Based on the 2022 occupational mix survey data, we determined (in Step 7 of the occupational mix calculation) the following:

National Percentage of Hospital Employees in the Nurse Category: 45%

National Percentage of Hospital Employees in the All Other Occupations Category: 55%

E. Hospital Redesignations and Reclassifications

The following sections III.E.1 through III.E.4 discuss revisions to the wage index based on hospital redesignations and reclassifications. Specifically, hospitals may have their geographic area changed for wage index payment by applying for urban to rural reclassification under section 1886(d)(8)(E) of the Act (implemented at § 412.103), reclassification by the Medicare Geographic Classification Review Board (MGCRB) under section 1886(d)(10) of the Act, Lugar status redesignations under section 1886(d)(8)(B) of the Act, or a combination of the foregoing.

1. Urban to Rural Reclassification Under Section 1886(d)(8)(E) of the Act, Implemented at § 412.103

Under section 1886(d)(8)(E) of the Act, a qualifying prospective payment hospital located in an urban area may apply for rural status for payment purposes separate from reclassification through the MGCRB. Specifically, section 1886(d)(8)(E) of the Act provides that, not later than 60 days after the receipt of an application (in a form and manner determined by the Secretary) from a subsection (d) hospital that satisfies certain criteria, the Secretary shall treat the hospital as being located in the rural area (as defined in paragraph (2)(D)) of the State in which the hospital is located. We refer readers to the regulations at § 412.103 for the general criteria and application requirements for a subsection (d) hospital to reclassify from urban to rural status in accordance with section 1886(d)(8)(E) of the Act (such hospitals are referred to herein as ''§ 412.103 hospitals''). The FY 2012 IPPS/LTCH PPS final rule (76 FR 51595 through 51596) includes our policies regarding the effect of wage data from reclassified or redesignated hospitals. We refer readers to the FY 2024 IPPS/LTCH final rule (88 FR 58971 through 58977) for a review of our policy finalized in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49004) to calculate the rural floor with the wage data of urban hospitals reclassifying to rural areas under § 412.103, and discussion of our modification to the calculation of the rural wage index and its implications for the rural floor.

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41369 through 41374), we codified certain policies regarding multicampus hospitals in the regulations at §§ 412.92, 412.96, 412.103, and 412.108. We stated that reclassifications from urban to rural

under § 412.103 apply to the entire hospital (that is, the main campus and its remote location(s)). We also stated that a main campus of a hospital cannot obtain Sole Community Hospital (SCH), Rural Referral Center (RRC), or Medicare Dependent Hospital (MDH) status, or rural reclassification under § 412.103, independently or separately from its remote location(s), and vice versa. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49012 and 49013), we added § 412.103(a)(8) to clarify that for a multicampus hospital, approved rural reclassification status applies to the main campus and any remote location located in an urban area, including a main campus or any remote location deemed urban under section 1886(d)(8)(B) of the Act. If a remote location of a hospital is located in a different CBSA than the main campus of the hospital, it is CMS' longstanding policy to assign that remote location a wage index based on its own geographic area to comply with the statutory requirement to adjust for geographic differences in hospital wage levels (section 1886(d)(3)(E) of the Act). Hospitals are required to identify and allocate wages and hours based on FTEs for remote locations located in different CBSAs on Worksheet S–2, Part I, Lines 165 and 166 of form CMS–2552–10. In calculating wage index values, CMS identifies the allocated wage data for these remote locations in Table 2 with a ''B'' in the 3rd position of the CCN. These remote locations of hospitals with § 412.103 rural reclassification status in a different CBSA are identified in Table 2, and hospitals should evaluate potential wage index outcomes for their remote location(s) when withdrawing or terminating MGCRB reclassification, or canceling § 412.103 rural reclassification status.

We also note that in the FY 2025 IPPS/LTCH PPS Final Rule (89 FR 69279 through 69280), we reminded hospitals located in rural areas becoming urban under the adoption of the revised OMB delineations in FY 2025 that if they have SCH, MDH, or RRC status, they may choose to apply for a § 412.103 urban to rural reclassification if qualifying criteria are met to maintain the SCH, MDH, or RRC status. We advised hospitals to evaluate their options and if desired, apply for § 412.103 urban to rural reclassification before the beginning of FY 2025, to avoid a lapse in SCH, MDH, or RRC status at the beginning of FY 2025. We note that the ''Am I Rural'' tool currently available on the Rural Health Information Hub [200] website at *https://www.ruralhealthinfo.org/am-i-rural* was updated on November 21, 2024, based on data provided by the Federal Office of Rural Health Policy which is available at *https://www.hrsa.gov/rural-health/about-us/what-is-rural/data-files*. As discussed at § 412.103(f), the duration of an approved rural reclassification remains in effect without need for reapproval unless there is a change in the circumstances under which the classification was approved. If a hospital located in an urban area was approved for a rural reclassification under § 412.103(a)(1), that reclassification would no longer be valid if the hospital is no longer located within a rural census tract of an MSA as determined by the Federal Office of Rural Health Policy (FORHP) of the Health Resources and Services Administration (HRSA). Therefore, we encourage all hospitals and CAHs with active rural reclassifications under section 1886(d)(8)(E) of the Act to review their original reclassification application and determine whether the reclassification status would still apply.

Finally, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69280), CMS finalized a policy regarding terminated or ''tied-out'' hospitals, to address our concerns regarding the impacts these hospitals would have on rural wage index values. Specifically, we finalized a policy that § 412.103 reclassifications would be considered cancelled for the purposes of calculating the area wage index for any hospital with a CCN listed as terminated or ''tied-out'' as of the date that the hospital ceased to operate with an active CCN. We stated that we would obtain and review the best available CCN termination status lists as of the § 412.103(b)(6) ''lock-in'' date (60 days after the proposed rule for the FY is displayed in the **Federal Register**), consistent with the wage index development timeline. The lock-in date is used to determine whether a hospital has been approved for § 412.103 reclassification in time for that status to be included in the upcoming year's wage index development.

We noted that our policy to consider § 412.103 reclassifications cancelled for the purposes of calculating area wage index for any hospital with a CCN listed as terminated or ''tied-out'' is not intended to alter or affect the qualification for Critical Access Hospital (CAH), Sole Community Hospital (SCH), or Rural Emergency Hospital (REH) statuses or to have other effects unrelated to hospital wage index calculations. The rural reclassification status would remain in effect for any period that the original PPS hospital remains in operation with an active CCN. For REH qualification requirement purposes, this would include the date of enactment of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260), which was December 27, 2020.

2. General Policies and Effects of MGCRB Reclassification and Treatment of Dual Reclassified Hospitals

Under section 1886(d)(10) of the Act, the MGCRB considers applications by hospitals for geographic reclassification for purposes of payment under the IPPS. Hospitals must apply to the MGCRB to reclassify not later than 13 months prior to the start of the fiscal year for which reclassification is sought (usually by September 1). Generally, hospitals must be proximate to the labor market area to which they are seeking reclassification and must demonstrate characteristics similar to hospitals located in that area. The MGCRB issues its decisions not later than the end of February for reclassifications that become effective for the following fiscal year (beginning October 1). The regulations applicable to reclassifications by the MGCRB are located in §§ 412.230 through 412.280. (We refer readers to a discussion in the FY 2002 IPPS final rule (66 FR 39874 and 39875) regarding how the MGCRB defines mileage for purposes of the proximity requirements.) The general policies for reclassifications and redesignations and the policies for the effects of hospitals' reclassifications and redesignations on the wage index are discussed in the FY 2012 IPPS/LTCH PPS final rule for the FY 2012 final wage index (76 FR 51595 and 51596).

In addition, in the FY 2012 IPPS/LTCH PPS final rule, we discussed the effects on the wage index of urban hospitals reclassifying to rural areas under § 412.103. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42332 through 42336), we finalized a policy to exclude the wage data of urban hospitals reclassifying to rural areas under § 412.103 from the calculation of the rural floor, but we reverted to the pre-FY 2020 policy in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49002 through 49004). Hospitals that are geographically located in States without any rural areas are ineligible to apply for rural reclassification in accordance with the provisions of § 412.103.

On April 21, 2016, we published an interim final rule with comment period (IFC) in the **Federal Register** (81 FR 23428 through 23438) that included provisions amending our regulations to allow hospitals nationwide to have simultaneous § 412.103 urban to rural and MGCRB reclassifications. Prior to this amendment to the regulations, hospitals had to choose between a § 412.103 urban to rural reclassification which confers other rural benefits (Medicare provisions such as payments to disproportionate share hospitals (DSHs), and non-Medicare payment provisions, such as the 340B Drug Pricing Program administered by HRSA) besides the wage index under section 1886(d) of the Act or a reclassification under the MGCRB to solely increase its wage index. Under the amended regulations, a hospital that has an active MGCRB reclassification and is then approved for an urban to rural reclassification under § 412.103 will not lose its MGCRB reclassification. Additionally, a hospital is no longer required to cancel its § 412.103 reclassification in order to be approved for an MGCRB reclassification. By amending the regulations and allowing a hospital to pursue reclassification under the MGCRB while also maintaining a rural reclassification under § 412.103, hospitals are accorded the benefits of a § 412.103 urban to rural reclassification and the ability to use distance and average hourly wage criteria designated for rural hospitals to obtain a higher wage index value through an MGCRB reclassification. We note, for wage index calculation and payment purposes, when there is both a § 412.103 reclassification and an MGCRB reclassification, the MGCRB reclassification controls for wage index calculation and payment purposes.

Prior to FY 2024, we excluded hospitals with § 412.103 urban to rural redesignations from the calculation of the reclassified rural wage index if they also have an active MGCRB reclassification to another area. That is, if an application for urban reclassification through the MGCRB is approved and is not withdrawn or terminated by the hospital within the established timelines, we considered the hospital's geographic CBSA and the urban CBSA to which the hospital is reclassified under the MGCRB for the wage index calculation. We refer readers to the April 21, 2016, IFC (81 FR 23428 through 23438) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 56922 through 56930), in which we finalized the April 21, 2016, IFC, for a full discussion of the effect of simultaneous reclassifications under both the § 412.103 and the MGCRB processes on wage index calculations. For FY 2024 and subsequent years, we refer readers to the FY 2024 IPPS/LTCH PPS final rule for discussion of our policy to include hospitals with a § 412.103 reclassification that also have an active MGCRB reclassification to another area in the calculation of the reclassified rural wage index (88 FR 58971 through 58977).

3. MGCRB Reclassification Issues for FY 2026

a. FY 2026 Reclassification Application Requirements and Approvals

As previously stated, under section 1886(d)(10) of the Act, the MGCRB considers applications by hospitals for geographic reclassification for purposes of payment under the IPPS. The specific procedures and rules that apply to the geographic reclassification process are outlined in regulations under 42 CFR 412.230 through 412.280. There are 639 hospitals approved for wage index reclassifications by the MGCRB starting in FY 2026. Because MGCRB wage index reclassifications are effective for 3 years, for FY 2026, hospitals reclassified beginning in FY 2024 or FY 2025 are eligible to continue to be reclassified to a particular labor market area based on such prior reclassifications for the remainder of their 3-year period. There were 280 hospitals approved for wage index reclassifications in FY 2024 that will continue for FY 2026, and 278 hospitals approved for wage index reclassifications in FY 2025 that will continue for FY 2026. Of all the hospitals approved for reclassification for FY 2024, FY 2025, and FY 2026, 1,197 hospitals (approximately 36 percent of IPPS hospitals) are in a MGCRB reclassification status for FY 2026 (with 279 of these hospitals reclassified back to their urban geographic location). We note that several of the 639 hospitals approved for MGCRB reclassifications beginning in FY 2026 may opt to withdraw this status after the final rule, and a prior year reclassification may become effective in its place. We refer readers to section III.F.3.b. of the preamble of this proposed rule for information on the effects of implementation of new OMB labor market area delineations on reclassified hospitals.

Under the regulations at § 412.273, hospitals that have been reclassified by the MGCRB are permitted to withdraw their applications if the request for withdrawal is received by the MGCRB any time before the MGCRB issues a decision on the application, or after the MGCRB issues a decision, provided the request for withdrawal is received by the MGCRB within 45 days of the date of filing for public inspection of the proposed rule at the website of the Office of the Federal Register, or within 7 calendar days of receiving a decision of the Administrator's in accordance with § 412.273, whichever is later.

For information about the current process for withdrawing, terminating, or canceling a previous withdrawal or termination of a 3-year reclassification for wage index purposes, we refer readers to § 412.273, as well as section III.E.3.b. of the preamble of this proposed rule, and the FY 2002 IPPS final rule (66 FR 39887 through 39888) and the FY 2003 IPPS final rule (67 FR 50065 through 50066). Additional discussion on withdrawals and terminations was included in the FY 2008 IPPS final rule (72 FR 47333) and the FY 2018 IPPS/LTCH PPS final rule (82 FR 38148 through 38150).

Applications for FY 2027 reclassifications are due to the MGCRB by September 2, 2025 (Note: While the deadline for reclassification applications is not later than 13 months prior to the start of the fiscal year for which reclassification is sought, usually by September 1, the Board has historically allowed submission up to the first business day in September, which is September 2, 2025, due to Labor Day). This is also the current deadline for canceling a previous wage index reclassification withdrawal or termination under § 412.273(d) for the FY 2026 cycle.

Applications and other information about MGCRB reclassifications may be obtained beginning in mid-July 2025 via the internet on the CMS website at *https://www.cms.gov/medicare/regulations-guidance/geographic-classification-review-board*. This collection of information was previously approved under OMB Control Number 0938–0573, which expired on January 31, 2021. A reinstatement of this PRA package is currently being developed. The public will have an opportunity to review and submit comments regarding the reinstatement of this PRA package through a public notice and comment period separate from this rulemaking.

b. Proposed Revisions to § 412.273 To Simplify MGCRB Reinstatements

As discussed in the previous section, under the regulations at § 412.273, hospitals that have been reclassified by the MGCRB are permitted to withdraw their applications if the request for withdrawal is received by the MGCRB any time before the MGCRB issues a decision on the application, or after the

MGCRB issues a decision, provided the request for withdrawal is received by the MGCRB within 45 days of the date of filing for public inspection of the proposed rule at the website of the Office of the Federal Register, or within 7 calendar days of receiving a decision of the Administrator's in accordance with § 412.273, whichever is later. Hospitals may also terminate an existing approved reclassification, effective for the second and third year of the three year reclassification period or both, provided the request for termination is received by the MGCRB within 45 days of the date of filing for public inspection of the proposed rule at the website of the Office of the Federal Register, or within 7 calendar days of receiving a decision of the Administrator's in accordance with § 412.273, whichever is later.

Furthermore, these withdrawal and termination requests may be cancelled by submitting a request by the next application deadline for MGCRB application, reinstating the withdrawn or terminated reclassification for the remaining years of the reclassification.

We believe this process allows hospitals to maintain flexibility in choosing the optimal reclassification status for any given fiscal year, while balancing the need for consistency and predictability of the wage index system. However, we also believe the regulations § 412.273 can be confusing and contain complicated definitions and language. We are proposing revisions to multiple paragraphs of § 412.273 to clarify current policy and revise definitions in a more straightforward and understandable manner.

The first consideration is CMS's definitions of a withdrawal and a termination in § 412.273(a). *Termination* refers to the termination of an already existing 3-year MGCRB reclassification where such reclassification has already been in effect for 1 or 2 years, and there are 1 or 2 years remaining on the 3-year reclassification. A termination is effective only for the full fiscal year(s) remaining in the 3-year period at the time the request is received. Requests for terminations for part of a fiscal year are not considered. *Withdrawal* refers to the withdrawal of a 3-year MGCRB reclassification that has not yet gone into effect or where the MGCRB has not yet issued a decision on the application.

Stated generally, a withdrawal is an action taken upon a reclassification that has either not yet been reviewed by the MGCRB, or an approved reclassification due to go into effect in that upcoming fiscal year, and a termination is an action taken on an approved reclassification that has already gone into effect. There are policy considerations for defining withdrawals and terminations separately. For example, county group reclassification withdrawals must include all parties to the application, while a termination may be submitted by any individual hospital that is party to the application. For reasons discussed later in this section, we continue to believe this is the appropriate policy. However, we believe that specifically citing this policy exception in regulation is more straightforward than maintaining differing definitions for substantially similar actions. Therefore, for consistency and simplicity we are proposing to modify the definition of a withdrawal to only include requests made prior to a decision being made by the MGCRB. The definition of termination would encompass all post-decision actions to forgo the upcoming years of an approved reclassification. Specifically, we are proposing to modify § 412.273(a) to provide that a *termination* refers to the termination of an approved 3-year MGCRB reclassification. A termination is effective only for the full fiscal year(s) remaining in the 3-year period at the time the request is received. Requests for terminations for part of a fiscal year are not considered. We would also specify that a *withdrawal* refers to the withdrawal of a 3-year MGCRB reclassification where the MGCRB has not yet issued a decision on the application.

We are also proposing to remove § 412.273(c)(1)(i) and (ii) and revise paragraph (c)(1) to indicate that a request for withdrawal must be received by the MGCRB at any time before the MGCRB issues a decision on the application.

There is also a current process for cancelling an eligible withdrawal or termination in order to make the reclassification effective for any remaining years of the 3-year reclassification period. We note that this process is widely referring to as a request for ''reinstatement.'' To provide clarity and consistency, we are proposing to modify several references in § 412.273(d) from ''cancelling'' or a ''cancellation'' to ''reinstating'' or ''reinstatement.'' As we are proposing that withdrawals be limited to applications prior to approval, a proposed reinstatement would only apply to the proposed modified definition of a termination. Therefore, we are proposing to delete the references to withdrawals from § 412.273(d)(1).

As discussed earlier in this section, we continue to believe that all parties to a county group reclassification must participate on any action prior to the effective date of a group reclassification. Under current policy, this would include whether to withdraw a reclassification in the timeframe described at § 412.273(c)), and whether to cancel an approved reclassification withdrawal request to reinstate the remaining second and third year of the approved group reclassification, as described at § 412.273(d)(2). We believe that requiring these actions to include all parties to the group reclassification reduces the possibility of one or more parties withdrawing from a reclassification to the benefit or detriment of other hospitals reclassified to that labor market area. For example, a hospital may be incentivized to withdraw a potentially beneficial reclassification if the exclusion of its wage data in the reclassified area would increase the wage index value. This type of manipulation of reclassification policy does not encourage stability or predictability of wage index system and is contrary to the concept of providing hospitals in a county an opportunity to obtain a reclassification that they may not be able to obtain through an individual reclassification. Therefore, we are proposing to continue the current policy by modifying the current regulation to explicitly state that the proposed modified withdrawal requests and proposed modified termination and reinstatement requests made prior to the effective date of the reclassification (that is, any request made prior to the first year the reclassification goes into effect), must include all parties to the application. Specifically, we are proposing to modify § 412.273(e), by modifying paragraph (e)(2) to state that a request to terminate an approved individual reclassification must be submitted in writing to the MGCRB according to the method prescribed by the MGCRB and adding a new paragraph (e)(3) specifying that a request to terminate or reinstate an approved group reclassification must be submitted in writing to the MGCRB according to the method prescribed by the MGCRB. A request to terminate or reinstate an approved group reclassification that has not yet gone into effect must include all hospitals party to the reclassification. Termination requests for group reclassification for the second or third year of the 3-year wage index reclassification period and reinstatement requests for a group reclassification effective for the third

year of the 3-year wage index reclassification period may be submitted by any individual hospital that is party to the reclassification.

We believe that this proposal to explicitly state this policy regarding county group reclassification in regulation reduces confusion for hospitals and more clearly addresses our intent.

To provide clarity, we are also proposing to state that a termination of a 3-year reclassification defined at § 412.273(d)(4) is not eligible to be reinstated. This type of termination of an approved reclassification occurs when a hospital receives a different MGCRB reclassification in a subsequent fiscal year. Under current policy, hospitals may effectively choose between accepting a newly approved reclassification, or to withdraw it and ''fallback'' to a previously approved reclassification. We believe this provides sufficient flexibility for hospitals to obtain the most beneficial reclassification. However, once an approved reclassification goes into effect, we believe it is appropriate to permanently terminate other previously approved reclassifications. Doing so provides a degree of predictability and consistency in the wage index calculations by limiting hospitals to a total of two potential MGCRB reclassification options. This is the current policy of CMS and the current practice of the MGCRB. We are proposing specifically state this policy in regulation by providing in § 412.273(d)(4) that the terminated reclassification in such a case is not eligible for reinstatement.

We are proposing the preceding changes to become effective for requests made beginning in FY 2026. The current policies and definitions will continue for the remainder of FY 2025. We note that hospitals currently use the Office of Hearings Case and Document Management System (OH CDMS) to enter and maintain their MGCRB cases, and to correspond with the Office of Hearings. We are aware that the proposed changes will require system changes to the OH CDMS, and there could be some delay in revising certain terminology. However, nothing in the section is intended to significantly modify current policies and practices. Instead, it serves to clarify and simplify the process of determining whether an approved reclassification should be accepted and applied in a given fiscal year. We also believe that in making these changes, the regulation will provide clearer instructions to hospitals.

Finally, we note that under the current and proposed policies, there is no negative effect for a hospital to reinstate (cancel a withdrawal or termination) for a subsequent year, as the reclassification could be terminated in the following year, and hospitals are eligible to reapply for wage index reclassification to a different labor market area. When eligible, a large majority of hospitals already do this, as it provides greater flexibility and options for wage index reclassification. Before the introduction of the OH CDMS, these reinstatement requests were often submitted simultaneously with a withdrawal or termination request. However, in the online system, the option to reinstate is typically only made available after all withdrawal and termination requests have been processed. We have considered a policy modification to make termination requests effective for only one fiscal year. That is, all requests to withdraw or terminate a reclassification made in the timeframe specified at § 412.273(c) would automatically be reinstated for any remaining fiscal years, without the need of a second action to reinstate it. We have not fully evaluated the impact of such a policy but may consider it in future rulemaking.

4. Redesignations Under Section 1886(d)(8)(B) of the Act

a. Lugar Status Determinations

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51599 through 51600), we adopted the policy that, beginning with FY 2012, an eligible hospital that waives its Lugar status to receive the out-migration adjustment has effectively waived its deemed urban status and, thus, is rural for all purposes under the IPPS effective for the fiscal year in which the hospital receives the outmigration adjustment. In addition, in that rule, we adopted a minor procedural change that would allow a Lugar hospital that qualifies for and accepts the out-migration adjustment (through written notification to CMS within 45 days from the issuance of the proposed rule in the **Federal Register**) to waive its urban status for the full 3-year period for which its out-migration adjustment is effective. By doing so, such a Lugar hospital would no longer be required during the second and third years of eligibility for the out-migration adjustment to advise us annually that it prefers to continue being treated as rural and receive the out-migration adjustment. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 56930), we further clarified that if a hospital wishes to reinstate its urban status for any fiscal year within this 3-year period, it must send a request to CMS within 45 days of the issuance of the proposed rule in the **Federal Register** for that particular fiscal year. We indicated that such reinstatement requests may be sent electronically to *wageindex@cms.hhs.gov*. In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38147 through 38148), we finalized a policy revision to require a Lugar hospital that qualifies for and accepts the out-migration adjustment, or that no longer wishes to accept the out-migration adjustment and instead elects to return to its deemed urban status, to notify CMS within 45 days from the date of public display of the proposed rule at the Office of the Federal Register. These revised notification timeframes were effective beginning October 1, 2017. In addition, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38148), we clarified that both requests to waive and to reinstate ''Lugar'' status may be sent to *wageindex@cms.hhs.gov*. To ensure proper accounting, we request hospitals to include their CCN, and either ''waive Lugar'' or ''reinstate Lugar'', in the subject line of these requests. When applicable, this election would result in a cancelation of a hospital's rural reclassification status under § 412.103, effective October 1, 2025. We also inform hospitals that for the request to be approved, the hospital must withdraw or terminate any active MGCRB reclassification. All requests, once approved, will remain in effect for the remainder of the 3-year out-migration adjustment period.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42314 and 42315), we clarified that in circumstances where an eligible hospital elects to receive the outmigration adjustment within 45 days of the public display date of the proposed rule at the Office of the Federal Register in lieu of its Lugar wage index reclassification, and the county in which the hospital is located would no longer qualify for an outmigration adjustment when the final rule (or a subsequent correction notice) wage index calculations are completed, the hospital's request to accept the outmigration adjustment would be denied, and the hospital would be automatically assigned to its deemed urban status under section 1886(d)(8)(B) of the Act. We stated that final rule wage index values would be recalculated to reflect this reclassification, and in some instances, after taking into account this reclassification, the out-migration adjustment for the county in question could be restored in the final rule. However, as the hospital is assigned a Lugar reclassification under section

1886(d)(8)(B) of the Act, it would be ineligible to receive the county outmigration adjustment under section 1886(d)(13)(G) of the Act.

F. Wage Index Adjustments: Rural Floor, Imputed Floor, State Frontier Floor, Out-Migration Adjustment, Low Wage Index Hospital, and Cap on Wage Index Decrease Policies

The following adjustments to the wage index are listed in the order that they are generally applied. First, the rural floor, imputed floor, and state frontier floor provide a minimum wage index. The rural floor at section 4410(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33) provides that the wage index for hospitals in urban areas of a State may not be less than the wage index applicable to hospitals located in rural areas in that State. The imputed floor at section 1886(d)(3)(E)(iv) of the Act provides a wage index minimum for all-urban states. The state frontier floor at section 1886(d)(3)(E)(iii) of the Act requires that hospitals in frontier states cannot be assigned a wage index of less than 1.0000. Next, the out-migration adjustment at section 1886(d)(13)(A) of the Act is applied, potentially increasing the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county but work in a different county or counties with a higher wage index. For FY 2026 and subsequent fiscal years, as discussed later in this section, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are proposing to discontinue the low wage index hospital policy. Because we are proposing to discontinue the low wage index hospital policy for FY 2026 and subsequent fiscal years, we would no longer apply a low wage index budget neutrality factor to the standardized amounts. Finally, all hospital wage index decreases are capped at 95 percent of the hospital's final wage index in the prior fiscal year, according to the policy finalized in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021).

1. Rural Floor

Section 4410(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33) provides that, for discharges on or after October 1, 1997, the area wage index applicable to any hospital that is located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State. This provision is referred to as the rural floor. Section 3141 of the Patient Protection and Affordable Care Act (Pub. L. 111–148) also requires that a national budget neutrality adjustment be applied in implementing the rural floor. Based on the FY 2026 wage index associated with this proposed rule (which is available on the CMS website), and based on the calculation of the rural floor including the wage data of hospitals that have reclassified as rural under § 412.103, we estimate that 565 hospitals would receive the rural floor in FY 2026. The budget neutrality impact of the proposed application of the rural floor is discussed in section II.A.4.e. of Addendum A of this proposed rule.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48784), CMS finalized a policy change to calculate the rural floor in the same manner as we did prior to the FY 2020 IPPS/LTCH PPS final rule, in which the rural wage index sets the rural floor. We stated that for FY 2023 and subsequent years, we would include the wage data of § 412.103 hospitals that have no Medicare Geographic Classification Review Board (MGCRB) reclassification in the calculation of the rural floor, and include the wage data of such hospitals in the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in section 1886(d)(8)(C)(iii) of the Act.

In the FY 2024 IPPS/LTCH final rule (88 FR 58971 through 58977), we finalized a policy change beginning that year to include the data of *all* § 412.103 hospitals, even those that have an MGCRB reclassification, in the calculation of the rural floor and the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in section 1886(d)(8)(C)(iii) of the Act. We explained that after revisiting the case law, prior public comments, and the relevant statutory language, we agreed that the best reading of section 1886(d)(8)(E)'s text that CMS ''shall treat the [§ 412.103] hospital as being located in the rural area'' is that it instructs CMS to treat § 412.103 hospitals the same as geographically rural hospitals for the wage index calculation.

Accordingly, in the FY 2024 IPPS/LTCH PPS final rule, we finalized a policy to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and to exclude ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) that are implicated by the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. (For additional information on these changes, we refer readers to the FY 2024 IPPS/LTCH PPS final rule (88 FR 58971 through 58977).)

2. Imputed Floor

In the FY 2005 IPPS final rule (69 FR 49109 through 49111), we adopted the imputed floor policy as a temporary 3-year regulatory measure to address concerns from hospitals in all-urban States that have stated that they are disadvantaged by the absence of rural hospitals to set a wage index floor for those States. We extended the imputed floor policy eight times since its initial implementation, the last of which was adopted in the FY 2018 IPPS/LTCH PPS final rule and expired on September 30, 2018. We refer readers to further discussions of the imputed floor in the IPPS/LTCH PPS final rules from FYs 2014 through 2019 (78 FR 50589 through 50590, 79 FR 49969 through 49971, 80 FR 49497 through 49498, 81 FR 56921 through 56922, 82 FR 38138 through 38142, and 83 FR 41376 through 41380, respectively) and to the regulations at § 412.64(h)(4). For FYs 2019, 2020, and 2021, hospitals in all-urban states received a wage index that was calculated without applying an imputed floor, and we no longer included the imputed floor as a factor in the national budget neutrality adjustment.

Section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2), enacted on March 11, 2021, amended section 1886(d)(3)(E)(i) of the Act and added section 1886(d)(3)(E)(iv) of the Act to establish a minimum area wage index for hospitals in all-urban States for discharges occurring on or after October 1, 2021. Specifically, section 1886(d)(3)(E)(iv)(I) and (II) of the Act provides that for discharges occurring on or after October 1, 2021, the area wage index applicable to any hospital in an all-urban State may not be less than the minimum area wage index for the fiscal year for hospitals in that State established using the methodology described in § 412.64(h)(4)(vi) as in effect for FY 2018. Unlike the imputed floor that was in effect from FYs 2005 through 2018, section 1886(d)(3)(E)(iv)(III) of the Act provides that the imputed floor wage index shall not be applied in a budget neutral manner. Section 1886(d)(3)(E)(iv)(IV) of the Act provides that, for purposes of the imputed floor wage index under clause (iv), the term all-urban State means a State in which there are no rural areas (as defined in section 1886(d)(2)(D) of the Act) or a State in which there are no hospitals classified as rural under section 1886 of the Act. Under this definition, given that it applies for purposes of the imputed floor wage index, we consider a hospital to be classified as rural under section

1886 of the Act if it is assigned the State's rural area wage index value.

Effective beginning October 1, 2021 (FY 2022), section 1886(d)(3)(E)(iv) of the Act reinstated the imputed floor wage index policy for all-urban States, with no expiration date, using the methodology described in § 412.64(h)(4)(vi) as in effect for FY 2018. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45176 through 45178) for further discussion of the original imputed floor calculation methodology implemented in FY 2005 and the alternative methodology implemented in FY 2013.

Based on data available for this proposed rule, States that will be all-urban States as defined in section 1886(d)(3)(E)(iv)(IV) of the Act, and thus hospitals in such States that will be eligible to receive an increase in their wage index due to application of the imputed floor for FY 2026, are identified in Table 3 (which is available on the CMS website) associated with this proposed rule.

The regulations at § 412.64(e)(1) and (4) and (h)(4) and (5) implement the imputed floor required by section 1886(d)(3)(E)(iv) of the Act for discharges occurring on or after October 1, 2021. The imputed floor will continue to be applied for FY 2026 in accordance with the policies adopted in the FY 2022 IPPS/LTCH PPS final rule. For more information regarding our implementation of the imputed floor required by section 1886(d)(3)(E)(iv) of the Act, we refer readers to the discussion in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45176 through 45178).

3. State Frontier Floor for FY 2026

Section 10324 of Public Law 111–148 requires that hospitals in frontier States cannot be assigned a wage index of less than 1.0000. (We refer readers to the regulations at § 412.64(m) and to a discussion of the implementation of this provision in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 through 50161).) We are not proposing any changes to the frontier floor policy for FY 2026. In this proposed rule, 40 hospitals would receive the frontier floor value of 1.0000 for their FY 2026 proposed wage index. These hospitals are located in Montana, North Dakota, South Dakota, and Wyoming. We note that while Nevada meets the criteria of a frontier State, all hospitals within the State currently receive a wage index value greater than 1.0000.

The areas affected by the rural and frontier floor policies for the proposed FY 2026 wage index are identified in Table 3 associated with this proposed rule, which is available via the internet on the CMS website.

4. Proposed Out-Migration Adjustment Based on Commuting Patterns of Hospital Employees

In accordance with section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, beginning with FY 2005, we established a process to make adjustments to the hospital wage index based on commuting patterns of hospital employees (the ''out-migration'' adjustment). The process, outlined in the FY 2005 IPPS final rule (69 FR 49061), provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county but work in a different county (or counties) with a higher wage index.

Section 1886(d)(13)(B) of the Act requires the Secretary to use data the Secretary determines to be appropriate to establish the qualifying counties. When the provision of section 1886(d)(13) of the Act was implemented for the FY 2005 wage index, we analyzed commuting data compiled by the U.S. Census Bureau that were derived from a special tabulation of the 2000 Census journey-to-work data for all industries (CMS extracted data applicable to hospitals). These data were compiled from responses to the ''long-form'' survey, which the Census Bureau used at that time, and which contained questions on where residents in each county worked (69 FR 49062). However, the 2010 Census was ''short form'' only; information on where residents in each county worked was not collected as part of the 2010 Census. The Census Bureau worked with CMS to provide an alternative dataset based on the latest available data on where residents in each county worked in 2010, for use in developing a new out-migration adjustment based on new commuting patterns developed from the 2010 Census data beginning with FY 2016.

To determine the out-migration adjustments and applicable counties for FY 2016, we analyzed commuting data compiled by the Census Bureau that were derived from a custom tabulation of the American Community Survey (ACS), an official Census Bureau survey, utilizing 2008 through 2012 (5-year) Microdata. The data were compiled from responses to the ACS questions regarding the county where workers reside and the county to which workers commute. As we discussed in prior IPPS/LTCH PPS final rules, we have applied the same policies, procedures, and computations since FY 2012. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49500 through 49502) for a full explanation of the revised data source. We also stated that we would consider determining out-migration adjustments based on data from the next Census or other available data, as appropriate.

As discussed above in section III.A.2., in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69253 through 69266), CMS adopted revised delineations from the OMB Bulletin 23–01, published July 21, 2023. The revised delineations incorporated population estimates based on the 2020 decennial census, as well as updated journey-to-work commuting data. The Census Bureau once again worked with CMS to provide an alternative dataset based on the latest available data on where residents in each county worked, for use in developing a new out-migration adjustment based on new commuting patterns. We analyzed commuting data compiled by the Census Bureau that were derived from a custom tabulation of the ACS, utilizing 2016 through 2020 data. The Census Bureau produces county level commuting flow tables every 5 years using non-overlapping 5-year ACS estimates. The data include demographic characteristics, home and work locations, and journey-to-work travel flows. The custom tabulation requested by CMS was specific to general medical and surgical hospital and specialty (except psychiatric and substance use disorder treatment) hospital employees (hospital sector Census code 8191/NAICS code 6221 and 6223) who worked in the 50 States, Washington, DC, and Puerto Rico and, therefore, provided information about commuting patterns of workers at the county level for residents of the 50 States, Washington, DC, and Puerto Rico.

For the ACS, the Census Bureau selects a random sample of addresses where workers reside to be included in the survey, and the sample is designed to ensure good geographic coverage. The ACS samples approximately 3.5 million resident addresses per year.[201] The results of the ACS are used to formulate descriptive population estimates, and, as such, the sample on which the dataset is based represents the actual figures that would be obtained from a complete count.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69301), we finalized that for

[201] According to the Census Bureau, the effects of the public health emergency (PHE) on ACS activities in 2020 resulted in a lower number of addresses (~2.9 million) in the sample, as well as fewer interviews than a typical year.

FY 2025 and subsequent years, the out-migration adjustment would be based on the data derived from the previously discussed custom tabulation of the ACS utilizing 2016 through 2020 (5-year) Microdata. As discussed earlier, we believe that these data are the most appropriate to establish qualifying counties, because they are the most accurate and up-to-date data that are available to us. For FY 2026, we are not proposing any changes to the methodology or data source for calculating the out-migration adjustment. Specifically, we are proposing that the FY 2026 out-migration adjustments continue to be based on the same policies, procedures, and computation that were used for the FY 2012 out-migration adjustment. We have applied these same policies, procedures, and computations since FY 2012, and we believe they continue to be appropriate for FY 2026. We refer readers to a full discussion of the out-migration adjustment, including rules on deeming hospitals reclassified under section 1886(d)(8) or section 1886(d)(10) of the Act to have waived the out-migration adjustment, in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51601 through 51602). Table 2 of this proposed rule (which is available on the CMS website) lists the proposed out-migration adjustments for the FY 2026 wage index. In addition, Table 4A associated with this proposed rule, ''List of Counties Eligible for the Out Migration Adjustment under Section 1886(d)(13) of the Act'' (also available on the CMS website), consists of the following: A list of counties that are eligible for the outmigration adjustment for FY 2026 identified by FIPS county code, the proposed FY 2026 out-migration adjustment, and the number of years the adjustment will be in effect. We refer readers to section V.I. of the Addendum of this proposed rule for instructions on accessing IPPS tables that are posted on the CMS websites identified in this proposed rule.

5. Discontinuation of the Low Wage Index Hospital Policy and Budget Neutrality Adjustment

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42325 through 42339), we finalized a policy to address increasing wage index disparities, based in part on comments we received in response to our request for information included in our FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20372 through 20377). Accordingly, we finalized a policy that provided certain low wage index hospitals with an opportunity to increase employee compensation without the usual lag in those increases being reflected in the calculation of the wage index (as they would expect to do if not for the lag). We accomplished this by temporarily increasing the wage index values for certain hospitals with low wage index values and doing so in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We increased the wage index for hospitals with a wage index value below the 25th percentile wage index value for a fiscal year by half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals (the low wage index hospital policy).

When we adopted the low wage index hospital policy in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42326 through 42328), we stated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We also stated we intended to revisit the issue of the duration of this policy in future rulemaking as we gained experience under the policy. For FY 2024, we continued to apply the low wage index hospital policy and the related budget neutrality adjustment (88 FR 58977 through 58980). In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69301 through 69308), we adopted an extension of the low wage index hospital policy and the related budget neutrality adjustment effective for at least three more years, beginning in FY 2025, in order for sufficient wage data from after the end of the COVID–19 Public Health Emergency to become available.

On July 23, 2024, the Court of Appeals for the D.C. Circuit held that the Secretary lacked authority under section 1886(d)(3)(E) of the Act or under the ''adjustments'' language of section 1886(d)(5)(I)(i) of the Act to adopt the low wage index hospital policy for FY 2020, and that the policy and related budget neutrality adjustment must be vacated.[202] After considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* in the interim final action with comment period (IFC) titled ''Medicare Program; Changes to the Fiscal Year 2025 Hospital Inpatient Prospective Payment System (IPPS) Rates Due to Court Decision'' (referred to herein as the FY 2025 IFC) (89 FR 80405 through 80421), we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. We refer the reader to the applicable year final rule discussions (FY 2020 IPPS/LTCH PPS final rule (84 FR 42325 through 42339); FY 2024 IPPS/LTCH PPS final rule (88 FR 58977 through 58980)) regarding the implementation of the low wage index hospital policy and the FY 2025 IFC for a complete discussion regarding the removal of the low wage index hospital policy for FY 2025.

For FY 2026 and subsequent fiscal years, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are proposing to discontinue the low wage index hospital policy. Because we are proposing to discontinue the low wage index hospital policy for FY 2026 and subsequent fiscal years, we would no longer apply a low wage index budget neutrality factor to the standardized amounts.

6. Cap on Wage Index Decreases and Budget Neutrality Adjustment

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021), we finalized a wage index cap policy and associated budget neutrality adjustment for FY 2023 and subsequent fiscal years. Under this policy, we apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. A hospital's wage index will not be less than 95 percent of its final wage index for the prior FY. If a hospital's prior FY wage index is calculated with the application of the 5-percent cap, the following year's wage index will not be less than 95 percent of the hospital's capped wage index in the prior FY. We note, the FY 2025 wage index was established in the FY 2025 Interim Final Action with Comment (IFC) which removed the low wage index hospital policy (89 FR 80405 through 80421). Therefore, for FY 2026, the prior year wage index for purposes of the cap would be based on the wage index established in the IFC. We also note that in that same IFC, we established a transitional payment exception for FY 2025. The 5-percent cap for FY 2026 would be applied irrespective of the FY 2025 transitional payment exception. We finally note, as discussed below, that for FY 2026 we are also proposing a transitional payment exception that addresses the effects of the removal of the low wage index hospital policy. This proposed transitional payment exception would be applied after the application of the 5-percent cap.

[202] *Bridgeport Hosp.* v. *Becerra,* 108 F.4th 882, 887–91 & n.6 (D.C. Cir. 2024).

Except for newly opened hospitals, we apply the cap for a FY using the final wage index applicable to the hospital on the last day of the prior FY. A newly opened hospital will be paid the wage index for the area in which it is geographically located for its first full or partial fiscal year, and it will not receive a cap for that first year, because it will not have been assigned a wage index in the prior year. The wage index cap policy is reflected at § 412.64(h)(7). We apply the cap in a budget neutral manner through a national adjustment to the standardized amount each fiscal year. For more information about the wage index cap policy and associated budget neutrality adjustment, we refer readers to the discussion in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021).

For FY 2026, we would apply the wage index cap and associated budget neutrality adjustment in accordance with the policies adopted in the FY 2023 IPPS/LTCH PPS final rule. We note that the budget neutrality adjustment will be updated, as appropriate, based on the final rule data. We refer readers to the Addendum of this proposed rule for further information regarding the budget neutrality calculations.

7. Proposed Transition for the Discontinuation of the Low Wage Index Hospital Policy

As discussed above, in the FY 2025 IFC we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. For FY 2026 and subsequent fiscal years, consistent with the FY 2025 IFC, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are proposing to discontinue the low wage index hospital policy. Because we are proposing to discontinue the low wage index hospital policy for FY 2026 and subsequent fiscal years, we would no longer apply the low wage index budget neutrality factor to the standardized amounts.

In the past, we have established temporary transition policies when there have been significant changes to payment policies, and we have limited the duration of each transition in order to phase in the effects of those payment policy changes. In taking this temporary approach in the past, we have sought to mitigate short-term instability and payment fluctuations that can negatively impact hospitals consistent with principles of certainty and predictability under prospective payment systems. For example, CMS has recognized that hospitals in certain areas may experience a negative impact on their IPPS payment due to the adoption of revised OMB delineations for wage index purposes and has finalized transition policies to mitigate negative financial impacts and provide stability to year-to-year wage index variations. We refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 49956 through 49962) for a discussion of the transition period finalized when CMS adopted revised OMB delineations after the 2010 decennial census. For FY 2025, consistent with our past practice, we established an interim transition policy for hospitals significantly impacted by the removal of the FY 2025 low wage index hospital policy using our authority under section 1886(d)(5)(I) of the Act. Specifically, the transitional payment exception for FY 2025 for those hospitals is equal to the additional FY 2025 amount a hospital would have been paid under the IPPS if its FY 2025 wage index were equal to 95 percent of its FY 2024 wage index. For a discussion of the removal of the low wage index hospital policy and the establishment of the interim transition policy, we refer readers to the FY 2025 IFC (89 FR 80405 through 80421).

We currently have a wage index cap policy at 42 CFR 412.64(h)(7), under which we apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY in a budget neutral manner, regardless of the circumstances causing the decline, so that a hospital's final wage index for the upcoming fiscal year will not be less than 95 percent of its final wage index from the prior fiscal year. In accordance with 42 CFR 412.64(e)(1)(ii), CMS applies a budget neutrality adjustment to offset the increase in total payments resulting from the application of that cap.

Some hospitals that previously benefitted from the low wage index hospital policy would experience decreases of 10 percent or more over the two years from their FY 2024 wage index (with the low wage index hospital policy applied) to their proposed FY 2026 wage index (that is, approximately 5 percent or more per year over that time period). Similar to how 42 CFR 412.64(h)(7) would operate, and how our interim transitional policy established in the FY 2025 IFC for these hospitals operates in FY 2025, we are proposing to establish a narrow transitional exception to the calculation of FY 2026 payments for these hospitals.

As described above, if the combined payment effect of the FY 2025 wage index and the transitional payment exception for FY 2025 had been attributable solely to the FY 2025 wage index, then the wage index cap policy at 42 CFR 412.64(h)(7) would have mitigated these FY 2026 wage index decreases and would have done so in a budget neutral manner under our current regulations. As discussed in the FY 2025 IFC (89 FR 80407–80408), while CMS is not necessarily required by the statute to budget neutralize every exception or adjustment under section 1886(d)(5)(I), it has often done so by exercising its discretion under section 1886(d)(5)(I) of the Act twice: first to adopt an exception or adjustment, and then again to make that exception or adjustment budget neutral.[203] For the FY 2025 interim transition policy, under the unique circumstances and due to the timing of the appellate court's decision in *Bridgeport Hosp.* v. *Becerra* so close to the beginning of FY 2025, we declined to exercise our discretion to budget neutralize that interim FY 2025 transition policy. We stated that unlike most policies relevant to the calculation of the hospital wage index, the timing of the court's decision shortly before the beginning of the fiscal year necessitated swift action by the agency via an IFC, rather than providing for prior notice and opportunity for comment. The agency's action in that IFC was intended to promote certainty regarding FY 2025 IPPS payments in light of the reasoning of *Bridgeport,* which risked creating ongoing confusion for hospitals extending into FY 2025 about the amount of their IPPS payments. In that circumstance, the lack of an opportunity to notify interested parties in a notice of proposed rulemaking about changes to their wage index that would result from budget neutralizing the transition policy, and for the agency to consider before the policy's effective date issues hospitals might raise when commenting on those changes, weighed in favor of an approach that did not adversely affect the significant majority of hospitals. For these reasons, and as discussed in the IFC, we declined to budget neutralize the interim FY 2025 transition policy.

In contrast, we are proposing the FY 2026 transition policy under very different circumstances. We are not facing the timing constraints of a court decision issued shortly before the beginning of a fiscal year that necessitated swift action through an IFC to promote certainty and prevent ongoing confusion by hospitals. Rather,

[203] For example, CMS has stated in the past that it would exercise its discretion under section 1886(d)(5)(I) of the Act to make the low wage index hospital policy budget neutral even if budget neutrality were not required by statute (88 FR 58979).

we are proposing the FY 2026 transition policy through the normal course of our annual rulemaking for the IPPS, which will allow both for advance notice of the policy and for us to consider issues interested parties might raise in comments on this proposed rule. We are proposing to make this policy budget neutral through an adjustment applied to the standardized amount for all hospitals because (1) the wage index cap policy at 42 CFR 412.64(h)(7) would have mitigated these FY 2026 wage index decreases had the combined payment effect of the FY 2025 wage index and the transitional payment exception been reflected solely in the FY 2025 wage index, and it would have done so in a budget neutral manner under our current regulations, and (2) the circumstances described above that caused us to decline to budget neutralize the interim FY 2025 transition policy are not applicable to the proposed FY 2026 transition policy. In addition, we note that implementing the proposed FY 2026 transition policy in a budget neutral manner would be consistent with past practice. For example, we budget neutralized the FY 2015 wage index transition budget neutrality policy discussed earlier (79 FR 49956 through 49962). As we have discussed in other instances (89 FR 19398), we believed, and continue to believe, that transition policies should not increase estimated aggregate Medicare payments beyond the payments that would be made had we never proposed these transition policies. Therefore, we are proposing to use our authority under section 1886(d)(5)(I)(i) of the Act twice. First, we are proposing to adopt a narrow transitional exception to the calculation of FY 2026 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy. Second, we are exercising our authority again to do so in a budget neutral manner.[204] [205] We refer the reader to section II.A.4.g. of the Addendum of this proposed rule for complete details regarding the application of the proposed transition for the discontinuation of the low wage index hospital policy budget neutrality factor.

The transitional exception policy we are proposing applies to hospitals that benefitted from the FY 2024 low wage index hospital policy. For those hospitals, we compare the hospital's proposed FY 2026 wage index to the hospital's FY 2024 wage index. If the hospital is significantly impacted by the discontinuation of the low wage index hospital policy, meaning the hospital's proposed FY 2026 wage index is decreasing by more than 9.75 percent [206] from the hospital's FY 2024 wage index, then the transitional payment exception for FY 2026 for that hospital would be equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent [207] of its FY 2024 wage index.[208] We note this proposed transitional payment exception would be applied after the application of the 5-percent cap described at 42 CFR 412.64(h)(7). For example, assume the FY 2024 wage index for a hospital that benefitted from the low wage index hospital policy is 0.7600, and the hospital's proposed FY 2026 wage index is 0.6500. (If applicable, this proposed FY 2026 wage index value would include the 5-percent cap based on a comparison of the hospital's FY 2026 wage index prior to application of the 5-percent cap, to the hospital's FY 2025 wage index. We note the FY 2025 wage index that will be used in this comparison is generally the FY 2025 wage index listed in Table 2 from the FY 2025 IFC in the column labeled ''FY 2025 Wage Index With Cap''. We note all hospitals, regardless of whether the cap was applied to their FY 2025 wage index, have a value in the column ''FY 2025 Wage Index With Cap''. Hospitals that did not have a cap applied to their FY 2025 wage index will display a wage index in this column without the cap.) The hospital's proposed FY 2026 wage index is decreasing by more than 9.75 percent from the hospital's FY 2024 wage index [that is, 0.6500 < 0.6859 where 0.6859 = (0.9025 times 0.7600)]. The proposed transitional payment exception for FY 2026 for this hospital is equal to the additional amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 0.6859, which is 90.25 percent of 0.7600, its FY 2024 wage index.

Under the capital IPPS, the adjustment for local cost variation is based on the hospital wage index value that is applicable to the hospital under the operating IPPS. We adjust the capital standard Federal rate so that the effects of the annual changes in the geographic adjustment factor (GAF) are budget neutral. The low wage index hospital policy has been reflected in the capital IPPS GAFs since FY 2020 (84 FR 42638). The removal of the low wage index hospital policy for FY 2025 also affects the FY 2025 GAFs. Because we are now no longer applying the low wage index hospital policy in FY 2025, we are also no longer making an adjustment to the FY 2025 capital standard Federal rate to ensure budget neutrality for the low wage index hospital policy.

As discussed previously, for FY 2025 we believe it is appropriate to establish a transition policy for low wage hospitals significantly impacted by the removal of the low wage index hospital policy.

As discussed in the FY 2025 IFC (89 FR 80408), since FY 2023, the GAFs reflect the wage index cap policy that limits any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline, to 95 percent of its prior year value. As described previously, some hospitals that previously benefitted from the low wage index hospital policy would experience decreases of 10 percent or more over the two years from their FY 2024 wage index (with the low wage index hospital policy applied) to their proposed FY 2026 wage index (that is, approximately 5 percent or more per year over that time period). As such, similar to the FY 2025 interim transition policy established in the FY 2025 IFC, we are proposing to make a budget neutral

[204] We note that even more so than was the case for the FY 2025 interim transition policy, the scope and magnitude of the proposed FY 2026 transitional policy are much smaller than the low wage index hospital policy. As discussed in section VI. of the preamble of this proposed rule, we estimate only 52 hospitals out of the over 3,000 hospitals paid under the IPPS would receive proposed FY 2026 transitional exception payments, and the total payment impact of the proposed transitional policy is an increase in IPPS operating payments by approximately $27 million. For the FY 2025 interim transition policy the corresponding figures were 113 hospitals and an increase in IPPS operating payments by approximately $37 million (89 FR 80417).

[205] We note that because creating an exception to the calculation of the FY 2026 payments is in this circumstance functionally equivalent to adjusting the FY 2026 payments, the proposed transitional exception can be alternatively considered a proposed transitional adjustment.

[206] Under the wage index cap policy at 42 CFR 412.64(h)(7), a hospital's wage index for a FY cannot be lower than 0.95 * its wage index from the prior FY. Over a 2-year period if its wage index were decreasing by more than 5 percent each year, this would mean a hospital's wage index for a FY cannot be lower than (0.95*0.95) times its wage index from two years earlier. Similarly for our proposed FY 2026 transitional exception policy, we are proposing that a hospital is significantly impacted by the discontinuation of the low wage index hospital policy if its FY 2026 wage index is less than (0.95*0.95) of its FY 2024 wage index, which equates to a decrease of more than 9.75 percent.

[207] 90.25 percent = 95 percent for FY 2025 * 95 percent for FY 2026.

[208] We note that we are not proposing to change the FY 2026 wage index values under section 1886(d)(3)(E) for hospitals eligible for the proposed FY 2026 transitional exception policy on the basis of the exception; the proposed change would be applied as a separate step only for purposes of determining the hospitals' FY 2026 IPPS payments.

equivalent exception under the capital IPPS.

G. FY 2026 Wage Index Tables

In this FY 2026 IPPS/LTCH PPS proposed rule, we have included the following wage index tables: Table 2 titled ''Case-Mix Index and Wage Index Table by CCN''; Table 3 titled ''Wage Index Table by CBSA''; Table 4A titled ''List of Counties Eligible for the Out-Migration Adjustment under Section 1886(d)(13) of the Act''; and Table 4B titled ''Counties redesignated under section 1886(d)(8)(B) of the Act (Lugar Counties).'' We refer readers to section VI. of the Addendum to this proposed rule for a discussion of the wage index tables for FY 2026.

H. Proposed Labor-Related Share for the FY 2026 Wage Index

Section 1886(d)(3)(E) of the Act directs the Secretary to adjust the proportion of the national prospective payment system base payment rates that are attributable to wages and wage-related costs by a factor that reflects the relative differences in labor costs among geographic areas. It also directs the Secretary to estimate from time to time the proportion of hospital costs that are labor-related and to adjust the proportion (as estimated by the Secretary from time to time) of hospitals' costs that are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the portion of hospital costs attributable to wages and wage-related costs as the labor-related share. The labor-related share of the prospective payment rate is adjusted by an index of relative labor costs, which is referred to as the wage index.

Section 403 of Public Law 108–173 amended section 1886(d)(3)(E) of the Act to provide that the Secretary must employ 62 percent as the labor-related share unless this would result in lower payments to a hospital than would otherwise be made. However, this provision of Public Law 108–173 did not change the legal requirement that the Secretary estimate from time to time the proportion of hospitals' costs that are attributable to wages and wage-related costs. Thus, hospitals receive payment based on either a 62-percent labor-related share, or the labor-related share estimated from time to time by the Secretary, depending on which labor-related share results in a higher payment.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45208), we rebased and revised the hospital market basket to a 2018-based IPPS hospital market basket, which replaced the 2014-based IPPS hospital market basket, effective beginning October 1, 2021. Using the 2018-based IPPS market basket, we finalized a labor-related share of 67.6 percent for discharges occurring on or after October 1, 2021. In addition, in FY 2022, we implemented this revised and rebased labor-related share in a budget neutral manner (86 FR 45193, 86 FR 45529 through 45530). However, consistent with section 1886(d)(3)(E) of the Act, we did not take into account the additional payments that would be made as a result of hospitals with a wage index less than or equal to 1.0000 being paid using a labor-related share lower than the labor-related share of hospitals with a wage index greater than 1.0000.

As described in section IV. of the preamble of this proposed rule, effective beginning FY 2026, we are proposing to rebase and revise the IPPS market basket to reflect a 2023 base year. We also are proposing to recalculate the labor-related share for discharges occurring on or after October 1, 2025, using the proposed 2023-based IPPS market basket. As discussed in Appendix A of this proposed rule, we are proposing this rebased and revised labor-related share in a budget neutral manner. However, consistent with section 1886(d)(3)(E) of the Act, we would not take into account the additional payments that would be made as a result of hospitals with a wage index less than or equal to 1.0000 being paid using a labor-related share lower than the labor-related share of hospitals with a wage index greater than 1.0000.

The labor-related share is used to determine the proportion of the national IPPS base payment rate to which the area wage index is applied. We include a cost category in the labor-related share if the costs are labor intensive and vary with the local labor market. As described in section IV. of the preamble of this proposed rule, beginning with FY 2026, we are proposing to include in the labor-related share the national average proportion of operating costs that are attributable to the following cost categories in the 2023-based IPPS market basket: Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; and All Other: Labor-Related Services as measured in the proposed 2023-based IPPS market basket. Therefore, for FY 2026, we are proposing to use a labor-related share of 66.0 percent for discharges occurring on or after October 1, 2025.

As discussed in section V.B. of the preamble of this proposed rule, prior to January 1, 2016, Puerto Rico hospitals were paid based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. As a result, we applied the Puerto Rico-specific labor-related share percentage and nonlabor-related share percentage to the Puerto Rico-specific standardized amount. Section 601 of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113) amended section 1886(d)(9)(E) of the Act to specify that the payment calculation with respect to operating costs of inpatient hospital services of a subsection (d) Puerto Rico hospital for inpatient hospital discharges on or after January 1, 2016, shall use 100 percent of the national standardized amount. Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount as of January 1, 2016, under section 1886(d)(9)(E) of the Act as amended by section 601 of the Consolidated Appropriations Act, 2016, there is no longer a need for us to calculate a Puerto Rico-specific labor-related share percentage and nonlabor-related share percentage for application to the Puerto Rico-specific standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the national labor-related share and nonlabor-related share percentages that are applied to the national standardized amount. Accordingly, for FY 2026, we are not proposing a Puerto Rico-specific labor-related share percentage or a nonlabor-related share percentage.

Tables 1A and 1B, which are published in section VI. of the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule and available via the internet on the CMS website, reflect the national labor-related share. Table 1C, in section VI. of the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule and available via the internet on the CMS website, reflects the national labor-related share for hospitals located in Puerto Rico. For FY 2026, for all IPPS hospitals (including Puerto Rico hospitals) whose wage indexes are less than or equal to 1.0000, we are proposing to apply the wage index to a labor-related share of 62 percent of the national standardized amount. For all IPPS hospitals (including Puerto Rico hospitals) whose wage indexes are greater than 1.000, for FY 2026, we are proposing to apply the wage index to a labor-related share of 66.0 percent of the national standardized amount.

IV. Rebasing and Revising of the Hospital Market Baskets for Acute Care Hospitals

A. Background

Effective for cost reporting periods beginning on or after July 1, 1979, we developed and adopted a hospital input price index (that is, the hospital market basket for operating costs). Although ''market basket'' technically describes the mix of goods and services used in providing hospital care, this term is also commonly used to denote the input price index (that is, cost category weights and price proxies combined) derived from that market basket. Accordingly, the term ''market basket'' as used in this document refers to the hospital input price index.

The percentage change in the market basket reflects the average change in the price of goods and services hospitals purchase in order to provide inpatient care. We first used the market basket to adjust hospital cost limits by an amount that reflected the average increase in the prices of the goods and services used to provide hospital inpatient care. This approach linked the increase in the cost limits to the efficient utilization of resources.

Since the inception of the IPPS, the projected change in the hospital market basket has been the integral component of the update factor by which the prospective payment rates are updated every year. An explanation of the hospital market basket used to develop the prospective payment rates was published in the **Federal Register** on September 1, 1983 (48 FR 39764). We also refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45207) in which we discussed the most recent previous rebasing of the hospital input price index.

The hospital market basket is a fixed-weight, Laspeyres-type price index. A Laspeyres-type price index measures the change in price, over time, of the same mix of goods and services purchased in the base period. Any changes in the quantity or mix of goods and services (that is, intensity) purchased over time relative to the base period are not measured.

The index itself is constructed in three steps. First, a base period is selected (in this proposed rule, we propose to use 2023 as the base period) and total base period costs are estimated for a set of mutually exclusive and exhaustive spending categories, with the proportion of total costs that each category represents being calculated. These proportions are called cost weights. Second, each cost category is matched to an appropriate price or wage variable, referred to as a ''price proxy.'' In almost every instance, these price proxies are derived from publicly available statistical series that are published on a consistent schedule (preferably at least on a quarterly basis). Finally, the cost weight for each cost category is multiplied by the level of its respective price proxy. The sum of these products (that is, the cost weights multiplied by their price index levels) for all cost categories yields the composite index level of the market basket in a given period. Repeating this step for other periods produces a series of market basket levels over time. Dividing an index level for a given period by an index level for an earlier period produces a rate of growth in the input price index over that timeframe.

As previously noted, the market basket is described as a fixed-weight index because it represents the change in price over time of a constant mix (quantity and intensity) of goods and services needed to provide hospital services. The effects on total costs resulting from changes in the mix of goods and services purchased subsequent to the base period are not measured. For example, a hospital hiring more nurses to accommodate the needs of patients would increase the volume of goods and services purchased by the hospital but would not be factored into the price change measured by a fixed-weight hospital market basket. Only when the index is rebased would changes in the quantity and intensity be captured, with those changes being reflected in the cost weights. Therefore, we rebase the market basket periodically so that the cost weights reflect recent changes in the mix of goods and services that hospitals purchase (hospital inputs) to furnish inpatient care between base periods.

We last rebased the hospital market basket cost weights effective for FY 2022 (86 FR 45194 through 45207), with 2018 data used as the base period for the construction of the market basket cost weights. For this FY 2026 IPPS/LTCH PPS proposed rule, we propose to rebase the IPPS operating market basket to reflect the 2023 cost structure for IPPS hospitals and to revise applicable cost categories and price proxies used to determine the IPPS market basket, as discussed in this proposed rule. We also propose to rebase and revise the Capital Input Price Index (CIPI) as described in section IV.D. of the preamble of this proposed rule.

In the following section, we provide an overview of the proposed IPPS market basket, describe the proposed methodologies for developing the cost weights, and provide information on the proposed price proxies. Then, we present the proposed FY 2026 market basket update and labor-related share based on the proposed 2023-based IPPS market basket.

B. Rebasing and Revising the IPPS Market Basket

The terms ''rebasing'' and ''revising,'' while often used interchangeably, actually denote different activities. ''Rebasing'' means moving the base year for the structure of costs of an input price index (for example, in this proposed rule, we propose to shift the base year cost structure for the IPPS hospital index from 2018 to 2023). ''Revising'' means changing data sources or price proxies used in the input price index. As published in the FY 2006 IPPS final rule (70 FR 47403), in accordance with section 404 of Public Law 108–173, CMS determined a new frequency for rebasing the hospital market basket. We established a rebasing frequency of every 4 years and, therefore, we propose to rebase and revise the IPPS market basket effective for the FY 2026 IPPS update since it was last rebased effective for the FY 2022 IPPS update (the base year for the cost weights is being updated from 2018 to 2023). We invite public comments on our proposed methodology discussed in this section of this proposed rule, for deriving the proposed 2023-based IPPS market basket.

1. Development of Cost Categories and Weights

a. Use of Medicare Cost Report Data

The major source of expenditure data for developing the proposed rebased and revised hospital market basket cost weights is the 2023 Medicare cost reports. These 2023 Medicare cost reports are for cost reporting periods beginning on and after October 1, 2022, and before October 1, 2023. We propose to use 2023 as the base year because we believe that the 2023 Medicare cost reports represent the most recent, complete set of Medicare cost report data available to develop cost weights for IPPS hospitals at the time of rulemaking. As was done in previous rebasings, these cost reports are from IPPS hospitals only (hospitals excluded from the IPPS (including CAHs and rural emergency hospitals) are not included) and are based on IPPS Medicare-allowable operating costs. IPPS Medicare-allowable operating costs are costs that are eligible to be paid under the IPPS. For example, the IPPS market basket excludes home health agency (HHA) costs as these costs would

be paid under the HHA PPS and, therefore, these costs are not IPPS Medicare-allowable costs.

The current set of instructions for the Medicare cost reports for hospitals (Form 2552–10, OMB Control Number 0938–0050) can be found in Chapter 40 at the following website (*https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Paper-Based-Manuals-Items/CMS021935*).

The major types of costs underlying the proposed 2023-based IPPS market basket are derived from the Medicare cost reports (Form 2552–10, OMB Control Number 0938–0050). Specifically, we propose to use the Medicare cost reports for seven specific types of costs: Wages and Salaries, Employee Benefits, Contract Labor, Pharmaceuticals, Professional Liability Insurance (Malpractice), Blood and Blood Products, and Home Office/Related Organization Contract Labor. A residual category is then estimated and reflects all remaining costs not captured in the seven types of costs identified previously. The 2018-based IPPS market basket similarly used the Medicare cost reports.

In order to create a market basket that is representative of IPPS hospitals serving Medicare patients and to help ensure the major cost weights accurately reflect the percent of total Medicare-allowable operating costs, as defined in this proposed rule, we propose to apply edits to remove reporting errors and outliers. Specifically, the IPPS Medicare cost reports used to calculate the market basket cost weights exclude any providers that reported costs less than or equal to zero for the following categories: total Medicare inpatient costs (Worksheet D–1, Part II, column 1, line 49); Medicare PPS payments (Worksheet E, Part A, column 1, line 59); Total salary costs (Worksheet S–3, Part II, column 2, line 1). We also limited our sample to providers that had a Medicare cost reporting period that was between 10 and 14 months. The final sample used includes roughly 2,900 Medicare cost reports (about 93 percent of the universe of IPPS Medicare cost reports for 2023). The sample of providers is representative of the national universe of providers by ownership-type (proprietary, nonprofit, and government) and by urban/rural status.

In this proposed rule, we calculate total Medicare-allowable operating costs for each hospital to be equal to noncapital costs (Worksheet B, Part I, column 26 less Worksheet B, Part II, column 26) that are attributable to the Medicare-allowable cost centers of the hospital. We propose that Medicare-allowable cost centers are lines 30 through 35, 50 through 60, 62 through 76, 90, 91, 92.01, 93, 96 and 97. This is the same methodology that was used for the 2018-based IPPS market basket.

(1) Wages and Salaries Costs

To derive wages and salaries costs for the Medicare-allowable cost centers, we propose to first calculate total unadjusted wages and salaries costs as reported on Worksheet S–3, Part II, column 4, line 1. We then propose to remove the wages and salaries attributable to non-Medicare-allowable cost centers (that is, excluded areas) as well as a portion of overhead wages and salaries attributable to these excluded areas. This is the same methodology that was used to derive wages and salaries costs for the 2018-based IPPS market basket.

Specifically, we propose to calculate excluded area wages and salaries as equal to the sum of Worksheet S–3, Part II, column 4, lines 3, 4.01, 5, 6, 7, 7.01, 8, 9, and 10 less Worksheet A, column 1, lines 20 and 23. Overhead wages and salaries are attributable to the entire IPPS facility. Therefore, we propose to only include the proportion attributable to the Medicare-allowable cost centers. Specifically, we propose to estimate the proportion of overhead wages and salaries that are not attributable to Medicare-allowable cost centers (that is, excluded areas) by first calculating the ratio of total Medicare-allowable operating costs (as previously defined) to total facility operating costs (Worksheet B, Part I, column 26, line 202 less Worksheet B, Part I, column 0, lines 1 and 2). We then propose to multiply this ratio by total overhead wages and salaries (Worksheet S–3, Part II, column 4, lines 26, 27, 29 through 32, 34, and 36 through 43) to estimate Medicare allowable overhead wages and salaries. The difference between total overhead wages and salaries and Medicare allowable overhead wages and salaries is equal to the overhead wages and salaries attributable to the excluded areas.

Therefore, we propose wages and salaries costs used for the 2023-based IPPS market basket are equal to total wages and salaries costs less: (a) excluded area wages and salaries costs; and (b) overhead wages and salaries costs attributable to the excluded areas.

(2) Employee Benefits Costs

We propose to derive employee benefits costs using a similar methodology as the wages and salaries costs; that is, reflecting employee benefits costs attributable to the Medicare-allowable cost centers. First, we calculate total unadjusted employee benefits costs as the sum of Worksheet S–3, Part II, column 4, lines 17, 18, 20, 22, and 25.52.

We then exclude those employee benefits attributable to the overhead wages and salaries for the non-Medicare-allowable cost centers (that is, excluded areas). Employee benefits attributable to the non-Medicare-allowable cost centers are derived by multiplying the ratio of total employee benefits (equal to the sum of Worksheet S–3, Part II, column 4, lines 17, 18, 19, 20, 21, 22, 22.01, 23, 24, 25, 25.50, 25.51, 25.52, and 25.53) to total wages and salaries (Worksheet S–3, Part II, column 4, line 1) (which we hereafter refer to as the ''IPPS benefits ratio'') by excluded overhead wages and salaries (as previously described in section IV.B.1.a.(1) of the preamble of this proposed rule for wages and salaries costs). The same methodology was used in the 2018-based IPPS market basket.

Therefore, we propose employee benefit costs used for the 2023-based IPPS market basket are equal to total employee benefit costs less: (a) excluded area benefit costs; and (b) overhead benefit costs attributable to the excluded areas.

(3) Contract Labor Costs

Contract labor costs are primarily associated with direct patient care services. Contract labor costs for services such as accounting, billing, and legal are estimated using other government data sources as described in this proposed rule. We propose to derive contract labor costs for the 2023-based IPPS market basket as the sum of Worksheet S–3, Part II, column 4, lines 11, 13, and 15. The same methodology was used in the 2018-based IPPS market basket.

(4) Professional Liability Insurance Costs

We propose that professional liability insurance (PLI) costs (often referred to as malpractice costs) be equal to premiums, paid losses, and self-insurance costs reported on Worksheet S–2, Part I, columns 1 through 3, line 118.01. The same methodology was used for the 2018-based IPPS market basket.

(5) Pharmaceuticals Costs

We propose to calculate pharmaceuticals costs as total costs reported for the Pharmacy cost center (Worksheet B, Part I, column 0, line 15) and Drugs Charged to Patients cost center (Worksheet B, Part I, column 0, line 73) less wages and salaries attributable to these two cost centers

(Worksheet S–3, Part II, column 4, line 40 and Worksheet A, column 1, line 73) less estimated employee benefits attributable to these two cost centers. We propose to estimate the employee benefits costs by multiplying the IPPS benefits ratio as described in section IV.B.1.a.(2) of the preamble of this proposed rule by total wages and salaries costs for the Pharmacy and Drugs Charged to Patients cost centers (equal to the sum of Worksheet S–3, Part II, column 4, line 40 and Worksheet A, column 1, line 73). The same methodology was used for the 2018-based IPPS market basket.

(6) Blood and Blood Products Costs

We propose to calculate blood and blood products costs as total costs reported for the Whole Blood & Packed Red Blood Cells cost center (Worksheet B, Part I, column 0, line 62) and the Blood Storing, Processing, & Transfusing cost center (Worksheet B, Part I, column 0, line 63) less wages and salaries attributable to these two cost centers (Worksheet A, column 1, lines 62 and 63) less estimated employee benefits attributable to these two cost centers. We estimate these employee benefits costs by multiplying the IPPS benefits ratio as described in section IV.B.1.a.(2) of the preamble of this proposed rule by total wages and salaries for the Whole Blood & Packed Red Blood Cells and Blood Storing, Processing, & Transfusing cost centers (equal to the sum of Worksheet A, column 1, lines 62 and 63). The same methodology was used for the 2018-based IPPS market basket.

(7) Home Office/Related Organization Contract Labor Costs

We propose to determine home office/related organization contract labor costs using data reported on Worksheet S–3, Part II, column 4, lines 14.01, 14.02, 25.50, and 25.51. The same methodology was used for the 2018-based IPPS market basket.

b. Final Major Cost Category Computation

After we derived costs for the major cost categories for each provider using the Medicare cost report data as previously described, we propose to address data outliers using the following steps.

First, for each of the major cost weights except the Home Office/Related Organization Contract Labor cost weight, we propose to trim the data to remove outliers (a standard statistical process) by: (step 1) requiring that major expenses (such as Wages and Salaries costs) and total Medicare-allowable operating costs be greater than zero; (step 2) dividing the costs for each of the six categories (calculated as previously described in this section) by total Medicare-allowable operating costs to obtain cost weights for each PPS hospital; and (step 3) excluding the top and bottom five percent of the major cost weight (for example, Wages and Salaries costs as a percent of total Medicare-allowable operating costs). We note that missing values are assumed to be zero consistent with the methodology for how missing values were treated in the 2018-based IPPS market basket.

For the Home Office/Related Organization Contract Labor cost weight, we propose to exclude outliers using a slightly different method by (step 1) requiring that total Medicare-allowable operating costs are greater than zero; (step 2) dividing the home office/related organization contract labor costs (calculated as previously described in this section) by total Medicare-allowable operating costs to obtain a cost weight for each PPS hospital; and (step 3) applying a trim that excludes those reporters with a Home Office/Related Organization Contract Labor cost weight above the 99th percentile. This allows all providers' Medicare-allowable costs to be included, even if their home office/related organization contract labor costs were reported to be zero. The Medicare cost report data (Worksheet S–2, Part I, line 140) indicate that not all hospitals have a home office. IPPS hospitals without a home office would report administrative costs that might typically be associated with a home office in the Wages and Salaries and Employee Benefits cost weights, or these costs would be reflected in the residual cost weight if they purchased these types of services from external contractors. We believe the trimming methodology that excludes those who report a Home Office/Related Organization Contract Labor cost weight above the 99th percentile is appropriate as it removes extreme outliers while also allowing providers with zero home office/related organization contract labor costs to be included in the Home Office/Related Organization Contract Labor cost weight calculation.

After the outliers have been removed, we sum the costs for each category across all remaining providers. We then divide this by the sum of total Medicare-allowable operating costs across all remaining providers to obtain a cost weight for the proposed 2023-based IPPS market basket for the given category. This is the same methodology used for the 2018-based IPPS market basket.

The trimming process is done individually for each cost category so that providers excluded from one cost weight calculation are not automatically excluded from another cost weight calculation. We note that these proposed trimming methods are the same types of edits performed for the 2018-based IPPS market basket, as well as other PPS market baskets (including but not limited to SNF market basket and home health market basket). We note that for each of the cost weights we evaluated the distribution of providers and costs by ownership-type, and by urban/rural status. For all of the cost weights, the trimmed sample was nationally representative.

Finally, we calculate the residual ''All Other'' cost weight that reflects all remaining costs that are not captured in the seven cost categories listed. Table IV–01 shows the major cost categories and their respective cost weights as derived from the Medicare cost reports.

TABLE IV–01—MAJOR COST CATEGORIES AS DERIVED FROM THE MEDICARE COST REPORTS

Major cost categories	2018-based IPPS market basket	Proposed 2023-based IPPS market basket
Wages and Salaries	39.7	37.8
Employee Benefits	11.3	9.8
Contract Labor	2.0	3.6
Professional Liability Insurance (Malpractice)	1.0	1.0
Pharmaceuticals	7.1	7.4
Blood and Blood Products	0.6	0.5
Home Office/Related Organization Contract Labor	5.9	6.7

TABLE IV–01—MAJOR COST CATEGORIES AS DERIVED FROM THE MEDICARE COST REPORTS—Continued

Major cost categories	2018-based IPPS market basket	Proposed 2023-based IPPS market basket
All Other	32.4	33.2

From 2018 to 2023, the Wages and Salaries and Employee Benefits cost weights as calculated directly from the Medicare cost reports decreased by 1.9 percentage points and 1.5 percentage points, respectively, while the Contract Labor cost weight increased by 1.6 percentage points.

As we did for the 2018-based IPPS market basket (86 FR 45198), we propose to allocate contract labor costs to the Wages and Salaries and Employee Benefits cost weights based on their relative proportions for employed labor under the assumption that contract labor costs are comprised of both wages and salaries and employee benefits. The contract labor allocation proportion for wages and salaries is equal to the Wages and Salaries cost weight as a percent of the sum of the Wages and Salaries cost weight and the Employee Benefits cost weight. Using the 2023 Medicare cost report data, this percentage is 79 percent. Therefore, we propose to allocate approximately 79 percent of the Contract Labor cost weight to the Wages and Salaries cost weight and 21 percent to the Employee Benefits cost weight. The 2018-based IPPS market basket allocated 78 percent of the Contract Labor cost weight to the Wages and Salaries cost weight.

Table IV–02 shows the Wages and Salaries and Employee Benefits cost weights after contract labor allocation for the 2018-based IPPS market basket and the proposed 2023-based IPPS market basket. In aggregate, the Compensation cost weight (calculated using more detailed decimal places) decreased from 53.0 percent to 51.1 percent, or 1.9 percentage points.

TABLE IV–02—WAGES AND SALARIES AND EMPLOYEE BENEFITS COST WEIGHTS AFTER CONTRACT LABOR ALLOCATION

Major cost categories	2018-based IPPS market basket	Proposed 2023-based IPPS market basket
Total Compensation	53.0	51.1
Wages and Salaries	41.2	40.6
Employee Benefits	11.7	10.5

Note: Detail may not add to total due to rounding.

c. Derivation of the Detailed Cost Weights

To further divide the ''All Other'' residual cost weight estimated from the 2023 Medicare cost report data into more detailed cost categories, we propose to use the 2017 Benchmark I–O, ''The Use Table (Supply-Use Framework),'' for NAICS 622000, Hospitals, published by the Bureau of Economic Analysis (BEA). These data are publicly available at the following website: *https://www.bea.gov/industry/input-output-accounts-data*. The BEA Benchmark I–O data are generally scheduled for publication every 5 years on a lagged basis, with the most recent data available for 2017. The 2017 Benchmark I–O data are derived from the 2017 Economic Census and are the building blocks for BEA's economic accounts. Therefore, they represent the most comprehensive and complete set of data on the economic processes or mechanisms by which output is produced and distributed.[209] BEA also produces Annual I–O estimates. However, while based on a similar methodology, these estimates reflect less comprehensive and less detailed data sources and are subject to revision when benchmark data become available. Instead of using the less detailed Annual I–O data, we propose to inflate the detailed 2017 Benchmark I–O data forward to 2023 by applying the annual price changes from the respective price proxies to the appropriate market basket cost categories that are obtained from the 2017 Benchmark I–O data and calculated the cost shares that each cost category represents using the inflated data. These resulting 2023 cost shares were applied to the residual ''All Other'' cost weight to obtain the detailed cost weights for the proposed 2023-based IPPS market basket. For example, the cost for Food: Direct Purchases represents 4.0 percent of the sum of the residual ''All Other'' 2017 Benchmark I–O Hospital Expenditures inflated to 2023. Therefore, the Food: Direct Purchases cost weight represents 4.0 percent of the proposed 2023-based IPPS market basket's ''All Other'' cost category (33.2 percent), yielding a Food: Direct Purchases proposed cost weight of 1.3 percent in the proposed 2023-based IPPS market basket (0.040×33.2 percent = 1.3 percent). For the 2018-based IPPS market basket (86 FR 45198), we used the same methodology utilizing the 2012 Benchmark I–O data (aged to 2018).

Using this methodology, we propose to derive 17 detailed cost categories from the proposed 2023-based IPPS market basket residual cost weight (33.2 percent). These categories are: (1) Fuel: Oil and Gas; (2) Electricity and Other Non-Fuel Utilities; (3) Food: Direct Purchases; (4) Food: Contract Services; (5) Chemicals; (6) Medical Instruments; (7) Rubber and Plastics; (8) Paper and Printing Products; (9) Miscellaneous Products; (10) Professional Fees: Labor-Related; (11) Administrative and Facilities Support Services; (12) Installation, Maintenance, and Repair Services; (13) All Other: Labor-Related Services; (14) Professional Fees: Nonlabor-Related; (15) Financial Services; (16) Telephone Services; and (17) All Other: Nonlabor-Related Services. We note that these are the same categories that were used in the 2018-based IPPS market basket.

2. Selection of Proposed Price Proxies

After computing the proposed 2023 cost weights for the IPPS market basket, it was necessary to select appropriate wage and price proxies to reflect the rate of price change for each expenditure category. With the exception of the

[209] *https://www.bea.gov/papers/pdf/IOmanual_092906.pdf.*

proxy for professional liability insurance (PLI), all the proxies we are proposing are based on Bureau of Labor Statistics (BLS) data and are grouped into one of the following BLS categories:

- Producer Price Indexes—Producer Price Indexes (PPIs) measure the average change over time in the selling prices received by domestic producers for their output. The prices included in the PPI are from the first commercial transaction for many products and some services (*https://www.bls.gov/ppi/*).
- Consumer Price Indexes—Consumer Price Indexes (CPIs) measure the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services (*https://www.bls.gov/cpi/*). CPIs are only used when the purchases are similar to those of retail consumers rather than purchases at the producer level, or if no appropriate PPIs are available.
- Employment Cost Indexes—Employment Cost Indexes (ECIs) measure the rate of change in employee wage rates and employer costs for employee benefits per hour worked. These indexes are fixed-weight indexes and strictly measure the change in wage rates and employee benefits per hour. ECIs are superior to Average Hourly Earnings (AHE) as price proxies for input price indexes because they are not affected by shifts in occupation or industry mix, and because they measure pure price change and are available by both occupational group and by industry. The industry ECIs are based on the NAICS and the occupational ECIs are based on the Standard Occupational Classification System (SOC).

We evaluated the price proxies using the criteria of reliability, timeliness, availability, and relevance:

- Reliability. Reliability indicates that the index is based on valid statistical methods and has low sampling variability. Widely accepted statistical methods ensure that the data were collected and aggregated in a way that can be replicated. Low sampling variability is desirable because it indicates that the sample reflects the typical members of the population. (Sampling variability is variation that occurs by chance because only a sample was surveyed rather than the entire population.)
- Timeliness. Timeliness implies that the proxy is published regularly, preferably at least once a quarter. The market basket levels are updated quarterly, and therefore, it is important for the underlying price proxies to be up-to-date, reflecting the most recent data available. We believe that using proxies that are published regularly (at least quarterly, whenever possible) helps to ensure that we are using the most recent data available to update the market basket. We strive to use publications that are disseminated frequently, because we believe that this is an optimal way to stay abreast of the most current data available.
- Availability. Availability means that the proxy is publicly available. We prefer that our proxies are publicly available because this will help ensure that our market basket updates are as transparent to the public as possible. In addition, this enables the public to be able to obtain the price proxy data on a regular basis.
- Relevance. Relevance means that the proxy is applicable and representative of the cost category weight to which it is applied.

We believe the proposed PPIs, CPIs, and ECIs selected meet these criteria. Therefore, we believe that they continue to be the best proxy of price changes for the cost categories to which they would be applied.

In this proposed rule, we present a detailed explanation of the price proxies that we propose for each cost category weight.

a. Wages and Salaries

We propose to use the ECI for Wages and Salaries for All Civilian Workers in Hospitals (BLS series code CIU1026220000000I) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

b. Employee Benefits

We propose to use the ECI for Total Benefits for All Civilian Workers in Hospitals to proxy the price growth of this cost category. This ECI is calculated using the ECI for Total Compensation for All Civilian Workers in Hospitals (BLS series code CIU1016220000000I) and the relative importance of wages and salaries within total compensation. This is the same price proxy used in the 2018-based IPPS market basket.

c. Fuel: Oil and Gas

For the proposed 2023-based IPPS market basket, we propose to use a blend of the PPI Industry for Petroleum Refineries (NAICS 3241), PPI for Other Petroleum and Coal Products (NAICS 32419) and the PPI Commodity for Natural Gas. Our analysis of the Bureau of Economic Analysis' 2017 Benchmark I–O data for NAICS 622000 Hospitals shows that Petroleum Refineries expenses account for approximately 86 percent, Other Petroleum and Coal Products expenses account for about 7 percent and Natural Gas expenses account for approximately 7 percent of Hospitals' (NAICS 622000) total Fuel: Oil and Gas expenses. Therefore, we propose to use a blend of 86 percent of the PPI Industry for Petroleum Refineries (BLS series code PCU324110324110), 7 percent of the PPI for Other Petroleum and Coal Products (BLS series code PCU32419) and 7 percent of the PPI Commodity Index for Natural Gas (BLS series code WPU0531) as the price proxy for this cost category. The 2018-based IPPS market basket used a 90/10 blend of the PPI Industry for Petroleum Refineries and PPI Commodity for Natural Gas, reflecting the 2012 I–O data (86 FR 45199). We believe that the three proposed price proxies are the most technically appropriate indices available to proxy the price growth of the Fuel: Oil and Gas cost category in the proposed 2023-based IPPS market basket.

d. Electricity and Other Non-Fuel Utilities

We propose to use the PPI Commodity for Commercial Electric Power (BLS series code WPU0542) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

e. Professional Liability Insurance

We propose to proxy price changes in hospital professional liability insurance premiums (PLI) using percentage changes as estimated by the CMS Hospital Professional Liability Index. To generate these estimates, we collect commercial insurance medical liability premiums for a fixed level of coverage while holding nonprice factors constant (such as a change in the level of coverage). This is the same price proxy used in the 2018-based IPPS market basket.

f. Pharmaceuticals

We propose to use the PPI Commodity for Pharmaceuticals for Human Use, Prescription (BLS series code WPUSI07003) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

g. Food: Direct Purchases

We propose to use the PPI Commodity for Processed Foods and Feeds (BLS series code WPU02) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

h. Food: Contract Services

We propose to use the CPI for Food Away From Home (All Urban Consumers) (BLS series code

CUUR0000SEFV) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

i. Chemicals

Similar to the 2018-based IPPS market basket, we propose to use a four-part blended PPI as the proxy for the Chemicals cost category in the proposed 2023-based IPPS market basket. The proposed blend is composed of the PPI Industry for Industrial Gas Manufacturing, Primary Products (BLS series code PCU325120325120P), the PPI Industry for Other Basic Inorganic Chemical Manufacturing (BLS series code PCU32518–32518), the PPI Industry for Other Basic Organic Chemical Manufacturing (BLS series code PCU32519–32519), and the PPI Industry for Other Miscellaneous Chemical Product Manufacturing (BLS series code PCU325998325998). For the proposed 2023-based IPPS market basket, we propose to derive the weights for the PPIs using the 2017 Benchmark I–O data. The 2018-based IPPS market basket used the 2012 Benchmark I–O data to derive the weights for the four PPIs (86 FR 45200).

Table IV–03 shows the proposed weights for each of the four PPIs used to create the blended index compared to those used for the 2018-based IPPS market basket.

TABLE IV–03—BLENDED CHEMICAL PPI WEIGHTS

NAICS	Name	2018-based IPPS weights (%)	Proposed 2023-based IPPS weights (%)
325120	PPI Industry for Industrial Gas Manufacturing	19	26
325180	PPI Industry for Other Basic Inorganic Chemical Manufacturing	13	10
325190	PPI Industry for Other Basic Organic Chemical Manufacturing	60	49
325998	PPI Industry for Other Miscellaneous Chemical Product Manufacturing	8	15

j. Blood and Blood Products

We propose to use the PPI Industry for Blood and Organ Banks (BLS series code PCU621991621991) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

k. Medical Instruments

We propose to use a blended price proxy for the Medical Instruments category, as shown in Table IV–04. The 2017 Benchmark I–O data shows the majority of medical instruments and supply costs are for NAICS 339112—Surgical and medical instrument manufacturing costs (approximately 64 percent) and NAICS 339113—Surgical appliance and supplies manufacturing costs (approximately 36 percent). To proxy the price changes associated with NAICS 339112, we propose using the PPI Commodity for Surgical and medical instruments (BLS series code WPU1562). To proxy the price changes associated with NAICS 339113, we propose to use a 50/50 blend of the PPI Commodity for Medical and surgical appliances and supplies (BLS series code WPU1563) and the PPI Commodity for Miscellaneous products, Personal safety equipment and clothing (BLS series code WPU1571). We propose to include the latter price proxy as it would reflect personal protective equipment including but not limited to face shields and protective clothing. The 2017 Benchmark I–O data does not provide specific expenses for these products; however, we recognize that this category reflects costs faced by IPPS hospitals. These are the same price proxies used in the 2018-based IPPS market basket.

TABLE IV–04—BLENDED MEDICAL INSTRUMENTS PPI WEIGHTS

NAICS	Name	2018-based IPPS weights (%)	Proposed 2023-based IPPS weights (%)
339112	PPI Commodity for Surgical and medical instruments	56	64
339113	PPI—Commodity for Medical and surgical appliances and supplies	22	18
	PPI Commodity for Miscellaneous products, Personal safety equipment and clothing	22	18

l. Rubber and Plastics

We propose to use the PPI Commodity for Rubber and Plastic Products (BLS series code WPU07) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

m. Paper and Printing Products

We propose to use a 61/39 blend of the PPI Commodity for Publications Printed Matter and Printing Material (BLS Series Code WPU094) and the PPI Commodity for Converted Paper and Paperboard Products (BLS series code WPU0915) to proxy the price growth of this cost category. The 2017 Benchmark I–O data shows that 61 percent of paper and printing expenses are for Printing (NAICS 323110) and the remaining expenses are for Paper manufacturing (NAICS 322). The 2018-based IPPS market basket (86 FR 45201) used the PPI Commodity for Converted Paper and Paperboard Products (BLS series code WPU0915) as this comprised the majority of expenses as reported in the 2012 Benchmark I–O data.

n. Miscellaneous Products

We propose to use the PPI Commodity for Finished Goods Less Food and Energy (BLS series code WPUFD4131) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

o. Professional Fees: Labor-Related

We propose to use the ECI for Total Compensation for Private Industry Workers in Professional and Related (BLS series code CIU2010000120000I) to proxy the price growth of this category. It includes occupations such as legal, accounting, and engineering services. This is the same price proxy used in the 2018-based IPPS market basket.

p. Administrative and Facilities Support Services

We propose to use the ECI for Total Compensation for Private Industry Workers in Office and Administrative Support (BLS series code CIU2010000220000I) to proxy the price growth of this category. This is the same price proxy used in the 2018-based IPPS market basket.

q. Installation, Maintenance, and Repair Services

We propose to use the ECI for Total Compensation for All Civilian Workers in Installation, Maintenance, and Repair (BLS series code CIU1010000430000I) to proxy the price growth of this cost category. This is the same proxy used in the 2018-based IPPS market basket.

r. All Other: Labor-Related Services

We propose to use the ECI for Total Compensation for Private Industry Workers in Service Occupations (BLS series code CIU2010000300000I) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

s. Professional Fees: Nonlabor-Related

We propose to use the ECI for Total Compensation for Private Industry Workers in Professional and Related (BLS series code CIU2010000120000I) to proxy the price growth of this category. This is the same price proxy that we proposed to use for the Professional Fees: Labor-Related cost category and the same price proxy used in the 2018-based IPPS market basket.

t. Financial Services

We propose to use the ECI for Total Compensation for Private Industry Workers in Financial Activities (BLS series code CIU201520A000000I) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

u. Telephone Services

We propose to use the CPI for Telephone Services (BLS series code CUUR0000SEED) to proxy the price growth of this cost category. This is the same price proxy used in the 2018-based IPPS market basket.

v. All Other: Nonlabor-Related Services

We propose to use the CPI for All Items Less Food and Energy (BLS series code CUUR0000SA0L1E) to proxy the price growth of this cost category. We believe that using the CPI for All Items Less Food and Energy avoids double counting of changes in food and energy prices as they are already captured elsewhere in the market basket. This is the same price proxy used in the 2018-based IPPS market basket.

Table IV–05 sets forth the proposed 2023-based IPPS market basket, including the cost categories and their respective weights and price proxies. For comparison purposes, the corresponding 2018-based IPPS market basket cost weights also are listed.

TABLE IV–05—2023-BASED IPPS MARKET BASKET COST CATEGORIES, COST WEIGHTS, AND PRICE PROXIES COMPARED TO 2018-BASED IPPS MARKET BASKET COST WEIGHTS

Cost categories	2018-based IPPS market basket cost weights	Proposed 2023-based IPPS market basket cost weights	Proposed 2023-based IPPS market basket price proxies
1. Compensation	53.0	51.1	
A. Wages and Salaries [1]	41.2	40.6	ECI for Wages and Salaries for All Civilian Workers in Hospitals.
B. Employee Benefits [1]	11.7	10.5	ECI for Total Benefits for All Civilian Workers in Hospitals.
2. Utilities	2.3	1.8	
A. Electricity and Other Non-Fuel Utilities	1.5	1.5	PPI Commodity for Commercial Electric Power.
B. Fuel: Oil and Gas	0.8	0.4	Blend of PPIs.
3. Professional Liability Insurance	1.0	1.0	CMS Hospital Professional Liability Insurance Premium Index.
4. All Other	43.8	46.0	
A. All Other Products	18.4	20.5	
(1.) Pharmaceuticals	7.1	7.4	PPI Commodity for Pharmaceuticals for Human Use, Prescription.
(2.) Food: Direct Purchases	1.6	1.3	PPI Commodity for Processed Foods and Feeds.
(3.) Food: Contract Services	1.8	2.2	CPI for Food Away From Home.
(4.) Chemicals	0.6	0.6	Blend of PPIs.
(5.) Blood and Blood Products	0.6	0.5	PPI Industry for Blood and Organ Banks.
(6.) Medical Instruments	4.1	5.3	Blend of PPIs.
(7.) Rubber and Plastics	0.6	0.7	PPI Commodity for Rubber and Plastic Products.
(8.) Paper and Printing Products	0.9	0.9	Blend of PPIs.
(9.) Miscellaneous Products	1.2	1.5	PPI Commodity for Finished Goods less Food and Energy.
B. Labor-Related Services	14.7	14.8	
(1.) Professional Fees: Labor-Related	8.6	10.0	ECI for Total Compensation for Private Industry Workers in Professional and Related.
(2.) Administrative and Facilities Support Services.	1.1	0.8	ECI for Total Compensation for Private Industry Workers in Office and Administrative Support.
(3.) Installation, Maintenance and Repair Services.	2.4	1.5	ECI for Total Compensation for Civilian Workers in Installation, Maintenance, and Repair.
(4.) All Other: Labor-Related Services	2.6	2.6	ECI for Total Compensation for Private Industry Workers in Service Occupations.
C. Nonlabor-Related Services	10.7	10.7	
(1.) Professional Fees: Nonlabor-Related	7.0	7.0	ECI for Total Compensation for Private Industry Workers in Professional and Related.

TABLE IV–05—2023-BASED IPPS MARKET BASKET COST CATEGORIES, COST WEIGHTS, AND PRICE PROXIES COMPARED TO 2018-BASED IPPS MARKET BASKET COST WEIGHTS—Continued

Cost categories	2018-based IPPS market basket cost weights	Proposed 2023-based IPPS market basket cost weights	Proposed 2023-based IPPS market basket price proxies
(2.) Financial Services	1.4	1.8	ECI for Total Compensation for Private Industry Workers in Financial Activities.
(3.) Telephone Services	0.4	0.3	CPI for Telephone Services.
(4.) All Other: Nonlabor-Related Services	1.8	1.5	CPI for All Items less Food and Energy.
Total	100.0	100.0	

Note: The cost weights are calculated using three decimal places. For presentational purposes, we are displaying one decimal and, therefore, the detail may not add to the total due to rounding.

[1] Contract labor is distributed to wages and salaries and employee benefits based on the share of total compensation that each category represents.

Table IV–06 compares both the historical and forecasted percent changes in the 2018-based IPPS market basket and the proposed 2023-based IPPS market basket. The forecasted growth rates in Table IV–06 are based on IHS Global Inc.'s (IGI's) fourth quarter 2024 forecast with historical data through third quarter 2024.

TABLE IV–06—2018-BASED AND PROPOSED 2023-BASED IPPS HOSPITAL MARKET BASKET PERCENT CHANGE, FY 2021 THROUGH FY 2028

Fiscal year (FY)	2018-based IPPS market basket percent change	Proposed 2023-based IPPS market basket percent change
Historical data:		
FY 2021	3.0	2.8
FY 2022	5.7	5.3
FY 2023	4.8	4.9
FY 2024	3.6	3.7
Average FYs 2021–2024	4.3	4.2
Forecast:		
FY 2025	3.4	3.5
FY 2026	3.3	3.2
FY 2027	3.1	3.0
FY 2028	2.9	2.9
Average FYs 2025–2028	3.2	3.2

Source: IHS Global, Inc., 4th Quarter 2024 forecast.

The average percent change of the proposed 2023-based IPPS market basket is 0.1 percentage point lower than the average percent change of the 2018-based IPPS market basket over the FY 2021 through FY 2024 time period. For FY 2026, the proposed 2023-based IPPS market basket is projected to increase 3.2 percent, which is 0.1 percentage point lower than the FY 2026 projected increase of the 2018-based IPPS market basket. The lower projected increase of the proposed 2023-based IPPS market basket compared to the 2018-based IPPS market basket is primarily a result of the lower compensation cost weight in the proposed 2023-based IPPS market basket. The compensation cost weights in the proposed 2023-based and 2018-based IPPS market basket were calculated from the hospital Medicare cost reports using the same methodology.

3. Labor-Related Share

Under section 1886(d)(3)(E) of the Act, the Secretary estimates from time to time the proportion of payments that are labor-related. Section 1886(d)(3)(E) of the Act states that the Secretary shall adjust the proportion, (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs, of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the ''labor-related share.''

The labor-related share is used to determine the proportion of the national PPS base payment rate to which the area wage index is applied. We include a cost category in the labor-related share if the costs are *labor intensive* and *vary with the local labor market.* For this proposed rule, we propose to include in the labor-related share the national average proportion of operating costs that are attributable to the following cost categories in the proposed 2023-based IPPS market basket: Wages and Salaries, Employee Benefits, Professional Fees: Labor-Related, Administrative and Facilities Support Services, Installation, Maintenance, and Repair Services, and All Other: Labor-Related Services, as we did in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45204).

Similar to the 2018-based IPPS market basket, for the proposed 2023-based IPPS market basket we propose to classify expenses into the Professional Fees: Labor-Related cost category using the Benchmark I–O data, and then for this rebasing supplement these estimates with data obtained from the Medicare hospital cost report regarding the proportion of expenses classified as professional fees (for example, advertising, legal services, accounting and auditing, engineering, and

management consulting) that are purchased within the local area labor market. The 2018-based IPPS market basket (86 FR 45204 through 45205) used a survey of hospitals conducted by CMS in 2008 (OMB Control Number 0938–1036) to supplement the Benchmark I–O data and determine this proportion. Effective for transmittal 18 (*https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r18p240i*), the hospital Medicare cost report (CMS Form 2552–10, OMB No. 0938–0050) Worksheet S–2, Part I collects information on whether a hospital purchased professional services (for example, legal, accounting, tax preparation, bookkeeping, payroll, advertising, and management/consulting services or both) from an unrelated organization and if the majority of these expenses were purchased from unrelated organizations located outside of the main hospital's local area labor market.

For the proposed 2023-based IPPS market basket, we propose to determine the proportion of expenses classified as professional fees that meet our definition of labor-related services based on the Medicare cost report data. Based on these data, approximately 73 percent of IPPS hospitals (approximately 2,100) purchased professional services from an unrelated organization in 2023 as reported on Worksheet S–2, Part I, column 1, line 123 (that is, answered Yes) and also indicated whether the majority of these expenses are purchased outside their local labor market (reported Yes or No on Worksheet S–2, Part I, column 2, line 123). Of those hospitals, 37 percent of them purchased the majority of these expenses from unrelated organizations located in a CBSA outside of the main hospital CBSA as reported on Worksheet S–2, Part I, column 2, line 123. For these reporters (which accounted for 32 percent of total Medicare allowable operating costs) that indicated they purchased the majority of these services outside of the local labor market, we need to estimate a specific proportion of these services that are purchased inside the local labor market. For these reporters, we use 25 percent (the median of 1 percent to 49 percent range) to estimate of the proportion of these services that are purchased inside of the local labor market. For the remaining reporters (which accounted for 68 percent of total Medicare allowable operating costs) that indicated they purchased the majority of these services inside the local labor market we use 75 percent (the median of 51 percent to 100 percent). To estimate the overall proportion of expenses classified as professional fees that meet our definition of labor-related services (that is, reflects services purchased inside of the local labor market), for the first group of reporters we multiply 32 percent times 25 percent, which yields an estimate of 8 percent, and for the second group of reporters multiply 68 percent times 75 percent, which yields an estimated proportion of 51 percent. Combining these two measures yields 59 percent (8 percent plus 51 percent), which reflects the overall proportion of total Medicare allowable operating expenses that are purchased inside the local labor market and would be reflected in our labor-related measure. Therefore, we propose to allocate 59 percent of the Benchmark I–O expenses classified as professional fees to estimate Professional Fees: Labor-Related cost weight, and 41 percent of the Benchmark I–O expenses classified as professional fees to estimate Professional Fees: Nonlabor-Related cost weight.

In the proposed 2023-based IPPS market basket, expenses classified as professional fees that are subject to allocation represent approximately 9.8 percent of total operating costs. Based on the Medicare cost report results, we propose to apportion 5.8 percentage points of the 9.8 percentage point figure into the Professional Fees: Labor-Related cost category (59 percent of 9.8 percent) and designate the remaining approximately 4.0 percentage points into the Professional Fees: Nonlabor-Related cost category (41 percent of 9.8 percent). We note that in the 2018-based IPPS market basket given the data available from the 2008 survey, we classified some expenses from the 2012 Benchmark I–O data as Professional Fees: Labor-Related, some expenses as Professional Fees: Nonlabor-Related, and some expenses as professional fees subject to allocation based on the survey. We then applied the 2008 survey results to the following specific categories of expenses: Legal services, Accounting, tax preparation, bookkeeping, and payroll services, Architectural, engineering and related services, and Management consulting services. However, for the 2023-based IPPS market basket, we are proposing to revise the methodology to now use the data as reported on the Medicare cost reports (Worksheet S–2, Part I) to allocate all of the expenses we propose to classify as professional fees costs from the 2017 Benchmark I–O data. The impact of this proposed change is an increase in the proposed 2023-based Professional Fees: Labor-Related cost weight of about one percentage point.

In addition to the professional services listed earlier, we also classify a proportion of the Home Office/Related Organization Contract Labor cost weight into the Professional Fees: Labor-Related cost category as was done in the previous rebasing. We believe that many of these costs are labor-intensive and vary with the local labor market. However, data indicate that not all IPPS hospitals with home offices have home offices located in their local labor market. Therefore, we propose to include in the labor-related share only a proportion of the Home Office/Related Organization Contract Labor cost weight based on the methodology described in this proposed rule.

For the proposed 2023-based IPPS market basket, based on Medicare cost report data, we found that approximately 71 percent of IPPS hospitals reported some type of home office information on their Medicare cost report for 2023 (for example, city, State, and zip code). Using the data reported on the Medicare cost report, we compared the location of the hospital with the location of the hospital's home office. We then determined the proportion of home office/related organization contract labor cost that should be allocated to the labor-related share based on the percent of the home office/related organization contract labor costs for those hospitals that had home offices located in their respective local labor markets—defined as being in the same MSA. We determined a hospital's and home office's MSAs using their zip code information from the Medicare cost report.

Based on these data, we determined the proportion of costs that should be allocated to the labor-related share based on the percent of hospital home office/related organization contract labor costs (equal to the sum of Worksheet S–3, Part II, column 4, lines 14.01, 14.02, 25.50, and 25.51). Using this methodology, we determined that 62 percent of hospitals' home office compensation costs were for home offices located in their respective local labor markets. Therefore, we propose to allocate 62 percent of Home Office/Related Organization Contract Labor cost weight to the labor-related share. The 2018-based IPPS market basket used a 60 percent proportion, which was based on the same methodology and the 2018 Medicare cost report data.

In the proposed 2023-based IPPS market basket, the Home Office/Related Organization Contract Labor cost weight that is subject to allocation based on the home office allocation methodology

represented 6.7 percent of total operating costs. Based on the results of the home office analysis, as previously discussed, we apportioned approximately 4.2 percentage points of the 6.7 percentage points figure into the Professional Fees: Labor-Related cost category and designated the remaining approximately 2.6 percentage points into the Professional Fees: Nonlabor-Related cost category.[210] In summary, based on the two previously mentioned allocations, we apportioned 10.0 percentage points (sum of the professional fees (5.8 percentage points) and Home Office/Related Organization Contract Labor cost weight (4.2 percentage points)) into the Professional Fees: Labor-Related cost category. Using these two methods, we then apportion 6.6 percentage points (sum of the professional fees (4.0 percentage points) and Home Office/Related Organization Contract Labor cost weight (2.6 percentage points)) to the Professional Fees: Nonlabor-related cost category to be included with other costs classified as Professional Fees: Nonlabor-Related (approximately 0.4 percentage point), resulting in a proposed Professional Fees: Nonlabor-related cost weight of 7.0 percent. The resulting proposed 2023-based Professional Fees: Labor-related cost weight is about 1.4 percentage points higher than the 2018-based Professional Fees: Labor-related cost weight.

Table IV–07 presents a comparison of the proposed 2023-based labor-related share and the 2018-based labor-related share. As discussed in section IV.B.1.b. of the preamble of this proposed rule, the Wages and Salaries and Employee Benefits cost weights reflect contract labor costs.

TABLE IV–07—COMPARISION OF THE 2018-BASED LABOR-RELATED SHARE AND THE PROPOSED 2023-BASED LABOR-RELATED SHARE

	2018-based IPPS market basket cost weights	Proposed 2023-based IPPS market basket cost weights
Wages and Salaries	41.2	40.6
Employee Benefits	11.7	10.5
Professional Fees: Labor-Related	8.6	10.0
Administrative and Facilities Support Services	1.1	0.8
Installation, Maintenance, and Repair Services	2.4	1.5
All Other: Labor-Related Services	2.6	2.6
Total Labor-Related Share	67.6	66.0

Note: Detail may not add to total due to rounding.

Using the cost category weights from the proposed 2023-based IPPS market basket, we calculated a labor-related share of 66.0 percent, 1.6 percentage points lower than the current labor-related share of 67.6 percent. This downward revision to the labor-related share is primarily the result of incorporating the more recent 2023 Medicare cost report data for Wages and Salaries, Employee Benefits, and Contract Labor costs. This is partially offset by an increase in the Professional Fees: Labor-Related cost weight.

Therefore, we propose to use a labor-related share of 66.0 percent for discharges occurring on or after October 1, 2025. We continue to believe, as we have stated in the past, that these operating cost categories are related to, influenced by, or vary with the local markets. Therefore, our definition of the labor-related share continues to be consistent with section 1886(d)(3) of the Act. We note that section 403 of Public Law 108–173 amended sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act to provide that the Secretary must employ 62 percent as the labor-related share unless 62 percent would result in lower payments to a hospital than would otherwise be made.

C. Market Basket for Certain Hospitals Presently Excluded From the IPPS

As explained in the FY 2006 IPPS final rule (70 FR 47396 through 47398), beginning with FY 2006, we have used the percentage increase in the IPPS operating market basket to update the target amounts for children's hospitals, the 11 cancer hospitals, and RNHCIs.

Consistent with the regulations at §§ 412.23(g) and 413.40(a)(2)(ii)(A) and (c)(3)(viii), we also have used the percentage increase in the IPPS operating market basket to update target amounts for short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. In the FY 2018 IPPS/LTCH PPS final rule, we rebased and revised the IPPS operating market basket to a 2014 base year, effective for FY 2018 and subsequent fiscal years (82 FR 38158 through 38175), and finalized the use of the percentage increase in the 2014-based IPPS operating market basket to update the target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2018 and subsequent fiscal years. Effective for the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45207), we rebased and revised the IPPS operating market basket to a 2018 base year. Therefore, we used the percentage increase in the 2018-based IPPS operating market basket to update the target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2022 and subsequent fiscal years.

As discussed in this section IV. of the preamble of this proposed rule, we propose to rebase and revise the IPPS operating market basket to a 2023 base year. We continue to believe that it is appropriate to use the increase in the IPPS operating market basket to update the target amounts for these excluded facilities, as discussed in prior rulemaking. Therefore, we propose to use the percentage increase in the proposed 2023-based IPPS operating market basket to update the target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern

[210] **Note:** The cost weights are calculated using three decimal places. For presentational purposes, we are displaying one decimal and therefore, the detail may not add to the total due to rounding.

Mariana Islands, and American Samoa for FY 2026 and subsequent fiscal years. Accordingly, for FY 2026, the rate-of increase percentage to be applied to the target amount for these hospitals would be the FY 2026 percentage increase in the proposed 2023-based IPPS operating market basket. Furthermore, we are proposing that if more recent data become available for the FY 2026 IPPS/LTCH PPS final rule, we would use such data, if appropriate, to calculate the IPPS operating market basket rate of increase for FY 2026.

D. Rebasing and Revising the Capital Input Price Index (CIPI)

The CIPI was originally described in the FY 1993 IPPS final rule (57 FR 40016). There have been subsequent discussions of the CIPI presented in the IPPS proposed and final rules. The FY 2022 IPPS/LTCH PPS final rule (86 FR 45208 through 45213) described the most recent rebasing and revising of the CIPI to a 2018 base year, which reflected the capital cost structure of IPPS hospitals available at that time.

Effective for FY 2026, we are proposing to rebase and revise the CIPI to a 2023 base year to reflect a more current structure of capital costs for IPPS hospitals. We invite public comments on our proposed methodology discussed in this section of this proposed rule, for deriving the proposed 2023-based CIPI. This proposed 2023-based CIPI was derived using data from the 2023 cost reports for IPPS hospitals, which includes providers whose cost reporting period began on or after October 1, 2022, and prior to September 30, 2023. We are also proposing to start with the same subset of Medicare cost reports from IPPS hospitals as previously described in section IV.B.1.a. of the preamble of this proposed rule. As with the 2018-based index, we are proposing to develop two sets of weights to derive the proposed 2023-based CIPI. The first set of weights identifies the proportion of hospital capital expenditures attributable to each expenditure category, while the second set of weights is a set of relative vintage weights for depreciation and interest. The set of vintage weights is used to identify the proportion of capital expenditures within a cost category that is attributable to each year over the useful life of the capital assets in that category. A more thorough discussion of vintage weights is provided later in this section.

Using 2023 Medicare cost reports (CMS Form 2552–10, OMB Control number 0938–0050), we are able to obtain capital costs for the following categories: Depreciation, Interest, Lease, and Other. Specifically, we are proposing to determine what proportion of total capital costs that each category represents using the data reported by IPPS hospitals on Worksheet A–7, Part III. We are proposing that Depreciation costs are equal to the sum of Worksheet A–7, Part III, column 9, lines 1 and 2. We are proposing that Interest costs are equal to the sum of Worksheet A–7, Part III, column 11, lines 1 and 2. We are proposing that Lease costs are equal to the sum of Worksheet A–7, Part III, column 10, lines 1 and 2. We are proposing that Other costs are equal to the sum of Worksheet A–7, Part III, columns 12 through 14, lines 1 and 2. We are proposing that Total Capital costs are equal to the sum of Worksheet A–7, Part III, column 15, lines 1 and 2. We are proposing to derive cost weights for each IPPS hospital for each CIPI cost category by calculating the ratio of the costs reported for each cost category (for example, Depreciation) to Total Capital costs. Finally, we are proposing to apply a set of simultaneous trims based on these derived cost weights to remove outliers. Specifically, we are proposing to only include cost reports for providers where their Depreciation cost weight is between 25 percent and 90 percent; Interest cost weight is between 0 and 75 percent, Lease cost weight is between 0 and 50 percent and Total Capital costs are greater than zero and less than Total Facility Costs reported on Worksheet B, Part I, column 26, line 202. The trimming process is done simultaneously on each cost category so that if a cost weight is outside the specific range for one or more of the cost weight criteria mentioned, the provider is excluded from the sample. We note that these proposed trimming methods are the same types of edits performed for the 2018-based CIPI. We then are proposing to sum the costs for each cost category (Depreciation, Interest, Lease, and Other) and divide each sum by the sum of Total Capital costs for this same set of IPPS hospitals. The ratio of the total costs for each category to the sum of Total Capital costs represents the cost weight for each of the Depreciation, Interest, Lease and Other cost categories. This is the same methodology as was used for the 2018-based CIPI. As shown in the left column of Table IV–08, in 2023 depreciation expenses accounted for 67.2 percent of total capital costs, interest expenses accounted for 15.2 percent, leasing expenses accounted for 11.6 percent, and other capital expenses accounted for 6.0 percent.

We also are proposing to allocate lease costs across each of the remaining capital cost categories as was done in the 2018-based CIPI. We are proposing to proportionally distribute leasing costs among the cost categories of Depreciation, Interest, and Other, reflecting the assumption that the underlying cost structure of leases is similar to that of capital costs in general. As was done for the 2018-based CIPI, we are proposing to assume that 10 percent of the lease costs as a proportion of total capital costs represents overhead and to assign those costs to the Other capital cost category accordingly. Therefore, we are assuming that approximately 1.2 percent (11.6 percent $\times$ 0.1) of total capital costs represent lease costs attributable to overhead, and we are proposing to add this 1.2 percent to the 6.0 percent Other cost category weight. We are then proposing to distribute the remaining lease costs (10.4 percent, or 11.6 percent $-$ 1.2 percent) proportionally across the three cost categories (Depreciation, Interest, and Other) based on the proportion that these categories comprise of the sum of the Depreciation, Interest, and Other cost categories (excluding lease expenses). For example, the Other cost category represented 6.7 percent of all three cost categories (Depreciation, Interest, and Other) prior to any lease expenses being allocated. This 6.7 percent is applied to the 10.4 percent of remaining lease expenses so that another 0.7 percent of lease expenses as a percent of total capital costs is allocated to the Other cost category. Therefore, the resulting proposed Other cost weight is 7.8 percent (calculated using unrounded numbers, which is approximately equal to 6.0 percent + 1.2 percent + 0.7 percent). This is the same methodology used for the 2018-based CIPI. The resulting cost weights of the proposed allocation of lease expenses are shown in the right column of Table IV–08.

TABLE IV–08—PROPOSED ALLOCATION OF LEASE EXPENSES FOR THE PROPOSED 2023-BASED CIPI

Cost categories	Proposed cost shares obtained from medicare cost reports (percent of total capital costs)	Proposed cost shares after allocation of lease expenses (percent of total capital costs)
Depreciation	67.2	75.1
Interest	15.2	17.0
Lease	11.6	
Other	6.0	7.8

Note: Detail may not add to 100 percent due to rounding.

Finally, we are proposing to further divide the Depreciation and Interest cost categories. We are proposing to separate the Depreciation cost category into the following two categories: (1) Building and Fixed Equipment and (2) Movable Equipment. We also are proposing to separate the Interest cost category into the following two categories: (1) Government/Nonprofit; and (2) For-profit. These are the same categories used for the 2018-based CIPI.

To disaggregate the depreciation cost weight, we needed to determine the percent of total depreciation costs for IPPS hospitals (after the allocation of lease costs) that are attributable to building and fixed equipment, which we hereafter refer to as the ''fixed percentage.'' After applying the trim requiring that the Depreciation cost weight is between 25 percent and 90 percent as described previously, for the providers remaining, we calculate the fixed percentage as the ratio of the sum of building and fixed equipment depreciation (Worksheet A–7, Part III, column 9, line 1) to the sum of total depreciation (sum of Worksheet A–7, Part III column 9, lines 1 and 2). Based on the 2023 IPPS Medicare cost reports, we have determined that depreciation costs for building and fixed equipment account for approximately 52 percent of total depreciation costs, while depreciation costs for movable equipment account for approximately 48 percent of total depreciation costs. This is the same methodology used for the 2018-based CIPI. As was done for the 2018-based CIPI, we are proposing to apply this fixed percentage to the depreciation cost weight (after leasing costs are included) to derive a Depreciation cost weight attributable to Building and Fixed Equipment and a Depreciation cost weight attributable to Movable Equipment.

To disaggregate the Interest cost weight, we needed to determine the percent of total interest costs for IPPS hospitals that are attributable to government and nonprofit facilities, which we hereafter refer to as the ''nonprofit percentage,'' because interest price pressures tend to differ between nonprofit and for-profit facilities. After applying the trim requiring that the Interest cost weight is between 0 percent and 75 percent as described previously, for the providers remaining, we calculate the nonprofit percentage as the ratio of the sum of interest costs (Worksheet A–7, Part III, column 11, lines 1 and 2) for government and nonprofit facilities to the sum of total interest costs for all facilities. This is the same methodology used for the 2018-based CIPI. The nonprofit percentage determined using this method is 91 percent. Table IV–09 provides a comparison of the 2018-based CIPI cost weights and the proposed 2023-based CIPI cost weights. After the capital cost category weights were computed, it was necessary to select appropriate price proxies to reflect the rate-of-increase for each expenditure category. We are proposing to use the same price proxies as were used in the 2018-based CIPI, which are listed in Table IV–09. We also are proposing to continue to vintage weight the capital price proxies for Depreciation and Interest to capture the long-term consumption of capital. This vintage weighting method is the same general method that was used for the 2018-based CIPI (with a proposed change to the data source used to derive the vintage weights) and is described later in this section of this proposed rule.

For the Depreciation—Building and Fixed Equipment cost category, we are proposing to continue to use the BEA Chained Price Index for Private Fixed Investment in Structures, Nonresidential, Hospitals and Special Care (BEA Table 5.4.4. Price Indexes for Private Fixed Investment in Structures by Type) as the price proxy. This BEA index is intended to capture prices for construction of facilities such as hospitals, nursing homes, hospices, and rehabilitation centers. For the Depreciation—Movable Equipment cost category, we are proposing to continue to use the PPI Commodity for Machinery and Equipment (BLS series code WPU11) as the price proxy. This price index reflects price inflation associated with a variety of machinery and equipment that would be utilized by hospitals including but not limited to communication equipment, computers, and medical equipment. For the Nonprofit Interest cost category, we are proposing to continue to use the average yield on domestic municipal bonds (Bond Buyer 20-bond index) as the price proxy. For the For-profit Interest cost category, we are proposing to continue to use the iBoxx AAA Corporate Bond Yield index as the price proxy. For the Other capital cost category (including insurances, taxes, and other capital-related costs), we are proposing to continue to use the CPI for Rent of Primary Residence (All Urban Consumers) (BLS series code CUUS0000SEHA) as the price proxy. We believe that these price series continue to be the most appropriate proxies for IPPS capital costs that meet our selection criteria of relevance, timeliness, availability, and reliability.

TABLE IV–09—PROPOSED 2023-BASED CIPI COST WEIGHTS AND PRICE PROXIES COMPARED TO 2018-BASED CIPI COST WEIGHTS

Cost categories	2018 cost weights	Proposed 2023 cost weights	Proposed price proxy
Total	100.0	100.0	
Depreciation	76.8	75.1	
Building and Fixed Equipment	39.3	39.3	BEA's Chained Price Index for Private Fixed Investment in Structures, Nonresidential, Hospitals and Special Care.
Movable Equipment	37.5	35.9	PPI Commodity for Machinery and Equipment.
Interest	16.6	17.0	
Government/Nonprofit	14.9	15.4	Average Yield on Domestic Municipal Bonds (Bond Buyer 20-Bond Index).
For-Profit	1.7	1.6	Average Yield on iBoxx AAA Corporate Bonds.
Other	6.6	7.8	CPI for Rent of Primary Residence.

Note: The cost weights are calculated using three decimal places. For presentational purposes, we are displaying one decimal and therefore, the detail may not add to the total due to rounding.

Because capital is acquired and paid for over time, capital expenses in any given year are determined by both past and present purchases of physical and financial capital. The proposed vintage-weighted 2023-based CIPI is intended to capture the long-term consumption of capital, using vintage weights for depreciation (physical capital) and interest (financial capital). These vintage weights reflect the proportion of capital purchases attributable to each year of the expected life of building and fixed equipment, movable equipment, and interest.

Vintage weights are an integral part of the CIPI. Capital costs are inherently complicated and are determined by complex capital purchasing decisions, over time, based on such factors as interest rates and debt financing. In addition, capital is depreciated over time instead of being consumed in the same period it is purchased. By accounting for the vintage nature of capital, we are able to provide an accurate and stable annual measure of price changes. Annual nonvintage price changes for capital are unstable due to the volatility of interest rate changes and, therefore, do not reflect the actual annual price changes for IPPS capital costs. The CIPI reflects the underlying stability of the capital acquisition process.

To calculate the vintage weights for depreciation and interest expenses, we first needed a time series of capital purchases for building and fixed equipment and movable equipment. We found no single source that provides an appropriate time series of capital purchases by hospitals for all of the components of capital purchases previously noted. For the 2018-based CIPI, we calculated capital purchases using data on total expenses from the American Hospital Association (AHA) for the years 1964 through 2018 and the method was described in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45210). The data from AHA are no longer available beyond 2020 and, therefore, for the 2023-based CIPI, we are proposing to use an alternative data source for deriving the capital purchases needed to calculate the vintage weights. Specifically, we are proposing to obtain a time series of building and fixed equipment acquisitions (that is, purchases) and movable equipment acquisitions using two different data sources. For the years 1996 through 2023, we are proposing to use data from Worksheet A–7 on the Medicare cost report as reported by IPPS hospitals (with the exception of 2002 through 2004 due to the temporary discontinuation of Worksheet A–7 from the Medicare cost report in those years). For the years 1977 through 1995 we are proposing to use the growth rates in the building and fixed equipment and movable equipment acquisitions derived using our previous method used for the 2018-based CIPI (based on AHA data) to extrapolate the levels from the Medicare cost report back in time. Below we provide the proposed steps for calculating capital acquisitions (that is, capital purchases) used to derive the vintage weights for the proposed 2023-based CIPI.

Step 1—We obtain data from Worksheet A–7 of the Medicare cost reports and apply basic trims. Specifically, for 1996 through 2010 we use the CMS Form 2552–96, OMB Control number 0938–0050 and for 2010 through 2023 we use the CMS Form 2552–10, OMB Control number 0938–0050 (where 2010 data were collected using both forms). Specific cost report references in this discussion are based on the CMS Form 2552–10, OMB Control number 0938–0050. For each of the years 1996 through 2001 and 2005 through 2023, we propose to apply a set of general trims based on data obtained from Worksheet A–7 requiring that total capital costs (sum of Worksheet A–7, part III, column 15, lines 1 and 2) are greater than zero; beginning values of building and fixed equipment (sum of Worksheet A–7, part I, column 1, lines 2 through 5) and movable equipment (sum of Worksheet A–7, part I, column 1, lines 6 and 7) are greater than zero; ending asset values of building and fixed equipment and movable equipment are greater than zero; building and fixed equipment depreciation is greater than zero; movable equipment depreciation is greater than zero; building and fixed equipment acquisitions are greater than zero; movable equipment acquisitions are greater than zero as well as total facility costs (Worksheet B, part I, column 26, line 202) are greater than zero.

In addition to these basic edits, we also propose to remove outliers in the data by trimming separately the top and bottom 1 percent building and fixed equipment useful lives and top and bottom 1 percent movable equipment useful lives. We first calculate the building and fixed equipment useful life and movable equipment useful life for each hospital for the years 1996 through 2001 and 2005 through 2023. The expected life of any asset can be determined by dividing the value of the asset (excluding fully depreciated assets) by its current year depreciation amount. This calculation yields the estimated expected life of an asset if the rates of depreciation were to continue at current year levels, assuming straight-line depreciation. We propose to calculate the building and fixed equipment useful life as the ending value of fixed assets (sum of Worksheet

A–7, part I, column 6, lines 2 through 5, less sum of Worksheet A–7, part I, column 7, lines 2 through 5) divided by fixed asset depreciation (Worksheet A–7, part III, column 9, line 1). We propose to calculate the movable equipment useful life as the ending value of movable assets (sum of Worksheet A–7, part I, column 6, lines 6 through 7, less sum of Worksheet A–7, part I, column 7, lines 6 through 7) divided by movable depreciation (Worksheet A–7, part III, column 9, line 2). For the remaining hospitals (after applying the top and bottom 1 percent trim on useful lives), we obtain a time series of building and fixed equipment acquisitions (sum of Worksheet A–7, part I, columns 2 and 3, lines 2 through 5) and a time series of movable equipment acquisitions (sum of Worksheet A–7, part I, columns 2 and 3, lines 6 through 7).

Step 2—Due to the temporary discontinuation of Worksheet A–7 from the Medicare cost reports for the years 2002 through 2004, we need to derive the building and fixed equipment acquisitions and movable equipment acquisitions using a slightly different methodology. First, for each of the years 1996 through 2001 and 2005 through 2023 we calculate the annual ratio of the sum of building and fixed equipment acquisitions from Worksheet A–7 to the sum of building and fixed equipment ending asset values from Worksheet G. We next estimate these fixed ratios for 2002 through 2004 (when Worksheet A–7 data are not available) by straight-line interpolating the ratios between 2001 and 2005. Finally, we multiply these fixed ratios for 2002 through 2004 by the total ending building and fixed equipment asset values (as reported on Worksheet G). This results in an estimate of building and fixed equipment acquisitions for the years 2002 through 2004. We use this same methodology to derive movable equipment acquisitions using the movable equipment data. We note that the total ending asset values from Worksheet G are calculated after the application of a set of general trims (similar to those in Step 1) requiring total capital costs to be greater than zero and ending asset values of building and fixed equipment and movable equipment (as reported on Worksheet G) to be greater than zero.

Step 3—As done with prior vintage weights (including those used in the 2018-based CIPI), we propose to use a time series of capital acquisitions of more than 50 years in the derivation of the vintage weights. Since we only have Medicare cost report data back to 1996, we are proposing to derive capital acquisitions for the prior period based on the capital acquisitions used to derive the vintage weights for the 2018-based CIPI based on AHA data. Specifically, beginning with the 1996 acquisition level derived in Step 1 (first year of data available from the Medicare cost reports) we propose to apply the growth rate of acquisitions derived using the prior method going back to 1977. We do this separately for both building and fixed equipment acquisitions and movable equipment acquisitions.

As done in prior CIPI rebasings (including the 2018-based CIPI), in order to derive the proposed vintage weights, we need to calculate the average useful lives for building and fixed equipment and movable equipment based on the most recent Medicare cost report data. As previously described in Step 1, we propose to calculate the average building and fixed equipment useful life using 2023 Medicare cost report data as the ending asset value of building and fixed equipment (sum of Worksheet A–7, part I, column 6, lines 2 through 5, less sum of Worksheet A–7, part I, column 7, lines 2 through 5) divided by building and fixed equipment depreciation (Worksheet A–7, part III, column 9, line 1). We propose to calculate the average movable equipment useful life using 2023 Medicare cost report data as the ending asset value of movable equipment (sum of Worksheet A–7, part I, column 6, lines 6 through 7, less sum of Worksheet A–7, part I, column 7, lines 6 through 7) divided by movable equipment depreciation (Worksheet A–7, part III, column 9, line 2). Using this proposed method, we determined the average expected life of building and fixed equipment to be equal to 28 years, and the average expected life of movable equipment to be equal to 12 years. For the expected life of interest, we believe that vintage weights for interest should represent the average expected life of building and fixed equipment because, based on previous research described in the FY 1997 IPPS final rule (61 FR 46198), the expected life of hospital debt instruments and the expected life of buildings and fixed equipment are similar. We note that the 2018-based CIPI was based on an expected average life of building and fixed equipment of 27 years and an expected average life of movable equipment of 12 years.

For the building and fixed equipment and movable equipment vintage weights, we are proposing to use the real annual capital-related purchase amounts for each asset type to capture the actual amount of the physical acquisition, net of the effect of price inflation. These real annual capital-related purchase amounts are produced by deflating the nominal annual purchase amount (as calculated in Steps 1 through 3) by the associated price proxy as provided earlier in this proposed rule. For the interest vintage weights, we are proposing to use the total nominal annual capital-related purchase amounts to capture the value of the debt instrument (including, but not limited to, mortgages and bonds). Using these capital purchases time series specific to each asset type, we are proposing to calculate the vintage weights for building and fixed equipment, for movable equipment, and for interest.

The vintage weights for each asset type are deemed to represent the average purchase pattern of the asset over its expected life (in the case of building and fixed equipment and interest, 28 years, and in the case of movable equipment, 12 years). For each asset type, we are proposing to use the time series of annual capital purchases amounts available from 1977 to 2023. These data allow us to derive twenty 28-year periods of capital purchases for building and fixed equipment and interest, and thirty-five 12-year periods of capital purchases for movable equipment. For each 28-year period for building and fixed equipment and interest, or 12-year period for movable equipment, we are proposing to calculate annual vintage weights by dividing the capital-related purchase amount in any given year by the total amount of purchases over the entire 28-year or 12-year period. This calculation was done for each year in the 28-year or 12-year period and for each of the periods for which we have data. We then calculated the average vintage weight for a given year of the expected life by taking the average of these vintage weights across the multiple periods of data. This is the same methodology used for the 2018-based CIPI but using 27 years and 12 years and reflecting data through 2018.

The vintage weights for the proposed 2023-based CIPI and the 2018-based CIPI are presented in Table IV–10. While we are proposing an alternative methodology for calculating the vintage weights due to the discontinuation of AHA data, Table IV–10 shows this change had limited impact on the results. We note that using the proposed 2023-based vintage weights instead of the 2018-based vintage weights has a minimal impact on the overall CIPI update (averaging 0.0 percent over FY 2021 through FY 2026).

TABLE IV–10—PROPOSED 2023-BASED CIPI AND 2018-BASED CIPI VINTAGE WEIGHTS

Year [1]	Building and fixed equipment		Movable equipment		Interest	
	2018-based 27 years	Proposed 2023-based 28 years	2018-based 12 years	Proposed 2023-based 12 years	2018-based 27 years	Proposed 2023-based 28 years

Total	1.000	1.000	1.000	1.000	1.000	1.000

Note: Numbers may not add to total due to rounding.

[1] Vintage weight in the last year (for example, year 28 for the proposed 2023-based CIPI) is applied to the most recent data point and prior vintage weights are applied going back in time. For example, year 28 vintage weight would be applied to the 2026q3 fixed price proxy level, year 27 vintage weight would be applied to the 2025q3 fixed price proxy level, etc.

The process of creating vintage-weighted price proxies requires applying the vintage weights to the price proxy index where the last applied vintage weight in Table IV–10 is applied to the most recent data point. We have provided on the CMS website an example of how the vintage weighting price proxies are calculated, using example vintage weights and example price indices. The example can be found under the following CMS website link: *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information* in the zip file titled ''Weight Calculations as described in the IPPS FY 2010 Proposed Rule.''

Table IV–11 in this section of this proposed rule compares both the historical and forecasted percent changes in the 2018-based CIPI and the proposed 2023-based CIPI. Over the most recent historical period, the proposed 2023-based CIPI increases at a slightly lower rate, on average, than the 2018-based CIPI primarily due to rebasing the CIPI from 2018 to 2023 and updating the base year cost weights.

TABLE IV–11—COMPARISON OF 2018-BASED AND PROPOSED 2023-BASED CAPITAL INPUT PRICE INDEX, PERCENT CHANGE, FY 2021 THROUGH FY 2028

Fiscal year	CIPI, 2018-based	Proposed CIPI, 2023-based
Historical Data:		
FY 2021	1.0	0.8
FY 2022	2.0	1.8
FY 2023	3.0	2.8
FY 2024	2.8	2.7
Average FYs 2021–2024	2.2	2.0
Forecast:		
FY 2025	2.7	2.6
FY 2026	2.7	2.6
FY 2027	2.6	2.5
FY 2028	2.5	2.4

TABLE IV–11—COMPARISON OF 2018-BASED AND PROPOSED 2023-BASED CAPITAL INPUT PRICE INDEX, PERCENT CHANGE, FY 2021 THROUGH FY 2028—Continued

Fiscal year	CIPI, 2018-based	Proposed CIPI, 2023-based
Average FYs 2025–2028	2.6	2.5

Source: IHS Global, Inc., 4th quarter 2024 forecast.

IHS Global, Inc. forecasts a 2.6 percent increase in the proposed 2023-based CIPI for FY 2026, as shown in Table IV–11. The underlying vintage-weighted price increases for depreciation (including building and fixed equipment and movable equipment) and interest (including government/nonprofit and for-profit) based on the proposed 2023-based CIPI are included in Table IV–12.

TABLE IV–12—PROPOSED 2023-BASED CAPITAL INPUT PRICE INDEX PERCENT CHANGES, TOTAL AND DEPRECIATION AND INTEREST COMPONENTS—FYS 2021 THROUGH 2028

Fiscal year	Total	Depreciation	Interest
Historical Data:			
FY 2021	0.8	1.8	−3.7
FY 2022	1.8	2.7	−2.8
FY 2023	2.8	3.3	−1.5
FY 2024	2.7	3.3	−1.1
Forecast:			
FY 2025	2.6	3.2	−0.8
FY 2026	2.6	3.2	−0.8
FY 2027	2.5	3.1	−1.0
FY 2028	2.4	3.0	−1.2

Source: IHS Global, Inc., 4th quarter 2024 forecast.

The FY 2026 percentage increase based on the proposed 2023-based CIPI is 0.1 percentage point lower than the increase based on the 2018-based CIPI when rounded, as shown in Table IV–11. Rebasing the CIPI from 2018 to 2023 and updating the base year cost weights lowered the FY 2026 update by approximately 0.1 percentage point, which was partially offset by the incorporation of the 2023-based vintage weights.

V. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2026 (§ 412.106)

A. General Discussion

Section 1886(d)(5)(F) of the Act provides for additional Medicare payments to subsection (d) hospitals [211] that serve a significantly disproportionate number of low-income patients. The Act specifies two methods by which a hospital may qualify for the Medicare disproportionate share hospital (DSH) adjustment. Under the first method, hospitals that are located in an urban area and have 100 or more beds may receive a Medicare DSH payment adjustment if the hospital can demonstrate that, during its cost reporting period, more than 30 percent of its net inpatient care revenues are derived from State and local government payments for care furnished to patients with low incomes. This method is commonly referred to as the ''Pickle method.'' The second method for qualifying for the DSH payment adjustment, which is the more commonly used method, is based on the hospital's disproportionate patient percentage (DPP), described below, under which the DSH payment adjustment is based a complex statutory formula which includes the hospital's geographic designation, the number of beds in the hospital, and the level of the hospital's DPP.

A hospital's DPP is the sum of two fractions: the ''Medicare fraction'' and the ''Medicaid fraction.'' The Medicare fraction (also known as the ''SSI fraction'' or ''SSI ratio'') is computed by dividing the number of the hospital's inpatient days that are furnished to patients who were entitled to both Medicare Part A and Supplemental Security Income (SSI) benefits by the hospital's total number of patient days furnished to patients entitled to benefits under Medicare Part A. The Medicaid fraction is computed by dividing the hospital's number of inpatient days furnished to patients who, for such days, were eligible for Medicaid, but were not entitled to benefits under Medicare Part A, by the hospital's total number of inpatient days in the same period.

DSH eligibility	Qualifying criteria
Statutory Formula	A hospital that has a disproportionate patient percentage equal to or exceeding 15 percent may qualify for the Medicare DSH adjustment. We refer readers to 42 CFR 412.106 for the specific eligibility criteria and payment formulas.

[211] See section 1886(d)(1)(B) of the Act for the definition of a ''subsection (d) hospital''.

DSH eligibility	Qualifying criteria
''Pickle Method''	A hospital that is located in an urban area and has 100 or more beds may qualify to receive a Medicare DSH payment adjustment if the hospital can demonstrate that, during its cost reporting period, more than 30 percent of its net inpatient care revenues are derived from State and local government payments for care furnished to patients with low incomes.

Because the DSH payment adjustment is part of the IPPS, the statutory references to ''days'' in section 1886(d)(5)(F) of the Act have been interpreted to apply only to hospital acute care inpatient days. Regulations located at 42 CFR 412.106 govern the Medicare DSH payment adjustment and specify how the DPP is calculated as well as how beds and patient days are counted in determining the Medicare DSH payment adjustment. Under § 412.106(a)(1)(i), the number of beds for the Medicare DSH payment adjustment is determined in accordance with bed counting rules for the IME adjustment under § 412.105(b).

Section 3133 of the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by section 10316 of the same Act and section 1104 of the Health Care and Education Reconciliation Act (Pub. L. 111–152), added a section 1886(r) to the Act that modifies the methodology for computing the Medicare DSH payment adjustment. We refer to these provisions collectively as section 3133 of the Affordable Care Act. Beginning with discharges in FY 2014, hospitals that qualify for Medicare DSH payments under section 1886(d)(5)(F) of the Act receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments. This provision applies equally to hospitals that qualify for DSH payments on the basis of the hospital's DPP under section 1886(d)(5)(F)(i)(I) of the Act and those hospitals that qualify under the Pickle method under section 1886(d)(5)(F)(i)(II) of the Act.

The remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured, is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The payments to each hospital for a fiscal year are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all hospitals that receive Medicare DSH payments for that fiscal year.

Since FY 2014, section 1886(r) of the Act has required that hospitals that are eligible for DSH payments under section 1886(d)(5)(F) of the Act receive 2 separately calculated payments:

Medicare DSH Payment: An empirically justified DSH payment equal to 25% of the amount determined under the statutory formula in section 1886(d)(5)(F) of the Act.

Medicare DSH Uncompensated Care Payment: An uncompensated care payment determined as the product of 3 factors, as discussed in this section.

Specifically, section 1886(r)(1) of the Act provides that the Secretary shall pay to such subsection (d) hospital 25 percent of the amount the hospital would have received under section 1886(d)(5)(F) of the Act for DSH payments, which represents the empirically justified amount for such payment, as determined by the MedPAC in its March 2007 Report to Congress.[212] We refer to this payment as the ''empirically justified Medicare DSH payment.''

In addition to this empirically justified Medicare DSH payment, section 1886(r)(2) of the Act provides that, for FY 2014 and each subsequent fiscal year, the Secretary shall pay to such subsection (d) hospitals an additional amount equal to the product of three factors. The first factor is the difference between the aggregate amount of payments that would be made to subsection (d) hospitals under section 1886(d)(5)(F) of the Act if subsection (r) did not apply and the aggregate amount of payments that are made to subsection (d) hospitals under section 1886(r)(1) of the Act for such fiscal year. In other words, the first factor of the uncompensated care payment calculation is 75 percent of the payments that would otherwise be made as Medicare DSH payments under section 1886(d)(5)(F) of the Act.

The second factor is, for FY 2018 and subsequent fiscal years, 1 minus the percent change in the percent of individuals who are uninsured, as determined by comparing the percent of individuals who were uninsured in 2013 (as estimated by the Secretary, based on data from the Census Bureau or other sources the Secretary determines appropriate, and certified by the Chief Actuary of CMS) and the percent of individuals who were uninsured in the most recent period for which data are available (as so estimated and certified). As discussed in a later section, we note that the second factor is computed based on estimates of the total U.S population.

The third factor is a percent that, for each subsection (d) hospital, represents the quotient of the amount of uncompensated care for such hospital for a period selected by the Secretary (as estimated by the Secretary, based on appropriate data), including the use of alternative data where the Secretary determines that alternative data are available which are a better proxy for the costs of subsection (d) hospitals for treating the uninsured, and the aggregate amount of uncompensated care for all subsection (d) hospitals that receive a payment under section 1886(r) of the Act. Therefore, this third factor represents a hospital's uncompensated care amount for a given time period relative to the uncompensated care amount for that same time period for all hospitals that receive Medicare DSH payments in the applicable fiscal year, expressed as a percent.

For each hospital, the product of these three factors represents its additional payment for uncompensated care for the applicable fiscal year. We refer to the additional payment determined by these factors as the ''uncompensated care payment.'' In brief, the uncompensated care payment for an individual hospital is determined as the product of the following 3 factors:

Factor 1: 75% of the total amount of DSH payments that would otherwise be made under section 1886(d)(5)(F) of the Act.

Factor 2: 1 minus the percent change in the percent of individuals who are uninsured.

Factor 3: The hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that receive DSH payments, expressed as a percentage.

Section 1886(r) of the Act applies to FY 2014 and each subsequent fiscal year. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50620 through 50647) and the FY 2014 IPPS interim final rule with comment period (78 FR 61191 through 61197), we set forth our policies

[212] *https://www.medpac.gov/document/march-2007-report-to-the-congress-medicare-payment-policy/.*

for implementing the required changes to the Medicare DSH payment methodology made by section 3133 of the Affordable Care Act for FY 2014. In those rules, we noted that, because section 1886(r) of the Act modifies the payment required under section 1886(d)(5)(F) of the Act, it affects only the DSH payment under the operating IPPS. It does not revise or replace the capital IPPS DSH payment provided under the regulations at 42 CFR part 412, subpart M, which was established through the exercise of the Secretary's discretion in implementing the capital IPPS under section 1886(g)(1)(A) of the Act.

Finally, section 1886(r)(3) of the Act provides that there shall be no administrative or judicial review under section 1869, section 1878, or otherwise of any estimate of the Secretary for purposes of determining the factors described in section 1886(r)(2) of the Act or of any period selected by the Secretary for the purpose of determining those factors. Therefore, there is no administrative or judicial review of the estimates developed for purposes of applying the three factors used to determine uncompensated care payments, or of the periods selected to develop such estimates.

B. Eligibility for Empirically Justified Medicare DSH Payments and Uncompensated Care Payments

The payment methodology under section 3133 of the Affordable Care Act applies to ''subsection (d) hospitals'' that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act. Therefore, hospitals must receive empirically justified Medicare DSH payments in a fiscal year to receive an additional Medicare uncompensated care payment for that year. Specifically, section 1886(r)(2) of the Act states that, in addition to the empirically justified Medicare DSH payment made to a subsection (d) hospital under section 1886(r)(1) of the Act, the Secretary shall pay to ''such subsection (d) hospitals'' the uncompensated care payment. Section 1886(r)(2)'s reference to ''such subsection (d) hospitals'' refers to hospitals that receive empirically justified Medicare DSH payments under section 1886(r)(1) for the applicable fiscal year.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50622) and the FY 2014 IPPS interim final rule with comment period (78 FR 61193), we explained that hospitals that are not eligible to receive empirically justified Medicare DSH payments in a fiscal year will not receive uncompensated care payments for that year. We also specified that we would make a determination concerning eligibility for interim uncompensated care payments based on each hospital's estimated DSH status (that is, eligibility to receive empirically justified Medicare DSH payments) for the applicable fiscal year (using the most recent data that are available). For this proposed rule, we estimated DSH status for all hospitals using the most recent available SSI ratios and information from the most recent available Provider Specific File. We note that FY 2021 SSI ratios available on the CMS website were the most recent available SSI ratios at the time of developing this proposed rule.[213] If more recent data on DSH eligibility becomes available before the final rule, we would use such data in the final rule.

Our final determinations of a hospital's eligibility for uncompensated care and empirically justified Medicare DSH payments will be based on the hospital's actual DSH status at cost report settlement for FY 2026.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50622) and in the rulemakings for subsequent fiscal years, we have specified our policies for several specific classes of hospitals within the scope of section 1886(r) of the Act. Eligible hospitals include the following:

- Subsection (d) Puerto Rico hospitals that are eligible for DSH payments also are eligible to receive empirically justified Medicare DSH payments and uncompensated care payments under section 1886(r) of the Act (78 FR 50623 and 79 FR 50006).
- Sole community hospitals (SCHs) that are paid under the IPPS Federal rate receive interim payments based on what we estimate and project their DSH status to be prior to the beginning of the fiscal year (based on the best available data at that time) subject to settlement through the cost report. If they receive interim empirically justified Medicare DSH payments in a fiscal year, they will also be eligible to receive interim uncompensated care payments for that fiscal year on a per discharge basis. Final eligibility determinations will be made at the end of the cost reporting period at settlement, and both interim empirically justified Medicare DSH payments and uncompensated care payments will be adjusted accordingly (78 FR 50624 and 79 FR 50007).
- Medicare-dependent, small rural hospitals (MDHs) are paid based on the IPPS Federal rate or, if higher, the IPPS Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the updated hospital-specific rate from certain specified base years (76 FR 51684). The IPPS Federal rate that is used in the MDH payment methodology is the same IPPS Federal rate that is used in the SCH payment methodology. Because MDHs are paid based on the IPPS Federal rate, they continue to be eligible to receive empirically justified Medicare DSH payments and uncompensated care payments if their DPP is at least 15 percent, and we apply the same process to determine MDHs' eligibility for interim empirically justified Medicare DSH and interim uncompensated care payments as we do for all other IPPS hospitals. Recently enacted legislation has extended the MDH program through September 30, 2025. We refer readers to section V.F. of the preamble of this proposed rule for further discussion of the MDH program. We will continue to make a determination concerning an MDH's eligibility for interim empirically justified Medicare DSH and uncompensated care payments based on the hospital's estimated DSH status for the applicable fiscal year.
- IPPS hospitals that elect to participate in the Bundled Payments for Care Improvement Advanced (BPCI Advanced) model, will continue to be paid under the IPPS and, therefore, are eligible to receive empirically justified Medicare DSH payments and uncompensated care payments until the Model's final performance year, which ends on December 31, 2025. For further information regarding the BPCI Advanced model, we refer readers to the CMS website at *https://innovation.cms.gov/innovation-models/bpci-advanced*.
- Transforming Episode Accountability Model (TEAM) is a new episode-based payment model. Hospitals participating in TEAM would continue to be paid under the IPPS and, therefore, are eligible to receive empirically justified Medicare DSH payments and uncompensated care payments. The model's start date is January 1, 2026.

Ineligible hospitals include the following:

- Maryland hospitals are not eligible to receive empirically justified Medicare DSH payments and uncompensated care payments under the payment methodology of section 1866(r) of the Act because they are not paid under the IPPS. As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41402 through 41403), CMS and the State have entered into an agreement to govern payments to Maryland hospitals under a new payment model, the Maryland

[213] *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/dsh.*

Total Cost of Care (TCOC) Model, which began on January 1, 2019. Under the Maryland TCOC Model, which concludes on December 31, 2026, Maryland hospitals are not paid under the IPPS and are ineligible to receive empirically justified Medicare DSH payments and uncompensated care payments under section 1886(r) of the Act.

- SCHs that are paid under their hospital-specific rate are not eligible for Medicare DSH and uncompensated care payments (78 FR 50623 and 50624).
- Hospitals participating in the Rural Community Hospital Demonstration Program are not eligible to receive empirically justified Medicare DSH payments and uncompensated care payments under section 1886(r) of the Act because they are not paid under the IPPS (78 FR 50625 and 79 FR 50008). The Rural Community Hospital Demonstration Program was originally authorized for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173).[214] The period of participation for the last hospital in the demonstration under this most recent legislative authorization will end on June 30, 2028. Under the payment methodology that applies during this most recent extension of the demonstration program, participating hospitals do not receive empirically justified Medicare DSH payments, and they are excluded from receiving interim and final uncompensated care payments. At the time of development of this proposed rule, we believe 16 hospitals may participate in the demonstration program at the start of FY 2026. We note that if at the time of developing the final rule there is a different number of hospitals projected to participate in the demonstration program during FY 2026, we would use updated information in the FY 2026 final rule.

C. Empirically Justified Medicare DSH Payments

As we have discussed earlier, section 1886(r)(1) of the Act requires the Secretary to pay 25 percent of the amount of the Medicare DSH payment that would otherwise be made under section 1886(d)(5)(F) of the Act to a subsection (d) hospital. Because section 1886(r)(1) of the Act merely requires the Secretary to pay a designated percentage of these payments, without revising the criteria governing eligibility for DSH payments or the underlying payment methodology, we stated in the FY 2014 IPPS/LTCH PPS final rule that we did not believe that it was necessary to develop any new operational mechanisms for making such payments.

Therefore, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50626), we implemented this provision by advising Medicare Administrative Contractors (MACs) to simply adjust subsection (d) hospitals' interim claim payments to an amount equal to 25 percent of what would have been paid if section 1886(r) of the Act did not apply. We also made corresponding changes to the hospital cost report so that these empirically justified Medicare DSH payments could be settled at the appropriate level at the time of cost report settlement. We provided more detailed operational instructions and cost report instructions following issuance of the FY 2014 IPPS/LTCH PPS final rule that are available on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2014-Transmittals-Items/R5P240.html.*

D. Supplemental Payment for Indian Health Service (IHS) and Tribal Hospitals and Puerto Rico Hospitals

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49047 through 49051), we established a new supplemental payment for IHS/Tribal hospitals and hospitals located in Puerto Rico for FY 2023 and subsequent fiscal years. This payment was established to help to mitigate the impact of the decision to discontinue the use of low-income insured days as a proxy for uncompensated care costs for these hospitals and to prevent undue long-term financial disruption for these providers. The regulations located at 42 CFR 412.106(h) govern the supplemental payment. In brief, the supplemental payment for a fiscal year is determined as the difference between the hospital's base year amount and its uncompensated care payment for the applicable fiscal year as determined under § 412.106(g)(1). The base year amount is the hospital's FY 2022 uncompensated care payment adjusted by one plus the percent change in the total uncompensated care amount between the applicable fiscal year (that is, FY 2026 for purposes of this rulemaking) and FY 2022, where the total uncompensated care amount for a fiscal year is determined as the product of Factor 1 and Factor 2 for that year. If the base year amount is equal to or lower than the hospital's uncompensated care payment for the current fiscal year, then the hospital would not receive a supplemental payment because the hospital would not be experiencing financial disruption in that year as a result of the use of uncompensated care data from the Worksheet S–10 in determining Factor 3 of the uncompensated care payment methodology.

For FY 2026, we are not proposing any changes to the methodology for determining supplemental payments and we will calculate the supplemental payments to eligible IHS/Tribal and Puerto Rico hospitals consistent with the methodology described in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49047 through 49051) and § 412.106(h).

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49048 and 49049), the eligibility and payment processes for the supplemental payment are consistent with the processes for determining eligibility to receive interim and final uncompensated care payments adopted in FY 2014 IPPS/LTCH PPS final rule. We note that the MAC will make a final determination with respect to a hospital's eligibility to receive the supplemental payment for a fiscal year, in conjunction with its final determination of the hospital's eligibility for DSH payments and uncompensated care payments for that fiscal year.

E. Uncompensated Care Payments

As we discussed earlier, section 1886(r)(2) of the Act provides that, for each eligible hospital in FY 2014 and subsequent years, the uncompensated care payment is the product of three factors, which are discussed in the next sections.

1. Proposed Calculation of Factor 1 for FY 2026

Section 1886(r)(2)(A) of the Act establishes Factor 1 in the calculation of the uncompensated care payment. The regulations located at 42 CFR 412.106(g)(1)(i) govern the Factor 1 calculation. Under a prospective payment system, we would not know the precise aggregate Medicare DSH

[214] The Rural Community Hospital Demonstration Program was extended for a subsequent 5-year period by sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148). The period of performance for this 5-year extension period ended on December 31, 2016. Section 15003 of the 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016, again amended section 410A of Public Law 108–173 to require a 10-year extension period (in place of the 5-year extension required by the Affordable Care Act), therefore requiring an additional 5-year participation period for the demonstration program. Section 15003 of Public Law 114–255 also required a solicitation for applications for additional hospitals to participate in the demonstration program. The period of performance for this 5-year extension period ended December 31, 2021. The Consolidated Appropriations Act, 2021 (Pub. L. 116–260) amended section 410A of Public Law 108–173 to extend the demonstration program for an additional 5-year period.

payment amounts that would be paid for a fiscal year until cost report settlement for all IPPS hospitals is completed, which occurs several years after the end of the fiscal year. Therefore, section 1886(r)(2)(A)(i) of the Act provides authority to estimate this amount by specifying that, for each fiscal year to which the provision applies, such amount is to be estimated by the Secretary. Similarly, we would not know the precise aggregate empirically justified Medicare DSH payment amounts that would be paid for a fiscal year until cost report settlement for all IPPS hospitals is completed. Thus, section 1886(r)(2)(A)(ii) of the Act provides authority to estimate this amount. In brief, Factor 1 is the difference between the Secretary's estimates of: (1) the amount that would have been paid in Medicare DSH payments for the fiscal year, in the absence of section 1886(r) of the Act; and (2) the amount of empirically justified Medicare DSH payments that are made for the fiscal year, which takes into account the requirement to pay 25 percent of what would have otherwise been paid under section 1886(d)(5)(F) of the Act.

In this FY 2026 IPPS/LTCH PPS proposed rule consistent with the policy that has applied since the FY 2014 final rule (78 FR 50627 through 50631), we are determining Factor 1 from the most recently available estimates of the aggregate amount of Medicare DSH payments that would be made for FY 2026 in the absence of section 1886(r)(1) of the Act and the aggregate amount of empirically justified Medicare DSH payments that would be made for FY 2026, both as calculated by CMS' Office of the Actuary (OACT). Consistent with the policy that has applied in previous years, these estimates will not be revised or updated subsequent to publication of our final projections in the FY 2026 IPPS/LTCH PPS final rule.

For this proposed rule, to calculate both estimates, we used the most recently available projections of Medicare DSH payments for the fiscal year, as calculated by OACT using the most recently filed Medicare hospital cost reports with Medicare DSH payment information and the most recent DPPs and Medicare DSH payment adjustments provided in the IPPS Impact File. The projection of Medicare DSH payments for the fiscal year is also partially based on OACT's Part A benefits projection model, which projects, among other things, inpatient hospital spending. Projections of DSH payments additionally require projections of expected increases in utilization and case-mix. The assumptions that were used in making these inpatient hospital spending, utilization, and case-mix projections and the resulting estimates of DSH payments for FY 2023 through FY 2026 are discussed later in this section and in the table titled ''Factors Applied for FY 2023 through FY 2026 to Estimate Medicare DSH Expenditures Using FY 2022 Baseline.''

For purposes of calculating Factor 1 and modeling the impact of this FY 2026 IPPS/LTCH PPS proposed rule, we used OACT's January 2025 Medicare DSH estimates, which were based on data from the December 2024 update of the Medicare Hospital Cost Report Information System (HCRIS) and the FY 2025 IPPS/LTCH PPS final rule IPPS Impact File, published in conjunction with the publication of the FY 2025 IPPS/LTCH PPS final rule. Because SCHs that are projected to be paid under their hospital-specific rate are ineligible for empirically justified Medicare DSH payments and uncompensated care payments, they were excluded from the January 2025 Medicare DSH estimates. Because Maryland hospitals are not paid under the IPPS, they are also ineligible for empirically justified Medicare DSH payments and uncompensated care payments and were also excluded from OACT's January 2025 Medicare DSH estimates.

The 16 hospitals that CMS expects will participate in the Rural Community Hospital Demonstration Program in FY 2026 were also excluded from OACT's January 2025 Medicare DSH estimates because under the payment methodology that applies during the demonstration, these hospitals are not eligible to receive empirically justified Medicare DSH payments or uncompensated care payments.

For this proposed rule, using the data sources previously discussed, OACT's January 2025 estimates of Medicare DSH payments for FY 2026 without regard to the application of section 1886(r)(1) of the Act is approximately $15.682 billion. Therefore, also based on OACT's January 2025 Medicare DSH estimates, the estimate of empirically justified Medicare DSH payments for FY 2026, with the application of section 1886(r)(1) of the Act, is approximately $3.92 billion (or 25 percent of the total amount of estimated Medicare DSH payments for FY 2026). Under § 412.106(g)(1)(i), Factor 1 is the difference between these two OACT estimates. Therefore, in this proposed rule, we are determining that Factor 1 for FY 2026 would be $11.761 billion, which is equal to 75 percent of the total amount of estimated Medicare DSH payments for FY 2026 ($15.682 billion minus $3.92 billion). We note that consistent with our approach in previous rulemakings, OACT intends to use more recent data that may become available for purposes of projecting the final Factor 1 estimates for the FY 2026 IPPS/LTCH PPS final rule.

We note that the Factor 1 estimates for IPPS/LTCH PPS proposed rules are generally consistent with the economic assumptions and actuarial analysis used to develop the President's Budget estimates under current law, and Factor 1 estimates for IPPS/LTCH PPS final rules are generally consistent with those used for the Midsession Review of the President's Budget.[215] Consistent with historical practice, we expect the Midsession Review will have updated economic assumptions and actuarial analysis, which will be used for the development of Factor 1 estimates in the FY 2026 IPPS/LTCH PPS final rule.

For a general overview of the principal steps involved in projecting future inpatient costs and utilization, we refer readers to the ''2024 Annual Report of the Boards of Trustees of the Federal Hospital Insurance and Federal Supplementary Medical Insurance Trust Funds,'' available on the CMS website at *https://www.cms.gov/oact/tr/2024*.[216] The actuarial projections contained in these reports are based on numerous assumptions regarding future trends in program enrollment, utilization and costs of health care services covered by Medicare, as well as other factors affecting program expenditures. In addition, although the methods used to estimate future costs based on these assumptions are complex, they are subject to periodic review by independent experts to ensure their validity and reasonableness.

In this proposed rule, we include information regarding the data sources, methods, and assumptions employed by OACT's actuaries in determining our estimate of Factor 1. In summary, we indicate the historical HCRIS data update OACT used to estimate Medicare DSH payments; we explain that the most recent Medicare DSH payment adjustments provided in the IPPS Impact File were used, and we provide the components of all the update factors that were applied to the historical data to estimate the Medicare DSH payments for the upcoming fiscal year, along with

[215] As we have in the past, for additional information on the development of the President's Budget, we refer readers to the Office of Management and Budget website at *https://www.whitehouse.gov/omb/budget*.

[216] We note that the annual reports of the Medicare Boards of Trustees to Congress represent the Federal Government's official evaluation of the financial status of the Medicare Program.

the associated rationale and assumptions. The discussion also includes descriptions of the ''Other'' and ''Discharges'' assumptions.

OACT's estimates for FY 2026 for this proposed rule began with a baseline of $13.018 billion in Medicare DSH expenditures for FY 2022. The following table shows the factors applied to update this baseline through the current estimate for FY 2026:

FACTORS APPLIED FOR FY 2023 THROUGH FY 2026 TO ESTIMATE MEDICARE DSH EXPENDITURES USING FY 2022 BASELINE

FY	IPPS hospital market basket update factor	Discharges	Case-mix	Other	Total	Estimated DSH payment (in billions) *
2023	1.043	0.994	0.990	1.0504	1.0784	14.038
2024	1.031	0.998	0.997	1.0310	1.0573	14.842
2025	1.029	0.991	1.005	0.9976	1.0228	15.180
2026 **	1.024	0.999	1.005	1.0048	1.0331	15.682

* Rounded.
** The FY 2026 figures reflect the proposed inpatient hospital market basket percentage increase and productivity adjustment and are based on the 4th quarter 2024 IHS Global Inc. (IGI) forecast, the most recent forecast available at the time of development of this proposed rule.

In this table, the discharges column shows the changes in the number of Medicare FFS inpatient hospital discharges. The discharge figures for FY 2023 and FY 2024 are based on Medicare claims data that have been adjusted by a completion factor to account for incomplete claims data. The discharge figures for FY 2025 and FY 2026 are assumptions based on recent historical experience and assumptions related to how many beneficiaries will be enrolled in MA plans.

The case-mix column shows the estimated change in case-mix for IPPS hospitals. The case-mix figures for FY 2023 and FY 2024 are based on actual claims data adjusted by a completion factor to account for incomplete claims data. The case-mix figures for FY 2025 and for FY 2026 are assumptions based on the 2012 ''Review of Assumptions and Methods of the Medicare Trustees' Financial Projections'' report by the 2010–2011 Medicare Technical Review Panel.[217]

The ''Other'' column reflects the change in other factors that contribute to the Medicare DSH estimates. These factors include the difference between the total inpatient hospital discharges and IPPS discharges and various adjustments to the payment rates that have been included over the years but are not reflected in the other columns. In addition, the ''Other'' column includes a factor for the estimated changes in Medicaid enrollment through FY 2023.

The following table shows the factors that are included in the ''IPPS Hospital Market Basket Update Factor'' column of the previous table:

FY	IPPS hospital market basket percentage increase	Productivity adjustment	Documentation and coding	Total update percentage
2023	4.1	0.3	0.5	4.3
2024	3.3	0.2	0.0	3.1
2025	3.4	0.5	0.0	2.9
2026	3.2	0.8	0.0	2.4

Note: All figures in this table are the final inpatient hospital updates for the applicable fiscal year, except for the FY 2026 figures. The FY 2026 figures reflect the proposed inpatient hospital market basket percentage increase and productivity adjustment and are based on the 4th quarter 2024 IGI forecast, the most recent forecast available at the time of development of this proposed rule. We refer readers to section V.B. of the preamble of this proposed rule for a complete discussion of the inpatient hospital market basket update for FY 2026.

We are inviting public comments on our proposed Factor 1 for FY 2026.

IV. Proposed Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2026 (§ 412.106)

2. Calculation of Proposed Factor 2 for FY 2026

a. Background

Section 1886(r)(2)(B) of the Act establishes Factor 2 in the calculation of the uncompensated care payment. Section 1886(r)(2)(B)(ii) of the Act provides that, for FY 2018 and subsequent fiscal years, the second factor is 1 minus the percent change in the percent of individuals who are uninsured, as determined by comparing the percent of individuals who were uninsured in 2013 (as estimated by the Secretary, based on data from the Census Bureau or other sources the Secretary determines appropriate, and certified by the Chief Actuary of CMS) and the percent of individuals who were uninsured in the most recent period for which data are available (as so estimated and certified).

We are continuing to use the methodology that was used in FY 2018 through FY 2025 to determine Factor 2 for FY 2026—to use the National Health Expenditure Accounts (NHEA) data to determine the percent change in the percent of individuals who are uninsured. We refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38197 and 38198) for a complete discussion of the NHEA and why we determined, and continue to believe, that it is the data source for the rate of uninsurance that, on balance, best meets all our considerations and is consistent with the statutory requirement that the estimate of the rate of uninsurance be based on data from the Census Bureau or other sources the Secretary determines appropriate.

[217] *https://www.cms.gov/research-statistics-data-and-systems/statistics-trends-and-reports/reportstrustfunds/downloads/technicalpanelreport2010-2011.pdf.*

In brief, the NHEA represents the government's official estimates of economic activity (spending) within the health sector. The NHEA includes comprehensive enrollment estimates for total private health insurance (PHI) (including direct-purchase and employer-sponsored plans), Medicare, Medicaid, the Children's Health Insurance Program (CHIP), and other public programs, and estimates of the number of individuals who are uninsured. The NHEA data are publicly available on the CMS website at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/NationalHealthExpendData/index.html*.

To compute Factor 2 for FY 2026, the first metric that is needed is the proportion of the total U.S. population that was uninsured in 2013. For a complete discussion of the approach OACT used to prepare the NHEA's estimate of the rate of uninsurance in 2013, including the data sources used, we refer readers to the FY 2024 IPPS/LTCH PPS final rule (88 FR 58998–58999).

The next metrics needed to compute Factor 2 for FY 2026 are projections of the rate of uninsurance in both CY 2025 and CY 2026 for the total U.S. population. On an annual basis, OACT projects enrollment and spending trends for the coming 10-year period. The most recent projections are for 2023 through 2032 and were published on June 12, 2024. Those projections used the latest NHEA historical data that were available at the time of their construction (that is, historical data through 2022). The NHEA projection methodology accounts for expected changes in enrollment across all of the categories of insurance coverage previously listed. For a complete discussion of how the NHEA data account for expected changes in enrollment across all the categories of insurance coverage previously listed, we refer readers to the FY 2024 IPPS/LTCH PPS final rule (88 FR 58999).

b. Proposed Factor 2 for FY 2026

Using these data sources and the previously described methodologies, at the time of developing this proposed rule, OACT has estimated that the uninsured rate for the historical, baseline year of 2013 was 14 percent, and that the uninsured rates for CYs 2025 and 2026 were 7.7 percent and 8.7 percent, respectively. As required by section 1886(r)(2)(B)(ii) of the Act, the Chief Actuary of CMS certified these estimates. We refer readers to OACT's Memorandum on Certification of Rates of Uninsured prepared for this FY 2026 IPPS/LTCH PPS proposed rule for further details on the methodology and assumptions that were used in the projection of these rates of uninsurance.[218]

As with the CBO estimates on which we based Factor 2 for fiscal years before FY 2018, the NHEA estimates are for a calendar year. Under the approach originally adopted in the FY 2014 IPPS/LTCH PPS final rule, we use a weighted average approach to project the rate of uninsurance for each fiscal year. We continue to believe that, in order to estimate the rate of uninsurance during a fiscal year accurately, Factor 2 should reflect the estimated rate of uninsurance that hospitals will experience during the fiscal year, rather than the rate of uninsurance during only one of the calendar years that the fiscal year spans. Accordingly, in this FY 2026 IPPS/LTCH PPS proposed rule, we are continuing to apply the weighted average approach used in past fiscal years to estimate this proposed rule's rate of uninsurance for FY 2026.

OACT certified the estimate of the rate of uninsurance for FY 2026 determined using this weighted average approach to be reasonable and appropriate for purposes of section 1886(r)(2)(B)(ii) of the Act. We note that we may also consider the use of more recent data that may become available for purposes of estimating the rates of uninsurance used in the calculation of the final Factor 2 for FY 2026. The calculation of the proposed Factor 2 for FY 2026 is as follows:

- Percent of individuals without insurance for CY 2013: 14 percent.
- Percent of individuals without insurance for CY 2025: 7.7 percent.
- Percent of individuals without insurance for CY 2026: 8.7 percent.
- Percent of individuals without insurance for FY 2026: (0.25 times 0.077) + (0.75 times 0.087) = 8.5 percent.
- FY 2026's proposed Factor 2 is calculated as 1 minus the percent change in the percent of individuals without insurance between CY 2013 and FY 2026.
- Proposed Factor 2 is as follows: $1-|((0.14-0.085)/0.14)| = 1-0.3929 = 0.6071$.

We are proposing that Factor 2 for FY 2026 would be 60.71 percent.

The proposed FY 2026 uncompensated care amount is equivalent to proposed Factor 1 multiplied by proposed Factor 2, which is $7,140,406,650.

We are inviting public comments on our proposed Factor 2 for FY 2026.

3. Calculation of Proposed Factor 3 for FY 2026

a. General Background

Section 1886(r)(2)(C) of the Act defines Factor 3 in the calculation of the uncompensated care payment. As we have discussed earlier, section 1886(r)(2)(C) of the Act states that Factor 3 is equal to the percent, for each subsection (d) hospital, that represents the quotient of: (1) the amount of uncompensated care for such hospital for a period selected by the Secretary (as estimated by the Secretary, based on appropriate data (including, in the case where the Secretary determines alternative data are available that are a better proxy for the costs of subsection (d) hospitals for treating the uninsured, the use of such alternative data)); and (2) the aggregate amount of uncompensated care for all subsection (d) hospitals that receive a payment under section 1886(r) of the Act for such period (as so estimated, based on such data).

Therefore, Factor 3 is a hospital-specific value that expresses the proportion of the estimated uncompensated care amount for each subsection (d) hospital and each subsection (d) Puerto Rico hospital with the potential to receive Medicare DSH payments relative to the estimated uncompensated care amount for all hospitals estimated to receive Medicare DSH payments in the fiscal year for which the uncompensated care payment is to be made. Factor 3 is applied to the product of Factor 1 and Factor 2 to determine the amount of the uncompensated care payment that each eligible hospital will receive for FY 2014 and subsequent fiscal years. In order to implement the statutory requirements for this factor of the uncompensated care payment formula, it was necessary for us to determine: (1) the definition of uncompensated care or, in other words, the specific items that are to be included in the numerator (that is, the estimated uncompensated care amount for an individual hospital) and the denominator (that is, the estimated uncompensated care amount for all hospitals estimated to receive Medicare DSH payments in the applicable fiscal year); (2) the data source(s) for the estimated uncompensated care amount; and (3) the timing and manner of computing the quotient for each hospital estimated to receive Medicare DSH payments. The statute instructs the Secretary to estimate the amounts of uncompensated care for a period based

[218] *https://www.cms.gov/files/document/certification-rates-uninsured-2026-proposed-rule.pdf.*

on appropriate data. In addition, we note that the statute permits the Secretary to use alternative data in the case where the Secretary determines that such alternative data are available that are a better proxy for the costs of subsection (d) hospitals for treating individuals who are uninsured. For a discussion of the methodology, we used to calculate Factor 3 for fiscal years 2014 through 2022, we refer readers to the FY 2024 IPPS/LTCH final rule (88 FR 59001 and 59002).

b. Background on the Methodology Used To Calculate Factor 3 for FY 2024 and Subsequent Years

Section 1886(r)(2)(C) of the Act governs the selection of the data to be used in calculating Factor 3 and allows the Secretary the discretion to determine the time periods from which we will derive the data to estimate the numerator and the denominator of the Factor 3 quotient. Specifically, section 1886(r)(2)(C)(i) of the Act defines the numerator of the quotient as the amount of uncompensated care for a subsection (d) hospital for a period selected by the Secretary. Section 1886(r)(2)(C)(ii) of the Act defines the denominator as the aggregate amount of uncompensated care for all subsection (d) hospitals that receive a payment under section 1886(r) of the Act for such period. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50634 through 50647), we adopted a process of making interim payments with final cost report settlement for both the empirically justified Medicare DSH payments and the uncompensated care payments required by section 3133 of the Affordable Care Act. Consistent with that process, we also determined the time period from which to calculate the numerator and denominator of the Factor 3 quotient in a way that would be consistent with making interim and final payments. Specifically, we must have Factor 3 values available for hospitals that we estimate will qualify for Medicare DSH payments for a fiscal year and for those hospitals that we do not estimate will qualify for Medicare DSH payments for that fiscal year but that may ultimately qualify for Medicare DSH payments for that fiscal year at the time of cost report settlement.

