection rate, and does not stimulate fibrosis nor a foreign body reaction. The mechanism of action of ligation is to stop blood flow through the injured artery but without revascularization, while amputation functions by removing part or all the injured limb to prevent further complications and save a patient's life. SYMVESS™ offers an alternative by providing a vessel capable of restoring blood flow, preserving limb functionality.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	The use of SYMVESS™ will likely be assigned to the same MS–DRGs where existing technologies to treat significantly damaged arteries due to traumatic injuries, are assigned.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	SYMVESS™ is used to treat the same type of disease in a similar patient population as existing technologies. Traumatic vascular injury can be caused by motor vehicle accidents, industrial accidents, falls, gunshot wounds, knife wounds, etc. For all these types of injuries to the extremities, if an autologous vein is available for arterial repair, then such injuries are typically repaired using a harvested vein from the patient. However, regardless of the mechanism of injury, in some cases, an autologous vein is not available, or its use is not feasible in a given trauma situation. In some situations, there may not be enough time to harvest the vein, or the trauma surgeon may not have the necessary training to harvest a vein. Regardless of the situation, the patient or the injury mechanism, SYMVESS™ is anticipated to provide a new treatment option to patients where revascularization using a harvested autologous vein is not feasible. By addressing the needs of these specific patients, SYMVESS™ expands the treatment options available for saving life and limb following vascular trauma, ensuring better outcomes for a broader patient population.

We have the following concerns with regard to the newness criterion. The applicant stated that SYMVESS™ has a novel mechanism of action based on its manufacturing, composition, and post-operative regenerative properties. However, we are interested in more information about how the composition of SYMVESS™ is associated with its post-operative regenerative properties, and specifically how these regenerative properties are associated with its mechanism of action to achieve a therapeutic outcome, as well as how the association between SYMVESS™'s regenerative properties and mechanism of therapeutic action differs from that of autologous vein grafts. In addition, we question whether physiological changes, such as arterialization, cellular repopulation, and fibrosis, that occur after a conduit is implanted, should be considered part of the mechanism of action. We also note that the applicant stated that the mechanism of action of synthetic grafts is immediate revascularization, and we question whether that is not also the mechanism of action of SYMVESS™ and/or autologous vein grafts.

We are inviting public comments on whether SYMVESS™ is substantially similar to existing technologies, including whether post-implantation physiological changes should be considered as part of a technology's mechanism of action, and whether SYMVESS™ meets the newness criterion.

With respect to the cost criterion, the applicant provided an analysis to demonstrate that SYMVESS™ meets the cost criterion. The analysis followed the order of operations summarized in the following table.

SYMVESS™ COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes, ICD–10–PCS codes, and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for SYMVESS™.
Claims identified	1,540 claims mapping to 90 MS–DRGs, with 18.83% of claims mapping to MS–DRG 252 (Other Vascular Procedures with MCC).
Charges removed for prior technology.	Per the applicant, use of the technology would replace other implantable devices. The applicant removed 100% of charges for implantable devices from the identified cases, as to take a conservative approach in its cost analysis. The applicant did not remove any indirect charges related to the prior technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS interim final action with comment period.
Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of SYMVESS™ by the national average-cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule.
Cost analysis results	Average case-weighted threshold amount: $143,227. Final inflated average case-weighted standardized charge per case: $423,141.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that SYMVESS™ meets the cost criterion.

We are inviting public comments on whether SYMVESS™ meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that SYMVESS™ represents a substantial clinical improvement over existing technologies because SYMVESS™ is a new treatment option for patients with extremity vascular trauma where autologous vein grafts are infeasible, has improved secondary patency compared to synthetic grafts, and has lower amputation and infection rates. The applicant also stated that SYMVESS™ enables quicker perfusion of injured extremities compared to autologous grafts, reducing ischemia time and complication risks. The applicant provided 6 documents, including 2 studies and 2 FDA-related documents, to support these claims, as well as 10 background articles about extremity arterial trauma outcomes, trauma surgery clinical guidelines, and the impact of repair duration on extremity arterial injuries.[157] The following table summarizes the applicant's assertions regarding the

[157] Background articles are not included in the following table but can be accessed via the online posting for the technology.

substantial clinical improvement criterion. Please see the online posting for SYMVESS™ for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
SYMVESS™ is the first and only bioengineered blood vessel approved for extremity vascular trauma.	Food and Drug Administration. U.S. Department of Health and Human Services. Grant of Regenerative Medicine Advanced Therapy Designation for Human Acellular Vessel (HAV). U.S. Department of Health and Human Services, Food and Drug Administration. Granted May 2, 2023. SYMVESS™ enables quicker reperfusion of injured extremities compared to autologous vein grafts, reducing risk of complications and amputation.	Humacyte Global, Inc, 2023, *op. cit.* Moore, 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

We also received written public comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for SYMVESS™, which we are summarizing in this section.

Comment: Two commenters submitted comments on SYMVESS™. A commenter stated that SYMVESS™ has not demonstrated non-inferiority to synthetic grafts or provided evidence for when SYMVESS™ should be used instead of a synthetic graft in any of what the commenter described as underpowered, non-comparative trauma clinical trials (V005 and the V017). The commenter stated that instead of conducting a head-to-head trial, synthetic graft benchmarks that compared unfavorably to SYMVESS™ were used in the V005 and V017 trials. The commenter stated that the total number of evaluable patients was only 51 (V005) and 16 in the observational study (V017), which was not enough to show significance. In terms of primary patency rate, which was the primary endpoint of the V005 and V017 trials, the commenter noted that primary patency is defined as intervention free functionality, and that graft literature reports primary patency rates in months to years. The commenter also noted that the applicant reported primary patency and adverse events data at 30-day endpoints, while most of these vascular grafts are in patients for months to years. The commenter also expressed concern that the applicant defines secondary patency as functionality after a thrombolytic intervention. The commenter stated that secondary patency data can be open to interpretation because multiple interventions may have been used to keep SYMVESS™ open, even if the technology is not functional. In terms of the Wang et al. (2023) study, which compared SYMVESS™ to ePTFE grafts

in patients requiring a conduit for hemodialysis, the commenter stated that 10 times more thrombotic events occurred in the SYMVESS™ group (N=126) versus the control (arteriovenous fistula, AVF) (N=12) group, and that there was twice as much stenosis in the SYMVESS™ group (N=228) versus the control group (N=115). The commenter was not supportive of approving new technology add-on payments for SYMVESS™.

The other commenter stated that SYMVESS™ does not represent a meaningful improvement of the standard of care. According to the commenter, the actual study cohort for the V005 trial was modified. Specifically, the study enrolled 72 patients and treated 69 with SYMVESS™ on an intention-to-treat basis (ITT), and only 51 were included in the analysis, representing an analysis on modified intention to treat basis (mITT). According to the commenter, the reasons given were that, of the 18 SYMVESS™ recipients who were not included in the analysis, 16 had iatrogenic injuries and 2 had thoracic injuries. Per the commenter, the 51-patient cohort was referred to as ITT, even though 69 actually received the product. The commenter also stated that to its knowledge, the data of the 18 patients have never been shared. The commenter also stated that the inclusion and exclusion criteria of the V017 trial were very different from those of the V005 trial. Per the commenter, the V017 trial may include patients who can be treated with either autologous veins or SYMVESS™, and that any limb threatening injury could be included in the patient cohort. The commenter also noted that although the average Injury Severity Score (ISS) between V005 and V017 were similar (about 20.0), V017 has a much higher variance (standard deviation [SD]=18.9) than V005 (SD=10.5). The commenter also noted that the range of SD was not disclosed. Per the commenter, even one extremely high ISS could skew the average up if it was otherwise low, and that there were no exclusion criteria in V017 for ISS higher than 60. The commenter also stated that while SYMVESS™ may have superior initial uptake in the human body than PTFE grafts, its performance drops off significantly over time in both trauma and dialysis. The commenter stated that in terms of long-term patency, long-term graft studies show that after a year or two, the patency levels off, so even 12-months or 24-months is enough to make some highly educated guesses about the long-term patency of the product.

In terms of secondary patency, the commenter noted that the 12-month rate for the combined samples of V005 and V017 was about 73 percent, and that, based on information from Humacyte's press release from August 2024,[158] the 12-month secondary patency for V017 was 87 percent. According to the commenter, since V017 had a sample size of 16, and the combined sample size was 67, this would imply that the results from V005 were in fact much lower than those of V017. According to the commenter, solving (((X * 51) + (0.87 * 16))/67) = 0.73 yielded a 12-month secondary patency rate of 68.6 percent (X ≈ 0.686078) for V005 which was much lower than 78.9 percent, the applicant's 30-day synthetic grafts benchmark for secondary patency, and 18.4 percent lower than the secondary patency of V017 (87 percent). According to the commenter, the outcomes of the two trials were different, which it described as two obviously different data set results. The commenter speculated that the difference in the long-term outcomes of V005 and V017 can be explained by the baseline health of the patients in each trial. The commenter also stated that the difference in patency between the two trials was obvious if safety signals are considered. Per the commenter, according to the adverse event data of Moore study (2024), the patients in the V017 trial were implicitly much healthier than those in the V005 trial either at presentation in clinic or afterwards. The commenter stated that it would be unlikely for the two trials to have similar outcomes. The commenter questioned whether removing one of the inclusion criteria in V005, that patients who received SYMVESS™ would have to be unable to receive arteriovenous grafts (AVG), would increase the average health of the patients.

The commenter also stated that the Moore study (2024) provided the confidence intervals for the amputation, infection, and death rates, but not for the ISS. Per the commenter, the mean ($\bar{x}$) and standard deviation (SD) for the ISS were similar for the two trials (V005: $\bar{x}$=20.8, SD=10.5; V017: $\bar{x}$=20.1, SD=18.9). Per the commenter, three of the 16 patients in V017 had no ISS reported, and that the synthetic graft variance was much smaller (SD=2.4). According to the commenter, per the Moore team (2024), no deaths were attributed to SYMVESS™.[159] The commenter stated that overall survival is generally not differentiated this way in the literature, and that deaths resulting from injuries were counted as such regardless of whether the SYMVESS™ graft was patent or not. The commenter stated that the death rate for the two trials was 5.9 percent and zero percent, and that the death rate for the 2 trials combined was 3.5 percent, which was higher than the 3.4 percent synthetic graft benchmark for all-cause death. The commenter stated it believed this was probably due to thrombotic events caused by SYMVESS™. The commenter also stated that the absence of p-value in the applicant's report of trial results made it hard to tell whether those results were due to chance.

In terms of the synthetic graft benchmarks, the commenter stated that historical comparisons are always a last resort way to compare two products in a clinical trial, and that it is hard to compare two trials that were run in different sites, on different people, under different conditions, at different periods in time. According to the commenter, previous clinical trials for the indication of vascular trauma had tested different technologies (autologous vein grafts, different synthetic grafts) on different types of patients (for example, civilian versus military) on different parts of the body for short- versus long-term. The commenter stated that trial results may be skewed by a historical control that performed much better or much worse than its comparator in a previous trial. In addition, the commenter stated that the way we treat thrombosis with post-graft drug regimens has evolved over time, and some studies found that the use of post-surgery prescription drugs can drastically impact outcomes. Per the commenter, those are the reasons that it becomes challenging to evaluate graft performance in 2024 using historical controls from 2004. The commenter asserted that head-to-head comparison is a feasible study design in trauma.

The commenter noted that in Fox (2005), one of the papers in the meta-analysis of the Moore study (2024), the infection and amputation rates for the PTFE grafts were very high, and that all of the grafts had become infected and failed, resulting in amputation. Per the commenter, Fox mentioned that he had only examined one-third of all the patients, that the median ISS was 40 (range: 16–75), which, the commenter noted, was double the average for V005 ($\bar{x}$=20.8) and V017 ($\bar{x}$=20.1). According

[158] Humacyte presents positive long-term results in ATEV™ in treatment of vascular trauma in military setting of Ukraine Humanitarian Program (*https://investors.humacyte.com/news-releases/news-release-details/humacyte-presents-positive-long-term-results-atevtm-treatment*, accessed 1/30/2025).

[159] Moore (2024), *op. cit.* p. E5.

to the commenter, Perkins (2016), another paper in the meta-analysis, analyzed 579 extremity injuries and showed that amputations happened more often among those with higher ISS. Moreover, the commenter stated that while the studies in the synthetic graft meta-analysis reported percent of patients who received a synthetic graft, infection rate, and amputation rate, only some reported whether the patients who received a synthetic graft developed infection or underwent amputation as a result of the synthetic graft. In addition, while the Moore study (2024) reported that the meta-analysis included 281 synthetic grafts, the commenter noted that it was unable to replicate that number. Moreover, the commenter stated that the Rudstrom paper (2008), another study in the meta-analysis, specifically looked at iatrogenic injuries. The commenter questioned why patients with iatrogenic injuries were excluded from the evaluable cohorts in the V005 and V017 trials, but the synthetic graft benchmarks included the results of patients with iatrogenic injuries. The commenter expressed doubt as to whether iatrogenic injuries were excluded from the meta-analysis.

Furthermore, the commenter stated that SYMVESS™ should be compared with Artegraft®, a biological off-the-shelf solution approved for trauma, hemodialysis, and lower extremity bypass surgeries and owned by LeMaitre. The commenter noted that according to the Statistical Analysis Plan for SYMVESS™, besides the synthetic graft benchmarks, the applicant also created a non-autologous vein and non-synthetic graft benchmark.[160] Per the commenter, this benchmark has not been shared publicly, and as a result, the results of what that benchmarking activity yielded or what the comparative to the Artegraft® or other xenografts look like remain unclear.

Regarding the Wang study (2023), the commenter stated that the applicant did not demonstrate non-inferiority in months 18 and 24 and therefore failed the study. According to the commenter, although SYMVESS™ demonstrated initially superior secondary patency and uptake in the human body, there was significant degradation over time, which brings into question the robustness of the technology. Per the commenter, the finding that SYMVESS™ performed worse than ePTFE in terms of secondary patency after one year is important because if the technology needs to be replaced more often, this potentially introduces significant risk to the patient by needing to undergo an additional surgery.

The commenter also added that the results from the SYMVESS™ studies conducted in America have generally lower secondary patency rates. Per the commenter, when interpreting the SYMVESS™ clinical data, only the U.S. data should be considered, especially given the large variance in the injury data and the fact that the applicant did not exclude patients who could have received an autologous vein graft. The commenter stated that those were the major variables that greatly influenced the outcome of the Moore study (2024). The commenter concluded that SYMVESS™ is inferior to standard of care alternatives that are already approved in trauma.

Response: We thank the commenters for their comments. After review of the information provided by the applicant and the public comments received in response to the New Technology Town Hall meeting, we have the following concerns regarding whether SYMVESS™ meets the substantial clinical improvement criterion. We note that being the first and only bioengineered blood vessel for vascular trauma may relate to newness but does not explain how the technology treats patients unresponsive to or ineligible for existing treatment options. Additionally, while the applicant stated that SYMVESS™ is a treatment option for patients ineligible for autologous vein grafts, we note that these patients could still receive other available treatment options, which may include, but are not limited to: primary repair, shunting, use of synthetic or other graft for bypass or interposition grafting, and amputation. Therefore, it is unclear that SYMVESS™ offers a treatment option for patients ineligible for or unresponsive to currently available treatments.

With respect to the assertion that SYMVESS™ significantly improves clinical outcomes relative to services or technologies previously available, the applicant stated that SYMVESS™ is associated with lower conduit infection and amputation rates, and significantly improves secondary patency rates compared to synthetic grafts. To support these claims, the applicant provided the Moore et al. (2024) study, which compared pooled results from two single-arm clinical trials using SYMVESS™ (V005 and V017) to synthetic graft benchmarks derived from a systematic review and meta-analysis of literature. However, we question the reliability and validity of the synthetic graft benchmarks against which Moore et al. (2024) compared SYMVESS™ effects on clinical outcomes. V005 was a prospective phase II/III trial of 69 civilian patients with vascular injuries at U.S. and Israeli level 1 trauma centers from September 2018 through June 2023. V017 was a retrospective trial of 19 wounded war fighters and other patients from a humanitarian program in Ukraine from June 2022 through June 2023. Moore et al. (2024) developed the three synthetic graft benchmarks based on a meta-analysis of 12 studies published between 2005 and 2022.[161] [162] [163] [164] [165] [166] [167] [168] [169] [170] [171] [172] Of these 12 studies, 7 used samples of

soldiers from the wars in Iraq and Afghanistan and 5 used samples of civilians in the U.S., Trinidad and Tobago, and Sweden. We note that these 12 studies were conducted using different trial designs, patient samples with different baseline demographic and clinical attributes, and during a long period of time when innovations and guidelines for management of extreme arterial injury continued to emerge and evolve. In addition, these studies used different inclusion and exclusion criteria for injury types and followed different documentation protocols for details about injuries. Furthermore, they implemented different treatments based on different surgical decisions, including Dacron or PTFE synthetic grafts, primary repair, shunting, oversew, reversed vein, or amputation. Half of these studies conducted follow-up periods on clinical outcomes, ranging from 36 days to 10 years. We are concerned that not accounting for these differences in the meta-analysis may confound the results on clinical outcomes and limit the reliability of the comparison between SYMVESS™ and synthetic grafts. In addition, more than half (N=7) of the 12 studies were published before 2019 and we question whether the meta-analysis sufficiently accounts for more recent advances in post-graft drug therapy and other recent advances in treatments for extremity vascular trauma. Moreover, we are concerned about whether there is any empirical evidence that the three synthetic graft benchmarks reflect the clinical outcomes that patients would attain if they have received guideline-based care for extremity vascular trauma. We note that none of the 12 studies made claims regarding the association between guideline-based implementation of synthetic graft treatments and extremity vascular trauma outcomes. Also, in 9 of the 12 studies, the number of synthetic graft recipients ranged from 3 to 16. We question if these samples were sufficiently powered to detect statistically significant and clinically meaningful differences between synthetic grafts and comparators on clinical outcomes. As previously discussed, only half of the 12 studies conducted follow up on clinical outcomes; however, none indicated whether the patients who received synthetic grafts remained in the trial throughout the follow-up periods. Consequently, we are interested in additional information on the reliability and validity of Moore et al. (2024) study's synthetic graft benchmarks, which were developed based on 12 studies with heterogeneous study designs, injury types, interventions, and follow-up protocols. Additionally, we note that the patient samples in the V005 and V017 trials may not be comparable to those in the 12 studies. We are interested in whether and how the differences, such as the availability of treatments and standard of care, between the V005 trial's SYMVESS™ recipients and the 12 studies' patient populations were accounted for in the meta-analysis and interpretation of the clinical outcomes of the Moore et al. (2024) study.

We further note that the Moore et al. (2024) study also combined the results of the V005 and V017 trials for comparison to the synthetic grafts benchmarks, and we question whether the combined results can be generalized to the Medicare population. In the combined sample (N=67), the 51 civilian patients of the V005 trial accounted for 76 percent of the combined total, while the 16 military patients of the V017 trial accounted for 24 percent of the combined total. We question whether the combined results can be extrapolated to a civilian or military population. In addition, we note that while the average age of both of the trials' patient populations were comparable (V005: 33.5 years; V017: 34.2 years); they differed in the distribution of a number of variables, including the types of injuries and trauma. As a result, we question whether it is appropriate to combine the results from these trials, and whether any outcomes from the trials are generalizable to the Medicare population, which may have a different distribution of various types of injuries and trauma. We also note that the applicant acknowledged the lack of Medicare-aged study participants in the Moore et al. (2024) study, and stated that the proportion (3 percent) of Medicare-aged patients in the V005 and V017 clinical trials was comparable to that in clinical databases (4.6 percent in the National Trauma Data Bank® (NTDB®) and 4.5 percent in the PROspective Observational Vascular Injury Trial (PROOVIT) registry). According to the applicant, the V005 and V017 trials included two patients at least 65 years of age who experienced vascular or extremity trauma (Humacyte Global, Inc., 2023). The applicant compared the percent of SYMVESS™ recipients 65 years of age or older with that of trauma patients in the PROOVIT registry, which includes data of vascular injuries from 14 level 1 or 2 trauma centers in the U.S. since February 2013 (DuBose et al., 2015).[173] According to the applicant, the PROOVIT registry included 47 patients who were 65 years of age or older and had vascular or extremity trauma. Both of the SYMVESS™ patients over the age of 65 in the V005 and V017 trials had lower extremity trauma but no upper extremity trauma. In comparison, 43 percent of the patients in the PROOVIT registry had lower extremity trauma, and 57 percent had upper extremity trauma. Therefore, we continue to question whether the findings of the V005 and V017 trials are generalizable to the Medicare population.

We are also concerned that the sample sizes of the 2 trials in the Moore et al. (2024) study were too small to ensure that the estimates for clinical outcomes were reliable, as the V017 trial included only 16 cases and the V005 trial included 51. We note that the sample size for the V005 trial was calculated for analyzing 30-day patency rate, which was the primary endpoint of the trial.[174] The Moore team estimated that at least 40 cases would be needed to yield sufficient power for the testing of patency rate at 30 days after implant. However, whether a sample size yields sufficient power depends partly on the effect size, that is, the difference in outcomes between subjects receiving treatments versus control that is statistically significant and clinically meaningful. We question whether, due to the sample size for the V005 trial, the study findings with respect to patency, infections, amputations, and death are sufficient to support that the technology provides a substantial clinical improvement over existing technologies with respect to these outcomes.

Moreover, we note that there are differences in the outcome data for the V005 trial in the Moore (2024) study and the SYMVESS™ United States Prescribing Information (USPI).[175] We note that the USPI reports clinical outcomes for the two trials separately and does not present the combined outcomes. We also note that the clinical outcomes data for V017 are identical between the Moore study (2024) and Section 14, Clinical Studies, of the

[173] DuBose JJ, Savage SA, and Fabian TC, et al. (2015). The American Association for the Surgery of Trauma PROspective Observation Vascular Injury Treatment (PROOVIT) registry: Multicenter data on modern vascular injury diagnosis, management, and outcomes. *Journal of Trauma and Acute Care Surgery* 78(2).

[174] Moore (2024), op.cit. Supplement #2, Statistical Analysis Plan for CLO–PRO–V005, Version 8. p. 10.

[175] Humacyte Global, Inc. SYMVESS USPI [Package Insert]. (Revised 12/2024). Available at: *https://www.fda.gov/media/184625/download?attachment.*

USPI. For the V005 trial, the Moore study (2024) reported the primary patency rate as 84.3 percent (43/51),[176] and the USPI 66.7 percent (36/54).[177] Thus for primary patency, SYMVESS™ exceeded the synthetic graft benchmark (78.9 percent) according to the Moore study, but not according to the USPI. In terms of secondary patency, the Moore study (2024) reported the rate as 90.2 percent (46/51), the USPI 72.2 percent (39/54). Therefore, for secondary patency, SYMVESS™ exceeded the synthetic grafts benchmarks according to the Moore study (2024), but not according to the USPI. In terms of amputation, the Moore study (2024) reported the 30-day rate as 9.8 percent (5/51), the USPI reported 30-day limb salvage rate as 75.9 percent (41/54), or 24.1 percent (13/54) in terms of 30-day amputation rate. In terms of limb salvage, therefore, SYMVESS™'s performance exceeded the synthetic graft benchmark (24.3 percent) according to the Moore study (2024), and was comparable according to the USPI. Also, while the Moore study (2024) reported a 30-day all-cause mortality rate (5.9 percent), which was higher than the corresponding synthetic grafts benchmark (3.4 percent), the USPI does not provide any mortality rates. Given the variation by data source as to whether SYMVESS™ performed better than the synthetic grafts benchmarks for primary and secondary patency and amputation rates, we question the applicant's assertion of clinical improvement compared to synthetic grafts.

Regarding Wang et al. (2023), a prospective, multicenter, phase III randomized clinical trial comparing the effects of SYMVESS™ to that of synthetic ePTFE grafts as an arteriovenous conduit for hemodialysis access in patients with ESRD, we note that the study sample did not assess patients with vascular trauma, and both arms were made up of dialysis patients, who are in general immunocompromised and have comorbidities, unlike trauma patients.[178] The differences in clinical profiles between ESRD and trauma patients may confound the difference between the two groups in conduit-related infection rate, limb salvage rate, and other graft-related clinical outcomes. While the applicant provided this study to demonstrate that SYMVESS™ provides improved infection rate compared to synthetic grafts, we question the extent to which the infection rates of SYMVESS™ in ESRD patients can be extrapolated to patients with extreme arterial injury, for which the technology is indicated.

We also note that while the applicant provided studies comparing SYMVESS™ to synthetic grafts to demonstrate improved outcomes, we remain unclear about how the clinical outcomes of SYMVESS™ recipients compare to those who receive other currently available treatments for extremity vascular trauma, like cryopreserved human grafts or xenografts. We would be interested in additional evidence comparing SYMVESS™ and these grafts in order to inform our assessment of substantial clinical improvement over existing technologies.

Lastly, we question the applicant's claim that SYMVESS™ enables quicker reperfusion of injured extremities compared to autologous vein grafts which reduces the risk of complications. According to the indication, SYMVESS™ is used when autologous vein graft is not feasible. Thus, SYMVESS™ would not be an alternative for nor comparable to autologous vein grafts. We welcome clarification or further information about this claim.

We are inviting public comments on whether SYMVESS™ meets the substantial clinical improvement criterion.

m. TECELRA® (Afamitresgene Autoleucel)

Adaptimmune, LLC submitted an application for new technology add-on payments for TECELRA® for FY 2026. According to the applicant, TECELRA® is a melanoma-associated antigen A4 (MAGE–A4)-directed genetically modified autologous T-cell immunotherapy (also referred to as an autologous T-cell receptor (TCR) therapy) indicated for the treatment of adults with unresectable or metastatic synovial sarcoma who have received prior chemotherapy, are HLA–A*02 subtype positive, and whose tumor expresses the MAGE–A4 antigen. Per the applicant, TECELRA® is composed of T cells genetically modified to express affinity-enhanced TCRs specific to the MAGE–A4 protein, which is expressed by synovial sarcoma tumor cells at varying frequencies.

Please refer to the online application posting for TECELRA®, available at *https://mearis.cms.gov/public/publications/ntap/NTP241004LTDY2*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, TECELRA® was granted BLA accelerated approval from FDA on August 1, 2024 for treatment of adults with unresectable or metastatic synovial sarcoma who have received prior chemotherapy; are HLA–A*02:01P, HLA–A*02:02P, HLA–A*02:03P, or HLA–A*02:06P positive; and whose tumor expresses the MAGE–A4 antigen as determined by FDA-approved or cleared companion diagnostic devices. Per the applicant, TECELRA® was commercially available immediately after receiving FDA marketing authorization. The applicant stated that TECELRA® is a single, one-time, patient-specific treatment delivered as an intravenous infusion containing 2.68×10^9 to 10×10^9 MAGE–A4 TCR positive T-cells, in one or more infusion bag(s).

The applicant stated that, effective October 1, 2022, the following ICD–10–PCS codes may be used to uniquely describe procedures involving the use of TECELRA®: XW03368 (Introduction of afamitresgene autoleucel immunotherapy into peripheral vein, percutaneous approach, new technology group 8) or XW04368 (Introduction of afamitresgene autoleucel immunotherapy into central vein, percutaneous approach, new technology group 8).

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that TECELRA® is not substantially similar to other currently available technologies because TECELRA® is the first FDA-approved engineered TCR T-cell therapy with a unique mechanism of action that is distinct from that of other marketed therapeutic products, the only therapy approved for synovial sarcoma assigned to MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies), and the only therapy studied specifically in the synovial sarcoma patient population and FDA-approved specifically for the treatment of synovial sarcoma. Therefore, according to the applicant, the technology meets the newness criterion. The following table summarizes the applicant's assertions

[176] Moore (2024), *op. cit.,* Table 2.

[177] SYMVESS USPI, *op. cit.* Table 2.

[178] U.S. Centers for Disease Control and Prevention. (2023, May 11). People Who Are Immunocompromised: Know how to protect yourself and what to do if you get sick. U.S. Department of Health and Human Services, Centers for Disease Control and Prevention. *https://archive.cdc.gov/www_cdc_gov/coronavirus/2019-ncov/need-extra-precautions/people-who-are-immunocompromised.html.*

regarding the substantial similarity criteria. Please see the online application posting for TECELRA® for the applicant's complete statements in support of its assertion that TECELRA® is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	TECELRA®'s mechanism of action is distinct from that of other marketed therapeutic products. TECELRA® is a type of adoptive cell therapy, which are innovative cancer immunotherapies that involve collecting lymphocytes (white blood cells, or peripheral blood mononuclear cells) from the patient for the purpose of genetically modifying and expanding the lymphocytes to improve their tumor-fighting capabilities before returning the re-engineered cells to the patient. Although CAR T-cell therapies are also adoptive cell therapies, their mechanism of action is different compared to TCR T-cell therapies such as TECELRA®. Specifically, CAR T-cell therapies use an antibody-derived single-chain antibody-variable fragment (scFv) that recognizes cell surface antigens. By contrast, TCR T-cell therapies recognize a specific peptide presented at the cancer cell surface as peptide-HLA complexes. TECELRA® is comprised of T cells that have hypervariable CDRs modified to express affinity to the MAGE–A4 protein, which is expressed in certain solid tumors at varying frequencies. TECELRA® is the first and only FDA-approved MAGE–A4 targeted therapy of any kind. Although other therapies are utilized for the treatment of patients with unresectable or metastatic synovial sarcoma who have received prior chemotherapy, pazopanib (VOTRIENT), a small molecule antiangiogenic tyrosine kinase inhibitor, is the only agent indicated for second-line (2L) treatment of soft tissue sarcoma (STS).
Is the technology assigned to the same MS–DRG as existing technologies?	No	As reflected in the FY 2025 Medicare IPPS Final Rule, CMS assigned TECELRA®'s unique ICD–10–PCS codes (XW03368 (Introduction of afamitresgene autoleucel immunotherapy into peripheral vein, percutaneous approach, new technology group 8) and XW04368 (Introduction of afamitresgene autoleucel immunotherapy into central vein, percutaneous approach, new technology group 8)) to MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies). TECELRA® is the only therapy approved for synovial sarcoma assigned to MS–DRG 018 and the only TCR T-cell therapy assigned to MS–DRG 018. Other technologies assigned to MS–DRG 018 do not treat synovial sarcoma and have different mechanisms of action.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	TECELRA® is the first FDA-approved engineered TCR T-cell therapy and the only therapy specifically studied in and approved for synovial sarcoma patients. Synovial sarcoma is a specific form of STS and is a rare disease that tends to occur in younger individuals, with a median age of initial clinical presentation being in the third decade of life. Prior to TECELRA®, there were no FDA-approved therapies specifically for the treatment of synovial sarcoma. Pazopanib was studied in broader STS populations that included a subgroup of patients with synovial sarcoma (less than 10% of patients) but was not approved by FDA specifically for the treatment of synovial sarcoma. No other technology is specifically indicated for the treatment of adult patients with synovial sarcoma. To the extent other therapies are used for the treatment of synovial sarcoma off-label consistent with National Comprehensive Cancer Network (NCCN) clinical guidelines, synovial sarcoma patients were mere subpopulations of a larger STS subject pool across multiple histologies and without formal a priori subgroup efficacy analyses. Thus, we know of no studies in which synovial sarcoma patients were the focus population to determine safety and efficacy of the treatments.

We note that the applicant stated that TECELRA® is the only FDA-approved therapy specifically studied and approved for patients with synovial sarcoma, therefore, it does not involve the treatment of a similar type of disease or patient population as existing technologies. While the applicant stated that other therapies in the National Comprehensive Cancer Network Clinical Practice Guidelines (NCCN Guidelines®), such as pazopanib, are indicated for use in the broader STS population rather than specifically for synovial sarcoma, we note that synovial sarcoma is a type of STS. Consequently, we question whether existing treatments indicated for STS, which can be used for the treatment of specific subtypes of STS such as synovial sarcoma, would treat the same or similar patient population as TECELRA®.

We are inviting public comments on whether TECELRA® is substantially similar to existing technologies and whether TECELRA® meets the newness criterion.

With respect to the cost criterion, the applicant provided four analyses to demonstrate that TECELRA® meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

TECELRA® COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for TECELRA®.

TECELRA® COST ANALYSIS—Continued

Claims identified	Scenario 1: 1,123 claims mapping to MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies). Scenario 2: 374 claims mapping to MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies). Scenario 3: 374 claims mapping to MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies). Scenario 4: 2,174 claims mapping to 37 MS–DRGs, with 10.81% of claims mapping to MS–DRG 464 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal System and Connective Tissue Disorders with CC).
Charges removed for prior technology.	Scenarios 1–3: Per the applicant, claim charges for cell and gene therapy products were removed when they were reported on the claims. For all other claims, the applicant removed the total drug charges from the claims. The applicant stated that removing all drugs charges is an overestimate of charges needing to be removed. Scenario 4: Per the applicant, no prior technology charges were removed since these cases likely do not include any high-cost therapies like MS–DRG 018 does. The applicant did not remove indirect charges related to the prior technology in all four scenarios.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application.
Inflation factor	The applicant applied an inflation factor of 8.406% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the wholesale acquisition cost of the new technology by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Average case-weighted threshold amount: $1,554,026. Final inflated average case-weighted standardized charge per case: —Scenario 1: $4,286,667. —Scenario 2: $4,383,746. —Scenario 3: $4,207,244. —Scenario 4: $4,186,358.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all four scenarios, the applicant asserted that TECELRA® meets the cost criterion.