As described in the FY 2022 IPPS/LTCH PPS final rule, commenters expressed concerns that the use of only 1 year of data to determine Factor 3 would lead to significant variations in year-to-year uncompensated care payments. Some stakeholders recommended the use of 2 years of historical data from Worksheet S–10 data of the Medicare cost report (86 FR 45237). In the FY 2022 IPPS/LTCH PPS final rule, we stated that we would consider using multiple years of data when the vast majority of providers had been audited for more than 1 fiscal year under the revised reporting instructions. Audited FY 2020 cost reports were available for the development of the FY 2024 IPPS/LTCH PPS proposed and final rules. Feedback from previous audits and lessons learned were incorporated into the audit process for the FY 2020 reports.

In consideration of the comments discussed in the FY 2022 IPPS/LTCH PPS final rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49036 through 49047), we finalized a policy of using a multi-year average of audited Worksheet S–10 data to determine Factor 3 for FY 2023 and subsequent fiscal years. We explained our belief that this approach would be generally consistent with our past practice of using the most recent single year of audited data from the Worksheet S–10, while also addressing commenters' concerns regarding year-to-year fluctuations in uncompensated care payments. Under this policy, we used a 2-year average of audited FY 2018 and FY 2019 Worksheet S–10 data to calculate Factor 3 for FY 2023. We also indicated that we expected FY 2024 would be the first year that 3 years of audited data would be available at the time of rulemaking. For FY 2024 and subsequent fiscal years, we finalized a policy of using a 3-year average of the uncompensated care data from the 3 most recent fiscal years for which audited data are available to determine Factor 3. Consistent with the approach that we followed when multiple years of data were previously used in the Factor 3 methodology, if a hospital does not have data for all 3 years used in the Factor 3 calculation, we will determine Factor 3 based on an average of the hospital's available data. For IHS and Tribal hospitals and Puerto Rico hospitals, we use the same multi-year average of Worksheet S–10 data to determine Factor 3 for FY 2024 and subsequent fiscal years as is used to determine Factor 3 for all other DSH-eligible hospitals (in other words, hospitals eligible to receive empirically justified Medicare DSH payments for a fiscal year) to determine Factor 3.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49033 through 49047), we also modified our policy regarding cost reports that start in one fiscal year and span the entirety of the following fiscal year. Specifically, in the rare cases when we use a cost report that starts in one fiscal year and spans the entirety of the subsequent fiscal year to determine uncompensated care costs for the subsequent fiscal year, we would not use the same cost report to determine the hospital's uncompensated care costs for the earlier fiscal year. We explained that using the same cost report to determine uncompensated care costs for both fiscal years would not be consistent with our intent to smooth year-to-year variation in uncompensated care costs. As an alternative, we finalized our proposal to use the hospital's most recent prior cost report, if that cost report spans the applicable period.[219]

(1) Scaling Factor

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69323), we continued the policy finalized in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49042) to address the effects of calculating Factor 3 using data from multiple fiscal years, in which we apply a scaling factor to the Factor 3 values calculated for all DSH-eligible hospitals so that total uncompensated care payments to hospitals that are projected to be DSH-eligible for a fiscal year will be consistent with the estimated amount available to make uncompensated care payments for that fiscal year. Pursuant to that policy, we divide 1 (the expected sum of all DSH-eligible hospitals' Factor 3 values) by the actual sum of all DSH-eligible hospitals' Factor 3 values and then multiply the quotient by the uncompensated care payment determined for each DSH-eligible hospital to obtain a scaled uncompensated care payment amount for each hospital. This process is designed to ensure that the sum of the scaled uncompensated care payments for all hospitals that are projected to be DSH-eligible is consistent with the estimate of the total amount available to make uncompensated care payments for the applicable fiscal year.

(2) New Hospital Policy for Purposes of Factor 3

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69323), we continued our new hospital policy that was modified in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49042) and initially adopted in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42370 through 42371) to determine Factor 3 for new hospitals. Consistent with our policy of using

[219] For example, in determining Factor 3 for FY 2023, we did not use the same cost report to determine a hospital's uncompensated care costs for both FY 2018 and FY 2019. Rather, we used the cost report that spanned the entirety of FY 2019 to determine uncompensated care costs for FY 2019 and used the hospital's most recent prior cost report to determine its uncompensated care costs for FY 2018, provided that cost report spanned some portion of FY 2018.

multiple years of cost reports to determine Factor 3, we defined new hospitals as hospitals that do not have cost report data for the most recent year of data being used in the Factor 3 calculation. Under this definition, the cut-off date for the new hospital policy is the beginning of the fiscal year after the most recent year for which audits of the Worksheet S–10 data have been conducted. For FY 2026, the FY 2022 cost reports are the most recent year of cost reports for which audits of Worksheet S–10 data have been conducted. Thus, hospitals with CMS Certification Numbers (CCNs) established on or after October 1, 2022, would be subject to the new hospital policy for FY 2026.

Under our modified new hospital policy, if a new hospital has a preliminary projection of being DSH-eligible based on its most recent available disproportionate patient percentage, it may receive interim empirically justified DSH payments. However, new hospitals will not receive interim uncompensated care payments because we would have no uncompensated care data on which to determine what those interim payments should be. The MAC will make a final determination concerning whether the hospital is eligible to receive Medicare DSH payments at cost report settlement. In FY 2025, while we continued to determine the numerator of the Factor 3 calculation using the new hospital's uncompensated care costs reported on Worksheet S–10 of the hospital's cost report for the current fiscal year, we determined Factor 3 for new hospitals using a denominator based solely on uncompensated care costs from cost reports for the most recent fiscal year for which audits have been conducted. In addition, we applied a scaling factor to the Factor 3 calculation for a new hospital.[220]

(3) Newly Merged Hospital Policy

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 690323 through 690324), we continued our policy of treating hospitals that merge after the development of the final rule for the applicable fiscal year similar to new hospitals. As explained in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50021), for these newly merged hospitals, we do not have data currently available to calculate a Factor 3 amount that accounts for the merged hospital's uncompensated care burden. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50021 and 50022), we finalized a policy under which Factor 3 for hospitals that we do not identify as undergoing a merger until after the public comment period and additional review period following the publication of the final rule or that undergo a merger during the fiscal year will be recalculated similar to new hospitals.

Consistent with the policy adopted in the FY 2015 IPPS/LTCH PPS final rule, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 690323 through 690324), we stated that we would continue to treat newly merged hospitals in a similar manner to new hospitals, such that the newly merged hospital's final uncompensated care payment will be determined at cost report settlement where the numerator of the newly merged hospital's Factor 3 will be based on the cost report of only the surviving hospital (that is, the newly merged hospital's cost report) for the current fiscal year. However, if the hospital's cost reporting period includes less than 12 months of data, the data from the newly merged hospital's cost report will be annualized for purposes of the Factor 3 calculation. Consistent with the methodology used to determine Factor 3 for new hospitals described in section IV.E.3. of the preamble of this proposed rule, we continued our policy for determining Factor 3 for newly merged hospitals using a denominator that is the sum of the uncompensated care costs for all DSH-eligible hospitals, as reported on Worksheet S–10 of their cost reports for the most recent fiscal year for which audits have been conducted. In addition, we apply a scaling factor, as discussed in section IV.E.3. of the preamble of this proposed rule, to the Factor 3 calculation for a newly merged hospital. In the FY 2025 IPPS/LTCH PPS final rule, we explained that consistent with past policy, interim uncompensated care payments for the newly merged hospital would be based only on the data for the surviving hospital's CCN available at the time of the development of the final rule.

(4) CCR Trim Methodology

The calculation of a hospital's total uncompensated care costs on Worksheet S–10 requires the use of the hospital's cost to charge ratio (CCR). In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69324), we continued the policy of trimming CCRs, which we adopted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49043), for FY 2025. Under this policy, we apply the following steps to determine the applicable CCR separately for each fiscal year that is included as part of the multi-year average used to determine Factor 3:

Step 1: Remove Maryland hospitals. In addition, we will remove all-inclusive rate providers because their CCRs are not comparable to the CCRs calculated for other IPPS hospitals.

Step 2: Calculate a CCR ''ceiling'' for the applicable fiscal year with the following data: for each IPPS hospital that was not removed in Step 1 (including hospitals that are not DSH-eligible), we use cost report data to calculate a CCR by dividing the total costs on Worksheet C, Part I, Line 202, Column 3 by the charges reported on Worksheet C, Part I, Line 202, Column 8. (Combining data from multiple cost reports from the same fiscal year is not necessary, as the longer cost report will be selected.) The ceiling is calculated as 3 standard deviations above the national geometric mean CCR for the applicable fiscal year. This approach is consistent with the methodology for calculating the CCR ceiling used for high-cost outliers. Remove all hospitals that exceed the ceiling so that these aberrant CCRs do not skew the calculation of the statewide average CCR.

Step 3: Using the CCRs for the remaining hospitals in Step 2, determine the urban and rural statewide average CCRs for the applicable fiscal year for hospitals within each State (including hospitals that are not DSH-eligible), weighted by the sum of total hospital discharges from Worksheet S–3, Part I, Line 14, Column 15.

Step 4: Assign the appropriate statewide average CCR (urban or rural) calculated in Step 3 to all hospitals, excluding all-inclusive rate providers, with a CCR for the applicable fiscal year greater than 3 standard deviations above the national geometric mean for that fiscal year (that is, the CCR ''ceiling'').

Step 5: For hospitals that did not report a CCR on Worksheet S–10, Line 1, we assign them the statewide average CCR for the applicable fiscal year as determined in step 3.

After completing these steps, we re-calculate the hospital's uncompensated care costs (Line 30) for the applicable fiscal year using the trimmed CCR (the statewide average CCR (urban or rural, as applicable)).

(5) Uncompensated Care Data Trim Methodology

After applying the CCR trim methodology, there are rare situations where a hospital has potentially aberrant uncompensated care data for a fiscal year that are unrelated to its CCR. Therefore, under the trim methodology for potentially aberrant uncompensated

[220] In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49042), we explained our belief that applying the scaling factor is appropriate for purposes of calculating Factor 3 for all hospitals, including new hospitals and hospitals that are treated as new hospitals, to improve consistency and predictability across all hospitals.

care costs (UCC) that was included as part of the methodology for purposes of determining Factor 3 in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58832), if the hospital's uncompensated care costs for any fiscal year that is included as a part of the multi-year average are an extremely high ratio (greater than 50 percent) of its total operating costs in the applicable fiscal year, we will determine the ratio of uncompensated care costs to the hospital's total operating costs from another available cost report, and apply that ratio to the total operating expenses for the potentially aberrant fiscal year to determine an adjusted amount of uncompensated care costs for the applicable fiscal year.[221]

However, we note that we have audited the Worksheet S–10 data that will be used in the Factor 3 calculation for a number of hospitals. Because the UCC data for these hospitals have been subject to audit, we believe that there is increased confidence that if high uncompensated care costs are reported by these audited hospitals, the information is accurate. Therefore, as we explained in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58832), we determined it is unnecessary to apply the UCC trim methodology for a fiscal year for which a hospital's UCC data have been audited.

In rare cases, hospitals that are not currently projected to be DSH-eligible and that do not have audited Worksheet S–10 data may have a potentially aberrant amount of insured patients' charity care costs (line 23 column 2). In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69324 through 69325), we stated that in addition to the UCC trim methodology, we will continue to apply an alternative trim specific to certain hospitals that do not have audited Worksheet S–10 data for one or more of the fiscal years that are used in the Factor 3 calculation. For FY 2023 and subsequent fiscal years, in the rare case that a hospital's insured patients' charity care costs for a fiscal year are greater than $7 million and the ratio of the hospital's cost of insured patient charity care (line 23 column 2) to total uncompensated care costs (line 30) is greater than 60 percent, we will not calculate a Factor 3 for the hospital at the time of proposed or final rulemaking. This trim will only impact hospitals that are not currently projected to be DSH-eligible; and therefore, are not part of the calculation of the denominator of Factor 3, which includes only uncompensated care costs for hospitals projected to be DSH-eligible. Consistent with the approach adopted in the FY 2022 IPPS/LTCH PPS final rule, if a hospital would be trimmed under both the UCC trim methodology and this alternative trim, we will apply this trim in place of the existing UCC trim methodology. We continue to believe this alternative trim more appropriately addresses potentially aberrant insured patient charity care costs compared to the UCC trim methodology, because the UCC trim is based solely on the ratio of total uncompensated care costs to total operating costs and does not consider the level of insured patients' charity care costs.

Similar to the approach initially adopted in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45245 and 45246), in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69324), we also stated that we would continue to use a threshold of 3 standard deviations from the mean ratio of insured patients' charity care costs to total uncompensated care costs (line 23 column 2 divided by line 30) and a dollar threshold that is the median total uncompensated care cost reported on most recent audited cost reports for hospitals that are projected to be DSH-eligible. We stated that we continued to believe these thresholds are appropriate to address potentially aberrant data. We also continued to include Worksheet S–10 data from IHS/Tribal hospitals and Puerto Rico hospitals consistent with our policy finalized in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49047 through 49051). In addition, we continued our policy adopted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49044) of applying the same threshold amounts originally calculated for the FY 2019 reports to identify potentially aberrant data for FY 2025 and subsequent fiscal years to facilitate transparency and predictability. If a hospital subject to this trim is determined to be DSH-eligible at cost report settlement, the MAC will calculate the hospital's Factor 3 using the same methodology used to calculate Factor 3 for new hospitals.

c. Methodology for Calculating Factor 3 for FY 2026

For FY 2026, consistent with § 412.106(g)(1)(iii)(C)(*11*), we are following the same methodology as applied in FY 2024 and described in the previous section of the preamble of this proposed rule to determine Factor 3 using the most recent 3 years of audited cost reports, from FY 2020, FY 2021, and FY 2022. Consistent with our approach for FY 2025, for FY 2026, we are also applying the scaling factor, new hospital, newly merged hospital, CCR trim methodology, UCC trim, and alternative trim methodology policies discussed in the previous section of the preamble of this proposed rule. For purposes of the FY 2026 IPPS/LTCH PPS proposed rule, we are using reports from the December 2024 HCRIS extract to calculate Factor 3. We intend to use the March 2025 update of HCRIS to calculate the final Factor 3 for the FY 2026 IPPS/LTCH PPS final rule.

Thus, for FY 2026, we will use 3 years of audited Worksheet S–10 Part 1 data to calculate Factor 3 for all eligible hospitals, including IHS and Tribal hospitals and Puerto Rico hospitals that have a cost report for 2013, following the below steps. We note that we are clarifying in these steps our use of Worksheet S–10, Part I, rather than Worksheet S–10, Part II, to calculate Factor 3.

Step 1: Select the hospital's longest cost report for each of the most recent 3 years of fiscal year (FY) audited cost reports (FY 2020, FY 2021, and FY 2022). Alternatively, in the rare case when the hospital has no cost report for a particular year because the cost report for the previous fiscal year spanned the more recent fiscal year, the previous fiscal year cost report will be used in this step. In the rare case that using a previous fiscal year cost report results in a period without a report, we would use the prior year report, if that cost report spanned the applicable period.[222] In general, we note that, for purposes of the Factor 3 methodology, references to a fiscal year cost report are to the cost report that spans the relevant fiscal year.

Step 2: Annualize the UCC from Worksheet S–10, Part I, Line 30, if a cost report is more than or less than 12 months. (If applicable, use the statewide average CCR (urban or rural) to calculate uncompensated care costs.)

Step 3: Combine adjusted and/or annualized uncompensated care costs for hospitals that merged using the merger policy.

Step 4: Calculate Factor 3 for all DSH-eligible hospitals using annualized uncompensated care costs (Worksheet S–10, Part I, Line 30) based on cost report data from the most recent 3 years

[221] For example, if a hospital's FY 2018 cost report is determined to include potentially aberrant data, data from its FY 2019 cost report would be used for the ratio calculation.

[222] For example, if a hospital does not have a FY 2020 cost report because the hospital's FY 2019 cost report spanned the FY 2020 time period, we will use the FY 2019 cost report that spanned the FY 2020 time period for this step. Using the same example, where the hospital's FY 2019 report is used for the FY 2020 time period, we will use the hospital's FY 2018 report if it spans some of the FY 2019 time period. We will not use the same cost report for both the FY 2020 and the FY 2019 time periods.

of audited cost reports (from Step 1, 2 or 3). New hospitals and other hospitals that are treated as if they are new hospitals for purposes of Factor 3 are excluded from this calculation.

Step 5: Average the Factor 3 values from Step 4; that is, add the Factor 3 values, and divide that amount by the number of cost reporting periods with data to compute an average Factor 3 for the hospital. Multiply by a scaling factor, as discussed in the previous section of the preamble of this proposed rule.

As we explained previously in this section, for FY 2026, we are also applying the scaling factor, new hospital, newly merged hospital, CCR trim methodology, UCC trim, and alternative trim methodology policies discussed in the previous section of the preamble of this proposed rule. For a hospital that is subject to either of the trims for potentially aberrant data (the UCC trim and alternative trim methodology explained in the previous section of the preamble of this proposed rule) and is ultimately determined to be DSH-eligible at cost report settlement, its uncompensated care payment will be calculated only after the hospital's reporting of insured charity care costs on its FY 2026 Worksheet S–10 has been reviewed. Accordingly, the MAC will calculate a Factor 3 for the hospital only after reviewing the uncompensated care information reported on Worksheet S–10 of the hospital's FY 2026 cost report. Then we will calculate Factor 3 for the hospital using the same methodology used to determine Factor 3 for new hospitals. Specifically, the numerator will reflect the uncompensated care costs reported on the hospital's FY 2026 cost report, while the denominator will reflect the sum of the uncompensated care costs reported on Worksheet S–10 of the FY 2022 cost reports of all DSH-eligible hospitals. In addition, we will apply a scaling factor, as discussed previously, to the Factor 3 calculation for the hospital.

Under the CCR trim methodology, for purposes of this proposed rule, the statewide average CCR was applied to 8 hospitals' FY 2020 reports, of which 2 hospitals had FY 2020 Worksheet S–10 data. The statewide average CCR was applied to 10 hospitals' FY 2021 reports, of which 4 hospitals had FY 2021 Worksheet S–10 data. The statewide average CCR was applied to 8 hospitals' FY 2022 reports, of which 2 hospitals had FY 2022 Worksheet S–10 data.

For purposes of the FY 2026 IPPS/LTCH PPS final rule, consistent with our Factor 3 methodology since the FY 2014 IPPS/LTCH PPS final rule (78 FR 50642), we intend to use data from the March 2025 HCRIS extract for this calculation, which would be the latest quarterly HCRIS extract that is publicly available at the time of the development of the FY 2026 IPPS/LTCH PPS final rule.

Regarding requests from providers to amend and/or reopen previously audited Worksheet S–10 data for the most recent 3 cost reporting years that are used in the methodology for calculating Factor 3, we note that MACs follow normal timelines and procedures. For purposes of the Factor 3 calculation for the FY 2026 IPPS/LTCH PPS final rule, any amended reports and/or reopened reports would need to have completed the amended report and/or reopened report submission processes by the end of March 2025. In other words, if the amended report and/or reopened report is not available for the March HCRIS extract, then that amended and/or reopened report data would not be part of the FY 2026 IPPS/LTCH PPS final rule's Factor 3 calculation. We note that the March HCRIS data extract will be available during the comment period for this proposed rule if providers want to verify that their amended and/or reopened data is reflected in the March HCRIS extract.

d. Per-Discharge Amount of Interim Uncompensated Care Payments for FY 2026

Since FY 2014, we have made interim uncompensated care payments during the fiscal year on a per-discharge basis. Typically, we use a 3-year average of the number of discharges for a hospital to produce an estimate of the amount of the hospital's uncompensated care payment per discharge. Specifically, the hospital's total uncompensated care payment amount for the applicable fiscal year is divided by the hospital's historical 3-year average of discharges computed using the most recent available data to determine the uncompensated care payment per discharge for that fiscal year.

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69328–69329), we finalized a policy to use a 3-year average of the most recent years of available historical discharge data to calculate a per-discharge payment amount that would be used to make interim uncompensated care payments to each projected DSH-eligible hospital during FY 2026 and subsequent fiscal years, codified at 42 CFR 412.106(i)(1). We are applying this policy for FY 2026. Interim uncompensated care payments made to a hospital during the fiscal year are reconciled following the end of the year to ensure that the final payment amount is consistent with the hospital's prospectively determined uncompensated care payment for the fiscal year.

As we explained in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69329 through 69330), we also finalized a voluntary process in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58833 and 58834), through which a hospital may submit a request to its MAC for a lower per-discharge interim uncompensated care payment amount, including a reduction to zero, once before the beginning of the fiscal year and/or once during the fiscal year. In conjunction with this request, the hospital must provide supporting documentation demonstrating that there would likely be a significant recoupment at cost report settlement if the per-discharge amount is not lowered (for example, recoupment of 10 percent or more of the hospital's total uncompensated care payment, or at least $100,000). For example, a hospital might submit documentation showing a large projected increase in discharges during the fiscal year to support reduction of its per-discharge uncompensated care payment amount. As another example, a hospital might request that its per-discharge uncompensated care payment amount be reduced to zero midyear if the hospital's interim uncompensated care payments during the year have already surpassed the total uncompensated care payment calculated for the hospital.

Under the policy we finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58833 through 58834), the hospital's MAC will evaluate these requests and the supporting documentation before the beginning of the fiscal year and/or with midyear requests when the historical average number of discharges is lower than the hospital's projected discharges for the current fiscal year. If, following review of the request and the supporting documentation, the MAC agrees that there likely would be significant recoupment of the hospital's interim Medicare uncompensated care payments at cost report settlement, the only change that will be made is to lower the per-discharge amount either to the amount requested by the hospital or another amount determined by the MAC to be appropriate to reduce the likelihood of a substantial recoupment at cost report settlement. If the MAC determines it would be appropriate to reduce the interim Medicare uncompensated care payment per-discharge amount, that updated amount will be used for purposes of the outlier payment calculation for the remainder of the fiscal year. We are continuing to

apply this policy for FY 2026. We refer readers to the Addendum in the FY 2023 IPPS/LTCH final rule for a more detailed discussion of the steps for determining the operating and capital Federal payment rate and the outlier payment calculation (87 FR 49431 through 49432). No change would be made to the total uncompensated care payment amount determined for the hospital on the basis of its Factor 3. In other words, any change to the per-discharge uncompensated care payment amount will not change how the total uncompensated care payment amount will be reconciled at cost report settlement.

e. Process for Notifying CMS of Merger Updates and To Report Upload Issues

As we have done for every proposed and final rule beginning in FY 2014, in conjunction with this proposed rule, we will publish on the CMS website a table listing Factor 3 for hospitals that we estimate will receive empirically justified Medicare DSH payments in FY 2026 (that is, those hospitals that will receive interim uncompensated care payments during the fiscal year), and for the remaining subsection (d) hospitals and subsection (d) Puerto Rico hospitals that have the potential of receiving an uncompensated care payment in the event that they receive an empirically justified Medicare DSH payment for the fiscal year as determined at cost report settlement. However, we note that a Factor 3 will not be published for new hospitals and hospitals that are subject to the alternative trim for hospitals with potentially aberrant data that are not projected to be DSH-eligible.

We will also publish a supplemental data file containing a list of the mergers that we are aware of and the computed uncompensated care payment for each merged hospital. In the DSH uncompensated care supplemental data file, we list new hospitals and the 8 hospitals that would be subject to the alternative trim for hospitals with potentially aberrant data that are not projected to be DSH-eligible, with a N/A in the Factor 3 column.

Hospitals have 60 days from the date of public display of the FY 2026 IPPS/LTCH PPS proposed rule in the **Federal Register** to review the table and supplemental data file published on the CMS website in conjunction with this proposed rule and to notify CMS in writing of issues related to mergers and/or to report potential upload discrepancies due to MAC mishandling of Worksheet S–10 data during the report submission process.[223] Comments raising issues or concerns that are specific to the information included in the table and supplemental data file should be submitted by email to the CMS inbox at *Section3133DSH@cms.hhs.gov*. We will address comments related to mergers and/or reporting upload discrepancies submitted to the CMS DSH inbox as appropriate in the table and the supplemental data file that we publish on the CMS website in conjunction with the publication of the FY 2026 IPPS/LTCH PPS final rule. All other comments submitted in response to our proposals for FY 2026 must be submitted in one of the three ways found in the **ADDRESSES** section of the proposed rule before the close of the comment period in order to be assured consideration. In addition, we note that the CMS DSH inbox is not intended for Worksheet S–10 audit process related emails, which should be directed to the MACs.

VI. Other Proposed Decisions and Changes to the IPPS for Operating Costs

A. Proposed Changes to MS–DRGs Subject to Postacute Care Transfer Policy and MS–DRG Special Payments Policies (§ 412.4)

1. Background

Existing regulations at 42 CFR 412.4(a) define discharges under the IPPS as situations in which a patient is formally released from an acute care hospital or dies in the hospital. Section 412.4(b) defines acute care transfers, and § 412.4(c) defines postacute care transfers. Our policy set forth in § 412.4(f) provides that when a patient is transferred and his or her length of stay is less than the geometric mean length of stay for the MS–DRG to which the case is assigned, the transferring hospital is generally paid based on a graduated per diem rate for each day of stay, not to exceed the full MS–DRG payment that would have been made if the patient had been discharged without being transferred.

The per diem rate paid to a transferring hospital is calculated by dividing the full MS–DRG payment by the geometric mean length of stay for the MS–DRG. Based on an analysis that showed that the first day of hospitalization is the most expensive (60 FR 45804), our policy generally provides for payment that is twice the per diem amount for the first day, with each subsequent day paid at the per diem amount up to the full MS–DRG payment (§ 412.4(f)(1)). Transfer cases also are eligible for outlier payments. In general, the outlier threshold for transfer cases, as described in § 412.80(b), is equal to (Fixed-Loss Outlier threshold for Nontransfer Cases adjusted for geographic variations in costs/Geometric Mean Length of Stay for the MS–DRG) * (Length of Stay for the Case plus 1 day).

We established the criteria set forth in § 412.4(d) for determining which DRGs qualify for postacute care transfer payments in the FY 2006 IPPS final rule (70 FR 47419 through 47420). The determination of whether a DRG is subject to the postacute care transfer policy was initially based on the Medicare Version 23.0 GROUPER (FY 2006) and data from the FY 2004 MedPAR file. However, if a DRG did not exist in Version 23.0 or a DRG included in Version 23.0 is revised, we use the current version of the Medicare GROUPER and the most recent complete year of MedPAR data to determine if the DRG is subject to the postacute care transfer policy. Specifically, if the MS–DRG's total number of discharges to postacute care equals or exceeds the 55th percentile for all MS–DRGs and the proportion of short-stay discharges to postacute care to total discharges in the MS–DRG exceeds the 55th percentile for all MS–DRGs, CMS will apply the postacute care transfer policy to that MS–DRG and to any other MS–DRG that shares the same base MS–DRG. The statute at subparagraph 1886(d)(5)(J) of the Act directs CMS to identify MS–DRGs based on a high volume of discharges to postacute care facilities and a disproportionate use of postacute care services. As discussed in the FY 2006 IPPS final rule (70 FR 47416), we determined that the 55th percentile is an appropriate level at which to establish these thresholds. In that same final rule (70 FR 47419), we stated that we will not revise the list of DRGs subject to the postacute care transfer policy annually unless we are making a change to a specific MS–DRG.

To account for MS–DRGs subject to the postacute care policy that exhibit exceptionally higher shares of costs very early in the hospital stay, § 412.4(f) also includes a special payment methodology. For these MS–DRGs, hospitals receive 50 percent of the full MS–DRG payment, plus the single per diem payment, for the first day of the stay, as well as a per diem payment for subsequent days (up to the full MS–DRG payment (§ 412.4(f)(6))). For an MS–DRG to qualify for the special payment methodology, the geometric mean length of stay must be greater than 4

[223] For example, if the report does not reflect audit results due to MAC mishandling, or the most recent report differs from a previously accepted, amended report due to MAC mishandling.

days, and the average charges of 1-day discharge cases in the MS–DRG must be at least 50 percent of the average charges for all cases within the MS–DRG. MS–DRGs that are part of an MS–DRG severity level group will qualify under the MS–DRG special payment methodology policy if any one of the MS–DRGs that share that same base MS–DRG qualifies (§ 412.4(f)(6)).

Prior to the enactment of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), under section 1886(d)(5)(J) of the Act, a discharge was deemed a ''qualified discharge'' if the individual was discharged to one of the following postacute care settings:

- A hospital or hospital unit that is not a subsection (d) hospital.
- A skilled nursing facility.
- Related home health services provided by a home health agency provided within a timeframe established by the Secretary (beginning within 3 days after the date of discharge).

Section 53109 of the Bipartisan Budget Act of 2018 amended section 1886(d)(5)(J)(ii) of the Act to also include discharges to hospice care provided by a hospice program as a qualified discharge, effective for discharges occurring on or after October 1, 2018. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41394), we made conforming amendments to § 412.4(c) of the regulation to include discharges to hospice care occurring on or after October 1, 2018, as qualified discharges. We specified that hospital bills with a Patient Discharge Status code of 50 (Discharged/Transferred to Hospice—Routine or Continuous Home Care) or 51 (Discharged/Transferred to Hospice, General Inpatient Care or Inpatient Respite) are subject to the postacute care transfer policy in accordance with this statutory amendment.

2. Proposed Changes for FY 2026

As discussed in the preamble of this proposed rule, based on our analysis of FY 2024 MedPAR claims data, CMS proposed to make changes to a number of MS–DRGs, effective for FY 2026. Specifically, we are proposing the following changes:

- Adding ICD–10–PCS codes describing restriction and replacement of the thoracic aorta, and bypass and occlusion of the subclavian and carotid arteries, to proposed new MS–DRG 209 (Complex Aortic Arch Procedures).
- Adding ICD–10–PCS codes describing restriction of the abdominal aorta and restriction of the iliac artery to proposed new MS–DRG 213 (Endovascular Abdominal Aorta with Iliac Branch Procedures).
- Reassigning ICD–10–PCS codes describing extirpation of matter from coronary arteries to proposed new MS–DRG 318 (Percutaneous Coronary Atherectomy without Intraluminal Device).
- Reassigning ICD–10–PCS codes describing extirpation of matter from coronary arteries and adding ICD–10–PCS codes describing dilation of coronary arteries and insertion of an intraluminal or other device to proposed new MS–DRGs 359 and 360 (Percutaneous Coronary Atherectomy with Intraluminal Device with MCC and without MCC, respectively).
- Adding ICD–10–CM diagnosis codes describing periprosthetic joint infection and ICD–10–PCS procedure codes describing hip or knee procedures to proposed new MS–DRGs 403 and 404 (Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection with MCC and without MCC, respectively).
- Deleting MS–DRGs 294 and 295 (Deep Vein Thrombophlebitis with CC/MCC and without CC/MCC, respectively) and reassigning the ICD–10–CM codes to MS–DRGs 299, 300, and 301 (Peripheral Vascular Disorders with MCC, with CC, and without CC/MCC, respectively).
- Deleting MS–DRG 509 (Arthroscopy) and reassigning the ICD–10–PCS codes describing inspection of various anatomic sites to their respective clinically appropriate MS–DRGs.
- Adding ICD–10–CM diagnosis codes describing the insertion of a radioactive element into the brain to MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator).

When proposing changes to MS–DRGs that involve adding, deleting, and reassigning procedure or diagnosis codes between proposed new and revised MS–DRGs, we continue to believe it is necessary to evaluate the affected MS–DRGs to determine whether they should be subject to the postacute care transfer policy. Considering the proposed changes to the MS–DRGs for FY 2026, according to the regulations under § 412.4(d), we evaluated the proposed new MS–DRGs using the general postacute care transfer policy criteria and data from the FY 2024 MedPAR file. We continue to believe it is appropriate to assess new MS–DRGs and reassess revised MS DRGs when proposing reassignment of procedure codes or diagnosis codes that would result in material changes to an MS DRG. We evaluated any current MS–DRGs if we estimate that more than 5 percent of the current cases would shift from the current assigned MS–DRGs to proposed new MS–DRGs, or to a current MS–DRG from a proposed revised or deleted MS–DRG.

For existing MS–DRGs 321 and 322 (Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ arteries/intraluminal devices, and without MCC, respectively), we determined that more than 5 percent of the current cases would shift from the current assigned MS–DRGs to proposed new MS–DRGs 359 and 360. We also determined that for MS–DRGs 463, 464, and 465 (Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC, with CC, and without MCC/CC, respectively), more than 5 percent of the current cases would shift from the current assigned MS–DRGs to proposed new MS–DRGs 403 and 404. We note that for all other proposed changes, the relative volume of cases shifting to or from current MS–DRGs does not exceed the 5 percent threshold.

If an MS–DRG qualified for the postacute care transfer policy, we also evaluated that MS–DRG under the special payment methodology criteria according to regulations at § 412.4(f)(6).

We note that proposed new MS–DRGs 403 and 404 would qualify to be included on the list of MS–DRGs that are subject to the postacute care transfer policy. We therefore are proposing to add proposed new MS–DRGs 403 and 404 to the list of MS–DRGs that are subject to the postacute care transfer policy.

We note that MS–DRGs 463, 464 and 465 are currently subject to the postacute care transfer policy. As a result of our review, these MS–DRGs, as proposed to be revised, would continue to qualify to be included on the list of MS–DRGs that are subject to the postacute care transfer policy.

Using the December 2024 update of the FY 2024 MedPAR file, we have developed the following chart which sets forth the most recent analysis of the postacute care transfer policy criteria completed for this proposed rule with respect to each of these proposed new or revised MS–DRGs. For the FY 2026 final rule, we intend to update this analysis using the most recent available data at that time.

LIST OF PROPOSED NEW OR REVISED MS–DRGS SUBJECT TO REVIEW OF POSTACUTE CARE TRANSFER POLICY STATUS FOR FY 2026

Proposed new or revised MS–DRG	MS–DRG title	Total cases	Postacute care transfer cases (55th percentile: 1,028)	Short-stay postacute care transfer cases	Percent of shortstay postacute care transfers to all cases (55th percentile: 9.654%)	FY 2025 postacute transfer policy status	Proposed postacute care transfer policy status
209	Complex Aortic Arch Procedures	334	*181	34	10.2%	New	No.
213	Endovascular Abdominal Aorta with Iliac Branch Procedures	1,163	*185	0	*0	New	No.
318	Percutaneous Coronary Atherectomy without Intraluminal Device.	915	*164	7	*0.8	New	No.
359	Percutaneous Coronary Atherectomy with Intraluminal Device with MCC.	3,027	*876	65	*2.2	New	No.
360	Percutaneous Coronary Atherectomy with Intraluminal Device without MCC.	3,934	*398	36	*0.9	New	No.
321	Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ arteries/intraluminal devices.	30,850	8710	798	*2.6	No	No.
322	Percutaneous Cardiovascular Procedures with Intraluminal Device without MCC.	46,159	4254	0	*0	No	No.
403	Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection with MCC.	1,250	1071	494	39.5	New	Yes.
404	Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection without MCC.	2,400	1995	682	28.4	New	Yes.
463	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC.	3,477	2865	1244	35.8	Yes	Yes.
464	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with CC.	4,959	3714	1124	22.7	Yes	Yes.
465	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders without CC/MCC.	1,357	*688	0	*0	Yes	Yes.**

*Indicates a current postacute care transfer policy criterion that the MS–DRG did not meet.
**As described in the policy at 42 CFR 412.4(d)(3)(ii)(D), MS–DRGs that share the same base MS–DRG will all qualify under the postacute care transfer policy if any one of the MS–DRGs that share that same base MS–DRG qualifies.

During our annual review of proposed new or revised MS–DRGs and analysis of the December 2024 update of the FY 2024 MedPAR file, we reviewed the list of proposed revised or new MS–DRGs that qualify to be included on the list of MS–DRGs subject to the postacute care transfer policy for FY 2026 to determine if any of these MS–DRGs would also be subject to the special payment methodology policy for FY 2026.

Based on our analysis of the proposed changes to the MS–DRGs included in the proposed rule, we determined that proposed new and revised MS–DRGs 404 and 464 meet the criteria for the MS–DRG special payment methodology. As described in the regulations at § 412.4(f)(6)(iv), MS–DRGs that share the same base MS–DRG will all qualify under the MS–DRG special payment policy if any one of the MS–DRGs that share that same base MS–DRG qualifies. Therefore, we are proposing that MS–DRGs 403, 404, 463, 464, and 465 would be subject to the MS–DRG special payment methodology, effective for FY 2026. For the FY 2026 final rule, we intend to update this analysis using the most recent available data at that time.

LIST OF PROPOSED NEW OR REVISED MS–DRGS SUBJECT TO REVIEW OF SPECIAL PAYMENT POLICY STATUS FOR FY 2026

Proposed new or revised MS–DRG	MS–DRG title	Geometric mean length of stay	Average charges of 1-day discharges	50 Percent of average charges for all cases within MS–DRG	FY 2025 special payment policy status	Proposed special payment policy status
403	Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection with MCC.	10.57	$0	$130,572	New	Yes.*
404	Hip or Knee Procedures with Principal Diagnosis of Periprosthetic Joint Infection without MCC.	5.58	87,126	72,946	New	Yes.
463	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with MCC.	10.58	58,384	114,609	No	Yes.*
464	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders with CC.	5.40	71,548	68,604	No	Yes.
465	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders without MCC/CC.	1.97	69,981	44,134	No	Yes.*

*As described in the policy at 42 CFR 412.4(f)(6)(iv), MS–DRGs that share the same base MS–DRG will all qualify under the special payment transfer policy if any one of the MS–DRGs that share that same base MS–DRG qualifies.

B. Proposed Changes in the Inpatient Hospital Update for FY 2026 (§ 412.64(d))

1. Proposed FY 2026 Inpatient Hospital Update

In accordance with section 1886(b)(3)(B)(i) of the Act, each year we update the national standardized amount for inpatient hospital operating costs by a factor called the ''applicable percentage increase.'' For FY 2026, we are setting the applicable percentage increase by applying the adjustments listed in this section in the same sequence as we did for FY 2025. (We note that section 1886(b)(3)(B)(xii) of the Act required an additional reduction each year only for FYs 2010 through 2019.) Specifically, consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. The applicable percentage increase under the IPPS for FY 2026 is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to all of the following:

- A reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act.
- A reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful EHR users in accordance with section 1886(b)(3)(B)(ix) of the Act.
- An adjustment based on changes in economy-wide multifactor productivity (MFP) (the productivity adjustment) in accordance with section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi) of the Act, as added by section 3401(a) of the Affordable Care Act, states that application of the productivity adjustment may result in the applicable percentage increase being less than zero.

As published in the FY 2006 IPPS final rule (70 FR 47403), in accordance with section 404 of Public Law 108–173, CMS determined a new frequency for rebasing the hospital market basket of every 4 years. In compliance with section 404 of Public Law 108–173, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45204), we replaced the 2014-based IPPS operating and capital market baskets with the rebased and revised 2018-based IPPS operating and capital market baskets beginning in FY 2022. Consistent with our established frequency of rebasing the IPPS market basket every 4 years, in this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing to rebase and revise the IPPS market basket to a 2023 base year, effective beginning in FY 2026.

We are proposing to base the FY 2026 market basket update used to determine the applicable percentage increase for the IPPS on IHS Global Inc.'s (IGI's) fourth quarter 2024 forecast of the proposed 2023-based IPPS market basket rate-of-increase with historical data through third quarter 2024, which is estimated to be 3.2 percent. We are also proposing that if more recent data subsequently become available (for example, a more recent estimate of the market basket update), we would use such data, if appropriate, to determine the FY 2026 market basket update in the final rule.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51689 through 51692), we finalized our methodology for calculating and applying the productivity adjustment. As we explained in that rule, section 1886(b)(3)(B)(xi)(II) of the Act, as added by section 3401(a) of the Affordable Care Act, defines this productivity adjustment as equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business MFP (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, calendar year, cost reporting period, or other annual period). The U.S. Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measures of private nonfarm business productivity for the U.S. economy. We note that previously the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act was published by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021, release of productivity data, BLS replaced the term multifactor productivity (MFP) with total factor productivity (TFP). BLS noted that this is a change in terminology only and will not affect the data or methodology. As a result of the BLS name change, the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act is now published by BLS as private nonfarm business total factor productivity. However, as mentioned, the data and methods are unchanged. Please see *www.bls.gov* for the BLS historical published TFP data. A complete description of IGI's TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information*. In addition, we note that beginning with the FY 2022 IPPS/LTCH PPS final rule, we refer to this adjustment as the productivity adjustment rather than the MFP adjustment, to more closely track the statutory language in section 1886(b)(3)(B)(xi)(II) of the Act. We note that the adjustment continues to rely on the same underlying data and methodology.

For FY 2026, we are proposing a productivity adjustment of 0.8 percent. Similar to the proposed market basket rate-of-increase, for this proposed rule, the estimate of the proposed FY 2026 productivity adjustment is based on IGI's fourth quarter 2024 forecast. As noted previously, we are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2026 productivity adjustment for the final rule.

Based on these data, we have determined four proposed applicable percentage increases to the standardized amount for FY 2026, as specified in the following table:

TABLE VI.B–01—PROPOSED FY 2026 APPLICABLE PERCENTAGE INCREASES FOR THE IPPS

FY 2026	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Proposed Market Basket Rate-of-Increase	3.2	3.2	3.2	3.2
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.8	−0.8

TABLE VI.B–01—PROPOSED FY 2026 APPLICABLE PERCENTAGE INCREASES FOR THE IPPS—Continued

FY 2026	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−2.4	0.0	−2.4
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8	−0.8	−0.8
Proposed Applicable Percentage Increase Applied to Standardized Amount	2.4	0.0	1.6	−0.8

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42344), we revised our regulations at 42 CFR 412.64(d) to reflect the current law for the update for FY 2020 and subsequent fiscal years. Specifically, in accordance with section 1886(b)(3)(B) of the Act, we added paragraph (d)(1)(viii) to § 412.64 to set forth the applicable percentage increase to the operating standardized amount for FY 2020 and subsequent fiscal years as the percentage increase in the market basket index, subject to the reductions specified under § 412.64(d)(2) for a hospital that does not submit quality data and § 412.64(d)(3) for a hospital that is not a meaningful EHR user, less a productivity adjustment.

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Therefore, the update to the hospital-specific rates for SCHs and MDHs is also subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act.

As discussed in section V.F. of the preamble of this proposed rule, section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through FY 2025. Therefore, under current law, the MDH program will expire for discharges on or after October 1, 2025. We refer readers to section V.F. of the preamble of this proposed rule for further discussion of the MDH program. We note that if the MDH program were to be extended by law into FY 2026, the proposed updates to the hospital-specific rates for SCHs as described in this section would also apply to the hospital-specific rates for MDHs for FY 2026.

For FY 2026, we are proposing the following updates to the hospital-specific rates applicable to SCHs: A proposed update of 2.4 percent for a hospital that submits quality data and is a meaningful EHR user (as defined in section 1886(n) of the Act); a proposed update of 0.0 percent for a hospital that submits quality data and is not a meaningful EHR user; a proposed update of 1.6 percent for a hospital that fails to submit quality data and is a meaningful EHR user; and a proposed update of −0.8 percent for a hospital that fails to submit quality data and is not an meaningful EHR user. As previously discussed, we are proposing that if more recent data subsequently become available (for example, a more recent estimate of the market basket update and the productivity adjustment), we would use such data, if appropriate, to determine the market basket update and the productivity adjustment in the final rule.

2. Proposed FY 2026 Puerto Rico Hospital Update

Section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that subsection (d) Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016. In addition, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. Accordingly, for FY 2022, section 1886(b)(3)(B)(ix) of the Act in conjunction with section 602(d) of Public Law 114–113 requires that any subsection (d) Puerto Rico hospital that is not a meaningful EHR user as defined in section 1886(n)(3) of the Act and not subject to an exception under section 1886(b)(3)(B)(ix) of the Act will have ''three-quarters'' of the applicable percentage increase (prior to the application of other statutory adjustments), or three-quarters of the applicable market basket rate-of-increase, reduced by 33⅓ percent. The reduction to three-quarters of the applicable percentage increase for subsection (d) Puerto Rico hospitals that are not meaningful EHR users increases to 66⅔ percent for FY 2023, and, for FY 2024 and subsequent fiscal years, to 100 percent. (We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for ''subsection (d)'' hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico.) The regulations at 42 CFR 412.64(d)(3)(ii) reflect the current law for the update for subsection (d) Puerto Rico hospitals for FY 2022 and subsequent fiscal years. In the FY 2019 IPPS/LTCH PPS final rule, we finalized the payment reductions (83 FR 41674).

For FY 2026, consistent with section 1886(b)(3)(B) of the Act, as amended by section 602 of Public Law 114–113, we are setting the applicable percentage increase for Puerto Rico hospitals by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS for Puerto Rico hospitals will be equal to the rate of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for Puerto Rico hospitals not considered to be meaningful EHR users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to the productivity adjustment at section 1886(b)(3)(B)(xi) of the Act. As noted previously, section 1886(b)(3)(B)(xi) of the Act states that application of the productivity adjustment may result in the applicable percentage increase being less than zero.

Based on IGI's fourth quarter 2024 forecast of the proposed 2023-based IPPS market basket update with historical data through third quarter 2024, for this FY 2026 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as discussed previously, for Puerto Rico hospitals we are proposing a market basket update of 3.2 percent less a productivity adjustment of 0.8 percentage point. Therefore, for FY 2026, depending on whether a Puerto

Rico hospital is a meaningful EHR user, there are two possible applicable percentage increases that could be applied to the standardized amount. Based on these data, we determined the following proposed applicable percentage increases to the standardized amount for FY 2026 for Puerto Rico hospitals:

- For a Puerto Rico hospital that is a meaningful EHR user, we are proposing a FY 2026 applicable percentage increase to the operating standardized amount of 2.4 percent (that is, the FY 2026 estimate of the proposed market basket rate-of-increase of 3.2 percent less 0.8 percentage point for the proposed productivity adjustment).
- For a Puerto Rico hospital that is not a meaningful EHR user, we are proposing a FY 2026 applicable percentage increase to the operating standardized amount of 0.0 percent (that is, the FY 2026 estimate of the proposed market basket rate-of-increase of 3.2 percent, less an adjustment of 2.4 percentage points (the proposed market basket rate-of-increase of 3.2 percent × 0.75 for failure to be a meaningful EHR user), and less 0.8 percentage point for the proposed productivity adjustment).

As noted previously, we are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2026 market basket update and the productivity adjustment for the FY 2026 IPPS/LTCH PPS final rule.

TABLE VI.B–02—PROPOSED FY 2026 APPLICABLE PERCENTAGE INCREASES FOR PUERTO RICO HOSPITALS UNDER THE IPPS

FY 2026	Hospital is a meaningful EHR user	Hospital is NOT a meaningful EHR user
Proposed Market Basket Rate-of-Increase	3.2	3.2
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−2.4
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8
Proposed Applicable Percentage Increase Applied to Standardized Amount	2.4	0.0

C. Rural Referral Centers (RRCs) Annual Updates to Case-Mix Index (CMI) and Discharge Criteria (§ 412.96)

Under the authority of section 1886(d)(5)(C)(i) of the Act, the regulations at 42 CFR 412.96 set forth the criteria that a hospital must meet in order to qualify under the IPPS as a rural referral center (RRC). RRCs receive special treatment under both the DSH payment adjustment and the criteria for geographic reclassification.

Section 402 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173) raised the DSH payment adjustment for RRCs such that they are not subject to the 12-percent cap on DSH payments that is applicable to other rural hospitals. RRCs also are not subject to the proximity criteria when applying for geographic reclassification. In addition, they do not have to meet the requirement that a hospital's average hourly wage must exceed, by a certain percentage, the average hourly wage of the labor market area in which the hospital is located.

Section 4202(b) of the Balanced Budget Act of 1997 (Pub. L. 105–33) states, in part, that any hospital classified as an RRC by the Secretary for FY 1991 shall be classified as such an RRC for FY 1998 and each subsequent fiscal year. In the August 29, 1997, IPPS final rule with comment period (62 FR 45999 through 46000), we reinstated RRC status for all hospitals that lost that status due to triennial review or MGCRB reclassification. However, we did not reinstate the status of hospitals that lost RRC status because they were now urban for all purposes because of the OMB designation of their geographic area as urban. Subsequently, in the August 1, 2000, IPPS final rule (65 FR 47087), we indicated that we were revisiting that decision. Specifically, we stated that we would permit hospitals that previously qualified as an RRC and lost their status due to OMB redesignation of the county in which they are located from rural to urban, to be reinstated as an RRC. Otherwise, a hospital seeking RRC status must satisfy all of the other applicable criteria. We use the definitions of ''urban'' and ''rural'' specified in subpart D of 42 CFR part 412. One of the criteria under which a hospital may qualify as an RRC is to have 275 or more beds available for use (42 CFR 412.96(b)(1)(ii)). A rural hospital that does not meet the bed size requirement can qualify as an RRC if the hospital meets two mandatory prerequisites (a minimum case-mix index (CMI) and a minimum number of discharges), and at least one of three optional criteria (relating to specialty composition of medical staff, source of inpatients, or referral volume). (We refer readers to 42 CFR 412.96(c)(1) through (5) and the September 30, 1988, **Federal Register** (53 FR 38513) for additional discussion.) With respect to the two mandatory prerequisites, a hospital may be classified as an RRC if the hospital's—

- CMI is at least equal to the lower of the median CMI for urban hospitals in its census region, excluding hospitals with approved teaching programs, or the median CMI for all urban hospitals nationally; and
- Number of discharges is at least 5,000 per year, or, if fewer, the median number of discharges for urban hospitals in the census region in which the hospital is located. The number of discharges criterion for an osteopathic hospital is at least 3,000 discharges per year, as specified in section 1886(d)(5)(C)(i) of the Act.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45217), in light of the COVID–19 PHE, we amended the regulations at 42 CFR 412.96(h)(1) to provide for the use of the best available data rather than the latest available data in calculating the national and regional CMI criteria. We also amended the regulations at 42 CFR 412.96(c)(1) to indicate that the individual hospital's CMI value for discharges during the same Federal fiscal year used to compute the national and regional CMI values is used for purposes of determining whether a hospital qualifies for RRC classification. We also amended the regulations 42 CFR 412.96(i)(1) and (2), which describe the methodology for calculating the number of discharges criteria, to provide for the use of the best available data rather than the latest available or most recent data when calculating the regional discharges for RRC classification.

1. Case-Mix Index (CMI)

Section 412.96(c)(1) provides that CMS establish updated national and regional CMI values in each year's annual notice of prospective payment

rates for purposes of determining RRC status. The methodology we used to determine the national and regional CMI values is set forth in the regulations at 42 CFR 412.96(c)(1)(ii). The proposed national median CMI value for FY 2026 is based on the CMI values of all urban hospitals nationwide, and the proposed regional median CMI values for FY 2026 are based on the CMI values of all urban hospitals within each census region, excluding those hospitals with approved teaching programs (that is, those hospitals that train residents in an approved GME program as provided in 42 CFR 413.75). These proposed values are based on discharges occurring during FY 2024 (October 1, 2023, through September 30, 2024), and include bills posted to CMS' records through December 2024. We believe that this is the best available data for use in calculating the proposed national and regional median CMI values and is consistent with our proposal to use of the FY 2024 MedPAR claims data for FY 2026 ratesetting.

In this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing that, in addition to meeting other criteria, if rural hospitals with fewer than 275 beds are to qualify for initial RRC status for cost reporting periods beginning on or after October 1, 2025, they must have a CMI value for FY 2024 that is at least—

- 1.7802 (national—all urban); or
- The median CMI value (not transfer-adjusted) for urban hospitals (excluding hospitals with approved teaching programs as identified in 42 CFR 413.75) calculated by CMS for the census region in which the hospital is located.

The proposed median CMI values by region are set forth in the following table. We intend to update the proposed CMI values in the FY 2026 IPPS/LTCH PPS final rule to reflect the updated FY 2024 MedPAR file, which will contain data from additional bills received through March 2025.

Region	Proposed case-mix index value
1. New England (CT, ME, MA, NH, RI, VT)	1.499
2. Middle Atlantic (PA, NJ, NY)	1.56165
3. East North Central (IL, IN, MI, OH, WI)	1.6175
4. West North Central (IA, KS, MN, MO, NE, ND, SD)	1.73965
5. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV)	1.635
6. East South Central (AL, KY, MS, TN)	1.5901
7. West South Central (AR, LA, OK, TX)	1.78085
8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)	1.8092
9. Pacific (AK, CA, HI, OR, WA)	1.7793

A hospital seeking to qualify as an RRC should obtain its hospital-specific CMI value (not transfer-adjusted) from its MAC. Data are available on the Provider Statistical and Reimbursement (PS&R) System. In keeping with our policy on discharges, the CMI values are computed based on all Medicare patient discharges subject to the IPPS MS–DRG-based payment.

2. Discharges

Section 412.96(c)(2)(i) provides that CMS set forth the national and regional numbers of discharges criteria in each year's annual notice of prospective payment rates for purposes of determining RRC status. As specified in section 1886(d)(5)(C)(ii) of the Act, the national standard is set at 5,000 discharges. For FY 2026, we are proposing to update the regional standards based on discharges for urban hospitals' cost reporting periods that began during FY 2023 (that is, October 1, 2022, through September 30, 2023), which are the latest cost report data available at the time this proposed rule was developed. We believe that this is the best available data for use in calculating the proposed median number of discharges by region and is consistent with our data proposal to use cost report data from cost reporting periods beginning during FY 2023 for FY 2026 rate setting. Therefore, we are proposing that, in addition to meeting other criteria, a hospital, if it is to qualify for initial RRC status for cost reporting periods beginning on or after October 1, 2025, must have, as the number of discharges for its cost reporting period that began during FY 2023, at least—

- 5,000 (3,000 for an osteopathic hospital); or
- If less, the median number of discharges for urban hospitals in the census region in which the hospital is located. We refer readers to the proposed number of discharges as set forth in the following table. We intend to update these numbers in the FY 2026 final rule based on the latest available cost report data.

Region	Proposed number of discharges
1. New England (CT, ME, MA, NH, RI, VT)	8,903
2. Middle Atlantic (PA, NJ, NY)	9,844
3. East North Central (IL, IN, MI, OH, WI)	7,762
4. West North Central (IA, KS, MN, MO, NE, ND, SD)	7,614
5. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV)	10,919
6. East South Central (AL, KY, MS, TN)	8,315
7. West South Central (AR, LA, OK, TX)	5,911
8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)	8,048
9. Pacific (AK, CA, HI, OR, WA)	8,932

We note that because the median number of discharges for hospitals in each census region is greater than the national standard of 5,000 discharges, under this proposed rule, 5,000 discharges is the minimum criterion for all hospitals, except for osteopathic hospitals for which the minimum criterion is 3,000 discharges.

D. Proposed Payment Adjustment for Low-Volume Hospitals (§ 412.101)

1. Background

Section 1886(d)(12) of the Act provides for an additional payment to each qualifying low-volume hospital under the IPPS beginning in FY 2005. The low-volume hospital payment adjustment is implemented in the regulations at 42 CFR 412.101. The additional payment adjustment to a low-volume hospital provided for under section 1886(d)(12) of the Act is in addition to any payment calculated under section 1886 of the Act and is based on the per discharge amount paid to the qualifying hospital. In other words, the low-volume hospital payment adjustment is based on total per discharge payments made under section 1886 of the Act, including capital, DSH, IME, and outlier payments. For SCHs and MDHs, the low-volume hospital payment adjustment is based in part on either the Federal rate or the hospital-specific rate, whichever results in a greater operating IPPS payment. The payment adjustment for low-volume hospitals is not budget neutral.

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69348 through 69352), Section 306 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), extended the temporary changes to the low-volume hospital qualifying criteria and payment adjustment under the IPPS, that is the modified definition of low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals under section 1886(d)(12), through December 31, 2024. Section 3201 of the American Relief Act, 2025 (Pub. L. 118–158), further extended those temporary changes through March 31, 2025. Most recently, section 2201 of the Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4), enacted on March 15, 2025, provides an extension of those temporary changes to the qualifying criteria and payment adjustment methodology for certain low-volume hospitals through September 30, 2025. Absent further Congressional action, beginning October 1, 2025, the low-volume hospital qualifying criteria and payment adjustment are set to revert to the statutory requirements that were in effect prior to FY 2011, and the preexisting low-volume hospital payment adjustment methodology and qualifying criteria, as implemented in FY 2005 and discussed later in this section, will resume. We discuss the payment policies for FY 2026, in section V.D.3. of the preamble of this proposed rule.

TABLE V.D.–01—LOW-VOLUME HOSPITAL QUALIFYING CRITERIA AND PAYMENT ADJUSTMENT FOR FYS 2019 AND SUBSEQUENT FYS

Fiscal years	Road miles	Total discharges	Payment adjustment
2019 through 2025	>15	≤500	0.25.
		>500 <3,800	0.25 − [0.25/3300] × (number of total discharges − 500) = (95/330) − (number of total discharges/13,200).
2026 and subsequent years	>25	<200	0.25.

2. Extension of Temporary Changes to Low-Volume Hospital Payment Definition and Payment Adjustment Methodology and Conforming Changes to Regulations

As discussed previously, prior to the enactment of the American Relief Act, 2025, the temporary changes to the low-volume hospital qualifying criteria and payment adjustment provided by section 306 of CAA, 2024 were set to expire on January 1, 2025. Section 3201 of the American Relief Act, 2025 extended the temporary changes to the low-volume hospital qualifying criteria and payment adjustment under the IPPS for the portion of FY 2025 beginning on January 1, 2025, and ending on March 31, 2025 (that is, for discharges occurring before April 1, 2025). We note that we address the extension provided by section 3201 of the American Relief Act, 2025, in Change Request 13949 (Transmittal 13035), issued January 6, 2025. For additional information, please refer to the transmittal *https://www.cms.gov/medicare/regulations-guidance/transmittals/2025-transmittals/r13035otn.* Subsequently, section 2201 of the Full-Year Continuing Appropriations and Extensions Act, 2025 further extended the temporary changes to the low-volume hospital qualifying criteria and payment adjustment under the IPPS for the remainder of FY 2025 (that is, for discharges occurring before October 1, 2025). We note the extension provided by section 2201 of the Full-Year Continuing Appropriations and Extensions Act, 2025 will be addressed in forthcoming guidance.

Under section 1886(d)(12)(C)(i) of the Act, as amended by the Full-Year Continuing Appropriations and Extensions Act, 2025, for FYs 2019 through FY 2025, a subsection (d) hospital qualifies as a low-volume hospital if it is more than 15 road miles from another subsection (d) hospital and has less than 3,800 total discharges during the fiscal year. In accordance with the existing regulations at § 412.101(a), we define the term ''road miles'' to mean ''miles'' as defined at § 412.92(c)(1). Under section 1886(d)(12)(D) of the Act, as amended, for discharges occurring in FYs 2019 through 2025, the Secretary determines the applicable percentage increase using a continuous, linear sliding scale ranging from an additional 25 percent payment adjustment for low-volume hospitals with 500 or fewer discharges to a zero percent additional payment for low volume hospitals with more than 3,800 discharges in the fiscal year. Consistent with the requirements of section 1886(d)(12)(C)(ii) of the Act, the term ''discharge'' for purposes of these provisions refers to total discharges, regardless of payer (that is, Medicare and non-Medicare discharges).

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41399), we specified a continuous, linear sliding scale formula to determine the low volume payment adjustment, as reflected in the regulations at § 412.101(c)(3)(ii). Consistent with the statute, we provided that qualifying hospitals with 500 or fewer total discharges will receive a low-volume hospital payment adjustment of 25. For qualifying hospitals with fewer than 3,800 discharges but more than 500 discharges, the low-volume payment adjustment is calculated by subtracting from 25 percent the proportion of payments associated with the discharges in excess of 500. For qualifying hospitals with fewer than 3,800 total discharges but more than 500 total discharges, the low-volume hospital payment adjustment is calculated using the formula at § 412.101(c)(3)(ii) (which

is shown in the Table V.D.–01). For this purpose, the term ''discharge'' refers to total discharges, regardless of payer (that is, Medicare and non-Medicare discharges). The hospital's most recently submitted cost report is used to determine if the hospital meets the discharge criterion to receive the low volume payment adjustment in the current year (§ 412.101(b)(2)(iii)). The low-volume hospital payment adjustment for FYs 2019 through 2024 and the portion of FY 2025 beginning on October 1, 2024, and ending on December 31, 2024, is set forth in the current regulations at § 412.101(c)(3).

In this proposed rule, we propose to make conforming changes to the regulation text in § 412.101 to reflect the extensions of the changes to the qualifying criteria and the payment adjustment methodology for low-volume hospitals in accordance with provisions of the American Relief Act, 2025 and the Full-Year Continuing Appropriations and Extensions Act, 2025. Specifically, we propose to make conforming changes to paragraphs (b)(2)(iii) and (c)(3) introductory text of § 412.101 to reflect that the low-volume hospital payment adjustment policy in effect through FY 2025 is the same low-volume hospital payment adjustment policy in effect for FYs 2019 through December 31, 2024 (as described in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41398 through 41399) and in the FY 2025 IPPS/LTCH final rule (89 FR 69348 through 69352)). In addition, in accordance with the provisions of the Full-Year Continuing Appropriations and Extensions Act, 2025, we propose to make conforming changes to paragraphs (b)(2)(i) and (c)(1) of § 412.101 to reflect that for FY 2026 and subsequent fiscal years, the low-volume hospital payment adjustment policy will revert back to the low-volume hospital payment adjustment policy in effect for FYs 2005 through 2010, as described in section V.D.3. of the preamble of this proposed rule. We further propose that if the temporary changes to the low-volume payment adjustment are extended through legislation beyond September 30, 2025, we would make the conforming changes to the regulations at § 412.101(b)(2)(i) and (iii) and (c)(1) and (3) to reflect any further extension.

3. Payment Adjustment for FY 2026 and Subsequent Fiscal Years

In accordance with section 1886(d)(12) of the Act, as amended by section 2201 of the Full-Year Continuing Appropriations and Extensions Act, 2025, beginning with discharges occurring on or after October 1, 2025, the low-volume hospital definition and payment adjustment methodology will revert to the statutory requirements that were in effect prior to the amendments made by the Affordable Care Act and subsequent legislation. Specifically, section 1886(d)(12)(B) of the Act requires, for discharges occurring in FYs 2005 through 2010 and for discharges occurring in FY 2026 and subsequent years, that the Secretary determine an applicable percentage increase for these low-volume hospitals based on the ''empirical relationship'' between the standardized cost-per-case for such hospitals and the total number of discharges of such hospitals and the amount of the additional incremental costs (if any) that are associated with such number of discharges. The statute thus mandates that the Secretary develop an empirically justifiable adjustment based on the relationship between costs and discharges for these low-volume hospitals.

Therefore, absent further Congressional action, effective FY 2026 and subsequent years, under current policy at § 412.101(b), to qualify as a low-volume hospital, a subsection (d) hospital must be more than 25 road miles from another subsection (d) hospital and have less than 200 discharges (that is, less than 200 discharges total, including both Medicare and non-Medicare discharges) during the fiscal year. For FY 2026 and subsequent years, the statute specifies that a low-volume hospital must have less than 800 discharges during the fiscal year. However, as required by section 1886(d)(12)(B)(i) of the Act, the Secretary has developed an empirically justifiable payment adjustment based on the relationship, for IPPS hospitals with less than 800 discharges, between the additional incremental costs (if any) that are associated with a particular number of discharges. Based on an analysis we conducted for the FY 2005 IPPS final rule (69 FR 49099 through 49102), a 25-percent low-volume adjustment to all qualifying hospitals with less than 200 discharges was found to be most consistent with the statutory requirement to provide relief for low-volume hospitals where there is empirical evidence that higher incremental costs are associated with low numbers of total discharges. (Under the policy we established in that same final rule, hospitals with between 200 and 799 discharges do not receive a low-volume hospital adjustment.)

As discussed previously, for FYs 2005 through 2010 and FY 2019 and subsequent years, the discharge determination is made based on the hospital's number of total discharges, that is, Medicare and non-Medicare discharges. The hospital's most recently submitted cost report is used to determine if the hospital meets the discharge criterion to receive the low-volume payment adjustment in the current year (§ 412.101(b)(2)(i)). We use cost report data to determine if a hospital meets the discharge criterion because this is the best available data source that includes information on both Medicare and non-Medicare discharges. We note that, for FYs 2011 through 2018, we used the most recently available MedPAR data to determine the hospital's Medicare discharges because only Medicare discharges were used to determine if a hospital met the discharge criterion for those years.

In addition to the discharge criterion, a hospital must also meet the mileage criterion to qualify for the low-volume payment adjustment. As specified by section 1886(d)(12)(C)(i) of the Act, a low-volume hospital must be more than 25 road miles (or 15 road miles for FYs 2011 through 2025) from another subsection (d) hospital. Accordingly, for FY 2026 and subsequent fiscal years, in addition to the discharge criterion, the eligibility for the low-volume payment adjustment is also dependent upon the hospital meeting the mileage criterion at § 412.101(b)(2)(i), which specifies that a hospital must be located more than 25 road miles from the nearest subsection (d) hospital, consistent with section 1886(d)(12)(C)(i) of the Act. We define, at § 412.101(a), the term ''road miles'' to mean ''miles'' as defined at § 412.92(c)(1) (75 FR 50238 through 50275 and 50414). As previously noted, we propose to make conforming changes to paragraphs (b)(2)(i) and (c)(1) of § 412.101 to reflect that for FY 2026 and subsequent fiscal years, the low-volume hospital payment adjustment policy is the same as that in effect for FYs 2005 through 2010.

4. Process for Requesting and Obtaining the Low-Volume Hospital Payment Adjustment for FY 2026

In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50238 through 50275 and 50414) and subsequent rulemaking, most recently in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69348 through 69352), we discussed the process for requesting and obtaining the low-volume hospital payment adjustment. Under this previously established process, a hospital makes a written request for the low-volume payment adjustment under § 412.101 to its MAC. This request must contain sufficient documentation to establish that the hospital meets the applicable mileage and discharge criteria. The MAC will determine if the hospital

qualifies as a low-volume hospital by reviewing the data the hospital submits with its request for low-volume hospital status in addition to other available data. Under this approach, a hospital will know in advance whether or not it will receive a payment adjustment under the low-volume hospital policy. The MAC and CMS may review available data such as the number of discharges, in addition to the data the hospital submits with its request for low-volume hospital status, to determine whether or not the hospital meets the qualifying criteria. (For additional information on our existing process for requesting the low-volume hospital payment adjustment, we refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41399 through 41401).)

As explained earlier, for FY 2019 and subsequent fiscal years, the discharge determination is made based on the hospital's number of total discharges, that is, Medicare and non-Medicare discharges, as was the case for FYs 2005 through 2010. Under § 412.101(b)(2)(i) and (iii), a hospital's most recently submitted cost report is used to determine if the hospital meets the discharge criterion to receive the low-volume payment adjustment in the current year. As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41399 and 41400), we use cost report data to determine if a hospital meets the discharge criterion because this is the best available data source that includes information on both Medicare and non-Medicare discharges. (For FYs 2011 through 2018, the most recently available MedPAR data were used to determine the hospital's Medicare discharges because non-Medicare discharges were not used to determine if a hospital met the discharge criterion for those years.) Therefore, a hospital must refer to its most recently submitted cost report for total discharges (Medicare and non-Medicare) to decide whether or not to apply for low-volume hospital status for a particular fiscal year.

In addition to the discharge criterion, eligibility for the low-volume hospital payment adjustment is also dependent upon the hospital meeting the applicable mileage criterion specified in section 1886(d)(12)(C)(i) of the Act, which is codified at § 412.101(b)(2), for the fiscal year. To meet the mileage criterion to qualify for the low-volume hospital payment adjustment for FY 2026, a hospital must be located more than 25 road miles from the nearest subsection (d) hospital. (We define in § 412.101(a) the term ''road miles'' to mean ''miles'' as defined in § 412.92(c)(1) (75 FR 50238 through 50275 and 50414).) For establishing that the hospital meets the mileage criterion, the use of a web-based mapping tool as part of the documentation is acceptable. The MAC will determine if the information submitted by the hospital, such as the name and street address of the nearest hospital(s), location on a map, and distance from the hospital requesting low-volume hospital status, is sufficient to document that it meets the mileage criterion. If not, the MAC will follow up with the hospital to obtain additional necessary information to determine whether or not the hospital meets the applicable mileage criterion.

In accordance with our previously established process, a hospital must make a written request for low-volume hospital status that is received by its MAC by September 1 immediately preceding the start of the Federal fiscal year for which the hospital is applying for low-volume hospital status in order for the applicable low-volume hospital payment adjustment to be applied to payments for its discharges for the fiscal year beginning on or after October 1 immediately following the request (that is, the start of the Federal fiscal year). For a hospital whose request for low-volume hospital status is received after September 1, if the MAC determines the hospital meets the criteria to qualify as a low-volume hospital, the MAC will apply the applicable low-volume hospital payment adjustment to determine payment for the hospital's discharges for the fiscal year, effective prospectively within 30 days of the date of the MAC's low-volume status determination.

Consistent with this previously established process, for FY 2026, we are proposing that a hospital must submit a written request for low-volume hospital status to its MAC that includes sufficient documentation to establish that the hospital meets the applicable mileage and discharge criteria (as described earlier). Specifically, for FY 2026, a hospital must make a written request for low-volume hospital status that is received by its MAC no later than September 1, 2025, in order for the 25-percent, low-volume, add-on payment adjustment to be applied to payments for its discharges beginning on or after October 1, 2025. If a hospital's written request for low-volume hospital status for FY 2026 is received after September 1, 2025, and if the MAC determines the hospital meets the criteria to qualify as a low-volume hospital, the MAC would apply the low-volume hospital payment adjustment to determine the payment for the hospital's FY 2026 discharges, effective prospectively within 30 days of the date of the MAC's low-volume hospital status determination.

Under this process, a hospital that qualified for the low-volume hospital payment adjustment for FY 2025, may continue to receive a low-volume hospital payment adjustment for FY 2026 without reapplying if it meet both the discharge criterion and the mileage criterion applicable for FY 2026 (that is, the preexisting low-volume hospital qualifying criteria as implemented in FY 2005 and specified in the existing regulations at § 412.101(b)(2)(i), as discussed previously). In such a case, we propose that the hospital must send written verification that is received by its MAC no later than September 1, 2025, stating that it meets the mileage criterion for FY 2026, consistent with our process in previous years. If a hospital's request for low-volume hospital status for FY 2026 is received after September 1, 2025, and if the MAC determines the hospital meets the criteria to qualify as a low-volume hospital, the MAC will apply the applicable low-volume add-on payment adjustment to determine the payment for the hospital's discharges for the applicable portion of FY 2026, effective prospectively within 30 days of the date of the MAC's low-volume hospital status determination.

E. Proposed Changes in the Medicare-Dependent, Small Rural Hospital (MDH) Program (§ 412.108)

1. Background for the MDH Program

Section 1886(d)(5)(G) of the Act provides special non-budget neutral payment protections, under the IPPS, to a Medicare-dependent, small rural hospital (MDH). MDHs are paid for their hospital inpatient services based on the higher of the Federal rate or a blended rate based in part on the Federal rate and in part on the MDH's hospital specific rate. (For additional information on the MDH program and the payment methodology, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51683 through 51684).) Section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4), enacted on March 15, 2025, extended the MDH program through September 30, 2025 (that is, for discharges occurring before October 1, 2025). Prior to enactment of the Full-Year Continuing Appropriations and Extensions Act, 2025, the MDH program was only to be in effect for FY 2025 discharges occurring before April 1, 2025. Under current law, the MDH program provisions at section 1886(d)(5)(G) of the Act will expire for

discharges on or after October 1, 2025. Beginning with discharges occurring on or after October 1, 2025, absent further Congressional action, all hospitals that previously qualified for MDH status will be paid based on the Federal rate.

Since the extension of the MDH program through FY 2012 provided by section 3124 of the Affordable Care Act, the MDH program had been extended by subsequent legislation as follows: section 606 of the American Taxpayer Relief Act (Pub. L. 112–240) extended the MDH program through FY 2013 (that is, for discharges occurring before October 1, 2013). Section 1106 of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) extended the MDH program through the first half of FY 2014 (that is, for discharges occurring before April 1, 2014). Section 106 of the Protecting Access to Medicare Act (Pub. L. 113–93) extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015). Section 205 of the MACRA (Pub. L. 114–10) extended the MDH program through FY 2017 (that is, for discharges occurring before October 1, 2017). Section 50205 of the Bipartisan Budget Act (Pub. L. 115–123) extended the MDH program through FY 2022 (that is for discharges occurring before October 1, 2022). Section 102 of the Continuing Appropriations and Ukraine Supplemental Appropriations Act, 2023 (Pub. L. 117–180) extended the MDH program through December 16, 2022. Section 102 of the Further Continuing Appropriations and Extensions Act, 2023 (Pub. L. 117–229) extended the MDH program through December 23, 2022. Section 4102 of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328) extended the MDH program through FY 2024 (that is for discharges occurring before October 1, 2024). Section 307 of the CAA, 2024 (Pub. L. 118–42) extended the MDH program through December 31, 2024 (that is, for discharges occurring before January 1, 2025). Section 3202 of the American Relief Act, 2025 (Pub. L. 118–158) extended the MDH program through March 31, 2025 (that is, for discharges occurring before April 1, 2025). Lastly, under current law, section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4) extended the MDH program through September 30, 2025 (that is, for discharges occurring before October 1, 2025).

For additional information on the extensions of the MDH program after FY 2012, we refer readers to the following **Federal Register** documents: The FY 2013 IPPS/LTCH PPS final rule (77 FR 53404 through 53405 and 53413 through 53414); the FY 2013 IPPS notice (78 FR 14689); the FY 2014 IPPS/LTCH PPS final rule (78 FR 50647 through 50649); the FY 2014 interim final rule with comment period (79 FR 15025 through 15027); the FY 2014 notice (79 FR 34446 through 34449); the FY 2015 IPPS/LTCH PPS final rule (79 FR 50022 through 50024); the August 2015 interim final rule with comment period (80 FR 49596); the FY 2017 IPPS/LTCH PPS final rule (81 FR 57054 through 57057); the FY 2018 notice (83 FR 18303 through 18305); the FY 2019 IPPS/LTCH PPS final rule (83 FR 41429); the FY 2024 IPPS/LTCH PPS final rule (88 FR 59045); and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69352).

2. Implementation of Legislative Extension of MDH Program

Prior to the enactment of Public Law 119–4, under section 3202 of Public Law 118–158, the MDH program authorized by section 1886(d)(5)(G) of the Act was set to expire on April 1, 2025. Section 2202 of Public Law 119–4 amended sections 1886(d)(5)(G)(i) and 1886(d)(5)(G)(ii)(II) of the Act by striking ''April 1, 2025'' and inserting ''October 1, 2025''. Section 2202 of Public Law 119–4 also made conforming amendments to sections 1886(b)(3)(D)(i) and 1886(b)(3)(D)(iv) of the Act.

Therefore, we are proposing to make conforming changes to the regulations governing the MDH program at § 412.108(a)(1) and (c)(2)(iii) and the general payment rules at § 412.90(j) to reflect the extension of the MDH program through September 30, 2025.

As a result of the extension of the MDH program through September 30, 2025, as provided by section 2202 of Public Law 119–4, a provider that was classified as an MDH as of March 31, 2025, will continue to be classified as an MDH as of April 1, 2025, with no need to reapply for MDH classification. We addressed the extension provided by section 3202 of the American Relief Act, 2025, in Change Request 13949 (Transmittal 13035), issued January 6, 2025. For additional information, please refer to the transmittal *https://www.cms.gov/medicare/regulations-guidance/transmittals/2025-transmittals/r13035otn*. We intend to address the extension provided by section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 in forthcoming guidance.

3. Expiration of the MDH Program

Because section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through September 30, 2025, only, beginning October 1, 2025, the MDH program will no longer be in effect. Since the MDH program is not authorized by statute beyond September 30, 2025, absent Congressional action, beginning October 1, 2025, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the Federal rate.

When the MDH program was set to expire at the end of FY 2012, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53404 through 53405), we revised our sole community hospital (SCH) policies to allow MDHs to apply for SCH status in advance of the expiration of the MDH program and be paid as such under certain conditions. We codified these changes in the regulations at § 412.92(b)(2)(i) and (v). For additional information, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53404 through 53405 and 53674). We note that a MDH that classifies as a SCH in anticipation of the MDH program expiration would have to reapply for MDH classification in accordance with the regulations at 42 CFR 412.108(b) and meet the classification criteria at 42 CFR 412.108(a) in the event that the MDH program is further extended and the provider wishes to return to its classification as a MDH.

As noted, we are proposing to make conforming changes to the regulations governing the MDH program at § 412.108(a)(1) and (c)(2)(iii) and the general payment rules at § 412.90(j) to reflect the extension of the MDH program through September 30, 2025. We are further proposing that if the MDH program were to be extended by law beyond September 30, 2025, similar to how it was extended by prior legislation as described previously, we would, depending on timing of such legislation in relation to the final rule, modify our proposed conforming changes to the regulations governing the MDH program at § 412.108(a)(1) and (c)(2)(iii) and the general payment rules at § 412.90(j) to reflect any such further extension of the MDH program. These modifications to our proposed conforming changes would only be made if the MDH program were to be extended by statute beyond September 30, 2025.

F. Payment for Indirect and Direct Graduate Medical Education Costs (§§ 412.105 and 413.75 Through 413.83)

1. Background

Section 1886(h) of the Act, as added by section 9202 of the Consolidated Omnibus Budget Reconciliation Act (COBRA) of 1985 (Pub. L. 99–272) and

as currently implemented in the regulations at 42 CFR 413.75 through 413.83, establishes a methodology for determining payments to hospitals for the direct costs of approved graduate medical education (GME) programs. Section 1886(h)(2) of the Act sets forth a methodology for the determination of a hospital-specific base-period per resident amount (PRA) that is calculated by dividing a hospital's allowable direct costs of GME in a base period by its number of full-time equivalent (FTE) residents in the base period. The base period is, for most hospitals, the hospital's cost reporting period beginning in FY 1984 (that is, October 1, 1983, through September 30, 1984). The base year PRA is updated annually for inflation.

In general, Medicare direct GME payments are calculated by multiplying the hospital's updated PRA by the weighted number of FTE residents working in all areas of the hospital complex (and at non-provider sites, when applicable), and the hospital's Medicare share of total inpatient days. Section 1886(d)(5)(B) of the Act provides for a payment adjustment known as the indirect medical education (IME) adjustment under the IPPS for hospitals that have residents in an approved GME program, in order to account for the higher indirect patient care costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment are located at 42 CFR 412.105. The hospital's IME adjustment applied to the DRG payments is calculated based on the ratio of the hospital's number of FTE residents training in either the inpatient or outpatient departments of the IPPS hospital (and, for discharges occurring on or after October 1, 1997, at non-provider sites, when applicable) to the number of inpatient hospital beds.

The calculation of both direct GME payments and the IME payment adjustment is affected by the number of FTE residents that a hospital is allowed to count. Generally, the greater the number of FTE residents a hospital counts, the greater the amount of Medicare direct GME and IME payments the hospital will receive. In an attempt to end the implicit incentive for hospitals to increase the number of FTE residents, Congress established a limit on the number of allopathic and osteopathic residents that a hospital could include in its FTE resident count for direct GME and IME payment purposes in the Balanced Budget Act of 1997 (Pub. L. 105–33). Under section 1886(h)(4)(F) of the Act, for cost reporting periods beginning on or after October 1, 1997, a hospital's unweighted FTE count of residents for purposes of direct GME cannot exceed the hospital's unweighted FTE count for direct GME in its most recent cost reporting period ending on or before December 31, 1996. Under section 1886(d)(5)(B)(v) of the Act, a similar limit based on the FTE count for IME during that cost reporting period is applied, effective for discharges occurring on or after October 1, 1997. Dental and podiatric residents are not included in this statutorily mandated cap.

2. Calculating Full-Time Equivalent Counts and Caps for Cost Reporting Periods Other Than Twelve Months

CMS's full-time equivalent (FTE) counting regulations, as established in the September 29, 1989, **Federal Register** (54 FR 40291), specify that no individual should be counted as more than one FTE, and that FTE status is based on the total time necessary to fill a residency slot and the share of total time spent training at each training site (see 42 CFR 412.105(f)(1)(iii)(A) for IME and 42 CFR 413.78(b)(1) for DGME). The requirements for what constitutes full-time participation may vary from specialty to specialty, or among different programs in the same specialty. Additionally, full-time equivalency may be computed based on various increments, such as hours, days, weeks, or months, in order for a hospital to obtain the full-time equivalent which it is allowed to count.

Full-time equivalency for each resident is computed by determining the portion of total allowable training time that may be claimed by each hospital. In general, these data are sourced from a ''master'' rotation schedule for each approved residency program. Each rotation may consist of both allowable and non-allowable training time. For example, the time that a resident spends in a hospital's distinct-part unit is allowable to the hospital for purposes of DGME, but not for purposes of IME, while time spent in research activities at an offsite nonpatient care facility is not allowable for either DGME or IME. Additionally, a hospital cannot claim the time spent by residents training at another hospital. Consistent with the regulations at 42 CFR 413.75(d), hospitals that cross-train residents in the same program need to agree on the method of computing FTEs to ensure that no resident is counted as more than one FTE.

For purposes of completing the Medicare cost report (Worksheet E, Part A, for IME and Worksheet E–4 for DGME of Form CMS–2552–10), full-time equivalency is typically calculated on the basis of 365 days (or 366 days, in the case of a leap year) for DGME *versus* the actual number of days in the cost reporting period for IME. Thus, for a standard 12-month cost reporting period, there is no difference in the calculation of the DGME and IME FTE counts.

In the case of a cost reporting period other than 12 months in length, the statute for both DGME and IME instructs the Secretary to make ''appropriate modifications'' to ensure that the FTE counts are based on the equivalent of 12 months. Specifically, for DGME, section 1886(h)(4)(G)(ii) states that if any cost reporting period beginning on or after October 1, 1997, is not equal to 12 months, the Secretary shall make appropriate modifications to ensure that the average full-time equivalent resident counts pursuant to section 1886(h)(4)(G)(i) are based on the equivalent of full 12-month cost reporting periods. Similarly, for IME, section 1886(d)(5)(B)(vii) states that if any cost reporting period beginning on or after October 1, 1997, is not equal to 12 months, the Secretary shall make appropriate modifications to ensure that the average full-time equivalent residency count pursuant to section 1886(d)(5)(B)(vi)(II) is based on the equivalent of full 12-month cost reporting periods.

The procedures for determining the total DGME and IME FTE counts for a non-12-month cost reporting period reflect the underlying differences in the two payment methodologies. A hospital's DGME count represents the number of FTE residents working in the healthcare complex over the course of an entire cost reporting period, and the total DGME payment is based on the hospital's PRA, which reflects the average costs incurred per resident during a 12-month base period or equivalent (see discussion at 54 FR 40290). Accordingly, the DGME FTE count must be prorated to reflect the length of a short or long cost reporting period, as illustrated in the following section of this preamble. By contrast, the IME adjustment reflects the average intensity of teaching activity in a hospital at any given time, and the total IME payment is based on the hospital's DRG payments during a cost reporting period. Because the size of a hospital's DRG payments already reflects the amount of patient care furnished during a short or long cost reporting period, it is not necessary to prorate the IME FTE count in the same manner as the DGME FTE count.

Similarly, as explained below, proration must be applied to a hospital's

DGME FTE cap (but not the IME FTE cap) to account for a non-12-month cost reporting period, as well as to the prior- and penultimate-year DGME FTE counts (but not the IME FTE counts) for the purpose of calculating the three-year rolling average FTE count. We also note that, while these methodological distinctions become apparent in the context of calculating the counts and caps for a non-12-month cost reporting period, they are equally applicable in the case of a standard 12-month cost reporting period.

While CMS's FTE counting policy is long-established and widely used in existing cost reporting software and the Intern and Resident Information System (IRIS) software, we are taking the opportunity to restate and clarify our FTE counting policy in rulemaking. We are not proposing any changes to the FTE counting policy at this time.

a. Calculating FTE Counts

To determine the unweighted FTE count for DGME, *whether or not the cost reporting period is 12 months, or more or less,* the following steps should be used:

- For each resident and each of that resident's individual rotations, determine the ratio of total days allowable to the hospital in that rotation, to total days in that entire rotation, consistent with the regulations at 42 CFR 413.78.
- Multiply the ratio from Step 1 by the ratio of (total days in the entire rotation divided by 365) (or 366, in the case of a leap year).[224] This represents the portion of total FTE time for this rotation that may be claimed by the hospital for purposes of DGME payment, prorated for the length of the cost reporting period.
- Calculate the sum of the products from Step 2 for all residents and rotations in the hospital's programs to arrive at the hospital's total unweighted DGME FTE count for the cost reporting period.

Stated formulaically:

Unweighted DGME FTE count = Sum of [(Allowable days in a rotation/Total days in the rotation) × (Total days in the rotation/365)]

Note: This portion of the FTE calculation is not weighted for years outside of the Initial Residency Period, as the application of weighting factors is a separate step in the calculation of DGME payment on the cost report. See 42 CFR 413.79(a) for more information about the Initial Residency Period.

[224] 366 days should be used when the cost reporting period includes February 29.

Example: A resident worked in a rotation at Hospital A for 4 weeks (28 days) but spent 1 week (7 days) offsite engaged in non-patient care research.

- *Step 1:* Consistent with the DGME regulations, the total time allowable to Hospital A for this rotation is 21 days. The ratio is (21 days/28 days) = 0.75.
- *Step 2:* The portion of total FTE time for this rotation that Hospital A may claim for purposes of DGME payment is 0.75 × (28/365) = 0.06 FTE. (*Note:* In the case of a leap year, divide by 366 days.)
- *Step 3:* Repeat Steps 1 and 2 for all residents and rotations in the hospital's programs, and sum the results from Step 2 to arrive at Hospital A's total unweighted DGME FTE count for the cost reporting period.

As stated above, 365 or 366 days is used as the denominator in Step 2 of the calculation regardless of the actual number of days in the cost reporting period. Thus, in computing the DGME FTE count, the length of the cost reporting period can affect the full-time equivalency determined for a given number of residents training at the hospital. For example, there would be fewer total rotations in a 3-month cost reporting period than in a 12-month period, and thus a commensurately smaller DGME count calculated in accordance with the procedure outlined above.

Note that the hospital's updated PRA is always used and is not prorated, as it represents that hospital's average cost to train an FTE resident determined in a base period, and is not dependent upon the length of cost reporting periods subsequent to the PRA base period.

In this manner, the DGME FTE count continues to be based on the ''equivalent of 12 months,'' as required by section 1886(h)(4)(G)(ii) of the Act. This procedure is performed to determine the total unweighted DGME FTE count on Form CMS–2552–10, Worksheet E–4, line 6 and line 7, as well as for the weighted FTE counts on lines 8 through 11, lines 15 and 16, and lines 21 and 22. For lines that record weighted FTE counts, the appropriate weighting factors are applied consistent with the regulations at 42 CFR 413.79(a).

As mentioned above, the procedure for determining the 12-month equivalent IME FTE count, in accordance with section 1886(d)(5)(B)(vii) of the Act, is different in that the number of days used in the denominator of the calculation in Step 2 depends on the length of the cost reporting period. For 12-month cost reporting periods, a denominator of 365 days is used (or 366 days in the case of a leap year), while for cost reporting periods of different lengths, the denominator is equal to the actual number of days in the cost reporting period. The resulting FTE count represents the average number of residents in the hospital at any given time, and in turn is multiplied by the DRG payments in that same cost reporting period to obtain the hospital's total IME payment.

Accordingly, to determine the FTE count for IME, *whether or not the cost reporting period is 12 months, or more or less,* the following steps should be used:

- For each resident and each of that resident's individual rotations, determine the ratio of total days allowable to the hospital in that rotation, to total days in that entire rotation, consistent with the regulations at 42 CFR 412.105(f).
- Multiply the ratio from Step 1 by the ratio of (total days in the entire rotation divided by the *actual number of days in the cost reporting period*). This represents the portion of total FTE time for this rotation that may be claimed by the hospital for purposes of IME payment.
- Calculate the sum of the products from Step 2 for all residents and rotations in the hospital's programs to arrive at the hospital's total IME FTE count for the cost reporting period.

Stated formulaically:

IME FTE count = Sum of [(Allowable days in a rotation/Total days in the rotation) × (Total days in the rotation/Days in cost reporting period)]

Example 1: 12-Month Cost Reporting Period (365 Days)

A resident worked in a rotation at Hospital A for 4 weeks (28 days) but spent 1 week (7 days) offsite engaged in non-patient care research.

Step 1: Consistent with the IME regulations, the total time allowable to Hospital A for this rotation is 21 days. The ratio is (21 days/28 days) = 0.75.

Step 2: The portion of total FTE time for this rotation that Hospital A may claim for purposes of IME payment is 0.75 × (28/365) = 0.06 FTE. (*Note:* In the case of a leap year, divide by 366 days.)

Step 3: Repeat Steps 1 and 2 for all residents and rotations in the hospital's programs, and sum the results from Step 2 to arrive at Hospital A's total IME FTE count for the cost reporting period.

Example 2: 3-Month Cost Reporting Period (92 Days)

During a 92-day cost reporting period, a resident worked in a rotation at Hospital A for 4 weeks (28 days) but

spent 1 week (7 days) offsite engaged in non-patient care research.

Step 1: Consistent with the IME regulations, the total time allowable to Hospital A for this rotation is 21 days. The ratio is (21 days/28 days) = 0.75.

Step 2: The portion of total FTE time for this rotation that Hospital A may claim for purposes of IME payment is 0.75 × (28/92) = 0.23 FTE.

Step 3: Repeat Steps 1 and 2 for all residents and rotations in the hospital's programs, and sum the results from Step 2 to arrive at Hospital A's total IME FTE count for the 3-month cost reporting period.

Consistent with the regulations at 42 CFR 412.105(b), the bed count used in the denominator of the intern and resident to bed (IRB) ratio is determined by counting the number of available bed days during the cost reporting period and dividing that number by the number of days in the cost reporting period.

While the IME FTE count itself is not prorated, the final amount of a hospital's IME payment nonetheless will be commensurate with the cost reporting period by virtue of the total amount of its DRG payments, which will generally increase or decrease as a result of the length of the period. For example, if a cost reporting period is 12 months long, the DRG payments by which the IME adjustment factor is multiplied to derive the total IME payment will also reflect 12 months of patient care. By contrast, the DRG payments for the 3-month (or 92-day) cost reporting period in Example 2 would reflect just 3 months of patient care.

This procedure is performed to determine the total IME FTE count on Form CMS–2552–10, Worksheet E, Part A, lines 10 through 12, as well as the FTE counts on lines 16 and 17 and lines 24 and 25.

b. Calculating FTE Caps for Cost Reporting Periods Other Than Twelve Months

Just as the DGME FTE counts are prorated on the basis of a standard 365- or 366-day cost reporting period, a hospital's DGME FTE cap must similarly be prorated for cost reporting periods other than 12 months in length. To calculate the prorated cap, the hospital's regular 12-month DGME FTE cap is divided by 365 days (or 366 days, in the case of a leap year) and then multiplied by the actual number of days in the cost reporting period. For example, if a hospital has a regular DGME FTE cap of 270 FTEs, then the prorated DGME cap for a 3-month cost reporting period with 92 days would be: (270/365) × (92) = 68.05 FTEs. (If the hospital subsequently had a 9-month cost report with 273 days, the DGME FTE cap for the 9-month cost report would be calculated as follows: (270/365) × (273) = 201.95 FTEs. Note that 68.05 + 201.95 = 270, equivalent to the total DGME cap for 12 months (totals may be slightly off due to rounding)). Proration applies similarly to all lines on Worksheet E–4 that are associated with the FTE cap, including lines 1 through 5 and line 20.

For reasons similar to those explained above in the discussion of the FTE counts, it is not necessary to prorate the IME FTE caps for a non-12-month cost reporting period; the same IME FTE cap and any associated cap adjustments apply to a cost reporting period that is less than or more than 12 months.

c. Calculating the Three-Year Rolling Average for Cost Reporting Periods of Unequal Lengths

Sections 1886(d)(5)(B)(vi)(II) and 1886(h)(4)(G)(i) of the Act require that a hospital's FTE counts for IME and DGME payment, respectively, in the current cost reporting period be based on a three-year rolling average. That is, the FTE counts in the current cost reporting period, prior cost reporting period, and penultimate cost reporting period are summed, then divided by 3. These provisions phase in any reductions or increases in payment over a three-year period for hospitals that experience a change in the number of residents they train. The regulations are at 42 CFR 412.105(f)(1)(v) for IME and 42 CFR 413.79(d)(3) for DGME.

For reasons similar to those discussed above, no adjustments need to be made to the prior and penultimate years when calculating the rolling average IME count. However, if the current, prior and/or penultimate year cost reporting periods are of different lengths, adjustments must be made to the respective DGME FTE counts so that the rolling average is based on quantities that are comparable with one another. Accordingly, if the current cost reporting period is other than 12 months in length, the prior- and penultimate-year DGME FTE counts must be prorated, yielding 3 years of comparable FTE counts from which to calculate the rolling average:

For the prior year, take the FTE count that would be reported on Worksheet E–4, line 12, and divide by 365 (or 366, if the prior year cost reporting period includes February 29), and then multiply that quotient by the number of days in the current non-12-month cost reporting period. Report this prorated FTE count on Worksheet E–4, line 12, of the current year cost report.

For the penultimate year, take the FTE count that would be reported on Worksheet E–4, line 13, and divide by 365 (or 366, if the penultimate year cost reporting period includes February 29), and then multiply that quotient by the number of days in the current non-12-month cost reporting period. Report this prorated FTE count on Worksheet E–4, line 13, of the current year cost report.

Stated formulaically:

Prorated DGME FTE count = [(Total annual DGME FTE count/365 or 366) × (Number of days in current cost reporting period)]

For example, if the current year cost reporting period is 3 months (92 days), while the prior year cost reporting period was 12 months, and the hospital's total capped DGME FTE count in the prior year was 300, then the prorated FTE count for the prior year would be: [(300/365) × (92)] = 75.62. That is, a DGME FTE count of 300 in a 12-month cost reporting period would be the equivalent of 75.62 FTEs in the current year 3-month cost reporting period. On the current year cost report, the hospital would enter 75.62 on line 12 of Worksheet E–4 (prior year FTE count). If the total capped DGME FTE count in the penultimate cost reporting period was 302, and the penultimate year was also 12 months, then the prorated FTE count for the penultimate year would be: [(302/365) × (92)] = 76.12. On the current year cost report, the hospital would enter 76.12 on line 13 of Worksheet E–4 (penultimate year FTE count).

We note that in this scenario, if either the prior or penultimate year cost reporting period was also other than 12 months in length, then it would be necessary to adjust the calculation to account for that difference. For instance, suppose that the hospital's penultimate year cost reporting period was 9 months or 273 days long, and its capped DGME FTE count during that period (prorated on a 12-month basis as described earlier in this preamble) was 225. In this case, rather than dividing by 365 days, the hospital would divide the penultimate-year DGME FTE count by 273 days, as follows: [(225/273) × (92)] = 75.82 FTEs. Thus, the hospital would enter 75.82 on line 13 of Worksheet E–4 of the current year cost report.

Conversely, if the current year is a full cost reporting period, but the prior and/or penultimate cost reporting period was other than 12 months, then the prior and/or penultimate year DGME FTE counts (which have been prorated on a 12-month basis as described earlier

in this preamble) must be annualized to yield 12-month equivalents. This procedure avoids understatement (or overstatement) of the DGME FTE count in the current year and, similar to the proration of DGME counts in the preceding scenario, results in 3 years of comparable FTE counts from which to calculate the DGME rolling average:

For the prior year, take the FTE count that would be reported on Worksheet E–4, line 12, and divide by the number of days in the non-12-month cost reporting period, and then multiply that quotient by 365 (or 366, if the current cost reporting period includes February 29). Report this annualized FTE count on Worksheet E–4, line 12 of, the current year cost report.

For the penultimate year, take the FTE count that would be reported on Worksheet E–4, line 13, and divide by the number of days in the non-12-month cost reporting period, and then multiply that quotient by 365 (or 366, if the current cost reporting period includes February 29). Report this annualized FTE count on Worksheet E–4, line 13 of the current year cost report.

Stated formulaically:

Annualized DGME FTE count = [(Prorated DGME FTE count/Number of days in the non-12-month cost reporting period) × (365 or 366)]

For example, if the current year cost reporting period is 12 months (365 days), while the prior year cost reporting period was 3 months (92 days), and the prior-year capped DGME FTE count (prorated on a 12-month basis) was 75, then the annualized FTE count for the prior year would be: [(75/92) × (365)] = 297.55. On the current year cost report, the hospital would enter 297.55 on line 12 of Worksheet E–4 (prior year FTE count).

3. Notice of Closure of Teaching Hospitals and Opportunity To Apply for Available Slots

Section 5506 of the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (collectively, ''Affordable Care Act''), authorizes the Secretary to redistribute residency slots after a hospital that trained residents in an approved medical residency program closes. Section 5506 of the Affordable Care Act instructs the Secretary to establish a process by regulation that redistributes slots from teaching hospitals that close to hospitals that meet the certain criteria, with priority given to certain hospitals including those located in the same Core Based Statistical Area (CBSA), in a contiguous CBSA or in the same state as the closed hospital.

Specifically, section 5506 of the Affordable Care Act amended the Act by adding subsection (vi) to section 1886(h)(4)(H) of the Act and modifying language at section 1886(d)(5)(B)(v) of the Act, to instruct the Secretary to establish a process to increase the FTE resident caps for other hospitals based upon the full-time equivalent (FTE) resident caps in teaching hospitals that closed on or after a date that is 2 years before the date of enactment (that is, March 23, 2008). In the CY 2011 Outpatient Prospective Payment System (OPPS) final rule with comment period (75 FR 72264), we established regulations at 42 CFR 413.79(o) and an application process for qualifying hospitals to apply to CMS to receive direct GME and IME FTE resident cap slots from the hospital that closed. We made certain additional modifications to § 413.79 in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53434), and we made changes to the section 5506 application process in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50122 through 50134). The procedures we established apply both to teaching hospitals that closed on or after March 23, 2008, and on or before August 3, 2010, and to teaching hospitals that close after August 3, 2010 (75 FR 72215).

a. Notice of Closure of Wahiawa General Hospital Located in Wahiawa, HI, and the Application Process—Round 24

CMS has learned of the closure of Wahiawa General Hospital, located in Wahiawa, HI (CCN 120004). Accordingly, this notice serves to notify the public of the closure of this teaching hospital and initiate another round (''Round 24'') of the application and selection process. This round will be the 24th round (''Round 24'') of the application and selection process. The table in this section of this proposed rule contains the identifying information and IME and direct GME FTE resident caps for the closed teaching hospital, which are part of the Round 24 application process under section 5506 of the Affordable Care Act.

TABLE V.F.–01—WAHIAWA GENERAL HOSPITAL FTE RESIDENT CAPS

CCN	Provider name	City and state	CBSA code	Terminating date	IME FTE resident cap (including ± MMA Sec. 422 adjustments [1])	Direct GME FTE resident cap (including ± MMA Sec. 422 adjustments)
120004	Wahiawa General Hospital.	Wahiawa, HI	46520	April 2, 2024	11.67 + 5.49 sec. 422 increase = 17.16 [2]	12.11 + 2.20 sec. 422 increase = 14.31.[3]

[1] Section 422 of the MMA, Public Law 108–173, redistributed unused IME and direct GME residency slots effective July 1, 2005.
[2] Wahiawa General Hospital's 1996 IME FTE resident cap is 11.67. Under section 422 of the MMA, the hospital received an increase of 5.49 to its IME FTE resident cap: 11.67 + 5.49 = 17.16.
[3] Wahiawa General Hospital's 1996 direct GME FTE resident cap is 12.11. Under section 422 of the MMA, the hospital received an increase of 2.20 to its direct GME FTE resident cap: 12.11 + 2.20 = 14.31.

b. Notice of Closure of Carney Hospital Located in Boston, MA and the Application Process—Round 25

CMS has learned of the closure of Carney Hospital, located in Boston, MA (CCN 220017). Accordingly, this notice serves to notify the public of the closure of this teaching hospital and initiate another round (''Round 25'') of the application and selection process. This round will be the 25th round (''Round 25'') of the application and selection process. The table in this section of this proposed rule contains the identifying information and IME and direct GME FTE resident caps for the closed teaching hospital, which are part of the Round 25 application process under section 5506 of the Affordable Care Act.

TABLE V.F.–02—CARNEY HOSPITAL FTE RESIDENT CAPS

CCN	Provider name	City and state	CBSA code	Terminating date	IME FTE resident cap (including ± MMA Sec. 422[1] and ACA Sec. 5503[2] adjustments)	Direct GME FTE resident cap (including ± MMA Sec. 422 and ACA Sec. 5503 adjustments)
220017	Carney Hospital.	Boston, MA	14454	August 31, 2024.	73.00 − 9.78 sec. 422 reduction − 0.07 sec. 5503 reduction = 63.15[3].	73.00 − 10.16 sec. 422 reduction − 1.70 sec. 5503 reduction = 61.14.[4]

[1] Section 422 of the MMA, Public Law 108–173, redistributed unused IME and direct GME residency slots effective July 1, 2005.
[2] Section 5503 of the Affordable Care Act of 2010, Public Law 111–148 and Public Law 111–152, redistributed unused IME and direct GME residency slots effective July 1, 2011.
[3] Carney Hospital's 1996 IME FTE resident cap is 73.00. Under section 422 of the MMA, the hospital received a reduction of 9.78 to its IME FTE resident cap, and under section 5503 of the Affordable Care Act, the hospital received a reduction of 0.07 to its IME FTE resident cap: 73.00 − 9.78 − 0.07 = 63.15.
[4] Carney Hospital's 1996 direct GME FTE resident cap is 73.00. Under section 422 of the MMA, the hospital received a reduction of 10.16 to its direct GME FTE resident cap, and under section 5503 of the Affordable Care Act, the hospital received a reduction of 1.70 to its direct GME FTE resident cap: 73.00 − 10.16 − 1.70 = 61.14.

c. Application Process for Available Resident Slots

The application period for hospitals to apply for slots under section 5506 of the Affordable Care Act is 90 days following notice to the public of a hospital closure (77 FR 53436). Therefore, hospitals that wish to apply for and receive slots from the previously noted hospitals' FTE resident caps must submit applications using the electronic application intake system, Medicare Electronic Application Request Information System™ (MEARIS™), with application submissions for Round 24 and 25 due no later than July 10, 2025. The section 5506 application can be accessed at: *https://mearis.cms.gov/public/home*.

CMS will only accept Round 24 and 25 applications submitted via MEARIS™. Applications submitted through any other method will not be considered. Within MEARIS™, we have built in several resources to support applicants:

- Please refer to the ''Resources'' section for guidance regarding the application submission process at: *https://mearis.cms.gov/public/resources*.
- Technical support is available under ''Useful Links'' at the bottom of the MEARIS™ web page.
- Application related questions can be submitted to CMS using the form available under ''Contact'' at: *https://mearis.cms.gov/public/resources*.

Application submission through MEARIS™ will not only help CMS track applications and streamline the review process, but it will also create efficiencies for applicants when compared to a paper submission process.

We have not established a deadline by when CMS will issue the final determinations to hospitals that receive slots under section 5506 of the Affordable Care Act. However, we review all applications received by the application deadline and notify applicants of our determinations as soon as possible.

We refer readers to the CMS Direct Graduate Medical Education (DGME) website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/direct-graduate-medical-education-dgme*. Hospitals should access this website for a list of additional section 5506 guidelines for the policy and procedures for applying for slots, and the redistribution of the slots under sections 1886(h)(4)(H)(vi) and 1886(d)(5)(B)(v) of the Act.

G. Reasonable Cost Payment for Nursing and Allied Health Education Programs (§ 413.85 and § 413.87)

1. General

Under section 1861(v) of the Act, Medicare has historically paid providers for Medicare's share of the costs that providers incur in connection with approved educational activities. The costs of these activities are excluded from the definition of ''inpatient hospital operating costs'' and are not included in the calculation of payment rates for hospitals or hospital units paid under the IPPS, IRF PPS, or IPF PPS, and are excluded from the rate-of-increase ceiling for certain facilities not paid on a PPS. These costs are separately identified and ''passed through'' (that is, paid separately on a reasonable cost basis).

Under the existing regulations at 42 CFR 413.85, approved nursing and allied health (NAH) education programs must meet State licensure requirements or be accredited by a recognized national professional organization. Additionally, an approved NAH education program must be operated by a provider. The most recent substantive rulemakings on these regulations were in the January 12, 2001, final rule (66 FR 3358 through 3374), and in the August 1, 2003, final rule (68 FR 45423 and 45434). The regulations regarding Medicare Advantage (MA) add-on payments for NAH education programs are at 42 CFR 413.87.

2. Medicare Advantage Nursing and Allied Health Education Payments

Section 541 of the Balanced Budget Refinement Act (BBRA) of 1999 provides for additional payments to hospitals for costs of nursing and allied health education associated with services to Medicare+Choice (now called Medicare Advantage (MA))[225] enrollees. Hospitals that operate approved nursing or allied health education programs and receive Medicare reasonable cost reimbursement for these programs may receive additional payments to account for MA enrollees. Section 541 of the BBRA limits total spending under the provision for MA enrollees to no more than $60 million in any calendar year (CY). (In this document, we refer to the total amount of $60 million or less as the payment ''pool''.) Section 541 of the BBRA also provides that direct graduate medical education (GME) payments for Medicare+Choice (now MA) utilization be reduced to the extent that these additional payments are made for nursing and allied health education programs. This provision was effective for portions of cost reporting periods occurring in a calendar year, on or after January 1, 2000.

Section 512 of the Benefits Improvement and Protection Act (BIPA) of 2000 changed the formula for determining the additional amounts to be paid to hospitals for Medicare+Choice (now MA) nursing and allied health costs. Under section 541 of the BBRA, the additional payment amount was determined based on the proportion of each individual hospital's nursing and allied health education payment to total nursing and allied health education payments made to all hospitals. However, this formula did not account for a hospital's specific Medicare+Choice (now MA) utilization. Section 512 of the BIPA revised this

[225] The M+C program in Part C of Medicare was renamed the Medicare Advantage (MA) Program under the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA), which was enacted in December 2003.

payment formula to specifically account for each hospital's Medicare+Choice (now MA) utilization. This provision was effective for portions of cost reporting periods occurring in a calendar year, beginning with CY 2001.

The regulations at 42 CFR 413.87 implement both statutory provisions. We first implemented the BBRA NAH Medicare+Choice (now MA) provision in the August 1, 2000, IPPS interim final rule with comment period (IFC) (65 FR 47036 through 47039), and subsequently implemented the BIPA provision in the August 1, 2001 IPPS final rule (66 FR 39909 and 39910). In those rules, we outlined the qualifying conditions for a hospital to receive the NAH Medicare+Choice (now MA) payment, how we would calculate the NAH Medicare+Choice (now MA) payment pool, and how a qualifying hospital would calculate its ''share'' of payment from that pool. Determining a hospital's NAH MA payment essentially involves applying a ratio of the hospital-specific NAH Part A payments, total inpatient days, and MA inpatient days, to national totals of those same variables, from cost reporting periods ending in the fiscal year that is 2 years prior to the current calendar year. The formula is as follows:

(((Hospital NAH pass-through payment/ Hospital Part A Inpatient Days) * (Hospital MA Inpatient Days)) divided by
((National NAH pass-through payment/ National Part A Inpatient Days) * (National MA Inpatient Days))) * Current Year Payment Pool.

With regard to determining the total national amounts for NAH pass-through payment, Part A inpatient days, and MA inpatient days, we note that section 1886(l) of the Act, as added by section 541 of the BBRA, gives the Secretary the discretion to ''estimate'' the national components of the formula noted previously. For example, section 1886(l)(2)(A) of the Act states that the Secretary shall estimate the ratio of payments for all hospitals for portions of cost reporting periods occurring in the year under section 1886(h)(3)(D) of the Act to total direct GME payments estimated for the same portions of periods under section 1886(h)(3) of the Act.

Accordingly, we stated in the August 1, 2000, IFC (65 FR 47038) that each year, we would determine and publish in a final rule the total amount of nursing and allied health education payments made across all hospitals during the fiscal year 2 years prior to the current calendar year. We would use the best available cost reporting data for the applicable hospitals from the Hospital Cost Report Information System (HCRIS) for cost reporting periods in the fiscal year that is 2 years prior to the current calendar year.

To calculate the pool, in accordance with section 1886(l) of the Act, we stated that we would ''estimate'' a total amount for each calendar year, not to exceed $60 million (65 FR 47038). To calculate the proportional reduction to Medicare+Choice (now MA) direct GME payments, we stated that the percentage is estimated by calculating the ratio of the Medicare+Choice nursing and allied health payment ''pool'' for the current calendar year to the projected total Medicare+Choice direct GME payments made across all hospitals for the current calendar year. We stated that the projections of Medicare+Choice direct GME and Part A direct GME payments are based on the best available cost report data from the HCRIS (for example, for CY 2000, the projections are based on the best available cost report data from FY 1998 HCRIS), and these payment amounts are increased using the increases allowed by section 1886(h) of the Act for these services (using the percentage applicable for the current calendar year for Medicare+Choice direct GME and the Consumer Price Index (CPI–U) increases for Part A direct GME). We also stated that we would publish the applicable percentage reduction each year in the IPPS proposed and final rules (65 FR 47038).

Thus, in the August 1, 2000, IFC, we described our policy regarding the timing and source of the national data components for the NAH Medicare+Choice (now MA) add-on payment and the percent reduction to the direct GME Medicare+Choice payments, and we stated that we would publish the rates for each calendar year in the IPPS proposed and final rules. While the rates for CY 2000 were published in the August 1, 2000, IFC (see 65 FR 47038 and 47039), the rates for subsequent CYs were only issued through Change Requests (CRs) (CR 2692, CR 11642, CR 12407). After recent issuance of the CY 2019 rates in CR 12407 on August 19, 2021, we reviewed our update procedures, and were reminded that the August 1, 2000, IFC states that we would publish the NAH Medicare+Choice (now MA) rates and direct GME percent reduction every year in the IPPS rules. Accordingly, for CY 2020 and CY 2021, we proposed and finalized the NAH MA add-on rates in the FY 2023 IPPS/LTCH PPS proposed and final rules. We stated that for CYs 2022 and after, we would similarly propose and finalize the respective NAH MA rates and direct GME percent reductions in subsequent IPPS/LTCH PPS rulemakings (see 87 FR 49073, August 10, 2022).

In this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing the rates for CY 2024. Consistent with the use of HCRIS data for past calendar years, we are proposing to use data from cost reports ending in FY 2022 HCRIS (the fiscal year that is 2 years prior to CY 2024) to compile these national amounts: NAH pass-through payment, Part A Inpatient Days, MA Inpatient Days.

For this proposed rule, we accessed the FY 2022 HCRIS data from the fourth quarterly HCRIS update of 2024. However, to calculate the ''pool'' and the direct GME MA percent reduction, we ''project'' Part A direct GME payments and MA direct GME payments for the current calendar year, which in this proposed rule is CY 2024, based on the ''best available cost report data from the HCRIS'' (65 FR 47038). Next, consistent with the method we described previously in the August 1, 2000, IFC, we increase these payment amounts from midpoint to midpoint of the appropriate calendar year using the increases allowed by section 1886(h) of the Act for these services (using the percentage applicable for the current calendar year for MA direct GME, and the Consumer Price Index-Urban (CPI–U) increases for Part A direct GME). For CY 2024, the direct GME projections are based on the fourth quarterly update of CY 2022 HCRIS, adjusted for the CPI–U and for increasing MA enrollment.

For CY 2024, the proposed national rates and percentages, and their data sources, are set forth in this table. We intend to update these numbers in the FY 2026 final rule based on the latest available cost report data.

Proposed CY 2024 NAH MA rates	Proposed CY 2024	Source
NAH Pass-Through	$281,853,426	Cost reports ending in FY 2022 HCRIS.
Part A Inpatient Days	75,303,913	Cost reports ending in FY 2022 HCRIS.
MA Inpatient Days	16,305,155	Cost reports ending in FY 2022 HCRIS.
Part A Direct GME	$3,085,013,941	CY 2022 HCRIS + CPI–U + MA enrollment.

Proposed CY 2024 NAH MA rates	Proposed CY 2024	Source
MA Direct GME	$2,565,628,319	CY 2022 HCRIS + CPI–U + MA enrollment.
Pool (not to exceed $60 million)	$60,000,000	((MA DGME/Part A DGME) * (NAH Pass-through)).
Percent Reduction to MA DGME Payments	2.34%	Pool/MA direct GME.

3. Proposed Regulatory Changes Regarding the Calculation of Net Cost of NAH Education Programs (42 CFR 413.85(d)(2)(i) and (ii))

In the January 12, 2001, final rule (66 FR 3358), we codified the payment regulations regarding NAH education program costs at 42 CFR 413.85. With regard to determining the net costs which are allowed for ''pass-through'' payment, 42 CFR 413.85(d)(2)(i) states that the net cost of approved educational activities is determined by deducting the revenues that a provider receives from tuition and student fees from the provider's total allowable educational costs that are directly related to approved educational activities. Section 413.85(d)(2)(ii) further states that a provider's total allowable educational costs are those costs incurred by the provider for trainee stipends, compensation of teachers, and other costs of the activities as determined under the Medicare cost-finding principles in § 413.24. These costs do not include patient care costs, costs incurred by a related organization, or costs that constitute a redistribution of costs from an educational institution to a provider or costs that have been or are currently being provided through community support. Worksheet A of the Medicare cost report captures the direct costs associated with a hospital's various cost centers, including its NAH education programs. The direct costs associated with operating a hospital's approved NAH education programs are reported on Worksheet A, line 20 (nursing programs) and line 23 (paramedical/allied health education programs). The instructions to these lines state—

Lines 20 and 23—If you have an approved nursing or allied health education program that meets the criteria of 42 CFR 413.85(e), classroom and clinical portions of the costs may be allowable as pass-through costs as defined in 42 CFR 413.85(d)(2). . . . (CMS Pub. 15–2, section 4013)

In addition to direct costs, hospitals also incur indirect or overhead costs associated with their operations. Overhead costs are assigned to the general service cost centers on lines 1 through 23 of Worksheet A, which are a hospital's non-patient care/non-revenue producing cost centers, and which include the Administrative & General (A&G) cost center on line 5. The general cost report instructions for Worksheet A state—

Lines 1 through 23—These lines are for the general service cost centers. These costs are expenses incurred in operating the facility as a whole *that are not directly associated with furnishing patient care* such as, but not limited to mortgage, rent, plant operations, administrative salaries, utilities, telephone charges, computer hardware and software costs, etc. General service cost centers furnish services to both general service areas and to other cost centers in the provider (emphasis added).

Because the costs of operating a hospital's NAH education programs are not directly associated with furnishing patient care, these cost centers are also included among the general service cost centers on Worksheet A. As noted in the cost report instructions cited previously, general service cost centers may furnish services to other general service areas. Thus, for example, a hospital's Administrative and General cost center may furnish services to its Nursing and Allied Health Education cost centers.

The regulations and cost report instructions require that, prior to allocating overhead costs to the revenue producing cost centers, a provider must make appropriate reclassifications and adjustments to its direct costs. Worksheet A–6 is used to reclassify costs between cost centers on the cost report, while Worksheet A–8 is used to adjust both a provider's revenue producing and non-revenue producing cost centers, and remove non-allowable costs. The cost report instructions for Worksheet A–8 state, in relevant part—

Types of adjustments entered on this worksheet include (1) those needed to adjust expenses to reflect actual expenses incurred; (2) *those items which constitute recovery of expenses through sales, charges, fees, etc.;* (3) those items needed to adjust expenses in accordance with the Medicare principles of reimbursement; and (4) those items which are provided for separately in the cost apportionment process (emphasis added). (CMS Pub. 15–2, section 4016.)

Adjustments, including the recovery of expenses through various forms of revenue, occur prior to cost finding, which is the process by which indirect costs (that is, the costs of the general service cost centers) are allocated to other cost centers (both other general service cost centers and revenue producing cost centers). Worksheets B, Part I, and B–1 have been designed to accommodate the stepdown method of cost finding described at 42 CFR 413.24(d)(1). Certain other cost adjustments, referred to as post-stepdown adjustments, occur after the allocation of indirect and overhead costs and are reported separately on Worksheet B–2.

On November 17, 2017, CMS issued Transmittal 12, which contained updates to the hospital cost report instructions at CMS–2552–10, Pub. 15–2, chapter 40. It added the following instructions to line 19 of Worksheet A–8:

Line 19—For each NAHE program on Worksheet A, line 20, and its subscripts, and Worksheet A, line 23, and its subscripts, enter the revenue adjustments (for tuition, fees, books, etc.) to be applied against total allowable costs that are directly related to the approved NAHE activities. Subscript this line to separately report the revenue offset for each NAHE program reported on line 20 and line 23. (See CMS Pub. 15–1, chapter 4, § 414, and 42 CFR 413.85(d)(2)(i).)

Transmittal 12 also added to Worksheet B–2 specific instructions for post-stepdown adjustments for certain costs associated with NAHE non-provider-operated programs under 42 CFR 413.85(g)(2), with the following note:

Note: Do not use this worksheet to reduce the total allowable costs that are directly related to the NAHE programs by the revenue received from tuition and student fees. Use Worksheet A–8 to offset NAHE program costs by tuition and student fees (42 CFR 413.85(d)(2)(i)). Do not use a post step-down adjustment.

By issuing these cost report clarifications in Transmittal 12, CMS was clarifying the rules regarding ensuring the appropriate order of operations for allocations and post-stepdown adjustments of overhead to the NAH education pass-through cost centers. Specifically, Transmittal 12 made it clear that adjustments to the direct costs of NAH education programs as a result of revenue received from tuition, student fees and other sources should occur on Worksheet A–8, prior to the allocation of overhead costs, and *not* as post-stepdown adjustments on Worksheet B–2.

On February 9, 2024, the U.S. District Court for the District of Columbia (D.C.) issued a decision involving five plaintiff hospitals (*Mercy Health—St. Vincent*

Medical Center LLC d/b/a Mercy St. Vincent Medical Center, et al., v. *Xavier Becerra,* Case No. 22–cv–3578 (TNM)). The providers disputed the order of operations for determining ''net costs'' under 42 CFR 413.85(d)(2)(i). The providers disagreed with the instructions in Transmittal 12, and argued that the offsets for revenue from tuition and student fees should be made after indirect costs are allocated, using Worksheet B–2, which follows the allocation of indirect costs on Worksheet B, Part I. According to the providers, the regulations require that indirect costs be included as part of a provider's total allowable educational costs before tuition and student fees are offset, and the change to the cost reporting instructions in 2017 was a change in policy that conflicts with the regulations.

The U.S. District Court for D.C. sided with the providers, arguing that the plain reading of the regulations text at 42 CFR 413.85(d)(2)(i) is consistent with the providers' interpretation of the order of operations, which is to allow direct and indirect costs to be summed, and tuition and fees to be subtracted from that sum. We disagree with the Court's ruling and assert that the cost report instructions at PRM 15–2 sec. 4016 are clear that revenue that is a recovery of expenses should be offset via Worksheet A–8, prior to the allocation of indirect costs, and that these instructions are consistent with the regulations and Medicare cost reporting policy broadly.

Nevertheless, in order to further clarify the regulations, we are proposing to change the regulations text at 42 CFR 413.85(d)(2)(i) to state that the net cost of approved educational activities is determined as follows:

- Determine allowable direct costs incurred by the provider for trainee stipends and compensation of teachers employed by the provider.
- Subtract from allowable direct costs the revenues the provider receives from students or on behalf of students enrolled in the program, such as, but not limited to, tuition, student fees, or textbooks purchased for resale.
- Add indirect costs of the activities as determined under the Medicare cost-finding principles in 42 CFR 413.24, but limited to indirect costs that the provider itself incurs as a consequence of operating the approved educational activities.

We note that as a result of this proposal, we would be modifying and moving the first sentence of existing 42 CFR 413.85(d)(2)(ii), which defines a provider's total allowable educational costs as those costs incurred by the provider for trainee stipends, compensation of teachers, and other costs of the activities as determined under the Medicare cost-finding principles in § 413.24, up to proposed 42 CFR 413.85(d)(2)(i). However, we are not proposing to revise the portion of existing regulations text at 42 CFR 413.85(d)(2)(ii) which states that the direct and indirect allowable costs of educational activities do not include patient care costs, costs incurred by a related organization, or costs that constitute a redistribution of costs from an educational institution to a provider or costs that have been or are currently being provided through community support.

The effective date of this proposed regulatory change would be cost reporting periods beginning on or after October 1, 2025.

We understand that it is not uncommon for a provider's total revenues from tuition, student fees and other sources to exceed the provider's allowable direct costs of its nursing and allied health education programs. If the default method of cost allocation is used, the adjustments occurring on Worksheet A–8 would reduce the overhead costs apportioned to the nursing program or allied health education program cost centers. This is because the default statistical basis for allocating administrative and general costs to other cost centers is accumulated cost, which in this case would be zero. However, to mitigate this reduction of indirect costs, providers that directly incur legitimate overhead costs as a result of the operation of their NAH education programs have options under current regulations to seek permission from their MAC to employ a different allocation method that is more suited to the types of costs they incur. Exercising these options is at the request of the provider, and will not occur unless the provider seeks permission from its MAC to change its allocation method.

If a provider wishes to change its statistical allocation basis for a particular cost center and/or the order in which the cost centers are allocated, the provider must make a written request to its MAC in accordance with PRM 15–1, chapter 23, section 2313. Specific to the operation of NAH education programs, a provider may elect to subscript its A&G cost center (line 5 of Worksheet A) for overhead costs directly related to NAH programs and use a statistic other than accumulated costs, which specifically relates to the NAH cost being allocated. For example, after subscripting the A&G cost center, a provider can use clinical rotation hours spent in each routine or ancillary area, to compute a ratio to total clinical rotation hours for each program. Then, to apportion staff's salaries among more than one NAH cost center, a provider can use a ratio of the number of students enrolled in a program to total number of students. For instance, a clinical coordinator's salary, whose job is to schedule and manage the clinical rotations of multiple NAHE programs, can be included in a subscripted A&G cost center and allocated to multiple NAH programs based on the ratio of the number of students in each NAH program to total number of students in all of the hospital's NAH programs. Providers would thus be able to appropriately differentiate the A&G costs to be allocated to NAH programs from those that should not be allocated toward operation of those programs because the statistical basis for this subscripted cost center would be more specific to services rendered. As a result, the amount of overhead costs that ultimately flow to the NAH cost centers would be more accurate, albeit less than what would be allocated if tuition and student fees were subtracted as a post-stepdown adjustment, as argued by the providers in *Mercy Health;* however, as discussed above, the providers' desired method is not consistent with CMS's existing policy or existing cost report instructions.

The proposed order of operations to offset revenue from direct costs on Worksheet A–8 also is consistent with CMS policy that A&G costs allocated to the NAH cost centers must be *directly related* to the operation of specific approved programs under 42 CFR 413.85(f) and (g). In the January 12, 2001, final rule (66 FR 3367), we clarified the meaning of the term ''tuition'' and specified a formula for determining the net costs to indicate that ''total costs'' includes only direct and indirect costs incurred by a provider that are *directly attributable* to the operation of an approved educational activity. We explained that *these costs do not include usual patient care costs that would be incurred in the absence of the educational activity,* such as the salary costs for nursing supervisors who oversee the floor nurses and student nurses. Moreover, these costs do *not* include *costs incurred by a related organization.* We understand that a significant portion of indirect costs that certain plaintiffs in the litigation allocated to their nursing and allied health cost centers included costs incurred by a related organization (such as a home office), in violation of the regulation at 42 CFR 413.85(d)(2)(ii),

as well as A&G costs not directly attributable to the operation of the NAH programs. Those A&G costs not directly incurred as a result of operating the NAH education programs are to be paid under the IPPS, not ''passed through'' the IPPS (or other applicable hospital payment system). For instance, costs which benefit the hospital as a whole, such as Infection Control, Admissions, Patient Registration, Telecommunications, etc., would generally be incurred in the absence of a provider's NAH programs; therefore, these types of costs are not to be allocated to the NAH program cost centers. Consequently, it is the provider's responsibility to request permission from its MAC to use an allocation method for overhead costs that accurately and appropriately reflects overhead costs incurred by the provider as a direct result of operating NAH education programs.

In summary, we are proposing to amend the regulations at 42 CFR 413.85(d)(2)(i) and (ii) as specified previously.

H. Proposed Payment Adjustment for Certain Immunotherapy Cases (§§ 412.85 and 412.312)

Effective for FY 2021, we created MS–DRG 018 for cases that include procedures describing CAR T-cell therapies, which were reported using ICD–10–PCS procedure codes XW033C3 or XW043C3 (85 FR 58599 through 58600). Effective for FY 2022, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 448106).

Effective for FY 2021, we modified our relative weight methodology for MS–DRG 018 in order to develop a relative weight that is reflective of the typical costs of providing CAR T-cell therapies relative to other IPPS services. Specifically, under our finalized policy we do not include claims determined to be clinical trial claims that group to MS–DRG 018 when calculating the average cost for MS–DRG 018 that is used to calculate the relative weight for this MS–DRG, with the additional refinements that: (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for MS DRG 018 to the extent such claims can be identified in the historical data; and (b) when there is expanded access use of immunotherapy, these cases will not be included when calculating the average cost for MS–DRG 018 to the extent such claims can be identified in the historical data (85 FR 58600). The term ''expanded access'' (sometimes called ''compassionate use'') is a potential pathway for a patient with a serious or immediately life-threatening disease or condition to gain access to an investigational medical product (drug, biologic, or medical device) for treatment outside of clinical trials when, among other criteria, there is no comparable or satisfactory alternative therapy to diagnose, monitor, or treat the disease or condition (21 CFR 312.305).[226]

Effective FY 2021, we also finalized an adjustment to the payment amount for applicable clinical trial and expanded access immunotherapy cases that group to MS–DRG 018 using the same methodology that we used to adjust the case count for purposes of the relative weight calculations (85 FR 58842 through 58844). (As previously noted, effective beginning FY 2022, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 448106).) Specifically, under our finalized policy we apply a payment adjustment to claims that group to MS–DRG 018 and include ICD–10–CM diagnosis code Z00.6, with the modification that when the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the payment adjustment will not be applied in calculating the payment for the case. We also finalized that when there is expanded access use of immunotherapy, the payment adjustment will be applied in calculating the payment for the case. This payment adjustment is codified at 42 CFR 412.85 (for operating IPPS payments) and 412.312 (for capital IPPS payments), for claims appropriately containing Z00.6, as described previously, and reflects that the adjustment is also applied for cases involving expanded access use immunotherapy, and that the payment adjustment only applies to applicable clinical trial cases; that is, the adjustment is not applicable to cases where the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product. The regulations at 42 CFR 412.85(c) also specify that the adjustment factor will reflect the average cost for cases to be assigned to MS–DRG 018 that involve expanded access use of immunotherapy or are part of an applicable clinical trial to the average cost for cases to be assigned to MS–DRG 018 that do not involve expanded access use of immunotherapy and are not part of a clinical trial (85 FR 58844).

For FY 2026, we are proposing to continue to apply an adjustment to the payment amount for expanded access use of immunotherapy and applicable clinical trial cases that group to MS–DRG 018, calculated using the same methodology, as modified in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59062), that we are proposing to use to adjust the case count for purposes of the relative weight calculations, including our proposed modifications to that methodology for FY 2026, as described in section II.D. of the preamble of this proposed rule.

As discussed in the FY 2024 IPPS/LTCH PPS final rule, the MedPAR claims data now includes a field that identifies whether or not the claim includes expanded access use of immunotherapy. For the FY 2023 MedPAR data and for subsequent years, this field identifies whether or not the claim includes condition code 90. The MedPAR files now also include information for claims with the payer-only condition code ''ZC'', which is used by the IPPS Pricer to identify a case where the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product so that the payment adjustment is not applied in calculating the payment for the case (for example, see Change Request 11879, available at *https://www.cms.gov/files/document/r10571cp.pdf*). We refer the readers to section II.D. of this proposed rule for further discussion of our methodology for identifying clinical trial claims and expanded access use claims in MS–DRG 018 and our methodology used to adjust the case count for purposes of the relative weight calculations, as modified in the FY 2024 IPPS/LTCH PPS final rule, and as further proposed to be modified for FY 2026 to identify other claims for which the immunotherapy product was not purchased in the usual manner, such as obtained at no cost.

In the FY 2025 IPPS/LTCH PPS final rule, we summarized a comment requesting that CMS establish a mechanism for hospitals to report when a product is not purchased in the usual manner, such as obtained at no cost, for reasons other than participation in a clinical trial or expanded access use (89 FR 69112). We indicated we may consider this request in future

[226] *https://www.fda.gov/news-events/expanded-access/expanded-access-keywords-definitions-and-resources.*

rulemaking. We agree that the same adjustment that applies to expanded access use of immunotherapy and applicable clinical trial cases should apply to other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, and therefore are proposing that, beginning in FY 2026, the payment adjustment would also be applied in calculating the payment for such cases. We intend to issue billing instructions in separate guidance that would allow a provider to indicate, for that case, that the immunotherapy product was not purchased in the usual manner so that MACs would apply the same adjustment to the payment amount that is applied for expanded access use of immunotherapy and applicable clinical trial cases that group to MS–DRG 018. We are also proposing to modify our regulations at 42 CFR 412.85 (for operating IPPS payments) and 412.312 (for capital IPPS payments) to codify this proposed payment adjustment for other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost. Specifically, we are proposing to modify the section heading and paragraphs (b) and (c) at 42 CFR 412.85 to include other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, and to make additional technical revisions to paragraph (c). We are also proposing to modify paragraph (f) at 42 CFR 412.312 to include cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost.

We also refer readers to section II.D. of the preamble of this proposed rule for further discussion of our proposed changes to our methodology for calculating the relative weight for MS–DRG 018 to identify other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost and to adjust the case count for purposes of the relative weight calculations.

Using the same methodology that we are proposing to use to adjust the case count for purposes of the relative weight calculations, including our proposed modifications as discussed in section II.D. of the preamble of this proposed rule, we are proposing to calculate the adjustment to the payment amount for expanded access use of immunotherapy, applicable clinical trial cases, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost as follows:

- Calculate the average cost for cases assigned to MS–DRG 018 that (a) contain ICD–10–CM diagnosis code Z00.6 and do not contain condition code ''ZC'', (b) contain condition code ''90'', or (c) contain standardized drug charges below the median standardized drug charge of clinical trial cases in MS–DRG 018.
- Calculate the average cost for all other cases assigned to MS–DRG 018.
- Calculate an adjustor by dividing the average cost calculated in step 1 by the average cost calculated in step 2.
- Apply this adjustor when calculating payments for expanded access use of immunotherapy, applicable clinical trial cases, and other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, that group to MS–DRG 018 by multiplying the relative weight for MS–DRG 018 by the adjustor.

We refer the readers to section II.D. of the preamble of this proposed rule for further discussion of our methodology.

Consistent with our calculation of the proposed adjustor for the relative weight calculations, for this proposed rule we are proposing to calculate this adjustor based on the December 2024 update of the FY 2024 MedPAR file for purposes of establishing the FY 2026 payment amount. Specifically, in accordance with proposed revised 42 CFR 412.85 (for operating IPPS payments) and 412.312 (for capital IPPS payments), we propose to multiply the FY 2026 relative weight for MS–DRG 018 by a proposed adjustor of 0.23 as part of the calculation of the payment for claims determined to be applicable clinical trial claims, expanded access use immunotherapy claims, or other cases where the immunotherapy product is not purchased in the usual manner, such as obtained at no cost, that group to MS–DRG 018, which includes CAR T-cell and non-CAR T-cell therapies and other immunotherapies. We also propose to update the value of the adjustor based on more recent data for the final rule.

K. Hospital Readmissions Reduction Program Updates and Changes

1. Regulatory Background

Section 1886(q) of the Act sets forth the requirements of the Hospital Readmissions Reduction Program effective for discharges from applicable hospitals beginning on or after October 1, 2012. Under the Hospital Readmissions Reduction Program, payments to applicable hospitals must be reduced to account for certain excess readmissions. We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49530 through 49543) and the FY 2018 IPPS/LTCH PPS final rule (82 FR 38221 through 38240) for a general overview of the Hospital Readmissions Reduction Program. We also refer readers to 42 CFR 412.152 through 412.154 for codified Hospital Readmissions Reduction Program requirements.

2. Hospital Readmissions Reduction Program Measures

a. Proposal To Integrate Medicare Advantage (MA) Beneficiaries Into the Cohorts of the Hospital Readmissions Reduction Program Measure Set Beginning With the FY 2027 Program Year

(1) Background

In this proposed rule, we propose to adopt substantive updates to the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) Following Acute Myocardial Infarction (AMI) Hospitalization; Hospital 30-Day, All-Cause, RSRR Following Heart Failure (HF) Hospitalization; Hospital 30-Day, All-Cause, RSRR Following Pneumonia (PN) Hospitalization; Hospital-Level, 30-Day, All-Cause, RSRR Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization; Hospital 30-Day, All-Cause, RSRR Following Total Hip Arthroplasty (THA) and Total Knee Arthroplasty (TKA) Hospitalization; and Hospital 30-Day, All-Cause, RSRR Following Coronary Artery Bypass Graft (CABG) Surgery measures, hereinafter referred to as the Hospital Readmissions Reduction Program measure set, beginning with the FY 2027 Program Year. The proposed updates to the Hospital Readmissions Reduction Program measure set would include integrating MA beneficiaries into each measure's cohorts and reducing the applicable period from a three-year period to a two-year period. In addition, we propose to make a non-substantive modification; we would update the risk adjustment model to use individual International Classification of Diseases (ICD)-10 codes instead of Hierarchical Condition Categories (HCCs). For the purposes of describing the substantive change of the Hospital Readmissions Reduction Program measure set, we note that ''cohort'' is defined as the hospitalizations, or ''index admissions,'' that are included when calculating each measure. This cohort is the set of hospitalizations that meet all the inclusion and exclusion criteria. For measure cohort details of the most recent versions of the Hospital Readmissions Reduction Program measure set, we refer readers to the

measure methodology report and measure risk adjustment statistical model on our website at: *https://qualitynet.cms.gov/inpatient/measures/readmission/methodology*.

Including MA beneficiaries in hospital outcome measures would help ensure that hospital quality would be measured across all Medicare beneficiaries and not just the Fee-For-Service (FFS) population. In 2024, 50 percent of eligible Medicare beneficiaries—or 34.3 million people—were covered by MA plans.[227] It is projected that nearly two-thirds of all Medicare enrollees will be enrolled in MA plans by 2030.[228] Consequently, using FFS-only beneficiaries may exclude a large segment of the focus population for quality measurement.

Additionally, studies comparing readmission rates between MA and FFS-only have shown mixed results. While several studies report lower readmissions for MA enrollees,[229] [230] others have found no difference or even higher risk-adjusted readmission rates for certain conditions.[231] [232] Due to these differing research study conclusions, adding the MA cohort to the Hospital Readmissions Reduction Program measures would allow for a more robust and holistic view of quality of care provided to all Medicare beneficiaries.[233] Most importantly, the FFS and MA data in our hospital outcome measures would empower patients and caregivers to make informed decisions about their healthcare by giving them additional comparative data on hospitals.

(2) Overview of Measure Updates

We refer readers to the CMS Measures Inventory Tool and Hospital Readmissions Reduction Program readmission measures specification manuals for more information on the Hospital Readmissions Reduction Program measure set, including background on each measure and a complete summary of measure specifications.[234] [235]

We propose to adopt updates to the Hospital Readmissions Reduction Program measure set in the Hospital Readmissions Reduction Program beginning with the FY 2027 program year. The newly refined versions of the Hospital Readmissions Reduction Program measure set would expand the measures' inclusion criteria to include MA beneficiaries. Currently, the measure denominator for the Hospital Readmissions Reduction Program measure set includes beneficiaries ''Enrolled in Medicare FFS Part A and Part B for the first 12 months prior to the date of admission and enrolled in Part A during the index admission.'' [236] We propose to modify the measure cohort to ''Enrolled in Medicare FFS and/or MA for the 12 months prior to the date of admission; and enrolled in FFS or MA during the index admission.'' [237] The addition of MA data to the measure doubles the cohort size and more accurately reflects the quality of care for both FFS and MA beneficiaries.

We are also providing a non-substantive update which would re-specify the risk model for each measure to primarily use individual ICD–10 codes, leveraging the specificity of individual ICD–10 coding in place of the previously used HCCs. This technical update would improve the performance of the risk adjustment models for condition- and procedure-specific mortality and complication measures.[238] We refer readers to the CMS Measures Management System for more on the list of ICD–10 codes used in the risk adjustment model, available at: *https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports/2024-MUC-List-materials*.

(3) Pre-Rulemaking Process and Measure Endorsement

(a) Recommendation From the PRMR Process

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69457 through 69458) for details on the Pre-Rulemaking Measure Review (PRMR) process, including the voting procedures that the PRMR process uses to reach consensus on measure recommendations. The PRMR Hospital Committee, comprised of the PRMR Hospital Advisory Group and PRMR Hospital Recommendation Group, reviewed the proposed updated versions of the Hospital Readmissions Reduction Program measure set. Consensus is reached when there is 75 percent or higher agreement among members of a committee.[239] The PRMR Hospital Recommendation Group reviewed the proposed updated Hospital Readmissions Reduction Program measure set specifications (MUC2024–030, MUC2024–032, MUC2024–040, MUC2024–041, MUC2024–045, MUC2024–046) during a meeting on January 16, 2025, to vote on a recommendation about use of these measures for the Hospital Readmissions Reduction Program.[240]

The PRMR Hospital Recommendation Group reached consensus for each of the measures. For each measure, they voted to recommend the addition of MA data to each measure, with conditions.[241]

The voting results of the PRMR Hospital Recommendation Group for the proposed updates to the Hospital 30-Day, All-Cause, RSRR Following AMI Hospitalization measure were: 18 members of the group recommended adopting the updates without

conditions; 9 members recommended adoption with conditions; and 0 members voted not to recommend the updates for adoption. Taken together, 100 percent of the votes were between ''recommend'' and ''recommend with conditions.'' Thus, the committee reached consensus and recommended with conditions the updates to the Hospital 30-Day, All-Cause, RSRR Following AMI Hospitalization measure.

The voting results of the PRMR Hospital Recommendation Group for the proposed updates to the Hospital 30-Day, All-Cause, RSRR Following HF Hospitalization measure were: 17 members of the group recommended adopting the updates without conditions; 10 members recommended adoption with conditions; and 0 members voted not to recommend the updates for adoption. Taken together, 100 percent of the votes were between ''recommend'' and ''recommend with conditions.'' Thus, the committee reached consensus and recommended with conditions the updates to the Hospital 30-Day, All-Cause, RSRR Following HF Hospitalization measure.

The voting results of the PRMR Hospital Recommendation Group for the proposed updates to the Hospital-Level, 30-Day, All-Cause, RSRR Following COPD Hospitalization measure were: 18 members of the group recommended adopting the updates without conditions; 9 members recommended adoption with conditions; and 0 members voted not to recommend the updates for adoption. Taken together, 100 percent of the votes were between ''recommend'' and ''recommend with conditions.'' Thus, the committee reached consensus and recommended with conditions the updates to the Hospital-Level, 30-Day, All-Cause, RSRR Following COPD Hospitalization measure.

The voting results of the PRMR Hospital Recommendation Group for the proposed updates to the Hospital 30-Day, All-Cause, RSRR Following THA and/or TKA Hospitalization measure were: 19 members of the group recommended adopting the updates without conditions; 7 members recommended adoption with conditions; and 1 member voted not to recommend the updates for adoption. Taken together, 96 percent of the votes were between ''recommend'' and ''recommend with conditions.'' Thus, the committee reached consensus and recommended with conditions the updates to the Hospital 30-Day, All-Cause, RSRR Following THA and/or TKA Hospitalization measure.

The voting results of the PRMR Hospital Recommendation Group for the proposed updates to the Hospital 30-Day, All-Cause, RSRR Following PN Hospitalization measure were: 17 members of the group recommended adopting the updates without conditions; 10 members recommended adoption with conditions; and 0 members voted not to recommend the updates for adoption. Taken together, 100 percent of the votes were between ''recommend'' and ''recommend with conditions.'' Thus, the committee reached consensus and recommended with conditions the updates to the Hospital 30-Day, All-Cause, RSRR Following PN Hospitalization measure.

The voting results of the PRMR Hospital Recommendation Group for the proposed updates to the Hospital 30-Day, All-Cause, RSRR Following CABG Surgery measure were: 19 members of the group recommended adopting the updates without conditions; 8 members recommended adoption with conditions; and 0 members voted not to recommend the updates for adoption. Taken together, 100 percent of the votes were between ''recommend'' and ''recommend with conditions.'' Thus, the committee reached consensus and recommended with conditions the updates to the Hospital 30-Day, All-Cause, RSRR Following CABG Surgery measure.

The measure set was discussed as a group during the Hospital Recommendation Group meeting, with committee members providing recommendations that spanned across measures. The conditions submitted included: revising the inclusion criteria to include care provided in ambulatory settings; stratification of measure data by MA and FFS; consideration of a shorter 7- or 14-day readmission time period; and conducting additional testing to evaluate whether the measure is topped out for all subgroups reporting.

After taking these conditions into account, we propose to adopt the updated Hospital Readmissions Reduction Program measure set in the Hospital Readmissions Reduction Program. We note that the conditions were not specific to the addition of MA data into the measures but addressed the measures in totality. Therefore, we will review the applicability of stratifying the measures by MA or FFS data and provide that information through the confidential feedback reports for hospitals. We will also evaluate the readmission metrics to a shorter 7- or 14-day readmission time period and review the criteria to include care provided in ambulatory settings and its applicability to each measure. We continue to review each measure's topped out status through our internal measure evaluation reports.

(b) Measure Endorsement

We refer readers to FY 2025 IPPS/LTCH PPS final rule (89 FR 69457 through 69458) for details on the endorsement and maintenance (E&M) process including the procedures the CBE's E&M Committees use to evaluate measures and whether they meet endorsement criteria. The currently implemented version of these measures in the Hospital Readmissions Reduction Program were previously evaluated and endorsed by the CBE.[242] The proposed updated measures that include MA beneficiaries in the patient cohorts will each be considered for future endorsement.

(4) Data Submission and Reporting

The proposed updated Hospital Readmissions Reduction Program measure set would use index admission diagnoses and in-hospital comorbidity data from Medicare FFS Part A, MA claims/encounters, or both. Additional comorbidities prior to the index admission are assessed using Part A and Part B Medicare claims, MA encounters in the 12 months prior to index (initial) admission. A patient's Medicare FFS or MA enrollment status would be obtained from the Medicare enrollment data which contains beneficiary demographic, benefit/coverage, and vital status information. We propose to use claims and encounter data with admission dates beginning from July 1, 2023, through June 30, 2025, which is associated with the FY 2027 program year. By using CMS administrative data, hospitals would not be required to submit additional data for calculating the measures. If these measure updates are finalized, we would continue to publicly report readmission rates by posting the readmission measure results for the applicable conditions for a fiscal year for each applicable hospital on the Compare tool or successor website(s), currently available at *https://www.medicare.gov/care-compare/*, and on the Provider Data Catalog, available

[242] Hospital 30-Day, All-Cause, RSRR Following PN Hospitalization (CBE #0506), Hospital 30-Day, All-Cause, RSRR Following HF Hospitalization (CBE #0330), Hospital 30-Day, All-Cause, RSRR Following THA and/or TKA Hospitalization (CBE #1551), Hospital 30-Day, All-Cause, RSRR Following CABG Surgery (CBE #2515), Hospital-Level, 30-Day, All-Cause, RSRR Following COPD Hospitalization (CBE #1891), and Hospital 30-Day, All-Cause, RSRR Following AMI Hospitalization (CBE #0505) can all be found at *https://cmit.cms.gov/cmit/#/MeasureInventory*.

at *https://data.cms.gov/provider-data/*, as codified at § 412.154(f).

We invite public comment on this proposal.

b. Technical Updates to the Specifications of the Hospital Readmissions Reduction Program Measures Beginning With the FY 2027 Program Year

During the COVID–19 public health emergency (PHE), in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45256 through 45258), we updated the Hospital 30-Day All-Cause RSRR Following AMI Hospitalization; Hospital 30-Day, All-Cause, RSRR Following CABG Surgery; Hospital-Level, 30-Day, All-Cause, RSRR Following COPD Hospitalization; Hospital 30-Day, All-Cause, RSRR Following HF Hospitalization; and Hospital 30-Day, All-Cause, RSRR Following THA and/or TKA Hospitalization measures to exclude patients diagnosed with COVID–19, including a primary or secondary diagnosis present on admission (POA) of COVID–19, from both index admissions and readmissions (86 FR 45257 through 45258). In the FY 2023 IPPS/LTCH PPS final rule, we provided an update regarding the technical specifications for the Hospital 30-Day, All-Cause, RSRR Following PN Hospitalization measure to exclude patients with either principal or secondary diagnosis POA of COVID–19 from both index admissions and readmissions (87 FR 49083 through 49086). Additionally, in the FY 2023 IPPS/LTCH PPS final rule, we modified the technical measure specifications of each of the six readmission measures to include a covariate adjustment for patient history of COVID–19 in the 12 months prior to the admission beginning with the FY 2023 program year (87 FR 49086 through 49088).

We stated that we were making these updates pursuant to the technical updates policy we finalized in the FY 2015 IPPS/LTCH final rule. Under this policy, we finalized a subregulatory process to incorporate technical measure specification updates into the measure specifications we had previously adopted for the Hospital Readmissions Reduction Program (79 FR 50039). We reiterated this policy in the FY 2020 IPPS/LTCH final rule, stating our continued belief that the subregulatory process is the most expeditious manner possible to ensure that quality measures remain fully up to date while preserving the public's ability to comment on updates that so fundamentally change a measure that it is no longer the same measure that we originally adopted (84 FR 42385 through 42387).

We are providing notice in this proposed rule that we intend to remove the COVID–19 exclusion from the readmission measures beginning with the FY 2027 program year. This technical update will modify these readmission measures to remove the exclusion of COVID–19 diagnosed patients from the index admissions and readmissions, including the removal of the exclusion of certain ICD–10 Codes that represented patients with a secondary diagnosis of COVID–19, and the history of COVID–19 risk variable.

The exclusion began as a response to the COVID–19 PHE which expired May 11, 2023. We believe that hospitals have had adequate time to adjust to the presence of COVID–19 as an ongoing virus. Using data from the last four years, July 2020–June 2024, our internal analysis showed a decline over time of the number of patients excluded from the various measure cohorts. Therefore, we believe that removing the exclusion of COVID–19 patients will ensure that these readmission measures continue to account for readmissions as intended and meet the goals of the Hospital Readmissions Reduction Program.

Additional resources about current measure technical specifications and the methodology for the Hospital Technical specification of the current readmission measures are provided at our website in the Measure Methodology Reports (available at: *https://qualitynet.cms.gov/inpatient/measures/readmission/methodology*). Hospital Readmissions Reduction Program resources are located at the Resources web page of the QualityNet website (available at: *https://qualitynet.cms.gov/inpatient/hrrp/resources*). An updated measure methodology report will be made available in May 2026.

3. Additional Policies for the Hospital Readmissions Reduction Program

a. Proposal To Modify the Applicable Period for the Hospital Readmissions Reduction Program Measures Set

We propose to modify the definition of ''applicable period'' as specified at § 412.152. Currently, the ''applicable period'' is the 3-year period from which data are being collected to calculate excess readmission ratios (ERRs) and payment adjustment factors for the fiscal year; this includes aggregate payments for excess readmissions and aggregate payments for all discharges used in the calculation of the payment adjustment. In the FY 2013 IPPS/LTCH PPS final rule, we noted that the 3-year period provided an increase the number of cases per hospital used for measure calculation, which improved the precision of each hospital's readmission estimate (77 FR 53379 through 53382). The ''applicable period for dual eligibility'' is the same as the ''applicable period'' that we otherwise adopted for purposes of the Hospital Readmissions Reduction Program.

However, we now propose to reduce the applicable period from 3 to 2 years. The proposed update would allow for more recent data when assessing performance. With the proposed inclusion of MA patients in the cohort, we assessed whether the reliability of the measures could reach a satisfactory level when the applicable period is shortened. In testing, all measures showed better between-hospital variance using the 2-year FFS and MA combined cohort as compared to the current measure specifications of a 3-year applicable period and the FFS-only cohort.

Beginning in FY 2027, we propose that the ''applicable period'' for the Hospital Readmissions Reduction Program would be the 2-year period beginning 1 year advanced from the previous program fiscal year's start of the ''applicable period.'' For example, for the FY 2027 program determination, claims/encounter data with admission dates beginning from July 1, 2023, through June 30, 2025, would be used.

Under this proposed policy, for all subsequent years, we would advance this 2-year period by 1 year unless otherwise specified by the Secretary, which we would revise through notice and comment rulemaking. Similarly, the ''applicable period for dual eligibility'' would continue to correspond to the ''applicable period'' for the Hospital Readmissions Reduction Program, unless otherwise specified by the Secretary.

We invite public comment on this proposal.

b. Proposal To Identify Aggregate Payments for Each Condition/Procedure and All Discharges for FY 2027 and Subsequent Years

When calculating the numerator (aggregate payments for excess readmissions), we determine the base operating DRG payment amount for an individual hospital for the applicable period for each condition/procedure using Medicare FFS inpatient claims from the MedPAR file with discharge dates that are within the applicable period. Under our established methodology, we use the update of the MedPAR file for each Federal fiscal year, which is updated 6 months after the end of each Federal fiscal year

within the applicable period, as our data source.

In identifying discharges for the applicable conditions/procedures to calculate the aggregate payments for excess readmissions, we apply the same exclusions to the claims in the MedPAR file as are applied in the measure methodology for each of the applicable conditions/procedures. For example, for the FY 2025 applicable period, this included the discharge diagnoses for each applicable condition/procedure based on the list of specific ICD–10–CM and ICD–10–PCS code sets, as applicable, for that condition/procedure, as specified in the 2024 version of the measure methodology reports.

In this proposed rule, we propose to include payment data for Medicare FFS and MA beneficiaries that meet the criteria as previously described for each applicable condition/procedure to calculate the aggregate payments for excess readmissions. We will rely on the MedPAR and/or the latest available data source that would provide the most up-to-date comprehensive information on payment information for Medicare FFS and MA beneficiaries. This proposal results from our proposal to include MA beneficiaries in the Hospital Readmissions Reduction Program measure set cohorts.

We note that § 412.152 defines the terms ''aggregate payments for excess readmissions'' and ''excess readmissions ratio'' (ERR) broadly enough to allow us to include MA beneficiaries in the calculation without requiring us to revise the regulatory definition.

(1) Analysis of Proposed Changes Impact on Aggregate Payments

To assess the expected impact on hospital payment adjustments resulting from the changes to the readmission measures, the ''applicable period'', and calculations for aggregate payments for excess readmissions, we estimated hospitals' payment adjustment factors using the proposed measures updates to include MA data, the proposed two-year applicable period, and the proposed updates to the calculations for aggregate payments for each condition/procedure to include MA data. Later in this section we show the estimated total Medicare savings under the current payment adjustment factor calculations and the proposed payment adjustment factor calculations which would use a two-year applicable period and include MA data in the ERR calculations and calculations for aggregate payments for each condition/procedure. Based on our analysis, the estimated average change in Medicare savings per hospital from the proposed updates was $15,579, with 1,424 hospitals having a greater penalty amount and 1,547 hospitals having the same or lower penalty amount.

TABLE VI.K–01—ESTIMATED TOTAL MEDICARE SAVINGS OF PROPOSED ADDITION OF MA COHORT TO HOSPITAL READMISSIONS REDUCTION PROGRAM MEASURE SET

	Current methodology	Proposed updates	Difference between proposed updates and current methodology	Percentage difference between proposed updates and current methodology
Estimated total Medicare savings	$316,131,336	$357,264,092	$41,132,756	13
Number of penalized hospitals	2,342	2,417	75	3

Our analysis also assesses the impact of the proposed updates to the number of eligible hospitals, number and percentage of penalized hospitals, and penalties as a share of payments overall and by hospital characteristics. The first and fifth columns in the below table indicates the total number of hospitals eligible for a penalty under the Hospital Readmissions Reduction Program. In FY 2025, approximately 3,000 subsection (d) hospitals were included in the Hospital Readmissions Reduction Program. Poorly performing hospitals included in the program may receive a penalty if they are non-Maryland subsection (d) hospitals with 25 or more eligible discharges for at least one measure during the applicable period. The second and sixth columns in the table indicates the total number of non-Maryland hospitals with available data for each characteristic that have an estimated payment adjustment factor less than 1 (that is, penalized hospitals). The third and seventh columns in the table indicates the estimated percentage of penalized hospitals among those eligible to receive a penalty by hospital characteristic. The fourth and eighth columns in the table estimate the financial impact on hospitals by hospital characteristic, referred to as the penalty as a share of payments. The penalty as a share of payments is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all base operating DRG payments for those hospitals. For example, under the current methodology, the penalty as a share of payments for urban hospitals is 0.42 percent, and with the proposed updates, the penalty as a share of payments for urban hospitals is 0.46 percent. This means that total penalties for all urban hospitals is 0.42 percent of total payments for urban hospitals under the current methodology and 0.46 percent with the proposed updates. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments accounts for differences in the amount of base operating DRG payments for hospitals with the characteristic when comparing the financial impact of the program on different groups of hospitals.

TABLE VI.K–02—COMPARISON OF PROPOSED UPDATES TO CURRENT METHODOLOGY IN HOSPITAL READMISSIONS REDUCTION PROGRAM BY HOSPITAL CHARACTERISTIC

Hospital characteristic	Current methodology (FY 2025 results: FFS only and 3-year performance period)				Proposed updates (adding MA stays and 2-year performance period)			
	Number of eligible hospitals [a]	Number of penalized hospitals [b]	Percentage of hospitals penalized (%) [c]	Penalty as a share of payments (%) [d]	Number of eligible hospitals [a]	Number of penalized hospitals [b]	Percentage of hospitals penalized (%) [c]	Penalty as a share of payments (%) [d]
All Hospitals	2,828	2,342	82.81	0.42	2,868	2,417	84.27	0.46
By Geographic Location:								
Urban hospitals	2,164	1,836	84.84	0.42	2,201	1,901	86.37	0.46

TABLE VI.K–02—COMPARISON OF PROPOSED UPDATES TO CURRENT METHODOLOGY IN HOSPITAL READMISSIONS REDUCTION PROGRAM BY HOSPITAL CHARACTERISTIC—Continued

Hospital characteristic	Current methodology (FY 2025 results: FFS only and 3-year performance period)				Proposed updates (adding MA stays and 2-year performance period)			
	Number of eligible hospitals [a]	Number of penalized hospitals [b]	Percentage of hospitals penalized (%) [c]	Penalty as a share of payments (%) [d]	Number of eligible hospitals [a]	Number of penalized hospitals [b]	Percentage of hospitals penalized (%) [c]	Penalty as a share of payments (%) [d]
1–99 beds	505	336	66.53	0.39	518	353	68.15	0.46

Source: Proposed Updates results based on: preliminary MA–FFS readmission measure results that were available using data from January 1, 2022, through December 31, 2023, and include non-HRRP hospitals (such as CAHs) in the estimation of ERRs; MA–FFS DRG ratios and dual proportions from July 1, 2021, through June 30, 2023. The Current Methodology results are the actual FY 2025 results using data from July 1, 2020, through June 30, 2023. Both analyses use MedPAR data from October 1, 2022, through September 30, 2023 (FY 2023), to calculate the payment adjustment as a proportion of total base operating DRG payments. Both analyses use data from the FY 2025 proposed rule impact file for hospital characteristics data. The number of hospitals with each characteristic may not sum to the total number of hospitals due to some hospitals having missing characteristic data in the impact file. This table only includes results for hospitals who are eligible for a penalty under the program on the basis of having at least 25 eligible discharges for at least one measure. The average share of penalties as a percentage of all DRG payments is calculated as the sum of all Medicare savings for the group of hospitals divided by total base operating DRG payments for all hospitals in that group.

[a] This column is the number of applicable hospitals within the characteristic that are eligible for a penalty (that is, they have 25 or more eligible discharges for at least one measure).

[b] This column is the number of applicable hospitals that are penalized (that is, they have 25 or more eligible discharges for at least one measure and an estimated payment adjustment factor less than 1) within the characteristic.

[c] This column is the percentage of applicable hospitals that are penalized among hospitals that are eligible to receive a penalty by characteristic.

[d] This column is calculated as the sum of all penalties for the group of hospitals with that characteristic divided by total base operating DRG payments for all those hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments in this way allows for comparisons across hospital characteristics that accounts for differences in the amount of base operating DRG payments for different groups of hospitals. MedPAR data from October 1, 2022, through September 30, 2023 (FY 2023), are used to estimate the total base operating DRG payments.

[e] A hospital is considered a teaching hospital if it has an Indirect Medical Education adjustment factor for Operation PPS (TCHOP) greater than zero.

[f] A hospital is considered a safety-net hospital if it is in the top DSH quintile.

[g] DSH patient percentage is the sum of the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[h] MCR (Medicare Cost Report) percentage is the percentage of total inpatient stays from Medicare patients.

We invite public comment on this proposal.

c. Proposal To Update and Codify the Extraordinary Circumstance Exception (ECE) Policy for the Hospital Readmissions Reduction Program

(1) Background

Under our current Extraordinary Circumstances Exception (ECE) regulations, we have granted exceptions to exclude data from Hospital Readmissions Reduction Program payment reduction calculations (FY 2016 IPPS/LTCH PPS final rule, 80 FR 49542 through 49543). An exception may be granted for extraordinary circumstances including, but not limited to, natural disasters or systemic problems with CMS data collection systems that directly affected the ability of facilities to submit data.[243] We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49542 through 49544); FY 2018 IPPS/LTCH PPS final rule (82 FR 38239 through 38240), and FY 2022 IPPS/LTCH PPS final rule (86 FR 45260 through 45262) for further background and details of our ECE policy. We also refer readers to the QualityNet website for the specific requirements for submission of an ECE request in the Hospital Readmissions Reduction Program.[244] Hospitals can request a CMS Quality Program ECE for multiple programs based on the same extraordinary circumstance using one ECE request form, including the Hospital Inpatient Quality Reporting (IQR) Program, the Hospital VBP Program, and the HAC Reduction Program.

Our ECE policy provides flexibility for Hospital Readmissions Reduction Program participants to ensure continuity of quality care delivery and measure reporting in the event of an extraordinary circumstance. For instance, we recognize that, in circumstances where an exclusion of data from the calculation of a hospital's payment reduction for the applicable period is not applicable, it is beneficial for a hospital to submit data for use in payment reduction calculations later than the Hospital Readmissions Reduction Program data submission deadline. Delayed data submission for use in payment reduction calculations authorized under the ECE policy would allow temporary relief for a hospital experiencing an extraordinary circumstance while preserving data reporting such as transparency and informed decision-making for beneficiaries and providers alike. Accordingly, we propose to update our regulations to specify that an ECE could take the form of an extension of time for a hospital to comply with a data reporting requirement if CMS determines that this type of relief would be appropriate under the circumstances.

(2) Proposals To Update and Codify the Extraordinary Circumstances Exception (ECE) Policy for the Hospital Readmissions Reduction Program

We propose to update and codify our ECE policy at 42 CFR 412.154(d) to include extensions of time as a form of relief and to further clarify the policy. Specifically, at proposed § 412.154(d)(1), we propose that CMS may grant an ECE with respect to reporting requirements in the event of an extraordinary circumstance—defined as an event beyond the control of a hospital (for example a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing)—that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

We propose that the process for requesting or granting an ECE will remain the same as the current ECE process, detailed by CMS at the QualityNet website or a successor website.[245] At proposed § 412.154(d)(2)(i), we propose that a hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred. Under this proposed policy, we clarify that CMS retains the authority to grant an ECE as a form of relief at any time after the extraordinary circumstance has occurred. At proposed § 412.154(d)(2)(ii), we propose that CMS notify the requestor with a decision, in writing, via email. In the event that CMS grants an ECE to the hospital, the written decision will specify whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

Additionally, at § 412.154(d)(3), we propose that CMS may grant an ECE to one or more hospitals that have not requested an ECE, if CMS determines that: a systemic problem with CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement; or that an extraordinary circumstance has affected an entire region or locale. As is the case under our current policy, any ECE granted will specify whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

This proposed ECE policy would provide further reporting flexibility for hospitals and clarify the ECE process for participants of the Hospital Readmissions Reduction Program. We refer readers to sections X.C.8, VI.L.5, VI.M.3.b, and X.D.4 in this proposed rule for similar proposals in the Hospital IQR Program, Hospital VBP Program, HAC Reduction Program, and PCHQR Program, respectively.

We invite public comment on our proposals.

L. Hospital Value-Based Purchasing (VBP) Program

1. Background

a. Overview

For background on the Hospital VBP Program, we refer readers to the CMS website at: *https://www.cms.gov/medicare/quality/initiatives/hospital-quality-initiative/hospital-value-based-purchasing*. We also refer readers to our codified requirements for the Hospital VBP Program at 42 CFR 412.160 through 412.168.

b. FY 2026 Program Year Payment Details

Under section 1886(o)(7)(C)(v) of the Act, the applicable percent for the FY 2026 program year is 2.00 percent. Using the methodology we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53571 through 53573), we estimate that the total amount available for value-based incentive payments for FY 2026 is approximately $1.7 billion, based on the December 2024 update of the FY 2024 MedPAR file.

As finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53573 through 53576), we will utilize a linear exchange function to translate this estimated amount available into a value-based incentive payment percentage for each hospital, based on its Total Performance Score (TPS). We are publishing proxy value-based incentive payment adjustment factors in Table 16 associated with this proposed rule (which is available via the internet on the CMS website). We note that these proxy adjustment factors will not be used to adjust hospital payments. These

[243] Centers for Medicare & Medicaid Services (CMS) Quality Program Extraordinary Circumstances Exceptions (ECE) Request Form. (2025). QualityNet. Available at: *https://qualitynet.cms.gov/files/677e843f50ed8df7419f60e1?filename=HQR_ECE_Req_Form_CY_2025.pdf*.

[244] CMS QualityNet. Available at: *https://qualitynet.cms.gov/inpatient/hrrp/participation#tab2*.

[245] CMS QualityNet. Available at: *https://qualitynet.cms.gov/inpatient/hrrp/participation#tab2*.

proxy value-based incentive payment adjustment factors were calculated using the proposed FY 2026 Hospital VBP program methodology and historical baseline and performance periods for the FY 2025 Hospital VBP Program and the SEP–1 measure. These proxy factors were calculated using the December 2024 update to the FY 2024 MedPAR file. The slope of the linear exchange function used to calculate these proxy factors was 4.5245231964, and the estimated amount available for value-based incentive payments to hospitals for FY 2026 is approximately $1.7 billion. We intend to include an update to this table, as Table 16A, with the FY 2026 IPPS/LTCH PPS final rule, to reflect changes based on the March 2025 update to the FY 2024 MedPAR file. We will add Table 16B to display the actual value-based incentive payment adjustment factors, exchange function slope, and estimated amount available for the FY 2026 Hospital VBP Program. We expect that Table 16B will be posted on the CMS website in Fall 2025.

2. Hospital VBP Program Measures

a. Proposed Measure Updates to the Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)

(1) Background

We are proposing to adopt substantive measure updates to the Hospital-level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (hereinafter referred to as the COMP–HIP–KNEE measure), beginning with the FY 2033 program year. We are proposing these updates contingent on our adopting the same updates to the COMP–HIP–KNEE measure for use in the Hospital IQR Program beginning with the FY 2027 payment determination, which we discuss further in section X.C. of the preamble of this proposed rule.

We adopted the COMP–HIP–KNEE measure in the FY 2015 IPPS/LTCH PPS final rule beginning with the FY 2019 program year for use in the Hospital VBP Program (79 FR 50062 through 50063). We previously adopted substantive updates to the COMP–HIP–KNEE measure in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59067 through 59070) to include index admission diagnoses and in-hospital comorbidity data from Medicare Part A claims which expanded the measure outcome to include 26 additional mechanical complications as identified from 10th revision of the International Classification of Diseases (ICD–10) codes. We continue to consider the clinical outcomes of the COMP–HIP–KNEE measure a high priority, providing important data on patient safety and adverse events, which is why we are proposing to adopt additional updates to the COMP–HIP–KNEE measure in the Hospital VBP Program under the Clinical Outcomes Domain beginning with the FY 2033 program year. In Table VI.L.-01, we illustrate the program years for which we have adopted the COMP–HIP–KNEE measure and the updates that we have adopted, as well as the proposed updates.

TABLE VI.L.–01—SUMMARY OF CURRENT AND PROPOSED REPORTING OF THE COMP–HIP–KNEE MEASURE IN THE HOSPITAL IQR AND VBP PROGRAMS

Payment year or program year impacted	Version of measure in use	
	Hospital IQR Program	Hospital VBP Program
FY 2026	Modification 1 (Additional outcomes added) [1]	Original.[2]
FY 2027	Modification 2 (Add MA patients, shorten performance period) [3]	Original.
FY 2028	Modification 2	Original.
FY 2029	Modification 2	Original.
FY 2030	N/A	Modification 1.
FY 2031	N/A	Modification 1.
FY 2032	N/A	Modification 1.
FY 2033 and Subsequent Years	N/A	Modification 2.

[1] Modification 1 was finalized in the FY 2024 IPPS/LTCH PPS final rule.
[2] Original version of the measure was finalized in the FY 2015 IPPS/LTCH PPS final rule.
[3] Modification 2 is being proposed in this section of the proposed rule.

(2) Overview of Measure Updates

The proposed substantive updates to the COMP–HIP–KNEE measure would expand the measure's inclusion criteria to (1) include Medicare Advantage (MA) patients and (2) shorten the performance period from 3 years to 2 years. The addition of MA data to the measure would approximately double the cohort size, demonstrate measure reliability, and more accurately reflect the quality of care for both FFS and MA beneficiaries. Additionally, the proposed update to reduce the performance period from 3 to 2 years would allow for more recent data for assessing performance. Being able to report measures with only 2 years of data with satisfactory reliability would provide more relevant and up to date quality information for actionable quality improvement insights.

With the inclusion of MA patients in the cohort, we assessed whether the reliability of the measure could reach a satisfactory level when the performance period is shortened. Signal-to-noise reliability testing was calculated for all hospitals in the testing sample (n=3,124) and hospitals with at least 25 cases (n=1,777), using 2 years of data for analysis (CY 2022/2023). For hospitals with at least 25 cases, the median reliability score was 0.784, ranging from 0.545 to 0.997. The 25th and 75th percentiles were 0.673 and 0.883, respectively. Therefore 75% of hospitals exceed a 0.6 reliability score, using the 2 year FFS and MA combined cohort, and we believe that this reliability score demonstrates that 2 years of data provide satisfactory reliability.

The proposed updated COMP–HIP–KNEE measure would use index admission diagnoses and procedure codes from Medicare FFS claims and MA encounter data to determine cohort inclusion criteria, complications outcomes, and present on admission (POA) comorbidities. We would assess additional comorbidities prior to the index (initial) admission using Part A inpatient, outpatient, and Part B office visit Medicare claims and MA encounters in the 12 months prior to index admission. We would obtain enrollment status from the Medicare Enrollment Database which contains beneficiary demographic, benefit/

coverage, and vital status information. We refer readers to section X.C. of the preamble of this proposed rule for more information on the proposed updates. As stated previously, these proposed updates in the Hospital VBP Program are contingent on our adopting them in the Hospital IQR Program.

(3) Pre-Rulemaking Process and Measure Endorsement

We listed this updated COMP–HIP–KNEE measure in the publicly available document entitled ''List of Measures Under Consideration for December 1, 2024'' (the ''MUC List'') with identification number MUC2024–042.[246] [247] [248] We refer readers to section X.C. of the preamble of this proposed rule for a discussion of the Pre-Rulemaking Measure Review (PRMR) meeting for this measure.