We are inviting public comments on whether TECELRA® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that TECELRA® represents a substantial clinical improvement over existing technologies because TECELRA® is the first and only FDA-approved therapy for eligible patients with unresectable or metastatic synovial sarcoma; is a new treatment option for eligible patients with unresectable or metastatic synovial sarcoma, who are unresponsive to existing systemic therapies after first-line (1L) progression; offers significant clinical improvement in overall response rate (ORR) and overall survival (OS) compared to existing therapies; and is well-tolerated with a manageable safety profile. The applicant provided 1 published study, TECELRA®'s prescribing information, and an FDA press release to support these claims, as well as 15 background articles about TCR T-cell therapies, expression of MAGE–A4 in tumors, the prevalence of HLA–A subtypes, other 2L synovial sarcoma treatments, and the burden of illness for patients with synovial sarcoma and myxoid/round cell liposarcoma (MRCLS).[179] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for TECELRA® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
TECELRA® is the first and only FDA-approved engineered TCR T-cell therapy.	FDA Press Release. FDA Approves First Gene Therapy to Treat Adults with Metastatic Synovial Sarcoma. August 2, 2024. Available from: *https://www.fda.gov/news-events/press-announcements/fda-approves-first-gene-therapy-treat-adults-metastatic-synovial-sarcoma.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
TECELRA® is the first and only FDA-approved therapy for patients with unresectable or metastatic synovial sarcoma.	U.S. Food and Drug Administration, 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

[179] Background articles are not included in the following table but can be accessed via the online posting for the technology.

Applicant statements in support	Supporting evidence provided by the applicant
TECELRA® is a new treatment option for patients with unresectable/metastatic synovial sarcoma, unresponsive to existing systemic therapies after first-line progression due to limited effectiveness, ORRs and OS.	D'Angelo SP, Araujo DM, Abdul Razak AR, et al. Afamitresgene autoleucel for advanced synovial sarcoma and myxoid round cell liposarcoma (SPEARHEAD–1): an international, open-label, phase 2 trial (2024): Lancet 403;10435:1460–1471. TECELRA [package insert]. Philadelphia, PA: Adaptimmune, LLC; 2024. The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
TECELERA® offers a significant clinical improvement in ORR and OS as compared to existing therapies.	D'Angelo, 2024, *op. cit.* Adaptimmune, 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.
TECELERA® is well tolerated and has a manageable safety profile.	D'Angelo, 2024, *op. cit.* Adaptimmune, 2024, *op. cit.* The applicant also provided background information to support this claim, which can be accessed via the online posting for the technology.

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for TECELRA®.

After review of the supporting evidence provided by the applicant, we have the following concerns regarding whether TECELRA® meets the substantial clinical improvement criterion. With respect to the assertion that TECELRA® offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments, we note that TECELRA® being the first approved TCR therapy may relate to mechanism of action under the newness criterion, but is not relevant to the demonstration of substantial clinical improvement. Further, while the applicant stated that TECELRA® is the first and only therapy approved specifically for patients with unresectable or metastatic synovial sarcoma, we note that synovial sarcoma is a subtype of the broader STS group. According to the applicant, there were no therapies approved by the FDA specifically for synovial sarcoma, and pazopanib and trabectedin are two therapies that may be used to manage synovial sarcoma in subsequent-line settings. However, according to the NCCN Clinical Guidelines® for STS, there are other available treatments that treat advanced and metastatic STS, including synovial sarcoma, which include pazopanib and trabectedin. Therefore, we question whether the applicant's claim supports that TECELRA® offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments given there are other available treatments for patients with STS that would also treat patients with unresectable or metastatic synovial sarcoma. In addition, while the applicant stated that TECELRA® is a new treatment option for patients with unresectable or metastatic synovial sarcoma unresponsive to existing systemic therapies after previous 1L treatments such as anthracycline-based or ifosfamide-based therapy due to limited effectiveness, ORR, and OS, it is unclear whether this patient population is unresponsive to or ineligible for other existing treatments such as trabectedin, in which higher response rates of 27–51% have been reported.[180] We note that while patients in the SPEARHEAD–1 study received multiple previous lines of systemic therapy, the study did not list these therapies while noting that bridging therapy, including pazopanib, trabectedin, ifosfamide, or doxorubicin, was permissible between leukapheresis and lymphodepletion at the investigators' discretion. Therefore, we question whether TECELRA® offers a treatment for a patient population unresponsive to, or ineligible for, currently available treatments.

With regard to the claim that TECELRA® offers a significant clinical improvement in ORR and OS compared to existing therapies, the applicant provided the SPEARHEAD–1 phase II clinical trial (D'Angelo et al., 2024), which assessed TECELRA®'s efficacy in 44 patients (aged 16 to 75 years) with metastatic or unresectable synovial sarcoma who previously received at least 1 prior line of anthracycline-containing or ifosfamide-containing chemotherapy. The SPEARHEAD–1 study found that synovial sarcoma patients treated with TECELRA® had an ORR of 39 percent and a median OS (mOS) of 16.9 months. According to the applicant, the study demonstrated a higher ORR and longer mOS than those from historical studies with pazopanib (18.9 percent, 10.3 months), trabectedin (12.3 percent, 10.4 months), gemcitabine/docetaxel (4.5–5.0 percent, 8.4–14 months), and regorafenib (8 percent, 13.4 months).[181] [182] [183] [184] The applicant also stated that, although listed in the NCCN Clinical Guidelines® for STS, eribulin, dacarbazine, temozolomide, and vinorelbine have not been adequately studied in previously treated unresectable or metastatic synovial sarcoma patients, and therefore, their effectiveness for this patient population cannot be determined (NCCN, 2024). However, we note that patients with unresectable or metastatic synovial sarcoma treated with TECELRA® demonstrated a mOS of

[180] Takahashi M, Takahashi S, Araki N, et al. Efficacy of trabectedin in patients with advanced translocation-related sarcomas: pooled analysis of two phase II studies. Oncologist 2017; 22: 979–88.

Poor treatment outcomes with palliative gemcitabine and docetaxel chemotherapy in advanced and metastatic synovial sarcoma. *Medical Oncology, 35,* 1–5. *https://doi.org/10.1007/s12032-018-1193-5.*

[183] Tansir, G., Rastogi, S., Kumar, A., Barwad, A., Mridha, A.R., Dhamija, E., . . . & Bhoriwal, S. (2023). A phase II study of gemcitabine and docetaxel combination in relapsed metastatic or unresectable locally advanced synovial sarcoma. *BMC Cancer, 23*(1), 639. *https://doi.org/10.1186/s12885-023-11099-4.*

[184] Mir, O., Brodowicz, T., Italiano, A., Wallet, J., Blay, J.Y., Bertucci, F., . . . & Penel, N. (2016). Safety and efficacy of regorafenib in patients with advanced soft tissue sarcoma (REGOSARC): a randomised, double-blind, placebo-controlled, phase 2 trial. *The Lancet Oncology, 17*(12), 1732–1742. *https://doi.org/10.1016/S1470-2045(16)30507-1.*

16.9 months, which is similar to the historical benchmark results from patients treated with gemcitabine/docetaxel (8.4 to 14 months) and regorafenib (13.4 months). In addition, we note that the mOS for SPEARHEAD–1 non-responders was comparable to existing therapies, and we question whether the baseline characteristics of the study population, such as biomarkers of resistance to TECELRA® rather than the treatment itself, may account for the observed survival outcomes. Furthermore, we note that TECELRA® is indicated for patients with tumors expressing the MAGE–A4 tumor antigen, and we question whether the provided historical benchmark results for other treatments in which study participants were not tested for biomarkers, such as MAGE–A4, may represent different target populations from that of TECELRA®. Finally, we note that the applicant compared the clinical outcomes from the SPEARHEAD–1 study to historical controls without appropriate statistical adjustments to account for differences in study designs. We question whether these differences may introduce confounders which could reduce the validity of the results of the comparison.

With respect to the claim that TECELRA® is well-tolerated and has a manageable safety profile, the applicant stated that the SPEARHEAD–1 clinical trial found that 75 percent of patients experienced cytokine release syndrome (CRS), with only one patient experiencing grade ≥3 CRS, and one patient experienced symptoms consistent with grade 1 immune effector cell-associated neurotoxicity syndrome (ICANS). The applicant stated that, compared to CAR T-cell therapies, the CRS associated with TECELRA® is modest (Tsimberidou et al., 2021). However, we are unclear why the applicant compared the safety profile of TECELRA® to CAR T-cell therapies (which are not approved for use in STS) rather than other available therapies that treat unresectable or metastatic synovial sarcoma. Therefore, we are interested in evidence comparing TECELRA®'s safety profile to other, non-CAR T-cell treatments for unresectable or metastatic synovial sarcoma. The applicant also stated that because TECELRA® is a single administration, recipients are less likely to experience repeated adverse events from the infusion compared to treatments requiring multiple/regular continuous or cyclical administrations; however, we question the basis for this claim as the applicant did not provide any supporting evidence.

We are inviting public comments on whether TECELRA® meets the substantial clinical improvement criterion.

n. ZIIHERA® (Zanidatamab-hrii)

Jazz Pharmaceuticals, Inc. submitted an application for new technology add-on payments for ZIIHERA® for FY 2026. According to the applicant, ZIIHERA® is a bispecific human epidermal growth factor receptor 2 (HER2)-directed antibody for the treatment of adults with previously treated, unresectable or metastatic HER2-positive (IHC 3+) biliary tract cancer (BTC).

Please refer to the online application posting for ZIIHERA®, available at *https://mearis.cms.gov/public/publications/ntap/NTP240925MW5YD*, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, ZIIHERA® was granted BLA approval from FDA on November 20, 2024, for the treatment of adults with previously treated, unresectable or metastatic HER2-positive (IHC 3+) BTC as detected by an FDA-approved test. According to the applicant, ZIIHERA®'s market availability was delayed to allow for final packaging with FDA approved labels and package inserts as well as to allow time for shipment to channel distribution points, therefore, ZIIHERA® became commercially available as of December 2, 2024. We are interested in additional information regarding the cause of any delay in the technology's commercial availability, such as related to packaging and shipment to channel distribution points.

According to the applicant, ZIIHERA® is administered intravenously in doses of 20 mg/kg once every 2 weeks until disease progression or unacceptable toxicity; therefore, the dose per inpatient stay is 1,400 mg.

The applicant stated that effective October 1, 2024, the following ICD–10–PCS codes may be used to uniquely describe procedures involving the use of ZIIHERA®: XW033CA (Introduction of zanidatamab antineoplastic into peripheral vein, percutaneous approach, new technology group 10) or XW043CA (Introduction of zanidatamab antineoplastic into central vein, percutaneous approach, new technology group 10). The applicant stated that C22.1 (Intrahepatic bile duct carcinoma), C23 (Malignant neoplasm of gallbladder), C24.0 (Malignant neoplasm of extrahepatic bile duct), C24.8 (Malignant neoplasm of overlapping sites of biliary tract), C24.9 (Malignant neoplasm of biliary tract, unspecified); or Z51.11 (Encounter for antineoplastic chemotherapy) may be used to currently identify the indication for ZIIHERA® under the ICD–10–CM coding system.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that ZIIHERA® is not substantially similar to other currently available technologies because ZIIHERA®'s novel and distinct mechanisms of action are not the same or substantially similar to those of other currently available therapies used for the treatment of adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC. In addition, the applicant asserted that ZIIHERA® is the first and only bispecific HER2-directed antibody indicated for this population, and that therefore, the technology meets the newness criterion. The following table summarizes the applicant's assertions regarding the substantial similarity criteria. Please see the online application posting for ZIIHERA® for the applicant's complete statements in support of its assertion that ZIIHERA® is not substantially similar to other currently available technologies.

Substantial similarity criteria	Applicant response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	ZIIHERA® is not the same or substantially similar to any therapies currently used to treat adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC. It is a bispecific HER2-directed, biparatopic antibody that simultaneously binds to 2 nonoverlapping, distinct sites on HER2: the ECD4 and ECD2 domains. Trans-binding of ZIIHERA® with HER2 results in receptor crosslinking, clustering, and internalization, which leads to a reduction of HER2 from the cell surface. It reduces phosphorylation of HER2 family members (including EGFR, HER2, and HER3), downstream signaling, and ligand-dependent and -independent proliferation. Distinctly, ZIIHERA® potently induces CDC, ADCC, and ADCP. ZIIHERA® is substantially differentiated mechanistically and clinically from currently available anti-HER2 agents: HERCEPTIN®, indicated for the treatment of HER2-overexpressing breast cancer and metastatic gastric or gastroesophageal junction adenocarcinoma; PERJETA®, indicated for use in combination with HERCEPTIN® and DOCETAXEL for HER2+ metastatic breast cancer; and ENHERTU®, indicated for HER2+ and HER2-low breast cancer, non-small cell lung cancer (NSCLC) activating HER2 mutations, HER2+ gastric or gastroesophageal junction adenocarcinoma, and HER2+ solid tumors (not specifically studied in BTC), when no other satisfactory treatment options for unresectable/metastatic HER2 (IHC 3+) BTC exist. ZIIHERA®'s distinct mechanisms of action were confirmed in preclinical models where ZIIHERA® exhibited improved antitumor activity compared with HERCEPTIN® alone and HERCEPTIN®PERJETA® in head-to-head comparisons across a range of tumors and HER2 expression levels: 1) ZIIHERA® binds adjacent HER2 reorganization not observed with HERCEPTIN® or PERJETA®; 2) ZIIHERA®, but not HERCEPTIN® or HERCEPTIN®+PERJETA®, elicit potent CDC against high HER2-expressing tumor cells in vitro (the only HER2 agent that can elicit CDC); and 4) ZIIHERA® mediates HER2 internalization and downregulation, inhibition of both cell signaling and tumor growth, ADCC and ADCP, and shows superior in vivo antitumor activity compared to HERCEPTIN®+PERJETA® in a HER2-expressing xenograft model. ZIIHERA® is also highly differentiated mechanistically and clinically from chemotherapeutic regimens or other therapies used in first line (1L) and second line (2L) treatment of BTC. It is not a chemotherapy. Its unique asymmetric design, its biparatopic bispecific binding, and ability to induce HER2 receptor crosslinking is believed to drive the multiple mechanisms of action of ZIIHERA® and its clinical activity as a single agent. ZIIHERA® is the first and only bispecific HER2-directed antibody indicated for the treatment of adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC.
Is the technology assigned to the same MS–DRG as existing technologies?	Yes	While ZIIHERA® will not map to MS–DRGs distinct from other treatments administered to patients diagnosed with BTC, patient cases receiving intravenous infusion of ZIIHERA® will be identified by unique ICD–10–PCS procedures codes for ZIIHERA® administration: XW033CA and XW043CA, effective October 1, 2024.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	No	ZIIHERA® is the first and only bispecific HER2-directed, biparatopic antibody approved by FDA for the treatment of adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC. Results from the pivotal, single-arm phase IIb HERIZON–BTC–01 study support ZIIHERA® having meaningful clinical benefit and potential as a new standard of care for patients with HER2+ (IHC 3+) BTC.

After review of the information provided by the applicant, we note that while the applicant stated that ZIIHERA® is the first and only bispecific HER2-directed, biparatopic antibody approved by FDA for the treatment of adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC, there are several existing treatment options for patients with unresectable/metastatic HER2+ (IHC 3+) BTC such as FOLFOX, FOLFIRI, STIVARGA®, or ENHERTU®.[185] Therefore, it is unclear how ZIIHERA® treats a new patient population or disease as compared to these existing treatments.

We are inviting public comments on whether ZIIHERA® is substantially similar to existing technologies and whether ZIIHERA® meets the newness criterion.

With respect to the cost criterion, the applicant provided multiple analyses to demonstrate that ZIIHERA® meets the cost criterion. Each analysis followed the order of operations summarized in the following table.

ZIIHERA® COST ANALYSIS

Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD–10–CM codes, ICD–10–PCS codes, and MS–DRGs used by the applicant, see the cost criterion codes and MS–DRGs attachment included in the online posting for ZIIHERA®.
Claims identified	Scenario 1: 152 claims mapping to 13 MS–DRGs, with 12.50% of claims mapping to MS–DRG 847 (Chemotherapy Without Acute Leukemia as Secondary Diagnosis with CC). Scenario 2: 3,807 claims mapping to 30 MS–DRGs, with 44.44% of claims mapping to MS–DRG 435 (Malignancy of Hepatobiliary System or Pancreas with MCC).

[185] National Comprehensive Care Network (NCCN). (2024, November 27). NCCN Guidelines Version 5.2024 Biliary Tract Cancers. Retrieved on January 8, 2025, from *https://www.nccn.org.*

ZIIHERA® COST ANALYSIS—Continued

Charges removed for prior technology.	Per the applicant, the utilization of ZIIHERA® would replace chemotherapy charges. The applicant removed 15.9% of radiology charges from identified cases in which BTC was the primary diagnosis and removed 19.9% of radiology charges from identified cases in which BTC was a secondary diagnosis. Per the applicant, these percentages were derived based on an analysis of the revenue center file from the 100% Inpatient Standard Analytic File (SAF) in FY 2023. The applicant estimated the percentage of chemotherapy therapy-related radiology charges for each set of cases by dividing the sum of charges for chemotherapy-related revenue codes (0331, 0332, 0335) by the sum of charges for the revenue codes comprising total radiology charges. The applicant did not remove indirect charges related to the prior technology.
Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
Inflation factor	The applicant applied an inflation factor of 8.406% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
Charges added for the new technology.	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
Cost analysis results	Scenario 1: —Average case-weighted threshold amount: $87,202. —Final inflated average case-weighted standardized charge per case: $197,284. Scenario 2: —Average case-weighted threshold amount: $93,683. —Final inflated average case-weighted standardized charge per case: $209,487.

Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that ZIIHERA® meets the cost criterion.

We are inviting public comments on whether ZIIHERA® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that ZIIHERA® represents a substantial clinical improvement over existing technologies because it is a bispecific HER2-directed antibody with multiple, distinct mechanisms of action and a differentiated clinical profile, and it is the first and only FDA-approved treatment for HER2+ (IHC 3+) BTC. In addition, the applicant asserted that ZIIHERA® fulfills an unmet need for this patient population by providing an optimal chemotherapy-free treatment option, where patients also have the potential to achieve meaningfully improved clinical benefits. The applicant provided 1 study and 2 poster presentations of the same study to support these claims, as well as 3 background articles on other treatments for advanced BTC.[186] The following table summarizes the applicant's assertions regarding the substantial clinical improvement criterion. Please see the online posting for ZIIHERA® for the applicant's complete statements regarding the substantial clinical improvement criterion and the supporting evidence provided.

Applicant statements in support	Supporting evidence provided by the applicant
Substantial Clinical Improvement Assertion #1: The technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments	
ZIIHERA® is the first and only bispecific HER2-directed antibody for the treatment of adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC.	Pant S, et al. Zanidatamab in previously treated HER2-positive biliary tract cancer: overall survival and longer follow-up from the phase 2b HERIZON–BTC–01 study. American Society of Clinical Oncology annual meeting. 2024. Abstract; Poster 4091. Harding JJ, et al. Zanidatamab for HER2-amplified, unresectable, locally advanced or metastatic biliary tract cancer (HERIZON–BTC–01): a multicentre, single-arm, phase 2b study. Lancet Oncol. 2023;24(7):772–82. The applicant also provided background information and supplemental material to support this claim, which can be accessed via the online posting for the technology.
Substantial Clinical Improvement Assertion #2: The technology significantly improves clinical outcomes relative to services or technologies previously available	
In HERIZON–BTC–01, ZIIHERA® demonstrated clinical benefit of sustained/durable response rates and longer overall survival compared to previously reported outcomes of 2L therapies for advanced BTC.	Pant, 2024, *op. cit.* Harding, 2023, *op. cit.* The applicant also provided background information and supplemental material to support this claim, which can be accessed via the online posting for the technology.

[186] Background articles and supplemental material are not included in the following table but can be accessed via the online posting for the technology.

Applicant statements in support	Supporting evidence provided by the applicant
Treatment with ZIIHERA® provides a marked clinical benefit with a significantly higher response rate than previously reported for currently preferred 2L chemotherapy regimen.	Pant, 2024, *op. cit.* Harding, 2023, *op. cit.* The applicant also provided background information and supplemental material to support this claim, which can be accessed via the online posting for the technology.
The overall benefit:risk assessment of ZIIHERA® is favorable. ZIIHERA® fulfills an unmet medical need and provides an option for patients to receive clinical benefit with a low risk of harm.	Harding, 2023, *op. cit.* Wasan H, et al. Health-related quality of life outcomes in patients with zanidatamab-treated HER2-positive biliary tract cancer in the Phase 2b HERIZON–BTC–01 study. Presented at European Society for Medical Oncology (ESMO) 2023; Poster presentation, Poster 101P. Pant, 2024, *op. cit.* The applicant also provided background information and supplemental material to support this claim, which can be accessed via the online posting for the technology.

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for ZIIHERA®.

After review of the information provided by the applicant, we have the following concerns regarding whether ZIIHERA® meets the substantial clinical improvement criterion. With respect to the assertion that ZIIHERA® offers a treatment option for a patient population unresponsive to or ineligible for existing therapies, the applicant stated that ZIIHERA® is the first and only FDA-approved bispecific HER2-directed antibody for the treatment of adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC. However, we note that while the target (HER2+) and type of therapy (bispecific antibody) for a particular indication may relate to mechanism of action under the newness criterion, it is not relevant to the demonstration of substantial clinical improvement. Further, we note that the applicant stated that FOLFOX is the preferred subsequent line therapy option for these patients, and we also note that NCCN guidelines list additional available therapies including: FOLFIRI, ENHERTU®, and HERCEPTIN® plus TUKYSA®. We further note that while the applicant provided studies describing outcomes from the HERIZON–BTC–01 trial of ZIIHERA® as well as background studies describing outcomes for other treatment options in 2L advanced BTC, the studies did not demonstrate that patients eligible for treatment with ZIIHERA® are unable to receive other existing therapies. Therefore, we question whether ZIIHERA® offers a treatment option for a patient population unresponsive to, or ineligible for other existing therapies.

With respect to the assertion that ZIIHERA® significantly improves clinical outcomes relative to services or technologies previously available, the applicant provided 1 published peer-reviewed study of HERIZON–BTC–01 (Harding et al., 2023) and 2 poster presentations that are analyses of HERIZON–BTC–01 (Pant et al., 2024; Wasan et al., 2023) in support of its claims. Harding et al. (2023) and Pant et al. (2024) provided results of the phase IIB HERIZON–BTC–01, a global, multicenter, single arm, cohort study assessing ZIIHERA® treatment in 87 patients with HER2+ BTC, which were grouped into cohorts based on immunohistochemistry (IHC): cohort 1, n=80 (HER2+ (IHC 2+ or IHC 3+)) and cohort 2, n=7 (IHC 0 or IHC 1+). We note that the HERIZON–BTC–01 study did not compare ZIIHERA® outcomes to outcomes for other existing treatments, and therefore we question the extent to which this can be relied upon for a finding of substantial clinical improvement. We note that 63 percent of the study's patients were enrolled at clinical trial sites in Asia, and we question whether the location of the clinical trial sites being outside of the US could affect the generalizability of the findings to the U.S. Medicare patient population. We also question whether the study's sample size may have impacted the ability to perform or interpret comparative analyses within and between the two different patient cohorts.

With respect to the applicant's claim that, in HERIZON–BTC–01 study (Harding et al., 2023), ZIIHERA® demonstrated a clinical benefit of sustained/durable response rates, longer OS, and a significantly higher response rate compared to previously reported outcomes of 2L advanced BTC therapies, we note that while the applicant provided background studies comparing FOLFOX and FOLFIRI to ZIIHERA®, the supporting evidence provided did not compare ZIIHERA® to other FDA-approved therapies used for unresectable/metastatic BTC such as ENHERTU®. The applicant stated that ZIIHERA®'s median confirmed objective response rate (cORR) of 51.6 percent represents a marked clinical benefit for the target population, which is approximately 10-fold higher than the previously reported median ORR for FOLFOX and significantly more than the historical response rate of 7.7 percent for 2L chemotherapy regimens, noting the highest historical rate reported of 14.8 percent was seen in the FOLFIRI regimen. However, we question whether the differences in the studies' reported responses are comparable given that the studies are different in design, protocol, and methodology, which may limit the ability to interpret the outcomes. While the applicant stated that FOLFOX chemotherapy regimen remains the preferred 2L treatment of advanced BTC, as there are other treatments used in the 2L+ treatment of advanced BTC, we would appreciate additional information on the comparison of outcomes with ZIIHERA® to those with other FDA-approved therapies used for advanced/metastatic BTC.

With respect to the claim that ZIIHERA® has a manageable safety profile with favorable tolerability in adults with previously treated, unresectable/metastatic HER2+ (IHC 3+) BTC, the applicant stated that, in contrast to chemotherapy regimens used as 2L or later therapies, ZIIHERA® as a single agent is well tolerated in the pretreated BTC patient population and the resulting adverse events are manageable. In support of this claim, the applicant provided results of the HERIZON–BTC–01 study (Harding et al., 2023, Wasan et al., 2023, and Pant et al., 2024), which measured safety and quality of life in 87 patients. We are concerned that the safety and quality of life data were combined in both the Harding et al. (2023) and Pant et al. (2024) studies for cohort 1 (n=80) (HER2+ (IHC 3+ or IHC 2+)) and cohort 2 (n=7) (IHC 1+ or IHC 0), and the Wasan paper reported from cohort 1 (HER2+ (IHC 3+ or IHC 2+)). Therefore,

these studies did not provide data on safety and treatment-related adverse events for IHC 3+ BTC patients separately. We note that since ZIIHERA® is indicated for use in patients with HER2+ (IHC 3+) BTC only, we question whether the inclusion of patients with HER2+ (IHC 2+) BTC and patients with IHC 1+ or IHC 0 BTC is appropriate to demonstrate outcomes for HER2+ (IHC 3+) BTC patients specifically. We question whether this analysis provides sufficient evidence as to ZIIHERA®'s overall benefit-risk profile and how it compares to other treatments given that Wasan et al. and Pant et al., which are unpublished and non-peer-reviewed conference posters, do not include full details of the study and methodology, which therefore may limit our ability to interpret the results. We further note that HERIZON–BTC–01 was a single arm study and that the clinical outcome and HRQoL data are not specific to IHC 3+ BTC patients, in accordance with ZIIHERA®'s FDA indication.

We are inviting public comments on whether ZIIHERA® meets the substantial clinical improvement criterion.

6. Proposed FY 2026 Applications for New Technology Add-On Payments (Alternative Pathways)

As discussed previously, beginning with applications for FY 2021, a medical device designated under FDA's Breakthrough Devices Program that has received marketing authorization for the indication covered by the Breakthrough Device designation, may qualify for the new technology add-on payment under an alternative pathway. Additionally, beginning with FY 2021, a medical product that is designated by FDA as a Qualified Infectious Disease Product (QIDP) and has received marketing authorization for the indication covered by the QIDP designation, and, beginning with FY 2022, a medical product that is a new medical product approved under FDA's Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD) and used for the indication approved under the LPAD pathway, may also qualify for the new technology add-on payment under an alternative pathway. Under an alternative pathway, a technology will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS and will not need to meet the requirement that it represents an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. These technologies must still be within the 2-to-3-year newness period to be considered ''new,'' and must also still meet the cost criterion.

As discussed previously, in the FY 2023 IPPS/LTCH PPS final rule, we finalized our proposal to publicly post online applications for new technology add-on payment beginning with FY 2024 applications (87 FR 48986 through 48990). As noted in the FY 2023 IPPS/LTCH PPS final rule, we are continuing to summarize each application in this proposed rule. However, while we are continuing to provide discussion of the concerns or issues we identified with respect to applications submitted under the alternative pathway, we are providing more succinct information as part of the summaries in the proposed and final rules regarding the applicant's assertions as to how the medical service or technology meets the applicable new technology add-on payment criteria. We refer readers to *https://mearis.cms.gov/public/publications/ntap* for the publicly posted FY 2026 new technology add-on payment applications and supporting information (with the exception of certain cost and volume information, and information or materials identified by the applicant as confidential or copyrighted), including tables listing the ICD–10–CM codes, ICD–10–PCS codes, and/or MS–DRGs related to the analyses of the cost criterion for certain technologies for the FY 2026 new technology add-on payment applications. In addition, for certain FY 2026 new technology add-on payment applications, we are making available separate tables listing the ICD–10–CM codes and/or ICD–10–PCS codes that we believe would be used to identify cases relevant to the Breakthrough Device-designated indications, or would be appropriate to exclude for cases related to FDA market authorized indications that are not covered by the Breakthrough Device designation indications, for purposes of the new technology add-on payment, if approved, in Table 10 associated with this proposed rule, available via the internet on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*. Click on the link on the left side of the screen titled ''FY 2026 IPPS Proposed Rule Home Page'' or ''Acute Inpatient—Files for Download''. Please see section VI of the Addendum for additional information regarding tables associated with this proposed rule.

We received 34 applications for new technology add-on payments for FY 2026 under the new technology add-on payment alternative pathway. As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958) and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69242 through 69245), we finalized that beginning with the new technology add-on payment applications for FY 2025, for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance or filing to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. See § 412.87(e) and further discussion in the FY 2024 and the FY 2025 IPPS/LTCH PPS final rules (88 FR 58948 through 58958; 89 FR 69242 through 69245). Of the 34 applications received under the alternative pathway, 1 application was not eligible for consideration for new technology add-on payment because it did not meet these requirements; and 4 applicants withdrew their applications prior to the issuance of this proposed rule. Of the remaining 29 applications, 27 of the technologies received a Breakthrough Device designation from FDA. The remaining two applications were designated as a QIDP by FDA. We did not receive any applications for technologies approved through the LPAD pathway.

In accordance with the regulations under § 412.87(f)(2), applicants for new technology add-on payments for FY 2026 for Breakthrough Devices must have FDA marketing authorization by May 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Under § 412.87(f)(3), applicants for new technology add-on payments for FY 2026 for QIDPs and technologies approved under the LPAD pathway must have FDA marketing authorization by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. The policy finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58742) provides for conditional approval for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products (QIDPs and LPADs) at § 412.87(d) that does not receive FDA marketing authorization by July 1 prior to the particular fiscal year for which the applicant applied for new technology add-on payments, provided that the technology receives FDA

marketing authorization before July 1 of the fiscal year for which the applicant applied for new technology add-on payments. We refer the reader to the FY 2021 IPPS/LTCH final rule for a complete discussion of this policy (85 FR 58737 through 58742).

As we did in the FY 2025 IPPS/LTCH PPS proposed rule, for applications under the alternative new technology add-on payment pathway, in this proposed rule we are making a proposal to approve or disapprove each of these 29 applications for FY 2026 new technology add-on payments. Therefore, in this section of the preamble of this proposed rule, we provide a table summarizing background information and the cost analysis for each alternative pathway application and propose whether or not each technology would be eligible for the new technology add-on payment for FY 2026. We refer readers to section II.H.8. of the preamble of the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and FY 2021 IPPS/LTCH PPS final rule (85 FR 58715 through 58733) for further discussion of the alternative new technology add-on payment pathways for these technologies.

a. Alternative Pathway for Breakthrough Devices

1. 4WEB Medical Ankle Truss System

The following table summarizes the information provided in the new technology add-on payment application for the 4WEB Medical Ankle Truss System. We note that 4WEB Medical, Inc. submitted an application for new technology add-on payments for the 4WEB Medical Ankle Truss System for FY 2024, as summarized in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26924 through 26926), which the applicant withdrew prior to the issuance of the FY 2024 IPPS/LTCH PPS final rule (88 FR 58919).

BILLING CODE 4120–01–P

	4WEB Medical Ankle Truss System	
Technology Info	**Applicant**	4WEB Medical, Inc.
	Description	Per the applicant, the 4WEB Medical Ankle Truss System (ATS) is for use with a premarket authorized tibiotalocalcaneal (TTC) nail as part of a TTC fusion system to manage ankle bone defects that occur after a failed ankle arthrodesis or arthroplasty.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241005L44VA
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the 4WEB Medical ATS is for use with a premarket authorized TCC nail as part of a TTC fusion system to manage ankle bone defects that may be associated with the following indications: - Failed ankle arthrodesis - Failed ankle arthroplasty The anatomical landmarks necessary for the design and creation of ATS PMDs must be present and identifiable on appropriate radiography scans. The ATS is intended for use with autograft and/or allogenic bone graft comprised of cancellous and/or corticocancellous bone graft.
	FDA marketing authorization indication	The 4WEB Medical ATS is for use as an accessory to the Stryker T2 Ankle Arthrodesis Nail or the Stryker Valor Hindfoot Fusion Nail as part of a TCC fusion construct in a salvage procedure following failed ankle arthrodesis or failed ankle arthroplasty for patients at risk for loss of limb. The ATS is not intended for standalone use. The anatomical landmarks necessary for the design and creation of ATS devices that are patient matched must be present and identifiable on appropriate radiography scans. The ATS is intended for use with autograft and/or allogenic bone graft comprised of cancellous and/or corticocancellous bone graft.
	FDA marketing authorization information	Per the applicant, the Breakthrough Device designation includes the use of the device after a failed ankle arthrodesis or failed ankle arthroplasty, which would be considered a salvage procedure as indicated in the FDA-cleared indication.
	FDA marketing authorization date	March 21, 2024
	Commercial availability	According to the applicant, the 4WEB Medical ATS was not immediately available for sale as the technology must be used with an FDA-cleared nail, and therefore a third-party distributor had to be engaged that could distribute the ATS System with an FDA-cleared nail. The applicant stated that the production of the ATS System could not be started until the distribution agreement was executed. Per the applicant, when scaling up to the production printing quantity, the manufacturer had to scrap the first batch of implants because part of the build did not print correctly. According to the applicant, this was not discovered until inspection, which by the time that occurred, was approximately one month later. Per the applicant, it did not receive the first batch that passed inspection until January 8th, 2025, which was the first date the device was available.
Coding	**Unique ICD-10-PCS Code(s)**	Effective October 1, 2023, the following ICD-10-PCS codes may be used to uniquely describe procedures involving the use of the 4WEB Medical ATS: XRGJ0B9 (Fusion of right ankle joint using open-truss design internal fixation device, open approach, new technology group 9), XRGK0B9 (Fusion of left ankle joint using open-truss design internal fixation device, open approach, new technology group 9), XRGL0B9 (Fusion of right tarsal joint using open-truss design internal fixation device, open approach, new technology group 9), or XRGM0B9 (Fusion of right tarsal joint using open-truss design internal fixation device, open approach, new technology group 9).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the 4WEB Medical Ankle Truss System.
	Claims identified	Scenario 1: 67 claims mapping to 6 MS-DRGs, with 17.91% of claims mapping to MS-DRG 493 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur with CC). Scenario 2: 255 claims mapping to 19 MS-DRGs, with 18.82% of claims mapping to MS-DRG 493 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur with CC).
	Charges removed for prior technology	The applicant removed 100% of charges associated with Medical/Surgical Supplies and Devices (revenue centers 027x, and 0624). The applicant stated that the use of the technology is expected to replace a portion of devices included in these claims, although it will not replace all devices, nor any medical supplies required to perform the procedure. However, an estimate of the percentage of these total charges for devices that would be replaced could not be determined. The applicant explained that to be as conservative as possible, the analysis removed 100% of these charges. The applicant did not

		remove any indirect charges related to the prior technology as it believed that financial impact of utilizing the ATS on hospital resources compared to prior technologies is minimal.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the expected hospital acquisition cost of the technology by the national cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Scenario 1: - Average case-weighted threshold amount: $103,093 - Final inflated average case-weighted standardized charge per case: $188,608 Scenario 2: - Average case-weighted threshold amount: $106,780 - Final inflated average case-weighted standardized charge per case: $194,544 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that the 4WEB Medical ATS meets the cost criterion.