The CBE previously re-endorsed the original measure in July of 2021.[249] We submitted the measure with the proposed modifications (CBE #1550) for re-endorsement for the Fall 2024 cycle. The CBE's Endorsement & Maintenance Cost and Efficiency Committee convened in the Fall 2024 cycle to review the COMP–HIP–KNEE measure that was submitted to the CBE for re-endorsement. The E&M Cost and Efficiency Committee voted, and did not reach consensus on this measure on February 10, 2025.[250] Thus, the measure was not re-endorsed by the CBE.

The committee discussed concerns about the case mix of patients, noting the shift from inpatient to outpatient for these elective procedures and that healthier patients may be directed to ambulatory surgical centers, leaving acute care hospitals with higher-risk individuals, which could affect case mix and measure outcomes. Another concern discussed was the limited scope of the measure which only includes inpatient complications, and whether this limited scope provides utility and relevance for patients. Additional concerns discussed include the overall approach to adjusting low-volume provider performance to the average, and that scores for lower volume providers may be misleading to patients.

Regarding concerns on patient mix, we note that this measure focuses on higher-risk patients and is intentionally narrow to capture significant complications, such as sepsis, pulmonary embolism, or a second surgery which should be treated in the inpatient setting. We wish to emphasize that those having elective THA or TKA procedures within the inpatient setting must meet certain criteria, resulting in a smaller cohort of patients, and in communities where there are no ambulatory care centers the patient would be treated in the hospital outpatient department and would not be counted in this measure. Regarding comments about adjusting for low patient volume, the goal of this measure and adjusting for low volume is to make performance scores available for as many providers as possible while trying to avoid misclassification or profiling of providers. We further note that scores are not available for facilities with fewer than 25 cases, because the number of cases may be too small for meaningful results. We wish to emphasize that this measure has been an important patient safety measure that has provided meaningful quality and patient safety information for patients on the hospital inpatient setting for a substantial period of time. Further, we are committed to continually improving quality and patient safety for as many patients as possible within the inpatient setting.

Section 1886(o)(2)(A) of the Act requires the Hospital VBP Program to select measures that have been specified for the Hospital IQR Program. We note that although section 1886(b)(3)(B)(viii)(IX)(aa) of the Act generally requires measures specified by the Secretary in the Hospital IQR Program be endorsed by the entity with a contract under section 1890(a) of the Act, section 1886(b)(3)(B)(viii)(IX)(bb) of the Act states that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We reviewed CBE-endorsed measures and were unable to identify any other CBE-endorsed measures on this topic, and, therefore, the exception in section 1886(b)(3)(B)(viii)(IX)(bb) of the Act applies.

(4) Data Source, Submission and Public Reporting

To continue to assess clinical outcomes, we are proposing to adopt these measure updates to the COMP–HIP–KNEE measure in the Hospital VBP Program under the Clinical Outcomes Domain beginning with the FY 2033 program year, contingent on our adoption of these changes in the Hospital IQR Program as described in section X.C. of the preamble of this proposed rule. If finalized, we would begin posting the updated measure data on the Compare tool beginning in July 2026, which would enable us to post data on the substantive updates to the measure for at least one year before the proposed adoption beginning with the April 1, 2029–March 31, 2031, performance period which is associated with the FY 2033 payment determination, as required by section 1886(o)(2)(C)(i) of the Act.[251] We are also proposing that the performance standards calculation methodology for the updated COMP–HIP–KNEE measure would be the same as that which we currently use for the measure. The performance standards for the updated measure for FY 2033 are not yet available.

We invite public comment on this proposal.

b. Technical Updates to the Specifications of the COMP–HIP–KNEE Measure To Update the Risk Adjustment Model Beginning With the FY 2027 Program Year

In addition to the updates discussed previously and further updates we discuss below, we provide notice of our intent to make a non-substantive modification, as permitted under § 412.164(c)(1), to the COMP–HIP–KNEE measure to update the risk adjustment model to use individual International Classification of Diseases (ICD)–10 codes instead of Hierarchical Condition Categories (HCCs). Under this technical updates policy, we use a

[246] Centers for Medicare & Medicaid Services. (2024) Overview of the List of Measures Under Consideration December 1, 2024. Available at: *https://mmshub.cms.gov/sites/default/files/2024-MUC-List-Overview.pdf*.

[247] Centers for Medicare and Medicaid Services. (2024) 2024 MUC List. Available at: *https://mmshub.cms.gov/sites/default/files/2024-MUC-List.xlsx*.

[248] We note that the measure denominator of the updated COMP–HIP–KNEE measure, as described in the MUC List, excludes patients with a principal diagnosis code of COVID–19 ICD–10 code (U07.1) or with a secondary diagnosis code of COVID–19 coded as present on admission (POA) on the index admission claim. As discussed further below, we are providing notice of our intent to remove this exclusion from the measure.

Available at: *https://www.qualityforum.org/Publications/2022/03/MAP_2021-2022_Considerations_for_Implementing_Measures_Final_Report_-_Clinicians,_Hospitals,_and_PAC-LTC.aspx*.

[250] Battelle—Partnership for Quality Measurement. (2025). Fall 2024 Endorsement Summary Report. This report will be available through this link: *https://p4qm.org/projects/cost-and-efficiency*.

[251] We note that this performance period would only be 2 years instead of 3 if the proposed updates to the COMP–HIP–KNEE measure, which includes shortening of the performance period, are adopted.

subregulatory process to incorporate technical measure specification updates into the measure specifications we have adopted for the Hospital VBP Program (79 FR 50077 through 50079). We continue to believe that this policy, codified at 42 CFR 412.164(c)(1), is the most expeditious manner possible to ensure that quality measures remain fully up to date while preserving the public's ability to comment on substantive updates, which so fundamentally change a measure that it is no longer the same measure that we originally adopted. The current risk adjustment strategy for this measure involves grouping ICD–10 diagnosis codes from CMS's HCC system into clinically relevant categories. We then evaluate the HCCs for statistical association with the measure's outcome.[252] However, research has indicated that using individual ICD codes in place of HCCs could significantly improve the model performance of the mortality measures.[253] To better leverage the data and analytical advances since the measure was initially developed, we created a new approach to use individual ICD–10 codes for risk adjustment instead of grouping them into categories. With this new approach, the discriminative performance of the risk adjustment model as measured by c-statistic was significantly better and the calibration performance also proved to be satisfactory.

c. Technical Updates to the Specifications of the Five Condition- and Procedure-Specific Mortality Measures and the COMP–HIP–KNEE Measure Beginning With the FY 2027 Program Year

During the COVID–19 public health emergency, in the FY 2022 IPPS/LTCH PPS final rule, we stated that we were updating the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Myocardial Infarction (AMI) Hospitalization (MORT–30–AMI), Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Coronary Artery Bypass Graft (CABG) Surgery (MORT–30–CABG), Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization (MORT–30 COPD), Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Heart Failure (HF) Hospitalization (MORT–30–HF), and Hospital-Level Risk-Standardized Complication Rate Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (COMP–HIP–KNEE) measures to exclude admissions with either a principal or secondary diagnosis of COVID–19 present on admission from the measure denominators (86 FR 45279 through 45281). In the FY 2023 IPPS/LTCH PPS final rule, we also updated the technical specifications for the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization (MORT–30–PN) measure to exclude patients with either principal or secondary diagnoses of COVID–19 from the measure denominator (87 FR 49109 through 49110). Additionally, we further modified the technical measure specifications for all six measures in the Clinical Outcomes domain, the MORT–30–AMI, MORT–30–CABG, MORT–30–COPD, MORT–30–HF, MORT–30–PN, and COMP–HIP–KNEE measures, in the FY 2023 IPPS/LTCH PPS final rule to include a covariate adjustment for patient history of COVID–19 in the 12 months prior to the admission beginning with the FY 2023 program year (87 FR 49106 through 49109).

We stated that we were making these updates pursuant to the technical updates policy we finalized in the FY 2015 IPPS/LTCH PPS final rule. We refer readers to the previous section of the preamble of this proposed rule for more details on our subregulatory technical updates policy.

Accordingly, we are providing notice in this proposed rule that we intend to remove the COVID–19 exclusions from the five condition- and procedure-specific mortality measures and one procedure-specific complication measure beginning with the FY 2027 program year. This technical update will modify the technical specifications of the MORT–30–AMI, MORT–30–CABG, MORT–30–COPD, MORT–30–HF, and MORT–30–PN measures to include the ICD–10 codes that identify patients with a principal or secondary diagnosis of COVID–19 in the measure denominators. The technical update will also modify the technical specifications of the COMP–HIP–KNEE measure to include the ICD–10 codes that identify patients with a principal or secondary diagnosis of COVID–19 in both the measure numerator and denominator. Lastly, the technical update will remove the covariate adjustment for patient history of COVID–19 in the 12 months prior to the admission for all six measures in the Clinical Outcomes domain for the Hospital VBP Program beginning with the FY 2027 program year.

We believe that including COVID–19 patients in the measure specifications for the measures in the Clinical Outcomes domain beginning with the FY 2027 program year provides a more complete picture of the care quality provided in hospitals, which we believe meets the goals of the Hospital VBP Program. Technical specifications of the Hospital VBP Program mortality and complication measures are provided on our website under the Measure Methodology Reports section (available at: *https://qualitynet.cms.gov/inpatient/measures/mortality/methodology* and *https://qualitynet.cms.gov/inpatient/measures/complication/methodology*). Additional resources about the measure technical specifications and methodology for the Hospital VBP Program are on the QualityNet website (available at: *https://qualitynet.cms.gov/inpatient/hvbp*).

d. Summary of Previously Adopted Quality Measures for the Hospital VBP Program

We refer readers to the FY 2025 IPPS/LTCH PPS final rule for summaries of the previously adopted measures for the FY 2026 through FY 2030 program years (89 FR 69402). We are not proposing any changes to the measure set. Table VI.L.–02 summarizes the previously adopted Hospital VBP Program measure set for the FY 2026 program year.

*In the FY 2025 IPPS/LTCH PPS final rule, we adopted the updated HCAHPS Survey measure in the Hospital VBP Program beginning with the FY 2030 program (89 FR 69508 through 69511). The Care Transition and Responsiveness of Hospital Staff dimensions will be included in the HCAHPS survey but not scored for FY 2027 through FY 2029, and will not be included in the HCAHPS survey beginning with FY 2030.

3. Baseline and Performance Periods for the FY 2027 Through FY 2031 Program Years

a. Background

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69403 through 69405) for previously adopted baseline and performance periods for the FY 2026 through FY 2030 program years. We also refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56998) in which we finalized a schedule for all future baseline and performance periods.

b. Summary of Baseline and Performance Periods for the FY 2027 Through FY 2031 Program Years

Tables VI.L.–04, VI.L.–05, VI.L.–06, VI.L.–07, and VI.L.–08 summarize the baseline and performance periods that we have previously adopted.

TABLE VI.L.–04—BASELINE AND PERFORMANCE PERIODS FOR THE FY 2027 PROGRAM YEAR

4. Performance Standards for the Hospital VBP Program

a. Background

We refer readers to the FY 2024 IPPS/LTCH PPS final rule (88 FR 59089) for previously established performance standards for the FY 2026 program year. We also refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69406 through 69407) for the previously established performance standards for the FY 2027 program year.

b. Technical Update to the Five National Healthcare Safety Network (NHSN) Healthcare-Associated Infection (HAI) Measures

In this section, we provide information regarding upcoming changes to the standard population data that are used to calculate the standardized infection ratio (SIR) for the CDC's NHSN measures. These changes are occurring as part of routine measure maintenance.

CDC's NHSN measures are used to monitor hospital performance on prevention of HAIs. For each NHSN measure, CDC calculates the standardized infection ratio (SIR), which compares a hospital's observed number of HAIs to the number of infections predicted for the hospital, adjusting for several risk factors. The predicted number of infections is determined using the amount of exposure (for example, the number of central line days when predicting CLABSI events) for a given hospital according to the relevant observed risk factors and infection rates for the same combination of risk factors that occurred among a standard population during a specified period as reflected by the appropriate risk adjustment model (this is sometimes referred to as a ''baseline,'' [254] but referred to here as ''standard population data''). This set of rates forms standard population data that promotes timely comparisons to measure change in an outcome. Since 2016, CDC has been using data collected in CY 2015 to determine the standard population and, currently, the 2015 standard population is used to calculate the HAI measures in the Hospital VBP Program.[255] Prior to 2016, calculated SIRs had different standard population years for each infection type and facility type.[256]

During this update, HAI SIR calculations of infections reported beginning in CY 2025 will reflect the use of both the new 2022 standard population data and the 2015 standard population data.

Because the Hospital VBP Program calculates improvement points using comparisons between data collected from hospitals in a baseline period and data collected in a performance period, the Hospital VBP Program must treat CDC's baseline update differently than other quality programs. We have determined that we cannot equally compare CDC's new baseline data to the current baseline data to calculate improvement points. If we do not address the CDC's measure update, we will be unable to compare the baseline and performance periods for NHSN measures in the FY 2027 through FY 2028 program years. To address the

[254] ''Rebaseline'' is a term that CDC's NHSN staff use to describe the process of updating the national HAI baseline data and risk adjustment models developed using these data. As part of routine measure maintenance, CDC has updated the baseline to ensure the number of predicted infections used in SIR calculations reflects the current state of HAIs in the United States using CY 2022 data. The CDC released its initial announcement of this rebaseline in June 2023. Resources and training regarding the 2015 and 2022 standard population data can be found at: *https://www.cdc.gov/nhsn/nhsnrebaseline/index.html.*

[255] Centers for Disease Control and Prevention. CHARTING THE COURSE: 2022 HAI REBASELINE. Available at: *https://www.cdc.gov/nhsn/pdfs/rebaseline/22-Rebaseline-FAQs-Final-Version.pdf.*

[256] Centers for Disease Control and Prevention. Paving the Path Forward: 2015 Rebaseline. Available at: *https://www.cdc.gov/nhsn/2015rebaseline/index.html.*

problem, we intend to use the 2015 baseline data to calculate performance standards and calculate and publicly report measure scores until the FY 2029 program year, as depicted in the table below. For the FY 2029 program year and subsequent years, the Hospital VBP Program will use the ''new standard population data'' (that is, CY 2022 data) to calculate performance standards and calculate and publicly report measure scores.

TABLE VI.L.–09—CDC'S BASELINE DATA IN THE HOSPITAL VBP PROGRAM

Measures	FY 2026 Program year *	FY 2027 Program year *	FY 2028 Program year *	FY 2029 Program year *
NHSN Measures Baseline Periods	2015 Baseline Data	2015 Baseline Data	2015 Baseline Data	2022 Baseline Data.
NHSN Measures Performance Period.	2015 Baseline Data	2015 Baseline Data	2015 Baseline Data	2022 Baseline Data.

* CDC will use current baseline data (CY 2015) to calculate measure data that we will translate into scores on the measures.
** CDC will use new baseline data (CY 2022) to calculate measure data that we will translate into scores on the measures.

c. Previously and Newly Established Performance Standards for the FY 2027 Program Year

We have adopted certain measures for the Safety domain, Clinical Outcomes domain, and the Efficiency and Cost Reduction domain for future program years to ensure that we can adopt baseline and performance periods of sufficient length for performance scoring purposes. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45294 through 45295), we established performance standards for the FY 2027 program year for the Clinical Outcomes domain measures (MORT–30–AMI, MORT–30–HF, MORT–30–PN (updated cohort), MORT–30–COPD, MORT–30–CABG, and COMP–HIP–KNEE) and the Efficiency and Cost Reduction domain measure (MSPB). Additionally, in the FY 2025 IPPS/LTCH PPS final rule, we established the performance standards for the FY 2027 program year for the Safety domain measures (CAUTI, CLABSI, CDI, MRSA Bacteremia, Colon and Abdominal Hysterectomy SSI, and SEP–1) and the Person and Community Engagement Domain (the HCAHPS Survey Dimensions) (89 FR 69406 through 69407).

While we are making technical updates to the measures in the Clinical Outcomes domain beginning with the FY 2027 program year as discussed previously, the FY 2027 performance standards that we previously adopted for measures in this domain are unchanged because the applicable baseline period does not include COVID–19 impacted data after applying the national ECE. For the reader's reference, the performance standards for the measures in the Clinical Outcomes domain for the FY 2027 program year are set out in Table VI.L.–10.

TABLE VI.L.–10—PERFORMANCE STANDARDS FOR THE FY 2027 PROGRAM YEAR

Measure short name	Achievement threshold	Benchmark
Clinical Outcomes Domain *		
MORT–30–AMI	0.877824	0.893133
MORT–30–HF	0.887571	0.913388
MORT–30–PN	0.844826	0.877204
MORT–30–COPD	0.917395	0.932640
MORT–30–CABG	0.971149	0.980752
COMP–HIP–KNEE **	0.023322	0.017018

* As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45297 through 45299), we did not include data from Q1 and Q2 of CY 2020 in the calculation of these performance standards due to the ECE granted by CMS on March 22, 2020.
** Lower values represent better performance.

d. Newly Established and Estimated Performance Standards for the FY 2028 Program Year

We have adopted certain measures for the Safety domain, Clinical Outcomes domain, and the Efficiency and Cost Reduction domain for future program years to ensure that we can adopt baseline and performance periods of sufficient length for performance scoring purposes. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49118), we established performance standards for the FY 2028 program year for the Clinical Outcomes domain measures (MORT–30–AMI, MORT–30–HF, MORT–30–PN, MORT–30–COPD, MORT–30–CABG, and COMP–HIP–KNEE) and the Efficiency and Cost Reduction domain measure (MSPB Hospital). However, given the technical update to the measures in the Clinical Outcomes domain beginning with the FY 2027 program year as discussed previously, we are establishing new performance standards for the measures in the Clinical Outcomes domain for the FY 2028 program year. We note that the performance standards for the MSPB Hospital measure are based on performance period data. Therefore, we are unable to provide numerical equivalents for the standards at this time. The newly established performance standards for these measures are set out in Table VI.L.–11.

TABLE VI.L.–11.—NEWLY ESTABLISHED AND ESTIMATED PERFORMANCE STANDARDS FOR THE FY 2028 PROGRAM YEAR

Measure short name	Achievement threshold	Benchmark
Safety Domain		
CAUTI* **	0.463	0.
CLABSI* **	0.549	0.
CDI* **	0.329	0.
MRSA Bacteremia* **	0.618	0.
Colon and Abdominal Hysterectomy SSI* **	0.74 0.899	0.
SEP–1***	0.632479	0.865693.
Clinical Outcomes Domain		
MORT–30–AMI♦	0.877260	0.893229.
MORT–30–HF♦	0.885427	0.910649.
MORT–30–PN♦	0.831776	0.866166.
MORT–30–COPD♦	0.913752	0.929652.
MORT–30–CABG♦	0.971052	0.980570.
COMP–HIP–KNEE*♦	0.029758	0.022002.
Efficiency and Cost Reduction Domain		
MSPB*	Median Medicare Spending per Beneficiary ratio across all hospitals during the performance period.	Mean of the lowest decile Medicare Spending per Beneficiary ratios across all hospitals during the performance period.

*Lower values represent better performance.

**We note that the numerical values for the performance standards for the HAI measures in this proposed rule represent estimates based on the most recently available data and have been rebaselined as discussed previously. We intend to update the numerical values in the FY 2026 IPPS/LTCH PPS final rule. These estimates are based on 10/01/2023–09/30/2024 data.

***We note that the numerical values for the performance standards for the SEP–1 measure in this proposed rule represent estimates based on the most recently available data. These estimates are based on 10/01/2023–09/30/2024 data.

♦As discussed in section VI.L.2.a. and b. of the preamble of this proposed rule, we are providing notice of a technical update for all measures in the Clinical Outcomes Domain. While these performance standards are unchanged at this time, we intend to update them in the FY 2026 IPPS/LTCH PPS final rule.

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69507–69508) where we finalized the policy to modify the scoring of the HCAHPS Survey for the FY 2027 through FY 2029 program years while updates to the survey are publicly reported under the Hospital IQR Program. Scoring is modified to only score hospitals on the six unchanged Hospital VBP dimensions of the HCAHPS Survey until the updates to the HCAHPS Survey have been publicly reported for one year. The six unchanged dimensions of the HCAHPS Survey for the Hospital VBP Program are as follows:

- ''Communication with Nurses''.
- ''Communication with Doctors''.
- ''Communication about Medicines''.
- ''Discharge Information''.
- ''Cleanliness and Quietness''.
- ''Overall Rating.''

Scoring is modified such that for each of the six unchanged dimensions, Achievement Points (0–10 points) and Improvement Points (0–9 points) will be calculated, the larger of which will be summed across these six dimensions to create a pre-normalized HCAHPS Base Score of 0–60 points (as compared to 0–80 points with the current eight dimensions). The pre-normalized HCAHPS Base Score will then be multiplied by 8/6 (1.3333333) and rounded according to standard rules (values of 0.5 and higher are rounded up, values below 0.5 are rounded down) to create the normalized HCAHPS Base Score. Each of the six unchanged dimensions will be of equal weight, so that, as currently scored, the normalized HCAHPS Base Score will range from 0 to 80 points. HCAHPS Consistency Points will be calculated in the same manner as the current method and will continue to range from 0 to 20 points. Like the Base Score, the Consistency Points Score will consider scores across the six unchanged dimensions of the Person and Community Engagement domain. The final element of the scoring formula, which will remain unchanged from the current formula, will be the sum of the HCAHPS Base Score and the HCAHPS Consistency Points Score for a total score that ranges from 0 to 100 points. The method for calculating the performance standards for the six dimensions will remain unchanged. We refer readers to the Hospital Inpatient VBP Program final rule (76 FR 26511 through 26512) for our methodology for calculating performance standards. The estimated performance standards for the six unchanged dimensions for the FY 2028 program year are set out in Table VI.L.–12.

TABLE VI.L.–12—ESTIMATED PERFORMANCE STANDARDS FOR THE FY 2028 PROGRAM YEAR: PERSON AND COMMUNITY ENGAGEMENT DOMAIN

HCAHPS survey dimension*	Floor (minimum)	Achievement threshold (50th percentile)	Benchmark (mean of top decile)
Communication with Nurses	55.55	77.55	86.47
Communication with Doctors	55.53	77.66	86.34
Responsiveness of Hospital Staff**	X	X	X

TABLE VI.L.–12—ESTIMATED PERFORMANCE STANDARDS FOR THE FY 2028 PROGRAM YEAR: PERSON AND COMMUNITY ENGAGEMENT DOMAIN—Continued

HCAHPS survey dimension *	Floor (minimum)	Achievement threshold (50th percentile)	Benchmark (mean of top decile)
Communication about Medicines	38.47	58.25	69.90
Hospital Cleanliness & Quietness	40.97	63.69	77.70
Discharge Information	66.89	86.22	91.47
Care Transition **	X	X	X
Overall Rating of Hospital	35.06	69.07	84.04

* We note that the numerical values for the performance standards for the HCAHPS Survey in this proposed rule represent estimates based on the most recently available data, and we intend to update the numerical values in the FY 2026 IPPS/LTCH PPS final rule. These estimates are based on 10/01/2023–09/30/2024 data.

** In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69507 and 69508), we finalized the policy to only score on the six unchanged dimensions of the original HCAHPS Survey for the FY 2028 program year while the updates to the survey are publicly reported on in the Hospital IQR Program for the statutorily required one year. Therefore, we are not reporting performance standards for the dimensions that are unscored.

e. Newly Established Performance Standards for Certain Measures for the FY 2029 Program Year

We have adopted certain measures for the Safety domain, Clinical Outcomes domain, and the Efficiency and Cost Reduction domain for future program years to ensure that we can adopt baseline and performance periods of sufficient length for performance scoring purposes. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59091 through 59092), we established performance standards for the FY 2029 program year for the Clinical Outcomes domain measures (MORT–30–AMI, MORT–30–HF, MORT–30–PN, MORT–30–COPD, MORT–30–CABG, and COMP–HIP–KNEE) and the Efficiency and Cost Reduction domain measure (MSPB Hospital). However, given the technical update to the measures in the Clinical Outcomes domain beginning with the FY 2027 program year as discussed previously, we are newly establishing the performance standards for the measures in the Clinical Outcomes domain for the FY 2029 program year to now include COVID–19 patients in the measure data. We note that the performance standards for the MSPB Hospital measure are based on performance period data. Therefore, we are unable to provide numerical equivalents for the standards at this time. The newly established performance standards for these measures are set out in Table VI.L–13.

TABLE VI.L.13—NEWLY ESTABLISHED PERFORMANCE STANDARDS FOR THE FY 2029 PROGRAM YEAR

Measure short name	Achievement threshold	Benchmark
Clinical Outcomes Domain*		
MORT–30–AMI	0.874856	0.893101.
MORT–30–HF	0.880089	0.9072.
MORT–30–PN	0.814736	0.853996.
MORT–30–COPD	0.905916	0.924829.
MORT–30–CABG	0.971027	0.979822.
COMP–HIP–KNEE **	0.025024	0.018708.
Efficiency and Cost Reduction Domain		
MSPB **	Median Medicare Spending per Beneficiary ratio across all hospitals during the performance period.	Mean of the lowest decile Medicare Spending per Beneficiary ratios across all hospitals during the performance period.

* As discussed in section VI.L.2.a. and b. of the preamble of this proposed rule, we are providing notice of a technical update for all measures in the Clinical Outcomes Domain. While these performance standards are unchanged at this time, we intend to update them in the FY 2026 IPPS/LTCH PPS final rule.

** Lower values represent better performance.

f. Newly Established Performance Standards for Certain Measures for the FY 2030 Program Year

We have adopted certain measures for the Safety domain, Clinical Outcomes domain, and the Efficiency and Cost Reduction domain for future program years to ensure that we can adopt baseline and performance periods of sufficient length for performance scoring purposes. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69409 through 69410), we established performance standards for the FY 2030 program year for the Clinical Outcomes domain measures (MORT–30–AMI, MORT–30–HF, MORT–30–PN, MORT–30–COPD, MORT–30–CABG, and COMP–HIP–KNEE) and the Efficiency and Cost Reduction domain measure (MSPB Hospital). However, given the technical update to the measures in the Clinical Outcomes domain beginning with the FY 2027 program year as discussed previously, we are newly establishing the performance standards for the measures in the Clinical Outcomes domain for the FY 2030 program year. We note that the performance standards for the MSPB Hospital measure are based on performance period data. Therefore, we are unable to provide numerical equivalents for the standards at this time. The newly established performance standards for these measures are set out in Table VI.L.–14.

TABLE VI.L.—14 NEWLY ESTABLISHED PERFORMANCE STANDARDS FOR THE FY 2030 PROGRAM YEAR

Measure short name	Achievement threshold	Benchmark
Clinical Outcomes Domain*		
MORT–30–AMI	0.873975	0.89371.
MORT–30–HF	0.878881	0.90929.
MORT–30–PN	0.81782	0.858688.
MORT–30–COPD	0.903404	0.924332.
MORT–30–CABG	0.972219	0.9815.
COMP–HIP–KNEE**	0.028252	0.019993.
Efficiency and Cost Reduction Domain		
MSPB**	Median Medicare Spending per Beneficiary ratio across all hospitals during the performance period.	Mean of the lowest decile Medicare Spending per Beneficiary ratios across all hospitals during the performance period.

*As discussed in section VI.L.2.a. and b. of the preamble of this proposed rule, we are providing notice of a technical update for all measures in the Clinical Outcomes Domain. While these performance standards are unchanged at this time, we intend to update them in the FY 2026 IPPS/LTCH PPS final rule.

**Lower values represent better performance.

g. Newly Established Performance Standards for Certain Measures for the FY 2031 Program Year

As discussed previously, we have adopted certain measures for the Clinical Outcomes domain (MORT–30–AMI, MORT–30–HF, MORT–30–PN, MORT–30–COPD, MORT–30–CABG, and COMP–HIP–KNEE) and the Efficiency and Cost Reduction domain (MSPB Hospital) for future program years to ensure that we can adopt baseline and performance periods of sufficient length for performance scoring purposes. In accordance with our methodology for calculating performance standards discussed more fully in the Hospital Inpatient VBP Program final rule (76 FR 26511 through 26512), which is codified at 42 CFR 412.160, we are establishing the following performance standards for the FY 2031 program year for the Clinical Outcomes domain and the Efficiency and Cost Reduction domain. We note that the performance standards for the MSPB Hospital measure are based on performance period data. Therefore, we are unable to provide numerical equivalents for the standards at this time. The newly established performance standards for these measures are set out in Table VI.L.–15.

TABLE VI.L.–15—NEWLY ESTABLISHED PERFORMANCE STANDARDS FOR THE FY 2031 PROGRAM YEAR

Measure short name	Achievement threshold	Benchmark
Clinical Outcomes Domain*		
MORT–30–AMI	0.878523	0.896695.
MORT–30–HF	0.882749	0.912451.
MORT–30–PN	0.835165	0.873917
MORT–30–COPD	0.909324	0.929745.
MORT–30–CABG	0.975023	0.983685.
COMP–HIP–KNEE**	0.036439	0.02533.
Efficiency and Cost Reduction Domain		
MSPB**	Median Medicare Spending per Beneficiary ratio across all hospitals during the performance period.	Mean of the lowest decile Medicare Spending per Beneficiary ratios across all hospitals during the performance period.

*As discussed in section VI.L.2.a. and b. of the preamble of this proposed rule, we are providing notice of a technical update to remove the COVID–19 exclusion from the measure data for all measures in the Clinical Outcomes Domain. As a result, these performance standards have been calculated with the inclusion of COVID–19 data.

**Lower values represent better performance.

5. Proposals To Update the Extraordinary Circumstance Exception (ECE) Policy for the Hospital VBP Program

(a) Background

Under our current Extraordinary Circumstances Exception (ECE) regulations, we have granted exceptions with respect to Hospital VBP Program requirements in the event of certain extraordinary circumstances beyond the control of the hospital. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45298 through 45299) and 42 CFR 412.165(c) for additional details related to the Hospital VBP Program ECE policy. We also refer readers to the QualityNet website for the specific requirements for submission of an ECE request in the Hospital VBP Program.[257]

Our ECE policies provide flexibility for Hospital VBP program participants to ensure continuity of quality care delivery and measure scoring in the event of an extraordinary circumstance. For instance, we recognize that, in circumstances where a full exception is not applicable, it is beneficial for a hospital to report data later than the reporting deadline. Delayed reporting authorized under our ECE policy allows temporary relief for a hospital

[257] *https://qualitynet.cms.gov/inpatient/hvbp/participation#tab6.*

experiencing an extraordinary circumstance while preserving the benefits of data reporting such as transparency and informed decision-making for beneficiaries and providers alike. Accordingly, we propose to update our regulations to specify that an ECE could take the form of an extension of time for a hospital to comply with a data reporting requirement if CMS determines that this type of relief would be appropriate under the circumstances.

(b) Proposal To Update the Extraordinary Circumstances Exception (ECE) Policy for the Hospital VBP Program

We propose to update the current ECE policy codified at 42 CFR 412.165(c) to include extensions of time as a form of relief and to further clarify the policy. Specifically, at proposed § 412.165(c)(1), we propose that CMS may grant an ECE with respect to reporting requirements in the event of an extraordinary circumstance—defined as an event beyond the control of a hospital (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing)—that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

We propose that the process for requesting or granting an ECE would remain the same as the current ECE process, detailed by CMS at the QualityNet website or a successor website.[258] At proposed § 412.165(c)(2)(i), we propose that a hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred. Our current policy allows a request within 90 days; however, this proposed change would align to CMS systems implementation requirements across all quality reporting programs. Under this proposed codified policy, we clarify that CMS retains the authority to grant an ECE as a form of relief at any time after the extraordinary circumstance has occurred. At proposed § 412.165(c)(2)(ii), we propose that CMS notify the requestor with a decision in writing. In the event that CMS grants an ECE to the hospital, the written decision will specify whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

Additionally, at § 412.165(c)(3), we note that CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines either of the following: a systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement, or that an extraordinary circumstance has affected an entire region or locale. As is the case under our current policy, any ECE granted will specify whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

This proposed ECE policy would provide further reporting flexibility for hospitals and clarify the ECE process.

We invite public comment on our proposals.

6. Proposed Removal of the Health Equity Adjustment From the Hospital VBP Program

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59092 through 59106), we adopted a Health Equity Adjustment (HEA) that, beginning with the FY 2026 program year, rewards top performing hospitals that serve higher proportions of patients with dual eligibility status. We codified the HEA at §§ 412.160 and 412.165(b) of our regulations. Section 1886(o)(5)(A) of the Act authorizes the Secretary to develop the methodology for assessing hospital performance based on performance standards established with respect to the measures selected for the Hospital VBP Program.

As discussed in the FY 2024 IPPS/LTCH PPS final rule, by providing the HEA to hospitals that serve higher proportions of patients with dual eligibility status and that perform well on quality measures, the HEA would appropriately recognize the resource intensity expended to achieve high performance on quality measures by hospitals that serve a high proportion of patients with dual eligibility status, while also mitigating the worse health outcomes experienced by dually eligible patients through incentivizing better care across all hospitals.

In this proposed rule, we are proposing to remove the HEA because simplifying the Hospital VBP Program's scoring methodology by removing the HEA will improve hospitals' understanding of the program and provide clearer incentives to hospitals as they seek to improve the quality of care for all patients. As noted in section I.G. of Appendix A of this proposed rule, in Table I.G.6.–01 and Table I.G.6.–02 the overall impact of the HEA on the overall payment adjustments is small. With the HEA, the average net percentage payment adjustment for FY 2026 is 0.170% and without the HEA, the average net percentage payment adjustment is 0.168%. Given this relatively small impact, and in light of the Administration's priority to streamline regulations and reduce burdens on those participating in the Medicare program, we are proposing to remove the HEA at this time. We refer readers to **SUPPLEMENTARY INFORMATION** section of this proposed rule for the Unleashing Prosperity Through Deregulation of the Medicare Program—Request for Information for more information.

We considered altering the structure of the adjustment methodology to simplify it, but that process will require time to develop and test a new adjustment and, if pursued, would be addressed in future rulemaking.

We do not anticipate any serious reliance interests as a result of this proposal since the HEA does not require any additional reporting burden.

We propose to codify this removal of the HEA by removing the definition of ''Health equity adjustment bonus points'' in § 412.160 of our regulations and revising § 412.165(b) to remove the calculation and addition of health equity adjustment bonus points from the Total Performance Score calculation beginning with the FY 2026 program year. We refer readers to Table I.G.6.–01 and Table I.G.6.–02 in K–CF, Section 6: Effects of Changes Under the FY 2026 Hospital Value-Based Purchasing (VBP) Program, which reflect an estimated impact analysis of base operating DRG payment amounts resulting from the FY 2026 Hospital VBP Program with and without the HEA, respectively.

We welcome public comment on these proposals.

M. Hospital-Acquired Condition Reduction Program Updates and Changes (HACRP)

1. Regulatory Background

We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50709) for a general overview of the Hospital-Acquired Condition (HAC) Reduction Program and a detailed discussion of the statutory basis for the Program. We also refer readers to 42 CFR 412.170 through 412.172 for codified HAC Reduction Program requirements.

2. Measures for FY 2026 and Subsequent Years in the HAC Reduction Program

a. Current Measures

The previously finalized measures for the HAC Reduction Program for FY

[258] *https://qualitynet.cms.gov/inpatient/iqr/participation#tab3.*

2026 and subsequent years are shown in table VI.M.–01. Technical specifications for the CMS Patient Safety and Adverse Events Composite (CMS PSI 90) measure can be found on the QualityNet website available at: *https://qualitynet.cms.gov/inpatient/measures/psi/resources.* Technical specifications for the Centers for Disease Control and Prevention's (CDC) National Healthcare Safety Network (NHSN) healthcare-associated infection (HAI) measures can be found at the CDC's NHSN website at: *https://www.cdc.gov/nhsn/acute-care-hospital/index.html* and on the QualityNet website available at: *https://qualitynet.cms.gov/inpatient/measures/hai/resources.* These web pages provide measure updates and other information necessary to guide hospitals participating in the collection of HAC Reduction Program data.

TABLE VI.M.–01—HAC REDUCTION PROGRAM MEASURES FOR FY 2026 AND SUBSEQUENT YEARS

Short name	Measure name	Consensus-based entity (CBE) No.
HAC Reduction Program Measures for FY 2026 and Subsequent Years		
CMS PSI 90	CMS Patient Safety and Adverse Events Composite	0531
CAUTI	CDC NHSN Catheter-associated Urinary Tract Infection (CAUTI) Outcome Measure	0138
CDI	CDC NHSN Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure.	1717
CLABSI	CDC NHSN Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure.	0139
Colon and Abdominal Hysterectomy SSI	American College of Surgeons—Centers for Disease Control and Prevention (ACS–CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure.	0753
MRSA Bacteremia	CDC NHSN Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure.	1716

We are not proposing to add or remove any measures in this proposed rule. We refer readers to section I.G.9. of Appendix A of this proposed rule for an updated estimate of the impact of the Program policies on the proportion of hospitals in the worst performing quartile of Total HAC Scores for the FY 2026 HAC Reduction Program.

b. Technical Update to CDC's National Healthcare Safety Network Healthcare-Associated Infection Measures for the HAC Reduction Program

In this section, we provide information regarding upcoming changes to the standard population data that are used to calculate the standardized infection ratio (SIR) for the CDC's NHSN measures. These changes are occurring as part of routine measure maintenance.

CDC's NHSN measures are used to monitor hospital performance on prevention of healthcare-associated infections (HAIs). For each NHSN measure, CDC calculates the SIR, which compares a hospital's observed number of HAIs to the number of infections predicted for the hospital, adjusting for several risk factors. The predicted number of infections is determined using the amount of exposure (for example, the number of central line days when predicting CLABSI events) for a given hospital according to the relevant observed risk factors and infection rates for the same combination of risk factors that occurred among a standard population during a specified period as reflected by the appropriate risk adjustment model (this is sometimes referred to as a ''baseline,'' [259] but referred to here as ''standard population data''). This set of rates forms standard population data that promotes timely comparisons to measure change in an outcome. Since 2016, CDC has been using data collected in CY 2015 to determine the standard population and, currently, the 2015 standard population is used to calculate the HAI measures in the HAC Reduction Program.[260] Prior to 2016, calculated SIRs had different standard population years for each infection type and facility type.[261]

During this update, HAI SIR calculations of infections reported beginning in CY 2025 will reflect the use of both the new 2022 standard population data and the 2015 standard population data. We anticipate that the new 2022 standard population data will affect the HAC Reduction Program beginning with the FY 2028 program year when both years of the 2-year applicable period (also referred to as the ''performance period'' of the measures), CY 2025 and CY 2026, will use the 2022 update to the standard population for the CDC's NHSN measures.

Under the HAC Reduction Program, confidential reports are made available to hospitals with respect to HACs of the hospital during the applicable period (78 FR 50708 through 50709). In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41484 through 41489), we clarified the Scoring Calculations Review and Correction Period (83 FR 41484) for the HAC Reduction Program, which provides hospitals with detailed HAC Reduction Program data and results in confidential Hospital-Specific Reports (HSRs). We give hospitals 30 days to review their HAC Reduction Program data, submit questions about the calculation of their results, and request corrections prior to such information being made public.[262] The HAI measures using the 2022 update to the standard population in the FY 2028 HAC Reduction Program dataset would be publicly reported on the Provider Data Catalog in early 2028.

For the HAI measure information publicly reported on the Compare tool

[259] ''Rebaseline'' is a term that CDC's NHSN staff use to describe the process of updating the national HAI baseline data and risk adjustment models developed using these data. As part of routine measure maintenance, CDC has updated the baseline to ensure the number of predicted infections used in SIR calculations reflects the current state of HAIs in the United States using CY 2022 data. The CDC released its initial announcement of this rebaseline in June 2023. Resources and training regarding the 2015 and 2022 standard population data can be found at: *https://www.cdc.gov/nhsn/nhsnrebaseline/index.html.*

[260] Centers for Disease Control and Prevention. CHARTING THE COURSE: 2022 HAI REBASELINE. Available at: *https://www.cdc.gov/nhsn/pdfs/rebaseline/22-Rebaseline-FAQs-Final-Version.pdf.*

[261] Centers for Disease Control and Prevention. Paving the Path Forward: 2015 Rebaseline. Available at: *https://www.cdc.gov/nhsn/2015rebaseline/index.html.*

[262] For more information on the Scoring Calculations Review and Correction Period, see: *https://qualitynet.cms.gov/inpatient/hac/payment#tab2.*

on *Medicare.gov,* it will continue to display on a quarterly basis calculated from a rolling four quarters of data. The HAI measures using the 2022 update to the standard population data will begin to be publicly reported on the Compare tool in fall 2026 using four quarters of CY 2025 data.

TABLE VI.M.–02—CDC BASELINE DATA ON THE COMPARE TOOL

Performance period for CDC NHSN HAI measures	Standard population data year	Public reporting
October 1, 2024, to September 30, 2025	2015	Summer 2026.
January 1, 2025, to December 31, 2025	2022	Fall 2026.

As we stated in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38324), our current policy has been to report data as soon as it is feasible on CMS websites such as the Compare tool and the Provider Data Catalog, after a 30-day preview period.[263] Table VI.M.–03 summarizes the HAI performance periods, the standard population data year, HAC Reduction Program year, and public reporting timeframe for the CDC's NHSN measures.

TABLE VI.M.–03—CDC BASELINE DATA IN THE HAC REDUCTION PROGRAM

HAC Reduction Program year	Performance period for CDC NHSN HAI measures	Standard population data year	Public reporting
FY 2025	January 1, 2022, to December 31, 2023	2015	Early 2025.
FY 2026	January 1, 2023, to December 31, 2024	2015	Early 2026.
FY 2027	January 1, 2024, to December 31, 2025	2015	Early 2027.
FY 2028	January 1, 2025, to December 31, 2026	2022	Early 2028.

We refer readers to section VI.L.4.b of this proposed rule, where we are proposing updates to the standard population data for the CDC's NHSN HAI measures in the Hospital Value-Based Purchasing (VBP) Program.

While we are not required to solicit comments on technical updates, we invite public comment on this technical update.

3. Proposal To Codify the Extraordinary Circumstances Exception Policy for the HAC Reduction Program

a. Background

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45309 through 45310), we clarified that an Extraordinary Circumstances Exception (ECE) granted under the HAC Reduction Program may allow an exception from quality data reporting requirements and may grant a request to exclude any data submitted (whether submitted for claims purposes or to the CDC's NHSN) from the calculation of a hospital's measure results or Total HAC Score for the applicable period or both, depending on the exact circumstances under which the request was made. We intend to provide relief for a hospital whose ability to accurately collect quality measure data and to report those data in a timely manner has been negatively impacted as a direct result of experiencing a significant disaster or other extraordinary circumstance beyond the control of a hospital (80 FR 49579 through 49581) or both. An exception may be granted for extraordinary circumstances including, but not limited to, natural disasters or systemic problems with data collection systems.[264] We refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49579 through 49581), FY 2018 IPPS/LTCH PPS final rule (82 FR 38276 through 38278), and FY 2022 IPPS/LTCH PPS final rule (86 FR 45308 through 45310) for further background and details of our ECE policy. We also refer readers to the QualityNet website for the specific requirements for submission of an ECE request in the HAC Reduction Program.[265] Hospitals can request a CMS Quality Program ECE for multiple programs based on the same extraordinary circumstance using one ECE request form, including the Hospital IQR Program, the Hospital VBP Program, and the Hospital Readmissions Reduction Program.

Our ECE policy provides flexibility for HAC Reduction Program participants to ensure continuity of quality care delivery and measure reporting in the event of an extraordinary circumstance. For instance, we recognize that, in circumstances where an exclusion of any data submitted from the calculation of a hospital's measure results or Total HAC Score for the applicable period is not applicable, it may be beneficial for a hospital to report data later than the reporting deadline. Delayed reporting authorized under the ECE policy would allow temporary relief for a hospital experiencing an extraordinary circumstance, while preserving data reporting benefits such as transparency and informed decision-making for beneficiaries and providers alike. Accordingly, we propose to specify that an ECE could take the form of an extension of time for a hospital to comply with a data reporting requirement if CMS determines that this type of relief would be appropriate under the circumstances.

b. Proposals To Codify the Extraordinary Circumstances Exception (ECE) Policy for the HAC Reduction Program

We propose to codify the ECE policy at 42 CFR 412.172(c) and include extensions of time as a form of relief. Specifically, at proposed § 412.172(c)(1), we propose that CMS may grant an ECE with respect to reporting requirements in the event of an extraordinary

[263] For more information on the Care Compare Preview period, see: *https://qualitynet.cms.gov/inpatient/public-reporting/public-reporting/hospital-compare-preview.*

[264] Centers for Medicare & Medicaid Services (CMS) Quality Program Extraordinary Circumstances Exceptions (ECE) Request Form. (2025). QualityNet. Available at: *https://qualitynet.cms.gov/files/677e843f50ed8df7419f60e1?filename=HQR_ECE_Req_Form_CY_2025.pdf.*

[265] CMS QualityNet. Available at: *https://qualitynet.cms.gov/inpatient/hac/participation#tab2.*

circumstance—defined as an event beyond the control of a hospital (for example a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing)—that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

We propose that the process for requesting or granting an ECE would remain the same as the current ECE process, detailed by CMS at the QualityNet website or a successor website.[266] At proposed § 412.172(c)(2)(i), we propose that a hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred. Under this proposed policy, we clarify that CMS retains the authority to grant an ECE as a form of relief at any time after the extraordinary circumstance has occurred. At proposed § 412.172(c)(2)(ii), we propose that CMS notify the requestor with a decision in writing, via email. In the event that CMS grants an ECE to the hospital, the written decision will specify whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

Additionally, at § 412.172(c)(3), we note that CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines that: a systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement, or that an extraordinary circumstance has affected an entire region or locale. Any ECE granted will specify whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

The ECE policy is intended to provide hospitals with further reporting flexibility and clarity regarding expectations when submitting ECE requests for participants of the HAC Reduction Program. We refer readers to sections X.C.8, VI.L.5, VI.K.3.c., and X.D.4. of the preamble of this proposed rule for similar proposals in the Hospital IQR Program, Hospital VBP Program, Hospital Readmissions Reduction Program, and PCHQR Program, respectively.

We invite public comment on our proposals.

N. Rural Community Hospital Demonstration Program

1. Introduction

The Rural Community Hospital Demonstration was originally authorized by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173). The demonstration has been extended three times since the original 5-year period mandated by the MMA, each time for an additional 5 years. These extensions were authorized by sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148), section 15003 of the 21st Century Cures Act (Pub. L. 114–255) (Cures Act) enacted in 2016, and most recently, by section 128 of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260), which also reauthorized the RCHD for five years. Below we summarize the status of the demonstration program and the current methodologies for implementation and calculating budget neutrality, and propose the amount to be subtracted from the national IPPS payment rates to account for the costs of the demonstration in FY 2026. The amount would include the reconciled amount of demonstration costs for FY 2020 in the FY 2026 IPPS/LTCH final rule. We expect all finalized cost reports for FY 2020 to be available when the FY 2026 IPPS/LTCH final rule is published.

Last year we published a new solicitation (89 FR 105049) to select 10 additional qualifying hospitals to participate in the Rural Community Hospital Demonstration. We only accepted applications to this solicitation from hospitals in the 20 least densely populated States, according to data for 2020 from the U.S. Census Bureau. These States are: Alaska, Arizona, Arkansas, Colorado, Idaho, Iowa, Kansas, Maine, Mississippi, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Vermont, and Wyoming. We did not accept applications from hospitals located in other States or in the U.S. territories. Applications were due March 1, 2025; we will be selecting hospitals on a rolling basis beginning May 1, 2025. Given the upcoming statutory termination of the model, we are aligning performance dates for the selected hospitals with the last performance day for the currently authorized extension; therefore, although previous agreements ran for 5-year periods, agreements for hospitals selected under CMS–5051–N2 will run only until June 30, 2028.

2. Background

Section 410A(a) of the MMA (Pub. L. 108–173) required the Secretary to establish a demonstration program to test the feasibility and advisability of establishing rural community hospitals to furnish covered inpatient hospital services to Medicare beneficiaries. The demonstration pays rural community hospitals under a reasonable cost-based methodology for Medicare payment purposes for covered inpatient hospital services furnished to Medicare beneficiaries. A rural community hospital, as defined in section 410A(f)(1), is a hospital that—

- Is located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or is treated as being located in a rural area under section 1886(d)(8)(E) of the Act;
- Has fewer than 51 beds (excluding beds in a distinct part psychiatric or rehabilitation unit) as reported in its most recent cost report;
- Provides 24-hour emergency care services; and
- Is not designated or eligible for designation as a CAH under section 1820 of the Act.

Our policy for implementing the 5-year extension period authorized by the CAA, 2021 (Pub. L. 116–260) follows upon the previous extensions under the Affordable Care Act (Pub. L. 111–148) and the Cures Act (Pub. L. 114–255). Section 410A of the MMA (Pub. L. 108–173) initially required a 5-year period of performance. Subsequently, sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148) required the Secretary to conduct the demonstration program for an additional 5-year period, to begin on the date immediately following the last day of the initial 5-year period. In addition, the Affordable Care Act (Pub. L. 111–148) limited the number of hospitals participating to no more than 30. Section 15003 of the Cures Act (Pub. L. 114–255) required a 10-year extension period in place of the 5-year extension period under the Affordable Care Act (Pub. L. 111–148), thereby extending the demonstration for another 5 years. Section 128 of CAA, 2021 (Pub. L. 116–260), in turn, revised the statute to indicate a 15-year extension period, instead of the 10-year extension period mandated by the Cures Act (Pub. L. 114–255). Please refer to the FY 2023 IPPS proposed and final rules (87 FR 28454 through 28458 and 87 FR 49138 through 49142, respectively) for an account of hospitals entering into and withdrawing from the demonstration with these re-authorizations. There are currently 20 hospitals participating in the demonstration.

2. Budget Neutrality

a. Statutory Budget Neutrality Requirement

Section 410A(c)(2) of the MMA (Pub. L. 108–173) requires that, in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount that the Secretary would have paid if the demonstration program under this section was not implemented. This requirement is commonly referred to as ''budget neutrality.'' Generally, when we implement a demonstration program on a budget neutral basis, the demonstration program is budget neutral on its own terms; in other words, the aggregate payments to the participating hospitals do not exceed the amount that would be paid to those same hospitals in the absence of the demonstration program. We note that the payment methodology for this demonstration, that is, cost-based payments to participating small rural hospitals, made it unlikely that increased Medicare outlays would produce an offsetting reduction to Medicare expenditures elsewhere. Therefore, in the IPPS final rules spanning the period from FY 2005 through FY 2016, we adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration program, thus applying budget neutrality across the payment system as a whole rather than merely across the participants in the demonstration program. (We applied a different methodology for FY 2017, with the demonstration expected to end prior to the Cures Act extension.) As we discussed in the FYs 2005 through 2017 IPPS/LTCH PPS final rules (69 FR 49183; 70 FR 47462; 71 FR 48100; 72 FR 47392; 73 FR 48670; 74 FR 43922, 75 FR 50343, 76 FR 51698, 77 FR 53449, 78 FR 50740, 77 FR 50145; 80 FR 49585; and 81 FR 57034, respectively), we believe that the statutory language of the budget neutrality requirements permits the agency to implement the budget neutrality provision in this manner.

We resumed this methodology of offsetting demonstration costs against the national payment rates in the IPPS final rules from FY 2018 through FY 2025. Please see the FY 2025 IPPS final rule for an account of how we applied the budget neutrality requirement for these fiscal years (89 FR 69412 through 69413).

b. General Budget Neutrality Methodology

We have generally incorporated two components into the budget neutrality offset amounts identified in the final IPPS rules in previous years. First, we have estimated the costs of the demonstration for the upcoming fiscal year, generally determined from historical, ''as submitted'' cost reports for the hospitals participating in that year. Updated factors representing nationwide trends in cost and volume increases have been incorporated into these estimates, as specified in the methodology described in the final rule for each fiscal year. Second, as finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the final IPPS rule for the corresponding fiscal year, and incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. If the actual costs for the demonstration for the earlier fiscal year exceeded the estimated costs of the demonstration identified in the final rule for that year, this difference was added to the estimated costs of the demonstration for the upcoming fiscal year when determining the budget neutrality adjustment for the upcoming fiscal year. Conversely, if the estimated costs of the demonstration set forth in the final rule for a prior fiscal year exceeded the actual costs of the demonstration for that year, this difference was subtracted from the estimated cost of the demonstration for the upcoming fiscal year when determining the budget neutrality adjustment for the upcoming fiscal year.

We note that we have calculated this difference for FYs 2005 through 2018 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS final rules for these years.

c. Budget Neutrality Methodology for the Extension Period Authorized by CAA, 2021

For the most-recently enacted extension period, under the CAA, 2021, we have continued upon the general budget neutrality methodology used in previous years, as described previously in the citations to earlier IPPS final rules. In this proposed rule, we outline the methodology to be used for determining the offset to the national IPPS payment rates for FY 2026.

(1) Methodology for Estimating Demonstration Costs for FY 2026

Consistent with the general methodology from previous years, we are estimating the costs of the demonstration for the upcoming fiscal year, and proposing to incorporate this estimate into the budget neutrality offset amount to be applied to the national IPPS rates for the upcoming fiscal year, that is, FY 2026. We are conducting this estimate for FY 2026 based on the 20 currently participating hospitals. The methodology for calculating this amount for FY 2026 proceeds according to the following steps:

Step 1: For each of these 20 hospitals, we identify the reasonable cost amount calculated under the reasonable cost-based methodology for covered inpatient hospital services, including swing beds, as indicated on the ''as submitted'' cost report for the most recent cost reporting period available. The ''as submitted'' cost report, submitted by each of the 20 hospitals, with a report end date in CY2023 is used. We sum these hospital -specific amounts to arrive at a total general amount representing the costs for covered inpatient hospital services, including swing beds, across the total 20 hospitals eligible to participate during FY 2026.

Then, we multiply the total general amount by the FYs 2024, 2025, and 2026 IPPS market basket percentage increases, which are calculated by the CMS Office of the Actuary. (We are using the proposed market basket percentage increase for FY 2026, which can be found at section VI.B.1. of the preamble to this proposed rule). The result for the 20 hospitals is the general estimated reasonable cost amount for covered inpatient hospital services for FY 2026.

Consistent with our methods in previous years for formulating this estimate, we are applying the IPPS market basket percentage increases for FYs 2024 through 2026 to the applicable estimated reasonable cost amount (previously described) to model the estimated FY 2026 reasonable cost amount under the demonstration. We believe that the IPPS market basket percentage increases appropriately indicate the trend of increase in inpatient hospital operating costs under the reasonable cost methodology for the years involved.

Step 2: For each of the participating hospitals, we identify the estimated amount that would otherwise have been paid in FY 2026 under applicable Medicare payment methodologies for covered inpatient hospital services, including swing beds (as indicated on the same set of ''as submitted'' cost reports as in Step 1), if the demonstration had not been implemented. We sum these hospital-

specific amounts, and, in turn, multiply this sum by the FYs 2024, 2025, and 2026 IPPS applicable percentage increases. (For FY 2026, we are using the proposed applicable percentage increase, per section VI.B.1. of the preamble of this proposed rule). This methodology differs from Step 1, in which we apply the market basket percentage increases to the hospitals' applicable estimated reasonable cost amount for covered inpatient hospital services. We believe that the IPPS applicable percentage increases are appropriate factors to update the estimated amounts that generally would otherwise be paid without the demonstration because IPPS payments constitute the majority of payments that would otherwise be made without the demonstration and the applicable percentage increase is the factor used under the IPPS to update the inpatient hospital payment rates.

Step 3: We subtract the amount derived in Step 2 from the amount derived in Step 1. According to our methodology, the resulting amount indicates the total difference for the 20 hospitals (for covered inpatient hospital services, including swing beds), which will be the general estimated amount of the costs of the demonstration for FY 2026.

For this proposed rule, the resulting amount is $47,527,557, which, if finalized, would be incorporated into the budget neutrality offset adjustment for FY 2026. This estimated amount is based on the specific assumptions regarding the data sources used, that is, recently available ''as submitted'' cost reports and historical update factors for cost and payment. If updated data become available prior to the final rule, we will use them as appropriate to estimate the costs for the demonstration program for FY 2026 in accordance with our methodology for determining the budget neutrality estimate. We will also incorporate any statutory change that might affect the methodology for determining hospital costs either with or without the demonstration. We are proposing to include estimated costs of the demonstration for FY 2026 for all participating hospitals, to include those participating as a result of the current solicitation, in the budget neutrality offset adjustment in the FY 2027 IPPS proposed and final rules.

(2) Reconciling Actual and Estimated Costs of the Demonstration for Previous Years

As described earlier, we have calculated the difference for FYs 2005 through 2018 between the actual costs of the demonstration, as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS final rules for these years.

At this time, for the FY 2026 proposed rule, not all of the finalized cost reports are available for the 20 hospitals that completed cost report periods beginning in FY 2020 under the demonstration payment methodology. We expect all of these finalized cost reports to be available by the time of the final rule, and thus we are proposing to include the difference between the actual cost of the demonstration for FY 2020 as determined from finalized cost reports within the budget neutrality offset amount in the FY 2026 final rule.

(3) Total Proposed Budget Neutrality Offset Amount for FY 2026

For this FY 2026 IPPS/LTCH PPS proposed rule, the proposed budget neutrality offset amount for FY 2026 is the amount determined under section X.2.c.(2). of the preamble of this proposed rule, representing the difference applicable to FY 2026 between the sum of the estimated reasonable cost amounts that would be paid under the demonstration for covered inpatient services to the 20 hospitals eligible to participate in the fiscal year and the sum of the estimated amounts that would generally be paid if the demonstration had not been implemented. This estimated amount is $47,527,557.

However, we note, that the overall amount might change if there are any revisions prior to the final rule to the data used to formulate this estimate. We also expect to revise the budget neutrality offset amount upon calculating the actual costs of the demonstration for FY 2020, after receiving all of the finalized cost reports for that fiscal year.

VII. Proposed Changes to the IPPS for Capital-Related Costs

A. Overview

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient acute hospital services in accordance with a prospective payment system established by the Secretary. Under the statute, the Secretary has broad authority in establishing and implementing the IPPS for acute care hospital inpatient capital-related costs. We initially implemented the IPPS for capital-related costs in the FY 1992 IPPS final rule (56 FR 43358). In that final rule, we established a 10-year transition period to change the payment methodology for Medicare hospital inpatient capital-related costs from a reasonable cost-based payment methodology to a prospective payment methodology (based fully on the Federal rate).

FY 2001 was the last year of the 10-year transition period that was established to phase in the IPPS for hospital inpatient capital-related costs. For cost reporting periods beginning in FY 2002, capital IPPS payments are based solely on the Federal rate for almost all acute care hospitals (other than hospitals receiving certain exception payments and certain new hospitals). (We refer readers to the FY 2002 IPPS final rule (66 FR 39910 through 39914) for additional information on the methodology used to determine capital IPPS payments to hospitals both during and after the transition period.)

The basic methodology for determining capital prospective payments using the Federal rate is set forth in the regulations at 42 CFR 412.312. For the purpose of calculating capital payments for each discharge, the standard Federal rate is adjusted as follows:

(Standard Federal Rate) × (DRG Weight) × (Geographic Adjustment Factor (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + Capital DSH Adjustment Factor + Capital IME Adjustment Factor, if applicable).

In addition, under § 412.312(c), hospitals also may receive outlier payments under the capital IPPS for extraordinarily high-cost cases that qualify under the thresholds established for each fiscal year.

B. Additional Provisions

1. Exception Payments

The regulations at 42 CFR 412.348 provide for certain exception payments under the capital IPPS. The regular exception payments provided under § 412.348(b) through (e) were available only during the 10-year transition period. For a certain period after the transition period, eligible hospitals may have received additional payments under the special exceptions provisions at § 412.348(g). However, FY 2012 was the final year hospitals could receive special exceptions payments. For additional details regarding these exceptions policies, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51725).

Under § 412.348(f), a hospital may request an additional payment if the hospital incurs unanticipated capital expenditures in excess of $5 million due to extraordinary circumstances beyond

the hospital's control. Additional information on the exception payment for extraordinary circumstances in § 412.348(f) can be found in the FY 2005 IPPS final rule (69 FR 49185 and 49186).

2. New Hospitals

Under the capital IPPS, the regulations at 42 CFR 412.300(b) define a new hospital as a hospital that has operated (under previous or current ownership) for less than 2 years and lists examples of hospitals that are not considered new hospitals. In accordance with § 412.304(c)(2), under the capital IPPS, a new hospital is paid 85 percent of its allowable Medicare inpatient hospital capital related costs through its first 2 years of operation, unless the new hospital elects to receive full prospective payment based on 100 percent of the Federal rate. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51725) for additional information on payments to new hospitals under the capital IPPS.

3. Payments for Hospitals Located in Puerto Rico

In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57061), we revised the regulations at 42 CFR 412.374 relating to the calculation of capital IPPS payments to hospitals located in Puerto Rico beginning in FY 2017 to parallel the change in the statutory calculation of operating IPPS payments to hospitals located in Puerto Rico, for discharges occurring on or after January 1, 2016, made by section 601 of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113). Section 601 of Public Law 114–113 increased the applicable Federal percentage of the operating IPPS payment for hospitals located in Puerto Rico from 75 percent to 100 percent and decreased the applicable Puerto Rico percentage of the operating IPPS payments for hospitals located in Puerto Rico from 25 percent to zero percent, applicable to discharges occurring on or after January 1, 2016. As such, under revised § 412.374, for discharges occurring on or after October 1, 2016, capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the capital Federal rate.

C. Proposed Annual Update for FY 2026

The proposed annual update to the national capital Federal rate, as provided for in 42 CFR 412.308(c), for FY 2026 is discussed in section III. of the Addendum to this FY 2026 IPPS/LTCH PPS proposed rule.

We also note that in section II.D. of the preamble of this proposed rule, we discuss our proposed revision to the adjustment to the payment amount for certain clinical trial or expanded access use immunotherapy cases to include other cases where the immunotherapy product is not purchased in the usual manner (such as provided at no cost) that will group to MS–DRG 018 for both operating IPPS payments and capital IPPS payments. We refer readers to section II.D. of this preamble for additional details on the proposed payment adjustment for these cases.

VIII. Proposed Changes for Hospitals Excluded From the IPPS

A. Proposed Rate-of-Increase in Payments to Excluded Hospitals for FY 2026

Certain hospitals excluded from a prospective payment system, including children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling. A per discharge limit (the target amount, as defined in § 413.40(a) of the regulations) is set for each hospital based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage. For each cost reporting period, the updated target amount is multiplied by total Medicare discharges during that period and applied as an aggregate upper limit (the ceiling as defined in § 413.40(a)) of Medicare reimbursement for total inpatient operating costs for a hospital's cost reporting period. In accordance with § 403.752(a) of the regulations, religious nonmedical health care institutions (RNHCIs) also are subject to the rate-of-increase limits established under § 413.40 of the regulations discussed previously. Furthermore, in accordance with § 412.526(c)(3) of the regulations, extended neoplastic disease care hospitals (formerly classified as ''Subclause II LTCs'') also are subject to the rate-of-increase limits established under § 413.40 of the regulations discussed previously.

As explained in the FY 2006 IPPS final rule (70 FR 47396 through 47398), beginning with FY 2006, we have used the percentage increase in the IPPS operating market basket to update the target amounts for children's hospitals, the 11 cancer hospitals, and RNHCIs.

Consistent with the regulations at §§ 412.23(g) and 413.40(a)(2)(ii)(A) and (c)(3)(viii), we also have used the percentage increase in the IPPS operating market basket to update target amounts for short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45207), we rebased and revised the IPPS operating market basket to a 2018 base year, and finalized the use of the percentage increase in the 2018-based IPPS operating market basket to update the target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2022 and subsequent fiscal years. As discussed in section IV. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing to rebase and revise the IPPS operating basket to a 2023 base year. Therefore, we are proposing to use the percentage increase in the proposed 2023-based IPPS operating market basket to update the target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa for FY 2026 and subsequent fiscal years. Accordingly, for FY 2026, the rate-of-increase percentage to be applied to the target amount for these hospitals would be the FY 2026 percentage increase in the proposed 2023-based IPPS operating market basket.

For the FY 2026 IPPS/LTCH PPS proposed rule, based on IGI's 2024 fourth quarter forecast, we estimate that the proposed 2023-based IPPS operating market basket percentage increase for FY 2026 is 3.2 percent (that is, the estimate of the market basket rate-of-increase). Based on this estimate, the FY 2026 rate-of-increase percentage that will be applied to the FY 2025 target amounts in order to calculate the FY 2026 target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is 3.2 percent, in accordance with the applicable regulations at 42 CFR 413.40. However, we are proposing that if more recent data become available for the FY 2026 IPPS/LTCH PPS final rule, we would use such data, if appropriate, to calculate the final IPPS operating market basket update for FY 2026.

In addition, payment for inpatient operating costs for hospitals classified under section 1886(d)(1)(B)(vi) of the Act (which we refer to as ''extended neoplastic disease care hospitals'') for

cost reporting periods beginning on or after January 1, 2015, is to be made as described in 42 CFR 412.526(c)(3), and payment for capital costs for these hospitals is to be made as described in 42 CFR 412.526(c)(4). (For additional information on these payment regulations, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38321 through 38322).) Section 412.526(c)(3) provides that the hospital's Medicare allowable net inpatient operating costs for that period are paid on a reasonable cost basis, subject to that hospital's ceiling, as determined under § 412.526(c)(1), for that period. Under § 412.526(c)(1), for each cost reporting period, the ceiling was determined by multiplying the updated target amount, as defined in § 412.526(c)(2), for that period by the number of total Medicare discharges paid during that period. Section 412.526(c)(2)(i) describes the method for determining the target amount for cost reporting periods beginning during FY 2015. Section 412.526(c)(2)(ii) specifies that, for cost reporting periods beginning during fiscal years after FY 2015, the target amount will equal the hospital's target amount for the previous cost reporting period updated by the applicable annual rate-of-increase percentage specified in § 413.40(c)(3) for the subject cost reporting period (79 FR 50197).

For FY 2026, in accordance with §§ 412.22(i) and 412.526(c)(2)(ii) of the regulations, for cost reporting periods beginning during FY 2026, the proposed update to the target amount for extended neoplastic disease care hospitals (that is, hospitals described under § 412.22(i)) is the applicable annual rate-of-increase percentage specified in § 413.40(c)(3), which is estimated to be the proposed percentage increase in the proposed 2023-based IPPS operating market basket (that is, the estimate of the market basket rate-of-increase). Accordingly, the proposed update to an extended neoplastic disease care hospital's target amount for FY 2026 is 3.2 percent, which is based on IGI's fourth quarter 2024 forecast. Furthermore, we are proposing that if more recent data become available for the FY 2026 IPPS/LTCH PPS final rule, we would use such data, if appropriate, to calculate the IPPS operating market basket rate of increase for FY 2026.

B. Critical Access Hospitals (CAHs)

1. Background

Section 1820 of the Act provides for the establishment of Medicare Rural Hospital Flexibility Programs (MRHFPs), under which individual States may designate certain facilities as critical access hospitals (CAHs). Facilities that are so designated and meet the CAH conditions of participation under 42 CFR part 485, subpart F, will be certified as CAHs by CMS. Regulations governing payments to CAHs for services to Medicare beneficiaries are located in 42 CFR part 413.

2. Frontier Community Health Integration Project Demonstration

a. Introduction

The Frontier Community Health Integration Project Demonstration was originally authorized by section 123 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275). The demonstration has been extended by section 129 of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260) for an additional 5 years. In this proposed rule, we are summarizing the status of the demonstration program, and the ongoing methodologies for implementation and budget neutrality for the demonstration extension period.

b. Background and Overview

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69416 through 69419), section 123 of the Medicare Improvements for Patients and Providers Act of 2008, as amended by section 3126 of the Affordable Care Act, authorized a demonstration project to allow eligible entities to develop and test new models for the delivery of health care services in eligible counties in order to improve access to and better integrate the delivery of acute care, extended care and other health care services to Medicare beneficiaries. The demonstration was titled ''Demonstration Project on Community Health Integration Models in Certain Rural Counties,'' and commonly known as the Frontier Community Health Integration Project (FCHIP) Demonstration.

The authorizing statute stated the eligibility criteria for entities to be able to participate in the demonstration. An eligible entity, as defined in section 123(d)(1)(B) of Public Law 110–275, as amended, is a Medicare Rural Hospital Flexibility Program (MRHFP) grantee under section 1820(g) of the Act (that is, a CAH); and is located in a State in which at least 65 percent of the counties in the state are counties that have 6 or less residents per square mile.

The authorizing statute stipulated several other requirements for the demonstration. In addition, section 123(g)(1)(B) of Public Law 110–275 required that the demonstration be budget neutral. Specifically, this provision stated that, in conducting the demonstration project, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project under the section were not implemented. Furthermore, section 123(i) of Public Law 110–275 stated that the Secretary may waive such requirements of titles XVIII and XIX of the Act as may be necessary and appropriate for the purpose of carrying out the demonstration project, thus allowing the waiver of Medicare payment rules encompassed in the demonstration. CMS selected CAHs to participate in four interventions, under which specific waivers of Medicare payment rules would allow for enhanced payment for telehealth, skilled nursing facility/nursing facility beds, ambulance services, and home health services. These waivers were formulated with the goal of increasing access to care with no net increase in costs.

Section 123 of Public Law 110–275 initially required a 3-year period of performance. The FCHIP Demonstration began on August 1, 2016, and concluded on July 31, 2019 (referred to in this section of the proposed rule as the ''initial period''). Subsequently, section 129 of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260) extended the demonstration by 5 years (referred to in this section of the proposed rule as the ''extension period''). The Secretary is required to conduct the demonstration for an additional 5-year period. CAHs participating in the demonstration project during the extension period began such participation in their cost reporting year that began on or after January 1, 2022.

As described in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69416 through 69419), 10 CAHs were selected for participation in the demonstration initial period. The selected CAHs were located in three States—Montana, Nevada, and North Dakota—and participated in three of the four interventions identified in the FY 2025 IPPS/LTCH PPS final rule. Each CAH was allowed to participate in more than one of the interventions. None of the selected CAHs were participants in the home health intervention, which was the fourth intervention.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45323 through 45328), CMS concluded that the initial period of the FCHIP Demonstration (covering the performance period of August 1, 2016, to July 31, 2019) had satisfied the

budget neutrality requirement described in section 123(g)(1)(B) of Public Law 110–275. Therefore, CMS did not apply a budget neutrality payment offset policy for the initial period of the demonstration.

Section 129 of Public Law 116–260, stipulates that only the 10 CAHs that participated in the initial period of the FCHIP Demonstration are eligible to participate during the extension period. Among the eligible CAHs, five have elected to participate in the extension period. The selected CAHs are located in two States—Montana and North Dakota—and are implementing three of the four interventions. The eligible CAH participants elected to change the number of interventions and payment waivers they would participate in during the extension period. CMS accepted and approved the CAHs intervention and payment waiver updates. For the extension period, five CAHs are participants in the telehealth intervention, three CAHs are participants in the skilled nursing facility/nursing facility bed intervention, and three CAHs are participants in the ambulance services intervention. As with the initial period, each CAH was allowed to participate in more than one of the interventions during the extension period. None of the selected CAHs are participants in the home health intervention, which was the fourth intervention.

c. Intervention Payment and Payment Waivers

As described in the FY 2025IPPS/LTCH PPS final rule (89 FR 69416 through 69419), CMS waived certain Medicare rules for CAHs participating in the demonstration initial period to allow for alternative reasonable cost-based payment methods in the three distinct intervention service areas: telehealth services, ambulance services, and skilled nursing facility/nursing facility (SNF/NF) beds expansion. The payments and payment waiver provisions only apply if the CAH is a participant in the associated intervention. CMS Intervention Payment and Payment Waivers for the demonstration extension period consist of the following:

(1) Telehealth Services Intervention Payments

CMS waives section 1834(m)(2)(B) of the Act, which specifies the facility fee to the originating site for Medicare telehealth services. CMS modifies the facility fee payment specified under section 1834(m)(2)(B) of the Act to make reasonable cost-based reimbursement to the participating CAH where the participating CAH serves as the originating site for a telehealth service furnished to an eligible telehealth individual, as defined in section 1834(m)(4)(B) of the Act. CMS reimburses the participating CAH serving as the originating site at 101 percent of its reasonable costs for overhead, salaries and fringe benefits associated with telehealth services at the participating CAH. CMS does not fund or provide reimbursement to the participating CAH for the purchase of new telehealth equipment.

CMS waives section 1834(m)(2)(A) of the Act, which specifies that the payment for a telehealth service furnished by a distant site practitioner is the same as it would be if the service had been furnished in-person. CMS modifies the payment amount specified for telehealth services under section 1834(m)(2)(A) of the Act to make reasonable cost-based reimbursement to the participating CAH for telehealth services furnished by a physician or practitioner located at distant site that is a participating CAH that is billing for the physician or practitioner professional services. Whether the participating CAH has or has not elected Optional Payment Method II for outpatient services, CMS would pay the participating CAH 101 percent of reasonable costs for telehealth services when a physician or practitioner has reassigned their billing rights to the participating CAH and furnishes telehealth services from the participating CAH as a distant site practitioner. This means that participating CAHs that are billing under the Standard Method on behalf of employees who are physicians or practitioners (as defined in section 1834(m)(4)(D) and (E) of the Act, respectively) would be eligible to bill for distant site telehealth services furnished by these physicians and practitioners. Additionally, CAHs billing under the Optional Method would be reimbursed based on 101 percent of reasonable costs, rather than paid based on the Medicare physician fee schedule, for the distant site telehealth services furnished by physicians and practitioners who have reassigned their billing rights to the CAH. For distant site telehealth services furnished by physicians or practitioners who have not reassigned billing rights to a participating CAH, payment to the distant site physician or practitioner would continue to be made as usual under the Medicare physician fee schedule. Except as described herein, CMS does not waive any other provisions of section 1834(m) of the Act for purposes of the telehealth services intervention payments, including the scope of Medicare telehealth services as established under section 1834(m)(4)(F) of the Act.

(2) Ambulance Services Intervention Payments

CMS waives 42 CFR 413.70(b)(5)(i)(D) and section 1834(l)(8) of the Act, which provides that payment for ambulance services furnished by a CAH, or an entity owned and operated by a CAH, is 101 percent of the reasonable costs of the CAH or the entity in furnishing the ambulance services, but only if the CAH or the entity is the only provider or supplier of ambulance services located within a 35-mile drive of the CAH, excluding ambulance providers or suppliers that are not legally authorized to furnish ambulance services to transport individuals to or from the CAH. The participating CAH would be paid 101 percent of reasonable costs for its ambulance services regardless of whether there is any provider or supplier of ambulance services located within a 35-mile drive of the participating CAH or participating CAH-owned and operated entity. CMS would not make cost-based payment to the participating CAH for any new capital (for example, vehicles) associated with ambulance services. This waiver does not modify any other Medicare rules regarding or affecting the provision of ambulance services.

(3) SNF/NF Beds Expansion Intervention Payments

CMS waives 42 CFR 485.620(a) and 485.645(a)(2) and section 1820(c)(2)(B)(iii) of the Act which limit CAHs to maintaining no more than 25 inpatient beds, including beds available for acute inpatient or swing bed services. CMS waives section 1820(f) of the Act permitting designating or certifying a facility as a critical access hospital for which the facility at any time is furnishing inpatient beds which exceed more than 25 beds. Under this waiver, if the participating CAH has received swing bed approval from CMS, the participating CAH may maintain up to ten additional beds (for a total of 35 beds) available for acute inpatient or swing bed services; however, the participating CAH may only use these 10 additional beds for nursing facility or skilled nursing facility level of care. CMS would pay the participating CAH 101 percent of reasonable costs for its SNF/NF services furnished in the 10 additional beds.

d. Budget Neutrality

(1) Budget Neutrality Requirement

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45323 through 45328), we finalized a policy to address the budget neutrality requirement for the demonstration initial period. As explained in the FY 2022 IPPS/LTCH PPS final rule, we based our selection of CAHs for participation in the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms meaning that the demonstration would produce savings from reduced transfers and admissions to other health care providers, offsetting any increase in Medicare payments as a result of the demonstration. However, because of the small size of the demonstration and uncertainty associated with the projected Medicare utilization and costs, the policy we finalized for the demonstration initial period of performance in the FY 2022 IPPS/LTCH PPS final rule provides a contingency plan to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49144 through 49147), we adopted the same budget neutrality policy contingency plan used during the demonstration initial period to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met during the demonstration extension period. If analysis of claims data for Medicare beneficiaries receiving services at each of the participating CAHs, as well as from other data sources, including cost reports for the participating CAHs, shows that increases in Medicare payments under the demonstration during the 5-year extension period are not sufficiently offset by reductions elsewhere, we would recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide.

As explained in the FY 2023 IPPS/LTCH PPS final rule, because of the small scale of the demonstration, we indicated that we did not believe it would be feasible to implement budget neutrality for the demonstration extension period by reducing payments to only the participating CAHs. Therefore, in the event that this demonstration extension period is found to result in aggregate payments in excess of the amount that would have been paid if this demonstration extension period were not implemented, CMS policy is to comply with the budget neutrality requirement finalized in the FY 2023 IPPS/LTCH PPS final rule, by reducing payments to all CAHs, not just those participating in the demonstration extension period.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49144 through 49147), we stated that we believe it is appropriate to make any payment reductions across all CAHs because the FCHIP Demonstration was specifically designed to test innovations that affect delivery of services by the CAH provider category. We explained our belief that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of Public Law 110–275 permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented and does not identify the range across which aggregate payments must be held equal.

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a policy that in the event the demonstration extension period is found not to have been budget neutral, any excess costs would be recouped within one fiscal year. We explained our belief that this policy is a more efficient timeframe for the government to conclude the demonstration operational requirements (such as analyzing claims data, cost report data or other data sources) to adjudicate the budget neutrality payment recoupment process due to any excess cost that occurred as result of the demonstration extension period.

(2) FCHIP Budget Neutrality Methodology and Analytical Approach

As explained in the FY 2022 IPPS/LTCH PPS final rule, we finalized a policy to address the demonstration budget neutrality methodology and analytical approach for the initial period of the demonstration. In the FY 2023 IPPS/LTCH PPS final rule, we finalized a policy to adopt the budget neutrality methodology and analytical approach used during the demonstration initial period to ensure budget neutrality for the extension period. The analysis of budget neutrality during the initial period of the demonstration identified both the costs related to providing the intervention services under the FCHIP Demonstration and any potential downstream effects of the intervention-related services, including any savings that may have accrued.

The budget neutrality analytical approach for the demonstration initial period incorporated two major data components: (1) Medicare cost reports; and (2) Medicare administrative claims. As described in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45323 through 45328), CMS computed the cost of the demonstration for each fiscal year of the demonstration initial period using Medicare cost reports for the participating CAHs, and Medicare administrative claims and enrollment data for beneficiaries who received demonstration intervention services.

In addition, in order to capture the full impact of the interventions, CMS developed a statistical modeling, Difference-in-Difference (DiD) regression analysis to estimate demonstration expenditures and compute the impact of expenditures on the intervention services by comparing cost data for the demonstration and non-demonstration groups using Medicare administrative claims across the demonstration period of performance under the initial period of the demonstration. The DiD regression analysis would compare the direct cost and potential downstream effects of intervention services, including any savings that may have accrued, during the baseline and performance period for both the demonstration and comparison groups.

Second, the Medicare administrative claims analysis would be reconciled using data obtained from auditing the participating CAHs' Medicare cost reports. We would estimate the costs of the demonstration using ''as submitted'' cost reports for each hospital's financial fiscal year participation within each of the demonstration extension period performance years. Each CAH has its own Medicare cost report end date applicable to the 5-year period of performance for the demonstration extension period. The cost report is structured to gather costs, revenues and statistical data on the provider's financial fiscal period. As a result, we finalized a policy in the FY 2023 IPPS/LTCH PPS final rule that we would determine the final budget neutrality results for the demonstration extension once complete data is available for each CAH for the demonstration extension period.

e. Policies for Implementing the 5-Year Extension and Provisions Authorized by Section 129 of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260)

As stated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69416 through 69419), our policy for implementing the 5-year extension period for section 129 of Public Law 116–260 follows same budget neutrality methodology and analytical approach as the

demonstration initial period methodology. While we expect to use the same methodology that was used to assess the budget neutrality of the FCHIP Demonstration during initial period of the demonstration to assess the financial impact of the demonstration during this extension period, upon receiving data for the extension period, we may update and/or modify the FCHIP budget neutrality methodology and analytical approach to ensure that the full impact of the demonstration is appropriately captured.

f. Total Budget Neutrality Offset Amount for FY 2026

At this time, for the FY 2026 IPPS/LTCH PPS proposed rule, while this discussion represents our anticipated approach to assessing the financial impact of the demonstration extension period based on upon receiving data for the full demonstration extension period, we may update and/or modify the FCHIP Demonstration budget neutrality methodology and analytical approach to ensure that the full impact of the demonstration is appropriately captured.

Therefore, we do not propose to apply a budget neutrality payment offset to payments to CAHs in FY 2026. This policy would have no impact for any national payment system for FY 2026.

IX. Proposed Changes to the Long-Term Care Hospital Prospective Payment System (LTCH PPS) for FY 2026

A. Background of the LTCH PPS

1. Legislative and Regulatory Authority

Section 123 of the Medicare, Medicaid, and SCHIP (State Children's Health Insurance Program) Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113), as amended by section 307(b) of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554), provides for payment for both the operating and capital-related costs of hospital inpatient stays in long-term care hospitals (LTCHs) under Medicare Part A based on prospectively set rates. The Medicare prospective payment system (PPS) for LTCHs applies to hospitals that are described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002.

Section 1886(d)(1)(B)(iv)(I) of the Act originally defined an LTCH as a hospital that has an average inpatient length of stay (as determined by the Secretary) of greater than 25 days.

Section 1886(d)(1)(B)(iv)(II) of the Act also provided an alternative definition of LTCHs (''subclause II'' LTCHs). However, section 15008 of the 21st Century Cures Act (Pub. L. 114–255) amended section 1886 of the Act to exclude former ''subclause II'' LTCHs from being paid under the LTCH PPS and created a new category of IPPS-excluded hospitals, which we refer to as ''extended neoplastic disease care hospitals,'' to be paid as hospitals that were formally classified as ''subclause (II)'' LTCHs (82 FR 38298).

Section 123 of the BBRA requires the PPS for LTCHs to be a ''per discharge'' system with a diagnosis-related group (DRG) based patient classification system that reflects the differences in patient resource use and costs in LTCHs.

Section 307(b)(1) of the BIPA, among other things, mandates that the Secretary shall examine, and may provide for, adjustments to payments under the LTCH PPS, including adjustments to DRG weights, area wage adjustments, geographic reclassification, outliers, updates, and a disproportionate share adjustment.

In the August 30, 2002, **Federal Register** (67 FR 55954), we issued a final rule that implemented the LTCH PPS authorized under the BBRA and BIPA. For the initial implementation of the LTCH PPS (FYs 2003 through 2007), the system used information from LTCH patient records to classify patients into distinct long-term care-diagnosis-related groups (LTCDRGs) based on clinical characteristics and expected resource needs. Beginning in FY 2008, we adopted the Medicare severity-long-term care-diagnosis related groups (MS–LTC–DRGs) as the patient classification system used under the LTCH PPS. Payments are calculated for each MS–LTC–DRG and provisions are made for appropriate payment adjustments. Payment rates under the LTCH PPS are updated annually and published in the **Federal Register**.

The LTCH PPS replaced the reasonable cost-based payment system under the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) (Pub. L. 97–248) for payments for inpatient services provided by an LTCH with a cost reporting period beginning on or after October 1, 2002. (The regulations implementing the TEFRA reasonable-cost-based payment provisions are located at 42 CFR part 413.) With the implementation of the PPS for acute care hospitals authorized by the Social Security Amendments of 1983 (Pub. L. 98–21), which added section 1886(d) to the Act, certain hospitals, including LTCHs, were excluded from the PPS for acute care hospitals and paid their reasonable costs for inpatient services subject to a per discharge limitation or target amount under the TEFRA system. For each cost reporting period, a hospital specific ceiling on payments was determined by multiplying the hospital's updated target amount by the number of total current year Medicare discharges. (Generally, in this section of the preamble of this proposed rule, when we refer to discharges, we describe Medicare discharges.) The August 30, 2002, final rule further details the payment policy under the TEFRA system (67 FR 55954).

In the August 30, 2002, final rule, we provided for a 5-year transition period from payments under the TEFRA system to payments under the LTCH PPS. During this 5-year transition period, an LTCH's total payment under the PPS was based on an increasing percentage of the Federal rate with a corresponding decrease in the percentage of the LTCH PPS payment that is based on reasonable cost concepts, unless an LTCH made a one-time election to be paid based on 100 percent of the Federal rate. Beginning with LTCHs' cost reporting periods beginning on or after October 1, 2006, total LTCH PPS payments are based on 100 percent of the Federal rate.

In addition, in the August 30, 2002, final rule, we presented an in-depth discussion of the LTCH PPS, including the patient classification system, relative weights, payment rates, additional payments, and the budget neutrality requirements mandated by section 123 of the BBRA. The same final rule that established regulations for the LTCH PPS under 42 CFR part 412, subpart O, also contained LTCH provisions related to covered inpatient services, limitation on charges to beneficiaries, medical review requirements, furnishing of inpatient hospital services directly or under arrangement, and reporting and recordkeeping requirements. We refer readers to the August 30, 2002, final rule for a comprehensive discussion of the research and data that supported the establishment of the LTCH PPS (67 FR 55954).

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623), we implemented the provisions of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67), which mandated the application of the ''site neutral'' payment rate under the LTCH PPS for discharges that do not meet the statutory criteria for exclusion beginning in FY 2016. For cost reporting periods beginning on or after October 1,

2015, discharges that do not meet certain statutory criteria for exclusion are paid based on the site neutral payment rate. Discharges that do meet the statutory criteria continue to receive payment based on the LTCH PPS standard Federal payment rate. For more information on the statutory requirements of the Pathway for SGR Reform Act of 2013, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623) and the FY 2017 IPPS/LTCH PPS final rule (81 FR 57068 through 57075).

In the FY 2018 IPPS/LTCH PPS final rule, we implemented several provisions of the 21st Century Cures Act (''the Cures Act'') (Pub. L. 114–255) that affected the LTCH PPS. (For more information on these provisions, we refer readers to (82 FR 38299).)

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41529), we made conforming changes to our regulations to implement the provisions of section 51005 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which extends the transitional blended payment rate for site neutral payment rate cases for an additional 2 years. We refer readers to section VII.C. of the preamble of the FY 2019 IPPS/LTCH PPS final rule for a discussion of our final policy. In addition, in the FY 2019 IPPS/LTCH PPS final rule, we removed the 25-percent threshold policy under 42 CFR 412.538, which was a payment adjustment that was applied to payments for Medicare patient LTCH discharges when the number of such patients originating from any single referring hospital was in excess of the applicable threshold for given cost reporting period.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42439), we further revised our regulations to implement the provisions of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) that relate to the payment adjustment for discharges from LTCHs that do not maintain the requisite discharge payment percentage and the process by which such LTCHs may have the payment adjustment discontinued.

2. Criteria for Classification as an LTCH

a. Classification as an LTCH

Under the regulations at § 412.23(e)(1), to qualify to be paid under the LTCH PPS, a hospital must have a provider agreement with Medicare. Furthermore, § 412.23(e)(2)(i), which implements section 1886(d)(1)(B)(iv) of the Act, requires that a hospital have an average Medicare inpatient length of stay of greater than 25 days to be paid under the LTCH PPS. In accordance with section 1206(a)(3) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67), as amended by section 15007 of Public Law 114–255, we amended our regulations to specify that Medicare Advantage plans' and site neutral payment rate discharges are excluded from the calculation of the average length of stay for all LTCHs, for discharges occurring in cost reporting period beginning on or after October 1, 2015.

b. Hospitals Excluded From the LTCH PPS

The following hospitals are paid under special payment provisions, as described in § 412.22(c) and, therefore, are not subject to the LTCH PPS rules:

- Veterans Administration hospitals.
- Hospitals that are reimbursed under State cost control systems approved under 42 CFR part 403.
- Hospitals that are reimbursed in accordance with demonstration projects authorized under section 402(a) of the Social Security Amendments of 1967 (Pub. L. 90–248) (42 U.S.C. 1395b–1), section 222(a) of the Social Security Amendments of 1972 (Pub. L. 92–603) (42 U.S.C. 1395b1 (note)) (Statewide-all payer systems, subject to the rate-of increase test at section 1814(b) of the Act), or section 3021 of the Patient Protection and Affordable Care Act (Pub. L. 111–148) (42 U.S.C. 1315a).
- Nonparticipating hospitals furnishing emergency services to Medicare beneficiaries.

3. Limitation on Charges to Beneficiaries

In the August 30, 2002, final rule, we presented an in-depth discussion of beneficiary liability under the LTCH PPS (67 FR 55974 through 55975). This discussion was further clarified in the RY 2005 LTCH PPS final rule (69 FR 25676). In keeping with those discussions, if the Medicare payment to the LTCH is the full LTC–DRG payment amount, consistent with other established hospital prospective payment systems, § 412.507 currently provides that an LTCH may not bill a Medicare beneficiary for more than the deductible and coinsurance amounts as specified under §§ 409.82, 409.83, and 409.87, and for items and services specified under § 489.30(a). However, under the LTCH PPS, Medicare will only pay for services furnished during the days for which the beneficiary has coverage until the short-stay outlier (SSO) threshold is exceeded. If the Medicare payment was for a SSO case (in accordance with § 412.529), and that payment was less than the full LTC–DRG payment amount because the beneficiary had insufficient coverage as a result of the remaining Medicare days, the LTCH also is currently permitted to charge the beneficiary for services delivered on those uncovered days (in accordance with § 412.507). In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49623), we amended our regulations to expressly limit the charges that may be imposed upon beneficiaries whose LTCHs' discharges are paid at the site neutral payment rate under the LTCH PPS. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 57102), we amended the regulations under § 412.507 to clarify our existing policy that blended payments made to an LTCH during its transitional period (that is, an LTCH's payment for discharges occurring in cost reporting periods beginning in FYs 2016 through 2019) are considered to be site neutral payment rate payments.

B. Medicare Severity Long-Term Care Diagnosis-Related Group (MS–LTC–DRG) Classifications and Relative Weights for FY 2026

1. Background

Section 123 of the BBRA required that the Secretary implement a PPS for LTCHs to replace the cost-based payment system under TEFRA. Section 307(b)(1) of the BIPA modified the requirements of section 123 of the BBRA by requiring that the Secretary examine the feasibility and the impact of basing payment under the LTCH PPS on the use of existing (or refined) hospital DRGs that have been modified to account for different resource use of LTCH patients.

Under both the IPPS and the LTCH PPS, the DRG-based classification system uses information on the claims for inpatient discharges to classify patients into distinct groups (for example, DRGs) based on clinical characteristics and expected resource needs. When the LTCH PPS was implemented for cost reporting periods beginning on or after October 1, 2002, we adopted the same DRG patient classification system utilized at that time under the IPPS. We referred to this patient classification system as the ''long-term care diagnosis-related groups (LTC–DRGs).'' As part of our efforts to better recognize severity of illness among patients, in the FY 2008 IPPS final rule with comment period (72 FR 47130), we adopted the MS–DRGs and the Medicare severity long-term care diagnosis-related groups (MS–LTC–DRGs) under the IPPS and the LTCH PPS, respectively, effective beginning October 1, 2007 (FY 2008). For a full description of the development, implementation, and rationale for the use of the MS–DRGs and MS–LTC–

DRGs, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47141 through 47175 and 47277 through 47299). (We note that, in that same final rule, we revised the regulations at § 412.503 to specify that for LTCH discharges occurring on or after October 1, 2007, when applying the provisions of 42 CFR part 412, subpart O, applicable to LTCHs for policy descriptions and payment calculations, all references to LTC–DRGs would be considered a reference to MS–LTC–DRGs. For the remainder of this section, we present the discussion in terms of the current MS–LTC–DRG patient classification system unless specifically referring to the previous LTC–DRG patient classification system that was in effect before October 1, 2007.)

Consistent with section 123 of the BBRA, as amended by section 307(b)(1) of the BIPA, and § 412.515 of the regulations, we use information derived from LTCH PPS patient records to classify LTCH discharges into distinct MS–LTC–DRGs based on clinical characteristics and estimated resource needs. As noted previously, we adopted the same DRG patient classification system utilized at that time under the IPPS. The MS–DRG classifications are updated annually, which has resulted in the number of MS–DRGs changing over time. For FY 2026, there would be 774 MS–DRG, and by extension, MS–LTC–DRG, groupings based on the proposed changes, as discussed in section II.E. of the preamble of this proposed rule.

Although the patient classification system used under both the LTCH PPS and the IPPS are the same, the relative weights are different. The established relative weight methodology and data used under the LTCH PPS result in relative weights under the LTCH PPS that reflect the differences in patient resource use of LTCH patients, consistent with section 123(a)(1) of the BBRA. That is, we assign an appropriate weight to the MS–LTC–DRGs to account for the differences in resource use by patients exhibiting the case complexity and multiple medical problems characteristic of LTCH patients.

2. Patient Classifications Into MS–LTC–DRGs

a. Background

The MS–DRGs (used under the IPPS) and the MS–LTC–DRGs (used under the LTCH PPS) are based on the CMS DRG structure. As noted previously in this section, we refer to the DRGs under the LTCH PPS as MS–LTC–DRGs although they are structurally identical to the MS–DRGs used under the IPPS.

The MS–DRGs are organized into 25 major diagnostic categories (MDCs), most of which are based on a particular organ system of the body; the remainder involve multiple organ systems (such as MDC 22, Burns). Within most MDCs, cases are then divided into surgical DRGs and medical DRGs. Surgical DRGs are assigned based on a surgical hierarchy that orders operating room (O.R.) procedures or groups of O.R. procedures by resource intensity. The GROUPER software program does not recognize all ICD–10–PCS procedure codes as procedures affecting DRG assignment. That is, procedures that are not surgical (for example, EKGs) or are minor surgical procedures (for example, a biopsy of skin and subcutaneous tissue (procedure code 0JBH3ZX)) do not affect the MS–LTC–DRG assignment based on their presence on the claim.

Generally, under the LTCH PPS, a Medicare payment is made at a predetermined specific rate for each discharge that varies based on the MS–LTC–DRG to which a beneficiary's discharge is assigned. Cases are classified into MS–LTC–DRGs for payment based on the following six data elements:

- Principal diagnosis.
- Additional or secondary diagnoses.
- Surgical procedures.
- Age.
- Sex.
- Discharge status of the patient.

Currently, for claims submitted using the version ASC X12 5010 standard, up to 25 diagnosis codes and 25 procedure codes are considered for an MS–DRG assignment. This includes one principal diagnosis and up to 24 secondary diagnoses for severity of illness determinations. (For additional information on the processing of up to 25 diagnosis codes and 25 procedure codes on hospital inpatient claims, we refer readers to section II.G.11.c. of the preamble of the FY 2011 IPPS/LTCH PPS final rule (75 FR 50127).)

Under the HIPAA transactions and code sets regulations at 45 CFR parts 160 and 162, covered entities (45 CFR 160.103) must comply with the adopted transaction standards and operating rules specified in subparts I through S of part 162. Among other requirements, on or after January 1, 2012, covered entities are required to use the ASC X12 Standards for Electronic Data Interchange Technical Report Type 3—Health Care Claim: Institutional (837), May 2006, ASC X12N/005010X223, and Type 1 Errata to Health Care Claim: Institutional (837) ASC X12 Standards for Electronic Data Interchange Technical Report Type 3, October 2007, ASC X12N/005010X233A1 for the health care claims or equivalent encounter information transaction (45 CFR 162.1102(c)).

HIPAA requires covered entities to use the applicable medical data code sets when conducting HIPAA transactions (45 CFR 162.1000). Currently, upon the discharge of the patient, the LTCH must assign appropriate diagnosis and procedure codes from the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, both of which were required to be implemented October 1, 2015 (45 CFR 162.1002(c)(2) and (3)). For additional information on the implementation of the ICD–10 coding system, we refer readers to section II.F.1. of the preamble of the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56790) and section II.E.1. of the preamble of this proposed rule. Additional coding instructions and examples are published in the AHA's *Coding Clinic for ICD–10–CM/PCS.*

To create the MS–DRGs (and by extension, the MS–LTC–DRGs), base DRGs were subdivided according to the presence of specific secondary diagnoses designated as complications or comorbidities (CCs) into one, two, or three levels of severity, depending on the impact of the CCs on resources used for those cases. Specifically, there are sets of MS–DRGs that are split into 2 or 3 subgroups based on the presence or absence of a CC or a major complication or comorbidity (MCC). We refer readers to section II.D. of the preamble of the FY 2008 IPPS final rule with comment period for a detailed discussion about the creation of MS–DRGs based on severity of illness levels (72 FR 47141 through 47175).

Medicare Administrative Contractors (MACs) enter the clinical and demographic information submitted by LTCHs into their claims processing systems and subject this information to a series of automated screening processes called the Medicare Code Editor (MCE). These screens are designed to identify cases that require further review before assignment into a MS–LTC–DRG can be made. During this process, certain types of cases are selected for further explanation (74 FR 43949).

After screening through the MCE, each claim is classified into the appropriate MS–LTC–DRG by the Medicare LTCH GROUPER software on the basis of diagnosis and procedure codes and other demographic

information (age, sex, and discharge status). The GROUPER software used under the LTCH PPS is the same GROUPER software program used under the IPPS. Following the MS–LTC–DRG assignment, the MAC determines the prospective payment amount by using the Medicare PRICER program, which accounts for hospital-specific adjustments. Under the LTCH PPS, we provide an opportunity for LTCHs to review the MS–LTC–DRG assignments made by the MAC and to submit additional information within a specified timeframe as provided in § 412.513(c).

The GROUPER software is used both to classify past cases to measure relative hospital resource consumption to establish the MS–LTC–DRG relative weights and to classify current cases for purposes of determining payment. The records for all Medicare hospital inpatient discharges are maintained in the MedPAR file. The data in this file are used to evaluate possible MS–DRG and MS–LTC–DRG classification changes and to recalibrate the MS–DRG and MS–LTC–DRG relative weights during our annual update under both the IPPS (§ 412.60(e)) and the LTCH PPS (§ 412.517), respectively.

b. Proposed Changes to the MS–LTC–DRGs for FY 2026

As specified by our regulations at § 412.517(a), which require that the MS–LTC–DRG classifications and relative weights be updated annually, and consistent with our historical practice of using the same patient classification system under the LTCH PPS as is used under the IPPS, in this proposed rule, we are proposing to update the MS–LTC–DRG classifications effective October 1, 2025, through September 30, 2026 (FY 2026), consistent with the proposed changes to specific MS–DRG classifications presented in section II.F. of the preamble of this proposed rule. Accordingly, the proposed MS–LTC–DRGs for FY 2026 are the same as the MS–DRGs being proposed for use under the IPPS for FY 2026. In addition, because the proposed MS–LTC–DRGs for FY 2026 are the same as the proposed MS–DRGs for FY 2026, the other proposed changes that affect MS–DRG (and by extension MS–LTC–DRG) assignments under proposed GROUPER Version 43, as discussed in section II.E. of the preamble of this proposed rule, including the proposed changes to the MCE software and the ICD–10–CM/PCS coding system, are also applicable under the LTCH PPS for FY 2026.

3. Proposed Development of the FY 2026 MS–LTC–DRG Relative Weights

a. General Overview of the MS–LTC–DRG Relative Weights

One of the primary goals for the implementation of the LTCH PPS is to pay each LTCH an appropriate amount for the efficient delivery of medical care to Medicare patients. The system must be able to account adequately for each LTCH's case-mix to ensure both fair distribution of Medicare payments and access to adequate care for those Medicare patients whose care is costlier (67 FR 55984). To accomplish these goals, we have annually adjusted the LTCH PPS standard Federal prospective payment rate by the applicable relative weight in determining payment to LTCHs for each case. Under the LTCH PPS, relative weights for each MS–LTC–DRG are a primary element used to account for the variations in cost per discharge and resource utilization among the payment groups (§ 412.515). To ensure that Medicare patients classified to each MS–LTC–DRG have access to an appropriate level of services and to encourage efficiency, we calculate a relative weight for each MS–LTC–DRG that represents the resources needed by an average inpatient LTCH case in that MS–LTC–DRG. For example, cases in an MS–LTC–DRG with a relative weight of 2 would, on average, cost twice as much to treat as cases in an MS–LTC–DRG with a relative weight of 1.

The established methodology to develop the MS–LTC–DRG relative weights is generally consistent with the methodology established when the LTCH PPS was implemented in the August 30, 2002, LTCH PPS final rule (67 FR 55989 through 55991). However, there have been some modifications of our historical procedures for assigning relative weights in cases of zero volume or nonmonotonicity or both resulting from the adoption of the MS–LTC–DRGs. We also made a modification in conjunction with the implementation of the dual rate LTCH PPS payment structure beginning in FY 2016 to use LTCH claims data from only LTCH PPS standard Federal payment rate cases (or LTCH PPS cases that would have qualified for payment under the LTCH PPS standard Federal payment rate if the dual rate LTCH PPS payment structure had been in effect at the time of the discharge). We also adopted, beginning in FY 2023, a 10-percent cap policy on the reduction in a MS–LTC–DRG's relative weight in a given year. (For details on the modifications to our historical procedures for assigning relative weights in cases of zero volume and nonmonotonicity or both, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47289 through 47295) and the FY 2009 IPPS final rule (73 FR 48542 through 48550)). For details on the change in our historical methodology to use LTCH claims data only from LTCH PPS standard Federal payment rate cases (or cases that would have qualified for such payment had the LTCH PPS dual payment rate structure been in effect at the time) to determine the MS–LTC–DRG relative weights, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49614 through 49617). For details on our adoption of the 10-percent cap policy, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 49152 through 49154).)

For purposes of determining the MS–LTC–DRG relative weights, under our historical methodology, there are three different categories of MS–LTC–DRGs based on volume of cases within specific MS–LTC–DRGs: (1) MS–LTC–DRGs with at least 25 applicable LTCH cases in the data used to calculate the relative weight, which are each assigned a unique relative weight; (2) low-volume MS–LTC–DRGs (that is, MS–LTC–DRGs that contain between 1 and 24 applicable LTCH cases that are grouped into quintiles (as described later in this section in Step 3 of our proposed methodology) and assigned the relative weight of the quintile); and (3) no-volume MS–LTC–DRGs that are cross-walked to other MS–LTC–DRGs based on the clinical similarities and assigned the relative weight of the cross-walked MS–LTC–DRG (as described later in this section in Step 8 of our proposed methodology). For FY 2026, we are proposing to continue to use applicable LTCH cases to establish the same volume-based categories to calculate the FY 2026 MS–LTC–DRG relative weights.

b. Development of the MS–LTC–DRG Relative Weights for FY 2026

In this section, we present our proposed methodology for determining the MS–LTC–DRG relative weights for FY 2026. We first list and provide a brief description of our proposed steps for determining the FY 2026 MS–LTC–DRG relative weights. Later in this section, we discuss in greater detail each step. We note that, as we did in FY 2025, we are proposing to use our historical relative weight methodology as described in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58898 through 58907), subject to a ten percent cap as described in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49162).

- *Step 1—Prepare data for MS–LTC–DRG relative weight calculation.* In this

step, we select and group the applicable claims data used in the development of the proposed MS–LTC–DRG relative weights.

• *Step 2—Remove cases with a length of stay of 7 days or less.* In this step, we trim the applicable claims data to remove cases with a length of stay of 7 days or less.

• *Step 3—Establish low-volume MS–LTC–DRG quintiles.* In this step, we employ our established quintile methodology for low-volume MS–LTC–DRGs (that is, MS–LTC–DRGs with fewer than 25 cases).

• *Step 4—Remove statistical outliers.* In this step, we trim the applicable claims data to remove statistical outlier cases.

• *Step 5—Adjust charges for the effects of Short Stay Outliers (SSOs).* In this step, we adjust the number of applicable cases in each MS–LTC–DRG (or low-volume quintile) for the effect of SSO cases.

• *Step 6—Calculate the relative weights on an iterative basis using the hospital-specific relative weights methodology.* In this step, we use our established hospital-specific relative value (HSRV) methodology, which is an iterative process, to calculate the relative weights.

• *Step 7—Adjust the relative weights to account for nonmonotonically increasing relative weights.* In this step, we make adjustments that ensure that within each base MS–LTC–DRG, the relative weights increase by MS–LTC–DRG severity.

• *Step 8—Determine a relative weight for MS–LTC–DRGs with no applicable LTCH cases.* In this step, we cross-walk each no-volume MS–LTC–DRG to another MS–LTC–DRG for which we calculated a relative weight.

• *Step 9—Budget neutralize the uncapped relative weights.* In this step, to ensure budget neutrality in the annual update to the MS–LTC–DRG classifications and relative weights, we adjust the relative weights by a normalization factor and a budget neutrality factor that ensures estimated aggregate LTCH PPS payments will be unaffected by the updates to the MS–LTC–DRG classifications and relative weights.

• *Step 10—Apply the 10-percent cap to decreases in MS–LTC–DRG relative weights.* In this step we limit the reduction of the relative weight for a MS–LTC–DRG to 10 percent of its prior year value. This 10-percent cap does not apply to zero-volume MS–LTC–DRGs or low-volume MS–LTC–DRGs.

• *Step 11—Budget neutralize the application of the 10-percent cap policy.* In this step, to ensure budget neutrality in the application of the MS–LTC–DRG cap policy, we adjust the relative weights by a budget neutrality factor that ensures estimated aggregate LTCH PPS payments will be unaffected by our application of the cap to the MS–LTC–DRG relative weights.

We next describe each of the 11 proposed steps for calculating the proposed FY 2026 MS–LTC–DRG relative weights in greater detail.

Step 1—Prepare data for MS–LTC–DRG relative weight calculation.

For this FY 2026 IPPS/LTCH PPS proposed rule, we obtained total charges from FY 2024 Medicare LTCH claims data from the December 2024 update of the FY 2024 MedPAR file and used proposed Version 43 of the GROUPER to classify LTCH cases. Consistent with our historical practice, we are proposing that if better data become available, we would use those data and the finalized Version 43 of the GROUPER in establishing the FY 2026 MS–LTC–DRG relative weights in the final rule.

To calculate the FY 2026 MS–LTC–DRG relative weights under the dual rate LTCH PPS payment structure, we are proposing to continue to use applicable LTCH data, which includes our policy of only using cases that meet the criteria for exclusion from the site neutral payment rate (or would have met the criteria had they been in effect at the time of the discharge) (80 FR 49624). Section 3711(b)(2) of the CARES Act provided a waiver of the application of the site neutral payment rate for LTCH cases admitted during the COVID–19 PHE period. The COVID–19 PHE expired on May 11, 2023. Therefore, nearly all LTCH PPS cases in FY 2024 were subject to the dual rate LTCH PPS payment structure. However, a small number of FY 2024 LTCH PPS cases (those with admission dates on or before May 11, 2023) were subject to the CARES Act waiver and were paid the LTCH PPS standard Federal rate regardless of whether the discharge met the statutory patient criteria. Therefore, for purposes of setting rates for LTCH PPS standard Federal rate cases for FY 2026 (including MS–LTC–DRG relative weights), we are proposing to identify FY 2024 cases that meet the statutory patient criteria depending on date of admission as follows. First, we propose to use LTCH PPS cases in the FY 2024 MedPAR file with an admission date after May 11, 2023, that met the criteria for exclusion from the site neutral payment rate under § 412.522(b) and were paid the LTCH PPS standard Federal rate in FY 2024 (based on the claim payment amount). Second, we propose to also use LTCH PPS cases in the FY 2024 MedPAR file with an admission date on or before May 11, 2023, that would have met the criteria for exclusion from the site neutral payment rate if the CARES Act waiver had not been in effect. For these cases we relied on our historical process for identifying cases that would have met the criteria for exclusion from the site neutral payment rate rather than how those cases were paid in FY 2024. This process is explained in full detail in the FY 2024 IPPS/LTCH PPS final rule (89 FR 69425).

Furthermore, consistent with our historical methodology, we excluded any claims in the resulting data set that were submitted by LTCHs that were all-inclusive rate providers and LTCHs that are paid in accordance with demonstration projects authorized under section 402(a) of Public Law 90–248 or section 222(a) of Public Law 92–603. In addition, consistent with our historical practice and our policies, we excluded any Medicare Advantage (Part C) claims in the resulting data. Such claims were identified based on the presence of a GHO Paid indicator value of ''1'' in the MedPAR files.

In summary, in general, we identified the claims data used in the development of the FY 2026 MS–LTC–DRG relative weights in this proposed rule by trimming claims data that were paid the site neutral payment rate or would have been paid the site neutral payment rate had the provisions of the CARES Act not been in effect. We trimmed the claims data of all-inclusive rate providers reported in the December 2024 update of the FY 2024 MedPAR file and any Medicare Advantage claims data. There were no data from any LTCHs that are paid in accordance with a demonstration project reported in the December 2024 update of the FY 2024 MedPAR file, but had there been any, we would have trimmed the claims data from those LTCHs as well, in accordance with our established policy.

We used the remaining data (that is, the applicable LTCH data) in the subsequent proposed steps to calculate the proposed MS–LTC–DRG relative weights for FY 2026.

Step 2—Remove cases with a length of stay of 7 days or less.

The next step in our proposed calculation of the proposed FY 2026 MS–LTC–DRG relative weights is to remove cases with a length of stay of 7 days or less. The MS–LTC–DRG relative weights reflect the average of resources used on representative cases of a specific type. Generally, cases with a length of stay of 7 days or less do not belong in an LTCH because these stays do not fully receive or benefit from treatment that is typical in an LTCH

stay, and full resources are often not used in the earlier stages of admission to an LTCH. If we were to include stays of 7 days or less in the computation of the proposed FY 2026 MS–LTC–DRG relative weights, the value of many relative weights would decrease and, therefore, payments would decrease to a level that may no longer be appropriate. We do not believe that it would be appropriate to compromise the integrity of the payment determination for those LTCH cases that actually benefit from and receive a full course of treatment at an LTCH by including data from these very short stays. Therefore, consistent with our existing relative weight methodology, in determining the proposed FY 2026 MS–LTC–DRG relative weights, we are proposing to remove LTCH cases with a length of stay of 7 days or less from applicable LTCH cases. (For additional information on what is removed in this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.)

Step 3—Establish low-volume MS–LTC–DRG quintiles.

To account for MS–LTC–DRGs with low-volume (that is, with fewer than 25 applicable LTCH cases), consistent with our existing methodology, we are proposing to continue to employ the quintile methodology for low-volume MS–LTC–DRGs, such that we grouped the ''low-volume MS–LTC–DRGs'' (that is, MS–LTC–DRGs that contain between 1 and 24 applicable LTCH cases into one of five categories (quintiles) based on average charges (67 FR 55984 through 55995; 72 FR 47283 through 47288; and 81 FR 25148)).

In this proposed rule, based on the best available data (that is, the December 2024 update of the FY 2024 MedPAR file), we identified 239 MS–LTC–DRGs that contained between 1 and 24 applicable LTCH cases. This list of MS–LTC–DRGs was then divided into 1 of the 5 low-volume quintiles. We assigned the low-volume MS–LTC–DRGs to specific low-volume quintiles by sorting the low-volume MS–LTC–DRGs in ascending order by average charge in accordance with our established methodology. Based on the data available for this proposed rule, the number of MS–LTC–DRGs with less than 25 applicable LTCH cases was not evenly divisible by 5. The quintiles each contained at least 47 MS–LTC–DRGs (239/5 = 47 with a remainder of 4). We are proposing to employ our historical methodology of assigning each remainder low-volume MS–LTC–DRG to the low-volume quintile that contains an MS–LTC–DRG with an average charge closest to that of the remainder low-volume MS–LTC–DRG. In cases where these initial assignments of low-volume MS–LTC–DRGs to quintiles results in nonmonotonicity within a base-DRG, we are proposing to make adjustments to the resulting low-volume MS–LTC–DRGs to preserve monotonicity, as discussed in Step 7 of our proposed methodology.

To determine the FY 2026 relative weights for the low-volume MS–LTC–DRGs, consistent with our historical practice, we are proposing to use the five low-volume quintiles described previously. We determined a relative weight and (geometric) average length of stay for each of the five low-volume quintiles using the methodology described in Step 6 of our proposed methodology. We assigned the same relative weight and average length of stay to each of the low-volume MS–LTC–DRGs that make up an individual low-volume quintile. We note that, as this system is dynamic, it is possible that the number and specific type of MS–LTC–DRGs with a low volume of applicable LTCH cases would vary in the future. Furthermore, we note that we continue to monitor the volume (that is, the number of applicable LTCH cases) in the low-volume quintiles to ensure that our quintile assignments used in determining the MS–LTC–DRG relative weights result in appropriate payment for LTCH cases grouped to low-volume MS–LTC–DRGs and do not result in an unintended financial incentive for LTCHs to inappropriately admit these types of cases.

For this proposed rule, we are providing the list of the composition of the proposed low-volume quintiles for low-volume MS–LTC–DRGs in a supplemental data file for public use posted via the internet on the CMS website for this proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* to streamline the information made available to the public that is used in the annual development of Table 11.

Step 4—Remove statistical outliers.

The next step in our proposed calculation of the proposed FY 2026 MS–LTC–DRG relative weights is to remove statistical outlier cases from the LTCH cases with a length of stay of at least 8 days. Consistent with our existing relative weight methodology, we are proposing to continue to define statistical outliers as cases that are outside of 3.0 standard deviations from the mean of the log distribution of both charges per case and the charges per day for each MS–LTC–DRG. These statistical outliers are removed prior to calculating the relative weights because we believe that they may represent aberrations in the data that distort the measure of average resource use. Including those LTCH cases in the calculation of the relative weights could result in an inaccurate relative weight that does not truly reflect relative resource use among those MS–LTC–DRGs. (For additional information on what is removed in this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.) After removing cases with a length of stay of 7 days or less and statistical outliers, in each set of claims, we were left with applicable LTCH cases that have a length of stay greater than or equal to 8 days. In this proposed rule, we refer to these cases as ''trimmed applicable LTCH cases.''

Step 5—Adjust charges for the effects of Short Stay Outliers (SSOs).

As the next step in the proposed calculation of the proposed FY 2026 MS–LTC–DRG relative weights, consistent with our historical approach, we are proposing to adjust each LTCH's charges per discharge for those remaining cases (that is, trimmed applicable LTCH cases) for the effects of SSOs (as defined in § 412.529(a) in conjunction with § 412.503). Specifically, we are proposing to make this adjustment by counting an SSO case as a fraction of a discharge based on the ratio of the length of stay of the case to the average length of stay of all cases grouped to the MS–LTC–DRG. This has the effect of proportionately reducing the impact of the lower charges for the SSO cases in calculating the average charge for the MS–LTC–DRG. This process produces the same result as if the actual charges per discharge of an SSO case were adjusted to what they would have been had the patient's length of stay been equal to the average length of stay of the MS–LTC–DRG.

Counting SSO cases as full LTCH cases with no adjustment in determining the proposed FY 2026 MS–LTC–DRG relative weights would lower the relative weight for affected MS–LTC–DRGs because the relatively lower charges of the SSO cases would bring down the average charge for all cases within a MS–LTC–DRG. This would result in an ''underpayment'' for non-SSO cases and an ''overpayment'' for SSO cases. Therefore, we propose to continue to adjust for SSO cases under § 412.529 in this manner because it would result in more appropriate payments for all LTCH PPS standard Federal payment rate cases. (For additional information on this step of the relative weight methodology, we refer readers to 67 FR 55989 and 74 FR 43959.)

Step 6—Calculate the relative weights on an iterative basis using the hospital-specific relative value methodology.

By nature, LTCHs often specialize in certain areas, such as ventilator-dependent patients. Some case types (MS–LTC–DRGs) may be treated, to a large extent, in hospitals that have, from a perspective of charges, relatively high (or low) charges. This nonrandom distribution of cases with relatively high (or low) charges in specific MS–LTC–DRGs has the potential to inappropriately distort the measure of average charges. To account for the fact that cases may not be randomly distributed across LTCHs, consistent with the methodology we have used since the implementation of the LTCH PPS, in this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing to continue to use a hospital-specific relative value (HSRV) methodology to calculate the MS–LTC–DRG relative weights for FY 2026. We believe that this method removes this hospital-specific source of bias in measuring LTCH average charges (67 FR 55985). Specifically, under this methodology, we reduced the impact of the variation in charges across providers on any particular MS–LTC–DRG relative weight by converting each LTCH's charge for an applicable LTCH case to a relative value based on that LTCH's average charge for such cases.

Under the HSRV methodology, we standardize charges for each LTCH by converting its charges for each applicable LTCH case to hospital-specific relative charge values and then adjusting those values for the LTCH's case-mix. The adjustment for case-mix is needed to rescale the hospital-specific relative charge values (which, by definition, average 1.0 for each LTCH). The average relative weight for an LTCH is its case-mix; therefore, it is reasonable to scale each LTCH's average relative charge value by its case-mix. In this way, each LTCH's relative charge value is adjusted by its case-mix to an average that reflects the complexity of the applicable LTCH cases it treats relative to the complexity of the applicable LTCH cases treated by all other LTCHs (the average LTCH PPS case-mix of all applicable LTCH cases across all LTCHs). In other words, by multiplying an LTCH's relative charge values by the LTCH's case-mix index, we account for the fact that the same relative charges are given greater weight at an LTCH with higher average costs than they would at an LTCH with low average costs, which is needed to adjust each LTCH's relative charge value to reflect its case-mix relative to the average case-mix for all LTCHs. By standardizing charges in this manner, we count charges for a Medicare patient at an LTCH with high average charges as less resource-intensive than they would be at an LTCH with low average charges. For example, a $10,000 charge for a case at an LTCH with an average adjusted charge of $17,500 reflects a higher level of relative resource use than a $10,000 charge for a case at an LTCH with the same case-mix, but an average adjusted charge of $35,000. We believe that the adjusted charge of an individual case more accurately reflects actual resource use for an individual LTCH because the variation in charges due to systematic differences in the markup of charges among LTCHs is taken into account.

Consistent with our historical relative weight methodology, we propose to calculate the proposed FY 2026 MS–LTC–DRG relative weights using the HSRV methodology, which is an iterative process. Therefore, in accordance with our established methodology, for FY 2026, we are proposing to continue to standardize charges for each applicable LTCH case by first dividing the adjusted charge for the case (adjusted for SSOs under § 412.529 as described in Step 5 of our proposed methodology) by the average adjusted charge for all applicable LTCH cases at the LTCH in which the case was treated. The average adjusted charge reflects the average intensity of the health care services delivered by a particular LTCH and the average cost level of that LTCH. The average adjusted charge is then multiplied by the LTCH's case-mix index to produce an adjusted hospital-specific relative charge value for the case. We used an initial case-mix index value of 1.0 for each LTCH.

For each proposed MS–LTC–DRG, we calculated the FY 2026 relative weight by dividing the SSO-adjusted average of the hospital-specific relative charge values for applicable LTCH cases for the MS–LTC–DRG (that is, the sum of the hospital-specific relative charge value, as previously stated, divided by the sum of equivalent cases from Step 5 for each MS–LTC–DRG) by the overall SSO-adjusted average hospital-specific relative charge value across all applicable LTCH cases for all LTCHs (that is, the sum of the hospital-specific relative charge value, as previously stated, divided by the sum of equivalent applicable LTCH cases from Step 5 for each MS–LTC–DRG). Using these recalculated MS–LTC–DRG relative weights, each LTCH's average relative weight for all of its SSO-adjusted trimmed applicable LTCH cases (that is, it's case-mix) was calculated by dividing the sum of all the LTCH's MS–LTC–DRG relative weights by its total number of SSO-adjusted trimmed applicable LTCH cases. The LTCHs' hospital-specific relative charge values (from previous) are then multiplied by the hospital-specific case-mix indexes. The hospital-specific case-mix adjusted relative charge values are then used to calculate a new set of MS–LTC–DRG relative weights across all LTCHs. This iterative process continued until there was convergence between the relative weights produced at adjacent steps, for example, when the maximum difference was less than 0.0001.

Step 7—Adjust the relative weights to account for nonmonotonically increasing relative weights.

The MS–DRGs contain base DRGs that have been subdivided into one, two, or three severity of illness levels. Where there are three severity levels, the most severe level has at least one secondary diagnosis code that is referred to as an MCC (that is, major complication or comorbidity). The next lower severity level contains cases with at least one secondary diagnosis code that is a CC (that is, complication or comorbidity). Those cases without an MCC or a CC are referred to as ''without CC/MCC.'' When data do not support the creation of three severity levels, the base MS–DRG is subdivided into either two levels or the base MS–DRG is not subdivided. The two-level subdivisions may consist of the MS–DRG with CC/MCC and the MS–DRG without CC/MCC. Alternatively, the other type of two-level subdivision may consist of the MS–DRG with MCC and the MS–DRG without MCC.

In those base MS–LTC–DRGs that are split into either two or three severity levels, cases classified into the ''without CC/MCC'' MS–LTC–DRG are expected to have a lower resource use (and lower costs) than the ''with CC/MCC'' MS–LTC–DRG (in the case of a two-level split) or both the ''with CC'' and the ''with MCC'' MS–LTC–DRGs (in the case of a three-level split). That is, theoretically, cases that are more severe typically require greater expenditure of medical care resources and would result in higher average charges. Therefore, in the three severity levels, relative weights should increase by severity, from lowest to highest. If the relative weights decrease as severity increases (that is, if within a base MS–LTC–DRG, an MS–LTC–DRG with CC has a higher relative weight than one with MCC, or the MS–LTC–DRG ''without CC/MCC'' has a higher relative weight than either of the others), they are nonmonotonic. We continue to believe that utilizing nonmonotonic relative weights to adjust Medicare payments would result in inappropriate payments because the

payment for the cases in the higher severity level in a base MS–LTC–DRG (which are generally expected to have higher resource use and costs) would be lower than the payment for cases in a lower severity level within the same base MS–LTC–DRG (which are generally expected to have lower resource use and costs). Therefore, in determining the proposed FY 2026 MS–LTC–DRG relative weights, consistent with our historical methodology, we are proposing to continue to combine MS–LTC–DRG severity levels within a base MS–LTC–DRG for the purpose of computing a relative weight when necessary to ensure that monotonicity is maintained. For a comprehensive description of our existing methodology to adjust for nonmonotonicity, we refer readers to the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43964 through 43966). Any adjustments for nonmonotonicity that were made in determining the proposed FY 2026 MS–LTC–DRG relative weights by applying this methodology are denoted in Table 11, which is listed in section VI. of the Addendum to this proposed rule and is available via the internet on the CMS website.

Step 8—Determine a relative weight for MS–LTC–DRGs with no applicable LTCH cases.

Using the trimmed applicable LTCH cases, consistent with our historical methodology, we identified the MS–LTC–DRGs for which there were no claims in the December 2024 update of the FY 2024 MedPAR file and, therefore, for which no charge data was available for these MS–LTC–DRGs. Because patients with a number of the diagnoses under these MS–LTC–DRGs may be treated at LTCHs, consistent with our historical methodology, we generally assign a relative weight to each of the no-volume MS–LTC–DRGs based on clinical similarity and relative costliness (with the exception of ''transplant'' MS–LTC–DRGs, ''error'' MS–LTC–DRGs, and MS–LTC–DRGs that indicate a principal diagnosis related to a psychiatric diagnosis or rehabilitation (referred to as the ''psychiatric or rehabilitation'' MS–LTC–DRGs), as discussed later in this section of the preamble of this proposed rule). (For additional information on this step of the relative weight methodology, we refer readers to 67 FR 55991 and 74 FR 43959 through 43960.)

Consistent with our existing methodology, we are proposing to crosswalk each no-volume proposed MS–LTC–DRG to another proposed MS–LTC–DRG for which we calculated a relative weight (determined in accordance with the methodology as previously described). Then, the ''no-volume'' proposed MS–LTC–DRG is assigned the same relative weight (and average length of stay) of the proposed MS–LTC–DRG to which it was cross-walked (as described in greater detail in this section of the preamble of this proposed rule).

Of the 774 proposed MS–LTC–DRGs for FY 2026, we identified 419 MS–LTC–DRGs for which there were no trimmed applicable LTCH cases. The 419 MS–LTC–DRGs for which there were no trimmed applicable LTCH cases includes the 11 ''transplant'' MS–LTC–DRGs, the 2 ''error'' MS–LTC–DRGs, and the 15 ''psychiatric or rehabilitation'' MS–LTC–DRGs, which are discussed in this section of this proposed rule, such that we identified 391 MS–LTC–DRGs that for which, we are proposing to assign a relative weight using our existing ''no-volume'' MS–LTC–DRG methodology (that is, $419 - 11 - 2 - 15 = 391$). We are proposing to assign relative weights to each of the 391 no-volume MS–LTC–DRGs based on clinical similarity and relative costliness to 1 of the remaining 355 ($774 - 419 = 355$) MS–LTC–DRGs for which we calculated relative weights based on the trimmed applicable LTCH cases in the FY 2024 MedPAR file data using the steps described previously. (For the remainder of this discussion, we refer to the ''cross-walked'' MS–LTC–DRGs as one of the 355 MS–LTC–DRGs to which we cross-walked each of the 391 ''no-volume'' MS–LTC–DRGs.) Then, in general, we are proposing to assign the 391 no-volume MS–LTC–DRGs the relative weight of the cross-walked MS–LTC–DRG (when necessary, we made adjustments to account for nonmonotonicity).

We cross-walked the no-volume MS–LTC–DRG to a MS–LTC–DRG for which we calculated relative weights based on the December 2024 update of the FY 2024 MedPAR file, and to which it is similar clinically in intensity of use of resources and relative costliness as determined by criteria such as care provided during the period of time surrounding surgery, surgical approach (if applicable), length of time of surgical procedure, postoperative care, and length of stay. (For more details on our process for evaluating relative costliness, we refer readers to the FY 2010 IPPS/RY 2010 LTCH PPS final rule (73 FR 48543).) We believe in the rare event that there would be a few LTCH cases grouped to one of the no-volume MS–LTC–DRGs in FY 2026, the relative weights assigned based on the cross-walked MS–LTC–DRGs would result in an appropriate LTCH PPS payment because the crosswalks, which are based on clinical similarity and relative costliness, would be expected to generally require equivalent relative resource use.

Then we assigned the proposed relative weight of the cross-walked MS–LTC–DRG as the relative weight for the no-volume MS–LTC–DRG such that both of these MS–LTC–DRGs (that is, the no-volume MS–LTC–DRG and the cross-walked MS–LTC–DRG) have the same relative weight (and average length of stay) for FY 2026. We note that, if the cross-walked MS–LTC–DRG had 25 applicable LTCH cases or more, its relative weight (calculated using the methodology as previously described in Steps 1 through 4) is assigned to the no-volume MS–LTC–DRG as well. Similarly, if the MS–LTC–DRG to which the no-volume MS–LTC–DRG was cross-walked had 24 or less cases and, therefore, was designated to 1 of the low-volume quintiles for purposes of determining the relative weights, we assigned the relative weight of the applicable low-volume quintile to the no-volume MS–LTC–DRG such that both of these MS–LTC–DRGs (that is, the no-volume MS–LTC–DRG and the cross-walked MS–LTC–DRG) have the same relative weight for FY 2026. (As we noted previously, in the infrequent case where nonmonotonicity involving a no-volume MS–LTC–DRG resulted, additional adjustments are required to maintain monotonically increasing relative weights.)

For this proposed rule, we are providing the list of the no-volume MS–LTC–DRGs and the MS–LTC–DRGs to which each was cross-walked (that is, the cross-walked MS–LTC–DRGs) for FY 2026 in a supplemental data file for public use posted via the internet on the CMS website for this proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* to streamline the information made available to the public that is used in the annual development of Table 11.

To illustrate this methodology for determining the proposed relative weights for the FY 2026 MS–LTC–DRGs with no applicable LTCH cases, we are providing the following example.

Example: There were no trimmed applicable LTCH cases in the FY 2024 MedPAR file that we are using for this proposed rule for proposed MS–LTC–DRG 061 (Ischemic stroke, precerebral occlusion or transient ischemia with thrombolytic agent with MCC). We determined that proposed MS–LTC–DRG 064 (Intracranial hemorrhage or cerebral infarction with MCC) is similar clinically and based on resource use to proposed MS–LTC–DRG 061. Therefore, we are proposing to assign the same

relative weight (and average length of stay) of proposed MS–LTC–DRG 064 of 1.1689 for FY 2026 to proposed MS–LTC–DRG 061 (we refer readers to Table 11, which is listed in section VI. of the Addendum to this proposed rule and is available via the internet on the CMS website).

Again, we note that, as this system is dynamic, it is entirely possible that the number of MS–LTC–DRGs with no volume would vary in the future. Consistent with our historical practice, we are proposing to use the best available claims data to identify the trimmed applicable LTCH cases from which we determined the relative weights in the final rule.

For FY 2026, consistent with our historical relative weight methodology, we are proposing to establish a relative weight of 0.0000 for the following transplant MS–LTC–DRGs: Heart Transplant or Implant of Heart Assist System with MCC (MS–LTC–DRG 001); Heart Transplant or Implant of Heart Assist System without MCC (MS–LTC–DRG 002); Liver Transplant with MCC or Intestinal Transplant (MS–LTC–DRG 005); Liver Transplant without MCC (MS–LTC–DRG 006); Lung Transplant (MS–LTC–DRG 007); Simultaneous Pancreas and Kidney Transplant (MS–LTC–DRG 008); Simultaneous Pancreas and Kidney Transplant with Hemodialysis (MS–LTC–DRG 019); Pancreas Transplant (MS–LTC–DRG 010); Kidney Transplant (MS–LTC–DRG 652); Kidney Transplant with Hemodialysis with MCC (MS–LTC–DRG 650), and Kidney Transplant with Hemodialysis without MCC (MS LTC DRG 651). This is because Medicare only covers these procedures if they are performed at a hospital that has been certified for the specific procedures by Medicare and presently no LTCH has been so certified. At the present time, we include these 11 transplant MS–LTC–DRGs in the GROUPER program for administrative purposes only. Because we use the same GROUPER program for LTCHs as is used under the IPPS, removing these MS–LTC–DRGs would be administratively burdensome. (For additional information regarding our treatment of transplant MS–LTC–DRGs, we refer readers to the RY 2010 LTCH PPS final rule (74 FR 43964).) In addition, consistent with our historical policy, we are proposing to establish a relative weight of 0.0000 for the 2 ''error'' MS–LTC–DRGs (that is, MS–LTC–DRG 998 (Principal Diagnosis Invalid as Discharge Diagnosis) and MS–LTC–DRG 999 (Ungroupable)) because applicable LTCH cases grouped to these MS–LTC–DRGs cannot be properly assigned to an MS–LTC–DRG according to the grouping logic.

Additionally, we are proposing to establish a relative weight of 0.0000 for the following ''psychiatric or rehabilitation'' MS–LTC–DRGs: MS–LTC–DRG 876 (O.R. Procedures with Principal Diagnosis of Mental Illness); MS–LTC–DRG 880 (Acute Adjustment Reaction & Psychosocial Dysfunction); MS–LTC–DRG 881 (Depressive Neuroses); MS–LTC–DRG 882 (Neuroses Except Depressive); MS–LTC–DRG 883 (Disorders of Personality & Impulse Control); MS–LTC–DRG 884 (Organic Disturbances & Intellectual Disability); MS–LTC–DRG 885 (Psychoses); MS–LTC–DRG 886 (Behavioral & Developmental Disorders); MS–LTC–DRG 887 (Other Mental Disorder Diagnoses); MS–LTC–DRG 894 (Alcohol, Drug Abuse or Dependence, Left AMA); MS–LTC–DRG 895 (Alcohol, Drug Abuse or Dependence with Rehabilitation Therapy); MS–LTC–DRG 896 (Alcohol, Drug Abuse or Dependence without Rehabilitation Therapy with MCC); MS–LTC–DRG 897 (Alcohol, Drug Abuse or Dependence without Rehabilitation Therapy without MCC); MS–LTC–DRG 945 (Rehabilitation with CC/MCC); and MS–LTC–DRG 946 (Rehabilitation without CC/MCC). We are proposing to establish a relative weight of 0.0000 for these 15 ''psychiatric or rehabilitation'' MS–LTC–DRGs because the blended payment rate and temporary exceptions to the site neutral payment rate would not be applicable for any LTCH discharges occurring in FY 2026, and as such payment under the LTCH PPS would be no longer be made in part based on the LTCH PPS standard Federal payment rate for any discharges assigned to those MS–LTC–DRGs.

Step 9—Budget neutralize the uncapped relative weights.

In accordance with the regulations at § 412.517(b) (in conjunction with § 412.503), the annual update to the MS–LTC–DRG classifications and relative weights is done in a budget neutral manner such that estimated aggregate LTCH PPS payments would be unaffected, that is, would be neither greater than nor less than the estimated aggregate LTCH PPS payments that would have been made without the MS–LTC–DRG classification and relative weight changes. (For a detailed discussion on the establishment of the budget neutrality requirement for the annual update of the MS–LTC–DRG classifications and relative weights, we refer readers to the RY 2008 LTCH PPS final rule (72 FR 26881 and 26882)).

To achieve budget neutrality under the requirement at § 412.517(b), under our established methodology, for each annual update the MS–LTC–DRG relative weights are uniformly adjusted to ensure that estimated aggregate payments under the LTCH PPS would not be affected (that is, decreased or increased). Consistent with that provision, we are proposing to continue to apply budget neutrality adjustments in determining the proposed FY 2026 MS–LTC–DRG relative weights so that our proposed update of the MS–LTC–DRG classifications and relative weights for FY 2026 are made in a budget neutral manner. For FY 2026, we are proposing to apply two budget neutrality factors to determine the MS–LTC–DRG relative weights. In this step, we describe the determination of the budget neutrality adjustment that accounts for the proposed update of the MS–LTC–DRG classifications and relative weights prior to the application of the ten-percent cap. In steps 10 and 11, we describe the application of the 10-percent cap policy (step 10) and the determination of the proposed budget neutrality factor that accounts for the application of the 10-percent cap policy (step 11).

In this proposed rule, to ensure budget neutrality for the proposed update to the MS–LTC–DRG classifications and relative weights prior to the application of the 10-percent cap (that is, uncapped relative weights), under § 412.517(b), we are proposing to continue to use our established two-step budget neutrality methodology. Therefore, in the first step of our MS–LTC–DRG update budget neutrality methodology, for FY 2026, we calculated and applied a proposed normalization factor to the recalibrated relative weights (the result of Steps 1 through 8 discussed previously) to ensure that estimated payments are not affected by changes in the composition of case types or the changes to the classification system. That is, the normalization adjustment is intended to ensure that the recalibration of the MS–LTC–DRG relative weights (that is, the process itself) neither increases nor decreases the average case-mix index.

To calculate the proposed normalization factor for FY 2026, we propose to use the following three steps: (1.a.) use the applicable LTCH cases from the best available data (that is, LTCH discharges from the FY 2024 MedPAR file) and group them using the proposed FY 2026 GROUPER (that is, Version 43 for FY 2026) and the proposed recalibrated FY 2026 MS–LTC–DRG uncapped relative weights (determined in Steps 1 through 8 discussed previously) to calculate the average case-mix index; (1.b.) group the

same applicable LTCH cases (as are used in Step 1.a.) using the FY 2025 GROUPER (Version 42) and FY 2025 MS–LTC–DRG relative weights in Table 11 of the FY 2025 IPPS/LTCH PPS final rule and calculate the average case-mix index; and (1.c.) compute the ratio of these average case-mix indexes by dividing the average case-mix index for FY 2025 (determined in Step 1.b.) by the average case-mix index for FY 2026 (determined in Step 1.a.). As a result, in determining the proposed MS–LTC–DRG relative weights for FY 2026, each recalibrated MS–LTC–DRG uncapped relative weight is multiplied by the proposed normalization factor of 1.24603 (determined in Step 1.c.) in the first step of the budget neutrality methodology, which produces ''normalized relative weights.''

In the second step of our MS–LTC–DRG update budget neutrality methodology, we calculated a proposed budget neutrality adjustment factor consisting of the ratio of estimated aggregate FY 2026 LTCH PPS standard Federal payment rate payments for applicable LTCH cases before reclassification and recalibration to estimated aggregate payments for FY 2026 LTCH PPS standard Federal payment rate payments for applicable LTCH cases after reclassification and recalibration. That is, for this proposed rule, for FY 2026, we propose to determine the budget neutrality adjustment factor using the following three steps: (2.a.) simulate estimated total FY 2026 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the uncapped normalized relative weights for FY 2026 and proposed GROUPER Version 43; (2.b.) simulate estimated total FY 2026 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the FY 2025 GROUPER (Version 42) and the FY 2025 MS–LTC–DRG relative weights in Table 11 of the FY 2025 IPPS/LTCH PPS final rule; and (2.c.) calculate the ratio of these estimated total payments by dividing the value determined in Step 2.b. by the value determined in Step 2.a. In determining the proposed FY 2026 MS–LTC–DRG relative weights, each uncapped normalized relative weight is then multiplied by a proposed budget neutrality factor of 1.0112216 (the value determined in Step 2.c.) in the second step of the budget neutrality methodology.

Step 10—Apply the 10-percent cap to decreases in MS–LTC–DRG relative weights.

To mitigate the financial impacts of significant year-to-year reductions in MS–LTC–DRGs relative weights, beginning in FY 2023, we adopted a policy that applies a budget neutral 10-percent cap on annual relative weight decreases for MS–LTC–DRGs with at least 25 applicable LTCH cases (§ 412.515(b)). Under this policy, in cases where CMS creates new MS–LTC–DRGs or modifies the MS–LTC–DRGs as part of its annual reclassifications resulting in renumbering of one or more MS–LTC–DRGs, the 10-percent cap does not apply to the relative weight for any new or renumbered MS–LTC–DRGs for the fiscal year. We refer readers to section VIII.B.3.b. of the preamble of the FY 2023 IPPS/LTCH PPS final rule with comment period for a detailed discussion on the adoption of the 10-percent cap policy (87 FR 49152 through 49154).

Applying the 10-percent cap to MS–LTC–DRGs with 25 or more cases results in more predictable and stable MS–LTC–DRG relative weights from year to year, especially for high-volume MS–LTC–DRGs that generally have the largest financial impact on an LTCH's operations. For this proposed rule, in cases where the relative weight for a MS–LTC–DRG with 25 or more applicable LTCH cases would decrease by more than 10-percent in FY 2026 relative to FY 2025, we are proposing to limit the reduction to 10-percent. Under this policy, we do not apply the 10 percent cap to the proposed low-volume MS–LTC–DRGs identified in Step 3 or the proposed no-volume MS–LTC–DRGs identified in Step 8.

Therefore, in this step, for each proposed FY 2026 MS–LTC–DRG with 25 or more applicable LTCH cases (excludes low-volume and zero-volume MS–LTC–DRGs) we compared its FY 2026 relative weight (after application of the proposed normalization and proposed budget neutrality factors determined in Step 9), to its FY 2025 MS–LTC–DRG relative weight. For any MS–LTC–DRG where the FY 2026 relative weight would otherwise have declined more than 10 percent, we established a proposed capped FY 2026 MS–LTC–DRG relative weight that is equal to 90 percent of that MS–LTC–DRG's FY 2025 relative weight (that is, we set the proposed FY 2026 relative weight equal to the FY 2025 weight × 0.90).

In section II.E. of the preamble of this proposed rule, we discuss our proposed changes to the MS–DRGs, and by extension the MS–LTC–DRGs, for FY 2026. As discussed previously, under our current policy, the 10-percent cap does not apply to the relative weight for any new or renumbered MS–LTC–DRGs. We are not proposing any changes to this policy for FY 2026, and as such any proposed new or renumbered MS–LTC–DRGs for FY 2026 would not be eligible for the 10-percent cap.

Step 11—Budget neutralize application of the 10-percent cap policy.

Under the requirement at existing § 412.517(b) that aggregate LTCH PPS payments will be unaffected by annual changes to the MS–LTC–DRG classifications and relative weights, consistent with our established methodology, we are proposing to continue to apply a budget neutrality adjustment to the MS–LTC–DRG relative weights so that the 10-percent cap on relative weight reductions (step 10) is implemented in a budget neutral manner. Therefore, we are proposing to determine the proposed budget neutrality adjustment factor for the 10-percent cap on relative weight reductions using the following three steps: (a) simulate estimated total FY 2026 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the proposed capped relative weights for FY 2026 (determined in Step 10) and proposed GROUPER Version 43; (b) simulate estimated total FY 2026 LTCH PPS standard Federal payment rate payments for applicable LTCH cases using the proposed uncapped relative weights for FY 2026 (determined in Step 9) and proposed GROUPER Version 43; and (c) calculate the ratio of these estimated total payments by dividing the value determined in step (b) by the value determined in step (a). In determining the proposed FY 2026 MS–LTC–DRG relative weights, each capped relative weight is then multiplied by a proposed budget neutrality factor of 0.9984259 (the value determined in step (c)) to achieve the budget neutrality requirement.

Table 11, which is listed in section VI. of the Addendum to this proposed rule and is available via the internet on the CMS website, lists the proposed MS–LTC–DRGs and their respective proposed relative weights, proposed geometric mean length of stay, and proposed five-sixths of the geometric mean length of stay (used to identify SSO cases under § 412.529(a)) for FY 2026. We also are making available on the website the proposed MS–LTC–DRG relative weights prior to the application of the 10 percent cap on MS–LTC–DRG relative weight reductions and corresponding proposed cap budget neutrality factor.

C. Proposed Changes to the LTCH PPS Payment Rates and Other Proposed Changes to the LTCH PPS for FY 2026

1. Overview of Development of the Proposed LTCH PPS Standard Federal Payment Rates

The basic methodology for determining LTCH PPS standard Federal payment rates is currently set forth at 42 CFR 412.515 through 412.533 and 412.535. In this section, we discuss the factors that we are proposing to use to update the LTCH PPS standard Federal payment rate for FY 2026, that is, effective for LTCH discharges occurring on or after October 1, 2025, through September 30, 2026. Under the dual rate LTCH PPS payment structure required by statute, beginning with discharges in cost reporting periods beginning in FY 2016, only LTCH discharges that meet the criteria for exclusion from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate specified at 42 CFR 412.523. (For additional details on our finalized policies related to the dual rate LTCH PPS payment structure required by statute, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49601 through 49623).)

Prior to the implementation of the dual payment rate system in FY 2016, all LTCH discharges were paid similarly to those now exempt from the site neutral payment rate. That legacy payment rate was called the standard Federal rate. For details on the development of the initial standard Federal rate for FY 2003, we refer readers to the August 30, 2002, LTCH PPS final rule (67 FR 56027 through 56037). For subsequent updates to the standard Federal rate from FYs 2003 through 2015, and LTCH PPS standard Federal payment rate from FY 2016 through present, as implemented under 42 CFR 412.523(c)(3), we refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42445 through 42446).

In this FY 2026 IPPS/LTCH PPS proposed rule, we present our proposed policies related to the annual update to the LTCH PPS standard Federal payment rate for FY 2026.

The proposed update to the LTCH PPS standard Federal payment rate for FY 2026 is presented in section V.A. of the Addendum to this proposed rule. The components of the proposed annual update to the LTCH PPS standard Federal payment rate for FY 2026 are discussed in this section, including the statutory reduction to the annual update for LTCHs that fail to submit quality reporting data for FY 2026 as required by the statute (as discussed in section IX.C.2.c. of the preamble of this proposed rule). We are proposing to make an adjustment to the LTCH PPS standard Federal payment rate to account for the estimated effect of the changes to the area wage level for FY 2026 on estimated aggregate LTCH PPS payments, in accordance with 42 CFR 412.523(d)(4) (as discussed in section V.B. of the Addendum to this proposed rule).

2. Proposed FY 2026 LTCH PPS Standard Federal Payment Rate Annual Market Basket Update

a. Overview

Historically, the Medicare program has used a market basket to account for input price increases in the services furnished by providers. The market basket used for the LTCH PPS includes both operating and capital-related costs of LTCHs because the LTCH PPS uses a single payment rate for both operating and capital-related costs. We adopted the 2022-based LTCH market basket for use under the LTCH PPS beginning in FY 2025. For additional details on the historical development of the market basket used under the LTCH PPS, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53467 through 53476), and for a complete discussion of the LTCH market basket and a description of the methodologies used to determine the operating and capital-related portions of the 2022-based LTCH market basket, we refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69435 through 69455).

Section 3401(c) of the Affordable Care Act provides for certain adjustments to any annual update to the LTCH PPS standard Federal payment rate and refers to the timeframes associated with such adjustments as a ''rate year.'' We note that, because the annual update to the LTCH PPS policies, rates, and factors now occurs on October 1, we adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010, to conform with the standard definition of the Federal fiscal year (October 1 through September 30) used by other PPSs, such as the IPPS (75 FR 50396 through 50397). Although the language of sections 3004(a), 3401(c), 10319, and 1105(b) of the Affordable Care Act refers to years 2010 and thereafter under the LTCH PPS as ''rate year,'' consistent with our change in the terminology used under the LTCH PPS from ''rate year'' to ''fiscal year,'' for purposes of clarity, when discussing the annual update for the LTCH PPS standard Federal payment rate, including the provisions of the Affordable Care Act, we use ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.

b. Proposed Annual Update to the LTCH PPS Standard Federal Payment Rate for FY 2026

As previously noted, we adopted the 2022-based LTCH market basket for use under the LTCH PPS beginning in FY 2025. The 2022-based LTCH market basket is primarily based on the Medicare cost report data submitted by LTCHs and, therefore, specifically reflects the cost structures of LTCHs. For additional details on the development of the 2022-based LTCH market basket, we refer readers to the FY 2025 IPPS/LTCH final rule (89 FR 69435 through 69455). We continue to believe that the 2022-based LTCH market basket appropriately reflects the cost structure of LTCHs for the reasons discussed when we adopted its use in the FY 2025 IPPS/LTCH PPS final rule. Therefore, in this proposed rule, we are proposing to use the 2022-based LTCH market basket to update the LTCH PPS standard Federal payment rate for FY 2026.

Section 1886(m)(3)(A) of the Act provides that, beginning in FY 2010, any annual update to the LTCH PPS standard Federal payment rate is reduced by the adjustments specified in clauses (i) and (ii) of subparagraph (A), as applicable. Clause (i) of section 1886(m)(3)(A) of the Act provides for a reduction, for FY 2012 and each subsequent rate year, by ''the productivity adjustment'' described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi)(II) of the Act, as added by section 3401(a) of the Affordable Care Act, defines this productivity adjustment as equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business multifactor productivity (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period). The U.S. Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measures of private nonfarm business productivity for the U.S. economy. We note that previously the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) was published by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021, release of productivity data, BLS replaced the term multifactor productivity with total factor productivity (TFP). BLS noted that this is a change in terminology only and will not affect the data or methodology. As a result of the BLS name change, the productivity measure

referenced in section 1886(b)(3)(B)(xi)(II) is now published by BLS as private nonfarm business total factor productivity. However, as mentioned, the data and methods are unchanged. Please see *www.bls.gov* for the BLS historical published TFP data. A complete description of IGI's TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information*. Section 1886(m)(3)(A)(ii) of the Act provided for a reduction, for each of FYs 2010 through 2019, by the ''other adjustment'' described in section 1886(m)(4)(F) of the Act.

Section 1886(m)(3)(B) of the Act provides that the application of paragraph (3) may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year.

c. Proposed Adjustment to the LTCH PPS Standard Federal Payment Rate Under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In accordance with section 1886(m)(5) of the Act, the Secretary established the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). The reduction in the annual update to the LTCH PPS standard Federal payment rate for failure to report quality data under the LTCH QRP for FY 2014 and subsequent fiscal years is codified under 42 CFR 412.523(c)(4). The LTCH QRP, as required for FY 2014 and subsequent fiscal years by section 1886(m)(5)(A)(i) of the Act, requires that a 2.0 percentage points reduction be applied to any update under 42 CFR 412.523(c)(3) for an LTCH that does not submit quality reporting data to the Secretary in accordance with section 1886(m)(5)(C) of the Act with respect to such a year (that is, in the form and manner and at the time specified by the Secretary under the LTCH QRP under 42 CFR 412.523(c)(4)(i)). Section 1886(m)(5)(A)(ii) of the Act provides that the application of the 2.0 percentage points reduction may result in an annual update that is less than 0.0 for a year, and may result in LTCH PPS payment rates for a year being less than such LTCH PPS payment rates for the preceding year. Furthermore, section 1886(m)(5)(B) of the Act specifies that the 2.0 percentage points reduction is applied in a noncumulative manner, such that any reduction made under section 1886(m)(5)(A) of the Act shall apply only with respect to the year involved and shall not be taken into account in computing the LTCH PPS payment amount for a subsequent year. These requirements are codified in the regulations at 42 CFR 412.523(c)(4). (For additional information on the history of the LTCH QRP, including the statutory authority and the selected measures, we refer readers to section X.E. of the preamble of this proposed rule.)

d. Proposed Annual Market Basket Update Under the LTCH PPS for FY 2026

Consistent with our historical practice, we estimate the market basket percentage increase and the productivity adjustment based on IHS Global Inc.'s (IGI's) forecast using the most recent available data. Based on IGI's fourth quarter 2024 forecast, the proposed FY 2026 market basket percentage increase for the LTCH PPS using the 2022-based LTCH market basket is 3.4 percent. The proposed productivity adjustment for FY 2026 based on IGI's fourth quarter 2024 forecast is 0.8 percentage point.

For FY 2026, section 1886(m)(3)(A)(i) of the Act requires that any annual update to the LTCH PPS standard Federal payment rate be reduced by the productivity adjustment, described in section 1886(b)(3)(B)(xi)(II) of the Act. Consistent with the statute, we are proposing to reduce the FY 2026 market basket percentage increase by the FY 2026 productivity adjustment. To determine the proposed market basket update for LTCHs for FY 2026 we subtracted the proposed FY 2026 productivity adjustment from the proposed FY 2026 market basket percentage increase. (For additional details on our established methodology for adjusting the market basket percentage increase by the productivity adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771).) In addition, for FY 2026, section 1886(m)(5) of the Act requires that, for LTCHs that do not submit quality reporting data as required under the LTCH QRP, any annual update to an LTCH PPS standard Federal payment rate, after application of the adjustments required by section 1886(m)(3) of the Act, shall be further reduced by 2.0 percentage points.

In this FY 2026 IPPS/LTCH PPS proposed rule, in accordance with the statute, we are proposing to reduce the proposed FY 2026 market basket percentage increase of 3.4 percent (based on IGI's fourth quarter 2024 forecast of the 2022-based LTCH market basket) by the proposed FY 2026 productivity adjustment of 0.8 percentage point (based on IGI's fourth quarter 2024 forecast). Therefore, under the authority of section 123 of the BBRA as amended by section 307(b) of the BIPA, consistent with 42 CFR 412.523(c)(3)(xvii), we are proposing to establish an annual market basket update to the LTCH PPS standard Federal payment rate for FY 2026 of 2.6 percent (that is, the proposed LTCH PPS market basket percentage increase of 3.4 percent less the proposed productivity adjustment of 0.8 percentage point). For LTCHs that fail to submit quality reporting data under the LTCH QRP, under 42 CFR 412.523(c)(3)(xvii) in conjunction with 42 CFR 412.523(c)(4), we are proposing to further reduce the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points, in accordance with section 1886(m)(5) of the Act. Accordingly, we are proposing to establish an annual update to the LTCH PPS standard Federal payment rate of 0.6 percent (that is, the proposed 2.6 percent LTCH market basket update minus 2.0 percentage points) for FY 2026 for LTCHs that fail to submit quality reporting data as required under the LTCH QRP. Consistent with our historical practice, we also are proposing that if more recent data subsequently become available (for example, a more recent estimate of the market basket percentage increase and productivity adjustment), we would use such data, if appropriate, to determine the FY 2026 market basket percentage increase and productivity adjustment in the final rule. We note that, consistent with historical practice, we are also proposing to adjust the FY 2026 LTCH PPS standard Federal payment rate by an area wage level budget neutrality factor in accordance with 42 CFR 412.523(d)(4) (as discussed in section V.B.6. of the Addendum to this proposed rule).

X. Proposed Quality Data Reporting Requirements for Specific Providers

A. Overview

In section X. of the preamble of this proposed rule, we are seeking comment on and proposing changes to the following Medicare quality reporting programs:

- In section X.B. of the preamble of this proposed rule, we are including the Toward Digital Quality Measurement in CMS Quality Programs—Request for Information.
- In section X.C. of the preamble of this proposed rule, the Hospital IQR Program.
- In section X.D. of the preamble of this proposed rule, the PCHQR Program.

- In section X.E. of the preamble of this proposed rule, the LTCH QRP.
- In section X.F. of the preamble of this proposed rule, the Medicare Promoting Interoperability Program for Eligible Hospitals and Critical Access Hospitals (CAHs) (previously known as the Medicare EHR Incentive Program).

B. Toward Digital Quality Measurement in CMS Quality Programs—Request for Information

We have previously issued requests for information (RFIs) to gather public input on the transition to digital quality measurement (dQM) for CMS programs.[267] This RFI provides updates on our progress and seeks input as we continue our path forward in the dQM transition.

In this RFI, we are soliciting comments on our anticipated approach to the use of Health Level Seven® (HL7®) Fast Healthcare Interoperability Resources® (FHIR®) in electronic clinical quality measure (eCQM) reporting. Several CMS programs currently use, or are considering using, eCQMs for various clinicians, facilities, providers, and other organizations to report their respective quality performance. These CMS programs include the Hospital Inpatient Quality Reporting (IQR) Program, the Hospital Outpatient Quality Reporting (OQR) Program, and the Medicare Promoting Interoperability Program. We are seeking feedback in this RFI on FHIR-based eCQM activities in these programs. We anticipate including a similar request in the CY 2026 Physician Fee Schedule (PFS) proposed rule to solicit comments on FHIR-based eCQM activities in the Medicare Shared Savings Program and the Merit-based Incentive Payment System (MIPS) quality performance category.

In this RFI, we are also soliciting comments on our anticipated approach to FHIR-based patient assessment reporting in the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program. While we seek comments in this RFI for the IPFQR Program in this proposed rule (as a majority of IPFs are hospital-based),[268] we anticipate seeking similar feedback in the FY 2026 Inpatient Psychiatric Facility (IPF) Prospective Payment System (PPS) proposed rule.

We will consider the feedback we receive as we refine our dQM transition efforts and plan the strategic modernization of our quality measurement enterprise.

1. Background

Having immediate access to electronic health information, in near real-time, supports quality measurement efforts, provides the ability to use these data for patient care considerations, and may lead to improved clinical outcomes. To support this, we aim to transition to a fully dQM landscape that promotes interoperability and increases the value of reporting quality measure data. In the coming years, we will continue to seek ways to advance technical infrastructure, update program regulations, and engage Federal partners and the public to support this dQM transition.[269]

We are collaborating with Federal agencies, including the Assistant Secretary for Technology Policy (ASTP) and Office of the National Coordinator for Health Information Technology (ONC) (collectively, ASTP) [270] to support data standardization and alignment of requirements for the development and reporting of digital quality measures. Advancements in the interoperability of healthcare data and corresponding requirements from ASTP have created the technical foundation across health information technology (IT) systems to pursue modernization of CMS' quality measurement systems. The 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program final rule (85 FR 25642) and the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing (HTI–1) final rule (89 FR 1192) advanced policy approaches that enable flexible, granular data sharing from the certified health IT systems used by many healthcare providers, facilities, and clinicians. Aligning technology requirements for healthcare providers, payers, public health agencies, and health IT developers allows for advancement of an interoperable health IT infrastructure that ensures providers and patients have access to health data when and where it is needed.

We continue to collaborate with ASTP on future versions of the United States Core Data for Interoperability (USCDI),[271] which establishes a baseline set of data elements referenced in health information exchange certification criteria under the ONC Health IT Certification Program. In addition, the ASTP USCDI+ program supports identification and establishment of domain-specific datasets that build on the USCDI foundation.[272] The USCDI+ Quality domain,[273] which we discuss in more detail in section X.2.b. of the preamble of this proposed rule, aims to harmonize data needs for quality measurement across Federal agencies and other interested parties, and inform supplemental standards necessary to support quality measurement. We also continue to work with ASTP to advance the interoperability of patient assessment data through collaboration with interested parties to develop FHIR standards through the CMS-sponsored Post-Acute Care Interoperability (PACIO) Project.[274]

Moreover, the CMS Innovation Center's Enhancing Oncology Model recently completed its first reporting period in which FHIR-based application programming interfaces (APIs) were used by model participants to submit clinical data elements to CMS. This specification for reporting was developed as part of the USCDI+ Cancer domain, in close collaboration with ASTP, the National Institutes of Health (NIH), and the National Cancer Institute (NCI).[275]

We are also collaborating with the Centers for Disease Control and Prevention (CDC) and the Health Resources and Services Administration (HRSA) in our dQM transition strategy. The CDC National Healthcare Safety Network (NHSN) is leading the development of fully electronic and automated digital quality measures for patient safety and public health surveillance, preparedness, and

[267] We refer readers to the following rules which contain the previous RFIs: FY 2022 IPPS/LTCH PPS final rule (86 FR 45342 through 86 FR 45349); FY 2023 IPPS/LTCH PPS final rule (87 FR 49181 through 87 FR 49188); CY 2022 Physician Fee Schedule (PFS) final rule (86 FR 65377 through 86 FR 65382); CY 2023 PFS proposed rule (87 FR 46259 through 87 FR 46262); CY 2022 Outpatient Prospective Payment System (OPPS)/Ambulatory Surgical Center (ASC) final rule (86 FR 63815 through 86 FR 63822); and CY 2022 End-Stage Renal Disease (ESRD) PPS final rule (86 FR 61941 through 86 FR 61948).

[268] We refer readers to the FY 2025 IPF PPS-Rate Update final rule, Table 24 (89 FR 64670). Based on this data, 59.3 percent of IPFs were hospital-based units, a figure derived by dividing the sum of urban and rural units by the total number of facilities.

[269] Read more about the dQM transition in the Electronic Clinical Quality Improvement (eCQI) Resource Center here: *https://ecqi.healthit.gov/dqm?qt-tabs_dqm=about-dqms*.

[270] On July 29, 2024, notice was posted in the **Federal Register** that ONC would be dually titled to the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (89 FR 60903).

[271] *https://www.healthit.gov/isp/united-states-core-data-interoperability-uscdi*.

[272] *https://www.healthit.gov/topic/interoperability/uscdi-plus*.

[273] *https://uscdiplus.healthit.gov/uscdiplus?id=uscdi_record&table=x_g_sshh_uscdi_domain&sys_id=7ddf78228745b95098e5edb90cbb3525&view=sp*.

[275] *https://www.cms.gov/priorities/innovation/innovation-models/enhancing-oncology-model*.

response.[276] We are working together with NHSN to explore a modernized approach for reporting quality measures to CMS via the NHSN data pipeline. There are currently nine digital quality measures reported to NHSN that are used in CMS programs.[277] CMS and CDC are working together to transition to fully automated digital quality measures using a two-pronged approach: (1) Develop new measures to address patient safety gaps; and (2) Update current measures to a FHIR-based format.

The NHSN dQM approach uses a reusable reporting framework (NHSN Digital Quality Measure Reporting Implementation Guide (IG)) [278] in conjunction with content based in national, interoperable data standards (USCDI and USCDI+) that are aligned with CMS requirements, and submitted via secure data transfer via open-source FHIR API (NHSNLink).[279] Promoting the use of these standards-based, flexible, advanced data reporting methods will reduce the reporting burden on facilities while increasing timeliness and completeness, and will improve the accuracy and quality of data, enhancing health system readiness and response capacity through near real-time data collection.

Our partners at HRSA are also making efforts to modernize reporting of eCQMs.[280] As part of the Uniform Data System (UDS) modernization, HRSA has developed the Uniform Data Systems Plus (UDS+), which provides for the electronic submission (using FHIR) of de-identified patient-level data including data elements aligned to select CMS eCQMs that health centers are required to report.[281] HRSA developed a UDS+ FHIR IG, which specifies the FHIR API requirements for structuring and transmitting these data elements based on program requirements.

All of these efforts to leverage standardized data and the FHIR model are intended to accelerate and support the transition to a data-driven healthcare system that will ultimately reduce provider burden, support the patient experience, and improve quality of care. Shifting towards approaches based on the FHIR standard will help us pave the way for future digital quality measures.[282]

We thank the public for providing feedback through industry conferences, direct conversations with CMS and our Federal partners, and submitting comments to RFIs in previous rulemaking. As we support healthcare providers, facilities, and clinicians, the health IT industry, and Federal partners in their respective activities, we are requesting public input on this RFI to better inform our ongoing strategy to transition to a fully digital quality landscape. Note that any substantive updates to program-specific requirements related to providing data for quality measurement and reporting would be addressed through future notice-and-comment rulemaking, as necessary.

2. Approach to eCQM Reporting Using FHIR in CMS Quality Programs

In this section, we describe the current state and request input on key components of the ongoing dQM transition related to FHIR-based eCQMs for the Hospital IQR Program, the Hospital OQR Program, and the Medicare Promoting Interoperability Program. These components include: (1) FHIR-based eCQM conversion progress; (2) Data standardization for quality measurement and reporting; (3) The timeline under consideration for FHIR-based eCQM reporting; and (4) Measure development and reporting tools.

a. eCQM FHIR Conversion Activities

Currently, eligible hospitals are required to report eCQMs for the Hospital IQR Program and the Hospital OQR Program, and eligible hospitals and critical access hospitals (CAHs) must report eCQMs through the Medicare Promoting Interoperability Program. Additionally, Medicare Shared Savings Program Accountable Care Organizations (ACOs) and eligible clinicians participating in the Merit-based Incentive Payment System (MIPS) can report eCQMs for their quality reporting. Electronic health record (EHR) and other health IT systems certified under the ONC Health IT Certification Program use patient data to calculate the results for each eCQM based upon the measure specifications for the eCQM.[283]

An important initial step in our dQM strategy is to ensure current eCQMs are specified using the FHIR standard and allow these measures to be calculated consistently using standardized data represented in FHIR. Standardized digital data can support multiple use cases, including quality measurement, quality improvement efforts, clinical decision support, research, and public health. The eCQMs currently use structured data defined by the Quality Data Model (QDM) and measure logic in Clinical Quality Language to evaluate a clinician's, provider's, facility's, or organization's performance on a measure concept.[284]

As we move to FHIR-based eCQMs, we continue to convert current eCQMs (authored using the QDM) to eCQMs authored using the HL7 FHIR® Quality Improvement Core (QI-Core) IG, updating to new versions as appropriate. We are conducting advanced validation of FHIR data exchange through ongoing HL7 Connectathons and integrated systems testing, leveraging and refining IGs to enhance interoperability and data standardization.[285] While new eCQMs continue to be developed, proposed, and adopted in existing CMS programs, we are working with measure developers to ensure existing eCQMs are converted to FHIR and that new eCQMs are also natively developed in FHIR. In the future, we are considering a requirement that all measures proposed for addition to CMS programs be specified in FHIR.

Additional information and updates regarding eCQMs and the dQM transition can be found on the Electronic Clinical Quality Improvement (eCQI) Resource Center website, available at: *https://ecqi.healthit.gov/dqm?qt-tabs_dqm=dqm-strategic-roadmap*. We continue to explore potential applications of the FHIR standard to the reporting and use of different types of quality measurement data.

We seek feedback on the following questions:

- Are there specific eCQMs or elements of existing eCQMs that you anticipate presenting particular challenges in specifying in FHIR?
- Are there gaps in the QI-Core IG that are likely to impact our ability to effectively specify current CMS eCQMs in FHIR?
- What supplementary activities would encourage additional engagement in FHIR testing activities (such as

Connectathons) that support the development of current and future IGs to advance adoption and use of FHIR-based eCQMs?

b. Data Standardization for Quality Measurement and Reporting

We are continuing to collaborate with ONC as it develops a certification approach to enable reporting of FHIR-based eCQMs using technology certified under the ONC Health IT Certification Program. This approach aims to repurpose and harmonize existing FHIR requirements in the ONC Health IT Certification Program whenever possible.[286] It also aims to incorporate industry-developed standards for the exchange of quality measurement data using FHIR.

In this section we discuss the standards and other artifacts which CMS and ONC are evaluating to serve as the basis for new health IT certification criteria supporting FHIR-based quality measurement and reporting. New health IT certification criteria for quality measurement and reporting could include requirements for certified health IT modules to support the consistent capture and exchange of quality data using FHIR APIs. New criteria could also support standardized reporting rules to ensure successful submission of quality measure data for the Hospital IQR Program, the Hospital OQR Program, and the Medicare Promoting Interoperability Program.

A key artifact we are reviewing as part of this approach is the QI-Core IG, which defines a set of FHIR profiles within a common logic model for clinical quality measurement and clinical decision support intended for use for multiple use cases across domains.[287] As described previously, this IG is used to represent the data elements necessary to support current eCQMs.

The QI-Core IG builds on the HL7 FHIR® US Core IG (US Core IG) which is currently referenced under the ONC Health IT Certification Program and implements the USCDI in FHIR. The US Core IG is incorporated in the ''Standardized API for patient and population services'' health IT certification criterion [288] and is widely implemented across certified health IT systems. Accordingly, we anticipate that developers implementing the QI-Core IG will be able to leverage existing work from implementing the US Core IG. QI-Core is expected to evolve over time to reflect subsequent versions of the US Core IG. For example, QI-Core 6.0 builds upon US Core version 6.1.0, which provides consensus-based capabilities aligned with USCDI version 3 (v3) data elements for FHIR APIs. In the HTI–1 final rule (89 FR 1196), ASTP finalized the expiration of USCDI v1 on January 1, 2026, and adopted USCDI v3 as the new baseline version of USCDI after USCDI v1 expires.

We also anticipate alignment between the QI-Core IG and the USCDI+ Quality data element list, which incorporates additional data elements beyond USCDI. We have collaborated with ASTP around the development of USCDI+ Quality as an extension to USCDI to improve healthcare interoperability across quality programs, establishing a consistent baseline of harmonized data elements for a wide range of quality measurement use cases.[289] Specifically for CMS programs, USCDI+ Quality includes the data elements to support program-specific measures.[290]

We are also considering the Data Exchange for Quality Measures (DEQM) IG [291] as part of the framework supporting the transition to FHIR-based eCQMs, in particular for supporting FHIR-based reporting to CMS. The DEQM IG provides a framework that defines conformance profiles and guidance to enable the exchange of quality information and enable FHIR-based quality measure reporting. It is based upon other related work in the FHIR and quality measure realm, including the US Core IG, the Healthcare Effectiveness Data and Information Set (HEDIS) IG, and Quality Reporting Document Architecture (QRDA) Category I and III reporting specifications. We are considering the use of the DEQM IG with quality measures specified in accordance with QI-Core.

To facilitate the exchange of significant volumes of data to support quality measurement, we are also evaluating the use of HL7 FHIR ® Bulk Data, both on its own [292] or through the DEQM IG.[293] The existing Bulk Data Access IG defines a standardized, FHIR-based approach for exporting bulk data from a FHIR server to an authenticated and authorized client. ASTP has adopted the Bulk Data Access IG STU 1, version 1.0.0, published on August 8, 2019 (hereafter referred to as version 1), and has incorporated it into the ONC Health IT Certification Program.[294] The Bulk Data Access IG has recently seen considerable revisions and enhancements over version 1 from the HL7 standards community. A new version of the Bulk Data Access IG, planned to be balloted in 2025, is expected to introduce new features such as the capacity to organize output by patient and criteria-based cohort creation, which could significantly enhance the quality reporting use case for the IG.[295] The HL7 community will also continue to prepare additional enhancements to the Bulk Data Access IG throughout 2025, with the Argonaut Project announcing Bulk Import as a 2025 project.[296] Bulk Import is already being used by HRSA in their UDS+ IG,[297] and has the potential to enhance the quality reporting use case more broadly. It defines a standardized mechanism for data submitters to upload or submit their Bulk FHIR data to a receiving system when they have their Bulk FHIR data ready to submit, rather than having to reactively respond to a Bulk FHIR export request initiated by a receiving system.

We seek feedback on the following questions:

- Can you share any experiences or challenges reviewing, implementing, or testing the QI-Core, DEQM, or Bulk FHIR standards, including any experiences or challenges unique to Bulk FHIR Import versus Bulk FHIR Export?
- Are there any deficiencies or gaps in the DEQM IG that must be addressed before it can potentially be used for reporting to CMS on eCQMs using FHIR APIs?
- Are there additional baseline requirements or capabilities that need to be considered before FHIR-based eCQMs could be reported to CMS using Bulk FHIR?

c. Timeline Under Consideration for FHIR-Based eCQM Reporting

As we noted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49183), we are considering proposing a transition

[286] See 45 CFR 170.315(g)(10)—*Standardized API for patient and population services* FHIR certification in the ONC Health IT Certification program.