After review of the information provided by the applicant, since the indication for which the applicant received 510(k) clearance is included within the scope of the Breakthrough Device designation indication, it appears that the FDA-cleared indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.

We agree with the applicant that the 4WEB Medical ATS meets the cost criterion and are therefore proposing to approve the 4WEB Medical ATS for new technology add-on payments for FY 2026 for use as an accessory to the Stryker T2 Ankle Arthrodesis Nail or the Stryker Valor Hindfoot Fusion Nail as part of a TCC fusion construct in a salvage procedure following failed ankle arthrodesis or failed ankle arthroplasty for patients at risk for loss of limb.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the 4WEB Medical ATS to the hospital to be $23,500 per patient. Per the applicant, one 4WEB Medical ATS is used per patient per hospital discharge. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the 4WEB Medical ATS would be $15,275 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the 4WEB Medical ATS meets the cost criterion and our proposal to approve new technology add-on payments for the 4WEB Medical ATS for FY 2026.

2. AeroPace® System

The following table summarizes the information provided in the new technology add-on payment application for the AeroPace® System.

		AeroPace® System
Technology Info	**Applicant**	Lungpacer(R) Medical Inc.
	Description	Per the applicant, the AeroPace® System is intended for temporary stimulation of the phrenic nerve(s) to increase diaphragmatic strength. Per the applicant, it is indicated to improve weaning success increase weaning, reduce ventilator days, and reduce reintubation – in patients ages 18 years or older on mechanical ventilation (MV) >96 hours and who have not weaned.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241004B25FM
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the proposed indication for use is to achieve earlier weaning from invasive MV in patients aged 18 years or older, who are not hypervolemic, and who have failed at least two spontaneous breathing trials.
	FDA marketing authorization indication	The AeroPace® System is indicated to improve weaning success - increase weaning, reduce ventilator days, and reduce reintubation - in patients ages 18 years or older on MV ≥96 hours and who have not weaned.
	FDA marketing authorization information	Per the applicant, the FDA-approved indication is consistent with its clinical trials and Breakthrough Device designation and MV treatment guidelines. The applicant stated that the Lungpacer Diaphragm Pacing Therapy System is the generic name, while the AeroPace® System is the commercial name for the device.
	FDA marketing authorization date	December 4, 2024
	Commercial availability	According to the applicant, the AeroPace® System is not commercially available immediately after FDA approval as it will take time following FDA approval to finalize the company's commercial operations and market materials to include the final labeling and regulatory information. The applicant stated that it anticipates the AeroPace® System to be commercially available on October 1, 2025.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the AeroPace® System.
	Claims identified	Broad Analysis: 83,011 claims mapping to 344 MS-DRGs, with 30% of claims mapping to MS-DRG 870 (Septicemia or Severe Sepsis with MV >96 Hours). Narrow Analysis: 15,925 claims mapping to 264 MS-DRGs, with 31% of claims mapping to MS-DRG 870 (Septicemia or Severe Sepsis with MV >96 Hours).
	Charges removed for prior technology	According to the applicant, the use of the AeroPace® System would be additive to the current practice. The applicant did not remove any direct charges for prior technologies being replaced, as there is no current technology for patients who may be treated with temporary transvenous diaphragm activation (TTDA) using the AeroPace® System. The applicant removed the indirect charges in the cost analysis. Per the applicant, the AeroPace® System may result in up to three fewer days on MV. The applicant estimated the charges per day associated with MV based on a presentation published by the Agency for Healthcare Research and Quality (AHRQ) in 2017. The applicant multiplied the charges per day by three days and inflated the charges using the annual IPPS rate-of-change for charges amount from FY 2018 through FY 2023. The applicant then applied the three-year inflation factor from the IPPS outlier fixed-loss threshold calculation to the respective amounts.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule and the impact file posted with the FY 2023 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant did not add any direct nor indirect charges related to the new technology. Per the applicant, the clinical data indicates that ICU days and charges for other indirect services are unchanged and are determined or influenced based on other patient clinical factors.
	Cost analysis results	Broad Analysis: - Average case-weighted threshold amount: $226,579 - Final inflated average case-weighted standardized charge per case: $374,929 Narrow Analysis: - Average case-weighted threshold amount: $230,227 - Final inflated average case-weighted standardized charge per case: $365,719 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both analyses, the applicant asserted that the AeroPace® System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received PMA approval from FDA is

included within the scope of the Breakthrough Device designation indication, it appears that the FDA-approved indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.

We note that the applicant stated that the technology is not yet available for sale because it would take time following FDA approval to finalize its commercial operations and market materials to include the final labeling and regulatory information. We are interested in additional information regarding the cause for any delay in the technology's market availability, as it received FDA approval on December 4, 2024, and the applicant states that it is not expected to be commercially available until October 1, 2025.

We agree with the applicant that the AeroPace® System meets the cost criterion and are therefore proposing to approve the AeroPace® System for new technology add-on payments for FY 2026, for use to improve weaning success—increase weaning, reduce ventilator days, and reduce reintubation—in patients ages 18 years or older on MV ≥96 hours and who have not weaned.

The applicant has not provided an estimate for the cost of the AeroPace® System at the time of this proposed rule. The applicant stated that the operating components include the AeroPace® Catheter and the Airway Sensor. The applicant also noted the capital components of the AeroPace® Neurostimulation Console, Catheter Cable, Handheld Controller, and Airway Sensor Cable. Because section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under that subsection, which establishes the system for payment of the operating costs of inpatient hospital services, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (86 FR 45145). As noted, the applicant stated that the cost of the AeroPace® Neurostimulation Console, Catheter Cable, Handheld Controller, and Airway Sensor Cable are capital costs. Therefore, it appears that these components are not eligible for new technology add-on payment because, as discussed in prior rulemaking and as noted, we only make new technology add-on payments for operating costs (72 FR 47307 through 47308). We expect the applicant to submit cost information prior to the final rule, and we will provide an update regarding the new technology add-on payment amount for the technology, if approved, in the final rule. Any new technology add-on payment for the AeroPace® System would be subject to our policy under § 412.88(a)(2) where we limit new technology add-on payment to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case.

We invite public comments on whether the AeroPace® System meets the cost criterion and our proposal to approve new technology add-on payments for the AeroPace® System for FY 2026.

3. AGENT™ Paclitaxel-Coated Balloon Catheter

The following table summarizes the information provided in the new technology add-on payment application for the AGENT™ Paclitaxel-Coated Balloon Catheter.

BILLING CODE 4120–01–P

	AGENT™ Paclitaxel-Coated Balloon Catheter	
Technology Info	Applicant	Boston Scientific Corporation
	Description	Per the applicant, the AGENT™ Paclitaxel-Coated Balloon Catheter is a semi-compliant percutaneous coronary intervention (PCI) catheter; the balloon portion of the device is coated with a TransPax coating. Per the applicant, the AGENT™ Drug Coated Balloon is designed to inhibit restenosis by delivering the drug, paclitaxel, to the diseased coronary arterial tissue.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007T6YMA
FDA Info	Breakthrough Device designation indication	Per the applicant, the AGENT Paclitaxel Drug Coated Balloon Catheter (Agent DCB) is indicated for Percutaneous Transluminal Coronary Angioplasty (PTCA) in coronary arteries 2.0 mm to 4.0 mm in diameter to treat in-stent restenosis (ISR), up to 26mm in length, for the purpose of improving myocardial perfusion.
	FDA marketing authorization indication	The AGENT™ Paclitaxel-Coated Balloon Catheter is intended to be used after appropriate vessel preparation in adult patients undergoing PCI in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating ISR.
	FDA marketing authorization information	Per the applicant, the FDA-approved indication is for the same patient population as the Breakthrough Device designation, but the language is slightly different because changes to the indication verbiage were made to provide additional clarity.
	FDA marketing authorization date	February 29, 2024
	Commercial availability	The applicant stated that the technology was commercially available immediately after FDA approval.
Coding	Unique ICD-10-PCS Code(s)	The applicant provided a list of procedure codes that, effective October 1, 2024, may be used to uniquely identify procedures involving the use of the AGENT™ Paclitaxel-Coated Balloon Catheter under the ICD-10-PCS coding system in the online application posting.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the AGENT™ Paclitaxel-Coated Balloon Catheter.
	Claims identified	15,435 claims mapping to 101 MS-DRGs, with 33.86% of claims mapping to MS-DRG 321 (Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices) and 23.79% of claims mapping to MS-DRG 322 (Percutaneous Cardiovascular Procedures with Intraluminal Device without MCC).
	Charges removed for prior technology	The applicant did not remove charges for PCI angioplasty procedures with a "Z" in the 6th position of the ICD-10-PCS code indicating no stent was utilized. The applicant removed estimated charges for PCI stent procedures with a "D","E","F","G" in the 6th position of the code indicating one or more bare metal stents (BMS) were utilized. Per the applicant, the median cost of C1876 (Stent, non-coated/non-covered, with delivery system) published by CMS in the documentation released with the CY25 OPPS proposed rule rate setting file was converted to charges using the national departmental cost-to-charge ratio for Implantable Devices published in the FY 2025 IPPS/LTCH PPS final rule. The applicant removed charges for PCI stent procedures with a "4","5","6","7" in the 6th position of the ICD-10-PCS code indicating one or more drug-eluding stents (DES) were utilized. Per the applicant, the median cost of C1874 (coated/covered, with delivery system) published by CMS in the documentation released with the CY25 OPPS proposed rule rate setting file was converted to charges using the national departmental cost-to-charge ratio for implantable devices published in the FY 2025 IPPS/LTCH PPS final rule. In both scenarios, the applicant removed charges for only one stent, regardless of the number of arteries and devices indicated by the procedure code because it was unclear how many stents would be replaced by the technology, as the ISR diagnosis code is not artery specific. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule and the impact file posted with the FY 2023 IPPS/LTCH final rule.
	Inflation factor	The applicant applied a 3-year inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges associated with one AGENT™ Drug-Coated Balloon by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Average case-weighted threshold amount: $139,326 Final inflated average case-weighted standardized charge per case: $186,485 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received PMA approval from FDA is

included within the scope of the Breakthrough Device designation indication, it appears that the FDA-approved indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.[187]

We agree with the applicant that the AGENT™ Paclitaxel-Coated Balloon Catheter meets the cost criterion and are therefore proposing to approve the AGENT™ Paclitaxel-Coated Balloon Catheter for new technology add-on payments for FY 2026 for use after appropriate vessel preparation in adult patients undergoing PCI in coronary arteries 2.0 mm to 4.0 mm in diameter and lesions up to 26 mm in length for the purpose of improving myocardial perfusion when treating ISR.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the AGENT™ Paclitaxel-Coated Balloon Catheter to the hospital to be $6,175 per patient. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the AGENT™ Paclitaxel-Coated Balloon Catheter would be $4,013.75 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the AGENT™ Paclitaxel-Coated Balloon Catheter meets the cost criterion and our proposal to approve new technology add-on payments for the AGENT™ Paclitaxel-Coated Balloon Catheter for FY 2026.

4. alfapump® System

The following table summarizes the information provided in the new technology add-on payment application for the alfapump® system.

BILLING CODE 4120–01–P

[187] Breakthrough Devices Program *https://www.fda.gov/medical-devices/how-study-and-market-your-device/breakthrough-devices-program.*

	alfapump® system	
Technology Info	Applicant	Sequana Medical NV
	Description	Per the applicant, the alfapump® system is an implanted subcutaneous device with rechargeable battery allowing fluid removal from the peritoneal cavity to the urinary bladder where it is then eliminated via urination. Per the applicant, the alfapump® system provides an alternative to standard treatments for refractory ascites, that is, large volume paracentesis (LVP) with albumin and transjugular intrahepatic shunts.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP240930MJNT7
FDA Info	Breakthrough Device designation indication	Per the applicant, the alfapump® System is intended for single patient use only in adult patients with refractory or recurrent ascites due to liver cirrhosis. It is indicated for the removal of excess peritoneal fluid from the peritoneal cavity into the bladder, where it can be eliminated through normal urination.
	FDA marketing authorization information	This device is intended for single patient use only in adult patients with refractory or recurrent ascites due to liver cirrhosis. It is indicated for the removal of excess peritoneal fluid from the peritoneal cavity into the bladder, where it can be eliminated through normal urination.
	FDA marketing authorization date	December 20, 2024
	Commercial availability	According to the applicant, the alfapump® system is not expected to be commercially available immediately after FDA approval due to internal production capacity and the phased roll out plan into Liver Transplant centers to have the best possible care for patients suffering from recurrent and refractory ascites. The applicant stated that the alfapump® system would not be commercially available until July 2025.
Coding	Unique ICD-10-PCS Code(s)	Effective October 1, 2020, the following ICD-10-PCS codes may be used to uniquely describe procedures involving the use of the alfapump® system: 0W1G3J6 (Bypass peritoneal cavity to bladder with synthetic substitute, percutaneous approach) and 0JH80YZ (Insertion of other device into abdomen subcutaneous tissue and fascia, open approach).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the alfapump® system.
	Claims identified	838 claims mapping to 3 MS-DRGs, with 75.3% of claims mapping to MS-DRG 423 (Other Hepatobiliary or Pancreas O.R. Procedures with MCC).
	Charges removed for prior technology	The applicant estimated the charges for the prior technology by calculating the average of the total revenue charges per claim from revenue centers 0274, 0278, and 0279 for each MS-DRG. The applicant stated that while revenue centers 0278 and 0279 would be used a proxy for device charges of prior technologies, a small number of cases (<11) also include line item charges in revenue center 0274, and therefore, the applicant added revenue center 0274 to accurately remove all prior device charges. The applicant removed indirect charges related to prior technology using a length of stay (LOS) reduction, along with the sum of the average specific identified drug charges, average ICU charges, average CCU charges, and average OR charges of analyzed claims for each MS-DRG. According to the applicant, the LOS reduction adjusts room and board charges to account for potentially shorter LOS for the use of technology than the analyzed hospital claims. The applicant determined the room and board charges by summing the total revenue line-item charges per claim for Room and Board (revenue centers 0110, 0111, 0117, 0119, 0120, 0121, 0127, 0129, 0131, 0151, and 0164) and calculated the average for each MS-DRG. The applicant estimated the LOS for implantation of the alfapump® system based on its clinical trial. The applicant calculated the LOS reduction by reducing the average room and board charges for hospital claims by the proportional difference between the average LOS for hospital claims and the implantation of the alfapump® system. The applicant determined the specific identified drug, ICU, CCU, and OR charges by summing the total revenue line-item charges per claim associated with ICU (revenue centers 0200, 0201, 0202, 0206, 0208, and 0209), CCU (revenue centers 0210, 0214, and 0219), OR (revenue centers 0360, 0361, and 0369), and Specific Drug (revenue centers 0634, 0635, and 0636). Per the applicant, radiology, CT scans, and other diagnostic imaging are assumed to be utilized regardless of prior or new technology used. The applicant stated that other medical and sterile surgical supplies as well as general anesthesia are expected to be utilized at a similar rate to prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule and correction amendment.

	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the alfapump® system by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. To calculate the average operating room costs for implantation of the alfapump® system, the applicant used an estimated surgical time based on its clinical trial and an estimated average operating room cost per minute based on the literature. The applicant added indirect charges related to the new technology by dividing the average operating room costs related to the new technology by the national average cost-to-charge ratio of 0.16 for Operating Room from the FY 2025 IPPS/LTCH PPS final rule.
	Cost analysis results	Average case-weighted threshold amount: $130,906 Final inflated average case-weighted standardized charge per case: $260,109 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the alfapump® system meets the cost criterion.

BILLING CODE 4120–01–C

As noted, the applicant stated that the technology is not expected to be commercially available until July 2025 due to its internal production capacity and the phased roll out plan into Liver Transplant centers. We are interested in additional information regarding any delay, such as whether the technology would be available for sale during its phased roll out plan.

We agree with the applicant that the alfapump® system meets the cost criterion and are therefore proposing to approve the alfapump® system for new technology add-on payments for FY 2026, in adult patients with refractory or recurrent ascites due to liver cirrhosis for the removal of excess peritoneal fluid from the peritoneal cavity into the bladder.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the alfapump® system to the hospital to be $30,000 per patient. Per the applicant, the alfapump® system is a single patient use implantable device, and one device is used per hospital stay. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the alfapump® system would be $19,500 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the alfapump® system meets the cost criterion and our proposal to approve new technology add-on payments for the alfapump® system.

5. aprevo®-C Cervical Interbody Fusion Device

The following table summarizes the information provided in the new technology add-on payment application for the aprevo®-C cervical interbody fusion device.

BILLING CODE 4120–01–P

	aprevo®-C cervical interbody fusion device	
Technology Info	**Applicant**	Carlsmed, Inc.
	Description	Per the applicant, the aprevo®-C cervical interbody fusion devices are intended to stabilize intervertebral spaces of the cervical spine (C2-T1) and facilitate fusion. Per the applicant, the devices are custom-made to achieve a patient-specific cervical alignment plan and have surfaces that match the irregular topography of each patient's cervical vertebral endplates.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007U130K
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the aprevo®-C cervical interbody fusion devices are intended for use in skeletally mature patients with degenerative cervical conditions including cervical disc degeneration, stenosis, deformity, and/or instability of the cervical spine (C2-T1) at one or more levels. Degenerative disc disease (DDD) is defined as discogenic pain with degeneration of the disc confirmed by history and radiographic studies. These patients should have had at least six weeks of non-operative treatment. These devices are to be filled with autograft bone and/or allogenic bone graft composed of cancellous, cortical, and/or cortico-cancellous bone. The aprevo®-C cervical interbody fusion devices can be used with supplemental fixation, such as an anterior plate or as a standalone construct to be used integrated bone screw fixation.
	FDA marketing authorization indication	The aprevo® Cervical ACDF Interbody System are interbody fusion devices indicated at one or more levels of the cervical spine (C2-T1) in patients with the following degenerative cervical conditions: cervical disc disease, instability, trauma including fractures, deformity defined as kyphosis, lordosis, or scoliosis, cervical spondylotic myelopathy, spinal stenosis, and failed previous fusion. Cervical disc disease is defined as discogenic pain with degeneration of the disc confirmed by history and radiographic studies. These patients should be skeletally mature and have had at least six (6) weeks of non-operative treatment. These devices are to be filled with autograft bone and/or allogenic bone graft composed of cancellous, cortical, and/or cortico-cancellous bone. The aprevo® Cervical ACDF Interbody System must be used with supplemental fixation systems. For hyperlordotic corrections (≥ 20 lordosis), the system must be used with at least an anterior cervical plate as supplemental fixation. The aprevo® Cervical ACDF-X Interbody System are interbody fusion devices indicated at one or more levels of the cervical spine (C2-T1) in patients with the following degenerative cervical conditions: cervical disc disease, instability, trauma including fractures, deformity defined as kyphosis, lordosis, or scoliosis, cervical spondylotic myelopathy, spinal stenosis, and failed previous fusion. Cervical disc disease is defined as discogenic pain with degeneration of the disc confirmed by history and radiographic studies. These patients should be skeletally mature and have had at least six (6) weeks of non-operative treatment. These devices are to be filled with autograft bone and/or allogenic bone graft composed of cancellous, cortical, and/or cortico-cancellous bone. When used as a standalone system, the aprevo® Cervical ACDF-X Interbody implant with integrated screw fixation is intended for use at multiple contiguous levels, or up to two levels when used in trauma, deformity or failed previous fusions. Deformity procedures to correct coronal angulation or any use of hyperlordotic correction (>20 °) must include supplemental fixation such as posterior cervical screw fixation or anterior plating.
	FDA marketing authorization information	Per the applicant, the FDA 510(k) indication was modified from the Breakthrough Device designation indications to remove the unlimiting terminology "degenerative cervical conditions including…" and to describe the specific indications using language that matches that use in predicate cervical interbody devices. The applicant also stated that there are two separate Indications for Use statements to distinguish between supplemental fixation and the standalone indication in which integrated fixation is used, both of which were included in the Breakthrough Device designation.
	FDA marketing authorization date	November 15, 2024
	Commercial availability	According to the applicant, the aprevo®-C cervical interbody fusion device will not be immediately available for sale because the commercial release date will align with the start of the new technology add-on payment. The applicant stated that the technology is expected to be commercially available on October 1, 2025.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-PCS codes and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the aprevo®-C cervical interbody fusion device.
	Claims identified	Cost Analysis 1: 17,041 claims mapping to 69 MS-DRGs, with 42.57% of claims mapping to MS-DRG 472 (Cervical Spinal Fusion with CC).

		Cost Analysis 2: 15,140 claims mapping to 5 MS-DRGs, with 47.92% of claims mapping to MS-DRG 472 (Cervical Spinal Fusion with CC).
	Charges removed for prior technology	Per the applicant, the aprevo®-C cervical interbody fusion device will replace other implantable devices, but it is difficult to identify the exact differences in care that patients treated with the aprevo®-C cervical interbody fusion device would receive, both before and in conjunction with treatment with the aprevo®-C cervical interbody fusion device. Therefore, to be conservative, the applicant removed 100% of charges associated with implantable devices. The applicant stated that this removal could over-estimate charges for other devices that would be replaced by the aprevo®-C cervical interbody fusion device. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS interim final action with comment period.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the aprevo®-C cervical interbody fusion device by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Cost Analysis 1: - Average case-weighted threshold amount: $140,223 - Final inflated average case-weighted standardized charge per case: $246,092 Cost Analysis 2: - Average case-weighted threshold amount: $135,395 - Final inflated average case-weighted standardized charge per case: $230,290 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both analyses, the applicant asserted that the aprevo®-C cervical interbody fusion device meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received 510(k) clearance from FDA is included within the scope of the Breakthrough Device designation, it appears that the FDA 510(k) clearance indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.

We note that the applicant stated that the technology is expected to be commercially available starting October 1, 2025, to align with the start of the new technology add-on payment. We are interested in additional information regarding the cause for any delay in the technology's market availability as the technology received FDA clearance on November 15, 2024.

We agree with the applicant that the aprevo®-C cervical interbody fusion device meets the cost criterion and are therefore proposing to approve the aprevo®-C cervical interbody fusion device for new technology add-on payments for FY 2026, as interbody fusion devices indicated at one or more levels of the cervical spine (C2–T1) in patients with the following degenerative cervical conditions: cervical disc disease, instability, trauma including fractures, deformity defined as kyphosis, lordosis, or scoliosis, cervical spondylotic myelopathy, spinal stenosis, and failed previous fusion.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the aprevo®-C cervical interbody fusion device to the hospital to be $32,500 per patient. The applicant stated that the average number of cervical interbody fusion (CIBF) devices per procedure is 4.42 if the patient has a deformity and 1.7 if the patient has a degenerative condition. Per the applicant, based on the projected mix between these diagnoses, the average number of aprevo®-C CIBF per procedure is expected to be 3.25. The applicant stated that the selling price will be $19,000 for the first level, and $6,000 for each additional level. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the aprevo®-C cervical interbody fusion device would be $21,125 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the aprevo®-C cervical interbody fusion device meets the cost criterion and our proposal to approve new technology add-on payments for the aprevo®-C cervical interbody fusion device for FY 2026.

6. CERAMENT® G

The following table summarizes the information provided in the new technology add-on payment application for CERAMENT® G.

BILLING CODE 4120–01–P

	CERAMENT® G	
Technology Info	Applicant	BONESUPPPORT, Inc.
	Description	Per the applicant, CERAMENT® G is an implantable bone void filler (device/drug combination product), consisting of calcium sulfate, hydroxyapatite, and gentamicin sulfate. Per the applicant, CERAMENT® G elutes 17.5 mg gentamicin/ mL paste.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP2410079G5KA
FDA Info	Breakthrough Device designation indication	Per the applicant, CERAMENT G is a resorbable, gentamicin-containing ceramic bone graft indicated for use as a bone void filler as part of the surgical procedure where there is a risk of bacterial contamination such as open, fresh fractures with osseous defects which are surgically created or a result of traumatic injury to the bone. CERAMENT G can augment provisional hardware to help support bone fragments during the surgical procedure. CERAMENT G resorbs and is replaced by bone during the healing process and is protected from bacterial colonization by gentamicin. CERAMENT™ G protects bone healing by reducing subsequent colonization of the bone void filler in orthopedic surgical procedures.
	FDA marketing authorization indication	CERAMENT G is a resorbable, gentamicin-eluting ceramic bone void filler intended for use in defects in the extremities of skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement as part of the standard treatment approach to bone infection and open fractures. By eluting gentamicin, CERAMENT G can reduce the occurrence and reoccurrence of bone infection from gentamicin sensitive microorganisms in order to protect bone healing. CERAMENT G can augment provisional hardware to help support bone fragments during the surgical procedure. The cured paste acts only as a temporary support media and is not intended to provide structural support during the healing process. CERAMENT G resorbs and is replaced by bone during the healing process.
	FDA marketing authorization information	The applicant stated that open fracture is included in both the Breakthrough Device Designation and FDA 510(k) clearance indication.
	FDA marketing authorization date	March 13, 2024
	Commercial availability	The applicant stated that the technology was commercially available immediately after FDA clearance.
Coding	Unique ICD-10-PCS Code(s)	Effective October 1, 2021, the following ICD-10-PCS codes may be used to uniquely describe procedures involving the use of CERAMENT® G: XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes and ICD-10-PCS codes used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for CERAMENT® G.
	Claims identified	6,521 claims mapping to 39 MS-DRGs, with 20.92% of claims mapping to MS-DRG 493 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur with CC).
	Charges removed for prior technology	Per the applicant, no prior technology is expected to be replaced by CERAMENT® G based on discussions with surgeons and a review of published literature on open fracture management. The applicant stated that it did not remove any direct charges for prior technologies being replaced, as it believed that there are no standard treatments given to reduce the occurrence of infection in open fractures beyond standard systemic antibiotics, which will still be provided to patients treated with CERAMENT® G. The applicant did not remove any indirect charges as it believed that the choice of device is the sole difference between cases treated with CERAMENT® G and cases treated with prior technology. The applicant stated that besides the choice of device, the procedure is the same, and the services provided during the course of the hospitalization are the same.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the FY 2023 MedPAR preliminary rule file (fee for service claims only) and impact and standardizing files posted with the FY 2024 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for CERAMENT® G by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.297 for Supplies and Equipment from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology, as it believed that there are no differences from prior technology other than choice of device.
	Cost analysis results	Average case-weighted threshold amount: $116,339.66 Final inflated average case-weighted standardized charge per case: $203,490.37 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that CERAMENT® G meets the cost criterion.

BILLING CODE 4120–01–C

We note that under the eligibility criteria for approval under the alternative pathway for certain transformative devices, only the use of

the technology for the indication that corresponds to the technology's Breakthrough Device designation would be eligible for the new technology add-on payment. Therefore, only the use of CERAMENT® G for open fractures, and the FDA Breakthrough Device designation it received for that use, are relevant for purposes of the new technology add-on payment application for FY 2026. We note that CERAMENT® G is also indicated for use for bone infections and was approved for new technology add-on payment for that indication in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48961 through 48966). As discussed in section II.E.4. of the preamble of this proposed rule, we are proposing to discontinue making new technology add-on payments for FY 2026 for use of CERAMENT® G for bone infections. We believe cases involving the use of CERAMENT® G related to bone infections, which would no longer be eligible for new technology add-on payment in FY 2026, would be identified by the ICD–10–PCS code XW0V0P7 (Introduction of antibiotic-eluting bone void filler into bones, open approach, new technology group 7) in combination with the ICD–10–CM codes in category M86 (Osteomyelitis). We are inviting public comments on the use of these codes to exclude the indication for use of CERAMENT® G related to bone infections, which would not be eligible for the new technology add-on payment for FY 2026, if approved.

We agree with the applicant that CERAMENT® G meets the cost criterion and are therefore proposing to approve CERAMENT® G for new technology add-on payments for FY 2026 for use as a bone void filler intended for use in defects in the extremities of skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement as part of the standard treatment approach to open fractures.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost to the hospital to be $8,750 per patient. The applicant stated that the cost of 10 cc of CERAMENT® G would be $8,750, and expected that 10 cc of CERAMENT® G would be used per patient as indicated in a long-term study of 81 patients with open fractures.[188]

[188] Henry, J, Ali, A., and Elkhidir, I et al. (2023). Long-term follow-up of open Gustilo-Anderson IIIB fractures treated with an adjuvant local antibiotic hydroxyapatite bio-composite. *Cureus* 15(5): e39103. DOI 10.7759/cureus.39103.

We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of CERAMENT® G would be $5,687.50 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether CERAMENT® G meets the cost criterion and our proposal to approve new technology add-on payments for CERAMENT® G for FY 2026.

7. Dexcom G7 Hospital Continuous Glucose Monitoring (CGM) System

The following table summarizes the information provided in the new technology add-on payment application for the Dexcom G7 Hospital CGM System.

BILLING CODE 4120–01–P

	Dexcom G7 Hospital Continuous Glucose Monitoring (CGM) System	
Technology Info	**Applicant**	Dexcom
	Description	Per the applicant, the Dexcom G7 Hospital Continuous Glucose Monitoring System (Dexcom Hospital System) is a real-time CGM device indicated for use by healthcare professionals to monitor and manage glucose levels of patients ages 18 years and older in a hospital environment.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007GNM42
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Dexcom G6 Pro Hospital CGM System (Dexcom Hospital System) is a real-time CGM device indicated for use by healthcare professionals to monitor and manage glucose levels of insulin-treated diabetes patients ages 18 years and older in a hospital environment. The Dexcom Hospital System aids the healthcare professional in the detection of episodes of hyperglycemia and hypoglycemia, facilitating acute therapy adjustments. Interpretation of the real-time Dexcom Hospital System results should be made by the healthcare professional based on the glucose trends and several sequential readings over time. The Dexcom Hospital System is intended to interface with authorized hospital network partner systems to send glucose data to EMRs for retrospective review by a healthcare professional. The Dexcom Hospital System can be used alone or in conjunction with cleared or approved hospital network partner systems for managing a patient's glucose or assessing glycemic variability.
	FDA marketing authorization information	The applicant anticipates a De Novo classification decision from FDA before May 1, 2025. Per the applicant, the expected FDA indication includes any patients ages 18 or older that requires CGM in the hospital inpatient setting, while the Breakthrough Device Designation indication is for insulin-treated diabetic patients. The applicant stated that the name of the technology has been changed to the Dexcom G7 Hospital Continuous Glucose Monitoring System.
	Commercial availability	The applicant stated that it anticipates that the technology will be commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Dexcom G7 Hospital CGM System.
	Claims identified	Scenario 1: 744,284 claims mapping to 757 MS-DRGs, with none exceeding more than 8% of the total identified cases. Scenario 2: 736,840 claims mapping to 756 MS-DRGs, with none exceeding more than 8% of the total identified cases.
	Charges removed for prior technology	The applicant removed 100% of charges associated with revenue centers 0270, 0271, 0272 and 0279. The applicant stated that while the use of the Dexcom G7 Hospital CGM System is not expected to replace any other supplies, the charges associated with these revenue centers were removed to be as conservative as possible. The applicant did not remove any indirect charges as the applicant believed that the financial impact of utilizing the Dexcom G7 Hospital CGM System on hospital resources compared to prior technologies is minimal.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant did not add any direct nor indirect charges related to the new technology. Per the applicant, no other hospital charges were assumed to be required for implanting the technology.
	Cost analysis results	Scenario 1: - Average case-weighted threshold amount: $75,695 - Final inflated average case-weighted standardized charge per case: $79,339 Scenario 2: - Average case-weighted threshold amount: $75,533 - Final inflated average case-weighted standardized charge per case: $79,009 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that the Dexcom G7 Hospital CGM System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we note that under the eligibility criteria for approval under the alternative pathway for

certain transformative devices, only the use of the technology for the indication that corresponds to the technology's Breakthrough Device designation would be eligible for the new technology add-on payment for FY 2026. As noted by the applicant, the expected De Novo indication is not limited to insulin-treated diabetes patients, as noted in the Breakthrough Device designation. Therefore, it appears that only the use of the Dexcom G7 Hospital CGM System for insulin-treated diabetes, and the FDA Breakthrough Device designation it received for that use, would be relevant for purposes of the new technology add-on payment application for FY 2026.

We believe the relevant ICD–10–CM codes to identify the Breakthrough Device-designated indication for use of the technology in insulin-treated diabetes patients would be the ICD–10–CM code Z79.4 (Long term (current) use of insulin) in combination with: the ICD–10–CM codes in the categories E08 (Diabetes mellitus due to underlying condition), E09 (Drug or chemical induced diabetes mellitus), E11 (Type 2 diabetes mellitus), or E13 (Other specified diabetes mellitus), or the ICD–10–CM codes in the subcategories O24.1 (Pre-existing type 2 diabetes mellitus, in pregnancy, childbirth and the puerperium), O24.3 (Unspecified pre-existing diabetes mellitus in pregnancy, childbirth and the puerperium), O24.8 (Other pre-existing diabetes mellitus in pregnancy, childbirth, and the puerperium), or O24.9 (Unspecified diabetes mellitus in pregnancy, childbirth and the puerperium). Insulin-treated diabetes patients may also be identified by: the ICD–10–CM codes in category E10 (Type 1 diabetes mellitus), the ICD–10–CM codes in the subcategory O24.0 (Pre-existing type 1 diabetes mellitus, in pregnancy, childbirth and the puerperium), or the ICD–10–CM codes O24.414 (Gestational diabetes mellitus in pregnancy, insulin controlled), O24.424 (Gestational diabetes mellitus in childbirth, insulin controlled), or O24.434 (Gestational diabetes mellitus in the puerperium, insulin controlled). We are inviting public comments on the use of these ICD–10–CM diagnosis codes to identify the Breakthrough Device-designated indication for purposes of the new technology add-on payment, if approved.

We agree with the applicant that the Dexcom G7 Hospital CGM System meets the cost criterion and are therefore proposing to approve the Dexcom G7 Hospital CGM System for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

The applicant has not provided an estimate for the cost of the Dexcom G7 Hospital CGM System at the time of this proposed rule. The applicant stated that the following components are included for the cost of the technology: the operating cost of the Dexcom G7 Hospital CGM Wearable Sensor and Applicator, and the capital cost of the Dexcom G7 Hospital CGM System Display App. Because section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under that subsection, which establishes the system for payment of the operating costs of inpatient hospital services, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (86 FR 45145). As noted, the applicant stated that the cost of the Dexcom G7 Hospital CGM System Display App is a capital cost. Therefore, it appears that this component is not eligible for new technology add-on payment because, as discussed in prior rulemaking and as noted, we only make new technology add-on payments for operating costs (72 FR 47307 through 47308). We expect the applicant to submit cost information prior to the final rule, and we will provide an update regarding the new technology add-on payment amount for the technology, if approved, in the final rule. Any new technology add-on payment for the Dexcom G7 Hospital CGM System would be subject to our policy under § 412.88(a)(2) where we limit new technology add-on payment to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case.

We invite public comments on whether the Dexcom G7 Hospital CGM System meets the cost criterion and our proposal to approve new technology add-on payments for the Dexcom G7 Hospital CGM System for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

8. DrugSorb-ATR Device

The following table summarizes the information provided in the new technology add-on payment application for the DrugSorb-ATR Device.

BILLING CODE 4120–01–P

	DrugSorb-ATR Device	
Technology Info	**Applicant**	CytoSorbents, Inc.
	Description	Per the applicant, the DrugSorb-ATR device is indicated for the removal of ticagrelor to reduce the severity of perioperative bleeding in patients undergoing coronary artery bypass grafting (CABG) within two days of ticagrelor discontinuation.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP24100700MP6
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the CytoSorb device is indicated for the removal of ticagrelor in a cardiopulmonary bypass circuit during emergent and urgent cardiothoracic surgery.
	FDA marketing authorization information	The applicant anticipates a De Novo classification decision from FDA before May 1, 2025, consistent with its Breakthrough Device designation. Per the applicant, the expected FDA indication for this device includes a subset of procedures that are included in the Breakthrough Designation indication. The expected FDA indication is for the removal of ticagrelor in CABG procedures as opposed to the broader Breakthrough Designation indication in emergent and urgent cardiothoracic surgery. Per the applicant, the CytoSorb device named in the Breakthrough Device designation letter is the same device as the DrugSorb-ATR Device.
	Commercial availability	The applicant anticipates that this technology will be commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the DrugSorb-ATR Device.
	Claims identified	5,893 claims mapping to 28 MS-DRGs, with 21.72% of claims mapping to MS-DRG 236 (Coronary Bypass without Cardiac Catheterization without MCC) and 20.07% of claims mapping to MS-DRG 234 (Coronary Bypass with Cardiac Catheterization or Open Ablation without MCC).
	Charges removed for prior technology	The applicant did not remove charges or indirect charges related to the prior technology. Per the applicant, the use of the technology is additive and would not replace existing technologies, and the financial impact of utilizing the new technology on hospital resources compared to prior technologies is minimal.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the expected hospital acquisition cost of the technology by the national cost to charge ratio of 0.160 for Operating Room from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Average case-weighted threshold amount: $236,691 Final inflated average case-weighted standardized charge per case: $336,491 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the DrugSorb-ATR Device meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we agree with the applicant that the DrugSorb-ATR device meets the cost criterion and are therefore proposing to approve the DrugSorb-ATR device for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the DrugSorb-ATR device to the hospital to be $7,000 per patient. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the DrugSorb-ATR device would be $4,550 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the DrugSorb-ATR device meets the cost criterion and our proposal to approve new technology add-on payments for the DrugSorb-ATR

device for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

9. Emily's Care Nourish Test System (Model 1)

The following table summarizes the information provided in the new technology add-on payment application for the Emily's Care Nourish Test System (Model 1).

BILLING CODE 4120–01–P

	Emily's Care Nourish Test System (Model 1)	
Technology Info	**Applicant**	Lactation Lab Inc.
	Description	Per the applicant, the Emily's Care Nourish Test System (Model 1) is an FDA cleared Breakthrough Device. Per the applicant, it is an analytical system designed to measure the concentration of fat, carbohydrates (lactose), and protein in human milk at point of care using an enzyme-based test strip and a smartphone camera with an associated application.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241006EAA50
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the macronutrient breast milk test strip quantitatively measures the concentration of fat, carbohydrate, and protein in human milk. The associated smartphone app provides a calculated value for energy (calories) and is intended to be used in conjunction with other clinical assessments to aid in the nutritional management and treatment of very low birth weight (VLBW) in the NICU, for both neonates and infants less than 6 months of age.
	FDA marketing authorization indication	The Emily's Care Nourish Test System (Model 1) quantitatively measures the concentration of protein, fat (triglycerides), and carbohydrates (lactose) in human milk. It also provides calculated values for calories (energy). These measurements, in conjunction with other clinical assessments, may be used to aid in the nutritional management of newborns, including preterm, and infants.
	FDA marketing authorization information	Per the applicant, the device was not named in the Breakthrough Device designation, and the device has since been named Emily's Care Nourish Test System (Model 1).
	FDA marketing authorization date	May 3, 2024
	Commercial availability	The applicant stated the technology was not commercially available immediately after FDA clearance because the applicant is a small business that needs to raise capital for manufacturing and because of manufacturing delays. The applicant anticipates the technology will become available on May 1, 2025.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	The applicant identified 2 MS-DRGs, MS-DRG 790 (Extreme Immaturity or Respiratory Distress Syndrome, Neonate) and MS-DRG 791 (Prematurity with Major Problems), as relevant to the cost analysis for this technology. The applicant did not provide a cost criterion codes and MS-DRGs attachment listing applicable codes used for purposes of its cost analysis.
	Claims identified	The applicant estimated there would be 25,000 claims mapping to 2 MS-DRGs, with 30% of claims mapping to MS-DRG 790 (Extreme Immaturity or Respiratory Distress Syndrome, Neonate) and 70% of claims mapping to MS-DRG 791 (Prematurity with Major Problems). To estimate the claim volume, the applicant estimated the total live births in the US was 4 million, and stated that 10.4% of infants would be premature based on data from March of Dimes. The applicant estimated that low birth weight (LBW) infants would be 8.6% of births (344,000), and VLBW infants would be 1.4% of births (56,000). The applicant stated that 50% of VLBW infants would be in MS-DRG 790 (28,000), and 50% of LBW infants would be in MS-DRG 791 (172,000), resulting in 200,000 total annual cases. The applicant estimated that initial rollout would be 25% of cases, resulting in 25,000 claims.
	Charges removed for prior technology	The applicant did not remove direct or indirect charges related to the prior technology.
	Standardized charges	For the average standardized charge per case, the applicant used the same values as the average charge per case (unstandardized with case weight).
	Inflation factor	The applicant applied an inflation factor of 1.04118% to the standardized charges.
	Charges added for the new technology	The applicant added charges for the new technology. The applicant also added indirect additional charges for training and additional time for measuring milk.
	Cost analysis results	Average case-weighted threshold amount: $52,165.00 Final inflated average case-weighted standardized charge per case: $837,658.83 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the Emily's Care Nourish Test System (Model 1) meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we note that under the eligibility criteria for approval under the alternative pathway for certain transformative devices, only the use of the technology for the indication that corresponds to the technology's Breakthrough Device designation would be eligible for the new technology add-on payment for FY 2026. Therefore, only the use of the Emily's Care Nourish Test System (Model 1) for VLBW neonates and infants in the NICU, and the FDA Breakthrough Device designation it received for that use, are relevant for purposes of the new technology add-on payment application for FY 2026.

We note the following concerns with respect to the cost criterion. We are unclear how the applicant identified the 25,000 claims used in its cost analysis, including the type of source data and the data year that were used to identify cases. The applicant did not provide a completed cost criterion codes and MS–DRGs worksheet and we are unclear how ICD–10–PCS and/or –CM codes were used to identify potential cases representing patients that may be eligible for use of the Emily's Care Nourish Test System (Model 1). We note that MS–DRGs 790 and 791 identified by the applicant may represent a patient population broader than those cases that would be included within the scope of the Breakthrough Device designation indication that is appropriate for consideration for new technology add-on payment under the alternative pathway criteria (VLBW neonates and infants less than 6 months of age in the NICU), and we question whether using these MS–DRGs without additional inclusion and/or exclusion criteria would be representative of cases eligible for new technology add-on payment.

Furthermore, it appears that the applicant did not identify relevant cases from a claims database such as the MedPAR file for its cost analysis, but instead calculated a case volume based on assumptions using the number of total live births in the United States. In addition, we question the assumptions used in the cost analysis regarding the potential Medicare volume for the technology. As noted in the FDA clearance letter for this device,[189] its intended patient population is newborns, including preterm, and infants. The applicant asserts that after a premature infant is delivered, the infant may be eligible for Medicare coverage if it qualifies under specific criteria, such as disability or end-stage renal disease (ESRD). Although we agree that infants may be eligible for Medicare if they have ESRD and need regular dialysis or have had a kidney transplant,[190] we note that Medicare Part A entitlement—for inpatient hospital services—based on child disability benefit entitlement can never begin before the month the person attains age 20 (or age 18 if the individual's disability is Amyotrophic Lateral Sclerosis).[191]

Furthermore, we are unclear how the average charge per case (unstandardized with no case weight) was calculated as it is unclear what claims data was used to determine the average charges for MS–DRG 790 and MS–DRG 791. We are also unclear as to the applicant's methodology for calculating the average charge per case (unstandardized with case weight), as it appears the applicant multiplied the average charge per case (unstandardized with no case weight) by 5.6671 for the charges in MS–DRG 790, and by 3.8704 for the charges in MS–DRG 791.

Although the applicant did not remove charges related to the technology being replaced, we note that the applicant stated that targeted fortification leads to a decreased length of stay (LOS) by 2.5 days, and we question if charges should be removed to account for the decreased LOS for patients using this technology.

We are also unclear as to the applicant's methodology for calculating the average standardized charge per case as the applicant used the same values from the average charge per case (unstandardized with case weight), which were the average charge per case (unstandardized with no case weight) multiplied by 5.6671 for the charges in MS–DRG 790, and by 3.8704 for the charges in MS–DRG 791.

To calculate the inflated average standardized charge per case, the applicant applied an inflation factor of 1.04118 percent. We would be interested in additional information regarding the basis for using this inflation factor and how it corresponds to the source data and year used for the cost analysis.

We note the applicant added direct and indirect charges related to the new technology. However, although the applicant identified a cost-to-charge ratio of 0.36 for intensive inpatient admission days, it is unclear how this cost-to-charge ratio was used to convert costs for the technology and indirect costs to charges, and how these charges were calculated using the costs of the device itself or costs related to additional time for training or measuring milk.

Therefore, because the applicant has not provided sufficient information as part of its cost analysis to demonstrate that the Emily's Care Nourish Test System (Model 1) meets the cost criterion, we are proposing to disapprove new technology add-on payments for the Emily's Care Nourish Test System (Model 1) for FY 2026. However, in the event we receive updated information to establish that the Emily's Care Nourish Test System (Model 1) meets the cost criterion, we are providing the following information regarding the new technology add-on payment.

We note the applicant states that the technology, which received FDA clearance on May 3, 2024, is expected to be commercially available May 1, 2025, and we would appreciate more information about the cause for any delay in the commercial availability of the device following FDA clearance.

We believe the relevant ICD–10–CM codes to identify the Breakthrough Device-designated indication for use of the technology in VLBW neonates and infants would be the following codes:

ICD–10–CM code	Description
P05.01	Newborn light for gestational age, less than 500 grams.
P05.02	Newborn light for gestational age, 500–749 grams.
P05.03	Newborn light for gestational age, 750–999 grams.
P05.04	Newborn light for gestational age, 1,000–1,249 grams.
P05.05	Newborn light for gestational age, 1,250–1,499 grams.
P05.11	Newborn small for gestational age, less than 500 grams.

[189] *https://www.accessdata.fda.gov/cdrh_docs/pdf23/K234088.pdf.*

[190] Centers for Medicare & Medicaid Services. End-stage renal disease (*https://www.medicare.gov/basics/end-stage-renal-disease*, accessed 1/16/2024).

[191] Centers for Medicare & Medicaid Services. Original Medicare (Part A and B) Eligibility and Enrollment (*https://www.cms.gov/medicare/enrollment-renewal/health-plans/original-part-a-b*, accessed 1/16/2024).

ICD–10–CM code	Description
P05.12	Newborn small for gestational age, 500–749 grams.
P05.13	Newborn small for gestational age, 750–999 grams.
P05.14	Newborn small for gestational age, 1,000–1,249 grams.
P05.15	Newborn small for gestational age, 1,250–1,499 grams.
P07.00	Extremely low birth weight newborn, unspecified weight.
P07.01	Extremely low birth weight newborn, less than 500 grams.
P07.02	Extremely low birth weight newborn, 500–749 grams.
P07.03	Extremely low birth weight newborn, 750–999 grams.
P07.14	Other low birth weight newborn, 1,000–1,249 grams.
P07.15	Other low birth weight newborn, 1,250–1,499 grams.

We are inviting public comments on the use of these ICD–10–CM diagnosis codes to identify the Breakthrough Device-designated indication for purposes of the new technology add-on payment, if approved.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost to the hospital for the Emily's Care Nourish Test System (Model 1) to be $3,000 per patient before discounts and $1,800 after discounts, based on the contents of the kit, which provides enough supplies for testing over a typical NICU stay (36 tests). The applicant stated the contents of the kit include: 36 test strips, pipettes, reference cards, 2 control solutions, and a reusable lightbox (iPhone not included). The applicant also provided additional information on the costs for the annual use of the technology to the hospital of $25,000, consisting of $10,000 for the kit including the lease of the lightbox and iPhone, and $15,000 for the device's operation (labor, testing milk, analysis interpretation, adjustment of feeding protocols). However, we note that the costs to the hospital, per patient, per inpatient stay remains unclear, and that the provided costs also include additional costs related to use of the device as well as capital costs for the lease of the lightbox and iPhone.

As we have discussed in prior rulemaking, when determining a new technology add-on payment, we provide payment based on the cost of the actual technology (such as the drug or device itself) and not for additional costs related to the use of the device (86 FR 45146). Therefore, we would not include costs of staff labor for the device's operation in the relevant costs for purposes of determining the new technology add-on payment amount.

In addition, because section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under that subsection, which establishes the system for payment of the operating costs of inpatient hospital services, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (86 FR 45145). The costs to lease the lightbox and iPhone are capital costs. As such, these components would not be eligible for new technology add-on payment because, as discussed in prior rulemaking and as noted, we only make new technology add-on payments for operating costs (72 FR 47307 through 47308).

Without a breakdown of the costs of this technology to the hospital, per patient, per inpatient stay, for the operating components of the kit, we are unable to identify the relevant costs for purposes of determining the new technology add-on payment amount. In addition, the applicant had indicated that the cost of the device would be discounted to hospitals, and the Medicare program expects providers to take advantage of available discounts.[192] It is unclear how potential discounts would affect the relevant estimated operating costs of the device. We would be interested in additional information regarding the current or anticipated average cost of the technology to the hospital per inpatient stay.

We invite public comments on whether the Emily's Care Nourish Test System (Model 1) meets the cost criterion and our proposal to disapprove new technology add-on payments for the Emily's Care Nourish Test System (Model 1) for FY 2026. We also invite public comments on the operating costs for the device, in the event we receive updated information to establish that the Emily's Care Nourish Test System (Model 1) meets the cost criterion.

10. Esprit™ BTK Everolimus Eluting Resorbable Scaffold System

The following table summarizes the information provided in the new technology add-on payment application for the Esprit™ BTK Everolimus Eluting Resorbable Scaffold System.

BILLING CODE 4120–01–P

[192] Medicare Department of Health & Human Services (DHHS) Provider Reimbursement Manual Part 1—Chapter 8, Purchase Discounts; Allowances; Refunds of Expenses (Date: March 8, 2013) *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/r456pr1.pdf.*

	Esprit™ BTK Everolimus Eluting Resorbable Scaffold System	
Technology Info	**Applicant**	Abbott Laboratories
	Description	Per the applicant, the Esprit™ BTK Everolimus Eluting Resorbable Scaffold is a temporary scaffold that will resorb over time and is indicated for improving luminal diameter in infrapopliteal lesions in patients with chronic limb threatening ischemia (CLTI).
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241004V78CP
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Absorb GT1 BVS is a temporary scaffold that will fully resorb over time and is indicated for improving luminal diameter in infrapopliteal lesions in patients with critical limb ischemia (CLI). In all cases, the treated lesion length should be less than the total scaffolding length with a reference vessel diameter of ≥ 2.5 mm and ≤ 3.75 mm.
	FDA marketing authorization indication	The Esprit™ BTK Everolimus Eluting Resorbable Scaffold System is indicated for improving luminal diameter in infrapopliteal lesions in patients with CLTI and total scaffolding length up to 170 mm with a reference vessel diameter of ≥ 2.5 mm and ≤ 4.00 mm.
	FDA marketing authorization information	Per the applicant, the primary difference in the FDA-approved indication and the Breakthrough Device indication is that the FDA-approved indication includes a total scaffolding length up to 170 mm and larger upper limit for the reference vessel diameter (≥ 2.5 mm and ≤ 4.00 mm). According to the applicant, the trade name had been updated to the Esprit™ BTK Everolimus Eluting Resorbable Scaffold System (Esprit™ BTK System).
	FDA marketing authorization date	April 26, 2024
	Commercial availability	The applicant stated that the technology was commercially available immediately after FDA approval.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant provided a list of procedure codes that, effective October 1, 2024, may be used to uniquely describe procedures involving the use of the Esprit™ BTK Everolimus Eluting Resorbable Scaffold under the ICD-10-PCS coding system in the online application posting. X27P3TA (Dilation of right anterior tibial artery with intraluminal device, everolimus-eluting resorbable scaffold(s), percutaneous approach, new technology group 10) X27Q3TA (Dilation of left anterior tibial artery with intraluminal device, everolimus-eluting resorbable scaffold(s), percutaneous approach, new technology group 10) (X27R3TA - Dilation of right posterior tibial artery with intraluminal device, everolimus-eluting resorbable scaffold(s), percutaneous approach, new technology group 10) X27S3TA (Dilation of left posterior tibial artery with intraluminal device, everolimus-eluting resorbable scaffold(s), percutaneous approach, new technology group 10) X27T3TA (Dilation of right peroneal artery with intraluminal device, everolimus-eluting resorbable scaffold(s), percutaneous approach, new technology group 10) X27U3TA (Dilation of left peroneal artery with intraluminal device, everolimus-eluting resorbable scaffold(s), percutaneous approach, new technology group 10)
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Esprit™ BTK Everolimus Eluting Resorbable Scaffold.
	Claims identified	Scenario 1: 12,850 claims mapping to 139 MS-DRGs, with 15.86% of claims mapping to MS-DRG 271 (Other Major Cardiovascular Procedures with CC) and 15.18% of claims mapping to MS-DRG 253 (Other Vascular Procedures with CC). Scenario 2: 2,751 claims mapping to 81 MS-DRGs, with 15.92% of claims mapping to MS-DRG 271 (Other Major Cardiovascular Procedures with CC) and 13.89% of claims mapping to MS-DRG 253 (Other Vascular Procedures with CC).
	Charges removed for prior technology	To be as conservative as possible, the applicant removed 100% of charges associated with Medical/Surgical Supplies and Devices (revenue centers 0275, 0276, 0278 and 0624) because the device is expected to replace a portion of devices included in these claims, although it will not replace all devices, nor any medical supplies required to perform the procedure, and an estimate of the percentage of total charges that the technology would replace could not be determined. The applicant did not remove indirect charges related to the prior technology.

	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Scenario 1: - Average case-weighted threshold amount: $130,782 - Final inflated average case-weighted standardized charge per case: $227,641 Scenario 2: - Average case-weighted threshold amount: $132,247 - Final inflated average case-weighted standardized charge per case: $252,513 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all scenarios, the applicant asserted that the Esprit BTK Everolimus Eluting Resorbable Scaffold meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant has received FDA marketing authorization is included within the scope of the Breakthrough Device designation indication, it appears that the FDA marketing authorization is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.[193]

We agree with the applicant that the Esprit™ BTK Everolimus Eluting Resorbable Scaffold meets the cost criterion and are therefore proposing to approve the Esprit™ BTK Everolimus Eluting Resorbable Scaffold for new technology add-on payments for FY 2026 for the indication of improving luminal diameter in infrapopliteal lesions in patients with CLTI and total scaffolding length up to 170 mm with a reference vessel diameter of ≥2.5 mm and ≤4 mm.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the Esprit™ BTK Everolimus Eluting Resorbable Scaffold to the hospital to be $6,000 per patient. According to the applicant, the costs of the technology include the Esprit™ BTK Scaffold ($2,750) and the Esprit™ BTK Delivery System ($250). The applicant stated that per the IDE Clinical Study, on average two Esprit™ BTK Everolimus Eluting Resorbable Scaffolds were used per patient. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the Esprit™ BTK Everolimus Eluting Resorbable Scaffold would be $3,900 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the Esprit™ BTK Everolimus Eluting Resorbable Scaffold meets the cost criterion and our proposal to approve new technology add-on payments for the Esprit™ BTK Everolimus Eluting Resorbable Scaffold for FY 2026.

11. EUROPA™ Posterior Cervical Fusion System

The following table summarizes the information provided in the new technology add-on payment application for the EUROPA™ Posterior Cervical Fusion System.

BILLING CODE 4120–01–P

[193] Breakthrough Devices Program *https://www.fda.gov/medical-devices/how-study-and-market-your-device/breakthrough-devices-program.*

	EUROPA™ Posterior Cervical Fusion System	
Technology Info	**Applicant**	MiRus, LLC
	Description	Per the applicant, the EUROPA™ Posterior Cervical Fusion System is a posterior cervical screw system intended to provide structural stability and mechanical support to the cervical spine through posterior cervical fusion. Per the applicant, the EUROPA™ Posterior Cervical Fusion System implants are offered in multiple configurations and different sizes to accommodate various needs.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007BVT6M
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the EUROPA™ Posterior Cervical Fusion System is intended to provide immobilization and stabilization of spinal segments as an adjunct to fusion for the following acute and chronic instabilities of the cervical spine (C1 to C7) and the thoracic spine from T1-T3: traumatic spinal fractures and/or traumatic dislocations; instability or deformity; failed previous fusions (for example, pseudarthrosis); tumors involving the cervical/thoracic spine; and degenerative disease, including intractable radiculopathy and/or myelopathy, neck and/or arm pain of discogenic origin as confirmed by radiographic studies, and degenerative disease of the facets with instability. The EUROPA™ Posterior Cervical Fusion System is also intended to restore the integrity of the spinal column even in the absence of fusion for a limited time period in patients with advanced stage tumors involving the cervical spine in whom life expectancy is of insufficient duration to permit achievement of fusion. In order to achieve additional levels of fixation, the EUROPA™ Posterior Cervical Fusion System may be connected to the EUROPA™ Pedicle Screw System via the rod-to-rod connectors.
	FDA marketing authorization indication	The EUROPA™ Posterior Cervical Fusion System is intended to provide immobilization and stabilization of spinal segments as an adjunct to fusion for the following acute and chronic instabilities of the cervical spine (Cl to C7) and the upper thoracic spine (T1 to T3): * Traumatic spinal fractures and/or traumatic dislocations * Instability or deformity * Failed previous fusions (for example, pseudarthrosis) * Tumors involving the cervical/thoracic spine * Degenerative disease, including intractable radiculopathy and/or myelopathy * Neck and/or arm pain of discogenic origin as confirmed by radiographic studies * Degenerative disease of the facets with instability. The EUROPA™ Posterior Cervical Fusion System is also intended to restore the integrity of the spinal column even in the absence of fusion for a limited time period in patients with advanced stage tumors involving the cervical spine in whom life expectancy is of insufficient duration to permit achievement of fusion. In order to achieve additional levels of fixation, the EUROPA™ Posterior Cervical Fusion System may be connected to the EUROPA™ Pedicle Screw System via the rod to rod connectors.
	FDA marketing authorization date	November 19, 2024
	Commercial availability	According to the applicant, the EUROPA™ Posterior Cervical Fusion System is not commercially available, as the applicant planned to start manufacturing this technology and make available for commercial use based on project timelines after FDA clearance. The applicant anticipates the technology will become available in the fourth quarter of 2025.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the EUROPA™ Posterior Cervical Fusion System.
	Claims identified	28,953 claims mapping to 31 MS-DRGs, with 20.41% of claims mapping to MS-DRG 472 (Cervical Spinal Fusion with CC).
	Charges removed for prior technology	The applicant calculated the cost estimate for prior technology using the average price for the screws, rods, and set screws that are used during the average spinal procedure. The applicant then converted the cost for an average procedure to a charge using national cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not remove any indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule correction notice.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant calculated the cost per patient based on the prices of the implants used in a construct and weighted by the length of the construct and the percentage of those procedures across different levels of fusion. The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Average case-weighted threshold amount: $175,355 Final inflated average case-weighted standardized charge per case: $688,679 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the EUROPA™ Posterior Cervical Fusion System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant has received FDA marketing authorization is

included within the scope of the Breakthrough Device designation indication, it appears that the FDA marketing authorization is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.

According to the applicant, the technology, which received FDA clearance on November 19, 2024, is not yet available for sale due to project timelines. The applicant stated that the technology is not expected to be commercially available until the fourth quarter of 2025. We are interested in additional information regarding the cause of any delay in the technology's market availability.

We agree with the applicant that the EUROPA™ Posterior Cervical Fusion System meets the cost criterion and are therefore proposing to approve the EUROPA™ Posterior Cervical Fusion System for new technology add-on payments for FY 2026, to provide immobilization and stabilization of spinal segments as an adjunct to fusion for the acute and chronic instabilities of the cervical spine (Cl to C7) and the upper thoracic spine (T1 to T3) listed in both the Breakthrough Device designation and FDA clearance letter.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the EUROPA™ Posterior Cervical Fusion System to the hospital to be $123,920 per patient. According to the applicant, there are approximately 374 different components associated with the technology, including Pedicle Screws, Set Screws, Rods, and Connectors, all of which are operating costs and new components. The applicant stated that the majority of posterior cervical fusion procedures are inpatient Medicare procedures in most hospitals, but there may be exceptions based on individual clinical practice. Per the applicant, most of these procedures are C1–T3 or C2–T3 with some exceptions being 2–3 levels. The applicant calculated the total cost based on the unit prices of the implants used in a construct (Rod $9,000.00; Pedicle Screw $5,000.00; Smooth Shank Screw $5,000.00; Set Screw $500.00; Connector $4,000.00), weighted by the length of the construct (1- through 9-level), and the percentage of those procedures across different levels of fusion (10 percent for 2- through 4-level; 90 percent for 5 or more levels). We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2)(ii)(B), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the EUROPA™ Posterior Cervical Fusion System would be $80,548 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the EUROPA™ Posterior Cervical Fusion System meets the cost criterion and our proposal to approve new technology add-on payments for the EUROPA™ Posterior Cervical Fusion System for FY 2026.

12. iFuse TORQ TNT™ Implant System

The following table summarizes the information provided in the new technology add-on payment application for the iFuse TORQ TNT™ Implant System.

BILLING CODE 4120–01–P

	iFuse TORQ TNT™ Implant System	
Technology Info	**Applicant**	SI-BONE, Inc.
	Description	Per the applicant, the iFuse TORQ TNT™ Implant System consists of a fully threaded, 3D-printed porous anatomy-specific implant with optional washers along with instruments used to place the implant under either fluoroscopic guidance or with certain navigation systems. According to the applicant, the implant has features specific to pelvic anatomy for fracture fixation or sacroiliac joint fusion.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241002J7XRV
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the iFuse TNT Implant System is indicated for fracture fixation of the pelvis, including acute, nonacute and non-traumatic fractures. The iFuse TNT Implant System is indicated for sacroiliac joint fusion for sacroiliac joint dysfunction including sacroiliac joint disruption and degenerative sacroiliitis. The iFuse TNT Navigation instruments are intended to be used with the iFuse TNT Implant System to assist the surgeon in precisely locating anatomical structures in iFuse TNT Implant System procedures, in which the use of stereotactic surgery may be appropriate, and where reference to a rigid anatomical structure, such as the pelvis or vertebra, can be identified relative to the acquired image (CT, MR, 2D fluoroscopic image or 3D fluoroscopic image reconstruction) and/or an image data based model of the anatomy.
	FDA marketing authorization indication	The iFuse TORQ TNT Implant System is indicated for fracture fixation of the pelvis, including acute, non-acute and non-traumatic fractures. The iFuse TORQ TNT Implant System is indicated for sacroiliac joint fusion for: - Sacroiliac joint dysfunction including sacroiliac joint disruption and degenerative sacroiliitis. - Augmenting immobilization and stabilization of the sacroiliac joint in skeletally mature patients undergoing sacropelvic fixation as part of a lumbar or thoracolumbar fusion. The iFuse TORQ TNT Navigation instruments are intended to be used with the iFuse TORQ TNT Implant System to assist the surgeon in precisely locating anatomical structures in iFuse TORQ TNT Implant System procedures, in which the use of stereotactic surgery may be appropriate, and where reference to a rigid anatomical structure, such as the pelvis or vertebra, can be identified relative to the acquired image (CT, MR, 2D fluoroscopic image or 3D fluoroscopic image reconstruction) and/or an image data based model of the anatomy. iFuse TORQ TNT Navigation instruments are intended to be used with the Medtronic StealthStation System.
	FDA marketing authorization information	The applicant asserted that the same device is applicable to both the Breakthrough Device designation and the FDA marketing authorization, despite slight difference in the name of the technology. According to the applicant, the current SI-BONE labeling materials for the iFuse TORQ TNT™ Implant System include indications for use that match the Breakthrough Device designation, except for a statement which describes an "augmenting" indication. The applicant stated that only after the completion of the appropriate SI-BONE design control activities will the indications statement in the labeling materials for the iFuse TORQ TNT™ Implant System be updated to include the additional "augmenting" indication.
	FDA marketing authorization date	August 19, 2024
	Commercial availability	The applicant stated that the technology was commercially available immediately after FDA clearance.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the iFuse TORQ TNT™ Implant System.
	Claims identified	Fracture Fixation with TNT Analysis: 853 claims mapping to 43 MS-DRGs, with none of the MS-DRGs exceeding more than 12.66% of the total identified cases. SI Joint Fusion with TNT Analysis: 642 claims mapping to 21 MS-DRGs, with 28.04% of claims mapping to MS-DRG 448 (Multiple Level Spinal Fusion Except Cervical Without MCC).

	Charges removed for prior technology	The applicant removed 75% of charges associated with Medical/Surgical Supplies and Devices (revenue centers 027X, and 0624). According to the applicant, the use of the technology is expected to replace a portion of devices included in these claims, but it will not replace all devices or medical supplies required to perform the procedure. The applicant stated that the estimate of the percentage of these total charges for devices that would be replaced could not be determined. The applicant, therefore, adopted a conservative approach to removed 75% of these charges. The applicant did not remove indirect charges related to the prior technology as it stated that the financial impact of utilizing the technology on hospital resources compared to prior technologies is minimal.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology as it stated that no other hospital charges were assumed to be required for implanting the technology.
	Cost analysis results	Fracture Fixation with TNT Analysis: - Average case-weighted threshold amount: $153,117 - Final inflated average case-weighted standardized charge per case: $264,101 Fracture Fixation with TNT Analysis: - Average case-weighted threshold amount: $173,990 - Final inflated average case-weighted standardized charge per case: $201,625 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both analyses, the applicant asserted that the iFuse TORQ TNT™ Implant System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we note that under the eligibility criteria for approval under the alternative pathway for certain transformative devices, only the use of the technology for the indication that corresponds to the technology's Breakthrough Device designation would be eligible for the new technology add-on payment for FY 2026. As noted by the applicant, the FDA clearance describes an additional indication for sacroiliac joint fusion for augmenting immobilization and stabilization of the sacroiliac joint in skeletally mature patients undergoing sacropelvic fixation as part of a lumbar or thoracolumbar fusion, which is not included in the Breakthrough Device designation. Therefore, it appears that this indication is not relevant for purposes of the new technology add-on payment application for FY 2026.