[287] *https://hl7.org/fhir/us/qicore/index.html.*

[288] 45 CFR 170.315(g)(10).

[289] *https://www.healthit.gov/topic/interoperability/uscdi-plus.*

[290] For more information about the USCDI+ Quality data element list please visit *https://uscdiplus.healthit.gov/.*

[291] *https://build.fhir.org/ig/HL7/davinci-deqm/.*

[292] *https://hl7.org/fhir/uv/bulkdata/.*

[294] ONC has adopted the Bulk Data Access IG, version 1, in 45 CFR 170.215, and has incorporated this IG into the ONC Health IT Certification Program as part of the ''Standardized API for patient and population services'' certification criterion in 45 CFR 170.215(g)(10).

[295] See Argonaut Bulk Optimize project: *https://confluence.hl7.org/spaces/AP/pages/227213555/Bulk+Optimize.*

[296] *https://confluence.hl7.org/spaces/AP/pages/325453837/Bulk+Import.*

[297] *https://www.fhir.org/guides/hrsa/uds-plus/OperationDefinition-import.html.*

period during which healthcare providers may report using either QDM- or FHIR-based eCQMs. This period would provide time for quality program participants, health IT developers, and CMS to engage in learning to optimize systems and processes. During this period, participants would still be required to report on the number of eCQMs finalized for an applicable reporting program, but program participants would be able to choose to submit either QDM-based *or* FHIR-based eCQMs to meet respective reporting requirements. For instance, program participants who are implementing updated certified health IT and gaining experience with FHIR-based eCQMs could continue submitting QRDA files to meet program requirements, while those who are ready to report FHIR-based eCQMs would be able to do so, for a specified period. For the purposes of this RFI, we refer to this concept as the ''reporting options'' period.

We acknowledge that participants in the identified CMS programs may proceed with updating certified health IT and implementing dQMs at different speeds. Hence, we are considering the reporting options period in order to provide additional time for providers to make the transition, in advance of any future proposal to require FHIR-based reporting. We are considering at least a two-year reporting options period before any future proposal to require mandatory reporting. Note that any updates to specific program requirements related to providing data for quality measurement and reporting would be addressed through future notice-and-comment rulemaking, as necessary.

We seek feedback on the following questions:

- Would a minimum of 24 months from the effective date of a FHIR-based eCQM reporting option using ONC Health IT Certification Program criteria to support quality program submission provide sufficient time for implementation (including measure specification review, certified health IT updates, workflow changes, training, and testing)?
- What resources or guidance could CMS provide to assist with the transition to submission of FHIR-based eCQM data?
- What, if any, challenges do you anticipate with the reporting timeline of FHIR-based eCQMs (beginning with at least a two-year reporting options period before any future proposal to require FHIR-based reporting)?
- What resources, guidance, or other support can we provide to encourage and facilitate the early adoption and reporting of FHIR-based eCQMs during the reporting options period?

d. Measure Development and Reporting Tools

We develop and maintain tools and resources to assist measure developers in the different stages of the Measure Lifecycle.[298] The Measure Authoring Development Integrated Environment (MADiE) is a free software tool that supports the eCQM development and testing process through dynamic authoring and testing within a single application.[299] MADiE supports QI-Core profile-informed authoring, testing, and verification of the behavior of FHIR-based eCQMs.[300] We encourage measure developers to continue using this environment for the development of FHIR-based eCQMs.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49183), we described plans to modernize programmatic data receiving systems through a unified CMS FHIR receiving system that would provide a single point of data receipt for quality reporting programs. We may also consider separate FHIR receiving systems for some programs initially as the shift to FHIR across CMS programs will be incremental. CMS will provide information on the form and manner for reporting for each program in respective notice-and-comment rulemaking, as necessary. Our vision remains to ultimately develop and implement a single point of data receipt via a unified CMS FHIR receiving system.

In the CMS Digital Quality Measurement Strategic Roadmap, we noted the development of a FHIR-based measure calculation tool (MCT).[301] After further consideration and testing, we have decided not to advance the MCT as previously described.

We seek feedback on the following question:

- What capabilities would be most useful for CMS to support in a FHIR-based eCQM reporting model?
- What, if any, additional concerns should CMS take into consideration when developing FHIR-based reporting requirements for systems receiving quality data?

e. Additional FHIR Transition Activities for ACOs

While this RFI focuses on the Hospital IQR Program, the Hospital OQR Program, and the Medicare Promoting Interoperability Program, we also intend to seek similar feedback in future rulemaking, including in the CY 2026 PFS proposed rule for MIPS. In addition, in the near future, we intend to solicit feedback on how the dQM transition and use of FHIR-based approaches to quality reporting would impact eligible clinicians participating in MIPS as well as in ACOs. ACOs have encountered challenges with aggregating, deduplicating, and matching quality data necessary to report using the eCQM and MIPS Clinical Quality Measure (CQM) collection types, as ACOs may bring together healthcare providers using disparate EHR systems from which data must be extracted and aggregated. We anticipate seeking feedback on how the transition to FHIR-based reporting of eCQMs could help to mitigate these challenges.

3. Approach to FHIR Patient Assessment Reporting in the IPFQR Program

Section 4125(b) of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117–328, Dec. 29, 2022) [302] amended section 1886(s)(4) of the Act by adding a new subparagraph (E), which requires an inpatient psychiatric facility (IPF) participating in the IPFQR Program to collect and submit specified standardized patient assessment data using a new standardized patient assessment instrument, for rate year 2028 and each subsequent year.

As noted in the RFI [303] in the FY 2025 IPF Prospective Payment System (PPS)-Rate Update proposed rule, achieving interoperability is an essential part of our goal to facilitate safe and secure data sharing, access, and utilization of electronic health information to enhance decision-making and create a more efficient healthcare system (89 FR 23201). We also stated that we are considering ways to ensure that the IPF Patient Assessment Instrument (IPF–PAI) can be represented using FHIR standards (89 FR 23201). As part of that RFI, we requested and received input on topics including: Whether Standardized Patient Assessment Data Elements already in use in the CMS Data Element Library (DEL) [304] are appropriate and clinically relevant for the IPF setting, use of CMS reporting systems, and other interoperability-related considerations (89 FR 23201). In the FY 2025 IPF PPS final rule, we acknowledged a recommendation to align the IPF–PAI with USCDI and several commenters

[298] *https://mmshub.cms.gov/cms-tools.*

[299] *https://www.emeasuretool.cms.gov/.*

[300] *Ibid.*

[301] *https://ecqi.healthit.gov/dqm?qt-tabs_dqm=dqm-strategic-roadmap.*

[303] ''Patient Assessment Instrument Under IPFQR Program (IPF PAI) to Improve the Accuracy of PPS'' (89 FR 23200 through 23204).

[304] *https://del.cms.gov/DELWeb/pubHome.*

noted IPFs did not receive funding to adopt CEHRT, suggesting we consider how the implementation of the IPF–PAI would affect providers without EHRs (89 FR 64646).

We are considering opportunities to advance FHIR-based reporting of patient assessment data for the IPF–PAI mandated by the CAA, 2023. The questions in this section seek to gain an understanding of the current adoption and use of EHRs, other health IT, and data standards supporting interoperability (such as FHIR and USCDI) within IPFs. We also aim to identify the extent of technology adoption beyond certified health IT and EHRs and seek a better understanding of how FHIR-standardized data can be generated, used, and shared through other technologies, without use of EHRs. Our objective is to explore how IPFs typically integrate technologies with varying complexity into existing systems and how this affects IPF workflows. We seek to identify the challenges or opportunities that may arise during this integration, and determine the support needed to complete and submit the IPF–PAIs in ways that protect and enhance care delivery. This insight will help inform the technologies we may consider for use with the IPF–PAI and quality data reporting.

We seek feedback on the current state of health IT use, including EHRs, in IPFs:

- To what extent does your IPF use health IT systems to maintain and exchange patient records?
- If your facility has transitioned to using electronic records in whole or in part, what types of health IT does your IPF use to maintain electronic patient records? Are these health IT systems certified under the ONC Health IT Certification Program? Does your facility use EHRs or other health IT products or systems that are not certified under the ONC Health IT Certification Program? If so, do these systems exchange data using standards and implementation specifications adopted by HHS? [305] Please specify.
- Does your IPF submit patient data to CMS directly from your health IT system, without the assistance of a third-party intermediary? If a third-party intermediary is used to report data, what type of intermediary service is used? How does your facility currently exchange health information with other healthcare providers or systems, specifically between IPFs and other provider types or with public health agencies? What challenges do you face with electronic exchange of health information?
- Are there any challenges with your current electronic devices (for example, tablets, smartphones, computers) that hinder your ability to easily exchange information across health IT systems? Please describe any specific issues you encounter.
- Does limited internet or lack of internet connectivity impact your ability to exchange data with other healthcare providers, including community-based care services, or your ability to submit patient data to CMS?
- What steps does your IPF take to ensure compliance in using health IT with security and patient privacy requirements such as the requirements of the regulations promulgated under the Health Insurance Portability and accountability Act (HIPAA) and related regulations?
- Does your IPF refer to the SAFER Guides (see newly revised versions published in January 2025 at *https://www.healthit.gov/topic/safety/safer-guides*) [306] to self-assess EHR safety practices?
- What challenges or barriers does your IPF encounter when submitting quality measure data to CMS as part of the IPFQR Program? Please identify any factors that hinder successful data submission. What opportunities or factors could improve your facility's successful data submission to CMS?
- What types of technical assistance, guidance, workforce training resources, and other resources would help IPFs to successfully implement FHIR-based technologies for submitting the IPF–PAI to CMS? What strategies can CMS, HHS, or other Federal partners take to ensure that technical assistance is both comprehensive and user-friendly? How could Quality Improvement Organizations (QIOs) or other entities enhance this support?
- Is your facility using technology that utilizes APIs based on the FHIR standard to enable electronic data sharing? If so, with whom are you sharing data using the FHIR standard and for what purpose(s)? For example, have you used FHIR APIs to share data with public health agencies? Does your facility use any Substitutable Medical Applications and Reusable Technologies (SMART) on FHIR [307] applications? If so, are the SMART on FHIR applications integrated with your EHR or other health IT?
- What benefits or challenges have you experienced with implementing technology that uses FHIR-based APIs? How can adopting technology that uses FHIR-based APIs to facilitate the reporting of patient assessment data impact provider workflows? What impact, if any, does adopting this technology have on quality of care?
- Does your facility have any experience using technology that shares electronic health information using one or more versions of the USCDI standard?
- Would your IPF and vendors or both be interested in participating in testing to explore options for transmission of assessments, for example, testing methods to transmit assessments that incorporate FHIR-enabled data to CMS?
- What other information should we consider to facilitate successful adoption and integration of FHIR-based technologies and standardized data for patient assessment instruments like the IPF–PAI? We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies.

4. General Solicitation of Comments

In conjunction with the previous questions, we are also seeking input on the following:

- Specific to FHIR-based quality reporting, are there any additional factors, or considerations to account for, that may help foster data harmonization and reduce reporting burden across entities?
- The Trusted Exchange Framework and Common Agreement™ (TEFCA™) framework supports nationwide health information exchange by connecting health information networks (HINs) across the country.[308] Additionally, TEFCA facilitates FHIR exchange by requiring Qualified HINs (QHINs) to perform patient discovery for those querying for data and providing data holders with FHIR endpoints to enable point-to-point exchange via FHIR APIs. How could this initiative potentially support exchange of FHIR-based quality measures and patient assessment submissions consistent with the FHIR Roadmap (available here: *https://rce.sequoiaproject.org/three-year-fhir-roadmap-for-tefca/*)? How might TEFCA enable the use of patient assessment

[305] For instance, see standards adopted by ONC on behalf of HHS in 45 CFR part 170, subpart B.

[306] The SAFER Guides are an evidence-based set of recommendations in the form of nine stand-alone, subject-oriented chapters that present the health IT community, including eligible hospitals and CAHs that use health IT, with best practice recommendations to improve the safety and safe use of EHRs. See *https://www.healthit.gov/topic/safety/safer-guides.*

[307] *https://smarthealthit.org/.*

[308] For more information about TEFCA, see *https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca.*

data for secondary uses such as treatment and research?

C. Requirements for and Changes to the Hospital Inpatient Quality Reporting (IQR) Program

1. Background and History of the Hospital IQR Program

The Hospital IQR Program is a pay-for-reporting program intended to measure the quality of hospital inpatient services, improve the quality of care provided to Medicare beneficiaries, and facilitate public transparency. Section 1886(b)(3)(B)(viii) of the Social Security Act (the Act) states that subsection (d) hospitals participating in the Hospital IQR Program that do not submit data required for measures selected with respect to such a year, in the form and manner required by the Secretary, will incur a 2.0 percentage point reduction to their annual payment update for the applicable fiscal year. We refer readers to our previous final rules for detailed discussions of the history of the Hospital IQR Program, including statutory history, and for the measures we have previously adopted for the Hospital IQR Program measure set.[309] We also refer readers to 42 CFR 412.140 for Hospital IQR Program regulations. We note that we are discontinuing the practice of retaining all subsections every year and have thus omitted subsections where there are no proposed changes.

2. Considerations in Expanding and Updating Quality Measures

(a) Measure Concepts Under Consideration for Future Years in the Hospital IQR Program—Request for Information (RFI): Well-Being and Nutrition

We are seeking input on well-being and nutrition measures for future years in the Hospital IQR Program. Well-being is a comprehensive approach to disease prevention and health promotion, as it integrates mental and physical health while emphasizing preventative care to proactively address potential health issues.[310] This comprehensive approach emphasizes person-centered care by promoting the well-being of patients and family members. We are seeking comments on tools and measures that assess overall health, happiness, and satisfaction in life that could include aspects of emotional well-being, social connections, purpose, and fulfillment. We would like to receive input and comments on the applicability of tools and constructs that assess for the integration of complementary and integrative health, skill building, and self-care. Please provide feedback on the relevant aspects of well-being for the Hospital IQR Program.

A second concept that we are seeking feedback on is for measures of nutrition. In the FY 2023 IPPS/LTCH PPS final rule, we adopted the Malnutrition Care Score (MCS)[311] electronic quality measure (eCQM) into the Hospital IQR Program, which assesses adults 65 years of age and older admitted to inpatient hospital services who received care appropriate to their level of malnutrition risk and malnutrition diagnosis (87 FR 49239 through 49246). In the FY 2025 IPPS/LTCH PPS final rule we modified the MCS eCQM to expand the population assessed to include patients 18 years of age and older (89 FR 69557 through 69560). We are seeking comments on tools and measures that assess optimal nutrition and preventive care in the Hospital IQR Program. Assessments for nutritional status may include various strategies, guidelines, and practices designed to promote healthy eating habits and ensure individuals receive the necessary nutrients for maintaining health, growth, and overall well-being. Such assessments may also include aspects of health that support or mediate nutritional status, such as physical activity and sleep. In this context, preventive care plays a vital role by proactively addressing factors that may lead to poor nutritional status or related health issues. These efforts not only support optimal nutrition but also work to prevent conditions that could otherwise hinder an individual's health and nutritional needs. Please provide feedback on the relevant aspects of optimal nutrition and preventive care for the Hospital IQR Program.

While we will not be responding to specific comments in response to this RFI in the FY 2026 IPPS/LTCH PPS final rule, we intend to use this input to inform our future measure development efforts.

(b) Background

We refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41147 and 41148), in which we describe the Meaningful Measures Framework. In 2021, we launched Meaningful Measures 2.0 to promote innovation and modernization of all aspects of quality, addressing a wide variety of settings, interested parties, and measure requirements.[312]

There are statutory requirements that the Secretary of HHS make public certain quality and efficiency measures that the Secretary is considering for adoption through rulemaking under Medicare.[313] To comply with those requirements, the Consensus-Based Entity (CBE), currently Battelle, convenes the Partnership for Quality Measurement (PQM), which is comprised of clinicians, patients, measure experts, and health information technology specialists, to participate in the pre-rulemaking process and the measure endorsement process. We refer readers to the FY 2025 IPPS/LTCH PPS final rule and the PQM website[314] for a more detailed discussion on the updated pre-rulemaking measure reviews (PRMR) process (89 FR 69457 through 69459).

3. Proposed Refinements to Current Measures in the Hospital IQR Program Measure Set

We propose refinements to two measures that are currently in the Hospital IQR Program measure set: (1) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Ischemic Stroke Hospitalization, beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination; and (2) Hospital-Level, Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April

[309] These rules are: the FY 2010 IPPS/LTCH PPS final rule (74 FR 43860 through 43861); the FY 2011 IPPS/LTCH PPS final rule (75 FR 50180 through 50181); the FY 2012 IPPS/LTCH PPS final rule (76 FR 51605 through 61653); the FY 2013 IPPS/LTCH PPS final rule (77 FR 53503 through 53555); the FY 2014 IPPS/LTCH PPS final rule (78 FR 50775 through 50837); the FY 2015 IPPS/LTCH PPS final rule (79 FR 50217 through 50249); the FY 2016 IPPS/LTCH PPS final rule (80 FR 49660 through 49692); the FY 2017 IPPS/LTCH PPS final rule (81 FR 57148 through 57150); the FY 2018 IPPS/LTCH PPS final rule (82 FR 38326 through 38328 and 82 FR 38348); the FY 2019 IPPS/LTCH PPS final rule (83 FR 41538 through 41609); the FY 2020 IPPS/LTCH PPS final rule (84 FR 42448 through 42509); the FY 2021 IPPS/LTCH PPS final rule (85 FR 58926 through 58959); the FY 2022 IPPS/LTCH PPS final rule (86 FR 45360 through 45426); the FY 2023 IPPS/LTCH PPS final rule (87 FR 49190 through 49310); the FY 2024 IPPS/LTCH PPS final rule (88 FR 59144 through 59203); and the FY 2025 IPPS/LTCH PPS final rule (89 FR 69515 through 69577).

1, 2023–March 31, 2025 reporting period/FY 2027 payment determination.

a. Proposed Modification of the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Ischemic Stroke Hospitalization Measure Beginning With the FY 2027 Payment Determination

(1) Background

Every year more than 795,000 people in the U.S. have a stroke.[315] In 2022, strokes were the fifth leading cause of death in the U.S.[316] Strokes are also associated with a high morbidity rate, causing over half of stroke survivors ages 65 years or older to suffer from reduced mobility.[317] Between 2019 and 2020 alone, stroke-related costs totaled almost $56.2 billion in the U.S., including costs for healthcare services, medications, and missed workdays.[318]

Stroke outcomes can vary greatly depending on the facility where patients receive care.[319] This was demonstrated in a study of Medicare patients ages 65 years or older admitted to a hospital for acute ischemic stroke, which found that stroke patients treated at hospitals with a higher volume of stroke patients had lower mortality rates and better outcomes.[320] This association is likely due to high-volume hospitals having more experience in treating strokes and developing improved processes of care.[321] Research has shown that improving processes for responding to strokes leads to better patient outcomes. For example, having a dedicated stroke team on call provides hospitals with expertise in a variety of relevant areas including emergency medicine, vascular neurology, radiology, pharmacology, and laboratory analysis. Similarly, setting up organized workflows for diagnosing and treating stroke improves response times for a condition for which patient outcomes are highly dependent on the timeliness of treatment.[322]

To improve stroke outcomes for patients, we adopted the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Ischemic Stroke Hospitalization measure (hereinafter referred to as the MORT–30–STK measure) in the Hospital IQR Program beginning with the FY 2016 payment determination (78 FR 50798 through 50802). The MORT–30–STK measure assesses the hospital-level, risk-standardized mortality rate after admission for acute ischemic stroke to any non-Federal acute care hospital. The measure includes Medicare fee-for-service (FFS) patients ages 65 years or older and the outcome is all-cause 30-day mortality.

When this measure was adopted, most Medicare patients were enrolled in the Medicare FFS Program.[323] However as of November 2024, roughly 50 percent of Medicare beneficiaries—34.4 million people—were enrolled in Medicare Advantage (MA) plans.[324] Including MA beneficiaries in hospital outcome measures would help ensure that hospital quality is measured across all Medicare beneficiaries, and would address concerns about differences in care quality for MA and Medicare FFS beneficiaries.[325] [326] Moreover, inclusion of MA beneficiaries increases the size of the measure's cohort, which enhances the reliability of the measure scores and allows more low-volume hospitals to receive measure results.

(2) Overview of Measure Updates

We propose modifications to the current MORT–30–STK measure with updates in the Hospital IQR Program beginning with the FY 2027 payment determination. Specifically, we propose to make two substantive updates to the MORT–30–STK measure: (1) we would expand the measure's inclusion criteria to include MA patients; and (2) we would shorten the performance period from 3 years to 2 years. The addition of MA encounter data to the measure roughly doubles the cohort size, improves measure reliability, and more accurately reflects the quality of care for both Medicare FFS and MA beneficiaries.

The proposed measure modifications align with our Meaningful Measures 2.0 priority area of ''Seamless Care Coordination'', which includes leveraging processes and activities to ensure successful transitions of care and coordination.[327] This measure promotes successful transitions of care for stroke patients discharged from acute care settings, as well as reduces short-term, preventable mortality rates. Patient outcomes depend on many aspects of care including communication between providers, prevention of and response to complications, patient safety, and coordinated transitions to the outpatient and rehabilitation care settings. The proposed modifications to the measure would better reflect overall patient outcomes in each hospital and inform quality improvement activities.

We propose to implement these changes beginning with the FY 2027 payment determination. The proposed new reporting period for the measure for the FY 2027 payment determination would be changed from July 1, 2022, through June 30, 2025, to July 1, 2023, through June 30, 2025.

(3) Technical Updates

We are also making two technical updates beginning with the FY 2027 payment determination. Specifically, the technical updates to the measure include: (1) updating the risk adjustment model to use individual International Classification of Diseases (ICD–10) codes instead of Hierarchical Condition Categories (HCCs) to improve the measure's risk adjustment methodology; and (2) removing the exclusion of patients with a secondary diagnosis code of COVID–19 coded as present on admission on the index admission claim. We refer readers to section X.C.5. of the preamble of this proposed rule for further discussion on removal of the COVID–19 diagnosis

exclusion to measures in the Hospital IQR Program.

We are updating the measure's risk adjustment methodology to use individual ICD–10 codes. The current risk adjustment strategy for this measure involves grouping ICD–10 diagnosis codes from CMS's HCC system into clinically relevant categories. Then we evaluate the HCCs for statistical association with the measure's outcome.[328] However, research has indicated that using individual ICD–10 codes in place of HCCs could significantly improve the model performance of the mortality measures.[329] To better leverage the data and analytical advances since the measure was initially developed, we created a new approach to use individual ICD–10 codes for risk adjustment instead of grouping them into categories. With this new approach, the ability of the risk adjustment model to account for stroke severity was significantly better (c-statistic improved from 0.79 to 0.91).[330] We did not adjust for social risk variables in the measure as neither of the two social risk factors tested (Area Deprivation Index and dual eligibility) showed significant effect. Given these findings and the complex pathways that could explain any relationship between social risk and mortality/complications, we chose not to adjust the measure for social risk.[331]

For measure specification details on the updates to this measure, we refer readers to the 2024 Condition-Specific Measure Updates and Specifications Report available at: *https://qualitynet.cms.gov/inpatient/measures/mortality/methodology*.

(4) Measure Calculation

The proposed modified MORT–30–STK measure would continue to measure 30-day, all-cause mortality. We define mortality as death from any cause within 30 days of the start of the index admission for patients discharged from the hospital with a principal discharge diagnosis of acute ischemic stroke. The cohort for the modified measure would include admissions for patients ages 65 years or older discharged from the hospital with a principal diagnosis of acute ischemic stroke, who were enrolled in Medicare FFS or MA for the 12 months prior to the date of admission, as well as enrolled in Medicare FFS or MA during the index admission.

The proposed updates to the measure exclude all of the following admissions from its cohort:

- Patients with inconsistent or unknown vital status, or other unreliable demographic data (for example, age and gender).
- Patients who were transferred from another acute care facility.
- Patients enrolled in the Medicare hospice program any time in the 12 months prior to the index hospitalization.
- Patients who were discharged against medical advice.

If a patient has more than one eligible stroke hospitalization during the reporting period, then we randomly select one index admission for inclusion in the cohort and exclude the other admissions within that reporting period.[332] The measure currently adjusts for factors including age, comorbidities, indications of patient frailty, and stroke severity upon admission when comparing a patient's risk of death at each facility.[333]

The proposed modifications to the MORT–30–STK measure would still be calculated using a risk-standardized mortality rate. This is calculated by first determining the ratio of the number of predicted deaths to the number of expected deaths and then multiplying the ratio by the national unadjusted mortality rate. The ratio is greater than one for hospitals that have more deaths than would be expected for an average hospital with similar cases and less than one if the hospital has fewer deaths than would be expected for an average hospital with similar cases. This approach is analogous to a ratio of an ''observed'' or ''crude'' rate to an ''expected'' or risk-adjusted rate used in other similar types of statistical analyses. It allows for a comparison of a particular hospital's performance to an average hospital's performance with the same case mix.

We propose to expand the applicable population to include MA patients ages 65 years or older in addition to Medicare FFS patients ages 65 years or older. Inclusion of MA beneficiaries has important benefits for the reliability and validity of the measure. The combination of MA beneficiaries with Medicare FFS beneficiaries significantly increases the size of the measure's cohort, which enhances the reliability of the measure scores, leading to more hospitals receiving results and increasing the chance of identifying meaningful differences in quality for some low-volume hospitals. With the improvements to the measure reliability, we propose to shorten the MORT–30–STK measure reporting period from 3 to 2 years. Based on our analysis that included MA patients in addition to the existing MORT–30–STK measure cohort, we found that the measure could achieve a satisfactory level of reliability with a two-year reporting period. The median reliability for the two-year performance period is 0.911, ranging from 0.623 to 0.994.[334] Shortening the reporting period would allow measure results to reflect more recent hospital performance, and therefore provide more actionable insights for quality improvement.

For more information regarding the proposed modifications to the MORT–30–STK measure specifications, we refer readers to the 2024 Condition-Specific Measure Updates and Specifications Report available at: *https://qualitynet.cms.gov/inpatient/measures/mortality/methodology*.

(5) Pre-Rulemaking Process and Measure Endorsement

(a) Recommendation From the Pre-Rulemaking Measure Review (PRMR) Process

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69457 through 69458) for details on the PRMR process, including the voting procedures used to reach consensus on measure recommendations. The PRMR Hospital Committee met on January 15 and 16, 2025, to review measures included by the Secretary on the publicly available ''2024 Measures Under Consideration List'' (MUC List), including the MORT–30–STK measure

[333] Centers for Medicare & Medicaid Services. (April 2024). 2024 Condition-Specific Measure Updates and Specifications Report: AMI, HF, COPD, Pneumonia, and Stroke Mortality. Available at: *https://qualitynet.cms.gov/inpatient/measures/mortality/methodology*.

[334] Yale New Haven Health Services Corporation—Center for Outcomes Research and Evaluation. (March 2024). 2024 Supplemental Measure Methodology: Condition-and Procedure-Specific Mortality/Complications. Available at: *https://p4qm.org/measures/4595*.

(MUC2024–043),[335] [336] and provided a recommendation on the potential use of this measure in the Hospital IQR Program.

The voting results of the PRMR Hospital Recommendation Committee for the proposed updates to the MORT–30–STK measure within the Hospital IQR Program were: 18 committee members recommended adopting the measure into the Hospital IQR Program without conditions; 7 committee members recommended adoption with conditions; 1 committee member voted not to recommend the measure for adoption.[337] Taken together, 96 percent of the votes were to recommend with conditions. Thus, the committee reached consensus and recommended the updates to the MORT–30–STK measure within the Hospital IQR Program with conditions.[338]

The conditions that the committee recommended were: (1) CBE endorsement; (2) CMS consider restructuring the measure to reduce the time lag and provide hospitals with more timely and useful data; and (3) CMS consider adding risk stratification for pre-existing do-not-resuscitate orders.[339] As discussed later in this section, the CBE voted to endorse the measure and therefore the first condition has been met. Regarding the second condition to reduce the reporting period, we propose to update the MORT–30–STK measure to shorten the reporting period from 3 to 2 years, which our current analysis shows is the shortest reporting period for which the results remain reliable and valid, and which significantly improves the timeliness of the data for this measure.

We also acknowledge the condition related to stratification of pre-existing do-not-resuscitate orders and will consider making this change in future updates to the measure, if our monitoring and evaluation of the measure demonstrate this stratification would be beneficial. We propose to adopt modifications to the MORT–30–STK measure in the Hospital IQR Program having taken into consideration the conditions raised by the PRMR Hospital Committee.

(b) Measure Endorsement

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69458 through 69459) for details on the measure endorsement and maintenance (E&M) process, including the measure evaluation procedures the E&M Committees use to evaluate measures and whether they meet endorsement criteria. The measure developer submitted the MORT–30–STK measure to the CBE in 2016 but it was not endorsed because the measure was not risk adjusted for stroke severity. When the measure developer submitted the measure to the CBE in 2021, the CBE did not endorse the measure because the committee did not reach consensus on whether in-hospital stroke mortality is an appropriate measure of quality and if there was sufficient evidence that clinical actions could be performed to reduce stroke mortality. The measure developer submitted the measure (CBE #4595) for endorsement again for the Fall 2024 cycle, which reflects the proposed modifications in the measure.[340] The CBE voted to endorse the measure on February 7, 2025.[341]

(6) Data Sources, Submission, and Public Reporting

This measure is calculated using administrative claims data routinely generated and submitted to CMS for all Medicare beneficiaries, which includes MA and Medicare FFS beneficiaries. Therefore, hospitals would not be required to report any additional data for this measure. We propose to add MA encounter data to the measure calculation in order to calculate measure results that include those patients. The MORT–30–STK measure would be calculated and publicly reported on an annual basis using a rolling 24 months of prior data for the measurement period, consistent with the approach currently used for the Thirty-day Risk-Standardized Death Rate Among Surgical Inpatients with Complications measure (89 FR 69545 through 69552) and the CMS Patient Safety and Adverse Events Composite (PSI 90) measure, currently reported in the Hospital-Acquired Condition (HAC) Reduction Program (78 FR 50712 through 50718). We would then publicly report measure results on the Compare tool, currently available at: *https://www.medicare.gov/care-compare,* beginning in July 2026 or as soon as feasible.

We invite public comment on our proposal to modify the MORT–30–STK measure beginning with the FY 2027 payment determination.

b. Proposed Modification to the Hospital-Level, Risk-Standardized Complication Rate Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) Measure Beginning With the FY 2027 Payment Determination

(1) Background

THA and TKA are commonly performed procedures for the Medicare population that improve quality of life.[342] From April 1, 2018–March 31, 2021, there were 563,236 THA and TKA procedures performed on Medicare FFS patients 65 years and older.[343] By 2040, the number of THA procedures is projected to increase by 176 percent and the number of TKA procedures is projected to increase by 139 percent.[344] While these procedures can dramatically improve a person's quality of life, they are costly. Based on projections of the annual demand for THA and TKA procedures, researchers estimate that Medicare expenditures on Total Joint Arthroplasty could climb to $50 billion by 2030.[345] Complications such as joint infections and sepsis following elective THA and TKA

[345] Wilson, N.A., et al., Hip and knee implants: current trends and policy considerations. Health Aff (Millwood), 2008. 27(6): p. 1587–98.

procedures are rare, but the results can be devastating. Evidence shows that periprosthetic joint infection rates following THA and TKA were 1.9 percent (1.5 percent to 2.2 percent) and 1.5 percent (1.3 percent to 1.7 percent) following TKA and THA, respectively.[346] From 2011 to 2021, reported 30- and 90-day death rates following THA are 0.49 percent and 0.47 percent, respectively.[347] Rates for pulmonary embolism following THA range from 0.5 percent to 1.22 percent [348] and range from 0.5 percent to 0.9 percent [349] following TKA. Rates for wound infection in Medicare population-based studies vary between 0.21 percent and 1.0 percent.[350] Rates for sepsis/septicemia range from 0.09 percent during the index admission to 0.3 percent 90 days following discharge for primary TKA. Rates for bleeding and hematoma following TKA range from 0.94 percent to 1.7 percent.[351]

The Hospital-Level, Risk-Standardized Complication Rate Following Elective Primary THA and or TKA measure (hereinafter referred to as the COMP–HIP–KNEE measure) was first adopted in the Hospital IQR Program in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53516 through 53521). The measure estimates a hospital-level, risk-standardized complication rate associated with elective primary THA and/or TKA procedures. More recently, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49263 through 49267), we adopted a re-evaluated COMP–HIP–KNEE measure into the Hospital IQR Program that included expanded outcomes. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59067 through 59070), the re-evaluated COMP–HIP–KNEE measure was adopted in the Hospital VBP Program in accordance with statutory requirements of section 1886(o)(2)(C)(i) of the Act and 42 CFR 412.164(b), which state that measures must be publicly reported for 1 year in the Hospital IQR Program prior to the beginning of the performance period in the Hospital VBP Program. In that same final rule, we finalized removal of the re-evaluated COMP–HIP–KNEE measure in the Hospital IQR Program beginning with the FY 2030 payment determination to prevent duplicative reporting of the measure in a quality reporting program and value-based program, and to simplify administration of both programs (88 FR 59168 through 59170). The clinical outcomes of the COMP–HIP–KNEE measure are a high priority for CMS and this measure provides important data on patient safety and complications. We are therefore proposing modifications to the COMP–HIP–KNEE measure in the Hospital IQR Program beginning with the FY 2027 payment determination, prior to its removal from the Hospital IQR Program beginning with the FY 2030 payment determination (88 FR 59168 through 59170). We refer readers to section VI.L.2.a. of the preamble of this proposed rule for more details on our proposal to adopt these same updates for the COMP–HIP–KNEE measure into the Hospital VBP Program beginning with the FY 2033 program year. If finalized, the proposed updated COMP–HIP–KNEE measure will have been publicly reported in the Hospital IQR Program for at least 1 year in accordance with statutory requirements before adoption into the Hospital VBP Program.

(2) Overview of Measure Updates

We propose modifications to the current COMP–HIP–KNEE measure in the Hospital IQR Program beginning with the FY 2027 payment determination. Specifically, we propose to modify the COMP–HIP–KNEE measure with two substantive updates: (1) expand the measure's inclusion criteria to include MA patients; and (2) shorten the performance period from 3 years to 2 years. The addition of MA encounter data to the measure roughly doubles the cohort size, improves measure reliability, and more accurately reflects the quality of care for both Medicare FFS and MA beneficiaries. If finalized, we would remove the updated COMP–HIP–KNEE measure in the Hospital IQR Program beginning with the FY 2030 payment determination, as finalized in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59168 through 59170), to prevent duplicative reporting of the measure in a quality reporting program and value-based program, and to simplify administration of both programs.

The proposed modifications of the updated COMP–HIP–KNEE measure would support the Meaningful Measures 2.0 priority area of ''Chronic Conditions'' that aims to improve disease-specific outcomes, reduce preventable emergency department usage and admissions, and reduce mortality.[352]

(3) Technical Updates

We are also making two technical updates to the proposed updated COMP–HIP–KNEE measure. Specifically, technical updates to the measure include: (1) update the risk adjustment model to use individual ICD–10 codes instead of HCCs to improve the measure's risk adjustment methodology; and (2) remove the exclusion of patients with a secondary diagnosis code of COVID–19 coded as present on admission on the index admission claim. We refer readers to section X.C.5. of the preamble of this proposed rule for further discussion on removal of the COVID–19 diagnosis exclusion to measures in the Hospital IQR Program.

We are updating the COMP–HIP–KNEE measure's risk-adjustment methodology to use individual ICD–10 codes using patient-level demographics (age), patient-level health status and clinical conditions (case-mix adjustment; severity of illness; comorbidities), and patient functional status (body function). These clinically relevant risk variables would be identified from inpatient and outpatient claims in the 12 months prior to the procedure. The current risk adjustment strategy for this measure involves grouping ICD–10 diagnosis codes from CMS's HCC system into clinically relevant categories. Then we evaluate the HCCs for statistical association with the measure's outcome.[353] However, research has indicated that using individual ICD codes in place of HCCs could significantly improve the model performance of the mortality measures.[354] To better leverage the data

[354] Krumholz, H.M., Coppi, A.C., Warner, F., Triche, E.W., Li, S.X., Mahajan, S., Li, Y., Bernheim,

and analytical advances since the measure was initially developed, we created a new approach to use individual ICD–10 codes for risk adjustment instead of grouping them into categories. With this new approach, the discriminative performance of the risk adjustment model as measured by c-statistic was significantly better and the calibration performance also proved to be satisfactory.[355] We did not adjust for social risk variables in the measure as neither of the two social risk factors tested (Area Deprivation Index and dual eligibility) showed significant effect. Given these findings and the complex pathways that could explain any relationship between social risk and mortality/complications, we chose not to adjust the measure for social risk.

For measure specification details on the updates to this measure, we refer readers to the Measure Methodology Report in the Hip and Knee Arthroplasty Complications (ZIP) folder on the QualityNet website, available at: *https://qualitynet.cms.gov/inpatient/measures/complication/methodology.*

(4) Measure Calculation

The outcome for the proposed updated COMP–HIP–KNEE measure would be a complication occurring during the index admission (not coded as present on admission) through 90 days post-date of the index admission. Complications are counted in the measure only if they occur during the index hospital admission or during a readmission. The complication outcome is a dichotomous (yes/no) outcome. If a patient experiences one or more of these complications in the applicable period, the complication outcome for that patient would be counted in the measure as a ''yes''.

The proposed updated measure includes one of the following complications:

- Acute myocardial infarction during the index admission or a subsequent inpatient admission that occurs within 7 days from the start of the index admission.
- Pneumonia or other acute respiratory complication during the index admission or a subsequent inpatient admission that occurs within 7 days from the start of the index admission.
- Sepsis/septicemia/shock during the index admission or a subsequent inpatient admission that occurs within 7 days from the start of the index admission.
- Surgical site bleeding or other surgical site complication during the index admission or a subsequent inpatient admission within 30 days from the start of the index admission.
- Pulmonary embolism during the index admission or a subsequent inpatient admission within 30 days from the start of the index admission.
- Death during the index admission within 30 days from the start of the index admission or within 30 days from the start of the index admission.
- Mechanical complication during the index admission or a subsequent inpatient admission that occurs within 90 days from the start of the index admission.
- Periprosthetic joint infection/wound infection or other wound complication during the index admission or a subsequent inpatient admission that occurs within 90 days from the start of the index admission.

The code list used to define the mechanical complication outcome includes clinically vetted mechanical complication ICD–10 codes. For a full list of these codes, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 49264).

We propose to expand the COMP–HIP–KNEE measure cohort to include both Medicare FFS and MA beneficiaries, aged 65 years or older, having a qualifying elective primary THA or TKA procedure during the index admission. Beneficiaries must be enrolled in Medicare FFS or MA for the 12 months prior to the date of admission and enrolled in Medicare FFS or MA during the index admission. Our analysis found that the addition of MA admissions into the COMP–HIP–KNEE measure approximately doubled the admissions in the cohorts and led to improved measure reliability and more hospitals and beneficiaries included for measure calculation.[356] Based on the results of that analysis, we found that the measure could achieve a satisfactory level of reliability (median reliability score 0.801, ranging from 0.560 to 0.997, with the 25th and 75th percentiles 0.683 and 0.891, respectively) with a 2-year reporting period and are therefore proposing to shorten the reporting period from 3 to 2 years.[357] This median reliability estimate exceeds the reliability of 0.6, which the CBE considers acceptable. Shortening the reporting period would allow measure results to reflect more recent hospital performance and, therefore, provide more actionable insights for quality improvement.

Consistent with the COMP–HIP–KNEE measure currently reported in the Hospital IQR Program, the proposed update to the COMP–HIP–KNEE measure would exclude patients from the measure cohort index admissions for patients who did not have at least 90 days post-discharge enrollment in Medicare FFS or MA, who were discharged against medical advice, or who had more than two THA/TKA procedure codes during the index hospitalization.[358]

The proposed modifications to the COMP–HIP–KNEE measure would still be calculated using a hospital risk-standardized complication rate by producing a ratio of the number of ''predicted'' complications (that is, the adjusted number of complications at a specific hospital based on its patient population) to the number of ''expected'' complications (that is, the number of complications if an average quality hospital treated the same patients) for each hospital and then multiplying the ratio by the national observed complication rate. For each hospital, the numerator of the ratio is the number of complications within the specified time period (up to 90 days) predicted on the basis of the hospital's performance with its observed case mix, and the denominator is the number of complications expected based on the Nation's performance with that hospital's case mix. This approach is analogous to a ratio of ''observed'' to ''expected'' used in other types of statistical analyses. It would allow for a comparison of a particular hospital's performance to an average hospital's performance with the same case mix.

For measure specification details on the updates to this measure, we refer readers to the Measure Methodology Report in the Hip and Knee Arthroplasty Complications (ZIP) folder on the QualityNet website, available at: *https://qualitynet.cms.gov/inpatient/measures/complication/methodology.*

(5) Pre-Rulemaking Process and Measure Endorsement

(a) Recommendation From the Pre-Rulemaking Measure Review (PRMR) Process

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69457 through 69458) for details on the PRMR process including the voting procedures used to reach consensus on measure recommendations. The PRMR Hospital Committee met on January 15 and 16, 2025, to review measures included by the Secretary on the publicly available 2024 Measures Under Consideration (MUC) List, including the COMP–HIP–KNEE measure (MUC2024–042),[359] and to vote on a recommendation regarding use of this measure in the Hospital IQR Program.

The PRMR Hospital Recommendation Committee reached consensus and voted to recommend this measure for the Hospital IQR Program with conditions.[360] Eighteen of 27 members of the committee recommended adopting the measure into the Hospital IQR Program without conditions; 8 members of the committee recommended adoption with conditions; 1 member of the committee did not recommend this measure for adoption. Taken together, 96 percent of the votes were to recommend this measure for the Hospital IQR Program with conditions. Thus, the committee reached consensus and recommended the updated COMP–HIP–KNEE measure for adoption into the Hospital IQR Program with conditions.[361]

The committee supported this measure, particularly with the addition of MA data to improve statistical reliability and make the measure more relevant for rural areas, with a call for transparency and analytical rigor to understand the impact of additional MA data. The committee raised concerns regarding the potentially uneven distribution of MA program participation, the shifting of benchmarks with new MA beneficiaries, and the implications of surgical procedures moving to ambulatory care settings which may leave more complex patients in inpatient facilities. Thus, the committee members submitted the following conditions for recommendations into the Hospital IQR Program: (1) stratified reporting; (2) providing hospitals with feedback on outcome variations between MA beneficiaries and Medicare Shared Savings Program (MSSP) populations; (3) breaking down performance data by payer; (4) re-evaluating the risk model as the measure matures to identify any adjustments needed for variation at the patient level across plans; and (5) considering if the reporting period is sufficient to avoid time lags that may hinder data usefulness and measure improvement.[362]

In response to concerns about uneven distributions among MA and Medicare FFS beneficiaries, based on our analysis, the observed complication rate for MA beneficiaries was 3.7 percent, 3.2 percent among Medicare FFS beneficiaries only, and 3.4 percent complication rate for MA and Medicare FFS beneficiaries, showing a difference of −0.5 percent between Medicare FFS only and MA only beneficiaries.[363] Thus, the variation between the two cohorts did not vary significantly for complication rates and does not raise concerns regarding uneven distribution of two cohorts for this measure. In regard to providing hospitals with stratified reporting results, we note that hospitals currently receive confidential feedback reports containing details on measure results, but they do not stratify results by payer. We will consider providing additional confidential feedback to hospitals in the future, including results stratified by MA and Medicare FFS beneficiaries. Regarding evaluating the risk adjustment model, as a part of routine measure maintenance, we conduct ongoing monitoring and evaluation analyses to watch for any unintended consequences. Regarding the condition related to lag time between performance and when results are received, one of the proposed updates is to shorten the reporting period from 3 to 2 years, which our current analysis shows is the shortest reporting period for which the results remain reliable and valid and which significantly improves the timeliness of the data for this measure. However, we will continue to analyze measure results and if the evidence shows that a reporting period that is shorter than 2 years produces valid and reliable measure results, we will consider proposing to adopt that shorter reporting period in the future. After taking these recommendations and concerns into consideration, we propose to adopt the updated COMP–HIP–KNEE measure in the Hospital IQR Program.

(b) Measure Endorsement

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 89 FR 69458 through 69459) for details on the E&M process including the procedures the CBE's E&M Committees use to evaluate measures and determine whether they meet endorsement criteria. The COMP–HIP–KNEE measure (CBE #1550) was reviewed by the CBE in the Fall 2020 cycle, and was re-endorsed July 2021.[364] The COMP–HIP–KNEE measure was most recently submitted to the CBE's E&M Cost and Efficiency Committee in the Fall 2024 E&M review cycle, which included the modifications we propose to adopt in this proposed rule as well as the technical updates to the risk methodology. The E&M Cost and Efficiency Committee voted, and did not reach consensus on this measure on February 10, 2025.[365] [366] Per the current CBE, consensus is reached when 75 percent of the committee vote to endorse, endorse with conditions, or remove endorsement or the combination of endorse and endorse with conditions reach 75 percent. Thus, with the combination of endorse and endorse with conditions only reaching 73 percent the measure was not re-endorsed by the CBE.[367] [368] The measure developer submitted an appeal for the endorsement decision with the following rationale: (1) procedural error in the endorsement process with an excessive focus on outpatient setting exclusions; and (2) misapplication of

measure evaluation criteria, particularly risk adjustment.[369] The CBE convened the E&M Fall 2024 appeals committee meeting on March 31, 2025, where the committee voted on whether to uphold the appeals request based on the rationale. The committee voted to uphold the appeals request, with a vote of 100 percent for both rationales, thereby overturning the endorsement decision of non-consensus. Thus, the COMP–HIP–KNEE measure was endorsed with conditions. The two conditions for endorsement were: (1) explore the proportion of procedures done in the ambulatory surgical centers and hospital outpatient department setting and evaluate the need for adjustment based on the impact of case mix; and (2) explore additional approaches to the reliability assessment to account for low-volume facilities.

Regarding the first criteria, to evaluate the need for adjustments based on case mix of patients, we note that this measure focuses on higher-risk patients and is intentionally narrow to capture significant complications, such as sepsis, pulmonary embolism, or a second surgery which should be treated in the inpatient setting. We wish to emphasize that those having elective THA or TKA procedures within the inpatient setting must meet certain criteria, resulting in a smaller cohort of patients, and in communities where there are no ambulatory care centers the patient would be treated in the hospital outpatient department and would not be counted in this measure. Regarding the second condition for endorsement, to explore additional approaches to the reliability assessment to account for low-volume facilities, we emphasize that the goal of this measure and adjusting for low-volume is to make performance scores available for as many providers as possible while trying to avoid misclassification or profiling of providers. We note that scores are not available for facilities with fewer than 25 cases, because the number of cases may be too small for meaningful results. Based on our evaluation of the endorsement criteria, these conditions have been met, and therefore, we consider this measure endorsed.

(6) Data Source, Submission and Public Reporting

The proposed updated COMP–HIP–KNEE measure would use index admission diagnoses and in-hospital comorbidity data from Medicare FFS claims or MA claims/encounters, or both. Additional comorbidities prior to the index admission are assessed using Part A inpatient, outpatient, and Part B office visit Medicare FFS claims and MA encounters in the 12 months prior to index (initial) admission. Enrollment status would be obtained from the Medicare Enrollment Database which contains beneficiary demographic, benefit/coverage, and vital status information. This measure uses readily available administrative claims data routinely generated and submitted to CMS for all Medicare beneficiaries, which includes Medicare Advantage and Medicare FFS beneficiaries. The updated COMP–HIP–KNEE measure would be calculated and publicly reported on an annual basis using a rolling 24 months of prior data for the measurement period, consistent with the approach currently used for the Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (89 FR 69545 through 69552) and CMS Patient Safety and Adverse Events Composite (PSI 90) measure, currently reported in the HAC Reduction Program (78 FR 50712 through 50718). As a claims-based measure, hospitals would not be required to submit data other than claims data, which we would use to calculate the measure. We are also proposing to adopt the modifications to the COMP–HIP–KNEE measure in the Hospital VBP Program in section VI.L.2.a. of the preamble of this proposed rule, beginning with the FY 2033 program year, after the updated measure has been publicly reported in the Hospital IQR Program for one year. Table X.C.1. summarizes the timelines for the current and proposed reporting of the COMP–HIP–KNEE measure in the Hospital IQR and VBP Programs.

TABLE X.C.1—SUMMARY OF CURRENT AND PROPOSED REPORTING OF THE COMP–HIP–KNEE MEASURE IN THE HOSPITAL IQR AND VBP PROGRAMS

In payment year or program year impacted	Version of measure in use	
	Hospital IQR Program	Hospital VBP Program
FY 2026	Modification 1 (Additional outcomes added) [1]	Original.[2]
FY 2027	Modification 2 (Add MA patients, shorten performance period) [3]	Original.
FY 2028	Modification 2	Original.
FY 2029	Modification 2	Original.
FY 2030	N/A	Modification 1.
FY 2031	N/A	Modification 1.
FY 2032	N/A	Modification 1.
FY 2033 and Subsequent Years	N/A	Modification 2.

[1] Modification 1 was finalized in the FY 2024 IPPS/LTCH PPS final rule.
[2] Original version of the measure was finalized in the FY 2015 IPPS/LTCH PPS final rule.
[3] Modification 2 is being proposed in this section of the proposed rule.

We propose to publicly report the updated COMP–HIP–KNEE measure in accordance with our previously established public reporting policy for the Hospital IQR Program.[370] Such reporting would be undertaken on the Compare tool available at: *https://www.medicare.gov/care-compare*, or its successor website, beginning in July 2026 or as soon as feasible.

We invite public comment on our proposal to adopt the updated COMP–HIP–KNEE measure into the Hospital IQR Program beginning with administrative claims and encounter data from April 1, 2023, through March 31, 2025, associated with the FY 2027 payment determination.

[369] Battelle—Partnership for Quality Measurement. (2025). E&M Fall 2024 Appeals Committee Meeting Summary Report. This report will be available through this link: *https://p4qm.org/EM/news-events.*

[370] See the FY 2025 IPPS/LTCH PPS final rule (89 FR 69577) for a brief overview of public display requirements under the Hospital IQR Program and our current public reporting policy.

4. Proposed Removals in the Hospital IQR Program Measure Set

We propose to remove four measures: (1) Hospital Commitment to Health Equity measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (2) COVID–19 Vaccination Coverage among Healthcare Personnel measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (3) Screening for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination; and (4) Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. We provide more details on each of these proposals in the subsequent sections.

a. Proposed Removal of the Hospital Commitment to Health Equity Measure Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

We refer readers to the FY 2023 IPPS/LTCH PPS final rule where we adopted the Hospital Commitment to Health Equity (hereafter referred to as HCHE) measure into the Hospital IQR Program (87 FR 49191 through 49201). We propose to remove the HCHE measure beginning with the FY 2026 payment determination due to the costs associated with achieving a high score on the measure outweighing the benefit of its continued use in the program. When adopted, we intended the collection of data described in the five domains of this measure to provide hospital leadership with meaningful and actionable health data to drive quality improvements to eliminate health disparities. Based on feedback received from hospitals as well as a re-focus on clinical outcome measures, for which the HCHE measure, as a structural measure, does not directly measure clinical outcomes, the burden of collecting this measure may outweigh the benefits. Removal of this measure would alleviate an estimated annual burden of approximately 525 hours, at a cost of $22,260, across all participating IPPS hospitals (87 FR 49385).

One of the goals of the Hospital IQR Program is to move forward in the least burdensome manner possible, while maintaining a parsimonious set of the most meaningful quality measures and continuing to incentivize improvement in the quality of care provided to patients. Removing this measure from the Hospital IQR Program is an effective way to accomplish this goal. Our priority is a re-focus on measurable clinical outcomes as well as identifying quality measures on topics of prevention, nutrition, and well-being, and as such we refer readers to our request for comment on ''Measure Concepts under Consideration for Future Years in the Hospital IQR Program-Request for Information (RFI): Well-Being and Nutrition'' in section X.C.2.a. The Hospital IQR Program continues to incentivize the improvement of care quality and health outcomes for all patients through measurement and transparency with other measures. It may be costly for hospitals to continue reporting on the HCHE measure and achieve high performance scores, and removal of this measure would make room both in the program's measure set to enhance the program's focus on measurable clinical outcomes and for hospital leadership to focus on other priority quality and safety areas. We acknowledge that some hospitals may have expended resources to implement some or all of the activities described in the HCHE measure attestation statements in order to be able to attest ''yes'' for measure reporting purposes, however, hospitals that had already implemented such activities prior to adoption of the measure would have been able to attest ''yes'' without expending similar resources.

If finalized, hospitals that do not report their CY 2024 reporting period data for the HCHE measure to CMS would not be considered noncompliant with the measure for purposes of their FY 2026 payment determination (that is, hospitals that do not report CY 2024 reporting period data would not be penalized for FY 2026 payments due to this measure). Any HCHE measure data received by CMS would not be used for public reporting or payment purposes.

If not finalized, hospitals that do not report their CY 2024 reporting data for the HCHE measure to CMS would be considered noncompliant with the measure for their FY 2026 payment determination, and would receive a letter of noncompliance after August 1, 2025, at which time the required 30-day reconsideration period would begin. Payment adjustments would apply to FY 2026 payment determinations fee-for-service claims as previously finalized.

We invite public comment on our proposal to remove the HCHE measure from the Hospital IQR Program beginning with the FY 2026 payment determination.

b. Proposed Removal of the COVID–19 Vaccination Coverage Among Healthcare Personnel Measure Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

We refer readers to the FY 2022 IPPS/LTCH PPS final rule where we adopted the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure (hereafter referred to as HCP COVID–19 Vaccination measure) into the Hospital IQR Program (86 FR 45374 through 45382) and the FY 2024 IPPS/LTCH PPS final rule where we modified the HCP COVID–19 Vaccination measure to account for updated vaccine guidance (88 FR 59137 through 59144).

We propose to remove the HCP COVID–19 Vaccination measure beginning with the CY 2024 reporting period/FY 2026 payment determination under removal Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program. We note that reporting on this measure currently requires reporting data on COVID–19 vaccination coverage among HCP for at least 1 week every month. This requires hospitals to track current vaccination status for all employees, licensed independent practitioners, adult students/trainers and volunteers and other contract personnel and log in to the National Healthcare Safety Network (NHSN) system to report the data monthly either manually in NHSN or by uploading a comma-separated value (CSV) file (86 FR 45377). The estimated burden of collecting this information annually across all 3,050 hospitals is between $1,378,600 and $1,608,570 annually. We refer readers to section XIII.B.4.e. of this proposed rule for more details on this estimated burden calculation.

When we first adopted the HCP COVID–19 Vaccination measure, the U.S. was in a Public Health Emergency (PHE) with millions of cases and over 550,000 COVID–19 deaths (86 FR 45374). While preventing the spread of COVID–19 remains a public health goal, the PHE ended on May 11, 2023.[371] In addition, the number of deaths due to COVID–19 in the U.S. has decreased since the adoption of this measure. In March 2021, when this measure was being proposed, the United States was averaging over 5,000 deaths per week. In April 2023, the last full month of the PHE, weekly number of deaths due to COVID–19 averaged around 1,300.[372]

[371] *https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html.*

[372] Provisional COVID–19 Deaths, by Week, in The United States, Reported to CDC. Accessed on March 27, 2025, via *https://covid.cdc.gov/covid-data-tracker/#trends_weeklydeaths_select_00.*

With the end of the PHE and the decrease in COVID–19 deaths, we believe the continued costs and burden to providers of tracking and monthly reporting on this measure outweigh the benefit of continued information collection on COVID–19 vaccination coverage among HCP. As it may be costly for hospitals to continue to report on the HCP COVID–19 Vaccination measure, removal of this measure would allow for the Hospital IQR Program to focus on goals such as clinical outcomes.

If finalized, hospitals that do not report their CY 2024 reporting period data for the HCP COVID–19 Vaccination measure to CMS would not be considered noncompliant with the measures for purposes of their FY 2026 payment determination (that is, hospitals that do not report CY 2024 reporting period data would not be penalized for FY 2026 payments due to this measure). Any HCP COVID–19 Vaccination measure data received by CMS would not be used for public reporting or payment purposes.

If not finalized, hospitals that do not report their CY 2024 reporting data for the HCP COVID–19 Vaccination measure to CMS would be considered noncompliant with the measure for their FY 2026 payment determination, and would receive a letter of noncompliance after August 1, 2025, at which time the required 30-day reconsideration period would begin. Payment adjustments would apply to FY 2026 payment determinations fee-for-service claims as previously finalized.

We invite public comment on our proposal to remove the HCP COVID–19 Vaccination measure from the Hospital IQR Program beginning with the FY 2026 payment determination.

c. Proposed Removal of Two Social Drivers of Health Measures Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

We propose to remove two social drivers of health (SDOH) process measures from the Hospital IQR Program beginning with the FY 2026 payment determination: Screening for Social Drivers of Health (SDOH–1) measure (adopted at 87 FR 49201 through 49215); and Screen Positive Rate for Social Drivers of Health (SDOH–2) measure (adopted at 87 FR 49215 through 49220).

We propose to remove the SDOH measures beginning with the FY 2026 payment determination under removal Factor 8, the costs associated with the measure outweigh the benefit of its continued use in the program. We have previously heard from some hospitals concerned with the costs and resources associated with screening patients via manual processes, manually storing such data, training hospital staff, and altering workflows for these measures. In the FY 2023 IPPS/LTCH PPS final rule, we estimated a total annual burden of 700,000 hours including hospital and patient burden, at a cost of $21,917,000 to screen all admitted patients in accordance with measure specifications for SDOH–1 (87 FR 49385 through 49386). For SDOH–2, we estimated a total annual burden of 525 hours across all IPPS hospitals, at a cost of $22,260 (87 FR 49385 through 49386). Further, we note that these measures document an administrative process and report aggregate level results, and do not shed light on the extent to which providers are ultimately connecting patients with resources or services and whether patients are benefiting from these screenings. We have concluded that the costs of the continued use of these measures in the Hospital IQR Program outweigh the benefits to providers and patients. Removal of these measures would alleviate the burden on hospitals to manually screen each patient and submit data each reporting cycle, allowing hospitals to focus resources on measurable clinical outcomes. This will also remove the patient burden associated with repeated SDOH screenings across multiple healthcare facilities. We refer readers to our request for comment, ''Measure Concepts under Consideration for Future Years in the Hospital IQR Program–Request for Information (RFI): Well-Being and Nutrition'' in section X.C.2.a. for more information regarding our areas of focus for new measures. We acknowledge that some hospitals may have expended resources to implement SDOH screenings, however, hospitals that had already implemented such screenings prior to adoption of the measures would not have expended similar resources. The objectives of the Hospital IQR Program continue to incentivize the improvement of care quality and health outcomes for all patients through transparency and use of appropriate quality measures.

If finalized, hospitals that do not report to CMS their CY 2024 reporting period data for the SDOH measures would not be considered noncompliant with the measures for purposes of their FY 2026 payment determination (that is, hospitals that do not report CY 2024 reporting period data would not be penalized for FY 2026 payments due to this measure). Any SDOH measure data received by CMS would not be used for public reporting or payment purposes.

If not finalized, hospitals that do not report their CY 2024 reporting data for the SDOH measures to CMS would be considered noncompliant with the measures for their FY 2026 payment determination, and would receive a letter of noncompliance after August 1, 2025, at which time the required 30-day reconsideration period would begin. Payment adjustments would apply to FY 2026 payment determinations fee-for-service claims as previously finalized.

We invite public comment on our proposal to remove the SDOH measures from the Hospital IQR Program beginning with the FY 2026 payment determination.

5. Technical Updates to the Specifications of the Hospital IQR Program Measures Beginning With the FY 2027 Program Year To Include Patients Diagnosed With COVID–19

We are removing the COVID–19 exclusion from all of the following Hospital IQR Program measures:

- MORT–30–STK, most recently discussed in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50798 through 50802) and proposed for modification in this proposed rule.
- COMP–HIP–KNEE, most recently discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49257 through 49263) and proposed for modification in this proposed rule.
- Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction (AMI Excess Days), most recently modified in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49269 through 49272).
- Excess Days in Acute Care after Hospitalization for Heart Failure (HF Excess Days), most recently discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49682 through 49690).
- Excess Days in Acute Care after Hospitalization for Pneumonia (PN Excess Days), most recently discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57142 through 57148).
- Hybrid Hospital-Wide All-Cause Readmission Measure (HWR), most recently modified in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59165 through 59168) and proposed for modification in this proposed rule.
- Hybrid Hospital-Wide All-Cause Risk Standardized Mortality Measure (HWM), most recently modified in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59161 through 59165) and proposed for modification in this proposed rule.

During the COVID–19 PHE, we updated the measures listed previously to exclude patients diagnosed with COVID–19, including a primary or

secondary diagnosis present on admission of COVID–19, from both the index admissions and readmissions. We stated that we were making these updates pursuant to the technical updates policy finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53504 through 53505). Under this policy, we finalized a subregulatory process to make nonsubstantive updates to measures used for the Hospital IQR Program (77 FR 53504 through 53505). We reiterated this policy in the FY 2020 IPPS/LTCH PPS final rule, for the HAC Reduction Program, stating our continued belief that the subregulatory process is the most expeditious manner possible to ensure that quality measures remain fully up to date while preserving the public's ability to comment on updates that so fundamentally change a measure that it is no longer the same measure that we originally adopted (84 FR 42385 through 42387).

We are providing notice in this proposed rule that we intend to remove the COVID–19 exclusion from the measures listed previously beginning with the FY 2027 program year. The exclusion began as a response to the COVID–19 PHE which expired May 11, 2023. This technical update will modify these measures to remove the exclusion of COVID–19 diagnosed patients from the index admissions and readmissions, including the removal of the exclusion of certain ICD–10 codes that represented patients with a secondary diagnosis of COVID–19, and the history of COVID–19 risk variable. Given the PHE expired approximately 2 years ago, hospitals have had adequate time to adjust to the presence of COVID–19 as an ongoing virus. Using data from the last 4 years, July 2020–June 2024, our internal analysis showed a decline of the number of patients excluded from the various measure cohorts. Therefore, removing the exclusion of COVID–19 patients will ensure that these measures continue to account for outcomes as intended and meet the goals of the Hospital IQR Program.

Technical specifications for all of the Hospital IQR Program measures, as well as additional resources, can be found on the QualityNet website (available at: *https://qualitynet.cms.gov/inpatient/iqr*).

6. Summary of Previously Finalized and Proposed Hospital IQR Program Measures

a. Summary of Previously Finalized and Proposed Hospital IQR Program Measures for the FY 2027 Payment Determination

This table summarizes the proposed and previously finalized Hospital IQR Program measure set for the FY 2027 payment determination:

TABLE X.C.2—MEASURES FOR THE FY 2027 PAYMENT DETERMINATION

Short name	Measure name	CBE No.*
National Healthcare Safety Network Measures		
HCP Influenza Vaccination	Influenza Vaccination Coverage Among Healthcare Personnel	0431
HCP COVID–19 Vaccination**	Quarterly Reporting of COVID–19 Vaccination Coverage among Healthcare Personnel.	3636
Claims-Based Patient Safety Measures		
Inpatient Surgical Complications Mortality Rate***.	Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications.	4125
Claims-Based Mortality/Complications Measures		
MORT–30–STK****	Hospital 30-Day, All-Cause, Risk Standardized Mortality-Rate Following Acute Ischemic Stroke Hospitalization with Claims-Based Risk Adjustment for Stroke Severity.	4595
COMP–HIP–KNEE****	Hospital-Level, Risk-Standardized Complication Rate (RSCR) Following Elective Primary THA and/or TKA.	1550

In the FY 2025 OPPS/ASC final rule (89 FR 94495 through 94499) we finalized an extension of voluntary reporting of linking variables and core clinical data elements for the Hybrid HWR measure and the Hybrid HWM measure for the FY 2026 and FY 2027 payment determinations. We refer readers to section X.C.7.c. of the preamble of this proposed rule for more detailed discussion.

******* The eCQM previously named Global Malnutrition Composite Score has been updated to Malnutrition Care Score. The short name has subsequently been updated to MCS eCQM.

7. Proposed Updates to the Form, Manner, and Timing of Hospital IQR Program Data Submission

We propose changes to our reporting and submission requirements for eCQMs and hybrid measures. We provide more details on these proposals in the subsequent sections. We are not proposing changes to the following requirements, and we have therefore omitted the following subsections from the Form, Manner, and Timing of Quality Data Submission section: procedural requirements; data submission requirements for chart-abstracted measures; sampling and case thresholds for chart-abstracted measures; HCAHPS Survey administration and submission requirements; data submission requirements for structural measures; data submission and reporting requirements for CDC NHSN measures; and data submission and reporting requirements for Patient-Reported Outcome-Based Performance Measures (PRO–PMs). We refer readers to the QualityNet website at: *https://qualitynet.cms.gov/inpatient/iqr* (or other successor CMS designated websites) for more details on the Hospital IQR Program data submission and procedural requirements.

a. Background

Sections 1886(b)(3)(B)(viii)(I) and (b)(3)(B)(viii)(II) of the Act state that the applicable percentage increase for FY 2015 and each subsequent year shall be reduced by one-quarter of such applicable percentage increase (determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act) for any subsection (d) hospital that does not submit data required to be submitted on measures specified by the Secretary in a form and manner and at a time specified by the Secretary. To participate successfully in the Hospital IQR Program, hospitals must comply with the specific procedural, data collection, submission, and validation requirements that we specify for the program.

b. Maintenance of Technical Specifications for Quality Measures

Section 412.140(c)(1) of title 42 of the Code of Federal Regulations (CFR) generally requires that a subsection (d) hospital participating in the Hospital IQR Program must submit to CMS data

on measures selected under section 1886(b)(3)(B)(viii) of the Act in a form and manner, and at a time, specified by CMS. The data submission requirements, specifications manual, measure methodology reports, and submission deadlines are posted on the QualityNet website at: *https://qualitynet.cms.gov* (or other successor CMS designated websites). The CMS Annual Update for the Hospital Quality Reporting Programs (Annual Update) contains the technical specifications for eCQMs. The Annual Update also contains updated measure specifications for the year prior to the reporting period. For example, for the CY 2025 reporting period/FY 2027 payment determination, hospitals are collecting and will submit eCQM data using the May 2024 Annual Update and any applicable addenda. The Annual Update and implementation guidance documents are available on the Electronic Clinical Quality Improvement (eCQI) Resource Center website at: *https://ecqi.healthit.gov/*.

Hospitals must register and submit quality data as described at 42 CFR 412.140(a). See 45 CFR part 160 and subparts A, C, and E of 45 CFR part 164.

c. Proposed Modification to the Reporting of the Hybrid Hospital-Wide All-Cause Readmission (HWR) and Hybrid Hospital-Wide All-Cause Risk Standardized Mortality (HWM) Measures

(1) Background

The Hospital IQR Program previously adopted two hybrid measures: (1) the Hybrid HWR measure; and (2) the Hybrid HWM measure. Hybrid measures use more than one data source for measure calculation. Specifically, the Hybrid HWR and Hybrid HWM measures are calculated using core clinical data elements (CCDEs), linking variables, and claims data (80 FR 49698). CCDEs are a set of clinical variables derived from electronic health records (EHRs) that can be used to risk adjust hospital outcome measures (80 FR 49699). Linking variables are administrative data that can be used to link or merge the CCDEs and claims data for measure calculation (80 FR 49703). These measures are designed to enhance risk adjustment of claims-based outcome measures by utilizing patient clinical data captured in EHRs (80 FR 49698).

Hospitals are currently required to report CCDEs (both vital signs and laboratory test results) on 90 percent of discharges and to submit four linking variables on 95 percent of discharges for both the Hybrid HWR and Hybrid HWM measures in a given reporting period beginning with mandatory reporting for the FY 2028 payment determination (89 FR 94495 through 94499). Hospitals must report 13 CCDEs (six vital signs and seven laboratory test results) for the Hybrid HWR measure and 10 CCDEs (four vital signs and six laboratory test results) for the Hybrid HWM measure.

(2) Proposed Decrease of the Hybrid Measures CCDE and Linking Variable Submission Thresholds Beginning With the FY 2028 Payment Determination

As a part of measure maintenance, we routinely monitor hospital performance on the Hospital IQR Program measures. The results of 2024 voluntary reporting for both the Hybrid HWR and Hybrid HWM measures indicated that three-fourths of the participating hospitals that submitted measure data during this voluntary period did not meet submission thresholds of 90 percent of discharges for the CCDEs and 95 percent of discharges for the linking variables. It is therefore likely that an even larger percentage of hospitals would not have met the current hybrid measure CCDE and linking variable submission thresholds if they had been required to report them during the July 1, 2022, through June 30, 2023, performance period. The hospitals that participated in voluntary reporting of these data consisted mostly of large, non-rural, non-critical access, and non-safety net hospitals.

In the CY 2025 OPPS/ASC final rule, we summarized feedback received on the reporting of the Hybrid HWR and Hybrid HWM measures (89 FR 94495 through 94499). Several commenters described challenges meeting the 90 percent thresholds for CCDEs and the 95 percent thresholds for linking variables and recommended reducing the required threshold percentages. A few commenters specifically recommended lowering the threshold for reporting laboratory results, which are included in the CCDEs. While lowering the thresholds would have been out-of-scope for the CY 2025 OPPS/ASC final rule, we stated our intent to propose lowering the thresholds in the FY 2026 IPPS/LTCH PPS proposed rule.

Based on the feedback from commenters and our analysis of the results from the voluntary reporting for both the Hybrid HWR and Hybrid HWM measures, we considered whether lowering the thresholds for CCDE and linking variables would increase the number of hospitals that were able to successfully report the hybrid measures without significantly decreasing reliability. The results of an internal analysis indicated that for both the Hybrid HWR and Hybrid HWM measures, allowing (1) fewer CCDEs to be submitted—up to two missing lab values and up to two missing vital signs—combined with (2) lowering the percentage of discharges meeting the CCDE lab values and vital signs threshold to 70 percent of discharges, significantly improves hospitals' ability to meet the measure reporting thresholds.[373] The same effect was observed for linking variables when lowering the threshold to 70 percent of discharges. While we established the current 90 and 95 percent thresholds for CCDEs and linking variables, respectively, based on initial measure testing to encourage data completeness, our recent analysis shows that these lower thresholds still demonstrate good reliability for measure calculation, while increasing the number of hospitals that were able to successfully report the hybrid measures.[374] [375] [376]

Therefore, we now propose to reduce the submission thresholds for both CCDE and linking variables to at least 70 percent of discharges for both the Hybrid HWR and Hybrid HWM measures. We selected the threshold of 70 percent to ensure successful submission for as many hospitals as possible, while still maintaining statistical validity.[377] We also propose to lower the number of required CCDE data elements for both the Hybrid HWR and Hybrid HWM measures to allow for up to two missing laboratory results and up to two missing vital signs. A hospital that submits CCDE and linking variable data for less than 70 percent of applicable patient discharges or that submits CCDE data with more than two missing laboratory results or more than two missing vital signs under either hybrid measure would not satisfy the measure's Hospital IQR Program requirements and would receive a one-fourth reduction to its Annual Payment Update (APU) for the applicable fiscal year.

We invite public comment on our proposals to reduce the number of required CCDEs, to allow up to two missing lab values and two missing vital signs, and to lower the required

[373] CMS. Internal Analysis. September 2024.

percentage of discharges meeting the CCDE and linking variable thresholds to 70 percent of discharges for the Hybrid HWR and Hybrid HWM measures beginning with the FY 2028 payment determination, which has a performance period of July 1, 2025, through June 30, 2026.

8. Hospital IQR Program Extraordinary Circumstances Exception (ECE) Policy

a. Background

Under our current Extraordinary Circumstances Exception (ECE) regulations, we have granted exceptions with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of a hospital (42 CFR 412.140(c)(2)). An exception may be granted for extraordinary circumstances including, but not limited to, natural disasters or systemic problems with data collection systems.[378] We refer readers to 42 CFR 412.140(c)(2) for our current ECE regulations, as well as the FY 2012 IPPS/LTCH PPS final rule (76 FR 51651), FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), and FY 2015 IPPS/LTCH PPS final rule (79 FR 50277) for further background and details of our ECE policy. We also refer readers to the QualityNet website for the specific requirements for submission of an ECE request in the Hospital IQR Program.[379]

Our ECE policy provides flexibility for Hospital IQR Program participants to ensure continuity of quality care delivery and measure reporting in the event of an extraordinary circumstance. For instance, we recognize that, in circumstances where a full exception is not applicable, it is beneficial for a hospital to report data later than the reporting deadline. Delayed reporting authorized under our ECE policy allows temporary relief for a hospital experiencing an extraordinary circumstance while preserving the benefits of data reporting, such as transparency and informed decision-making for beneficiaries and providers alike. Accordingly, we propose to update our regulations to specify that an ECE could take the form of an extension of time for a hospital to comply with a data reporting requirement if CMS determines that this type of relief would be appropriate under the circumstances.

b. Proposal To Update the Extraordinary Circumstances Exception (ECE) Policy for the Hospital IQR Program

We propose to update the current ECE policy codified at 42 CFR 412.140(c)(2) to include extensions of time as a form of relief and to further clarify the policy. Specifically, at proposed § 412.140(c)(2)(i), we propose that CMS may grant an ECE with respect to reporting requirements in the event of an extraordinary circumstance—defined as an event beyond the control of a hospital (for example a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing)—that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

We propose that the steps for requesting or granting an ECE would remain the same as the current ECE process, detailed by CMS at the QualityNet website or a successor website.[380] At proposed § 412.140(c)(2)(ii)(A), we propose that a hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred. Our current policy allows a request within 90 days; however, this proposed change would align the Hospital IQR policy with CMS systems implementation requirements across all quality reporting programs. Under this proposed codified policy, we clarify that CMS retains the authority to grant an ECE as a form of relief at any time after the extraordinary circumstance has occurred. At proposed § 412.140(c)(2)(ii)(B), we propose that CMS notify the requestor with a decision in writing. In the event that CMS grants an ECE to the hospital, the written decision will specify whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

Additionally, at § 412.140(c)(2)(iii), we propose that CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines that: a systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement, or that an extraordinary circumstance has affected an entire region or locale. As is the case under our current policy, any ECE granted will specify whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

This proposed ECE policy would provide further reporting flexibility for hospitals and clarify the ECE process.

We invite public comment on our proposals.

D. Proposed Changes to the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

1. Background

The PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program, authorized by section 1866(k) of the Act, applies to hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as ''PPS-Exempt Cancer Hospitals'' or ''PCHs''). We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53555 through 53567) for a general overview of the PCHQR Program. We also refer readers to 42 CFR 412.24 for codified PCHQR Program requirements.

2. PCHQR Program Measures

a. Proposed Removal of the Hospital Commitment to Health Equity Measure Beginning With CY 2024 Reporting Period/FY 2026 Program Year and for Subsequent Years

We refer readers to the FY 2024 IPPS/LTCH PPS final rule (88 FR 59204 through 59210) where we adopted the Hospital Commitment to Health Equity (hereinafter referred to as HCHE) measure into the PCHQR Program. We propose to remove the HCHE measure beginning with the CY 2024 reporting period/FY 2026 program year due to the costs associated with achieving a high score on the measure outweighing the benefit of its continued use in the program. When adopted, we intended the collection of data described in the five domains of this measure to provide hospital leadership with meaningful and actionable health data to drive quality improvements to eliminate health disparities. Based on feedback received from hospitals as well as a re-focus on clinical outcome measures, for which the HCHE measure, as a structural measure, does not directly measure clinical outcomes, the burden of collecting this measure may outweigh the benefits. Removal of this measure would alleviate an estimated annual burden of approximately 2 hours, at a cost of $90, across all PCHs (88 FR 59317).

One of the goals of the PCHQR Program is to move forward in the least burdensome manner possible, while maintaining a parsimonious set of the most meaningful quality measures and continuing to incentivize improvement

[378] Centers for Medicare & Medicaid Services (CMS) Quality Program Extraordinary Circumstances Exceptions (ECE) Request Form. (2025). QualityNet. Available at: *https://qualitynet.cms.gov/files/677e843f50ed8df7419f60e1?filename=HQR_ECE_Req_Form_CY_2025.pdf.*

[379] *https://qualitynet.cms.gov/inpatient/iqr/participation#tab3.*

[380] *https://qualitynet.cms.gov/inpatient/iqr/participation#tab3.*

in the quality of care provided to patients. Removing this measure from the PCHQR Program is an effective way to accomplish this goal. Our priority is a re-focus on measurable clinical outcomes as well as identifying quality measures on topics of prevention and well-being. It may be costly for hospitals to continue reporting on the HCHE measure, and removal of this measure would make room in the program's measure set to enhance the program's focus on measurable clinical outcomes. We acknowledge that some hospitals may have expended resources to implement some or all of the activities described in the HCHE measure attestation statements in order to be able to attest ''yes'' for measure reporting purposes, however, hospitals that had already implemented such activities prior to adoption of the measure would have been able to attest ''yes'' without expending similar resources.

If finalized, any HCHE measure data received by CMS would not be used for public reporting purposes.

We invite public comment on our proposal to remove the HCHE measure from the PCHQR Program beginning with the CY 2024 reporting period/FY 2026 program year.

b. Proposed Removal of Two Social Drivers of Health Measures Beginning With CY 2024 Reporting Period/FY 2026 Program Year and for Subsequent Years

We propose to remove two social drivers of health (SDOH) process measures from the PCHQR Program beginning with the CY 2024 reporting period/FY 2026 program year:

- Screening for Social Drivers of Health measure (adopted in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59210 through 59219)); and
- Screen Positive Rate for Social Drivers of Health measure (adopted in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59219 through 59222)).

We propose to remove the SDOH measures beginning with the CY 2024 reporting period/FY 2026 program year under removal Factor 8, the costs associated with the measure outweigh the benefit of its continued use in the program. We have previously heard from some hospitals concerned with the costs and resources associated with screening patients via manual processes, manually storing such data, training hospital staff, and altering workflows for these measures. In the FY 2023 and FY 2024 IPPS/LTCH PPS final rules, we estimated a total annual burden of 101 hours across all PCHs at a cost of $2,092 to screen all patients in accordance with measure specifications for Screening for Social Drivers of Health measure (88 FR 59317 through 59318). For Screen Positive Rate for Social Drivers of Health measure, we estimated a total annual burden of 2 hours across all PCHs at a cost of $90 (88 FR 59318). Further, we note that these measures document an administrative process and report aggregate level results, and do not shed light on the extent to which providers are ultimately connecting patients with resources or services and whether patients are benefiting from these screenings. We have concluded that the costs of the continued use of these measures in the PCHQR Program outweigh the benefits to beneficiaries and providers. Removal of these measures would alleviate the burden on hospitals to manually screen each patient and submit data each reporting cycle, allowing hospitals to focus resources on measurable clinical outcomes. This will also remove the patient burden associated with repeated SDOH screenings across multiple healthcare facilities. We acknowledge that some hospitals may have expended resources to implement SDOH screenings, however, hospitals that had already implemented such screenings prior to adoption of the measures would not have expended similar resources. The objectives of the PCHQR Program continue to incentivize the improvement of care quality and health outcomes for all patients through transparency and use of appropriate quality measures.

If finalized, any SDOH measure data received by CMS would not be used for public reporting purposes.

We invite public comment on our proposal to remove the SDOH measure from the PCHQR Program beginning with the CY 2024 reporting period/FY 2026 program year.

c. Summary of Previously Adopted PCHQR Program Measures for the CY 2026 Reporting Period/FY 2028 Program Year and Subsequent Years

Table X.D.–01 summarizes the previously adopted measures for the PCHQR Program measure set beginning with the CY 2026 reporting period/FY 2028 program year.

TABLE X.D.–01—PREVIOUSLY ADOPTED MEASURES FOR THE PCHQR PROGRAM MEASURE SET BEGINNING WITH THE CY 2026 REPORTING PERIOD/FY 2028 PROGRAM YEAR

Short name	Consensus-based entity (CBE) No.	Measure name
Safety and Healthcare-Associated Infection (HAI) Measures		
CAUTI *	0138	National Healthcare Safety Network (NHSN) Catheter-associated Urinary Tract Infection (CAUTI) Outcome Measure.
CLABSI *	0139	NHSN Central line-associated Bloodstream Infection (CLABSI) Outcome Measure.
Flu HCP Vaccination	0431	Influenza Vaccination Coverage Among Healthcare Personnel (HCP).
COVID–19 HCP Vaccination	N/A	COVID–19 Vaccination Coverage Among HCP.
Colon and Abdominal Hysterectomy SSI	0753	American College of Surgeons—Centers for Disease Control and Prevention (ACS–CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure (currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery).
MRSA *	1716	NHSN Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure.
CDI *	1717	NHSN Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure.
N/A	N/A	Patient Safety Structural Measure.
Clinical Process/Oncology Care Measures		
EOL-Chemo	0210	Proportion of Patients Who Died from Cancer—Receiving Chemotherapy in the Last 14 Days of Life.

TABLE X.D.–01—PREVIOUSLY ADOPTED MEASURES FOR THE PCHQR PROGRAM MEASURE SET BEGINNING WITH THE CY 2026 REPORTING PERIOD/FY 2028 PROGRAM YEAR—Continued

Short name	Consensus-based entity (CBE) No.	Measure name
EOL-Hospice	0215	Proportion of Patients Who Died from Cancer—Not Admitted to Hospice.
Intermediate Clinical Outcome Measures		
EOL–ICU	0213	Proportion of Patients Who Died from Cancer—Admitted to the ICU in the Last 30 Days of Life.
EOL–3DH	0216	Proportion of Patients Who Died from Cancer—Admitted to Hospice for Less Than Three Days.
Patient Engagement/Experience of Care Measure		
HCAHPS	0166	Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey.
N/A	N/A	Documentation of Goals of Care Discussions Among Cancer Patients.
Outcome Measures		
N/A	N/A	Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy.
N/A	3188	30-Day Unplanned Readmissions for Cancer Patients.
N/A	N/A	Surgical Treatment Complications for Localized Prostate Cancer.
Health Equity Measures		
HCHE **	N/A	Hospital Commitment to Health Equity.
SDOH–1 **	N/A	Screening for Social Drivers of Health.
SDOH–2 **	N/A	Screen Positive Rate for Social Drivers of Health.

*We are updating our NHSN measures in alignment with CDC's efforts to rebaseline using CY 2022 data. We refer readers to section VI.M.2.b. for more detailed discussion of technical updates to rebaseline CDC's NHSN Healthcare-Associated Infection measures for the HAC Reduction Program.

**In section X.D.2. of the preamble of this proposed rule, we are proposing to remove the HCHE measure and the SDOH measures beginning with the CY 2024 reporting period/FY 2026 program year.

3. Public Display Requirements

Under section 1866(k)(4) of the Act, the Secretary must establish procedures for making data submitted under the PCHQR Program available to the public.

a. Summary of Previously Finalized Public Display Policies for the PCHQR Program

Table X.D.–02 summarizes our current public display requirements for the PCHQR Program measures. The measure performance data are made publicly available on a CMS website, which is currently the Provider Data Catalog, available at: *https://data.cms.gov/provider-data/*.

TABLE X.D.–02—PREVIOUSLY FINALIZED PUBLIC DISPLAY POLICIES FOR THE PCHQR PROGRAM

Measures	Public display dates
• Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) (CBE #0166)	2016 and subsequent years.
• American College of Surgeons—Centers for Disease Control and Prevention (ACS–CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure [currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery] (CBE #0753).	2019 and subsequent years.
• NHSN Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* Bacteremia Outcome Measure* (CBE #1716).	
• NHSN Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure* (CBE #1717).	
• NHSN Influenza Vaccination Coverage Among Healthcare Personnel* (CBE #0431).	
• Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy	April 2020 and subsequent years.
• COVID–19 Vaccination Coverage Among Healthcare Personnel	October 2022 and subsequent years.
• CAUTI* (CBE #0138)	October 2022 and subsequent years.
• CLABSI* (CBE #0139).	
• 30-day Unplanned Readmissions for Cancer Patients (CBE #3188)	October 2023 and subsequent years.
• Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life (CBE #0210).	July 2024 and subsequent years.
• Proportion of Patients Who Died from Cancer Not Admitted to Hospice (CBE #0215).	
• Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life (CBE #0213).	
• Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days (CBE #0216).	
• Surgical Treatment Complications for Localized Prostate Cancer Measure (PCH–37)	July 2024 and subsequent years.

TABLE X.D.–02—PREVIOUSLY FINALIZED PUBLIC DISPLAY POLICIES FOR THE PCHQR PROGRAM—Continued

Measures	Public display dates
• Hospital Commitment to Health Equity**	January 2026 or as soon as feasible thereafter.
• Documentation of Goals of Care Discussions Among Cancer Patients	July 2026 or as soon as feasible thereafter.
• Patient Safety Structural Measure	October 2026 or as soon as feasible thereafter.
• Screening for Social Drivers of Health**	July 2027 or as soon as feasible thereafter.
• Screen Positive Rate for Social Drivers of Health**	July 2027 or as soon as feasible thereafter.

*We are updating our NHSN measures in alignment with CDC's efforts to rebaseline using CY 2022 data. We refer readers to section VI.M.2.b. of the preamble of this proposed rule for more detailed discussion of technical updates to re-baseline CDC's NHSN Healthcare-Associated Infection measures for the HAC Reduction Program.

**In section X.D.2. of the preamble of this proposed rule, we are proposing to remove the HCHE measure and the SDOH measures beginning with the CY 2024 reporting period/FY 2026 program year.

b. Proposal To Publicly Report PCHQR Data on Both the Provider Data Catalog and Compare Tool Website or Successor Websites

In FY 2022 IPPS/LTCH PPS final rule, we codified at 42 CFR 412.24(f) that data submitted by PCHs under the PCHQR Program are to be made publicly available on the Provider Data Catalog website (*https://data.cms.gov/provider-data/*) and that PCHs have an opportunity to review their data prior to publication during a preview period via the Hospital Quality Reporting (HQR) system (*https://hqr.cms.gov/hqrng/login*) with timelines for review published on the QualityNet website (*https://qualitynet.cms.gov*) and applicable listservs (86 FR 45435 through 45437; 86 FR 45518 through 45519). In this proposed rule, we propose to modify the public reporting requirements of the PCHQR Program to enable us to publicly report PCHQR data on both the Provider Data Catalog and the Compare tool (*https://www.medicare.gov/care-compare/*) or their successor websites. We also propose to make corresponding changes to the regulation text at § 412.24(f).

In 2020, CMS launched the Provider Data Catalog and the Compare tool websites to replace previous CMS healthcare comparison tools including Hospital Compare. Both the Provider Data Catalog and the Compare tool are valuable tools that allow patients, caregivers and families, providers, and other interested parties to find and compare information about the quality of care at participating PCHs and hospitals, respectively.

The Provider Data Catalog allows for downloading, exploration, and analysis of performance data. However, the Compare tool displays performance data in a format that is more user-friendly and more easily understood by consumers than the Provider Data Catalog. Data displayed on the Provider Data Catalog is a valuable resource that allows consumers, providers, and researchers to conduct analyses and compare quality of care delivery among PCHs. However, displaying data submitted by PCHs under the PCHQR Program in a more user-friendly format and making data more widely available would support consumer engagement and promote greater transparency. The Compare tool already includes quality measure information about hospitals participating in the Hospital Inpatient Quality Reporting Program, Hospital Outpatient Quality Reporting Program, Hospital-Acquired Condition Reduction Program, Hospital Readmissions Reduction Program, Inpatient Psychiatric Facility Quality Reporting Program, and Medicare Promoting Interoperability Program.

Therefore, to support greater data transparency and consumer engagement and to align with the other hospital quality programs, we propose to modify the public reporting requirements of the PCHQR Program to enable us to publicly report data from the PCHQR Program on both the Provider Data Catalog and the Compare tool (*https://www.medicare.gov/care-compare*) or their successor websites. We also propose corresponding changes to the regulation text at § 412.24(f) replacing references to ''Provider Data Catalog'' with ''CMS websites''.

We invite public comments on our proposal to publicly report PCHQR data on both the Provider Data Catalog and Compare tool or successor websites.

4. Proposal To Codify Updates to the Extraordinary Circumstances Exception Policy for the PCHQR Program

a. Background

Under our current Extraordinary Circumstances Exception (ECE) regulations, we have granted exceptions with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of the PCH (42 CFR 412.24(e)). An exception may be granted for extraordinary circumstances including, but not limited to, natural disasters or systemic problems with data collection systems.[381] We refer readers to 42 CFR 412.24(e) for our current ECE regulations, as well as FY 2014 IPPS/LTCH PPS final rule (78 FR 50848); FY 2018 IPPS/LTCH PPS final rule (82 FR 38424 through 38425); and FY 2019 IPPS/LTCH PPS final rule (83 FR 41623 through 41624) for further background and details of our ECE policy. We also refer readers to the QualityNet website for the specific requirements for submission of an ECE request in the PCHQR Program.[382]

Our ECE policy provides flexibility for PCHs to ensure continuity of quality care delivery and measure reporting in the event of an extraordinary circumstance. For instance, we recognize that in circumstances where a full exception is not applicable, it is beneficial for a PCH to report data later than the reporting deadline. Delayed reporting authorized under our ECE policy allows temporary relief for a PCH experiencing an extraordinary circumstance while preserving data reporting such as transparency and informed decision-making for beneficiaries and providers alike. Accordingly, we propose to update our regulations to specify that an ECE could take the form of an extension of time for a PCH to comply with a data reporting

[381] Centers for Medicare & Medicaid Services (CMS) Quality Program Extraordinary Circumstances Exceptions (ECE) Request Form. (2025). QualityNet. Available at: *https://qualitynet.cms.gov/files/677e843f50ed8df7419f60e1?filename=HQR_ECE_Req_Form_CY_2025.pdf.*

[382] CMS QualityNet. Available at: *https://qualitynet.cms.gov/pch/pchqr/participation#tab2.*

requirement if CMS determines that this type of relief would be appropriate under the circumstances.

b. Proposal To Update the Extraordinary Circumstances Exception (ECE) Policy for the PCHQR Program

We propose to update the current ECE policy codified at 42 CFR 412.24(e) to include extensions of time as a form of relief and to further clarify the policy. Specifically, at proposed § 412.24(e)(1), we propose that CMS may grant an ECE with respect to reporting requirements in the event of an extraordinary circumstance—defined as an event beyond the control of a PCH (for example a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing)—that affected the ability of the PCH to comply with one or more applicable reporting requirements with respect to a fiscal year.

We propose that the process for requesting or granting an ECE would remain the same as the current ECE process, detailed by CMS at the QualityNet website or a successor website.[383] At proposed § 412.24(e)(2)(i), we propose that a PCH may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred. Our current policy allows a request within 90 days; however, this proposed change would align the PCHQR policy with CMS systems implementation requirements across all quality reporting programs. Under this proposed codified policy, we clarify that CMS retains the authority to grant an ECE as a form of relief at any time after the extraordinary circumstance has occurred. At proposed § 412.24(e)(2)(ii), we propose that CMS notify the requestor with a decision in writing, via email. In the event that CMS grants an ECE to the PCH, the written decision will specify whether the PCH is exempted from one or more reporting requirements or whether CMS has granted the PCH an extension of time to comply with one or more reporting requirements.

Additionally, at § 412.24(e)(3), we propose that CMS may grant an ECE to one or more PCH that have not requested an ECE if CMS determines that: a systemic problem with CMS data collection systems directly impacted the ability of the PCH to comply with a data submission; or that an extraordinary circumstance has affected an entire region or locale. As is the case under our current policy, any ECE granted will specify whether the affected PCHs are exempted from one or more reporting requirements or whether CMS has granted the PCHs an extension of time to comply with one or more reporting requirements. At proposed § 412.24(e)(4), we propose that CMS may grant or deny an ECE based on the evaluation of the extraordinary circumstance including, but not limited to, whether the extraordinary circumstance occurred beyond the control of the PCH and affected the PCH's ability to meet data reporting requirements by the specified deadlines. We propose that CMS will notify the PCH of a denial of an ECE in writing via email to be codified at § 412.24(e)(5).

This proposed ECE policy would provide further reporting flexibility for PCHs and clarify the ECE process.

We invite public comment on our proposal to update the ECE policy for the PCHQR Program with corresponding updates to regulatory text at § 412.24(e).

E. Proposed Changes to the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

1. Background and Statutory Authority

The Long-Term Care Hospital Quality Reporting Program (LTCH QRP) is authorized by section 1886(m)(5) of the Act, and it applies to all hospitals certified by Medicare as Long-Term Care Hospitals (LTCHs). Section 1886(m)(5)(C) of the Act requires LTCHs to submit to the Secretary quality measure data specified under section 1886(m)(5)(D) in a form and manner, and at a time, specified by the Secretary. In addition, section 1886(m)(5)(F) of the Act requires LTCHs to submit data on quality measures under section 1899B(c)(1) of the Act, resource use or other measures under section 1899B(d)(1) of the Act, and standardized patient assessment data required under section 1899B(b)(1) of the Act. LTCHs must submit the data required under section 1886(m)(5)(F) of the Act in the form and manner, and at the time, specified by the Secretary. Section 1886(m)(5)(A) requires the Secretary to reduce by 2 percentage points the annual update to the LTCH PPS standard Federal rate for discharges for an LTCH during a fiscal year (FY)—if the LTCH has not submitted data to the Secretary in accordance with the LTCH QRP requirements specified for that FY. Section 1890A of the Act requires that the Secretary establish and follow a pre-rulemaking process, in coordination with the consensus-based entity (CBE) with a contract under section 1890(a) of the Act, to solicit input from certain groups regarding the selection of quality and efficiency measures for the LTCH QRP. We have codified our program requirements in our regulations at 42 CFR 412.560.

In this proposed rule, we are proposing to modify reporting requirements for the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure to exclude patients who have expired in the LTCH by removing an item on the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) as described in section X.E.3. of the preamble of this proposed rule. We also propose to remove four items previously adopted as standardized patient assessment data elements under the social determinants of health (SDOH) category beginning with the FY 2028 LTCH QRP: one item for Living Situation, two items for Food, and one item for Utilities. Next, we propose to amend our reconsideration policy and process as described in section X.E.4 of the preamble of this proposed rule. Finally, we seek public comment on several requests for information (RFIs), specifically on: (1) future measure concepts for the LTCH QRP as described in section X.E.5 of the preamble of this proposed rule; (2) revisions to the data submission deadlines for assessment data collected for the LTCH QRP as described in section X.E.6. of the preamble of this proposed rule; and (3) advancing digital quality measurement (dQM) in the LTCH QRP as described in section X.E.7. of the preamble of this proposed rule.

2. General Considerations Used for the Selection of Measures for the LTCH QRP—Quality Measures Currently Adopted for the LTCH QRP

For a detailed discussion of the considerations, we use for the selection of LTCH QRP quality, resource use, and other measures, we refer readers to the FY 2016 Inpatient Prospective Payment System (IPPS)/LTCH PPS final rule (80 FR 49728). The LTCH QRP currently has 18 adopted measures, which are set out in Table X.E.–01. We are not proposing to adopt any new measures for the LTCH QRP.

For a discussion of the factors we use to evaluate whether a measure should be removed from the LTCH QRP, we refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41624 through 41634) and to the regulations at § 412.560(b)(3).

[383] *https://qualitynet.cms.gov/inpatient/iqr/participation#tab3.*

TABLE X.E.–01—QUALITY MEASURES CURRENTLY ADOPTED FOR THE LTCH QRP

Short name	Measure name & data source
LTCH CARE Data Set	
Pressure Ulcer/Injury	Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury.
Application of Falls	Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay).
Change in Mobility	Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital (LTCH) Patients requiring ventilator support.
DRR	Drug Regimen Review Conducted with Follow-Up for Identified Issues–Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).
Compliance with SBT	Compliance with Spontaneous Breathing Trial (SBT) by Day 2 of the LTCH Stay.
Ventilator Liberation	Ventilator Liberation Rate.
TOH-Provider	Transfer of Health Information to the Provider Post-Acute Care (PAC).
TOH-Patient	Transfer of Health Information to the Patient Post-Acute Care (PAC).
DC Function	Discharge Function Score.
Patient/Resident COVID–19 Vaccine.	COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date.
National Healthcare Safety Network (NHSN)	
CAUTI *	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection Outcome Measure.
CLABSI *	National Healthcare Safety Network (NHSN) Central-Line associated Bloodstream Infection (CLABSI) Outcome Measure.
CDI *	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure.
HCP Influenza Vaccine	Influenza Vaccination Coverage among Healthcare Personnel.
HCP COVID–19 Vaccine	COVID–19 Vaccination Coverage among Healthcare Personnel (HCP).
Claims-Based	
MSPB LTCH	Medicare Spending Per Beneficiary (MSPB)—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).
DTC	Discharge to Community—Post Acute Care (PAC) Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).
PPR	Potentially Preventable 30-Day Post-Discharge Readmission Measure for Long-Term Care Hospital (LTCH) Quality Reporting Program (QRP).

*We are updating our NHSN measures in alignment with CDC's efforts to rebaseline using CY 2022 data. We refer readers to section VI.M.2.b. of the preamble of the proposed rule for more detailed discussion of technical updates to rebaseline CDC's NHSN Healthcare-Associated Infection measures.

3. Proposed Modification of Reporting Requirements for COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date Measure Beginning With the FY 2028 LTCH QRP

In the FY 2024 IPPS/LTCH PPS Final Rule (88 FR 59243 through 59250), we finalized the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date (Patient/Resident COVID–19 Vaccine) measure for the LTCH QRP beginning with the FY 2026 LTCH QRP. LTCHs collect and report data for this measure on the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS), the LTCH patient assessment instrument (88 FR 59247 and 59253). We added the Patient/Resident COVID–19 Vaccine item (O0350) on the LCDS discharge assessments (Planned Discharge, Unplanned Discharge, and Expired) for LTCHs to collect data on this measure for patients being discharged from the LTCH and who expire during their stay (88 FR 59253). We finalized that LTCHs must begin collecting data using the LCDS for this measure with patients discharged on October 1, 2024, for the FY 2026 LTCH QRP (88 FR 59247 and 59253).

Since the Patient/Resident COVID–19 Vaccine measure was adopted for the LTCH QRP and LTCHs began collecting data for this measure on October 1, 2024, LTCHs and other interested parties have expressed concerns about challenges and increased provider burden in collecting immunization data.[384] They have specifically noted challenges in identifying a patient's vaccination status once they have expired. We agree that collecting information regarding an expired patient's vaccination status is challenging because it may be difficult to interview the patient's family or other caregivers to ascertain the patient's vaccination status if it is not known during the expired assessment window (that is, no later than 5 days after the patient's date of death).[385] In addition, we agree that collecting this data creates unnecessary burden for LTCHs because this information is no longer actionable for LTCHs, since they can no longer help an expired patient stay up to date with regard to COVID–19 vaccinations. Removing the requirement to report this item when a patient expires in an LTCH will allow CMS to be responsive to LTCHs and reduce assessment collection burden.

We propose to modify the reporting requirements for the Patient/Resident COVID–19 Vaccine measure in the LTCH QRP to exclude patients who have expired in the LTCH beginning with the FY 2028 LTCH QRP. Specifically, we propose that, beginning with patients admitted on or after October 1, 2026, LTCHs would no longer be required to submit the Patient/Resident COVID–19 Vaccine item

[384] Standing Technical Expert Panel for the Development, Evaluation, and Maintenance of Post-Acute Care (PAC) and Hospice Quality Reporting Program (QRP) Measurement Sets Summary Report December 15, 2023, *https://www.cms.gov/files/document/december-2023-pac-and-hospice-cross-setting-tep-summary-report.pdf-1.*

[385] Chapter 2, Overview. LCDS Manual accessed in the Downloads section of: *https://www.cms.gov/medicare/quality/long-term-care-hospital/ltch-care-data-set-ltch-qrp-manual.*

(O0350) on the LCDS with respect to patients who have expired in the LTCH. We also propose to remove the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to item (O0350) from future LCDS forms that LTCHs use for expired patients. The remaining LCDS forms used for Planned Discharge and Unplanned Discharge would continue to include the Patient/Resident COVID–19 Vaccine item (O0350) for purposes of collecting and reporting data on the Patient/Resident COVID–19 Vaccine measure.

We invite public comment on our proposal to modify reporting requirements for the Patient/Resident COVID–19 Vaccine measure in the LTCH QRP to exclude patients who have expired in the LTCH beginning with the FY 2028 LTCH QRP.

4. Proposed Removal of Four Standardized Patient Assessment Data Elements Beginning With the FY 2028 LTCH QRP

We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69582 through 69593) where we finalized the adoption of four items as standardized patient assessment data elements under the social determinants of health (SDOH) category: one item for Living Situation (R0310); two items for Food (R0320A and R0320B); and one item for Utilities (R0330). As finalized in the FY 2025 IPPS/LTCH PPS final rule, LTCHs would be required to report these data elements using the LCDS beginning with patients discharged on or after October 1, 2026, through December 31, 2026, for purposes of the FY 2028 LTCH QRP and each program year after (89 FR 69597 and 69598).

In this proposed rule, we are proposing to remove these four standardized patient assessment data elements under the SDOH category as we acknowledge the burden associated with these items at this time. Further, as it is also standard evidence-based practice to assess and address these items in LTCHs, we would like to change the focus of CMS's data collection at this time. We continuously look for ways to balance the need of data collections regarding quality care and burden of these data collections on health care providers. CMS has a goal to facilitate improved health care delivery by requiring different systems and software applications to communicate and exchange data. Therefore, we would like to work towards the workflow for these data elements being part of a low burden interoperable electronic system. The focus will turn towards how the data and associated recommendations exchanged improves care coordination, efficiency, reduction in errors and improved patient experience. As health Information technology (HIT) advances and interoperability of data becomes more standardized, the burden to collect and share clinical data on these and other relevant patient information will become less burdensome allowing for better outcomes for LTCH patients and their families. The objectives of the LTCH QRP continue to be the improvement of care, quality and health outcomes for all patients through transparency and quality measurement, while not imposing undue burden on essential health providers.

Under our proposal, LTCHs would not be required to collect and submit Living Situation (R0310), Food (R0320A and R0320B), and Utilities (R0330) beginning with patients discharged on or after October 1, 2026, as previously finalized. Under this proposal, these items would not be necessary to meet LTCH QRP requirements beginning with the FY 2028 LTCH QRP. Removing these items from the data collection for the FY2028 LTCH QRP would keep the 330 LTCHs from incurring 2,601 hours of administrative burden at a cost of $182,330.10 (or $552.52 per LTCH) at this time. We refer readers to section XIII.B.6. of the preamble of this proposed rule for more details on this estimated burden reduction.

We invite public comment on our proposal to remove four standardized patient assessment data elements collected under the SDOH category from the LTCH QRP beginning with the FY 2028 LTCH QRP.

5. Proposals To Amend the Reconsideration Request Policy and Process

a. Background

In the fiscal year (FY) 2014 IPPS/LTCH PPS final rule (78 FR 50885 through 50887), we finalized the LTCH QRP Reconsiderations policy and process whereby an LTCH may request reconsideration of an initial determination that the LTCH did not comply with the LTCH QRP reporting requirements, warranting CMS reducing the LTCH's annual payment update by 2 percent for the applicable fiscal year as required by section 1886(m)(5)(A) of the Act. In that rule, we stated that the LTCH may file a request for reconsideration if they believe that the finding of non-compliance is erroneous, or if they were non-compliant, they have a valid and justifiable excuse for this non-compliance (78 FR 50886). We further stated that, after we review the request for reconsideration, we may reverse our initial finding of non-compliance if: (1) the LTCH provides proof of compliance with all requirements during the reporting period; or (2) the LTCH provides adequate proof of a valid or justifiable excuse for non-compliance if the LTCH was not able to comply with requirements during the reporting period (78 FR 50886). Finally, we stated that we will uphold an initial finding of non-compliance if the LTCH cannot show any justification for non-compliance (78 FR 50886).

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50317 and 50318), we finalized amendments to the LTCH QRP reconsideration policy and process. Specifically, we stated that each LTCH would receive a notification of noncompliance with LTCH QRP requirements if we determine it had not correctly submitted data with respect to the applicable fiscal year (79 FR 50317). Then, the LTCH would have 30 days from the date of our initial notification of noncompliance to submit a request for reconsideration via email. We also provided that, in very limited circumstances, we may grant a request by an LTCH to extend the deadline to submit its reconsideration request, so long as the LTCH requested the extension and demonstrated that extenuating circumstances existed that prevented it filing a reconsideration request by the 30-day deadline (79 FR 50317). Finally, we provided that, as part of its reconsideration request, the LTCH must submit all supporting documentation and evidence demonstrating: (1) full compliance with all LTCH QRP reporting requirements during the reporting period; or (2) extenuating circumstances that affected noncompliance if the LTCH was not able to comply with the requirements during the reporting period (79 FR 50317). We stated that we would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request (79 FR 50317).

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49755 and 49770), we codified the reconsideration policy and process for the LTCH QRP at § 412.560(d). In subsequent rulemakings, we have amended our reconsideration policy and process at § 412.560(d) for minor clarifications and technical updates (FY 2017 IPPS/LTCH PPS final rule (81 FR 57230 and 57231); FY 2019 IPPS/LTCH PPS final rule (83 FR 41633 and 41634; 83 FR 41705); and FY 2020 IPPS/LTCH PPS final rule (84 FR 42588 and 42615)). As codified, our regulation at § 412.560(d) addresses how we send our written notification of noncompliance to an LTCH, the process

for an LTCH to request reconsideration, what information an LTCH must include with its reconsideration request (for example, documentation that demonstrates the LTCH's compliance with LTCH QRP requirements), and how we notify the LTCH of our final decision regarding its reconsideration request.

We have become aware there are inconsistencies in our preamble and regulation text regarding LTCH requests for reconsideration. On this basis, in this proposed rule, we seek to clarify these areas.

b. Proposal To Allow LTCHs To Request an Extension To File a Request for Reconsideration

As noted previously, in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50317 and 50318), we provided that, in very limited circumstances, we may grant a request by an LTCH to extend the deadline to submit its reconsideration request, so long as the LTCH requested the extension and demonstrated that extenuating circumstances existed that prevented it filing a reconsideration request by the 30-day deadline (79 FR 50317). We did not codify this policy—permitting LTCHs to request an extension to file their reconsideration request—in our regulation text at § 412.560(d). In implementing this finalized policy, we have noted two areas where further clarity would be beneficial to LTCHs.

First, we have not clearly defined or explained the term ''extenuating circumstances,'' as used in our reconsideration policy. In contrast, we use the term ''extraordinary circumstances'' in our Extraordinary Circumstance Exception and Extension (ECE) policy, as codified at § 412.560(c). We did explain ''extraordinary circumstances'' in detail when we originally finalized this ECE policy in FY 2014 IPPS/LTCH PPS final rule (78 FR 50883).

On this basis, we are proposing to remove the term ''extenuating circumstances'' as used currently in our reconsideration policy and replace it with ''extraordinary circumstances.'' Specifically, we propose that an LTCH may request, and CMS may grant, an extension to file a reconsideration request if the LTCH was affected by extraordinary circumstances beyond the control of the LTCH (for example, a natural or man-made disaster). By modifying the basis by which an LTCH may request an extension to file a reconsideration request in this manner, we also propose to incorporate our prior explanation regarding the meaning extraordinary circumstances, as set forth in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50883 through 50885) as part of our Extraordinary Circumstance Exception and Extension (ECE) Policy.

Second, we have noted some areas in our policy where LTCHs may benefit from clearly demarcated deadlines. Although we believe an LTCH would have an interest in asking for an extension to file a reconsideration request prior to the deadline, our policy currently does not specify a deadline for an LTCH to submit its request for such extension (79 FR 50317). Our policy also provides that, to support such request, the LTCH must demonstrate that extenuating circumstances existed that prevented filing the reconsideration request by the 30-day deadline (79 FR 50317). However, we have not specified a temporal relationship between when the extenuating circumstances occurred and the reconsideration request deadline. We believe LTCHs may benefit from further specificity regarding these requirements for submitting a request to extend the deadline to file a reconsideration request.

On this basis, we propose to amend our reconsideration policy as codified at § 412.560(d) to permit LTCHs to request, and CMS to grant, an extension to file a request for reconsideration of a noncompliance determination if, during the period to request a reconsideration as set forth in § 412.560(d)(2), the LTCH was affected by an extraordinary circumstance beyond the control of the LTCH (for example, a natural or man-made disaster). We propose that the LTCH must submit its request for an extension to file a reconsideration request to CMS via email no later than 30 calendar days from the date of the written notification of noncompliance. We propose that the LTCH's extension request, submitted to CMS, must contain the following information: (1) the CCN for the LTCH; (2) the business name of the LTCH; (3) the business address of the LTCH; (4) certain contact information for the LTCH's chief executive officer or designated personnel; (5) a statement of the reason for the request for the extension; and (6) evidence of the impact of the extraordinary circumstances, including, for example, photographs, newspaper articles, and other media. We propose to codify this process at § 412.560(d)(4).

We further propose that CMS will notify the LTCH in writing of its final decision regarding its request for an extension to file a reconsideration of noncompliance request via an email from CMS. We propose to notify the LTCH in writing via email because this will allow for more expedient correspondence with the LTCH, given the 30-day reconsideration timeframe. We propose to codify this process at § 412.560(d)(5).

We note that we are considering proposing similar modifications across all post-acute care setting quality reporting programs to more closely align the reconsideration processes.

We invite comment on these proposals to amend the LTCH QRP Reconsideration policy to permit LTCHs to requests an extension to file a reconsideration request and to codify this proposed policy and process at § 412.560(d)(4) and (5).

c. Proposal To Update the Bases on Which CMS Can Grant a Reconsideration Request

As discussed previously, in the FY 2014 IPPS/LTCH PPS final rule, we stated that, after we review an LTCH's request for reconsideration, we may reverse our initial finding of non-compliance if: (1) the LTCH provides proof of compliance with all requirements during the reporting period; or (2) the LTCH provides adequate proof of a valid or justifiable excuse for non-compliance if the LTCH was not able to comply with requirements during the reporting period (78 FR 50886). We also stated that we will uphold an initial finding of non-compliance if the LTCH cannot show any justification for non-compliance (78 FR 50886).

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50317 and 50318), we reiterated this position, and provided that, as part of its reconsideration request, the LTCH must submit all supporting documentation and evidence demonstrating: (1) full compliance with all LTCH QRP reporting requirements during the reporting period; or (2) extenuating circumstances that affected noncompliance if the LTCH was not able to comply with the requirements during the reporting period (79 FR 50317). We stated that we would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request (79 FR 50317).

As previously discussed, we codified our reconsideration policy at § 412.560(d) in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49755 and 49770). Our regulation at § 412.560(d)(2)(vii) requires that an LTCH's request for reconsideration include accompanying documentation that demonstrates the LTCH's compliance with the LTCH QRP requirements. Then, we will notify the LTCH in writing regarding our final decision on its reconsideration request (§ 412.560(d)(3)). We believe it would be beneficial for LTCHs if we codify our

specific bases for granting a reconsideration request in our regulation at § 412.560(d).

On these bases, we propose to modify our reconsideration policy to provide that we will grant a timely request for reconsideration, and reverse an initial finding of non-compliance, only if CMS determines that the long-term care hospital was in full compliance with the LTCH QRP requirements for the applicable program year. We would consider full compliance with the LTCH QRP requirements to include CMS granting an exception or extension to LTCH QRP reporting requirements under our ECE policy at § 412.560(c). However, to demonstrate full compliance with our ECE policy, the LTCH would need to comply with our ECE policy's requirements, including the specific scope of the exception or extension as granted by CMS.

We propose to revise § 412.560(d)(3) to codify this modified policy in our regulation. The remainder of the text at § 412.560(d)(3) would remain the same, subject to minor technical amendments.

We note that we are considering proposing similar modifications across all post-acute care setting quality reporting programs to more closely align the reconsideration processes.

We invite comment on these proposals to amend the bases by which we grant a reconsideration request under the LTCH QRP Reconsideration policy and to codify this proposed policy at § 412.560(d)(3).

6. LTCH QRP Measure Concepts Under Consideration for Future Years—Request for Information (RFI): Interoperability, Well-Being, Nutrition & Delirium

We are seeking input on the importance, relevance, appropriateness, and applicability of each of the quality measure concepts under consideration listed in Table X.E.–02 for future years in the LTCH QRP. In the FY 2024 LTCH PPS proposed rule (88 FR 27150 through 27152), we included a request for information (RFI) on a set of principles for selecting and prioritizing LTCH QRP measures, identifying measurement gaps, and suitable measures for filling these gaps. We refer readers to the FY 2024 LTCH PPS final rule (88 FR 59250 and 59251) for a summary of the public comments we received in response to the RFI.

We are seeking input on four concepts for future measures for the LTCH QRP.

TABLE X.E.–02—FUTURE MEASURE CONCEPTS UNDER CONSIDERATION FOR THE LTCH QRP

Quality measure concepts
Interoperability.
Well-being.
Nutrition.
Delirium.

a. Interoperability

We are seeking input on the quality measure concept of interoperability, focusing on information technology systems' readiness and capabilities in the LTCH setting. Title XXX of the Public Health Service Act defines ''interoperability'' in part, and with respect to health information technology, as health information technology that enables the secure exchange of electronic health information with, and use of electronic health information from, other health information technology without requiring special efforts by the user.[386] The definition further states that interoperability of health information technology allows for complete, including by providers and patients, access, exchange, and use of electronically accessible health information for authorized uses under applicable State or Federal Law.[387] We request input and comment on approaches to assessing interoperability in the LTCH setting, for instance, measures that address or evaluate the level of readiness for interoperable data exchange, or measures that evaluate the ability of data systems to securely share information across the spectrum of care. Please provide input on the relevant aspects of interoperability for the LTCH setting.

b. Well-Being

We are seeking input on a quality measure concept of well-being for future quality measures. Well-being is a comprehensive approach to disease prevention and health promotion, as it integrates mental and physical health [388] [389] while emphasizing preventive care to proactively address potential health issues. This comprehensive approach emphasizes person-centered care by promoting well-being of patients and their family members. We request input and comment on tools and measures that assess for overall health, happiness, and satisfaction in life that could include aspects of emotional well-being, social connections, purpose, fulfillment, and self-care work. Please provide input on the relevant aspects of well-being for the LTCH setting.

c. Nutrition

We are seeking input on a quality measure concept of nutrition for future quality measures. Assessment of an individual's nutritional status may include various strategies, guidelines, and practices designed to promote healthy eating habits and ensure individuals receive the necessary nutrients for maintaining health, growth, and overall well-being. This also includes aspects of health that support or mediate nutritional status, such as physical activity and sleep. In this context, preventable care plays a vital role by proactively addressing factors that may lead to poor nutritional status or related health issues. These efforts not only support optimal nutrition but also work to prevent conditions that could otherwise hinder an individual's health and nutritional needs. We request input and comment on tools and frameworks that promote healthy eating habits, exercise, nutrition, or physical activity for optimal health, well-being, and best care for all. Please provide input on the relevant aspects of nutrition for the LTCH setting.

d. Delirium

Finally, we are seeking input on a quality measure concept of delirium for future quality measures. Delirium, often under-detected, is a common complication of illness or injury that leads to negative health outcomes like frailty, cognitive impairment, and functional decline. Post-acute care patients experiencing delirium symptoms are more likely to undergo rehospitalization, experience poor functional recovery outcomes, and have a higher 6-month mortality rate compared to patients without delirium.[390] We request input and comment on the applicability of measures that evaluate for the sudden, serious change in a person's mental

[390] Marcantonio, E.R., Kiely, D.K., Simon, S.E., John Orav, E., Jones, R.N., Murphy, K.M., & Bergmann, M.A. (2005). Outcomes of older people admitted to postacute facilities with delirium. *Journal of the American Geriatrics Society, 53*(6), 963–969. *https://doi.org/10.1111/j.1532-5415.2005.53305.x.*

state or altered state of consciousness that may be associated with underlying symptoms or conditions. Please provide input on the relevant aspects of delirium for the LTCH setting.

As we review new measure concepts, CMS will prioritize outcome measures that are evidenced-based.

7. Potential Revision of the Final Data Submission Deadline Period From 4.5 Months to 45 Days—Request for Information

Sections 1886(m)(5)(E) and 1899B(f) and (g) of the Act require CMS to provide feedback to LTCHs and to publicly report their performance on quality and other measures specified under the LTCH QRP. More specifically, sections 1886(m)(5)(E) and 1899B(f)(1) of the Act requires the Secretary to provide confidential feedback reports to LTCHs on their performance on the quality, resource use, and other measures specified for the LTCH QRP. Section 1899B(f)(2) of the Act provides that, to the extent feasible, the Secretary must make these confidential feedback reports available, except in the case of measures reported on an annual basis, in which case the confidential feedback reports may be made available annually. Additionally, sections 1886(m)(5) and 1899B(g)(1) of the Act require the Secretary to provide for the public reporting of each LTCH's performance on the measures specified for the LTCH QRP by establishing procedures for making the performance data available to the public. Sections 1886(m)(5)(E) and 1899B(g)(2) of the Act specifically require that such procedures must ensure, through a process consistent with the process applied under section 1886(b)(3)(B)(viii)(VII) of the Act, that LTCHs can review and submit corrections to the data and other information before it is made public.

In accordance with section 1888(m)(5)(C) of the Act, we have established policies specifying the form and manner, and timing, for LTCHs to submit data on the measures as specified. In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51755 and 51756), we initially finalized for assessment-based measures that LTCHs could submit their data related to the New or Worsened Pressure Ulcers measure allowing 4.5 months (approximately 135 days) after the end of each quarter for submission of assessment data for the FY 2014 and FY 2015 payment update determinations. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53636 and 53637), we finalized that LTCHs submit data quarterly for each of the finalized measures in the FY 2013 rule, submitting their data within approximately 135 days after the end of each quarter by which all data collected during that quarter must be submitted for the FY 2015 payment determination. We also finalized in the FY 2013 rule that LTCHs would have a shorter data submission timeframe for each of the measures for the FY 2016 payment determination. Specifically, we finalized that, for each quarter of the FY 2016 payment determination, LTCHs would have approximately 45 days after the end of each quarter to submit data collected for that quarter (77 FR 53636 and 53637). However, in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49749 through 49751), we finalized requiring data submission within 4.5 months at the end of each calendar quarter, beginning with the FY 2017 LTCH QRP and FY 2018 LTCH QRP, unless otherwise specified for a measure. We proposed and finalized this modification to the LTCH QRP data submission deadline in order to align with the Inpatient Rehabilitation Facility Quality Reporting Program (IRF QRP) and Hospital IQR Program (80 FR 49749 through 49751).

Public reporting data collected under quality reporting programs, such as the LTCH QRP, are designed to provide consumers and their families with the most current information, so they can make quality-informed decisions about where to receive their care. In the process of implementing the public reporting for the quality reporting programs, we have identified that the time between when data on measures is collected and submitted to us and when that data are publicly reported (that is, approximately nine months) may be too long to provide the most accurate and up to date information for the public. For example, through technical expert panels, we have received feedback from patient caregiver advocates that the aged data used in publicly reported quality measures diminishes their value to consumers.

Currently, the largest contributing factor to the nine-month lag between the end of the data collection period and when measures are publicly reported is the 4.5-month timeframe for data submission. If the data submission timeframe was reduced from 4.5 months to 45 days, then the lag time between the end of the data collection period and public reporting of that data could be reduced by up to 3 months. This revised timeframe would result in more timely public reporting of data that may provide more value for consumers and families as they make decisions about where they may want to receive their care. Additionally, this timeframe provides LTCHs with more recent data to use in their quality improvement activities.

An important consideration in reducing the data submission timeframe is the potential burden it may place on LTCHs, which could lead to fewer assessments submitted by the shorter 45-day data submission timeframe. We conducted an analysis to evaluate the potential impact of reducing the timeframe by determining how many assessments are currently being submitted within 45 days. Using 2023 data, we identified that only 2.5 percent of all LCDS assessments were submitted after the 45-day timeframe. Of those submissions, close to three-fourths (or 1.8 percent of the total) were submitted between 45 days and 4.5 months and hence have potential to be impacted.[391] On these bases, we believe reducing the LTCH QRP data submission deadline from 4.5 months to 45 days would improve the timeliness of public reporting by one quarter, which could be beneficial to both consumers and LTCHs with limited change in burden to LTCHs.

We are requesting feedback on this potential future reduction of the LTCH QRP data submission deadline from 4.5 months to 45 days that is under consideration. Specifically, we are requesting comment on—

- How this potential change could improve the timeliness and actionability of LTCH QRP quality measures;
- How this potential change could improve public display of quality information; and
- How this potential change could impact LTCH workflows or require updates to systems.

We intend to use this input to inform our program improvement efforts.

8. Advancing Digital Quality Measurement in the LTCH QRP—Request for Information

As part of our effort to advance the digital quality measurement (dQM) transition, we are issuing this request for information (RFI) to gather broad public input on the dQM transition in LTCHs. In section X.B. of the preamble of this proposed rule, we also issue an RFI seeking input on the use of Health Level Seven® (HL7®) Fast Healthcare Interoperability Resources® (FHIR®) in certain CMS quality reporting and value-based purchasing programs.

a. Background

We are committed to improving healthcare quality through measurement, transparency, and public

[391] Internal CMS analysis of FY 2023 LCDS assessment data.

reporting of quality data, and to enhancing healthcare data exchange by promoting the adoption of interoperable health information technology (IT) that enables information exchange using FHIR® standards. Proposing to require the use of such technology within the LTCH QRP in the future could potentially enable greater care coordination and information sharing, which is essential for delivering high-quality, efficient care and better outcomes at a lower cost (86 FR 25615). In the fiscal years 2020, 2021, 2022, and 2023 IPPS/LTCH PPS proposed rules,[392] we outlined several Department of Health and Human Services (HHS) initiatives aimed at promoting the adoption of interoperable health IT and facilitating nationwide health information exchange. Further, to inform our digital strategy, in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25615), we shared and sought feedback on the following:

- Our intent to explore the use of FHIR®-based standards to exchange clinical information through application programming interfaces (APIs).
- Enabling quality data submission to CMS through our internet Quality Improvement and Evaluation System (iQIES).
- To work with healthcare standards organizations to ensure their standards support our assessment tools.

We are considering opportunities to advance FHIR®-based reporting of patient assessment data for the submission of the LCDS and other existing systems such as CDC's National Healthcare Safety Network (NHSN) for which LTCHs have current CMS reporting requirements. Our objective is to explore how LTCHs typically integrate technologies with varying complexity into existing systems and how this affects LTCH workflows. In this RFI, we seek to identify the challenges and/or opportunities that may arise during this integration, and determine the support needed to complete and submit quality data in ways that protect and enhance care delivery.

We are also seeking input on future measures under consideration including applicability of interoperability as a future measure concept in post-acute care settings, including the LTCH QRP. Refer to section X.E.5. of the preamble of this proposed rule for more information.

[392] ''Advancing Health Information Exchange'' in: FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19170), FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32470), FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25085), and FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28122).

Any updates specific to the LTCH QRP program requirements related to quality measurement and reporting provisions would be addressed through separate and future notice-and-comment rulemaking, as necessary.

b. Solicitation for Comment

We seek feedback on the current state of health IT use, including electronic health records (EHRs), in LTCH facilities:

- To what extent does your LTCH use health IT systems to maintain and exchange patient records? If your facility has transitioned to using electronic records, in part or in whole, what types of health IT does your LTCH use to maintain patient records? Are these health IT systems certified by the Office of the National Coordinator for Health Information Technology (ONC Health IT) Certification Program? If your facility uses health IT products or systems that are not certified under the ONC Health IT Certification Program, please specify. Does your facility use EHRs or other health IT products or systems that are not certified under the ONC Health IT Certification Program? If no, what is the reason for not doing so? Do these other systems exchange data using standards and implementation specifications adopted by HHS? Does your facility maintain any patient records outside of these electronic systems? If so, are the data organized in a structured format, using codes and recognized standards, that can be exchanged with other systems and providers?
- Does your LTCH submit patient assessment data to CMS directly from your health IT system without the assistance of a third-party intermediary? If a third-party intermediary is used to report data, what type of intermediary service is used? How does your facility currently exchange health information with other healthcare providers or systems, specifically between LTCHs and other provider types? What about health information exchange with other entities, such as public health agencies? What challenges do you face with electronic exchange of health information?
- Are there any challenges with your current electronic devices (for example, tablets, smartphones, computers) that hinder your ability to easily exchange information across systems? Please describe any specific issues you encounter. Does limited internet or lack of internet connectivity impact your ability to exchange data with other healthcare providers, including community-based care services, or your ability to submit patient assessment data to CMS? Please specify.
- What steps does your LTCH take with respect to the implementation of health IT systems to ensure compliance with security and patient privacy requirements such as the requirements of the regulations promulgated under the Health Insurance Portability and Accountability Act (HIPAA) and related regulations?
- Does your LTCH refer to the Safety Assurance Factors for EHR Resilience (SAFER) Guides (see newly revised versions published in January 2025 at *https://www.healthit.gov/topic/safety/safer-guides*) to self-assess EHR safety practices?
- What challenges or barriers does your facility encounter when submitting quality measure data to CMS as part of the LTCH QRP? What opportunities or factors could improve your facility's successful data submission to CMS?
- What types of technical assistance, guidance, workforce trainings, and/or other resources would be most beneficial for the implementation of FHIR®-based technology in your facility for the submission of the LCDS to CMS and other existing systems such as CDC's National Healthcare Safety Network (NHSN) for which LTCHs have current CMS reporting requirements? What strategies can CMS, HHS or other Federal partners take to ensure that technical assistance is both comprehensive and user-friendly? How could Quality Improvement Organizations (QIOs) or other entities enhance this support?
- Is your facility using technology that utilizes APIs based on the FHIR® standard to enable electronic data sharing? If so, with whom are you sharing data using the FHIR® standard and for what purpose(s)? For example, have you used FHIR® APIs to share data with public health agencies? Does your facility use any Substitutable Medical Applications and Reusable Technologies (SMART) on FHIR® applications? If so, are the SMART on FHIR® applications integrated with your EHR or other health IT?
- How do you anticipate the adoption of technology using FHIR®-based APIs to facilitate the reporting of patient assessment data could impact provider workflows? What impact, if any, do you anticipate it will have on quality of care?
- What benefits or challenges have you experienced with implementing technology using FHIR®-based APIs? How can adopting technology using FHIR®-based APIs to facilitate the reporting of patient assessment data impact provider workflows? What

impact, if any, does adopting this technology have on quality of care?

- Does your facility have any experience using technology that shares electronic health information using one or more versions of the United States Core Data for Interoperability (USCDI) standard? [393]
- Would your LTCH and/or vendors be interested in participating in testing to explore options for transmission of assessments, for example testing the transmission of a FHIR®-based assessment to CMS?
- How could the Trusted Exchange Framework and Common Agreement™ (TEFCA™) support CMS quality programs' adoption of FHIR®-based assessment submissions consistent with the FHIR® Roadmap (available here: *https://rce.sequoiaproject.org/three-year-fhir-roadmap-for-tefca/*)? How might patient assessment data hold secondary uses for treatment or other TEFCA exchange purposes?
- What other information should we consider to facilitate successful adoption and integration of FHIR®-based technologies and standardized data for patient assessment instruments like the LCDS? We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies.

We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies and will use this input to inform our future dQM transition efforts.

9. Form, Manner, and Timing of Data Submission Under the LTCH QRP

a. Background

We refer readers to the regulatory text at § 412.560(b) for information regarding the current policies for reporting specified data for the LTCH QRP.

b. Proposal To Modify Reporting Requirements for the Patient/Resident COVID–19 Vaccine Measure Beginning With the FY 2028 LTCH QRP.

As discussed previously in section X.E.3. of the preamble of this proposed rule, we propose to modify reporting requirements for the Patient/Resident COVID–19 Vaccine measure in the LTCH QRP to exclude patients who have expired in the LTCH beginning with the FY 2028 LTCH QRP. Specifically, we propose that, beginning with patients admitted on or after October 1, 2026, LTCHs would no longer be required to submit the Patient/Resident COVID–19 Vaccine item (O0350) on the LCDS with respect to patients who have expired in the LTCH. We also propose to remove the Patient/Resident COVID–19 Vaccine item (O0350) from future LCDS forms that LTCHs use for expired patients. The remaining LCDS forms used for Planned Discharge and Unplanned Discharge would continue to include the Patient/Resident COVID–19 Vaccine item (O0350) for purposes of collecting and reporting data on the Patient/Resident COVID–19 Vaccine measure.

We invite public comment on our proposal to modify reporting requirements for the Patient/Resident COVID–19 Vaccine measure in the LTCH QRP to exclude patients who have expired in the LTCH beginning patients who have expired on or after October 1, 2026, for the FY 2028 LTCH QRP.

10. Policies Regarding Public Display of Measure Data for the LTCH QRP

We are not proposing any new policies regarding the public display of measure data in this proposed rule. For a more detailed discussion about our policies regarding public display of LTCH QRP measure data and procedures for the opportunity to review and correct data and information, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57236).

F. Proposed Changes to the Medicare Promoting Interoperability Program

1. Statutory Authority for the Medicare Promoting Interoperability Program for Eligible Hospitals and Critical Access Hospitals (CAHs)

Sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act (as amended by the Health Information Technology for Economic and Clinical Health Act, Title XII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (ARRA), Pub. L. 111–5) authorize downward payment adjustments under Medicare, beginning with FY 2015 for eligible hospitals and CAHs that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for the applicable electronic health record (EHR) reporting periods. Section 602 of Title VI, Division O of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113) added subsection (d) hospitals in Puerto Rico as eligible hospitals under the Medicare EHR Incentive Program and extended the participation timeline for these hospitals such that downward payment adjustments were authorized beginning in FY 2022 for section (d) Puerto Rico hospitals that do not successfully demonstrate meaningful use of CEHRT for the applicable EHR reporting periods.

2. Proposal To Define the EHR Reporting Period in CY 2026 and Subsequent Years

a. Proposal To Define the EHR Reporting Period

Under the definition of ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4, for eligible hospitals and CAHs in the Medicare Promoting Interoperability Program, the EHR reporting period in CY 2025 is a minimum of any continuous 180-day period within CY 2025 as finalized in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59259 through 59260). This applies to eligible hospitals and CAHs that are both new and returning participants in the Medicare Promoting Interoperability Program. We had previously maintained the EHR reporting period for a payment adjustment year as a minimum of any continuous 90-day period from CY 2015 through CY 2023 for eligible hospitals and CAHs for the Medicare Promoting Interoperability Program before increasing the length of the EHR reporting period to any continuous 180-days beginning with CY 2024. Maintaining a 180-day EHR reporting period for CY 2026 and subsequent years would provide consistency with the EHR reporting period established for CY 2025 and afford eligible hospitals and CAHs the flexibility they may need to work with their chosen EHR vendors on continuing to develop, update, implement, and test their EHR systems to maintain effective use of CEHRT.

Therefore, for eligible hospitals and CAHs that are new or returning participants in the Medicare Promoting Interoperability Program, for the EHR reporting period in CY 2026 and subsequent years, we propose to maintain the EHR reporting period for a payment adjustment year as a minimum of any continuous 180-day period within the calendar year. A 180-day EHR reporting period would be the minimum length, and eligible hospitals and CAHs are encouraged to use longer periods, up to and including the full calendar year. We propose corresponding revisions to the definition of ''EHR reporting period for a payment adjustment year'' at 42 CFR 495.4. In collaboration with the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (ONC) (collectively referred

[393] For more information about USCDI see *https://www.healthit.gov/isp/united-states-core-data-interoperability-uscdi.*

to as ASTP),[394] we will continue to monitor CEHRT utilization by eligible hospitals and CAHs to determine if a longer EHR reporting period may be appropriate in the future.

We invite public comment on this proposal to define the ''EHR reporting period for a payment adjustment year'' in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that calendar year for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program and to make corresponding revisions at 42 CFR 495.4.

b. Certified EHR Technology

In the FY 2025 IPPS/LTCH PPS final rule we discussed certain revisions to the CEHRT definition impacting eligible hospitals and CAHs. We refer readers to this discussion for more information (89 FR 69613 through 69614).

In this proposed rule, we remind readers of recent updates to ONC Health Information Technology (Health IT) Certification Program certification criteria that are referenced or incorporated within the definition of certified EHR technology (CEHRT) in 42 CFR 495.4. The definition of CEHRT includes EHR technology certified under the ONC Health IT Certification Program that meets the Base EHR definition at 45 CFR 170.102, technology certified to the criteria necessary to be a meaningful EHR user under the Medicare Promoting Interoperability Program and the Merit-Based Incentive Payment System (MIPS) Promoting Interoperability performance category, and technology certified to the criteria necessary to report on applicable objectives and measures.

In addition to the health IT certification criteria named in the CEHRT definition in 42 CFR 495.4, in order to meet the Base EHR definition, EHR technology [395] must, among other things, be certified to certain certification criteria specified in the Base EHR definition, while further health IT certification criteria in 45 CFR 170.315 are incorporated into the CEHRT definition as criteria necessary to be a meaningful EHR user consistent with paragraph (2)(ii) of the CEHRT definition in 42 CFR 495.4 (ONC health IT certification criteria required to meet Medicare Promoting Interoperability Program objectives and measures are listed in Table [X.F.–05]). As finalized in the Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program final rule, technology meeting the CEHRT definition must meet ONC's health IT certification criteria ''as adopted and updated in 45 CFR 170.315'' (88 FR 79553). For EHR technology to meet the CEHRT definition in CY 2026, it will be required to be certified to applicable certification criteria in 45 CFR 170.315 in CY 2026.

In the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing (HTI–1) final rule (89 FR 1205 through 1210), ONC adopted the certification criterion, ''decision support interventions (DSI)'' in 45 CFR 170.315(b)(11) to replace the ''clinical decision support (CDS)'' certification criterion in 45 CFR 170.315(a)(9), the latter of which is included in the Base EHR definition (89 FR 1236). The finalized DSI criterion in 45 CFR 170.315(b)(11) requires that Health IT Modules must, among other functions, enable a limited set of identified users to select (that is, activate) evidence-based DSIs and Predictive DSIs (as defined in 45 CFR 170.102) [396] and support ''source attributes'' [397]—categories of technical performance and quality information—for both evidence-based and Predictive DSIs. ONC further finalized that a Health IT Module may meet the Base EHR definition by either being certified to the existing CDS version of the certification criterion in 45 CFR 170.315(a)(9) or being certified to the revised DSI criterion in 45 CFR 170.315(b)(11), for the period up to, and including, December 31, 2024. On and after January 1, 2025, ONC finalized that only the DSI criterion in 45 CFR 170.315(b)(11) is included in the Base EHR definition. ONC further finalized that the adoption of the criterion in 45 CFR 170.315(a)(9) expired on January 1, 2025 (89 FR 1281).

In addition to the DSI criterion, to which Health IT Modules must be certified to meet the Base EHR definition after January 1, 2025, ONC finalized other updates in the HTI–1 final rule, for which health IT developers must update and provide Health IT Modules to their customers by January 1, 2026. These include updates resulting from the following finalized policies:

- The ''Transmission to public health agencies—electronic case reporting'' criterion in 45 CFR 170.315(f)(5) was updated to specify consensus-based, industry-developed electronic standards and implementation guides (IGs) to replace functional, descriptive requirements in the existing criterion (89 FR 1226). We have identified this criterion as required for the Electronic Case Reporting measure.
- The United States Core Data for Interoperability (USCDI) version 3 was adopted in 45 CFR 170.213(b), and ONC finalized that USCDI version 1 in 45 CFR 170.213(a) will expire on January 1, 2026. This change impacts several ONC health IT certification criteria that reference the USCDI, including the ''transitions of care'' certification criterion in 45 CFR 170.315(b)(1), the ''Clinical information reconciliation and incorporation—Reconciliation'' certification criterion in 45 CFR 170.315(b)(2) and the ''View, download, and transmit to 3rd party'' certification criterion in 45 CFR 170.315(e) (89 FR 1210). The ''transitions of care'' certification criterion in 45 CFR 170.315(b)(1) is included in the ''Base EHR definition'' while the ''Clinical information reconciliation and incorporation—Reconciliation'' certification criterion in 45 CFR 170.315(b)(2) is required for the ''Support Electronic Referral Loops by Receiving and Reconciling Health Information'' measure and the ''View, download, and transmit to 3rd party'' certification criterion is required for the ''Provide Patients Electronic Access to their Health Information'' measure.
- The ''standardized application programming interface (API) for patient and population services'' certification criterion in 45 CFR 170.315(g)(10), which is included in the Base EHR definition, was updated to include newer versions of certain standards, including USCDI version 3 and updated functionality to support the criterion (89 FR 1283).

For complete information about the updates to ONC health IT certification criteria finalized in the HTI–1 final rule, we refer readers to the text of the final rule (89 FR 1192) as well as resources available on ASTP's website.[398]

[394] On July 29, 2024, notice was posted in the **Federal Register** that ONC would be dually titled to the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (ASTP) (89 FR 60903).

[395] We refer here to ''EHR technology'' for the sake of simplicity. The definition of Base EHR in 45 CFR 170.102 applies to ''an electronic record of health-related information on an individual.''

[396] 45 CFR 170.315(b)(11)(iii)(A) and (B).

[397] 45 CFR 170.315(b)(11)(iv)(A) and (B).

3. Proposal To Modify the Security Risk Analysis Measure

a. Background on the Security Risk Analysis Measure

The Health Insurance Portability and Accountability Act of 1996 (HIPAA), as implemented in the HIPAA Security Rule [399] (45 CFR part 160 and subparts A and C of 45 CFR part 164) contains, among other things, the administrative safeguards that covered entities and business associates (45 CFR 160.103) must implement, such as the standard and implementation specifications for security management process. Among those safeguards are implementation specifications that require covered entities and business associates to conduct an accurate and thorough assessment of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of electronic protected health information (ePHI) held by the covered entity or business associate (45 CFR 164.308(a)(1)(ii)(A)) and to implement security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level to comply with the general requirements of the HIPAA Security Rule at 45 CFR 164.306(a) and the risk management requirements at 45 CFR 164.308(a)(1)(ii)(B).

For eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program, ensuring the privacy and security of ePHI is essential for demonstrating meaningful use of CEHRT. In both the Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 2 final rule (Stage 2 final rule) (77 FR 54002 through 54003) and the Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (Stage 3 final rule) (80 FR 62793 through 62794), we discussed the benefits of safeguarding electronic health information and our determination that protecting electronic health information is essential to all other aspects of meaningful use. We also noted that unintended, unlawful, or both, disclosures of protected health information could diminish individuals' confidence in EHRs and electronic health information exchange and that ensuring that health information is adequately protected and secured will assist in addressing the unique risks and challenges that may be presented by EHRs.

We previously adopted the Security Risk Analysis measure based on the HIPAA Security Rule risk analysis requirement in 45 CFR 164.308(a)(1). Information on the adoption of this measure can be found in several rules that established Medicare and Medicaid EHR Incentive Programs requirements, including the Medicare and Medicaid Programs; Electronic Health Record Incentive Program final rule (Stage 1 final rule) (75 FR 44369), Stage 2 final rule (77 FR 54002 and 54003), Stage 3 final rule (80 FR 62793 through 62794), and the FY 2019 IPPS/LTCH PPS final rule (83 FR 41644). In the Stage 3 final rule (80 FR 62793 through 62795 and 62829 through 62832), we adopted the Protect Patient Health Information objective and include the Security Risk Analysis measure within this important objective.

The Security Risk Analysis measure requires eligible hospitals and CAHs to attest ''yes'' or ''no'' as to whether they have conducted or reviewed a security risk analysis, as required under the HIPAA Security Rule at 45 CFR 164.308(a)(1)(ii)(A). Eligible hospitals and CAHs must attest ''yes'' to the measure to be considered a meaningful EHR user. The measure is not scored and does not contribute any points to the total score for eligible hospitals and CAHs for the Protect Patient Health Information objective and measures. An attestation of ''no'' results in the eligible hospital or CAH not meeting the measure and not satisfying the definition of a meaningful EHR user under 42 CFR 495.4, subjecting the eligible hospital or CAH to a downward payment adjustment.

b. Proposal To Modify the Security Risk Analysis Measure Beginning With the EHR Reporting Period in CY 2026

While the Security Risk Analysis measure currently requires eligible hospitals and CAHs to attest to conducting a security risk analysis as required under the HIPAA Security Rule, the Security Risk Analysis measure does not currently require eligible hospitals and CAHs to manage their security risk conduct or to attest to having implemented security measures to manage their security risk. Codified at 45 CFR 164.308(a)(1)(ii)(B), the HIPAA Security Rule implementation specification for risk management requires the implementation of security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level to comply with 45 CFR 164.306(a). We note the HIPAA Security Rule does not prescribe a specific methodology for conducting and documenting a risk analysis or managing risk (45 CFR 164.308(a)(1)(ii) and 164.316(b)(1)). We refer readers to the Security Risk Assessment Tool (*https://www.healthit.gov/topic/privacy-security-and-hipaa/security-risk-assessment-tool*), for informational purposes, that may help guide some organization types. This tool was developed by ASTP in collaboration with the U.S. Department of Health and Human Services (HHS) Office for Civil Rights (OCR), and OCR's cybersecurity newsletters,[400] for educational resources on conducting a security risk assessment as required by the HIPAA Security Rule. Additional information is also available in the National Institute of Standard and Technology (NIST) special publication, *Implementing the Health Insurance Portability and Accountability Act (HIPAA) Security Rule: A Cybersecurity Resource Guide.*[401]

We propose to modify the existing Security Risk Analysis measure to require eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management as required under the HIPAA Security Rule implementation specification for risk management. This would be in addition to the current requirement under the measure for eligible hospitals and CAHs to attest ''yes'' to having conducted or reviewed a security risk analysis. Under the proposed modified measure, eligible hospitals and CAHs would be required to attest that they have implemented policies and procedures to support analyzing and managing the security risks to ePHI associated with the implementation and use of EHRs as required by the HIPAA Security Rule implementation specifications for risk analysis and risk management as described in 45 CFR 164.308(a)(1)(ii)(A) and (B). The modifications we propose to the Security Risk Analysis measure would increase accountability among eligible hospitals and CAHs that have not taken steps to reduce risks and vulnerabilities to ePHI as required by the HIPAA Security Rule and would provide transparency regarding the efforts of eligible hospitals and CAHs that are already taking steps to manage this risk.

The proposed text of the measure is as follows, with new or revised proposed text in italics:

[399] The Department has proposed to modify the HIPAA Security Rule to strengthen the cybersecurity of electronic protected health information, including proposals to revise the existing requirements to conduct a risk analysis and risk management. See generally HIPAA Security Rule To Strengthen the Cybersecurity of Electronic Protected Health Information proposed rule (90 FR 898).

[400] *See* generally *https://www.hhs.gov/hipaa/for-professionals/security/guidance/index.html.*

[401] *See* NIST SP 800–66, rev. 2. *https://csrc.nist.gov/pubs/sp/800/66/r2/final.*

Conduct or review a security risk analysis *and conduct security risk management activities,* in accordance with the requirements under 45 CFR 164.308(a)(1)*(ii)(A) and (B),* including addressing the security of data created or maintained by CEHRT (*to include encryption*), in accordance with 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the *eligible hospital's or CAH's* risk management process. Actions included in the security risk analysis measure may occur any time during the calendar year in which the EHR reporting period occurs.

To meet the requirements of the modified measure, we propose eligible hospitals and CAHs would need to separately attest ''yes'' to both components of the proposed revised measure. An eligible hospital or CAH would be required to both attest ''yes'' that they have met the existing security risk analysis requirement component, *and* attest ''yes'' that they have met the security risk management component of the modified Security Risk Analysis measure to be considered a meaningful EHR user beginning with the EHR reporting period in CY 2026. This proposed modification would not impact the provision that actions included in the Security Risk Analysis measure may occur any time during the calendar year in which the EHR reporting period occurs and that an eligible hospital or CAH must use the capabilities and standards as defined for CEHRT at 42 CFR 495.4. The proposal to modify the Security Risk Analysis measure would not change the current scoring approach and would not contribute any points towards the eligible hospital or CAH's total score for the objectives and measures. An eligible hospital or CAH that attests ''no'' to either the risk analysis component or the risk management component, or to both components, would not meet the proposed measure requirements and would not satisfy the definition of a meaningful EHR user under 42 CFR 495.4, subjecting the eligible hospital or CAH to a downward payment adjustment.

We invite public comment on this proposal to modify the Security Risk Analysis measure to require eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management in addition to the current requirement under the measure for eligible hospitals and CAHs to attest ''yes'' to having conducted or reviewed a security risk analysis as required under the HIPAA Security Rule. We also invite public comment regarding compliance with security risk management requirements and the potential impact the proposed modification to the Security Risk Analysis measure would have on risk management compliance and any potential burden from this proposal.

4. Proposal To Modify the Safety Assurance Factors for EHR Resilience (SAFER) Guides Measure

a. Background on the SAFER Guides Measure

The SAFER Guides are an evidence-based set of recommendations in the form of nine stand-alone, subject-oriented chapters that present the health IT community, including eligible hospitals and CAHs that use health IT, with best practice recommendations to improve the safety and safe use of EHRs.[402] The SAFER Guides were first released in 2014 and updated in 2016. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45479 through 45481), we adopted the SAFER Guides measure under the Protect Patient Health Information objective beginning with the EHR reporting period in CY 2022. In the FY 2024 IPPS/LTCH PPS final rule, we modified the requirements for the SAFER Guides measure beginning with the EHR reporting period in CY 2024 to require eligible hospitals and CAHs to attest ''yes'' to conducting an annual self-assessment using all nine of the 2016 SAFER Guides to be considered a meaningful EHR user (88 FR 59262 through 59266).

b. Proposal To Modify the SAFER Guides Measure Beginning With the EHR Reporting Period in CY 2026

In January 2025, ASTP published an updated set of SAFER Guides (hereafter referred to as the 2025 SAFER Guides, located at *https://www.healthit.gov/topic/safety/safer-guides*). The 2025 SAFER Guides consist of eight guides organized into three broad groups of Foundational Guides, Infrastructure Guides, and Clinical Process Guides.[403] All guides have been edited and contain new recommendations as well as the comprehensive consolidation of recommendations that were similar and overlap in function or intent with the 2016 SAFER Guides. For example, the ''System Configuration'' and ''System Interfaces'' chapters have been consolidated into a single chapter titled, ''System Management.'' The entirety of the content recommendations, bibliography, and implementation guidance have been organized into a comprehensive table, which promotes the adoption of best safety practices for health IT. This update represents the most comprehensive revision of the SAFER Guides since they were first released. Table X.F.–01 provides the titles of the various guides, and chapters within the guides, that collectively comprise the 2016 SAFER Guides and the 2025 SAFER Guides, respectively.

TABLE X.F.–01—COMPARISON OF THE 2016 SAFER GUIDES AND THE 2025 SAFER GUIDES

Category	2016 SAFER Guides	2025 SAFER Guides
Foundational Guides	• High Priority Practices	• High Priority Practices.
	• Organizational Responsibilities	• Organizational Responsibilities.
Infrastructure Guides	• Contingency Planning	• Contingency Planning.
	• System Configuration	• System Management.
	• System Interfaces	
Clinical Process Guides	• Patient Identification	• Patient Identification.
	• Computerized Provider Order Entry with Decision Support.	• Computerized Provider Order Entry with Decision Support.
	• Test Results Reporting and Follow-Up	• Test Results Reporting and Follow-Up.
	• Clinician Communication	• Clinician Communication.

We propose to modify the SAFER Guides measure by requiring eligible hospitals and CAHs to attest ''yes'' to completing an annual self-assessment using all eight 2025 SAFER Guides to be considered a meaningful EHR user,

[402] ASTP SAFER Guides—*https://www.healthit.gov/topic/safety/safer-guides.*

[403] ASTP SAFER Guides—*https://www.healthit.gov/topic/safety/safer-guides.*

beginning with the EHR reporting period in CY 2026. During FY 2024 IPPS/LTCH PPS rulemaking, some commenters believed the 2016 SAFER Guides were outdated and recommended that CMS and ONC review and make updates. Some commenters questioned the relevancy of the [2016] SAFER Guides to patient safety in hospitals due to the rapid advancement of health IT (88 FR 59264 through 59265). Our proposal to update the SAFER Guides measure will address these concerns because the 2025 SAFER guides have been updated and streamlined to focus on the highest risk, most commonly occurring issues that can be addressed through technology or practice changes to build system resilience and have been condensed into eight SAFER Guides rather than nine.

The proposed text of the measure is as follows: Conduct an annual self-assessment using all eight of the 2025 SAFER Guides at any point during the calendar year in which the EHR reporting period occurs, beginning with the EHR reporting period in CY 2026 and subsequent years. We note that our proposed version of the measure referencing the 2025 SAFER Guides would only be effective starting with EHR reporting periods in CY 2026. During EHR reporting periods in CY 2025, eligible hospitals and CAHs should continue to use the 2016 SAFER Guides. Both the 2016 and the 2025 SAFER Guides are available on the ASTP website: *https://www.healthit.gov/topic/safety/safer-guides*. We encourage eligible hospitals and CAHs to begin to familiarize themselves with the 2025 SAFER Guides during CY 2025.

We invite public comment on this proposal for eligible hospitals and CAHs to conduct an annual self-assessment using all eight of the 2025 SAFER Guides at any point during the calendar year in which the EHR reporting period occurs, beginning with the EHR reporting period in CY 2026 and subsequent years.

5. Proposal To Modify the Public Health and Clinical Data Exchange Objective: Adoption of an Optional Bonus Measure for Public Health Reporting Using the Trusted Exchange Framework and Common Agreement™ (TEFCA)

a. Background on the Public Health and Clinical Data Exchange Objective

The Medicare Promoting Interoperability Program for eligible hospitals and CAHs encourages health information exchange for public health purposes through the Public Health and Clinical Data Exchange objective. Effective and efficient responses to public health events require rapid, accurate exchange of electronic health information between health care providers, including eligible hospitals and CAHs, and Federal, State, Tribal, local, and territorial public health agencies (PHAs). Health care providers, including eligible hospitals and CAHs, collect this electronic health information for patient care, and PHAs use the information for public health purposes such as tracking a disease, initiating contact tracing, or pinpointing the source of a disease or outbreak of foodborne illness.

There are currently eight measures under the Public Health and Clinical Data Exchange objective: Immunization Registry Reporting, Syndromic Surveillance Reporting, Electronic Case Reporting, Electronic Laboratory Reporting, Antimicrobial Use Surveillance, Antimicrobial Resistance Surveillance, Public Health Registry Reporting, and Clinical Data Registry Reporting. Six of these measures are required under the objective, while two, the Public Health Registry Reporting and Clinical Data Registry Reporting, are optional bonus measures. Eligible hospitals and CAHs may receive a total of 5 bonus points for reporting on one or both optional bonus measures.

Measures under the Public Health and Clinical Data Exchange objective promote the exchange of health information for specific public health use cases with PHAs and other entities using CEHRT. However, one difficulty with the electronic exchange of health information for many different public health purposes is that exchange between PHAs and eligible hospitals and CAHs requires different processes. For instance, health information exchange for Electronic Case Reporting may be based on several point-to-point connections among eligible hospitals, CAHs, intermediaries, and PHAs, but these connections and agreements are different for other use cases such as Electronic Laboratory Reporting or Syndromic Surveillance. We anticipate that participation in TEFCA could help reduce the difficulty of public health information exchange over time by creating a common governance and technical framework for health information exchange. Facilitating health information exchange with PHAs through the TEFCA framework has the potential to increase standardization of connections to PHAs and reduce reporting burden for eligible hospitals, CAHs, and PHAs.

b. Background on TEFCA

Section 4003(b) of the 21st Century Cures Act, enacted in 2016, amended section 3001(c) of the Public Health Service Act and required HHS to take steps to ensure full network-to-network exchange of health information. Specifically, in section 3001(c)(9)(A) of the Public Health Service Act, Congress directed the National Coordinator, in collaboration with NIST and other agencies within HHS, to ''develop or support a trusted exchange framework, including a common agreement among health information networks nationally.'' Since the enactment of the 21st Century Cures Act, HHS has pursued development of the TEFCA framework.

By standardizing health information exchange across many different networks, TEFCA helps to ensure nationwide network-to-network exchange of health information. Standardization across networks simplifies health information exchange by reducing the number of connections that health care providers, including eligible hospitals and CAHs, PHAs, and other interested parties need to make to send and receive health information. TEFCA supports this standardization by creating baseline governance, legal, and technical requirements that enable secure health information exchange across different networks nationwide, including: a common method for authenticating trusted network participants, a common set of rules for trusted exchange, organizational and operational policies to enable the exchange of health information among networks, and a process for filing and adjudicating noncompliance with the terms of the Common Agreement.[404] We anticipate that TEFCA can help expand the nationwide availability of secure health information exchange capabilities in public health reporting.

CMS, the Centers for Disease Control and Prevention (CDC), and ASTP have been working closely with PHAs and other interested parties to expand the use of TEFCA for sharing health information for public health purposes. TEFCA is an important part of a shared vision for building a modernized public health infrastructure that connects previously siloed public health and health care systems. Early efforts to enable public health reporting through TEFCA exchange have focused on electronic case reporting, which is likely

[404] Additional information on TEFCA can be found on the ASTP website, available at: *https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca.*

to be the primary mechanism of public health information exchange supported by entities that are part of TEFCA during 2026.

c. Proposal To Add an Optional Bonus Measure Under the Public Health and Clinical Data Exchange Objective Beginning With the EHR Reporting Period in CY 2026

We propose to add an optional bonus measure under the Public Health and Clinical Data Exchange objective for health information exchange with a PHA that occurs using TEFCA. Specifically, beginning with the EHR reporting period in CY 2026, we propose the following optional bonus measure:

- Public Health Reporting Using TEFCA. The eligible hospital or CAH: (1) participates as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ASTP's website); (2) is not suspended; (3) submits health information using TEFCA to a PHA consistent with one or more of the measures under the Public Health and Clinical Data Exchange objective; (4) is in active engagement Option 2 (validated data production) with a PHA to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective; and (5) uses the functions of CEHRT to exchange with the PHA.

Under our proposal, an eligible hospital or CAH would be able to claim 5 bonus points under the Public Health and Clinical Data Exchange objective if the eligible hospital or CAH has attested that they are in active engagement (Option 2) with a PHA to submit electronic production data for one or more of the measures under the Public Health and Clinical Data Exchange objective using TEFCA. As previously finalized in the FY 2023 IPPS/LTCH final rule (87 FR 49339), for the measures in the Public Health and Clinical Data Exchange objective, eligible hospitals and CAHs are required to report their level of active engagement as either Option 1 (pre-production and validation) or Option 2 (validated data production), and may only spend one EHR reporting period at the pre-production and validation level of active engagement (Option 1) before advancing to Option 2 (validated data production) to fulfill measure requirements. Under our proposal, the bonus measure would only be available where the eligible hospital or CAH is in active engagement Option 2 (validated data production) with a PHA to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective.

Furthermore, under our proposal, to attest ''yes'' for the Public Health Reporting Using TEFCA optional bonus measure, an eligible hospital or CAH must be a signatory to a TEFCA Framework Agreement,[405] meaning either the Common Agreement or an agreement that includes the Participant/Sub-participant Terms of Participation,[406] and is not suspended under the respective agreement.

In addition, to attest ''yes'' for this bonus measure, an eligible hospital or CAH must transmit electronic health information for at least one measure under the Public Health and Clinic Data Exchange objective using TEFCA.

For more information about exchange of public health data using TEFCA, we refer readers to the TEFCA Public Health Exchange Purpose Implementation Standard Operating Procedure (SOP).[407] The Public Health Exchange Purpose Implementation SOP currently identifies electronic case reporting and electronic laboratory reporting as exchange use cases, but the SOP can also be used for any allowable public health purpose. CDC, ASTP, and others are focused on establishing a foundation for health care providers, including eligible hospitals and CAHs, to use TEFCA to meet their public health reporting needs for the benefit of both public health and clinical care.

Finally, the eligible hospital or CAH must use the functions of CEHRT to engage in exchange with a PHA. We believe there are numerous certified health IT capabilities that can support exchange under a TEFCA Framework Agreement with a PHA. For instance, eligible hospitals or CAHs may exchange information under a TEFCA Framework Agreement by using technology certified to the health IT certification criteria, ''Transmission to public health agencies—reportable laboratory tests and value/results'' at 45 CFR 170.315(f)(3) and ''Transmission to public health agencies—electronic case reporting'' at 45 CFR 170.315(f)(5). Both criteria are associated with the exchange use cases currently identified under the TEFCA Public Health Exchange Purpose Implementation SOP. We further recognize that eligible hospitals and CAHs may connect to entities that connect directly or indirectly to a Qualified Health Information Network™ [408] (QHIN) using certified health IT in a variety of ways. This includes the other ONC health IT certification criterion at 45 CFR 170.315(f) associated with the Public Health and Clinical Data Exchange objective measures, and we believe that we should allow for substantial flexibility in how eligible hospitals and CAHs use certified health IT to exchange health information under a TEFCA Framework Agreement. We invite public comment on health IT certification criteria that can support the proposed bonus measure.

We propose that an eligible hospital or CAH may earn a total of 5 bonus points if it attests ''yes'' for one of the following optional bonus measures: the Public Health Reporting Using TEFCA measure, the Public Health Registry Reporting measure, or the Clinical Data Registry Reporting measure. Eligible hospitals and CAHs may attest ''yes'' to more than one, but the eligible hospital or CAH can only earn a total of 5 bonus points even if it attests ''yes'' to multiple bonus measures. Because the Public Health Reporting Using TEFCA measure would be an optional bonus measure, we are not proposing any exclusions. We are also proposing that if an eligible hospital or CAH uses TEFCA to fulfill any of the required Public Health and Clinical Data Exchange objective measures, such as Electronic Case Reporting or Electronic Laboratory Reporting, that eligible hospital or CAH would be able to claim the 5 bonus points if it attests ''yes'' to the Public Health Reporting Using TEFCA bonus measure in addition to earning points for fulfilling the requirements of the required measure(s).

We invite public comment on our proposal to adopt an optional bonus measure under the Public Health and Clinical Data Exchange Objective to permit an eligible hospital or CAH to earn a total of 5 bonus points if it is participating as a signatory to a TEFCA Framework Agreement, is not

[405] The Common Agreement defines ''Framework Agreement(s)'' as: ''any one or combination of the Common Agreement, a Participant-QHIN Agreement, a Participant-Subparticipant Agreement, or a Downstream Subparticipant Agreement, as applicable.'' See Common Agreement for Nationwide Health Information Interoperability Version 2.1 (Nov 2024) *https://www.healthit.gov/sites/default/files/2024-11/Common_Agreement_2.1.pdf*.

[406] Participant/Subparticipant Terms of Participation (Apr. 2024), *https://rce.sequoiaproject.org/wp-content/uploads/2024/05/Common-Agreement-v2.0-Exhibit-1_508.pdf*.

[407] For more information, see *https://rce.sequoiaproject.org/wp-content/uploads/2024/08/XP-Implementation-SOP-Public-Health-PH.pdf*.

[408] A Qualified Health Information Network is a health information network that facilitates TEFCA exchange by undergoing technology and security testing, onboarding, and designation. For more information, see: *https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca*.

suspended, and submits health information using TEFCA to a PHA consistent with one or more of the measures under the Public Health and Clinical Data Exchange objective, is in active engagement Option 2 (validated data production) with a PHA to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective, and uses the functions of CEHRT to exchange with the PHA.

6. Overview of Scoring Methodology for the EHR Reporting Period in CY 2026

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41636 through 41641), we adopted a performance-based scoring methodology for eligible hospitals and CAHs reporting to the Medicare Promoting Interoperability Program beginning with the EHR reporting period in CY 2019. This methodology included a minimum scoring threshold that eligible hospitals and CAHs were required to meet at 42 CFR 495.24(e)(1)(i)(B), in addition to the requirement to report on the objectives and measures of meaningful use under 42 CFR 495.24(e)(1)(i)(A), to be considered a meaningful EHR user under 42 CFR 495.4. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69616 through 69618), we finalized a proposal to increase the performance-based scoring threshold to at least 70 points for the EHR reporting period in CY 2025 and to at least 80 points beginning with the EHR reporting period in CY 2026 and continuing in the EHR reporting periods in subsequent years.

As shown in Table X.F.–02., the points associated with the required measures sum to 100 points, and reporting on one or more of the optional bonus measures offers an additional 5 total bonus points. The scores for each of the required measures and bonus measures are added together to calculate a total score of up to 105 possible points for each eligible hospital or CAH. We refer readers to Table X.F.–02. in this proposed rule, which reflects the objectives, measures, maximum points available, and whether a measure is required or optional for the EHR reporting period in CY 2026 and subsequent years based on our previously adopted policies and the proposals included in this proposed rule.

TABLE X.F.–02—PERFORMANCE-BASED SCORING METHODOLOGY FOR EHR REPORTING PERIODS IN CY 2026 AND SUBSEQUENT YEARS

Objective	Measure	Maximum points	Required/optional
Electronic Prescribing (e-Prescribing) ...	e-Prescribing	10 points	Required.
	Query of Prescription Drug Monitoring Program (PDMP).	10 points	Required.
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information.	15 points	Required (eligible hospitals and CAHs must choose one of the three reporting options).
	—AND—		
	Support Electronic Referral Loops by Receiving and Reconciling Health Information.	15 points.	
	—OR—		
	HIE Bi-Directional Exchange	30 points.	
	—OR—		
	Enabling Exchange under TEFCA	30 points.	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information.	25 points	Required.
Public Health and Clinical Data Exchange.	Report the following six measures: ..... • Syndromic Surveillance Reporting. • Immunization Registry Reporting. • Electronic Case Reporting. • Electronic Laboratory Reporting.** • Antimicrobial Use Surveillance. • Antimicrobial Resistance Surveillance.	25 points	Required.
	Report one of the following measures: • Public Health Registry Reporting. • Clinical Data Registry Reporting. • Public Health Reporting Using TEFCA.*	5 points (*bonus*)	Optional.

Notes: The Security Risk Analysis measure, SAFER Guides measure, and attestations required by section 106(b)(2)(B) of the Medicare Access and CHIP Reauthorization Act of 2015 are required but will not be scored. Reporting electronic clinical quality measures (eCQMs) is required but will not be scored. Eligible hospitals and CAHs must also submit their level of active engagement for measures under the Public Health and Clinical Data Exchange objective. Participants may spend only one EHR reporting period at the Option 1: Pre-production and Validation level per measure and must progress to Option 2: Validated Data Production level for the following EHR reporting period. See the FY 2023 IPPS/LTCH PPS final rule (87 FR 49337) for more details about active engagement. The ePrior Authorization measure is required beginning with the EHR reporting period in CY 2027.

* Signifies a proposal made in this FY 2026 IPPS/LTCH PPS proposed rule. For details on our proposal to add the Public Health Reporting Under TEFCA measure, we refer readers to section X.F.5. of the preamble of this proposed rule.

** In prior rulemaking, we inadvertently referenced the measure name incorrectly. To ensure accuracy, we are correcting the measure's name to Electronic Laboratory Reporting measure. This is a non-substantive change and does not impact the measure's specifications or reporting requirements.

The maximum number of points available by measure in this proposed rule do not include the points that would be redistributed in the event an exclusion is claimed for a given measure. We are not proposing any changes to our policy for point redistribution in the event an exclusion is claimed. We refer readers to Table X.F.–03. in the preamble of this proposed rule, which shows point redistribution among the objectives and

measures for the EHR reporting period in CY 2026 and subsequent years, in the event an eligible hospital or CAH claims an exclusion.

TABLE X.F.–03—EXCLUSION REDISTRIBUTION FOR THE EHR REPORTING PERIOD IN CY 2026 AND SUBSEQUENT YEARS

Objective	Measure	Redistribution if exclusion is claimed
e-Prescribing	e-Prescribing	10 points to Health Information Exchange Objective.
	Query of PDMP	10 points to e-Prescribing measure.
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information.	No exclusion.
	—AND—	
	Support Electronic Referral Loops by Receiving and Reconciling Health Information.	No exclusion.
	—OR—	
	HIE Bi-Directional Exchange	No exclusion.
	—OR—	
	Enabling Exchange under TEFCA	No exclusion.
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information.	No exclusion.
Public Health and Clinical Data Exchange.	Report the following six measures: • Syndromic Surveillance Reporting. • Immunization Registry Reporting. • Electronic Case Reporting. • Electronic Laboratory Reporting.* • Antimicrobial Use Surveillance. • Antimicrobial Resistance Surveillance.	If an exclusion is claimed for each of the six measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure.

Notes: The ePrior Authorization measure is required beginning with the EHR reporting period in CY 2027.

* In prior rulemaking, we inadvertently referenced the measure name incorrectly. To ensure accuracy, we are correcting the measure's name to Electronic Laboratory Reporting measure. This is a non-substantive change and does not impact the measure's specifications or reporting requirements.

7. Overview of Objectives and Measures for the Medicare Promoting Interoperability Program for the EHR Reporting Period in CY 2026

For ease of reference, Table X.F.–04. lists objectives and measures for the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2026, as revised to reflect the proposals in this proposed rule, and Table X.F.–05. lists the ONC Health IT Certification Program certification criteria required to meet the Medicare Promoting Interoperability Program objectives and measures.

TABLE X.F.–04—SUMMARY OF OBJECTIVES AND MEASURES FOR THE MEDICARE PROMOTING INTEROPERABILITY PROGRAM FOR THE EHR REPORTING PERIOD IN CY 2026

Objective	Measure	Numerator	Denominator	Exclusion	Calculation considerations related to counting unique patients or actions for CY 2026 and subsequent years
Electronic Prescribing (e-Prescribing).	e-Prescribing: For at least one hospital discharge, medication orders for permissible prescriptions (for new and changed prescriptions) are transmitted electronically using CEHRT.*	The number of prescriptions in the denominator generated and transmitted electronically.	The number of new or changed prescriptions written for drugs requiring a prescription in order to be dispensed, other than controlled substances for patients discharged during the EHR reporting period.	Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions, and there are no pharmacies that accept electronic prescriptions within 10 miles at the start of their EHR reporting period.	Measure may be calculated by reviewing only actions for patients whose records are maintained using CEHRT for which sufficient data were entered in the CEHRT to allow the record to be saved and not rejected due to incomplete data.
e-Prescribing	Query of Prescription Drug Monitoring Program (PDMP): For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the EHR reporting period, the eligible hospital or CAH uses data from CEHRT to conduct a query of a PDMP for prescription drug history.	N/A (measure is Y/N)	N/A (measure is Y/N)	(1) Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions for controlled substances that include Schedule II, III and IV drugs and is not located within 10 miles of any pharmacy that accepts electronic prescriptions for controlled substances at the start of their EHR reporting period. (2) Any eligible hospital or CAH that could not report on this measure in accordance with applicable law.	N/A (measure is Y/N).
Health Information Exchange.	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the eligible hospital or CAH that transitions or refers its patient to another setting of care or provider of care: (1) Creates a summary of care record using CEHRT; and (2) Electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where a summary of care record was created using CEHRT and exchanged electronically.	Number of transitions of care and referrals during the EHR reporting period for which the eligible hospital or CAH inpatient or emergency department (Place of Service [POS] 21 or 23) was the transitioning or referring provider.	None	Measure may be calculated by reviewing only actions for patients whose records are maintained using CEHRT for which sufficient data were entered in the CEHRT to allow the record to be saved and not rejected due to incomplete data.
Health Information Exchange.	Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received using CEHRT for patient encounters during the EHR reporting period for which an eligible hospital or CAH was the receiving party of a transition of care or referral, or for patient encounters during the EHR reporting period in which the eligible hospital or CAH has never before encountered the patient, the eligible hospital or CAH conducts clinical information reconciliation for medication, medication allergy, and current problem list using CEHRT.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication—Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication Allergy—Review of the patient's known medication allergies; and (3) Current Problem List—Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the EHR reporting period for which an eligible hospital or CAH was the reconciling party of a transition of care or referral, and for patient encounters during the EHR reporting period in which the eligible hospital or CAH has never before encountered the patient.	None	Measure may be calculated by reviewing only actions for patients whose records are maintained using CEHRT for which sufficient data were entered in the CEHRT to allow the record to be saved and not rejected due to incomplete data.