Please see Table 10.2.—iFuse TORQ TNT™ Implant System associated with this proposed rule for the list of ICD–10–PCS procedure codes that we believe would be appropriate to exclude when reported in combination with use of the iFuse TORQ TNT™ Implant System. We are inviting public comments on the exclusion of cases reporting these ICD–10–PCS procedure codes in combination with the procedure codes that identify use of the iFuse TORQ TNT™ Implant System for augmenting immobilization and stabilization of the sacroiliac joint in skeletally mature patients undergoing sacropelvic fixation as part of a lumbar or thoracolumbar fusion, which would not be eligible for new technology add-on payment, if approved.

We agree with the applicant that the iFuse TORQ TNT™ Implant System meets the cost criterion and are therefore proposing to approve the iFuse TORQ TNT™ Implant System for new technology add-on payments for FY 2026 when used for fracture fixation of the pelvis, including acute, non-acute and nontraumatic fractures and sacroiliac joint fusion for sacroiliac joint dysfunction including sacroiliac joint disruption and degenerative sacroiliitis.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the iFuse TORQ TNT™ Implant System to the hospital to be $6,573 per patient. The applicant stated that the iFuse TORQ TNT™ Implant System includes the operating unit costs of the TNT Implant ($3,150), Drill Bit ($200), Guide Pin ($100), Blunt Pin ($100), and Washer ($50). The applicant estimated the average number of each component used per case for pelvic fixation and sacroiliac joint fusion cases separately, and calculated the costs of the new technology by multiplying the component costs by the average number of components used per case. The applicant used internal sales data to estimate the percentages of pelvic fixation (80 percent) and sacroiliac joint (20 percent) fusion cases in an average hospital. The applicant then calculated the total cost of the iFuse TORQ TNT™ Implant System to the hospital by taking the weighted average of the cost per pelvic fixation case and cost per sacroiliac joint fusion case.

It appears that the TNT Implant and Washers are components of the Breakthrough device. However, the Drill Bit, Guide Pin, and Blunt Pin are instrumentation used for the implantation of the TNT Implant. As we have discussed in prior rulemaking, when determining a new technology add-on payment, we provide payment based on the cost of the actual technology (such as the drug or device itself) and not for additional costs related to the use of the device (86 FR 45146). It appears that the cost of the instrumentation (the Drill Bit, Guide Pin, and Blunt Pin) are costs related to the use of the technology, rather than a cost of the technology itself. In addition, it is not clear if the Drill Bit, Guide Pin, and Blunt Pin are new and unique components for this technology, or if they may be reused and/or may be purchased separately in support of other technologies. Therefore, it appears any add-on payment for the iFuse TORQ TNT™ Implant System would include only the weighted average cost per pelvic fixation case and cost per

sacroiliac joint fusion case of the TNT Implant and Washers ($6,093).

We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the iFuse TORQ TNT™ Implant System would be $3,960.45 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the iFuse TORQ TNT™ Implant System meets the cost criterion and our proposal to approve new technology add-on payments for the iFuse TORQ TNT™ Implant System for FY 2026.

13. Merit Wrapsody® Cell Impermeable Endoprosthesis (CIE)

The following table summarizes the information provided in the new technology add-on payment application for the Merit Wrapsody® Cell Impermeable Endoprosthesis (CIE).

BILLING CODE 4120–01–P

	Merit Wrapsody® Cell Impermeable Endoprosthesis (CIE)	
Technology Info	**Applicant**	Merit Medical
	Description	Per the applicant, the Merit Wrapsody® is a flexible self-expanding CIE to treat venous outflow circuit stenosis or occlusion in patients with hemodialysis fistula or graft. Per the applicant, FDA Breakthrough prevents transgraft cellular migration resulting in randomized controlled trial (RCT) multicenter 6-month target lesion primary patency (TLPP) (90% vs 63%) compared to percutaneous transluminal angioplasty (PTA) and equal safety.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP2410062MPCC
FDA Info	**Breakthrough Device designation indications**	Per the applicant, the proposed indications for use includes treatment of stenosis or occlusion within the dialysis outflow circuit, including stenosis or occlusion: • within the peripheral veins in the arm of the Arteriovenous Fistula (AVF) patients, and • within the thoracic central veins, up to the superior vena cava, in Arteriovenous Graft (AVG) patients. The proposed indications for use include treatment of stenosis or occlusion within the dialysis outflow circuit of patients with a synthetic arteriovenous graft, including stenosis or occlusion: • at the venous anastomosis and • within the peripheral veins of the outflow circuit up to but not including the subclavian vein.
	FDA marketing authorization indication	The WRAPSODY® Cell-Impermeable Endoprosthesis is a flexible, self-expanding endoprosthesis indicated for use in hemodialysis patients for the treatment of stenosis or occlusion within the dialysis access outflow circuit, including stenosis or occlusion: • In the peripheral veins of individuals with an arteriovenous (AV) fistula, • At the venous anastomosis of a synthetic AV graft.
	FDA marketing authorization information	Per the applicant, the original FDA Breakthrough Device designation indications for use (IFU) are different from the current IFU to reflect the patients enrolled for analysis in the RCT. According to the applicant, the current IFU no longer includes patients with a dysfunction within the thoracic central veins and instead reflects the predominant hemodialysis AVG dysfunction enrolled in the RCT, meeting the safety and efficacy end points. Per the applicant, the name of the technology was updated to the Merit Wrapsody® Cell Impermeable Endoprosthesis after validation of the clinical effectiveness and patent issuance.
	FDA marketing authorization date	December 19, 2024
	Commercial availability	The applicant stated the Merit Wrapsody® CIE was commercially available on 1/02/2025 with 3 purchase orders in 3 days. Per the applicant, it is marketed in accordance with the conditions of the sale and distribution restricted to prescription use in accordance with 21 CFR 801.109 and under section 515(d)(1)(B)(ii) of the Federal FDA Act (the act). The applicant noted that the device is further restricted under section 515(d)(1)(B)(ii) of the act insofar as the labeling must specify the specific training or experience practitioners need in order to use the device.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Merit Wrapsody® CIE. The applicant noted that "Set A Cost Thresh" was for its cost threshold calculations.
	Claims identified	44,393 claims mapping to 7 MS-DRGs, with 38.12% of claims mapping to MS-DRG 252 (Other Vascular Procedures with MCC).
	Charges removed for prior technology	The applicant removed charges for routine PTA catheters or stents by estimating a weighted cost based on 70% of procedures using a catheter for PTA and 30% of procedures for stent placement. The applicant then converted the cost to charges using the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used relevant values reported in the impact file and standardizing file posted with the FY 2023 IPPS/LTCH PPS final rule and correction notice, as well as the labor share percent from the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for	The applicant added charges for the new technology by dividing the cost of the new technology by the

	the new technology	national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Average case-weighted threshold amount: $115,373 Final inflated average case-weighted standardized charge per case: $161,315 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the Merit Wrapsody® CIE meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received PMA approval from FDA is included within the scope of the Breakthrough Device designation indication, it appears that the FDA-approved indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.

We note that the application stated that commercialization of the device was initiated on January 2, 2025, with 3 purchase orders in 3 days. We are interested in additional information regarding any delay in commercial availability between its FDA approval on December 19, 2024, and the date commercialization was initiated, including if the device was available for sale prior to January 2, 2025.

We agree with the applicant that the Merit Wrapsody® CIE meets the cost criterion and are therefore proposing to approve the Merit Wrapsody® CIE for new technology add-on payments for FY 2026, for use in hemodialysis patients for the treatment of stenosis or occlusion within the dialysis access outflow circuit, including stenosis or occlusion in the peripheral veins of individuals with an AV fistula or at the venous anastomosis of a synthetic AV graft.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the cost of the Merit Wrapsody® CIE to the hospital to be $5,800 per patient, inclusive of all components and accessories. The applicant also provided an additional cost for operating room time because the facility operation room time may be 8–12 minutes greater than similar current procedures. However, as discussed in prior rulemaking, when determining a new technology add-on payment, we provide payment based on the cost of the actual technology (such as the drug or device itself) and not for additional costs related to the use of the device, such as the ongoing use of the device including maintenance and processing fees. For example, if a technology required an extra hour of operating room time, or reduced the amount of procedure time, we would neither add nor deduct costs based on this, and would only consider the actual cost of the technology at the time of purchase in our determination of the add-on payment (86 FR 45146).

We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the Merit Wrapsody® CIE would be $3,770 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the Merit Wrapsody® CIE meets the cost criterion and our proposal to approve new technology add-on payments for the Merit Wrapsody® CIE for FY 2026.

14. Minima Stent System

The following table summarizes the information provided in the new technology add-on payment application for the Minima Stent System.

BILLING CODE 4120–01–P

	Minima Stent System	
Technology Info	**Applicant**	Renata Medical, Inc.
	Description	Per the applicant, the Minima Stent System is the first and only stent designed, tested, clinically trialed, and FDA approved for treating coarctation of aorta and pulmonary artery stenosis in neonates, infants, and young children > 1.5 kg. Per the applicant, not only can the device be implanted that small, but it is also designed to be re-expanded over time up to adult size vessels.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241004LBYDY
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Renata Minima Stent System is indicated for use in the treatment of common congenital and post-operative discrete coarctation of the aorta without significant arch hypoplasia in patients less than 20kg and in the treatment of pulmonary artery stenoses.
	FDA marketing authorization indication	The Minima Stent System is indicated for use in the treatment of native or acquired pulmonary artery stenoses or coarctation of the aorta in neonates, infants, and children at least 1.5 kg in weight.
	FDA marketing authorization date	August 28, 2024
	Commercial availability	The applicant stated that the technology was commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-PCS codes and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Minima Stent System.
	Claims identified	75,638 claims mapping to 6 MS-DRGs, with 26.50% of claims mapping to MS-DRG 252 (Other Vascular Procedures with MCC).
	Charges removed for prior technology	The applicant did not remove charges or indirect charges related to the prior technology as the applicant stated that the technology would not replace a device and is not expected to significantly change cost in other revenue/cost centers.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Average case-weighted threshold amount: $128,762 Final inflated average case-weighted standardized charge per case: $270,295 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the Minima Stent System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received PMA approval from FDA is included within the scope of the Breakthrough Device designation indication, it appears that the FDA-approved indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.[194]

With respect to the cost criterion, we note that the applicant identified 6 relevant MS–DRGs using 8 ICD–10–PCS codes that most closely resemble the procedure to insert and/or dilate the great vessels using the Minima Stent System. Per the applicant, the Minima Stent System is used in the pediatric population and no cases appear in Medicare data; therefore, the applicant used CY 2022 and CY 2023 Medicare charge and discharge data accessed via Definitive Healthcare as well as data from the AOR/BOR File published as part of the FY 2025 IPPS/LTCH PPS final rule, correction notice and interim final action with comment period Data and Supplemental Files and FY 2023 IPPS/LTCH PPS final rule and correcting amendment files. However, we question whether using the total charges for the Medicare claims within the 6 identified MS–DRGs would provide an accurate estimate for eligible cases in a pediatric patient population where the Minima Stent System would be used.

Subject to the applicant adequately addressing this concern, we would agree that the technology meets the cost criterion and are proposing to approve the Minima Stent System for new technology add-on payments for FY 2026 for use in the treatment of native or acquired pulmonary artery stenoses or coarctation of the aorta in neonates, infants, and children at least 1.5 kg in weight.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the Minima Stent

[194] Breakthrough Devices Program *https://www.fda.gov/medical-devices/how-study-and-market-your-device/breakthrough-devices-program.*

System to the hospital to be $34,900 per patient. Per the applicant, total cost per inpatient stay was calculated based on the assumption that only one unit will be used per patient for each inpatient stay. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the Minima Stent System would be $22,685 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the Minima Stent System meets the cost criterion and our proposal to approve new technology add-on payments for the Minima Stent System for FY 2026.

15. MY01 Continuous Compartmental Pressure Monitor

The following table summarizes the information provided in the new technology add-on payment application for the MY01 Continuous Compartmental Pressure Monitor.

BILLING CODE 4120–01–P

	MY01 Continuous Compartmental Pressure Monitor	
Technology Info	**Applicant**	MY01 Inc.
	Description	Per the applicant, the MY01 Continuous Compartmental Pressure Monitor is a single-use device that measures and displays in real-time muscle compartment pressure as an aid in Compartment Syndrome diagnosis. Per the applicant, the companion Mobile App displays identical muscle pressure data together with calculated perfusion pressure using a manually entered diastolic blood pressure.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007X55AR
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the MY01 device is used for real-time and continuous measurement of muscle pressures. The measured muscle pressure can be used as an aid in the diagnosis of acute compartment syndrome (ACS). The MY01 Mobile Application is an application intended for storing and displaying identical pressure values from the MY01 device and calculating critical muscle perfusion pressure utilizing diastolic pressure manual entry by the physician. Diagnosis should always be made in conjunction with clinical assessments.
	FDA marketing authorization indication	The MY01 Continuous Compartmental Pressure Monitor is used for real-time and continuous measurement of the muscle compartment pressure. The measured muscle compartment pressure can be used as an aid in diagnosis of Compartment Syndrome (Acute and Chronic). The MY01 Mobile Application is an application intended for storing and displaying identical pressure values from the MY01 Continuous Compartmental Pressure Monitor device and calculating critical muscle perfusion pressure utilizing diastolic pressure manual entry by the physician. Diagnosis should always be made in conjunction with clinical assessments.
	FDA marketing authorization information	Per the applicant, the FDA indication for use is similar to the Breakthrough Device designation, but the language was modified for clarity and accuracy. Per the applicant: the device name was changed from "MY01 device" to "MY01 Continuous Compartmental Pressure Monitor"; the term "muscle pressure" was changed to "muscle compartment pressure"; the indications were expanded from including only "acute compartment syndrome" to include both "(Acute and Chronic) [compartment syndrome]"
	FDA marketing authorization date	March 13, 2025
	Commercial availability	According to the applicant, the MY01 Mobile Application is not yet available for use because the applicant is completing final testing of the application before it is available on the Apple App Store and the Google Play App Store. The applicant anticipates the app will be available for download by April 30, 2025.
Coding	**Unique ICD-10-PCS Code(s)**	Effective October 1, 2023, the following ICD-10-PCS code may be used to uniquely describe procedures involving the use of the MY01 Continuous Compartmental Pressure Monitor: XX2F3W9 (Monitoring of musculoskeletal muscle compartment pressure, micro-electro-mechanical system, percutaneous approach, new technology group 9).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the MY01 Continuous Compartmental Pressure Monitor.
	Claims identified	78,166 claims mapping to 90 MS-DRGs, with 13.69% of claims mapping to MS-DRG 563 (Fracture, Sprain, Strain and Dislocation Except Femur, Hip, Pelvis and Thigh without MCC) and 13.54% of claims mapping to MS-DRG 493 (Lower Extremity and Humerus Procedures Except Hip, Foot and Femur with CC).
	Charges removed for prior technology	The applicant conducted an analysis of sales data to collect the cost of each component of the prior technology. To calculate the charges for the prior technology, the applicant converted the cost to charge by using the national average cost-to-charge ratio of 0.297 for Supplies and Equipment from the FY 2025 IPPS/LTCH PPS final rule. The applicant estimated that the technology would be used on 50% of patients and therefore removed charges for 50% of the charges for the prior technology. The applicant did not remove charges related to the prior technology as it believed that the choice of device is the sole difference between cases treated with the MY01 Continuous Compartmental Pressure Monitor and cases treated with the prior technology. Per the applicant, besides the choice of device, the procedure is the same, and the services provided during the course of the hospitalization are also the same.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.297 for Supplies and Equipment from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology, as the services provided during the course of hospitalization are not affected by the use of the technology.

	Cost analysis results	Average case-weighted threshold amount: $86,011 Final inflated average case-weighted standardized charge per case: $112,813 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the MY01 Continuous Compartmental Pressure Monitor meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant has received FDA marketing authorization is included within the scope of the Breakthrough Device designation indication, it appears that the FDA marketing authorization is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.[195]

According to the applicant, the MY01 Mobile Application is not yet available for use because the applicant is completing final testing of the application before it is available for download. We are interested in additional information on when the MY01 Continuous Compartmental Pressure Monitor, which is the subject of this new technology add-on payment application, became available for sale.

We agree with the applicant that the MY01 Continuous Compartmental Pressure Monitor meets the cost criterion and are therefore proposing to approve the MY01 Continuous Compartmental Pressure Monitor for new technology add-on payments for FY 2026, for real-time and continuous measurement of the muscle compartment pressure.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the MY01 Continuous Compartmental Pressure Monitor to the hospital to be $3,250 per patient. Per the applicant, only one device is used per inpatient stay, and the companion MY01 Mobile Application is provided at no additional cost for any physician registered to use the device. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the MY01 Continuous Compartmental Pressure Monitor would be $2,112.50 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the MY01 Continuous Compartmental Pressure Monitor meets the cost criterion and our proposal to approve new technology add-on payments for the MY01 Continuous Compartmental Pressure Monitor for FY 2026.

16. Nelli Seizure Monitoring System

The following table summarizes the information provided in the new technology add-on payment application for the Nelli Seizure Monitoring System. We note that Neuro Event Labs, Inc. submitted an application for new technology add-on payments for the Nelli Seizure Monitoring System for FY 2023, as summarized in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28341 through 28342), but the technology did not meet the applicable deadline for FDA approval or clearance of the technology and, therefore, was not eligible for consideration for new technology add-on payments for FY 2023 (87 FR 48960). We note that the applicant also submitted an application for new technology add-on payments for FY 2024, as summarized in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26940 through 26942), that it withdrew prior to the issuance of the FY 2024 IPPS/LTCH PPS final rule (88 FR 58919).

BILLING CODE 4120–01–P

[195] Breakthrough Devices Program *https://www.fda.gov/medical-devices/how-study-and-market-your-device/breakthrough-devices-program.*

	Nelli Seizure Monitoring System	
Technology Info	**Applicant**	Neuro Event Labs
	Description	Per the applicant, the Nelli Seizure Monitoring System is a prescription-only device that is designed to be used as an adjunct to seizure monitoring in a hospital inpatient or home setting for adults and children 6 years of age and older. Per the applicant, Nelli's software is designed to automate the analysis of audio and video data to identify seizure events with a positive motor component.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241006U8AKC
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Nelli software is intended for the automated analysis of audio and video data to identify seizure events with a positive motor component in children and adults. The software provides objective summaries of semiological components of identified events (including velocity and acceleration of movements, seizure frequency, seizure duration, heart rate, and respiratory rate). Nelli software provides A/V data for physicians to characterize seizures and peri-ictal events.
	FDA marketing authorization information	The applicant anticipates a 510(k) clearance decision from FDA before May 1, 2025. Per the applicant, the FDA indication is currently being pursued for adults only.
	Commercial availability	Per the applicant, the technology will be commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	Effective October 1, 2022, the following ICD-10-PCS code may be used to uniquely describe procedures involving the use of the Nelli Seizure Monitoring System: XXE0X48 (Measurement of brain electrical activity, computer-aided semiologic analysis, new technology group 8).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Nelli Seizure Monitoring System. The applicant completed a cost analysis and a separate "imputed" analysis using the same Inclusion/Exclusion criteria. Cost Analysis: The applicant used the resulting MS-DRGs assigned to claims for hospitals with ≥11 claims. Blended Imputed Analysis: Using the same MS-DRGs identified for hospitals with ≥11 claims, the applicant performed a separate blended "imputed" analysis for cases from hospitals with <11 claims by combining this data with the original data for hospitals performing ≥11 cases.
	Claims identified	Cost Analysis: 11,215 claims mapping to 17 MS-DRGs, with 56.86% of claims mapping to MS-DRG 101 (Seizures without MCC). Blended Imputed Analysis: 22,530 claims mapping to 17 MS-DRGs, with 36.55% of claims mapping to MS-DRG 101 (Seizures without MCC).
	Charges removed for prior technology	The applicant did not remove direct or indirect charges related to the prior technology as it stated that no technology is being replaced and there is no change in other resources.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the operating expenses of the new technology by dividing the non-capital cost of the technology by the cost to charge ratio of 0.336 for Other Services from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Cost Analysis: - Average case-weighted threshold amount: $59,383 - Final inflated average case-weighted standardized charge per case: $81,595 Blended Imputed Analysis: - Average case-weighted threshold amount: $66,696 - Final inflated average case-weighted standardized charge per case: $114,010 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both analyses, the applicant asserted that the Nelli Seizure Monitoring System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we agree with the applicant that the Nelli Seizure Monitoring System meets the cost

criterion and are therefore proposing to approve the Nelli Seizure Monitoring System for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the Nelli Seizure Monitoring System to the hospital to be $1,000 per patient for the cost of the analysis during the hospital visit. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the Nelli Seizure Monitoring System would be $650 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the Nelli Seizure Monitoring System meets the cost criterion and our proposal to approve new technology add-on payments for the Nelli Seizure Monitoring System for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

17. Positive Blood Culture (PBC) Separator With Selux AST System

The following table summarizes the information provided in the new technology add-on payment application for the PBC Separator with Selux AST System. We note that Selux Diagnostics, Inc. submitted an application for new technology add-on payments for the PBC Separator with Selux AST System for FY 2024 under the name Selux NGP System, as summarized in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26946 through 26949), that it withdrew prior to the issuance of the FY 2024 IPPS/LTCH PPS final rule (88 FR 58919).

BILLING CODE 4120–01–P

	PBC Separator with Selux AST System	
Technology Info	**Applicant**	Selux Diagnostics, Inc.
	Description	Per the applicant, the PBC Separator with Selux AST System is a phenotypic antimicrobial susceptibility testing (AST) system, intended to assist medical professionals in the identification of in vitro susceptibility or resistance to specific antimicrobial agents.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007LLY3U
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Selux Positive Blood Culture Separator and Selux System is intended for use with bacteria separated from monomicrobial positive blood cultures and sterile body fluid culture samples from non-charcoal-containing types of BACTEC, BacT/ALERT, VIRTUO and VersaTREK blood culture bottles.
	FDA marketing authorization indication	The PBC Separator with Selux AST System is an automated inoculum preparation system that uses lysis, centrifugation and sequential optical density measurements to generate a McFarland equivalent suspension from positive blood culture samples that can be used for quantitative in vitro AST by the Selux AST System. Samples are processed directly from blood culture samples identified as positive by a continuous monitoring blood culture system. Samples should be confirmed as monomicrobial, gram negative rods by Gram stain. Organism identification is required for AST result interpretation and reporting, per the Selux AST System instructions for use.
	FDA marketing authorization information	Per the applicant, the Selux Positive Blood Culture Separator and Selux System is the same technology as the PBC Separator with Selux AST System from the FDA 510(k) clearance associated with this application. The applicant stated that during the 510(k) clearance process, FDA requested that Selux change the name to make it clear that this clearance was specific to the positive blood culture indication of the previously cleared AST system.
	FDA marketing authorization date	February 15, 2024
	Commercial availability	Per the applicant, the technology was commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	Effective October 1, 2023, the following ICD-10-PCS code may be used to uniquely describe procedures involving the use of the PBC Separator with Selux AST System: XXE5XY9 (Measurement of infection, other positive blood/isolated colonies bimodal phenotypic susceptibility technology, new technology group 9).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, and/or MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the PBC Separator with Selux AST System.
	Claims identified	Simulation 1: 1,319,069 claims mapping to 37 MS-DRGs, with 41.42% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV >96 Hours with MCC) Simulation 2: 1,793,579 claims mapping to 742 MS-DRGs, with 30.32% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV >96 Hours with MCC) Simulation 3: 2,117,455 claims mapping to 742 MS-DRGs, with 25.80% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV >96 Hours with MCC) Simulation 4: 368,389 claims mapping to 589 MS-DRGs, with 42.01% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV >96 Hours with MCC) Simulation 5: 1,437,546 claims mapping to 592 MS-DRGs, with 38.00% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV >96 Hours with MCC)
	Charges removed for prior technology	The applicant did not remove direct or indirect charges related to the prior technology. Per the applicant, the technology is not expected to remove the need for prior technologies or remove the costs associated with prior technologies.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.102 for Laboratory from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Simulation 1: - Average case-weighted threshold amount: $73,418 - Final inflated average case-weighted standardized charge per case: $84,339

		Simulation 2: - Average case-weighted threshold amount: $81,998 - Final inflated average case-weighted standardized charge per case: $107,616 Simulation 3: - Average case-weighted threshold amount: $78,365 - Final inflated average case-weighted standardized charge per case: $99,821 Simulation 4: - Average case-weighted threshold amount: $90,005 Final inflated average case-weighted standardized charge per case: $133,372 Simulation 5: - Average case-weighted threshold amount: $75,671 Final inflated average case-weighted standardized charge per case: $92,088 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all scenarios, the applicant asserted that the PBC Separator with Selux AST System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received 510(k) clearance from FDA is included within the scope of the Breakthrough Device designation indication, it appears that the FDA-cleared indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.

We agree with the applicant that the PBC Separator with Selux AST System meets the cost criterion and are therefore proposing to approve the PBC Separator with Selux AST System for new technology add-on payments for FY 2026 for use as an automated inoculum preparation system that uses lysis, centrifugation and sequential optical density measurements to generate a McFarland equivalent suspension from positive blood culture samples that can be used for quantitative in vitro AST by the Selux AST System.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the PBC Separator with Selux AST System to the hospital to be $135.04 per patient. Per the applicant, the cost per patient includes $80 for the Selux AST Gram Negative and Selux AST Gram Positive AST Kit, $50 for the Selux AST Positive Blood Culture Kit, $4.79 for the Selux AST Analyzer Reagent Kit, and $0.25 for the Selux AST Waste Kit.

We note that according to the applicant, the Selux AST System has been granted multiple previous FDA clearances for a different indication and sample type.[196] However, per the applicant, the Breakthrough Device designation is for the Selux Positive Blood Culture Separator and Selux [AST] System. The previous FDA clearances for the Selux AST System were not considered Breakthrough Devices. Therefore, it appears that the components of the Selux AST System, including the Selux AST Gram Negative and Selux AST Gram Positive AST Kit, Selux AST Analyzer Reagent Kit, and Selux AST Waste Kit are eligible for new technology add-on payment only when used in conjunction with the PBC Separator on positive blood culture samples. We further note that the Selux AST System first received FDA 510(k) clearance on January 18, 2023, and therefore the components of the Selux AST System would still be new for FY 2026.

We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2) we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the PBC Separator with Selux AST System would be $87.78 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the PBC Separator with Selux AST System meets the cost criterion and our proposal to approve new technology add-on payments for the PBC Separator with Selux AST System for FY 2026.

18. PearlMatrix P–15 Peptide Enhanced Bone Graft

The following table summarizes the information provided in the new technology add-on payment application for the PearlMatrix P–15 Peptide Enhanced Bone Graft.

BILLING CODE 4120–01–P

[196] *https://www.accessdata.fda.gov/cdrh_docs/pdf21/K211759.pdf* and *https://www.accessdata.fda.gov/cdrh_docs/pdf21/K211748.pdf.*

	PearlMatrix P-15 Peptide Enhanced Bone Graft	
Technology Info	**Applicant**	Cerapedics Inc.
	Description	Per the applicant, the PearlMatrix P-15 Peptide Enhanced Bone Graft is a composite bone graft material consisting of a synthetic peptide, found naturally occurring in human Type I collagen (P-15), adsorbed onto calcium phosphate particles, which are incorporated into a fibrous collagen matrix putty as an inert carrier.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241003MHP1H
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the P-15L Bone Graft is indicated for intervertebral body fusion of the spine in skeletally mature patients. The P-15L Bone Graft is intended to be used in conjunction with a TLIF Fusion Device and supplemental internal spinal fixation systems cleared by FDA for use in the lumbosacral spine. The system is to be used in patients who have had at least six months of non-operative treatment. The P-15L Bone Graft is intended for use at one level in the lumbar spine (L2-S1) for the treatment of degenerative disc disease (DDD) with up to Grade I spondylolisthesis. DDD is defined as back pain of discogenic origin with degeneration of the disc confirmed by history and radiographic studies.
	FDA marketing authorization information	The applicant anticipates a PMA decision from FDA before May 1, 2025. Per the applicant, the device name of P-15L Bone Graft was used in the application for the Breakthrough Device designation. The applicant stated that Indications for Use statement in the Breakthrough Device designation was broader to encompass the initial product approval as well as future potential indication expansions, but the expected FDA indication would be specific to the clinical study data gathered within the Investigational Device Exemption study for FDA approval.
	Commercial availability	The applicant stated that it anticipates the technology will be available on the market immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the PearlMatrix P-15 Peptide Enhanced Bone Graft.
	Claims identified	6,902 claims mapping to 2 MS-DRGs, with 94.73% of claims mapping to MS-DRG 451 (Single Level Spinal Fusion Except Cervical without MCC).
	Charges removed for prior technology	The applicant removed 50% of charges associated with implantable devices (revenue centers 0278 and 0624). The applicant stated that this approach reflects a conservative estimate because the PearlMatrix P-15 Peptide Enhanced Bone Graft is used in conjunction with other implantable devices, including PEEK TLIF fusion device and posterior pedicle screw fixation. Per the applicant, this approach is supported by its literature review, which shows the percentage of costs associated with bone graft products as of total implantable devices ranges from 13% to 37%. The applicant did not remove any indirect charges as the applicant believed that the PearlMatrix P-15 Peptide Enhanced Bone Graft is anticipated to use a similar level of medical resources as the previous technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file and standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology as the applicant believed that the PearlMatrix P-15 Peptide Enhanced Bone Graft is anticipated to use a similar level of medical resources as the previous technology.
	Cost analysis results	Average case-weighted threshold amount: $127,054 Final inflated average case-weighted standardized charge per case: $145,497 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the PearlMatrix P-15 Peptide Enhanced Bone Graft meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we agree with the applicant that the PearlMatrix P–15 Peptide Enhanced Bone Graft

meets the cost criterion and are therefore proposing to approve the PearlMatrix P–15 Peptide Enhanced Bone Graft for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the PearlMatrix P–15 Peptide Enhanced Bone Graft to the hospital to be $6,500 per patient, for one 10 cc kit used per inpatient stay. The applicant provided the following cost breakdown of each component: bone graft peptide ($3,120 operating cost and $780 capital cost), porcine anorganic bone mineral ($780 operating cost and $195 capital cost), and fibrous collagen matrix ($1,300 operating cost and $325 capital cost). Because section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under that subsection, which establishes the system for payment of the operating costs of inpatient hospital services, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (86 FR 45145). As noted, the applicant stated, there are capital costs of $1,300 for the bone graft peptide, porcine anorganic bone mineral, and fibrous collagen matrix. Therefore, it appears that these costs are not eligible for new technology add-on payment because, as discussed in prior rulemaking and as noted, we only make new technology add-on payments for operating costs (72 FR 47307 through 47308). We note that any new technology add-on payment for the PearlMatrix P–15 Peptide Enhanced Bone Graft would include only the operating costs of $5,200 for the bone graft peptide, porcine anorganic bone mineral, and fibrous collagen matrix. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Any new technology add-on payment for the PearlMatrix P–15 Peptide Enhance Bone Graft would be subject to our policy under § 412.88(a)(2) where we limit new technology add-on payment to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the PearlMatrix P–15 Peptide Enhanced Bone Graft would be $3,380 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the PearlMatrix P–15 Peptide Enhanced Bone Graft meets the cost criterion and our proposal to approve new technology add-on payments for the PearlMatrix P–15 Peptide Enhanced Bone Graft for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

19. Provizio® SEM Scanner

The following table summarizes the information provided in the new technology add-on payment application for the Provizio® SEM Scanner.

BILLING CODE 4120–01–P

	Provizio® SEM Scanner	
Technology Info	**Applicant**	Bruin Biometrics, LLC
	Description	Per the applicant, the Provizio® SEM Scanner is a wireless, hand-held, bedside device with a touch-screen interface. Per the applicant, the technology is non-invasive and detects, measures, and monitors sub-epidermal moisture (SEM), persistent focal edema, or localized edema to detect early-stage pressure injuries/ulcers (PI/PUs) and deep tissue pressure injuries (DTPIs).
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP2410076TVHF
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Provizio SEM Scanner S is intended to measure and monitor changes in subepidermal moisture (SEM), representing localized edema or persistent focal edema, for the detection of pressure induced and deep tissue damage when scanning the heels and sacrum of patients who are at risk of developing pressure ulcers and deep tissue injuries. Results from the Provizio SEM Scanner S are intended to direct clinical decision making in providing earlier, anatomy - specific interventions to treat raised levels of SEM while the skin is still intact. When used as intended by healthcare professionals, results from the Provizio SEM Scanner S are clinically actionable and aid in the prevention of chronic pressure ulcers (Stages 2, 3 and 4) and deep tissue injuries.
	FDA marketing authorization information	The applicant anticipates a De Novo Classification decision from FDA before May 1, 2025, consistent with its Breakthrough Device designation.
	Commercial availability	The applicant anticipates the technology will be commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	Effective April 1, 2024, the following ICD-10-PCS code may be used to uniquely describe procedures involving the use of the Provizio® SEM Scanner: XX2KXP9 (Monitoring of interstitial fluid volume, sub-epidermal moisture using electrical biocapacitance).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the list of ICD-10-CM codes used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Provizio® SEM Scanner. The applicant used FY 2023 MedPAR data to identify cases used in the cost analysis.
	Claims identified	10,249 claims mapping to 444 MS-DRGs, with none exceeding more than 7.86% of the total identified cases.
	Charges removed for prior technology	The applicant did not remove charges as the applicant stated there is no current technology for prevention of pressure ulcers and the new technology is additive to current practice. The applicant removed indirect charges to account for fewer supplies used to treat an active pressure ulcer and a lower length of stay if a pressure ulcer was prevented. The applicant analyzed the MedPAR data and compared the length of stay and supply charges for patients without pressure ulcers to cases for patients who developed sacral and heel pressure ulcers during the stay. The applicant reduced supply charges by 18% and reduced accommodation charges associated with 59% reduction in length of stay.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule and standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the estimated cost of the technology per day by the national average cost-to-charge ratio of 0.297 for Supplies & Equipment from the FY 2025 IPPS/LTCH PPS final rule to estimate charges per day. The applicant then multiplied this charge by the estimated length of stay after reducing the length of stay by 59% to bring in line with the length of stay for patients without pressure ulcers. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Average case-weighted threshold amount: $137,789 Final inflated average case-weighted standardized charge per case: $232,164 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the Provizio® SEM Scanner meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we agree with the applicant that the Provizio® SEM Scanner meets the cost criterion and are therefore proposing to approve the Provizio® SEM Scanner for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the Provizio® SEM Scanner to the hospital to be $631.84 per patient, based on the cost of the

Single-Use Disposable Provizio® SEM Sensor ($17.95) with a two-scan frequency per day, and an anticipated average length of stay (LOS) of 17.6 days. Per the applicant, the average LOS was determined by analyzing the FY2023 MedPAR data, and the weighted average LOS for all MS–DRGs (765 DRGs) was 5.1 days. According to the applicant, the average LOS for MS–DRGs (444 MS–DRGs) with patients who developed sacral and heel pressure ulcers (PUs) during the stay was 24.9 days, and the average LOS for the same MS–DRGs for cases without PUs was 10.3 days. The applicant expected that the LOS for these MS–DRGs would be reduced from 24.9 to 10.3 days for patients using the device. The applicant noted that the MedPAR data describes the number of cases with PUs, and that it is possible that individual patients may have multiple PUs, such as at the sacrum and heel. Per the applicant, in these cases, the scanner would be used on the remaining anatomies at risk of PUs through the average LOS of 24.9 days. Per the applicant, the midpoint between the average LOS for cases without PUs and cases with PUs is 17.6 days. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Any new technology add-on payment for the Provizio® SEM Scanner would be subject to our policy under § 412.88(a)(2) where we limit new technology add-on payment to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the Provizio® SEM Scanner would be $410.70 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the Provizio® SEM Scanner meets the cost criterion and our proposal to approve new technology add-on payments for the Provizio® SEM Scanner for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

20. RECELL® Autologous Cell Harvesting Device

The following table summarizes the information provided in the new technology add-on payment application for the RECELL® Autologous Cell Harvesting Device.

BILLING CODE 4120–01–P

	RECELL® Autologous Cell Harvesting Device	
Technology Info	**Applicant**	AVITA Medical
	Description	Per the applicant, the RECELL® Autologous Cell Harvesting Device is a stand-alone, single-use, battery-powered medical device that is used to process and apply a skin cell suspension autograft for the treatment of thermal burn wounds and full thickness skin defects. Per the applicant, this NTAP application is for the full thickness skin defects indication.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007VBAM0
FDA Info	**Breakthrough Device designation Indication**	Per the applicant, the proposed indication for use is for the treatment of patients with acute nonthermal full thickness skin wounds after traumatic avulsion, surgical excision (for example, necrotizing soft tissue infection), or resection (for example, skin cancer), in combination with meshed autografting.
	FDA marketing authorization indication	The RECELL® Autologous Cell Harvesting Device is used by an appropriately licensed and trained healthcare professional at the patient's point-of-care to prepare autologous Spray-On Skin Cells for direct application to acute partial-thickness thermal burn wounds in patients 18 years of age or older, or application in combination with meshed autografting for acute full-thickness thermal burn wounds in pediatric and adult patients and full-thickness skin defects after traumatic avulsion (for example, degloving) or surgical excision (for example, necrotizing soft tissue infection) or resection (for example, skin cancer) in patients 15 years of age and older.
	FDA marketing authorization information	The applicant stated that the following FDA-approved indication is the subject of the new technology add-on payment application: for the use of the RECELL® Autologous Cell Harvesting Device in combination with meshed autografting for full thickness skin defects resulting from traumatic avulsion (for example, degloving), surgical excision (for example, necrotizing soft tissue infection), or resection (for example, skin cancer) in patients 15 years of age and older.
	FDA marketing authorization date	June 7, 2023
	Commercial availability	Per the applicant, the RECELL® Autologous Cell Harvesting Device was commercially available immediately after FDA approval for the indication of full thickness skin defects.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant provided a list of procedure codes that, effective October 1, 2019, may be used to uniquely identify procedures involving the use of the RECELL® Autologous Cell Harvesting Device under the ICD-10-PCS coding system in the online application posting.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and list of MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the RECELL® Autologous Cell Harvesting Device.
	Claims identified	Cost Analysis 1: 17,183 claims mapping to 11 MS-DRGs, with 36.87% of claims mapping to MS-DRG 464 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connectivity Tissue Disorders with CC). Cost Analysis 2: 13,539 claims mapping to 4 MS-DRGs, with 46.79% of claims mapping to MS-DRG 464 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connectivity Tissue Disorders with CC). Cost Analysis 3: 17,183 claims mapping to 11 MS-DRGs, with 36.87% of claims mapping to MS-DRG 464 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connectivity Tissue Disorders with CC).
	Charges removed for prior technology	According to the applicant, the RECELL® Autologous Cell Harvesting Device is a novel device and does not replace any prior technology. Therefore, the applicant did not remove any direct charges for prior technology being replaced. The applicant stated that the RECELL® Autologous Cell Harvesting Device is indicated for use in combination with the standard of care, split-thickness skin grafting (STSG), for full-thickness skin defects, complementing but not replacing the STSG procedure. The applicant believed the same resources required for a standard STSG are also needed when the RECELL® Autologous Cell Harvesting Device is used. Therefore, the applicant did not remove any indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.

	Inflation factor	Cost analysis 1 and 2: The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule. Cost analysis 3: The applicant did not apply an inflation factor to the standardized charges.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology because it believed the same resources required for a standard STSG are also needed when the RECELL® Autologous Cell Harvesting Device is used.
	Cost analysis results	Cost Analysis 1: - Average case-weighted threshold amount: $114,718 - Final inflated average case-weighted standardized charge per case: $175,809 Cost Analysis 2: - Average case-weighted threshold amount: $113,758 - Final inflated average case-weighted standardized charge per case: $172,998 Cost Analysis 3: - Average case-weighted threshold amount: $114,718 - Final inflated average case-weighted standardized charge per case: $159,065 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all analyses, the applicant asserted that the RECELL® Autologous Cell Harvesting Device meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we note that the RECELL® Autologous Cell Harvesting Device is also indicated for acute partial-thickness thermal burn wounds and acute full-thickness thermal burn wounds. However, we note that under the eligibility criteria for approval under the alternative pathway for certain transformative devices, only the use of the technology for the indication that corresponds to the technology's Breakthrough Device designation would be eligible for the new technology add-on payment for FY 2026. Therefore, only the use of the RECELL® Autologous Cell Harvesting Device for acute nonthermal full thickness skin wounds after traumatic avulsion, surgical excision (for example, necrotizing soft tissue infection), or resection (for example, skin cancer), and the FDA Breakthrough Device designation it received for those uses, are relevant for purposes of the new technology add-on payment application for FY 2026.

Please see Table 10.1.A.-RECELL® Autologous Cell Harvesting Device associated with this proposed rule for the list of relevant ICD–10–CM diagnosis codes that we believe would identify the Breakthrough Device-designated indication of acute nonthermal full thickness skin wounds after traumatic avulsion. Please see Table 10.1.B.-RECELL® Autologous Cell Harvesting Device associated with this proposed rule for the list of relevant ICD–10–PCS procedure codes that we believe would be appropriate to report in combination with use of the RECELL® Autologous Cell Harvesting Device to identify use of the technology for the Breakthrough Device-designated indication of acute nonthermal full thickness skin wounds after surgical excision (for example, necrotizing soft tissue infection) or resection (for example, skin cancer). We are inviting public comments on the use of these ICD–10–CM diagnosis and ICD–10–PCS procedure codes to identify use of the technology for the Breakthrough Device-designated indications for purposes of the new technology add-on payment, if approved.

We agree with the applicant that the RECELL® Autologous Cell Harvesting Device meets the cost criterion and are therefore proposing to approve the RECELL® Autologous Cell Harvesting Device for new technology add-on payments for FY 2026, when used in combination with meshed autografting for acute full-thickness thermal burn wounds in pediatric and adult patients and full-thickness skin defects after traumatic avulsion (for example, degloving) or surgical excision (for example, necrotizing soft tissue infection) or resection (for example, skin cancer).

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the RECELL® Autologous Cell Harvesting Device to the hospital to be $7,500 per device. The applicant estimated that, on average, one device is used per inpatient stay for patients with a full-thickness skin defect. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the RECELL® Autologous Cell Harvesting Device would be $4,875 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the RECELL® Autologous Cell Harvesting Device meets the cost criterion and our proposal to approve new technology add-on payments for the RECELL® Autologous Cell Harvesting Device for FY 2026.

21. Restor3d TIDAL™ Fusion Cage

The following table summarizes the information provided in the new

technology add-on payment application for the restor3d TIDAL™ Fusion Cage. We note that restor3d submitted an application for new technology add-on payments for the restor3d TIDAL™ Fusion Cage for FY 2025, as summarized in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36124 through 36125), that it withdrew prior to the issuance of the FY 2025 IPPS/LTCH PPS final rule (89 FR 69204).

BILLING CODE 4120–01–P

	restor3d TIDAL™ Fusion Cage	
Technology Info	**Applicant**	restor3d
	Description	Per the applicant, the restor3d TIDAL™ Fusion Cages are additively manufactured porous cages intended to be used as an accessory to an intramedullary nail for internal bone fixation for bone fractures, bone voids, or surgical resections in the hindfoot and tibia.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP2410022M84U
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the restor3d Fusion Cage System is intended for tibiotalocalcaneal arthrodesis (fusion) to provide stabilization of the hindfoot and ankle with critical size bone defect, in lieu of bulk allograft in procedures such as: post-traumatic and degenerative arthritis; post-traumatic or primary arthrosis involving both ankle and subtalar joints; revision after failed ankle arthrodesis with subtalar involvement; failed total ankle arthroplasty; non-union ankle arthrodesis; rheumatoid hindfoot; talectomy; avascular necrosis of the talus; neuroarthropathy; neuromuscular disease and severe deformity; osteoarthritis; Charcot foot; and previously infected arthrosis, second degree.
	FDA marketing authorization information	The applicant anticipates a 510(k) clearance decision from FDA before May 1, 2025, consistent with its Breakthrough Device designation. Per the applicant, the proposed FDA indications are a subset of the indications from the Breakthrough Designation and that the restor3d TIDAL™ Fusion Cage indications have been restricted to use the DynaNail, with indications limited to revision applications for patients at risk of limb loss.
	Commercial availability	The applicant anticipates the technology will be immediately available for sale after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	Effective October 1, 2024, the following ICD-10-PCS codes may be used to uniquely describe procedures involving use of the restor3d TIDAL™ Fusion Cage: XRGK0CA (Fusion of left ankle joint using gyroid-sheet lattice design internal fixation device, open approach), XRGM0CA (Fusion of left tarsal joint using gyroid-sheet lattice design internal fixation device, open approach), XRGJ0CA (Fusion of right ankle joint using gyroid-sheet lattice design internal fixation device, open approach), and XRGL0CA (Fusion of right tarsal joint using gyroid-sheet lattice design internal fixation device, open approach).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the list of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the restor3d TIDAL™ Fusion Cage. The applicant used FY 2022 MedPAR data to identify cases used in the cost analysis.
	Claims identified	14,247 claims mapping to 24 MS-DRGs, with 15.82% of claims mapping to MS-DRG 617 (Amputation of Lower Limb for Endocrine, Nutritional and Metabolic Disorders With CC) and 15.61% of claims mapping to MS-DRG 853 (Infectious and Parasitic Diseases with O.R. Procedures with MCC).
	Charges removed for prior technology	The applicant removed charges for the prior technology by estimating the cost of the technology being replaced using market intelligence data and the CMS Public Data file. The applicant then calculated charges for the technology by using the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file and standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 17.52% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant added indirect charges related to the new technology by using market intelligence data to estimate the cost related to use of the technology. The applicant then calculated charges using the Implantable Devices cost-to-charge ratio (0.259).
	Cost analysis results	Average case-weighted threshold amount: $113,613 Final inflated average case-weighted standardized charge per case: $320,053 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the restor3d TIDAL™ Fusion Cage meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we agree with the applicant that the restor3d TIDAL™ Fusion Cage meets the cost criterion and are therefore proposing to approve the restor3d TIDAL™ Fusion

Cage for new technology add-on payments for FY 2026 subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the cost of the restor3d TIDAL™ Fusion Cage to the hospital to be $27,995 per patient. In addition, the applicant noted the costs related to the technology for required supporting instruments and materials consist of one unit each of the Instrument Kit ($6,995), TTC Fusion Nail ($7,500), and Graft Material ($1,500). The applicant estimated the total cost to the hospital to be $43,990 for each procedure per patient, including the related cost of the technology. As we discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36125) and in prior rulemaking, when determining a new technology add-on payment, we provide payment based on the cost of the actual technology (such as the drug or device itself) and not for additional costs related to the use of the device (86 FR 45146). Based on the information provided by the applicant, the cost of the Instrument Kit is included in the costs of the supporting instruments and materials for each procedure related to the use of the technology, rather than the cost of the technology itself. In addition, it appears that the TTC Fusion Nail and Bone Graft are not new and unique components for this technology and can be purchased separately in support of other technologies. Furthermore, we note that the Instrument Kit is not included in the Breakthrough Device designation, and it therefore appears that only the restor3d TIDAL™ Fusion Cage would be designated as the Breakthrough Device once market authorized and would be eligible for new technology add-on payments under the alternative pathway. Therefore, it appears any add-on payment for the restor3d TIDAL™ Fusion Cage would include only the cost of the restor3d TIDAL™ Fusion Cage ($27,995).

We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the restor3d TIDAL™ Fusion Cage would be $18,196.75 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the restor3d TIDAL™ Fusion Cage meets the cost criterion and our proposal to approve new technology add-on payments for the restor3d TIDAL™ Fusion Cage for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

22. ShortCut™

The following table summarizes the information provided in the new technology add-on payment application for the ShortCut™.

BILLING CODE 4120–01–P

	ShortCut™	
Technology Info	Applicant	Pi-Cardia Ltd
	Description	Per the applicant, the ShortCut™ is indicated for use as a splitting device of bioprosthetic aortic valve leaflets to facilitate valve-in-valve procedures for patients at risk of coronary obstruction.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP2410045YWFH
FDA Info	Breakthrough Device designation indication	Per the applicant, the ShortCut™ is indicated for use as a splitting device of bioprosthetic aortic valve leaflets to facilitate valve-in-valve procedures for patients at risk for coronary obstruction.
	FDA marketing authorization indication	The ShortCut™ is indicated for use as a splitting device of bioprosthetic aortic valve leaflets to facilitate valve-in-valve procedures for patients at risk for coronary obstruction.
	FDA marketing authorization date	September 27, 2024
	Commercial availability	The applicant stated that the technology was commercially available immediately after FDA market authorization.
Coding	Unique ICD-10-PCS Code(s)	Effective October 1, 2024, the following ICD-10-PCS code may be used to uniquely describe procedures involving the use of the ShortCut™: X28F3VA (Division of aortic valve using intraluminal bioprosthetic valve leaflet splitting technology in existing valve, percutaneous approach, new technology group 10).
	ICD-10-CM Code(s)	The applicant stated the ICD-10-CM code I35.0 (Nonrheumatic aortic (valve) stenosis) may be used to currently identify the indication under the ICD-10-CM coding system.
Cost Criterion	Inclusion/exclusion criteria	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the ShortCut™. The applicant used FY 2023 MedPAR data to identify cases used in the cost analysis.
	Claims identified	39,533 claims mapping to 2 MS-DRGs, with 68.3% of claims mapping to MS-DRG 267 (Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC).
	Charges removed for prior technology	The applicant did not remove charges or indirect charges related to prior technology as the applicant stated there is no existing technology to be replaced.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.297 for Supplies & Equipment from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Average case-weighted threshold amount: $192,802 Final inflated average case-weighted standardized charge per case: $275,030 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the ShortCut™ meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we agree with the applicant that the ShortCut™ meets the cost criterion and are therefore proposing to approve the ShortCut™ for new technology add-on payments for FY 2026 for use as a splitting device of bioprosthetic aortic valve leaflets to facilitate valve-in-valve procedures for patients at risk for coronary obstruction.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the ShortCut™ to the hospital to be $15,000 per patient. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS-DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the ShortCut™ would be $9,750 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the ShortCut™ meets the cost criterion and our proposal to approve new technology add-on payments for the ShortCut™ for FY 2026.

23. Spur Peripheral Retrievable Stent System

The following table summarizes the information provided in the new technology add-on payment application for the Spur Peripheral Retrievable Stent System.

BILLING CODE 4120–01–P

	Spur Peripheral Retrievable Stent System	
Technology Info	**Applicant**	Reflow Medical, Inc.
	Description	Per the applicant, the Spur Peripheral Retrievable Stent System is intended for the treatment of de novo or restenotic lesions of the infrapopliteal arteries to increase luminal diameter. Per the applicant, it places a temporary stent within the lesion and is removed during the procedure.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241004UTR2W
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Bare Temporary Spur Stent System is intended for the treatment of de novo or restenotic lesions of the infrapopliteal arteries to increase luminal gain.
	FDA marketing authorization information	The applicant stated that it anticipates a De Novo Classification decision from FDA before May 1, 2025. Per the applicant, the expected FDA indication has verbiage regarding increasing luminal diameter, which is similar to the Breakthrough Device designation indication verbiage regarding increasing luminal gain. Per the applicant, both indications are consistent in that the device is intended for patients with de novo or restenotic lesions in the infrapopliteal arteries. According to the applicant, the Bare Spur Stent System named in the Breakthrough Device designation letter is the same device as the Spur Peripheral Retrievable Stent System named in the De Novo application.
	Commercial availability	The applicant stated that it anticipates the technology will be commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Spur Peripheral Retrievable Stent System.
	Claims identified	14,511 claims mapping to 152 MS-DRGs, with 15.22% of claims mapping to MS-DRG 253 (Other Vascular Procedures with CC).
	Charges removed for prior technology	The applicant removed 100% of charges associated with Medical/Surgical Supplies and Devices (revenue centers 027x, and 0624). Per the applicant, the use of the Spur Peripheral Retrievable Stent System is expected to replace a portion of devices included in these claims, although it will not replace all devices, nor any medical supplies required to perform the procedure. However, an estimate of the percentage of these total charges for devices that would be replaced could not be determined by the applicant. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant did not add charges or indirect charges for the new technology.
	Cost analysis results	Average case-weighted threshold amount: $130,537 Final inflated average case-weighted standardized charge per case: $187,119 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that the Spur Peripheral Retrievable Stent System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, with regard to the cost criterion, we note that the applicant provided a list of ICD–10–CM codes to identify indications relevant to use of the technology for patients with de novo or restenotic lesions in the infrapopliteal arteries. However, in the cost analysis, the applicant used only ICD–10–PCS codes to identify eligible cases. We question whether using a combination of ICD–10–CM and ICD–10–PCS codes would more accurately identify eligible cases.

Subject to the applicant adequately addressing this concern, we would agree that the Spur Peripheral Retrievable Stent System meets the cost criterion and are therefore proposing to approve the Spur Peripheral Retrievable Stent System for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

The applicant has not provided an estimate for the cost of the Spur Peripheral Retrievable Stent System at the time of this proposed rule. We expect the applicant to submit cost information prior to the final rule, and we will provide an update regarding the new technology add-on payment amount for the technology, if approved, in the final rule. Any new technology add-on payment for the Spur Peripheral Retrievable Stent System would be subject to our policy under § 412.88(a)(2) where we limit new

technology add-on payment to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS-DRG payment for the case.

We invite public comments on whether the Spur Peripheral Retrievable Stent System meets the cost criterion and our proposal to approve new technology add-on payments for the Spur Peripheral Retrievable Stent System for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

24. The WiSE CRT System

The following table summarizes the information provided in the new technology add-on payment application for The WiSE CRT System.

BILLING CODE 4120–01–P

	The WiSE CRT System	
Technology Info	**Applicant**	EBR Systems, Inc
	Description	Per the applicant, The WiSE CRT System is indicated for patients who meet current guidelines for cardiac resynchronization therapy (CRT) with previously acute or chronic failed implants or patients that are high-risk upgrades to a traditional CRT device.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP2410056PHBK
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the WiSE CRT System is indicated for patients who meet current guidelines for CRT device implantation and satisfy at least one of the following criteria: patients with previously implanted CRT device, who have not responded to CRT – referred to as "non-responders;" patients in whom previous coronary sinus lead implantation procedure was unsuccessful, or where an implanted lead has been turned off – referred to as "previously untreatable;" and patients with previously implanted pacemakers or ICD's in whom standard CRT upgrade is not advisable due to known relative contraindications for CS lead or CRT device implantation – referred to as "high-risk upgrades."
	FDA marketing authorization information	The applicant stated that it anticipates a PMA decision from FDA before May 1, 2025. According to the applicant, the proposed FDA indication includes two of the three indications for which Breakthrough Device Designation was approved, specifically patients that are "previously untreatable" and "high-risk upgrades."
	Commercial availability	The applicant anticipates The WiSE CRT System will be commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for The WiSE CRT System.
	Claims identified	Scenario 1: 396 claims mapping to 2 MS-DRGs, with 53.79% of claims mapping to MS-DRG 229 (Other Cardiothoracic Procedures without MCC). Scenario 2: 934 claims mapping to 2 MS-DRGs, with 64.45% of claims mapping to MS-DRG 229 (Other Cardiothoracic Procedures without MCC).
	Charges removed for prior technology	The applicant removed 100% of charges associated with Medical/Surgical Supplies and Devices (revenue centers 027x, and 0624), because the technology is expected to replace a portion of devices included in these claims (although it will not replace all devices, nor any medical supplies required to perform the procedure) and an estimate of the percentage of total charges that the technology would replace could not be determined. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2023 IPPS/LTCH PPS final rule correcting amendment.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Scenario 1: - Average case-weighted threshold amount: $156,573 - Final inflated average case-weighted standardized charge per case: $362,465 Scenario 2: - Average case-weighted threshold amount: $150,937 - Final inflated average case-weighted standardized charge per case: $356,495 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both scenarios, the applicant asserted that The WiSE CRT System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we agree with the applicant that The WiSE CRT System meets the cost criterion and are therefore proposing to approve The WiSE CRT System for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of The WiSE CRT System to the hospital to be $63,300 per patient. The components include the electrode

and catheter ($21,970), the delivery sheath ($2,590), the battery ($12,870), and the transmitter ($25,870). We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS-DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of The WiSE CRT System would be $41,145 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether The WiSE CRT System meets the cost criterion and our proposal to approve new technology add-on payments for The WiSE CRT System for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

25. TriVerity Test

The following table summarizes the information provided in the new technology add-on payment application for the TriVerity Test.

BILLING CODE 4120–01–P

	TriVerity Test	
Technology Info	**Applicant**	Inflammatix, Inc.
	Description	Per the applicant, the TriVerity test is a blood test that rapidly "reads" the body's immune response to infection using machine learning-derived algorithms. Per the applicant, the test informs on the presence of infection and risk of progression to severe illness in adult patients suspected of acute infection or sepsis in the emergency department.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007260BW
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the TriVerity Test is an automated, semi-quantitative in vitro diagnostic test that measures the relative expression levels of host response genes in RNA isolated from whole blood collected in the PAXgene Blood RNA tube using reverse transcription loop-mediated isothermal amplification (RT-LAMP) on the Myrna instrument. The results are generated using two fixed classifiers. The TriVerity Test is indicated for use in conjunction with clinical assessments and other laboratory findings as an aid to differentiate bacterial infections, viral infections, and non-infectious illness, as well as the likelihood of disease progression in adult patients with suspected acute infection or sepsis presenting to the emergency department. The test generates three scores that fall within one of five discrete interpretation bands based on the likelihoods of: 1) bacterial infection, 2) viral infection, and 3) severe illness, as defined by the need for mechanical ventilation, vasopressors, and/or renal replacement therapy (RRT) within seven days.
	FDA marketing authorization information	The TriVerity test is an automated, semi-quantitative in vitro diagnostic test that measures the relative expression levels of host response genes in RNA isolated from whole blood collected in the PAXgene Blood RNA tube using reverse transcription loop-mediated isothermal amplification (RT-LAMP) on the Myrna instrument. The TriVerity test is indicated for use in conjunction with clinical assessments and other laboratory findings as an aid to differentiate bacterial infections, viral infections, and non-infectious illness, as well as to determine the likelihood of 7-day need for mechanical ventilation, vasopressors, and/or renal replacement therapy in adult patients with suspected acute infection or suspected sepsis presenting to the emergency department. The test generates three scores that each fall within one of five discrete interpretation bands based on the increasing likelihood of 1) bacterial infection, 2) viral infection, and 3) severe illness, as defined by the need for mechanical ventilation, vasopressors, and/or renal replacement therapy (RRT) within seven days.
	FDA marketing authorization date	January 10, 2025
	Commercial availability	Per the applicant, the technology was not commercially available immediately after FDA marketing authorization because it is working to transition its test system manufacturing to be able to roll out TriVerity cartridges for routine clinical use including: (1) updating labeling, (2) build-up of TriVerity cartridge inventory, and (3) updating documents within its QMS. Per the applicant, its target date for commercial availability is March 6, 2025.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a diagnosis code that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes and/or MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the TriVerity Test.
	Claims identified	Cost Analysis 1: 1,321,764 claims mapping to 42 MS-DRGs, with 39.73% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC). Cost Analysis 2: 2,269,088 claims mapping to 727 MS-DRGs, with 23.05% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC).
	Charges removed for prior technology	The applicant stated that the TriVerity Test is expected to be used as an aid in the Emergency Department to help identify which patients should receive antibiotics, undergo further diagnostic testing, and be admitted for further treatment, and would be additive to the cases identified. Therefore, the applicant did not remove any direct or indirect charges for prior technologies being replaced.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS interim final action with comment period.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant did not add direct or indirect charges related to the new technology.
	Cost analysis results	Cost Analysis 1: - Average case-weighted threshold amount: $67,984 - Final inflated average case-weighted standardized charge per case: $70,025 Cost Analysis 2: - Average case-weighted threshold amount: $73,258 - Final inflated average case-weighted standardized charge per case: $81,393 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in both analyses, the applicant asserted that the TriVerity Test meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we note the applicant stated that the technology was not commercially available immediately

after FDA clearance. We are interested in additional information regarding the cause of any delay in the technology's commercial availability, including the significance of building up TriVerity cartridge inventory on its availability for routine clinical use.

With regard to the cost criterion, the applicant stated the technology is used as an aid to differentiate bacterial infections, viral infections, and non-infectious illness, as well as the likelihood of disease progression in adult patients. However, the applicant included diagnosis codes related to sepsis of newborn in the second cost criterion analysis. We question whether diagnosis codes related to newborns are applicable to this technology because it is indicated for use in adult patients, and whether the applicant should remove these diagnosis codes to identify eligible cases more accurately.

Subject to the applicant adequately addressing this concern, we would agree that the technology meets the cost criterion and propose to approve the TriVerity Test for new technology add-on payments for FY 2026, for use in conjunction with clinical assessments and other laboratory findings as an aid to differentiate bacterial infections, viral infections, and non-infectious illness, as well as to determine the likelihood of 7-day need for mechanical ventilation, vasopressors, and/or renal replacement therapy in adult patients with suspected acute infection or suspected sepsis presenting to the emergency department.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the TriVerity Test to the hospital to be $388 per patient. The applicant stated that there would be two components for the operating cost of the technology: the TriVerity Cartridge ($375) and the PAXgene Blood RNA Tube ($13). Per the applicant, the PAXgene Blood RNA Tube is an FDA-cleared tube distributed by BD and is a necessary component for hospitals to use the TriVerity Test. The applicant stated that hospitals can purchase the PAXgene Blood RNA Tubes directly from BD or from the applicant. Although the applicant stated that the PAXgene Blood RNA Tube is a new component of the device, we note that the PAXgene Blood RNA Tube is also commercially available for other uses as a standalone sample collection device, and received FDA marketing authorization as early as April 18, 2005.[197] Therefore, it appears that only the cost of the TriVerity Cartridge is appropriate for consideration for new technology add-on payment. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the TriVerity Test would be $243.75 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the TriVerity Test meets the cost criterion and our proposal to approve new technology add-on payments for the TriVerity Test for FY 2026.

[197] *https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/denovo.cfm?id=DEN050003.*

26. Ventura® Interatrial Shunt System

The following table summarizes the information provided in the new technology add-on payment application for the Ventura® Interatrial Shunt System.

BILLING CODE 4120–01–P

	Ventura® Interatrial Shunt System	
Technology Info	**Applicant**	V-Wave, Inc.
	Description	Per the applicant, the Ventura® Interatrial Shunt System includes the Ventura® Interatrial Shunt and delivery system. Per the applicant, it is indicated to reduce morbidity and mortality in NYHA Class III heart failure patients who remain symptomatic despite guideline directed medical therapy and have a left ventricular ejection fraction of ≤40%.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241004DLXGV
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the V-Wave Shunt is a permanent implant, which is designed to enable shunting of blood from the left to the right atrium and by that, improve symptoms in NYHA Class III and ambulatory Class IV heart failure patients, with reduced or preserved left ventricular systolic function.
	FDA marketing authorization information	The applicant anticipates a PMA decision from FDA before May 1, 2025. Per the applicant, the Breakthrough Device designation is broader than the proposed FDA indication submitted for FDA marketing authorization because the Breakthrough device indication includes both NYHA Class III and ambulatory Class IV heart failure patients, with reduced or preserved left ventricular systolic function, while the proposed FDA indication is for NYHA Class III heart failure patients who remain symptomatic despite guideline directed medical therapy and have a left ventricular ejection fraction (LVEF) of ≤40%. According to the applicant, the V-Wave Shunt named in the Breakthrough designation letter is now called Ventura® Interatrial Shunt System.
	Commercial availability	The applicant anticipates the technology will be commercially available immediately after FDA marketing authorization.
Coding	**Unique ICD-10-PCS Code(s)**	According to the applicant, the following ICD-10-PCS code may be used to uniquely describe procedures involving the use of the Ventura® Interatrial Shunt System: 02173J6 (Bypass left atrium to right atrium with synthetic substitute, percutaneous approach).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the Ventura® Interatrial Shunt System.
	Claims identified	Medical MS-DRG analysis: 13,345 claims mapping to 10 MS-DRGs, with 40.66% of claims mapping to MS-DRG 291 (Heart Failure and Shock with MCC). Surgical MS-DRG analysis: 975 claims mapping to 3 MS-DRGs, with 83.28% of claims mapping to MS-DRG 270 (Other Major Cardiovascular Procedures with MCC).
	Charges removed for prior technology	Medical MS-DRG analysis: The applicant did not remove charges for prior technology because the applicant selected the currently medically managed cases that the Ventura® Interatrial Shunt System will be used to treat. Per the applicant, the new technology is additive to current practice. The applicant did not remove indirect charges related to the new technology. Surgical MS-DRG analysis: The applicant removed supplies and implant charges associated with similarly resourced surgical procedures performed in the catheterization lab. According to the applicant, this technology would not be used in conjunction with any other procedure. The applicant did not remove indirect charges related to the new technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used relevant values reported in the impact file posted with the FY 2023 IPPS/LTCH PPS final rule and in the standardization file posted with the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.259 for Implantable Devices from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Scenario 1: - Average case-weighted threshold amount: $53,467 - Final inflated average case-weighted standardized charge per case: $185,373 Scenario 2: - Average case-weighted threshold amount: $170,001 - Final inflated average case-weighted standardized charge per case: $293,772 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all scenarios, the applicant asserted that the Ventura® Interatrial Shunt System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we note that with regard to the unique ICD–10–PCS procedure code used to identify the use

of this technology, the applicant stated that ICD–10–PCS procedure code 02173J6 (Bypass left atrium to right atrium with synthetic substitute, percutaneous approach) describes implantation of an interatrial shunt. The applicant stated that it expects the Ventura® Interatrial Shunt System to be the first interatrial shunt to receive FDA approval and that it therefore will be the only technology reported under this code. However, we believe that other technologies currently in clinical trials may also be able to be reported using this code. Therefore, we believe that the ICD–10–CM diagnosis code Z00.6 (Encounter for examination for normal comparison and control in clinical research program) should be used in combination with the ICD–10–PCS procedure code 02173J6 to exclude new technology add-on payment for cases involving technologies that are used in clinical trial settings, as costs for the investigational item or service, itself unless otherwise covered outside of the clinical trial, are not covered by Medicare under the routine costs of a clinical trial.[198] We are inviting public comments on the use of this ICD–10–CM diagnosis code to exclude cases involving technologies that are used in clinical trial settings, which would not be eligible for the new technology add-on payment, if approved.

We agree with the applicant that the Ventura® Interatrial Shunt System meets the cost criterion and are therefore proposing to approve the Ventura® Interatrial Shunt System for new technology add-on payments for FY 2026 subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the Ventura® Interatrial Shunt System to the hospital to be $34,000 per device, and one unit of the shunt system would be furnished during an inpatient stay. The components include the Ventura® Interatrial Shunt ($32,000) and the Ventura® Interatrial Shunt Delivery System ($2,000). We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the Ventura® Interatrial Shunt System would be $22,100 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the Ventura® Interatrial Shunt System meets the cost criterion and our proposal to approve new technology add-on payments for the Ventura® Interatrial Shunt System for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the Breakthrough Device designation by May 1, 2025.

27. VITEK® REVEAL™ AST System

The following table summarizes the information provided in the new technology add-on payment application for the VITEK® REVEAL™ AST System.