TABLE X.F.–04—SUMMARY OF OBJECTIVES AND MEASURES FOR THE MEDICARE PROMOTING INTEROPERABILITY PROGRAM FOR THE EHR REPORTING PERIOD IN CY 2026—Continued

Objective	Measure	Numerator	Denominator	Exclusion	Calculation considerations related to counting unique patients or actions for CY 2026 and subsequent years
Health Information Exchange.	HIE Bi-Directional Exchange: The eligible hospital or CAH must attest to the following: (1) Participating in a Health Information Exchange system (HIE) in order to enable secure, bi-directional exchange of information to occur for all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23), and all unique patient records stored or maintained in the EHR for these departments, during the EHR reporting period in accordance with applicable law and policy. (2) Participating in an HIE that is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners. (3) Using the functions of CEHRT to support bi-directional exchange with an HIE.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N).
Health Information Exchange.	Enabling Exchange using the Trusted Exchange Framework and Common Agreement (TEFCA): The eligible hospital or CAH must attest to the following: (1) Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ASTP's website) in good standing (that is, not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23), and all unique patient records stored or maintained in the EHR for these departments, during the EHR reporting period in accordance with applicable law and policy. (2) Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N).

Provider to Patient Exchange.	Provide Patients Electronic Access to Their Health Information: For at least one unique patient discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23): (1) the patient (or patient-authorized representative) is provided timely access to view online, download, and transmit their health information; and (2) the eligible hospital or CAH ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the application programming interface API in the eligible hospital's or CAH's CEHRT.	The number of patients in the denominator (or patient authorized representatives) who are provided timely access to health information to view online, download and transmit to a third party and to access using an application of their choice that is configured to meet the technical specifications of the API in the eligible hospital's or CAH's CEHRT.	The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.	None	Measure must be calculated by reviewing all patient records, not just those maintained using CEHRT.
Public Health and Clinical Data Exchange.	Immunization Registry Reporting: The eligible hospital or CAH is in active engagement with a public health agency (PHA) to submit immunization data and receive immunization forecasts and histories from the public health immunization registry or immunization information system (IIS).	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the immunization registry reporting measure if the eligible hospital or CAH: (1) Does not administer any immunizations to any of the populations for which data are collected by its jurisdiction's immunization registry or IIS during the EHR reporting period; (2) Operates in a jurisdiction for which no immunization registry or IIS is capable of accepting the specific standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no immunization registry or IIS has declared readiness to receive immunization data as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N).

TABLE X.F.–04—SUMMARY OF OBJECTIVES AND MEASURES FOR THE MEDICARE PROMOTING INTEROPERABILITY PROGRAM FOR THE EHR REPORTING PERIOD IN CY 2026—Continued

Objective	Measure	Numerator	Denominator	Exclusion	Calculation considerations related to counting unique patients or actions for CY 2026 and subsequent years
Public Health and Clinical Data Exchange.	Syndromic Surveillance Reporting: The eligible hospital or CAH is in active engagement with a PHA to submit syndromic surveillance data from an emergency department (POS 23).	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the syndromic surveillance reporting measure if the eligible hospital or CAH: (1) Does not have an emergency department; (2) Operates in a jurisdiction for which no PHA is capable of receiving electronic syndromic surveillance data from eligible hospitals or CAHs in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no PHA has declared readiness to receive syndromic surveillance data from eligible hospitals or CAHs as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N).
Public Health and Clinical Data Exchange.	Electronic Case Reporting: The eligible hospital or CAH is in active engagement with a PHA to submit case reporting of reportable conditions.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the Electronic Case Reporting measure if the eligible hospital or CAH: (1) Does not treat or diagnose any reportable diseases for which data are collected by its jurisdiction's reportable disease system during the EHR reporting period; (2) Operates in a jurisdiction for which no PHA is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no PHA has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N).

Public Health and Clinical Data Exchange.	Electronic Laboratory Reporting:** The eligible hospital or CAH is in active engagement with a PHA to submit Electronic Laboratory Reporting results.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the Electronic Laboratory Reporting measure if the eligible hospital or CAH: (1) Does not perform or order laboratory tests that are reportable in its jurisdiction during the EHR reporting period; (2) Operates in a jurisdiction for which no PHA is capable of accepting the specific Electronic Laboratory Reporting standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no PHA has declared readiness to receive Electronic Laboratory Reporting results from an eligible hospital or CAH as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N).
Public Health and Clinical Data Exchange.	Antimicrobial Use Surveillance: The eligible hospital or CAH is in active engagement with CDC's National Health Safety Network (NHSN) to submit Antimicrobial Use data for the EHR reporting period and receives a report from NHSN indicating its successful submission of Antimicrobial Use data for the EHR reporting period.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH may be excluded from the measure if the eligible hospital or CAH: (1) Does not have any patients in any patient care location for which data are collected by NHSN during the EHR reporting period; (2) Does not have electronic medication administration record (eMAR)/barcode medication administration (BCMA) electronic records or an admission, discharge, transfer (ADT) system during the EHR reporting period; or (3) Does not have a data source containing the minimal discrete data elements that are required for reporting.	N/A (measure is Y/N).
Public Health and Clinical Data Exchange.	Antimicrobial Resistance Surveillance: The eligible hospital or CAH is in active engagement with CDC's NHSN to submit Antimicrobial Resistance data for the EHR reporting period and receives a report from NHSN indicating its successful submission of Antimicrobial Resistance data for the EHR reporting period.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH may be excluded from the measure if the eligible hospital or CAH: (1) Does not have any patients in any patient care location for which data are collected by NHSN during the EHR reporting period; (2) Does not have a laboratory information system (LIS) or ADT system during the EHR reporting period; or (3) Does not have a data source containing the minimal discrete data elements that are required for reporting.	N/A (measure is Y/N).
Public Health and Clinical Data Exchange.	Public Health Registry Reporting: The eligible hospital or CAH is in active engagement with a PHA to submit data to public health registries.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N).

TABLE X.F.–04—SUMMARY OF OBJECTIVES AND MEASURES FOR THE MEDICARE PROMOTING INTEROPERABILITY PROGRAM FOR THE EHR REPORTING PERIOD IN CY 2026—Continued

Objective	Measure	Numerator	Denominator	Exclusion	Calculation considerations related to counting unique patients or actions for CY 2026 and subsequent years
Public Health and Clinical Data Exchange.	Clinical Data Registry Reporting: The eligible hospital or CAH is in active engagement to submit data to a clinical data registry.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N).
Public Health and Clinical Data Exchange.	Public Health Reporting Using TEFCA:* The eligible hospital or CAH (1) participates as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ASTP's website); (2) is not suspended; (3) submits health information using TEFCA to a PHA consistent with one or more of the measures under the Public Health and Clinical Data Exchange objective; (4) is in active engagement Option 2 (validated data production) with a PHA to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective; and (5) uses the functions of CEHRT to exchange with the PHA.	N/A (measure is Y/N)*	N/A (measure is Y/N)*	None*	N/A (measure is Y/N)*.
Protect Patient Health Information.	Security Risk Analysis:* Conduct or review a security risk analysis and conduct security risk management activities, in accordance with the requirements under 45 CFR 164.308(a)(1)(ii)(A) and (B), including addressing the security of data created or maintained by CEHRT (to include encryption), in accordance with 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the eligible hospital's or CAH's risk management process. Actions included in the security risk analysis measure may occur any time during the calendar year in which the EHR reporting period occurs.*	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N).

Protect Patient Health Information.	Safety Assurance Factors for EHR Resilience (SAFER) Guides: * Conduct an annual self-assessment using all eight of the 2025 SAFER Guides at any point during the calendar year in which the EHR reporting period occurs, beginning with the EHR reporting period in CY 2026 and subsequent years.*	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N).

* Signifies a proposal made in this FY 2026 IPPS/LTCH PPS proposed rule that would apply to the EHR reporting period in CY 2026 and subsequent years.

** In prior rulemaking, we inadvertently referenced the measure name incorrectly. To ensure accuracy, we are correcting the measure's name to Electronic Laboratory Reporting measure. This is a non-substantive change and does not impact the measure's specifications or reporting requirements.

TABLE X.F.–05—MEDICARE PROMOTING INTEROPERABILITY PROGRAM OBJECTIVES AND MEASURES AND ONC HEALTH IT CERTIFICATION PROGRAM CERTIFICATION CRITERIA FOR THE EHR REPORTING PERIOD IN CY 2026

Objective	Measure	ONC Health IT Certification Program certification criteria as defined in the following sections of title 45 CFR
e-Prescribing	e-Prescribing	170.315(b)(3) e-Prescribing.
	Query of PDMP	170.315(b)(3) e-Prescribing.
Health Information Exchange	Support electronic referral loops by sending health information.	170.315(b)(1) Transitions of care.
	Support electronic referral loops by receiving and reconciling health information.	170.315(b)(1) Transitions of care. 170.315(b)(2) Clinical information reconciliation and incorporation.
Health Information Exchange (alternative).	Health Information Exchange Bi-Directional Exchange	Examples of certified health IT capabilities to support the actions of this measure may include but are *not* limited to technology certified to the following criteria: 170.315(b)(1) Transitions of care. 170.315(b)(2) Clinical information reconciliation and incorporation. 170.315(g)(7) Application access—patient selection. 170.315(g)(9) Application access—all data request. 170.315(g)(10) Standardized API for patient and population services.
Health Information Exchange (alternative).	Enabling Exchange under TEFCA	Examples of certified health IT capabilities to support the actions of this measure may include but are *not* limited to technology certified to the following criteria: 170.315(b)(1) Transitions of care. 170.315(b)(2) Clinical information reconciliation and incorporation. 170.315(g)(7) Application access—patient selection. 170.315(g)(9) Application access—all data request. 170.315(g)(10) Standardized API for patient and population services.
Provider to Patient Exchange	Provide patients electronic access to their health information.	170.315(e)(1) View, download, and transmit to 3rd party. 170.315(g)(7) Application access—patient selection. 170.315(g)(9) Application access—all data request. 170.315(g)(10) Standardized API for patient and population services.
Public Health and Clinical Data Exchange.	Immunization registry reporting	170.315(f)(1) Transmission to immunization registries.
	Syndromic surveillance reporting	170.315(f)(2) Transmission to public health agencies—syndromic surveillance.
	Electronic case reporting	170.315(f)(5) Transmission to public health agencies—electronic case reporting.
	Public health registry reporting	170.315(f)(7) Transmission to public health agencies—health care surveys.
	Clinical data registry reporting	No ONC health IT certification criteria at this time.
	Public health reporting using TEFCA*	Examples of certified health IT capabilities to support the actions of this measure may include but are *not* limited to technology certified to the following criteria: 170.315(f)(3) Transmission to public health agencies—reportable laboratory tests and value/results. 170.315(f)(5) Transmission to public health agencies—electronic case reporting.
	Electronic laboratory reporting**	170.315(f)(3) Transmission to public health agencies—reportable laboratory tests and value/results.
	Antimicrobial Use Surveillance	170.315(f)(6) Transmission to public health agencies—antimicrobial use and resistance reporting.
	Antimicrobial Resistance Surveillance	170.315(f)(6) Transmission to public health agencies—antimicrobial use and resistance reporting.
Electronic Clinical Quality measures (eCQMs).	eCQMs for eligible hospitals and CAHs	170.315(c)(1). 170.315(c)(2). 170.315(c)(3)(i) and (ii).
Protect Patient Health Information	Security Risk Analysis*	No ONC health IT certification criteria at this time.
	SAFER Guides*	No ONC health IT certification criteria at this time.

*Signifies a measure with a proposal made in this FY 2026 IPPS/LTCH PPS proposed rule.
**In prior rulemaking, we inadvertently referenced the measure name incorrectly. To ensure accuracy, we are correcting the measure's name to Electronic Laboratory Reporting measure. This is a non-substantive change and does not impact the measure's specifications or reporting requirements.

8. Clinical Quality Measurement for Eligible Hospitals and CAHs Participating in the Medicare Promoting Interoperability Program

a. Background on Clinical Quality Measurement for Eligible Hospitals and CAHs

Under sections 1814(l)(3)(A) and 1886(n)(3)(A) of the Act and the definition of ''meaningful EHR user'' under 42 CFR 495.4, eligible hospitals and CAHs must report on clinical quality measures selected by the Secretary using CEHRT (also referred to as electronic clinical quality measures, or eCQMs), as part of the Medicare Promoting Interoperability Program.

Table X.F–06. summarizes the previously finalized required and self-selected eCQMs available for eligible hospitals and CAHs to report under the Medicare Promoting Interoperability Program for the CY 2026 reporting period and subsequent years.

TABLE X.F.–06—PREVIOUSLY FINALIZED eCQMS FOR ELIGIBLE HOSPITALS AND CAHS FOR THE CY 2026 REPORTING PERIOD AND SUBSEQUENT YEARS

Short name	Measure name	CBE No.***
Safe Use of Opioids*	Safe Use of Opioids—Concurrent Prescribing	3316e
PC–02*	Cesarean Birth	0471e
PC–07*	Severe Obstetric Complications	3687e
STK–2	Discharged on Antithrombotic Therapy	0435e
STK–3	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436e
STK–5	Antithrombotic Therapy by End of Hospital Day Two	0438e
VTE–1	Venous Thromboembolism Prophylaxis	0371
VTE–2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
HH–HYPO*	Hospital Harm—Severe Hypoglycemia	3503e
HH–HYPER*	Hospital Harm—Severe Hyperglycemia	3533e
HH–OREA*	Hospital Harm—Opioid-Related Adverse Events	3501e
HH–PI**	Hospital Harm—Pressure Injury	3498e
HH–AKI**	Hospital Harm—Acute Kidney Injury	3713e
HH–FI	Hospital Harm—Falls with Injury	4120e
HH–RF	Hospital Harm—Postoperative Respiratory Failure	4130e
MCS****	Malnutrition Care Score	3592e
IP-ExRad	Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults (Hospital Level—Inpatient).	3663e

* Signifies a required measure for the CY 2026 reporting period and subsequent years.
** Signifies a required measure added for the CY 2027 reporting period and subsequent years.
*** We note that inclusion of a CBE number neither indicates endorsement or lack of endorsement. More information about current endorsement status can be found on the Partnership for Quality Measurement website: *https://p4qm.org/measures*.
**** The eCQM previously named Global Malnutrition Composite Score has been updated to Malnutrition Care Score. The short name has subsequently been updated to MCS eCQM.

We are not proposing any changes to the eCQMs for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program in this proposed rule.

9. Request for Information (RFI) Regarding the Query of Prescription Drug Monitoring Program (PDMP) Measure

a. Background on PDMPs and the Query of PDMP Measure

PDMPs are electronic databases that monitor the use of controlled substances, including prescription drug usage and prescription drug history. PDMPs are critical decision support tools for addressing prescription drug use, misuse, and diversion. Recent legislation has continued to advance the use of PDMPs, including the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT for Patients and Communities Act) (Pub. L. 115–271), enacted in 2018, that authorizes important investments in combating the opioid epidemic. Among other provisions, the SUPPORT for Patients and Communities Act included new requirements and Federal funding for the enhancement, integration, and interoperability of PDMPs to help reduce opioid misuse and overprescribing and to help promote the overall effective prevention and treatment of opioid use disorders.

Today, all 50 States, the District of Columbia, Guam, Puerto Rico, and the Northern Mariana Islands host PDMPs.[409] PDMPs play an important role in patient safety by enabling clinicians to check PDMP data for prescription opioids and other controlled medications received by a patient from other clinicians to determine whether a patient is put at high risk for overdose. A literature review of recent studies on PDMP effectiveness compiled by the PDMP Training and Technical Assistance Center (TTAC) at the Institute for Intergovernmental Research and published in the *PDMP Administrators' Orientation Guide of PDMPs* highlights the role of PDMPs in reducing the following: high-risk opioid prescribing and dispensing behaviors; overall supply of opioid prescriptions; multiple provider episodes (for example, doctor or pharmacy shopping); opioid-related overdose rates; and admissions to treatment facilities for prescription drug misuse.[410]

Increased integration of PDMPs into EHRs and EHR systems continues to reduce barriers to and burden of PDMP review by incorporating PDMP queries into the provider workflow. A PDMP TTAC assessment of PDMP Policies and Capabilities[411] published in December 2024 found that 49 of the 54 PDMPs have taken steps to integrate with EHR or health information exchange systems (HIEs), pharmacy dispensing systems (PDSs), or both. We refer readers to Table X.F.–07. for more detailed information.

TABLE X.F.–07—PDMP INTEGRATION AS OF 2024[412]

Type of integration	Number of PDMPs
EHR, HIE, and PDS	18
EHR and PDS	24
EHR and HIE	1
EHR only	5
HIE only	1

We continue to work with Federal partners and industry stakeholders to advance common standards for the exchange of information between PDMPs, EHRs, pharmacy dispensing systems, and exchange networks. ASTP convened the PDMP and health IT system communities to standardize data

[411] PDMP TTAC, PDMP Policies and Capabilities: 2024 Assessment Results, December 2024, available at: *https://www.pdmpassist.org/Content/Documents/pdf/resources/PDMP%20Policies%20and%20Capabilities%202023%20Assessment%20Results_final_20240108.pdf*.

[412] PDMP TTAC, PDMP Policies and Capabilities: 2024 Assessment Results, December 2024, available at: *https://www.pdmpassist.org/Content/Documents/pdf/resources/PDMP%20Policies%20and%20Capabilities%202023%20Assessment%20Results_final_20240108.pdf*.

format and transport protocols to exchange controlled substances prescription data between PDMP and health IT systems, which produced a PDMP–EHR Integration Toolkit.[413] Moreover, ASTP continues to collaborate with industry partners furthering the development of a Health Level 7® (HL7) Fast Healthcare Interoperability Resources® (FHIR) IG that allows EHRs and other health IT systems to support more seamless exchange of prescription data with PDMP systems.[414]

On August 5, 2024, the Health Data, Technology, and Interoperability: Patient Engagement, Information Sharing, and Public Health Interoperability (HTI–2) proposed rule appeared in the **Federal Register** (89 FR 63498). The HTI–2 proposed rule includes a proposal for a PDMP certification criterion in 45 CFR 170.315(f)(9), titled ''Prescription Drug Monitoring Program (PDMP) Databases—Query, receive, validate, parse, and filter,'' that would enable the bi-directional interaction and electronic health information exchange between certified Health IT Modules and PDMP databases using a consistent approach to querying PDMP data (89 FR 63547). Specifically, the proposed certification criterion would enable the query of prescription drug monitoring systems and the receipt, validation, parsing, and filtering of medication information from PDMPs. The proposed criterion would be a functional criterion agnostic to a specific PDMP standard, but would include transport, content, and vocabulary standards where appropriate. ASTP has not finalized the proposal to date.

In the FY 2019 IPPS/LTCH PPS final rule, CMS adopted the Query of PDMP measure under the e-Prescribing objective of the Medicare Promoting Interoperability Program to support HHS initiatives aimed at improving the treatment of opioid and substance use disorders by helping eligible hospitals and CAHs avoid inappropriate prescriptions (83 FR 41648 through 41653). The Query of PDMP measure provides that for at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the EHR reporting period, the eligible hospital or CAH uses data from CEHRT to conduct a query of their PDMP for prescription drug history (89 FR 69607).

We are interested in continuing to make improvements to the Medicare Promoting Interoperability Program that promote patient safety and encourage appropriate prescribing of controlled substances while minimizing provider burden. We further believe improved technology approaches and increased PDMP integration into EHR systems can enable increased utilization of PDMPs and associated positive outcomes for patients. We are also considering recent studies of how outcome-oriented quality measures that are not currently included in the Medicare Promoting Interoperability Program, such as the Concurrent Use of Opioids and Benzodiazepines measure, could potentially be included in the Medicare Promoting Interoperability Program associated with the Query of PDMP measure or as an eCQM to provide additional data and support quality improvement in our efforts to address the inappropriate prescribing of controlled substances.[415]

Therefore, we are seeking public comment through this RFI to potentially inform future rulemaking for the Query of PDMP measure related to the following policy considerations: (1) changing the Query of PDMP measure from an attestation-based measure (''yes'' or ''no'') to a performance-based measure (numerator and denominator), as well as alternative measures designed to more effectively assess the degree to which participants are utilizing PDMPs, and (2) expanding the types of drugs to which the Query of PDMP measure could apply.

b. RFI on Changing the Query of PDMP Measure From an Attestation-Based Measure to a Performance-Based Measure

The Query of PDMP measure was initially finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41649 through 41653) as a performance-based measure with a numerator and denominator described as follows:

- Denominator: Number of Schedule II opioids[416] electronically prescribed using CEHRT by the eligible hospital or CAH during the EHR reporting period.
- Numerator: The number of Schedule II opioid prescriptions in the denominator for which data from CEHRT is used to conduct a query of a PDMP for prescription drug history except where prohibited and in accordance with applicable law.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42593 through 42595), we modified the Query of PDMP measure to become an attestation-based measure beginning with the EHR reporting period in CY 2019, and an optional measure for the EHR reporting period in CY 2020, noting that it was premature to require the Query of PDMP measure and to score it based on performance. We received feedback that incorporating the ability to count the number of PDMP queries in the EHR would require implementation of manual processes due to the wide variation in approaches by eligible hospitals and CAHs querying PDMPs, and that the costs of additional development if further standardization was introduced later would likely be passed on to eligible hospitals and CAHs. We refer to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42593 through 42596), FY 2021 IPPS/LTCH PPS final rule (85 FR 58967 through 58969), and FY 2022 IPPS/LTCH PPS final rule (86 FR 45462 through 45464) for discussions of stakeholder concerns with implementing the Query of PDMP measure as a performance-based measure.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49322 through 49323), beginning with the EHR reporting period in CY 2023, we finalized the Query of PDMP measure to require a ''yes'' or a ''no'' attestation from eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program. A ''yes'' response would indicate that for at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the EHR reporting period, the eligible hospital or CAH uses data from CEHRT to conduct a query of a PDMP for prescription drug history.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49327), we stated that we believed our efforts to promote interoperability for accessing data through PDMPs, including standardized functionality, would enable the potential future modification of the Query of PDMP measure to be performance-based. Given recent progress in a variety of areas, there is now a clearer trajectory moving forward

[413] PDMP–EHR Integration Toolkit, available at: *https://www.healthit.gov/topic/health-it-health-care-settings/prescription-drug-monitoring-programs.*

[414] HL7 FHIR PDMP IG; available at: *https://build.fhir.org/ig/HL7/fhir-pdmp/.*

[415] For example, see Gabriel, Meghan; Montavon, Joel; Digmann, Rachel; Ferris, Lindsey M.; Spiro, Shelly. A Novel Approach to PDMP Reporting: Adapting Opioid Quality Measures to PDMP Data. Journal for Healthcare Quality 45(2): p 107–116, March/April 2023. For measure specifications and additional information for the Concurrent Use of Opioids and Benzodiazepines measure, we refer readers to the eCQI Resource Center website at: *https://ecqi.healthit.gov/ecqm/eh/2024/cms0506v6?qt-tabs_measure=measure-information.*

[416] In the FY 2019 IPPS/LTCH PPS final rule, the Query of PDMP only included Schedule II opioids (83 FR 41649 through 41653). We finalized the expansion of the Query of PDMP measure to include Schedule II opioids and Schedules III and IV drugs beginning with the EHR reporting period in CY 2023 in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49323 through 49325).

to enhance the Medicare Promoting Interoperability Program's capacity to incentivize use of PDMPs, and thereby, to improve the quality of health care and promote care coordination. Notably, PDMPs are now widely available across all 50 states and several localities, and PDMP integration with HIEs, EHRs, and PDSs has increased since the Query of PDMP measure was finalized as an attestation measure. Therefore, to further promote the utilization of PDMPs and to support appropriate prescribing for controlled substances, we are inviting public comment and feedback on the potential modification of the Query of PMDP measure from an attestation measure to a performance-based measure to inform potential future rulemaking and include the following questions:

- Should CMS propose to adopt a performance-based (numerator/denominator) reporting requirement for the Query of PDMP measure? If so, how should the numerator and denominator be defined?

For example, one approach we are considering to potentially inform future rulemaking is the following description of a numerator and a denominator, which is updated from the numerator and denominator established in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41649 through 41653), when the Query of PDMP measure was initially finalized as a performance-based measure and only included Schedule II opioids:

++ Denominator: Number of Schedule II opioid or Schedule III or IV drugs electronically prescribed using CEHRT by the eligible hospital or CAH during the EHR reporting period.

++ Numerator: The number of prescriptions of Schedule II opioid or Schedule III or IV drugs in the denominator for which data from CEHRT is used at the time of prescribing to conduct a query of a PDMP for prescription drug history except where prohibited and in accordance with applicable law.

- What are potential barriers for eligible hospitals and CAHs meeting the Query of PDMP measure as a performance-based measure?
- How should CMS account for varying levels of readiness and capacity for performance-based reporting, particularly for small and rural providers, including eligible hospitals and CAHs?
- Are there specific exclusions that we should consider for performance-based reporting?
- What timeframe would allow for systems and process changes to account for a change of the Query of PDMP measure from an attestation measure to a performance-based measure while minimizing burden?
- Would adoption and use of Health IT Modules certified to the ''Prescription Drug Monitoring Program (PDMP) Databases—Query, receive, validate, parse, and filter'' certification criterion proposed by ONC in the HTI–2 proposed rule (89 FR 63547), if this criterion were to be finalized, help to mitigate previously identified burden associated with implementing and reporting on a performance-based ''Query of PDMP'' measure?
- How would the adoption and use of Health IT Modules certified to the proposed ''Prescription Drug Monitoring Program (PDMP) Databases—Query, receive, validate, parse, and filter'' certification criterion, if it were finalized, impact the numerator and denominator of a potential performance-based PDMP measure?

We are also requesting feedback on a broader set of performance-based measurement concepts that could help to advance our priorities with respect to the use of PDMPs to support the prevention and treatment of opioid use disorders. We are specifically interested in creating performance-based measures that allow eligible hospitals and CAHs to leverage technology to improve care and reduce burden.

- What are other measure concepts we should consider that would allow us to focus on outcomes related to overdose prevention?
- Should we explore measures related to monitoring data from PDMPs that could assess multiple opioid prescriptions, opioid prescriptions from multiple prescribers, combined opioid and benzodiazepine prescriptions, or very high standardized dosage of opioids prescribed?
- What measure concepts related to the use of PDMPs are likely to involve the lowest effort and provide the highest value to the health care community?

c. RFI on the Modification of the Query of PDMP Measure To Include All Schedule II Drugs

Under the Controlled Substances Act (CSA),[417] the Drug Enforcement Administration classifies drugs, substances, and certain chemicals used to make drugs into five distinct categories or schedules depending upon the drug's acceptable medical use and the drug's abuse or dependency potential. A drug's abuse rate is a factor used to determine its classification; for example, Schedule I medications have the highest abuse potential while medications in Schedule V have a low abuse potential.[418] We refer readers to Table X.F.–08. for information on each Schedule, including abuse potential, medicinal use, if any, and drug examples. For additional information, we refer readers to the listing of drugs and their schedule located at CSA Scheduling at *https://www.deadiversion.usdoj.gov/schedules/orangebook/c_cs_alpha.pdf*.

TABLE X.F.–08—CONTROLLED SUBSTANCE SCHEDULES, DESCRIPTIONS, AND EXAMPLES [419]

Schedule	Description	Examples
Schedule I	No accepted medical use, are unsafe, and hold a high potential for abuse.	Heroin and LSD.
Schedule II	Accepted medical use, high potential for abuse, abuse could lead to severe psychological or physical dependence.	Hydrocodone, methadone, meperidine, oxycodone, morphine, codeine, and amphetamine.
Schedule III	Accepted medical use, less potential for abuse than schedule I or II substances, abuse may lead to moderate or low physical dependence or high psychological dependence.	Ketamine and anabolic steroids.
Schedule IV	Accepted medical use, low potential for abuse relative to schedule III substances, abuse may lead to limited physical or psychological dependence relative to schedule III substances.	Alprazolam, clonazepam, diazepam, and tramadol.

[417] Public Law 91–513, tit. II, 84 Stat. 1236, 1242–84 (1970); codified, as amended, at 21 U.S.C. 801 *et seq.*

[418] United States Drug Enforcement Administration, website; available at: *https://www.dea.gov/drug-information/drug-scheduling.*

[419] GAO–21–22, Prescription Drug Monitoring Programs: Views on Usefulness and Challenges of Programs; 21 U.S.C. 812; and the U.S. Drug Enforcement Administration, website, available at: *https://www.dea.gov/drug-information/drug-scheduling.*

TABLE X.F.–08—CONTROLLED SUBSTANCE SCHEDULES, DESCRIPTIONS, AND EXAMPLES [419]—Continued

Schedule	Description	Examples
Schedule V	Accepted medical use, low potential for abuse relative to schedule IV substances, abuse may lead to limited physical or psychological dependence relative to schedule IV substances.	Pregabalin, cough preparations containing less than 200 mg per 100 mL or 100 g of codeine.

PDMPs are operated at the state level, and individual state requirements for reporting and use differ from state to state.[420] Currently, almost every state collects data on Schedules II, III, and IV drugs that are prescribed.[421]

In the FY 2023 IPPS/LTCH PPS final rule, we finalized the expansion of the Query of PDMP measure to not only include Schedule II opioids, but also include Schedule III and IV drugs, beginning with the EHR reporting period in CY 2023 (87 FR 49323 through 49325). We also finalized the measure description: for at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the EHR reporting period, the eligible hospital or CAH uses data from CEHRT to conduct a query of a PDMP for prescription drug history. We noted that expanding the Query of PDMP measure to include Schedule III and IV drugs in addition to Schedule II opioids would offer eligible hospitals and CAHs a broader clinical picture aimed at overall patient safety efforts and would support better alignment with state regulations. We also clarified in response to public comment that the Query of PDMP measure does not include or apply to Schedule II drugs that are not opioids (for example, central nervous system stimulants) (87 FR 49325). For additional information on the Query of PDMP measure policies, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 49320 through 49327).

To further promote the Medicare Promoting Interoperability Program's capacity to incentivize the electronic exchange of health information through the use of PDMPs, and thereby improve the quality of care by supporting appropriate prescribing of controlled substances, we are considering proposing in future rulemaking to expand the Query of PDMP measure to include all Schedule II drugs, rather than only including Schedule II opioids. Notably, this would expand the Query of PDMP measure to include controlled substances that are categorized as Schedule II drugs that are not opioids, such as central nervous system stimulants that can be prescribed for Attention-Deficit Hyperactivity Disorder (ADHD). We refer readers to Table X.F.–09. for examples of Schedule II opioid drugs and other Schedule II drugs.

TABLE X.F.–09—EXAMPLES OF SCHEDULE II OPIOID DRUGS AND OTHER SCHEDULE II DRUGS [422]

Schedule II opioid drugs	Other Schedule II drugs
• Codeine • Fentanyl • Hydrocodone • Meperidine • Methadone • Morphine • Oxycodone	• Amphetamine • Lisdexamfetamine • Methamphetamine • Methylphenidate • Pentobarbital

For this RFI, we are inviting public comment and feedback on possible future expansion of the Query of PDMP measure to include all Schedule II (Schedule II opioids and other Schedule II drugs), Schedule III, and Schedule IV drugs in future rulemaking. We are also seeking responses to the following specific questions:

- What challenges exist, if any, around expanding the Query of PDMP measure to include all Schedule II drugs?
- What are the potential benefits versus risks of expanding the Query of PDMP measure to include all Schedule II drugs?
- Would expanding the Query of PDMP measure to Schedule II non-opioid drugs create barriers for patients appropriately prescribed Schedule II non-opioid drugs (for example, central nervous stimulants appropriately prescribed for ADHD)?
- How should CMS account for varying levels of readiness and capacity for eligible hospitals and CAHs to meet an expanded scope of the measure, particularly for small and rural providers, including eligible hospitals and CAHs?
- What exclusions should be considered, if any?

10. RFI Regarding Performance-Based Measures

As finalized in the FY 2023 IPPS/LTCH final rule (87 FR 49339), the measures under the Public Health and Clinical Data Exchange objective require eligible hospitals and CAHs to indicate their level of active engagement with a PHA (Option 1 or Option 2) but do not measure the degree to which eligible hospitals and CAHs are exchanging the data specified under each measure. Historically, the Public Health and Clinical Data Exchange objective has included measures that required reporting via attestation to account for factors such as the ongoing development of connections between eligible hospitals and CAHs and PHAs, as well as variation across state and local requirements which govern reporting requirements for eligible hospitals and CAHs (77 FR 54022). However, given the ongoing advancements in public health reporting infrastructure across the nation, we are exploring whether alternatives to the current attestation-based measures can drive further improvements in the quality and consistency of reporting to PHAs and associated public health outcomes. This approach would align with the Act's requirement to seek to improve the use of EHRs and health care quality over time (section 1886(n)(3)(A) of the Act).

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36380), we included an RFI regarding the Public Health and Clinical Data Exchange objective, including questions that sought feedback on replacing current attestation-based measures with measures that would require reporting of a numerator and denominator to better assess performance on measures included under the Public Health and Clinical Data Exchange objective. Because we only require that an eligible hospital or CAH indicate their level of active engagement (Option 1 or Option 2), attestation-based reporting does not capture aspects of the health information shared with PHAs that we are seeking to improve, such as comprehensiveness, quality, or timeliness.

We appreciate the responses received on our RFI in the FY 2025 IPPS/LTCH PPS proposed rule, and we are seeking

[420] PDMP TTAC website, available at: *https://www.pdmpassist.org/State.*

[421] PDMP TTAC website, available at: *https://www.pdmpassist.org/Policies/Maps/PDMPPolicies.*

[422] For additional information on drug scheduling, we refer readers to the U.S. Drug Enforcement Administration website, available at: *https://www.dea.gov/drug-information/drug-scheduling.*

additional feedback from commenters through another RFI in this proposed rule. For this RFI, we are seeking to further refine our discussion of possible future measures to address commenter concerns and seek information to ensure any future proposals align with our goals of ultimately improving public health outcomes. Specifically, we are interested in new measure concepts for public health that would allow us to better focus on aspects of the data quality of public health reporting. We are seeking public comment on the following questions:

- What aspects of data quality and usability are most appropriate and valuable to measure in the context of the Public Health and Clinical Data Exchange objective of the Medicare Promoting Interoperability Program (for example, timeliness and completeness of reporting)?
- How could data completeness be defined? For instance, how should we define ''complete data''? Should we consider a threshold approach, under which eligible hospitals and CAHs would attest that they are successfully sending complete data for a minimum set of data elements to a PHA?

++ For example, for the Electronic Case Reporting measure, should we define a minimum threshold for completeness of certain data elements that are critical to public health and are supported in CEHRT (for example, data elements included in a specific version of the USCDI such as medications or medication dose)? If so, how should we define or set such thresholds?

++ For the Electronic Laboratory Reporting measure, should we require eligible hospitals and CAHs to report how many laboratory tests were ordered using Logical Observation Identifiers Names and Codes (LOINC) and how many results used Systematized Nomenclature of Medicine (SNOMED) codes?

- Are there other metrics available that we should consider in the Medicare Promoting Interoperability Program that more directly relate to actions and outcomes that public health reporting is intended to enable (for example, overdose prevention)?
- Of the current types of public health data exchange reflected in the Public Health and Clinical Data Exchange objective measures, what use cases should we prioritize for a focus on data quality that would provide the highest value to the health care community while resulting in the least burden?

As part of our exploration of alternative measure concepts to assess performance on different aspects of the Public Health and Clinical Data Exchange objective measures, we are considering revising our approach to scoring the measures under the objective.

We are seeking public comment on the following questions:

- Currently, eligible hospitals and CAHs can earn 25 points for reporting on all six required measures. Under a revised scoring approach, should we specify that eligible hospitals and CAHs could earn up to 5 points for each measure, for a total of 30 points for the objective, but must earn at least 1 point for each measure to earn a score for the Medicare Promoting Interoperability program, in addition to meeting the overall threshold for the program?
- Should we score all public health measures for which we finalize a numerator and denominator based on performance? Or should we only score a subset of measures based on performance?

In recent years, ONC has finalized updates to ONC Health IT Certification Program certification criteria that are included in CEHRT to provide technical capabilities based on FHIR, an advanced, modern interoperability standard developed by HL7 to facilitate efficient, scalable and standardized health information exchange.[423] For instance, technology certified to the ''Standardized API for patient and population services'' criterion at 45 CFR 170.315(g)(10) provides for a FHIR API in Health IT Modules for data in a version or versions of the USCDI. In the HTI–1 final rule, ONC finalized that Health IT Modules certified to the ''Electronic case reporting'' criterion at 45 CFR 170.315(f)(5) may meet the requirements of the criterion by certifying to the HL7 FHIR Implementation Guide: Electronic Case Reporting—US Realm 2.1.0—STU 2 US to support electronic case reporting (89 FR 1231). In the HTI–2 proposed rule, ONC also proposed several updates to public health certification criteria that include reference to FHIR implementation specifications (89 FR 63537). In 2024, ASTP released the Draft FHIR Federal Action Plan with a goal of building an ecosystem for innovation that strengthens consistent use of the FHIR standard.[424] ASTP, CMS, and CDC plan to continue to explore opportunities to leverage FHIR-based capabilities within certified health IT to support public health reporting, and we are seeking comment on how such future updates could impact the potential measure strategies discussed in this section. Specifically, we are seeking public comment on the following questions:

- What are the most promising uses of FHIR approaches to the public health reporting requirements under the Medicare Promoting Interoperability Program? What approaches have the most potential to reduce the burden of reporting on eligible hospitals and CAHs and increase the quality and timeliness of data submitted to PHAs?
- Approaches to public health reporting using FHIR have focused on greater automation of the interactions between health care providers and PHAs in order to reduce burden on providers, including eligible hospitals and CAHs, and increase PHAs' ability to obtain the information they need. How might FHIR approaches to the exchange of public health data impact measurement of eligible hospital and CAH performance?
- Use of FHIR APIs could ultimately result in consolidation of disparate functions in EHRs that are currently being used to support different types of public health data exchange, for instance, through availability of an API that makes data available for a range of public health use cases. If these approaches are implemented in certified health IT in the future, should we consider streamlining or reduce the number of measures required in the Medicare Promoting Interoperability Program?

11. RFI Regarding Data Quality

Gaps and discrepancies in data accuracy, completeness, reliability, and consistency undermine the integrity of health information exchange. We believe eligible hospitals and CAHs should be able to seamlessly exchange high-quality health information with patients, providers, and payers across systems. For the purposes of this discussion, we define data quality as the degree to which health information is accurate, complete, timely, consistent, and reliable. These factors increase the overall quality of health information that touches several aspects of the health care continuum: clinical information, patient safety, claims, provider data, eligibility, benefits, and administrative data.[425] Poor data quality poses direct threats to patient safety, especially when providers, including eligible hospitals and CAHs, treat patients based on inaccurate or

[423] Additional resources about FHIR can be found here: *https://www.healthit.gov/topic/standards-technology/standards/fhir.*

[424] *https://www.healthit.gov/isp/about-fhir-action-plan.*

[425] *https://www.nejm.org/doi/full/10.1056/nejmp1708704.*

incomplete information.[426] Accountability, transparency, and improvement efforts also suffer when health care actors evaluate—or are evaluated based on—care quality and outcomes that don't reflect true performance due to unreliable or low quality data.[427] Poor quality data also poses risks beyond health care delivery and administration. Because health care data captured by EHRs serve as the foundation for public health reporting and clinical research using real world evidence, widespread deficits in data quality can adversely affect clinical innovation and public health decision-making.[428]

We encourage eligible hospitals and CAHs to work with their health IT vendors to ensure the richest, highest quality data are sent to their exchange partners. This partnership can help ensure data validation; reduce burden between eligible hospitals and CAHs and their exchange partners; and reduce unintended consequences and risks that come with low-quality data. For example, timely, complete data are needed for monitoring adverse events such as antimicrobial resistance. When providers, including eligible hospitals and CAHs, send accurate data the first time, this reduces the need for prolonged testing and email exchanges between providers, PHAs, payers, and patients.

As the prevalence of electronic health information continues to grow, and as providers and payers continue to move to a value-based care model, the need for high-quality data will become increasingly important.[429] We want to both encourage and support eligible hospitals' and CAHs' use of modern technologies and standards to ensure data are usable, complete, accurate, timely, and consistent. We are seeking public comment on the following questions:

- What data quality challenges does your health care organization experience (for example, discrepancies in data accuracy, completeness, reliability, and consistency)? How are you working to address data quality challenges? What data quality challenges persist longitudinally across your patient population(s)?
- What are the primary barriers to collecting high-quality data? What resources do you believe could help your organization address these challenges?
- What solutions have eligible hospitals and CAHs found most effective to address data quality?
- What steps should CMS consider to drive further improvement in the quality and usability of health information being exchanged? How can CMS partner with eligible hospitals, CAHs, industry, and Federal agencies to drive further improvements in the quality and usability of health information being exchanged? What methods should CMS and other partners explore to further rectify data quality issues in the health care community?

XI. Other Provisions Included in This Proposed Rule

A. Proposed Changes to the Transforming Episode Accountability Model (TEAM)

1. Background

a. Purpose

TEAM is a 5-year mandatory alternative payment model tested by the CMS Innovation Center that will begin on January 1, 2026, and end on December 31, 2030. TEAM will test whether an episode-based pricing methodology linked with quality measure performance for select acute care hospitals reduces Medicare program expenditures while preserving or improving the quality of care for Medicare beneficiaries who initiate certain episode categories. Specifically, TEAM will test five surgical episode categories: Coronary Artery Bypass Graft Surgery (CABG), Lower Extremity Joint Replacement (LEJR), Major Bowel Procedure, Surgical Hip/Femur Fracture Treatment (SHFFT), and Spinal Fusion.

As discussed in greater detail in section XI.A.1.b. of the preamble of this proposed rule, TEAM was established through notice and comment rulemaking. While the model performance period has not yet begun, we noted in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that a few policies that were proposed were not finalized due to public comment concerns and other policies were not finalized because they needed further consideration, such as how to construct target prices when there are coding changes, which is addressed in section XI.A.2.c.(2) of the preamble of this proposed rule. Further, we indicated that for certain policies, such as the policy to address TEAM participants that have a low volume of episodes, we would go through rulemaking in the future to promulgate new policies that could be finalized before the model start date. Therefore, this proposed rule proposes updates to TEAM that would include the following modifications:

- A limited deferment period for certain hospitals.
- Linking Track 2 participation eligibility for hospitals with a Medicare Dependent Hospital (MDH) designation to the expiration of the MDH program.
- Adding the Information Transfer Patient Reported Outcome-based Performance Measure (Information Transfer PRO–PM).
- Applying a neutral quality measure score for TEAM participants with insufficient quality data.
- A methodology to construct target prices when there are coding changes.
- Reconstructing the normalization factor and prospective trend factor.
- Replacing the Area Deprivation Index (ADI) with the Community Deprivation Index (CDI).
- Using a 180-day lookback period and Hierarchical Condition Categories (HCC) version 28 for beneficiary risk adjustment.
- Aligning the date range used for episode attribution.
- Removing health equity plans.
- Expanding the Skilled Nursing Facility (SNF) 3-Day Rule Waiver.
- Removing the Decarbonization and Resilience Initiative.

We are also soliciting comment, but not proposing updates, in the following policy areas:

- Indian Health Service (IHS) hospital outpatient episodes.
- Low volume hospitals;.
- Standardized prices and reconciliation amounts; and.
- Primary care services referral requirement.

The policies in this proposed rule reflect our commitment to ensuring TEAM's incentives help to drive beneficiary quality of care improvements and reductions in Medicare spending.

b. Statutory Authority and Background

Under the authority of section 1115A of the Act, through notice-and-comment rulemaking, the CMS Innovation Center established TEAM in the FY 2025 IPPS/LTCH PPS final rule that appeared in the August 28, 2024, **Federal Register** (89 FR 69626 through 69879). The intent of TEAM is to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: CABG, LEJR, major bowel procedure, SHFFT, and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries.

[427] *https://pubmed.ncbi.nlm.nih.gov/39221336.*

[428] *https://pubmed.ncbi.nlm.nih.gov/32258941.*

[429] *https://www.healthit.gov/data/quickstats/national-trends-hospital-and-physician-adoption-electronic-health-records.*

Under Traditional Medicare, Medicare makes separate payments to providers and suppliers for the items and services furnished to a beneficiary over the course of an episode of care. Because providers and suppliers are paid for each individual item or service delivered, providers may not be incentivized to invest in quality improvement and care coordination activities. As a result, care may be fragmented, unnecessary, or duplicative. By holding hospitals accountable for all items and services provided during an episode, providers would be better incentivized to coordinate patient care, avoid duplicative or unnecessary services, and improve the beneficiary care experience during care transitions.

Under TEAM, all acute care hospitals, with limited exceptions, located within the Core Based Statistical Areas (CBSAs) that CMS selected for model implementation will be required to participate in TEAM. CMS allowed a one-time opportunity for hospitals that participate until the last day of the last performance period in the Bundled Payments for Care Improvement Advanced (BPCI Advanced) Model or the last day of the last performance year of the Comprehensive Care for Joint Replacement (CJR) Model, that are not located in a mandatory CBSA selected for TEAM participation, to voluntarily opt into TEAM. TEAM will have a 1-year glide path opportunity that will allow TEAM participants to ease into full financial risk as well as three different participation tracks to accommodate different levels of financial risk and reward. Track 1 is an upside only risk track available for all TEAM participants in the first performance year and available to safety net hospitals for the first three performance years. Track 2 is a two-sided risk track that has lower financial risk and reward, relative to Track 3, and will be available to select TEAM participants in performance years 2 through 5.[430] Track 3 is a two-sided risk track that has higher financial risk and reward, relative to Track 2, and will be available to all TEAM participants in performance years 1 through 5.

Episodes will include non-excluded Medicare Parts A and B items and services and will begin with an anchor hospitalization or anchor procedure and would end 30 days after hospital discharge. TEAM participants will continue to bill Medicare FFS as usual for items and services delivered to beneficiaries in an episode but will receive preliminary target prices for episodes prior to each performance year. Target prices will be based on three years of baseline data, prospectively trended forward to the relevant performance year, and calculated at the level of Medicare Severity Diagnosis Related Group/Healthcare Common Procedure Coding System (MS–DRG/HCPCS) episode type and region. Target prices will also include a discount factor and risk-adjustment. Participants will receive reconciliation (final) target prices that will incorporate a capped retrospective trend factor adjustment and a capped normalization factor.

Performance in the model will be assessed by comparing TEAM participants' actual Medicare FFS spending during a performance year to their reconciliation target price as well as by assessing performance on selected quality measures. TEAM participants may earn a payment from CMS, subject to a quality performance adjustment, if their spending is below the reconciliation target price. TEAM participants may owe CMS a repayment amount, subject to a quality performance adjustment, if their spending was above the reconciliation target price.

2. TEAM Provisions of This Proposed Rule

a. Participation

(1) Background

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69642) we indicated that testing TEAM will help us understand the impact of a mandatory episode-based payment model in selected geographic areas for acute care hospitals that initiate the episode categories included in the model. We stated that implementing TEAM among acute care hospitals in select geographic areas will allow CMS and TEAM participants to gain experience testing and evaluating an episode-based payment approach for certain episodes furnished by hospitals with a variety of historic utilization patterns; roles within their local markets, including with regard to accountable care organization participation or affiliation; volume of services provided; access to financial, community, or other resources; and population and health care provider density. Further, Medicare beneficiaries and providers in certain areas, such as rural areas, can be underrepresented in voluntary models, whereas under a mandatory model we have the ability to include these entities, with safeguards as appropriate, for participation so that all beneficiaries have access to care redesign approaches intended to improve the quality care, and such providers gain experience in value-based care. Lastly, we noted that participation of hospitals in selected geographic areas will allow CMS to test episode-based payments without introducing participant attrition or selection bias such as the selection bias inherent in the BPCI Advanced model due to self-selected participation in the model and self-selection of episode categories.

(2) Mandatory Participation

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69642), we defined two ways that an acute care hospital could be designated as a TEAM participant. First, a hospital is a TEAM participant if it initiates episodes and is paid under the IPPS with a CMS Certification Number (CCN) primary address located in one of the mandatory CBSAs selected for participation in TEAM. Second, a hospital that participates in either the Bundled Payments for Care Improvement Advanced (BPCI Advanced) Model or the Comprehensive Care for Joint Replacement (CJR) Model until the last day of the last performance period [or last performance year] of the respective model may voluntarily opt into TEAM participation.

These criteria for TEAM participants did not include any temporal restrictions, leading to potential uncertainty regarding the TEAM participant status of hospitals that open before or during the model performance period, which is defined at § 512.505 as the 60-month period from January 1, 2026, to December 31, 2030, during which TEAM is being tested and the TEAM participant is held accountable for spending and quality. Additionally, there was also uncertainty regarding TEAM participant status in circumstances where a hospital that previously did not satisfy the definition of TEAM participant later meets the definition criteria in the months before or during the model performance period. For example, this scenario would apply to a hospital that was previously not paid under the IPPS but then underwent a status change such that the hospital is no longer classified as a critical access hospital (CAH), as defined in section 1861(mm)(1) of the Act, or a hospital that terminated their participation in the Rural Community Health Demonstration (RCHD).[431] Further, we recognize that there may be instances where a hospital no longer satisfies the definition of TEAM

[430] TEAM participants eligible for Track 2 include safety net hospitals, rural hospitals, Medicare dependent hospitals, Sole Community Hospitals, and Essential Access Community Hospitals, all defined at § 512.505.

[431] *https://www.cms.gov/priorities/innovation/innovation-models/rural-community-hospital.*

participant during the model performance period, such as a hospital joining the RCHD or a hospital converting to a CAH.

We also note that our existing policy at § 512.550(b)(2) provides for separate TEAM reconciliation calculations for TEAM participants that experience a reorganization event, as defined at § 512.505, including any new TEAM participant that results from a reorganization event. However, this policy does not address new hospitals that open in TEAM mandatory CBSAs independently of a reorganization event.

We recognize that new hospitals that open shortly before or during the model performance period, as well as hospitals that begin to satisfy the definition of TEAM participant shortly before or during the model performance period, and that would otherwise be required to participate in TEAM based on their receipt of payment under IPPS and their geographic location, may experience multiple disadvantages relative to other TEAM participants. First, because the list of mandatory CBSAs was published as part of the FY 2025 IPPS/LTCH PPS final rule on August 1, 2024 (89 FR 69706), and a preliminary TEAM participant list was published to the TEAM public web page on September 5, 2024, the TEAM participants in existence at that time have been afforded an opportunity to prepare for TEAM prior to the beginning of the model performance period on January 1, 2026. Based on previous and current episode-based payment models like BPCI Advanced and CJR models, we recognize that hospitals may engage in a number of care redesign activities and processes in order to achieve successful model outcomes, and that new hospitals that open shortly before or during the model performance period, as well as hospitals that begin to satisfy the definition of a TEAM participant shortly before or during the model performance period, may be at a relative disadvantage by not having comparable advance notice to engage in preparatory care redesign activities or otherwise prepare for the model. Second, to accommodate the varying levels of readiness among TEAM participants at the beginning of the model performance period, we have provided participation track options which allow TEAM participants to phase in financial risk based on performance year (PY). Eligibility for Track 1, which has no downside risk, is available to all TEAM participants in PY 1 and to safety net hospitals in PYs 1 through 3. As a result, if new hospitals were to become TEAM participants during or after PY 1, they would not be afforded the same opportunity to participate in a track with no downside risk for at least 1 year prior to assuming greater levels of financial risk.

In this proposed rule, we propose to establish a cutoff date after which new hospitals and hospitals that begin to meet the definition of a TEAM participant and that are located in a mandatory CBSAs, excepting any new hospitals resulting from a reorganization event, would not be required to participate immediately in the model and would have a limited deferment period before beginning their participation in TEAM. Therefore, we are proposing that any new hospital, as identified by Medicare ID (CMS Certification Number—CCN) with an initial effective date after December 31, 2024, within the Medicare Provider Enrollment, Chain, and Ownership System (PECOS), excepting any new hospital that is created as part of a reorganization event as defined at § 512.505, would not be required to participate in TEAM immediately and would have at least one full performance year of participation deferment before being required to participate in the model. We also propose that any hospital that begins to satisfy the definition of TEAM participant after December 31, 2024, would not be required to participate in TEAM immediately and would have at least one full performance year of participation deferment before being required to participate in the model. Specifically, we propose that any new hospital located in a mandatory CBSA, and any hospital located in a mandatory CBSA that begins to meet the definition of TEAM participant after December 31, 2024, would not be required to participate in TEAM in the performance year when their Medicare ID initially became effective or when they began to meet the definition of TEAM participant, or the performance year thereafter. Rather, these hospitals would be required to participate in TEAM starting on January 1st of the subsequent performance year. For example, if a hospital opened in a mandatory CBSA with a Medicare ID initial effective date on June 1, 2026, then that hospital would not be required to begin participation in TEAM until January 1, 2028 (PY 3). Likewise, if a hospital located in a mandatory CBSA terminated their participation in the RCHD effective on August 1, 2027, then they would not be required to begin participation in TEAM until January 1, 2029 (PY 4). We believe this proposed policy would allow new hospitals and hospitals that begin to meet the definition of TEAM participant sufficient time to focus on establishing their care processes and ensuring their ability to comply with TEAM policies and requirements before being required to participate in TEAM. Specifically, the proposed cutoff date of December 31, 2024, would provide all new or newly qualifying hospitals with at least 1 year and not more than 2 years to prepare for the model, thereby establishing a level playing field with hospitals that have had the opportunity to prepare for model implementation since the publication of the preliminary TEAM participant list on the TEAM public web page on September 5, 2024.

As mentioned previously, this proposal would not affect the existing policy at § 512.550(b)(2) to conduct separate reconciliations for each hospital entity that results from a reorganization event as defined at § 512.505.

We are also proposing that a hospital that no longer satisfies the definition of TEAM participant would end TEAM participation effective the date they no longer satisfy the definition. We believe it is important to only allow hospitals that satisfy the definition of TEAM participant to participate in TEAM, otherwise it may introduce issues with pricing fairness and episode attribution. For example, since Medicare payments to CAHs and to hospitals participating in the RCHD are based on reasonable costs rather than traditional FFS, TEAM's pricing methodology may not afford these hospitals the same opportunity for savings compared to hospitals paid under FFS. Additionally, since TEAM's sampling and pricing methodologies were devised based on acute care hospitals paid under the IPPS, allowing additional hospitals that do not meet these criteria to participate in TEAM could result in changes to the TEAM sample in terms of geographic location and expected episode volume. We also propose that CMS would notify the hospital that no longer met the definition of TEAM participant within 30 days of the hospital no longer meeting the TEAM participant definition or as soon as is reasonably practicable. For example, if a TEAM participant was classified as a CAH on April 1, 2026, then their last day participating in TEAM would be March 31, 2026, and CMS would notify the hospital that they are no longer a TEAM participant by April 30, 2026, or as soon as is reasonably practicable. We recognize that this proposed policy may present an opportunity for hospitals to avoid mandatory participation in TEAM. However, we do not believe this policy would affect many hospitals

given the stringent requirements to convert to a non-IPPS hospital type, such as a CAH, or to participate in the RCHD. Irrespective of the potentially small impact, we would monitor for concerns of participation gaming.

We considered proposing that new hospitals, as identified by a Medicare ID initial effective date after December 31, 2024, within the Medicare PECOS, excepting any new hospital that is created as part of a reorganization event as defined at § 512.505, and hospitals that begin to satisfy the definition of TEAM participant after December 31, 2024, would not be required to participate in TEAM. However, we believe it important that new hospitals are exposed to value-based care early on to promote adoption of standard care practices and efficient processes.

We also considered proposing that new hospitals, as identified by a Medicare ID initial effective date after December 31, 2024, within the Medicare PECOS, excepting any new hospital that is created as part of a reorganization event as defined at § 512.505, and hospitals that begin to satisfy the definition of TEAM participant after December 31, 2024, would be required to participate in the first full performance year following their Medicare ID initial effective date or the date when they began to satisfy the TEAM participant definition. We considered allowing those hospitals to participate with no downside risk for that first performance year and then requiring them to participate in the subsequent performance year in one of the participation tracks, as applicable depending on their eligibility under the participation track requirements. However, we believe requiring the hospitals to participate in the first full performance year, even with no downside financial risk, would not provide sufficient opportunity for them to prepare for the participation requirements. That is because, while the hospitals would not have downside financial risk during the first year, they would still need to comply with other model requirements which could be challenging to meet in addition to all the Medicare conditions of participation.

We recognize that a deferred participation policy or a policy that excludes new hospitals within mandatory CBSAs could provide an opportunity for patient shifting. For example, a TEAM participant or affiliated provider could refer patients who are anticipated to need costly treatments or require extensive and potentially expensive follow-up care to a non-participating hospital. We believe that such patient shifting would run counter to the goals of the model as discussed at 89 FR 69631. We anticipate this practice would be unlikely to occur given our belief that TEAM participants would make medically appropriate decisions for beneficiaries and that the frequency of new hospitals opening during the performance period would be low. However, we recognize that the introduction of deferred participation for new hospitals in TEAM mandatory CBSAs could present an opportunity for such patient shifting. As a result, we propose to monitor specifically for the potential shifting of patients with high anticipated episode spending from TEAM participants to non-participant hospitals. We also note that, based on experience with prior models, we anticipate the opening of new hospitals within selected mandatory CBSAs during the TEAM performance period to be a relatively rare occurrence. As a result, we anticipate that the proposed policy will not affect a large number of hospitals.

We considered, but are not proposing, including as TEAM participants and requiring immediate participation from any new hospitals in TEAM mandatory CBSAs, as identified by a Medicare ID (CMS Certification Number) with an initial effective date after December 31, 2024, within PECOS and hospitals that begin to satisfy the definition of TEAM participant after December 31, 2024. As discussed previously, we believe that such hospitals would be placed at a disadvantage in terms of their performance in TEAM if they were not afforded the same opportunities to prepare for the model and phase in financial risk. We also considered, but are not proposing, alternative cutoff dates for the inclusion of hospitals as TEAM participants without a deferment period, including June 30, 2025, December 31, 2025, and December 31, 2026. While a cutoff date of June 30, 2025, would provide new or newly qualifying hospitals with at least six months to prepare for model implementation in 2025, including receipt and analysis of baseline claims and preliminary target price data from CMS, we recognize that these hospitals, especially those that open shortly before the cutoff date, could be disadvantaged relative to hospitals that have had at least one year to prepare for model implementation. We also recognize that a cutoff date at the end of 2025 could result in the same disadvantage from a lack of preparation time, and that a cutoff date at the end of 2026 could result in this same disadvantage, as well as the disadvantage of missing the opportunity to participate without downside risk in PY 1.

Lastly, we considered but are not proposing requiring new hospitals in mandatory CBSAs, as identified by Medicare ID (CMS Certification Number) with an initial effective date after December 31, 2024, within PECOS and hospitals that begin to satisfy the definition of TEAM participant after December 31, 2024, to participate in TEAM either 1 year or 2 years after their Medicare ID initial effective date or from the date they begin to satisfy the definition of TEAM participant. However, TEAM's performance years run on a calendar year basis, and a new hospital Medicare ID effective date or the date when a hospital begins to satisfy the definition of TEAM participant would not generally fall on January 1st of a calendar year, which can make including them as a TEAM participant after the performance year has started challenging. Many model requirements, like participation track decisions and submission of certain deliverables, occur prior to the beginning of each performance year and apply to the entire performance year, which may disadvantage hospitals if they started after the performance year begins.

We seek comment on our proposal at § 512.508 to require new hospitals that open in a mandatory CBSA as indicated by a Medicare ID initial effective date after December 31, 2024, and hospitals located in a mandatory CBSA that begin to satisfy the definition of TEAM participant after December 31, 2024, to participate in TEAM after one full performance year has passed from their Medicare ID initial effective date or the date when they begin to satisfy the definition of TEAM participant, respectively. We also seek comment on our proposal to monitor specifically for the potential shifting of patients with high anticipated episode spending from TEAM participants to non-participant hospitals. We also seek comment on whether or how this policy could affect the business decision of opening a new hospital even when there is patient need in the service area where the new hospital would be opened.

(3) Medicare Dependent Hospital Status

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), we designated hospital types that are eligible for participation in Track 2, which offers lower levels of upside and downside financial risk relative to Track 3, for PYs 2 through 5. As stated at 89 FR 69657, we believe that certain TEAM participants may benefit from a participation option that has limited

two-sided financial risk so that their beneficiaries may receive high quality, coordinated care without imposing significant financial pressure.

The hospital types designated for Track 2 eligibility are safety net hospitals, rural hospitals, Medicare dependent hospitals (MDHs), sole community hospitals (SCHs), and essential access community hospitals. Section 1886(d)(5)(G)(iv) of the Act defines a MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in 2 of its 3 most recently settled Medicare cost reporting years). For additional information on the MDH program and proposals in this rulemaking, we refer readers to section VI.E. of the preamble of this proposed rule. The Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program. Specifically, section 307 of the CAA, 2024, extended the MDH program under section 1886(d)(5)(G) of the Act through December 31, 2024. Subsequently, section 3202 of the American Relief Act, 2025 (ARA, 2025) (Pub. L. 118–158), enacted on December 21, 2024, extended the MDH program for FY 2025 discharges occurring before April 1, 2025. Most recently, section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4), enacted on March 15, 2025, extended the MDH program, amongst other changes, for FY 2025 discharges occurring before October 1, 2025. Because the MDH program is not authorized by statute beyond September 30, 2025, beginning October 1, 2025, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the IPPS Federal rate.

We recognize the end of the MDH program on September 30, 2025, affects Track 2 participation eligibility. However, we also acknowledge that, historically, Congress has extended the MDH program, and in some instances retroactively reinstated the program. Therefore, we are proposing that TEAM participants who are classified as MDHs would still be eligible for Track 2 participation as long as the MDH program is active at the time that participation track selections are due to CMS. As described in § 512.520(b)(2), TEAM participants must notify CMS of its Track 2 selection prior to the performance year in a form and manner and by a date specified by CMS. For example, if CMS requests participation track selections by November 15, 2026, for PY 2 and the MDH program was set to expire on December 31, 2026, then TEAM participants with a MDH classification that submit their Track 2 selection by November 15, 2026, would be eligible for Track 2 for PY 2, regardless of whether the MDH program was active in PY 2. In contrast, using the previous scenario except that the MDH program expired on June 30, 2026, no TEAM participant could use their previous MDH classification for eligibility to participate in Track 2 for PY 2 because the MDH program was not active as of the deadline by which CMS requested participation track selections. We note this proposal would not affect Track 2 eligibility for TEAM participants that meet the definition of safety net hospitals, rural hospitals, SCHs, or essential access community hospitals, as defined in § 512.505.

We believe that tying the eligibility for Track 2 participation for TEAM participants that have a MDH classification to the expiration of the MDH program allows TEAM participants to still take advantage of Track 2 participation while acknowledging that the MDH program is not indefinite. We anticipate that if the MDH program is not extended, then there would be minimal impact on Track 2 eligibility for this lower-risk participation track due to the overlap between the MDH classification as defined at § 412.108 and TEAM's rural hospital definition, as defined at § 512.505. Per § 412.108, a necessary criterion for MDH classification is location in a rural area, which means any area outside an urban area as defined at § 412.64, or, for hospitals located in a State with no rural area, satisfaction of any of the criteria for reclassification as rural as described in § 412.103(a)(1) through (3) (65 FR 47048). For the purposes of TEAM, rural hospital is defined as an IPPS hospital that meets one of the following criteria:

- Is located in a rural area as defined under § 412.64.
- Is located in a rural census tract defined under § 412.103(a)(1).

Qualification as rural under § 412.64 encompasses all hospitals not located in an urban area, meaning a Metropolitan Statistical Area or a Metropolitan Division (in the case where a Metropolitan Statistical Area is divided into Metropolitan Divisions), as defined by the Office of Management and Budget (69 FR 49242). Qualification as rural under § 412.103(a)(1) encompasses all hospitals located in a rural census tract of a Metropolitan Statistical Area as determined under the most recent version of the Goldsmith Modification,[432] using the Rural-Urban Commuting Area codes and additional criteria, as determined by the Federal Office of Rural Health Policy (FORHP) of the Health Resources and Services Administration (HRSA), which is available at the web link provided in the most recent **Federal Register** notice issued by HRSA defining rural areas (65 FR 47048). For the purposes of TEAM, a hospital's qualification as rural on the basis of location in a rural census tract as defined under § 412.103(a)(1) is determined by location of the hospital's primary CCN within a rural census tract as defined under § 412.103(a)(1), regardless of whether the hospital has applied for and received rural reclassification from CMS under § 412.103.

Since these two pathways to rural hospital designation cover both hospitals located outside of an urban area and hospitals located in a rural census tract within an urban area, we anticipate that a large proportion of hospitals that would have been designated as MDHs, and thus would have been eligible for participation in Track 2 during the TEAM performance period will continue to be eligible for participation in Track 2 due to rural hospital status.

We considered, but are not proposing, continuing to classify hospitals in TEAM based on the existing MDH criteria beyond the expiration of the MDH program. While this option would maintain the list of Track 2-eligible hospitals as originally finalized in the FY 2025 IPPS/LTCH PPS final rule at § 512.520(b)(4), we do not believe that it would be appropriate for TEAM to maintain hospital designations that are no longer maintained in Medicare more broadly. We also note that § 412.108(b)(1) states that the Medicare Administrative Contractor (MAC) determines whether a hospital meets the criteria for MDH designation as specified in § 412.108(a), and that § 412.108(b) establishes classification procedures for MDH status (55 FR 15175). As a result, we do not believe that it would be appropriate for CMS to circumvent these established procedures for the purposes of TEAM.

[432] The Goldsmith Modification was originally developed and used to identify rural Census tracts in large metropolitan counties. For additional information regarding the Goldsmith Modification, we direct readers to: *https://www.ruralhealthinfo.org/pdf/improving-the-operational-definition-of-rural-areas.pdf.*

We have also considered and are seeking comment on, but not proposing, the potential for CMMI to provide support to TEAM participants that were designated as MDHs until the termination of the MDH designation, with such support including providing technical assistance in helping them determine their eligibility for other Track 2-eligible hospital designations, including rural and SCH. Such support may be necessary as the TEAM participant may not be aware of other hospital designations they may be eligible for given their potential long-standing participation in the MDH program. Table XI.A.–01 identifies the potential impact on TEAM participants if the MDH program were to expire. While we recognize that hospitals with MDH designation may qualify for other hospital designations that are eligible to participate in Track 2 for PY 2 through 5 of TEAM, we also note that provision of such assistance to TEAM participants could unfairly disadvantage non-participant hospitals that do not receive the same support from CMS.

TABLE XI.A.–01—ESTIMATED VOLUME OF HOSPITALS IMPACTED BY THE MEDICARE DEPENDENT HOSPITAL PROGRAM IN TEAM

Estimated number of TEAM participants	741
Estimated number of TEAM participants with a MDH designation	25
Estimated number of TEAM participants with a MDH designation that may also be eligible for Track 2 participation because they are a safety net hospital, rural hospital, Sole Community Hospital, or Essential Access Community Hospital, as defined at § 512.505	21
Estimated number of TEAM participants that have the MDH designation that may not be eligible for Track 2 participation if the MDH program expires	4

We seek comment on our proposal to determine MDHs' eligibility for Track 2 participation in TEAM based on the hospitals' status in the MDH program on the date CMS requires the TEAM participants to submit their track selections for the upcoming PY. We also seek comment on the potential for us to provide support to TEAM participants whose MDH designation ended as a result of the expiration of the MDH program in determining their eligibility for other hospital designations, such as rural and SCH, that are eligible for participation in Track 2 in PY 2 through 5 of TEAM.

(4) Indian Health Services/Tribal Hospitals

As indicated earlier in section XI.A.2.a.(1). of the preamble of this proposed rule, and defined at § 512.505, for a hospital to be a TEAM participant they must either—(1) initiate episodes and be paid under the IPPS with a CMS Certification Number (CCN) primary address located in one of the mandatory CBSAs selected for participation in TEAM; or (2) be a hospital that participates in either the BPCI Advanced Model or the CJR Model until the last day of the last performance period or last performance year of the respective model that voluntarily opts into TEAM and CMS approves their opt in request. We have received questions about Indian Health Service (IHS)/Tribal hospitals, as identified in section 1880 of the Act, participating in TEAM. In the FY2025 IPPS/LTCH PPS final rule, we discussed certain hospitals that would be ineligible for participation in TEAM due to not being paid under the IPPS and Outpatient Prospective Payment System (OPPS) (89 FR 69643). Specifically, hospitals located in the state of Maryland are precluded from being TEAM participants. We did not exempt IHS/Tribal hospitals from TEAM participation because IHS/Tribal hospitals are still paid under the IPPS. However, we note that IHS/Tribal hospitals are not paid under the OPPS, as described in § 419.20. While the TEAM participant definition does not explicitly state a hospital needs to be paid under the OPPS to participate in the model, we recognize that allowing hospitals to participate in TEAM that are not paid under the OPPS may create challenges when constructing target prices for episodes that initiate in the hospital outpatient department, specifically for the LEJR and spinal fusion anchor procedures.

As described in section XI.A.2.c.(1) of the preamble of this proposed rule, TEAM participants will be provided with target prices for each MS–DRG/HCPCS episode type. These target prices will be calculated using three years of baseline data, trended forward to the performance year, at the level of MS–DRG/HCPCS episode type and region, with updates to be made using the performance year data during the reconciliation process. While TEAM's target prices are constructed using regional level spending and would allow IHS/Tribal hospitals to receive a target price, including LEJR and spinal fusion target prices, there is concern on whether these target prices would accurately reflect the IHS/Tribal hospital's episode spending or allow them opportunity to achieve a reconciliation payment amount. That is because their historical spending for episodes initiated in the hospital outpatient department, specifically the hospital spending portion, would not be included in the regional spending since they are not paid under the OPPS, but rather Medicare pays them under an All-Inclusive Rate (AIR). All-inclusive rates are billed by encounter, which means the calculation of a rate accounts for all of the allowable costs of providing care. This differs from traditional fee-for-service rates, where specific services are billed at specific rates, even if more than one service is provided during an encounter.[433] Therefore, it may be possible that IHS/Tribal hospital outpatient spending could be lower (or higher) compared to other hospitals in the same region. Since the regional target prices are constructed from IPPS and OPPS hospital spending, Medicare may be at risk for setting the LEJR and spinal fusion regional target prices too high or too low for IHS/Tribal hospitals, with the latter scenario making it more challenging for them to reduce LEJR and spinal fusion spending.

Given this concern, we considered but are not proposing to exclude IHS/Tribal hospitals from initiating anchor procedures. Specifically, we considered updating § 512.525(b) to not allow IHS/Tribal hospitals that are TEAM participants to have anchor procedure episodes attributed to them. This would mean that IHS/Tribal hospitals would not be able to initiate or have episodes attributed to them for LEJR and spinal fusions in the hospital outpatient department but would be able to initiate anchor hospitalizations, including LEJR and spinal fusion anchor

[433] *https://www.cms.gov/training-education/partner-outreach-resources/american-indian-alaska-native/ltss-ta-center/information/ltss-financing/comparing-reimbursement-rates#:~:text=*%20All%2Dinclusive%20rates%20are%20billed%20by%20encounter%2C,one%20service%20is%20provided%20during%20an%20encounter.*

hospitalizations. We believe this option would mitigate some of the concern with respect to regional prices being reasonable for IHS/Tribal hospitals. While we recognize that this could open an opportunity for patient shifting, given that episodes could be initiated in the inpatient setting but not the hospital outpatient department, we believe that the generally lower AIR, relative to IPPS rates, may disincentivize such actions. Nonetheless, given the potential incentive for patient shifting if IHS/Tribal hospitals were only accountable for episode categories in one setting, we considered additional monitoring for IHS/Tribal hospitals in TEAM but believe the existing monitoring requirements, as described in § 512.590, would be sufficient given the broad scope of monitoring requirements and the ability to impose a remedial action, as described in § 512.592, if warranted.

We also considered, but are not proposing, to exclude IHS/Tribal hospitals from initiating episode categories that include both anchor hospitalizations and anchor procedures. Specifically, we considered adding a provision to § 512.525 that would exclude TEAM participants that are IHS/Tribal hospitals from the LEJR and spinal fusion episode categories. In other words, IHS/Tribal hospitals would not be eligible to initiate an anchor hospitalization or anchor procedure in the LEJR or spinal fusion episode category. This option would mitigate the potential concern for patient shifting and avoid the challenges of ensuring an accurate target price for IHS/Tribal hospitals. However, we are concerned that such an option would limit IHS/Tribal hospitals participation in the model given the volume of episodes associated with the LEJR and spinal fusion episode categories, thus reducing the number of beneficiaries that would be captured in the model.

We also considered, but are not proposing, to exclude IHS/Tribal hospitals from the model, such that they would not satisfy the definition of TEAM participant. This would be done by updating the TEAM participant definition to state that a TEAM participant must be paid under IPPS and OPPS. We recognize this consideration may not have a significant impact on the model with respect to episode volume. That is because we are aware that some IHS/Tribal hospitals may not perform the procedures tested in TEAM at their hospital but may be a part of a beneficiary's follow-up care. In those instances, the IHS/Tribal hospital would not initiate an episode in TEAM because the anchor hospitalization or anchor procedure did not initiate at the IHS/Tribal hospital. However, we are concerned that fully excluding IHS/Tribal hospitals from TEAM, particularly for those IHS/Tribal hospitals that initiate anchor hospitalizations or anchor procedures, would limit beneficiary access to the potential benefits of the model, including high-quality coordinated care, and prevent IHS/Tribal hospitals from gaining value-based care experience.

We also considered, but are not proposing, constructing IHS/Tribal hospital specific target prices for anchor procedures. This would also help to ensure that IHS/Tribal hospitals have reasonable target prices for anchor procedures. However, we recognize that creating an IHS/Tribal hospital specific target price would increase the target price calculation complexity, making it more challenging for IHS/Tribal hospitals to understand the methodology and predict their episode spending.

Lastly, we also considered, but are not proposing, to include IHS/Tribal hospitals as a hospital type eligible for Track 2 participation. However, we also believe many IHS/Tribal hospitals may already satisfy eligibility requirements for Track 2 due to being a safety net hospital or a rural hospital.

We seek comment on the alternatives we considered for IHS/Tribal hospitals. We also seek comment on alternatives that we may not have considered.

b. Quality Measures

(1) Background

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), Medicare payment policy has moved away from FFS payments that are not linked to quality of care. Through the Medicare Modernization Act and the Affordable Care Act, we have implemented specific IPPS programs like the Hospital Inpatient Quality Reporting (IQR) Program (section 1886(b)(3)(B)(viii) of the Act), the Hospital Value-Based Purchasing (VBP) Program (subsection (o) of section 1886), the Hospital-Acquired Condition (HAC) Reduction Program (subsection (q) of section 1886), and the Hospital Readmissions Reduction Program (subsection (p) of section 1886), where payment reflects the quality of care delivered to Medicare beneficiaries.

TEAM's quality measures focus on care coordination, patient safety, and patient reported outcomes (PROs) which we believe represent areas of quality that are particularly important to patients undergoing acute procedures. Wherever possible, we align TEAM quality measures with those used in ongoing models and programs to minimize participant burden, recognizing that introducing new reporting functions and requirements in a mandatory model would create additional burden. Hospitals are not required to report quality data separately to CMS for TEAM. CMS will use data already reported through existing CMS quality reporting programs, thereby avoiding duplicative reporting requirements. We aim to use quality measures in which all hospitals would have access and experience.

We finalized in the FY 2025 IPPS/LTCH PPS final rule a set of quality measures tied to payment, with these measures scored to calculate the Composite Quality Score (CQS). The CQS would be combined with the TEAM participants' reconciliation amount during the reconciliation process to tie quality performance to payment. The finalized set of TEAM quality measures have been summarized in Table XI.A.–02.

TABLE XI.A.–02—TEAM QUALITY MEASURES BY PERFORMANCE YEAR

FY 2025 IPPS/LTCH PPS Finalized TEAM Quality Measures		
Performance Year 1	All Episode Categories	Hybrid Hospital-Wide All-Cause Readmission measure (CMIT ID #356).
Performance Year 1	All Episode Categories	CMS Patient Safety and Adverse Events Composite (CMIT ID #135).
Performance Year 1	Lower Extremity Joint Replacement Episodes.	Hospital-Level Total Hip and/or Knee Arthroplasty (THA/THK) Patient Reported Outcome Based Measure (CMIT ID #1618).
Performance Year 2–5	All Episode Categories	Hospital Harm—Fall with Injury (CMIT ID #1518).
Performance Year 2–5	All Episode Categories	Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788).

TABLE XI.A.–02—TEAM QUALITY MEASURES BY PERFORMANCE YEAR—Continued

Performance Year 2–5	All Episode Categories	Thirty-Day Risk—Standardized Death Rate among Surgical Inpatients with Complications (Inpatient Surgical Compilations Mortality Rate)) (CMIT ID #134).

For performance year 1, we proposed and finalized three quality measures (noted later in this section) due to their: (1) alignment with the goals of TEAM; (2) hospitals' familiarity with the measures due to their use in other CMS hospital quality programs, including the Hospital IQR and HAC Reduction Programs; and (3) alignment to CMS priorities, including the CMS National Quality Strategy, which has goals that support safety, outcomes, and engagement. We believe these three TEAM PY1 quality measures that link to payment reflect these goals and accurately measure hospitals' level of achievement on such goals.

These PY1 measures are:

- For all TEAM episodes: Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356);
- For all TEAM episodes: CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135); and
- For LEJR episodes: Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618).

Additionally, we proposed and finalized inclusion of three measures that were included in the Measures Under Consideration List (known as the MUC List) that were subsequently finalized (89 FR 69540 and 89 FR 69552), starting in PY 2 (2027), and will replace the PSI 90 measure. These three measures are as follows:

- For all TEAM episodes: Hospital Harm—Falls with Injury (CMIT ID #1518) (starting in PY 2).
- For all TEAM episodes: Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788) (starting in PY 2).
- For all TEAM episodes: Thirty-day Risk—Standardized Death Rate among Surgical Inpatients with Complications (Inpatient Surgical Compilations Mortality Rate) (CMIT ID #134) (starting in PY 2).

The Inpatient Surgical Complications Mortality Rate measure began mandatory reporting with the July 1, 2023–June 30, 2025, reporting period, while the other two (Hospital Harm—Falls with Injury and Hospital Harm—Postoperative Respiratory Failure) are available on the list of eCQMs from which hospitals must select to report three beginning with the CY2026 reporting period. This timeline will allow TEAM participants to have 1 year to gain experience reporting all three of these measures in the Hospital IQR program before their performance is tied to payment beginning in TEAM's second performance year (2027).

While we believe the TEAM quality measure set would provide CMS with sufficient measures to monitor quality and to calculate scoring on quality performance, we stated that we may adjust the measure set in future performance years, via rulemaking, by adding new measures or removing measures if we determine those adjustments to be appropriate at the time. In this proposed rule, we are proposing several changes to and clarifications around the TEAM quality measure set finalized in the FY 2025 IPPS/LTCH PPS final rule.

(2) Alignment of Hybrid Hospital-Wide Readmission Measure to Hospital IQR Program

As stated previously, TEAM aims to, whenever possible, align measures with existing reporting requirements so as not to introduce additional burden to participants. This includes aligning the TEAM Hybrid Hospital-Wide Readmission (HWR) Measure reporting requirements with what is required under the Hospital Inpatient Quality Reporting (IQR) Program. The Hybrid HWR measure combines claims data with electronic health record (EHR) data to risk-adjust hospital readmission rates, accounting for patient severity and illness at admission. The Hospital IQR Program initially planned that the Hybrid HWR measure would be mandatory, beginning with the July 1, 2023–June 30, 2024, reporting period. However, after public feedback on reporting difficulties, the Hospital IQR Program finalized in the CY 2025 Hospital OPPS Final Rule (89 FR 93912) the continuation of voluntary reporting of the clinical data elements for the Hybrid HWR for the July 1, 2023, through June 30, 2024, reporting period and the July 1, 2024, through June 30, 2025, reporting period. Mandatory reporting will begin the following reporting period (July 1, 2025, through June 30, 2026), impacting TEAM's PY 1. Additionally, CMS has recognized public input regarding the difficulties in reporting the clinical data elements and is proposing in section X.C. of the preamble of this proposed rule the following allowances: up to two missing laboratory results; up to two missing vital signs; the reduction of the CCDE (core clinical data elements) submission requirement to 70 percent or more of discharges, and; the reduction of the submission requirement of linking variables to 70 percent or more of discharges.

We recognize that this change means that the first year of mandatory reporting (July 1, 2025, through June 30, 2026) for the Hybrid HWR will serve as the baseline performance period for TEAM's PY1. In order to allow additional time to gain experience with the measure, we considered not aligning with the Hospital IQR Program and delaying mandatory reporting for TEAM for an additional period of time. However, since hospitals will have multiple years of voluntary reporting of the Hybrid HWR measure under the Hospital IQR Program prior to the mandatory requirement, and because the mandatory requirement contains additional allowances, we believe that TEAM participants will have sufficient time to prepare. Additionally, we believe that aligning the TEAM Hybrid HWR measure as closely as possible to the requirements under the Hospital IQR Program will be the most straightforward approach for TEAM participants.

Since TEAM aims to align with the Hospital IQR Program's requirement for the Hybrid HWR, we propose to align with the requirements set forth at 89 FR 93912, including utilizing the mandatory reporting period of July 1, 2025–June 30, 2026, as TEAM's PY1 baseline period, and including the revised submission requirements.

We seek comment on aligning with the Hospital IQR Program, specifically utilizing the first mandatory reporting period of July 1, 2025, through June 30, 2026, as the TEAM PY1 quality measure performance period for the Hybrid HWR measure. Additionally, we also seek comment on alternate considerations, including whether TEAM should not align with the Hospital IQR Program and, as during the voluntary reporting period, only use claims-based elements of the Hybrid HWR for quality measurement.

(3) Information Transfer Patient Reported Outcome-Based Performance Measure (Information Transfer PRO–PM)

The existing quality measures finalized in TEAM were selected based on their relevance to episode categories tested in the model, while also considering the reporting burden on participants. These measures focus on key domains, including hospital readmissions, patient safety, and patient reported outcomes, which we believe represents areas of quality that are particularly important to patients undergoing acute procedures. We believe that quality measures used in TEAM should address one of these domains, given their importance to patient quality of care and relationship to episode care management.

As stated in FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), we wish to incorporate more patient-reported outcome measures (PRO–PMs) into TEAM, as these measures provide valuable insights into the patient's perspective of care received. We also wish to incorporate quality measures that capture care in the outpatient setting, given the LEJR and Spinal Fusion episode categories initiate in the hospital outpatient department (HOPD) setting and all the measures finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) are measures of inpatient performance.

To identify potential quality measures for episode categories initiated in the HOPD, we reviewed quality measures from the CMS Hospital Outpatient Quality Reporting Program (Hospital OQR Program) that align with the domains emphasized in TEAM. To maintain a reasonable volume of quality measures in TEAM, we aimed to identify a single measure that would be clinically meaningful for both the LEJR and Spinal Fusion episode categories, rather than adding separate quality measures for each. We identified one quality measure, the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery, that hospitals are required to report to the Hospital OQR Program, as well as two quality measures that hospitals may voluntarily report: the Risk-Standardized PRO–PM Following Elective Primary THA and/or TKA in the HOPD Setting, and the Information Transfer PRO–PM. We evaluated the suitability of each quality measure for TEAM based on its pros and cons.

- The Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery is applicable to both the LEJR and Spinal Fusion episode categories, focuses on hospital readmissions, and could be included in TEAM for PY1 (CY 2026) given its current mandatory reporting status in the Hospital OQR program. However, it does not advance CMS's or the model's goal of increasing the number of PRO–PMs.
- The Risk-Standardized PRO–PM Following Elective Primary THA and/or TKA in the HOPD Setting aligns well with the existing THA/TKA PRO–PM for inpatient LEJR episodes and would increase the number of PRO–PMs in the model; however, it is only applicable to LEJR episodes, and mandatory reporting for the Hospital OQR Program will not begin until PY3 of TEAM (CY 2028).
- The Information Transfer PRO–PM is applicable to both the LEJR and Spinal Fusion episode categories and would increase the number of PRO–PMs in the model; however, mandatory reporting for the Hospital OQR Program will not begin until PY2 of TEAM (CY 2027).

Since our aim is to create a meaningful and efficient quality measure set, we do not believe it is necessary to include all three measures in TEAM. Given that the Risk-Standardized PRO–PM Following Elective Primary THA and/or TKA in the HOPD Setting measure is only applicable to the LEJR episode category, we do not consider it beneficial to propose this measure for use in TEAM. Of the remaining two measures, we recognize the value of the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery; however, this focuses on hospital readmissions and does not provide the patient viewpoint afforded by PRO–PMs that we are prioritizing capturing in the model. As such, we are proposing the addition of the Information Transfer PRO–PM for all episode categories initiated in the HOPD in TEAM. The Information Transfer PRO–PM can apply to all episode categories initiated in the HOPD under TEAM as it evaluates how well information is transferred to patients after outpatient procedures, particularly in HOPDs. Additionally, this measure captures patient viewpoint afforded by PRO–PMs.

To ensure alignment with the Hospital OQR Program, we propose using the following measure specifications, as detailed and updated here: *https://www.cms.gov/files/document/patient-understanding-key-information-related-recovery-after-facility-based-outpatient-procedure-or.pdf*. This document outlines key information related to the Information Transfer PRO–PM and highlights the need for improved patient education for post-discharge instructions. The measure was developed by Yale New Haven Services Corporation for CMS and tested across hospital outpatient departments. The goal of this measure is to enhance recovery outcomes by standardizing information transfer. We also propose to include the Information Transfer PRO–PM starting in PY3 (CY 2028) with a CY 2027 CQS baseline period and the following quality measure performance periods as displayed in Table XI.A.–03.

TABLE XI.A.–03—PROPOSED QUALITY MEASURE PERFORMANCE PERIODS BY TEAM PERFORMANCE YEAR

Measure	TEAM performance year				
	1st	2nd	3rd	4th	5th
Information Transfer PRO–PM.	Not Applicable	Not Applicable	CY 2028 (January 1, 2028–December 31, 2028).	CY 2029 (January 1, 2029–December 31, 2029).	CY 2030 (January 1, 2030–December 31, 2030).

We believe that including the Information Transfer PRO–PM in TEAM would enhance the model because it is a general measure not tied to a specific clinical diagnosis or procedure. This flexibility means it could apply to current episode categories initiated in the HOPD and any future episode categories, if proposed and finalized in future rulemaking. We also emphasize the importance of increasing the number of PRO–PMs, as they offer a direct way to incorporate patient input into quality measure performance. We further believe that delaying the inclusion of the Information Transfer PRO–PM until PY3 would allow TEAM participants to gain 1 year of mandatory reporting

experience before the measure is incorporated into TEAM, affecting their composite quality score (CQS) and ultimately their reconciliation amounts. Lastly, similar to the other two measures that we considered but did not propose (THA/TKA PRO–PM and Hospital Visits within 7 Days after Hospital Outpatient Surgery), inclusion of the Information Transfer PRO–PM aligns with those used in ongoing models and programs (this measure aligns with already existing reporting requirements for the Hospital Outpatient Quality Reporting (OQR) Program) and therefore, would not increase TEAM participant burden.

We seek comment on our proposal to include the Information Transfer PRO–PM in TEAM starting in PY 3. We also seek comment on other quality measures, including options for capturing quality of care in the outpatient setting and other PRO–PMs appropriate for TEAM quality measurement.

(4) Approach for When TEAM Participant Has No Quality Measure Performance Data

As was outlined in Table X.A.–09 of the FY 2025 IPPS/LTCH PPS final rule (89 FR 69744), TEAM quality measures will be evaluated against a measure performance period. The measure performance periods are consistent with those used in ongoing models and programs in which TEAM measures align, including the Hospital IQR Program and Hospital-Acquired Condition Reduction Program performance periods, so that there is no additional reporting burden on TEAM participants as a result of the quality measures used in TEAM. However, we recognize it is possible that some TEAM participants may not have a complete measure set during this performance period in which to measure their quality against. For example, a newly established hospital that began seeing Medicare beneficiaries in early 2025 may have no or incomplete quality measure data given the quality measure performance periods for the three quality measures used in PY 1 which rely on quality measure performance periods starting on July 1, 2023, or 2024, through June 30, 2025. Additionally, we recognize some quality measures in TEAM, specifically the Hospital Harm—Falls with Injury (CMIT ID #1518) and the Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788) measures, are electronic clinical quality measure (eCQM) available for self-selection in the Hospital IQR Program. This means hospitals are not mandated to report these two measures for the Hospital IQR Program. Therefore, it's possible that a TEAM participant may not select to report those two measures to the Hospital IQR Program, which would result in having no quality measure data for those two measures in TEAM. We still believe it's important to be mindful of TEAM participant burden, and do not want to remove a TEAM participant's ability to self-select those measures. Therefore, having no or incomplete quality measure data may make calculating of the CQS, which is then used to adjust the TEAM participant's reconciliation amount, challenging. The CQS, as described in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69744), is the pay-for-performance mechanism that ties quality measure performance to payment, ultimately incentivizing and rewarding cost savings in relation to the quality of episode care provided by the TEAM participant.

The CQS is constructed by converting the TEAM participant's raw quality measure score for the performance year into a scaled quality measure score. TEAM participants that have no or incomplete quality measure data would not have a raw quality measure score, making the conversion to a scaled quality measure score impossible. This would result in a CQS that is only based on the quality measures that had sufficient data to produce a scaled quality measure score or potentially a CQS that could not be calculated if all quality measures had lacked a raw quality measure score. We believe it is important for TEAM participants that may have no or incomplete quality measure data to not be penalized for a lack of quality measure data when they may in fact be providing high quality care to Medicare beneficiaries. Therefore, we propose assigning a neutral quality measure score to TEAM participants with no or an incomplete raw quality measure score for a given quality measure. Specifically, a TEAM participant that does not have a raw quality measure score for a given quality measure would be assigned a scaled quality measure score of 50, which is the midpoint on the CQS scale of 0–100. We believe this approach would not disadvantage a TEAM participant who may be providing high quality care, because this neutral quality measure score ensures providers are not unfairly penalized due to insufficient quality measure data. Once the TEAM participant reaches the threshold for sufficient data to produce raw quality measure data, it will be converted into a scaled quality measure in the subsequent performance year. We considered but are not proposing a policy under which hospitals have to meet certain criteria in order to receive a 50th performance percentile for quality measure when insufficient volume was present. For example, if a hospital had insufficient volume due to failure to report quality data, then they may receive a lower quality score, such as 25th percentile.

This approach to assign participant hospitals a 50th performance percentile of a quality measure when a low volume hospital did not have reportable quality measure values (80 FR 73364) is consistent with the CJR model. Though there is a slight policy difference since this was for CJR hospitals that had a low volume of triggered episodes, the implication of having no or minimal information of quality data is similar, and therefore, why we are proposing to utilize this approach.

We considered, but are not proposing here, a policy under which TEAM participants with no or incomplete quality measure data would receive the average scaled quality measure score across all TEAM participant hospitals for a given quality measure. While we believe this approach may result in a reasonable scaled quality measure score, we have concerns that a TEAM participant's scaled quality measure score is influenced by how well other TEAM participants perform in quality. Therefore, we believe our proposed approach of assigning a scaled quality measure score of 50 would be unbiased and easier to compute.

We seek comment on our proposal at § 512.547(b)(1)(i)(D) to assign a scaled quality measure score of 50 when the TEAM participant has no or an incomplete raw quality measure score for a given quality measure.

c. Pricing Methodology

(1) Background

As finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) TEAM participants will be provided with target prices for each MS–DRG/HCPCS episode type. These target prices will be calculated using 3 years of baseline data, trended forward to the performance year, at the level of MS–DRG/HCPCS episode type and region, with updates to be made using the performance year data during the reconciliation process. The regions are defined as the nine U.S. census divisions and the MS–DRG/HCPCS episode type is based on the episode categories that will be tested in the model: Coronary Artery Bypass Graft (CABG), Lower Extremity Joint Replacement (LEJR), Major Bowel

Procedure, Surgical Hip Femur Fracture Treatment (SHFFT), and Spinal Fusion.

Episode spending will be capped at the 99th percentile for each of the 29 MSDRG/HCPCS episode types and 9 regions, and the benchmark price will be calculated as the average capped and standardized spending in baseline year 3 dollars for each MS–DRG/HCPCS episode type in each region, resulting in 261 benchmark prices. Benchmark prices will be calculated using all hospitals in a region, regardless of TEAM participation status. CMS will apply a prospective trend factor and a discount factor to benchmark prices. During reconciliation, these preliminary target prices will be updated by updating the trend (subject to caps) and normalization factor (subject to caps) and by factoring in each participant's realized risk adjustment factors.

Risk adjustment factors will be calculated and made available to TEAM participants prior to the start of the performance year, so participants would be able to use them to estimate their episode-level target prices. Risk adjustment factors include age group, Hierarchical Condition Category (HCC) count, and beneficiary social risk as risk adjusters, as well as episode category-specific HCC adjusters and provider-level adjusters. The risk adjustment factors will be calculated at the MS–DRG/HCPCS level on baseline episodes, using a weighted linear regression where episodes are weighted differentially based on whether they belong to year 1, 2, or 3 of the baseline periods. Episodes from baseline year 1 will be weighted at 17 percent, baseline year 2 at 33 percent, and baseline year 3 at 50 percent. The risk adjustment factors will be held fixed and applied to performance year episodes at reconciliation based on the realized case mix of the TEAM Participant in the performance year.

After risk adjusting for the performance year case-mix, CMS will normalize the target prices to ensure that the average of the total risk-adjusted preliminary target price does not exceed the average of the total non-risk adjusted preliminary target price. The final normalization factor will be calculated as the national mean of the benchmark price for each MS–DRG/HCPCS episode type divided by the national mean of the risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type. However, it will be capped should this ratio exceed ±5 percent of the prospective normalization factor. The final target prices will include a retrospective trend factor, which will be capped at being within 3 percent of the prospective trend. The retrospective trend factor will be calculated as the average capped performance year episode spending at the MS–DRG/HCPCS episode type and region level divided by the capped mean baseline episode spending in baseline year 3 dollars at the MS–DRG/HCPCS episode type and region level (that is, national mean benchmark price). Table XI.A.–04 provides a few examples of the calculation of the retrospective trend factor for three MS–DRG/HCPCS regions in which the retrospective trend factor is capped at 3 percent below the prospective trend factor, not capped, and capped at 3 percent above the prospective trend factor, respectively.

TABLE XI.A.–04—EXAMPLE CALCULATING RETROSPECTIVE TREND FACTOR

MS–DRG	Region	Average capped baseline episode spending in BY3 dollars	Prospective trend factor	Average capped performance year episode spending	Retrospective trend factor	Capped retrospective trend factor
231	1	$80,000.00	1.05	$78,400.00	0.98	1.02
232	1	55,000.00	0.95	53,350.00	0.97	0.97
233	1	70,000.00	1.05	78,400.00	1.12	1.08

In summary, the reconciliation (final) target price will be calculated as the product of the capped mean baseline episode spending in baseline year 3 dollars, the capped retrospective trend, the risk adjustment multiplier using the performance year case-mix, and the capped final normalization factor. Table XI.A.–05 provides a few examples of reconciliation target price calculations for a fictional hospital with three MS–DRG/HCPCS and region combinations as finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986).

TABLE XI.A.–05—EXAMPLE CALCULATING RECONCILIATION TARGET PRICES PER THE FY 2025 IPPS/LTCH PPS FINAL RULE

CCN	MS–DRG	Region	Benchmark price (MS–DRG region)	Performance risk adjustment multiplier (CCN MS–DRG region)	Capped final normalization factor (MS–DRG)	Capped retrospective trend factor (MS–DRG region)	Discount factor (MS–DRG) (%)	Final target price
123456	231	1	$80,000.00	1.41	0.77	1.02	1.5	$87,048.84
123456	232	1	55,000.00	1.03	0.95	0.97	1.5	51,548.80
123456	233	1	70,000.00	1.15	0.91	1.08	1.5	77,958.94

TEAM participants will have the opportunity to achieve a reconciliation payment amount, after accounting for quality performance, if their performance year spending is below the reconciliation target price, or they may owe a repayment amount if their spending is above the reconciliation target price.

(2) Accounting for Future Changes to MS–DRGs and HCPCS

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), we acknowledged comments about how we would address episode pricing when there are Medicare Severity Diagnosis Related Group (MS–DRG) or Healthcare Common Procedure Coding System (HCPCS) code modifications or other payment system changes over the course

of the model (89 FR 69719 and 69750). Specifically, we received multiple comments inquiring about this issue given the deletion of three spinal fusion MS–DRGs 453–455 and the addition of eight new spinal fusion MS–DRGs. In the final rule, we stated that we would be proposing a policy in future rulemaking for how to construct target prices when there are MS–DRG or HCPCS modifications or other payment system changes that may arise over the course of the model. In this proposed rule, we aim to clarify both our intention to incorporate these changes into the model when they occur and the specific methodology for target price construction in such a case. Failing to incorporate MS–DRG or HCPCS changes that arise between the baseline period and the performance year may lead to a significant drop in episode volume during the performance year and limit the number of beneficiaries exposed to the potential benefits of the model.

As an episode-based payment model, an important feature of TEAM is identifying the procedures or clinical conditions that would initiate an anchor hospitalization or anchor procedure. TEAM relies on MS–DRG codes to initiate an anchor hospitalization and HCPCS codes to initiate an anchor procedure. However, MS–DRG and HCPCS codes, and more specifically the assignment of HCPCS codes to Ambulatory Payment Classifications (APCs), may be modified because of changes in treatment patterns, technology, and any other factors that may change the relative use of hospital and provider resources. Typically, CMS proposes and finalizes coding changes, as applicable, through established annual payment rules, such as the FY IPPS/LTCH proposed and final rules and the CY Outpatient Prospective Payment System (OPPS)/Ambulatory Surgical Center (ASC) proposed and final rules. MS–DRG or HCPCS changes resulting from these rules may directly impact TEAM because they may alter which codes would initiate an anchor hospitalization and anchor procedure and subsequently may change the composition of episodes and its spending observed in the baseline period compared to the performance years for TEAM. This is significant for two reasons: (1) TEAM uses a 3-year historical baseline period to construct target prices for a given performance year, and if the codes that existed in the baseline period do not exist or were modified, then this can lead to target prices that may not appropriately reflect episode spending in the performance year; and (2) new codes established during the performance year that did not exist in the baseline period would not have a target price since TEAM's target prices are based on the MS–DRG/HCPCS episode type.

To accommodate the spinal fusion MS–DRG changes from the FY 2025 IPPS/LTCH final rule, account for any future MS–DRG or HCPCS/APC changes, and construct preliminary target prices, we are proposing a standard, three-step approach to account for MS–DRG and HCPCS/APC changes by remapping and adjusting relevant MS–DRG/HCPCS episode types during the baseline period to estimate performance year costs. Specifically, we propose that Step 1 would be to identify diagnosis or procedure codes that are being moved from one MS–DRG or HCPCS/APC to another based on the FY IPPS/LTCH or CY OPPS/ASC final rules of the relevant performance year and then map these codes to the new or revised MS–DRGs or HCPCS/APCs. In other words, baseline period episodes are reassigned to the MS–DRG or HCPCS/APC they would have received had the episode occurred in the performance year. For example, the spinal fusion MS–DRG 453 existed in the baseline period but was removed in the FY 2025 IPPS/LTCH PPS final rule. The procedure codes under MS–DRG 453 would be moved under three new MS–DRGs finalized in the FY 2025 IPPS/LTCH PPS final rule and based on the presence of specific procedure and diagnosis codes, as demonstrated in Table XI.A.–06.

TABLE XI.A.–06—EXAMPLE MS–DRG MAPPING LOGIC

Baseline MS–DRG	Mapping logic: move the anchor stay from the baseline MS–DRG to the remapped MS–DRG	Re-mapped MS–DRG
453	Presence of single anterior fusion and posterior fusion (except cervical) procedure codes without a diagnosis code on the MCC/CC list.	402
453	Presence of the following procedure code combinations with a diagnosis code on the MCC list: (i) single level anterior and multiple level posterior fusion; or (ii) single level posterior and multiple level anterior fusion; or (iii) multiple level anterior and posterior fusion; or (iv) single level anterior and posterior fusion.	426
453	Presence of cervical anterior fusion or cervical posterior fusion procedure codes with a diagnosis code on the MCC list	429

Based on the mappings for a given performance year, we propose that inpatient stays and outpatient procedures in the baseline would fall into one of three, mutually exclusive and collectively exhaustive mapping groups:

- Group 1: Existing MS–DRGs or HCPCS/APCs which would be deleted and mapped to new or existing MS–DRGs
- Group 2: Existing MS–DRGs or HCPCS/APCs which would be retained but portions of them would be mapped to new or existing MS–DRGs or HCPCS/APCs
- Group 3: MS–DRGs or HCPCS/APCs where there would be no changes occurring

For Step 2, we propose to construct episodes using the remapped MS–DRG or HCPCS/triggers. We propose that a baseline period episode would initiate an anchor hospitalization or anchor procedure based on whether the remapped MS–DRG or HCPCS, rather than the original MS–DRG or HCPCS, initiates a TEAM episode. Further, we propose that preliminary prices would then be constructed in the same manner described in § 512.540 of the FY 2025 IPPS/LTCH PPS final rule, with target prices for each MS–DRG/HCPCS episode type, inclusive of episodes initiated by anchor hospitalizations and anchor procedures that would be related to these newly incorporated diagnosis or procedure codes.

Lastly, we propose that Step 3 would adjust the standardized allowed amounts, used in target price calculations, to account for changes in fee-for-service rates between the baseline period and performance year due to changes to MS–DRG or HCPCS/APC weights (which account for relative intensity of hospital resource use). To do this, we propose to use a scaling factor, which we propose to define at § 512.505 to mean the ratio of the remapped MS–DRG or HCPCS/APC relative weight in the performance year, as applicable to the original MS–DRG or HCPCS/APC relative weight in the baseline period. The scaling factor adjusts the standardized allowed amount to account for differences in the

relative weights of the original and re-mapped MS–DRGs. This adjustment would replicate the payment the anchor hospitalization or anchor procedure would have received if the MS–DRG or HCPCS/APC assignments had been the same as they are in the performance year. Calculating the scaling factor as the ratio of the re-mapped MS–DRG relative weight in the performance year to the original MS–DRG relative weight in the baseline year also ensures the cost remains in baseline year dollars. Table XI.A.-07 provides an example of the scaling factor calculation for each of the three possible MS–DRG groups.

TABLE XI.A.–07—EXAMPLE CALCULATING THE SCALING FACTOR

Group	Baseline period fiscal year	Baseline MS–DRG	Performance year fiscal year	Remapped MS–DRG	Original MS–DRG relative weight	Remapped MS–DRG relative weight	Scaling factor
Group 1	2021	453	2025	402	9.1936	3.9292	0.427384
Group 2	2020	469	2023	521	3.1399	3.0192	0.961559
Group 2	2020	469	2023	469	3.1399	3.2314	1.02914
Group 3	2021	329	2023	329	4.8503	4.6233	0.953199

After calculating the scaling factor, we propose that the standardized allowed amount of the MS–DRG portion of the anchor hospitalization, or the HCPCS/APC portion of the anchor procedure, from the baseline year would be multiplied by the corresponding scaling factor to calculate the standardized allowed amount for the performance year. Table XI.A.–08 demonstrates application of the scaling factor for anchor hospitalizations while Table XI.A.–09 demonstrates application of the scaling factor for anchor procedures.

TABLE XI.A.–08—EXAMPLE APPYLING THE SCALING FACTOR TO ANCHOR HOSPITALIZATIONS

Baseline year (BY)	Baseline MS–DRG	Re-mapped PY MS–DRG	Performance year (PY)	Standardized (std) allowed amount in BY	Std allowed amount for MS–DRG	Scaling factor	Scaled std allowed amount for MS-DRG	Total adjusted cost (std dollars)
2021	453	402	2024	$20,000	$20,000	0.427384	$8,547.69	$8,547.69
2021	453	402	2024	22,500	20,000	0.427384	8,547.69	11,047.69
2021	453	402	2024	15,000	15,000	0.427384	6,410.76	6,410.76

TABLE XI.A.–09—EXAMPLE APPYLING THE SCALING FACTOR TO ANCHOR PROCEDURES

Baseline CY	Baseline HCPCS	Baseline APC	PY	Remapped PY APC	Baseline APC weight	PY APC weight	Scaling factor	Baseline episode cost	Total adjusted cost (std. dollars)
2021	27702	5115	2024	5116	148.7344	203.203	1.366214	$12,000	$16,394.57
2021	22612	5115	2024	5116	148.7344	203.203	1.366214	15,000	20,493.21

We believe this three-step approach allows the construction of preliminary target prices when there are MS–DRG or HCPCS/APC changes while ensuring anchor hospitalizations and anchor procedures maintain a consistent composition of patient cohorts. Further, it creates a standard process to address Medicare payment rate changes across time by identifying MS–DRG and HCPCS codes that initiate an anchor hospitalization or anchor procedure in the baseline period and how it would be billed under current Medicare payment rates and rules. Lastly, we believe this three-step approach for TEAM adequately captures the majority of year-to-year variation in Medicare spending and avoids unnecessary complexity by focusing on anchor hospitalization and anchor procedure costs. TEAM's pricing methodology includes a retrospective trend factor that can help capture Medicare FFS rate changes for non-anchor hospitalization and anchor procedure costs, which makes capturing additional Medicare spending variation outside of the anchor hospitalization or anchor procedure unnecessary and less transparent to TEAM participants.

We considered an alternative approach to make different adjustments to claims in the post-discharge or post-procedure period. This approach would have incorporated a fourth step, similar to the method used in the BPCI Advanced model, to further adjust the mapped, performance year MS–DRG and HCPCS/APC using setting-specific update factors. Although this methodology more accurately captures the changes in episode spending related to shifts in MS–DRG HCPCS/APC composition and Medicare FFS rate updates, there are more steps involved which can increase the complexity and require a high level of effort to implement. We also considered an even more simplistic approach in which we would replace the standardized MS–DRG or APC allowed amount from the baseline year with the standardized allowed amount from the performance year. However, doing so would not account for other changes in pricing from year to year. Using a ratio of the relative weights better preserves these pricing changes. We seek comment on these alternatives.

We note that TEAM constructs preliminary target prices based on a performance year, which aligns with a calendar year timeframe, and would be shared with TEAM participants prior to each performance year. Typically, MS–DRG changes are aligned to a fiscal year and HCPCS/APC changes align to a calendar year. This means that the proposed three-step approach may not address MS–DRG changes that are implemented in the last quarter of a performance year. We considered, but are not proposing, updating preliminary target prices for Medicare payment rule fiscal year updates, similar to how the BPCI Advanced model updates prices and how the early years of the Comprehensive Care for Joint Replacement (CJR) model updated prices. However, that would create two

preliminary target prices for a given performance year, rather than one preliminary target price as currently finalized. Having to manage two different preliminary target prices in a given performance year can increase participant burden and pricing methodology complexity. Further, updating the preliminary target price during the middle of the performance year can increase target price instability, even though it may produce more accurate target prices. We seek comment on whether we should update preliminary target prices during the performance year to account for any fiscal year or calendar year Medicare payment rule changes that occur after preliminary target prices are released to TEAM participants.

We seek comment on our proposal at § 512.505 to define scaling and at § 512.540(a)(2)(i) through (iii) to account for MS–DRG and HCPCS/APC changes between the baseline period and the performance year that arise from Medicare payment rule changes.

(3) U.S. Territories and Census Division 9

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we noted that hospitals in the five U.S. territories (American Samoa, Guam, the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands) will be grouped alongside Census Division 9 (that is, the Pacific region) for the purposes of construction of regional prices (89 FR 69751). In response to public inquiries asking which specific Census Division U.S. territories would be categorized into since it was not reflected in regulatory text, we are proposing to revise the definition for region at § 512.505 to more clearly reflect this policy. Therefore, we propose that hospitals located in one of the five U.S. territories (American Samoa, Guam, the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands) will be grouped alongside Census Division 9. Specifically, we propose to revise the definition for region at § 512.505 to mean one of the nine U.S. census divisions, as defined by the U.S. Census Bureau, with the U.S. territories included in Census Division 9. We believe grouping the U.S. territories to Census Division 9 is the most appropriate given the majority of U.S. territories captured in this group are located in the Pacific region. Mean episode spending for hospitals within the five U.S. territories is lower than hospitals in Census Division 9 for most episode types, and episode counts are significantly smaller. Therefore, including hospitals within the five U.S. territories as part of Census Division 9 will not disadvantage them since the benchmarks are expected to be higher. Moreover, any differences in spending that are due to patient case-mix between these regions should be accounted for through risk adjustment, ensuring providers are not penalized within the five U.S. territories.

Further, this approach is similar to how the BPCI Advanced model grouped the U.S. territories for the Census Division peer group characteristic. This policy would address the one CBSA in Puerto Rico (10380: Aguadilla, PR) selected for participation in TEAM. TEAM participants in this CBSA would use regional target prices calculated for Census Division 9.

We considered but are not proposing grouping hospitals in a U.S. territory into a separate group not based on Census Division but believe that doing so would create unnecessary complexity and reduce uniformity in how target prices are constructed in TEAM.

We seek comment on our proposal at proposed § 512.505 to include U.S. territories in Census Division 9.

(4) Calculation and Application of Normalization Factors

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we finalized using a normalization factor in our calculation of preliminary and reconciliation target prices. The normalization factor is the ratio of the average benchmark price divided by the average risk-adjusted benchmark price. We will multiply the risk-adjusted benchmark prices by the normalization factor to ensure the average benchmark price after risk adjustment does not exceed the average benchmark price prior to risk adjustment. If the average benchmark price is higher than the average risk-adjusted benchmark price, then the normalization factor will be greater than 1, and its application will increase the risk-adjusted benchmark prices. If the average benchmark price is lower than the average risk-adjusted benchmark price, then the normalization factor will be less than 1, and its application will decrease the risk-adjusted benchmark prices.

In the FY 2025 IPPS/LTCH PPS final rule, we finalized a policy to calculate a prospective normalization factor during the creation of preliminary target prices, which we would then modify (by no more than ±5 percent) for the final normalization factor when constructing reconciliation target prices. Under our current policy, the prospective normalization factor will be calculated as the ratio of the average total risk-adjusted preliminary target price to the average total non-risk adjusted preliminary target price for each MS–DRG/HCPCS episode type. We also finalized the final normalization factor, which will be calculated as the national mean of the benchmark price for each MS–DRG/HCPCS episode type divided by the national mean of the risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type.

To ensure consistency in our approach to calculating the prospective normalization factor(s) and the final normalization factor(s), we are proposing to update the language at § 512.505 to clarify that the prospective normalization factor will be calculated using the benchmark prices (that is, the average non-risk adjusted preliminary benchmark price divided by the average risk adjusted preliminary benchmark price) rather than using preliminary target prices. Specifically, we are proposing to revise the definition for prospective normalization factor to mean the multiplier incorporated into the preliminary target price to ensure that the average of the total risk-adjusted benchmark price does not exceed the average of the total non-risk adjusted benchmark price, calculated as set forth in § 512.540(b)(6). We are similarly proposing to revise the definition for final normalization factor at § 512.505 to mean the benchmark price for each MS–DRG/HCPCS episode type and region divided by the mean of the risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type and region. Benchmark prices are calculated prior to incorporating the trend factor and discount factor. Therefore, using benchmark prices rather than target prices for calculating the prospective normalization factor would preserve the effect of the trend and discount factors and would prevent the prospective normalization factor from being influenced by the trend and discount factors. This proposed policy would ensure consistency in the construction of the prospective and final normalization factors. We seek comment on our proposals at § 512.505 to construct the prospective normalization factor using benchmark prices and to construct the final normalization factor to be based on MS–DRG/HCPCS episode type and region.

Additionally, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), we finalized a policy to calculate normalization factors at the MS–DRG/HCPCS level—that is, to calculate normalization factors as the average national non-risk adjusted benchmark price divided by the average national risk-adjusted preliminary benchmark

price for each MS–DRG/HCPCS episode type. To further ensure consistency in our approach to calculating target prices, we are proposing to calculate normalization factors at the MS–DRG/HCPCS region level. We propose to calculate normalization factors as the average regional non-risk adjusted benchmark price divided by the average regional risk-adjusted preliminary benchmark price for each MS–DRG/HCPCS episode type. This will produce a unique normalization factor for each region and MS–DRG/HCPCS episode type for a total of 261 normalization factors (as opposed to just 29 normalization factors, as previously proposed). We believe this approach is preferable because it will ensure that the regional average MS–DRG/HCPCS target price is equal to the regional average MS–DRG/HCPCS benchmark price. We seek comment on our proposal at §§ 512.540(b)(6) and 512.545(e)(1)(i) to construct the normalization factors for each MS–DRG/HCPCS at the region level.

Table XI.A.–10 provides a few examples of the proposed calculation of the prospective and final normalization factors for three MS–DRG/HCPCS regions in which the final normalization factor is capped at 5 percent below the prospective normalization factor, not capped, and capped at 5 percent above the prospective normalization factor, respectively.

TABLE XI.A.–10—EXAMPLE CALCULATING NORMALIZATION FACTOR

DRG	Region	National mean benchmark price	National mean baseline risk adjusted benchmark	Prospective normalization factor	National mean performance risk adjusted benchmark	Final normalization factor	Capped final normalization factor
231	1	$80,000.00	$96,000.00	0.83	$104,000.00	0.77	0.79
232	1	55,000.00	55,550.00	0.99	57,750.00	0.95	0.95
233	1	70,000.00	84,000.00	0.83	77,000.00	0.91	0.88

Lastly, we wish to clarify how normalization factors will be applied in the calculation of preliminary target prices and how preliminary target prices will be provided to TEAM participants. We previously finalized a policy to provide each TEAM participant within a region with the same preliminary target price for an MS–DRG/HCPCS episode type. We also stated that prospective normalize factors would be incorporated into this preliminary target price and that risk adjustment factors would be calculated and separately be made available to TEAM participants prior to the start of the performance year, so participants would be able to use them to estimate their episode-level target prices. In this proposed rule, we are proposing that two separate preliminary target prices will be made available to all participants: (1) the regional average target price for each MS–DRG/HCPCS episode type, before application of the risk adjustment factors or normalization factors; and (2) a TEAM participant-specific preliminary target price, including the TEAM participant's average risk adjustment factors (calculated based on the TEAM participant's case mix in the baseline period) and the regional MS–DRG/HCPCS normalization factors. We believe that these two target prices will provide TEAM participants with the most complete information to both anticipate their final reconciliation target prices and understand their performance as compared to other participants within the same region. We seek comment on our proposal at § 512.540(b)(8) to communicate and share preliminary target prices that are region specific and TEAM participant specific.

(5) Calculation of the Prospective Trend Factor

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we finalized a pricing methodology using a 3 percent capped retrospective trend factor. Under this methodology, reconciliation target prices are based on average regional MS–DRG spending in the contemporaneous performance year. The retrospective approach ensures that reconciliation target prices accurately account for unpredictable year-to-year fluctuations in spending, including the introduction of new technologies and medical advancements and unexpected increases or decreases to health care utilization (for example, the COVID–19 public health emergency). However, as stated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69745), we believe that providing TEAM participants with preliminary target prices before each performance year—and ensuring the accuracy and reliability of preliminary target prices—is essential to participants' success. Accurate target prices enable participants to prepare and undertake appropriate care transformation. We also believe the methodology for setting prospective target prices should be sufficiently simple that it is transparent to participants. With our methodology, we aimed to find the balance between simplicity and predictive accuracy.

The methodology finalized in the FY 2025 IPPS/LTCH PPS final rule calculates preliminary target prices by applying a trend factor to average regional MS–DRG spending in the final year of the baseline period. This trend factor is calculated as the 2-year percentage change from baseline year 1 (BY1) to baseline year 3 (BY3)—specifically average regional MSDRG spending in BY3 divided by average regional MS–DRG spending in BY1. We proposed and finalized the use of a 2-year trend because of the 2-year lag between each performance year and spending data availability from prior years. For example, preliminary target prices for performance year 1, 2026, will be shared with participants during 2025, when the last available complete year of data will be from 2024. Therefore, there is a need to convert 2024 spending into 2026 prices. We believed the simplicity of this approach would ensure transparency in our methodology.

However, further review of our methodology and testing using simulated reconciliation results, which relied on using baseline period data from 2019 and 2021 and a 2023 performance year, demonstrated potential shortcomings of this methodology. Specifically, the specification for the calculation of the 2-year trend factor used only spending data from BY1 and BY3, omitting data from BY2. Given expected variability in year-to-year spending, BY2 is a potentially valuable data point to include in our trend predictions. Furthermore, its omission has the potential to produce year-to-year fluctuations in preliminary target prices which may not accurately reflect trends in the baseline period data.

Therefore, we are proposing to update our preliminary target price calculation methodology to one which more fully incorporates available data and would more accurately represent year-to-year

trends. First, we are proposing to change the calculation of the prospective trend factor from a percentage change based between BY1 and BY3 to an annual percentage change calculated using a linear regression model. Specifically, we are proposing to use a log-linear model which would fit the model to logarithmically transformed values of average regional MS–DRG spending for each of the baseline years. Logarithmic transformation of the spending variables serves two purposes. First, it reduces the effect of outliers on our coefficient estimates. Second, it allows for interpretation of the coefficients as an annual percentage change rather than an absolute change. The coefficient estimates would be interpretable as the anticipated one-year percentage point change in the preliminary target price. For example, a coefficient of 0.03 reflects a 3 percent year-over-year increase in the average regional MS–DRG spending of the hospital. Conversely, a coefficient of −0.03 reflects a 3 percent year-over-year decrease in the average regional MS–DRG spending of the hospital. As there is a 2-year lag between the last baseline year and the performance year, we would square the exponentiated value of the coefficient estimate to calculate the 2-year prospective trend factor to predict the performance year spending. An exponentiated coefficient estimate of 1.03 would produce a 2-year prospective trend factor of: 1.03^2 = ~1.061, meaning that average regional MS–DRG spending is expected to increase by 6.1 percent between the last baseline year and performance year. An exponentiated coefficient of 0.97 would produce a trend factor of 0.97^2 = ~0.941, meaning that average regional MS–DRG spending is expected to decrease by 5.9 percent between the last baseline year and performance year. The 2-year trend factor will then proportionally adjust the benchmark price for each MS–DRG/HCPCS region preliminary target price based on the expected percentage increase or decrease in spending between the last baseline year and performance year.

Second, we are proposing to use 2 additional years of episode spending data in our calculation of the prospective trend factor. We propose these 2 years be the 2 years immediately prior to the 3-year baseline period. Therefore, we propose to define trend year at § 512.505 to mean either of the 2 years immediately prior to the 3-year baseline period used in combination with the baseline period to calculate the prospective trend factor. For example, for performance year 1 (2026), the 3-year baseline period is 2022 through 2024. Therefore, the trend years for performance year 1 would be 2020 (trend year 1) and 2021 (trend year 2). We believe using 2 additional trend years to calculate the trend factor and estimate preliminary target prices would produce more accurate projections of future FFS costs and, therefore, more reliable preliminary target prices for TEAM participants. We are proposing the use of trend years to only be applicable to construction of the prospective trend factor used in preliminary target price calculations. We would continue to use the 3-year baseline period previously finalized in the FY 2025 IPPS/LTCH PPS final rule for all other purposes related to TEAM, including but not limited to: excluded services, safety net hospital determinations, and risk adjustment. We also propose that trend years would roll forward on an annual basis in the same manner as the 3-year baseline period. We believe rolling the trend years forward annually with the baseline period is consistent with our previously finalized methodology, as well as with other CMMI models, and ensures a uniform approach to calculating prospective trends factors and preliminary target prices in each performance year. Lastly, we are proposing to use a blend of regional and national trend factors in the calculation of preliminary target prices. In the FY 2025 IPPS/LTCH PPS rule we proposed and finalized a policy to calculate individual trend factors for each regional MS–DRG (89 FR 69756). While we believe that preservation of potential variation in regional trends is an important element of our pricing methodology, we are concerned that a short baseline period—even when adding 2 trend years to the period used to make projections—may amplify short-term regional trends and unpredictable year-to year fluctuations that are not an accurate representation of longer-term cost trends for TEAM participants and are not likely to produce reliable preliminary target prices. Therefore, we propose for each regional MS–DRG in each performance year to calculate the prospective trend factor as the average (arithmetic mean) of the regional trend factor (calculated as proposed previously in this rulemaking) and a national trend factor. The national MS–DRG trend factor would be calculated in the same manner as regional MS–DRG trend factors using a linear regression of logarithmically transformed national average MS–DRG spending.

Lastly, we are proposing an additional change to how we calculate and apply the high-cost outlier cap finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69745). Currently, the high-cost outlier cap is an episode spending cap applied to the 99th percentile of regional spending for a given MS–DRG/HCPCS episode type in a given region across all 3 years of the baseline period. That is, the 99th percentile of regional spending for a given MS–DRG/HCPCS episode type is calculated for all episodes within the 3-year baseline period, rather than for each baseline year individually. As a result, episodes from different baseline years are not equally likely to be capped. For example, if per episode spending increases year-to-year within the baseline period, episodes in more recent years will be more likely to be subject to the high-cost outlier cap than episodes in earlier years. Conversely, if the per episode spending decreases year-to-year within the baseline period, episodes in earlier years will be more likely to be capped. To ensure that the trend factor—as well as the benchmark price—are calculated in a way that treats all 3 baseline years equally, with respect to the high-cost outlier cap, we are proposing to calculate the 99th percentile for a given MS–DRG/HCPCS episode type in a given region individually in each of the baseline and trend years. Although trend years are not used in calculation of the benchmark price, we propose to apply the high-cost outlier cap to episodes in the trend years as well to ensure consistency in the calculation of our trend factor. Therefore, we propose to revise the definition for high-cost outlier cap at § 512.505 to mean the 99th percentile of regional spending for a given MS–DRG/HCPCS episode type, region, and baseline year, which is the amount at which episode spending would be capped for purposes of determining baseline and performance year episode spending. We believe this approach would improve the accuracy of our benchmark prices and trend factors and, ultimately, of target prices.

In proposing this revised methodology for calculating TEAM participants' preliminary target prices, we considered multiple alternatives for each proposed change. As alternatives to the proposed regression-based approach to calculating an annual prospective trend factor, we considered retaining the approach finalized in the FY 2025 IPPS/LTCH PPS rule as well as two similar approaches. The first alternative approach we considered would calculate the 2-year trend factor

as double the average of the 1-year trend from BY1 to BY2 (that is, average regional MS–DRG episode spending in BY2 divided by average regional MS–DRG episode spending in BY1) and from BY2 to BY3. This approach would have the benefit of retaining the simplicity of the methodology previously finalized while also incorporating all 3 years of available baseline data. We also considered an approach that would use 4 years of data (3-year baseline plus 1 trend year, defined as the year prior to the start of the baseline period) to calculate the 2-year trend factor as the average of the 2-year trend from BY1 to BY3 and trend year 1 to BY2 (for example, for performance year 1, 2026, the average of the 2-year trend factor from 2022 [BY1] to 2024 [BY3] and the 2-year trend factor from 2021 [trend year 1] to 2023 [BY2]). We intend to conduct further analysis to evaluate the reliability of both of these approaches, as compared to the proposed approach, for historical episode spending as part of simulated reconciliation. We request comment from stakeholders on whether either of these approaches would produce more accurate prospective trend factor estimates or meaningfully simplify our pricing methodology such that it would be easier for TEAM participants to replicate preliminary target price calculations and identify potential opportunities for spending efficiencies.

Additionally, we considered proposing the use of weights for different baseline and trend years for the regression-based approach. Specifically, we considered two alternatives to our proposed approach. In the first alternative, we would weight each of the 3 baseline years at 0.25 and each of the 2 trends years at 0.125. In the second, we considered weights of: BY3 = 0.3, BY2 = 0.25, and BY1 and both trend years = 0.15. We request comment on whether weighting more recent years used in the calculation of prospective tend factors and projection of preliminary target prices would improve the accuracy of target price calculations.

Lastly, we considered alternatives to our proposal to use the average of the regional and national trend factors. Specifically, we considered using just the regional trend factor, as proposed and finalized in the FY 2025 IPPS/LTCH PPS, as well as the use of different weights on the regional and national trend factors, for example, a weight of 0.67 for the regional trend factor and 0.33 for the national trend factor. We intend to conduct further analysis on whether alternative weights would provide better estimates of real FFS spending.

We believe our proposed revisions to our methodology for the calculation of the prospective trend factor would produce more accurate and reliable preliminary target prices for TEAM participants and reduce adjustments to reconciliation target prices that are calculated during reconciliation. We will maintain the ±3 percent cap on the retrospective trend factor adjustment. However, we believe that by improving the accuracy of prospective trend factor construction used in preliminary target prices, the methodological changes proposed previously will reduce the frequency with which that 3 percent cap need be applied.

We seek comment on our proposals at § 512.540(b)(7) to reconstruct the prospective trend factor and at § 512.540(b)(4) to calculate the high-cost outlier cap for each baseline year in the baseline period.

(6) Standardizing Area Deprivation Index (ADI)

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we finalized a social need risk adjustment factor for beneficiary-level risk adjustment in the construction of our preliminary and reconciliation target prices. We finalized this variable as a single binary variable with a value of yes = 1 if the beneficiary—(1) was eligible for full Medicaid benefits (referred to as a dual eligible beneficiary eligible to receive both full Medicare and Medicaid benefits); (2) was eligible for the Medicare Part D Low Income Subsidy (LIS); or (3) resided in a census block group with an Area Deprivation Index (ADI) above the 80th percentile of either national ranking or 8th decile of the state-level ranking. We noted that we believed that accounting for multiple potential markers of beneficiary social risk would be most appropriate to ensure accurate representation of the additional resources required to treat beneficiaries with greater levels of social vulnerability and need. In the FY 2025 IPPS/LTCH PPS final rule, we also acknowledged concerns that the lack of standardization of ADI variables may make the ADI primarily a function of a subset of variables (namely income and home values) included in its calculation. Further, we further stated that we would continue to explore whether standardization of the ADI variables would be appropriate for the purposes of TEAM's risk adjustment approach and would propose any such changes in future rulemaking.

As part of our preparation for TEAM and the calculation of preliminary target prices, we constructed episodes using a 2019 through 2021 baseline period to reassess the value of the social need risk adjustment factor. We calculated cross-tabulations of dual eligibility, LIS, and ADI status of episodes and beneficiaries identified as triggering a TEAM episode. We found that 99.9 percent of dual eligible beneficiaries who triggered an episode in TEAM (as well as 99.9 percent of episodes associated with a dual eligible beneficiary) were also qualified for LIS. This is consistent with the fact that LIS has more lenient asset and income requirements than Medicaid and that dual eligible beneficiaries automatically qualify for LIS without having to apply.

As previously suggested by commenters in response to the FY 2025 IPPS/LTCH PPS proposed rule, we explored options for the standardization of the ADI that would better measure deprivation in urban areas. The CMS Innovation Center's Accountable Care Organization REACH (ACO REACH) model includes an adjustment that is a blend of one-third National ADI scores, one-third State ADI scores, and one-third Dual-Eligibility or Low-Income Subsidy status. In performance year 2025, CMS will remove the National/State blended ADI from ACO REACH and replace it with an area-level deprivation measure that uses standardized variables. This will better identify deprived areas of the nation, particularly for populations in high housing cost areas where housing costs do not correlate with the other included economic variables.

Specifically, ACO REACH intends to use a slightly modified census block group deprivation index, known as the Community Deprivation Index (CDI), which updates and standardizes the variables used in the construction of the ADI. Standardization refers to the process making the individual indicators that comprise the ADI unit to be neutral by subtracting the mean and dividing by the standard deviation before combining them to form a composite measure. Standardization prevents those variables with high nominal values, namely income and home values, from predominating the calculation of the metric. Given the extensive work the ACO REACH model has conducted to standardize the ADI, we believe it is important to use a similar approach to more accurately measure areas of deprivation and create alignment across CMS Innovation Center models with similar adjustments.

Based on our further research and analysis, we are proposing a few changes to the construction of the social need risk adjustment factor for beneficiary-level risk adjustment in TEAM.

First, we are proposing to rename the social needs risk adjustment factor to be the beneficiary economic risk adjustment factor and replace the use of the ADI in the construction of our beneficiary economic risk adjustment variable, with a similar but slightly modified census block group deprivation index, the Community Deprivation Index (CDI). We propose to use the same construction methodology as the ACO REACH model. Specifically, the CDI would be a factor-weighted composite measure of 18 variables collected from the Census Bureau. We propose the deprivation scores would be percentile ranked relative to the Nation such that the resulting index would range from a score of 1, indicating the lowest level of relative deprivation, to 100, indicating the highest level of relative deprivation. We also propose maintaining the use of the 80th percentile threshold for the CDI. For example, the TEAM beneficiary would be assigned a value of yes = 1 on the beneficiary economic risk adjustment factor if the TEAM beneficiary's CDI was above the 80th percentile. We believe the updated variable name better represents what the variable is risk adjusting for. We also believe the use of the CDI instead of the ADI will better represent beneficiary-level deprivation in urban areas due to the standardization of variables prior to the construction of the composite measure.

Second, we are proposing to use only national-level CDI rankings in the construction of our beneficiary economic risk adjustment factor. In our initial proposal in the FY25 IPPS/LTCH PPS proposed rule (89 FR 36450), we stated that the use of national- and state-level ADIs would help mitigate potential concerns about the validity of the ADI as a measure of economic risk given its close correlation with home values. We believed that using a relative measure of deprivation within states, in addition to a national measure, would better identify high deprivation census block groups and beneficiaries in states with high incomes and home values. We believe that the standardization of variables in the CDI will adequately address the influence of these two variables in the aggregate measure, negating the need for the use of both national and state rankings.

Furthermore, we believe that the inclusion of too many measures of beneficiary deprivation will dilute risk adjustment for TEAM participants with beneficiaries with the highest levels of economic vulnerability. Although in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69772) we confirmed that we would only make upward risk adjustments to target prices, target price increases through risk adjustment must be offset by across-the-board target price reduction with the application of the normalization factor in our target price methodology. Therefore, the more beneficiaries receive risk-adjusted target prices, the smaller those adjustments must necessarily be.

As an alternative to our proposed changes to the construction of the economic risk factor for beneficiary-level risk adjustment, we considered retaining the use of the ADI, including both the national- and state-level rankings, and dual eligibility status. As previously stated, we believe that the use of the CDI as a standardized alternative to the ADI provides a more reliable measure of economic risk and negates the need for used of the state-level rankings. We further believe that minimizing the number of variables used to identify economic risk both keeps the methodology simpler and reduces the extent to which positive risk adjustments must be offset by normalization, therefore ensuring that beneficiaries with the highest levels of deprivation receive adequate risk adjustment. We also gave further consideration to additional alternatives to the ADI, including the Centers for Disease Control and Prevention's (CDC) Social Vulnerability Index (SVI). However, as stated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69799), we continue to believe that it would not have been appropriate to use the SVI in place of the ADI or CDI, given that SVI is not as granular as the ADI (SVI uses census tracts as opposed to census block groups), and given the limitations and timing of this source data, the American Community Survey (ACS) 5-year estimates. For these reasons, we are not proposing the SVI as a potential risk adjustor in TEAM.

We seek comment on our proposal at § 512.545(a) to rename the risk adjustment variable. We also seek comment on our proposal at § 512.545(a)(3)(i) to use the CDI and remove a measurement of deprivation at the State level.

Finally, we considered but are not proposing at this time to omit the dual eligibility (receiving both full Medicare and Medicaid benefits) variable from our construction of the single, binary economic risk adjustment factor. While we continue to believe that dual eligibility is an important indicator of economic vulnerability, we believe the near complete overlap between dual eligibility and LIS status makes the use of dual eligibility status redundant. Removing the dual eligibility variable would simplify the construction of the economic risk adjustment factor without sacrificing the identification of beneficiaries with high economic risk. Furthermore, LIS also provides a nationally consistent measure of economic risk, as LIS eligibility is set at the national level, unlike Medicare-Medicaid dual eligibility. Lastly, the use of only LIS status, as opposed to both LIS and dual eligibility, is consistent with the specification used by CMS Innovation Center models, such as the Making Care Primary (MCP) Model.

While we are not proposing any change at this time to the inclusion of the dual eligibility variable in our construction of the economic risk adjustment factor, we are seeking comment on whether the removal of this variable to streamline construction of the economic risk adjustment factor would be preferable.

(7) Hierarchical Condition Categories (HCC) in Risk Adjustment

(a) Lookback Period

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we recognized the need to account for beneficiary acuity in setting target prices for episode categories tested in TEAM. We finalized the use of beneficiary level variables that are episode category specific. These beneficiary level variables are drawn from the HCCs used in the CMS–HCC risk adjustment model that informs the Medicare Advantage (MA) capitation rates and Part C and Part D Payment Policies. While the specific HCCs were finalized for each episode category in TEAM, we did not finalize the lookback period duration to capture the HCCs. Specifically, we did not specify how far back from the episode start date CMS would look to capture HCC data to determine the total count of HCCs and the episode-specific HCC variables.

In the early years of BPCI Advanced, we used a 90-day lookback for each beneficiary, beginning with the day prior to the anchor hospitalization or anchor procedure. We would use the beneficiary's Medicare Fee-For-Service (FFS) claims from that 90-day lookback period to determine which HCC flags the beneficiary is assigned and create a count of those HCC flags. During the COVID–19 public health emergency (PHE), BPCI Advanced participants urged CMS to reconsider the 90-day lookback period because beneficiaries were hesitant to interface with providers during this time, which directly affected the risk adjustment and target price methodology. Given those concerns, BPCI Advanced began using a 180-day lookback period.

Since the COVID–19 PHE has ended and utilization is now once again similar to pre-PHE levels, we proposed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35934) that we would conduct a 90-day lookback for each beneficiary, beginning with the day prior to the anchor hospitalization or anchor procedure. We would use the beneficiary's Medicare FFS claims from that 90-day lookback period to determine which HCC flags the beneficiary is assigned and create a count of those HCC flags. This methodology would have been consistent with the earlier years of BPCI Advanced and would represent a more uniform way of measuring clinical complexity across beneficiaries. It would also reduce the incentive for increased coding intensity at the time of the initiating procedure. However, following feedback from public comments, we held off on finalizing a lookback period to take more time to consider alternatives, such as a longer lookback period.

We now propose to conduct a 180-day lookback for each beneficiary, beginning with the day prior to the anchor hospitalization or anchor procedure. We propose to use the beneficiary's Medicare FFS claims from that 180-day lookback period to determine which HCC variables (or flags) the beneficiary is assigned and determine the HCC episode specific flags as well as the TEAM HCC count flag. We also propose that the TEAM beneficiary would need to meet beneficiary inclusion criteria, as described in § 512.535, during the entire 180-day lookback period. We believe a 180-day lookback period would sufficiently capture beneficiary acuity and ultimately improve the risk adjustment methodology to better reflect the level of spending outside of the hospital's control. This methodology would be consistent with the current BPCI Advanced methodology and would continue to represent a more uniform way of measuring clinical complexity across beneficiaries. In past internal analyses, CMS has found that a 180-day lookback period may improve model fit in a risk adjustment model but may reduce episode volume. Internal analysis demonstrated that using a 180-day lookback period in BPCI Advanced reduced total episodes from 12,473,202 to 12,451,784 when looking at a period from October 1, 2015, through September 30, 2019. Our analysis further found that extending the lookback period from 90 days to 180 days resulted in an average increase in regional MS–DRG benchmark prices of just 0.04 percent. The average change in regional MS–DRG benchmark prices was just ± 0.2 percent and only 16 of the 261 benchmark prices changed by more than ± 0.5 percent. Use of 270-day and 365-day lookback periods produced only marginally different results.

However, because of the importance of accurate and complete data when risk-adjusting for TEAM, we believe 180-days is the most appropriate duration as opposed to lookback periods longer than 180 days. The 180-day lookback period allows for improvements in model fit and modest adjustments in target price accuracy, relative to a 90-day lookback period, without a large drop in episode volume in the lookback period. Additionally, we believe a 180-day lookback period would address public commenters' concerns that the 90-day lookback period did not adequately account for past spending associated with beneficiary health status. It would also reduce the incentive for increased coding intensity at the time of the initiating procedure. Using a lookback period, rather than including diagnoses from the episode initiating admission/procedure, will minimize the opportunities for participants to change coding intensity among their patients relative to non-participants.

We recognize other CMS initiatives may use different lookback periods. For example, the Enhancing Oncology Model uses HCCs from the previous calendar year, and some of the episode-based cost measures in the Merit-based Incentive Payment Systems that align with similar episode categories tested in TEAM use a 120-day lookback period. Therefore, we considered, but are not proposing here, a 90-day, 120-day, 270-day, or 365-day lookback period to determine which HCC flags the beneficiary is assigned. We have not considered lookback periods longer than 1 year as we believe that it would capture beneficiary acuity that may be unrelated to their episodic care in TEAM, and thus arbitrarily adjusting target prices. There is limited research into the most appropriate lookback period duration for risk adjustment, however there are some findings that suggest that incorporating clinical information beyond 1 year does not improve risk adjustment. Although we are not proposing this alternative, we seek comment on whether these alternative lookback periods would be appropriate for TEAM or if there are other lookback period options we should consider.

We seek comment on our proposal at proposed § 512.545(a) to use a 180-day lookback period to determine which HCC flags the beneficiary is assigned.

(b) HCC Version

In the FY 2025 IPPS/LTCH PPS final rule we finalized TEAM's approach to risk adjustment for target prices, which included episode category risk adjusters linked to specific HCCs that aimed to improve target price accuracy by accounting for beneficiary-driven episode expenditure variation (89 FR 69763). As indicated in the final rule, a Lasso regression analysis with additional input from a Technical Expert Panel (TEP) of clinicians was performed to identify the finalized risk adjusters, including the specific HCCs. The analysis used HCCs from version 22 (v22) of the CMS–HCC risk adjustment model as this version is the version used in the BPCI Advanced model which TEAM predicated its risk adjustment approach on. However, we are aware that v22 is not the most updated version used in the CMS–HCC risk adjustment model. Currently, version 28 (v28), as finalized in the Risk Adjustment Data Validation (RADV) final rule (88 FR 6643), is used in Medicare Part C and other CMS initiatives. Given there is a more recent HCC version and its adoption across CMS and its initiatives, we believe it is important for TEAM to use a more recent HCC version that relies on ICD–10 diagnosis codes, rather than previous versions that include ICD–9 diagnosis codes, leading to more granular HCCs.

Given HCC v28 results in more granular HCCs, there is not a one-to-one mapping of the HCCs used in v22 to v28. As there is not a one-to-one match between HCCs in v22 and v28, a Lasso regression analysis with additional clinician input was repeated to identify the specific HCCs in v28 that would be used to risk adjust target prices in TEAM. Lasso regression analysis is a statistical modeling method used to identify a subset of risk adjusters which are most relevant for prediction of the natural log difference between clinical episode spending and the benchmark price. The objective of Lasso regression is to find the risk adjusters that minimize the residual sum of squares. In other words, the Lasso regression analysis identifies the risk adjusters that minimize the difference between the predicted and the actual values. Clinician input helps to identify risk adjusters relevant to clinical practice and predicting target prices. Clinician input was informed by a literature review of perioperative comorbidities that would affect outcome and Lasso covariate estimates to support their recommendations.

Based on the Lasso analysis and clinician input, we are proposing to use

HCC v28 to identify the episode category specific HCC risk adjusters used in TEAM's risk adjustment methodology. Specifically, we are proposing to replace the HCC episode category specific risk adjusters finalized in FY 2025 IPPS/LTCH PPS final rule with the following HCC episode category specific risk adjusters as demonstrated in Table XI.A.–011.

TABLE XI.A.–011—PROPOSED HCC V28 EPISODE CATEGORY SPECIFIC RISK ADJUSTERS

Episode category	Finalized HCC v22 risk adjusters	Proposed HCC v28 risk adjusters
CABG	• HCC 18: Diabetes with Chronic Complications. • HCC 46: Severe Hematological Disorders. • HCC 58: Major Depressive, Bipolar, and Paranoid Disorders. • HCC 84: Cardio-Respiratory Failure and Shock. • HCC 85: Congestive Heart Failure. • HCC 86: Acute Myocardial Infarction. • HCC 96: Specified Heart Arrhythmias. • HCC 103: Hemiplegia/Hemiparesis. • HCC 111: Chronic Obstructive Pulmonary Disease. • HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders. • HCC 134: Dialysis Status.	• HCC 37: Diabetes with Chronic Complications. • HCC 48: Morbid Obesity. • HCC 125: Dementia, Severe. • HCC 126: Dementia, Moderate. • HCC 127: Dementia, Mild or Unspecified. • HCC 155: Major Depression, Moderate or Severe, without Psychosis. • HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia. • HCC 213: Cardio-Respiratory Failure and Shock. • HCC 224: Acute on Chronic Heart Failure. • HCC 226: Heart Failure, Except End-Stage and Acute. • HCC 228: Acute Myocardial Infarction. • HCC 229: Unstable Angina and Other Acute Ischemic Heart Disease. • HCC 238: Specified Heart Arrhythmias. • HCC 249: Ischemic or Unspecified Stroke. • HCC 253: Hemiplegia/Hemiparesis. • HCC 263: Atherosclerosis of Arteries of the Extremities with Ulceration or Gangrene. • HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders. • HCC 298: Severe Diabetic Eye Disease, Retinal Vein Occlusion, and Vitreous Hemorrhage. • HCC 326: Chronic Kidney Disease, Stage 5. • HCC 327: Chronic Kidney Disease, Severe (Stage 4). • HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle. • HCC 409: Amputation Status, Lower Limb/Amputation Complications.
LEJR	• HCC 8: Metastatic Cancer and Acute Leukemia. • HCC 18: Diabetes with Chronic Complications. • HCC 22: Morbid Obesity. • HCC 58: Major Depressive, Bipolar, and Paranoid Disorders. • HCC 78: Parkinson's and Huntington's Diseases. • HCC 85: Congestive Heart Failure. • HCC 86: Acute Myocardial Infarction. • HCC 103: Hemiplegia/Hemiparesis. • HCC 111: Chronic Obstructive Pulmonary Disease. • HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders. • HCC 134: Dialysis Status. • HCC 170: Hip Fracture/Dislocation.	• HCC 17: Cancer Metastatic to Lung, Liver, Brain, and Other Organs; Acute Myeloid Leukemia Except Promyelocytic. • HCC 36: Diabetes with Severe Acute Complications. • HCC 37: Diabetes with Chronic Complications. • HCC 48: Morbid Obesity. • HCC 125: Dementia, Severe. • HCC 126: Dementia, Moderate. • HCC 127: Dementia, Mild or Unspecified. • HCC 151: Schizophrenia. • HCC 155: Major Depression, Moderate or Severe, without Psychosis. • HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia. • HCC 224: Acute on Chronic Heart Failure. • HCC 225: Acute Heart Failure (Excludes Acute on Chronic). • HCC 226: Heart Failure, Except End-Stage and Acute. • HCC 238: Specified Heart Arrhythmias. • HCC 253: Hemiplegia/Hemiparesis. • HCC 267: Deep Vein Thrombosis and Pulmonary Embolism. • HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders. • HCC 326: Chronic Kidney Disease, Stage 5. • HCC 327: Chronic Kidney Disease, Severe (Stage 4). • HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle. • HCC402: Hip Fracture/Dislocation.
Major Bowel Procedure.	• HCC 11: Colorectal, Bladder, and Other Cancers. • HCC 18: Diabetes with Chronic Complications. • HCC 21: Protein-Calorie Malnutrition. • HCC 33: Intestinal Obstruction/Perforation. • HCC 82: Respirator Dependence/Tracheostomy Status. • HCC 85: Congestive Heart Failure. • HCC 86: Acute Myocardial Infarction. • HCC 103: Hemiplegia/Hemiparesis. • HCC 111: Chronic Obstructive Pulmonary Disease. • HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders. • HCC 134: Dialysis Status. • HCC 188: Artificial Openings for Feeding or Elimination.	• HCC 17: Cancer Metastatic to Lung, Liver, Brain, and Other Organs; Acute Myeloid Leukemia Except Promyelocytic. • HCC 22: Bladder, Colorectal, and Other Cancers. • HCC 37: Diabetes with Chronic Complications. • HCC 48: Morbid Obesity. • HCC 78: Intestinal Obstruction/Perforation. • HCC 125: Dementia, Severe. • HCC 126: Dementia, Moderate. • HCC 127: Dementia, Mild or Unspecified. • HCC 151: Schizophrenia. • HCC 155: Major Depression, Moderate or Severe, without Psychosis. • HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia. • HCC 201: Seizure Disorders and Convulsions. • HCC 211: Respirator Dependence/Tracheostomy Status/Complications. • HCC 213: Cardio-Respiratory Failure and Shock. • HCC 224: Acute on Chronic Heart Failure. • HCC 226: Heart Failure, Except End-Stage and Acute. • HCC 238: Specified Heart Arrhythmias. • HCC 253: Hemiplegia/Hemiparesis. • HCC 267: Deep Vein Thrombosis and Pulmonary Embolism. • HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders. • HCC 326: Chronic Kidney Disease, Stage 5. • HCC 327: Chronic Kidney Disease, Severe (Stage 4). • HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle.

TABLE XI.A.–011—PROPOSED HCC V28 EPISODE CATEGORY SPECIFIC RISK ADJUSTERS—Continued

Episode category	Finalized HCC v22 risk adjusters	Proposed HCC v28 risk adjusters
SHFFT	• HCC 18: Diabetes with Chronic Complications. • HCC 22: Morbid Obesity. • HCC 82: Respirator Dependence/Tracheostomy Status. • HCC 83: Respiratory Arrest. • HCC 84: Cardio-Respiratory Failure and Shock. • HCC 85: Congestive Heart Failure. • HCC 86: Acute Myocardial Infarction. • HCC 96: Specified Heart Arrhythmias. • HCC 103: Hemiplegia/Hemiparesis. • HCC 111: Chronic Obstructive Pulmonary Disease. • HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders. • HCC 134: Dialysis Status. • HCC 157: Pressure Ulcer of Skin with Necrosis Through to Muscle, Tendon, or Bone. • HCC 158: Pressure Ulcer of Skin with Full Thickness Skin Loss. • HCC 161: Chronic Ulcer of Skin, Except Pressure. • HCC 170: Hip Fracture/Dislocation.	• HCC 463: Artificial Openings for Feeding or Elimination. • HCC 36: Diabetes with Severe Acute Complications. • HCC 37: Diabetes with Chronic Complications. • HCC 38: Diabetes with Glycemic, Unspecified, or No Complications. • HCC 48: Morbid Obesity. • HCC 63: Chronic Liver Failure/End-Stage Liver Disorders. • HCC 93: Rheumatoid Arthritis and Other Specified Inflammatory Rheumatic Disorders. • HCC 109: Acquired Hemolytic, Aplastic, and Sideroblastic Anemias. • HCC 125: Dementia, Severe. • HCC 126: Dementia, Moderate. • HCC 127: Dementia, Mild or Unspecified. • HCC 180: Quadriplegia. • HCC 181: Paraplegia. • HCC 191: Quadriplegic Cerebral Palsy. • HCC 198: Multiple Sclerosis. • HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia. • HCC 211: Respirator Dependence/Tracheostomy Status/Complications. • HCC 213: Cardio-Respiratory Failure and Shock. • HCC 226: Heart Failure, Except End-Stage and Acute. • HCC 238: Specified Heart Arrhythmias. • HCC 249: Ischemic or Unspecified Stroke. • HCC 253: Hemiplegia/Hemiparesis. • HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders. • HCC 326: Chronic Kidney Disease, Stage 5. • HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle. • HCC 402: Hip Fracture/Dislocation.
Spinal Fusion	• HCC 8: Metastatic Cancer and Acute Leukemia. • HCC 18: Diabetes with Chronic Complications. • HCC 22: Morbid Obesity. • HCC 40: Rheumatoid Arthritis and Inflammatory Connective Tissue Disease. • HCC 58: Major Depressive, Bipolar, and Paranoid Disorders. • HCC 85: Congestive Heart Failure. • HCC 86: Acute Myocardial Infarction. • HCC 96: Specified Heart Arrhythmias. • HCC 103: Hemiplegia/Hemiparesis. • HCC 111: Chronic Obstructive Pulmonary Disease. • HCC 112: Fibrosis of Lung and Other Chronic Lung Disorders. • HCC 134: Dialysis Status.	• HCC 17: Cancer Metastatic to Lung, Liver, Brain, and Other Organs; Acute Myeloid Leukemia Except Promyelocytic. • HCC 18: Cancer Metastatic to Bone, Other and Unspecified Metastatic Cancer; Acute Leukemia Except Myeloid. • HCC 37: Diabetes with Chronic Complications. • HCC 48: Morbid Obesity. • HCC 93: Rheumatoid Arthritis and Other Specified Inflammatory Rheumatic Disorders. • HCC 125: Dementia, Severe. • HCC 126: Dementia, Moderate. • HCC 127: Dementia, Mild or Unspecified. • HCC 155: Major Depression, Moderate or Severe, without Psychosis. • HCC 180: Quadriplegia. • HCC 181: Paraplegia. • HCC 182: Spinal Cord Disorders/Injuries. • HCC 192: Cerebral Palsy, Except Quadriplegic. • HCC 193: Chronic Inflammatory Demyelinating Polyneuritis and Multifocal Motor Neuropathy. • HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia. • HCC 224: Acute on Chronic Heart Failure. • HCC 226: Heart Failure, Except End-Stage and Acute. • HCC 238: Specified Heart Arrhythmias. • HCC 249: Ischemic or Unspecified Stroke. • HCC 253: Hemiplegia/Hemiparesis. • HCC 254: Monoplegia, Other Paralytic Syndromes. • HCC 267: Deep Vein Thrombosis and Pulmonary Embolism. • HCC 326: Chronic Kidney Disease, Stage 5. • HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle. • HCC 401: Vertebral Fractures without Spinal Cord Injury.

We recognize that our proposed list of episode category specific HCCs is greater in number compared to what we finalized in the FY 2025 IPPS/LTCH PPS final rule. There are approximately 25 risk adjusters per episode category, inclusive of non-HCC risk adjusters, that were finalized in the FY 2025 IPPS/LTCH PPS final rule as compared to the approximately 30 risk adjusters that would result from incorporating the proposed v28 HCCs. We believe this increase in HCCs is comparable given the HCC volume increased from v28 to v22. We also believe that the proposed list of episode category specific HCCs maintains our goal of a simplified risk adjustment methodology that aims to capture spending accurately, while aligning with the most recent HCC version.

We note that there are other episode category specific risk adjusters that were finalized in the FY 2025 IPPS/LTCH PPS final rule which are not HCCs. We are not proposing to replace the non-HCC episode category specific risk adjusters. Nor are we proposing to replace the beneficiary level risk adjusters applicable to all episode categories, such as HCC count and age bracket, or the provider-level risk adjusters, such as hospital bed size and safety net status. All of these risk adjusters were included in the Lasso regression analysis and clinical review and deemed appropriate for continued use in TEAM's risk adjustment methodology. However, we are proposing to update the social need risk adjustment factor, as described in section XI.A.2.c.(6). of the preamble of this proposed rule.

We seek comment on our proposal at § 512.545(a)(6)(i) through (v) to use HCC

v28 to construct our episode category specific HCC risk adjusters.

(8) Low Volume Hospitals

In both CJR and BPCI Advanced, we recognized that hospitals that perform a number of episodes below a certain volume threshold may have challenges taking on two-sided financial risk. As noted in the Episode-Based Payment Model Request for Information (88 FR 45872), episode volume is an important feature in an episode-based payment model because episode categories with sufficient volume help to reduce pricing volatility and spread financial risk. In the 2015 CJR final rule (80 FR 73285), we acknowledged that such hospitals might not find it in their financial interests to make systemic care redesigns or engage in an active way with the CJR model. At 80 FR 73292, we acknowledged commenter concerns about low volume providers, including but not limited to observations that low volume providers could be: less proficient in taking care of LEJR patients in an efficient and cost-effective manner, more financially vulnerable with fewer resources to respond to the financial incentives of the model, and disproportionately impacted by high-cost outlier cases. In spite of these potential challenges, we stated that the inclusion of low volume hospitals in CJR was consistent with the goal of evaluating the impact of bundled payment and care redesign across a broad spectrum of hospitals with varying levels of infrastructure, care redesign experience, market position, and other considerations and circumstances (80 FR 73292).

In CJR, we set the low volume threshold as fewer than 20 CJR episodes across the 3-year baseline years of 2012 through 2014. Low volume hospitals received target prices based on 100 percent regional data, rather than a blended target price that incorporated their participant-specific data, because a target price based on limited data is less likely to be accurate and reliable. These hospitals were also subject to the lower stop-loss limits that we offered to rural hospitals, in recognition of the fact that they might be less prepared to take on downside risk than hospitals with higher episode volume. In the CJR 2017 final rule that reduced the number of mandatory MSAs, low volume hospitals were among the types of hospitals that were required to opt in if they wanted to remain in the model (82 FR 57072). In the CJR 2020 final rule, we removed the remaining low volume hospitals from the CJR extension when we limited the CJR participant hospital definition to those hospitals that had been mandatory participants throughout the model (86 FR 23497).

In BPCI Advanced, our low volume threshold policy was to not provide a target price for a given clinical episode category if performed at a hospital that did not meet the 41 clinical episode minimum volume threshold during the 4-year baseline period. This meant that no BPCI Advanced episodes would be triggered for that particular clinical episode category during the applicable performance period at that hospital. However, participants could continue to trigger other clinical episode categories for which they had enrolled and for which there was sufficient baseline volume. Additionally, clinical episodes that occurred at the hospital during the performance period, though not triggering a BPCI Advanced episode, would count toward the low volume threshold when that year became part of a subsequent baseline period. Therefore, as the baseline shifted forward each year, bringing a more recent year into the baseline and dropping the oldest year, a hospital could potentially meet the volume threshold and receive a target price for the clinical episode category for a subsequent performance period.

Last year, in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35934) that established TEAM, we proposed that TEAM would include a low volume threshold. We proposed that if a TEAM Participant did not meet the proposed low volume threshold of at least 31 total episodes across all episode categories in the baseline period for PY1, CMS would still reconcile their episodes, but the TEAM participant would be subject to the Track 1 stop-loss and stop-gain limits for PY1. If a TEAM Participant did not meet the proposed low volume threshold of at least 31 total episodes in the applicable 3-year baseline periods for PYs 2 through 5, the TEAM Participant would be subject to the Track 2 stop-loss and stop-gain limits for PY 2 through 5. However, after many comments that this policy was insufficient for low volume hospitals, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), we determined we would not finalize a policy for low volume hospitals and instead would propose a new policy in future notice and comment rulemaking.

In this rulemaking, rather than offering a specific proposal, we are proposing to maintain our current policy of having no low volume episode policy, given that Track 1 of the model has no downside risk and we expect most TEAM participants to select Track 1 for the first performance year. Rather, we are seeking comment on several potential policies to address prior commenters' concerns about low volume providers participating in TEAM.

First, we are considering, but not proposing, that a low volume threshold would apply to specific episode categories in the baseline period for a given PY, similar to BPCI Advanced. If a TEAM participant did not meet the considered low volume threshold of at least 31 episodes in a given baseline period for a given episode category, CMS would still reconcile their episodes, but the TEAM participant would not be held accountable for any performance year episode spending that exceeded the reconciliation target price for each of the MS–DRG/HCPCS episode types in that given episode category during the applicable performance year. This policy would effectively waive downside financial risk for the TEAM participant for episode categories in which they did not meet the considered low volume threshold. For example, in PY1, if a TEAM participant only initiated 30 episodes in the baseline period for the major bowel procedure episode category, and initiated 31 or more episodes in the baseline period for each of the other episode categories tested in TEAM, then the TEAM participant would not be held accountable for performance year episode spending that exceeded the reconciliation target price for the major bowel procedure episode category but would be accountable for performance year episode spending that exceeded the reconciliation target price for all the other episode categories for PY1. We note that the baseline period for a given performance year in TEAM rolls forward each year. Therefore, it is possible for a TEAM participant to not meet the low volume threshold for a given episode category in one performance year and then meet the low volume threshold the next performance year because the baseline period rolled forward and captured a different volume of baseline period episodes. We do not anticipate there would be a significant number of hospitals meeting the threshold one performance year and not the next (and vice versa), because procedure volumes tend to remain consistent across performance years.

This considered policy may addresses commenters' concerns, by placing the low volume threshold at the episode category level rather than across all episode categories and acknowledge commenters' concerns regarding the level of financial risk that is tolerable for low volume hospitals, especially hospitals that are safety net hospitals or rural hospitals. TEAM participants with

low volume may not have enough episode volume to spread the risk or create efficient care pathways sufficient for downside risk. Further, and as compared to the BPCI Advanced model, this considered policy would allow TEAM participants to still initiate episodes and earn a reconciliation payment amount if they can reduce spending and provide quality care. However, we are concerned that waiving downside risk for low volume hospitals may affect potential TEAM savings for CMS. Additionally, the 31-episode category threshold may not be the optimal threshold to ensure a low volume policy adequately addresses the concerns of TEAM participants and stakeholders affected by a potential low volume policy. A 31-episode is a similar approach to capturing the per baseline year threshold in BPCI Advanced, but this threshold could theoretically be too low to capture all TEAM participant hardship caused by episode volatility. It could also be too high and exclude too many episodes from the model and thus deprive TEAM participants an opportunity to enhance patient quality of care or provider efficiency and earn associated reconciliation payments.

We also considered, but are not proposing, different low volume thresholds for the above considered policy in the baseline period for a given episode category, including 91, 61, 51, 41, 21, and 11 episodes. In an internal analysis of hospitals that were potentially eligible for TEAM using claims data from calendar year 2023, we found that 30 percent of acute care hospital (ACH)-clinical episode category (CEC) combinations had 10 or fewer episodes and were not flagged as a low volume hospital using the baseline period methodology of fewer than 31 episodes in a given CEC. Presumably, these could be seen as false negative results for low volume status or indications that the fewer than 31-episode threshold was set too high. Among these ACH–CEC combinations, the average episode count was seven. Additionally, 14 percent of these ACH–CEC combinations had five episodes or fewer. It could be the case that the 31 or fewer episode threshold could include hospitals that are not truly so low volume as to justify waiving downside risk. Alternatively, hospitals may just barely cross the 31 or fewer episode threshold and thus be subject to downside risk and may still be fundamentally similar to identified low volume TEAM participants experiencing hardship from the natural volatility involved in having fewer qualifying episodes. Though this is true of any threshold, the likelihood of this increases at lower thresholds than larger thresholds. Therefore, we are considering alternative thresholds such as fewer than 91 episodes (approximately 3 times the fewer than 31 episode threshold), fewer than 61 episodes (approximately 2 times the fewer than 31 episode threshold), fewer than 51 episodes (the fewer than 31 episode threshold plus 3 times the average count of episodes for ACH–CEC combinations in our mock reconciliation not cited as low volume), fewer than 41 episodes (the fewer than 31 episode threshold plus one-third the threshold), fewer than 21 episodes (3 times the average count of episodes for ACH–CEC combinations in our mock reconciliation not cited as low volume), and fewer than 11 episodes (a threshold that should only flag ACH–CEC combinations at the lowest threshold found in our analysis).

We considered, but are not proposing, limiting the scope of a potential low volume policy to safety net and rural hospitals only, since these hospital types are more likely to initiate lower volumes of episodes. However, we are concerned that this restriction would unfairly hinder other low-volume providers (which are not safety net or rural) from gaining efficiency in care coordination, since they would still bear the same financial risk as higher volume hospitals. In an internal analysis, approximately 343 acute care hospitals are not designated as safety net hospitals or rural hospitals. Of these hospitals, approximately 109 acute care hospitals would have at least one episode category that had fewer than 31 episodes in the baseline period and would meet the definition of low volume if safety net hospital status or rural hospital status was not required for a low volume qualification. Excluding non-safety net hospitals and non-rural hospitals from a low volume status could unfairly hinder nearly one-third of non-safety net hospitals or non-rural hospitals.

We also considered, but are not proposing, including alternative approaches to a low episode volume threshold in TEAM, including an approach similar to BPCI Advanced, where if a TEAM participant did not meet the 31 episode low volume threshold for a given episode category in the baseline period, the TEAM participant would not be held accountable for that episode category for the performance year that aligned with the baseline period. In other words, they would not be eligible to initiate episodes in that episode category during the performance year and would be not eligible to earn any reconciliation payment amount or repayment amount for that given episode category during the performance year. However, we are concerned that imposing a minimum volume threshold that removes TEAM participant accountability may restrict the number of hospitals eligible to participate in TEAM and limit beneficiary access to the benefits of value-based, coordinated care.

We also considered allowing low-volume episode types to be subject to a stop-loss/stop-gain limit of 5 percent, similar to Track 2, or a lower stop-loss/stop-gain limit of 3 percent, 2 percent, and 1 percent, such that TEAM participants are subject to a lower level of financial risk and gain, but still held accountable for the care provided under these episode categories. Under this approach, after creating the quality-adjusted reconciliation amount based on the TEAM participant's track selection, CMS would calculate the proportion of the quality-adjusted reconciliation amount that each episode category contributes to based on the PY episode weight. For example, Table XI.A.–012 demonstrates a TEAM participant, assuming Track 3 participation, meeting the low-volume threshold for the LEJR episode category but not for the SHFFT episode category.

TABLE XI.A.–012—EXAMPLE LOW-VOLUME THRESHOLD AT EPISODE CATEGORY LEVEL

Episode category	Meets low-volume threshold	Performance year (PY) episode count	Quality-adjusted reconciliation amount	Episode-level quality adjusted reconciliation amount
LEJR	Y	15	$50,000	$16,666.67
SHFFT	N	30		33,333.33

Table XI.A.–013 continues the example by showing the stop-loss/stop-gain cap would then be applied to each episode category where the low-volume episode-type is subject to a 5 percent stop-loss/stop-gain cap while any other non-low volume episode types are subject to the stop-loss/stop-gain cap based on the TEAM participant's Track 3 selection.

TABLE XI.A.–13—EXAMPLE LOW-VOLUME THRESHOLD APPLICATION AFFECTING STOP-LOSS/STOP-GAIN LIMITS

Episode category	Meets low-volume threshold	Stop-loss/ stop-gain limit (%)	Episode-level quality adjusted reconciliation amount	Target amount	Volume weighted target amount based on stop-loss/ stop-gain limit	Stop-loss/ stop-gain limit applied	Episode-level NPRA	Hospital-level NPRA
LEJR	Y	5	$16,666.67	$100,000	$5,000	Y	$5,000	$38,333.33
SHFFT	N	20	33,333.33	200,000	40,000	N	33,333.33	

However, as demonstrated by Tables XI.A.–12 and XI.A.–13, we are concerned that this approach adds complexity to the reconciliation calculations by adding additional steps. Further, we are also concerned that lower stop-loss/stop-gain limits would still not sufficiently protect low-volume episode TEAM participants from undue financial risk in the model.

We also considered implementing low episode volume thresholds during the performance year. Specifically, we considered not holding TEAM participants accountable for a given episode category if they initiated less than 11 or 6 episodes in a given episode category or less than 31 or 21 total episodes across episode categories in a performance year. However, we are concerned that including minimum episode volume thresholds during the performance year may introduce program integrity issues.

We seek comment on our considered policies. We also seek comment on low volume policy alternatives we have not considered.

(9) Aligning Date Range in the Baseline and Performance Years and Timing of Reconciliation

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we finalized the policy that we would calculate preliminary target prices using a 3-year rolling baseline period as described in § 512.540(b)(2). For example, for PY 1, covering the period from January 1, 2026, to December 31, 2026, we would use a baseline period from January 1, 2022, to December 31, 2024. We noted that we would attribute episodes to the baseline period based on the episode start date. An episode with an anchor hospitalization beginning in December 2022 and an anchor hospitalization discharge date in January 2023 would have an episode start date in 2022 and would be included in the baseline for PY 1 but not for PY 2, for which the baseline period is January 1, 2023, to December 31, 2025.

However, as indicated in § 512.540(a)(3), we finalized our proposal to attribute episodes to performance years based on the date of discharge from the anchor hospitalization or the date of the anchor procedure for the purpose of assigning target prices. We further clarified this approach in section X.A.3.d.(3).(d) of the FY 2025 IPPS/LTCH PPS final rule and gave the following example: If an episode has an anchor hospitalization or anchor procedure end date in December 2026 but an episode end date in January 2027, the episode is assigned to PY 1 and will have the PY 1 target price applied to it. However, if the episode starts in 2026 but both the anchor hospitalization discharge and episode end dates are in 2027, the episode is assigned to PY 2 and will have the PY 2 target price applied to it.

To better align our episode attribution and pricing methodologies across the baseline and performance periods, we are proposing to modify our approach to attribution of episodes to baseline years for the purposes of calculating preliminary target prices. Specifically, we propose to adopt the same approach that we finalized for attribution of performance year episodes, as described previously. Therefore, we are proposing that an episode with an anchor hospitalization beginning in a given baseline year and an anchor hospitalization discharge date in the subsequent baseline year would be attributed to the baseline year when the anchor hospitalization discharge date occurred. For example, an episode with an anchor hospitalization beginning in December 2022 with an anchor hospitalization discharge date in January 2023 would be included in the baseline for both PY 1 (as baseline year 2 of a baseline period from January 1, 2022, to December 31, 2024) and PY 2 (as baseline year 1 of a baseline period from January 1, 2023, to December 31, 2025). This modification does not make any change to the methodology for attribution of episodes to the performance year. We believe this approach simplifies the construction of baseline and performance year episodes and maintains consistent application of episode assignment between baseline and performance years.

We also indicated in FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that for episodes that begin in one performance year and end in a subsequent performance year we would reconcile episodes based on the episode end date. However, we recognize that reconciling an episode based on the episode's end date may unnecessarily increase operational burden when trying to manage when an episode would be reconciled, especially when comparing the target price to the performance year. For example, if an episode starts in one performance year and ends in a subsequent performance year, then a TEAM participant would have to wait an additional year before that episode would be reconciled even though its target price was aligned with the performance year of the anchor hospitalization discharge date. Table XI.A.–14 demonstrates how episodes starting in a one performance year and ending in a subsequent performance year are reconciled.

TABLE XI.A.–14—EXAMPLE OF WHEN EPISODES WOULD BE RECONCILED BASED ON EPISODE END DATE

Anchor hospitalization/procedure start date	Anchor hospitalization/procedure discharge date	Episode end date	Performance year (PY) for target price	Reconciliation time period
November 1, 2026	November 15, 2026	December 15, 2026	PY 1	Fall 2027.
November 1, 2026	December 15, 2026	January 15, 2027	PY 1	Fall 2028.
January 5, 2027	January 10, 2027	February 10, 2027	PY 2	Fall 2028.

Therefore, we propose to reconcile an episode based on the episode's anchor hospitalization or anchor procedure discharge date. We believe this approach would simplify tracking episodes and their reconciliation timing for TEAM participants. Additionally, it would keep all episodes aligned to a given performance year based on target price construction to the same reconciliation time period. Table XI.A.-15 demonstrates the proposed approach to reconciling episodes based on anchor hospitalization or anchor procedure discharge date.

TABLE XI.A.–15—EXAMPLE OF WHEN EPISODES WOULD BE RECONCILED BASED ON ANCHOR HOSPITALIZATION/ANCHOR PROCEDURE DISCHARGE DATE

Anchor hospitalization/procedure start date	Anchor hospitalization/procedure discharge date	Episode end date	Performance year (PY) for target price	Reconciliation time period
November 1, 2026	November 15, 2026	December 15, 2026	PY 1	Fall 2027.
November 1, 2026	December 15, 2026	January 15, 2027	PY 1	Fall 2027.
January 5, 2027	January 10, 2027	February 10, 2027	PY 2	Fall 2028.

We seek comment on our proposal at proposed § 512.540(b)(2)(i) through (v) to construct baseline year episodes based on the anchor hospitalization or anchor procedure discharge date. We also seek comment on our proposal at proposed § 512.540(a)(3) to reconcile episodes based on anchor hospitalization or anchor procedure discharge date.

(10) Converting Standardized Dollars to Real Dollars

(a) Converting Target Prices and Reconciliation Amounts to Real Dollars

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we finalized the methodology for constructing regional target prices and, ultimately, determining performance year spending and reconciliation amounts. Spending and reconciliation amounts are based on Medicare allowed amounts (also referred to as ''allowed amounts''), which include the amount Medicare reimburses providers as well as any beneficiary liability (that is, beneficiary deductibles and coinsurance) and payment from other payers. Specifically, we finalized an approach for using standardized dollar amounts (as also referred to as ''standardized dollars'') as opposed to the actual, nominal dollar amounts reflected on claims (also referred to as ''real dollars'') in the calculation of performance year spending and reconciliation amounts. Standardization of Medicare allowed amounts removes adjustments to payment amounts including but not limited to those from Medicare incentive programs (for example, the HVBP Program, the HAC Reduction Program, and the HIQR Program) and geographic or policy-driven payment system adjustments, such as hospital wage index or indirect medical education adjustments, from TEAM's target prices. Standardization of allowed amounts allows for meaningful comparison of resource use for services covered by CMS across provider types and geographic areas. When comparing standardized allowed amounts, cost differences primarily result from differences in practice patterns and health care delivery choices (for example, about the setting, provider type, or number of services provided). Not standardizing allowed amounts by removing adjustments and incentive payments would unduly penalize hospitals receiving additional payments for compliance and undermine the incentives of CMS reporting or quality programs. Without payment standardization, high-quality or reporting compliant hospitals may appear to have high episode payments under TEAM. Conversely, lower quality or non-reporting compliant hospitals that incur payment reduction penalties may appear to have low episode payments under TEAM. Additionally, removal of geographic adjustments is important given variation in episode payments across hospitals resulting from wage index adjustments. We want to avoid having the wage level or other adjustments for one hospital arbitrarily influence target prices for another hospital with a different wage level or adjustments, as this would introduce unintended pricing distortions not based on utilization pattern differences. Thus, we believe it is important to use standardized allowed amounts as the foundation for constructing target prices and determining performance year spending and reconciliation amounts (reconciliation payment amounts or repayment amounts) to ensure a TEAM participant's actual performance is not artificially improved or worsened because of adjustments or incentive payments.

However, we acknowledge that when target prices and reconciliation amounts are denominated in standardized dollars, they may not reflect relative differences in costs faced by TEAM participants. We expect that TEAM participants will use their reconciliation payment amounts to invest in care redesign, coordination, and delivery infrastructure, and we expect that the costs for such investments would vary by geography and by the type of hospital, such as due to differences in local wages or whether the hospital is a teaching hospital. For example, we expect that hiring a care coordinator would cost a TEAM participant more in San Francisco than in a rural part of Idaho. Therefore, we considered approaches to converting standardized target prices and reconciliation amounts back to real dollars as other CMMI models have done. For example, the BPCI Advanced model converted back

to real dollars using a ratio of the sum of real clinical episode spending to standardized allowed amount spending at the episode initiator-clinical episode category level. In another approach, the CJR model used a wage factor derived from the IPPS wage index (aligned with the fiscal year and based on the episode start date) to account for differences in real costs between model participants.

We believe that all these approaches have limitations that may unduly negatively impact TEAM participants. For example, if we used an approach similar to the BPCI Advanced model, TEAM participants that receive add-on payments unrelated to the direct costs associated with providing services (for example, low-volume volume payment adjustment payments and indirect medical payment adjustments) would have a higher real-to-standardized ratio than comparable participants that do not receive these payments. In the case where such a TEAM participant has a negative reconciliation amount (that is, owes a repayment amount to CMS), converting the reconciliation amount to real dollars would increase this repayment amount. We are worried that such an increase may unduly burden TEAM participants with already limited resources. Furthermore, specific approaches have unique limitations. For example, we believe the approach used in the CJR model of converting standard dollars back to real dollars using a wage factor ignores two key considerations. First, there may be significant differences in relative wages between the IPPS setting in which the episode is triggered and other claims settings in the post-discharge period. Therefore, applying the IPPS-derived wage factor to the entire episode (that is, all claims grouped to it, including those in the post-discharge period) may not accurately reflect differences in real costs across participants and settings of care. Second, using only the wage factor fails to take into account non-wage differences in Medicare payment amounts such as outlier payments and provider-specific adjustments from other Medicare initiatives.

Given all of these considerations, we are not proposing any methodology for converting standardized target prices and reconciliation amounts to real dollars at this time. Instead, we are keeping target prices and reconciliation amounts in standardized dollars, while requesting comment on whether we should convert to real dollars and the preferred methodology for doing so, including but not limited to all the approaches discussed herein.

(b) Converting Post-Episode Spending Amounts to Real Dollars

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) that established TEAM, we noted that some hospitals may have an incentive to withhold or delay medically necessary care until after an episode ends to reduce their actual episode payments. In order to identify and address such inappropriate shifting of care, we finalized a post-episode spending calculation methodology. In this approach, we would identify whether the average 30-day post-episode spending for a TEAM participant in any given performance year is greater than 3 standard deviations above the regional average 30-day post-episode spending, based on the 30-day post-episode spending for episodes attributed to all TEAM regional hospitals in the same region as the TEAM participant. We finalized that beginning with PY 1 for Track 3 TEAM participants, and PY 2 for Track 2 TEAM participants, if the TEAM participant's average post-episode spending exceeds this threshold, the amount above the threshold would be subtracted from the reconciliation amount or added to the repayment amount for that performance year.

We recognize it is important to remain consistent across our calculations when converting to real dollars. Therefore, we are also seeking comment on whether and how to convert the post-episode spending amounts from standardized dollars to real dollars. Specifically, we are requesting comment on whether, if a TEAM participant's average post-episode spending in the MS–DRG/HCPCS episode type exceeds the region's threshold in that MS–DRG/HCPCS episode type, the amount above the threshold should be converted from standardized to real dollars using a hospital-level real-to-standardized spending ratio.

Additionally, we considered that the post-episode spending amounts would be determined at a MS–DRG-hospital level rather than an episode level like our target price and reconciliation amount consideration because—

- Average post-episode spending is more representative of consistent patterns in the delay of medically necessary services in the post discharge period by a hospital; and
- Hospitals do not have the same incentives to not exceed the expected post-episode spending that they have with in-episode spending. Hence, TEAM participants may be subject to higher penalties if the post-episode calculation is at an episode level compared to an aggregate hospital-level.

Therefore, were we to propose to convert from standardized dollars to real dollars, we would propose to do so at the hospital level to align with the hospital-level post-episode spending amounts. The hospital level real-to-standardized ratios would be determined as the ratio of sum of total post-episode spending in real dollars to sum of total post-episode spending in standardized dollars using the set of reconciled episodes in the corresponding MS–DRG/HCPCS episode type.

We seek comment on our consideration to determine post-episode spending amounts at the MS–DRG-hospital level rather than an episode level. We also seek comment on whether and how to convert target prices, reconciliation amounts, and post-episode spending amounts from standardized dollars to real dollars in a consistent manner.

d. Health Data Reporting

As described in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69800), we finalized voluntary reporting of three elements that aims to address reducing health disparities for TEAM beneficiaries. The elements include health equity plans, demographic data, and health related social needs data. We continue to believe that it is important to understand and address health needs of all TEAM beneficiaries so that they can benefit from the care redesign interventions implemented by TEAM participants. However, due to the new Administration's priorities and concern over placing additional burdens on TEAM participants in a mandatory model, we recognize the need to remove the voluntary health equity plan and the health-related social needs data to reduce burden on TEAM participants. We recognize that asking TEAM participants to submit health equity plans or report health related social needs data, even on a voluntary basis, could add an additional burden that CMS does not intend to add in the model. Even if TEAM participants choose to not voluntarily submit a health equity plan or report health related social needs data, we believe it would be a better use of TEAM participant resources to focus on care redesign activities that would help improve their performance in the model and improve the quality of care and care experience for the beneficiary, rather than spend resources on collecting and reporting health equity plan information or health related social needs data. Therefore, we are proposing to completely remove the health equity plan and health related social needs

data policies from TEAM, including all references to health equity plans. Though currently there is no replacement for these policies, CMS will consider adding elements that are consistent with the new Administration's focus on making America healthy again. We believe there is opportunity through TEAM to encourage healthy habits among TEAM beneficiaries to drive improvements in overall health. Changes to TEAM that would incorporate the Administration's focus on prevention and healthy living would be proposed in future notice and comment rulemaking.

Given our desire to remove health equity plans, we also propose to remove the ''Health equity reporting'' title to § 512.563 and replace it with ''Health data reporting''. Lastly, we also propose removing the definition for ''Health equity goal'', ''Health equity plan'', ''Health equity plan intervention strategy'', ''Health equity plan performance measure'', and ''Underserved community'' from the definitions at § 512.505.

Additionally, we propose to remove the voluntary collection of health-related social needs screening and reporting. This includes removing voluntary reporting of the Screening for Social Drivers of Health measure, adopted at § 512.563(b); and the Screen Positive Rate for Social Drivers of Health measure, adopted § 512.563(b).

We also continue to believe voluntarily collecting demographic data is important to better understand TEAM beneficiaries. Therefore, we are not proposing any changes to this element. We note that we did discuss in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69802) potential demographic data variables that CMS would voluntarily collect from TEAM participants such as race, ethnicity, language, disability, sexual orientation, gender identity, sex characteristics, and other demographics. While we have not specified the exact variables TEAM participants will report and will notify TEAM participants through sub-regulatory guidance of the demographic variables we wish to collect, as indicated in the final rule (89 FR 69804), we can clarify that we will not be collecting variables such as sexual orientation, race, ethnicity, or gender identity to align with the Administration's priorities and to reduce reporting burden on TEAM participants.

Finally, to align with the Administration's executive order to identify an individual's immutable biological classification as either male or female, we propose to update the name of a beneficiary-identifiable data variable, that is not used for pricing or payment purposes, that we would share with TEAM participants, pursuant to a data request and executed TEAM data sharing agreement.[434] Specifically, we propose the ''gender'' variable identified at § 512.562(c)(3) to be renamed ''sex''. We believe sex better represents the binary variable that we would be sharing with TEAM participants and allows for consistent interpretation of the term across Federal programs and initiatives.

We seek comment on our proposal at § 512.505 to remove from the definitions section health equity goal, health equity plan, health equity plan intervention strategy, health equity plan performance measure, and underserved community. We seek comment on our proposal at § 512.563 to retitle the header and remove the health equity plan and health related social needs data elements. We also seek comment on our proposal at § 512.562(c)(3) to rename the ''gender'' variable to ''sex''.

e. Referral to Primary Care Services

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69850) we finalized the referral to primary care services requirement. To comply with this requirement, TEAM participants must (1) include in hospital discharge planning a referral to a supplier of primary care services for a TEAM beneficiary, on or prior to discharge from an anchor hospitalization or anchor procedure and (2) follow beneficiary freedom of choice requirements, as indicated in § 512.582(a). Since a TEAM episode only lasts 30 days after the TEAM beneficiary is discharged from the hospital, the goal of this policy is to integrate care during the transition from an acute event—an episode—back to longitudinal care relationships, such as primary care.

We continue to believe there is value in maintaining this requirement in TEAM so that the TEAM beneficiary has continuity of care after the episode ends. Therefore, we propose no change to the current policy. However, we are aware that the current policy does not take into consideration the TEAM beneficiary's relationship with existing suppliers of primary care services. In other words, the TEAM participant may refer the TEAM beneficiary to a supplier of primary care services that is different from the supplier of primary care services that the TEAM beneficiary has an established relationship with, as documented through previous encounters via claims data, as long as it complies with beneficiary freedom of choice requirements. As such, the TEAM participant may be incentivized to refer to their own suppliers of primary care services with whom they have a contractual relationship, even when complying with beneficiary freedom of choice requirements. While we anticipate most TEAM participants would refer TEAM beneficiaries back to suppliers with whom they have an existing relationship with, we seek comment on whether not specifically requiring that beneficiaries be referred back to suppliers with whom they have an existing relationship could disrupt fair competition as well as limit access to high-value care.

We considered, but are not proposing, including in the referral to primary care services the requirement that TEAM participants refer the TEAM beneficiary back to the supplier of primary care services with whom they have an established relationship. As part of the alternative, we considered identifying an established relationship by the TEAM beneficiary's interaction with a supplier of primary care services within the 2 previous years before the initiation of the episode and TEAM participants would still need to comply with beneficiary freedom of choice requirements. However, we are concerned that this consideration, namely requiring the TEAM participant to refer the TEAM participant back to a supplier of primary care services with whom they have an existing relationship, would increase TEAM participant administrative burden by having them review claims data for an existing relationship and may be challenging to operationalize given the window of time when the beneficiary is admitted to the hospital or hospital outpatient department and when they are required to submit the referral—before the TEAM beneficiary is discharged from the hospital or hospital outpatient department. As such, we considered extending the timeframe of when the referral to primary care services would occur. For example, we considered requiring the referral to primary care services occur any time before the episode ends, rather than by the time the TEAM beneficiary is discharged from the hospital or hospital outpatient department. Given the administrative burden, we considered only requiring the referral for TEAM beneficiaries who do not have any relationship with a supplier of primary

[434] Defending Women from Gender Ideology Extremism and Restoring Biological Truth to the Federal Government: *https://www.whitehouse.gov/presidential-actions/2025/01/defending-women-from-gender-ideology-extremism-and-restoring-biological-truth-to-the-federal-government/.*

care services within the two previous years before the initiation of the episode as long as beneficiary freedom of choice requirements would be met, which would reduce burden since evidence from the BPCI Advanced model suggests most beneficiaries have some existing relationship. However, we recognize burden would not be diminished because it would still require the TEAM participant to identify through claims data whether the beneficiary had an established relationship or not.

We also considered, but are not proposing, that a TEAM participant could refer the beneficiary to a supplier of primary care services other than their existing supplier, including referral to a TEAM participant's supplier of primary care services, as long as beneficiary freedom of choice requirements would be met, and the TEAM participant documented the TEAM beneficiary's preference. We recognize such a policy would increase administrative burden on TEAM participants to document a TEAM beneficiary's preference to be referred to a supplier of primary care services other than the supplier with whom they have an established relationship. However, we believe this additional documentation would help to ensure referrals are not influenced by a TEAM participant's financial or contractual relationships with certain suppliers of primary care services.

An internal analysis for the BPCI Advanced model demonstrated that approximately 94 percent of beneficiaries that initiated an episode, medical or surgical, had some primary care visit, as demonstrated through at least one evaluation & management (E&M), care management services, care planning, or wellness visit in 2 years prior to their episode. Additionally, among the small group that did not have a primary care visit in those 2 years before the episode, the BPCI Advanced model increased the share of beneficiaries getting a primary care visit within the 90-day post-discharge period by 9 percent for medical episodes. This suggests that the majority of BPCI Advanced beneficiaries have interfaced with primary care prior to their episode of care and that they may have an existing relationship with a supplier of primary care services. However, the benefit to requiring referral to primary care may be more practical for medical episodes rather than surgical episodes. This may be because the surgeon specialist has the expertise to manage the clinical follow-up, whereas a medical episode is generally an acute exacerbation of a chronic condition that primary care may typically manage. Given TEAM's current set episodes are all surgical, we recognize the primary care service referral may not be as impactful to driving primary care connections. We therefore considered, but are not proposing, removing the referral to primary care services requirement from TEAM. This means that a TEAM participant would not be required to submit a referral to primary care services for any TEAM beneficiary. In addition to the internal analysis findings, we believe many TEAM participants already have the mechanisms in place to refer the TEAM beneficiary back to their preferred supplier of primary care services, thus making the requirement inconsequential. Further, TEAM's testing of surgical episodes may also be contrary to a goal of the model. Meaning, referring back to a supplier of primary care services could result in unnecessary spending if the supplier of primary care services does not effectively manage the TEAM beneficiary's care. For example, a supplier of primary care services has the TEAM beneficiary go to the emergency department for surgical wound assessment, whereas the surgeon specialist may have informed the TEAM beneficiary the wound was healing as expected. Despite the consideration to removing the referral to primary care services requirement, we still believe it is an important policy because it provides additional assurances the TEAM participant will connect the TEAM beneficiary to primary care services for ongoing care and follow-up that may help to reduce avoidable readmissions and promote better longer-term outcomes.

We seek comment on our proposal to maintain the current policy as well as the alternative approaches for the referral to primary care services requirement as described previously. We also seek comment on alternatives that we may not have considered.

f. Waivers of Medicare Program Requirements—3-Day SNF Rule

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69833), we finalized the 3-Day SNF Rule Waiver that waives the requirement for a 3-day inpatient hospital stay prior to a Medicare-covered, post-hospital, extended-care service for eligible beneficiaries if certain conditions are met. As finalized, the 3-Day SNF Rule Waiver allows TEAM participants to send eligible TEAM beneficiaries to qualified SNFs, as described in § 512.580(b), which does not include hospitals which swing bed arrangements. We sought comment in the FY 2025 IPPS/LTCH PPS proposed rule on the potential to allow TEAM participants to use the SNF 3-day rule waiver for hospitals and Critical Access Hospitals (CAHs), as designated in § 485.606, providing post-acute care (PAC) under swing bed arrangements (89 FR 36468). We considered including swing bed arrangements under the TEAM SNF 3-day rule waiver, but did not propose to do so at the time, citing concerns about the inability to ensure the quality of swing bed arrangements for post-acute care following an early hospital discharge. We received stakeholder feedback recommending that we allow TEAM participants to use the TEAM SNF 3-day rule waiver for PAC provided under swing bed arrangements on the grounds that the inclusion of swing beds would increase access to PAC services for beneficiaries in rural areas or areas with health care shortages (89 FR 69834). However, we did not alter our proposal and finalized the TEAM SNF 3-day rule waiver without including swing beds. In the final rule, we noted that greater risks may be present for patients following early inpatient hospital discharge, and that the SNF quality rating requirement for use of the SNF 3-day rule waiver, which requires SNFs to have a CMS Five-Star Quality Rating System rating of at least 3 stars in 7 of the past 12 months, offers an additional level of protection to beneficiaries following an early discharge by ensuring that all TEAM beneficiaries discharged to a SNF after a hospital stay of fewer than 3 days are admitted to a SNF that has demonstrated that it can provide quality care to patients with significant unresolved post-surgical symptoms and problems. Without a corresponding metric in place for swing bed arrangements, we declined to include swing beds under the TEAM SNF 3-day rule waiver.

To address stakeholder concerns surrounding PAC access in rural and underserved areas, we are now proposing to allow TEAM participants to use the TEAM SNF 3-day rule waiver for TEAM beneficiaries discharged to hospitals and CAHs providing PAC under swing bed arrangements.

In order to furnish SNF services under a swing bed agreement, hospitals must be substantially in compliance with the SNF participation requirements specified at § 482.58(b), whereas CAHs must be substantially in compliance with the SNF participation requirements specified at § 485.645(d). However, per current TEAM regulations, TEAM participants are not permitted to use the TEAM 3-day SNF waiver for SNF services furnished under a swing bed agreement because: (1) The SNF 3-day rule waiver under the TEAM regulations

at § 512.580(b)(1) waives the requirement for a 3-day prior inpatient hospitalization only with respect to otherwise covered SNF services furnished by an eligible SNF and does not extend to otherwise covered post-hospital extended care services furnished by a provider under a swing bed agreement; and (2) CAHs and other rural hospitals furnishing SNF services under swing bed agreements are not included in the CMS Five-Star Quality Rating System and, therefore, cannot meet the requirement at § 512.580(b)(3) that, to be qualified for Medicare coverage of SNF services provided to a TEAM beneficiary discharged from the hospital with a stay of less than 3 days under the TEAM SNF 3-day rule waiver, the SNF must have an overall rating of 3 or higher under the CMS Five-Star Quality Rating System for 7 of the previous 12 months.

For the reasons described in stakeholder comments on the FY 2025 IPPS/LTCH PPS proposed rule as well as recent research on PAC access in rural areas, we believe it is necessary to offer hospitals participating under episode-based payment models and thereby assuming financial responsibility for their beneficiaries' PAC—especially hospitals operating in areas where PAC access may be limited and SNF services specifically may only be available in non-traditional SNF settings—additional tools and flexibility to manage and coordinate care for their beneficiaries. We agree with stakeholders that there are fewer SNFs in rural areas. Therefore, we agree with stakeholders that risk-bearing hospitals in rural areas would be better able to coordinate and manage care, and thus to control unnecessary costs, if the SNF 3-day rule waiver extended to otherwise covered SNF services provided by a hospital or CAH under a swing bed agreement. We believe this proposal would primarily benefit hospitals located in rural areas because most CAHs and hospitals that are approved to furnish post-acute SNF-level care via a swing bed agreement are located in rural areas. Consistent with this proposal, and in line with the Medicare Shared Savings Program regulations at § 425.612(a)(1) introductory text and (a)(1)(iii)(A), we also propose to revise the regulations governing the SNF 3-day rule waiver at § 512.580(b)(1) to indicate that, for purposes of determining SNF qualification for the SNF 3-day rule waiver, SNFs include providers furnishing SNF services under swing bed arrangements. We believe it's important to align the SNF 3-day rule waiver with other CMS programs and initiatives, where appropriate, to create more uniform policies and hopefully increase waiver utilization. In addition, we propose to revise § 512.580(b)(3) to specify that the minimum 3-star rating requirement for 7 of the past 12 months applies only if the provider furnishing SNF services is eligible to be included in the CMS Five-Star Quality Rating System. We do not have a comparable data element to the CMS Five-Star Quality Rating System for hospitals and CAHs under swing bed agreements; however, under §§ 512.590 and 512.586(a), we reserve the right to monitor and audit the use of payment waivers. We will continue to monitor the use of the SNF 3-day rule waiver to ensure TEAM participants are not compromising beneficiary protections at § 512.582(a) and reserve the right to perform remedial action under § 512.592 if the waiver is used inappropriately or beneficiaries are not receiving appropriate care.

Additionally, we note the possibility that a beneficiary could be admitted to a hospital, have an inpatient stay of less than 3 days, and then be admitted to the same hospital under its swing bed agreement. As previously discussed, we believe hospitals that bear a degree of financial risk have a stronger incentive not to overutilize services and have an incentive to recommend a beneficiary for admission to a SNF only when it is medically appropriate. We also note this scenario could occur when a beneficiary meets the generally applicable 3-day stay requirement. Thus, we do not believe extending the SNF 3-day rule waiver to include services furnished by a hospital under a swing bed agreement would create a new gaming opportunity.

We considered, but are not proposing, including only swing bed arrangements at CAHs under the expanded TEAM SNF 3-day rule waiver. While stakeholder feedback received on the 2025 IPPS/LTCH PPS proposed rule focused on swing bed arrangements at CAHs, we believe that the inclusion of swing bed arrangements at other hospitals is better aligned with the swing bed eligibility requirements detailed in § 482.58.

We seek comment on our proposal at § 512.580(b)(3) to allow TEAM participants to use the TEAM SNF 3-day rule waiver for TEAM beneficiaries discharged to hospitals and CAHs providing post-acute care (PAC) under swing bed arrangements.

g. Decarbonization and Resilience Initiative

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69859) we finalized the Decarbonization and Resilience Initiative (DRI). This initiative was designed to address threats posed by climate change to the Nation's health and health care system by collecting, monitoring, and assessing hospital carbon emissions and their effects on health outcomes, costs, and quality. The initiative includes two primary elements—

- Emissions reporting in four priority areas: organizational, building energy, anesthetic gas, and transportation; and
- Technical assistance on reducing emissions.

While the DRI is a voluntary initiative for TEAM participants and their hospital corporate affiliates, we recognize it does not align with the Administration's priorities. We note that it is not uncommon to reevaluate policies and programs, and that doing so is within an agency's discretion, especially after a change in Administration, to implement changes through rulemaking. Additionally, since TEAM is a mandatory model, we want to reduce the reporting burden and reduce administrative costs on TEAM participants as much as possible, so eliminating this initiative will reduce the amount of data TEAM participants may report and reduce the costs to set up the reporting infrastructure. The Episode Payment Models and the Cardiac Rehabilitation (CR) Incentive Payment Model were cancelled because, at that time, those models were not in the best interest of the Agency or the providers affected by them (82 FR 57066), and we similarly believe that retaining the DRI in TEAM is not in the best interest of the Agency or providers who already a part of a mandatory model. We believe removing this initiative from TEAM will allow TEAM participants to focus on the requirements of the model, rather than a voluntary initiative. We also believe that cancelling the DRI from TEAM will offer CMS flexibility to design and test other initiatives in the future that align with the Administration's goals. We note that TEAM participants are not precluded from continuing their own efforts to reduce greenhouse gas emissions and are encouraged to engage in other areas that may help improve patient quality of care and reduce hospital spending and operating costs. Therefore, we propose to remove the DRI from TEAM.

We seek comment on our proposal to remove the DRI from TEAM and remove the corresponding regulations at § 512.598.

XII. MedPAC Recommendations and Publicly Available Files

A. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have reviewed MedPAC's March 2025 ''Report to the Congress: Medicare Payment Policy'' and have given the recommendations in the report consideration in conjunction with the policies set forth in this proposed rule. MedPAC recommendations for the IPPS for FY 2026 are addressed in Appendix B to this proposed rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653–7226, or visit MedPAC's website at *https://www.medpac.gov*.

B. Publicly Available Files

IPPS-related data are available on the internet for public use. The data can be found on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*. Following is a listing of the IPPS-related data files that are available.

Commenters interested in discussing any data files used in construction of this proposed rule should contact Michael Treitel at (410) 786–4552.

1. CMS Wage Data Public Use File

This file contains the hospital hours and salaries from Worksheet S–3, parts II and III from FY 2022 Medicare cost reports used to create the proposed FY 2026 IPPS wage index. Multiple versions of this file are created each year. For a discussion of the release of different versions of this file, we refer readers to section III.C.4. of the preamble of this proposed rule.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html*.

Periods Available: FY 2007 through FY 2026 IPPS Update.

2. CMS Occupational Mix Data Public Use File

This file contains the CY 2022 occupational mix survey data to be used to compute the occupational mix adjusted wage indexes. Multiple versions of this file are created each year. For a discussion of the release of different versions of this file, we refer readers to section III.C.4 of the preamble of this proposed rule.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html*.

Period Available: FY 2026 IPPS Update.

3. Provider Occupational Mix Adjustment Factors for Each Occupational Category Public Use File

This file contains each hospital's occupational mix adjustment factors by occupational category. Two versions of these files are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html*.

Period Available: FY 2026 IPPS Update.

4. Other Wage Index Files

CMS releases other wage index analysis files after each proposed and final rule.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html*.

Periods Available: FY 2005 through FY 2026.

5. FY 2026 IPPS FIPS CBSA State and County Crosswalk

This file contains a crosswalk of State and county codes used by the Federal Information Processing Standards (FIPS), county name, and a list of Core Based Statistical Areas (CBSAs).

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2026 proposed rule home page or the FY 2026 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html*.

Period Available: FY 2026 IPPS Update.

6. HCRIS Cost Report Data

The data included in this file contain cost reports with fiscal years ending on or after September 30, 1996. These data files contain the highest level of cost report status.

Media: internet at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/Cost-Reports/Cost-Reports-by-Fiscal-Year*.

(We note that data are no longer offered on a CD. All of the data collected are now available free for download from the cited website.)

7. Provider-Specific File

This file is a component of the PRICER program used in the MAC's system to compute DRG/MS–DRG payments for individual bills. The file contains records for all prospective payment system eligible hospitals, including hospitals in waiver States, and data elements used in the prospective payment system recalibration processes and related activities. Beginning with December 1988, the individual records were enlarged to include pass-through per diems and other elements.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ProspMedicareFeeSvcPmtGen/psf_text*.

Period Available: Quarterly Update.

8. CMS Medicare Case-Mix Index File

This file contains the Medicare case-mix index by provider number based on the MS–DRGs assigned to the hospital's discharges using the GROUPER version in effect on the date of the discharge. The case-mix index is a measure of the costliness of cases treated by a hospital relative to the cost of the national average of all Medicare hospital cases, using DRG/MS–DRG weights as a measure of relative costliness of cases. Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html*, or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or fiscal year final rule home page desired).

Periods Available: FY 1985 through FY 2026.

9. MS–DRG Relative Weights (Also Table 5—MS–DRGs)

This file contains a listing of MS–DRGs, MS–DRG narrative descriptions, relative weights, and geometric and arithmetic mean lengths of stay for each fiscal year. Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-*

for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html, or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or the fiscal year final rule home page desired).

Periods Available: FY 2005 through FY 2026 IPPS Update.

10. IPPS Payment Impact File

This file contains data used to estimate payments under Medicare's hospital inpatient prospective payment systems for operating and capital-related costs. The data are taken from various sources, including the Provider-Specific File, HCRIS Cost Report Data, MedPAR Limited Data Sets, and prior impact files. The data set is abstracted from an internal file used for the impact analysis of the changes to the prospective payment systems published in the **Federal Register**. Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Historical-Impact-Files-for-FY-1994-through-Present*, or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or fiscal year final rule home page desired).

Periods Available: FY 1994 through FY 2026 IPPS Update.

11. AOR/BOR File

This file contains data used to develop the MS–DRG relative weights. It contains mean, maximum, minimum, standard deviation, and coefficient of variation statistics by MS–DRG for length of stay and standardized charges. The BOR file are ''Before Outliers Removed'' and the AOR file is ''After Outliers Removed.'' (Outliers refer to statistical outliers, not payment outliers.) Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html*, or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or fiscal year final rule home page desired).

Periods Available: FY 2005 through FY 2026 IPPS Update.

12. Prospective Payment System (PPS) Standardizing File

This file contains information that standardizes the charges used to calculate relative weights to determine payments under the hospital inpatient operating and capital prospective payment systems. Variables include wage index, cost-of-living adjustment (COLA), case-mix index, indirect medical education (IME) adjustment, disproportionate share, and the Core-Based Statistical Area (CBSA). The file supports the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2026 proposed rule home page or the FY 2026 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html*.

Period Available: FY 2026 IPPS Update.

13. MS–DRG Relative Weights Cost Centers File

This file provides the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center cost-to-charge ratios (CCRs) that we used in the relative weight calculation.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2026 proposed rule home page or the FY 2026 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html*.

Period Available: FY 2026 IPPS Update.

14. Hospital Readmissions Reduction Program Supplemental File

The Hospital Readmissions Reduction Program Supplemental File is only available and updated for the final rule, when the most recent data is available. Therefore, we refer readers to the FY 2025 IPPS/LTCH PPS final rule supplemental file, which has the most recent finalized payment adjustment factor components and is the same data as would have been used to create the FY 2026 IPPS/LTCH PPS proposed rule supplemental file.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2026 proposed rule home page or the FY 2026 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html*.

Period Available: FY 2026 IPPS Update.

15. Medicare Disproportionate Share Hospital (DSH) Supplemental File

This file contains information on the calculation of the uncompensated care payments for DSH-eligible hospitals as well as the supplemental payments for eligible IHS and Tribal hospitals and hospitals located in Puerto Rico for FY 2026. Variables include the data used to determine a hospital's share of uncompensated care payments, total uncompensated care payments, estimated per-claim uncompensated care payment amounts, and if applicable, supplemental payment amounts. The file supports the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2026 proposed rule home page or the FY 2026 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html*.

Period Available: FY 2026 IPPS Update.

16. New Technology Thresholds File

This file contains the cost thresholds by MS–DRG that are generally used to evaluate applications for new technology add-on payments for the fiscal year that follows the fiscal year that is otherwise the subject of the rulemaking. (As discussed in section II.G. of the preamble of this proposed rule, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.) Two versions of this file are created each year to support rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/*

AcuteInpatientPPS/Index.html (on the navigation panel on the left side of the page, click on the applicable fiscal year's proposed rule or final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Periods Available: FY 2025 through FY 2027 applications.

XIII. Collection of Information Requirements

A. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act (PRA) of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In this proposed rule, we are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs). The following ICRs are listed in the order of appearance within the preamble (see sections II. through XI. of the preamble of this proposed rule).

B. Collection of Information Requirements

1. ICRs for the Hospital Readmissions Reduction Program

In section VI.K. of the preamble of this proposed rule, we discuss our proposed updates to the Hospital Readmissions Reduction Program. Specifically, in this proposed rule, we propose to (1) modify the six readmission measures in the program to include Medicare Advantage (MA) beneficiaries into the patient cohorts, and (2) modify the applicable performance period from a 3-year period to a 2-year period. All six of the current Hospital Readmissions Reduction Program's measures are claims-based measures, therefore this proposal would not impact information collection burden. We believe that continuing to use these claims-based measures would not create or reduce any information collection burden for hospitals because they will continue to be collected using Medicare FFS claims that hospitals are already submitting to the Medicare program for payment purposes under OMB control number 0938–1197 (expiration date October 31, 2027).

2. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section VI.L. of the preamble of this proposed rule, we discuss our proposed updates to the Hospital VBP Program. Specifically, we propose to modify the Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty/Total Knee Arthroplasty (THA/TKA) measure in alignment with the Hospital IQR Program, beginning with the April 1, 2029–March 31, 2031, performance period/FY 2033 payment determination. The proposed modifications would include adding Medicare Advantage (MA) beneficiaries into the patient cohorts and modifying the applicable performance period from a 3-year period to a 2-year period.

The Hospital-Level RSCR Following Elective Primary THA/TKA measure currently uses data that are collected using Medicare FFS claims that hospitals are already submitting to the Medicare program for payment purposes; therefore, there is no additional information collection burden associated with this measure regarding the modification of the applicable performance period. We also do not anticipate any change in burden associated with the proposed modification to add MA beneficiaries into the patient cohorts. As proposed, the measure would use MA encounter data already collected by CMS to determine cohort inclusion criteria, complications outcomes, and present on admission (POA) comorbidities. We discuss the burden associated with the similar proposal to modify the Hospital-Level RSCR Following Elective Primary THA/TKA measure under the Hospital IQR Program in section X.C.3.b of the preamble of this proposed rule.

We also propose to remove the Health Equity Adjustment (HEA) that rewards top performing hospitals that serve higher proportions of patients with dual eligibility status. Because the HEA affects the scoring methodology and does not require hospitals to submit any additional information, we do not anticipate any change in burden associated with the proposal.

3. ICRs for the Hospital-Acquired Condition (HAC) Reduction Program

OMB has currently approved 28,840 hours of burden and approximately $1.5 million under OMB control number 0938–1352 (expiration date November 30, 2025), accounting for information collection burden experienced by 400 subsection (d) hospitals selected for validation each year in the HAC Reduction Program.

In section VI.M. of the preamble of this proposed rule, we discuss our proposed updates to the HAC Reduction Program. Specifically, we propose to update the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN) Hospital-Acquired Infection (HAI) chart-abstracted measures to a more recent baseline year to better reflect current HAI diagnostic practices to improve patient safety outcomes and quality of care. This proposed update does not affect the amount of data hospitals are required to submit for these measures, therefore we do not anticipate any change in information collection burden. Information collection burden associated with collection of data for these measures is accounted for by CDC under OMB control number 0920–0666 (expiration date December 31, 2027).

4. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

a. Background

Data collections for the Hospital IQR Program are associated with OMB control number 0938–1022 (expiration date January 31, 2026), under which OMB has currently approved 2,283,878 hours of burden at a cost of approximately $92.1 million, accounting for information collection burden experienced by approximately 3,050 IPPS hospitals and 1,500 non-IPPS hospitals for the FY 2027 payment determination. In this proposed rule, we describe the burden changes regarding collection of information, under OMB control number 0938–1022.

For more detailed information on our proposals for the Hospital IQR Program, we refer readers to sections X.C.3., X.C.4., and X.C.7. of the preamble of this proposed rule. We proposed modifications to two measures: (1) the Hospital-Level, Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure (herein after referred to as the COMP–HIP–KNEE measure) beginning with the FY 2027 payment determination, associated with the April 1, 2023–March 31, 2025 performance period; (2) the Hospital 30-Day, All-

Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Ischemic Stroke Hospitalization (hereinafter referred to as the MORT–30–STK) measure, beginning with the FY 2027 payment determination, associated with a July 1, 2023–June 30, 2025 performance period. We also proposed to modify the reporting requirements of the Hybrid Hospital-Wide Readmission (HWR) measure beginning with the FY 2028 payment determination, associated with a July 1, 2025–June 30, 2026, performance period; and the Hybrid Hospital-Wide Mortality (HWM) measure beginning with the FY 2028 payment determination, associated with a July 1, 2025–June 30, 2026, performance period. We do not anticipate any of these proposals will affect information collection burden.

We also proposed to remove four measures beginning with the CY 2024 reporting period/FY 2026 payment determination: (1) the Hospital Commitment to Health Equity measure; (2) the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure; (3) the Screening for Social Drivers of Health measure; and (4) the Screen Positive Rate for Social Drivers of Health Measure. We discuss the impacts on information collection burden associated with these proposals later in this section.

Using the most recent data from the BLS for medical records specialists (SOC 29–2072), entitled, the May 2023 National Occupational Employment and Wage Estimates (OEWS), we propose to use the mean hourly wage for medical records specialists for the industry, ''general medical and surgical hospitals,'' which is $27.69.[435] We believe the industry of ''general medical and surgical hospitals'' is more specific to this program compared to other industries under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.69 × 2 = $55.38) to estimate total cost is a reasonably accurate estimation method. Unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits estimate of $55.38 per hour throughout the discussion in this section of this proposed rule for the Hospital IQR Program. If BLS releases updated wage rates after this proposed rule is published and before the final rule is published, we will maintain the wage rates used in this proposed rule.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69894), our burden estimates were based on an assumption of approximately 3,050 IPPS hospitals. For this proposed rule, based on data from the FY 2025 Hospital IQR Program payment determination, we are maintaining that assumption and estimate that approximately 3,050 IPPS hospitals will report data to the Hospital IQR Program for the CY 2026 reporting period.

b. Information Collection Burden Estimate for the Proposed Modifications to the Hospital-Level, RSCR Following Elective Primary THA/TKA Measure and Hospital 30-Day, All-Cause, RSMR Following Acute Ischemic Stroke Hospitalization Measure Beginning With the FY 2027 Payment Determination

In sections X.C.3.a. and X.C.3.b. of the preamble of this proposed rule, we discuss the proposals to modify the COMP–HIP–KNEE measure beginning with the FY 2027 payment determination, associated with the April 1, 2023—March 31, 2025 performance period and the MORT–30–STK measure beginning with the FY 2027 payment determination, associated with the July 1, 2023–June 30, 2025 performance period. These proposed modifications would include adding MA patients to the current cohort of patients and shortening the performance period from 3 years to 2 years. Because these measures would be calculated using MA encounter data and Medicare FFS claims that are already reported to the Medicare program for payment purposes, modifying these measures would not result in a change in burden associated with OMB control number 0938–1022.

c. Information Collection Burden Estimate for the Proposed Modification of the Hybrid HWR and HWM Measures Beginning With the FY 2028 Payment Determination

In section X.C.7.c. of the preamble of this proposed rule, we propose to modify the Hybrid HWR and HWM measure reporting requirements beginning with the FY 2028 payment determination, associated with a July 1, 2025–June 30, 2026, performance period. This modification would lower the submission thresholds for both the Hybrid HWR and HWM measures to allow for up to two missing laboratory results and up to two missing vital signs, reduce the core clinical data elements (CCDEs) submission requirement to 70 percent or more of discharges, and reduce the submission requirement of linking variables to 70 percent or more of discharges.

In the CY 2025 OPPS/ASC final rule (89 FR 94495 through 94499), we finalized that submission of CCDEs and linking variables associated with the Hybrid HWR and Hybrid HWM measures will remain voluntary. In the FY 2020 IPPS/LTCH PPS and FY 2022 IPPS/LTCH PPS final rules, respectively, we estimated the burden for voluntary reporting for the Hybrid HWR (84 FR 42603 and 42604) and Hybrid HWM measures (86 FR 45508) and stated that we encourage all hospitals to submit data for the Hybrid HWR and Hybrid HWM measures during the voluntary reporting period. As a result, our previously finalized reporting burden estimates assume that all hospitals will participate in order to not underestimate the burden on participating hospitals and account for the submission of CCDEs and linking variables. Therefore, while the proposed modifications are designed to reduce the administrative burden associated with reporting these measures, they would not affect information collection burden as neither the amount of data collected nor frequency of data submission are impacted.

d. Information Collection Burden Estimate for the Proposed Removal of the Hospital Commitment to Health Equity Measure Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

In section X.C.4.a. of the preamble of this proposed rule, we propose to remove the Hospital Commitment to Health Equity (HCHE) measure beginning with the CY 2024 reporting period/FY 2026 payment determination. Reporting on the HCHE measure involves each hospital being required to provide responses and attest ''yes'' or ''no'' in response to as many as five questions one time per year for a given reporting period through CMS' HQR System. We estimate each hospital would require 10 minutes (0.167 hours) annually to report this measure.

The current burden estimate approved under OMB control number 0938–1022 is 509 hours annually across all 3,050 IPPS hospitals (0.167 hours × 3,050 IPPS hospitals). Therefore, we estimated the removal of this measure would decrease the burden for all 3,050 IPPS hospitals

[435] U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed November 27, 2024. Available at: *https://www.bls.gov/oes/current/oes292072.htm.*

by 509 hours annually at a savings of $28,188 (509 hours × $55.38).

e. Information Collection Burden Estimate for the Proposed Removal of the COVID–19 Vaccination Coverage Among HCP Measure Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

In section X.C.4.b. of the preamble of this proposed rule, we propose to remove the COVID–19 Vaccination Coverage among HCP measure beginning with the CY 2024 reporting period/FY 2026 payment determination. This measure was previously finalized in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45374 through 45382), and the associated information collection is approved under OMB control number 0920–1317 [436] (expiration date January 31, 2028).

Hospitals have the option to manually enter data directly into the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN) web-based application or by uploading a CSV file. CDC estimates that each hospital requires between 40 minutes (0.67 hours) to upload a CSV file and 45 minutes (0.75 hours) monthly to enter the data manually. CDC assumes that manual data entry would be completed by a Microbiologist with a wage rate of $58.60/hour and uploading of a CSV file would be completed by an Information Technologist with a wage rate of $56.50/hour. Therefore, we estimate that this proposal will result in a decrease in burden of between 24,400 hours (0.67 hours × 12 months × 3,050 IPPS hospitals) at a cost of $1,378,600 (24,400 hours × $56.50) and 27,450 hours (0.75 hours × 12 months × 3,050 IPPS hospitals) at a cost of $1,608,570 (27,450 hours × $58.60) annually across all 3,050 IPPS hospitals under OMB control number 0920–1317.

f. Information Collection Burden Estimate for the Proposed Removal of the Social Drivers of Health Measure Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

In section X.C.4.c. of the preamble of this proposed rule, we propose to remove the Screening for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. There are two components to this measure: patient screening for five health related social needs domains and hospital submission of aggregated hospital-level measure data. We estimate each patient requires 2 minutes (0.033 hours) to complete the screening and each hospital requires 10 minutes (0.167 hours) annually to report this measure.

With regard to patient screening, the currently approved burden estimate under OMB control number 0938–1022 is 625,500 hours annually for 18,765,000 patients (0.033 hours × 18,765,000 patients). With regard to measure reporting, the currently approved burden estimate is 509 hours annually across all 3,050 IPPS hospitals (0.167 hours × 3,050 IPPS hospitals).

We determine the cost for patients (or their representative) undertaking administrative and other tasks, such as filling out a survey or intake form, using a post-tax wage of $25.63/hour based on the report ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices,'' which identifies the approach for valuing time when individuals undertake activities on their own time.[437] To derive the costs for patients (or their representatives), a measurement of the usual weekly earnings of wage and salary workers of $1,192 is divided by 40 hours to calculate an hourly pre-tax wage rate of $29.80/hour.[438] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[439] resulting in the post-tax hourly wage rate of $25.63/hour. Unlike our state and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs because the individuals' activities, if any, will occur outside the scope of their employment.

Therefore, we estimate the removal of this measure would decrease the burden for all 3,050 IPPS hospitals by 626,009 hours (625,500 + 509) annually at a savings of $16,059,753 (625,500 hours × $25.63 + 509 hours × $55.38).

g. Information Collection Burden Estimate for the Proposed Removal of the Screen Positive Rate for Social Drivers of Health Measure Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

In section X.C.4.c. of the preamble of this proposed rule, we propose to remove the Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. For this measure, hospitals are required to report on an annual basis the number of patients who screen positive for one or more of the five Social Drivers of Health domains divided by the total number of patients screened (reported as five separate rates). We estimate each hospital requires 10 minutes (0.167 hours) annually to report this measure.

The current burden estimate approved under OMB control number 0938–1022 is 509 hours annually across all 3,050 IPPS hospitals (0.167 hours × 3,050 IPPS hospitals). Therefore, we estimated the removal of this measure would decrease the burden for all 3,050 IPPS hospitals by 509 hours annually at a savings of $28,188 (509 hours × $55.38/hour).

We invite public comments on the proposed information collection requirements and whether our estimated burden reduction of 0.033 hours per patient and an annual decrease of 509 hours in burden per hospitals at admission is an accurate estimate.

h. Summary of Information Collection Burden Estimates for the Hospital IQR Program

In summary, under OMB control number 0938–1022 (expiration date January 31, 2026), we estimate that the policies promulgated in this proposed rule would result in a decrease in information collection burden of 627,027 hours at a savings of $16,116,129. We also estimate that the policies promulgated in this proposed rule would result in a decrease in information collection burden of between 24,400 hours at a savings of $1,378,600 and 27,450 hours at a savings of $1,608,570 under OMB control number 0920–1317. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1022. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory

Impact Analysis (section I.K. of Appendix A of this proposed rule).

TABLE XIII.B–01—SUMMARY OF HOSPITAL IQR PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2024 REPORTING PERIOD

Activity	Estimated time per record (minutes)	Number reporting quarters per year	Number of respondents reporting	Average number records per respondent per quarter	Annual burden (hours) per respondent	Proposed annual burden (hours) across hospitals	Previously finalized annual burden (hours) across hospitals	Net difference in annual burden hours
Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938–1022 for the CY 2024 Reporting Period								
Removal of HCHE Measure	−0.167	1	3,050	1	-0.167	0	509	−509
Removal of Social Drivers of Health Measure (Patient Screening)	−0.033	1	18,765,000	1	−.033	0	625,500	−625,500
Removal of Social Drivers of Health Measure (Measure Reporting)	−0.167	1	3,050	1	−0.167	0	509	−509
Removal of Screen Positive for Social Drivers of Health Measure	−0.167	1	3,050	1	−0.167	0	509	−509
Total Change in Information Collection Burden Hours: −627,027.								
Total Cost Estimate: Updated Hourly Wage (Varies) × Change in Burden Hours (−627,027) = −$16,116,129.								

TABLE XIII.B–02—SUMMARY OF HOSPITAL IQR PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2024 REPORTING PERIOD

Activity	Estimated time per record (minutes)	Number reporting periods per year	Number of respondents reporting	Average number records per respondent per period	Annual burden (hours) per respondent	Proposed annual burden (hours) across hospitals	Previously finalized annual burden (hours) across hospitals	Net difference in annual burden hours
Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0920–1317 for the CY 2024 Reporting Period								
Removal of COVID–19 Vaccination Coverage Among HCP Measure	*−0.75	12	3,050	1	−9	0	27,450	−27,450
Total Change in Information Collection Burden Hours: −27,450.								
Total Cost Estimate: Updated Hourly Wage ($58.60) × Change in Burden Hours (−27,450) = −$1,608,570.								

*For purposes of this table, we state the maximum possible burden across all IPPS hospitals.

5. ICRs for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

OMB has currently approved 109 hours of burden at a cost of $2,844 under OMB control number 0938–1175 (expiration date November 30, 2027), accounting for the annual information collection requirements for 11 PCHs for the PCHQR Program. In this proposed rule, we describe the burden changes regarding collection of information under OMB control number 0938–1175 for PCHs.

For more detailed information on our proposals for the PCHQR Program, we refer readers to section X.D. of the preamble of this proposed rule. We propose to remove three measures beginning with the FY 2026 program year: (1) the Hospital Commitment to Health Equity measure; (2) the Screening for Social Drivers of Health measure; and (3) the Screen Positive Rate for Social Drivers of Health Measure. We discuss the impacts on information collection burden associated with these proposals later in this section.

We also propose to modify the public reporting requirements to allow for public reporting of the PCHQR Program on the Care Compare tool on Medicare.gov or a successor website in addition to current publication in the Provider Data Catalog. This proposal would not affect information collection burden as neither the amount of data collected nor frequency of data submission are impacted.

Using the most recent data from the BLS for medical records specialists (SOC 29–2072), entitled, the May 2023 National Occupational Employment and Wage Estimates (OEWS), we propose to use the mean hourly wage for medical records specialists for the industry, ''general medical and surgical hospitals,'' which is $27.69. We believe the industry of ''general medical and surgical hospitals'' is more specific to this program compared to other industries under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.69 × 2 = $55.38) to estimate total cost is a reasonably accurate estimation method. Unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits estimate of $55.38 per hour throughout the discussion in this section of this proposed rule for the PCHQR Program. If BLS releases updated wage rates after this proposed rule is published and before the final rule is published, we will maintain the wage rates used in this proposed rule.

b. Information Collection Burden Estimate for the Proposed Removal of the Hospital Commitment to Health Equity Measure Beginning With the FY 2026 Program Year

In section X.D.2.a. of the preamble of this proposed rule, we propose to remove the Hospital Commitment to Health Equity (HCHE) measure beginning with the FY 2026 program year. Reporting on the HCHE measure involves each PCH being required to provide responses and attest ''yes'' or ''no'' in response to as many as five questions one time per year for a given program year through CMS' HQR System.

The current burden estimate approved under OMB control number 0938–1175 is 2 hours annually across all 11 PCHs (0.167 hours × 11 PCHs). Therefore, we estimated the removal of this measure would decrease the burden for all 11 PCHs by 2 hours annually at a savings of $111 (2 hours × $55.38).

c. Information Collection Burden Estimate for the Proposed Removal of the Screening for Social Drivers of Health Measure Beginning With the FY 2026 Program Year

In section X.D.2.b. of this proposed rule, we propose to remove the Screening for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. There are two components to this measure: patient screening for five health related social needs domains and PCH submission of aggregated PCH-level measure data. In the FY 2024 IPPS/LTCH PPS final rule, the Screening for Social Drivers of Health and Screen Positive Rate for Social Drivers of Health measures were adopted with voluntary reporting in the FY 2026 program year followed by mandatory reporting on an annual basis beginning with the FY 2027 program year (88 FR 59317 and 59318). We estimate each patient requires 2 minutes (0.033 hours) to complete the screening and each PCH requires 10 minutes (0.167 hours) annually to report this measure.

With regard to patient screening, the currently approved burden estimate under OMB control number 0938–1175 is 28 hours for 828 patients (0.033 hours × 828 patients) for the FY 2026 program year and 101 hours annually for 3,025 patients (0.033 hours × 3,025 patients) beginning with the FY 2027 program year. With regard to measure reporting, the currently approved burden estimate is 1 hour (0.167 hours × 6 PCHs) for the FY 2026 program year and 2 hours annually (0.167 hours × 11 PCHs) beginning with the FY 2027 program year. We invite public comments on the proposed information collection requirements and whether our estimated burden reduction of 0.033 hours per patient and an annual decrease of 2 hours in burden per PCH at admission is an accurate estimate.

We determine the cost for patients (or their representative) undertaking administrative and other tasks, such as filling out a survey or intake form, using a post-tax wage of $25.63/hour based on the report ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices,'' which identifies the approach for valuing time when individuals undertake activities on their own time.[440] To derive the costs for patients (or their representatives), a measurement of the usual weekly earnings of wage and salary workers of $1,192 is divided by 40 hours to calculate an hourly pre-tax wage rate of $29.80/hour.[441] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[442] resulting in the post-tax hourly wage rate of $25.63/hour. Unlike our state and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs because the individuals' activities, if any, will occur outside the scope of their employment.

Therefore, we estimate the removal of this measure would decrease the burden by 29 hours (1 hour + 28 hours) at a savings of $773 (28 hours × $25.63 + 1 hour × $55.38) for 6 PCHs for the FY 2026 program year and 103 hours (2 hour + 101 hours) at a savings of $2,699 (101 hours × $25.63/hour + 2 hours × $55.38/hour) for 11 PCHs for the FY 2027 program year.

d. Information Collection Burden Estimate for the Proposed Removal of the Screen Positive Rate for Social Drivers of Health Measure Beginning With the FY 2026 Program Year

In section X.D.2.b. of the preamble of this proposed rule, we propose to remove the Screen Positive Rate for Social Drivers of Health measure beginning with the FY 2026 program year. For this measure, PCHs are required to report on an annual basis the number of patients who screen positive for one or more of the five Social Drivers of Health domains divided by the total number of patients screened (reported as five separate rates). We estimate each PCH requires 10 minutes (0.167 hours) annually to report this measure.

The current burden estimate approved under OMB control number 0938–1175 is 1 hour (0.167 hours × 6 PCHs) for the FY 2026 program year and 2 hours annually (0.167 hours × 11 PCHs) beginning with the FY 2027 program year. Therefore, we estimated the removal of this measure would decrease the burden by 1 hours at a savings of $55 (1 hour × $55.38) for the FY 2026 program year and 2 hours at a savings of $111 (2 hours × $55.38) beginning with the FY 2027 program year.

e. Summary of Information Collection Burden Estimates for the PCHQR Program

In summary, under OMB control number 0938–1175 (expiration November 30, 2027), we estimate that the policies promulgated in this proposed rule would result in a decrease in burden of 107 hours and $2,921. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1175. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.L. of Appendix A of this proposed rule).

6. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

As required by section 1886(m)(5)(A)(i) of the Act, an LTCH that does not meet the requirements of the LTCH QRP for a fiscal year will receive a 2-percentage point reduction to its otherwise applicable annual update for that fiscal year. We estimate that the burden associated with the LTCH QRP is the time and effort associated with complying with the requirements of the LTCH QRP. In section X.E.4 of the preamble of this proposed rule, we are proposing to amend the LTCH QRP reconsideration request policy and process. As we noted in the FY2016 IPPS/LTCH PPS Final rule (80 FR 49755), we believe the reconsideration requirements, and the associated burden would be incurred subsequent to an administrative action. In accordance with the implementing regulations for the PRA (5 CFR 1320.4(a)(2) and (c)), the burden associated with any information collected subsequent to the administrative action is exempt from the requirements of the PRA. However, we have provided detailed cost burden estimates in section I.M. of Appendix A of this proposed rule. We welcome public comments on the accuracy of the cost estimate assigned to this administrative burden.

a. Information Collection Burden Estimate for the Proposed Modification of Reporting Requirements for the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date Measure Beginning With the FY 2028 LTCH QRP

In section X.E.3. of the preamble of this proposed rule, we propose to modify reporting requirements for the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date (Patient/Resident COVID–19 Vaccine) measure to exclude patients who have expired in the LTCH beginning with the FY 2028 LTCH QRP. Version 5.1 of the LCDS, which includes the Patient/Resident COVID–19 Vaccine item (O0350) for purposes of reporting the Patient/Resident COVID–19 Vaccine measure, has been approved under OMB control number 0938–1163 (Expiration date: 12/31/2027). To implement the proposed modification to this measure, we also propose to remove the related Patient/Resident COVID–19 Vaccine Status item (O0350) from the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) form used for patients who have expired. The remaining LCDS forms used for Planned Discharge and Unplanned Discharge would continue to include the Patient/Resident COVID–19 Vaccine Status item (O0350) for purposes of collecting and reporting data on the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure. The following is a discussion of this information collection.

If our proposal in section X.E.3. is finalized, LTCHs would no longer be required to collect information and report the Patient COVID–19 Vaccination Status item on the LCDS form used for patients who have expired in the LTCH. This would result in a decrease of 0.005 hours (0.3 minutes/60

minutes) of clinical staff time on the LCDS form used for expired patients. We identified the staff type based on past LTCH burden calculations, and our assumptions are based on the staff type generally necessary to perform an assessment.

Using data collected for FY 2024, we estimate 130,050 total admissions and 6,503 expired assessments from 330 LTCHs annually. This equates to a decrease of 33 hours for all LTCHs (6,503 × 0.005 hour) and 0.10 hours per LTCH.

We estimate that the item on the LCDS would be completed equally by a Registered Nurse (RN) and a Licensed Practical and Licensed Vocational Nurse (LPN/LVN). However, LTCHs determine the staffing resources necessary. For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages for these staff from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. To account for other indirect costs and fringe benefits, we doubled the hourly wage. These amounts are detailed in Table XIII.B–05. We established a composite cost estimate using our adjusted wage estimates. The composite estimate of $70.10/hour was calculated by weighting each adjusted hourly wage equally (that is, 50 percent) [($82.76 × 0.5) + ($57.44 × 0.5) = $70.10].

TABLE XIII.B–05—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hour)	Overhead and fringe benefit ($/hour)	Adjusted hourly wage ($/hour)
Registered Nurse (RN)	29–1141	$41.38	$41.38	$82.76
Licensed Practical Nurse/Licensed Vocational Nurse (LPN/LVN)	29–2061	28.72	28.72	57.44

We estimate that the burden and cost for LTCHs for complying with data collection and reporting requirements for the FY 2028 LTCH QRP would decrease under this proposal. Using FY 2024 data, we estimate a total of 6,503 expired assessments from 330 LTCHs annually for a decrease of 33 hours for all LTCHs (6,503 × 0.005 hour) and 0.10 hours per LTCH. Given 33 hours at $70.10 per hour, we estimate the total cost will be decreased by $2,313.30 (33 hours × $70.10 per hour) for all LTCHs annually, or $7.01 per LTCH (2,279.13 ÷ 330 LTCHs) annually.

b. Information Collection Burden Estimate for the Proposed Removal of Four Standardized Patient Assessment Data Elements Beginning With the FY 2028 LTCH QRP

In section X.E.4 of the preamble of this proposed rule, we propose to remove four standardized patient assessment data elements from the LCDS, with respect to admission, effective October 1, 2026.

We identified the staff type based on past LTCH burden calculations, and our assumptions are based on the categories generally necessary to perform an assessment. We believe that the items would be completed equally by a Registered Nurse (RN) and a Licensed Practical and Licensed Vocational Nurse (LPN/LVN). However, LTCHs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages for these staff from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[443] To account for other indirect costs and fringe benefits, we doubled the hourly wage. These amounts are detailed in Table XIII.B–06. We established a composite cost estimate using our adjusted wage estimates. The composite estimate of $70.10/hr was calculated by weighting each adjusted hourly wage equally (that is, 50 percent) [($82.76 × 0.5) + ($57.44 × 0.5) = $70.10].

TABLE XIII.B–06—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hour)	Overhead and fringe benefit ($/hour)	Adjusted hourly wage ($/hour)
Registered Nurse (RN)	29–1141	$41.38	$41.38	$82.76
Licensed Practical Nurse/Licensed Vocational Nurse (LPN/LVN)	29–2061	28.72	28.72	57.44

We estimate that the burden and cost for LTCHs for complying with requirements of the FY 2028 LTCH QRP would decrease under this proposal. We estimate that the removal of these four standardized patient assessment data elements will result in a decrease of 1.2 minutes (0.3 minutes × 4), or 0.02 hours (1.2 ÷ 60). Using FY 2024 data, we estimate a total of 130,050 admissions from 330 LTCHs annually for a decrease of 2,601 hours in burden for all LTCHs (130,050 × 0.02 hour), or a decrease of 7.88 hours per LTCH (2,601 ÷ 330 LTCHs). Given 7.88 hours at $70.10 per hour, we estimate the total cost will be decreased by $552.39 (7.88 × $70.10)

[443] U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/current/oes_nat.htm.*

annually, or $182,330.100 ($552.39 × 330 LTCHs) for all LTCHs annually.

c. Summary of Information Collection Burden Estimates for the LTCH QRP Program

As described in Table XIII.B–07, under OMB control number 0938–1163, we estimate that our proposals set forth in this proposed rule for the LTCH QRP, if finalized, would result in an overall decrease of 7.98 hours per LTCH, or 2,633.51 hours annually for 330 LTCHs. The total cost decrease related to this information collection is estimated at approximately −$180,016.80, or $545.51 per LTCH. The decrease in burden would be accounted for in a revised information collection request under OMB control number 0938–1163.

TABLE XIII.B–07—ESTIMATED LTCH QRP PROGRAM IMPACTS FOR FY 2028

Requirement	Per LTCH		All LTCHs	
	Change in annual burden hours	Change in annual cost	Change in annual burden hours	Change in annual cost
Estimated change in burden associated with removal of one item collected on expired assessment beginning with the FY 2028 LTCH QRP	−0.10	−$7.01	−33	−$2,313.30
Estimated change in burden associated with removal of four items collected on admission assessment beginning with the FY 2028 LTCH QRP	−7.88	−552.52	−2,601	−182,330.10
Total estimated change in burden for the FY 2028 LTCH QRP	−7.98	−545.51	−2,633.51	−180,016.80

We invite public comments on the proposed modification to information collection requirements for LTCH QRP beginning with the FY 2028 LTCH QRP.

7. ICRs for the Medicare Promoting Interoperability Program

a. Background

OMB has currently approved 30,151 hours of burden at a cost of $1,571,474 under OMB control number 0938–1278 (expiration date April 30, 2027), accounting for information collection burden experienced by approximately 3,150 eligible hospitals and 1,400 CAHs for the electronic health record (EHR) reporting period in CY 2025. The collection of information burden analysis in this proposed rule focuses on all eligible hospitals and CAHs that could participate in the Medicare Promoting Interoperability Program and report the objectives and measures, and report electronic Clinical Quality Measures (eCQMs), under the Medicare Promoting Interoperability Program for the EHR reporting periods in CY 2026 through CY 2027.

For more detailed information on our proposals for the Hospital IQR Program, we refer readers to section X.C. of the preamble of this proposed rule. For the Medicare Promoting Interoperability Program, we proposed to adopt a new optional bonus measure under the Public Health and Clinical Data Exchange objective for health information exchange with a public health agency (PHA) that occurs using the Trusted Exchange Framework and Common Agreement (TEFCA), and where the eligible hospital or CAH meets certain additional requirements, beginning with the EHR reporting period in CY 2026. We also proposed to modify two measures: (1) the Safety Assurance Factors for Electronic Health Record Resilience (SAFER) Guides measure, which we proposed to modify by requiring eligible hospitals and CAHs to attest ''yes'' to completing an annual self-assessment using the SAFER Guides published in January 2025 beginning with the EHR reporting period in CY 2026; and (2) the Security Risk Analysis measure, which we proposed to modify to require eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management as required under the HIPAA Security Rule beginning with the EHR reporting period in CY 2026. We also proposed to define the EHR reporting period in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that CY for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

Using the most recent data, the May 2023 National Occupational Employment and Wage Estimates (OEWS) from the BLS, we propose to use the mean hourly wage for medical records specialists (SOC 29–2072) for the industry, ''general medical and surgical hospitals,'' which is $27.69.[444] We believe the industry of ''general medical and surgical hospitals'' is more specific to this program compared to other industries under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.69 × 2 = $55.38) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we calculate the cost burden to eligible hospitals and CAHs using a wage plus benefits estimate of $55.38 per hour throughout the discussion in this section of the preamble of this proposed rule for the Medicare Promoting Interoperability Program. If BLS releases updated wage rates after this proposed rule appears in the **Federal Register** and before the final rule appears in the **Federal Register**, we will maintain the wage rates used in this proposed rule.

In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69903), our burden estimates were based on an assumption of 4,550 eligible hospitals and CAHs. For this FY 2026 proposed rule, based on data from the EHR reporting period in CY 2023, we continue to estimate approximately 3,150 eligible hospitals and 1,400 CAHs will report data to the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2026, for a total number of 4,550 respondents.

[444] U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed November 27, 2024. Available at: *https://www.bls.gov/oes/current/oes292072.htm.*

b. Information Collection Burden for the Proposed Adoption of a New Optional Bonus Measure Under the Public Health and Clinical Data Exchange Objective Beginning With the EHR Reporting Period in CY 2026

In section X.F.5. of the preamble of this proposed rule, we are proposing to adopt a new optional bonus measure under the Public Health and Clinical Data Exchange objective for reporting data to a PHA using TEFCA, and where the eligible hospital or CAH meets certain additional requirements, beginning with the EHR reporting period in CY 2026.

As part of the Public Health and Clinical Data Exchange objective, eligible hospitals and CAHs can receive credit for attesting to up to one optional bonus measure. While eligible hospitals and CAHs can attest to more than one optional bonus measure, we assumed they will not attest to more than one because they cannot receive any additional credit for doing so. Under OMB control number 0938–1278, our currently approved burden estimates include 0.5 minutes for eligible hospitals and CAHs to attest to one of the previously finalized optional bonus measures (the Public Health Registry measure and the Clinical Data Registry Reporting measure) under this objective. As a result, we estimate no additional burden for eligible hospitals and CAHs that elect to instead attest to this new optional bonus measure.

c. Information Collection Burden for the Proposed Modification of the SAFER Guides measure Beginning With the EHR Reporting Period in CY 2026

In section X.F.4. of the preamble of this proposed rule, we are proposing to modify the SAFER Guides measure by requiring eligible hospitals and CAHs to attest ''yes'' to completing an annual self-assessment using the SAFER Guides published in January 2025 beginning with the EHR reporting period in CY 2026.

In the FY 2022 IPPS/LTCH PPS final rule, we adopted the SAFER Guides measure and required eligible hospitals and CAHs to attest ''yes'' or ''no'' as to whether they completed an annual self-assessment on each of the nine SAFER Guides at any point during the CY in which their EHR reporting period occurs (86 FR 45479 through 45481). In the FY 2024 IPPS/LTCH PPS final rule, we finalized a requirement for eligible hospitals and CAHs to attest ''yes'' to fulfill the measure and discussed the associated costs for eligible hospitals and CAHs to conduct a SAFER Guides self-assessment (88 FR 59262 through 59265; 59432 and 59433). In this proposed rule, because we are not proposing an additional attestation, but instead propose to modify one that was previously finalized, this proposal would not result in any changes to the information collection burden currently approved under OMB control number 0938–1278.

d. Information Collection Burden for the Proposed Modification of the Security Risk Analysis Measure Beginning With the EHR Reporting Period in CY 2026

In section X.F.3. of the preamble of this proposed rule, we are proposing to modify the Security Risk Analysis measure by adding a requirement for eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management as required under the HIPAA Security Rule at 45 CFR 164.308(a)(1)(ii)(B) beginning with the EHR reporting period in CY 2026.

The currently approved burden estimate under OMB control number 0938–1278 for eligible hospitals and CAHs to conduct or review a security risk analysis, including addressing the security (to include encryption) of data created or maintained by CEHRT, implementing security updates as necessary, and correcting identified security deficiencies as part of the eligible hospital's or CAH's risk management process is approximately 6 hours annually as currently approved under OMB control number 0938–1278. Given the negligible additional effort associated with this proposal compared to the currently approved burden estimate, we propose that the currently approved burden estimate is sufficient to include the proposed attestation and do not propose any changes to the information collection burden currently approved under OMB control number 0938–1278.

e. Information Collection Burden for the Proposal to Define the EHR Reporting Period in CY 2026 and Subsequent Years as a Minimum of Any Continuous 180-Day Period Within That CY

In section X.F.2. of the preamble of this proposed rule, we are proposing to define the EHR reporting period in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that CY for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program. As this is the current requirement for the EHR reporting period in CY 2025 as finalized in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59259 through 59260), this proposal would not result in any changes to the information collection burden currently approved under OMB control number 0938–1278.

f. Summary of Estimates Used To Calculate the Collection of Information Burden

In summary, under OMB control number 0938–1278 (expiration date April 30, 2027), we estimate that the policies in this proposed rule would not result in a change in information collection burden. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.N. of Appendix A of this proposed rule).

8. ICRs for the Transforming Episode Accountability Model

In section XI.A. of the preamble of this proposed rule, we discuss testing the Transforming Episode Accountability Model (TEAM), finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), and propose updates to the model under the authority of the CMS Innovation Center. Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. As stated in section 1115A(d)(3) of the Act, chapter 35 of title 44, United States Code, shall not apply to the testing and evaluation of models under section 1115A of the Act. As a result, the information collection requirements contained in this proposed rule for TEAM need not be reviewed by the Office of Management and Budget.

XIV. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

Stephanie Carlton, Acting Administrator of the Centers for Medicare & Medicaid Services, approved this document on April 8, 2025.

List of Subjects

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Diseases, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 512

Administrative practice and procedure, Health care, Health facilities, Health insurance, Intergovernmental relations, Medicare, Penalties, Reporting and recordkeeping requirements.

For the reasons set out in the preamble, 42 CFR parts 412, 413, 495, and 512 are proposed to be amended as follows:

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 1. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 2. Section 412.24 is amended by revising paragraphs (e) and (f) to read as follows:

§ 412.24 Requirements under the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program.

* * * * *

(e) *Extraordinary circumstances exceptions (ECEs)*—(1) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the PCH. For purposes of this paragraph (e), an extraordinary circumstance is an event beyond the control of a PCH (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the PCH to comply with one or more applicable reporting requirements with respect to a fiscal year.

(2) *Process for requesting an ECE.* (i) A PCH may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the PCH of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the PCH, the written decision specifies whether the PCH is exempted from one or more reporting requirements or whether CMS has granted the PCH an extension of time to comply with one or more reporting requirements.

(3) *Authority to Grant an ECE.* (i) CMS may grant an ECE to one or more PCHs that have not requested an ECE if CMS determines that—

(A) A systemic problem with a CMS data collection system directly impacted the ability of the PCH to comply with a quality data reporting requirement; or

(B) An extraordinary circumstance has affected an entire region or locale.

(ii) Any ECE granted under this paragraph (e)(3) specifies whether the affected PCHs are exempted from one or more reporting requirements or whether CMS has granted the PCHs an extension of time to comply with one or more reporting requirements.

(f) *Public reporting of PCHQR Program data.* CMS makes data submitted by PCHs under the PCHQR Program available to the public on CMS websites. Prior to making any such data submitted by a PCH available to the public, CMS gives the PCH an opportunity to review the data via the Hospital Quality Reporting (HQR) system and announces the timeline for review on the QualityNet website and applicable listservs.

■ 3. Section 412.85 is amended by revising the section heading and paragraphs (b) and (c) to read as follows:

§ 412.85 Payment adjustment for certain immunotherapy cases.

* * * * *

(b) *Discharges subject to payment adjustment.* Payment is adjusted in accordance with paragraph (c) of this section for discharges assigned to MS–DRG 018 involving expanded access use of immunotherapy or that are part of an applicable clinical trial as determined by CMS based on the reporting of a diagnosis code indicating the encounter is part of a clinical research program on the claim for the discharge or, for discharges occurring on or after October 1, 2025, other cases where the immunotherapy product is not purchased in the usual manner, such as provided at no cost.

(c) *Adjustment.* The DRG weighting factor determined under § 412.60(b) is adjusted by a factor that reflects the average cost for cases assigned to MS–DRG 018 that involve expanded access use of immunotherapy, are part of an applicable clinical trial, or where the immunotherapy product is not purchased in the usual manner, such as provided at no cost, to the average cost for all other cases assigned to MS–DRG 018.

§ 412.90 [Amended]

■ 4. Section 412.90 is amended in paragraph (j) by removing the date ''January 1, 2025'' and adding in its place the date ''October 1, 2025''.

§ 412.101 [Amended]

■ 5. Section 412.101 is amended by—

■ a. In paragraph (b)(2)(i), removing the phrase ''FY 2010, the portion of FY 2025 beginning on January 1, 2025 and subsequent fiscal years,'' and adding in its place the phrase ''FY 2010 and FY 2026 and subsequent years,'';

■ b. In paragraph (b)(2)(iii), removing the phrase ''FY 2024 and the portion of FY 2025 beginning on October 1, 2024, and ending on December 31, 2024,'' and adding in its place the phrase ''FY 2025,'';

■ c. In paragraph (c)(1), removing the phrase ''FY 2010, the portion of FY 2025 beginning on January 1, 2025, and subsequent fiscal years,'' and adding in its place the phrase '' FY 2010 and FY 2026 and subsequent years,''; and

■ d. In paragraph (c)(3) introductory text, removing the phrase ''FY 2024 and the portion of FY 2025 beginning on October 1, 2024, and ending on December 31, 2024,'' and adding in its place ''FY 2025,''.

§ 412.108 [Amended]

■ 6. Section 412.108 is amended by—

■ a. In paragraph (a)(1) introductory text, removing the date ''January 1, 2025'' and adding in its place the date ''October 1, 2025''; and

■ b. In paragraph (c)(2)(iii) introductory text, removing the date ''January 1, 2025'' and adding in its place the date ''October 1, 2025''.

■ 7. Section 412.140 is amended by revising paragraph (c)(2) to read as follows:

§ 412.140 Participation, data submission, and validation requirements under the Hospital Inpatient Quality Reporting (IQR) Program.

* * * * *

(c) * * *

(2) *Extraordinary circumstance exception (ECE)*—(i) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the hospital. For purposes of this paragraph (c)(2), an extraordinary circumstance is an event beyond the control of a hospital (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

(ii) *Process for requesting an ECE.* (A) A hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(B) CMS notifies the hospital of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the hospital, the written decision specifies whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

(iii) *Authority to Grant an ECE.* CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines that—

(A) A systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement; or

(B) An extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (c)(2)(iii) specifies whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

* * * * *

■ 8. Section 412.152 is amended by—

■ a. In the definition of ''Applicable period''—

■ i. Revising the introductory text;

■ ii. Removing the word ''and'' at the end of paragraph (1);

■ iii. Removing the period at the end of paragraph (2) and adding in its place ''; and''; and

■ iv. Adding paragraph (3); and

■ b. In the definition of ''Applicable period for dual eligibility,'' removing the phrase ''3-year data period'' and adding in its place the phrase ''2-year or 3-year data period''.

The revision and addition read as follows:

§ 412.152 Definitions for the Hospital Readmissions Reduction Program.

* * * * *

Applicable period is, with respect to a fiscal year, the 2-year or 3-year period (specified by the Secretary) from which data are collected in order to calculate excess readmission ratios and adjustments under the Hospital Readmissions Reduction Program.

* * * * *

(3) Beginning with the FY 2027 program year, the applicable period is the 2-year period advanced by 1-year from the prior year's period from which data are collected in order to calculate excess readmission ratios and adjustments under the Hospital Readmissions Reduction Program, unless otherwise specified by the Secretary.

* * * * *

■ 9. Section 412.154 is amended by adding paragraph (d) to read as follows:

§ 412.154 Payment adjustments under the Hospital Readmissions Reduction Program.

* * * * *

(d) *Extraordinary circumstance exception (ECE)*—(1) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the hospital. For purposes of this paragraph (d), an extraordinary circumstance is an event beyond the control of a hospital (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

(2) *Process for requesting an ECE.* (i) A hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the hospital of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the hospital, the written decision specifies whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

(3) *Authority to Grant an ECE.* CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines that a systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement, or that an extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (d)(3) specifies whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

* * * * *

§ 412.160 [Amended]

■ 10. Section 412.160 is amended by removing the definition of ''Health equity adjustment bonus points.''

■ 11. Section 412.165 is amended by—

■ a. Removing paragraph (b)(5);

■ b. Redesginating paragraph (b)(6) as paragraph (b)(5);

■ c. Revising newly redesignated paragraph (b)(5) and paragraph (c).

The revisions read as follows:

§ 412.165 Performance scoring under the Hospital Value-Based Purchasing (VBP) Program.

* * * * *

(b) * * *

(5) The hospital's Total Performance Score for the fiscal year is the sum of the weighted domain scores up to a maximum score of 100.

(c) *Extraordinary circumstance exception (ECE)*—(1) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the hospital. For purposes of this paragraph (c), an extraordinary circumstance is an event beyond the control of a hospital (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

(2) *Process for requesting an ECE.* (i) A hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the hospital of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the hospital, the written decision will specify whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

(3) *Authority to Grant an ECE.* CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines that a systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement or that an extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (c)(3) specifies whether the affected hospitals are exempted from one or more reporting requirements or whether CMS has granted the hospitals an extension of time to comply with one or more reporting requirements.

■ 12. Section 412.172 is amended by adding paragraph (c) to read as follows:

§ 412.172 Payment adjustments under the Hospital-Acquired Condition Reduction Program.

* * * * *

(c) *Extraordinary circumstance exception (ECE)*—(1) *General rule.* CMS may grant an ECE with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the hospital. For purposes of this paragraph (c), an extraordinary circumstance is an event beyond the control of a hospital (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

(2) *Process for requesting an ECE.* (i) A hospital may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the hospital of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the hospital, the written decision specifies whether the hospital is exempted from one or more reporting requirements or whether CMS has granted the hospital an extension of time to comply with one or more reporting requirements.

(3) *Authority to grant an ECE.* CMS may grant an ECE to one or more hospitals that have not requested an ECE if CMS determines that a systemic problem with a CMS data collection system directly impacted the ability of the hospital to comply with a quality data reporting requirement, or that an extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (c)(3) will specify whether the affected PCHs are exempted from one or more reporting requirements or whether CMS has granted the PCHs an extension of time to comply with one or more reporting requirements.

* * * * *

■ 13. Section 412.273 is amended by—

■ a. Revising the section heading, the definitions of ''Termination'' and ''Withdrawal'' in paragraph (a), and paragraphs (c)(1), (d), and (e)(2); and

■ b. Adding paragraph (e)(3).

The revisions and addition read as follows:

§ 412.273 Withdrawing an application, terminating an approved 3-year reclassification, or reinstating a previous termination.

(a) * * *

Termination refers to the termination of an approved 3-year MGCRB reclassification. A termination is effective only for the full fiscal year(s) remaining in the 3-year period at the time the request is received. Requests for terminations for part of a fiscal year are not considered.

Withdrawal refers to the withdrawal of a 3-year MGCRB reclassification where the MGCRB has not yet issued a decision on the application.

* * * * *

(c) * * *

(1) A request for withdrawal must be received by the MGCRB at any time before the MGCRB issues a decision on the application.

* * * * *

(d) *Reapplication within the approved 3-year period, reinstatement of terminations, and prohibition on overlapping reclassification approvals*—(1) *Reinstatement of terminations.* Subject to the provisions of this section, a hospital (or group of hospitals) may cancel a termination, effective for the subsequent year, and request the MGCRB to reinstate the wage index reclassification for the remaining fiscal year(s) of the 3-year period.

(2) *Timing and process of reinstatement request.* Reinstatement requests must be submitted in writing to the MGCRB according to the method prescribed by the MGCRB no later than the deadline for submitting reclassification applications for the following fiscal year, as specified in § 412.256(a)(2).

(3) *Reapplications.* A hospital may apply for reclassification to a different area (that is, an area different from the one to which it was originally reclassified for the 3-year period). If the application is approved, the reclassification will be effective for 3 years. Once a 3-year reclassification becomes effective, a hospital may no longer reinstate a termination of another 3-year reclassification, regardless of whether the termination request is made within 3 years from the date of the withdrawal or termination.

(4) *Termination of existing 3-year reclassification.* In a case in which a hospital with an existing 3-year wage index reclassification applies to be reclassified to another area, its existing 3-year reclassification will be terminated when a second 3-year wage index reclassification goes into effect for payments for discharges on or after the following October 1. The terminated reclassification in such a case is not eligible for reinstatement.

(e) * * *

(2) A request to terminate or reinstate an approved individual reclassification must be submitted in writing to the MGCRB according to the method prescribed by the MGCRB.

(3) A request to terminate or reinstate an approved group reclassification must be submitted in writing to the MGCRB according to the method prescribed by the MGCRB.

(i) A request to terminate or reinstate an approved group reclassification that has not yet gone into effect must include all hospitals party to the reclassification.

(ii) Termination requests for group reclassification for the second or third year of the 3-year wage index reclassification and reinstatement requests for a group reclassification effective for the third year of the 3-year wage index reclassification may be submitted by an individual hospital that is party to the reclassification.

* * * * *

■ 14. Section 412.312 is amended by revising paragraph (f) to read as follows:

§ 412.312 Payment based on the Federal rate.

* * * * *

(f) *Payment adjustment for certain immunotherapy cases.* For discharges occurring on or after October 1, 2020, in determining the payment amount under this section for certain clinical trial or expanded access use immunotherapy cases, or, for discharges occurring on or after October 1, 2025, other cases where the immunotherapy product is not purchased in the usual manner, such as provided at no cost, as described in § 412.85(b), the DRG weighting factor described in paragraph (b)(1) of this section is adjusted as described in § 412.85(c).

■ 15. Section 412.560 is amended by—

■ a. Revising paragraph (d)(3); and

■ b. Adding paragraphs (d)(4) and (5).

The revision and additions read as follows:

§ 412.560 Requirements under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP).

* * * * *

(d) * * *

(3) *CMS decision on reconsideration request.* (i) CMS notifies the LTCH, in writing, of its final decision regarding any reconsideration request through at least one of the following methods:

(A) CMS designated data submission system.

(B) The United States Postal Service.

(C) Via email from the CMS Medicare Administrative Contractor (MAC).

(ii) CMS grants a timely request for reconsideration, and reverses an initial finding of non-compliance, only if CMS determines that the long-term care hospital was in full compliance with the

LTCH QRP requirements for the applicable program year.

(4) *Request for an extension to file a reconsideration of noncompliance request.* A long-term care hospital may request, and CMS may grant, an extension to file a reconsideration request if, during the period to request a reconsideration as set forth in paragraph (d)(2) of this section, the long-term care hospital was affected by an extraordinary circumstance beyond the control of the LTCH (for example, a natural or man-made disaster).

(i) The long-term care hospital must submit its request for an extension to file a reconsideration request no later than 30 calendar days from the date of the written notification of noncompliance.

(ii) The long-term care hospital must submit its request for an extension to CMS via email to *LTCHQRPReconsiderations@cms.hhs.gov*, and it must contain the following information:

(A) The CCN for the long-term care hospital.

(B) The business name of the long-term care hospital.

(C) The business address of the long-term care hospital.

(D) Contact information for the long-term care hospital's chief executive officer or designated personnel, including the name, telephone number, title, email address, and physical mailing address, which may not be a post office box.

(E) A statement of the reason for the request for the extension.

(F) Evidence of the impact of the extraordinary circumstances, including, for example, photographs, newspaper articles, and other media.

(5) *CMS decision on extension to file a reconsideration of noncompliance request.* CMS notifies the long-term care hospital in writing of its final decision regarding its request for an extension to file a reconsideration of noncompliance request via an email from CMS.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES; PAYMENT FOR ACUTE KIDNEY INJURY DIALYSIS

■ 16. The authority citation for part 413 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395m, 1395x(v), 1395x(kkk), 1395hh, 1395rr, 1395tt, and 1395ww.

■ 17. Section 413.85 is amended by revising paragraphs (d)(2)(i) and (ii) to read as follows:

§ 413.85 Cost of approved nursing and allied health education activities.

* * * * *

(d) * * *

(2) * * *

(i) Subject to the provisions of paragraphs (d)(2)(ii) and (iii) of this section, the net cost of approved educational activities is determined based on all of the following:

(A) Determine allowable direct costs incurred by the provider for trainee stipends and compensation of teachers employed by the provider.

(B) Subtract from allowable direct costs the revenues the provider receives from students or on behalf of students enrolled in the program, such as, but not limited to, tuition, student fees, or textbooks purchased for resale.

(C) Add indirect costs of the activities as determined under the Medicare cost-finding principles in § 413.24 but limited to indirect costs that the provider itself incurs as a consequence of operating the approved educational activities.

(ii) The direct and indirect allowable costs of educational activities do not include patient care costs, costs incurred by a related organization, or costs that constitute a redistribution of costs from an educational institution to a provider or costs that have been or are currently being provided through community support.

* * * * *

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 18. The authority citation for part 495 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 19. Section 495.4 is amended in the definition of ''EHR reporting period for a payment adjustment year'' by adding paragraphs (2)(x) and (3)(x) to read as follows:

§ 495.4 Definitions.

* * * * *

EHR reporting period for a payment adjustment year. * * *

(2) * * *

(x) For an eligible hospital in CY 2026 and subsequent years, the EHR reporting period is any continuous 180-day period within that calendar year and applies for the fiscal year payment adjustment year that is 2 years after the calendar year of the EHR reporting period.

(3) * * *

(x) For a CAH in CY 2026 and subsequent years, the EHR reporting period is any continuous 180-day period within that calendar year and applies for the fiscal year payment adjustment year for the calendar year of the EHR reporting period.

* * * * *

PART 512—STANDARD PROVISIONS FOR MANDATORY INNOVATION CENTER MODELS AND SPECIFIC PROVISIONS FOR CERTAIN MODELS

■ 20. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 21. The heading for part 512 is revised to read as set forth above.

■ 22. Section 512.505 is amended by—

■ a. Removing the definition for ''ADI'';

■ b. Adding definitions for ''APC'' and ''CDI'' in alphabetical order;

■ c. Revising the definition for ''Final normalization factor'';

■ d. Removing the definitions for ''Health equity goal'', ''Health equity plan'', ''Health equity plan intervention strategy'', and ''Health equity plan performance measure'';

■ e. Revising the definition for ''High-cost outlier cap'';

■ f. Adding definitions for ''Medicare ID'' and ''PECOS'' in alphabetical order;

■ g. Revising the definitions for ''Prospective normalization factor'' and ''Region'';

■ h. Adding definitions for ''Scaling factor'' and ''Trend year'' in alphabetical order; and

■ i. Removing the definition for ''Underserved community''.

The additions and revisions read as follows:

§ 512.505 Definitions.

* * * * *

APC stands for Ambulatory Payment Classification.

* * * * *

CDI stands for the Community Deprivation Index.

* * * * *

Final normalization factor refers to the mean of the benchmark price for each MS–DRG/HCPCS episode type and region divided by the mean of the risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type and region.

* * * * *

High-cost outlier cap refers to the 99th percentile of regional spending for a given MS–DRG/HCPCS episode type, region, and baseline year, which is the amount at which episode spending would be capped for purposes of determining baseline and performance year episode spending.

* * * * *

Medicare ID means the hospital CCN in the PECOS.

* * * * *

PECOS stands for the Provider Enrollment, Chain, and Ownership System.

* * * * *

Prospective normalization factor refers to the multiplier incorporated into the preliminary target price to ensure that the average of the total risk-adjusted benchmark price does not exceed the average of the total non-risk adjusted benchmark price, calculated as set forth in § 512.540(b)(6).

* * * * *

Region means one of the nine U.S. census divisions, as defined by the U.S. Census Bureau, with the U.S. territories included in Census Division 9.

* * * * *

Scaling factor means the ratio of the remapped MS–DRG or HCPCS/APC relative weight in the performance year, as applicable, to the original MS–DRG or HCPCS/APC relative weight in the baseline period.

* * * * *

Trend year means either of the 2 years immediately prior to the 3-year baseline period used in combination with the baseline period to calculate the prospective trend factor.

* * * * *

■ 23. Section 512.508 is added, under undesignated center heading ''TEAM Participation,'' to read as follows:

§ 512.508 Mandatory participation.

(a) *General.* TEAM participants, as defined in § 512.505, must participate in TEAM for the full duration of the model performance period, unless CMS terminates TEAM or the TEAM participant receives notice of termination from TEAM in accordance with § 512.596.

(b) *New hospital exception.* New hospitals with a Medicare ID with an initial effective date after December 31, 2024, within the PECOS that initiate episodes and are paid under the IPPS with a CCN primary address located in one of the mandatory CBSAs selected for participation in TEAM in accordance with § 512.515, must participate in TEAM at the beginning of the performance year that follows one full performance year since their Medicare ID initial effective date.

(1) As described in § 512.550(b)(2)(ii), CMS performs reconciliation calculations for any new or surviving TEAM participant that results from a TEAM participant's reorganization event, as defined in § 512.505, for episodes where the anchor hospitalization admission or anchor procedure occurred on or after the effective date of the reorganization event. Therefore, new hospitals that result from a TEAM participant's reorganization event begin participation in TEAM on the effective date of the reorganization event.

(2) [Reserved]

(c) *Newly qualifying hospital exception.* (1) Hospitals that begin to satisfy the definition of TEAM participant, as described in § 512.505, must participate in TEAM at the beginning of the performance year that follows one full performance year since the date on which they began to satisfy the definition of TEAM participant.

(2) Hospitals that no longer satisfy the definition of TEAM participant, as described in § 512.505, end TEAM participation on the date they no longer satisfy the definition.

(i) CMS notifies hospitals identified in this paragraph (c)(2) within 30 days of the hospital no longer satisfying the TEAM participant definition or as soon as is reasonably practicable.

(ii) [Reserved]

(d) *Monitoring.* CMS may monitor specifically for the potential shifting of patients with high anticipated treatment costs from TEAM participants to new non-participant hospitals, including hospitals in the participation deferment period in accordance with § 512.505(b) and (c).

■ 24. Section 512.520 is amended by revising paragraph (b)(4)(i) to read as follows:

§ 512.520 Participation tracks.

* * * * *

(b) * * *

(4) * * *

(i) Medicare-dependent hospital (as defined in § 512.505) and the Medicare Dependent Hospital program, as authorized by statute, is not expired at the time Track 2 selections are due, as described in paragraph (b)(2) of this section.

* * * * *

■ 25. Section 512.540 is amended by—

■ a. Revising paragraphs (a)(2) and (3) and (b)(2)(i) through (v);

■ b. In paragraph (b)(4), removing the phrase ''specified in § 512.540(a)(1)(ii)'' and adding in its place the phrase ''specified in paragraph (a)(1)(ii) of this section for each baseline year individually'';

■ c. In paragraph (b)(6) introductory text, removing the phrase ''factor, which is a multiplier'' and adding in its place the phrase ''factor at the MS–DRG/HCPCS region level, which is a multiplier''; and

■ d. Revising paragraphs (b)(7) and (8).

The revisions read as follows:

§ 512.540 Determination of preliminary target prices.

(a) * * *

(2) *Applicable time period for preliminary target prices.* CMS calculates preliminary target prices for each MS–DRG/HCPCS episode type and region for each performance year and applies the preliminary target price to each episode based on the episode's date of discharge from the anchor hospitalization or the date of the anchor procedure, as applicable. CMS also does all of the following:

(i) Accounts for MS–DRG and HCPCS/APC code changes between the baseline period and performance year by identifying diagnosis or procedure codes that are being moved from one MS–DRG or HCPCS/APC to another for the relevant performance year and mapping the new or revised MS–DRG or HCPCS/APC codes to the original codes that were used in the baseline period.

(ii) Constructs preliminary target prices using the remapped MS–DRG or HCPCS/APC codes in the same manner described in paragraph (b) of this section, with target prices for each MS–DRG/HCPCS episode type, inclusive of episodes initiated by anchor hospitalizations and anchor procedures that would be related to the remapped MS–DRG or HCPCS/APC codes.

(iii) Adjusts the preliminary target price by calculating and applying the scaling factor to the standardized episode spending of the MS–DRG portion for the anchor hospitalization or standardized episode spending of the HCPCS/APC portion of the anchor procedure.

(3) *Episodes that begin in one performance year and end in the subsequent performance year.* CMS applies the preliminary target price to the episode based on the date of discharge from the anchor hospitalization or the date of the anchor procedure, as applicable, and reconciles the episode based on the date of discharge from the anchor hospitalization or the date of the anchor procedure.

(b) * * *

(2) * * *

(i) Performance Year 1: Episodes with anchor hospitalization start dates or anchor procedure dates beginning on or after January 1, 2022, and anchor hospitalization discharge dates or anchor procedure dates between January 1, 2022, and December 31, 2024.

(ii) Performance Year 2: Episodes with anchor hospitalization or anchor procedure start dates beginning on or after January 1, 202,3 and anchor hospitalization discharge dates or

anchor procedure dates between January 1, 2023, and December 31, 2025.

(iii) Performance Year 3: Episodes with anchor hospitalization or anchor procedure start dates beginning on or after January 1, 2024, and anchor hospitalization discharge dates or anchor procedure dates between January 1, 2024, and December 31, 2026.

(iv) Performance Year 4: Episodes with anchor hospitalization or anchor procedure start dates beginning on or after January 1, 2025, and anchor hospitalization discharge dates or anchor procedure dates between January 1, 2025, and December 31, 2027.

(v) Performance Year 5: Episodes with anchor hospitalization or anchor procedure start dates beginning on or after January 1, 2026, and anchor hospitalization discharge dates or anchor procedure dates between January 1, 2026, and December 31, 2028.

* * * * *

(7) *Prospective trend factor.* CMS calculates a multiplier for each MS–DRG/HCPCS episode type and region which is applied to the most recent calendar year of the applicable baseline period. The multiplier is calculated using linear regression on the logarithmically transformed average regional spending for each MS–DRG/HCPCS episode type in the baseline years and trend years at both the regional and national level. CMS exponentiates the coefficient from this regression to calculate the estimated annual change (where an exponentiated coefficient of 1 signifies no change) in average regional spending for each MS–DRG/HCPCS episode type from year to year. CMS then squares this value to calculate the 2-year prospective trend factor. The prospective trend factor for each MS–DRG/HCPCS episode type and region is the average (arithmetic mean) of the multiplier for that MS–DRG/HCPCS episode type and region and the national average for that MS–DRG/HCPCS episode type.

(8) *Communication of preliminary target prices.* CMS communicates the preliminary target prices for each MS–DRG/HCPCS episode type for each region, and the preliminary target prices for each MS–DRG/HCPCS episode type specific to the TEAM participant before the performance year in which they apply.

* * * * *

■ 26. Section 512.545 is amended by—

■ a. In paragraph (a) introductory text—

■ i. Removing the phrase ''social need'' and adding in its place the phrase ''beneficiary economic''; and

■ ii. Removing the text ''paragraph (a)(6)(i) through (v)'' and adding in its place the text ''paragraphs (a)(6)(i) through (v)'';

■ b. In paragraph (a)(1), removing the phrase ''CMS–HCC conditions based on a lookback period'' and adding in its place ''CMS–HCC conditions based on a 180-day lookback period'';

■ c. Revising paragraphs (a)(3) and (6), (e)(1)(i), and (f) introductory text.

The revisions read as follows:

§ 512.545 Determination of reconciliation target prices.

(a) * * *

(3) The beneficiary economic risk adjustment factor uses two variables, representing beneficiaries that, as of the first day of the episode—

(i) Meet one or more of the following economic measures:

(A) [Reserved]

(B) National CDI above the 80th percentile.

(C) Eligibility for the low-income subsidy.

(D) Eligibility for full Medicaid benefits.

(ii) Do not meet any of the three economic measures in paragraph (a)(3)(i) of this section.

* * * * *

(6) Episode category-specific beneficiary level risk adjustment factors represent the presence or absence in beneficiaries, based on a 180-day lookback period that ends on the day prior to the anchor hospitalization or anchor procedure, of each of the following conditions:

(i) CABG episode category.

(A) Prior post-acute care use.

(B) HCC 37: Diabetes with Chronic Complications.

(C) HCC 48: Morbid Obesity.

(D) HCC 125: Dementia, Severe.

(E) HCC 126: Dementia, Moderate.

(F) HCC 127: Dementia, Mild or Unspecified.

(G) HCC 155: Major Depression, Moderate or Severe, without Psychosis.

(H) HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia.

(I) HCC 213: Cardio-Respiratory Failure and Shock.

(J) HCC 224: Acute on Chronic Heart Failure.

(K) HCC 226: Heart Failure, Except End-Stage and Acute.

(L) HCC 228: Acute Myocardial Infarction.

(M) HCC 229: Unstable Angina and Other Acute Ischemic Heart Disease.

(N) HCC 238: Specified Heart Arrhythmias.

(O) HCC 249: Ischemic or Unspecified Stroke.

(P) HCC 253: Hemiplegia/Hemiparesis.

(Q) HCC 263: Atherosclerosis of Arteries of the Extremities with Ulceration or Gangrene.

(R) HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders.

(S) HCC 298: Severe Diabetic Eye Disease, Retinal Vein Occlusion, and Vitreous Hemorrhage.

(T) HCC 326: Chronic Kidney Disease, Stage 5.

(U) HCC 327: Chronic Kidney Disease, Severe (Stage 4).

(V) HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle.

(W) HCC 409: Amputation Status, Lower Limb/Amputation Complications.

(ii) LEJR episode category.

(A) Ankle procedure or reattachment, partial hip procedure, partial knee arthroplasty, total hip arthroplasty or hip resurfacing procedure, and total knee arthroplasty.

(B) Disability as the original reason for Medicare enrollment.

(C) Dementia without complications.

(D) Prior post-acute care use.

(E) HCC 17: Cancer Metastatic to Lung, Liver, Brain, and Other Organs; Acute Myeloid Leukemia Except Promyelocytic.

(F) HCC 36: Diabetes with Severe Acute Complications.

(G) HCC 37: Diabetes with Chronic Complications.

(H) HCC 48: Morbid Obesity.

(I) HCC 125: Dementia, Severe.

(J) HCC 126: Dementia, Moderate.

(K) HCC 127: Dementia, Mild or Unspecified.

(L) HCC 151: Schizophrenia.

(M) HCC 155: Major Depression, Moderate or Severe, without Psychosis.

(N) HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia.

(O) HCC 224: Acute on Chronic Heart Failure.

(P) HCC 225: Acute Heart Failure (Excludes Acute on Chronic).

(Q) HCC 226: Heart Failure, Except End-Stage and Acute.

(R) HCC 238: Specified Heart Arrhythmias.

(S) HCC 253: Hemiplegia/Hemiparesis.

(T) HCC 267: Deep Vein Thrombosis and Pulmonary Embolism.

(U) HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders.

(V) HCC 326: Chronic Kidney Disease, Stage 5.

(W) HCC 327: Chronic Kidney Disease, Severe (Stage 4).

(X) HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle.

(Y) HCC402: Hip Fracture/Dislocation.

(iii) Major Bowel Procedure episode category.
(A) Long-term institutional care use.
(B) HCC 17: Cancer Metastatic to Lung, Liver, Brain, and Other Organs; Acute Myeloid Leukemia Except Promyelocytic.
(C) HCC 22: Bladder, Colorectal, and Other Cancers.
(D) HCC 37: Diabetes with Chronic Complications.
(E) HCC 48: Morbid Obesity.
(F) HCC 78: Intestinal Obstruction/Perforation.
(G) HCC 125: Dementia, Severe.
(H) HCC 126: Dementia, Moderate.
(I) HCC 127: Dementia, Mild or Unspecified.
(J) HCC 151: Schizophrenia.
(K) HCC 155: Major Depression, Moderate or Severe, without Psychosis.
(L) HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia.
(M) HCC 201: Seizure Disorders and Convulsions.
(N) HCC 211: Respirator Dependence/Tracheostomy Status/Complications.
(O) HCC 213: Cardio-Respiratory Failure and Shock.
(P) HCC 224: Acute on Chronic Heart Failure.
(Q) HCC 226: Heart Failure, Except End-Stage and Acute.
(R) HCC 238: Specified Heart Arrhythmias.
(S) HCC 253: Hemiplegia/Hemiparesis.
(T) HCC 267: Deep Vein Thrombosis and Pulmonary Embolism.
(U) HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders.
(V) HCC 326: Chronic Kidney Disease, Stage 5.
(W) HCC 327: Chronic Kidney Disease, Severe (Stage 4).
(X) HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle.
(Y) HCC 463: Artificial Openings for Feeding or Elimination.
(iv) SHFFT episode category.
(A) HCC 36: Diabetes with Severe Acute Complications.
(B) HCC 37: Diabetes with Chronic Complications.
(C) HCC 38: Diabetes with Glycemic, Unspecified, or No Complications.
(D) HCC 48: Morbid Obesity.
(E) HCC 63: Chronic Liver Failure/End-Stage Liver Disorders.
(F) HCC 93: Rheumatoid Arthritis and Other Specified Inflammatory Rheumatic Disorders.
(G) HCC 109: Acquired Hemolytic, Aplastic, and Sideroblastic Anemias.
(H) HCC 125: Dementia, Severe.
(I) HCC 126: Dementia, Moderate.
(J) HCC 127: Dementia, Mild or Unspecified.
(K) HCC 180: Quadriplegia.
(L) HCC 181: Paraplegia.
(M) HCC 191: Quadriplegic Cerebral Palsy.
(N) HCC 198: Multiple Sclerosis.
(O) HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia.
(P) HCC 211: Respirator Dependence/Tracheostomy Status/Complications.
(Q) HCC 213: Cardio-Respiratory Failure and Shock.
(R) HCC 226: Heart Failure, Except End-Stage and Acute.
(S) HCC 238: Specified Heart Arrhythmias.
(T) HCC 249: Ischemic or Unspecified Stroke.
(U) HCC 253: Hemiplegia/Hemiparesis.
(V) HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders.
(W) HCC 326: Chronic Kidney Disease, Stage 5.
(X) HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle.
(Y) HCC 402: Hip Fracture/Dislocation.
(v) Spinal Fusion episode category.
(A) Prior post-acute care use.
(B) HCC 17: Cancer Metastatic to Lung, Liver, Brain, and Other Organs; Acute Myeloid Leukemia Except Promyelocytic.
(C) HCC 18: Cancer Metastatic to Bone, Other and Unspecified Metastatic Cancer; Acute Leukemia Except Myeloid.
(D) HCC 37: Diabetes with Chronic Complications.
(E) HCC 48: Morbid Obesity.
(F) HCC 93: Rheumatoid Arthritis and Other Specified Inflammatory Rheumatic Disorders.
(G) HCC 125: Dementia, Severe.
(H) HCC 126: Dementia, Moderate.
(I) HCC 127: Dementia, Mild or Unspecified.
(J) HCC 155: Major Depression, Moderate or Severe, without Psychosis.
(K) HCC 180: Quadriplegia.
(L) HCC 181: Paraplegia.
(M) HCC 182: Spinal Cord Disorders/Injuries.
(N) HCC 192: Cerebral Palsy, Except Quadriplegic.
(O) HCC 193: Chronic Inflammatory Demyelinating Polyneuritis and Multifocal Motor Neuropathy.
(P) HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia.
(Q) HCC 224: Acute on Chronic Heart Failure.
(R) HCC 226: Heart Failure, Except End-Stage and Acute.
(S) HCC 238: Specified Heart Arrhythmias.
(T) HCC 249: Ischemic or Unspecified Stroke.
(U) HCC 253: Hemiplegia/Hemiparesis.
(V) HCC 254: Monoplegia, Other Paralytic Syndromes.
(W) HCC 267: Deep Vein Thrombosis and Pulmonary Embolism.
(X) HCC 326: Chronic Kidney Disease, Stage 5.
(Y) HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle.
(Z) HCC 401: Vertebral Fractures without Spinal Cord Injury.

■ 27. Section 512.547 is amended by—
■ a. In paragraph (a)(2) introductory text, removing the phrase ''years 2 through 5'' and adding in its place ''year 2'';
■ b. Adding paragraph (a)(3); and
■ d. Revising paragraph (b)(1)(i)(D).

The addition and revision read as follows:

§ 512.547 Quality measures, composite quality score, and display of quality measures.

(a) * * *
(3) For performance years 3 through 5:
(i) For all episode categories: Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356) with a CY 2025 CQS baseline period.
(ii) For all episode categories: Hospital Harm—Falls with Injury (CMIT ID #1518) with a CY 2026 CQS baseline period.
(iii) For all episode categories: Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788) with a CY 2026 CQS baseline period.

(iv) For all episode categories: Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) (CMIT ID #134) with a CY 2026 CQS baseline period.

(v) For LEJR episodes: Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618) with a CY 2025 CQS baseline period.

(vi) For LEJR and Spinal Fusion episodes: Information Transfer PRO–PM (CMIT ID #1797) with a CY 2027 CQS baseline period.

§ 512.598 [Removed]

■ 31. Section 512.598 is removed.

Robert F. Kennedy, Jr.,

Secretary, Department of Health and Human Services.

Note: The following addendum and appendices will not appear in the Code of Federal Regulations.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective With Cost Reporting Periods Beginning on or After October 1, 2025, and Payment Rates for LTCHs Effective for Discharges Occurring on or After October 1, 2025

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the proposed prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2026 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2026. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the proposed figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this proposed rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that would be effective for cost reporting periods beginning on or after October 1, 2025. In addition, we are setting forth a description of the methods and data we used to determine the LTCH PPS standard Federal payment rate that would be applicable to Medicare LTCHs for FY 2026.

In general, except for SCHs and MDHs, for FY 2026, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (including, as discussed in section IV.E. of the preamble of this proposed rule, uncompensated care payments under section 1886(r)(2) of the Act).
- The updated hospital-specific rate based on FY 1982 costs per discharge.
- The updated hospital-specific rate based on FY 1987 costs per discharge.
- The updated hospital-specific rate based on FY 1996 costs per discharge.
- The updated hospital-specific rate based on FY 2006 costs per discharge.

Under section 1886(d)(5)(G) of the Act, MDHs historically were paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever was higher. However, section 5003(a)(1) of Public Law 109–171 extended and modified the MDH special payment provision that was previously set to expire on October 1, 2006, to include discharges occurring on or after October 1, 2006, but before October 1, 2011. Under section 5003(b) of Public Law 109–171, if the change results in an increase to an MDH's target amount, we must rebase an MDH's hospital specific rates based on its FY 2002 cost report. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor. Section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through FY 2025. Therefore, under current law, the MDH program will expire for discharges on or after October 1, 2025. We note that if the MDH program were to be extended by law beyond September 30, 2025, into FY 2026, the proposed updates to the hospital-specific rates for SCHs as described in this section would also apply to the hospital-specific rates for MDHs for FY 2026. We refer readers to section V.F. of the preamble of this proposed rule for further discussion of the MDH program.

As discussed in section V.B.2. of the preamble of this proposed rule, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. In general, Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update. Accordingly, our discussion later in this section does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum, we are proposing to make changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2026. In section III. of this Addendum, we discuss our proposed policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2026. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2026. In section V. of this Addendum, we discuss proposed policy changes for determining the LTCH PPS standard Federal rate for LTCHs paid under the LTCH PPS for FY 2026. The tables to which we refer in the preamble of this proposed rule are listed in section VI. of

this Addendum and are available via the internet on the CMS website.

II. Proposed Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2026

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. In this section, we discuss the factors we are proposing to use for determining the proposed prospective payment rates for FY 2026.

In summary, the proposed standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the internet on the CMS website) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2026, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount.

We refer readers to section VI.B. of the preamble of this proposed rule for a complete discussion on the FY 2026 inpatient hospital update. The table that follows shows these four scenarios:

PROPOSED FY 2026 APPLICABLE PERCENTAGE INCREASE FOR THE IPPS

FY 2026	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is not a meaningful EHR user	Hospital did not submit quality data and is a meaningful EHR user	Hospital did not submit quality data and is not a meaningful EHR user
Proposed Market Basket Rate-of-Increase	3.2	3.2	3.2	3.2
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	−0.8	−0.8
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	−2.4	0	−2.4
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8	−0.8	−0.8
Proposed Applicable Percentage Increase Applied to Standardized Amount	2.4	0.0	1.6	−0.8

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for ''subsection (d)'' hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico. In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. Accordingly, the applicable percentage increase for subsection (d) Puerto Rico hospitals that are not meaningful EHR users for FY 2026 and subsequent fiscal years is adjusted by the proposed adjustment for failure to be a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act. The regulations at 42 CFR 412.64(d)(3)(ii) reflect the current law for the update for subsection (d) Puerto Rico hospitals for FY 2022 and subsequent fiscal years.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to the standardized amount to ensure budget neutrality for the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, as discussed in section II.D.2.c. of the preamble of this proposed rule, consistent with our current methodology for implementing DRG recalibration and reclassification budget neutrality under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to ensure the wage index and labor-related share changes (depending on the fiscal year) are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005)). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.
- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2025 budget neutrality factor and applying a revised factor.
- An adjustment to the standardized amount to implement in a budget neutral manner the wage index cap policy (as described in section III.G.6. of the preamble of this proposed rule).
- Using our authority under section 1886(d)(5)(I)(i) of the Act, an adjustment to the standardized amount to implement in a budget neutral manner the proposed transition for the discontinuation of the low wage index hospital policy (as described in section III.F.7. of the preamble of this proposed rule).
- An adjustment to ensure the effects of the Rural Community Hospital Demonstration program required under section 410A of Public Law 108–173 (as amended by sections 3123 and 10313 of Pub. L. 111–148, which extended the demonstration program for an additional 5 years and section 15003 of Pub. L. 114–255), are budget neutral as required under section 410A(c)(2) of Public Law 108–173.
- An adjustment to remove the FY 2025 outlier offset and apply an offset for FY 2026, as provided for in section 1886(d)(3)(B) of the Act.

For FY 2026, consistent with current law, we are proposing to apply the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we are proposing to apply a uniform, national budget neutrality adjustment to the FY 2026 wage index for the rural floor.

For FY 2026, we are proposing to continue to not remove the Stem Cell Acquisition Budget Neutrality Factor from the prior year's standardized amount and to not apply a new factor. If we removed the prior year's adjustment, we would not satisfy budget neutrality. We believe this approach ensures the effects of the reasonable cost-based payment for allogeneic hematopoietic stem cell acquisition costs under section 108 of the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94) are budget neutral as required under section 108 of Public Law 116–94. For a discussion of Stem Cell

Acquisition Budget Neutrality Factor, we refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 59032 and 59033).

We finally note, as discussed in section III.G.5. of the preamble to this proposed rule, in the FY 2025 IFC we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. For FY 2026 and subsequent fiscal years, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are proposing to discontinue the low wage index hospital policy. Because we are proposing to discontinue the low wage index hospital policy for FY 2026 and subsequent fiscal years we are no longer applying the low wage index budget neutrality factor to the standardized amounts.

A. Calculation of the Proposed Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983, interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2026, we are proposing to rebase and revise the national labor-related and nonlabor-related shares (based on the proposed 2023-based hospital IPPS market basket discussed in section IV.B.3. of the preamble of this proposed rule). Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the ''labor-related share.'' For FY 2026, as discussed in section III.H. of the preamble of this proposed rule, we are proposing to use a labor-related share of 66.0 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are proposing to apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The proposed standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this proposed rule and are available via the internet on the CMS website.

2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage increase. Accordingly, we are proposing to calculate the FY 2026 national average standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, we are proposing to use the proposed 2023-based IPPS operating and capital market baskets for FY 2026. As discussed in section VI.B. of the preamble of this proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are proposing to reduce the FY 2026 applicable percentage increase (which for this proposed rule is based on IGI's fourth quarter 2024 forecast of the proposed 2023-based IPPS market basket) by the productivity adjustment, as discussed elsewhere in this proposed rule.

Based on IGI's fourth quarter 2024 forecast of the IPPS hospital market basket percentage increase (as discussed in appendix B of this proposed rule), the forecast of the hospital market basket percentage increase for FY 2026 for this proposed rule is 3.2 percent and the forecast of the productivity adjustment for FY 2026 for this proposed rule is 0.8 percentage point. As discussed earlier, for FY 2026, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section VI.B. of the preamble of this proposed rule for a complete discussion on the proposed FY 2026 inpatient hospital update to the standardized amount. We also refer readers to the previous table for the four possible applicable percentage increases that would be applied to update the national standardized amounts. The proposed standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the internet on the CMS website reflect these differential amounts.

Although the update factors for FY 2026 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2026 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our recommendations in the **Federal Register** for public comment. Our recommendation on the proposed FY 2026 update factors is set forth in appendix B of this proposed rule.

4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the proposed FY 2026 standardized amount is as follows:

- To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we applied the following inclusion and exclusion criteria: include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); exclude CAHs and Rural Emergency Hospitals (REHs) at the time of this proposed rule (we finalized to remove REHs in the calculation of the standardized amount in the FY 2025 IPPS/LTCH final rule (89 FR 69941–69942); exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS excluded-cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- As in the past, we are proposing to adjust the FY 2026 standardized amount to remove the effects of the FY 2026 geographic reclassifications and outlier payments before applying the FY 2026 updates. We then applied budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on proposed FY 2026 payment policies.
- We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

- Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these

payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total ''operating DRG payments,'' which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

• Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

• Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

• Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field for the budget neutrality adjustments. We are proposing to remove organ acquisition charges, except for cases that group to MS–DRG 018, from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS. Revenue centers 081X–089X are typically excluded from ratesetting, however, we are proposing to not remove revenue center 891 charges from MS–DRG 018 claims during ratesetting because those revenue 891 charges were included in the relative weight calculation for MS–DRG 018, which is consistent with the policy finalized in the FY 2021 final rule (85 FR 58600). We note that a new MedPAR variable for revenue code 891 charges was introduced in April 2020.

• For FY 2026, we are continuing to remove allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).

• The participation of hospitals under the BPCI (Bundled Payments for Care Improvement) Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in the BPCI Advanced model in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals would continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at: *https://innovation.cms.gov/initiatives/bpci-advanced/*.

For FY 2026, consistent with how we treated hospitals that participated in the BPCI Advanced Model in the FY 2021 IPPS/LTCH PPS final rule (85 FR 59029 and 59030), we are proposing to include all applicable data from subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations. We believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because these hospitals are still receiving IPPS payments under section 1886(d) of the Act. For the same reasons, we are proposing to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

• Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, consistent with the approach we have taken in prior years, for FY 2026, we are proposing to continue to apply a proxy based on the prior fiscal year hospital readmissions payment adjustment and a proxy based on the prior fiscal year hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). Under this proposed policy for FY 2026, we used the final FY 2025 readmissions adjustment factors from Table 15 of the FY 2025 IPPS/LTCH PPS final rule and the final FY 2025 hospital VBP adjustment factors from Table 16B of the FY 2025 IPPS/LTCH PPS final rule. These proxy factors are applied on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum. We refer the reader to section V.K. of the preamble of this proposed rule for a complete discussion on the Hospital Readmissions Reduction Program and section V.L. of the preamble of this proposed rule for a complete discussion on the Hospital VBP Program.

• The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured and any additional statutory adjustment, is available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

Consistent with prior fiscal years, we are proposing to include estimated empirically justified Medicare DSH payments that would be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we are proposing to consider estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

We also are proposing to include the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

• When calculating total payments for budget neutrality, to determine total payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of

the total payments is greater. As discussed in section IV.G. of the preamble to this proposed rule and later in this section, we are proposing to continue to use the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we are proposing to include estimated uncompensated care payments in this comparison.

As discussed elsewhere in this proposed rule, section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through FY 2025. Therefore, under current law, the MDH program will expire for discharges on or after October 1, 2025. If the MDH program were to be extended by law into FY 2026, we would, depending on the timing of such legislation in relation to the final rule, include the total payments for MDHs in the budget neutrality discussed in this section. We note, for the final rule, if the MDH program were extended by law into FY 2026, consistent with historical practice for MDHs, when computing payments under the Federal national rate plus 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate, we would continue to take into consideration uncompensated care payments in the computation of payments under the Federal rate and the hospital-specific rate for MDHs under any such extension.

- We are proposing to include an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2026. Similar to FY 2025, we are including this adjustment based on data on the prior year's performance. Payments for hospitals would be estimated based on the proposed applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2026.
- In our determination of all budget neutrality factors described in section II.A.4. of this Addendum, we used transfer-adjusted discharges.

We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49414 through 49415), we finalized a change to the ordering of the budget neutrality factors in the calculation so that the RCH Demonstration budget neutrality factor is applied after all wage index and other budget neutrality factors. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

a. Proposed Reclassification and Recalibration of MS–DRG Relative Weights Before Cap

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.D. of the preamble of this proposed rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are proposing to make a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For this FY 2026 proposed rule, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2024 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2025 labor-related share percentages, the FY 2025 relative weights, and the FY 2025 pre-reclassified wage data, and applied the proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments (as described previously); and
- Aggregate payments using the FY 2025 labor-related share percentages, the proposed FY 2026 relative weights before applying the 10-percent cap, and the FY 2025 pre-reclassified wage data, and applied the same proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments applied previously.

Because this payment simulation uses the proposed FY 2026 relative weights (before applying the 10-percent cap), consistent with our proposal in section V.I. of the preamble to this proposed rule, we applied the proposed adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments. We note that because the simulations of payments for all of the budget neutrality factors discussed in this section also use the FY 2026 relative weights, we are proposing to apply the adjustor for certain MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and other immunotherapies) cases in all simulations of payments for the budget neutrality factors discussed later in this section. We refer the reader to section V.I. of the preamble of this proposed rule for a complete discussion on the proposed adjustor for certain cases that group to MS–DRG 018 and to section II.D.2.b. of the preamble of this proposed rule, for a complete discussion of the proposed adjustment to the FY 2026 relative weights to account for certain cases that group to MS–DRG 018.

Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we are proposing to apply the MS–DRG reclassification and recalibration budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2025. Please see the table later in this section setting forth each of the proposed FY 2026 budget neutrality factors.

b. Proposed Budget Neutrality Adjustment for Reclassification and Recalibration of MS–DRG Relative Weights With Cap

As discussed in section II.D.2.c. of the preamble of this proposed rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900), we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. As also discussed in section II.D.2.c. of the preamble of this proposed rule, and consistent with our current methodology for implementing budget neutrality for MS–DRG reclassification and recalibration of the relative weights under section 1886(d)(4)(C)(iii) of the Act, we apply a budget neutrality adjustment to the standardized amount for all hospitals so that this 10-percent cap on relative weight reductions does not increase estimated aggregate Medicare payments beyond the payments that would be made had we never applied this cap. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

To calculate this proposed budget neutrality adjustment factor for FY 2026, we used FY 2024 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2025 labor-related share percentages, the proposed FY 2026 relative weights before applying the 10-percent cap, and the FY 2025 pre-reclassified wage data, and applied the proposed proxy FY 2026 hospital readmissions payment adjustments and the proposed proxy FY 2026 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2025 labor-related share percentages, the proposed FY 2026 relative weights after applying the 10-percent cap, and the FY 2025 pre-reclassified wage data, and applied the same proposed proxy FY 2026 hospital readmissions payment adjustments and proposed proxy FY 2026 hospital VBP payment adjustments applied previously.

Because this payment simulation uses the proposed FY 2026 relative weights, consistent with our proposal in section V.I. of the preamble to this proposed rule and our historical policy, and as discussed in the preceding section, we applied the proposed adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments.

In addition, we applied the proposed MS–DRG reclassification and recalibration budget neutrality adjustment factor before the cap (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2025 to FY 2026. Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, as we are proposing to apply this budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2024. Please see the table later in this section setting forth each of the proposed FY 2026 budget neutrality factors.

c. Updated Wage Index—Proposed Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2026, we are proposing to adjust 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.D. of the preamble of this proposed rule.

To compute a proposed budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2024 discharge data to simulate payments and compared the following:

- Aggregate payments using the proposed FY 2026 relative weights and the FY 2025 pre-reclassified wage indexes, applied the FY 2025 labor-related share of 67.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the proxy FY 2026 hospital readmissions payment adjustment and the proxy FY 2026 hospital VBP payment adjustment.
- Aggregate payments using the proposed FY 2026 relative weights and the proposed FY 2026 pre-reclassified wage indexes, applied the proposed labor-related share for FY 2026 of 66.0 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same proxy FY 2026 hospital readmissions payment adjustments and proxy FY 2026 hospital VBP payment adjustments applied previously.

In addition, we applied the proposed MS–DRG reclassification and recalibration budget neutrality adjustment factor before the proposed cap (derived in the first step) and the 10-percent cap on relative weight reductions adjustment factor (derived from the second step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2025 to FY 2026. Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this factor to the standardized amount for changes to the wage index. Please see the table later in this section for a summary of the proposed FY 2026 budget neutrality factors.

d. Reclassified Hospitals—Proposed Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971 through 58977), we finalized a policy beginning with FY 2025 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and only exclude ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in section 1886(d)(8)(C)(iii) of the Act.

We refer the reader to the FY 2015 IPPS final rule (79 FR 50371 and 50372) for a complete discussion regarding the requirement of section 1886(d)(8)(C)(iii) of the Act. We further note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) of the Act shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the proposed budget neutrality adjustment factor for FY 2026, we used FY 2024 discharge data to simulate payments and compared the following:

- Aggregate payments using the proposed FY 2026 labor-related share percentage, the proposed FY 2026 relative weights, and the proposed FY 2026 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the proxy FY 2026 hospital readmissions payment adjustments and the proxy FY 2026 hospital VBP payment adjustments.
- Aggregate payments using the proposed FY 2026 labor-related share percentage, the proposed FY 2026 relative weights, and the proposed FY 2026 wage data after such reclassifications, and applied the same proxy FY 2026 hospital readmissions payment adjustments and the proxy FY 2026 hospital VBP payment adjustments applied previously.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this proposed rule, which is available via the internet on the CMS website. This table reflects reclassification crosswalks for FY 2026 and applies the policies explained in section III. of the preamble of this proposed rule. Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this proposed factor to the standardized amount to ensure that the effects of these provisions are budget neutral, consistent with the statute. Please see the table later in this section for a summary of the proposed FY 2026 budget neutrality factors.

The proposed FY 2026 budget neutrality adjustment factor was applied to the standardized amount after removing the effects of the FY 2025 budget neutrality adjustment factor. We note that the proposed FY 2026 budget neutrality adjustment reflects FY 2026 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this proposed rule.

e. Proposed Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) are equal to the aggregate prospective payments that would have been made in the absence of this provision. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G. of the preamble of this proposed rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor is a national adjustment to the wage index.

Similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), for FY 2026, we are proposing to calculate a national rural Puerto Rico wage index. Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2026 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous to (share a border with) the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the OMB labor market area delineations, all urban Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the proposed FY 2026 rural Puerto Rico wage index is calculated based on the average of the proposed FY 2026 wage indexes for the following urban areas: Aguadilla, PR (CBSA 10380); Arecibo, PR (CBSA 11640), Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660); and San Juan-Bayamon-Caguas, PR (CBSA 41980).

We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971–77), we finalized a policy

beginning with FY 2025 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations and are only excluding ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of the rural floor.

To calculate the proposed national rural floor budget neutrality adjustment factor, we used FY 2024 discharge data to simulate payments, and the post-reclassified national wage indexes and compared the following:

- National simulated payments without the rural floor.
- National simulated payments with the rural floor.

Based on this comparison, we determined a proposed national rural floor budget neutrality adjustment factor. The proposed national adjustment was applied to the national wage indexes to produce proposed rural floor budget neutral wage indexes. Please see the table later in this section for a summary of the proposed FY 2026 budget neutrality factors.

As further discussed in section III.G.2. of this proposed rule, we note that section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2), enacted on March 11, 2021 amended section 1886(d)(3)(E)(i) of the Act (42 U.S.C. 1395ww(d)(3)(E)(i)) and added section 1886(d)(3)(E)(iv) of the Act to establish a minimum area wage index (or imputed floor) for hospitals in all-urban States for discharges occurring on or after October 1, 2022. Unlike the imputed floor that was in effect from FY 2005 through FY 2018, section 1886(d)(3)(E)(iv)(III) of the Act provides that the imputed floor wage index shall not be applied in a budget neutral manner. Specifically, section 9831(b) of Public Law 117–2 amends section 1886(d)(3)(E)(i) of the Act to exclude the imputed floor from the budget neutrality requirement under section 1886(d)(3)(E)(i) of the Act. In the past, we budget neutralized the estimated increase in payments each year resulting from the imputed floor that was in effect from FY 2005 through FY 2018. For FY 2022 and subsequent years, in applying the imputed floor required under section 1886(d)(3)(E)(iv) of the Act, we are applying the imputed floor after the application of the rural floor and would apply no reductions to the standardized amount or to the wage index to fund the increase in payments to hospitals in all-urban States resulting from the application of the imputed floor. We refer the reader to section III.G.2. of the preamble of this proposed rule for a complete discussion regarding the imputed floor.

f. Permanent Cap Policy for Wage Index—Proposed Budget Neutrality Adjustment

As noted previously, in section III.G.6. of the preamble to this proposed rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021) we finalized a policy to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, a hospital's wage index would not be less than 95 percent of its final wage index for the prior FY. We also finalized the application of this permanent cap policy in a budget neutral manner through an adjustment to the standardized amount to ensure that estimated aggregate payments under our wage index cap policy for hospitals that will have a decrease in their wage indexes for the upcoming fiscal year of more than 5 percent will equal what estimated aggregate payments would have been without the permanent cap policy.

To calculate a wage index cap budget neutrality adjustment factor for FY 2026, we used FY 2024 discharge data to simulate payments and compared the following:

- Aggregate payments without the 5-percent cap using the proposed FY 2026 labor-related share percentages, the proposed FY 2026 relative weights, and applied the proposed proxy FY 2026 hospital readmissions payment adjustments and the proposed proxy FY 2026 hospital VBP payment adjustments.
- Aggregate payments with the 5-percent cap using the proposed FY 2026 labor-related share percentages, the proposed FY 2026 relative weights, and applied the same proxy FY 2026 hospital readmissions payment adjustments and the proposed proxy FY 2026 hospital VBP payment adjustments applied previously.

g. Proposed Transition for the Discontinuation of the Low Wage Index Hospital Policy Budget Neutrality Factor

As discussed in section III.G.5. of the preamble to this proposed rule, in the FY 2025 IFC we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. For FY 2026 and subsequent fiscal years, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are proposing to discontinue the low wage index hospital policy. Because we are proposing to discontinue the low wage index hospital policy for FY 2026 and subsequent fiscal years we would no longer apply the low wage index budget neutrality factor to the standardized amounts.

As noted previously, in section III.G.7. of the preamble to this proposed rule, we are proposing to use our authority under section 1886(d)(5)(I)(i) of the Act twice. First, to adopt a narrow transitional exception to the calculation of FY 2026 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy, and then again to do so in a budget neutral manner. To calculate the proposed transition wage index budget neutrality adjustment factor for FY 2026, we used FY 2024 discharge data to simulate payments and compared the following:

- Aggregate payments without the proposed transition for the discontinuation of the low wage index hospital policy, the 5-percent cap using the proposed FY 2026 labor-related share percentages, the proposed FY 2026 relative weights, and applied the proposed proxy FY 2026 hospital readmissions payment adjustments and the proposed proxy FY 2026 hospital VBP payment adjustments.
- Aggregate payments with the proposed transition for the discontinuation of the low wage index hospital policy, the 5-percent cap using the proposed FY 2026 labor-related share percentages, the proposed FY 2026 relative weights, and applied the same proxy FY 2026 hospital readmissions payment adjustments and the proposed proxy FY 2026 hospital VBP payment adjustments applied previously. This proposed FY 2026 budget neutrality adjustment factor was applied to the standardized amount.

We note, Table 2 associated with this proposed rule contains the wage index by provider before and after applying 5 percent cap and the proposed transition for the discontinuation of the low wage index hospital policy.

h. Proposed Rural Community Hospital Demonstration Program Adjustment

In section VI.N. of the preamble of this proposed rule, we discuss the Rural Community Hospital (RCH) Demonstration program, which was originally authorized for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), and extended for another 5-year period by sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148). Subsequently, section 15003 of the 21st Century Cures Act (Pub. L. 114–255), enacted December 13, 2016, amended section 410A of Public Law 108–173 to require a 10-year extension period (in place of the 5-year extension required by the Affordable Care Act, as further discussed later in this section). Finally, Division CC, section 128(a) of the Consolidated Appropriations Act of 2021 (Pub. L. 116–260) again amended section 410A to require a 15-year extension period in place of the 10-year period. We make an adjustment to the standardized amount to ensure the effects of the RCH Demonstration program are budget neutral as required under section 410A(c)(2) of Public Law 108–173. We refer readers to section VI.N. of the preamble of this proposed rule for complete details regarding the Rural Community Hospital Demonstration.

With regard to budget neutrality, as mentioned earlier, we make an adjustment to the standardized amount to ensure the effects of the Rural Community Hospital Demonstration are budget neutral, as required under section 410A(c)(2) of Public Law 108–173. For FY 2026, based on the latest data for this proposed rule, the total amount that we are applying to make an adjustment to the standardized amounts to ensure the effects of the Rural Community Hospital Demonstration program are budget neutral is $ 47,527,557. Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2026, we computed a factor for the Rural Community Hospital Demonstration budget neutrality adjustment that would be applied to the standardized amount. Please see the table later in this section for a summary of the Proposed FY 2026 budget neutrality factors. We refer readers to section VI.N. of the preamble of

this proposed rule on complete details regarding the calculation of the amount we are applying to make an adjustment to the standardized amounts.

The following table is a summary of the proposed FY 2026 budget neutrality factors, as discussed in the previous sections.

SUMMARY OF PROPOSED FY 2026 BUDGET NEUTRALITY FACTORS

MS-DRG Reclassification and Recalibration Budget Neutrality Factor	0.998422
Cap Policy MS–DRG Weights Budget Neutrality Factor	0.999938
Wage Index Budget Neutrality Factor	1.001273
Reclassification Budget Neutrality Factor	0.976960
*Rural Floor Budget Neutrality Factor	0.985942
Cap Policy Wage Index Budget Neutrality Factor	0.993116
Transition for the Discontinuation of the Low Wage Index Hospital Policy Budget Neutrality Factor	0.999741
Rural Demonstration Budget Neutrality Factor	0.999548

*The rural floor budget neutrality factor is applied to the national wage indexes while the rest of the budget neutrality adjustments are applied to the standardized amounts.

i. Proposed Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for ''outlier'' cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the ''outlier threshold'' or ''fixed-loss'' amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the outlier threshold as the outlier ''fixed-loss cost threshold.'' To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital's CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2026 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the percent target by dividing the total projected operating outlier payments by the total projected operating DRG payments plus projected operating outlier payments. As discussed in the next section, for FY 2026, we are incorporating an estimate of the impact of outlier reconciliation when setting the outlier threshold. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated total of outlier payments as a proportion of total DRG payments. More information on outlier payments may be found on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.html*.

(1) Methodology To Incorporate a Proposed Estimate of the Impact of Outlier Reconciliation in the FY 2026 Outlier Fixed-Loss Cost Threshold

The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement will be based on operating and capital cost-to-charge ratios (CCRs) calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. Instructions for outlier reconciliation are in section 20.1.2.5 of chapter 3 of the Claims Processing Manual (available at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*). The original instructions issued in July 2003 [1] instruct MACs to identify for CMS any instances where: (1) a hospital's actual operating CCR for the cost reporting period fluctuates plus or minus 10 percentage points or more compared to the interim operating CCR used to calculate outlier payments when a bill is processed; and (2) the total operating and capital outlier payments for the hospital exceeded $500,000 for that cost reporting period. Cost reports that meet these criteria will have the hospital's outlier payments reconciled at the time of cost report final settlement if approved by the CMS Central Office. For the remainder of this discussion, we refer to these criteria as the original criteria for outlier reconciliation (or the original criteria).

On March 28, 2024, we issued Change Request (CR) 13566, which is available at *https://www.cms.gov/medicare/regulations-guidance/transmittals/2024-transmittals/r12558cp*. CR 13566 provides additional instructions to MACs that expand the criteria for identifying cost reports MACs are to refer to CMS for approval of outlier reconciliation. As discussed in the FY 2025 IPPS/LTCH final rule, we anticipate that MACs will identify more cost reports to refer to CMS for outlier reconciliation approval. Specifically, CR 13566 states that for cost reports beginning on or after October 1, 2024, MACs shall identify for CMS any instances where: (1) the actual operating CCR is found to be plus or minus 20 percent or more from the operating CCR used during that time period to make outlier payments, and (2) the total operating and capital outlier payments for the hospital exceeded $500,000 for that cost reporting period. For the remainder of this discussion, we refer to these criteria as the new criteria for outlier reconciliation (or the new criteria). These new criteria for identifying hospital cost reports that MACs identify for outlier reconciliation approval are in addition to the original criteria for reconciliation described previously. That is, under the new criteria, MACs identify hospitals for outlier reconciliation approval that would not have met the original criteria. In addition, CR 13566 instructs that for cost reporting periods that begin on or after October 1, 2024, a hospital in its first cost reporting period will be referred for approval of reconciliation of outlier payments at the time of cost report final settlement. As such, new hospitals will be referred for outlier reconciliation approval regardless of the change to the operating CCR and no matter the amount of outlier payments during the cost reporting period. If we determine that a hospital's outlier payments should be reconciled, we reconcile both operating and capital outlier payments. We refer readers to section 20.1.2.5 of Chapter 3 of the Medicare Claims Processing Manual for complete instructions regarding outlier reconciliation, including the update to the outlier reconciliation criteria provided in CR 13566. (Refer to the FY 2025 IPPS/LTCH PS final rule for additional information (89 FR 69950).)

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42635), we finalized a methodology to incorporate outlier reconciliation in the FY 2020 outlier fixed loss cost threshold. As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19592), we stated that rather than trying to predict which claims and/or hospitals may be subject to outlier reconciliation, we

[1] Change Request 2785 (Transmittal A–03–058; July 3, 2003) found at *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/a03058.pdf*.

believe a methodology that incorporates an estimate of outlier reconciliation dollars based on actual outlier reconciliation amounts reported in historical cost reports would be a more feasible approach and provide a better estimate and predictor of outlier reconciliation for the upcoming fiscal year. We also stated that we believe the methodology addresses stakeholder's concerns on the impact of outlier reconciliation on the modeling of the outlier threshold. (For a detailed discussion of additional background regarding outlier reconciliation, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule.)

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69949 through 69955), we finalized changes to our methodology to incorporate an estimate of outlier reconciliation in the FY 2025 outlier fixed loss cost threshold to reflect the estimated reconciled outlier payments under the new criteria in CR 13566 (described previously). In that final rule, we provided step by step details under our methodology to incorporate a projection of outlier payment reconciliations for the FY 2025 outlier threshold calculation. We refer the reader to the FY 2025 IPPS/LTCH final rule for complete details (89 FR 69950 through 69955).

(a) Incorporating a Proposed Projection of Outlier Reconciliations for the FY 2026 Outlier Threshold Calculation

Under our methodology for incorporating a projection of outlier reconciliation for the outlier threshold calculation, for each year, we typically advance the historical data used by 1 year, using cost report data that is on a 6-year lag, which is typically the most recent and complete available data to project the estimate of outlier reconciliation. Accordingly, for FY 2025 we used FY 2019 cost report data. Because the new criteria were not effective until FY 2025 cost reports, to estimate outlier reconciliation dollars under the new criteria, we applied the new criteria to FY 2019 cost reports as if they had been in place at the time of final cost report settlement.

For FY 2026, we evaluated the use of the FY 2020 cost report data under our methodology as established in FY 2020 and modified in the FY 2025 IPPS/LTCH PPS final rule, to incorporate a projection of operating outlier reconciliations for the FY 2026 outlier threshold calculation (that is, the FY 2020 methodology as modified in FY 2025 to reflect additional cost reports that would be identified for outlier reconciliation approval under the new criteria in CR 13566). Specifically, for FY 2026 we evaluated using the same steps finalized in the FY 2025 IPPS/LTCH PPS final rule.

Specifically, we calculated a projection of outlier reconciliation using cost report data from FY 2020 hospital cost reports in the December 2024 HCRIS extract that were reconciled using the original criteria for referral for outlier reconciliation approval. In addition, in calculating this estimate, we used data from the Provider Specific File (PSF) and the cost report data to identify the FY 2020 cost reports that would have met the new criteria if those criteria had been in effect. This allows us to account for the additional hospital cost reports that would be referred for outlier reconciliation approval as a result of the new criteria under our methodology. For purposes of this estimate, we used the latest quarterly PSF update (December 2024 for the proposed rule).

As explained above, our 5-step methodology to incorporate a projection of outlier payment reconciliations for the outlier threshold calculation is described in detail in the FY 2025 IPPS/LTCH final rule (see 89 FR 69950 through 69952). The 5 steps can be summarized as follows:

Step 1: Identify hospital cost reports that meet the original criteria (Step 1a) or the new criteria (Step 1b).

Step 2: Determine the aggregate amount of operating outlier reconciliation dollars (under both the original criteria (Step 2a) and the new criteria (Steps 2b)).

Step 3: Calculate the aggregate amount of total Federal operating payments across all applicable hospitals using the cost report data.

Step 4: Determine the percentage of total operating outlier reconciliation dollars to total Federal operating payments for the cost report data year.

Step 5: Adjust the outlier target using the percentage from Step 4.

With regard to incorporating outlier reconciliation in the FY 2026 outlier fixed-loss cost threshold, we evaluated the use of the most recent available data (as described previously) using the 5-step methodology as set forth in the FY 2025 IPPS/LTCH PPS final rule. As we explain in greater detail in the discussion that follows, we found that using the most recent available data under our 5-step methodology appears to produce anomalous results that may not provide an appropriate estimate and predictor of outlier reconciliation for the upcoming fiscal year. (We note, for the hospitals identified in Step 1b (hospitals that would be referred for outlier reconciliation under the new criteria), for this proposed rule we posted a public use file that includes the operating CCR calculated from the FY 2020 cost report in the most recent publicly available quarterly HCRIS extract (the December 2024 HCRIS for the proposed rule), the weighted operating CCR used for claim payment during the FY 2020 cost reporting period from the latest quarterly PSF update (December 2024 for the proposed rule), and the supplemental data from the MACs and operating outlier payment reported on the FY 2020 cost report.)

Step 4 of the methodology divides the aggregate amount from Step 2 [2] (operating outlier reconciliation dollars under both the original criteria and the new criteria or total reconciled dollars) by the amount from Step 3 [3] (total Federal operating payments across all applicable hospitals using the cost report data) and multiplies the resulting amount by 100 to produce the percentage of total operating outlier reconciliation dollars to total Federal operating payments (89 FR 69952). As discussed in previous proposed and final rules, when the percentage of total operating outlier reconciliation dollars to total Federal operating payments in Step 4 rounds to a negative value, the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. When the percentage of total operating outlier reconciliation dollars to total Federal operating payments in Step 4 rounds to a positive value, the effect is an increase to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars.

Using the most recent available data for this proposed rule (as described previously), the ratio calculated under Step 4 of the methodology would be 0.095654 percent (($79,574,408/$83,189,787,222) × 100), which, when rounded to the second digit, is +0.1 percent. Under Step 5 of the methodology, this percentage amount would be used to adjust the outlier target for FY 2026. This would mean that for FY 2026, we would incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.0 percent [5.1 percent − (0.1 percent)]. This positive 0.1 percentage point is being driven by the numerator in Step 4 (that is, the total reconciled dollars or the aggregate operating outlier reconciliation dollars under both the original criteria and the new criteria).

Typically, the total reconciled dollars in Step 2 (the numerator of Step 4) is a negative amount reflecting that overall, providers would owe the Medicare program money at the time of outlier reconciliation, which then produces a negative percentage of operating outlier reconciliation dollars to total Federal operating payments in Step 4. Using the most recent available data (described previously), the total reconciled dollars in Step 2 (the numerator of Step 4) is a positive amount reflecting that overall, the Medicare program would owe hospitals money at the time of outlier reconciliation, which then produces a positive percentage of operating outlier reconciliation dollars to total Federal operating payments.

As mentioned above, since FY 2020 we have incorporated outlier reconciliation into the outlier fixed loss cost threshold calculation. For the outlier fixed loss cost threshold calculation for FYs 2020 through 2025, the percentage of operating outlier reconciliation dollars to total Federal operating payments from Step 4 has resulted in a negative value (having the effect of a decrease to the outlier threshold). Using the FY 2020 cost report data and PSF values described previously under our methodology would be the first time that the percentage of

[2] Step 2, the numerator of step 4, is the aggregate amount of operating outlier reconciliation dollars under both the original criteria and the new criteria which is the sum of the amounts from Steps 2a and 2b. (89 FR 69951 through 69952).

[3] Step 3, the denominator of step 4, is the aggregate amount of total Federal operating payments across all applicable hospitals using the cost report data. The total Federal operating payments consist of the Federal payments (Worksheet E, Part A, Line 1.01 and Line 1.02, plus Line 1.03 and Line 1.04), outlier payments (Worksheet E, Part A, Lines 2.02, 2.03, and 2.04), and the outlier reconciliation amounts from Steps 2a and 2b. (89 FR 69952).

operating outlier reconciliation dollars to total Federal operating payments from Step 4 is a positive value (and would have the effect of an increase to the outlier threshold). We believe this positive value may be an anomaly and may not be an accurate predictor of outlier reconciliations for FY 2026 to use as an estimate of outlier reconciliation dollars for incorporating the effect of outlier reconciliation in the FY 2026 outlier fixed-loss cost threshold. Therefore, rather than use the percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 based on the latest available data (as described previously), for purposes of incorporating an estimate of outlier reconciliation into the outlier fixed-loss cost threshold calculation for FY 2026, we are proposing to hold the data constant and to use the percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data. As discussed in that final rule (89 FR 69952), the ratio was a negative 0.041994 percent ((−$36,439,127/$86,772,005,692) × 100), which, when rounded to the second digit, is −0.04 percent. Given the anomaly in the most recent available data described earlier, we believe that this is the best available data to estimate and predict outlier reconciliations for FY 2026 to use to incorporate the effect of outlier reconciliation in the FY 2026 outlier fixed-loss cost threshold. This percentage amount would then be used to adjust the proposed outlier target for FY 2026 as determined in Step 5. (For complete details on the calculation, refer to the FY 2025 IPPS/LTCH final rule (89 FR 69950 through 69952).)

Under Step 5 of our methodology, because the outlier reconciliation dollars are only available on the cost reports, and not in the Medicare claims data in the MedPAR file used to model the outlier threshold, we are proposing to target 5.1 percent minus the percentage determined under Step 4 in determining the outlier threshold. Consistent with the FY 2025 IPPS/LTCH PPS final rule, to incorporate a projection of outlier reconciliation dollars, we are proposing to target an outlier threshold at an amount higher than 5.1 percent for outlier payments for FY 2026. Therefore, for FY 2026, we are proposing to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent − (−0.04 percent)]. As explained earlier, when the aggregate amount of outlier reconciliation as a percent of total operating payments rounds to a negative percent, the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. In section II.A.4.i.(2). of this Addendum, we provide the FY 2026 proposed outlier threshold as calculated for this proposed rule both with and without including this percentage estimate of operating outlier reconciliation.

Consistent with the approach taken in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19593), we would continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount. Therefore, the proposed operating outlier offset to the standardized amount is 0.949 (1 − 0.051).

We note, for the FY 2026 final rule, consistent with our historical practice, we plan to evaluate the updated data available at the time of the development of that final rule (such as the March 2025 HCRIS extract of the FY 2020 cost report). We would evaluate the use of that updated data in the methodology to assess whether that data still shows an anomaly such that it would not be appropriate to use in calculating the projection of outlier reconciliation dollars for FY 2026 and, depending on the results of this evaluation, may consider use of that data for purposes of projecting an estimate of outlier reconciliation dollars and incorporating that estimate into the modeling for the fixed loss cost outlier threshold for FY 2026. We are inviting public comment on our proposed methodology for projecting an estimate of outlier reconciliation and incorporating that estimate into the modeling for the fixed loss cost outlier threshold for FY 2026.

(b) Proposed Adjustment To Account for Capital Outlier Reconciliation Payments in the Projected Proportion of Capital IPPS Payments Paid as Outliers in Determining the FY 2026 Capital Federal Rate

We establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital related costs (58 FR 46348). Similar to the calculation of the adjustment to the standardized amount to account for the projected proportion of operating payments paid as outlier payments, as discussed in greater detail in section III.A.2. of this Addendum, we are proposing to reduce the FY 2026 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers. The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement would be based on operating and capital CCRs calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. As such, any reconciliation also applies to capital outlier payments.

Under our methodology for incorporating an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers in determining the FY 2026 capital Federal rate, each year, we typically advance the historical data used by 1 year and use cost report data that is on a six year lag, which is typically the most recent and complete available data to project the estimate of outlier reconciliation. Accordingly, for FY 2025 we used FY 2019 cost report data. Because the new criteria were not effective until FY 2025 cost reports, to estimate outlier reconciliation dollars under the new criteria, we applied the new criteria to FY 2019 cost reports as if they had been in place at the time of final cost report settlement.

For FY 2026, we evaluated the use of the FY 2020 cost report data under the methodology we used for FY 2025 to incorporate an adjustment to the FY 2026 capital standard Federal rate to account for the projected proportion of capital IPPS payments paid as outliers (that is, the FY 2020 methodology as modified in FY 2025 to reflect additional cost reports that would be identified for reconciliation under the new criteria in CR 13566). Specifically, we calculated an estimate of outlier reconciliation using cost report data from FY 2020 hospital cost reports in the December 2024 HCRIS extract that were reconciled using the original criteria for referral for outlier reconciliation. Similarly, in calculating this estimate, we used data from the Provider Specific File (PSF) and the cost report data to identify the FY 2020 cost reports that would have met the new criteria if those criteria had been in effect. This allows us to account for the additional hospital cost reports that would be referred for outlier reconciliation approval as a result of the new criteria under our methodology. For purposes of this estimate, we used the latest quarterly PSF update (December 2024) for the proposed rule.

As explained above, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 699540 through 69955), we finalized changes to our methodology to incorporate an estimate of outlier reconciliation in the FY 2025 outlier fixed loss cost threshold to reflect the estimated reconciled outlier payments under the new criteria in CR 13566 (described previously). In that final rule, we provided step by step details under our methodology to incorporate a projection of outlier payment reconciliations for the FY 2025 outlier threshold calculation. (For complete details on our 5-step methodology to incorporate an adjustment to the capital outlier adjustment factor, we refer readers to the FY 2025 IPPS/LTCH final rule (89 FR 69953 through 69955).) The 5 steps can be summarized as follows:

Step 1: Identify hospital cost reports that meet the original criteria (Step 1a) or the new criteria (Step 1b).

Step 2: Determine the aggregate amount of capital outlier reconciliation dollars (under both the original criteria (Step 2a) and the new criteria (Steps 2b)).

Step 3: Calculate the aggregate amount of total Federal capital Federal payments across all applicable hospitals using the cost report data.

Step 4: Determine the percentage of total capital outlier reconciliation dollars to total capital Federal payments for the cost report data year.

Step 5: Adjust the capital outlier adjustment factor using the percentage from Step 4.

Under this methodology, because the outlier reconciliation dollars are only available on the cost reports, and not in the specific Medicare claims data in the MedPAR file used to estimate outlier payments, in Step 5 the estimate of capital outlier payments are determined by adding the percentage determined in Step 4 to the estimated percentage of capital outlier payments otherwise determined using the shared outlier threshold that is applicable to both hospital inpatient operating costs and

hospital inpatient capital-related costs. (We note that this percentage is added for capital outlier payments but subtracted in the analogous step for operating outlier payments. We have a unified outlier payment methodology that uses a shared threshold to identify outlier cases for both operating and capital payments. The difference stems from the fact that operating outlier payments are determined by first setting a ''target'' percentage of operating outlier payments relative to aggregate operating payments which produces the outlier threshold. Once the shared threshold is set, it is used to estimate the percentage of capital outlier payments to total capital payments based on that threshold. Because the threshold is already set based on the operating target, rather than adjusting the threshold (or operating target), we adjust the percentage of capital outlier to total capital payments to account for the estimated effect of capital outlier reconciliation payments. This percentage is adjusted by adding the capital outlier reconciliation percentage from Step 4 to the estimate of the percentage of capital outlier payments to total capital payments based on the shared threshold.)

As discussed in previous proposed and final rules, when the aggregate capital outlier reconciliation dollars in Step 2 is negative, the estimate of capital outlier payments under our methodology would be lower than the percentage of capital outlier payments otherwise determined using the shared outlier threshold. Under Step 5 this would be a relatively smaller outlier budget neutrality adjustment factor which would have the effect of an increase to the capital Federal rate. When the aggregate capital outlier reconciliation dollars from Step 2 are positive, the estimate of capital outlier payments under our methodology would be higher than the percentage of capital outlier payments otherwise determined using the shared outlier threshold. Under Step 5 this would be a relatively larger outlier budget neutrality adjustment factor which would have the effect of a decrease to the capital Federal rate.

With regard to incorporating an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers, we evaluated the use of the most recent available data (as described previously) using the 5-step methodology as set forth in the FY 2025 IPPS/LTCH PPS final rule. As we explain in greater detail in the discussion that follows, we found that using the most recent available data under our 5-step methodology appears to produce anomalous results that may not provide an appropriate estimate and predictor of outlier reconciliation for the upcoming fiscal year. (We note, for the hospitals identified in Step 1b (hospitals that would be referred for outlier reconciliation approval under the new criteria), for this proposed rule we posted a public use file that includes the capital CCR calculated from the FY 2020 cost report in the most recent publicly available quarterly HCRIS extract (the December 2024 HCRIS for the proposed rule), the weighted capital CCR used for claim payment during the FY 2020 cost reporting period from the latest quarterly PSF update (December 2024 for the proposed rule), and the supplemental data from the MACs and capital outlier payment reported on the FY 2020 cost report.)

Step 4 of the methodology divides the aggregate amount from Step 2 [4] (capital outlier reconciliation dollars under both the original criteria and the new criteria or total reconciled dollars) by the amount from Step 3 [5] (total Federal capital payments across all applicable hospitals using the cost report data) and multiplies the resulting amount by 100 to produce the percentage of total capital outlier reconciliation dollars to total capital Federal payments (89 FR 69955). Under the methodology, in Step 5 this amount is added to the estimated percentage of capital outlier payments otherwise determined using the shared outlier threshold (as explained above).

For this proposed rule, the estimated percentage of FY 2026 capital outlier payments otherwise determined using the shared outlier threshold is 4.16 percent (estimated capital outlier payments of $289,418,426 divided by (estimated capital outlier payments of $289,418,426 plus the estimated total capital Federal payment of $6,670,448,919)). Using the most recent available data (described previously), the total in Step 2 is $1,529,376, which is a positive amount. The percentage calculated in Step 4 is a positive 0.021188 percent (($1,529,376/$7,218,168,555) × 100), which, when rounded to the second digit, is +0.02 percent. Under Step 5 of the methodology, this percentage amount would be used to adjust the estimate of capital outlier payments for FY 2026. This would mean that for FY 2026 we would increase the estimated percentage of FY 2026 aggregate capital outlier payments by 0.02 percent. This positive 0.02 percentage point is being driven by the numerator in Step 4 (that is, the total reconciled dollars or the aggregate capital outlier reconciliation dollars under both the original criteria and the new criteria).

Typically, the total reconciled dollars in Step 2 (the numerator of Step 4) is a negative amount reflecting that overall, providers would owe the Medicare program money at the time of outlier reconciliation, which then produces a negative percentage of capital outlier reconciliation dollars to total Federal capital payments in Step 4. Using the most recent available data (described previously), the total reconciled dollars in Step 2 (the numerator of Step 4) is a positive amount reflecting that overall, the Medicare program would owe hospitals money at the time of outlier reconciliation, which then produces a positive percentage of capital outlier reconciliation dollars to total Federal capital payments.

As mentioned above, since FY 2020 we have incorporated an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers in determining the FY 2026 capital Federal rate. This adjustment (the percentage of capital outlier reconciliation dollars to total capital Federal payments from Step 4) has resulted in a negative value for FYs 2020 through 2025 (having the effect of an increase to the capital Federal amount, as described previously). Using the FY 2020 cost report data and PSF values described previously under our methodology would be the first time that the adjustment under Step 4 (the percentage of capital outlier reconciliation dollars to total capital Federal payments) is a positive value (and would have the effect of a decrease to the capital Federal amount). We believe this positive value may be an anomaly and may not be an accurate predictor of outlier reconciliations for FY 2026 to use as an estimate of outlier reconciliation dollars for incorporating the effect of outlier reconciliation to adjust the capital standard Federal rate. Therefore, rather than use the percentage of total capital outlier reconciliation dollars to total capital Federal payments from Step 4 based on the latest available data (as described previously), for purposes of incorporating an adjustment to the capital standard Federal rate for FY 2026, we are proposing to hold the data constant and to use the percentage of total capital outlier reconciliation dollars to total capital Federal payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data. As discussed in that final rule (89 FR 69955), the ratio was a negative 0.028042 percent ((−$2,181,440/$7,779,306,800) × 100), which, when rounded to the second digit, is −0.03 percent. Accordingly, for this proposed rule, taking into account projected capital outlier reconciliation under our methodology would decrease the estimated percentage of FY 2026 aggregate capital outlier payments by 0.03 percent. This percentage amount would be used to adjust the proposed estimated percentage of FY 2026 aggregate capital outlier payments under Step 5 of the methodology. (For complete details on the calculation, refer to the FY 2025 IPPS/LTCH final rule (89 FR 69953 through 69955).) Given the anomaly in the most recent available data described earlier, we believe that this is the best available data to estimate and predict outlier reconciliations for FY 2026 to use to incorporate an adjustment to the FY 2026 capital standard Federal rate.

As discussed in section III.A.2. of this Addendum, we are incorporating the capital outlier reconciliation dollars from Step 5 when applying the outlier adjustment factor in determining the capital Federal rate based on the estimated percentage of capital outlier payments to total capital Federal rate payments for FY 2026.

We note, for the FY 2026 final rule, consistent with our historical practice, we plan to evaluate the updated data available at the time of the development of that final

[4] Step 2, the numerator of step 4, is the aggregate amount of capital outlier reconciliation dollars under both the original criteria and the new criteria which is the sum of the amounts from Steps 2a and 2b. (89 FR 69954 through 69955).

[5] Step 3, the denominator of step 4, is the aggregate amount of total capital Federal payments across all applicable hospitals using the cost report data. The total capital Federal payments consist of the capital DRG payments, capital outlier payments, capital indirect medical education (IME) Payments, capital disproportionate share hospital (DSH) payments (Worksheet E, Part A, Line 50, Column 1) and the capital outlier reconciliation amounts from Steps 2a and 2b. (89 FR 69955).

rule (such as the March 2025 HCRIS extract of the FY 2020 cost report). We would evaluate the use of that updated data in the methodology to assess whether that data still shows an anomaly such that it would not be appropriate to use in calculating the projection of outlier reconciliation dollars for FY 2026 and, depending on the results of this evaluation, may consider use of that data for purposes of projecting an estimate of outlier reconciliation dollars and incorporating an adjustment to the FY 2026 capital standard Federal rate to account for the projected proportion of capital IPPS payments paid as outliers. We are inviting public comment on our proposed methodology for incorporating an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers in determining the FY 2026 capital Federal rate.

(2) Proposed FY 2026 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a detailed discussion of the changes.

As we have done in the past, to calculate the proposed FY 2026 outlier threshold, we simulated payments by applying proposed FY 2026 payment rates and policies using cases from the FY 2024 MedPAR file. As noted in section II.C. of this Addendum, we specify the formula used for actual claim payment which is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the Provider-Specific File (PSF) while CMS uses an adjusted CCR (as described later in this section) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

In order to determine the proposed FY 2026 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2024 to FY 2026. Consistent with the FY 2020 IPPS/LTCH PPS final rule (84 FR 42626 and 42627), we are proposing to use the following methodology to calculate the charge inflation factor for FY 2026:

- Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); include CAHs and REHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor; include hospitals in Maryland; and remove PPS-excluded cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- Include providers that are in both periods of charge data that are used to calculate the 1-year average annual rate of-change in charges per case. We note this is consistent with the methodology used since FY 2014.
- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.
- In order to ensure that we capture only FFS claims, we included claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).
- In order to further ensure that we capture only FFS claims, we excluded claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).
- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS. As noted previously, we proposing to remove allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).
- Because this payment simulation uses the proposed FY 2026 relative weights, consistent with our proposal discussed in section IV.I. of the preamble to this proposed rule, we applied the proposed adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments.

Our general methodology to inflate the charges computes the 1-year average annual rate-of-change in charges per case which is then applied twice to inflate the charges on the MedPAR claims by 2 years since we typically use claims data for the fiscal year that is 2 years prior to the upcoming fiscal year.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42627), we modified our charge inflation methodology. We stated that we believe balancing our preference to use the latest available data from the MedPAR files and stakeholders' concerns about being able to use publicly available MedPAR files to review the charge inflation factor can be achieved by modifying our methodology to use the publicly available Federal fiscal year period (that is, for FY 2020, we used the charge data from Federal fiscal years 2017 and 2018), rather than the most recent data available to CMS which, under our prior methodology, was based on calendar year data. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule for a complete discussion regarding this change.

For the same reasons discussed in that rulemaking, for FY 2026, we are proposing to use the same methodology as FY 2020 to determine the charge inflation factor. That is, for FY 2026, we are proposing to use the MedPAR files for the two most recent available Federal fiscal year time periods to calculate the charge inflation factor, as we did for FY 2020. Specifically, for this proposed rule we used the December 2023 MedPAR file of FY 2023 (October 1, 2023, to September 30, 2023) charge data (released for the FY 2025 IPPS/LTCH PPS proposed rule) and the December 2024 MedPAR file of FY 2024 (October 1, 2023, to September 30, 2024) charge data (released for this FY 2026 IPPS/LTCH PPS proposed rule) to compute the proposed charge inflation factor. We are proposing that for the FY 2026 final rule, we would use more recently updated data, that is the MedPAR files from March 2024 for the FY 2023 time period and March 2025 for the FY 2024 time period.

For FY 2026, under this proposed methodology, to compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of $86,031.03 ($592,911,386,867/6,891,832) from October 1, 2022, through September 30, 2023, to the average covered charge per case of $90,711.54 ($624,034,862,796/6,879,333) from October 1, 2023, through September 30, 2024. This rate-of-change was 5.440 percent (1.05440) or 11.18 percent (1.1118) over 2 years. The billed charges are obtained from the claims from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, in this FY 2026 IPPS/LTCH PPS proposed rule, we are proposing to establish the FY 2026 outlier threshold using hospital CCRs from the December 2024 update to the Provider-Specific File (PSF), the most recent available data at the time of the development of the proposed rule. We are proposing to apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described later in this section to hospitals assigned the statewide average CCR. For FY 2026, we are proposing to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained later in this section). We also are proposing that, if more recent data become available, we would use that data to calculate the final FY 2026 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital

CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we have done in the past, we are proposing to adjust the CCRs from the December 2024 update of the PSF by comparing the percentage change in the national average case weighted operating CCR and capital CCR from the December 2023 update of the PSF to the national average case weighted operating CCR and capital CCR from the December 2024 update of the PSF. We note that we used total transfer-adjusted cases from FY 2024 to determine the national average case weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology, for this proposed rule, we calculated a December 2023 operating national average case-weighted CCR of 0.252119 and a December 2024 operating national average case-weighted CCR of 0.244584.We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2023 operating national average case-weighted CCR from the December 2024 operating national average case-weighted CCR and then dividing the result by the December 2023 national operating average case-weighted CCR. This resulted in a proposed one-year national operating CCR adjustment factor of 0.970113.

We used this same proposed methodology to adjust the capital CCRs. Specifically, we calculated a December 2023 capital national average case-weighted CCR of 0.017659 and a December 2024 capital national average case-weighted CCR of 0.016912. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2023 capital national average case-weighted CCR from the December 2024 capital national average case-weighted CCR and then dividing the result by the December 2023 capital national average case-weighted CCR. This resulted in a proposed one-year national capital CCR adjustment factor of 0.957699.

For purposes of estimating the proposed outlier threshold for FY 2026, we used a wage index that reflects the policies discussed in this proposed rule. This includes the following:

- Application of the proposed rural and imputed floor adjustment.
- The proposed frontier State floor adjustments in accordance with section 10324(a) of the Affordable Care Act.
- The proposed out-migration adjustment as added by section 505 of Public Law 108–173.
- Incorporating our policy (described in section III.6. of the preamble of this proposed rule) to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline.
- The proposed transition for the discontinuation of the low wage index hospital policy (as described in section III.F.7. of the preamble of this proposed rule).

If we did not take the aforementioned into account, our estimate of total FY 2026 payments would be too low, and, as a result, our proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments (which includes outlier reconciliation).

As described in sections V.K. and V.L., respectively, of the preamble of this proposed rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the proposed hospital VBP payment adjustments and the hospital readmissions payment adjustments in the proposed outlier threshold calculation or the proposed outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments would continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we are proposing to exclude the estimated hospital VBP payment adjustments and the estimated hospital readmissions payment adjustments from the calculation of the proposed outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2026, we are proposing to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally.

Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2026, we are proposing to include estimated FY 2026 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we are proposing to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

In addition, consistent with the methodology finalized in the FY 2023 final rule, we are proposing to include the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals in the computation of the FY 2026 proposed outlier fixed-loss cost threshold. Specifically, we are proposing to use the estimated per-discharge supplemental payments to hospitals eligible for the supplemental payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we are proposing to incorporate an estimate of FY 2026 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, for the FY 2026 proposed rule, we are proposing to hold the data constant and to use the FY 2025 final rule percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data. As discussed in the FY 2025 IPPS/LTCH PPS final rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) was a negative 0.041994 percent, which, when rounded to the second digit, is −0.04 percent. Therefore, for FY 2026, we are proposing to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent − (− .04 percent)]. Under this proposed approach, we determined a proposed threshold of $44,305 and calculated total outlier payments of $4,420,494,091and total operating Federal payments of $81,579,487,131. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.14 percent target, which reflected our proposal to incorporate an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). We note that, if calculated without applying our proposed methodology for incorporating an estimate of outlier reconciliation in the determination of the outlier threshold, the proposed threshold would be $44,644. We

are proposing an outlier fixed-loss cost threshold for FY 2026 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on payments for new technology, plus $44,305.

(3) Other Proposed Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a higher percentage of outlier payments for capital-related costs than for operating costs. We project that the threshold for FY 2026 (which reflects our methodology to incorporate an estimate of operating outlier reconciliation) would result in outlier payments that would equal 5.1 percent of operating DRG payments and we estimate that capital outlier payments would equal 4.12 percent of capital payments based on the Federal rate (which reflects our methodology discussed previously to incorporate an estimate of capital outlier reconciliation).

In accordance with section 1886(d)(3)(B) of the Act and as discussed previously, we are proposing to reduce the FY 2026 standardized amount by 5.1 percent to account for the projected proportion of payments paid as outliers.

The proposed outlier adjustment factors that would be applied to the operating standardized amount and capital Federal rate based on the proposed FY 2026 outlier threshold are as follows:

	Operating standardized amounts	Capital federal rate *
National	0.949	0.958716

* The adjustment factor for the capital Federal rate includes an adjustment to the estimated percentage of FY 2026 capital outlier payments for capital outlier reconciliation, as discussed previously and in section III.A.2 in this Addendum.

We are proposing to apply the outlier adjustment factors to the FY 2026 payment rates after removing the effects of the FY 2025 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we currently apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.273 or capital CCRs greater than 0.133 or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the proposed statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the range previously specified. These statewide average ratios would be effective for discharges occurring on or after October 1, 2025, and would replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the comparable proposed statewide average capital CCRs. As previously stated, the proposed CCRs in Tables 8A and 8B would be used during FY 2026 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted previously. Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the proposed statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that section 20.1.2 of chapter three of the Medicare Claims Processing Manual (on the internet at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*) covers an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in the manual. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of the manual are followed. In addition, the manual outlines the outlier reconciliation process for hospitals and Medicare contractors. We refer hospitals to the manual instructions for complete details on outlier reconciliation.

(4) FY 2024 Outlier Payments

Our current estimate, using available FY 2024 claims data, is that actual outlier payments for FY 2024 were approximately 5.13 percent of actual total MS–DRG payments. Therefore, the data indicate that, for FY 2024, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2024. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2024 are equal to 5.1 percent of total MS–DRG payments. As explained in the FY 2003 Outlier final rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS–DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section states that outlier payments be equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS–DRG payments. We believe that an important goal of a PPS is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that, because the MedPAR claims data for the entire FY 2025 period would not be available until after September 30, 2025, we are unable to provide an estimate of actual outlier payments for FY 2025 based on FY 2025 claims data in this proposed rule. We will provide an estimate of actual FY 2025 outlier payments in the FY 2027 IPPS/LTCH PPS proposed rule.

5. Proposed FY 2026 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the internet on the CMS website) contain the national standardized amounts that we are proposing to apply to all hospitals, except hospitals located in Puerto Rico, for FY 2026. The proposed standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). The proposed amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 66.0 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are proposing to apply a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we would apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000. In addition, Tables 1A and 1B include the proposed standardized amounts reflecting the

proposed applicable percentage increases for FY 2026.

The proposed labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2026 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). Similarly, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2025 national standardized amounts to the proposed FY 2026 national standardized amounts. The second through fifth columns display the changes from the FY 2025 standardized amounts for each proposed applicable FY 2026 standardized amount. The first row of the table shows the updated (through FY 2025) average standardized amount after restoring the FY 2025 offsets for outlier payments, geographic reclassification, rural demonstration, and wage index cap policy budget neutrality. The MS–DRG reclassification and recalibration wage index, and stem cell acquisition budget neutrality factors are cumulative (that is, we have not restored the offsets). Accordingly, those FY 2025 adjustment factors have not been removed from the base rate in the following table.

CHANGES FROM FY 2025 STANDARDIZED AMOUNTS TO THE PROPOSED FY 2026 STANDARDIZED AMOUNTS

	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
FY 2026 Base Rate after removing: ..... 1. FY 2025 Geographic Reclassification Budget Neutrality (0.962786). 2. FY 2025 Operating Outlier Offset (0.949) ..... 3. FY 2025 Rural Demonstration Budget Neutrality Factor (0.999811). 4. FY 2025 Cap Policy Wage Index Budget Neutrality Factor (0.999166).	If Wage Index is Greater Than 1.0000: Labor (66.0%): ..... $4,790.03 ..... Nonlabor (34.0%): ..... $2,467.59 ..... If Wage Index is less Than or Equal to 1.0000: Labor (62%): ..... $4,499.73 ..... Nonlabor (38%): $2,757.90.	If Wage Index is Greater Than 1.0000: Labor (66.0%): ..... $4,790.034 ..... Nonlabor (34.0%): ..... $2,467.59 ..... Proposed National Standardized Amount for FY 2026 if Wage Index is Less Than or Equal to 1.0000; Labor/Non-Labor Share Percentage (62/38).	Labor: $4,237.99 ..... Nonlabor: $2,597.48	Labor: $4,138.66 ..... Nonlabor: $2,536.60	Labor: $4,204.88 ..... Nonlabor: $2,577.18	Labor: $4,105.55. Nonlabor: $2,516.31.

B. Proposed Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the internet on the CMS website), contain the proposed labor-related and nonlabor-related shares that we are proposing to use to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2026. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Proposed Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2026, as discussed in section IV.B.3. of the preamble of this proposed rule, we are proposing to apply a labor-related share of 66.0 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are proposing to apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this proposed rule, we discuss the data and methodology for the FY 2026 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described previously. To account for higher non-labor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years

(coinciding with the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively). In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45546 through 45547), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and Consumer Price Indices (CPIs) data through 2020. Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we utilized these COLA factors for FYs 2022 through 2025 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii.

In general, under our existing methodology, we update the 2009 OPM COLA factors by a comparison of the growth in the CPIs for the areas of Urban Alaska and Urban Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). We use the comparison of the growth in the overall CPI relative to the growth in the CPI for those areas to update the COLA factors for all areas in Alaska and Hawaii, respectively, because BLS publishes CPI data for only Urban Alaska and Urban Hawaii. Using the respective CPI commodities index and CPI services index and using the approximate commodities/services shares obtained from the IPPS market basket, we create reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. Lastly, we exercised our discretionary authority to adjust payments to hospitals in Alaska and Hawaii by incorporating the statutorily mandated cap of 25 percent that was applied when determining OPM's COLA factors. (For additional information, refer to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45546 through 45547).)

We previously stated our intention to update the COLA factors at the same time as the update to the labor-related share of the IPPS market basket. In section III.H. of the preamble of this proposed rule, we are proposing to update the labor-related share of the IPPS market basket. The following table lists the COLA factors for Alaska and Hawaii hospitals as calculated under our current methodology, using updated CPI data through 2024 and the approximate 60 percent commodities/40 percent services shares obtained from the proposed 2023-based IPPS market basket.

Area	FY 2022 through FY 2025 COLA factors	Updated COLA factors under current methodology	Difference
Alaska:			
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
City of Juneau and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
Rest of Alaska	1.24	1.20	−0.04
Hawaii:			
City and County of Honolulu	1.25	1.25	0
County of Hawaii	1.22	1.21	−0.01
County of Kauai	1.25	1.25	0
County of Maui and County of Kalawao	1.25	1.25	0

At this time, we believe it would be appropriate to maintain the current COLA factors for FY 2026 to allow us to consider whether it would be appropriate to incorporate additional data sources or other methodology changes in determining the adjustment we make to IPPS payments to account for the unique circumstances of hospitals located in Alaska and Hawaii. Therefore, we are proposing to continue to use the FY 2025 COLA factors to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii for FY 2026. The following table lists the proposed FY 2026 COLA factors.