BILLING CODE 4120–01–P

[198] Routine Costs in Clinical Trials 310.1 (Effective Date of this Version 05/27/2024) *https://www.cms.gov/medicare-coverage-database/view/ncd.aspx?ncdid=1&ncdver=3&*.

	VITEK® REVEAL™ AST System	
Technology Info	**Applicant**	bioMerieux
	Description	Per the applicant, the VITEK® REVEAL™ Antimicrobial Susceptibility Testing (AST) System is an in vitro diagnostic (IVD) automated system for the quantitative AST of organisms from positive blood culture. Per the applicant, test results are intended to be used in conjunction with Gram stain, organism identification and other clinical findings to inform antibiotic therapy treatment decisions.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241007GL4LH
FDA Info	**Breakthrough Device designation indication**	Per the applicant, the Reveal Rapid AST System is indicated for use as an IVD automated system for quantitative AST of organisms direct from positive blood culture or isolate dilution. The Reveal GN BC AST Assay is indicated for susceptibility testing of specific gram-negative pathogenic bacteria commonly associated with or causing bacteremia. Results are intended to be used in conjunction with Gram stain, organism identification and other clinical laboratory findings.
	FDA marketing authorization indication	The VITEK® REVEAL™ AST System is an automated system for quantitative and qualitative AST of organisms direct from positive blood culture. The VITEK® REVEAL™ AST System does not provide organism identification. The VITEK® REVEAL™ AST System is an automated system that uses an array of sensors to detect volatile organic compounds emitted by growing bacteria for the IVD quantitative and qualitative determination of antimicrobial susceptibility. The VITEK® REVEAL™ GN AST Assay is indicated for susceptibility testing direct from positive blood culture samples signaled positive by a continuous monitoring blood culture system and confirmed to contain gram-negative bacilli by Gram stain. Organism identification is required for the AST result interpretation and reporting.
	FDA marketing authorization information	Per the applicant, the FDA-cleared device name is slightly different than the Breakthrough Device name, as the word "Rapid" was removed from the name by FDA as a condition of clearance. The applicant stated that the FDA-cleared device name is VITEK® REVEAL™ AST System.
	FDA marketing authorization date	June 20, 2024
	Commercial availability	According to the applicant, the VITEK® REVEAL™ AST System became commercially available on October 21, 2024. Per the applicant, there was a delay in market availability due to lead times in the supply chain and implementation of system modifications due to FDA requirements.
Coding	**Unique ICD-10-PCS Code(s)**	Effective October 1, 2024, the following ICD-10-PCS code may be used to uniquely describe procedures involving the use of the VITEK® REVEAL™ AST System: XXE5X4A (Measurement of infection, positive blood culture small molecule sensory array technology, new technology group 10).
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for the VITEK® REVEAL™ AST System.
	Claims identified	Simulation 1: 1,417,026 claims mapping to 579 MS-DRGs, with 35.52% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC) Simulation 2: 619,445 claims mapping to 3 MS-DRGs, with 81.25% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC) Simulation 3: 417,648 claims mapping to 585 MS-DRGs, with 49.81% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC) Simulation 4: 798,340 claims mapping to 44 MS-DRGs, with 61.16% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC)
	Charges removed for prior technology	Per the applicant, the technology is not expected to remove the need for prior technologies or remove the costs associated with prior technologies. Therefore, the applicant did not remove any direct or indirect charges for prior technologies being replaced.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the standardizing file posted with the FY 2025 IPPS/LTCH PPS final rule.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.

	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.102 for Laboratory from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Simulation 1: - Average case-weighted threshold amount: $81,102 - Final inflated average case-weighted standardized charge per case: $104,143 Simulation 2: - Average case-weighted threshold amount: $76,738 - Final inflated average case-weighted standardized charge per case: $87,170 Simulation 3: - Average case-weighted threshold amount: $78,518 - Final inflated average case-weighted standardized charge per case: $94,050 Simulation 4: - Average case-weighted threshold amount: $81,248 - Final inflated average case-weighted standardized charge per case: $93,942 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all scenarios, the applicant asserted that the VITEK® REVEAL™ AST System meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received 510(k) clearance is included within the scope of the Breakthrough Device designation indication, it appears that the FDA-cleared indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.[199]

We note the applicant stated the device was not commercially available until October 21, 2024, due to lead times in the supply chain and implementation of system modifications due to FDA requirements. We are interested in additional information regarding the cause for any delay in the technology's commercial availability, as it received FDA clearance on June 20, 2024, and it is not clear how lead times in the supply chain affected its availability on the market and what system modifications were required.

We agree with the applicant that the VITEK® REVEAL™ AST System meets the cost criterion and are therefore proposing to approve the VITEK® REVEAL™ AST System for new technology add-on payments for FY 2026, indicated for susceptibility testing direct from positive blood culture samples signaled positive by a continuous monitoring blood culture system and confirmed to contain gram-negative bacilli by Gram stain.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipated the total cost of the VITEK® REVEAL™ AST System to the hospital to be $125 per patient for the VITEK® REVEAL™ Sensor Array. Per the applicant, while there are additional capital costs for the technology, these costs were not included in the device's cost to the hospital per patient per inpatient stay. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2), we limit new technology add-on payments to the lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of the VITEK® REVEAL™ AST System would be $81.25 for FY 2026 (that is, 65 percent of the average cost of the technology).

We invite public comments on whether the VITEK® REVEAL™ AST System meets the cost criterion and our proposal to approve new technology add-on payments for the VITEK® REVEAL™ AST System for FY 2026.

b. Alternative Pathways for Qualified Infectious Disease Products (QIDPs)

1. EMBLAVEO™ (Aztreonam-Avibactam)

The following table summarizes the information provided in the new technology add-on payment application for EMBLAVEO™ (also referred to as ATM–AVI).

BILLING CODE 4120–01–P

[199] Breakthrough Devices Program *https://www.fda.gov/medical-devices/how-study-and-market-your-device/breakthrough-devices-program.*

	EMBLAVEO™ (aztreonam-avibactam)	
Technology Info	**Applicant**	AbbVie
	Description	Per the applicant, ATM-AVI is an intravenous antibiotic treatment for infections caused by Gram-negative bacteria with limited treatment options. Per the applicant, it combines aztreonam, a monobactam β-lactam, with avibactam, a potent broad-spectrum β-lactamase inhibitor.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP241005WY6F6
FDA Info	**QIDP designation indication**	Per the applicant, ATM-AVI is designated as a QIDP for treatment of complicated intra-abdominal infections (cIAI), complicated urinary tract infections (cUTI), and hospital-acquired bacterial pneumonia (HABP)/ventilator-associated bacterial pneumonia (VABP).
	FDA marketing authorization indication	Emblaveo, in combination with metronidazole, is indicated in patients 18 years and older who have limited or no alternative options for the treatment of complicated intraabdominal infections (cIAI) including those caused by the following susceptible gram-negative microorganisms: *Escherichia coli, Klebsiella pneumoniae, Klebsiella oxytoca, Enterobacter cloacae complex, Citrobacter freundii complex*, and *Serratia marcescens*.
	FDA marketing authorization date	February 7, 2025
	Commercial availability	The applicant anticipates EMBLAVEO™ will be available for use and purchase in the United States by quarter 3 (Q3) of calendar year (CY) 2025 due to product availability.
Coding	**Unique ICD-10-PCS Code(s)**	The applicant submitted a request for approval for a unique ICD-10-PCS procedure code beginning in FY 2026.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes, ICD-10-PCS codes, and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for EMBLAVEO™ (aztreonam-avibactam).
	Claims identified	57,785 claims mapping to 369 MS-DRGs, with 18.17% of claims mapping to MS-DRG 853 (Infectious and Parasitic Diseases with O.R. Procedures with MCC).
	Charges removed for prior technology	The applicant did not remove any charges for drugs from the identified cases because the technology is expected to be additive to current treatments. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS interim final action with comment period.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant did not add direct or indirect charges related to the technology.
	Cost analysis results	Average case-weighted threshold amount: $126,084 Final inflated average case-weighted standardized charge per case: $195,074 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant asserted that EMBLAVEO™ meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, since the indication for which the applicant received NDA approval is included within the scope of the QIDP designation indication, it appears that the FDA-approved indication is appropriate for consideration for new technology add-on payment under the alternative pathway criteria.

We note that the applicant stated that the technology is expected to be commercially available by Q3 of CY 2025 due to product availability. We are interested in additional information regarding the cause for any delay in the technology's market availability as the technology received FDA approval on February 7, 2025.

We agree with the applicant that EMBLAVEO™ meets the cost criterion and are therefore proposing to approve EMBLAVEO™ for new technology add-on payments for FY 2026 for use in patients 18 years and older who have limited or no alternative options for the treatment of cIAI.

The applicant has not provided an estimate for the cost of EMBLAVEO™ at the time of this proposed rule. We expect the applicant to submit cost information prior to the final rule, and we will provide an update regarding the new technology add-on payment amount for the technology, if approved, in the final rule. Any new technology add-on payment for EMBLAVEO™ would be subject to our policy under § 412.88(a)(2)(ii)(B) where we limit new technology add-on payment for QIDPs to the lesser of 75 percent of the average cost of the technology, or 75 percent of the costs in excess of the MS–DRG payment for the case.

We invite public comments on whether EMBLAVEO™ meets the cost criterion and our proposal to approve new technology add-on payments for EMBLAVEO™ for FY 2026.

2. CONTEPO™ (Fosfomycin)

The following table summarizes the information provided in the new technology add-on payment application for CONTEPO™ (fosfomycin). We note

that Nabriva Therapeutics submitted an application for CONTEPO™ for FY 2021 and FY 2022, as summarized in the FY 2021 and FY 2022 IPPS/LTCH PPS proposed rules (85 FR 32682 through 32683; 86 FR 25390 through 25392), and received conditional approval subject to the technology receiving FDA marketing authorization before July 1 of the particular fiscal year for which the applicant applied for new technology add-on payments (85 FR 58723 through 58725; 86 FR 45154 through 45155). CONTEPO™ did not receive FDA marketing authorization by the applicable July 1 deadlines, and was therefore not eligible for new technology add-on payments for FY 2021 or FY 2022 (86 FR 44972; 87 FR 48909).

Per the applicant, Meitheal Pharmaceuticals Inc. has acquired the rights to CONTEPO™ in the U.S. and is submitting the new technology add-on payment application for FY 2026.

BILLING CODE 4120–01–P

	CONTEPO™ (fosfomycin)	
Technology Info	**Applicant**	Meitheal Pharmaceuticals Inc.
	Description	Per the applicant, CONTEPO™ for injection is a broad spectrum intravenous antibiotic for the treatment of complicated urinary tract infection (cUTI), including acute pyelonephritis, due to difficult to treat Gram-negative and Gram-positive bacteria.
	Online application	https://mearis.cms.gov/public/publications/ntap/NTP2410073U85N
FDA Info	**QIDP designation Indication**	Per the applicant, ZTI-01 (fosfomycin disodium) is designated for IV use as a QIDP for cUTI.
	FDA marketing authorization information	The applicant anticipates an NDA decision from FDA before July 1, 2025, consistent with its QIDP designation. According to the applicant, the QIDP designation indication refers to ZTI-01 and the generic name fosfomycin disodium, as the brand name CONTEPO™ was not yet established at the time of QIDP designation.
	Commercial availability	According to the applicant, CONTEPO™ is expected to be commercially available within 3 months of FDA approval due to manufacturing scheduling, final label implementation and printing and supply chain fulfilment.
Coding	**Unique ICD-10-PCS Code(s)**	A code proposal in association with the Spring 2025 ICD-10 Coordination and Maintenance Committee Update regarding a unique procedure code beginning in FY 2026 was made available in the ICD-10-PCS Topics Open for Public Comment materials located at: https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-coordination-maintenance-committee-materials.
	ICD-10-CM Code(s)	The applicant provided a list of diagnosis codes that may be used to currently identify the indication under the ICD-10-CM coding system in the online application posting.
Cost Criterion	**Inclusion/exclusion criteria**	For the Inclusion/Exclusion criteria used in the Cost Analysis, including the data source and lists of ICD-10-CM codes and MS-DRGs used by the applicant, see the cost criterion codes and MS-DRGs attachment included in the online posting for CONTEPO™.
	Claims identified	Cost Analysis 1: 528,518 claims mapping to 575 MS-DRGs, with 15.84% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC). Cost Analysis 2: 396,786 claims mapping to 559 MS-DRGs, with 16.81% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC). Cost Analysis 3: 371,862 claims mapping to 20 MS-DRGs, with 22.51% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC). Cost Analysis 4: 319,332 claims mapping to 10 MS-DRGs, with 26.22% of claims mapping to MS-DRG 871 (Septicemia or Severe Sepsis without MV>96 Hours with MCC).
	Charges removed for prior technology	Per the applicant, it is likely that CONTEPO™ will replace other antibiotics during some patients' inpatient stays, but it is difficult to identify the exact differences in drug regimen that patients treated with CONTEPO™ would receive, both before and in conjunction with treatment with CONTEPO™. Therefore, to make the estimate conservative, the applicant removed all drug charges on the original claims. The applicant stated that this is likely an overestimation of the charges of the drugs that will be replaced, as patients may receive drugs in addition to CONTEPO™ for care during their hospitalization. The applicant did not remove indirect charges related to the prior technology.
	Standardized charges	The applicant used the standardization formula provided in Appendix A of the application. The applicant used all relevant values reported in the impact file posted with the FY 2025 IPPS/LTCH PPS interim final action with comment period.
	Inflation factor	The applicant applied an inflation factor of 12.87% to the standardized charges, based on the inflation factor used to calculate outlier threshold charges in the FY 2025 IPPS/LTCH PPS final rule.
	Charges added for the new technology	The applicant added charges for the new technology by dividing the cost of the new technology by the national average cost-to-charge ratio of 0.178 for Drugs and Cellular Therapies from the FY 2025 IPPS/LTCH PPS final rule. The applicant did not add indirect charges related to the new technology.
	Cost analysis results	Cost Analysis 1: - Average case-weighted threshold amount: $71,141 - Final inflated average case-weighted standardized charge per case: $132,960 Cost Analysis 2: - Average case-weighted threshold amount: $66,939

		- Final inflated average case-weighted standardized charge per case: $ 115,271 Cost Analysis 3: - Average case-weighted threshold amount: $67,176 - Final inflated average case-weighted standardized charge per case: $124,459 Cost Analysis 4: - Average case-weighted threshold amount: $65,055 - Final inflated average case-weighted standardized charge per case: $ 121,799 Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount in all analyses, the applicant asserted that CONTEPO™ meets the cost criterion.

BILLING CODE 4120–01–C

After review of the information provided by the applicant, we note the applicant states that the technology is expected to be commercially available within 3 months of FDA approval, and we would appreciate more information on the reasons for any delay in the commercial availability of CONTEPO™ following FDA approval.

We agree with the applicant that CONTEPO™ meets the cost criterion and are therefore proposing to approve CONTEPO™ for new technology add-on payments for FY 2026, subject to the technology receiving FDA marketing authorization for the indication corresponding to the QIDP designation by July 1, 2025. As an application submitted under the alternative pathway for certain antimicrobial products at § 412.87(d), CONTEPO™ is eligible for conditional approval for new technology add-on payments if it does not receive FDA marketing authorization by July 1, 2025, provided that the technology receives FDA marketing authorization before July 1 of the fiscal year for which the applicant applied for new technology add-on payments (that is, July 1, 2026), as provided in § 412.87(f)(3). If CONTEPO™ receives FDA marketing authorization before July 1, 2026, the new technology add-on payment for cases involving the use of this technology would be made effective for discharges beginning in the first quarter after FDA marketing authorization is granted. If FDA marketing authorization is received on or after July 1, 2026, no new technology add-on payments would be made for cases involving the use of CONTEPO™ for FY 2026.

Based on preliminary information from the applicant at the time of this proposed rule, the applicant anticipates the total cost of CONTEPO™ to the hospital to be $11,700 per patient. The applicant estimated that each vial costs $325 and that 3 doses are needed each day for an average treatment duration of 12 days. We note that the cost information for this technology may be updated in the final rule based on revised or additional information CMS receives prior to the final rule. Under § 412.88(a)(2)(ii)(B), we limit new technology add-on for technologies designated as QIDPs to the lesser of 75 percent of the average cost of the technology, or 75 percent of the costs in excess of the MS–DRG payment for the case. As a result, we are proposing that the maximum new technology add-on payment for a case involving the use of CONTEPO™ would be $8,775 for FY 2026 (that is, 75 percent of the average cost of the technology).

We invite public comments on whether CONTEPO™ meets the cost criterion and our proposal to approve new technology add-on payments for CONTEPO™ for FY 2026, subject to the technology receiving FDA marketing authorization consistent with its QIDP designation by July 1, 2025.

III. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

A. Background

1. Legislative Authority

Section 1886(d)(3)(E) of the Act requires that, as part of the methodology for determining prospective payments to hospitals, the Secretary adjust the standardized amounts for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level. We currently define hospital labor market areas based on the delineations of statistical areas established by the Office of Management and Budget (OMB). A discussion of the proposed FY 2026 hospital wage index based on the statistical areas appears under section III.B. of the preamble of this proposed rule.

Section 1886(d)(3)(E) of the Act requires the Secretary to update the wage index annually and to base the update on a survey of wages and wage-related costs of short-term, acute care hospitals. CMS collects these data on the Medicare cost report, CMS Form 2552–10, Worksheet S–3, Parts II, III, IV. The aforementioned information collection requirements are in Worksheet S–3, Parts II, III, IV. of the information collection request titled ''Hospitals and Health Care Complex Cost Report (CMS Form 2552–10)''. The information collection request is currently approved under OMB control number is 0938–0050 and has a September 30, 2025, expiration date. We plan to submit the information collection request to OMB for reapproval in the near future. In accordance with the PRA, the resubmission process will be announced in the **Federal Register** providing the public with the requisite notice and comment periods which will be separate from those associated with this rulemaking. Section 1886(d)(3)(E) of the Act also requires that any updates or adjustments to the wage index be made in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. The proposed adjustment for FY 2026 is discussed in section II.B. of the Addendum to this proposed rule.

As discussed in section III.I. of the preamble of this proposed rule, we also take into account the geographic reclassification of hospitals in accordance with sections 1886(d)(8)(B) and 1886(d)(10) of the Act when calculating IPPS payment amounts. Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amounts so as to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B), 1886(d)(8)(C), and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. The proposed budget neutrality adjustment for FY 2026 is discussed in section II.A.4.b. of the Addendum to this proposed rule.

Section 1886(d)(3)(E) of the Act also provides for the collection of data every 3 years on the occupational mix of employees for short-term, acute care hospitals participating in the Medicare program to construct an occupational mix adjustment to the wage index. The information collection request is currently approved under OMB control number is 0938–0907 and has a September 30, 2025, expiration date. We plan to submit the information collection request to OMB for reapproval in the near future. In accordance with the PRA, the resubmission process will be announced in the **Federal Register** providing the public with the requisite notice and comment periods which will be separate from those associated with this rulemaking. A discussion of the occupational mix adjustment that we are proposing to apply to the FY 2026 wage index appears under section III.E. of the preamble of this proposed rule.

2. Core-Based Statistical Areas (CBSAs) for the Proposed FY 2026 Hospital Wage Index

The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005 (69 FR 49026 through 49032), we delineate hospital labor market areas based on OMB-established Core-Based Statistical Areas (CBSAs). In the July 16, 2021, **Federal Register** (86 FR 37777), OMB finalized a schedule for future updates based on results of the decennial Census updates to commuting patterns from the American Community Survey (ACS). In accordance with that schedule, on July 21, 2023, OMB released Bulletin No. 23–01. The current statistical areas (which were implemented beginning with FY 2025) are based on revised OMB delineations issued on July 21, 2023, in OMB Bulletin No. 23–01. According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (''the 2020 Standards''), which appeared in the **Federal Register** on July 16, 2021 (86 FR 37770 through 37778), and the application of those standards to Census Bureau population and journey-to-work data (that is, 2020 Decennial Census, the ACS, and Census Population Estimates Program data) (we refer to these revised OMB delineations as the ''new OMB delineations'' in this proposed rule). A copy of OMB Bulletin No. 23–01 may be obtained at *https://bidenwhitehouse.archives.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf*. We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69253 through 69266) for a full discussion of our implementation of the new OMB delineations for the FY 2025 wage index. For FY 2026, we are proposing to continue using the new OMB delineations that we adopted beginning with FY 2025 to calculate the area wage indexes and the transition periods, which we discuss below.

3. Codes for Constituent Counties in CBSAs

CBSAs are made up of one or more constituent counties. Each CBSA and constituent county has its own unique identifying codes. The Federal Information Processing Standard (FIPS) county codes are maintained by the U.S. Census Bureau. In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38129 through 38130), we adopted a policy to use the FIPS county codes for purposes of crosswalking counties to CBSAs. In addition, in the same rule, we implemented the latest FIPS code updates, which were effective October 1, 2017, beginning with the FY 2018 wage indexes. These updates have been used to calculate the wage indexes in a manner generally consistent with the CBSA-based methodologies finalized in the FY 2005 IPPS final rule and the FY 2015 IPPS/LTCH PPS final rule. We refer the reader to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38129 through 38130) for a complete discussion of our adoption of FIPS county codes. For FY 2026, we are proposing to continue to use only the FIPS county codes for purposes of crosswalking counties to CBSAs. For FY 2026, Tables 2 and 3 associated with this proposed rule and the County to CBSA Crosswalk File and Urban CBSAs and Constituent Counties for Acute Care Hospitals File posted on the CMS website reflect the latest FIPS county code updates.

B. Worksheet S–3 Wage Data for the FY 2026 Wage Index

1. Cost Reporting Periods Beginning in FY 2022 for FY 2026 Wage Index

The proposed FY 2026 wage index values are based on the data collected from the Medicare cost reports submitted by hospitals for cost reporting periods beginning in FY 2022 (the FY 2025 wage indexes were based on data from cost reporting periods beginning during FY 2021).

The proposed FY 2026 wage index includes all of the following categories of data associated with costs paid under the IPPS (as well as outpatient costs):

- Salaries and hours from short-term, acute care hospitals (including paid lunch hours and hours associated with military leave and jury duty).
- Home office costs and hours.
- Certain contract labor costs and hours including direct patient care (which includes nursing), certain top management, pharmacy, laboratory, and nonteaching physician Part A services, and certain contract indirect patient care services (as discussed in the FY 2008 final rule with comment period (72 FR 47315 through 47317)).
- Wage-related costs, including pension costs (based on policies adopted in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51586 through 51590) and modified in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49505 through 49508)) and other deferred compensation costs.

Consistent with the wage index methodology for FY 2025, the proposed wage index for FY 2026 excludes the direct and overhead salaries and hours for services not subject to IPPS payment, such as skilled nursing facility (SNF) services, home health services, costs related to Graduate Medical Education (GME) (teaching physicians and residents) and certified registered nurse anesthetists (CRNAs), and other subprovider components that are not paid under the IPPS. The proposed FY 2026 wage index also excludes the salaries, hours, and wage-related costs of hospital-based rural health clinics (RHCs), and Federally Qualified Health Centers (FQHCs), because Medicare pays for these costs outside of the IPPS (68 FR 45395). In addition, as explained in the FY 2004 IPPS final rule (68 FR 45397 through 45398), salaries, hours, and wage-related costs of Critical Access Hospitals (CAHs) are excluded from the wage index as we believe that removing CAHs from the wage index is prudent policy, given the substantial negative impact these hospitals have on the wage indexes in the areas where they are located and the minimal impact they have on the wage indexes of other areas. We refer the reader to the FY 2004 IPPS final rule (68 FR 45397 through 45398) for a complete discussion regarding the exclusion of CAHs from the wage index. Similar to our treatment of CAHs, as discussed later in this section, we exclude Rural Emergency Hospitals (REHs) from the wage index.

For FY 2020 and subsequent years, other wage-related costs are also excluded from the calculation of the wage index. As discussed in the FY 2019 IPPS/LTCH final rule (83 FR 41365 through 41369), other wage-related costs reported on Worksheet S–3, Part II, Line 18 and Worksheet S–3, Part IV, Line 25 and subscripts, as well as all other wage-related costs, such as contract

labor costs, are excluded from the calculation of the wage index.

2. Use of Wage Index Data by Suppliers and Providers Other Than Acute Care Hospitals Under the IPPS

Data collected for the IPPS wage index also are currently used to calculate wage indexes applicable to suppliers and other providers, such as SNFs, home health agencies (HHAs), ambulatory surgical centers (ASCs), and hospices. In addition, they are used for prospective payments to IRFs, IPFs, and LTCHs, and for hospital outpatient services. We note, in the calendar year (CY) 2025 ESRD PPS final rule (89 FR 89097–89116), CMS finalized a new ESRD PPS-specific wage index that will be used to adjust ESRD PPS payments for geographic differences in area wages. We refer the reader to the CY 2025 ESRD PPS final rule for complete details regarding ESRD wage index. We further note that, in the IPPS rules, we do not address comments pertaining to the wage indexes of any supplier or provider except IPPS providers and LTCHs. Such comments should be made in response to separate proposed rules for those suppliers and providers.

3. Verification of Worksheet S–3 Wage Data

The wage data for the proposed FY 2026 wage index were obtained from Worksheet S–3, Parts II, III and IV of the Medicare cost report, CMS Form 2552–10 (OMB Control Number 0938–0050 with an expiration date September 30, 2025) for cost reporting periods beginning on or after October 1, 2021, and before October 1, 2022. For wage index purposes, we refer to cost reports beginning on or after October 1, 2021, and before October 1, 2022, as the ''FY 2022 cost report,'' the ''FY 2022 wage data,'' or the ''FY 2022 data.'' Instructions for completing the wage index sections of Worksheet S–3 are included in the Provider Reimbursement Manual (PRM), Part 2 (Pub. 15–2), Chapter 40, Sections 4005.2 through 4005.4. The data file used to construct the FY 2026 wage index includes FY 2022 data submitted to us as of January 31, 2025. As in past years, we performed an extensive review of the wage data, mostly through the use of edits designed to identify aberrant data.

We note, in previous fiscal years, we reviewed and evaluated the audited wage data, and the impacts of the COVID–19 PHE on such data. For FY 2026, we have not identified any significant issues with the FY 2022 wage data itself in terms of our audits of this data. As usual, the data was audited by the Medicare Administrative Contractors (MACs), and there were no significant issues reported across the data for all hospitals.

We requested that our Medicare Administrative Contractors (MACs) revise or verify data elements that resulted in specific edit failures. For the proposed FY 2026 wage index, we identified and excluded 79 providers with aberrant data that should not be included in the wage index. If data elements for some of these providers are corrected, we intend to include data from those providers in the final FY 2026 wage index. We also adjusted certain aberrant data and included these data in the wage index. For example, in situations where a hospital did not have documentable salaries, wages, and hours for housekeeping and dietary services, we imputed estimates, in accordance with policies established in the FY 2015 IPPS/LTCH PPS final rule (79 FR 49965 through 49967). We instructed MACs to complete their verification of questionable data elements and to transmit any changes to the wage data no later than March 21, 2025.

In constructing the proposed FY 2026 wage index, we included the wage data for facilities that were IPPS hospitals in FY 2022, inclusive of those facilities that have since terminated their participation in the program as hospitals, as long as those data did not fail any of our edits for reasonableness. We believe that including the wage data for these hospitals is, in general, appropriate to reflect the economic conditions in the various labor market areas during the relevant past period and to ensure that the current wage index represents the labor market area's current wages as compared to the national average of wages.

As discussed in the FY 2004 IPPS final rule (68 FR 45397 through 45398) and FY 2025 IPPS/LTCH final rule (89 FR 69268), any hospital that is designated as a CAH or REH by 7 days prior to the publication of the preliminary wage index public use file (PUF) is excluded from the calculation of the wage index.

For the proposed FY 2026 wage index, we removed 7 hospitals that converted to CAH status and 5 hospitals that converted to REH status on or after January 24, 2024, the cut-off date for CAH and REH exclusion from the FY 2025 wage index, and through and including January 24, 2025, the cut-off date for CAH and REH exclusion from the FY 2026 wage index. In summary, we calculated the FY 2026 wage index using the Worksheet S–3, Parts II and III wage data of 3,027 hospitals.

For the proposed FY 2026 wage index, we allotted the wages and hours data for a multicampus hospital among the different labor market areas where its campuses are located using campus full-time equivalent (FTE) percentages as originally finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51591). Table 2, which contains the FY 2026 wage index associated with this proposed rule (available via the internet on the CMS website), includes separate wage data for the campuses of 29 multicampus hospitals. The following chart lists the multicampus hospitals by CMS certification number (CCN) and the FTE percentages on which the wages and hours of each campus were allotted to their respective labor market areas:

CCN of main campus of multicampus hospital	Full-time equivalent percentage of main campus	CCN of sub campus of multicampus hospital	Full-time equivalent percentage of sub campus	CCN of second sub campus of multicampus hospital	Full-time equivalent percentage of second sub campus
050121	0.86	05B121	0.14	.....	.....
070010	0.85	07B010	0.15	.....	.....
070022	0.99	07B022	0.01	.....	.....
100029	0.52	10B029	0.48	.....	.....
140010	0.81	14B010	0.19	.....	.....
220074	0.9	22B074	0.1	.....	.....
310069	0.17	31B069	0.83	.....	.....
330103	0.69	33B103	0.31	.....	.....
330195	0.9	33B195	0.1	.....	.....
330214	0.77	33B214	0.23	.....	.....
330234	0.79	33B234	0.21	.....	.....
340040	0.93	34B040	0.07	.....	.....
340115	0.82	34B115	0.13	34C115	0.05

CCN of main campus of multicampus hospital	Full-time equivalent percentage of main campus	CCN of sub campus of multicampus hospital	Full-time equivalent percentage of sub campus	CCN of second sub campus of multicampus hospital	Full-time equivalent percentage of second sub campus
360020	0.97	36B020	0.03	.....	.....
390115	0.82	39B115	0.18	.....	.....
390142	0.83	39B142	0.17	.....	.....
390307	0.89	39B307	0.11	.....	.....
420004	0.96	42B004	0.04	.....	.....
450033	0.96	45B033	0.04	.....	.....
450330	0.96	45B330	0.04	.....	.....
460051	0.77	46B051	0.23	.....	.....
510022	0.94	51B022	0.06	.....	.....
520009	0.72	52B009	0.28	.....	.....
520030	0.98	52B030	0.02	.....	.....
520189	0.72	52B189	0.28	.....	.....
670062	0.84	67B062	0.16	.....	.....
670102	0.68	67B102	0.32	.....	.....
670107	0.69	67B107	0.31	.....	.....
670116	0.66	67B116	0.34	.....	.....

We note that, in past years, in Table 2, we have placed a ''B'' to designate the subordinate campus in the fourth position of the hospital CCN. However, for the FY 2019 IPPS/LTCH PPS proposed and final rules and subsequent rules, we have moved the ''B'' to the third position of the CCN. Because all IPPS hospitals have a ''0'' in the third position of the CCN, we believe that placement of the ''B'' in this third position, instead of the ''0'' for the subordinate campus, is the most efficient method of identification and interferes the least with the other variable digits in the CCN. We also note that provider 340115 has an additional second sub campus located in a different CBSA then the main campus and its other sub campus. Therefore, in order to uniquely identify this second sub campus, we have placed a ''C'' in the third position of the CCN.

4. Process for Requests for Wage Index Data Corrections

a. Process for Hospitals To Request Wage Index Data Corrections

The preliminary, unaudited Worksheet S–3 wage data files for the proposed FY 2026 wage index were made available on May 23, 2024, through the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/wage-index-files/fy-2026-wage-index-home-page*. The FY 2026 preliminary Worksheet S–3 wage data file inadvertently contained cost report data with a begin date before 10/01/2021 and cost report data with a begin date after 10/01/2022. We removed these cost reports and added cost reports that were inadvertently omitted from the file originally posted on May 23. Therefore, on June 20, 2024, we posted an updated FY 2026 preliminary Worksheet S–3 wage data file.

On January 31, 2025, we posted a public use file (PUF) at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/wage-index-files/fy-2026-wage-index-home-page* containing FY 2026 wage index data available as of January 31, 2025. This PUF contains a tab with the Worksheet S–3 wage data (which includes Worksheet S–3, Parts II and III wage data from cost reporting periods beginning on or after October 1, 2021, through September 30, 2022; that is, FY 2022 wage data), a tab with the occupational mix data (which includes data from the CY 2022 occupational mix survey, Form CMS–10079), a tab containing the Worksheet S–3 wage data of hospitals deleted from the January 31, 2025 wage data PUF, and a tab containing the CY 2022 occupational mix data of the hospitals deleted from the January 31, 2025 occupational mix PUF. In a memorandum dated January 31, 2025, we instructed all MACs to inform the IPPS hospitals that they service of the availability of the January 31, 2025, wage index data PUFs, and the process and timeframe for requesting revisions in accordance with the FY 2026 Hospital Wage Index Development Time Table available at *https://www.cms.gov/files/document/fy-2026-hospital-wage-index-development-time-table.pdf*.

In the interest of meeting the data needs of the public, beginning with the proposed FY 2009 wage index, we post an additional PUF on the CMS website that reflects the actual data that are used in computing the proposed wage index. The release of this file does not alter the current wage index process or schedule. We notify the hospital community of the availability of these data as we do with the current public use wage data files through our Hospital Open Door Forum. We encourage hospitals to sign up for automatic notifications of information about hospital issues and about the dates of the Hospital Open Door Forums at the CMS website at *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums*.

In a memorandum dated April 17, 2024, we instructed all MACs to inform the IPPS hospitals that they service of the availability of the preliminary wage index data files and the CY 2022 occupational mix survey data files posted on May 23, 2024, and the process and timeframe for requesting revisions.