PROPOSED FY 2026 COST-OF-LIVING ADJUSTMENT (COLA) FACTORS: ALASKA AND HAWAII HOSPITALS

Area	Proposed COLA
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22
City of Juneau and 80-kilometer (50-mile) radius by road	1.22
Rest of Alaska	1.24
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.22
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

We are interested in and soliciting comments on any possible data sources that could be considered in the development of the COLA factors beyond the methodology (as summarized previously and described in more detail in the FY 2022 IPPS/LTCH PPS final rule, 86 FR 45546) that relies on service and commodity prices as measured by the CPI for the average U.S. city and for the areas of Urban Hawaii and Urban Alaska.

C. Calculation of the Proposed Prospective Payment Rates

1. General Formula for Calculation of the Prospective Payment Rates for FY 2026

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs and MDHs, for FY 2026 equals the Federal rate (which includes uncompensated care payments). As previously discussed, section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 further extended the MDH program through FY 2025. Therefore, under current law, the MDH program will expire for discharges on or after October 1, 2025.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (which, as discussed in section V.E. of the preamble of this proposed rule, includes uncompensated care payments).

• The updated hospital-specific rate based on FY 1982 costs per discharge.
• The updated hospital-specific rate based on FY 1987 costs per discharge.
• The updated hospital-specific rate based on FY 1996 costs per discharge.
• The updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2026 equals the higher of the applicable Federal rate, or the hospital-specific rate as described later in this section. The prospective payment rate for MDHs for discharges occurring before September 30, 2025, equals the higher of the Federal rate, or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described in this section. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

2. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

Note: The formula specified in this section is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described previously) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS–DRG and MS–DRG relative weight (from Table 5) for each claim primarily based on the ICD–10–CM diagnosis and ICD–10–PCS procedure codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described previously.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS–DRG Relative Weight × [(Labor-Related Applicable Standardized Amount × Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount × Cost-of-Living Adjustment)] × (1 + IME + (DSH * 0.25))
—Federal Payment for Capital Costs = MS–DRG Relative Weight x Federal Capital Rate × Geographic Adjustment Fact × (l + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges × Operating CCR)
—Capital Costs = (Billed Charges × Capital CCR)

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)
—Operating Outlier Threshold = [Fixed Loss Threshold × ((Labor-Related Portion × CBSA Wage Index) + Nonlabor-Related portion)] × Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals + New Technology Add-On Payment Amount
—Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)
—Capital Outlier Threshold = (Fixed Loss Threshold × Geographic Adjustment Factor × Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS–DRG)
—Operating Outlier Payment = (Operating Costs—Operating Outlier Threshold) × Marginal Cost Factor
—Capital Outlier Payment = (Capital Costs—Capital Outlier Threshold) × Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment and supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals to the total claim payment amount. As noted in the previous formula, we take uncompensated care payments, supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and new technology add-on payments into consideration when calculating outlier payments.

3. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment. As discussed previously, currently MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the greater of the updated hospital-specific rates based on either FY 1982, FY 1987, or FY 2002 costs per discharge. As noted, under current law, the MDH program is effective for FY 2025 discharges on or before September 30, 2025.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990, final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2026

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. As discussed in section V.F. of the preamble of this proposed rule, section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 further extended the MDH program through FY 2025. Therefore, under current law, the MDH program will expire for discharges on or after October 1, 2025. We refer readers to section V.F. of the preamble of this proposed rule for further discussion of the MDH program. We note that if the MDH program were to be extended by law beyond September 30, 2025, into FY 2026, the proposed updates to the hospital-specific rates for SCHs as described in this section would also apply to the hospital-specific rates for MDHs for FY 2026.

Accordingly, the proposed applicable percentage increases to the hospital-specific rates applicable to SCHs are the following:

FY 2026	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Proposed Market Basket Rate-of-Increase	3.2	3.2	3.2	3.2
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	−0.8	−0.8
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	−2.4	0	−2.4
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8	−0.8	−0.8
Proposed Applicable Percentage Increase Applied to Standardized Amount	2.4	0.0	1.6	−0.8

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section V.F. of the preamble of this proposed rule.

In addition, because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS–DRG classifications and the recalibration of the MS–DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the hospital specific-rate for an SCH or MDH is adjusted by the proposed MS–DRG reclassification and recalibration budget neutrality factor, as discussed in section III. of this Addendum and listed in the table in section II. of this Addendum. In addition, as discussed in section II.E.2.d. of the preamble this proposed rule and previously, we are applying a permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, as finalized in the FY 2023 IPPS/LTCH PPS final rule. Because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, consistent with the policy adopted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900 and 49432 through 49433), the hospital specific-rate for an SCH would be adjusted by the proposed MS–DRG 10-percent cap budget neutrality factor. The resulting rate is used in determining the payment rate that an SCH would receive for its discharges beginning on or after October 1, 2025.

III. Proposed Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2026

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. In this section of this Addendum, we discuss the factors that we are proposing to use to determine the capital Federal rate for FY 2026, which would be effective for discharges occurring on or after October 1, 2025.

All hospitals (except ''new'' hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. We annually update the capital standard Federal rate, as provided in § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs, which currently specifies capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the Federal rate.

A. Determination of the Proposed Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update for FY 2026

In the discussion that follows, we explain the factors that we are proposing to use to determine the capital Federal rate for FY 2026. In particular, we explain why the proposed FY 2026 capital Federal rate would increase approximately 3.28 percent, compared to the FY 2025 capital Federal rate. As discussed in the impact analysis in Appendix A to this proposed rule, we estimate that capital payments per discharge would increase approximately 2.7 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate of change, as appropriate, each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The proposed update factor for FY 2026 under that framework is 2.6 percent based on a projected 2.6 percent increase in the proposed 2023-based CIPI, a proposed 0.0 percentage point adjustment for intensity, a proposed 0.0 percentage point adjustment for case-mix, a proposed 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a proposed forecast error correction of 0.0 percentage point. As discussed in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2026 CIPI projection in that same section of this Addendum. In this proposed rule, we describe the policy adjustments that we are proposing to apply in the update framework for FY 2026.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons—

- The average resource use of Medicare patient changes (''real'' case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (''coding effects''); or
- The annual DRG reclassification and recalibration changes may not be budget neutral (''reclassification effect'').

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients, as opposed to changes in documentation and coding behavior that result in assignment of

cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004, IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts, as discussed in section II. of appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2026, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase would equal 0.5 percent for FY 2026. The net adjustment for change in case-mix is the difference between the projected real increases in case mix and the projected total increase in case mix. Therefore, the proposed net adjustment for case-mix change in FY 2026 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, for this proposed rule, we have the FY 2024 MedPAR claims data available to evaluate the effects of the FY 2024 DRG reclassification and recalibration as part of our update for FY 2026. We assume for purposes of this adjustment, that the estimate of FY 2024 DRG reclassification and recalibration would result in no change in the case-mix when compared with the case mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, we are proposing to make a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2026.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if the difference in the actual increase and projected increase of the capital input price index for any year is greater than 0.25 percentage point in absolute terms. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. The forecast error in any given year can be derived as the actual CIPI increase less the forecasted CIPI increase. A forecast error of −0.1 percentage point was calculated for the FY 2024 update, for which there are historical data. That is, current historical data indicate that actual realized price increases (2.8 percent) were 0.1 percentage point lower than the forecasted FY 2024 CIPI increase (2.9 percent) used in calculating the FY 2024 update factor. As this does not exceed the 0.25 percentage point threshold, we are not proposing an adjustment for forecast error in the update for FY 2026.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculate this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflects how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the Consumer Price Index for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual change is due to each of these factors. Thus, the capital update framework provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this proposed rule, we are proposing to continue to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2026 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 0436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2026, we are proposing to use an intensity measure that is based on an average of cost-per-discharge data from the 5-year period beginning with FY 2019 and extending through FY 2023. Based on these data, we estimated that case-mix constant intensity declined during FYs 2019 through 2023. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimated that intensity declined during that 5-year period, we believe it is appropriate to continue to apply a zero-intensity adjustment for FY 2026. Therefore, we are proposing to make a 0.0 percentage point adjustment for intensity in the update for FY 2026.

Earlier, we described the basis of the components we used to develop the proposed 2.6 percent capital update factor under the capital update framework for FY 2026, as shown in the following table.

PROPOSED FY 2026 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	2.6
Intensity:	0.0
Case-Mix Adjustment Factors:	
Projected Case-Mix Change	−0.5
Real Across DRG Change	0.5
Subtotal	0.0
Effect of FY 2024 Reclassification and Recalibration	0.0
Forecast Error Correction	0.0
Total Update	2.6

*The capital input price index represents the proposed 2023-based CIPI.

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A shared threshold is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier threshold is set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments. For FY 2026, we are proposing to continue to incorporate the impact of estimated operating outlier reconciliation payment amounts into the outlier threshold model. (For more details on our proposal to incorporate an estimate of the impact of operating outlier reconciliation payment amounts into the outlier threshold model, see section II.A.4.i. of this Addendum to this proposed rule.)

For FY 2025, we estimated that outlier payments for capital-related PPS payments would equal 4.23 percent of inpatient capital-related payments based on the capital Federal rate. Based on the threshold discussed in section II.A. of this Addendum, we estimate that prior to taking into account projected capital outlier reconciliation payments, outlier payments for capital-related costs would equal 4.16 percent of inpatient capital-related payments based on the proposed capital Federal rate in FY 2026. Using the proposal outlined in section II.A.4.i. of this Addendum, we estimate that taking into account projected capital outlier reconciliation payments would decrease the estimated percentage of FY 2026 capital outlier payments by 0.03 percent. Therefore, accounting for estimated capital outlier reconciliation, the estimated outlier payments for capital-related PPS payments would equal 4.13 percent (4.16 percent − 0.03 percent) of inpatient capital-related payments based on the proposed capital Federal rate in FY 2026. Accordingly, we are proposing to apply an outlier adjustment factor of 0.9587 in determining the capital Federal rate for FY 2026. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2026 would be lower than the percentage we estimated for FY 2025.

The outlier reduction factors are not built permanently into the capital rates; that is,

they are not applied cumulatively in determining the capital Federal rate. The proposed FY 2026 outlier adjustment of 0.9587 is a 0.11 percent change from the FY 2025 outlier adjustment of 0.9577. Therefore, the proposed net change in the outlier adjustment to the capital Federal rate for FY 2026 is 1.0011 (0.9587/0.9577) so that the proposed outlier adjustment would increase the FY 2026 capital Federal rate by approximately 0.11 percent compared to the FY 2025 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate, after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF, are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes.

As discussed in section III.G.5. of the preamble of this proposed rule, in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42325 through 42339), we finalized a policy to address wage index disparities between high and low wage index hospitals by increasing the wage index values for hospitals with a wage index value below the 25th percentile wage index. We stated that this policy would be effective for at least 4 years, beginning in FY 2020. This policy was applied in FYs 2020 through 2024. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69301 through 69308), we adopted an extension of this policy for at least three more years, beginning in FY 2025. However, in the FY 2025 IPPS/LTCH PPS interim final action with comment period (IFC) titled ''Medicare Program; Changes to the Fiscal Year 2025 Hospital Inpatient Prospective Payment System (IPPS) Rates Due to Court Decision'' (referred to herein as the FY 2025 IFC) (89 FR 80406 through 80408), after consideration of the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we recalculated the FY 2025 hospital wage index to remove the low wage hospital policy for FY 2025. The recalculation of the FY 2025 hospital wage index impacted the FY 2025 GAFs. In- the FY 2025 IFC (89 FR 80412), we also modified the calculation of the GAF budget neutrality adjustment factor that ensured budget neutrality for changes to the GAFs due to the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy (our policy to place a 5 percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year). Specifically, we modified this calculation to ensure budget neutrality for changes to the GAFs due only to the 5-percent cap on wage index decreases policy.

As discussed in section III.G.5. of the preamble of this proposed rule, for FY 2026 and subsequent fiscal years, we are proposing to discontinue the low wage index hospital policy and associated budget neutrality adjustment. In addition, as discussed in section IIII.G.7. of the preamble of this proposed rule, we recognize that some hospitals that previously benefitted from the low wage index hospital policy would experience decreases of 10 percent or more over the two years from their FY 2024 wage index (with the low wage index hospital policy applied) to their proposed FY 2026 wage index. Therefore, in addition to our permanent 5-percent wage index cap policy at 42 CFR 412.64(h)(7), we are proposing to establish a narrow transitional exception to the calculation of FY 2026 payments for hospitals significantly impacted by the discontinuation of the low wage index hospital policy, that would be implemented in a budget neutral manner. Specifically, we are proposing that for hospitals that benefitted from the low wage index hospital policy in FY 2024 and whose FY 2026 wage index is decreasing by more than 9.75 percent from the hospital's FY 2024 wage index, we would establish a transitional payment exception for FY 2026 for that hospital that would be equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent of its FY 2024 wage index. Under that proposal, we indicated we are proposing to make a budget neutral equivalent exception under the capital IPPS. In this section, we refer to this proposed policy as the transition for the discontinuation of the low wage index hospital policy.

As referenced previously, beginning in FY 2023, we finalized at 42 CFR 412.64(h)(7) a permanent 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY regardless of the circumstances causing the decline. That is, under this policy, a hospital's wage index value would not be less than 95 percent of its prior year value (87 FR 49018 through 49021). In this section, we refer to our permanent policy to place a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year as the 5-percent cap on wage index decreases policy. We note that the proposed transitional payment exception for FY 2026 discussed previously would be applied after the application of the 5-percent cap on wage index decreases policy. Given these proposed changes, we are proposing to augment our historical methodology for computing the budget neutrality factor for proposed changes in the GAFs.

Specifically, we are proposing to use a 2-step methodology for computing the budget neutrality factor for changes in the GAFs in light of the effect of those proposed wage index changes on the GAFs. In the first step, we propose to calculate a factor to ensure budget neutrality for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy, consistent with our historical GAF budget neutrality factor methodology. In the second step, we propose to calculate a factor to ensure budget neutrality for changes to the GAFs due to the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy.

The budget neutrality factors applied for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are built permanently into the capital Federal rate; that is, they are applied cumulatively in determining the capital Federal rate. However, the budget neutrality factor for the 5-percent cap on wage index decreases policy is not permanently built into the capital Federal rate. This is because the GAFs with 5-percent cap on wage index decreases policy applied from the previous year are not used in the budget neutrality factor calculations for the current year. Accordingly, and consistent with this approach, prior to calculating the proposed GAF budget neutrality factors for FY 2026, we removed from the capital Federal rate the budget neutrality factor applied in FY 2025 for the 5-percent cap on wage index decreases policy. Specifically, we divided the capital Federal rate by the FY 2025 budget neutrality factor of 0.9992 (89 FR 80412). (We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45552) for additional discussion on our policy of removing from the capital Federal rate the prior year budget neutrality factor(s) that are not used in the budget neutrality factor calculations for the current year.)

We discuss our proposed 2-step calculation of the proposed GAF budget neutrality factors for FY 2026 as follows. To determine the GAF budget neutrality factors for FY 2026, we first compared estimated aggregate capital Federal rate payments based on the FY 2025 MS–DRG classifications and relative weights and the FY 2025 GAFs to estimated aggregate capital Federal rate payments based on the FY 2025 MS–DRG classifications and relative weights and the proposed FY 2026 GAFs without incorporating the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy. To achieve budget neutrality for these proposed changes in the GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 1.0140 for FY 2026.

Next, we compared estimated aggregate capital Federal rate payments based on the proposed FY 2026 GAFs with and without the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy. For this calculation, estimated aggregate capital Federal rate payments were calculated using the proposed FY 2026 MS–DRG classifications and relative weights (after application of the 10-percent cap discussed later in this section) and the proposed FY 2026 GAFs (both with and without the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy). (We note, for this calculation the proposed GAFs included the imputed floor, out-migration, and Frontier State adjustments.) To achieve budget neutrality for the effects of the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy on the proposed FY 2026 GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 0.9927.

The budget neutrality factor for the 5-percent cap on wage index decreases policy

and the proposed transition for the discontinuation of the low wage index hospital policy is not permanently built into the capital Federal rate. Consistent with this, we present the proposed budget neutrality factor for the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy calculated under the second step of this 2-step methodology separately from the other proposed budget neutrality factors in the discussion that follows, and this proposed factor is not included in the calculation of the proposed combined GAF/DRG adjustment factor described later in this section.

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. Consistent with our historical methodology for adjusting the capital standard Federal rate to ensure that the effects of the annual DRG reclassification and the recalibration of DRG weights are budget neutral under § 412.308(c)(4)(ii), we finalized to apply an additional budget neutrality factor to the capital standard Federal rate so that the 10-percent cap on decreases in an MS–DRG's relative weight is implemented in a budget neutral manner (87 FR 49436). Specifically, we augmented our historical methodology for computing the budget neutrality factor for the annual DRG reclassification and recalibration by computing a budget neutrality adjustment for the annual DRG reclassification and recalibration in two steps. We first calculate a budget neutrality factor to account for the annual DRG reclassification and recalibration prior to the application of the 10-percent cap on MS–DRG relative weight decreases. Then we calculate an additional budget neutrality factor to account for the application of the 10-percent cap on MS–DRG relative weight decreases.

To determine the proposed DRG budget neutrality factors for FY 2026, we first compared estimated aggregate capital Federal rate payments based on the FY 2025 MS–DRG classifications and relative weights to estimated aggregate capital Federal rate payments based on the proposed FY 2026 MS–DRG classifications and relative weights prior to the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were calculated using the proposed FY 2026 GAFs without the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy. The proposed incremental adjustment factor for DRG classifications and changes in relative weights prior to the application of the 10-percent cap is 0.9982. Next, we compared estimated aggregate capital Federal rate payments based on the proposed FY 2026 MS–DRG classifications and relative weights prior to the application of the 10-percent cap to estimated aggregate capital Federal rate payments based on the proposed FY 2026 MS–DRG classifications and relative weights after the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were also calculated using the proposed FY 2026 GAFs without the 5 percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy. The proposed incremental adjustment factor for the application of the 10-percent cap on relative weight decreases is 0.9999. Therefore, to achieve budget neutrality for the proposed FY 2026 MS–DRG reclassification and recalibration (including the 10-percent cap), based on the calculations described previously, we are proposing to apply an incremental budget neutrality adjustment factor of 0.9982 (0.9982×0.9999) for FY 2026 to the capital Federal rate. We note that all the values are calculated with unrounded numbers.

The proposed incremental adjustment factor for the proposed FY 2026 MS–DRG reclassification and recalibration (0.9982) and for proposed changes in the FY 2026 GAFs due to the proposed update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy (1.0140) is 1.0121 (0.9982×1.0140). This incremental adjustment factor is built permanently into the capital Federal rates.

To achieve budget neutrality for the effects of the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy on the FY 2026 GAFs, as described previously, we calculated a proposed budget neutrality adjustment factor of 0.9927 for FY 2026. We refer to this proposed budget neutrality factor for the remainder of this section as the cap/transition adjustment factor.

We applied the proposed budget neutrality adjustment factors described previously to the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are determined separately. Under the capital IPPS, there is a single budget neutrality adjustment factor for changes in the GAF that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy. In addition, there is no adjustment for the effects that geographic reclassification, the 5-percent cap on wage index decreases policy, or the proposed transition for the discontinuation of the low wage index hospital policy described previously have on the other payment parameters, such as the payments for DSH or IME.

The proposed incremental GAF/DRG adjustment factor of 1.0121 accounts for the proposed MS–DRG reclassifications and recalibration (including application of the 10-percent cap on relative weight decreases) and for proposed changes in the GAFs that result from proposed updates to the wage data, the effects on the GAFs of FY 2026 geographic reclassification decisions made by the MGCRB compared to FY 2025 decisions, and the application of the rural floor policy. The proposed cap/transition adjustment factor of 0.9927 accounts for changes that result from the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy. However, these factors do not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2026

For FY 2025, we established a capital Federal rate of $512.14 (89 FR 80412). We are proposing to establish an update of 2.6 percent in determining the FY 2026 capital Federal rate for all hospitals. As a result of this proposed update and the proposed budget neutrality factors discussed earlier, we are proposing to establish a national capital Federal rate of $528.95 for FY 2026. The proposed national capital Federal rate for FY 2026 was calculated as follows:

- The proposed FY 2026 update factor is 1.026; that is, the proposed update is 2.6 percent.
- The proposed FY 2026 GAF/DRG budget neutrality adjustment factor that is applied to the capital Federal rate for proposed changes in the MS–DRG classifications and relative weights (including application of the 10-percent cap on relative weight decreases) and proposed changes in the GAFs that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy is 1.0121.
- The proposed FY 2026 cap/transition budget neutrality adjustment factor that is applied to the capital Federal rate for changes due to the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy is 0.9927.
- The proposed FY 2026 outlier adjustment factor is 0.9587.

We are providing the following chart that shows how each of the proposed factors and adjustments for FY 2026 affects the computation of the proposed FY 2026 national capital Federal rate in comparison to the FY 2025 national capital Federal rate. The proposed FY 2026 update factor has the effect of increasing the capital Federal rate by 2.6 percent compared to the FY 2025 capital Federal rate. The proposed GAF/DRG budget neutrality adjustment factor has the effect of increasing the capital Federal rate by 1.21 percent. The proposed FY 2026 cap/transition budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.65 percent compared to the FY 2025 capital Federal rate. The proposed FY 2026 outlier adjustment factor has the effect of increasing the capital Federal rate by 0.11 percent compared to the FY 2025 capital Federal rate. The combined effect of all the proposed changes would increase the national capital Federal rate by

approximately 3.28 percent, compared to the FY 2025 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS—FY 2025 CAPITAL FEDERAL RATE AND THE PROPOSED FY 2026 CAPITAL FEDERAL RATE

	FY 2025	Proposed FY 2026	Change	Percent change
Update Factor [1]	1.0310	1.0260	1.0260	2.60
GAF/DRG Adjustment Factor [1]	0.9854	1.0121	1.0121	1.21
GAF Cap/Transition Adjustment Factor [2]	0.9992	0.9927	0.9935	−0.65
Outlier Adjustment Factor [3]	0.9577	0.9587	1.0011	0.11
Capital Federal Rate	$512.14	$528.95	1.0328	[4] 3.28

[1] The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rate. Thus, for example, the incremental change from FY 2025 to FY 2026 resulting from the application of the proposed 1.0121 GAF/DRG budget neutrality adjustment factor for FY 2025 is a net change of 1.0121 (or 1.21 percent).

[2] For FY 2025 the GAF Cap/Transition budget neutrality adjustment factor reflects only the FY 2025 budget neutrality factor for the 5-percent cap on wage index decreases policy. The GAF Cap/Transition budget neutrality adjustment factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the proposed FY 2026 GAF Cap/Transition budget neutrality adjustment factor is 0.9927/0.9992 or 0.9935 (or −0.65 percent).

[3] The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the proposed FY 2026 outlier adjustment factor is 0.9587/0.9577 or 1.0011 (or 0.11 percent).

[4] Percent change may not sum due to rounding.

B. Calculation of the Proposed Inpatient Capital-Related Prospective Payments for FY 2026

For purposes of calculating payments for each discharge during FY 2026, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. Section 412.312(c) provides for a shared threshold to identify outlier cases for both inpatient operating and inpatient capital-related payments. The proposed outlier threshold for FY 2026 is in section II.A. of this Addendum. For FY 2026, a case will qualify as a cost outlier if the cost for the case is greater than the prospective payment rates for the MS–DRG plus IME and DSH payments (including the empirically justified Medicare DSH payment and the estimated uncompensated care payment), estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on payments for new technology, plus the proposed fixed-loss amount of $44,305.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation, unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted average of past capital purchase prices up to and including the current year.

For this proposed rule, we are proposing to use the IPPS operating and capital market baskets that reflect a 2023 base year. For a complete discussion of the proposal to rebase the IPPS operating and capital market baskets, we refer readers to section IV. of the preamble of this proposed rule.

2. Forecast of the CIPI for FY 2026

Based on IHS Global Inc.'s (IGI) fourth quarter 2024 forecast, for this proposed rule, we are forecasting the proposed 2023-based CIPI to increase 2.6 percent in FY 2026. This reflects a projected 3.2 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 3.4 percent increase in other capital expense prices in FY 2026, partially offset by a projected 0.8 percent decline in vintage-weighted interest expense prices in FY 2026. The weighted average of these three factors produces the forecasted 2.6 percent increase for the proposed 2023-based CIPI in FY 2026.

We are also proposing that if more recent data become available (for example, a more recent estimate of the percentage increase in the proposed 2023-based CIPI), we would use such data, if appropriate, to determine the FY 2026 capital update factor for the final rule.

IV. Proposed Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2026

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are paid on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount, as defined in § 413.40(a) of the regulations) is set for each hospital, based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, as specified in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38536), effective for cost reporting periods beginning during FY 2018, the annual update to the target amount for extended neoplastic disease care hospitals (hospitals described in § 412.22(i) of the regulations) also is the rate-of-increase percentage specified in § 413.40(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

For this FY 2026 IPPS/LTCH PPS proposed rule, based on IGI's 2024 fourth quarter forecast, we estimate that the proposed 2023-based IPPS operating market basket percentage increase for FY 2026 is 3.2 percent (that is, the estimate of the market basket rate-of-increase). Based on this estimate, the proposed FY 2026 rate-of-increase percentage that will be applied to the FY 2025 target amounts in order to calculate the proposed FY 2026 target amounts for children's hospitals, the 11 cancer hospitals, RNCHIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and extended neoplastic disease care hospitals will be 3.2 percent, in accordance with the applicable regulations at 42 CFR 413.40. We are also proposing that if more recent data become available (for example a more recent estimate of the market basket rate-of-increase), we would use such data, if appropriate, to

calculate the final IPPS operating market basket update for FY 2026.

IRFs and rehabilitation distinct part units, IPFs and psychiatric units, and LTCHs are excluded from the IPPS and paid under their respective PPSs. The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VIII. of the preamble and section V. of the Addendum of this proposed rule for the changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2026. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

V. Proposed Changes to the Payment Rates for the LTCH PPS for FY 2026

A. Proposed LTCH PPS Standard Federal Payment Rate for FY 2026

1. Overview

In section IX. of the preamble of this proposed rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2026.

Under § 412.523(c)(3) of the regulations, for FY 2012 and subsequent years, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3) (citing sections 1886(b)(3)(B)(xi)(II) and 1886(m)(4) of the Act as set forth in the regulations at § 412.523(c)(3)(viii) through (xvii)). (For a summary of the payment rate development prior to FY 2012, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38310 through 38312) and references therein.)

Section 1886(m)(3)(A) of the Act specifies that, for rate year 2012 and each subsequent rate year, any annual update to the standard Federal payment rate shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act as discussed in section IX.C.2. of the preamble of this proposed rule. This section of the Act further provides that the application of section 1886(m)(3)(B) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section IX.C.2. of the preamble of this proposed rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.)

For LTCHs that fail to submit the required quality reporting data in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

2. Development of the Proposed FY 2026 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice and § 412.523(c)(3)(xvii), for FY 2026, we are proposing to apply the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the proposed LTCH PPS standard Federal payment rate for FY 2026, we also are proposing to make certain regulatory adjustments, consistent with past practices. Specifically, in determining the proposed FY 2026 LTCH PPS standard Federal payment rate, we are proposing to apply a budget neutrality adjustment factor for the changes related to the area wage level adjustment (that is, changes to the wage data and labor-related share) as discussed in section V.B.6. of this Addendum.

In this proposed rule, we are proposing to establish an annual update to the LTCH PPS standard Federal payment rate of 2.6 percent (that is, the most recent estimate of the 2022-based LTCH market basket increase of 3.4 percent less the proposed productivity adjustment of 0.8 percentage point). Therefore, in accordance with § 412.523(c)(3)(xvii), we are proposing to apply an update factor of 1.026 to the FY 2025 LTCH PPS standard Federal payment rate of $49,383.26 to determine the proposed FY 2026 LTCH PPS standard Federal payment rate. Also, in accordance with § 412.523(c)(3)(xvii) and (c)(4), we are required to reduce the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points for LTCHs that fail to submit the required quality reporting data for FY 2026 as required under the LTCH QRP. Therefore, for LTCHs that fail to submit quality reporting data under the LTCH QRP, we are proposing to establish an annual update to the LTCH PPS standard Federal payment rate of 0.6 percent (or an update factor of 1.006). This proposed update reflects the proposed annual market basket update of 3.4 percent reduced by the proposed 0.8 percentage point productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act, minus 2.0 percentage points for LTCHs failing to submit quality data under the LTCH QRP, as required by section 1886(m)(5) of the Act. Consistent with § 412.523(d)(4), we are proposing to apply an area wage level budget neutrality factor to the FY 2026 LTCH PPS standard Federal payment rate of 1.0012146, based on the best available data at this time, to ensure that any proposed changes to the area wage level adjustment (that is, the proposed annual update of the wage index (including application of the 5-percent cap on wage index decreases, discussed later in this section), and proposed labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Accordingly, we are proposing to establish an LTCH PPS standard Federal payment rate of $50,728.77 (calculated as $49,383.26 × 1.026 × 1.0012146) for FY 2026. For LTCHs that fail to submit quality reporting data for FY 2026, in accordance with the requirements of the LTCH QRP under section 1866(m)(5) of the Act, we are proposing to establish an LTCH PPS standard Federal payment rate of $49,739.90 (calculated as $49,383.26 × 1.006 × 1.0012146) for FY 2026.

B. Proposed Adjustment for Area Wage Levels Under the LTCH PPS for FY 2026

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

The proposed FY 2026 LTCH PPS standard Federal payment rate wage index values that would be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2025, through September 30, 2026, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of this Addendum and available via the internet on the CMS website.

2. Proposed Geographic Classifications (Labor Market Areas) Under the LTCH PPS

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an ''urban area,'' or a ''rural area,'' as defined in § 412.503. Under § 412.503, an ''urban area'' is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as defined by the Executive OMB, and a ''rural area'' is defined as any area outside of an urban area (75 FR 37246).

The geographic classifications (labor market area definitions) currently used under the LTCH PPS are based on the Core Based Statistical Areas (CBSAs) established by OMB. In the July 16, 2021, **Federal Register** (86 FR 37777), OMB finalized a schedule for future updates based on results of the decennial Census updates to commuting patterns from the American Community Survey. In accordance with that schedule, on July 21, 2023, OMB released Bulletin No. 23–01. According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (''the 2020 Standards''), which appeared in the **Federal Register** on July 16, 2021 (86 FR 37770 through 37778), and the application of those standards to Census Bureau population and journey-to-work data (that is, 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). A copy of OMB Bulletin No. 23–01 may be obtained at *https://bidenwhitehouse.archives.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf.*

In the FY 2025 IPPS/LTCH PPS final rule, we stated that we believe that adopting the

CBSA-based labor market area delineations established in OMB Bulletin 23–01 will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (89 FR 69974). We also noted that our adoption of the revised delineations announced in OMB Bulletin No. 23–01 is consistent with the changes under the IPPS for FY 2025. Therefore, in that same final rule, we adopted the updates set forth in OMB Bulletin No. 23–01, under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, for the LTCH PPS effective for FY 2025. We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69973 through 69975), for a full discussion of our implementation of the OMB delineations based on OMB Bulletin No. 23–01 for the LTCH PPS. For additional information on the CBSA-based labor market area (geographic classification) delineations used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).

We continue to believe that the CBSA-based labor market area delineations, as established in OMB Bulletin 23–01, would ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (89 FR 69974). Therefore, for FY 2026, we are proposing to continue to use the CBSA-based labor market area delineations as established in OMB Bulletin 23–01 and adopted in the FY 2025 IPPS/LTCH final rule.

CBSAs are made up of one or more constituent counties. For FY 2026, we are continuing to use the Federal Information Processing Standard (FIPS) county codes, maintained by the U.S. Census Bureau, for purposes of crosswalking counties to CBSAs. The current county-to-CBSA crosswalk was adopted under the LTCH PPS in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69973 through 69975) and is located on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/long-term-care-hospital/other-files-download*.

3. Proposed Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

Effective FY 2025, we rebased and revised the 2017-based LTCH market basket to reflect a 2022 base year and determined the labor-related share annually as the sum of the relative importance of each labor-related cost category in the 2022-based LTCH market basket using the most recent available data. (For more details, we refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69435 through 69455).)

In this proposed rule, consistent with our historical practice, we are proposing that the LTCH PPS labor-related share for FY 2026 would be the sum of the FY 2026 relative importance of each labor-related cost category in the LTCH market basket using the most recent available data. Specially, we are proposing that the labor-related share for FY 2026 is the sum of the labor-related portion of operating costs from the 2022-based LTCH market basket (that is, the sum of the FY 2026 relative importance shares of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services) and a portion of the relative importance of Capital-Related cost weight from the 2022-based LTCH market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (2022) and FY 2026. Based on IHS Global Inc.'s fourth quarter 2024 forecast of the 2022-based LTCH market basket, the sum of the FY 2026 relative importance for Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; and All Other: Labor-Related Services is 69.2 percent. The portion of capital-related costs that is influenced by the local labor market is estimated to be 46 percent (that is, the same percentage applied to the 2009-based, 2013-based, and 2017-based LTCH market basket capital-related costs relative importance). Since the FY 2026 relative importance for capital-related costs is 8.4 percent based on IHS Global Inc.'s fourth quarter 2024 forecast of the 2022-based LTCH market basket, we took 46 percent of 8.4 percent to determine the labor-related share of capital-related costs for FY 2026 of 3.9 percent. Therefore, we are proposing a total labor-related share for FY 2026 of 73.1 percent (the sum of 69.2 percent for the labor-related share of operating costs and 3.9 percent for the labor-related share of capital-related costs). Consistent with our historical practice, we are proposing that if more recent data become available after the publication of the proposed rule and before the publication of the final rule (for example, a more recent estimate of the relative importance of each labor-related cost category of the 2022-based LTCH market basket), we will use such data, if appropriate, to determine the FY 2026 LTCH PPS labor-related share.

4. Proposed Wage Index for FY 2026 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the ''urban'' or ''rural'' designation of any related or affiliated provider. As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also employ a policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, to determine the applicable area wage index values for the FY 2026 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are proposing to continue to employ our historical practice of using the same data we used to compute the proposed FY 2026 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this proposed rule (that is, wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2022) because these data are the most recent complete data available.

In addition, we are proposing to compute the FY 2026 LTCH PPS standard Federal payment rate area wage index values consistent with the ''urban'' and ''rural'' geographic classifications (that is, the proposed labor market area delineations as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. We are also proposing to continue to apportion the wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values, for FY 2026, we are proposing to continue to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data is determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data is determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2022 IPPS wage data that we are proposing to use to determine the proposed FY 2026 LTCH PPS area wage index values in this proposed rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent

with our existing methodology, we calculated the proposed FY 2026 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, proposed CBSAs 10500, 12020, 12054, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 31924, 40660, 42340, 46660, and 47580), as shown in Table 12A, which is listed in section VI. of this Addendum.

Based on the FY 2022 IPPS wage data that we are proposing to use to determine the proposed FY 2026 LTCH PPS area wage index values in this proposed rule, there are no IPPS wage data for rural North Dakota (CBSA 35). Consistent with our existing methodology, we calculated the proposed FY 2026 wage index value for CBSA 35 as the average of the wage index values for all proposed CBSAs that are contiguous to the rural counties of the State (that is, proposed CBSAs 13900, 22020, 24220, and 33500), as shown in Table 12B, which is listed in section VI. of this Addendum. We note that, as IPPS wage data are dynamic, it is possible that the number of urban and rural areas without IPPS wage data will vary in the future.

5. Cap on Wage Index Decreases

a. Cap on LTCH PPS Wage Index Decreases

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49440 through 49442), we finalized a policy that applies a permanent 5-percent cap on any decrease to an LTCH's wage index from its wage index in the prior year. Consistent with the requirement at § 412.525(c)(2) that changes to area wage level adjustments are made in a budget neutral manner, we include the application of this policy in the determination of the area wage level budget neutrality factor that is applied to the standard Federal payment rate, as is discussed later in section V.B.6. of this Addendum.

Under this policy, an LTCH's wage index will not be less than 95 percent of its wage index for the prior fiscal year. An LTCH's wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the LTCH PPS wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2026 would not be eligible for the LTCH PPS wage index cap in FY 2026. These LTCHs would receive the calculated wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage index cap. The cap on wage index decreases policy is reflected at § 412.525(c)(1).

For each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped wage index. This includes the LTCH's final prior year wage index value, the LTCH's uncapped current year wage index value, and the LTCH's capped current year wage index value. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact their MAC to ensure that its wage index value is not less than 95 percent of the value paid to it for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

b. Cap on IPPS Comparable Wage Index Decreases

Determining LTCH PPS payments for short-stay-outlier cases (reflected in § 412.529) and site neutral payment rate cases (reflected in § 412.522(c)) requires calculating an ''IPPS comparable amount.'' For information on this ''IPPS comparable amount'' calculation, we refer the reader to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49608 through 49610). Determining LTCH PPS payments for LTCHs that do not meet the applicable discharge payment percentage (reflected in § 412.522(d)) requires calculating an ''IPPS equivalent amount.'' For information on this ''IPPS equivalent amount'' calculation, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42439 through 42445).

Calculating both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' requires adjusting the IPPS operating and capital standardized amounts by the applicable IPPS wage index for nonreclassified IPPS hospitals. That is, the standardized amounts are adjusted by the IPPS wage index for nonreclassified IPPS hospitals located in the same geographic area as the LTCH. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49442 through 49443), we finalized a policy that applies a permanent 5-percent cap on decreases in an LTCH's applicable IPPS comparable wage index from its applicable IPPS comparable wage index in the prior year. Historically, we have not budget neutralized changes to LTCH PPS payments that result from the annual update of the IPPS wage index for nonreclassified IPPS hospitals. Consistent with this approach, the cap on decreases in an LTCH's applicable IPPS comparable wage index is not applied in a budget neutral manner.

Under this policy, an LTCH's applicable IPPS comparable wage index will not be less than 95 percent of its applicable IPPS comparable wage index for the prior fiscal year. An LTCH's applicable IPPS comparable wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the applicable IPPS comparable wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2026 would not be eligible for the applicable IPPS comparable wage index cap in FY 2026. This means that these LTCHs would receive the calculated applicable IPPS comparable wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage cap. The cap on IPPS comparable wage index decreases policy is reflected at § 412.529(d)(4)(ii)(B) and (d)(4)(iii)(B).

Similar to the information we are making available for the cap on the LTCH PPS wage index values (described previously), for each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped applicable IPPS comparable wage index. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact its MAC to ensure that its applicable IPPS comparable wage index value is not less than 95 percent of the value paid to them for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this proposed rule at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*.

6. Proposed Budget Neutrality Adjustments for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage level adjustment budget neutrality factor that is applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we have applied an area wage level adjustment budget neutrality factor in determining the standard Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

For FY 2026, in accordance with § 412.523(d)(4), we are applying a proposed area wage level budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments, consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). As discussed in section V.B.5. of this Addendum, consistent with, § 412.525(c)(2), we include the application of the 5-percent cap on wage index decreases in the determination of the proposed area wage

level budget neutrality factor. Specifically, we are proposing to determine an area wage level adjustment budget neutrality factor that is applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2026 using the following methodology:

Step 1—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2025 wage index values and the FY 2025 labor-related share of 72.8 percent.

Step 2—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the proposed FY 2026 wage index values (including the application of the 5-percent cap on wage index decreases) and the proposed FY 2026 labor-related share of 73.1 percent. (As noted previously, the proposed changes to the wage index values based on updated hospital wage data are discussed in section V.B.4. of this Addendum and the proposed labor-related share is discussed in section V.B.3. of this Addendum.)

Step 3—Calculate the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2025 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the proposed FY 2026 updates to the area wage level adjustment (calculated in Step 2) to determine the proposed budget neutrality factor for updates to the area wage level adjustment for FY 2026 LTCH PPS standard Federal payment rate payments.

Step 4—Apply the proposed FY 2026 updates to the area wage level adjustment budget neutrality factor from Step 3 to determine the proposed FY 2026 LTCH PPS standard Federal payment rate after the application of the proposed FY 2026 annual update.

We are proposing to use the most recent data available, including claims from the FY 2024 MedPAR file, in calculating the FY 2026 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor. We note that, because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, consistent with historical practice, we only used data from claims that qualified for payment at the LTCH PPS standard Federal payment rate under the dual rate LTCH PPS to calculate the FY 2026 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor.

For this proposed rule, using the steps in the methodology previously described, we determined a proposed FY 2026 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 1.0012146. Accordingly, in section V.A. of this Addendum, we applied the proposed area wage level adjustment budget neutrality factor of 1.0012146 to determine the proposed FY 2026 LTCH PPS standard Federal payment rate, in accordance with § 412.523(d)(4).

C. Proposed Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels.

The current methodology used to determine the COLA factors for Alaska and Hawaii is based on the 2009 OPM COLAs (which are the last COLA factors OPM published prior to transitioning from COLA to locality pay) by a comparison of the growth in the Consumer Price Indexes (CPIs) for Urban Alaska and Urban Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). We use the comparison of the growth in the overall CPI relative to the growth in the CPI for those areas to update the COLA factors for all areas in Alaska and Hawaii, respectively, because BLS publishes CPI data for only Urban Alaska and Urban Hawaii. Using the respective CPI commodities index and CPI services index and using the approximate commodities/services shares obtained from the IPPS market basket, we create reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. The methodology also includes our discretionary authority to adjust payments to hospitals in Alaska and Hawaii by incorporating the statutorily mandated cap of 25 percent that was applied when determining OPM's COLA factors (77 FR 53482). Under this policy, we have updated the COLA factors using this methodology every 4 years (at the same time as the update to the labor-related share of the IPPS market basket) beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53481 through 53482) for a detailed description of this methodology.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45559 through 45560), we last updated the COLA factors for LTCHs using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53481 through 53482) and CPI data through 2020. We utilized these COLA factors for FYs 2022 through 2025 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. (We note the same COLA methodology and factors were used under the IPPS and LTCH PPS for FYs 2022 through 2025.)

As stated previously, we have historically updated the COLA factors at the same time as the update to the labor-related share of the IPPS market basket (77 FR 53482). In section III.H. the preamble of this proposed rule, we are proposing to update the labor-related share of the IPPS market basket. The table below lists the COLA factors for Alaska and Hawaii hospitals as calculated under the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53481 through 53482), using updated CPI data through 2024 and the approximate 60 percent commodities/40 percent services shares obtained from the proposed 2023-based IPPS market basket. For comparison purposes, we also are presenting the COLA factors for FYs 2022 through 2025.

COMPARISON OF COST-OF-LIVING ADJUSTMENT (COLA) FACTORS—ALASKA AND HAWAII UNDER THE LTCH PPS

Area	FY 2022 through FY 2025	Updated COLA factors under current methodology	Difference
Alaska:			
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
City of Juneau and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
Rest of Alaska	1.24	1.20	−0.04
Hawaii:			
City and County of Honolulu	1.25	1.25	.....
County of Hawaii	1.22	1.21	−0.01
County of Kauai	1.25	1.25	.....
County of Maui and County of Kalawao	1.25	1.25	.....

At this time, consistent with the approach proposed under the IPPS as discussed in section II.B.2. of this Addendum, we believe it would be appropriate to maintain the current COLA factors for FY 2026 to allow us to consider whether it would be appropriate to incorporate additional data sources or other methodology changes in determining the adjustment we make to LTCH PPS payments to account for the unique circumstances of LTCHs located in Alaska and Hawaii. Therefore, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, for FY 2026 we are proposing to continue to use the FY 2025 COLA factors (which were originally established in the FY 2022 IPPS/LTCH PPS final rule, as described previously). The following table lists the proposed FY 2026 COLA factors.

PROPOSED FY 2026 COLA FACTORS—ALASKA AND HAWAII UNDER THE LTCH PPS

Area	Proposed COLA
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22
City of Juneau and 80-kilometer (50-mile) radius by road	1.22
Rest of Alaska	1.24
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.22
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

We are interested in and soliciting comments on any possible data sources that could be considered in the development of the COLA factors beyond the methodology (as summarized previously and described in more detail in the FY 2022 IPPS/LTCH PPS final rule, 86 FR 45559) that relies on service and commodity prices as measured by the CPI for the average U.S. city and for the areas of Urban Hawaii and Urban Alaska.

D. Proposed Adjustment for LTCH PPS High-Cost Outlier (HCO) Cases

1. HCO Background

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital's overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the dual rate LTCH PPS payment structure under section 1206 of Public Law 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the FY 2016 IPPS/LTCH PPS final rule, we established separate fixed loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8-percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

To maintain budget neutrality, consistent with the budget neutrality requirement at § 412.523(d)(1) for HCO payments to LTCH PPS standard Federal rate payment cases, we also adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (We refer readers to § 412.522(c)(2)(i) of the regulations for further details.) We note that, during the 4-year transitional period, the site neutral payment rate HCO budget neutrality factor did not apply to the LTCH PPS standard Federal payment rate portion of the blended payment rate at § 412.522(c)(3) payable to site neutral payment rate cases. (For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).)

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

As noted previously, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS and are also used to determine payments for site neutral payment rate cases. As noted earlier, in determining HCO and the site neutral payment rate payments (regardless of whether the case is also an HCO), we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding CCRs and HCO adjustments for either LTCH PPS payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR. This policy is premised on a belief that calculated CCRs in excess of the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

b. Proposed LTCH Total CCR Ceiling

Consistent with our historical practice, we are proposing to use the best available data to determine the LTCH total CCR ceiling for

FY 2026 in this proposed rule. Specifically, in this proposed rule, we are proposing to use our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the December 2024 update of the Provider Specific File (PSF), which is the most recent data available. Accordingly, we are proposing an LTCH total CCR ceiling of 1.359 under the LTCH PPS for FY 2026 in accordance with § 412.525(a)(4)(iv)(C)(*2*) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. Consistent with our historical practice, we are proposing to use the best available data, if applicable, to determine the LTCH total CCR ceiling for FY 2026 in the final rule. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48117 through 48119).)

c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on ''total'' IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(C), the SSO policy at § 412.529(f)(4)(iii), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this proposed rule, we are proposing to use our established methodology for determining the LTCH PPS statewide average CCRs, based on the most recent complete IPPS ''total CCR'' data from the December 2024 update of the PSF. We are proposing LTCH PPS statewide average total CCRs for urban and rural hospitals that would be effective for discharges occurring on or after October 1, 2025, through September 30, 2026, in Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website). Consistent with our historical practice, we also are proposing to use the best available data, if applicable, to determine the LTCH PPS statewide average total CCRs for FY 2026 in the final rule.

Under the current LTCH PPS labor market areas, all areas in the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, we are proposing to continue to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are proposing to use this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

Furthermore, although Connecticut, Massachusetts, Nevada, and North Dakota have areas that are designated as rural under the current LTCH PPS labor market areas, in our calculation of the LTCH statewide average CCRs, there were no trimmed CCR data available from IPPS hospitals located in these rural areas as of December 2024. We refer the reader to section II.A.4.i.(2). of this Addendum for details on the trims applied to the IPPS CCR data from the December 2024 update of the PSF, which are the same data used to calculate the LTCH statewide average total CCRs. Therefore, consistent with our existing methodology, we are proposing to use the national average total CCR for rural IPPS hospitals for rural Connecticut, Massachusetts, Nevada, and North Dakota in Table 8C. We note that there were no LTCHs located in these rural areas as of December 2024.

d. Reconciliation of HCO Payments

Under the HCO policy at § 412.525(a)(4)(iv)(D), the payments for HCO cases are subject to reconciliation (regardless of whether payment is based on the LTCH standard Federal payment rate or the site neutral payment rate). Specifically, any such payments are reconciled at settlement based on the CCR that was calculated based on the cost report coinciding with the discharge. For additional information on the reconciliation policy, we refer readers to sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010) and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821), and most recently modified by Change Request 13566 (Transmittal 12558; March 28, 2024) with an update to the outlier reconciliation criteria.

3. Proposed High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

Under the regulations at § 412.525(a)(2)(ii) and as required by section 1886(m)(7) of the Act, the fixed-loss amount for HCO payments is set each year so that the estimated aggregate HCO payments for LTCH PPS standard Federal payment rate cases are 99.6875 percent of 8 percent (that is, 7.975 percent) of estimated aggregate LTCH PPS payments for LTCH PPS standard Federal payment rate cases. (For more details on the requirements for high-cost outlier payments in FY 2018 and subsequent years under section 1886(m)(7) of the Act and additional information regarding high-cost outlier payments prior to FY 2018, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38542 through 38544).)

b. Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2026

In this section of this Addendum, we discuss our proposed methodology for determining the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2026. When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments (that is, the target percentage) under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy would continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount for LTCH PPS standard Federal payment rate cases would be determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes had been in effect at the time of those discharges.

To determine the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been an LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. In accordance with § 412.525(a)(2)(ii), the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

(1) Proposed Charge Inflation Factor for Use in Determining the Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2026

Under the LTCH PPS, the cost of each claim is estimated by multiplying the charges

on the claim by the provider's CCR. Due to the lag time in the availability of claims data, when estimating costs for the upcoming payment year we typically inflate the charges from the claims data by a uniform factor.

For greater accuracy in calculating the fixed-loss amount, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45562 through 45566), we finalized a technical change to our methodology for determining the charge inflation factor. Similar to the method used under the IPPS hospital payment methodology (as discussed in section II.A.4.i.(2). of this Addendum), our methodology determines the LTCH charge inflation factor based on the historical growth in charges for LTCH PPS standard Federal payment rate cases, calculated using historical MedPAR claims data. In this section of this Addendum, we describe our charge inflation factor methodology.

Step 1—Identify LTCH PPS Standard Federal Payment Rate Cases.

The first step in our methodology is to identify LTCH PPS standard Federal payment rate cases from the MedPAR claim files for the two most recently available Federal fiscal year time periods. For both fiscal years, consistent with our historical methodology for determining payment rates for the LTCH PPS, we remove any claims submitted by LTCHs that were all-inclusive rate providers as well as any Medicare Advantage claims. For both fiscal years, we also remove claims from providers that only had claims in one of the fiscal years.

Step 2—Remove Statistical Outliers.

The next step in our methodology is to remove all claims from providers whose growth in average charges was a statistical outlier. We remove these statistical outliers prior to calculating the charge inflation factor because we believe they may represent aberrations in the data that would distort the measure of average charge growth. To perform this statistical trim, we first calculate each provider's average charge in both fiscal years. Then, we calculate a charge growth factor for each provider by dividing its average charge in the most recent fiscal year by its average charge in the prior fiscal year. Then we remove all claims for providers whose calculated charge growth factor was outside 3 standard deviations from the mean provider charge growth factor.

Step 3—Calculate the Charge Inflation Factor.

The final step in our methodology is to use the remaining claims to calculate a national charge inflation factor. We first calculate the average charge for those remaining claims in both fiscal years. Then we calculate the national charge inflation factor by dividing the average charge in the more recent fiscal year by the average charge in the prior fiscal year.

Following the methodology described previously, we computed a proposed charge inflation factor based on the most recently available data. Specifically, we used the December 2024 update of the FY 2024 MedPAR file and the December 2023 update of the FY 2023 MedPAR as the basis of the LTCH PPS standard Federal payment rate cases for the two most recently available Federal fiscal year time periods, as described previously in our methodology. Therefore, we trimmed the December 2024 update of the FY 2024 MedPAR file and the December 2023 update of the FY 2023 MedPAR file as described in steps 1 and 2 of our methodology. To compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of $302,638 ($12,632,704,879/41,742 cases) from FY 2023 to the average covered charge per case of $340,622 ($14,523,112,734/42,637 cases) from FY 2024. This rate-of-change was 12.5512 percent, which results in a 1-year charge inflation factor of 1.125512, and a 2-year charge inflation factor of 1.266777 (calculated by squaring the 1-year factor). We propose to inflate the billed charges obtained from the FY 2024 MedPAR file by this 2-year charge inflation factor of 1.266777 when determining the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2026.

(2) CCRs for Use in Determining the Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2026

For greater accuracy in calculating the fixed-loss amount, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45562 through 45566), we finalized a technical change to our methodology for determining the CCRs used to calculate the fixed-loss amount. Similar to the methodology used for IPPS hospitals (as discussed in section II.A.4.i.(2). of this Addendum), our methodology adjusts CCRs obtained from the best available PSF data by an adjustment factor that is calculated based on historical changes in the average case-weighted CCR for LTCHs. We believe these adjusted CCRs more accurately reflect CCR levels in the upcoming payment year because they account for historical changes in the relationship between costs and charges for LTCHs. In this section of this Addendum, we describe our CCR adjustment factor methodology.

Step 1—Assign Providers Their Historical CCRs.

The first step in our methodology is to identify providers with LTCH PPS standard Federal payment rate cases in the most recent MedPAR claims file (excluding all-inclusive rate providers and providers with only Medicare Advantage claims). For each of these providers, we then identify the CCR from the most recently available PSF. For each of these providers we also identify the CCR from the PSF that was made available one year prior to the most recently available PSF.

Step 2—Trim Providers With Insufficient CCR Data.

The next step in our methodology is to remove from the CCR adjustment factor calculation any providers for which we cannot accurately measure changes to their CCR using the PSF data. We first remove any provider whose CCR was missing in the most recent PSF or prior year PSF. We next remove any provider assigned the statewide average CCR for their State in either the most recent PSF or prior year PSF. We lastly remove any provider whose CCR was not updated between the most recent PSF and prior year PSF (determined by comparing the effective date of the records).

Step 3—Remove Statistical Outliers.

The next step in our methodology is to remove providers whose change in their CCR is a statistical outlier. To perform this statistical trim, for those providers remaining after application of Step 2, we calculate a provider-level CCR growth factor by dividing the provider's CCR from the most recent PSF by its CCR in the prior year's PSF. We then remove any provider whose CCR growth factor was outside 3 standard deviations from the mean provider CCR growth factor. These statistical outliers are removed prior to calculating the CCR adjustment factor because we believe that they may represent aberrations in the data that would distort the measure of average annual CCR change.

Step 4—Calculate a CCR Adjustment Factor.

The final step in our methodology is to calculate, across all remaining providers after application of Step 3, an average case-weighted CCR from both the most recent PSF and prior year PSF. The provider case counts that we use to calculate the case-weighted average are determined from claims for LTCH standard Federal rate cases from the most recent MedPAR claims file. We note when determining these case counts, consistent with our historical methodology for determining the MS–LTC–DRG relative weights, we do not count short stay outlier claims as full cases but instead as a fraction of a case based on the ratio of covered days to the geometric mean length of stay for the MS–LTC–DRG grouped to the case. We calculate the national CCR adjustment factor by dividing the case-weighted CCR from the most recent PSF by the case-weighted CCR from the prior year PSF.

Following the methodology described previously, we computed a CCR adjustment factor based on the most recently available data. Specifically, we used the December 2024 PSF as the most recently available PSF and the December 2023 PSF as the PSF that was made available one year prior to the most recently available PSF, as described in our methodology. In addition, we used claims from the December 2024 update of the FY 2024 MedPAR file in our calculation of average case-weighted CCRs described in Step 4 of our methodology. Specifically, following the methodology described previously and, for providers with LTCH PPS standard Federal payment rate cases in the December 2024 update of the FY 2024 MedPAR file, we identified their CCRs from both the December 2023 PSF and December 2024 PSF. After performing the trims outlined in our methodology, we used the LTCH PPS standard Federal payment rate case counts from the FY 2024 MedPAR file (classified using proposed Version 43 of the GROUPER) to calculate case-weighted average CCRs. Based on this data, we calculated a December 2023 national average case-weighted CCR of 0.238634 and a December 2024 national average case-weighted CCR of 0.226588. We then calculated the proposed national CCR adjustment factor by dividing the December 2024 national average case-weighted CCR by the December 2023 national average case-weighted CCR. This results in a proposed 1-year national CCR adjustment factor of

0.949522. When calculating the proposed fixed-loss amount for FY 2026, we assigned the statewide average CCR for the upcoming fiscal year to all providers who were assigned the statewide average in the December 2024 PSF or whose CCR was missing in the December 2024 PSF. For all other providers, we multiplied their CCR from the December 2024 PSF by the proposed 1-year national CCR adjustment factor of 0.949522.

(3) Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2026

In this proposed rule, for FY 2026, using the best available data and the steps described previously, we calculated a proposed fixed-loss amount that would maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases as required by section 1886(m)(7) of the Act and in accordance with § 412.525(a)(2)(ii) (based on the proposed payment rates and policies for these cases presented in this proposed rule). Consistent with our historical practice, we are proposing to use the best available LTCH claims data and CCR data, if applicable, when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2026 in the final rule. Therefore, based on LTCH claims data from the December 2024 update of the FY 2024 MedPAR file adjusted for charge inflation and adjusted CCRs from the December 2024 update of the PSF, under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we are proposing a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2026 of $91,247 that would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2026 payments for such cases. As such, we would make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the proposed adjusted LTCH PPS standard Federal payment rate payment and the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases of $91,247).

The proposed fixed-loss amount for FY 2026 ($91,247) is approximately $14,000 higher than the fixed-loss amount for FY 2025 ($77,048). We seek comment on the proposed fixed-loss amount and will consider these comments when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2026 in the final rule.

4. Proposed High-Cost Outlier Payments for Site Neutral Payment Rate Cases

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 and FY 2018 because the historical claims data available in each of these years were not all subject to the LTCH PPS dual rate payment system. Similarly, for FYs 2019 through 2025, we continued to rely on these considerations and actuarial projections because, due to the transitional blended payment policy for site neutral payment rate cases and the provisions of section 3711(b)(2) of the CARES Act, the historical claims data available in each of these years were not subject to the full effect of the site neutral payment rate.

For FYs 2016 through 2025, our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for FYs 2016 through 2025 would be equal to the IPPS fixed-loss amount for that particular fiscal year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the corresponding IPPS fixed-loss amounts for FYs 2016 through 2025. In particular, in FY 2025, we established the fixed-loss amount for site neutral payment rate cases as the FY 2025 IPPS fixed-loss amount of $46,217 (89 FR 80412). For this proposed rule, we used FY 2024 data in the FY 2026 LTCH PPS proposed ratesetting. We note that section 3711(b)(2) of the CARES Act provided a waiver of the application of the site neutral payment rate for LTCH cases. This waiver applied to patients admitted during the COVID–19 PHE period and expired on May 11, 2023. Although the vast majority of LTCH discharges in FY 2024 were not subject to the waiver of the application of the site neutral payment rate, we believe LTCHs' admission patterns may still have been adapting to the expiration of the waiver of the application of the site neutral payment rate. Therefore, at this time, we do not believe it would be appropriate to use FY 2024 data to develop a fixed-loss amount for site neutral payment rate cases for FY 2026. As discussed earlier in this section, we also continue to believe LTCH PPS site neutral payment rate cases should not receive dramatically different HCO payments from those cases that would be paid under the IPPS while we continue to evaluate the actuarial assumptions discussed previously and the use of LTCH PPS site neutral payment rate data to determine an appropriate outlier threshold for such cases.

For these reasons, we continue to believe that the most appropriate fixed-loss amount for site neutral payment rate cases for FY 2026 is the IPPS fixed-loss amount for FY 2026. Accordingly, for FY 2026, we are proposing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the proposed IPPS fixed-loss amount. That is, we are proposing a fixed-loss amount for site neutral payment rate cases of $44,305, which is the same proposed FY 2026 IPPS fixed-loss amount discussed in section II.A.4.i.(2). of this Addendum. Accordingly, under this policy, for FY 2026, we would calculate an HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the site neutral payment rate payment and the proposed fixed-loss amount for site neutral payment rate cases of $44,305).

In establishing an HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS standard Federal payment rate cases is budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2026 would not result in any increase in estimated aggregate FY 2026 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2026. Consistent with our historical practice, we are proposing to continue this policy.

As discussed earlier, consistent with the IPPS HCO payment threshold, we estimate the proposed fixed-loss threshold would result in FY 2026 HCO payments for site neutral payment rate cases to equal 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2026 would not result in any increase in estimated aggregate FY 2026 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2026. To achieve this, for FY 2026, we are proposing to apply a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as $1.0 - 5.1/100 = 0.949$) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We note that, consistent with our current policy, this proposed HCO budget neutrality adjustment would not be applied to the HCO portion of the site neutral payment rate amount (81 FR 57309).

E. Proposed Update to the IPPS Comparable Amount To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' under the SSO policy at § 412.529 and the ''IPPS equivalent amount'' under the site neutral payment rate at § 412.522. Historically, the determination of both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' includes an amount for inpatient operating costs ''for the costs of serving a disproportionate share of low-income patients.'' Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under the age of 65 who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all hospitals that receive Medicare DSH payments.

To reflect the Medicare DSH payment adjustment methodology statutory changes in section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS, we stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766) that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that are based on IPPS rates). We also stated, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

For FY 2026, as discussed in greater detail in section IV.E.2.b. of the preamble of this proposed rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 60.71 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2026. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act is adjusted to 45.53 percent (the product of 75 percent and 60.71 percent) and the resulting amount is used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2026, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 70.53 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 45.53 percent = 70.53 percent).

Therefore, for FY 2026, we are proposing to establish that the calculation of the ''IPPS comparable amount'' under § 412.529 would include an applicable operating Medicare DSH payment amount that is equal to 70.53 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we are proposing that, if more recent data became available, we would use that data to determine the applicable operating Medicare DSH payment amount used to calculate the ''IPPS comparable amount'' in the final rule.

F. Computing the Proposed Adjusted LTCH PPS Federal Prospective Payments for FY 2026

Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages; we make this adjustment by multiplying the labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the proposed FY 2026 values are shown in Tables 12A through 12B listed in section VI. of this Addendum and are available via the internet on the CMS website). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the proposed FY 2026 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this proposed rule, we are proposing to establish an LTCH PPS standard Federal payment rate for FY 2026 of $50,728.77, as discussed in section V.A. of this Addendum. We illustrate the methodology to adjust the proposed LTCH PPS standard Federal payment rate for FY 2026, applying our proposed LTCH PPS amounts for the standard Federal payment rate, MS–LTC–DRG relative weights, and wage index in the following example:

Example:

During FY 2026, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in CBSA 16984, which has a proposed FY 2026 LTCH PPS wage index value of 1.0267 (as shown in Table 12A listed in section VI. of this Addendum). The Medicare patient case is classified into proposed MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a proposed relative weight for FY 2026 of 0.9485 (as shown in Table 11 listed in section VI. of this Addendum). The LTCH submitted quality reporting data for FY 2026 in accordance with the LTCH QRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted proposed Federal prospective payment for this Medicare patient case in FY 2026, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted proposed FY 2026 LTCH PPS standard Federal payment rate ($50,728.77) by the proposed labor-related share (73.1 percent) and the proposed wage index value (1.0267). This wage-adjusted amount was then added to the proposed nonlabor-related portion of the unadjusted proposed LTCH PPS standard Federal payment rate (26.9 percent; adjusted for cost of living, if

applicable) to determine the adjusted proposed LTCH PPS standard Federal payment rate, which is then multiplied by the proposed MS–LTC–DRG relative weight (0.9485) to calculate the total adjusted proposed LTCH PPS standard Federal prospective payment for FY 2026 ($49,055.36). The table illustrates the components of the calculations in this example.

Unadjusted Proposed LTCH PPS Standard Federal Prospective Payment Rate	$50,728.77
Proposed Labor-Related Share	× 0.731
Proposed Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate	= $37,082.73
Proposed Wage Index (CBSA 16984)	× 1.0267
Proposed Wage-Adjusted Labor Share of the LTCH PPS Standard Federal Payment Rate	= $38,072.84
Proposed Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate ($50,728.77 × 0.269)	+ $13,646.04
Adjusted Proposed LTCH PPS Standard Federal Payment Amount	= $51,718.88
Proposed MS–LTC–DRG 189 Relative Weight	× 0.9485
Total Adjusted Proposed LTCH PPS Standard Federal Prospective Payment	= $49,055.36

VI. Tables Referenced in This Proposed Rule Generally Available Through the Internet on the CMS Website

This section lists the tables referred to throughout the preamble of this proposed rule and in the Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2025, for the FY 2026 rulemaking cycle, the IPPS and LTCH PPS tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be on the CMS website. Specifically, all IPPS tables listed in the proposed rule, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E, will generally be available on the CMS website. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

Tables 7A and 7B historically contained the Medicare prospective payment system selected percentile lengths of stay for the MS–DRGs for the prior year and upcoming fiscal year. We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49452), we finalized beginning with FY 2023, to provide the percentile length of stay information previously included in Tables 7A and 7B in the supplemental AOR/BOR data file. The AOR/BOR files can be found on the FY 2026 IPPS proposed rule home page on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

As discussed in section II.E.6. of the preamble to this proposed rule, for certain FY 2026 new technology add-on payment applications, we are making available separate tables listing the ICD–10–CM codes and/or ICD–10–PCS codes that we believe would be used to identify cases relevant to the Breakthrough Device-designated indications, or would be appropriate to exclude for cases related to FDA market authorized indications that are not covered by the Breakthrough Device designation indications, for purposes of the new technology add-on payment, if approved, in Table 10 associated with this proposed rule.

After hospitals have been given an opportunity to review and correct their calculations for FY 2026, we will post Table 15 (which will be available via the CMS website) to display the final FY 2026 readmissions payment adjustment factors that will be applicable to discharges occurring on or after October 1, 2025. We expect Table 15 will be posted on the CMS website in the Fall 2025.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified in this proposed rule should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this proposed rule are generally available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled ''FY 2026 IPPS Proposed Rule Home Page'' or ''Acute Inpatient-Files-for Download.''

[FY 2026]

	Rates if wage index greater than 1		Hospital is a meaningful EHR user and wage index less than or equal to 1 (update = 2.4)		Hospital is NOT a meaningful EHR user and wage index l ess than or equal to 1 (update = 0.0)	
	Labor	Nonlabor	Labor	Nonlabor	Labor	Nonlabor
National [1]	Not Applicable	Not Applicable	$4,237.99	$2,597.48	$4,138.66	$2,536.60

[1] For FY 2026, there are no CBSAs in Puerto Rico with a national wage index greater than 1.

TABLE 1D—PROPOSED CAPITAL STANDARD FEDERAL PAYMENT RATE

[FY 2026]

	Rate
National	$528.95

TABLE 1E—PROPOSED LTCH PPS STANDARD FEDERAL PAYMENT RATE

[FY 2026]

	Full update (2.6 percent)	Reduced update * (0.6 percent)
Standard Federal Rate	$50,728.77	$49,739.90

* For LTCHs that fail to submit quality reporting data for FY 2026 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Statement of Need

This proposed rule is necessary to make payment and policy changes under the IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This proposed rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS. Also, as we note later in this Appendix, the primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the proposed changes in this proposed rule, such as the proposed updates to the IPPS and LTCH PPS rates, and the proposals and discussions relating to applications for new technology add-on payments, are needed to further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries.

We expect that these proposed changes would ensure that the outcomes of the prospective payment systems are reasonable and provide equitable payments, while avoiding or minimizing unintended adverse consequences.

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

a. Proposed Update to the IPPS Payment Rates

As discussed in section IV. of the preamble of this proposed rule, we are proposing to rebase and revise the 2018-based IPPS market basket to reflect a 2023 base year. In addition, using the cost category weights from the proposed 2023-based IPPS market basket, we calculated a labor-related share of 66.0 percent, which we are proposing to use for discharges occurring on or after October 1, 2025. The proposed labor-related share of 66.0 percent is 1.6 percentage points lower than the current labor-related share of 67.6 percent. As discussed in section IV.B.3. of the preamble of this proposed rule, this downward revision to the labor-related share is primarily the result of incorporating the more recent 2023 Medicare cost report data for Wages and Salaries, Employee Benefits, and Contract Labor costs. This is partially offset by an increase in the Professional Fees: Labor-Related cost weight.

In accordance with section 1886(b)(3)(B) of the Act and as described in section VI.B. of the preamble to this proposed rule, we are proposing to update the national standardized amount for inpatient hospital operating costs by the proposed applicable percentage increase of 2.4 percent (that is, a proposed 3.2 percent market basket update with a proposed reduction of 0.8 percentage point for the productivity adjustment). We are also proposing to apply the proposed applicable percentage increase (including the market basket update and the proposed productivity adjustment) to the hospital-specific rates.

Subsection (d) hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act would receive a proposed applicable percentage increase of 1.6 percent which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data. Hospitals that are not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act would receive a proposed applicable percentage increase of 0.0 percent which reflects a three-quarter percent reduction of the market basket update for not being a meaningful EHR user.

Hospitals that are not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act would receive a proposed applicable percentage increase of −0.8 percent, which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data and a three-quarter percent reduction of the market basket update for not meeting the requirements to be a meaningful EHR user.

b. Proposed Changes for the Add-On Payments for New Services and Technologies

Consistent with sections 1886(d)(5)(K) and (L) of the Act, we review applications for new technology add-on payments based on the eligibility criteria at 42 CFR 412.87. As set forth in 42 CFR 412.87(f)(1), we consider whether a technology meets the criteria for the new technology add-on payment and announce the results as part of the annual updates and changes to the IPPS. New technology add-on payments are not budget neutral.

c. Proposed Transition for the Discontinuation of the Low Wage Index Hospital Policy

To help mitigate wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We also stated we intended to revisit the issue of the duration of this policy in future rulemaking as we gained experience under the policy. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 69301 through 69308), we adopted an extension of the low wage index hospital policy and the related budget neutrality adjustment effective for at least three more years, beginning in FY 2025, in order for sufficient wage data from after the end of the COVID–19 Public Health Emergency to become available.

As discussed in section III.F.5. of the preamble of this proposed rule, on July 23, 2024, the Court of Appeals for the D.C. Circuit held that the Secretary lacked authority under section 1886(d)(3)(E) of the Act or under the ''adjustments'' language of section 1886(d)(5)(I)(i) of the Act to adopt the low wage index hospital policy for FY 2020, and that the policy and related budget neutrality adjustment must be vacated. After considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* in the FY 2025 IFC (89 FR 80405 through 80421), we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. In addition, we established an interim transition policy for hospitals significantly impacted by the removal of the FY 2025 low wage index hospital policy using our authority under section 1886(d)(5)(I) of the Act.

For FY 2026 and subsequent fiscal years, after considering the D.C. Circuit's decision in *Bridgeport Hosp.* v. *Becerra,* we are proposing to discontinue the low wage index hospital policy and would no longer apply a low wage index budget neutrality factor to the standardized amounts. As discussed in section III.F.7. of the preamble of this proposed rule, we are proposing to use our authority under section 1886(d)(5)(I)(i) of the Act to adopt a narrow transitional exception to the calculation of FY 2026 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy, that would be implemented in a budget neutral manner. This proposed transitional exception policy would apply to hospitals that benefitted from the FY 2024 low wage index hospital policy and would compare the hospital's proposed FY 2026 wage index to the hospital's FY 2024 wage index. If the hospital's proposed FY 2026 wage index is decreasing by more than 9.75 percent from the hospital's FY 2024 wage index, then the proposed transitional payment exception for FY 2026 for that hospital would be equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent of its FY 2024 wage index. We proposed to make this policy budget neutral through an adjustment applied to the standardized amounts for all hospitals.

d. Additional Payment for Uncompensated Care to Medicare Disproportionate Share Hospitals (DSHs) and Supplemental Payment

In this proposed rule, as required by section 1886(r)(2) of the Act, we are updating our estimates of the 3 factors used to determine uncompensated care payments for FY 2026. Beginning with FY 2023, we adopted a multiyear averaging methodology to determine Factor 3 of the uncompensated care payment methodology, which would help to mitigate against large fluctuations in uncompensated care payments from year to year. Under this methodology, for FY 2025 and subsequent fiscal years, we would determine Factor 3 for all eligible hospitals using a 3-year average of the data on uncompensated care costs from Worksheet S–10 for the 3 most recent fiscal years for which audited data are available. We propose to use a 3-year average of audited data on uncompensated care costs from Worksheet S–10 from the FY 2020, FY 2021, and FY 2022 cost reports to calculate Factor 3 for FY 2026 for all eligible hospitals.

Beginning with FY 2023 (87 FR 49047 through 49051), we also established a supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico. In section V.D. of the preamble of this proposed rule, we summarize the ongoing methodology for supplemental payments.

e. Rural Community Hospital Demonstration Program

The Rural Community Hospital Demonstration (RCHD) was authorized originally for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), and it was extended for another 5-year period by section 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148). Section 15003 of the 21st Century Cures Act (Cures Act) (Pub. L. 114–255) extended the demonstration for an additional 5-year period, and section 128 of the Consolidated Appropriations Act of 2021 (Pub. L. 116–159) included an additional 5-year re-authorization. CMS has conducted the demonstration since 2004, which allows enhanced, cost-based payment for Medicare inpatient services for up to 30 small rural hospitals.

The authorizing legislation imposes a strict budget neutrality requirement. In this proposed rule, we summarize the status of the demonstration program, and the ongoing

methodologies for implementation and budget neutrality.

2. Frontier Community Health Integration Project (FCHIP) Demonstration

The Frontier Community Health Integration Project (FCHIP) demonstration was authorized under section 123 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275), as amended by section 3126 of the Affordable Care Act of 2010 (Pub. L. 114–158), and most recently re-authorized and extended by the Consolidated Appropriations Act of 2021 (Pub. L. 116–260). The legislation authorized a demonstration project to allow eligible entities to develop and test new models for the delivery of health care in order to improve access to and better integrate the delivery of acute care, extended care and other health care services to Medicare beneficiaries in certain rural areas. The FCHIP demonstration initial period was conducted in 10 critical access hospitals (CAHs) from August 1, 2016, to July 31, 2019, and the demonstration ''extension period'' began on January 1, 2022, to run through June 30, 2027.

The authorizing legislation requires the FCHIP demonstration to be budget neutral. In this proposed rule, we propose to continue with the budget neutrality approach used in the demonstration initial period for the demonstration extension period—to offset payments across CAHs nationally—should the demonstration incur costs to Medicare.

3. Proposed Update to the LTCH PPS Payment Rates

The proposed update to the LTCH PPS standard Federal payment rate for FY 2026 is discussed in section IX.C. of the preamble of this proposed rule. For FY 2026, we are proposing to establish an annual market basket update to the LTCH PPS standard Federal payment rate to 2.6 percent (that is, the 3.4 percent proposed market basket increase with a proposed reduction of 0.8 percentage point for the productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act). LTCHs that failed to submit quality data, as required by 1886(m)(5)(A)(i) of the Act would receive a proposed update of 0.6 percent for FY 2025, which reflects a 2.0 percentage point reduction for failure to submit quality data.

4. Hospital Quality Programs

Section 1886(b)(3)(B)(viii) of the Act requires subsection (d) hospitals to report data in accordance with the requirements of the Hospital IQR Program for purposes of measuring and making publicly available information on health care quality and links the quality data submission to the annual applicable percentage increase. Sections 1886(b)(3)(B)(ix), 1886(n), and 1814(l) of the Act require eligible hospitals and CAHs to demonstrate they are meaningful users of certified EHR technology for purposes of electronic exchange of health information to improve the quality of health care and link the submission of information demonstrating meaningful use to the annual applicable percentage increase for eligible hospitals and the applicable percent for CAHs. Section 1886(m)(5) of the Act requires each LTCH to submit quality measure data in accordance with the requirements of the LTCH QRP for purposes of measuring and making publicly available information on health care quality, and in order to avoid a 2-percentage point reduction. Section 1886(o) of the Act requires the Secretary to establish a value-based purchasing program under which value-based incentive payments are made in a fiscal year to hospitals that meet the performance standards established on an announced set of quality and efficiency measures for the fiscal year. The purposes of the Hospital VBP Program include measuring the quality of hospital inpatient care, linking hospital measure performance to payment, and making publicly available information on hospital quality of care. Section 1886(p) of the Act requires a reduction in payment for subsection (d) hospitals that rank in the worst-performing 25 percent with respect to measures of hospital-acquired conditions under the HAC Reduction Program for the purpose of measuring HACs, linking measure performance to payment, and making publicly available information on health care quality. Section 1886(q) of the Act requires a reduction in payment for subsection (d) hospitals for excess readmissions based on measures for applicable conditions under the Hospital Readmissions Reduction Program for the purpose of measuring readmissions, linking measure performance to payment, and making publicly available information on health care quality. Section 1866(k) of the Act applies to hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as ''PPS-exempt cancer hospitals'' or ''PCHs'') and requires PCHs to report data in accordance with the requirements of the PCHQR Program for purposes of measuring and making publicly available information on the quality of care furnished by PCHs. However, there is no reduction in payment to a PCH that does not report data.

5. Other Proposed Provisions—Transforming Episode Accountability Model (TEAM)

In section XI.A. of the preamble of this proposed rule, we discuss the alternative payment model called the Transforming Episode Accountability Model (TEAM), which will be tested under the authority at section 1115A of the Act. Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and CHIP beneficiaries while reducing program expenditures. The underlying issue addressed by TEAM is that under the traditional fee-for-service (FFS) payment system, Medicare makes separate payments to providers and suppliers for items and services furnished to a beneficiary over the course of an episode of care. Because providers and suppliers are paid for each individual item or service delivered, this may lead to care that is fragmented, unnecessary or duplicative, while making it challenging to invest in quality improvement or care coordination that would maximize patient benefit. We anticipate TEAM may reduce costs while maintaining or improving quality of care by bundling payment for items and services for a given episode and holding TEAM participants accountable for spending and quality performance, as well as by providing incentives to promote high quality and efficient care. Further, testing TEAM would allow us to learn more about the patterns of potentially inefficient utilization of health care services, as well as how to improve the beneficiary care experience during care transitions and incentivize quality improvements for common surgical episodes. This information could inform future Medicare payment policy and potentially establish the framework for managing clinical episodes as a standard practice in Traditional Medicare.

TEAM was finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) and we indicated that we intended to go through future rulemaking to promulgate new policies before the model start date. The proposals contained within this proposed rule would address policy gaps, make technical or conforming updates, and establish new policies to ensure TEAM has sound and well developed technical, administrative, and operational policies before the model starts.

B. Overall Impact

We have examined the impacts of this proposed rule as required by Executive Order 12866, ''Regulatory Planning and Review''; Executive Order 13132, ''Federalism''; Executive Order 13563, ''Improving Regulation and Regulatory Review''; Executive Order 14192, '' Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (Pub. L. 96–354); section 1102(b) of the Social Security Act; section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select those regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, or the President's priorities.

A regulatory impact analysis (RIA) must be prepared for a regulatory action that is significant under section 3(f)(1) of E.O. 12866. Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1). We have prepared a regulatory impact analysis that to the best of our ability presents the costs and benefits of the

rulemaking. OMB has reviewed these regulations, and the Departments have provided the following assessment of their impact.

We estimate that the proposed changes for FY 2026 acute care hospital operating and capital payments would redistribute amounts in excess of $100 million to acute care hospitals. The proposed applicable percentage increase to the IPPS rates required by the statute, in conjunction with other proposed payment changes in this proposed rule, would result in an estimated $4.0 billion increase in FY 2026 payments, primarily driven by the changes in FY 2026 operating payments, including uncompensated care payments, FY 2026 capital payments, the expiration of the temporary changes in the low-volume hospital program and the expiration of the MDH program. These changes are relative to payments made in FY 2025. The impact analysis of the capital payments can be found in section I.I. of this Appendix. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience an increase in payments of approximately $61 million in FY 2026 relative to FY 2025.

Our operating payment impact estimate includes the proposed 2.4 percent applicable percentage increase to the standardized amount (reflecting the proposed 3.2 percent market basket increase reduced by the proposed 0.8 percentage point productivity adjustment). The estimates of IPPS operating payments to acute care hospitals generally do not reflect any changes in hospital admissions or real case-mix intensity, which would also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this proposed rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This proposed rule would affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Office of Management and Budget has reviewed this proposed rule.

C. Objectives of the IPPS and the LTCH PPS

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this proposed rule would further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these proposed changes would ensure that the outcomes of the prospective payment systems are reasonable and equitable, while avoiding or minimizing unintended adverse consequences.

Because this proposed rule contains a range of policies, we refer readers to the section of the proposed rule where each policy is discussed. These sections include the rationale for our decisions, including the need for the proposed policy.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our proposed policy changes, as well as statutory changes effective for FY 2026, on various hospital groups. We estimate the effects of individual proposed policy changes by estimating payments per case, while holding all other payment policies constant. We use the best data available, but, generally, unless specifically indicated, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, case mix, changes to the Medicare population, or incentives. In addition, we discuss limitations of our analysis for specific proposed policies in the discussion of those policies as needed.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital related-costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 26 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland Total Cost of Care Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 6 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of March 2025, there were 3,038 IPPS acute care hospitals included in our analysis. This represents approximately 52 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,375 CAHs. These small, limited-service hospitals are paid on the basis of reasonable costs, rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, cancer hospitals, extended neoplastic disease care hospital, and short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this proposed rule. The impact of the proposed update and policy changes to the LTCH PPS for FY 2026 is discussed in section I.J. of this Appendix.

F. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs and Medicare Uncompensated Care Payments

1. Basis and Methodology of Estimates

In this proposed rule, we are announcing proposed policy changes and payment rate updates for the IPPS for FY 2026 for operating costs of acute care hospitals and for uncompensated care payments. The proposed FY 2026 updates to the capital payments to acute care hospitals are discussed in section I.I. of this Appendix. A more detailed analysis of the proposed updated to uncompensated care payments is discussed in section I.G.2 of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2026 operating payments and uncompensated care payments, would increase by 3.4 percent, compared to FY 2025. The operating payment impacts generally do not reflect changes in the number of hospital admissions or real case-mix intensity, which would also affect overall payment changes.

We have prepared separate impact analyses of the proposed changes on the operating and capital prospective payment systems. This section primarily deals with the proposed changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the best available claims data to enable us to estimate the impacts on payments per case of certain proposed changes in this proposed rule. However, there are other proposed changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of proposed changes in operating payments per case presented in this section are taken from the FY 2024 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the proposed changes to the operating PPS do not incorporate cost data, data from the best available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not generally adjust for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2024 MedPAR file, we simulate payments under the operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals

and hospitals in Maryland were excluded from the simulations. The impact of proposed payments under the capital IPPS, and the impact of proposed payments other than inpatient operating payments and uncompensated care payments are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2026 are discussed in section I.I. of this Appendix.

We discuss the following proposed changes:

- The estimated effects of proposed outlier payments returning to their targeted levels in FY 2026 as compared to the estimated outlier payments for FY 2025 produced from our payment simulation model.
- The effects of the application of the proposed applicable percentage increase of 2.4 percent (that is, a proposed 3.2 percent market basket update with a reduction of 0.8 percentage point for the proposed productivity adjustment), and the proposed applicable percentage increase (including the proposed market basket update and the proposed productivity adjustment) to the hospital-specific rates.
- The effects of the proposed changes to estimated uncompensated care payments in FY 2026 as compared to FY 2025.
- The effects of the expiration of the special payment status for MDHs beginning October 1, 2025 under current law.
- The effects of the proposed changes to the relative weights and MS–DRG GROUPER.
- The effects of the proposed changes in hospitals' wage index values due to the effects of the proposed incorporation of updated wage data from hospitals' cost reporting periods, the proposed update to the labor and non-labor share percentages, and the proposed changes in wage index reclassifications.
- The total estimated change in payments based on the proposed FY 2026 policies relative to payments based on FY 2025 policies.

To illustrate the impact of the proposed FY 2026 changes, our analysis begins with a FY 2025 baseline simulation model using: the FY 2025 national adjusted operating standardized amount; the FY 2025 MS–DRG GROUPER (Version 42); the FY 2025 CBSA designations for hospitals based on the OMB definitions from the 2020 Census; the FY 2025 wage index, including the FY 2025 labor and nonlabor share percentages; FY 2025 uncompensated care payments; and FY 2025 outlier payments which reflects our estimate of 4.8 percent of total operating MS–DRG and outlier payments as produced by our payment simulation model based on FY 2024 MedPAR data.

Our comparison illustrates the proposed percent change in payments per case from FY 2025 to FY 2026. The update to the standardized amount is a significant factor in the percent change in payments per case. In accordance with section 1886(b)(3)(B)(i) of the Act, each year we update the national standardized amount for inpatient hospital operating costs by a factor called the ''applicable percentage increase.'' For FY 2026, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four proposed possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section VI.B. of the preamble of this proposed rule for a complete discussion of the FY 2026 inpatient hospital update, including the four proposed possible applicable percentage increases. For purposes of the simulations shown later in this section, we modeled the proposed payment changes for FY 2026 using a reduced update for hospitals that (1) failed to submit quality data but are meaningful EHR users; (2) are identified as not meaningful EHR users that do submit quality data; and (3) are identified as not meaningful EHR users that do not submit quality data. The reduced updates used for these hospitals are discussed in section VI.B. of the preamble of this proposed rule and these hospitals are identified in the impact file posted in conjunction with this proposed rule.

We note, section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act for hospitals that fail to submit quality data or are not a meaningful EHR users. Accordingly, the proposed applicable percentage increases to the hospital-specific rates applicable to SCHs (and MDHs, if the program is extended by subsequent legislation) for FY 2026 are the same as the four proposed applicable percentage increases discussed in section VI.B. of the preamble of this proposed rule.

2. Impact Analysis of Proposed Changes on Payments for IPPS Operating Costs and Uncompensated Care Payments

Table I displays the results of our analysis of the proposed changes for FY 2026 on payments for IPPS operating costs and uncompensated care payments. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the acute care hospitals included in the analysis.

The next two rows of Table I contain hospitals categorized according to their geographic location: urban and rural. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The last groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2026 payment classifications, including any reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act. For example, the rows labeled urban and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under section 1886(d)(8)(B) of the Act, also known as Lugar hospitals, and section 1886(d)(8)(E) of the Act as implemented at 42 CFR 412.103).

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH payment purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next six rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs and RRCs) and reclassification status from urban to rural in accordance with section 1886(d)(8)(E) of the Act.

The next series of groupings are based on the type of ownership and the hospital's Medicare and Medicaid utilization expressed as a percent of total inpatient days. These data were taken from the most recent available Medicare cost reports.

The next grouping concerns the geographic reclassification status of hospitals. The first subgrouping is based on whether a hospital is reclassified or not. The second and third subgroupings are based on whether urban and rural hospitals were reclassified by the MGCRB for FY 2026 or not, respectively. The fourth subgrouping displays hospitals that reclassified from urban to rural in accordance with section 1886(d)(8)(E) of the Act as implemented at 42 CFR 412.103. The fifth subgrouping displays hospitals deemed urban in accordance with section 1886(d)(8)(B) of the Act, also known as Lugar hospitals.

TABLE I—IMPACT ANALYSIS OF PROPOSED CHANGES ON PAYMENTS FOR IPPS OPERATING COSTS AND UNCOMPENSATED CARE PAYMENTS FOR FY 2026

	Number of hospitals [1]	Proposed FY 2026 outlier payments (1) [2]	Proposed FY 2026 hospital rate update (2) [3]	MDH expiration (3) [4]	Proposed FY 2026 uncompensated care payments (4) [5]	Proposed FY 2026 weights and DRG changes with application of recalibration budget neutrality (5) [6]	Proposed FY 2026 wage index (6) [7 8 9]	All proposed FY 2026 changes (7) [10]
All Hospitals	3,038	0.2	2.3	−0.1	1.3	0.0	−0.2	3.4
By Geographic Location:

Other Reclassified Hospitals (Section 1886(d)(8)(B), also known as Lugar hospitals)	52	0.1	2.3	−2.3	1.1	−0.6	0.3	0.7

[1] Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2024, and hospital cost report data are from the latest available reporting periods.

[2] This column displays the effects of estimated outlier payments returning to their targeted levels in FY 2026 as compared to the estimated outlier payments for FY 2025.

[3] This column displays the payment impact of the hospital rate update, including the proposed 2.4 percent update to the national standardized amount and the hospital-specific rate (the proposed 3.2 percent IPPS market basket rate-of-increase reduced by the proposed 0.8 percentage point for the productivity adjustment).

[4] This column displays the impact of the expiration of the MDH status on October 1, 2025, a non-budget neutral payment provision.

[5] This column displays the effects of the proposed changes to estimated uncompensated care payments in FY 2026 as compared to FY 2025. See also the table in section I.G.2 of this Appendix.

[6] This column displays the payment impact of proposed Version 43 GROUPER, the proposed changes to the relative weights and the proposed recalibration of the MS–DRG weights based on FY 2024 MedPAR data, and the 10-percent cap where the relative weight for a MS–DRG would decrease by more than ten percent in a given fiscal year. This column displays the application of the proposed recalibration budget neutrality factor and the proposed 10-percent cap budget neutrality factor (which can be found in section II.A.4 of the Addendum of this proposed rule).

[7] This column displays the effects of the changes to the proposed FY 2026 wage index. This includes (1) the proposed update to wage index data using FY 2022 cost report data, the application of the proposed wage budget neutrality factor and the proposed update to the labor and nonlabor shares. (2) The effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB), showing the payment impact of going from FY 2025 reclassifications to the reclassifications scheduled to be in effect for FY 2026. (3) The effects of the application of the proposed rural floor. (4) The effects of urban to rural reclassifications under section 1886(d)(8) of the Act on the proposed wage index. (5) The effects of the application of ''LUGAR'' status under section 1886(d)(10) of the Act on the proposed wage index. (6) The proposed adjustments to the wage index driven by non-budget neutral policies. These include (a) the imputed floor for all-urban states; (b) the policy that requires hospitals located in frontier States have a wage index no less than 1.0; and (c) the policy which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. The budget neutrality factors for the effects that are budget neutral can be found in section II.A.4 of the Addendum of this proposed rule.

[8] For the traditional wage index information showing the effect of including or excluding particular wage index polices from the computation of the FY 2026 wage index instead of the impact of the wage index changes from FY 2025 to FY 2026 shown in Table I, we refer readers to the data file available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* (click on the link on the left side of the screen titled ''FY 2026 IPPS Proposed Rule Home Page''.)

[9] We note that because the low wage index hospital policy was removed for FY 2025, the proposed discontinuation of the policy effective FY 2026 has no impact on the estimated change in proposed payments from FY 2025 to FY 2026. However, the proposed budget neutral transition for the discontinuation of the low wage index hospital policy will redistribute payments from hospitals that do not benefit from the proposed transition to hospitals that do benefit (primarily all the hospitals located in Puerto Rico) due to the associated budget neutrality factor. The budget neutrality factor for the proposed transition can be found in section II.A.4 of the Addendum of this proposed rule.

[10] This column shows the estimated change in proposed payments from FY 2025 to FY 2026.

a. Effects of the Outlier Adjustment (Column 1)

This column reflects the effect of estimated outlier payments returning to their targeted levels in FY 2026 as compared to the estimated outlier payments for FY 2025 produced from our payment simulation model. As discussed in section II.A.4.i. of the Addendum to this proposed rule, the statute requires that outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments plus outlier payments, and also requires that the average standardized amount be reduced by a factor to account for the estimated proportion of total DRG payments made to outlier cases. We continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount, just as we did for FY 2025. Therefore, our proposed estimate of payments per discharge for FY 2026 from our payment simulation model reflects this 5.1 percent outlier payment target. Our payment simulation model shows that estimated outlier payments for FY 2025 were less than that target by approximately 0.3 percentage point.

Overall, hospitals would experience a 0.2 percent increase in payments primarily due to the estimated 0.3 percent change in outlier payments produced by our payment simulation model when returning to the 5.1 percent outlier target for FY 2026 in combination with interactive effects among the various add-on payment factors.

b. Effects of the Proposed Hospital Update (Column 2)

As discussed in section VI.B. of the preamble of this proposed rule, this column includes the proposed hospital update, including the proposed 3.2 percent IPPS market basket rate-of-increase reduced by 0.8 percentage point for the proposed productivity adjustment. As a result, we are proposing to make a 2.4 percent update to the national standardized amount. This column also includes the proposed update to the hospital-specific rates which includes the proposed 3.2 percent market basket rate-of-increase reduced by 0.8 percentage point for the proposed productivity adjustment. As a result, we are proposing to make a 2.4 percent update to the hospital-specific rates. This column also includes any applicable adjustments for hospitals that fail to comply with the quality data submission requirements and/or are not meaningful EHR users.

Overall, hospitals would experience a 2.3 percent increase in payments primarily due to the combined effects of the proposed hospital update to the national standardized amount and the proposed hospital update to the hospital-specific rates.

c. Effects of the Expiration of MDH Special Payment Status (Column 3)

Column 3 shows our estimate of the changes in payments due to the expiration of MDH status, a nonbudget neutral payment provision. Section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 further extended the MDH program through FY 2025. Therefore, under current law, the MDH program will expire for discharges on or after October 1, 2025. Hospitals that qualify to be MDHs receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate amount plus 75 percent of the difference between payments based on the Federal rate and payments based on the hospital-specific rate (a hospital-specific cost-based rate). Because this provision is not budget neutral, the expiration of this payment provision is estimated to result in a 0.1 percent decrease in IPPS payments overall. There are currently 164 MDHs, of which we estimate 84 would be paid under the blended payment of the Federal rate and hospital-specific rate if the MDH program were not set to expire. Because those 84 MDHs will no longer receive the blended payment and will be paid only under the Federal rate for FY 2026, it is estimated that those hospitals would experience an overall decrease in payments of approximately $154 million (relative to the MDH program payments they received for FY 2025 discharges).

d. Effects of the Proposed Changes in Uncompensated Care Payments (UCP) (Column 4)

Column 4 shows the effects of the proposed changes in uncompensated care payments made to hospitals in FY 2026. As discussed in section IV.E. of the preamble of this proposed rule, the total proposed UCP and proposed supplemental payments equal approximately $7.3 billion. Overall, hospitals would experience a 2.9 percent increase in total operating IPPS payments due to the proposed change in uncompensated care payments. For a more detailed impact analysis of the proposed changes to uncompensated care payment, we refer readers to section I.G.2 of appendix A to this proposed rule.

e. Effects of the Proposed Changes to the MS–DRG Reclassifications and Relative Cost-Based Weights with Recalibration Budget Neutrality (Column 5)

Column 5 shows the effects of the proposed changes to the MS–DRGs and relative weights with the application of the proposed recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a proposed recalibration budget neutrality factor to account for the changes in MS–DRGs and relative weights to ensure that the overall payment impact is budget neutral. We also applied the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given year and an associated recalibration cap budget neutrality factor to account for the 10-percent cap on relative weight reductions to ensure that the overall payment impact is budget neutral.

As discussed in section II.D. of the preamble of this proposed rule, for FY 2026, we calculated the proposed MS–DRG relative weights using the FY 2024 MedPAR data grouped to the proposed Version 43 (FY 2026) MS–DRGs. The proposed reclassification changes to the GROUPER are described in more detail in section II.C. of the preamble of this proposed rule.

The ''All Hospitals'' line in Column 5 indicates that changes due to the MS–DRGs and relative weights would result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor (discussed in section II.A.4.a. of the Addendum to this proposed rule) and the recalibration cap budget neutrality factor to the standardized amount (discussed in section II.A.4.b. of the Addendum to this proposed rule).

f. Effects of the Proposed Wage Index Changes (Column 6)

Column 6 shows the impact of the proposed changes to hospitals' FY 2026 wage index as compared to hospitals' FY 2025 wage index. Overall, the FY 2026 wage index changes would lead to a 0.2 percent decrease for all hospitals, as shown in Column 6. This change is a result of the proposed updates to the wage data reported by hospitals, the proposed change to the labor and nonlabor shares, changes in the geographic reclassifications of hospitals, and the interactions of those changes with statutory wage index floors and exceptions. We combine these changes because the complex and interactive ways in which hospitals increasingly seek to maximize their wage index values in a given year render isolation of these effects in a year-over-year context less informative. For example, the impact of the proposed updates to the wage data reported by hospitals in the absence of the changes in geographic reclassification and especially the interaction of both of those with statutory wage index floors and exceptions is less meaningful than showing the combined effect of those factors. For the traditional wage index information showing the effect of including or excluding particular wage index polices from the computation of the FY 2026 wage index instead of the impact of the wage index changes from FY 2025 to FY 2026 shown in Table I, we refer readers to the data file available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* (click on the link on the left side of the screen titled ''FY 2026 IPPS Proposed Rule Home Page'').

Specifically, this column in Table I shows the combined effects of the application of the following proposed FY 2026 wage index changes relative to FY 2025:

(1) Effects of the Proposed Changes to the Wage Data

Column 6 reflects the effects of the proposed updated wage data and the proposed labor and non-labor shares, with the application of the proposed wage index budget neutrality factor for FY 2026 relative to FY 2025.

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the proposed wage index for acute care hospitals for FY 2026 is based on data submitted for hospital cost reporting periods, beginning on or after October 1,

2021, and before October 1, 2022. Column 6 reflects the proposed percentage change in payments when going from a model using the FY 2025 wage index based on FY 2025 reclassifications and the FY 2025 labor-related share of 67.6 percent, to a model using the proposed FY 2026 wage index based on FY 2026 reclassifications (as described in further detail in the next section) and the proposed labor-related share of 66.0 percent, while holding other payment parameters, such as use of the proposed Version 43 MS–DRG GROUPER, constant.

In addition, the column incorporates the application of the proposed wage budget neutrality to the national standardized amount. As discussed in section II.A.4.c. of the Addendum to this proposed rule, for FY 2026 we calculated the proposed wage budget neutrality factor to ensure that payments under the proposed updated wage data and the proposed labor-related share of 66.0 percent are budget neutral, without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. This proposed budget neutrality factor can be found in the summary table of the proposed FY 2026 budget neutrality factors in section II.A.4. of the Addendum to this proposed rule.

(2) Effects of MGCRB, Urban to Rural and ''Lugar'' Reclassifications

Column 6 reflects the impact of MGCRB reclassification decisions under section 1886(d)(10) of the Act, urban to rural reclassifications under section 1886(d)(8)(E) of the Act, and Lugar status redesignations under section 1886(d)(8)(B) of the Act on the proposed wage index for FY 2026 relative to FY 2025. The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, as discussed in section II.A.4.d. of the Addendum to this proposed rule, we apply a proposed reclassification budget neutrality adjustment to ensure that the effects of the reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are budget neutral. This proposed budget neutrality factor can be found in the summary table of the proposed FY 2026 budget neutrality factors in section II.A.4. of the Addendum to this proposed rule.

Table 2 listed in section VI. of the Addendum to this proposed rule and available on the CMS website reflects the reclassifications for FY 2026 at the time of development of this proposed rule. For further information on MGCRB reclassifications, urban to rural reclassifications and Lugar status redesignations, we refer readers to section III. of the preamble of this proposed rule.

(3) The Effects of the Proposed Rural Floor, Including Proposed Budget Neutrality Adjustment

Column 6 reflects the effects of the application of the proposed rural floor and the application of the proposed rural floor budget neutrality on the proposed wage index for FY 2026 relative to FY 2025. As discussed in section III.F.1. of the preamble of this proposed rule, section 4410 of Public Law 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index applicable to hospitals located in rural areas in the same state. We apply a uniform budget neutrality adjustment to the wage index as discussed in section II.A.4.e. of the Addendum to this proposed rule. All IPPS hospitals in our model have their wage indexes reduced by the proposed rural floor budget neutrality adjustment. This proposed budget neutrality factor can be found in the summary table of the proposed FY 2026 budget neutrality factors in section II.A.4. of the Addendum to this proposed rule.

(4) Effects of the Application of the Proposed Imputed Floor, Proposed Frontier State Wage Index and Proposed Out-Migration Adjustment

Lastly, this column also reflects the combined effects of the application of the following non-budget neutral provisions for FY 2026 relative to FY 2025: (a) the imputed floor under section 1886(d)(3)(E)(iv)(I) and (II) of the Act for certain all-urban States (as discussed in section III.F.2. of the preamble of this proposed rule); (b) the minimum post-reclassified wage index of 1.00 for all hospitals located in ''frontier States'' as required by section 1886(d)(3)(E)(iii) Act (as discussed in section III.F.3. of the preamble of this proposed rule); and (c) the effects of the proposed out- migration adjustment under section 1886(d)(13) of the Act (as discussed in section III.F.4. of the preamble of this proposed rule).

g. Effects of All Proposed FY 2026 Changes (Column 7)

Column 7 shows our estimate of the proposed changes in payments per discharge from FY 2025 and FY 2026, resulting from all proposed changes for FY 2026 included in Table I. It includes the combined effects of the year-over-year change of the factors described in the previous columns in the table.

The proposed average increase in payments under the IPPS for all hospitals is approximately 3.4 percent for FY 2026 relative to FY 2025, which is primarily driven by the proposed changes reflected in Column 2 (proposed hospital update) and Column 4 (proposed uncompensated care payments). As described in Column 2, the proposed annual hospital update for hospitals paid under the national standardized amount, combined with the proposed annual hospital update for hospitals paid under the hospital-specific rates would result in a 2.3 percent increase in payments in FY 2026 relative to FY 2025 for all hospitals. As described in Column 4, proposed uncompensated care payments would result in a 1.3 percent increase in payments in FY 2026 relative to FY 2025 for all hospitals.

Overall payments to hospitals paid under the IPPS are estimated to increase by 3.4 percent for FY 2026 (as compared to FY 2025) due to the proposed outlier adjustment, the proposed applicable percentage increase, the MDH program expiration, proposed uncompensated care payments, and proposed changes to the wage index and labor and nonlabor shares. Hospitals in urban areas would experience a 3.5 percent increase in payments per discharge in FY 2026 compared to FY 2025. Hospital payments per discharge in rural areas are estimated to increase by 2.5 percent in FY 2026. The relatively lower projected increase for rural hospitals is due in part to the MDH program expiration (Column 3) and the proposed MS–DRG and relative weight changes with application budget neutrality (Column 5). Hospital categories that generally treat relatively less complex cases, such as rural hospitals and smaller urban hospitals, would experience a decrease in their payments, while hospitals that generally treat relatively more complex cases, such as larger urban hospitals, would experience an increase in their payments as a result of the proposed changes to the relative weights.

3. Estimated Average Payments per Discharge

Table II displays the results of our analysis of the proposed changes for FY 2026 on estimated average payments per discharge for IPPS operating costs and uncompensated care payments. It presents the impact for the categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2025 with the estimated average payments per discharge for FY 2026, as calculated under our models. It reflects the combined effects of the proposed changes presented in Table I, and therefore the estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 7 of Table I.

TABLE II—IMPACT ANALYSIS OF PROPOSED CHANGES ON AVERAGE PAYMENTS PER DISCHARGE FOR OPERATING COSTS AND UNCOMPENSATED CARE

	Number of hospitals	Estimated average FY 2025 payment per discharge	Estimated proposed average FY 2026 payment per discharge	Proposed FY 2026 changes
	(1)	(2)	(3)	(4)
All Hospitals	3,038	17,753	18,363	3.4
By Geographic Location:				
Urban hospitals	2,369	18,187	18,823	3.5

TABLE II—IMPACT ANALYSIS OF PROPOSED CHANGES ON AVERAGE PAYMENTS PER DISCHARGE FOR OPERATING COSTS AND UNCOMPENSATED CARE—Continued

	Number of hospitals	Estimated average FY 2025 payment per discharge	Estimated proposed average FY 2026 payment per discharge	Proposed FY 2026 changes
	(1)	(2)	(3)	(4)
Rural hospitals	669	12,917	13,242	2.5
Bed Size (Urban):				
0–99 beds	643	12,977	13,308	2.6

G. Effects of Other Policy Changes

In addition to those proposed policy changes discussed previously that we are able to model using our IPPS payment simulation model, we are proposing to make various other changes in this proposed rule. As noted in section I.D. of this Appendix, our payment simulation model uses the most recent available claims data to estimate the impacts on payments per case of certain proposed changes in this proposed rule. Generally, we have limited or no specific data available with which to estimate the impacts of these proposed changes using that payment simulation model. For those proposed changes, we have attempted to predict the payment impacts based upon our experience and other more limited data. Our estimates of the likely impacts associated with these other proposed changes are discussed in this section.

1. Effects of the Proposed Changes Relating to New Medical Service and Technology Add-On Payments

a. Proposed FY 2026 Status of Technologies Approved for FY 2025 New Technology Add-On Payments

In section II.E.4. of the preamble of this proposed rule, we are proposing to continue to make new technology add-on payments for the technologies listed in the following table in FY 2026 because these technologies would still be considered new for purposes of new technology add-on payments. Under § 412.88(a)(2), the new technology add-on payment for each case would be limited to the lesser of: (1) 65 percent of the costs of the new technology (or 75 percent of the costs for technologies designated as Qualified Infectious Disease Products (QIDPs) or approved under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD) pathway, or for the gene therapies, Casgevy™ (exagamglogene autotemcel) and Lyfgenia™ (lovotibeglogene autotemcel), when indicated and used specifically for the treatment of SCD, which were approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69128 through 69135, and 89 FR 69188 through 69196)); or (2) 65 percent of the amount by which the costs of the case exceed the standard MS–DRG payment for the case (or 75 percent of the amount for technologies designated as QIDPs; for technologies approved under the LPAD pathway; or for the gene therapies, Casgevy™ and Lyfgenia™, when indicated and used specifically for the treatment of SCD, which were approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69128 through 69135, and 89 FR 69188 through 69196)). Because it is difficult to predict the actual new technology add-on payment for each case, our estimates in this proposed rule are based on the applicant's estimate at the time they submitted their original application and the increase in new technology add-on payments for FY 2026 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment.

In the following table are estimates for the 26 new technology add-on payments which we are proposing to continue in FY 2026:

FY 2026 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS PROPOSED TO CONTINUE FOR FY 2026

Technology name	Estimated cases	Proposed FY 2026 NTAP amount (65% or 75%)	Estimated total FY 2026 impact
1. CYTALUX® (pafolacianine) (lung indication)	300	$2,762.50	$828,750.00

Aggregate Estimated Total FY 2026 Impact	.....	.....	597,772,854.79

*These two technologies were determined to be substantially similar to each other and were therefore evaluated as one application for new technology add-on payments under the IPPS.

b. Proposed FY 2026 Applications for New Technology Add-On Payments

In sections II.E.5. and 6. of the preamble to this proposed rule are 43 discussions of technologies with respect to add-on payments for new medical services and technologies for FY 2026. We note that of the 53 applications (34 alternative and 19 traditional) we received, 3 applications were not eligible for consideration for new technology add-on payment (1 alternative and 2 traditional), and 7 applicants withdrew their application (4 alternative and 3 traditional) prior to the issuance of this proposed rule. As explained in the preamble to this proposed rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed in section II.E.6. of the preamble of this proposed rule, under the alternative pathway for new technology add-on payments, new technologies that are medical products with a QIDP designation, approved through the FDA LPAD pathway, or are designated under the Breakthrough Device program will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to demonstrate that the technology represents a substantial clinical improvement. These technologies must still be within the 2- to 3-year newness period, as discussed in section II.E.1.a.(1). of the preamble this proposed rule, and must also still meet the cost criterion.

As also discussed in section II.E.6. of the preamble of this proposed rule, we are proposing to approve 28 new technology add-on payments for the alternative pathway applications submitted for FY 2026 new technology add-on payments.

Based on preliminary information from the applicants at the time of this proposed rule, we estimate that total payments for the 28 technologies that applied under the alternative pathway, if approved, would be approximately $405.5 million for FY 2026. Total estimated FY 2026 payments for new technologies that are designated as a QIDP are approximately $5.0 million, and the total estimated FY 2026 payments for new technologies that are part of the Breakthrough Device program are approximately $400.5 million. Because cost or volume information has not yet been provided for 5 of the 28 technologies under the alternative pathway, we have not included those technologies in the estimate. We did not receive any LPAD applications for add-on payments for new technologies for FY 2026. We note that the estimated payments may be updated in the final rule based on revised or additional information CMS receives prior to the final rule.

We have not yet determined whether any of the technologies discussed in section II.E.5. of the preamble of this proposed rule will meet the criteria for new technology add-on payments for FY 2026 under the traditional pathway. Consequently, it is challenging to estimate the potential payment impact of these technologies for any potential new technology add-on payments for FY 2026. We note that, as in past years, if any of the technologies that applied under the traditional pathway are found to be eligible for new technology add-on payments for FY 2026, we would discuss the estimated payment impact for FY 2026 in the FY 2026 IPPS/LTCH PPS final rule.

2. Medicare DSH Uncompensated Care Payments and Supplemental Payment for Indian Health Service Hospitals and Tribal Hospitals and Hospitals Located in Puerto Rico

As discussed in section V.E. of the preamble of this proposed rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has reported uncompensated care. Each hospital that is eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's amount of uncompensated care relative to the aggregate amount of uncompensated care of all hospitals eligible for Medicare DSH payments (Factor 3). The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this proposed rule, we are proposing to establish the amount to be distributed as uncompensated care payments (UCP) to DSH-eligible hospitals for FY 2026, which is $7,190,037,075.00. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 60.71 percent. For FY 2025, the amount available to be distributed for uncompensated care was $5,705,743,275.00 or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 54.29 percent. In addition, eligible IHS/Tribal hospitals and hospitals located in Puerto Rico are estimated to receive approximately $100,623,613.55 million in supplemental payments in FY 2026, as determined based on the difference between each hospital's FY 2022 UCP (increased by 26.01 percent, which is the projected change between the FY 2026 total uncompensated care payment amount and the total uncompensated care payment amount for FY 2025) and its FY 2026 UCP as calculated using the methodology for FY

2026. If this difference is less than or equal to zero, the hospital will not receive a supplemental payment. For this proposed rule, the total proposed UCP and proposed supplemental payments equal approximately $7.291 billion. For FY 2026, we are proposing to use 3 years of data on uncompensated care costs from Worksheet S–10 of the FYs 2020, 2021, and 2022 cost reports to calculate Factor 3 for all DSH-eligible hospitals, including IHS/Tribal hospitals and Puerto Rico hospitals. For a complete discussion regarding the methodology for calculating Factor 3 for FY 2026, we refer readers to section V.E. of the preamble of this proposed rule. For a discussion regarding the methodology for calculating the supplemental payments, we refer readers to section V.D. of the preamble of this proposed rule.

To estimate the impact of the combined effect of the proposed changes in Factors 1 and 2, as well as the changes to the data used in determining Factor 3, on the calculation of Medicare UCP along with changes to supplemental payments for IHS/Tribal hospitals and hospitals located in Puerto Rico, we compared total UCP and supplemental payments estimated in the FY 2025 IPPS/LTCH PPS final rule correction notice (89 FR 68986) to the combined total of the proposed UCP and the proposed supplemental payments estimated in this FY 2026 IPPS/LTCH PPS proposed rule. For FY 2025, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 54.29 percent and multiplied by a Factor 3 calculated using the methodology described in the FY 2025 IPPS/LTCH PPS final rule. For FY 2026, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments during FY 2025 absent section 3133 of the Affordable Care Act, adjusted by a proposed Factor 2 of 60.71 percent and multiplied by a Factor 3 calculated using the methodology described previously. For this proposed rule, the supplemental payments for IHS/Tribal hospitals and Puerto Rico hospitals are calculated as the difference between the hospital's adjusted base year amount (as determined based on the hospital's FY 2022 uncompensated care payment) and the hospital's FY 2026 uncompensated care payment.

Our analysis included 2,385 hospitals that are projected to be DSH-eligible in FY 2026. Our analysis did not include hospitals that had terminated their participation in the Medicare program as of January 22, 2025, Maryland hospitals, new hospitals, and SCHs that are expected to be paid based on their hospital-specific rates. The 16 hospitals that are anticipated to be participating in the Rural Community Hospital Demonstration Program were also excluded from this analysis, as participating hospitals are not eligible to receive empirically justified Medicare DSH payments and uncompensated care payments. In addition, the data from merged or acquired hospitals were combined under the surviving hospital's CMS certification number (CCN), and the non-surviving CCN was excluded from the analysis. The estimated impact of the proposed changes in Factors 1, 2, and 3 on UCP and supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals across all hospitals projected to be DSH-eligible in FY 2026, by hospital characteristic, is presented in the following table:

MODELED UNCOMPENSATED CARE PAYMENTS * AND SUPPLEMENTAL PAYMENTS FOR ESTIMATED FY 2026 DSHS BY HOSPITAL TYPE

Source: Dobson | DaVanzo analysis of 2020, 2021 and 2022 Hospital Cost Reports.

* Dollar UCP calculated by [0.75 * estimated section 1886(d)(5)(F) payments * Factor 2 * Factor 3]. When summed across all hospitals projected to receive DSH payments, UCP and supplemental payments are estimated to be $5.786 million in FY 2025, and UCP and supplemental payments are estimated to be $ 7,291 million in FY 2026.

** For IHS/Tribal hospitals and Puerto Rico hospitals, this impact table reflects the supplemental payments.

*** Percentage change is determined as the difference between Medicare UCP and supplemental payments modeled for this FY 2026 IPPS/LTCH PPS proposed rule (column 3) and Medicare UCP and supplemental payments modeled for the FY 2025 IPPS/LTCH PPS final rule correction notice (column 2) divided by Medicare UCP and supplemental payments modeled for the FY 2025 IPPS/LTCH PPS final rule correction notice (column 2) times 100 percent.

**** Hospitals with missing or unknown Medicare utilization or Medicaid utilization are not shown in the table.

The changes in projected FY 2026 UCP and supplemental payments compared to the total of UCP and supplemental payments in FY 2025 are driven by increases in Factor 1 and Factor 2. The proposed Factor 1 has increased from the FY 2025 final rule's Factor 1 of $10.509 billion to this proposed rule's Factor 1 of $11.843 billion. The proposed Factor 2 has increased from FY 2025 final rule's Factor 2 of 54.29 percent to this proposed rule's Factor 2 of 60.71 percent. In addition, we note that there is a decrease in the number of projected DSH-eligible hospitals to 2,385 at the time of the development of this proposed rule compared to the 2,398 DSHs in the FY 2025 IPPS/LTCH PPS final rule (88 FR 58640). Based on the changes, the impact analysis found that, across all projected DSH-eligible hospitals, proposed FY 2026 UCP and supplemental payments are estimated at approximately $7.291 billion, or an increase of approximately 26.01 percent from FY 2025 UCP and supplemental payments (approximately $5.786 billion). While the changes would result in a net increase in the total amount available to be distributed in UCP and supplemental payments, the projected payment increases vary by hospital type. This redistribution of proposed payments is caused by changes in proposed Factor 3 and the amount of the proposed supplemental payment for DSH-eligible IHS/Tribal hospitals and Puerto Rico hospitals. As seen in the previous table, a percent change of less than 26.01 percent indicates that hospitals within the specified category are projected to experience a smaller increase in proposed payments, on average, compared to the universe of projected FY 2026 DSH-eligible hospitals. Conversely, a percentage change greater than 26.01 percent indicates that a hospital type is projected to have a larger increase compared to the overall average. The variation in the distribution of overall proposed payments by hospital characteristic is largely dependent on a given hospital's uncompensated care costs as reported on the Worksheet S–10 and used in the Factor 3 computation and whether the hospital is eligible to receive the proposed supplemental payment.

Urban hospitals, in general, are projected to experience a slightly larger increase in proposed UCP compared to the increase their rural counterparts are projected to experience. Overall, urban hospitals are projected to receive a 26.1 percent increase in proposed payments, while rural hospitals are projected to receive a 24.73 percent increase in proposed payments, which is slightly less than the overall hospital average.

By bed size, rural hospitals with 0 to 99 beds are projected to receive a larger than average increase of approximately 26.0 percent, while rural hospitals with 100 to 249 beds and rural hospitals with 250+ beds are projected to receive smaller than average increases of 25.5 percent and 14.1 percent, respectively. Among urban hospitals, the largest urban hospitals, those with 250+ beds, are projected to receive an increase in payments (27.0 percent) that is greater than the overall hospital average. In contrast, smaller urban hospitals with 0–99 beds and 100–249 beds are projected to receive smaller than average increases in proposed payments of 20.6 and 24.5 percent, respectively.

By region, rural hospitals are projected to receive a varied range of payment changes. Rural hospitals in the New England, South

Atlantic, East South Central, West South Central, and Pacific regions are projected to receive smaller than average increases in proposed payments. Rural hospitals in all other regions are projected to receive larger than average increases in proposed payments. Urban hospitals in the South Atlantic, East North Central, West North Central, and Pacific regions are projected to receive smaller than average increases in proposed payments, while urban hospitals in all other regions are projected to receive larger than average increases in proposed payments.

By payment classification, hospitals in urban payment areas overall are expected to receive a smaller than average increase in proposed UCP and proposed supplemental payments of 25.5 percent. Hospitals in large urban payment areas and other urban payment areas are projected to receive a smaller than average increase in proposed payments of 25.6 percent and 25.3 percent, respectively. In contrast, hospitals in rural payment areas are projected to receive a larger than average increase in proposed payments of 26.5 percent.

Nonteaching hospitals and teaching hospitals with fewer than 100 residents are projected to receive smaller than average payment increases of 23.7 percent and 24.1 percent, respectively. Teaching hospitals with 100+ residents are projected to receive larger than average proposed payment increases of 29.3 percent. Voluntary hospitals and proprietary hospitals are projected to receive smaller than average increases of 24.1 percent and 25.0 percent, respectively, while government-owned hospitals are expected to receive a larger than average proposed payment increase of 30.4 percent. Hospitals with less than 25 percent Medicare utilization are projected to receive larger than average increases of 26.6 percent, while hospitals with Medicare utilization between 25–50 percent and 50–65 percent are projected to receive smaller than average proposed payment increases of 24.3 percent and 23.7 percent, respectively. There are 2 hospitals with greater than 65 percent Medicare utilization, and the hospitals are projected to have a decrease in payments of 100.0 percent, which reflects the hospitals' projected DSH eligibility. Hospitals with 50–65 percent Medicaid utilization and those with greater than 65 percent Medicaid utilization are projected to receive larger than average increases in proposed payments of 30.8 and 41.2 percent, respectively, while hospitals with less than 25 percent Medicaid utilization and those with Medicaid utilization between 25–50 percent are projected to receive smaller than average increases of 24.4 percent and 25.7 percent, respectively.

The impact table reflects the modeled FY 2026 proposed UCP and supplemental payments for IHS/Tribal and Puerto Rico hospitals. We note that the proposed supplemental payments to IHS/Tribal hospitals and Puerto Rico hospitals are estimated to be approximately $100.6 million in FY 2026.

3. Effects of Expiration of the Temporary Changes to the Low-Volume Hospital Payment Policy

In section VI.D. of the preamble of this proposed rule, we discuss the extension of the temporary changes to the low-volume hospital payment policy originally provided for by the Affordable Care Act and extended by subsequent legislation. Specifically, section 2201 of the Full-Year Continuing Appropriations and Extensions, 2025 further extended the modified definition of low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals under section 1886(d)(12) through September 30, 2025. Prior to the enactment of the Full-Year Continuing Appropriations and Extensions, 2025, the temporary changes to the low-volume hospital payment adjustment were set to expire on April 1, 2025. Under the extension provided by section 2201 of the Full-Year Continuing Appropriations and Extensions, 2025, FY 2025 payments to IPPS hospitals are projected to increase by approximately $90 million relative to what the payments would have been in the absence of section 2201.

Beginning October 1, 2025, the low-volume hospital qualifying criteria and payment adjustment will revert to the statutory requirements that were in effect prior to FY 2011, and the preexisting low-volume hospital payment adjustment methodology and qualifying criteria, as implemented in FY 2005, will resume. Therefore, absent further Congressional action, effective for FY 2026 and subsequent years, in order to qualify as a low-volume hospital, a subsection (d) hospital must be more than 25 road miles from another subsection (d) hospital and have less than 200 discharges (that is, less than 200 discharges total, including both Medicare and non-Medicare discharges) during the fiscal year.

Using the same methodology used in developing the quantitative analyses of changes in payments per case discussed previously in section I.G. of this Appendix, based upon the best available data at this time, we estimate the expiration of the temporary changes to the low-volume hospital payment policy effective for discharges occurring on or after October 1, 2025, and subsequent years would decrease aggregate low-volume hospital payments by $375 million in FY 2026 as compared to FY 2025. This payment estimate was determined based on the estimated payments for the approximately 580 providers that are expected to no longer qualify under the criteria that are effective beginning on October 1, 2025.

Of those 580 hospitals, currently approximately 100 hospitals have a low-volume hospital payment adjustment based on 500 or fewer total discharges, while the remaining approximately 480 hospitals have an adjustment based on having between 500 and 3,800 total discharges. Approximately 55 of the 580 hospitals that currently qualify for a low-volume hospital payment adjustment in FY 2025 have 200 or fewer total discharges. However, the distance information needed to project whether those hospitals are more than 25 road miles from another subsection (d) hospital (instead of 15 road miles), and therefore would continue to qualify for a low-volume hospital payment adjustment for FY 2026, is evaluated by each hospitals' MAC. Therefore, we are unable to estimate how many of these 55 hospitals would continue to qualify for the low-volume hospital payment adjustment for FY 2026.

4. Impact for Proposed Revision to Regulation Text Regarding Calculation of Net Cost of NAH Education Programs (42 CFR 413.85(d)(2)(i))

In section V.G.3. of the preamble of this proposed rule, we discuss our proposal to revise our regulations at 42 CFR 413.85(d)(2)(i) to state clearly that when calculating the allowable net cost of approved nursing and allied health (NAH) education programs, the correct order of operations is to determine direct costs, subtract tuition and fees, and then add indirect costs. This is in response to an adverse ruling in the U.S. District Court for the District of Columbia (DC) involving five plaintiff hospitals (Mercy Health—St. Vincent Medical Center LLC d/b/a Mercy St. Vincent Medical Center, et al., v. Xavier Becerra, Case No. 22–cv–3578 (TNM)). The proposed effective date of this proposed regulation change would be cost reporting periods beginning on or after October 1, 2025. Regarding the financial impact of this change to the regulations text, other than the amounts in dispute in the specific court case, the national impact is unknown, as it is unclear how many hospitals will change their reporting practices in the absence of this rulemaking. Therefore, we are unable to estimate the impact.

5. Effects Under the Hospital Readmissions Reduction Program for FY 2026

In section VI.K. of the preamble of this proposed rule, we are proposing to modify the six readmission measures in the program to include Medicare Advantage (MA) beneficiaries into the patient cohorts and modify the applicable performance period from a 3-year period to a 2-year period beginning with the FY 2027 program year; the remaining policies finalized in FY 2025 IPPS/LTCH PPS final rule (89 FR 69400) continue to apply. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating diagnosis-related group (DRG) payments to account for excess readmissions of selected applicable conditions and procedures. The table and analysis in this section illustrate the estimated financial impact of the Hospital Readmissions Reduction Program payment adjustment methodology by hospital characteristic. Hospitals are sorted into quintiles based on the proportion of dual-eligible stays among Medicare fee-for-service (FFS) and managed care stays between July 1, 2020, and June 30, 2023 (that is, the FY 2025 Hospital Readmissions Reduction Program's applicable period, which is the most recently available data at the time of publication of this proposed rule). Hospitals' excess readmission ratios (ERRs) are assessed relative to their peer group median and a neutrality modifier is applied in the payment adjustment factor calculation to maintain budget neutrality. In the FY 2026 IPPS/LTCH

PPS final rule, we will provide an updated estimate of the financial impact using the proportion of dually eligible beneficiaries, ERRs, and aggregate payments for each condition/procedure and all discharges for applicable hospitals from the FY 2026 Hospital Readmissions Reduction Program applicable period (that is, July 1, 2021, through June 30, 2024).

The results in Table I.G.5.–01 include 2,828 non-Maryland hospitals estimated as eligible to receive a penalty during the performance period. Hospitals are eligible to receive a penalty if they have 25 or more eligible discharges for at least one measure between July 1, 2021, and June 30, 2024. The second column in Table I.G.5.–01 indicates the total number of non-Maryland hospitals with available data for each characteristic that have an estimated payment adjustment factor less than 1 (that is, penalized hospitals).

The third column in Table I.G.5.–01 indicates the estimated percentage of penalized hospitals among those eligible to receive a penalty by hospital characteristic. For example, 78.34 percent of eligible hospitals characterized as non-teaching hospitals are expected to be penalized. Among teaching hospitals, 88.57 percent of eligible hospitals with fewer than 100 residents and 90.14 percent of eligible hospitals with 100 or more residents are expected to be penalized. The fourth column in Table I.G.5.–01 estimates the financial impact on hospitals by hospital characteristic. Table I.G.5.–01 also shows the share of penalties as a percentage of all base operating DRG payments for hospitals with each characteristic. This is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all base operating DRG payments for those hospitals between October 1, 2022, through September 30, 2023 (FY 2023). For example, the penalty as a share of payments for non-teaching hospitals is 0.45 percent. This means that total penalties for all non-teaching hospitals are 0.45 percent of total payments for non-teaching hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments accounts for differences in the amount of base operating DRG payments for hospitals with the characteristic when comparing the financial impact of the program on different groups of hospitals.

TABLE I.G.5.–01—ESTIMATED PERCENTAGE OF HOSPITALS PENALIZED AND PENALTY AS SHARE OF PAYMENTS FOR FY 2026 HOSPITAL READMISSIONS REDUCTION PROGRAM BY HOSPITAL CHARACTERISTIC

Hospital characteristic	Number of eligible hospitals [a]	Number of penalized hospitals [b]	Percentage of hospitals penalized [c] (%)	Penalty as a share of payments [d] (%)
All Hospitals	2,828	2,342	82.81	0.42
By Geographic Location (n=2,828):				
Urban hospitals	2,164	1,836	84.84	0.42
1–99 beds	505	336	66.53	0.39
100–199 beds	624	549	87.98	0.48
200–299 beds	397	368	92.70	0.48
300–399 beds	268	250	93.28	0.43
400–499 beds	123	112	91.06	0.46
500 or more beds	247	221	89.47	0.34
Rural hospitals	664	506	76.20	0.41
1–49 beds	312	203	65.06	0.31
50–99 beds	186	151	81.18	0.46
100–149 beds	92	82	89.13	0.39
150–199 beds	44	41	93.18	0.43
200 or more beds	30	29	96.67	0.40
By Teaching Status [e] (n=2,828):				
Non-teaching	1,634	1,280	78.34	0.45
Fewer than 100 Residents	910	806	88.57	0.44
100 or more Residents	284	256	90.14	0.36
By Ownership Type (n=2,828):				
Government	403	313	77.67	0.29
Proprietary	636	519	81.60	0.55
Voluntary	1,789	1,510	84.40	0.41
By Safety-Net Status [f] (n=2,828):				
Safety-net hospitals	544	453	83.27	0.34
Non-safety-net hospitals	2,284	1,889	82.71	0.44
By Disproportionate Share Hospital (DSH) Patient Percentage [g] (n=2,828):				
0–24	1,058	828	78.26	0.48
25–49	1,469	1,273	86.66	0.39
50–64	177	147	83.05	0.36
65 and over	124	94	75.81	0.43
By Medicare Cost Report (MCR) Percentage [h] (n=2,827):				
0–24	1,183	995	84.11	0.33
25–49	1,572	1,296	82.44	0.48
50–64	62	43	69.35	0.75

East South Central	253	210	83.00	0.47
West South Central	425	342	80.47	0.39
Mountain	211	151	71.56	0.31

TABLE I.G.5.–01—ESTIMATED PERCENTAGE OF HOSPITALS PENALIZED AND PENALTY AS SHARE OF PAYMENTS FOR FY 2026 HOSPITAL READMISSIONS REDUCTION PROGRAM BY HOSPITAL CHARACTERISTIC—Continued

Hospital characteristic	Number of eligible hospitals [a]	Number of penalized hospitals [b]	Percentage of hospitals penalized [c] (%)	Penalty as a share of payments [d] (%)
Pacific	349	274	78.51	0.34

Source: The table results are based on the data used to calculate the FY 2025 payment adjustment factors of open, non-Maryland, subsection (d) hospitals only. The FY 2025 payment adjustment factors are based on discharges from July 1, 2020, through June 30, 2023. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals and hospitals that are not open as of the October 2024 public reporting open hospital list because these hospitals are not eligible for a penalty under the program. Hospitals are sorted into five peer groups based on the proportion of FFS and managed care dual-eligible stays for the multi-year performance period. Hospital characteristics are from the FY 2025 IPPS Proposed Rule Impact File.

Note: The total number of hospitals with hospital characteristics data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for MCR percentage (n=2,827; missing=1).

[a] This column is the number of applicable hospitals within the characteristic that are eligible for a penalty (that is, they have 25 or more eligible discharges for at least one measure).

[b] This column is the number of applicable hospitals that are penalized (that is, they have 25 or more eligible discharges for at least one measure and an estimated payment adjustment factor less than 1) within the characteristic.

[c] This column is the percentage of applicable hospitals that are penalized among hospitals that are eligible to receive a penalty by characteristic.

[d] This column is calculated as the sum of all penalties for the group of hospitals with that characteristic divided by total base operating DRG payments for all those hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments in this way allows for comparisons across hospital characteristics that accounts for differences in the amount of base operating DRG payments for different groups of hospitals. MedPAR data from October 1, 2022, through September 30, 2023 (FY 2023), are used to estimate the total base operating DRG payments.

[e] A hospital is considered a teaching hospital if it has an Indirect Medical Education adjustment factor for Operation PPS (TCHOP) greater than zero.

[f] A hospital is considered a safety-net hospital if it is in the top DSH quintile.

[g] DSH patient percentage is the sum of the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[h] MCR (Medicare Cost Report) percentage is the percentage of total inpatient stays from Medicare patients.

6. Effects of Changes Under the FY 2026 Hospital Value-Based Purchasing (VBP) Program

The Secretary makes value-based incentive payments to hospitals under the Hospital Value-Based Purchasing Program based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2026 through a reduction to the FY 2026 base operating DRG payment amount for hospital discharges for such fiscal year, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2026 and subsequent years is 2 percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary. In section VI.L.1.b. of the preamble of this proposed rule, we estimate the available pool of funds for value-based incentive payments in the FY 2026 program year, which, in accordance with section 1886(o)(7)(C)(v) of the Act, will be 2.00 percent of base operating DRG payments, or a total of approximately $1.7 billion. This estimated available pool for FY 2026 is based on the historical pool of hospitals that were eligible to participate in the FY 2025 program year and the payment information from the December 2024 update to the FY 2024 MedPAR file.

The proposed estimated impacts of the FY 2026 program year by hospital characteristic, found in Table I.G.6.–01., are based on historical TPSs, sepsis measure results and the Health Equity Adjustment previously finalized in the FY 2024 IPPS rule (88 FR 59092 through 59106). Table I.G.6.–02 are based on the same data and reflect our proposal to remove the Health Equity Adjustment as discussed in this proposed rule. We used the FY 2025 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the December 2024 update to the FY 2024 MedPAR file. The proxy adjustment factors can be found in Table 16 associated with this proposed rule (available via the internet on the CMS website).

The proposed estimated impact analysis shows that, for the FY 2026 program year, the number of hospitals with a positive percent change in base operating DRG (51.5 percent) is higher than the number of hospitals with a negative percent change (48.5 percent). Approximately half of all hospitals experience a percent change in base operating DRG between −1.9 percent and 0.0 percent. On average, both urban and rural hospitals in the Pacific region have the highest positive percent change in base operating DRG. Urban hospitals in the Middle Atlantic, East South Central, South Atlantic, and West South Central regions experience an average negative percent change in base operating DRG. All other regions (both urban and rural) experience an average positive percent change in base operating DRG. As the MCR percent increases, the average percent change in base operating DRG generally increases, except for the four hospitals with the highest MCR percentage. As DSH percent increases, the average percent change in base operating DRG decreases except for hospitals with greater than 65 DSH percent. On average, non-teaching hospitals have a higher percent change in base operating DRG compared to teaching hospitals.

Missing	1	0.786
BY TEACHING STATUS:		
Non-Teaching	1,370	0.319
Teaching	1,161	−0.007
Missing	1	0.786

The proposed estimated impact analysis shows that, for the FY 2026 program year, with the proposal to remove the Health Equity Adjustment the number of hospitals with a negative percent change in base operating DRG (50.8 percent) is higher than the number of hospitals with a positive percent change (49.2 percent). Approximately half of all hospitals experience a percent change in base operating DRG between −2.1 percent and 0.0 percent. On average, both urban hospitals in the West North Central region and rural hospitals in the Mountain region have the highest positive percent change in base operating DRG. Urban hospitals in the Middle Atlantic, East South Central, and West South Central regions experience an average negative percent change in base operating DRG. All other regions (both urban and rural) experience an average positive percent change in base operating DRG. Hospitals in higher MCR percent categories have higher average net percentage payment increases compared to hospitals with lower MCR percent. Hospitals in higher DSH percent categories (50–65 and greater than 65) have negative average net percentage payment, compared to hospitals in the lower DSH categories. On average, non-teaching hospitals have a higher percent change in base operating DRG compared to teaching hospitals.

The actual FY 2026 program year's TPSs will not be reviewed and corrected by hospitals until after the FY 2026 IPPS/LTCH PPS final rule has published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2025 program year would be used for the updated impact analysis in the final rule, if the proposals, as previously described, for FY 2026 are not finalized.

7. Effects of Requirements Under the Hospital-Acquired Condition (HAC) Reduction Program for FY 2026

We present the estimated impact of the FY 2026 HAC Reduction Program on hospitals by hospital characteristic based on previously adopted policies for the program. In this proposed rule, we are not proposing to add or remove any measures from the HAC Reduction Program, nor are we proposing any changes to reporting or submission requirements which would have any significant economic impact for the FY 2026 program year. The table in this section presents the estimated proportion of hospitals in the worst-performing quartile of Total HAC Scores by hospital characteristic. Hospitals' CMS Patient Safety and Adverse Events Composite (CMS PSI 90) measure results are based on Medicare fee-for-service (FFS) discharges from July 1, 2021, through June 30, 2023, and version 14.0 of the CMS PSI software. Hospitals' measure results for Centers for Disease Control and Prevention (CDC) Central Line-Associated Bloodstream

Infection (CLABSI), Catheter-Associated Urinary Tract Infection (CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) are derived from standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the CDC's National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2022, and December 31, 2023. Hospital characteristics are based on the FY 2025 IPPS proposed rule Impact File.

This table includes 2,933 non-Maryland hospitals with an estimated FY 2026 Total HAC Score based on the most recently available data at the time of publication of this proposed rule. Maryland hospitals and hospitals without a Total HAC Score are excluded from the table. Actual results for FY 2026 will be determined in the fall of 2025 after a 30-day review and corrections period for hospitals to review their program results. The first column presents a breakdown of each characteristic, and the second column indicates the number of hospitals for the respective characteristic.

The third column in the table indicates the estimated number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. For example, with regard to teaching status, 426 hospitals out of 1,700 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 196 out of 935 hospitals with fewer than 100 residents and 102 out of 285 hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in the table indicates the estimated proportion of hospitals for each characteristic that would be in the worst performing quartile of Total HAC Scores and thus receive a payment reduction under the FY 2026 HAC Reduction Program. For example, 25.1 percent of the 1,700 hospitals characterized as non-teaching hospitals, 21.0 percent of the 935 teaching hospitals with fewer than 100 residents, and 35.8 percent of the 285 teaching hospitals with 100 or more residents would be subject to a payment reduction.

TABLE I.G.7.–01—ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORES FOR THE FY 2026 HAC REDUCTION PROGRAM (BY HOSPITAL CHARACTERISTIC)

Hospital characteristic	Number of hospitals	Number of hospitals in the worst-performing quartile [a]	Percent of hospitals in the worst-performing quartile [b]
All hospitals [c]	2,933	732	25.0
By Geographic Location (n=2,920): [d]			
Urban hospitals	2,268	530	23.4
1–99 beds	574	147	25.6
100–199 beds	644	149	23.1
200–299 beds	409	86	21.0
300–399 beds	270	49	18.1
400–499 beds	123	31	25.2
500 or more beds	248	68	27.4
Rural hospitals	652	194	29.8
1–49 beds	298	82	27.5
50–99 beds	188	61	32.4
100–149 beds	92	23	25.0
150–199 beds	44	18	40.9
200 or more beds	30	10	33.3
By Teaching Status [d] (n=2,920): [d]			
Non-teaching	1,700	426	25.1
Fewer than 100 residents	935	196	21.0
100 or more residents	285	102	35.8
By Ownership (n=2,920):			
Government	404	138	34.2
Proprietary	684	120	17.5
Voluntary	1,832	466	25.4
By Safety-Net Status [e] (n=2,920): [d]			
Safety-net	580	163	28.1
Non-safety net	2,340	561	24.0
By Disproportionate Share Hospital (DSH) Patient Percentage [f] (n=2,920):			
0–24	1,112	235	21.1
25–49	1,471	385	26.2
50–64	186	55	29.6
65 and over	151	49	32.5
By Medicare Cost Report (MCR) Percentage (n=2,915):			
0–24	1,273	307	24.1
25–49	1,571	395	25.1
50–64	56	14	25.0
65 and over	15	4	26.7
By Region (n=2,933):			
New England	125	36	28.8
Middle Atlantic	322	90	28.0
East North Central	462	131	28.4
West North Central	232	55	23.7
South Atlantic	494	111	22.5
East South Central	255	73	28.6
West South Central	444	93	20.9
Mountain	224	39	17.4

TABLE I.G.7.–01—ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORES FOR THE FY 2026 HAC REDUCTION PROGRAM (BY HOSPITAL CHARACTERISTIC)—Continued

Hospital characteristic	Number of hospitals	Number of hospitals in the worst-performing quartile [a]	Percent of hospitals in the worst-performing quartile [b]
Pacific	375	104	27.7

Source: FY 2026 HAC Reduction Program estimated proposed rule results are based on CMS PSI 90 data from July 1, 2021, through June 30, 2023, and CDC's NHSN HAI results from January 1, 2022, through December 31, 2023. Hospital Characteristics are based on the FY 2025 IPPS proposed rule Impact File.

Note: The total number of hospitals with hospital characteristic data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for geographic location, teaching status, ownership, Safety-net status, and DSH percent (n=2,920; missing=13), and MCR percent (n=2,915; missing=18).

[a] This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

[b] This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

[c] The number of non-Maryland hospitals with a Total HAC Score (n=2,933).

[d] A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

[e] A hospital is considered a Safety-net hospital if it is in the top quintile for DSH percent.

[f] The DSH patient percentage is equal to the sum of: (1) the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income; and (2) the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

8. Effects of the Implementation of the Rural Community Hospital Demonstration (RCHD) Program in FY 2026

In section VI.N.2 of the preamble of this proposed rule for FY 2026, we discussed our budget neutrality methodology for section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, by section 15003 of Public Law 114–255, and most recently, by section 128 of Public Law 116–260, which requires the Secretary to conduct a demonstration that would modify payments for inpatient services for up to 30 rural hospitals. Section 128 of Public Law 116–260 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 15-year extension period (that is, for an additional 5 years beyond the previous extension period). In addition, the statute provides for continued participation for all hospitals participating in the demonstration program as of December 30, 2019.

While the statute does not call for any new hospitals to join the demonstration, CMMI issued a notice on December 20, 2024, in the **Federal Register** for a solicitation (CMS–5051–N2) (89 FR 105049) for up to 10 additional eligible hospitals to participate in the RCHD. Applications were due March 1, 2025. Hospitals that enter the demonstration under this solicitation will be able to participate from May 1, 2025, through June 30, 2028. Section 410A(c)(2) of Public Law 108–173 requires that in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented (budget neutrality). To ensure budget neutrality, we propose to adopt the general methodology used in previous years, whereby we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration, and then adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. This proposed methodology applies budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented but does not identify the range across which aggregate payments must be held equal.

For this proposed rule, the resulting amount applicable to FY 2026 is $47,527,557, which we are proposing as the budget neutrality offset adjustment for FY 2026. This estimated amount is based on the specific assumptions regarding the data sources used, that is, recently available ''as submitted'' cost reports and historical and currently finalized update factors for cost and payment.

In previous years, we have incorporated a second component into the budget neutrality offset amounts identified in the IPPS/LTCH PPS final rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the IPPS/LTCH PPS final rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2005 through 2018 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS/LTCH PPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 128 of Public Law 116–260, we propose to continue this general procedure. At this time, for the FY 2026 IPPS/LTCH PPS proposed rule, not all of the finalized cost reports are available for the 20 hospitals that completed cost report periods beginning in FY 2020 under the demonstration payment methodology. If all of these cost reports are available, we will include in the budget neutrality offset amount in the FY 2026 IPPS/LTCH PPS final rule the amount by which the actual costs of the demonstration, as determined from these cost reports, differed from the estimated costs identified in the FY 2020 IPPS/LTCH PPS final rule.

9. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

In section VIII.B.2. of the preamble of this proposed rule, we discuss the implementation of the FCHIP Demonstration, which was authorized under section 123 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275), as amended by section 3126 of the Affordable Care Act of 2010 (Pub. L. 114–158), and most recently re-authorized and extended by the Consolidated Appropriations Act of 2021 (Pub. L. 116–260). The legislation authorized a demonstration project to allow eligible entities to develop and test new models for the delivery of health care in order to improve access to and better integrate the delivery of acute care, extended care and other health care services to Medicare beneficiaries in certain rural areas. The FCHIP demonstration initial period was conducted in 10 critical access hospitals (CAHs) from August 1, 2016, to July 31, 2019, and the demonstration ''extension period'' began on January 1, 2022, to run through June 30, 2027. Section 123(g)(1)(B) of Public Law 110–275 required that the demonstration be budget neutral. Specifically, this provision stated that, in conducting the demonstration project, the Secretary shall ensure that the aggregate payments made by the Secretary do

not exceed the amount which the Secretary estimates would have been paid if the demonstration project under the section were not implemented. Budget neutrality estimates for the demonstration described in the preamble of this proposed rule are based on the demonstration extension period.

As described in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69416 through 69419), CMS waived certain Medicare rules for CAHs participating in the demonstration extension period to allow for alternative reasonable cost-based payment methods in the three distinct intervention service areas: telehealth services, ambulance services, and skilled nursing facility/nursing facility services. These waivers were implemented with the goal of increasing access to care with no net increase in costs. As we explained in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69416 through 69419), section 129 of Public Law 116–260, stipulates that only the 10 CAHs that participated in the initial period of the FCHIP Demonstration are eligible to participate during the extension period. Among the eligible CAHs, five elected to participate in the extension period. The selected CAHs are located in two states—Montana and North Dakota—and are implementing the three intervention services.

As explained in the FY 2025 IPPS/LTCH PPS final rule, we based our selection of CAHs for participation in the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms meaning that the demonstration would produce savings from reduced transfers and admissions to other health care providers, offsetting any increase in Medicare payments as a result of the demonstration. However, because of the small size of the demonstration and uncertainty associated with the projected Medicare utilization and costs, the policy we finalized for the demonstration extension period of performance in the FY 2025 IPPS/LTCH PPS final rule provides a contingency plan to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met.

In the FY 2025 IPPS/LTCH PPS final rule, we adopted the same budget neutrality policy contingency plan used during the demonstration initial period to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met during the demonstration extension period. If analysis of claims data for Medicare beneficiaries receiving services at each of the participating CAHs, as well as from other data sources, including cost reports for the participating CAHs, shows that increases in Medicare payments under the demonstration during the 5-year extension period is not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide.

As explained in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69416 through 69419), because of the small scale of the demonstration, we indicated that we did not believe it would be feasible to implement budget neutrality for the demonstration extension period by reducing payments to only the participating CAHs. Therefore, in the event that this demonstration extension period is found to result in aggregate payments in excess of the amount that would have been paid if this demonstration extension period were not implemented, CMS policy is to comply with the budget neutrality requirement finalized in the FY 2025 IPPS/LTCH PPS final rule, by reducing payments to all CAHs, not just those participating in the demonstration extension period.

In the FY 2025 IPPS/LTCH PPS final rule, we stated that we believe it is appropriate to make any payment reductions across all CAHs because the FCHIP Demonstration was specifically designed to test innovations that affect delivery of services by the CAH provider category. As we explained in the FY 2025 IPPS/LTCH PPS final rule, we believe that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of Public Law 110–275 permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented and does not identify the range across which aggregate payments must be held equal.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45323 through 45328), CMS concluded that the initial period of the FCHIP Demonstration had satisfied the budget neutrality requirement described in section 123(g)(1)(B) of Public Law 110–275. Therefore, CMS did not apply a budget neutrality payment offset policy for the initial period of the demonstration. As explained in the FY 2022 IPPS/LTCH PPS final rule, we finalized a policy to address the demonstration budget neutrality methodology and analytical approach for the initial period of the demonstration. In the FY 2025 IPPS/LTCH PPS final rule, we finalized a policy to adopt the same budget neutrality methodology and analytical approach used during the demonstration initial period to be used for the demonstration extension period. As stated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69416 through 69419), our policy for implementing the 5-year extension period for section 129 of Public Law 116–260 follows same budget neutrality methodology and analytical approach as the demonstration initial period methodology. While we expect to use the same methodology that was used to assess the budget neutrality of the FCHIP Demonstration during initial period of the demonstration to assess the financial impact of the demonstration during this extension period, upon receiving data for the extension period, we may update and/or modify the FCHIP budget neutrality methodology and analytical approach to ensure that the full impact of the demonstration is appropriately captured. Therefore, we are not proposing to apply a budget neutrality payment offset to payments to CAHs in FY 2026. This policy will have no impact for any national payment system for FY 2026.

10. Effects of the Transforming Episode Accountability Model (TEAM)

In section XI.A. of the preamble of this proposed rule, we discuss testing the mandatory episode-based payment model titled the Transforming Episode Accountability Model (TEAM) under the authority of the CMS Center for Medicare and Medicaid Innovation (CMS Innovation Center). Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries while reducing program expenditures. The intent of TEAM is to improve beneficiary care through financial accountability for episode categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM will benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare fee-for-service (FFS) payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

As finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), TEAM will be mandatory for acute care hospitals located within mandatory CBSAs and will also include acute care hospitals that were eligible for voluntary opt-in participation.[6] TEAM will begin on January 1, 2026, and end on December 31, 2030. Payment approaches that hold providers accountable for episode cost and performance can potentially create incentives for the implementation and coordination of care redesign between participants and other providers and suppliers such as physicians and post-acute care providers. We anticipate TEAM will enable hospitals to consider the most appropriate strategies for care redesign, including (1) increasing post-hospitalization follow-up and medical management for patients; (2) coordinating care across the inpatient and post-acute care spectrum; (3) conducting appropriate discharge planning; (4) improving adherence to treatment or drug regimens; (5) reducing readmissions and complications during the post-discharge period; (6) managing chronic diseases and conditions that may be related to the episodes; (7) choosing the most appropriate post-acute care setting; and (8) coordinating between providers and suppliers such as hospitals, physicians, and post-acute care providers.

Under TEAM, TEAM participants will continue to bill Medicare under the traditional FFS system for items and services

[6] Acute care hospitals that participate in the BPCI Advanced or the CJR model, that are not located in a mandatory CBSA selected for TEAM participation, and continue to participate in BPCI Advanced or CJR until the last day of the last performance period or last performance year of the respective model, were eligible to voluntarily opt into TEAM.

furnished to Medicare FFS beneficiaries. The TEAM participant may receive a reconciliation payment from CMS if Medicare FFS expenditures for a performance year are less than the reconciliation target price, subject to a quality adjustment. TEAM will not have downside risk for Track 1, meaning TEAM participants will only be accountable for performance year spending below their reconciliation target price, subject to a quality adjustment, that would result in a reconciliation payment amount. For Track 2 and Track 3, TEAM will be a two-sided risk model that requires TEAM participants to be accountable for performance year spending above or below their reconciliation target price, subject to a quality adjustment, that would result in a reconciliation payment amount or a repayment amount.

a. Effects on the Medicare Program

TEAM is a mandatory episode-based payment model which will have a direct effect on the Medicare program because TEAM participants will be incentivized to reduce Medicare spending. Additionally, TEAM participants could receive a reconciliation payment amount from CMS or have to pay CMS a repayment amount based on their spending and quality performance. In the FY 2025 IPPS/LTCH PPS final rule (89 FR 70026), we estimated and projected financial impacts of TEAM over the course of the five-year model test. We estimated that on net, TEAM participants would pay CMS $442 million, and that TEAM would save the Medicare program approximately $481 million over the five performance years (2026 through 2030). In this proposed rule, we are proposing several policies and soliciting comment on policy considerations. We believe the policies that are being proposed would not have a material impact on the Medicare savings estimate. For example, we do not anticipate there will be many new hospitals that would be affected by a deferred participation period, nor would capturing an additional quality measure in the model or allowing TEAM participants to use swing-bed arrangements in the 3-Day SNF Rule waiver have a significant effect on Medicare spending or savings. Additionally, the proposals that affect the pricing methodology, such as changes to the construction of the prospective trend factor and normalization factors or using a 180-day lookback period for risk adjustment, aim to improve the accuracy of target prices but should not result in dramatic shifts to the Medicare savings estimate. We note that certain policy considerations that we are seeking comment on and not proposing, such as a low volume hospital policy could impact the Medicare savings estimate in magnitude, but we anticipate the direction of the Medicare savings to remain the same. Generally, Medicare savings estimates are based on the proposed policies to reflect the potential financial implications of the proposals and are not generally updated based on policies that are only soliciting comments. Therefore, TEAM's financial impact to the Medicare program remains unchanged from the FY 2025 IPPS/LTCH PPS final rule. While the Medicare savings estimate remains unchanged for TEAM, we note in section I.O. of this Appendix, that we assessed the potential financial impact of a low volume policy on the model. Further, we anticipate updating the Medicare savings estimate for the final rule to reflect actual TEAM participants participating in the model, inclusive of those hospitals that voluntarily opt into the model, and updated baseline spending assumptions. Additionally, should a policy that we considered become finalized, such as the low volume hospital policy, we anticipate we would update the Medicare savings estimate to reflect that policy as well.

b. Effects on the Medicare Beneficiaries

We believe the refinements to TEAM proposed in this proposed rule would not materially alter the potential effects of the model on beneficiaries that we had initially indicated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 70028). We believe the majority of the changes would not alter the effects of the model on beneficiaries because the changes predominantly alter how hospitals interact with the model, rather than how beneficiaries receive care. However, we believe any changes proposed that may have a direct effect on TEAM beneficiaries are positive. In section XI.A.2.b.(3) of the preamble of this proposed rule that we are proposing to include the Information Transfer PRO–PM, specific to episodes initiated in the hospital outpatient department setting, in the quality measure set that would be tied to payment with the belief that doing so would encourage TEAM participants to focus on and deliver improved quality of care for Medicare beneficiaries. We also note in section XI.A.2.f. of the preamble of this proposed rule that we are proposing to allow TEAM participants to use the SNF 3-day rule waiver for TEAM beneficiaries discharged to hospitals and CAHs providing PAC under swing bed arrangements. This proposal would help improve beneficiary freedom of choice and access to care, such that beneficiaries in rural or underserved areas could receive PAC services closer their home.

We welcome public comments on our impact of TEAM on Medicare beneficiaries.

H. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of January 2025, there were 91 children's hospitals, 11 cancer hospitals, 6 short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, 1 extended neoplastic disease care hospital, and 9 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, the rehabilitation hospitals and units, and the LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and the psychiatric hospitals and units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this proposed rule. The impacts of the changes on LTCHs are discussed in section I.J. of this appendix.

For the children's hospitals, cancer hospitals, short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated proposed FY 2026 percentage increase in the proposed 2023-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. Consistent with current law, based on IGI's fourth quarter 2024 forecast of the proposed 2023-based IPPS market basket increase, we are estimating the FY 2026 update to be 3.2 percent (that is, the estimate of the market basket rate-of-increase), as discussed in section V.A. of the preamble of this proposed rule. We proposed that if more recent data become available for the final rule, we would use such data, if appropriate, to calculate the final IPPS operating market basket update for FY 2026. Section 1886(b)(3)(B)(xi)(I) of the Act requires a productivity adjustment (0.8 percentage point reduction proposed for FY 2026), resulting in a proposed 2.4 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section V.B. of the preamble of this proposed rule. Children's hospitals, cancer hospitals, short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under section 1886(b)(3)(B)(xi)(I) of the Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the percentage increase in the proposed 2023-based IPPS operating market basket for FY 2026, currently estimated at 3.2 percent.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

I. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented in this section of this proposed rule, we used data from the December 2024 update of the FY 2024 MedPAR file and the December 2024 update of the Provider-Specific File (PSF) that was used for payment purposes. Although the analyses of the proposed changes to the capital prospective payment system do not incorporate cost data, we used the December 2024 update of the most recently available hospital cost report data to categorize hospitals. Our analysis has several qualifications and uses the best data available, as described later in this section of this proposed rule.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each proposed change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the December 2024 update of the FY 2024 MedPAR file, we simulated payments under the capital IPPS for FY 2025 and the proposed payments for FY 2026 for a comparison of total payments per case. Short-term, acute care hospitals not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2026 is as follows:

(Standard Federal rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH adjustment factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the geographic adjustment factor (GAF) and the hospital's case-mix. Then we added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- The capital Federal rate was updated, beginning in FY 1996, by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1. of the Addendum to this proposed rule, the proposed update to the capital Federal rate is 2.6 percent for FY 2026.
- In addition to the proposed FY 2026 update factor, the proposed FY 2026 capital Federal rate was calculated based on a proposed GAF/DRG budget neutrality adjustment factor of 1.0121, a proposed budget neutrality factor for the 5-percent cap on wage index decreases policy and the proposed transition for the discontinuation of the low wage index hospital policy of 0.9927, and a proposed outlier adjustment factor of 0.9587.

2. Results

We used the payment simulation model previously described in section I.I. of this Appendix to estimate the potential impact of the proposed changes for FY 2026 on total capital payments per case, using a universe of 3,038 hospitals. As previously described, the individual hospital payment parameters are taken from the best available data, including the December 2024 update of the FY 2024 MedPAR file, the December 2024 update to the PSF, and the most recent available cost report data from the December 2024 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2025 and estimated proposed total payments per case for FY 2026 based on the proposed FY 2026 payment policies. Column 2 shows estimates of payments per case under our model for FY 2025. Column 3 shows estimates of proposed payments per case under our model for FY 2026. Column 4 shows the total proposed percentage change in payments from FY 2025 to FY 2026. The change represented in Column 4 includes the proposed 2.6 percent update to the capital Federal rate and other proposed changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2026 are expected to increase 2.7 percent compared to capital payments per case in FY 2025. This expected increase is primarily due to the proposed 2.6 percent update to the capital Federal rate. In general, regional variations in estimated capital payments per case in FY 2026 as compared to capital payments per case in FY 2025 are primarily due to the proposed changes in GAFs, and are generally consistent with the projected changes in payments due to the proposed changes in the wage index (and proposed policies affecting the wage index), as shown in Table I in section I.F. of this appendix.

The net impact of these proposed changes is an estimated 2.7 percent increase in capital payments per case from FY 2025 to FY 2026 for all hospitals (as shown in Table III). The geographic comparison shows that, on average, hospitals in both urban and rural classifications would experience an increase in capital IPPS payments per case in FY 2026 as compared to FY 2025. Capital IPPS payments per case would increase by an estimated 2.7 percent for hospitals in urban areas while payments to hospitals in rural areas would increase by 2.9 percent from FY 2025 to FY 2026. The primary factor contributing to the difference in the projected increase in capital IPPS payments per case for rural hospitals as compared to urban hospitals is the estimated increase in capital payments to rural hospitals due to the effect of proposed changes in the GAFs.

The comparisons by region show that the change in capital payments per case from FY 2025 to FY 2026 for urban areas range from a 0.8 percent increase for the New England urban region to a 5.4 percent increase for the West North Central urban region. Meanwhile, the change in capital payments per case from FY 2025 to FY 2026 for rural areas range from a 1.3 percent increase for the East North Central rural region to a 5.2 percent increase for the West North Central rural region. Capital IPPS payments per case for hospitals located in Puerto Rico are projected to remain constant. These regional differences are primarily due to the proposed changes in the GAFs.

The comparison by hospital type of ownership (Voluntary, Proprietary, and Government) shows that voluntary hospitals as well as proprietary hospitals are expected to experience an increase in capital payments per case from FY 2025 to FY 2026 of 2.6 percent. Government hospitals are expected to experience an increase in capital payments per case from FY 2025 to FY 2026 of 3.1 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2026. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this proposed rule for FY 2026, we show the proposed average capital payments per case for reclassified hospitals for FY 2026. Urban reclassified hospitals are expected to experience an increase in capital payments per case of 2.7 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 2.6 percent. Rural reclassified hospitals as well as rural nonreclassified hospitals are expected to experience an increase in capital payments per case of 2.9 percent.

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE

FY 2025 payments compared to proposed FY 2026 payments	Number of hospitals	Average FY 2025 payments/case	Proposed average FY 2026 payments/case	Change
All Hospitals	3,038	1,184	1,216	2.7
By Geographic Location:

J. Effects of Proposed Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section XI. of the preamble of this proposed rule and section V. of the Addendum to this proposed rule, we set forth the proposed annual update to the payment rates for the LTCH PPS for FY 2026. In the preamble of this proposed rule, we specify the statutory authority for the proposals that are presented, identify the proposed policies for FY 2026, and present rationales for our proposals as well as alternatives that were considered. In this section, we discuss the impact of the proposed changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this proposed rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 328 LTCHs included in this impact analysis. We note that, although there are currently approximately 335 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2026 MS–LTC–DRG relative weights (discussed in section XI.B.3. of the preamble of this proposed rule). Moreover, in the claims data used for this proposed rule, one of the 328 LTCHs included in our impact analysis only had claims for site neutral payment rate cases and, therefore, does not affect our impact analysis for LTCH PPS standard Federal payment rate cases presented in Table IV (that is, the impact analysis presented in Table IV is based on the data for 327 LTCHs).

In the impact analysis, we used the proposed payment rate, factors, and policies presented in this proposed rule, the proposed 2.6 percent annual update to the LTCH PPS standard Federal payment rate, the proposed update to the MS–LTC–DRG classifications and relative weights, the proposed update to the wage index values and labor-related share, and the best available claims and CCR data to estimate the change in payments for FY 2026.

Under the dual rate LTCH PPS payment structure, payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) is based on the LTCH PPS standard Federal payment rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a), reduced by 4.6 percent for FYs 2018 through 2026; or 100 percent of the estimated cost of the case as determined under § 412.529(d)(2). In addition, there are two separate high-cost outlier targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases.

Based on the best available data for the 328 LTCHs in our database that were considered in the analyses used for this proposed rule, we estimate that overall LTCH PPS payments in FY 2026 will increase by approximately 2.5 percent (or approximately $61 million) based on the proposed rates and factors presented in section XI. of the preamble and section V. of the Addendum to this proposed rule.

Based on the FY 2024 LTCH cases that were used for the analysis in this proposed rule, approximately 10 percent of those cases were classified as site neutral payment rate cases (that is, 10 percent of LTCH cases would not meet the statutory patient-level criteria for exclusion from the site neutral payment rate). In section XI.B.3.b of the preamble, we outline how we considered the ending of the waiver of the application of the site neutral payment rate for LTCH cases under section 3711(b)(2) of the CARES Act when identifying site neutral payment rate cases based on the statutory patient criteria, admission date, and claim payment amounts. To estimate FY 2026 LTCH PPS payments for site neutral payment rate cases, we calculated the IPPS comparable per diem amounts using the proposed FY 2026 IPPS rates and factors along with other changes that would apply to the site neutral payment rate cases in FY 2026. We estimate that aggregate LTCH PPS payments for these site neutral payment rate cases will increase by approximately 8.5 percent (or approximately $9 million). This projected increase in payments to LTCH PPS site neutral payment rate cases is primarily due to the proposed updates to the IPPS rates and factors reflected in our estimate of the IPPS comparable per diem amount, as well as an increase in estimated costs for these cases determined using the proposed charge and CCR adjustment factors described in section V.D.3.b. of the Addendum to this proposed rule. We note that we estimate payments to site neutral payment rate cases in FY 2026 will represent approximately 4.5 percent of estimated aggregate FY 2026 LTCH PPS payments.

Based on the FY 2024 LTCH cases that were used for the analysis in this proposed rule, approximately 90 percent of LTCH cases will meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2026, and will be paid based on the LTCH PPS standard Federal payment rate. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2026 will increase approximately 2.2 percent (or approximately $52 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2026 is primarily due to the proposed 2.6 percent annual update to the LTCH PPS standard Federal payment rate being partially offset by a projected 0.3 percent decrease in high-cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments, which is discussed later in this section.

Based on the 328 LTCHs that were represented in the FY 2024 LTCH cases that were used for the analyses in this proposed rule presented in this appendix, we estimate that aggregate FY 2026 LTCH PPS payments will be approximately $2.558 billion, as compared to estimated aggregate FY 2025 LTCH PPS payments of approximately $2.497 billion, resulting in an estimated overall increase in LTCH PPS payments of

approximately $61 million. We note that the estimated $61 million increase in LTCH PPS payments in FY 2026 does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of the proposed policies in this proposed rule.

The LTCH PPS standard Federal payment rate for FY 2025 is $49,383.26. For FY 2026, we are proposing to establish an LTCH PPS standard Federal payment rate of $50,728.77 which reflects the proposed 2.6 percent annual update to the LTCH PPS standard Federal payment rate and the proposed budget neutrality factor for updates to the area wage level adjustment of 1.0012146 (discussed in section V.B.6. of the Addendum to this proposed rule). For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are proposing to establish an LTCH PPS standard Federal payment rate of $49,739.90. This proposed LTCH PPS standard Federal payment rate reflects the proposed updates and factors previously described, as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP.

Table IV shows the estimated impact for LTCH PPS standard Federal payment rate cases. The estimated change attributable solely to the proposed annual update of 2.6 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 2.5 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026, on average, for all LTCHs (Column 6). The estimated increase of 2.5 percent shown in Column 6 of Table IV also includes estimated payments for short-stay outlier (SSO) cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit the required LTCH QRP data. For most hospital categories, the projected increase in payments based on the LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases also rounds to approximately 2.5 percent.

For FY 2026, we are proposing to update the wage index values based on the most recent available data (data from cost reporting periods beginning during FY 2022 which is the same data used for the FY 2026 IPPS wage index). In addition, we are proposing to establish a labor-related share of 73.1 percent for FY 2026, based on the most recent available data (IGI's fourth quarter 2024 forecast) of the relative importance of the labor-related share of operating and capital costs of the 2022-based LTCH market basket. We also are proposing to apply an area wage level budget neutrality factor of 1.0012146 to ensure that the proposed changes to the area wage level adjustment would not result in any change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

For LTCH PPS standard Federal payment rate cases, we currently estimate high-cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments will decrease from FY 2025 to FY 2026. Based on the FY 2024 LTCH cases that were used for the analyses in this proposed rule, we estimate that the FY 2025 high-cost outlier threshold of $77,048 (as established in the FY 2025 IPPS/LTCH PPS final rule) will result in estimated high-cost outlier payments for LTCH PPS standard Federal payment rate cases in FY 2025 that are projected to exceed the 7.975 percent target. Specifically, we currently estimate that high-cost outlier payments for LTCH PPS standard Federal payment rate cases will be approximately 8.2 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2025. Combined with our estimate that FY 2026 high-cost outlier payments for LTCH PPS standard Federal payment rate cases will be 7.975 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2026, this will result in an estimated decrease in high-cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments of approximately 0.3 percent between FY 2025 and FY 2026. We note that, in calculating these estimated high-cost outlier payments, we inflated charges reported on the FY 2024 claims by the proposed charge inflation factor described in section V.D.3.b. of the Addendum to this proposed rule. We also note that, in calculating these estimated high-cost outlier payments, we estimated the cost of each case by multiplying the inflated charges by the adjusted CCRs that we determined using our proposed methodology described in section V.D.3.b. of the Addendum to this proposed rule.

Table IV shows the estimated impact of the proposed payment rate and policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2026 by comparing estimated FY 2025 LTCH PPS payments to estimated FY 2026 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) We note that these impacts do not include LTCH PPS site neutral payment rate cases as discussed in section I.J.3. of this appendix.

As we discuss in detail throughout this proposed rule, based on the best available data, we believe that the provisions of this proposed rule relating to the LTCH PPS, which are projected to result in an overall increase in estimated aggregate LTCH PPS payments (for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases), and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 2.5 percent increase in estimated payments for LTCH PPS standard Federal payment rate cases for LTCHs located in a rural area. This increase is primarily due to the combination of the proposed 2.6 percent annual update to the LTCH PPS standard Federal payment rate for FY 2026, the proposed changes to the area wage level adjustment, and estimated changes in outlier payments. This estimated impact is based on the FY 2024 data for the 17 rural LTCHs (out of 327 LTCHs) that were used for the impact analyses shown in Table IV.

3. Anticipated Effects of the Proposed LTCH PPS Payment Rate Changes and Policy Changes

a. Proposed Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs ''maintain budget neutrality.'' We believe that the statute's mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal payment rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges paid at the site neutral payment rate are generally paid the lower of the IPPS comparable per diem amount, reduced by 4.6 percent for FYs 2018 through 2026, including any applicable high-cost outlier (HCO) payments, or 100 percent of the estimated cost of the case, reduced by 4.6 percent.

As discussed in section I.J.1. of this appendix, we project an increase in aggregate LTCH PPS payments in FY 2026 of approximately $61 million. This estimated increase in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately $52 million and the projected increase in payments to site neutral payment rate cases of approximately $9 million under the dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016.

Consistent with prior years, Table IV only reflects proposed changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.3. of this appendix refers only to the impact on LTCH PPS payments for LTCH PPS standard Federal payment rate cases. In the following section, we present our provider impact analysis for the proposed changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

b. Proposed Impact on Providers

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.533 and 412.535. In addition to adjusting the LTCH PPS standard Federal payment rate

by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and SSOs. LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), reduced by 4.6 percent for FYs 2018 through 2026, including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this proposed rule on different categories of LTCHs for FY 2026, it is necessary to estimate payments per discharge for FY 2025 using the rates, factors, and the policies established in the FY 2025 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2026 using the proposed rates, factors, and the policies in this proposed rule (as discussed in section XI. of the preamble of this proposed rule and section V. of the Addendum to this proposed rule). As discussed elsewhere in this proposed rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for HCO cases in each year. The resulting analyses can then be used to compare how our proposed policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: large urban/other urban/rural.
- Ownership control.
- Census region.
- Bed size.

c. Proposed Calculation of LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our policies on payments for LTCH PPS standard Federal payment rate cases, we simulated FY 2025 and proposed FY 2026 payments on a case-by-case basis using historical LTCH claims from the FY 2024 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2024 MedPAR files. For modeling FY 2025 LTCH PPS payments, we used the FY 2025 standard Federal payment rate of $49,383.26 (or $48,424.36 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). Similarly, for modeling payments based on the proposed FY 2026 LTCH PPS standard Federal payment rate, we used the proposed FY 2026 standard Federal payment rate of $50,728.77 (or $49,739.90 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). In each case, we applied the applicable proposed adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2025 LTCH PPS payments, we used the current FY 2025 labor-related share (72.8 percent), the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2025 IPPS/LTCH PPS final rule (which are available via the internet on the CMS website), the FY 2025 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of $77,048 (as reflected in the FY 2025 IPPS/LTCH PPS final rule), and the FY 2025 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2025 nonlabor-related share (27.2 percent) for LTCHs located in Alaska and Hawaii.

Similarly, for modeling proposed FY 2026 LTCH PPS payments, we used the proposed FY 2026 LTCH PPS labor-related share (73.1 percent), the proposed FY 2026 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this proposed rule (which are available via the internet on the CMS website), the proposed FY 2026 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of $91,247 (as discussed in section V.D.3. of the Addendum to this proposed rule), and the proposed FY 2026 COLA factors (shown in the table in section V.C. of the Addendum to this proposed rule) to adjust the proposed FY 2026 nonlabor-related share (26.9 percent) for LTCHs located in Alaska and Hawaii. We note that in modeling payments for HCO cases for LTCH PPS standard Federal payment rate cases, we inflated charges reported on the FY 2024 claims by the proposed charge inflation factors in section V.D.3.b. of the Addendum to this proposed rule. We also note that in modeling payments for HCO cases for LTCH PPS standard Federal payment rate cases, we estimated the cost of each case by multiplying the inflated charges by the adjusted CCRs that we determined using our proposed methodology described in section V.D.3.b. of the Addendum to this proposed rule.

The impacts that follow reflect the estimated ''losses'' or ''gains'' among the various classifications of LTCHs from FY 2025 to FY 2026 based on the payment rates and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this proposed rule. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2025 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The fifth column shows the estimated proposed FY 2026 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2025 to FY 2026 due to the proposed annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this proposed rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026 due to the proposed changes to the area wage level adjustment (that is, the proposed updated hospital wage data and the proposed labor-related share) and the application of the corresponding proposed budget neutrality factor (as discussed in section V.B.6. of the Addendum to this proposed rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2025 (Column 4) to FY 2026 (Column 5) due to all proposed changes.