If a hospital wished to request a change to its data as shown in the May 23, 2024, preliminary wage data files and occupational mix data files, the hospital had to submit corrections along with complete, detailed supporting documentation to its MAC so that the MAC received them by September 3, 2024. Hospitals were notified of these deadlines and of all other deadlines and requirements, including the requirement to review and verify their data as posted in the preliminary wage index data files on the internet, through the letters sent to them by their MACs.

November 1, 2024, was the date by when MACs notified State hospital associations regarding hospitals that failed to respond to issues raised during the desk reviews. Additional revisions made by the MACs were transmitted to CMS throughout January 2025. CMS published the wage index PUFs that included hospitals' revised wage index data on January 31, 2025. Hospitals had until February 18, 2025, to submit requests to the MACs to correct errors in the January 31, 2025, PUF due to CMS or MAC mishandling of the wage index data, or to revise desk review adjustments to their wage index data as included in the January 31, 2025, PUF.

Hospitals also were required to submit sufficient documentation to support their requests. Hospitals' requests and supporting documentation must have been received by the MAC by the February deadline (that is, by February 18, 2025, for the FY 2026 wage index).

After reviewing requested changes submitted by hospitals, MACs were required to transmit to CMS any additional revisions resulting from the hospitals' reconsideration requests by March 21, 2025. Under our current policy as adopted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38153), the deadline for a hospital to request CMS intervention in cases where a hospital disagreed with a MAC's handling of wage data on any basis (including a policy, factual, or other dispute) is April 4, 2025. Data that were incorrect in the preliminary or January 31, 2025, wage index data PUFs, but for which no correction request was received by the February 18, 2025, deadline, are not considered for correction at this stage. In addition, April 4, 2025, is the deadline for hospitals to dispute data corrections made by CMS of which the hospital was notified after the January 31, 2025, PUF and at least 14 calendar days prior to April 4, 2025 (that is, March 21, 2025), that do not arise from a hospital's request for revisions. The hospital's request and supporting documentation must be received by CMS (and a copy received by the MAC) by the April deadline (that is, by April 4, 2025, for the FY 2026 wage index). We refer readers to the FY 2026 Hospital Wage Index Development Time Table for complete details.

Hospitals are given the opportunity to examine Table 2 associated with this proposed rule, which is listed in section VI. of the Addendum to the proposed rule and available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/wage-index-files/fy-2026-wage-index-home-page*. Table 2 associated with the proposed rule contains each hospital's proposed adjusted average hourly wage used to construct the wage index values for the past 3 years, including the proposed FY 2026 wage index, which was constructed from FY 2022 data. We note that the proposed hospital average hourly wages shown in Table 2 only reflect changes made to a hospital's data that were transmitted to CMS by late January 2025.

We plan to post the final wage index data PUFs on April 30, 2025, on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/wage-index-files/fy-2026-wage-index-home-page*. The April 2025 PUFs are made available solely for the limited purpose of identifying any potential errors made by CMS or the MAC in the entry of the final wage index data that resulted from the correction process (the process for disputing revisions submitted to CMS by the MACs by March 21, 2025, and the process for disputing data corrections made by CMS that did not arise from a hospital's request for wage data revisions as discussed earlier), as previously described.

After the release of the April 2025 wage index data PUFs, changes to the wage and occupational mix data can only be made in those very limited situations involving an error by the MAC or CMS that the hospital could not have known about before its review of the final wage index data files. Specifically, neither the MAC nor CMS will approve the following types of requests:

- Requests for wage index data corrections that were submitted too late to be included in the data transmitted to CMS by the MACs on or before March 21, 2025.
- Requests for correction of errors that were not, but could have been, identified during the hospital's review of the January 31, 2025, wage index PUFs.
- Requests to revisit factual determinations or policy interpretations made by the MAC or CMS during the wage index data correction process.

If, after reviewing the April 2025 final wage index data PUFs, a hospital believes that its wage or occupational mix data are incorrect due to a MAC or CMS error in the entry or tabulation of the final data, the hospital is given the opportunity to notify both its MAC and CMS regarding why the hospital believes an error exists and provide all supporting information, including relevant dates (for example, when it first became aware of the error). The hospital is required to send its request to CMS and to the MAC so that it is received no later than May 30, 2025. May 30, 2025, is also the deadline for hospitals to dispute data corrections made by CMS of which the hospital is notified on or after 13 calendar days prior to April 4, 2025 (that is, March 22, 2025), and at least 14 calendar days prior to May 30, 2025 (that is, May 16, 2025), that did not arise from a hospital's request for revisions. (Data corrections made by CMS of which a hospital is notified on or after 13 calendar days prior to May 30, 2025 (that is, May 17, 2025), may be appealed to the Provider Reimbursement Review Board (PRRB)). In accordance with the FY 2026 Hospital Wage Index Development Time Table posted on the CMS website at *https://www.cms.gov/files/document/fy-2026-hospital-wage-index-development-time-table.pdf*, the May appeals are required to be submitted to CMS through an online submission process or through email. We refer readers to the FY 2026 Hospital Wage Index Development Time Table for complete details.

Verified corrections to the wage index data received timely (that is, by May 30, 2025) by CMS and the MACs will be incorporated into the final FY 2026 wage index, which will be effective October 1, 2025.

We created the processes previously described to resolve all substantive wage index data correction disputes before we finalize the wage and occupational mix data for the FY 2026 payment rates. Accordingly, hospitals that do not meet the procedural deadlines set forth earlier will not be afforded a later opportunity to submit wage index data corrections or to dispute the MAC's decision with respect to requested changes. Specifically, our policy is that hospitals that do not meet the procedural deadlines as previously set forth (requiring requests to MACs by the specified date in February and, where such requests are unsuccessful, requests for intervention by CMS by the specified date in April) will not be permitted to challenge later, before the PRRB, the failure of CMS to make a requested data revision. We refer readers also to the FY 2000 IPPS final rule (64 FR 41513) for a discussion of the parameters for appeals to the PRRB for wage index data corrections. As finalized in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38154 through 38156), this policy also applies to a hospital disputing corrections made by CMS that do not arise from a hospital's request for a wage index data revision. That is, a hospital disputing an adjustment made by CMS that did not arise from a hospital's request for a wage index data revision is required to request a correction by the first applicable deadline. Hospitals that do not meet the procedural deadlines set forth earlier will not be afforded a later opportunity to submit wage index data corrections or to dispute CMS' decision with respect to changes.

Again, we believe the wage index data correction process described earlier provides hospitals with sufficient opportunity to bring errors in their wage and occupational mix data to the MAC's attention. Moreover, because hospitals had access to the final wage index data PUFs by late April 2025, they have an opportunity to detect any data entry or

tabulation errors made by the MAC or CMS before the development and publication of the final FY 2026 wage index by August 2025, and the implementation of the FY 2026 wage index on October 1, 2025. Given these processes, the wage index implemented on October 1 should be accurate. Nevertheless, in the event that errors are identified by hospitals and brought to our attention after May 30, 2025, we retain the right to make midyear changes to the wage index under very limited circumstances.

Specifically, in accordance with § 412.64(k)(1) of our regulations, we make midyear corrections to the wage index for an area only if a hospital can show that: (1) The MAC or CMS made an error in tabulating its data; and (2) the requesting hospital could not have known about the error or did not have an opportunity to correct the error, before the beginning of the fiscal year. For purposes of this provision, ''before the beginning of the fiscal year'' means by the May deadline for making corrections to the wage data for the following fiscal year's wage index (for example, May 30, 2025, for the FY 2026 wage index). This provision is not available to a hospital seeking to revise another hospital's data that may be affecting the requesting hospital's wage index for the labor market area. As indicated earlier, because CMS makes the wage index data available to hospitals on the CMS website prior to publishing both the proposed and final IPPS rules, and the MACs notify hospitals directly of any wage index data changes after completing their desk reviews, we do not expect that midyear corrections will be necessary. However, under our current policy, if the correction of a data error changes the wage index value for an area, the revised wage index value will be effective prospectively from the date the correction is made.

In the FY 2006 IPPS final rule (70 FR 47385 through 47387 and 47485), we revised § 412.64(k)(2) to specify that, effective on October 1, 2005, that is, beginning with the FY 2006 wage index, a change to the wage index can be made retroactive to the beginning of the Federal fiscal year only when CMS determines all of the following: (1) The MAC or CMS made an error in tabulating data used for the wage index calculation; (2) the hospital knew about the error and requested that the MAC and CMS correct the error using the established process and within the established schedule for requesting corrections to the wage index data, before the beginning of the fiscal year for the applicable IPPS update (that is, by the May 30, 2025, deadline for the FY 2026 wage index); and (3) CMS agreed before October 1 that the MAC or CMS made an error in tabulating the hospital's wage index data and the wage index should be corrected.

In those circumstances where a hospital requested a correction to its wage index data before CMS calculated the final wage index (that is, by the May 30, 2025 deadline for the FY 2026 wage index), and CMS acknowledges that the error in the hospital's wage index data was caused by CMS' or the MAC's mishandling of the data, we believe that the hospital should not be penalized by our delay in publishing or implementing the correction. As with our current policy, we indicated that the provision is not available to a hospital seeking to revise another hospital's data. In addition, the provision cannot be used to correct prior years' wage index data; it can only be used for the current Federal fiscal year. In situations where our policies would allow midyear corrections other than those specified in § 412.64(k)(2)(ii), we continue to believe that it is appropriate to make prospective-only corrections to the wage index.

We note that, as with prospective changes to the wage index, the final retroactive correction will be made irrespective of whether the change increases or decreases a hospital's payment rate. In addition, we note that the policy of retroactive adjustment will still apply in those instances where a final judicial decision reverses a CMS denial of a hospital's wage index data revision request.

b. Process for Data Corrections by CMS After the January 31, 2025, Public Use File (PUF)

The process set forth with the wage index timetable discussed in section III.C.4. of the preamble of this proposed rule allows hospitals to request corrections to their wage index data within prescribed timeframes. In addition to hospitals' opportunity to request corrections of wage index data errors or MACs' mishandling of data, CMS has the authority under section 1886(d)(3)(E) of the Act to make corrections to hospital wage index and occupational mix data to ensure the accuracy of the wage index. As we explained in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49490 through 49491) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 56914), section 1886(d)(3)(E) of the Act requires the Secretary to adjust the proportion of hospitals' costs attributable to wages and wage-related costs for area differences reflecting the relative hospital wage level in the geographic areas of the hospital compared to the national average hospital wage level. We believe that, under section 1886(d)(3)(E) of the Act, we have discretion to make corrections to hospitals' data to help ensure that the costs attributable to wages and wage-related costs in fact accurately reflect the relative hospital wage level in the hospitals' geographic areas.

We have an established multistep, 15-month process for the review and correction of the hospital wage data that is used to create the IPPS wage index for the upcoming fiscal year. Since the origin of the IPPS, the wage index has been subject to its own annual review process, first by the MACs, and then by CMS. As a standard practice, after each annual desk review, CMS reviews the results of the MACs' desk reviews and focuses on items flagged during the desk review, requiring that, if necessary, hospitals provide additional documentation, adjustments, or corrections to the data. This ongoing communication with hospitals about their wage data may result in the discovery by CMS of additional items that were reported incorrectly or other data errors, even after the posting of the January 31, 2025, PUF, and throughout the remainder of the wage index development process. In addition, the fact that CMS analyzes the data from a regional and even national level, unlike the review performed by the MACs that review a limited subset of hospitals, can facilitate additional editing of the data the need for which may not be readily apparent to the MACs. In these occasional instances, an error may be of sufficient magnitude that the wage index of an entire CBSA is affected. Accordingly, CMS uses its authority to ensure that the wage index accurately reflects the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level, by continuing to make corrections to hospital wage data upon discovering incorrect wage data, distinct from instances in which hospitals request data revisions.

We note that CMS corrects errors to hospital wage data as appropriate, regardless of whether that correction will raise or lower a hospital's average hourly wage. For example, as discussed in section III.C. of the preamble of the FY 2019 IPPS/LTCH PPS final rule (83 FR 41364), in situations where a hospital did not have documentable salaries, wages, and hours for housekeeping and dietary services, we imputed estimates, in accordance with policies established in the FY 2015 IPPS/LTCH PPS final rule (79 FR 49965

through 49967). Furthermore, if CMS discovers after conclusion of the desk review, for example, that a MAC inadvertently failed to incorporate positive adjustments resulting from a prior year's wage index appeal of a hospital's wage-related costs such as pension, CMS would correct that data error, and the hospital's average hourly wage would likely increase as a result.

While we maintain CMS' authority to conduct additional review and make resulting corrections at any time during the wage index development process, in accordance with the policy finalized in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38154 through 38156) and as first implemented with the FY 2019 wage index (83 FR 41389), hospitals are able to request further review of a correction made by CMS that did not arise from a hospital's request for a wage index data correction. Instances where CMS makes a correction to a hospital's data after the January 31, 2025, PUF based on a different understanding than the hospital about certain reported costs, for example, could potentially be resolved using this process before the final wage index is calculated. We believe this process and the timeline for requesting review of such corrections (as described earlier and in the FY 2018 IPPS/LTCH PPS final rule) promote additional transparency in instances where CMS makes data corrections after the January 31, 2025 PUF and provide opportunities for hospitals to request further review of CMS changes in time for the most accurate data to be reflected in the final wage index calculations. These additional appeals opportunities are described earlier and in the FY 2026 Hospital Wage Index Development Time Table, as well as in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38154 through 38156).

C. Method for Computing the Proposed FY 2026 Unadjusted Wage Index

The method used to compute the proposed FY 2026 wage index without an occupational mix adjustment follows the same methodology that we used to compute the wage indexes without an occupational mix adjustment in the FY 2021 IPPS/LTCH PPS final rule (see 85 FR 58758 through 58761), and we are not proposing any changes to this methodology. We have restated our methodology in this section the preamble of this proposed rule.

Step 1.—We gathered data from each of the non-Federal, short-term, acute care hospitals for which data were reported on the Worksheet S–3, Parts II and III of the Medicare cost report for the hospital's cost reporting period relevant to the wage index (in this case, for FY 2026, these were data from cost reports for cost reporting periods beginning on or after October 1, 2021, and before October 1, 2022). In addition, we included data from hospitals that had cost reporting periods beginning prior to the October 1, 2021, begin date and extending into FY 2022 but that did not have any cost report with a begin date on or after October 1, 2021, and before October 1, 2022. We include this data because no other data from these hospitals would be available for the cost reporting period as previously described, and because particular labor market areas might be affected due to the omission of these hospitals. However, we generally describe these wage data as data applicable to the fiscal year wage data being used to compute the wage index for those hospitals. We note that, if a hospital had more than one cost reporting period beginning during FY 2022 (for example, a hospital had two short cost reporting periods beginning on or after October 1, 2021, and before October 1, 2022), we include wage data from only one of the cost reporting periods, the longer, in the wage index calculation. If there was more than one cost reporting period and the periods were equal in length, we included the wage data from the later period in the wage index calculation.

Step 2.—Salaries.—The method used to compute a hospital's average hourly wage excludes certain costs that are not paid under the IPPS. (We note that, beginning with FY 2008 (72 FR 47315), we included what were then Lines 22.01, 26.01, and 27.01 of Worksheet S–3, Part II of CMS Form 2552–96 for overhead services in the wage index. Currently, these lines are lines 28, 33, and 35 on CMS Form 2552–10. However, we note that the wages and hours on these lines are not incorporated into Line 101, Column 1 of Worksheet A, which, through the electronic cost reporting software, flows directly to Line 1 of Worksheet S–3, Part II. Therefore, the first step in the wage index calculation is to compute a ''revised'' Line 1, by adding to the Line 1 on Worksheet S–3, Part II (for wages and hours respectively) the amounts on Lines 28, 33, and 35.) In calculating a hospital's Net Salaries (we note that we previously used the term ''average'' salaries in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51592), but we now use the term ''net'' salaries) plus wage-related costs, we first compute the following: Subtract from Line 1 (total salaries) the GME and CRNA costs reported on CMS Form 2552–10, Lines 2, 4.01, 7, and 7.01, the Part B salaries reported on Lines 3, 5 and 6, home office salaries reported on Line 8, and exclude salaries reported on Lines 9 and 10 (that is, direct salaries attributable to SNF services, home health services, and other subprovider components not subject to the IPPS). We also subtract from Line 1 the salaries for which no hours were reported. Therefore, the formula for Net Salaries (from Worksheet S–3, Part II) is the following:

((Line 1 + Line 28 + Line 33 + Line 35) − (Line 2 + Line 3 + Line 4.01 + Line 5 + Line 6 + Line 7 + Line 7.01 + Line 8 + Line 9 + Line 10)).

To determine Total Salaries plus Wage-Related Costs, we add to the Net Salaries the costs of contract labor for direct patient care, certain top management, pharmacy, laboratory, and nonteaching physician Part A services (Lines 11, 12 and 13), home office salaries and wage-related costs reported by the hospital on Lines 14.01, 14.02, and 15, and nonexcluded area wage-related costs (Lines 17, 22, 25.50, 25.51, and 25.52). We note that contract labor and home office salaries for which no corresponding hours are reported are not included. In addition, wage-related costs for nonteaching physician Part A employees (Line 22) are excluded if no corresponding salaries are reported for those employees on Line 4. The formula for Total Salaries plus Wage-Related Costs (from Worksheet S–3, Part II) is the following: ((Line 1 + Line 28 + Line 33 + Line 35) − (Line 2 + Line 3 + Line 4.01 + Line 5 + Line 6 + Line 7 + Line 7.01 + Line 8 + Line 9 + Line 10)) + (Line 11 + Line 12 + Line 13 + Line 14.01 + 14.02 + Line 15) + (Line 17 + Line 22 + 25.50 + 25.51 + 25.52).

Step 3.—Hours.—With the exception of wage-related costs, for which there are no associated hours, we compute total hours using the same methods as described for salaries in Step 2. The formula for Total Hours (from Worksheet S–3, Part II) is the following:

((Line 1 + Line 28 + Line 33 + Line 35) − (Line 2 + Line 3 + Line 4.01 + Line 5 + Line 6 + Line 7 + Line 7.01 + Line 8 + Line 9 + Line 10)) + (Line 11 + Line 12 + Line 13 + Line 14.01 + 14.02 + Line 15).

Step 4.—For each hospital reporting both total overhead salaries and total overhead hours greater than zero, we then allocate overhead costs to areas of the hospital excluded from the wage index calculation. First, we determine the ''excluded rate'', which is the ratio of excluded area hours to Revised Total Hours (from Worksheet S–3, Part II) with the following formula: (Line 9 + Line 10)/(Line 1 + Line 28 + Line 33 + Line 35) − (Lines 2, 3, 4.01, 5, 6, 7, 7.01, and 8 and Lines 26 through 43). We then compute the amounts of overhead

salaries and hours to be allocated to the excluded areas by multiplying the previously discussed ratio by the total overhead salaries and hours reported on Lines 26 through 43 of Worksheet S–3, Part II. Next, we compute the amounts of overhead wage-related costs to be allocated to the excluded areas using three steps:

- We determine the ''overhead rate'' (from Worksheet S–3, Part II), which is the ratio of overhead hours (Lines 26 through 43 minus the sum of Lines 28, 33, and 35) to revised hours excluding the sum of lines 28, 33, and 35 (Line 1 minus the sum of Lines 2, 3, 4.01, 5, 6, 7, 7.01, 8, 9, 10, 28, 33, and 35). We note that, for the FY 2008 and subsequent wage index calculations, we have been excluding the overhead contract labor (Lines 28, 33, and 35) from the determination of the ratio of overhead hours to revised hours because hospitals typically do not provide fringe benefits (wage-related costs) to contract personnel. Therefore, it is not necessary for the wage index calculation to exclude overhead wage-related costs for contract personnel. Further, if a hospital does contribute to wage-related costs for contracted personnel, the instructions for Lines 28, 33, and 35 require that associated wage-related costs be combined with wages on the respective contract labor lines. The formula for the Overhead Rate (from Worksheet S–3, Part II) is the following: (Lines 26 through 43 − Lines 28, 33 and 35)/ ((((Line 1 + Lines 28, 33, 35) − (Lines 2, 3, 4.01, 5, 6, 7, 7.01, 8, and 26 through 43)) − (Lines 9 and 10)) + (Lines 26 through 43 − Lines 28, 33, and 35)).
- We compute overhead wage-related costs by multiplying the overhead hours ratio by wage-related costs reported on Part II, Lines 17, 22, 25.50, 25.51, and 25.52.
- We multiply the computed overhead wage-related costs by the previously described excluded area hours ratio.

Finally, we subtract the computed overhead salaries, wage-related costs, and hours associated with excluded areas from the total salaries (plus wage-related costs) and hours derived in Steps 2 and 3.

Step 5.—For each hospital, we adjust the total salaries plus wage-related costs to a common period to determine total adjusted salaries plus wage-related costs. To make the wage adjustment, we estimate the percentage change in the employment cost index (ECI) for compensation for each 30-day increment from October 14, 2021, through April 15, 2023, for private industry hospital workers from data obtained from the Bureau of Labor Statistics' (BLS') Office of Compensation and Working Conditions. We use the ECI because it reflects the price increase associated with total compensation (salaries plus fringe benefits) rather than just the increase in salaries. In addition, the ECI includes managers as well as other hospital workers. This methodology to compute the monthly update factors uses actual quarterly ECI data and assures that the update factors match the actual quarterly and annual percent changes. We also note that, since April 2006 with the publication of March 2006 data, the BLS' ECI uses a different classification system, the North American Industrial Classification System (NAICS), instead of the Standard Industrial Codes (SICs), which no longer exist. We have consistently used the ECI as the data source for our wages and salaries and other price proxies in the IPPS market basket, and we are not proposing to make any changes to the usage of the ECI for FY 2026. The factors used to adjust the hospital's data are based on the midpoint of the cost reporting period, as indicated in this proposed rule.

Step 6.—Each hospital is assigned to its appropriate urban or rural labor market area before any reclassifications under section 1886(d)(8)(B), 1886(d)(8)(E), or 1886(d)(10) of the Act. Within each urban or rural labor market area, we add the total adjusted salaries plus wage-related costs obtained in Step 5 for all hospitals in that area to determine the total adjusted salaries plus wage-related costs for the labor market area.

Step 7.—We divide the total adjusted salaries plus wage-related costs obtained under Step 6 by the sum of the corresponding total hours (from Step 4) for all hospitals in each labor market area to determine an average hourly wage for the area.

Step 8.—We add the total adjusted salaries plus wage-related costs obtained in Step 5 for all hospitals in the Nation and then divide the sum by the national sum of total hours from Step 4 to arrive at a national average hourly wage.

Step 9.—For each urban or rural labor market area, we calculate the hospital wage index value, unadjusted for occupational mix, by dividing the area average hourly wage obtained in Step 7 by the national average hourly wage computed in Step 8.

Step 10.—For each urban labor market area for which we do not have any hospital wage data (either because there are no IPPS hospitals in that labor market area, or there are IPPS hospitals in that area but their data are either too new to be reflected in the current year's wage index calculation, or their data are aberrant and are deleted from the wage index), we finalized in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42305) that, for FY 2020 and subsequent years' wage index calculations, such CBSAs' wage index would be equal to total urban salaries plus wage-related costs (from Step 5) in the State, divided by the total urban hours (from Step 4) in the State, divided by the national average hourly wage from Step 8 (see 84 FR 42305 and 42306). We believe that, in the absence of wage data for an urban labor market area, it is reasonable to use a statewide urban average, which is based on actual, acceptable wage data of hospitals in that State, rather than impute some other type of value using a different methodology. For calculation of the proposed FY 2026 wage index, we note there is one urban CBSA for which we do not have IPPS hospital wage data. In Table 3 (which is available via the internet on the CMS website and contains the area wage indexes), we include a footnote to indicate to which CBSA this policy applies. This CBSA's wage index is calculated as described, based on the FY 2020 IPPS/LTCH PPS final rule methodology (84 FR 42305). Under this step, we also apply our policy with regard to how dollar amounts, hours, and other numerical values in the wage index calculations are rounded.

We refer readers to section II. of Appendix B of this proposed rule for the policy regarding rural areas that do not have IPPS hospitals.

Step 11.—Section 4410 of Public Law 105–33 provides that, for discharges on or after October 1, 1997, the area wage index applicable to any hospital that is located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State. The areas affected by this provision are identified in Table 2 listed in section VI. of the Addendum to the proposed rule and available via the internet on the CMS website.

The following is our policy with regard to rounding of the wage data (dollar amounts, hours, and other numerical values) in the calculation of the unadjusted and adjusted wage index, as finalized in the FY 2020 IPPS/LTCH final rule (84 FR 42306). For data that we consider to be ''raw data,'' such as the cost report data on Worksheets S–3, Parts II and III, and the occupational mix survey data, we use such data ''as is,'' and do not round any of the individual line items or fields. However, for any dollar amounts within the wage index calculations, including any type of summed wage amount, average hourly wages, and the national average hourly wage (both the unadjusted and

adjusted for occupational mix), we round the dollar amounts to 2 decimals. For any hour amounts within the wage index calculations, we round such hour amounts to the nearest whole number. For any numbers not expressed as dollars or hours within the wage index calculations, which could include ratios, percentages, or inflation factors, we round such numbers to 5 decimals. However, we continue rounding the actual unadjusted and adjusted wage indexes to 4 decimals, as we have done historically.

As discussed in the FY 2012 IPPS/LTCH PPS final rule, in ''Step 5,'' for each hospital, we adjust the total salaries plus wage-related costs to a common period to determine total adjusted salaries plus wage-related costs. To make the wage adjustment, we estimate the percentage change in the ECI for compensation for each 30-day increment from October 14, 2021, through April 15, 2023, for private industry hospital workers from the BLS' Office of Compensation and Working Conditions data. We have consistently used the ECI as the data source for our wages and salaries and other price proxies in the IPPS market basket, and we are not proposing any changes to the usage of the ECI for FY 2026. The factors used to adjust the hospital's data were based on the midpoint of the cost reporting period, as indicated in the following table.

MIDPOINT OF COST REPORTING PERIOD

After	Before	Adjustment factor
10/14/2021	11/15/2021	1.07227
11/14/2021	12/15/2021	1.06742
12/14/2021	01/15/2022	1.06250
01/14/2022	02/15/2022	1.05755
02/14/2022	03/15/2022	1.05259
03/14/2022	04/15/2022	1.04772
04/14/2022	05/15/2022	1.04303
05/14/2022	06/15/2022	1.03854
06/14/2022	07/15/2022	1.03412
07/14/2022	08/15/2022	1.02967
08/14/2022	09/15/2022	1.02518
09/14/2022	10/15/2022	1.02072
10/14/2022	11/15/2022	1.01637
11/14/2022	12/15/2022	1.01212
12/14/2022	01/15/2023	1.00797
01/14/2023	02/15/2023	1.00393
02/14/2023	03/15/2023	1.00000
03/14/2023	04/15/2023	0.99617

For example, the midpoint of a cost reporting period beginning January 1, 2022, and ending December 31, 2022, is June 30, 2022. An adjustment factor of 1.03412 was applied to the wages of a hospital with such a cost reporting period.

Previously, we also would provide a Puerto Rico overall average hourly wage. As discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56915), prior to January 1, 2016, Puerto Rico hospitals were paid based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. As a result, we calculated a Puerto Rico specific wage index that was applied to the labor-related share of the Puerto Rico-specific standardized amount. Section 601 of Division O, Title VI (section 601) of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113) amended section 1886(d)(9)(E) of the Act to specify that the payment calculation with respect to operating costs of inpatient hospital services of a subsection (d) Puerto Rico hospital for inpatient hospital discharges on or after January 1, 2016, shall use 100 percent of the national standardized amount. As we stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56915 through 56916), because Puerto Rico hospitals are no longer paid with a Puerto Rico specific standardized amount as of January 1, 2016, under section 1886(d)(9)(E) of the Act, as amended by section 601 of the Consolidated Appropriations Act, 2016, there is no longer a need to calculate a Puerto Rico specific average hourly wage and wage index. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the national average hourly wage (unadjusted for occupational mix) and the national wage index, which is applied to the national labor-related share of the national standardized amount. Therefore, for FY 2026, there is no Puerto Rico-specific overall average hourly wage or wage index.

Based on the previously described methodology, the proposed FY 2026 unadjusted national average hourly wage is the following:

Proposed FY 2026 Unadjusted National Average Hourly Wage: $57.70

D. Proposed Occupational Mix Adjustment to the FY 2026 Wage Index

As stated earlier, section 1886(d)(3)(E) of the Act provides for the collection of data every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program, to construct an occupational mix adjustment to the wage index, for application beginning October 1, 2004 (the FY 2005 wage index). The purpose of the occupational mix adjustment is to control for the effect of hospitals' employment choices on the wage index. For example, hospitals may choose to employ different combinations of registered nurses, licensed practical nurses, nursing aides, and medical assistants for the purpose of providing nursing care to their patients. The varying labor costs associated with these choices reflect hospital management decisions rather than geographic differences in the costs of labor.

1. Use of 2022 Medicare Wage Index Occupational Mix Survey for the FY 2026 Wage Index

Section 304(c) of Appendix F, Title III of the Consolidated Appropriations Act, 2001 (Pub. L. 106–554) amended section 1886(d)(3)(E) of the Act to require CMS to collect data every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program and to measure the earnings and paid hours of employment for such hospitals by occupational category. As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69275 through 69278), we collected data in 2022 to compute the occupational mix adjustment for the FY 2025, FY 2026, and FY 2027 wage indexes.

The FY 2026 occupational mix adjustment is based on a calendar year (CY) 2022 survey. Hospitals were required to submit their completed 2022 surveys (Form CMS–10079, OMB Control Number 0938–0907, expiration date January 31, 2026) to their MACs by July 1, 2023. The preliminary, unaudited CY 2022 survey data were posted on the CMS website on July 12, 2023. As with the Worksheet S–3, Parts II and III cost report wage data, as part of the FY 2026 desk review process, the MACs revised or verified data elements in hospitals' occupational mix surveys that resulted in certain edit failures.

2. Calculation of the Occupational Mix Adjustment for FY 2026

For FY 2026, we are proposing to calculate the occupational mix adjustment factor using the same methodology that we have used since the FY 2012 wage index (76 FR 51582 through 51586) and to apply the occupational mix adjustment to 100 percent of the FY 2026 wage index. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42308), we modified our methodology with regard to how dollar amounts, hours, and other numerical values in the unadjusted and adjusted wage index calculation are rounded, to ensure consistency in the calculation. According to the policy finalized in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42308 and 42309), for data that we consider to be ''raw data,'' such as the

cost report data on Worksheets S–3, Parts II and III, and the occupational mix survey data, we continue to use these data ''as is'', and not round any of the individual line items or fields. However, for any dollar amounts within the wage index calculations, including any type of summed wage amount, average hourly wages, and the national average hourly wage (both the unadjusted and adjusted for occupational mix), we round such dollar amounts to 2 decimals. We round any hour amounts within the wage index calculations to the nearest whole number. We round any numbers not expressed as dollars or hours in the wage index calculations, which could include ratios, percentages, or inflation factors, to 5 decimals. However, we continue rounding the actual unadjusted and adjusted wage indexes to 4 decimals, as we have done historically.

Similar to the method we use for the calculation of the wage index without occupational mix, salaries and hours for a multicampus hospital are allotted among the different labor market areas where its campuses are located. Table 2 associated with this proposed rule (which is available via the internet on the CMS website), which contains the proposed FY 2026 occupational mix adjusted wage index, includes separate wage data for the campuses of multicampus hospitals. We refer readers to section III.C. of the preamble of this proposed rule for a chart listing the multicampus hospitals and the FTE percentages used to allot their occupational mix data.

Because the statute requires that the Secretary measure the earnings and paid hours of employment by occupational category not less than once every 3 years, all hospitals that are subject to payments under the IPPS, or any hospital that would be subject to the IPPS if not granted a waiver, must complete the occupational mix survey, unless the hospital has no associated cost report wage data that are included in the proposed FY 2026 wage index. For the proposed FY 2026 wage index, we used the Worksheet S–3, Parts II and III wage data of 3,029 hospitals, and we used the occupational mix surveys of 2,945 hospitals for which we also had Worksheet S–3 wage data, which represented a ''response'' rate of 97 percent (2,945/3,029). For the proposed FY 2026 wage index, we applied proxy data for noncompliant hospitals, new hospitals, or hospitals that submitted erroneous or aberrant data in the same manner that we applied proxy data for such hospitals in the FY 2012 wage index occupational mix adjustment (76 FR 51586). As a result of applying this methodology, the proposed FY 2026 occupational mix adjusted national average hourly wage is the following:

Proposed FY 2026 Occupational Mix Adjusted National Average Hourly Wage: $57.63

3. Proposed Occupational Mix Adjustment and the Proposed FY 2026 Occupational Mix Adjusted Wage Index

As discussed in section III.E. of the preamble of this proposed rule, for FY 2026, we are applying the occupational mix adjustment to 100 percent of the FY 2026 wage index. We calculated the occupational mix adjustment using data from the 2022 occupational mix survey, using the methodology described in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51582–51586).

Based on the 2022 occupational mix survey data, the proposed FY 2026 national average hourly wages for each occupational mix nursing subcategory as calculated in Step 2 of the occupational mix calculation are as follows:

Occupational mix nursing subcategory	Average hourly wage
National RN	$60.47
National LPN and Surgical Technician	35.06
National Nurse Aide, Orderly, and Attendant	23.53
National Medical Assistant	23.15
National Nurse Category	50.12

The proposed national average hourly wage for the entire nurse category is computed in Step 5 of the occupational mix calculation. Hospitals with a nurse category average hourly wage (as calculated in Step 4) of greater than the national nurse category average hourly wage receive an occupational mix adjustment factor (as calculated in Step 6) of less than 1.0. Hospitals with a nurse category average hourly wage (as calculated in Step 4) of less than the national nurse category average hourly wage receive an occupational mix adjustment factor (as calculated in Step 6) of greater than 1.0.