TABLE IV—IMPACT OF PROPOSED PAYMENT RATE AND POLICY CHANGES TO LTCH PPS PAYMENTS FOR LTCH PPS STANDARD FEDERAL PAYMENT RATE CASES FOR FY 2026

[Estimated FY 2025 payments compared to estimated FY 2026 payments]

LTCH classification	Number of LTCHS	Number of LTCH PPS standard payment rate cases	Average FY 2025 LTCH PPS payment per standard payment rate	Average FY 2026 LTCH PPS payment per standard payment rate [1]	Change due to change to the annual update to the standard federal rate [2]	Percent change due to changes to area wage adjustment with wage budget neutrality [3]	Percent change due to all standard payment rate changes [4]

[1] Estimated FY 2026 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the proposed payment rate and factor changes applicable to such cases presented in the preamble of and the Addendum to this proposed rule.

[2] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026 due to the proposed annual update to the LTCH PPS standard Federal payment rate.

[3] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026 due to the proposed changes to the area wage level adjustment under § 412.525(c) (that is, the proposed updated hospital wage data and the proposed labor-related share) with budget neutrality.

[4] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2025 (shown in Column 4) to FY 2026 (shown in Column 5), due to all of the proposed changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this proposed rule. We note that this column, which shows the percent change in estimated payments per discharge due to all proposed changes, does not equal the sum of the percent changes in estimated payments per discharge due to the proposed annual update to the LTCH PPS standard Federal payment rate (Column 6) and due to the proposed changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in estimated payments to aggregate HCO payments for LTCH PPS standard Federal payment rate cases (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

d. Results

Based on the FY 2024 LTCH cases (from 327 LTCHs) that were used for the analyses in this proposed rule, we have prepared the following summary of the impact (as shown in Table IV) of the proposed LTCH PPS payment rate and policy changes for LTCH PPS standard Federal payment rate cases presented in this proposed rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are projected to increase 2.2 percent, on average, for all LTCHs from FY 2025 to FY 2026 as a result of the proposed payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this proposed rule. This estimated 2.2 percent increase in LTCH PPS payments per discharge was determined by comparing estimated FY 2026 LTCH PPS payments (using the proposed payment rates and factors discussed in this proposed rule) to estimated FY 2025 LTCH PPS payments for LTCH discharges which will be LTCH PPS standard Federal payment rate cases if the dual rate LTCH PPS payment structure was or had been in effect at the time of the discharge (as described in section I.J.3. of this appendix).

As stated previously, we are proposing an annual update to the LTCH PPS standard Federal payment rate for FY 2026 of 2.6 percent. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard Federal payment rate. Consistent with § 412.523(d)(4), we also are applying a proposed budget neutrality factor for changes to the area wage level adjustment of 1.0012146 (discussed in section V.B.6. of the Addendum to this proposed rule), based on the best available data at this time, to ensure that any proposed changes to the area wage level adjustment will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. As we also explained earlier in this section of the proposed rule, for most categories of LTCHs (as shown in Table IV, Column 6), the estimated payment increase due to the proposed 2.6 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 2.5 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2025 to FY 2026. We note our estimate of the changes in payments due to the proposed update to the LTCH PPS standard Federal payment rate also includes estimated payments for SSO cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit data under the requirements of the LTCH QRP.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 3 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the overall average percent increase in estimated payments per

discharge for LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026 for all hospitals is 2.2 percent. Urban LTCHs are projected to experience an increase of 2.2 percent. Meanwhile, rural LTCHs are projected to experience an increase of 2.5 percent.

(2) Ownership Control

LTCHs are grouped into three categories based on ownership control type: voluntary, proprietary, and government. Based on the best available data, approximately 16 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 81 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, proprietary LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases of 2.1 percent. Voluntary LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026 of 2.8 percent. Government owned and operated LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026 of 1.8 percent.

(3) Census Region

The comparisons by region show that the changes in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2025 to FY 2026 are projected an increase from 1.2 percent in the West South Central region to 3.5 percent in the Middle Atlantic region. These regional variations are primarily due to the proposed changes to the area wage adjustment and estimated changes in outlier payments.

(4) Bed Size

LTCHs are grouped into five categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; and greater than 125 beds. We project that LTCHs with 50–74 beds will experience the largest increase in payments with 2.6 percent. The remaining bed size categories are projected to experience an increase in payments in the range of 1.6 to 2.2 percent.

4. Effect on the Medicare Program

As stated previously, we project that the provisions of this proposed rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2026 relative to FY 2025 of approximately $52 million (or approximately 2.2 percent) for the 328 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this proposed rule will result in an increase in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2026 relative to FY 2025 of approximately $9 million (or approximately 8.5 percent) for the 328 LTCHs in our database. (As noted previously, we estimate payments to site neutral payment rate cases in FY 2026 will represent approximately 4.5 percent of total estimated FY 2026 LTCH PPS payments.) Therefore, we project that the provisions of this proposed rule will result in an increase in estimated aggregate LTCH PPS payments for all LTCH cases in FY 2026 relative to FY 2025 of approximately $61 million (or approximately 2.5 percent) for the 328 LTCHs in our database.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this proposed rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As discussed previously, we do not expect the continued implementation of the site neutral payment system to have a negative impact on access to or quality of care, as demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

K. Effects of Proposed Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

In sections X.C.3., X.C.4, and X.C.7. of the preamble of this proposed rule, we discuss the proposed requirements for hospitals reporting quality data under the Hospital IQR Program to receive the full annual percentage increase for the FY 2028 payment determination and subsequent years.

In the preamble of this proposed rule, we propose: (1) to modify the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Ischemic Stroke Hospitalization claims-based measure, beginning with the FY 2027 payment determination, associated with a July 1, 2023–June 30, 2025, performance period; (2) to modify the Hospital-Level, Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) claims-based measure beginning with the FY 2027 payment determination, associated with the April 1, 2023–March 31, 2025, performance period; (3) to modify the reporting requirements of the Hybrid Hospital-Wide Readmission (HWR) measure beginning with the FY 2028 payment determination, associated with a July 1, 2025–June 30, 2026, performance period; (4) to modify the reporting requirements of the Hybrid Hospital-Wide Mortality (HWM) measure beginning with the FY 2028 payment determination, associated with a July 1, 2025–June 30, 2026, performance period; (5) to remove the Hospital Commitment to Health Equity measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (6) to remove the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (7) to remove the Screening for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination; and (8) to remove the Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination.

As shown in the summary tables in section XIII.B.4.h. of the preamble of this proposed rule, we estimate a decrease of 627,027 hours at a savings of $16,116,129 in information collection burden associated with the proposed policies compared to the currently approved information collection burden estimates under OMB control number 0938–1022 (expiration date January 31, 2026). We also estimate a decrease of between 24,400 hours at a savings of $1,378,600 and 27,450 hours at a savings of $1,608,570 in information collection burden associated with the proposed policies compared to the currently approved information collection burden estimates and under OMB control number 0920–1317 (expiration date January 31, 2028).

In section X.C.7. of the preamble of this proposed rule, we propose to modify reporting requirements of the Hybrid HWR and HWM measures beginning with the FY 2028 payment determination. This modification would lower the submission thresholds for both the Hybrid HWR and HWM measures to allow for up to two missing laboratory results and up to two missing vital signs, reduce the core clinical data elements (CCDEs) submission requirement to 70 percent or more of discharges, and reduce the submission requirement of linking variables to 70 percent or more of discharges. While we are unable to quantify the associated impact, we believe these modifications would result in reducing the overall administrative burden required by hospitals to report these measures.

Regarding the remaining proposals, we do not anticipate any of these proposals would result in any additional economic impact beyond those discussed in section XIII.B.4. of the preamble of this proposed rule (Collection of Information).

Historically, 100 hospitals, on average, that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year due to the failure to meet all requirements of the Hospital IQR Program. We anticipate that the number of hospitals not receiving the full annual percentage increase will be approximately the same as in past years based on review of previous performance.

L. Effects of New Proposed Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

In section X.D. of the preamble of this proposed rule, we discuss proposed requirements for PPS-exempt cancer hospitals (PCHs) reporting quality data under the PCH Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act. There is no financial impact to PCH Medicare reimbursement if a PCH does not submit data.

In the preamble of this proposed rule, we proposed: (1) to remove the Hospital Commitment to Health Equity measure beginning with the CY 2024 reporting period/FY 2026 payment determination; (2) to remove the Screening for Social Drivers of Health measure beginning with the CY 2024

reporting period/FY 2026 payment determination; and (3) to remove the Screen Positive Rate for Social Drivers of Health measure beginning with the CY 2024 reporting period/FY 2026 payment determination. We also proposed to modify the public reporting requirements to allow for public reporting of the PCHQR Program on the Care Compare tool on *Medicare.gov* or a successor website in addition to current publication in the Provider Data Catalog.

As shown in the summary tables in section XIII.B.5.f. of the preamble of this proposed rule, we estimate a decrease of 107 hours at a savings of $2,921 in information collection burden associated with the proposed policies compared to the currently approved information collection burden estimates under OMB control number 0938–1175 (expiration date November 30, 2027). We do not believe any of these proposals would result in any additional economic impact beyond those discussed in section XIII.B.5. of the preamble of this proposed rule (Collection of Information).

M. Effects of Proposed Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In section X.E.3 of the preamble of this proposed rule, we are proposing to modify reporting requirements for the COVID–19 Vaccine: Percent of Patients/Residents Who are Up to Date measure to exclude patients who have expired in the LTCH beginning on October 1, 2026, for the FY 2028 LTCH QRP. In section X.E.4 of the preamble of this proposed rule, we are proposing to remove four standardized patient assessment data elements collected under the SDOH category from the LTCH QRP beginning with the FY 2028 LTCH QRP. Additionally, we propose to amend our reconsideration policy and process as described in section X.E.5 of the preamble of this proposed rule. Finally, in sections X.E.6 through X.E.8 of the preamble of this proposed rule, we seek public comment on several Requests for Information (RFIs), specifically: (1) future measure concepts for the LTCH QRP; (2) revisions to the data submission deadlines for assessment data collected for the LTCH QRP; and (3) advancing digital quality measurement (dQM) in the LTCH QRP.

The effect of these proposals for the LTCH QRP would be an overall decrease in burden for LTCHs participating in the LTCH QRP.

For the FY 2026 LTCH QRP, we estimate an increase in burden related to the proposal to amend the reconsideration request policy and process, as described in section X.E.4. of the preamble of this proposed rule. For LTCHs that seek to file an extension to file a request for reconsideration of a noncompliance determination, we estimate that this form will take LTCHs approximately 15 minutes to complete. We believe that this data would be entered by medical records specialists. However, LTCHs determine the staffing resources necessary.

For the purposes of calculating the costs we obtained median hourly wages from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[2] To account for overhead and fringe benefits, we have doubled the hourly wage. These amounts are detailed in Table I.M.–01.

TABLE I.M.–01—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Medical Records Specialists	29–2072	$23.45	$23.45	$46.90

We estimate that the collection of this form will result in an additional 15 minutes, or 0.25 hours, per form. Based on the number of reconsiderations requests we have received in the previous 3 years, we estimate an average of 16 forms per year, for an additional 4 hours per year (0.25 hours × 16 forms per year) for all LTCHs. Given an estimated $46.90 hourly wage, we estimate an increase of $187.60 (4 hours × $46.90) for all LTCHs annually or $0.57 per LTCHs that submit reconsiderations.

For the FY 2028 LTCH QRP, as shown in summary table XII.B–09 in section XII.B.6. of the preamble of this proposed rule, we estimate a total information collection burden decrease for 330 eligible LTCHs of 7.98 hours per LTCH, or 2,633.51 hours for all LTCHs, for a total cost decrease of approximately −$180,016.80, or $545.51 per LTCH annually associated with our proposed policies and updated burden estimates for the FY 2028 program year compared to our currently approved information collection burden estimates. We refer readers to section XII.B.6. of the preamble of this proposed rule, where CMS has provided an estimate of the burden and cost to LTCHs, and note that it will be included in a revised information collection request for 0938–1163.

N. Effects of Requirements Regarding the Medicare Promoting Interoperability Program

In section X.F. of the preamble of this proposed rule, we discuss proposed requirements for eligible hospitals and critical access hospitals (CAHs) to report objectives and measures and electronic Clinical Quality Measures (eCQMs) under the Medicare Promoting Interoperability Program.

In the preamble of this proposed rule, we proposed to: (1) adopt a new optional bonus measure under the Public Health and Clinical Data Exchange objective for health information exchange to a public health agency (PHA) that occurs using the Trusted Exchange Framework and Common Agreement (TEFCA), and where the eligible hospital or CAH meets certain additional requirements, beginning with the electronic health record (EHR) reporting period in CY 2026; (2) modify the Safety Assurance Factors for Electronic Health Record Resilience (SAFER) Guides measure by requiring eligible hospitals and CAHs to attest ''yes'' to completing an annual self-assessment using the SAFER Guides published in January 2025 beginning with the EHR reporting period in CY 2026; (3) modify the Security Risk Analysis measure by adding a requirement for eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management as required under the HIPAA Security Rule beginning with the EHR reporting period in CY 2026; and (4) define the EHR reporting period in CY 2026 and subsequent years as a minimum of any continuous 180-day period within that CY for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program and to make corresponding revisions at 42 CFR 495.4.

As discussed in section XIII.B.7. of the preamble of this proposed rule, we estimate no change in information collection burden associated with our proposed policies and updated burden estimates for the EHR reporting period in CY 2026 and future years compared to our currently approved information collection burden estimates. We refer readers to section XIII.B.7. of the preamble of this proposed rule (Collection of Information) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the Medicare Promoting Interoperability Program.

In section X.F.5. of the preamble of this proposed rule, we propose to adopt a new optional bonus measure under the Public Health and Clinical Data Exchange objective for health information exchange to a PHA that occurs using TEFCA, and where the eligible hospital or CAH meets certain additional requirements, beginning with the EHR reporting period in CY 2026. For eligible hospitals and CAHs that already report health information to a PHA using TEFCA, there will be no additional economic impacts if they elect to voluntarily attest to this optional bonus measure. For eligible hospitals and CAHs that are currently using another means for reporting data to a PHA and desire to attest to this optional bonus measure, there will be some non-recurring costs associated with the transition. In addition, eligible hospitals and CAHs may also incur some recurring costs associated with TEFCA connectivity depending on the nature of their agreement with the health IT vendors through which they participate in TEFCA. However, because each eligible

hospital, CAH, and health IT vendor is unique and we lack sufficient insight into the individual decisions of each, the extent of these costs is difficult to quantify.

In section X.F.4. of the preamble of this proposed rule, we propose to modify the SAFER Guides measure by requiring eligible hospitals and CAHs to attest ''yes'' to completing an annual self-assessment using the SAFER Guides that ASTP published in January 2025 beginning with the EHR reporting period in CY 2026. We do not believe this provision results in any additional economic impacts beyond those previously discussed in the FY 2022 IPPS/LTCH PPS and FY 2024 IPPS/LTCH PPS final rules (86 FR 45609 and 88 FR 59432 through 59433, respectively).

In section X.F.3. of the preamble of this proposed rule, we propose to modify the Security Risk Analysis measure to require eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management as required under the HIPAA Security Rule at 45 CFR 164.308(a)(1)(ii)(B) beginning with the EHR reporting period in CY 2026. While we are proposing to require eligible hospitals and CAHs to attest ''yes'' to having conducted security risk management, the costs associated with performing security risk management required under the HIPAA Security Rule are currently approved under OMB control number 0945–0003 (expiration date July 31, 2027). We do not believe this provision results in any additional economic impacts.

We do not believe the remaining provision results in any additional economic impact beyond those discussed in section XIII.B.7. of the preamble of this proposed rule (Collection of Information).

O. Alternatives Considered

This proposed rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the proposed policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

1. Alternatives Considered to the LTCH QRP Reporting Requirements

Regarding the proposal to remove item O0350, Patient's COVID–19 vaccination is up to date, on the LCDS with respect to patients who have expired in the LTCH, we believe this is responsive to LTCHs concerns and will help reduce assessment collection burden. We considered the alternative of continuing to collect this item with respect to patients who have expired in the LTCH but given the concerns from LTCHs and other interested parties about data collection challenges and increased provider burden in collecting immunization data, we believe maintaining this item is unwarranted. Regarding our proposal to remove four SDOH standardized patient assessment data elements, we considered keeping these items but decided not to because of the burden associated with these items at this time.

Regarding the proposal to amend the process by which an LTCH may request an extension to file a reconsideration request if the LTCH was affected by an extraordinary circumstance beyond the control of the LTCH, we considered the alternative of leaving the policy language unchanged. However, we found it important to clarify the definition of ''extraordinary'' and the process for requesting an extension to file a reconsideration request, we believe these proposals are responsive to providers' feedback.

2. Alternatives Considered for the Transforming Episode Accountability Model

In section XI.A. of the preamble of this proposed rule, we discuss the mandatory episode-based payment model called the Transforming Episode Accountability Model (TEAM). TEAM is designed to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM would benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare FFS payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

Throughout this proposed rule, we have identified our proposed policies and alternatives that we have considered and provided information as to the effects of these alternatives and the rationale for each of the proposed policies. For example, we considered requiring new acute care hospitals that open in a mandatory core-based statistical areas (CBSA) to immediately participate in TEAM. However, we are concerned that requiring immediate participation while they are establishing their clinical and operational practices could make it challenging for new acute care hospitals to participate in the model.

We also considered multiple approaches to a low volume hospital policy, as discussed in section XI.A.2.c.(8) of the preamble of this proposed rule. While we have not proposed a low volume hospital policy, we recognize including a low volume hospital policy in TEAM would have a financial impact to TEAM's ability to save Medicare money. This is because all the options considered give some financial protection to the low volume hospital. We assessed the financial impact to TEAM by modeling the option that would result in the most cost to Medicare, specifically the option that would waive downside financial risk at the episode category level for TEAM participants that did not initiate at least 31 episodes in the baseline period. Using 2023 as a performance year and 2019–2021 as a baseline period, we simulated reconciliation results for the hospitals required to participate in TEAM. We found that applying a low volume policy where downside risk was waived for approximately 1.75% of the episodes in the model resulted in approximately $10.7 million in repayment amounts being waived. We also found that $5.8 million of the $10.7 million in repayment amounts were associated with safety net hospitals, that are already eligible to have downside risk waived if they choose to participate in Track 1 of the model. We note that our Medicare savings estimates from the FY 2025 IPPS/LTCH PPS final rule (89 FR 70026), that estimated a $481 million savings to Medicare, already assumed TEAM participants that are considered safety net hospitals, as defined at § 512.505, would have downside risk waived for the first three performance years of the model. Therefore, we anticipate the inclusion of a potential low volume hospital policy in TEAM would slightly reduce Medicare savings but would still yield overall positive savings to Medicare.

We solicit and welcome comments on our proposals, on the alternatives we have identified, and on other alternatives that we should consider.

P. Overall Conclusion

1. Acute Care Hospitals

Acute care hospitals are estimated to experience an increase of approximately $4.0 billion in FY 2026, including operating, capital, and the effects of (1) new technology add-on payment changes, (2) the proposed changes to estimated uncompensated care payments and (3) the statutory expiration of the MDH program and the temporary changes to the low-volume hospital payment adjustment on October 1, 2025. The estimated change in operating payments and uncompensated care payments is approximately $3.95 billion (discussed in sections I.F of this Appendix). The estimated change in capital payments is approximately $0.21 billion (discussed in section I.I. of this Appendix). The estimated change in the combined effects of other proposed changes including new technology add-on payment changes and the statutory expiration of the temporary changes to the low-volume hospital payment adjustment on October 1, 2025, is approximately −$0.14 billion as discussed in sections I.F and I.G. of this Appendix. Totals may differ from the sum of the components due to rounding.

Table I. of section I.F. of this Appendix also demonstrates the estimated redistributional impacts of the proposed FY 2026 changes on IPPS payments relative to FY 2025.

We estimate that hospitals will experience a 2.7 percent increase in capital payments per case, as shown in Table III of section I.I. of this Appendix. We project that there will be an approximately $21 million increase in capital payments in FY 2026 compared to FY 2025.

The discussions presented in the previous pages, in combination with the remainder of this proposed rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience an increase in estimated payments in FY 2026. In the impact analysis, we are using the rates, factors, and policies presented in this proposed rule based on the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY

2026. Accordingly, based on the best available data for the 328 LTCHs included in our analysis, we estimate that overall FY 2026 LTCH PPS payments would increase approximately $61 million relative to FY 2025, primarily due to the proposed annual update to the LTCH PPS standard Federal rate partially offset by an estimated decrease in high-cost outlier payments.

Q. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on last year's proposed rule will be the number of reviewers of this proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons, we believe that the number of past commenters would be a fair estimate of the number of reviewers of this proposed rule. We welcome any comments on the approach in estimating the number of entities which will review this proposed rule.

We recognize that different types of entities are in many cases affected by mutually exclusive sections of the rule. Thus, for the purposes of our estimate we assume that each reviewer read approximately 50 percent of the proposed rule. Finally, in our estimates, we have used the 6,180 number of timely pieces of correspondence on the FY 2025 IPPS/LTCH proposed rule as our estimate for the number of reviewers of this proposed rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the comprehensive review of preamble and regulatory text. We seek comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing the proposed rule is $106.42 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed, we estimate that it would take approximately 15.22 hours for the staff to review half of this proposed rule. For each IPPS hospital or LTCH that reviews this proposed rule, the estimated cost is $1,619.71 (15.22 hours × $106.42). Therefore, we estimate that the total cost of reviewing this proposed rule is $10,009,807.80 ($1,619.71 × 6,180 reviewers).

II. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf*), in Table V. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this proposed rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the proposed changes to the IPPS presented in this proposed rule. All expenditures are classified as transfers to Medicare providers.

As shown in Table V. of this Appendix, the net costs to the Federal Government associated with the policies in this proposed rule are estimated at $4.0 billion.

TABLE V—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2025 TO FY 2026

Category	Transfers
Annualized Monetized Transfers	$4.0 billion.
From Whom to Whom	Federal Government to IPPS Medicare Providers.

B. LTCHs

As discussed in section I.J. of this Appendix, the impact analysis of the payment rates and factors presented in this proposed rule under the LTCH PPS is projected to result in an increase in estimated aggregate LTCH PPS payments in FY 2026 relative to FY 2025 of approximately $61 million based on the data for 328 LTCHs in our database that are subject to payment under the LTCH PPS. Therefore, as required by OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf*), in Table VI. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this proposed rule as they relate LTCHs. Table VI. of this Appendix provides our best estimate of the estimated change in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this proposed rule based on the data for the 328 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs).

As shown in Table VI. of this Appendix, the net cost to the Federal Government associated with the policies for LTCHs in this proposed rule are estimated at $61 million.

TABLE VI—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2025 LTCH PPS TO THE FY 2026 LTCH PPS

Category	Transfers
Annualized Monetized Transfers	$61 million.
From Whom to Whom	Federal Government to LTCH Medicare Providers.

III. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $8.0 million to $41.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 38 of the Table of Small Business Size Standards for NAIC 622 found on the SBA website at *https://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf*.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Because all hospitals are considered to be small entities for purposes of the RFA, the hospital impacts described in this proposed rule are impacts on small entities. Individuals and States are not included in the definition of a small entity. MACs are not considered to be small entities because they do not meet the SBA definition of a small business.

HHS's practice in interpreting the RFA is to consider effects economically ''significant'' if greater than 5 percent of providers reach a threshold of 3 to 5 percent or more of total revenue or total costs. We believe that the

provisions of this proposed rule relating to IPPS hospitals would have an economically significant impact on small entities as explained in this Appendix. Therefore, the Secretary has certified that this proposed rule is expected to have a significant economic impact on a substantial number of small entities. For example, the majority of the 3,038 IPPS hospitals included in the impact analysis shown in ''Table I.—Impact Analysis of Proposed Changes to the IPPS for Operating Costs for FY 2026,'' on average are expected to see increases in the range of 3.5 percent, primarily due to the proposed hospital rate update and proposed uncompensated care payments, as discussed in section I.F. of this Appendix. On average, the proposed rate update for these hospitals is estimated to be 2.4 percent and proposed uncompensated care payments are estimated to increase payments in FY 2026 by 1.3 percent for all hospitals.

The 328 LTCH PPS hospitals included in the impact analysis shown in ''Table IV: Impact of Proposed Payment Rate and Policy Changes to LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases for FY 2026 (Estimated FY 2025 Payments Compared to Estimated Proposed FY 2026 Payments)'' on average are expected to see an increase of approximately 2.2 percent, primarily due to the proposed annual standard Federal rate update for FY 2026 (2.6 percent) being partially offset by a projected 0.3 percent decrease in high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments, as discussed in section I.J. of this Appendix.

This proposed rule contains a range of proposals. It provides descriptions of the statutory provisions that are addressed, identifies the proposed policies, and presents rationales for our decisions and, where relevant, alternatives that were considered. All alternatives considered apply to hospitals considered small businesses. The analyses discussed in this Appendix and throughout the preamble of this proposed rule constitutes our initial regulatory flexibility analysis. We are seeking public comments on our estimates and analysis of the impact of our proposals on small entities.

IV. Impact on Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals.

As shown in Table I. in section I.F. of this Appendix, rural IPPS hospitals with 0–49 beds (320 hospitals) are expected to experience an increase in payments from FY 2025 to FY 2026 of 2.3 percent and rural IPPS hospitals with 50–99 beds (182 hospitals) are expected to experience an increase in payments from FY 2025 to FY 2026 of 0.9 percent. These changes are primarily driven by the proposed hospital rate update and the increase in estimated uncompensated care payment offset by the statutory expiration of the MDH program. We refer readers to Table I. in section I.F. of this Appendix for additional information on the quantitative effects of the proposed policy changes under the IPPS for operating costs.

All rural LTCHs (17 hospitals) shown in Table IV. in section I.J. of this Appendix have less than 100 beds. These hospitals are expected to experience an increase in payments from FY 2025 to FY 2026 of 2.5 percent. This increase is primarily due to the combination of the proposed 2.6 percent annual update to the LTCH PPS standard Federal payment rate for FY 2026, as discussed in section I.J. of this Appendix.

V. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately $187 million. This proposed rule would not mandate any requirements that meet the threshold for State, local, or Tribal governments, nor would it affect private sector costs.

VI. Executive Order 13132

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts state law, or otherwise has federalism implications. This proposed rule would not have a substantial direct effect on State or local governments, preempt states, or otherwise have a federalism implication.

VII. Executive Order 13175

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having Tribal implications. Section 1880(a) of the Act states that a hospital of the Indian Health Service, whether operated by such Service or by an Indian Tribe or Tribal organization, is eligible for Medicare payments so long as it meets all of the conditions and requirements for such payments which are applicable generally to hospitals. Consistent with section 1880(a) of the Act, this proposed rule contains general provisions also applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act. We continue to engage in consultations with Tribal officials on IPPS issues of interest. We will use input received from these consultations, as well as the comments on the proposed rule, to inform this rulemaking.

VIII. Executive Order 14192

Executive Order 14192, titled ''Unleashing Prosperity Through Deregulation,'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations. This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action. We estimate that this proposed rule would generate $17.5 million in annualized cost savings at a 7 percent discount rate, discounted relative to year 2024, over a perpetual time horizon.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2026, consistent with our approach for FY 2025, we are including the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2026

A. Proposed FY 2026 Inpatient Hospital Update

As discussed in section VI.B. of the preamble to this proposed rule, for FY 2026, consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section

1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then an adjustment based on changes in economy-wide productivity (the productivity adjustment). Section 1886(b)(3)(B)(xi) of the Act, as added by section 3401(a) of the Affordable Care Act, states that application of the productivity adjustment may result in the applicable percentage increase being less than zero.

We note that, in compliance with section 404 of the MMA, in this proposed rule, we are proposing to replace the 2018-based IPPS operating and capital market baskets with the rebased and revised proposed 2023-based IPPS operating and capital market baskets beginning in FY 2026.

In this FY 2026 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, we are proposing to base the proposed FY 2026 market basket update used to determine the applicable percentage increase for the IPPS on IGI's fourth quarter 2024 forecast of the proposed 2023-based IPPS market basket rate-of-increase with historical data through third quarter 2024, which is estimated to be 3.2 percent. In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section VI.B. of the preamble of this FY 2026 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2024 forecast, we are proposing a productivity adjustment of 0.8 percentage point for FY 2026. We are also proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2026 market basket update and productivity adjustment for the FY 2026 IPPS/LTCH PPS final rule.

Therefore, based on IGI's fourth quarter 2024 forecast of the proposed 2023-based IPPS market basket percentage increase and the productivity adjustment, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we are proposing four possible applicable percentage increases that could be applied to the standardized amount, as shown in the following table.

FY 2026	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Proposed IPPS Market Basket Rate-of-Increase	3.2	3.2	3.2	3.2
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	−0.8	−0.8
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	−2.4	0.0	−2.4
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	−0.8	−0.8	−0.8	−0.8
Proposed Applicable Percentage Increase Applied to Standardized Amount	2.4	0.0	1.6	−0.8

B. Proposed FY 2026 SCH Update

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Therefore, the update to the hospital-specific rates for SCHs and MDHs is also subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act.

As discussed in section VI.F. of the preamble of this proposed rule, section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through FY 2025. Therefore, under current law, the MDH program will expire for discharges on or after October 1, 2025. We note that if the MDH program were to be extended by law into FY 2026, the proposed updates to the hospital-specific rates for SCHs as described in this section would also apply to the hospital-specific rates for MDHs for FY 2026. We refer readers to section V.E. of the preamble of this proposed rule for further discussion of the MDH program.

As previously stated, the update to the hospital specific rate for SCHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are proposing the same four possible applicable percentage increases in the previous table for the hospital-specific rate applicable to SCHs.

C. Proposed FY 2026 Puerto Rico Hospital Update

Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section VI.B.1. of the preamble of this proposed rule.

In addition, as discussed in section VI.B.2. of the preamble of this proposed rule, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that subsection (d) Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016. In addition, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022.

Section 1886(b)(3)(B)(ix) of the Act in conjunction with section 602(d) of Public Law 114–113 requires that for FY 2024 and subsequent fiscal years, any subsection (d) Puerto Rico hospital that is not a meaningful EHR user as defined in section 1886(n)(3) of the Act and not subject to an exception under section 1886(b)(3)(B)(ix) of the Act will have a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments).

Based on IGI's fourth quarter 2024 forecast of the proposed 2023-based IPPS market basket update with historical data through third quarter 2024, in this FY 2026 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as previously discussed, for Puerto Rico hospitals, we are proposing an IPPS market basket increase of 3.2 percent and a productivity adjustment of 0.8 percentage point. Therefore, for FY 2026, depending on whether a Puerto Rico hospital is a meaningful EHR user, there are two possible applicable percentage increases that can be applied to the standardized amount. Based on these data, we are proposing the following applicable percentage increases to the standardized amount for FY 2026 for Puerto Rico hospitals:

- For a Puerto Rico hospital that is a meaningful EHR user, we are proposing an applicable percentage increase to the operating standardized amount of 2.4 percent (that is, the FY 2026 estimate of the proposed IPPS market basket rate-of-increase of 3.2 percent less an adjustment of 0.8 percentage point for the proposed productivity adjustment).
- For a Puerto Rico hospital that is not a meaningful EHR user, we are proposing an applicable percentage increase to the operating standardized amount of 0.0 percent (that is, the FY 2026 estimate of the proposed market basket rate-of-increase of 3.2 percent,

less an adjustment of 2.4 percentage point (the proposed IPPS market basket rate-of-increase of 3.2 percent × 0.75 for failure to be a meaningful EHR user), and less an adjustment of 0.8 percentage point for the proposed productivity adjustment).

As noted previously, we are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2026 market basket percentage increase and the productivity adjustment for the FY 2026 IPPS/LTCH PPS final rule.

D. Proposed Update for Hospitals Excluded From the IPPS for FY 2026

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and America Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, religious nonmedical health care institutions (RNHCIs) are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. In addition, in accordance with § 412.526(c)(3) of the regulations, extended neoplastic disease care hospitals (described in § 412.22(i) of the regulations) also are subject to the rate-of-increase limits. As discussed in section VI. of the preamble of this proposed rule, we are proposing to use the percentage increase in the proposed 2023-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and extended neoplastic disease care hospitals for FY 2026 and subsequent fiscal years. Accordingly, for FY 2026, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, extended neoplastic disease care hospitals, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is the FY 2026 percentage increase in the proposed 2023-based IPPS operating market basket. For this proposed rule, the current estimate of the IPPS operating market basket percentage increase for FY 2026 is 3.2 percent. We are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2026 IPPS operating market basket rate-of-increase for the FY 2026 IPPS/LTCH PPS final rule.

E. Proposed Update for LTCHs for FY 2026

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this proposed rule, we are proposing to update the LTCH PPS standard Federal payment rate for FY 2026 by 2.6 percent, consistent with section 1886(m)(3) of the Act which provides that any annual update be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (that is, the productivity adjustment). Furthermore, in accordance with the LTCH QR Program under section 1886(m)(5) of the Act, we are proposing to reduce the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are proposing to establish an update factor of 1.026 in determining the LTCH PPS standard Federal rate for FY 2026. For LTCHs that fail to submit quality data for FY 2026, we are proposing to establish an annual update to the LTCH PPS standard Federal rate of 0.6 percent (that is, the proposed annual update for FY 2026 of 2.6 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying a proposed update factor of 1.006 in determining the LTCH PPS standard Federal rate for FY 2026. (We note that, as discussed in section VII.D. of the preamble of this proposed rule, the update to the LTCH PPS standard Federal payment rate of 2.6 percent for FY 2026 does not reflect any budget neutrality factors.)

III. Secretary's Recommendations

MedPAC is recommending inpatient hospital rates be updated by the amount specified in current law plus 1.0 percent. MedPAC's rationale for this update recommendation is described in more detail in this section. As previously stated, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix. We are recommending that the same applicable percentage increases apply to SCHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa and extended neoplastic disease care hospitals of 3.2 percent.

For FY 2026, consistent with policy set forth in section IX. of the preamble of this proposed rule, for LTCHs that submit quality data, we are recommending an update of 2.6 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2026, we are recommending an annual update to the LTCH PPS standard Federal rate of 0.6 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2025 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates by the amount specified in current law plus 1.0 percent. MedPAC anticipates that their recommendation to update the IPPS payment rate by the amount specified under current law plus 1.0 percent in 2026 would generally be adequate to maintain beneficiaries' access to hospital inpatient and outpatient care and keep IPPS payment rates close to, if somewhat below, the cost of delivering high-quality care efficiently.

MedPAC stated that their recommended update to IPPS and OPPS payment rates of current law plus 1.0 percent may not be sufficient to ensure the financial viability of some Medicare safety-net hospitals with a poor payer mix. MedPAC recommends redistributing the current Medicare safety-net payments (disproportionate share hospital and uncompensated care payments) using the MedPAC-developed Medicare Safety-Net Index (MSNI) for hospitals. In addition, MedPAC recommends adding $4 billion to this MSNI pool of funds to help maintain the financial viability of Medicare safety-net hospitals and recommended to Congress transitional approaches for a MSNI policy.

We refer readers to the March 2025 MedPAC report, which is available for download at *https://www.medpac.gov/document-type/report/*. We look forward to working with Congress on these matters.

We are proposing an applicable percentage increase for FY 2026 of 2.4 percent as described in section 1886(b)(3)(B) of the Act, provided the hospital submits quality data and is a meaningful EHR user consistent with these statutory requirements. We note that, because the operating and capital payments in the IPPS remain separate, we are continuing to use separate updates for operating and capital payments in the IPPS. The update to the capital rate is discussed in section III. of the Addendum to this proposed rule.

We note that section 1886(d)(5)(F) of the Act provides for additional Medicare payment adjustments, called Medicare disproportionate share hospital (DSH) payments, for subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. Section 1886(r) of the Act provides that, for FY 2014 and each subsequent fiscal year, the Secretary shall

pay each such subsection (d) hospital that is eligible for Medicare DSH payments an empirically justified DSH payment equal to 25 percent of the Medicare DSH adjustment they would have received under section 1886(d)(5)(F) of the Act if subsection (r) did not apply. The remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments if subsection (r) of the Act did not apply, reduced to reflect changes in the percentage of individuals who are uninsured, is available to make additional payments to each hospital that qualifies for Medicare DSH payments and has uncompensated care. These additional payments are called uncompensated care payments. We refer readers to section V. of preamble of this proposed rule for a further discussion of Medicare DSH and uncompensated care payments.

[CMS–1831–P]

RIN 0938–AV46

Medicare Program; FY 2026 Inpatient Psychiatric Facilities Prospective Payment System—Rate Update

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This rulemaking proposes to update the prospective payment rates, the outlier threshold, and the wage index for Medicare inpatient hospital services provided by Inpatient Psychiatric Facilities (IPFs), which include psychiatric hospitals and excluded psychiatric units of an acute care hospital or critical access hospital. This rulemaking also proposes to revise the payment adjustment factors for teaching status and for IPFs located in rural areas. These proposed changes would be effective for IPF discharges occurring during the fiscal year beginning October 1, 2025 through September 30, 2026. We are proposing to make changes to measures used in the Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program, to update and codify the Extraordinary Circumstances Exception policy, and to solicit feedback through requests for information on future changes to the IPFQR Program.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, by June 10, 2025.

ADDRESSES: In commenting, please refer to file code CMS–1831–P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1831–P, P.O. Box 8010, Baltimore, MD 21244–8010.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1831–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:

The IPF Payment Policy mailbox at *IPFPaymentPolicy@cms.hhs.gov* for general information.

Nick Brock (410) 786–5148, for information regarding the inpatient psychiatric facilities prospective payment system (IPF PPS) and regulatory impact analysis.

Kaleigh Emerson, *kaleigh.emerson1@cms.hhs.gov,* for information regarding the inpatient psychiatric facilities quality reporting (IPFQR) program.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *https://www.regulations.gov.* Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Plain Language Summary: In accordance with 5 U.S.C. 553(b)(4), a plain language summary of this rule may be found at *https://www.regulations.gov/.*

Deregulation Request for Information (RFI): On January 31, 2025, President Trump issued Executive Order (E.O.) 14192 ''Unleashing Prosperity Through Deregulation,'' which states the Administration policy to significantly reduce the private expenditures required to comply with Federal regulations to secure America's economic prosperity and national security and the highest possible quality of life for each citizen. We would like public input on approaches and opportunities to streamline regulations and reduce administrative burdens on providers, suppliers, beneficiaries, and other interested parties participating in the Medicare program. CMS has made available an RFI at *https://www.cms.gov/medicare-regulatory-relief-rfi.* Please submit all comments in response to this RFI through the provided weblink.

Availability of Certain Tables Exclusively Through the Internet on the CMS Website

Addendum A to this proposed rule summarizes the fiscal year (FY) 2026 IPF PPS payment rates, outlier threshold, cost of living adjustment factors (COLA) for Alaska and Hawaii, national and upper limit cost-to-charge ratios, and adjustment factors. In addition, Addendum B to this proposed rule shows the complete listing of ICD–10 Clinical Modification (CM) and Procedure Coding System (PCS) codes, the FY 2026 IPF PPS comorbidity adjustment, and electroconvulsive therapy (ECT) procedure codes. Addenda A and B to this proposed rule are available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/inpatient-psychiatric-facility/tools-and-worksheets.*

Tables setting forth the FY 2026 Wage Index for Urban Areas Based on Core Based Statistical Area (CBSA) Labor Market Areas, the FY 2026 Wage Index Based on CBSA Labor Market Areas for Rural Areas, and the FY 2026 CBSA Labor Market Areas are available exclusively through the internet, on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/inpatient-psychiatric-facility/wage-index.*

I. Executive Summary

A. Purpose

This proposed rule would update the prospective payment rates, the outlier threshold, and the wage index for Medicare inpatient hospital services provided by Inpatient Psychiatric Facilities (IPFs) for discharges occurring during fiscal year (FY) 2026, (beginning October 1, 2025 through September 30, 2026). This rule includes a proposal to revise the payment adjustment factors for teaching status and for IPFs located in rural areas. Lastly, this proposed rule would update a quality measure, remove four quality measures, and update and codify the Extraordinary Circumstances Exception (ECE) policy under the Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program.

B. Summary of the Major Provisions

1. Inpatient Psychiatric Facilities Prospective Payment System (IPF PPS)

For the IPF PPS, we propose to:

- Revise the facility-level IPF PPS adjustment factors for teaching status and for IPFs located in rural areas.
- Make technical rate setting updates: The IPF PPS payment rates will be adjusted annually for input price inflation, as well as statutory and other policy factors.

This rule proposes to update:

++ The IPF PPS Federal per diem base rate from $876.53 to $891.99.

++ The IPF PPS Federal per diem base rate for providers who failed to report quality data to $874.57.

++ The electroconvulsive therapy (ECT) payment per treatment from $661.52 to $673.19.

++ The ECT payment per treatment for providers who failed to report quality data to $660.04.

++ The labor-related share from 78.8 percent to 78.9 percent.

++ The wage index budget neutrality factor to 1.0011. This proposed rule would apply a refinement standardization factor of 0.9927.

++ The fixed dollar loss threshold amount from $38,110 to $39,360, to maintain estimated outlier payments at 2 percent of total estimated aggregate IPF PPS payments.

2. Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program

For the Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program, we propose to modify the reporting period of the 30-Day Risk-Standardized All Cause Emergency Department (ED) Visit Following an IPF Discharge measure, to remove the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure, to remove the Facility Commitment to Health Equity measure, to remove the Screening for Social Drivers of Health and Screen Positive Rate for Social Drivers of Health measures, and to update and codify changes to the Extraordinary Circumstances Exception (ECE) policy. In addition, we are soliciting feedback on three topics through requests for information on a potential future star rating system for IPFs, future measures for the IPFQR Program, and on using the Fast Healthcare Interoperability Resources® (FHIR®) standard for electronic exchange of healthcare information for patient assessment reporting.

C. Summary of Impacts

Provision description	Total transfers & cost reductions
FY 2026 IPF PPS payment update	The overall economic impact of this proposed rule is an estimated $70 million in increased payments to IPFs during FY 2026.
IPFQR Program update, including measure removals	We estimate a cost reduction of $1,746,474 ($1,731,712 in CY2026 and a further $14,761 in CY 2027) for facilities and patients due to the policies we are proposing for the IPFQR Program.

II. Background

A. Overview of the Legislative Requirements of the IPF PPS

Section 124 of the Medicare, Medicaid, and State Children's Health Insurance Program Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) required the establishment and implementation of an IPF PPS in a budget neutral manner. Specifically, section 124 of the BBRA mandated that the Secretary of Health and Human Services (the Secretary) develop a per diem prospective payment system (PPS) for inpatient hospital services furnished in psychiatric hospitals and excluded psychiatric units including an adequate patient classification system that reflects the differences in patient resource use and costs among psychiatric hospitals and excluded psychiatric units. ''Excluded psychiatric unit'' means a psychiatric unit of an acute care hospital or of a Critical Access Hospital (CAH), which is excluded from payment under the Inpatient Prospective Payment System (IPPS) or CAH payment system, respectively. These excluded psychiatric units will be paid under the IPF PPS.

Section 405(g)(2) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173) extended the IPF PPS to psychiatric distinct part units of CAHs.

Sections 3401(f) and 10322 of the Patient Protection and Affordable Care Act (Pub. L. 111–148) as amended by section 10319(e) of that Act and by section 1105(d) of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) (hereafter referred to jointly as ''the Affordable Care Act'') added subsection (s) to section 1886 of the Social Security Act (the Act).

Section 1886(s)(1) of the Act titled ''Reference to Establishment and Implementation of System,'' refers to section 124 of the BBRA, which relates to the establishment of the IPF PPS.

Section 1886(s)(2)(A)(i) of the Act requires the application of the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act to the IPF PPS for the rate year (RY) beginning in 2012 (that is, a RY that coincides with a FY) and each subsequent RY.

Section 1886(s)(2)(A)(ii) of the Act required the application of an ''other adjustment'' that reduced any update to an IPF PPS base rate by a percentage point amount specified in section 1886(s)(3) of the Act for the RY beginning in 2010 through the RY beginning in 2019. As noted in the FY 2020 IPF PPS final rule (84 FR 38424), for the RY beginning in 2019, section 1886(s)(3)(E) of the Act required that the other adjustment reduction be equal to 0.75 percentage point; that was the final year the statute required the application of this adjustment. Because FY 2021 was a RY beginning in 2020, FY 2021 was the first year that section 1886(s)(2)(A)(ii) of the Act did not apply since its enactment.

Sections 1886(s)(4)(A) through (D) of the Act require that for RY 2014 and each subsequent RY, IPFs that fail to report required quality data with respect to such a RY will have their annual update to a standard Federal rate for discharges reduced by 2.0 percentage points. This may result in an annual update being less than 0.0 for a RY, and may result in payment rates for the upcoming RY being less than such payment rates for the preceding RY. Any reduction for failure to report required quality data will apply only to the RY involved, and the Secretary will not consider such reduction in computing the payment amount for a subsequent RY. Additional information about the specifics of the current IPFQR Program is available in the FY 2020 IPF PPS final rule (84 FR 38459 through 38468).

Section 4125 of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117–328), which amended section 1886(s) of the Act, requires CMS to revise the Medicare prospective payment system for psychiatric hospitals and psychiatric units. Specifically, section 4125(a) of the CAA,

2023 added section 1886(s)(5)(A) of the Act to require the Secretary to collect data and information, as the Secretary determines appropriate, to revise payments under the IPF PPS. CMS discussed this data collection in the FY 2024 IPF PPS final rule (88 FR 51054), as CMS was required to begin collecting this data and information not later than October 1, 2023. As discussed in that rule, the agency has already been collecting data and information consistent with the types set forth in the CAA, 2023 as part of our extensive and years-long analyses and consideration of potential payment system refinements. We refer readers to the FY 2024 IPF PPS final rule (88 FR 51095 through 51098) where we discussed existing data collection and requested information to inform future IPF PPS revisions.

In addition, section 1886(s)(5)(D) of the Act, as added by section 4125(a) of the CAA, 2023 required that the Secretary implement revisions to the methodology for determining the payment rates under the IPF PPS for psychiatric hospitals and psychiatric units, effective for RY 2025 (FY 2025). Section 1886(s)(5)(D) of the Act provided that these revisions may be based on a review of the data and information collected under section 1886(s)(5)(A) of the Act. For a detailed discussion on the revisions implemented for FY 2025, we refer readers to the FY 2025 IPF PPS final rule (89 FR 64590 through 64636).

Section 4125(b) of the CAA, 2023 amended section 1886(s)(4) of the Act by inserting a new subparagraph (E)—and redesignating the existing subparagraph (E) as subparagraph (F)—which requires IPFs participating in the IPFQR Program to collect and submit to the Secretary standardized patient assessment data, using a standardized patient assessment instrument, for RY 2028 (FY 2028) and each subsequent rate year. IPFs must submit such data with respect to at least the admission and discharge of an individual, or more frequently as the Secretary determines appropriate. For IPFs to meet this new data collection and reporting requirement for RY 2028 and each subsequent rate year, the Secretary must implement a standardized patient assessment instrument that collects data with respect to the following categories: functional status; cognitive function and mental status; special services, treatments, and interventions; medical conditions and comorbidities; impairments; and other categories as determined appropriate by the Secretary. This patient assessment instrument must enable comparison of such patient assessment data that IPFs submit across all such IPFs to which such data are applicable.

Section 4125(b) of the CAA, 2023 further amended section 1886(s) of the Act by adding a new subparagraph (6) that requires the Secretary to implement revisions to the methodology for determining the payment rates for psychiatric hospitals and psychiatric units (that is, payment rates under the IPF PPS), effective for RY 2031 (FY 2031), as the Secretary determines to be appropriate, to take into account the patient assessment data described in paragraph (4)(E)(ii).

To implement and periodically update the IPF PPS, we have published various proposed and final rules and notices in the **Federal Register**. For more information regarding these documents, we refer readers to the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilPPS/index.html?redirect=/InpatientPsychFacilPPS/.*

B. Overview of the IPF PPS

We issued the rate year (RY) 2005 IPF PPS final rule which appeared in the November 15, 2004 **Federal Register** (69 FR 66922). The RY 2005 IPF PPS final rule established the IPF PPS, as required by section 124 of the BBRA and codified at 42 CFR part 412, subpart N. The RY 2005 IPF PPS final rule set forth the Federal per diem base rate for the implementation year (the 18-month period from January 1, 2005 through June 30, 2006) and provided payment for the inpatient operating and capital costs to IPFs for covered psychiatric services they furnish (that is, routine, ancillary, and capital costs, but not costs of approved educational activities, bad debts, and other services or items that are outside the scope of the IPF PPS). Covered psychiatric services include services for which benefits are provided under the fee-for-service Part A (Hospital Insurance Program) of the Medicare program.

The IPF PPS established the Federal per diem base rate for each patient day in an IPF derived from the national average daily routine operating, ancillary, and capital costs in IPFs in FY 2002. The average per diem cost was updated to the midpoint of the first year under the IPF PPS, standardized to account for the overall positive effects of the IPF PPS payment adjustments, and adjusted for budget neutrality.

The Federal per diem payment under the IPF PPS is comprised of the Federal per diem base rate described previously and certain patient- and facility-level payment adjustments for characteristics that were found in the regression analysis to be associated with statistically significant per diem cost differences, with statistical significance defined as p less than 0.05. A complete discussion of the regression analysis that established the IPF PPS adjustment factors can be found in the RY 2005 IPF PPS final rule (69 FR 66933 through 66936).

The patient-level adjustments include age, Diagnosis-Related Group (DRG) assignment, and comorbidities, as well as adjustments to reflect higher per diem costs at the beginning of a patient's IPF stay and lower costs for later days of the stay. Facility-level adjustments include adjustments for the IPF's wage index, rural location, teaching status, a cost-of-living adjustment for IPFs located in Alaska and Hawaii, and an adjustment for the presence of a qualifying emergency department (ED).

The IPF PPS provides additional payment policies for outlier cases, interrupted stays, and a per treatment payment for patients who undergo ECT. During the IPF PPS mandatory 3-year transition period, stop-loss payments were also provided; however, since the transition ended as of January 1, 2008, these payments are no longer available.

C. Annual Requirements for Updating the IPF PPS

Section 124 of the BBRA did not specify an annual rate update strategy for the IPF PPS and was broadly written to give the Secretary discretion in establishing an update methodology. Therefore, in the RY 2005 IPF PPS final rule, we implemented the IPF PPS using the following update strategy:

- Calculate the final Federal per diem base rate to be budget neutral for the 18-month period of January 1, 2005 through June 30, 2006.
- Use a July 1 through June 30 annual update cycle.
- Allow the IPF PPS first update to be effective for discharges on or after July 1, 2006 through June 30, 2007.

The RY 2005 final rule (69 FR 66922) implemented the IPF PPS. In developing the IPF PPS, and to ensure that the IPF PPS can account adequately for each IPF's case-mix, we performed an extensive regression analysis of the relationship between the per diem costs and certain patient and facility characteristics to determine those characteristics associated with statistically significant cost differences on a per diem basis. That regression analysis is described in detail in our RY 2004 IPF proposed rule (68 FR 66923; 66928 through 66933) and our RY 2005 IPF final rule (69 FR 66933 through 66960). For characteristics with

statistically significant cost differences, we used the regression coefficients of those variables to determine the size of the corresponding payment adjustments.

In the RY 2005 IPF final rule, we explained the reasons for delaying an update to the adjustment factors, derived from the regression analysis, including waiting until we have IPF PPS data that yields as much information as possible regarding the patient-level characteristics of the population that each IPF serves. We indicated that we did not intend to update the regression analysis and the patient-level and facility-level adjustments until we complete that analysis. Until that analysis is complete, we stated our intention to publish a notice in the **Federal Register** each spring to update the IPF PPS (69 FR 66966).

We issued a final rule which appeared in the May 6, 2011 **Federal Register** titled, ''Inpatient Psychiatric Facilities Prospective Payment System—Update for Rate Year Beginning July 1, 2011 (RY 2012)'' (76 FR 26432), which changed the payment rate update period to a RY that coincides with a FY update. Therefore, final rules are now published in the **Federal Register** in the summer to be effective on October 1st of each year. When proposing changes in IPF payment policy, a proposed rule is issued in the spring, and the final rule in the summer to be effective on October 1st. For a detailed list of updates to the IPF PPS, we refer readers to our regulations at 42 CFR 412.428. Beginning October 1, 2012, we finalized that we would refer to the 12-month period from October 1 through September 30 as a ''fiscal year'' (FY) rather than a RY (76 FR 26435). Therefore, in this proposed rule we refer to rules that took effect after RY 2012 by the FY, rather than the RY, in which they took effect.

The most recent IPF PPS annual update, the FY 2025 IPF PPS final rule (89 FR 64582), appeared in the **Federal Register** on August 7, 2024. The FY 2025 IPF PPS final rule updated the patient-level adjustments and the Emergency Department adjustment as well as increased the ECT per treatment payment amount for FY 2025, in accordance with section 1886(s)(5)(D)(i) of the Act. That final rule also updated the IPF PPS Federal per diem base rates that were published in the FY 2024 IPF PPS final rule (88 FR 51054). In revising the IPF PPS patient-level adjustment factors, and to ensure that the IPF PPS can account adequately for each IPF's case-mix, we performed an extensive regression analysis of the relationship between the per diem costs and patient characteristics to determine those characteristics associated with statistically significant cost differences on a per diem basis. That regression analysis is described in detail in our FY 2025 IPF PPS proposed rule (89 FR 23154 through 23161) and our FY 2025 IPF PPS final rule (89 FR 64594 through 64601). For characteristics with statistically significant cost differences, we used the regression coefficients of those variables to determine the size of the corresponding payment adjustments.

As required by section 1886(s)(5)(D)(iii) of the Act, revisions to the IPF PPS payment rates implemented pursuant to section 1886(s)(5)(D)(i) of the Act must be budget neutral. Therefore, we finalized a refinement standardization factor for the FY 2025 IPF PPS payment rates to maintain budget neutrality for FY 2025. The application of the FY 2025 standardization factor is described in detail in our FY 2025 IPF PPS proposed rule (89 FR 23194) and our FY 2025 IPF PPS final rule (89 FR 64640 and 64641).

III. Provisions of the FY 2026 IPF PPS Proposed Rule

A. Proposed FY 2026 Market Basket Increase and Productivity Adjustment for the IPF PPS

1. Background

Originally, the input price index used to develop the IPF PPS was the Excluded Hospital with Capital market basket. This market basket was based on 1997 Medicare cost reports for Medicare-participating inpatient rehabilitation facilities (IRFs), IPFs, long-term care hospitals (LTCHs), cancer hospitals, and children's hospitals. Although ''market basket'' technically describes the mix of goods and services used in providing health care at a given point in time, this term is also commonly used to denote the input price index (that is, cost category weights and price proxies) derived from that market basket. Accordingly, the term ''market basket,'' as used in this document, refers to an input price index.

Since the IPF PPS inception, the market basket used to update IPF PPS payments has been rebased and revised to reflect more recent data on IPF cost structures. We last rebased and revised the IPF market basket in the FY 2024 IPF PPS rule, where we adopted a 2021-based IPF market basket, using Medicare cost report data for both Medicare participating freestanding psychiatric hospitals and psychiatric units. We refer readers to the FY 2024 IPF PPS final rule for a detailed discussion of the 2021-based IPF market basket and its development (88 FR 51057 through 51081). Prior to the 2021-based IPF market basket, we used the 2016-based IPF market basket which was adopted in the FY 2020 IPF PPS final rule (84 FR 38426 through 38447). References to the historical market baskets used to update IPF PPS payments prior to the FY 2020 IPF PPS rule are listed in the FY 2016 IPF PPS final rule (80 FR 46656).

2. Proposed FY 2026 IPF Market Basket Update

For FY 2026 (beginning October 1, 2025 and ending September 30, 2026), we are proposing to update the IPF PPS payments by a market basket increase factor, with a productivity adjustment as required by section 1886(s)(2)(A)(i) of the Act. Consistent with historical practice, we are proposing to estimate the market basket update for the IPF PPS based on the most recent forecast available at the time of rulemaking from IHS Global Inc. (IGI). IGI is a nationally recognized economic and financial forecasting firm with which CMS contracts to forecast the components of the market baskets and productivity adjustment. For this proposed rule, based on IGI's fourth quarter 2024 forecast with historical data through the third quarter of 2024, the proposed 2021-based IPF market basket increase factor for FY 2026 is 3.2 percent.

Section 1886(s)(2)(A)(i) of the Act requires that, after establishing the increase factor for a FY, the Secretary shall reduce such increase factor for FY 2012 and each subsequent FY, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi)(II) of the Act sets forth the definition of this productivity adjustment. The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable FY, year, cost reporting period, or other annual period) (the ''productivity adjustment''). The United States Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measures of productivity for the United States economy. We note that previously the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act was published by BLS as private nonfarm business MFP. Beginning with the November 18, 2021 release of productivity data, BLS replaced the term ''multifactor productivity'' with ''total factor productivity'' (TFP). BLS noted that this is a change in

terminology only and will not affect the data or methodology. As a result of the BLS name change, the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act is now published by BLS as private nonfarm business TFP. However, as mentioned previously, the data and methods are unchanged. We refer readers to *www.bls.gov* for the BLS historical published TFP data. A complete description of IGI's TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information.* In addition, in the FY 2022 IPF PPS final rule (86 FR 42611), we noted that effective with FY 2022 and forward, CMS changed the name of this adjustment to refer to it as the productivity adjustment rather than the MFP adjustment.

Section 1886(s)(2)(A)(i) of the Act requires the application of the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act to the IPF PPS for the RY beginning in 2012 (a RY that coincides with a FY) and each subsequent RY. For this FY2026 IPF PPS proposed rule, based on IGI's fourth quarter 2024 forecast, the proposed productivity adjustment for FY2026 (the 10-year moving average of TFP for the period ending FY 2026) is projected to be 0.8 percentage point. Accordingly, we are proposing to reduce the proposed 3.2 percent IPF market basket increase by this proposed 0.8 percentage point productivity adjustment, as mandated by the Act. This results in a proposed FY 2026 IPF PPS payment rate update of 2.4 percent (3.2 percent − 0.8 percentage point = 2.4 percent). We are also proposing that if more recent data become available, we would use such data, if appropriate, to determine the FY 2026 IPF market basket increase and productivity adjustment for the final rule.

We solicit comments on the proposed IPF market basket increase and productivity adjustment for FY 2026.

3. Proposed FY 2026 IPF Labor-Related Share

Due to variations in geographic wage levels and other labor-related costs, we believe that payment rates under the IPF PPS should continue to be adjusted by a geographic wage index, which would apply to the labor-related portion of the Federal per diem base rate (hereafter referred to as the ''labor-related share''). The labor-related share is determined by identifying the national average proportion of total costs that are related to, influenced by, or vary with the local labor market. We are proposing to continue to classify a cost category as labor-related if the costs are labor-intensive and vary with the local labor market.

Based on our definition of the labor-related share and the cost categories in the 2021-based IPF market basket, we are proposing to continue to include in the labor-related share the sum of the relative importance of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services; and a portion of the Capital-Related relative importance from the 2021-based IPF market basket. For more details regarding the methodology for determining specific cost categories for inclusion in the labor-related share based on the 2021-based IPF market basket, we refer readers to the FY 2024 IPF PPS final rule (88 FR 51078 through 51081).

The relative importance reflects the different rates of price change for these cost categories between the base year (FY 2021) and FY 2026. Based on IGI's fourth quarter 2024 forecast of the 2021-based IPF market basket, the sum of the FY 2026 relative importance moving average of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services is 75.8 percent. We are proposing, consistent with prior rulemaking, that the portion of Capital-Related costs that are influenced by the local labor market is 46 percent. Since the relative importance for Capital-Related costs is 6.7 percent of the 2021-based IPF market basket for FY 2026, we are proposing to take 46 percent of 6.7 percent to determine a labor-related share of Capital-Related costs for FY 2026 of 3.1 percent. Therefore, we are proposing a total labor-related share for FY 2026 of 78.9 percent (the sum of 75.8-percent for the labor-related share of operating costs and 3.1 percent for the labor-related share of Capital-Related costs). We are also proposing that if more recent data become available, we would use such data, if appropriate, to determine the FY 2026 labor-related share for the final rule. For more information on the labor-related share and its calculation, we refer readers to the FY2024 IPF PPS final rule (88 FR 51078 through 51081).

Table 1 shows the proposed FY 2026 labor-related share and the final FY 2025 labor-related share using the 2021-based IPF market basket relative importance.

TABLE 1—FY 2026 PROPOSED IPF LABOR-RELATED SHARE AND FY 2025 IPF LABOR-RELATED SHARE

	Relative importance, labor-related share FY 2025 [1]	Relative importance, proposed labor-related share FY 2026 [2]
Wages and Salaries	53.6	53.7
Employee Benefits	14.1	14.1
Professional Fees: Labor-Related	4.7	4.7
Administrative and Facilities Support Services	0.6	0.6
Installation, Maintenance and Repair Services	1.2	1.2
All Other Labor-Related Services	1.5	1.5
Subtotal	75.7	75.8
Labor-related portion of Capital-Related (.46)	3.1	3.1
Total Labor-Related Share	78.8	78.9

[1] Based on the 2nd quarter 2024 IGI forecast of the 2021-based IPF market basket.
[2] Based on the 4th quarter 2024 IGI forecast of the 2021-based IPF market basket.

We solicit comment on the proposed labor-related share for FY 2026.

B. Proposed Updates to the IPF PPS Rates for FY Beginning October 1, 2025

The IPF PPS is based on a standardized Federal per diem base rate calculated from the IPF average per diem costs and adjusted for budget neutrality in the implementation year. The Federal per diem base rate is used as the standard payment per day under the IPF PPS and is adjusted by the patient-level and facility-level adjustments that are applicable to the IPF stay. A detailed explanation of how we calculated the average per diem cost appears in the RY 2005 IPF PPS final rule (69 FR 66926).

1. Determining the Standardized Budget Neutral Federal Per Diem Base Rate

Section 124(a)(1) and (c) of the BBRA requires that we implement the IPF PPS in a budget neutral manner. In other words, the amount of total payments under the IPF PPS, including any payment adjustments, must be projected to be equal to the amount of total payments that would have been made if the IPF PPS were not implemented. Therefore, we calculated the budget neutrality factor by setting the total estimated IPF PPS payments to be equal to the total estimated payments that would have been made under the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) (Pub. L. 97–248) methodology had the IPF PPS not been implemented. A step-by-step description of the methodology used to estimate payments under the TEFRA payment system appears in the RY 2005 IPF PPS final rule (69 FR 66926).

Under the IPF PPS methodology, we calculated the final Federal per diem base rate to be budget neutral during the IPF PPS implementation period (that is, the 18-month period from January 1, 2005, through June 30, 2006) using a July 1 update cycle. We updated the average cost per day to the midpoint of the IPF PPS implementation period (October 1, 2005), and this amount was used in the payment model to establish the budget neutrality adjustment.

Next, we standardized the IPF PPS Federal per diem base rate to account for the overall positive effects of the IPF PPS payment adjustment factors by dividing total estimated payments under the TEFRA payment system by estimated payments under the IPF PPS. The information concerning this standardization can be found in the RY 2005 IPF PPS final rule (69 FR 66932) and the RY 2006 IPF PPS final rule (71 FR 27045). We then reduced the standardized Federal per diem base rate to account for the outlier policy, the stop loss provision, and anticipated behavioral changes. A complete discussion of how we calculated each component of the budget neutrality adjustment appears in the RY 2005 IPF PPS final rule (69 FR 66932 and 66933) and in the RY 2007 IPF PPS final rule (71 FR 27044 through 27046). The final standardized budget neutral Federal per diem base rate established for cost reporting periods beginning on or after January 1, 2005 was calculated to be $575.95.

The Federal per diem base rate has been updated in accordance with applicable statutory requirements and 42 CFR 412.428 through publication of annual notices or proposed and final rules. A detailed discussion on the standardized budget neutral Federal per diem base rate and the ECT payment per treatment appears in the FY 2014 IPF PPS update notice (78 FR 46738 through 46740). These documents are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilPPS/index.html.*

As discussed in sections III.D.3.5 and III.D.6 of this proposed rule, we are proposing to revise the facility-level adjustment factors for FY 2026 pursuant to section 1886(s)(5)(D)(i) of the Act. Section 1886(s)(5)(D)(iii) of the Act requires that revisions to IPF payment rates implemented pursuant to section 1886(s)(5)(D)(i) of the Act must be made budget-neutrally. Therefore, as discussed in section III.D.9 of this proposed rule, we are proposing to apply a standardization factor to the FY 2026 base rate that takes these refinements of facility-level adjustments into account to keep total IPF PPS payments budget neutral.

2. Determining the Electroconvulsive Therapy (ECT) Payment per Treatment

In the RY 2005 IPF PPS final rule (69 FR 66951), we analyzed the costs of IPF stays that included ECT treatment using the FY 2002 Medicare Provider and Analysis Review (MedPAR) data based on comments we received on the RY 2005 IPF PPS proposed rule. Consistent with the comments we received about ECT, our analysis and review indicated that cases with ECT treatment are substantially more costly than cases without ECT treatment. Based on this analysis, in that final rule we finalized an additional payment for each ECT treatment furnished during the IPF stay. This ECT payment per treatment is made in addition to the per diem and outlier payments under the IPF PPS. To receive the payment per ECT treatment, IPFs must indicate on their claims the revenue code and procedure code for ECT (Rev Code 901; procedure code 90870) and the number of units of ECT, that is, the number of ECT treatments the patient received during the IPF stay.

To establish the ECT per treatment payment, we used the pre-scaled and pre-adjusted median cost for procedure code 90870 developed for the Hospital Outpatient Prospective Payment System (OPPS), based on hospital claims data. We explained in the RY 2005 IPF PPS final rule that we used OPPS data because after a careful review and analysis of IPF claims, we were unable to separate out the cost of a single ECT treatment (69 FR 66922). We used the unadjusted hospital claims data under the OPPS because we did not want the ECT payment under the IPF PPS to be affected by factors that are relevant to OPPS, but not specifically applicable to IPFs. The median cost was then standardized and adjusted for budget neutrality. We also adjusted the ECT rate for wage differences in the same manner that we adjust the per diem rate.

Since the ECT payment rate was established in the RY 2005 IPF PPS rule, it has been updated annually by application of each year's market basket, productivity adjustment, and wage index budget neutrality factor to the previous year's ECT payment rate (referred to as our ''standard methodology'' in this section).

We last updated the ECT payment amount per treatment for FY 2025. As we explained in the FY 2025 IPF PPS proposed rule (89 FR 23146), we analyzed recent data from both the IPF PPS and the OPPS. Findings revealed that costs for IPF stays involving ECT were significantly more costly than stays without ECT, with cost driven primarily by longer stays and higher ancillary expenses. These IPF stays with ECT treatment, which accounted for only 1.7 percent of all IPF stays in 2022 (down from 6.0 percent in 2002), were approximately three times more costly than IPF stays without ECT treatment. We noted that on average, IPF stays with ECT cost $44,687.50 compared to $15,432.30 for IPF stays without ECT treatment in 2022, with notable increases in per-day costs and ancillary expenses. While our standard payment update methodologies would have resulted in only minor adjustments, the analysis indicated that the updates to the ECT payment rates since 2005 had not kept pace with rising costs.

To address this, we finalized a new ECT payment calculation based on the pre-scaled and pre-adjusted CY 2024 OPPS geometric mean cost, adjusted by the market basket update and wage index budget neutrality factor. We

stated that the change to the ECT per treatment amount aligned payments more closely with the actual cost of providing ECT. We noted that the increase to the ECT per treatment amount would be associated with a minor decrease to the IPF per diem base rate as a result of the refinement standardization factor, and it would increase payments to facilities providing ECT. A complete discussion of the final FY 2025 ECT payment per treatment can be found in the FY 2025 IPF PPS final rule (89 FR 64591 through 64593).

3. Proposed Update of the Federal Per Diem Base Rate and Electroconvulsive Therapy Payment per Treatment

The current (FY 2025) Federal per diem base rate is $876.53 and the ECT payment per treatment is $661.52. For the proposed FY 2026 Federal per diem base rate, we are proposing to apply the proposed of 2.4 percent IPF market basket update (that is, the proposed 2021-based IPF market basket percentage increase for FY 2026 of 3.2 percent reduced by the proposed productivity adjustment of 0.8 percentage point), the proposed wage index budget neutrality factor of 1.0011 (as discussed in section III.D.4.c of this proposed rule), and the proposed refinement standardization factor of 0.9927 (as discussed in section III.D.9 of this proposed rule) to the FY 2025 Federal per diem base rate of $876.53, yielding a proposed Federal per diem base rate of $891.99 for FY 2026. We are proposing to apply the proposed 2.4 percent IPF market basket update, the proposed 1.0011 wage index budget neutrality factor, and the proposed 0.9927 refinement standardization factor to the final FY 2025 ECT payment per treatment of $661.52, yielding a proposed ECT payment per treatment of $673.19 for FY 2026.

Section 1886(s)(4)(A)(i) of the Act requires that for RY 2014 and each subsequent RY, in the case of an IPF that fails to report required quality data with respect to such RY, the Secretary will reduce any annual update to a standard Federal rate for discharges during the RY by 2.0 percentage points. Therefore, we applied a 2.0 percentage point reduction to the proposed annual update to the Federal per diem base rate and the proposed ECT payment per treatment as follows:

- For IPFs that fail to report required data under the IPFQR Program, we would apply a proposed 0.4 percent IPF market basket update for FY 2026—that is, the proposed IPF market basket increase for FY 2026 of 3.2 percent reduced by the proposed productivity adjustment of 0.8 percentage point for an update of 2.4 percent, and further reduced by 2.0 percentage points in accordance with section 1886(s)(4)(A)(i) of the Act. We also propose to apply the refinement standardization factor of 0.9927 and the wage index budget neutrality factor of 1.0011 to the FY 2025 Federal per diem base rate of $876.53, yielding a proposed Federal per diem base rate of $874.57 for FY 2026.
- For IPFs that fail to report required data under the IPFQR Program, we would apply the proposed 0.4 percent annual IPF market basket update, the proposed 0.9927 refinement standardization factor, and the proposed 1.0011 wage index budget neutrality factor to the FY 2025 ECT payment per treatment of $661.52, yielding a proposed ECT payment per treatment of $660.04 for FY 2026.

C. Proposed Updates to the IPF PPS Patient-Level Adjustment Factors

1. Overview of the IPF PPS Adjustment Factors

The IPF PPS payment adjustment factors were originally derived from a regression analysis of 100 percent of the FY 2002 MedPAR data file, which contained 483,038 cases. For a more detailed description of the data file used for this regression analysis, we refer readers to the RY 2005 IPF PPS final rule (69 FR 66935 and 66936).

In FY 2025, we implemented revisions to the methodology for determining payment rates under the IPF PPS, as required by section 1886(s)(5)(D) of the Act. We developed the current (FY 2025) adjustment factors based on a regression analysis of IPF cost and claims data. The primary sources of this analysis were CY 2019 through 2021 MedPAR files and Medicare cost report data (CMS Form 2552–10, OMB No. 0938–0050) from the FY 2019 through 2021 Hospital Cost Report Information System (HCRIS). For a more detailed description of the data files used for this regression analysis, we refer readers to the FY 2025 IPF PPS final rule (89 FR 64593 through 64601).

For FY 2026, we propose to use the existing regression-derived patient-level adjustment factors established for FY 2025. We are not proposing any changes to the patient-level adjustment factors for FY 2026; however, we have used more recent claims data to simulate payments to finalize the outlier fixed dollar loss threshold amount and to assess the impact of the IPF PPS updates.

2. Proposed IPF PPS Patient-Level Adjustments

The IPF PPS includes payment adjustments for the following patient-level characteristics: Medicare Severity Diagnosis Related Groups (MS–DRGs) assignment of the patient's principal diagnosis, selected comorbidities, patient age, and the variable per diem adjustments.

a. Proposed Update to MS–DRG Assignment

We believe it is important to maintain for IPFs the same diagnostic coding and DRG classification used under the IPPS for providing psychiatric care. For this reason, when the IPF PPS was implemented for cost reporting periods beginning on or after January 1, 2005, we adopted the same diagnostic code set (ICD–9 Clinical Modification (CM)) and DRG patient classification system (MS–DRGs) that were utilized at the time under the IPPS. In the RY 2009 IPF PPS notice (73 FR 25709), we discussed CMS's effort to better recognize resource use and the severity of illness among patients. CMS adopted the new MS–DRGs for the IPPS in the FY 2008 IPPS final rule with comment period (72 FR 47130). In the RY 2009 IPF PPS notice (73 FR 25716), we provided a crosswalk to reflect changes that were made under the IPF PPS to adopt the new MS–DRGs. For a detailed description of the mapping changes from the original DRG adjustment categories to the current MS–DRG adjustment categories, we refer readers to the RY 2009 IPF PPS notice (73 FR 25714).

The IPF PPS includes payment adjustments for designated psychiatric DRGs assigned to the claim based on the patient's principal diagnosis. The DRG adjustment factors were expressed relative to the most frequently reported psychiatric DRG in FY 2002, that is, DRG 430 (psychoses). The coefficient values and adjustment factors were derived from the regression analysis discussed in detail in the RY 2004 IPF proposed rule (68 FR 66923; 66928 through 66933) and the RY 2005 IPF final rule (69 FR 66933 through 66960). Mapping the DRGs to the MS–DRGs resulted in 17 IPF MS–DRGs, instead of the original 15 DRGs, for which the IPF PPS provides an adjustment.

In the FY 2015 IPF PPS final rule (79 FR 45945 through 45947), we finalized conversions of the ICD–9–CM-based MS–DRGs to ICD–10–CM/Procedure Coding System (PCS)-based MS–DRGs, which were implemented on October 1, 2015. Further information on the ICD–10–CM/PCS MS–DRG conversion project can be found on the CMS ICD–

10–CM website at *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-ms-drg-conversion-project.*

In the FY 2025 IPF PPS final rule (89 FR 64602 through 64606), we revised the payment adjustments for designated psychiatric DRGs assigned to the claim based on the patient's principal diagnosis, following our longstanding policy of using the ICD–10–CM/PCS-based MS–DRG system. In that final rule, we identified 19 DRGs for which the IPF PPS adjusts payment. In addition, we implemented a sub-regulatory process to adopt routine coding updates that incorporate new or revised codes with an April 1 effective date (89 FR 64602 and 64603).

For FY 2026, we propose to continue making the existing payment adjustments for psychiatric diagnoses that group to one of the existing 19 IPF MS–DRGs listed in Addendum A. Addendum A is available on our website at *https://www.cms.gov/Medicare/Medicare-Fee-forService-Payment/InpatientPsychFacilPPS/tools.html.* Psychiatric principal diagnoses that do not group to one of the 19 designated MS–DRGs would still receive the Federal per diem base rate and all other applicable adjustments, but the payment would not include an MS–DRG adjustment.

The diagnoses for each IPF MS–DRG will be updated as of October 1, 2025, using the final IPPS FY 2026 ICD–10–CM/PCS code sets. The FY 2026 IPPS/LTCH PPS final rule will include tables of the changes to the ICD–10–CM/PCS code sets that underlie the proposed FY 2026 IPF MS–DRGs. Both the FY 2026 IPPS/LTCH PPS final rule and the tables of final changes to the ICD–10–CM/PCS code sets, which underlie the FY 2026 MS–DRGs, will be available on the CMS IPPS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.*

Additionally, as discussed in the ICD–10–CM Official Guidelines for Coding and Reporting, certain conditions have both an underlying etiology and multiple body system manifestations due to the underlying etiology. For such conditions, the ICD–10–CM has a coding convention that requires the underlying condition be sequenced first, followed by the manifestation. Wherever such a combination exists, there is a ''use additional code'' note at the etiology code, and a ''code first'' note at the manifestation code. These instructional notes indicate the proper sequencing order of the codes (etiology followed by manifestation). In accordance with the ICD–10–CM Official Guidelines for Coding and Reporting, when a primary (psychiatric) diagnosis code has a code first note, the provider will follow the instructions in the ICD–10–CM Tabular List. The submitted claim goes through the CMS processing system, which will identify the principal diagnosis code as non-psychiatric and search the secondary codes for a psychiatric code to assign a DRG code for adjustment. The system will continue to search the secondary codes for those that are appropriate for comorbidity adjustment. For more information on the code first policy, we refer readers to the RY 2005 IPF PPS final rule (69 FR 66945). We also refer readers to sections I.A.13 and I.B.7 of the FY 2020 ICD–10–CM Coding Guidelines, which is available at *https://www.cdc.gov/nchs/data/icd/10cmguidelinesFY2020_final.pdf.* In the FY 2015 IPF PPS final rule, we provided a code first table for reference that highlights the same or similar manifestation codes where the code first instructions apply in ICD–10–CM that were present in ICD–10–CM (79 FR 46009).

As discussed in the FY 2025 IPF PPS final rule (89 FR 64602 and 64603), we adopted a sub-regulatory approach to handle the coding updates, rather than discussing coding updates in the **Federal Register** during regulatory updates prior to implementation. This approach mirrors the approach taken by the IPPS, allows for flexibility in the ICD–10 code update process for the IPF PPS, and reduces the lead time for making routine coding updates to the IPF PPS code first list, comorbidities, and ECT coding categories. The proposed FY 2026 Code First table is shown in Addendum B on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-forServicePayment/InpatientPsychFacilPPS/tools.html.*

b. Proposed Payment for Comorbid Conditions

The intent of the comorbidity adjustments is to recognize the increased costs associated with active comorbid conditions by providing additional payments for certain existing medical or psychiatric conditions that are expensive to treat.

Comorbidities are specific patient conditions that are secondary to the patient's principal diagnosis and that require active treatment during the stay. Diagnoses that relate to an earlier episode of care and have no bearing on the current hospital stay are excluded and must not be reported on IPF claims. Comorbid conditions must exist at the time of admission or develop subsequently, and affect the treatment received, length of stay (LOS), or both treatment and LOS.

For each claim, an IPF may receive only one comorbidity adjustment within a comorbidity category, but it may receive an adjustment for more than one comorbidity category. Current billing instructions for discharge claims, on or after October 1, 2015, require IPFs to enter the complete ICD–10–CM codes for up to 24 additional diagnoses if they co-exist at the time of admission, or develop subsequently and impact the treatment provided.

The IPF PPS comorbidity adjustments were originally determined based on the regression analysis using the diagnoses reported by IPFs in FY 2002. The principal diagnoses were used to establish the DRG adjustments and were not accounted for in establishing the comorbidity category adjustments, except where ICD–9–CM code first instructions applied. In a code first situation, the submitted claim goes through the CMS processing system, which identifies the principal diagnosis code as non-psychiatric and searches the secondary codes for a psychiatric code to assign an MS–DRG code for adjustment. The system continues to search the secondary codes for those that are appropriate for a comorbidity adjustment.

In FY 2025, we revised the comorbidity adjustment factors based on the results of the 2019 through 2021 regression analysis described in the FY 2025 IPF PPS final rule (89 FR 64606 through 64612). In addition, we made additions and changes to the comorbidity categories for which we adjust payment based on our analysis of ICD–10–CM codes currently included in each category as well as public comments received in response to the FY 2022 and FY 2023 IPF PPS proposed rules. Specifically, we removed 3 existing comorbidity categories, revised 2 existing comorbidity categories, and added 1 new comorbidity category. We finalized 15 comorbidity categories for FY 2025. For FY 2026, we propose to use the same comorbidity adjustment factors in effect in FY 2025. The proposed FY 2026 comorbidity adjustment factors are found in Addendum A, available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-ServicePayment/InpatientPsychFacilPPS/tools.html.*

As noted previously, it is our policy to maintain the same diagnostic coding set for IPFs that is used under the IPPS for providing the same psychiatric care. In the FY 2015 IPF PPS final rule (79 FR 45947 through 45955), the comorbidity categories formerly defined using ICD–

9–CM codes were converted to ICD–10–CM/PCS. The goal for converting the comorbidity categories is referred to as replication, meaning that the payment adjustment for a given patient encounter is the same after ICD–10–CM implementation as it would be if the same record had been coded in ICD–9–CM and submitted prior to ICD–10–CM/PCS implementation on October 1, 2015. All conversion efforts were made with the intent of achieving this goal.

As previously discussed in section III.C.2.a of this proposed rule, in the FY 2025 IPF PPS final rule (89 FR 64602 and 64603) we adopted an April 1 implementation date for ICD–10–CM diagnosis and ICD–10–PCS procedure code updates, in addition to the annual October 1 update, beginning with April 1, 2025 for the IPF PPS. Coding updates related to the IPF PPS comorbidity categories are adopted following a sub-regulatory process as finalized in the FY 2025 IPF PPS final rule (89 FR 64602 and 64603). For April 1, 2025, we added two ICD–10–PCS procedure codes to the Oncology Treatment Procedures list.

The proposed FY 2026 comorbidity codes are shown in Addenda B, available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-ServicePayment/InpatientPsychFacilPPS/tools.html.*

c. Proposed Patient Age Adjustments

As explained in the RY 2005 IPF PPS final rule (69 FR 66922), we analyzed the impact of age on per diem cost by examining the age variable (range of ages) for payment adjustments. In general, we found that the cost per day increases with age. The older age groups are costlier than the under 45 age group, the differences in per diem cost increase for each successive age group, and the differences are statistically significant. In FY 2025, we adopted revised patient age adjustments derived from the regression model using a blended set of 2019 through 2021 data (89 FR 64612 and 64613). For FY 2026, we propose to use the patient age adjustments currently in effect for FY 2025, as shown in Addendum A of this proposed rule (see *https://www.cms.gov/Medicare/Medicare-Fee-for-ServicePayment/InpatientPsychFacilPPS/tools.html*).

d. Proposed Variable Per Diem Adjustments

We explained in the RY 2005 IPF PPS final rule (69 FR 66946) that the regression analysis indicated that per diem cost declines as the LOS increases. The variable per diem adjustments to the Federal per diem base rate account for ancillary and administrative costs that occur disproportionately in the first days after admission to an IPF. As discussed in the RY 2005 IPF PPS final rule, where a complete discussion of the variable per diem adjustments can be found, we used a regression analysis to estimate the average differences in per diem cost among stays of different lengths (69 FR 66947 through 66950). As a result of this analysis, we established variable per diem adjustments that begin on day 1 and decline gradually over the course of the patient's stay. In addition, the adjustment applied to day 1 depends upon whether the IPF has a qualifying ED. If an IPF has a qualifying ED, it receives a higher adjustment factor for day 1 of each stay than it would receive if it did not have a qualifying ED. The ED adjustment is explained in more detail in section III.D.8 of this proposed rule.

In FY 2025, we revised the variable per diem adjustment factors based on the 2019 through 2021 regression analysis (89 FR 64613 and 64614). For FY 2026, we propose to use the variable per diem adjustment factors currently in effect in FY 2025, as shown in Addendum A of this proposed rule (available at *https://www.cms.gov/Medicare/Medicare-Fee-for-ServicePayment/InpatientPsychFacilPPS/tools.html*).

D. Proposed Updates to the IPF PPS Facility-Level Adjustments

1. Overview of the IPF PPS Facility-Level Adjustment Factors

The IPF PPS includes facility-level adjustments for the wage index, IPFs located in rural areas, teaching IPFs, cost of living adjustments for IPFs located in Alaska and Hawaii, and IPFs with a qualifying ED. The facility-level adjustment factors currently in place for rural location and teaching status are the existing regression-derived factors established in the RY 2005 IPF final rule. As discussed in the following sections, we are proposing annual updates to the FY 2026 IPF PPS wage index. In addition, we are proposing to update the facility-level adjustment factors for rural location and teaching status for FY 2026 to reflect more recent cost and claims data.

2. History of IPF PPS Cost and Claims Analyses

In the FY 2023 IPF PPS proposed rule (87 FR 19428 and 19429), we briefly discussed past analyses and areas of interest for future refinement, about which we previously solicited comments. At the same time, CMS also released a technical report posted to the CMS website [1] accompanying the rule, summarizing these analyses. In that same proposed rule, we described the results of the agency's latest analysis of the IPF PPS and solicited comments on certain topics from the report. We summarized the considerations and findings related to our analyses of the IPF PPS adjustment factors in the FY 2023 IPF PPS final rule (46864 through 46865).

In the FY 2024 IPF PPS proposed rule (88 FR 21269 through 21272), we requested information from the public to inform revisions to the IPF PPS required by the CAA, 2023. Specifically, we sought information about which data and information would be most appropriate and useful for the purposes of refining IPF PPS payments. We requested information related to the specific types of data and information mentioned in the CAA, 2023. We also solicited comments on the reporting of ancillary charges, such as labs and drugs, on IPF claims.

In response to those requests for information in the FY 2024 IPF PPS proposed rule, commenters offered a number of suggestions for further analysis, including recommendations to consider adjusting payment for patients with sleep apnea, violent behavior, and patients that transfer from an acute care unit.

In the FY 2025 IPF PPS proposed rule, we discussed our latest regression analysis results and the methodology we used to calculate proposed revisions to the patient-level adjustment factors (89 FR 23154 through 23161). In that same proposed rule (89 FR 23161 through 23172), we also discussed the analyses that we conducted and our findings, as related to patient-level adjustment factors, in response to the comments we received on the FY 2024 IPF PPS proposed rule.

As we have previously noted in the FY 2025 IPF PPS proposed rule (89 FR 23154), the primary goal in refining the IPF PPS payment adjustment factors is to pay each IPF an appropriate amount for the efficient delivery of care to Medicare beneficiaries. The system must be able to account adequately for each IPF's case-mix to allow for both fair distribution of Medicare payments and access to adequate care for those beneficiaries who require more costly care. As required by section 1886(s)(5)(D)(iii) of the Act, revisions to the IPF PPS adjustment factors made pursuant to section 1886(s)(5)(D)(i) of the Act must be budget neutral. As

[1] *https://www.cms.gov/files/document/technical-report-medicare-program-inpatient-psychiatric-facilities-prospective-payment-system.pdf.*

discussed in section III.D.9 of this proposed rule, we are applying a refinement standardization factor to the proposed IPF PPS payment rates to maintain budget neutrality for FY 2026.

3. Development of the Proposed Revised Regression for Facility-Level Refinements

For this FY 2026 IPF PPS proposed rule, we performed an extensive regression analysis of the relationship between the per diem costs and certain patient- and facility-level characteristics to analyze those characteristics associated with statistically significant cost differences. As discussed in section III.C of this proposed rule, we finalized revisions to the IPF PPS patient-level adjustments in the FY 2025 IPF PPS final rule (89 FR 64593 through 64614). As a result, we used a constrained regression model for FY 2026 to hold the patient-level adjustments at the level finalized for FY 2025. We discuss the results of this constrained regression analysis in section III.D.3.e of this proposed rule. We further discuss proposed policies related to the proposed revisions to the IPF PPS facility-level adjustment factors based on this regression analysis in sections III.D.5 and III.D.6 of this proposed rule.

For this FY 2026 IPF PPS proposed rule, we calculated a per diem cost (including routine and ancillary components) and identified patient and facility characteristics for each Medicare inpatient psychiatric stay using information from MedPAR files, Common Working File (CWF) inpatient claims, Medicare hospital cost reports, and other data sources for FY 2020 through FY 2022. We refer readers to the FY 2025 IPF PPS final rule for a discussion of the impact of the COVID–19 PHE and the benefits of using a combined set of data for the accuracy of the results (89 FR 64594).

We began with a base sample of IPF stays by Medicare FFS beneficiaries in MedPAR from the FY 2020 through FY 2022, which contain a total of 712,543 stays from 1,650 IPFs. We applied several data restrictions and exclusions to remove stays with missing and or aberrant data. The final sample used for the regression analysis contained 704,494 stays from 1,633 IPFs, which reflects the removal of 17 providers and 8,049 stays.

In preparing the cost regression sample and analysis, we incorporated more recent input data and refined our data processing method, as described in this section. We estimated a baseline regression using the constrained model and conducted sensitivity analysis to confirm the robustness of our results.

a. Data Sources

For the regression analysis, our primary data sources include the annual MedPAR files, which provide stay-level summaries of IPF stays, and Medicare hospital cost reports, which contain provider-level data on costs, utilization, and other financial information. Additionally, we used the Common Working File (CWF) claims data, the Provider of Services (POS) files, and the Provider Specific File (PSF) to identify provider and patient characteristics and to construct variables in the regression model.

More specifically, we used the following sources of data:

- *MedPAR Files:* The annual MedPAR file compiles final action claims records for IPF stays discharged during the fiscal year. Each MedPAR record provides a summary of clinical characteristics, service utilization, facility billings, and Medicare coverage for an inpatient hospital stay. We use MedPAR to identify all IPF stays by Medicare fee-for-service (FFS) beneficiaries during the fiscal year, along with key variables such as MS–DRG, principal and secondary diagnosis, length of stay, patient age, admission source, provider charges by revenue center, and other patient and provider attributes. For the FY 2026 proposed rule cost regression, we used MedPAR files for FY 2020 through FY 2022.
- *Hospital Cost Reports:* Medicare hospital cost reports (CMS Form 2552–10; OMB control number 0938–0050) provide the key inputs for estimating the per diem cost of IPF stays, specifically the facility's routine per diem cost and Cost-to-Charge Ratios (CCRs) for detailed cost centers for each Federal FY. We also use hospital cost reports to obtain key facility characteristics, including teaching status, bed counts, and ownership type. For providers whose own fiscal periods align with the FY, we directly match their FY 2020–FY 2022 hospital cost reports to the corresponding MedPAR stays. For providers whose own fiscal periods differ from the FY, we use multiple years of hospital cost reports data and proportionally allocate and align them to the FY basis for FY 2020 through FY 2022 before linking them to other data sources. This allocation and alignment is discussed in greater detail later in this section of this proposed rule.
- *Common Working File (CWF) Inpatient Claims Data:* We use detailed claims data from the CWF to supplement MedPAR stay records, specifically obtaining data on covered charges by detailed revenue center and utilization of ECT treatments during each IPF stay. To promote internal consistency, we use the CWF claims data with the same final action week as the corresponding MedPAR record.
- *Provider of Services (POS) File:* The POS file contains facility characteristics such as name, address, and types of services provided. For the regression analysis for this FY 2026 IPF PPS proposed rule, we primarily use the POS file to identify providers' Federal Information Processing Series (FIPS) codes, which determine each provider's designated Core-Based Statistical Area (CBSA). The CBSA is then used to match providers with the corresponding geographic cost adjustment factor. Additionally, we use the POS file as a secondary source for provider *ownership type.*
- *Provider Specific Data for Public Use Files for the IPF PPS:* We use the Provider Specific File (PSF) to identify providers' COLA factors and other facility-level characteristics, including whether a facility has a qualified Emergency Department (ED).
- *IPF Market Baskets:* We used the historical IPF market basket increases and labor-related shares for the FY 2020–FY 2022 period.
- *IPF PPS Wage Index:* We use the IPF PPS wage index, along with COLA and labor-related share, to calculate the geographic cost adjustment factor, which accounts for regional cost differences among providers in each year. In this analysis, we used the FY 2024 IPF PPS wage index to adjust IPF costs in FY 2020, and FY 2025 IPF PPS wage index to adjust IPF costs in FY 2021 and FY 2022.

b. Trims and Assumptions

For the FY 2026 proposed rule regression analysis, we used a combined set of FY 2020 through FY 2022 MedPAR data, consistent with the approach we adopted for the FY 2025 IPF PPS proposed and final rules to revise the patient-level adjustment factors. Our analysis demonstrated that combining multiple years of data yields the most stable and consistent result. We continue to believe that using a 3-year combined set of data in the regression analysis helps smooth the impact of utilization changes driven by the COVID–19 public health emergency (PHE), as well as significant changes in staffing and labor costs that commenters noted in response to the FY 2023 and FY 2024 IPF PPS proposed rules. This data set best reflects the current cost of care as impacted by the COVID–19 PHE, which has an ongoing impact on IPF cost and utilization trends. Our

approach mitigates the effect of these impacts in any single year by expanding the set of data.

Within the MedPAR dataset, we included inpatient hospital stays that met the following criteria:

- Hospital CMS Certification Number (CCN) contains ''40'', ''41'', ''42'', ''43'', or ''44'' in the third and fourth positions (freestanding psychiatric hospitals), a special unit code of ''S'' in the third position (psychiatric unit in an acute care hospital), a special unit code of ''M'' in the third position (psychiatric unit in a critical access hospital), or a special unit code of ''SA'', ''SB'', ''SC'', ''SD'', or ''SE'' in the third and fourth positions (psychiatric unit in a long-term care hospital (LTCH), rehabilitation hospital, or children's hospital).
- Beneficiary primary payer code is ''M'', ''N'', or blank, indicating that Medicare is the primary payer.
- Group Health Organization (GHO) paid code is zero or blank, indicating that a GHO has not paid the facility for the stay.
- National Claims History (NCH) claim type code is ''60,'' indicating a fee-for-service (FFS) inpatient claim.
- Covered charge and covered days (or Medicare utilization days) are greater than zero.[2]

For the FY 2020–FY 2022 sample period, a total of 712,543 patient stays from 1,650 unique providers in MedPAR met these selection criteria. That includes 284,176 stays from 1,587 providers in FY 2020, 231,668 stays from 1,546 providers in FY 2021, and 196,699 stays from 1,522 providers in FY 2022.

Using this base sample, we applied a series of additional trimming steps to remove stays with missing or outlier cost data. A detailed description of how we estimate IPF per diem costs is provided in section III.D.3.c of this proposed rule. We removed the following:

- Stays with missing routine per diem cost data or missing provider hospital cost reports for the FY 2020–FY 2022 period. This step removed 240 stays from the sample, which came from 13 unique providers.
- Stays with extraordinarily high or low costs per day. Specifically, we removed 2,315 stays whose routine per diem costs fell outside the mean plus or minus 3.00 standard deviations of the natural logarithm of routine per diem costs in the combined 3-year sample. We also removed an additional 1,639 stays with total per diem costs that fell outside the mean plus or minus 3.00 standard deviations of the natural logarithm of total per diem costs in the combined 3-year sample. (All cost estimates were adjusted for geographic differences and year-over-year inflation.) In total, this trimming step removed 3,954 stays with extraordinarily high or low costs per day from 322 providers across the 3-year sample.[3]

Finally, we excluded all stays with an MS–DRG that is not recognized by the IPF PPS, which removed 3,855 stays from 954 providers from the remaining sample.

After these trimming steps, our final cost regression sample included 704,494 IPF stays by Medicare FFS beneficiaries from 1,633 unique IPF providers in MedPAR FY 2020 through FY 2022. This final sample consists of 280,956 stays from 1,569 providers in FY 2020, 229,125 stays from 1,521 providers in FY 2021, and 194,413 stays from 1,492 providers in FY 2022.

c. Calculation of the Dependent Variable

The regression model for this FY 2026 IPF PPS proposed rule uses the natural logarithm of the total per diem cost, adjusted for geographic differences and inflation, as the dependent variable. Total per diem costs are calculated as the sum of routine per diem costs and ancillary per diem costs, with both components including operating and capital costs.

- Routine per diem costs are derived from facility-level average routine cost per day reported in provider hospital cost reports as total inpatient routine costs divided by total inpatient days (Worksheet D–1, Part II, column 1, Line 41 divided by Line 9)[4] and assigned to individual patient stays within the facility.
- Ancillary per diem costs are calculated by applying the cost center cost-to-charge ratio (CCR) from the cost report to the covered charges from ancillary departments on CWF inpatient claims, then dividing by the number of Medicare covered days of the stay (available in MedPAR).

The total per diem costs (or costs per day) are further adjusted for geographic cost differences using IPF wage indices (for the labor-related share portion) and COLA factors (for the non-labor-related share portion for IPFs located in Alaska and Hawaii). Cost estimates are also adjusted for annual inflation based on the historical growth rates of the 2021-based IPF market basket.

To promote consistency, accuracy, and comparability of our data, we apply a series of methodological steps when calculating the dependent variable as follows:

(1) Addressing Variation in Cost Report Reporting Periods

Because providers can select their own fiscal/reporting periods for hospital cost reports, there is a lack of uniformity in the time periods covered by the raw cost report data from different providers. For example, within each annual HCRIS file, roughly 40 percent of the reports have a January through December cost reporting period (Calendar Year), 30 percent have a July through June cost reporting period, 15 percent have an October through September cost reporting period (Federal fiscal year (FFY), and the remaining 15 percent cover various other cost reporting periods. Moreover, some providers change their fiscal/reporting periods mid-year (sometimes due to an ownership change), resulting in shorter or longer hospital cost reports and, in some cases, multiple hospital cost reports within a single year.

To address this lack of uniformity in provider reporting periods and enhance data accuracy and consistency, we apply a re-allocation procedure to align all provider hospital cost reports data to the FFY basis before matching them to MedPAR stays. First, we allocate each provider's annual cost report data across the months, assuming uniform values per month within the reporting period. Then we regroup the monthly data to align with the FFY for each provider and calculate annual averages. When

[2] For the purposes of regression analysis, we include ''same-day transfers'' (with positive covered charges) and assign them a length of stay of 1 day. A same-day transfer occurs when a patient is admitted to an IPF and is subsequently transferred for acute care (or another type of inpatient facility care) on the same day. If the patient is admitted to an IPF with the expectation that the patient will remain overnight, but is discharged before midnight, the day is counted as a full day for the cost report but is not counted as a Medicare covered day for purpose of charging the beneficiary utilization. The purpose for the difference in coding is to ensure that the beneficiary is charged for only one day of utilization when two facilities are billing for the same patient. Payments are made for 1 day.

[3] That includes 1 stay from 1 freestanding facility and 791 stays from 2 unit-based facilities that were removed for having extraordinarily low per diem cost estimates (that is, a routine per diem cost lower than $309 or a total per diem cost lower than $291 in 2022 dollars); and 552 stays from 38 freestanding facilities and 2,613 stays from 282 unit-based facilities that were removed for having extraordinarily high per diem cost estimates (that is, a routine per diem cost higher than $3,145 or a total per diem cost higher than $4,202 in 2022 dollars). There were 3 stays with very low routine per diem costs but extraordinarily high ancillary and total per diem costs, which were trimmed for both reasons.

[4] If Line 41 data is missing, Line 38 information—which is inpatient routine cost that excludes the medically necessary private room cost that is included in Line 41—is used. Line 38 is not divided by inpatient days as it is already in per diem units.

data for some months are missing, we use available partial-year data to extrapolate and construct the annual estimate.

For example, suppose a provider uses the CY as its cost reporting period. Its reported average routine per diem cost was $900 in CY 2019, $950 in CY 2020, $1000 in CY 2021, and $1100 in CY 2022. Its CCR for laboratory services is 0.30 in CY 2019, 0.25 in CY 2020, 0.32 in CY 2021, and 0.28 in CY 2022. Using the reallocation method, this provider's average routine per diem costs were $937.50 for FY 2020 (= 3/12*$900 + 9/12*$950), $987.50 for FY 2021, and $1,075.00 for FY 2022. Its CCR for laboratory services were 0.2625 for FY 2020, 0.3025 for FY 2021, and 0.2900 for FY 2022.

(2) Obtaining CCRs for Ancillary Cost Estimation

To estimate the costs of non-routine services provided during IPF stays, we group the cost centers from hospital cost reports and the revenue centers from CWF claims into 25 ''ancillary departments'': Pharmacy, Laboratory, Emergency Room, Medical/Surgical Supplies, Cardiology, Radiology, Magnetic Resonance Imaging (MRI), Physical Therapy, Occupational Therapy, Inhalation Therapy, Speech Pathology, Anesthesia, Operating Room, Intensive Care Unit (ICU), Coronary Care Unit (CCU), End Stage Renal Disease (ESRD), Professional Fees, Clinic Visit, Outpatient Services, Durable Medical Equipment (DME), Used DME, Blood, Blood Storage and Processing, Lithotripsy, and Other Services.[5]

For each ancillary department, we calculate each provider's CCR using the provider's cost report, Worksheet D. Specifically, we take ancillary department costs (Worksheet D–3, Column 3), subtract any positive inpatient pass-through costs (Worksheet D, Part IV, Column 11), and divide the result by ancillary department charges (Worksheet D–3, Column 2).[6]

To address extreme values and missing data in CCRs, we apply winsorization and imputation. For extreme values, we examine the distribution of CCR data (after aligning to FFY) for each ancillary department across providers from FY 2020 through FY 2022 and winsorize values at the 2nd and 98th percentiles. In addition, we consider all CCRs lower than 0.01 or higher than 10.0 as improbable and recode them to 0.01 or 10.0, respectively.

After adjusting for extreme values, we impute missing CCRs using available data, prioritizing provider-specific information. (A CCR is considered missing only if the provider had charges from the ancillary department on MedPAR and CWF claims for that year but did not report a CCR.) If a provider's CCR for an ancillary department is missing for a given year but available in other years, we use the weighted average of the provider's CCRs for that ancillary department from other years (weights based on the provider's stay counts in those years) to fill in the missing value. If those data are unavailable, we use the provider's all-ancillary CCR for that year, the weighted average of the provider's all-ancillary CCRs from other years, or the median CCR for that ancillary department from other providers of the same type (freestanding or unit-based) for that year, in descending order of preference. For ancillary departments such as ICU and CCU, where CCRs are rarely reported despite the presence of service charges on claims, we use the median all-ancillary CCR from other providers of the same type to fill in missing values.

(3) Accounting for Geographic Differences and Inflation

To account for geographic differences in costs, we construct a geographic adjustment factor using the formula:

*Geographic cost adjustment factor = IPF wage index * labor-related share + COLA for AK and HI * (1-labor-related share).*

We adjust the labor-related portion of per diem costs using the IPF wage index to account for regional differences in labor costs, while the non-labor portion is adjusted using COLA factors for IPFs in Alaska and Hawaii. Because the IPF wage index reflects local cost differences with a lag, we adjust for that timing discrepancy by applying more recent IPF wage indexes to the FY 2020–FY 2022 MedPAR stays. (We remind readers that the IPF PPS wage index is based on the pre-floor, pre-reclassified IPPS hospital wage index, which in turn is derived from hospital cost reports data from approximately 3–4 years prior. For example, the FY 2025 IPF PPS wage index reflects cost data from local labor markets around 2021–2022.) For this analysis, we used the FY 2024 IPF PPS wage index to adjust IPF costs in FY 2020, and FY 2025 IPF PPS wage index to adjust IPF costs in FY 2021 and FY 2022.

Finally, to promote comparability across the 3 years, we adjust cost estimates for year-over-year inflation using historical IPF market basket increases and labor-related shares, converting all cost estimates into 2022 dollars.

We calculated routine per diem cost, ancillary per diem cost, and the total per diem using the approach outlined in this section for all IPF stays in our FY 2020–FY 2022 MedPAR sample. We then excluded stays with missing routine costs and outlier routine or total per diem costs, based on the approach described earlier in section III.D.3.b of this proposed rule.

Among the 704,494 stays in the final FY 2020–FY 2022 cost regression sample, the median total per diem cost was $1,135 in 2022 dollars, with a range of $355 to $4,201 and a mean of $1,205 (the standard deviation was $539). Consistent with our approach in the FY 2025 IPF PPS final rule (89 FR 64596), the stays with zero ancillary charges were retained in the sample.

d. Independent Variables

The independent variables in the regression model represent patient-level and facility-level characteristics that influence the cost of an IPF stay. Some of these variables are adjustment-related, meaning that they are used for payment adjustments, while others are control variables, which are used to account for variation in the dependent variable associated with factors outside the adjustment factors in the payment model.

(1) Adjustment-Related Variables

Patient-level adjustment-related variables in the model include MS–DRG, comorbidity categories, patient age, and length of stay. Because we are not proposing any changes to these patient-level adjustment factors in this FY 2026 IPF PPS proposed rule, we constrained their coefficients to their corresponding FY 2025 adjustment factor values in the regression, instead of estimating them in the model.

Facility-level adjustment-related variables in the model include the facility's teaching status and whether the facility is located in a rural area. (A facility's rural status in each year is determined based on its CBSA designation.) We refer readers to sections III.D.4 and III.D.5 of this proposed rule for a more detailed explanation of the payment adjustment for rural location. In sections III.D.5 and III.D.6 of this proposed rule, we are

[5] The methodology for grouping revenue centers under each ancillary department is consistent with MedPAR: *https://resdac.org/cms-data/files/medpar/data-documentation.* The crosswalk we use to group cost centers under each ancillary department is similar to that used for the IPPS.

[6] Since costs for special care units, including ICU and CCU, are not present in Worksheet D–3, Column 3, we instead obtain these cost data from Worksheet D–1, Part II, Column 5, Lines 43–47.

proposing to revise the IPF PPS payment adjustment factors for these two facility-level characteristics based on the estimated coefficients of these variables in the constrained regression.

(2) Control Variables

As we noted in the FY 2025 IPF PPS proposed and final rules (89 FR 23157; and 89 FR 64596 and 64597, respectively), the original regression model included a control variable for the presence of ECT because ECT is paid on a per-treatment basis under the IPF PPS. We continue to observe that IPF stays with ECT have significantly higher costs per day. For FY 2026 we are proposing to continue paying for ECT on a per-treatment basis; therefore, we included a control variable to account for the additional costs associated with ECT, which will continue to be paid outside the regression model.

Similarly, we included a control variable for stays with positive covered emergency department (ED)-related charges. To address the costs of maintaining an ED and providing ED services, IPF PPS pays facilities with a qualified ED an additional 26 percent of the payment rate for the first day of the stay. To prevent ED adjustment from serving as an incentive for unnecessary ED use, all stays in facilities with qualifying EDs receive the payment, except in cases when the admission source code is ''D,'' indicating that the patient was transferred from the inpatient part of the same facility. (In such cases, the ED costs would have already been covered under the preceding claim.) The 26 percent ED adjustment, updated in the FY 2025 IPF PPS final rule (89 FR 64635 and 64636), was calculated in a way that accounts for the percentage of stays with ED charges and different admission sources, and that calculation was performed outside the cost regression framework. Since our regression model includes all costs associated with each IPF stay, including ED costs, we included a control variable for stays with positive covered ED charges to control for the additional costs associated with ED services in this FY 2026 IPF PPS proposed rule.

Lastly, we included control variables for the data year. Since the model uses a combined set of data from 3 years, we adjusted cost estimates for year-over-year inflation using historical IPF market basket increases and labor-related shares. However, external factors beyond this inflation adjustment may have influenced cost differences across the 3 years included in our sample. These factors, such as the impact of the COVID–19 PHE, may affect cost variation in our sample period. To account for these additional year-related factors, we continue to include a set of year controls in the FY 2026 IPF PPS proposed rule regression model.

e. Regression Results

We estimated the constrained regression using ordinary least squares (OLS) on 704,494 IPF stays from FY 2020 to FY 2022, clustering standard errors at the provider level. Table 2 presents the estimation results, along with the number and percentage of stays associated with each independent variable. The regression model has an R-squared value of 0.27841, meaning that the independent variables included in the regression (facility characteristics and control variables) were able to explain approximately 27.8 percent of the variation in per diem costs among IPF stays. We note that the R-squared value of our regression model is comparable to the R-squared values of prior models used for the IPF PPS (for example, see the R-squared value of 0.32340 in the FY 2025 IPF PPS final rule (89 FR 64597) and the finding that the payment model explained 33 percent of the variation in per diem cost among IPFs in the RY 2005 IPF PPS final rule (69 FR 66957)).

Except for the teaching variable, each of the adjustment factors presented in Table 2 is the exponentiated regression coefficient from our regression model, which as we previously noted uses the natural logarithm of per diem total cost as the dependent variable. We present the exponentiated regression results, as these most directly translate to the way that IPF PPS adjustment factors are calculated for payment purposes. That is, the exponentiated adjustment factors presented in this proposed rule represent a percentage increase or decrease in per diem cost for IPF stays with each characteristic. In the case of the teaching variable, the result presented is the un-exponentiated regression coefficient. As discussed in section III.D.6 of this proposed rule, the current IPF PPS teaching adjustment is calculated as 1 + a facility's ratio of interns and residents to its average daily census, raised to the power of 0.5150. The coefficient for teaching status presented in Table 2 can be interpreted in the same way.

Lastly, we consider regression factors to be statistically significant when the p-value is less than or equal to the significance level of 0.05 (*), 0.01 (**), and 0.001 (***), as notated in the Table 2 presented in this proposed rule.

We discuss the proposed changes to the adjustment factors for IPFs located in rural areas and for teaching status in sections III.D.5 and III.D.6 of this proposed rule, respectively, and the proposed refinement standardization factor in section III.D.9 of this proposed rule.

TABLE 2—IPF PPS PER DIEM COST REGRESSION RESULTS WITH DATA FROM FY 2020 THROUGH FY 2022

Variable description	Number of stays FY 2020–FY 2022	Percentage of stays FY 2020–FY 2022	FY 2025 current adjustment factor	Estimated adjustment factor	Statistical significance

4. Wage Index Adjustment

a. Background

As discussed in the RY 2007 IPF PPS final rule (71 FR 27061), and the RY 2009 IPF PPS (73 FR 25719) and RY 2010 IPF PPS notices (74 FR 20373), to provide an adjustment for geographic wage levels, the labor-related portion of an IPF's payment is adjusted using an appropriate wage index. Currently, an IPF's geographic wage index value is determined based on the actual location

of the IPF in an urban or rural area, as defined in § 412.64(b)(1)(ii)(A) and (C).

Due to the variation in costs and because of the differences in geographic wage levels, in the RY 2005 IPF PPS final rule, we required that payment rates under the IPF PPS be adjusted by a geographic wage index. We proposed and finalized a policy to use the unadjusted, pre-floor, pre-reclassified IPPS hospital wage index to account for geographic differences in IPF labor costs. We implemented use of the pre-floor, pre-reclassified IPPS hospital wage data to compute the IPF wage index since there was not an IPF-specific wage index available. We believe that IPFs generally compete in the same labor market as IPPS hospitals, and therefore, the pre-floor, pre-reclassified IPPS hospital wage data should be reflective of labor costs of IPFs. We believe this pre-floor, pre-reclassified IPPS hospital wage index to be the best available data to use as proxy for an IPF-specific wage index. As discussed in the RY 2007 IPF PPS final rule (71 FR 27061 through 27067), under the IPF PPS, the wage index is calculated using the IPPS wage index for the labor market area in which the IPF is located, without considering geographic reclassifications, floors, and other adjustments made to the wage index under the IPPS. For a complete description of these IPPS wage index adjustments, we refer readers to the FY 2019 IPPS/LTCH PPS final rule (83 FR 41362 through 41390). Our wage index policy at § 412.424(a)(2) provides that we use the best Medicare data available to estimate costs per day, including an appropriate wage index to adjust for wage differences.

When the IPF PPS was implemented in the RY 2005 IPF PPS final rule, with an effective date of January 1, 2005, the pre-floor, pre-reclassified IPPS hospital wage index that was available at the time was the FY 2005 pre-floor, pre-reclassified IPPS hospital wage index. Historically, the IPF wage index for a given RY has used the pre-floor, pre-reclassified IPPS hospital wage index from the prior FY as its basis. This has been due in part to the pre-floor, pre-reclassified IPPS hospital wage index data that were available during the IPF rulemaking cycle, where an annual IPF notice or IPF final rule was usually published in early May. This publication timeframe was relatively early compared to other Medicare payment rules because the IPF PPS follows a RY, which was defined in the implementation of the IPF PPS as the 12-month period from July 1 to June 30 (69 FR 66927). Therefore, the best available data at the time the IPF PPS was implemented was the pre-floor, pre-reclassified IPPS hospital wage index from the prior FY (for example, the RY 2006 IPF wage index was based on the FY 2005 pre-floor, pre-reclassified IPPS hospital wage index).

In the RY 2012 IPF PPS final rule, we changed the reporting year timeframe for IPFs from a RY to FY, which begins October 1 and ends September 30 (76 FR 26434 and 26435). In that FY 2012 IPF PPS final rule, we continued our established policy of using the pre-floor, pre-reclassified IPPS hospital wage index from the prior year (that is, from FY 2011) as the basis for the FY 2012 IPF wage index. This policy of basing a wage index on the prior year's pre-floor, pre-reclassified IPPS hospital wage index has been followed by other Medicare payment systems, such as hospice and inpatient rehabilitation facilities. By continuing with our established policy, we remained consistent with other Medicare payment systems.

In FY 2020, we finalized the IPF wage index methodology to align the IPF PPS wage index with the same wage data timeframe used by the IPPS for FY 2020 and subsequent years. Specifically, we finalized the use of the pre-floor, pre-reclassified IPPS hospital wage index from the FY concurrent with the IPF FY as the basis for the IPF wage index. For example, the FY 2020 IPF wage index was based on the FY 2020 pre-floor, pre-reclassified IPPS hospital wage index rather than on the FY 2019 pre-floor, pre-reclassified IPPS hospital wage index.

We explained in the FY 2020 proposed rule (84 FR 16973), that using the concurrent pre-floor, pre-reclassified IPPS hospital wage index will result in the most up-to-date wage data being the basis for the IPF wage index. We noted that it would also result in more consistency and parity in the wage index methodology used by other Medicare payment systems. We indicated that the Medicare skilled nursing facility (SNF) PPS already used the concurrent IPPS hospital wage index data as the basis for the SNF PPS wage index. We proposed and finalized similar policies to use the concurrent pre-floor, pre-reclassified IPPS hospital wage index data in other Medicare payment systems, such as hospice and inpatient rehabilitation facilities. Thus, the wage adjusted Medicare payments of various provider types are based upon wage index data from the same timeframe. For FY 2026, we are proposing to continue to use the concurrent pre-floor, pre-reclassified IPPS hospital wage index as the basis for the IPF wage index.

In the FY 2023 IPF PPS final rule (87 FR 46856 through 46859), we finalized a permanent 5-percent cap on any decrease to a provider's wage index from its wage index in the prior year, and we stated that we will apply this cap in a budget neutral manner. In addition, we finalized a policy that a new IPF will be paid the wage index for the area in which it is geographically located for its first full or partial FY with no cap applied because a new IPF will not have a wage index in the prior FY. We amended the IPF PPS regulations at § 412.424(d)(1)(i) to reflect this permanent cap on wage index decreases. We refer readers to the FY 2023 IPF PPS final rule for a more detailed discussion about this policy.

We are proposing to apply the IPF wage index adjustment to the labor-related share of the national IPF PPS base rate and ECT payment per treatment. The proposed labor-related share of the IPF PPS national base rate and ECT payment per treatment is 78.9 percent in FY 2026. This percentage reflects the labor-related share relative importance of the 2021-based IPF market basket for FY 2026 and is 0.1 percentage point higher than the FY 2025 labor-related share (see section III.A.3 of this proposed rule).

b. Office of Management and Budget (OMB) Bulletins

The wage index used for the IPF PPS is calculated using the unadjusted, pre-reclassified and pre-floor IPPS wage index data and is assigned to the IPF based on the labor market area in which the IPF is geographically located. IPF labor market areas are delineated based on the Core-Based Statistical Area (CBSAs) established by the OMB.

Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses through OMB Bulletins. These bulletins contain information regarding CBSA changes, including changes to CBSA numbers and titles. In accordance with our established methodology, the IPF PPS has historically adopted any CBSA changes that are published in the OMB bulletin that corresponds with the IPPS hospital wage index used to determine the IPF wage index and, when necessary and appropriate, has proposed and finalized transition policies for these changes.

In the RY 2007 IPF PPS final rule (71 FR 27061 through 27067), we adopted the changes discussed in OMB Bulletin No. 03–04 (June 6, 2003), which

announced revised definitions for Metropolitan Statistical Areas (MSAs), and the creation of Micropolitan Statistical Areas and Combined Statistical Areas. We refer readers to the FY 2007 IPF PPS final rule (71 FR 27064 and 27065) for a complete discussion regarding treating Micropolitan Areas as rural. In adopting the OMB CBSA geographic designations in RY 2007, we did not provide a separate transition for the CBSA-based wage index since the IPF PPS was already in a transition period from TEFRA payments to PPS payments.

In the RY 2009 IPF PPS notice, we incorporated the CBSA nomenclature changes published in the most recent OMB bulletin that applied to the IPPS hospital wage index used to determine the current IPF wage index and stated that we expected to continue to do the same for all the OMB CBSA nomenclature changes in future IPF PPS rules and notices, as necessary (73 FR 25721).

Subsequently, CMS adopted the changes that were published in past OMB bulletins in the FY 2016 IPF PPS final rule (80 FR 46682 through 46689), the FY 2018 IPF PPS rate update (82 FR 36778 and 36779), the FY 2020 IPF PPS final rule (84 FR 38453 and 38454), and the FY 2021 IPF PPS final rule (85 FR 47051 through 47059). We direct readers to each of these rules for more information about the changes that were adopted and any associated transition policies.

As discussed in the FY 2023 IPF PPS final rule, we did not adopt OMB Bulletin 20–01, which was issued March 6, 2020, because we determined this bulletin had no material impact on the IPF PPS wage index. This bulletin creates only one Micropolitan statistical area, and Micropolitan areas are considered rural for the IPF PPS wage index. That is, the constituent county of the new Micropolitan area was considered rural effective as of FY 2021 and would continue to be considered rural if we adopted OMB Bulletin 20–01.

In the FY 2025 IPF PPS final rule (89 FR 64614 through 64633), we adopted the updates set forth in OMB Bulletin No. 23–01 effective July 21, 2023, beginning with the FY 2025 IPF PPS wage index. These updates included material changes to the OMB statistical area delineations which included 53 urban counties that became rural, 54 rural counties that became urban, and 88 counties that moved to a new or modified CBSA. These updates also included replacing the 8 counties in Connecticut with 9 new ''Planning Regions.'' Planning regions now serve as county-equivalents within the CBSA system. OMB Bulletin No. 23 may be accessed online at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf.*

Given the scope of changes involved in adopting the CBSA delineations for FY 2025, we finalized a budget neutral 3-year phase out policy for IPFs transitioning from rural to urban based on CBSA revisions, as discussed further in section III.D.5.c of this proposed rule. We also applied the permanent 5-percent cap on wage index decreases described at § 412.424(d)(1)(i).

c. Proposed Wage Index Budget Neutrality Adjustment

In accordance with § 412.424(c)(5), changes to the wage index are made in a budget neutral manner so that updates do not increase expenditures. Therefore, for FY 2026, we are proposing to continue to apply a budget neutrality adjustment in accordance with our existing budget neutrality policy. This policy requires us to update the wage index in such a way that total estimated payments to IPFs for FY 2026 are the same with or without the changes (that is, in a budget neutral manner) by applying a budget neutrality factor to the IPF PPS rates. We are proposing to use the following steps to ensure that the rates reflect the FY 2026 update to the wage indexes (based on FY 2022 hospital cost report data) and the labor-related share in a budget-neutral manner:

Step 1: Simulate estimated IPF PPS payments, using the FY 2025 IPF wage index values (available on the CMS website) and labor-related share (as published in the FY 2025 IPF PPS final rule (89 FR 64582)).

Step 2: Simulate estimated IPF PPS payments using the FY 2026 IPF wage index values (available on the CMS website), and the FY 2026 labor-related share (based on the latest available data as discussed previously).

Step 3: Divide the amount calculated in step 1 by the amount calculated in step 2. The resulting quotient is the FY 2026 budget neutral wage adjustment factor of 1.0011.

Step 4: Apply the FY 2026 budget neutral wage adjustment factor from step 3 to the FY 2025 IPF PPS Federal per diem base rate after the application of the proposed IPF market basket increase reduced by the proposed productivity adjustment described in section III.A.2 of this proposed rule to determine the proposed FY 2026 IPF PPS Federal per diem base rate. As discussed in section III.D.9 of this proposed rule, we are also applying a refinement standardization factor to determine the FY 2026 IPF PPS Federal per diem base rate.

5. Proposed Adjustment for Rural Location

a. Background

In the RY 2005 IPF PPS final rule (69 FR 66954), we provided a 17-percent payment adjustment for IPFs located in a rural area. This adjustment was based on the regression analysis, which indicated that the per diem cost of rural facilities was 17 percent higher than that of urban facilities after accounting for the influence of the other variables included in the regression. This 17-percent adjustment has been part of the IPF PPS each year since the inception of the IPF PPS. In the FY 2025 IPF PPS final rule, we revised the patient-level adjustment factors and changed the CBSA delineations. To minimize the scope of changes that would impact providers in any single year, we maintained the existing regression-derived adjustment factor, which was established in RY 2005, for IPFs located in a rural area as defined at § 412.64(b)(1)(ii)(C) for FY 2025. See the RY 2005 IPF PPS final rule (69 FR 66954) for a complete discussion of the adjustment for rural locations.

b. Proposed Adjustment for Rural Location

As discussed in section III.D.3 of this FY 2026 IPF PPS proposed rule, we have completed analysis of more recent cost and claims data, which indicate that revisions to the facility-level IPF PPS payment adjustment factors would be appropriate.

In the FY 2025 IPF PPS proposed rule, we included a request for information (RFI) regarding a potential revision to the payment adjustment for rural location (89 FR 23194 and 23195); we refer readers to section V.A. of the FY 2025 IPF PPS final rule (89 FR 64641) for summaries of the comments we received, and our responses. We have taken the comments received into consideration for development of this FY 2026 proposed revision of the payment adjustment for rural location.

As discussed in section III.D.3 of this FY 2026 IPF PPS proposed rule, we are proposing to derive updated IPF PPS facility-level adjustment factors for FY 2026 using a regression analysis of data from the FY 2020 through 2022 MedPAR data files and Medicare cost report data from the FY 2020 through 2022 Hospital Cost Report Information System (HCRIS). More information about the data used for the impact

simulations is found in section VII.C of this FY 2026 IPF PPS proposed rule.

For FY 2026, we are proposing to increase the rural adjustment to 18 percent. Our regression analysis described in section III.D.3 of this proposed rule indicates that this revised adjustment more accurately represents the difference in costs between urban and rural IPFs. As discussed in section III.D.9 of this proposed rule, we are proposing to implement this revision to the rural adjustment budget-neutrally. A detailed discussion of the distributional impacts of this proposed change is found in section VII.C of this proposed rule.

We solicit comments on this proposed revision to the payment adjustment for rural location. Lastly, we are proposing that if more recent data become available, we would consider using such data to determine the final FY 2026 adjustment factor for rural location.

c. Continuation of Rural Transition

The adoption of OMB Bulletin No. 23–01 in the FY 2025 IPF PPS final rule (89 FR 64632) in accordance with our established methodology determines whether a facility is classified as urban or rural for purposes of the rural payment adjustment in the IPF PPS. Implementation of the updated OMB delineations results in the rural payment adjustment being applied where it is appropriate to adjust for higher costs incurred by IPFs in rural locations; however, these changes have distributional effects among IPF providers. Some providers lost eligibility for the rural payment adjustment in FY 2025 as a result of these changes. Therefore, we provided a transition period to implement the updated OMB delineations (89 FR 64633).

In the FY 2025 IPF PPS final rule, we phased out the rural adjustment for facilities located in a county that transitioned from rural to urban due to the changes outlined in OMB Bulletin 23–01. We implemented a 3-year budget neutral phase-out of the rural adjustment for IPFs located in the 54 rural counties that would become urban under the new OMB delineations, given the potentially significant payment impacts for these IPFs (89 FR 64632 and 64633), consistent with the transition policy we adopted for IPFs in FY 2016 (80 FR 46682 through 46689). Under this 3-year phase-out, for FY 2026, IPFs that became urban due to these OMB delineation changes will receive one-third of the rural adjustment that was applicable in FY 2024. For FY 2027, these IPFs will not receive a rural adjustment.

6. Proposed Teaching Adjustment

a. Background

In the RY 2005 IPF PPS final rule, we implemented regulations at § 412.424(d)(1)(iii) to establish a facility-level adjustment for IPFs that are, or are part of, teaching hospitals. The teaching adjustment accounts for the higher indirect operating costs experienced by hospitals that participate in graduate medical education (GME) programs. The payment adjustments are made based on the ratio of the number of fulltime equivalent (FTE) interns and residents training in the IPF and the IPF's average daily census.

Medicare makes direct GME payments (for direct costs such as resident and teaching physician salaries, and other direct teaching costs) to all teaching hospitals including those paid under a PPS and those paid under the TEFRA rate-of-increase limits. These direct GME payments are made separately from payments for hospital operating costs and are not part of the IPF PPS. The direct GME payments do not address the estimated higher indirect operating costs teaching hospitals may face.

The results of the regression analysis of FY 2002 IPF data established the basis for the payment adjustments included in the RY 2005 IPF PPS final rule. The results showed that the indirect teaching cost variable is significant in explaining the higher costs of IPFs that have teaching programs. We calculated the teaching adjustment based on the IPF's ''teaching variable,'' which is (1 + [the number of FTE residents training in the IPF's average daily census]). The teaching variable is then raised to the 0.5150 power to result in the teaching adjustment. This formula is subject to the limitations on the number of FTE residents, which are described in this section of this proposed rule.

We established the teaching adjustment in a manner that limited the incentives for IPFs to add FTE residents for the purpose of increasing their teaching adjustment. We imposed a cap on the number of FTE residents that may be counted for purposes of calculating the teaching adjustment. The cap limits the number of FTE residents that teaching IPFs may count for the purpose of calculating the IPF PPS teaching adjustment, not the number of residents teaching institutions can hire or train. We calculated the number of FTE residents that trained in the IPF during a ''base year'' and used that FTE resident number as the cap. An IPF's FTE resident cap is ultimately determined based on the final settlement of the IPF's most recent cost report filed before November 15, 2004 (69 FR 66955). A complete discussion of the temporary adjustment to the FTE cap to reflect residents due to hospital closure or residency program closure appears in the RY 2012 IPF PPS proposed rule (76 FR 5018 through 5020) and the RY 2012 IPF PPS final rule (76 FR 26453 through 26456). As discussed in section III.D.6.c of this proposed rule, we are proposing to make conforming changes to the IPF resident cap regulation beginning in FY 2026 to recognize permanent cap increases awarded under Section 4122 of the CAA, 2023.

In the regression analysis that informed the RY 2004 IPF PPS final rule, the logarithm of the teaching variable had a coefficient value of 0.5150. We converted this cost effect to a teaching payment adjustment by treating the regression coefficient as an exponent and raising the teaching variable to a power equal to the coefficient value. We note that the coefficient value of 0.5150 was based on the regression analysis holding all other components of the payment system constant. A complete discussion of how the teaching adjustment was calculated appears in the RY 2005 IPF PPS final rule (69 FR 66954 through 66957) and the RY 2009 IPF PPS notice (73 FR 25721).

b. Proposed Revision to the IPF PPS Teaching Adjustment

As we previously described in section III.D.3.e of this proposed rule, we have completed analysis of more recent cost and claims data, which indicate that revisions to the facility-level IPF PPS payment adjustment factors would be appropriate. Accordingly, we are proposing to revise the IPF PPS teaching adjustment for FY 2026 based on these results.

In the FY 2025 IPF PPS proposed rule, we included an RFI regarding a potential revision to the payment adjustment for teaching status (89 FR 23194 and 23195); we refer readers to section V.A of the FY 2025 IPF PPS final rule (89 FR 64641) for summaries of the comments we received, and our responses. In general, commenters were supportive of increasing the IPF teaching adjustment based on the more recent analysis presented in that proposed rule. We have taken the comments received into consideration for development of this FY 2026 proposed revision of the payment adjustment for teaching status.

For FY 2026, we are proposing to increase the teaching adjustment to 0.7981, based on the results of our latest

regression model discussed earlier in this proposed rule. As detailed in section III.D.3.e of this FY 2026 IPF PPS proposed rule, this un-exponentiated regression coefficient for the teaching status variable was found to be statistically significant at the 0.001 level. In accordance with our longstanding methodology, we would convert this cost effect to a teaching payment adjustment by treating the regression coefficient as an exponent and raising the teaching variable to a power equal to the coefficient value. We believe that increasing the teaching adjustment from 0.5150 to 0.7981 would more appropriately adjust IPF PPS payments for IPFs that have qualified teaching programs and would address the estimated higher indirect operating costs for teaching IPFs. As discussed in section III.D.9 of this proposed rule, we are proposing to implement this revision to the teaching adjustment budget-neutrally. A detailed discussion of the distributional impacts of this proposed change is found in section VII.C of this proposed rule.

We solicit comments on this proposed revision to the payment adjustment for teaching status. Lastly, we are proposing that if more recent data become available, we would consider using such data to determine the final FY 2026 adjustment factor for teaching status.

c. Proposed Update to IPF PPS Resident Caps

As we described earlier in this FY 2026 IPF PPS proposed rule, the IPF PPS teaching adjustment includes a policy of capping the number of FTE residents that an IPF can include in the calculation of its teaching adjustment. As previously noted, we established this policy to limit the incentives for IPFs to add FTE residents for the purpose of increasing their teaching adjustment. In the RY 2005 IPF PPS final rule (69 FR 66955), we noted that the IPF PPS statute did not require us to impose resident FTE caps, but we recognized that if we imposed no limits on the teaching adjustment under the IPF PPS, teaching programs in those facilities could grow and receive payments in a manner that would be inconsistent with the methodology for teaching hospitals paid under the IPPS. In addition, we were concerned that if a teaching hospital had a distinct part psychiatric unit and had a number of FTE residents above the amount recognized for reimbursement under the limits established by the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the hospital could potentially circumvent those limits by assigning residents to train in the IPF. We explained that after carefully reviewing the public comments, we decided to adopt a cap on the number of FTE residents that may be counted under the IPF PPS for the teaching adjustment. We stated that we made this decision in order to—(1) exercise our statutory responsibility under the BBA to prevent any erosion of the resident caps established under the IPPS that could result from the perverse incentives created by the facility adjustment for teaching under the IPF PPS; and (2) avoid creating incentives to artificially expand residency training in IPFs, and ensure that the resident base used to determine payments is related to the care needs in IPF institutions.

Since the establishment of the IPF PPS, there have been numerous statutory resident cap increases, which have impacted GME payments as well as IME payments under the IPPS. These statutory resident cap increases have generally not been applicable to IPF hospitals or subunits, because caps are awarded to IPPS hospitals which receive both direct GME payments and indirect medical education (IME) payments under the IPPS.

Section 4122 of the CAA, 2023 provided for the distribution of at least 100 resident FTEs to be distributed for hospitals with a psychiatry or psychiatry subspecialty residency, which the CAA, 2023 defines as a residency in psychiatry as accredited by the Accreditation Council for Graduate Medical Education for the purpose of preventing, diagnosing, and treating mental health disorders. Hospitals with a psychiatry or psychiatry subspecialty residency could include not only acute care hospitals paid under the IPPS, but also freestanding psychiatric hospitals paid under the IPF PPS.

The CAA, 2023 also included a provision for IME payments under the IPPS, which stated that for discharges occurring on or after July 1, 2026, insofar as an additional payment amount under section 4122 is attributable to resident positions distributed to a hospital that is identified under subsection (h)(10), the indirect teaching adjustment factor would be computed in the same manner as provided under section 1886(d)(5)(B)(ii) with respect to such resident positions (in other words, utilizing 1.35 as the value of ''c'' in the adjustment formula). We note that IPF hospitals paid under the IPF PPS are not considered a hospital under subsection (h)(10) and do not receive IME payments under the IPPS, but under section 1886(d)(5)(B) of the Act.

Historically, the IPF PPS teaching adjustment has not recognized permanent resident cap increases, which as we noted earlier have historically impacted GME payments and IME payments under the IPPS. However, current regulations at § 412.424(d)(1)(iii)(D) allow for an adjustment to an IPF's resident FTE cap for a new approved GME program. When we initially established this regulation in the RY 2005 IPF PPS final rule (69 FR 66955 and 66956), we explained that for new teaching IPFs and for teaching IPFs that start new programs, we were adopting the policy that was applied under the BBA for IPPS teaching hospitals that start new teaching programs as specified in § 413.79(e)(1). We noted that under § 412.105(f)(1)(vi) concerning IME payments under the IPPS, hospitals that have shared residency rotational relationships may elect to apply their respective IME resident caps on an aggregate basis via a Medicare GME affiliation agreement. We explained that our intent was not to affect affiliation agreements and rotational arrangements for hospitals that have residents that train in more than one hospital. We did not implement a provision concerning affiliation agreements specifically pertaining to the FTE caps used in the teaching adjustment under the IPF PPS. We also stated that we believe these policies fairly balance our responsibilities under the statute to assure appropriate enforcement of the BBA and the overall limits on payment adjustments for teaching hospitals with the greater precision that can be achieved by adjusting payments for teaching IPFs. We also stated that we believe that we have designed a cap that balances the need for limits with the unique conditions of teaching programs in freestanding psychiatric hospitals and in distinct part psychiatric units. We noted, however, that we would monitor the impact of these policies closely and consider changes in the future when appropriate.

In summary, the CAA, 2023 provides for the distribution of at least 100 psychiatry or psychiatry subspecialty resident FTEs and provides for corresponding increases to IME payments under the IPPS but makes no provisions pertaining to the indirect operating costs for IPFs with teaching programs. For FY 2026, we are proposing to recognize resident FTE cap increases that are awarded under section 4122 of the CAA, 2023, either to an IPF hospital or to an IPPS hospital for resident FTEs that are allocated to the IPF subunit paid under the IPF PPS. Specifically, we are proposing that such resident FTE cap increases would align

with our current IPF PPS teaching regulation at § 412.424(d)(1)(iii)(D), which allows for increases to IPF resident FTE caps for a new approved graduate medical education program. As we previously noted, we established the teaching cap policy under the IPF PPS to maintain alignment with the requirements of the BBA that applied to IME payments under the IPPS, and we have noted that § 412.424(d)(1)(iii)(D) is intended to achieve the same purpose. We believe that this proposal would be consistent with our current regulation and our longstanding policy of maintaining IPF PPS teaching cap policies that align with IME cap policies under the IPPS. We further believe that this proposal would continue to appropriately limit the incentives for IPFs to add FTE residents for the purpose of increasing their teaching adjustment. We are soliciting comments on this proposed update to the IPF PPS teaching policy.

7. Cost of Living Adjustment for IPFs Located in Alaska and Hawaii

The IPF PPS includes a payment adjustment for IPFs located in Alaska and Hawaii based upon the area in which the IPF is located. As we explained in the RY 2005 IPF PPS final rule, the FY 2002 data demonstrated that IPFs in Alaska and Hawaii had per diem costs that were disproportionately higher than other IPFs. As a result of this analysis, we provided a COLA in the RY 2005 IPF PPS final rule. We refer readers to the FY 2024 IPF PPS final rule for a complete discussion of the currently applicable COLA factors (88 FR 51088 and 51089).

In the FY 2013 IPPS/LTCH final rule (77 FR 53700 and 53701), we established a new methodology to update the COLA factors for Alaska and Hawaii and adopted this methodology for the IPF PPS in the FY 2015 IPF PPS final rule (79 FR 45958 through 45960). We also specified that the COLA updates will be determined every 4 years, in alignment with the IPPS market basket labor-related share update (79 FR 45958 through 45960). Because the labor-related share of the IPPS market basket was updated for FY 2022, the COLA factors were updated in FY 2022 IPPS/LTCH rulemaking (86 FR 45547) reflecting CPI data through 2020. As such, we also finalized an update to the IPF PPS COLA factors in the FY 2022 IPF PPS final rule to reflect the updated COLA factors finalized in the FY 2022 IPPS/LTCH rulemaking effective for FY 2022 through FY 2025 (86 FR 42621 and 42622).

Generally, under our existing methodology, we update the 2009 COLA factors published by the U.S. Office of Personnel Management (OPM) by a comparison of the growth in the Consumer Price Indices (CPIs) for the areas of Urban Alaska and Urban Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). Using the respective CPI commodities index and CPI services index and using the approximate commodities/services shares obtained from the IPPS market basket, we create reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. Lastly, we apply a 25 percent cap, which was incorporated into our methodology to reflect the statutory cap used to calculate OPM's COLA factors. For a complete discussion, we refer readers to the FY 2015 IPF PPS final rule (79 FR 45958 through 45960) as well as the FY 2022 IPF PPS final rule (86 FR 42621 and 42622).

Table 3 lists the COLA factors for IPFs located in Alaska and Hawaii as calculated under our current methodology, using updated CPI data through 2024 and the approximate 60 percent commodities/40 percent services shares obtained from the proposed 2023-based IPPS market basket.

TABLE 3—IPF PPS COST-OF-LIVING ADJUSTMENT FACTORS: IPFS LOCATED IN ALASKA AND HAWAII

Area	FY 2022 through FY 2025 COLA factors	Updated COLA factors under current methodology	Difference
Alaska:			
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
City of Juneau and 80-kilometer (50-mile) radius by road	1.22	1.18	−0.04
Rest of Alaska	1.24	1.20	−0.04
Hawaii:			
City and County of Honolulu	1.25	1.25	0
County of Hawaii	1.22	1.21	−0.01
County of Kauai	1.25	1.25	0
County of Maui and County of Kalawao	1.25	1.25	0

We believe it is appropriate to have a consistent policy approach with that of other hospitals in Alaska and Hawaii. At this time, we believe it would be appropriate to maintain the current COLA factors to allow CMS to consider whether any other data sources or methodology changes may improve the adjustment we make to hospital payments that accounts for the unique circumstances of hospitals located in Alaska and Hawaii. Therefore, we are proposing to continue to use the FY 2025 COLA factors to adjust the non-labor-related portion of the standardized amount for IPFs located in Alaska and Hawaii for FY 2026. For a complete discussion of the proposed FY 2026 COLA factors, we refer readers to the FY 2026 IPPS/LTCH proposed rule, published elsewhere in the **Federal Register**. Table 4 lists the proposed FY 2026 COLA factors.

TABLE 4—PROPOSED FY 2026 COST OF LIVING ADJUSTMENT (COLA) FACTORS: IPFS LOCATED IN ALASKA AND HAWAII

Area	Proposed COLA
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22

TABLE 4—PROPOSED FY 2026 COST OF LIVING ADJUSTMENT (COLA) FACTORS: IPFS LOCATED IN ALASKA AND HAWAII—Continued

Area	Proposed COLA
City of Juneau and 80-kilometer (50-mile) radius by road	1.22
Rest of Alaska	1.24
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.22
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

The proposed IPF PPS COLA factors for FY 2026 are also shown in Addendum A to this rule, which is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientPsychFacilPPS/tools.html.*

8. Proposed Adjustment for IPFs With a Qualifying ED

The IPF PPS includes a facility-level adjustment for IPFs with qualifying EDs. As defined in § 412.402, qualifying emergency department means an emergency department that is staffed and equipped to furnish a comprehensive array of emergency services and meets the requirements of § 489.24(b) and § 413.65.

We provide an adjustment to the Federal per diem base rate to account for the costs associated with maintaining a full-service ED. The adjustment is intended to account for ED costs incurred by a psychiatric hospital with a qualifying ED, or an excluded psychiatric unit of an IPPS hospital or a critical access hospital (CAH), and the overhead cost of maintaining the ED. This payment applies to all IPF admissions (with one exception which we describe in this section), regardless of whether the patient was admitted through the ED. The ED adjustment is made on every qualifying claim except as described in this section of this proposed rule. As specified at § 412.424(d)(1)(v)(B), the ED adjustment is not made when a patient is discharged from an IPPS hospital or CAH and admitted to the same IPPS hospital's or CAH's excluded psychiatric unit. We clarified in the RY 2005 IPF PPS final rule (69 FR 66960) that an ED adjustment is not made in this case because the costs associated with ED services are reflected in the DRG payment to the IPPS hospital or through the reasonable cost payment made to the CAH.

In the FY 2025 IPF PPS final rule, we updated the adjustment factor from 1.31 to 1.53 for IPFs with qualifying EDs using the same methodology used to determine ED adjustments in prior years (89 FR 64636). Beginning in FY 2025, IPFs with a qualifying ED receive an adjustment factor of 1.53 as the variable per diem adjustment for day 1 of each patient stay. If an IPF does not have a qualifying ED, it receives an adjustment factor of 1.27 as the variable per diem adjustment for day 1 of each patient stay. For FY 2026, we propose to maintain the 1.53 adjustment factor for IPFs with qualifying EDs. A complete discussion of the steps involved in the most recent calculation of the ED adjustment factor can be found in the FY 2025 IPF PPS final rule (89 FR 64636).

9. Refinement Standardization Factor

Section 1886(s)(5)(D)(iii) of the Act provides that revisions in payment implemented pursuant to section 1886(s)(5)(D)(i) for a rate year shall result in the same estimated amount of aggregate expenditures under Title XVIII of the Act for psychiatric hospitals and psychiatric units furnished in the rate year as would have been made under this Title for such care in such rate year if such revisions had not been implemented. We interpret this to mean that revisions in payment adjustments implemented for FY 2026 (and for any subsequent fiscal year) must be budget neutral.

Historically, we have maintained budget neutrality in the IPF PPS using the application of a standardization factor, which is codified in our regulations at § 412.424(c)(5) to account for the overall positive effects resulting from the facility-level and patient-level adjustments. As discussed in section III.B.1 of this proposed rule, section 124(a)(1) of the BBRA required that we implement the IPF PPS in a budget neutral manner. In other words, the amount of total payments under the IPF PPS, including any payment adjustments, must be projected to be equal to the amount of total payments that would have been made if the IPF PPS were not implemented. Therefore, we calculated the standardization factor by setting the total estimated IPF PPS payments, taking into account all of the adjustment factors under the IPF PPS, to be equal to the total estimated payments that would have been made using TEFRA methodology had the IPF PPS not been implemented. A step-by-step description of the methodology used to estimate payments under the TEFRA payment system appears in the RY 2005 IPF PPS final rule (69 FR 66926).

We believe the budget neutrality requirement of section 1886(s)(5)(D)(iii) of the Act is consistent with our longstanding methodology for maintaining budget neutrality under the IPF PPS pursuant to section 124(a)(1) of the BBRA. We note that for the FY 2025 IPF PPS rule (89 FR 64640 and 64641), we applied a refinement standardization factor to the FY 2024 IPF Federal per diem base rate and ECT per treatment amount to maintain budget neutrality for the change in the patient-level adjustment factors, ED adjustment, and ECT per treatment amount finalized in the FY 2025 IPF PPS rule.

Therefore, for FY 2026, we are proposing to apply a refinement standardization factor in accordance with our existing policy at § 412.424(c)(5). Under this policy, we would update IPF PPS adjustment factors for teaching status and for IPFs located in rural areas, as proposed in this FY 2026 IPF PPS proposed rule, in such a way that total estimated payments to IPFs for FY 2026 are the same with or without the changes (that is, in a budget neutral manner) by applying a refinement standardization factor to the IPF PPS rates. We are proposing to use the following steps to ensure that the rates reflect the proposed FY 2026 update to the facility-level adjustment factors (as previously discussed in sections III.D.5 and III.D.6 of this proposed rule and summarized in Addendum A) in a budget neutral manner:

Step 1: Simulate estimated IPF PPS payments using the FY 2025 IPF facility-level adjustment factor values (available on the CMS website).

Step 2: Simulate estimated IPF PPS payments using the proposed FY 2026 IPF facility-level adjustment factor

values (see Addendum A of this proposed rule, which is available on the CMS website).

Step 3: Divide the amount calculated in step 1 by the amount calculated in step 2. The resulting quotient is the proposed FY 2026 refinement standardization factor of 0.9927.

Step 4: Apply the FY 2026 refinement standardization factor from step 3 to the FY 2025 IPF PPS Federal per diem base rate and ECT per treatment amount, after the application of the wage index budget neutrality factor and the IPF market basket increase reduced by the productivity adjustment described in section III.A of this proposed rule to determine the proposed FY 2026 IPF PPS Federal per diem base rate and FY 2026 ECT payment amount per treatment.

E. Other Payment Adjustments and Policies

1. Outlier Payment Overview

The IPF PPS includes an outlier adjustment to promote access to IPF care for those patients who require expensive care and to limit the financial risk of IPFs treating unusually costly patients. In the RY 2005 IPF PPS final rule, we implemented regulations at § 412.424(d)(3)(i) to provide a per case payment for IPF stays that are extraordinarily costly. Providing additional payments to IPFs for extremely costly cases strongly improves the accuracy of the IPF PPS in determining resource costs at the patient and facility level. These additional payments reduce the financial losses that would otherwise be incurred in treating patients who require costlier care; therefore, reduce the incentives for IPFs to under-serve these patients. We make outlier payments for discharges where an IPF's estimated total cost for a case exceeds a fixed dollar loss threshold amount (multiplied by the IPF's facility-level adjustments) plus the Federal per diem payment amount for the case.

In instances when the case qualifies for an outlier payment, we pay 80 percent of the difference between the estimated cost for the case and the adjusted threshold amount for days 1 through 9 of the stay (consistent with the median LOS for IPFs in FY 2002), and 60 percent of the difference for day 10 and thereafter. The adjusted threshold amount is equal to the outlier threshold amount adjusted for wage area, teaching status, rural area, and the COLA factor (if applicable), plus the amount of the Medicare IPF payment for the case. We established the 80 percent and 60 percent loss sharing ratios because we were concerned that a single ratio established at 80 percent (like other Medicare PPSs) might provide an incentive under the IPF per diem payment system to increase LOS to receive additional payments.

After establishing the loss sharing ratios, we determined the current fixed dollar loss threshold amount through payment simulations designed to compute a dollar loss beyond which payments are estimated to meet the 2 percent outlier spending target. Each year when we update the IPF PPS, we simulate payments using the latest available data to compute the fixed dollar loss threshold so that outlier payments represent 2 percent of total estimated IPF PPS payments.

2. Proposed Update to the Outlier Fixed Dollar Loss Threshold Amount

In accordance with the update methodology described in § 412.428(d), we are proposing to update the fixed dollar loss threshold amount used under the IPF PPS outlier policy. Based on the regression analysis and payment simulations used to develop the IPF PPS, we established a 2 percent outlier policy, which strikes an appropriate balance between protecting IPFs from extraordinarily costly cases while ensuring the adequacy of the Federal per diem base rate for all other cases that are not outlier cases. We are proposing to maintain the established 2 percent outlier policy for FY 2026.

Our longstanding methodology for updating the outlier fixed dollar loss threshold involves using the best available data, which is typically the most recent available data. We note that for FY 2022 and FY 2023 only, we made certain methodological changes to our modeling of outlier payments, and we discussed the specific circumstances that led to those changes for those years (86 FR 42623 and 42624; 87 FR 46862 through 46864). We direct readers to the FY 2022 and FY 2023 IPF PPS proposed and final rules for a more complete discussion.

We are proposing to update the IPF outlier threshold amount for FY 2026 using FY 2024 claims data and the same methodology that we have used to set the initial outlier threshold amount each year beginning with the RY 2007 IPF PPS final rule (71 FR 27072 and 27073). For this FY 2026 IPF PPS rulemaking, consistent with our longstanding practice, based on an analysis of the latest available data (the December 2024 update of FY 2024 IPF claims) and rate increases, we believe it is necessary to update the fixed dollar loss threshold amount to maintain an outlier percentage that equals 2 percent of total estimated IPF PPS payments. Based on an analysis of these updated data, we estimate that IPF outlier payments as a percentage of total estimated payments would be slightly higher than 2.0 percent in FY 2025. Therefore, we are proposing to update the outlier threshold amount to $39,360 to maintain estimated outlier payments at 2 percent of total estimated aggregate IPF payments for FY 2026. This proposed update would be an increase from the FY 2025 threshold of $38,110. Lastly, we are proposing that if more recent data become available for the FY 2026 IPF PPS final rule, we would consider using such data to determine the final outlier fixed dollar loss threshold amount for FY 2026.

3. Proposed Update to IPF Cost-to-Charge Ratio Ceilings

Under the IPF PPS, an outlier payment is made if an IPF's cost for a stay exceeds a fixed dollar loss threshold amount plus the IPF PPS amount. To establish an IPF's cost for a particular case, we multiply the IPF's reported charges on the discharge bill by its overall CCR. This approach to determining an IPF's cost is consistent with the approach used under the IPPS and other PPSs. In the RY 2004 IPPS final rule (68 FR 34494), we implemented changes to the IPPS policy used to determine CCRs for IPPS hospitals, because we became aware that payment vulnerabilities resulted in inappropriate outlier payments. Under the IPPS, we established a statistical measure of accuracy for CCRs to ensure that aberrant CCR data did not result in inappropriate outlier payments.

As indicated in the RY 2005 IPF PPS final rule (69 FR 66961), we believe that the IPF outlier policy is susceptible to the same payment vulnerabilities as the IPPS; therefore, we adopted a method to ensure the statistical accuracy of CCRs under the IPF PPS. Specifically, we adopted the following procedure in the RY 2005 IPF PPS final rule:

- Calculated two national ceilings, one for IPFs located in rural areas and one for IPFs located in urban areas.
- Computed the ceilings by first calculating the national average and the standard deviation of the CCR for both urban and rural IPFs using the most recent CCRs entered in the most recent Provider Specific File (PSF) available.

For FY 2026, we are proposing to continue following this methodology. To determine the proposed rural and urban ceilings, we multiplied each of the standard deviations by 3 and added the result to the appropriate national CCR average (either rural or urban). The proposed upper threshold CCR for IPFs

in FY 2026 is 2.3331 for rural IPFs, and 1.7585 for urban IPFs, based on current CBSA-based geographic designations. If an IPF's CCR is above the applicable ceiling, the ratio is considered statistically inaccurate, and we assign the appropriate national (either rural or urban) median CCR to the IPF.

We apply the national median CCRs to the following situations:

- New IPFs that have not yet submitted their first Medicare cost report. We continue to use these national median CCRs until the facility's actual CCR can be computed using the first tentatively or final settled cost report.
- IPFs whose overall CCR is in excess of three standard deviations above the corresponding national geometric mean (that is, above the ceiling).
- Other IPFs for which the Medicare Administrative Contractor (MAC) obtains inaccurate or incomplete data with which to calculate a CCR.

We are proposing to update the FY 2026 national median and ceiling CCRs for urban and rural IPFs based on the CCRs entered in the latest available IPF PPS PSF.

Specifically, for FY 2026, to be used in each of the three situations listed previously, using the most recent CCRs entered in the CY 2024 PSF, we provide an estimated national median CCR of 0.5720 for rural IPFs and a national median CCR of 0.4200 for urban IPFs. These calculations are based on the IPF's location (either urban or rural) using the current CBSA-based geographic designations. A complete discussion regarding the national median CCRs appears in the RY 2005 IPF PPS final rule (69 FR 66961 through 66964).

Lastly, we are proposing that if more recent data become available, we would consider using such data to calculate the rural and urban national median and ceiling CCRs for FY 2026.

IV. Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program

A. Background and Statutory Authority

The Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program is authorized by section 1886(s)(4) of the Act, and it applies to psychiatric hospitals and psychiatric units paid by Medicare under the IPF PPS (see section II.A. of this proposed rule for a detailed discussion of entities covered under the IPF PPS).[7] [8] We refer readers to the FY 2019 IPF PPS final rule (83 FR 38589) for a discussion of the background and statutory authority of the IPFQR Program. We have codified procedural requirements and reconsideration and appeals procedures for IPFQR Program decisions in our regulations at 42 CFR 412.433 and 412.434. Consistent with previous IPFQR Program regulations, we refer to both inpatient psychiatric hospitals and psychiatric units as ''inpatient psychiatric facilities'' (at times, simply ''facilities'' where the context is clear) or ''IPFs.'' This usage follows the terminology in our IPF PPS regulations at § 412.402.

Section 1886(s)(4)(E) of the Act requires IPFs participating in the IPFQR Program to collect and submit to the Secretary certain standardized patient assessment data, using a standardized patient assessment instrument (PAI) developed by the Secretary, for RY 2028 (FY 2028) and each subsequent rate year. In the FY 2025 IPF PPS proposed rule, we solicited public comment on the principles and approach that CMS should consider when developing the IPF–PAI (89 FR 23200 through 89 FR 23204), which we summarized in the final rule (89 FR 64642 through 64649).

B. Proposal To Modify the Reporting Period of the 30-Day Risk-Standardized All-Cause Emergency Department Visit Following an IPF Discharge Measure, Beginning With the FY 2029 Payment Determination

1. Background

In the FY 2025 IPF PPS final rule, we adopted the 30-Day Risk-Standardized All-Cause Emergency Department (ED) Visit Following an IPF Discharge measure (IPF ED Visit measure) for the IPFQR Program beginning with the FY 2027 payment determination (89 FR 64650 through 89 FR 64659). The measure was adopted with a calendar year (CY) reporting period starting with the CY 2025 reporting period for the FY 2027 payment determination (89 FR 64659).[9] We adopted this measure to address a gap in the existing IPFQR Program measure set related to patient outcomes in the period following discharge from the IPF (89 FR 64651). While the Thirty Day All-Cause Unplanned Readmission Following Psychiatric Hospitalization measure (IPF Unplanned Readmission measure), adopted in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57241 through 57246), assesses hospital readmissions, it does not assess another type of post-discharge use of acute care: ED visits that do not result in a hospital admission. Therefore, we adopted the IPF ED Visit measure to fill this gap and to provide IPFs and patients with a more complete picture of acute care among IPF patients after discharge from the IPF (89 FR 64650 through 64659).

2. Proposal To Modify the Reporting Period of the IPF ED Visit Measure To Begin Q3 CY 2025–Q2 CY 2027 Reporting Period/FY 2029 Payment Determination

We intended for the IPF ED Visit measure and the IPF Unplanned Readmission measure to complement the IPF Unplanned Readmission measure to the extent possible (89 FR 64652 through 64653). Our rationale was that maintaining similarities between these two measures—the same timeframe (that is, the 30 days post-discharge from an IPF),the same definitions of index admission, and same patient populations—would provide IPFs and patients with a more complete picture of acute care among IPF patients after discharge. However, the IPF Unplanned Readmission measure uses a 2-year reporting period, which differs from the 1-year reporting

[7] We note that the statute uses the term ''rate year'' (RY). However, beginning with the annual update of the inpatient psychiatric facility prospective payment system (IPF PPS) that took effect on July 1, 2011 (RY 2012), we aligned the IPF PPS update with the annual update of the ICD codes, effective on October 1 of each year. This change allowed for annual payment updates and the ICD coding update to occur on the same schedule and appear in the same **Federal Register** document, promoting administrative efficiency. To reflect the change to the annual payment rate update cycle, we revised the regulations at 42 CFR 412.402 to specify that, beginning October 1, 2012, the IPF PPS RY means the 12-month period from October 1 through September 30, which we refer to as a ''fiscal year'' (FY) (76 FR 26435). Therefore, with respect to the IPFQR Program, the terms ''rate year,'' as used in the statute, and ''fiscal year'' as used in the regulation, both refer to the period from October 1 through September 30. For more information regarding this terminology change, we refer readers to section III of the RY 2012 IPF PPS final rule (76 FR 26434 through 26435).

[8] For the IPFQR Program, we refer to the year in which an IPF would receive the 2-percentage point reduction to the annual update to the standard Federal rate as the *payment determination* year. An IPF generally meets IPFQR Program requirements by submitting data on specified quality measures in a specified time and manner during a *data submission period* that occurs prior to the payment determination year. These data reflect a period prior to the data submission period during which the IPF furnished care to patients; this period is known as the *reporting period,* sometimes also referred to as the *performance period.* For example, for a measure for which CY 2026 is the reporting period which is required to be submitted in CY 2027 and affects FY 2028 payment determination, if an IPF did not submit the data for this measure as specified during CY 2027 (and meets all other IPFQR Program requirements for the FY 2028 payment determination) we would reduce by 2-percentage points that IPF's update for the FY 2028 payment determination year.

[9] We note that we used ''performance period'' in the FY 2025 IPF PPS final rule to refer to the reporting period.

period we finalized for the IPF ED Visit measure. To fully align the measures so that the same cohort of patients can be compared, it is necessary to modify the reporting period of the IPF ED Visit Measure.

For these reasons, we propose to modify the current 1-year reporting period for the IPF ED Visit measure to a 2-year reporting period. We propose that this 2-year reporting period would run from July 1st, 4 years prior to the applicable fiscal year payment determination, to June 30th, 2 years prior to the applicable fiscal year payment determination. This proposed 2-year reporting period for the IPF ED Visit measure would align with the IPF Unplanned Readmission measure. This proposal would modify the first reporting period for the measure to Quarter (Q)3 CY 2025–Q2 CY 2027 for the FY 2029 payment determination.[10] This proposed 2-year reporting period would allow the IPF ED Visit measure to better complement the IPF Unplanned Readmission measure, resulting in more meaningful IPFQR Program measure data for providers and consumers.

Because the data used to calculate the IPF ED Visit measure are available on Medicare claims and enrollment data, this measure requires no additional data collection or submission by IPFs (89 FR 64667). We are not proposing any other changes to the measure. We note the IPF ED Visit measure for the FY 2029 payment determination, which would reflect a Q3 CY 2025–Q2 CY 2027 reporting period, would first be publicly reported in the January 2029 release on the Compare tool on medicare.gov (*https://www.medicare.gov/care-compare/*) or their successor websites.

We invite public comment on our proposal to modify the reporting period of the IPF ED Visit Measure.

C. Proposal To Remove the Facility Commitment to Health Equity Measure Beginning With the CY 2024 Reporting Period/FY 2026 Payment Determination

We refer readers to the FY 2024 IPF PPS final rule where we adopted the Facility Commitment to Health Equity (hereafter referred to as FCHE) structural measure into the IPFQR Program (88 FR 51100 through 51107). We propose to remove the FCHE measure beginning with the FY 2026 payment determination due to the costs associated with achieving a high score on the measure outweighing the benefit of its continued use in the program. When adopted, we intended the collection of data described in the five domains of this measure to provide IPF leadership with meaningful and actionable health data to drive quality improvements to eliminate health disparities. Based on feedback received from IPFs as well as a re-focus on clinical outcomes measures, for which the FCHE measure, as a structural measure, does not directly measure clinical outcomes, the burden of collecting this measure may outweigh the benefits. Removal of this measure would alleviate an estimated annual burden of approximately 267 hours, at a cost of $11,978, across all participating IPFs (88 FR 51151).

One of the goals of the IPFQR Program is to move forward in the least burdensome manner possible, while maintaining a parsimonious set of the most meaningful quality measures and continuing to incentivize improvement in the quality of care provided to patients. Removing this measure from the IPFQR Program is an effective way to accomplish this goal. Our priority is a re-focus on measurable clinical outcomes as well as identifying quality measures on topics of prevention, nutrition, and well-being, and as such we refer readers to our request for comment on ''Request for Information on Future Measures for the IPFQR Program'' in section IV.H.2. The IPFQR Program continues to incentivize the improvement of care quality and health outcomes for all patients through measurement and transparency with other measures. It may be costly for IPFs to continue reporting on the FCHE measure and achieve high performance scores, and removal of this measure would make room both in the program's measure set to enhance the program's focus on measurable clinical outcomes and for IPF leadership to focus on other priority quality and safety areas. We acknowledge that some IPFs may have expended resources to implement some or all of the activities described in the FCHE measure attestation statements in order to be able to attest ''yes'' for measure reporting purposes, however, IPFs that had already implemented such activities prior to adoption of the measure would have been able to attest ''yes'' without expending similar resources.

If finalized, IPFs that do not report their CY 2024 reporting period data for the FCHE measure to CMS would not be considered noncompliant with the measure for purposes of their FY 2026 payment determination (that is, IPFs that do not report CY 2024 reporting period data would not be penalized for FY 2026 payments due to this measure). Any FCHE measure data received by CMS would not be used for public reporting or payment purposes.

If not finalized, IPFs that do not report their CY 2024 reporting data for the FCHE measure to CMS would be considered noncompliant with the measure for their FY 2026 payment determination, and would receive a letter of noncompliance after August 1, 2025, at which time the required 30 day reconsideration period would begin. Payment adjustments would apply to FY 2026 payment determinations fee-for-service claims as previously finalized.

We invite public comment on our proposal to remove the FCHE structural measure from the IPFQR Program beginning with the FY 2026 payment determination.

D. Proposal To Remove the COVID–19 Vaccination Coverage Among Healthcare Personnel Measure Beginning With CY 2024 Reporting Period/FY 2026 Payment Determination

We refer readers to the FY 2022 IPF PPS final rule where we adopted the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure into the IPFQR Program (86 FR 42633 through 42640) and the FY 2024 IPF PPS final rule where we modified the COVID–19 Vaccination Coverage Among HCP measure to account for updated vaccine guidance (88 FR 51128 through 51133).

We propose to remove the COVID–19 Vaccination Coverage Among HCP beginning with the CY 2024 reporting period/FY 2026 payment determination under removal Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program (§ 412.433(e)(3)(i)(H)). We note that reporting on this measure currently requires reporting data on COVID–19 vaccination coverage among HCP for 1 week each month for each of the 3 months in a quarter. This requires IPFs to track current vaccination status for all employees, licensed independent practitioners, adult students/trainers and volunteers, and other contract personnel and log in to the National Healthcare Safety Network (NHSN) to report the data monthly either manually in the NHSN or by uploading a comma-separated value (CSV) file (86 FR 42636). The estimated burden of collecting this information annually across all 1,596 IPFs is between $721,392 and $841,730 annually. We refer readers to section V.B.3. of this proposed rule for more details on this estimated burden calculation.

[10] As finalized in prior rulemaking (89 FR 64659), the IPF ED Visit measure would have been used in the FY 2027 payment determination. This proposal to modify the reporting period changes the first year that this measure will be used in the payment determination to FY 2029.

When we first adopted the COVID–19 Vaccination Coverage Among HCP measure, the United States was in a Public Health Emergency (PHE) with millions of cases and over 550,000 COVID–19 deaths (86 FR 42633). While preventing the spread of COVID–19 remains a public health goal, the PHE ended on May 11, 2023.[11] In addition, the number of deaths due to COVID–19 in the U.S. has decreased since the adoption of this measure. In March 2021, when this measure was being proposed, the United States was averaging over 5,000 deaths per week. In April 2023, the last full month of the PHE, weekly number of deaths due to COVID–19 averaged around 1,300.[12] With the end of the PHE and the decrease in COVID–19 deaths, we believe the continued costs and burden to providers of tracking and monthly reporting on this measure outweigh the benefit of continued information collection on COVID–19 vaccination coverage among HCP. As it may be costly for IPFs to continue to report on the COVID–19 Vaccination Coverage Among HCP measure, removal of this measure would allow the IPFQR Program to focus on goals such as measuring clinical outcomes.

If finalized, IPFs that do not report their CY 2024 reporting period data for the COVID–19 HCP Vaccination measure to CMS would not be considered noncompliant with the measures for purposes of their FY 2026 payment determination (that is, IPFs that do not report CY 2024 reporting period data would not be penalized for FY 2026 payments due to this measure). Any COVID–19 HCP Vaccination measure data received by CMS would not be used for public reporting or payment purposes.

If not finalized, IPFs that do not report their CY 2024 reporting data for the COVID–19 HCP Vaccination measure to CMS would be considered noncompliant with the measure for their FY 2026 payment determination, and would receive a letter of noncompliance after August 1, at which time the required 30 day reconsideration period would begin. Payment adjustments would apply to FY 2026 payment determination as previously finalized.

We invite public comment on our proposal to remove the COVID–19 Vaccination Coverage Among HCP measure from the IPFQR Program beginning with the FY 2026 payment determination.

E. Proposed Removal of Two Social Drivers of Health Measures Beginning With CY 2024 Reporting Period/FY 2026 Payment Determination

We propose to remove two social drivers of health process measures from the IPFQR Program beginning with the FY 2026 payment determination: Screening for Social Drivers of Health measure (Screening for SDOH) (adopted at 88 FR 51107 through 51117); and Screen Positive Rate for Social Drivers of Health measure (Screen Positive) (adopted at 88 FR 51117 through 51122).

We propose to remove the Screening for SDOH and Screen Positive measures beginning with the FY 2026 payment determination under removal Factor 8, the costs associated with the measure outweigh the benefit of its continued use in the program. We have previously heard from some IPFs concerned with the costs and resources associated with screening patients via manual processes, manually storing such data, training hospital staff, and altering workflows for these measures. In the FY 2024 IPF PPS final rule we estimated a total annual burden of surveying IPF patients for health-related social needs under the Screening for Social Drivers of Health measures will be 66,414 hours (1,596 facilities × 1,261 patients per facility × 0.033 hr) at a cost of $1,375,434 (66,414 hour × $20.71/hour) across all patients (88 FR 51152). We estimated that the submission of the Screen Positive measure to CMS would have incurred an additional 266 hours across all IPFs, at a cost of $11,933 (88 FR 51152 through 51153). Further, we note that these measures document an administrative process and report aggregate level outcomes, and do not shed light on the extent to which providers are ultimately connecting patients with resources or services and whether patients are benefiting from these screenings. We have concluded that the costs of the use of these measures in the IPFQR Program outweigh the benefits to providers and patients. Removal of these measures will alleviate the burden on IPFs to manually screen each patients and submit data each reporting cycle, allowing IPFs to focus resources on measurable clinical outcomes. This will also remove the patient burden associated with repeated SDOH screenings across multiple healthcare facilities. We refer readers to our request for comment ''Request for Information on Future Measures for the IPFQR Program'' in section IV.E. for more information regarding our areas of focus for new measures. We acknowledge that some IPFs may have expended resources to implement SDOH screenings, however, IPFs that had already implemented such screenings prior to adoption of the measures would not have expended similar resources in response to the measure. The objectives of the IPFQR Program continue to incentivize the improvement of care quality and health outcomes for all patients through transparency and use of appropriate quality measures.

If finalized, IPFs that do not report to CMS their CY 2024 reporting period data for the SDOH measures would not be considered noncompliant with the measures for purposes of their FY 2026 payment determination (that is, IPFs that do not report CY 2024 reporting period data would not be penalized for FY 2026 payments due to this measure). Any SDOH measure data received by CMS would not be used for public reporting or payment purposes.

If not finalized, IPFs that do not report their CY 2024 reporting data for the SDOH measures to CMS would be considered noncompliant with the measures for their FY 2026 payment determination, and would receive a letter of noncompliance after August 1, at which time the required 30 day reconsideration period would begin. Payment adjustments would apply to FY 2026 payment determinations as previously finalized.

We invite public comment on our proposal to remove these two social drivers of health measures from the IPFQR Program beginning with the FY 2026 payment determination.

F. Summary of IPFQR Program Measures for the FY 2028 Payment Determination and Subsequent Years

As previously discussed, we propose to modify the reporting period of one measure (the IPF ED Visit Measure) and remove four other measures (the Facility Commitment to Health Equity measure, the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure, the Screening for Social Drivers of Health measure, and the Screen Positive Rate for Social Drivers of Health measure). We are not proposing any new measures for the IPFQR Program in this proposed rule. Table 5 sets forth the measures in the FY 2028 IPFQR Program.

TABLE 5—IPFQR PROGRAM MEASURE SET FOR THE FY 2028 IPFQR PROGRAM

Consensus-based entity (CBE) #	Measure ID	Measure
0640	HBIPS–2	Hours of Physical Restraint Use.
0641	HBIPS–3	Hours of Seclusion Use.
N/A	FAPH	Follow-Up After Psychiatric Hospitalization.
N/A *	SUB–2 and SUB–2a	Alcohol Use Brief Intervention Provided or Offered and SUB–2a Alcohol Use Brief Intervention.
N/A *	SUB–3 and SUB–3a	Alcohol and Other Drug Use Disorder Treatment Provided or Offered at Discharge and SUB–3a Alcohol and Other Drug Use Disorder Treatment at Discharge.
N/A *	TOB–3 and TOB–3a	Tobacco Use Treatment Provided or Offered at Discharge and TOB–3a Tobacco Use Treatment at Discharge.
1659	IMM–2	Influenza Immunization.
N/A *	TR–1	Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care).
N/A	SMD	Screening for Metabolic Disorders.
N/A	PIX	Psychiatric Inpatient Experience Survey.
2860	IPF Unplanned Readmission	Thirty-Day All-Cause Unplanned Readmission Following Psychiatric Hospitalization in an Inpatient Psychiatric Facility.
N/A	IPF ED Visit	30-Day Risk-Standardized All-Cause Emergency Department Visit Following an Inpatient Psychiatric Facility Discharge.†
3205	Med Cont	Medication Continuation Following Inpatient Psychiatric Discharge.
N/A	COVID HCP	COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP).‡
N/A	Facility Commitment	Facility Commitment to Health Equity.‡
N/A	Screening for SDOH	Screening for Social Drivers of Health.‡
N/A	Screen Positive	Screen Positive Rate for Social Drivers of Health.‡

* Measure is no longer endorsed by the CBE but was endorsed at the time of adoption. We note that although section 1886(s)(4)(D)(i) of the Act generally requires measures specified by the Secretary be endorsed by the entity with a contract under section be endorsed by the entity with a contract under section 1890(a) of the Act, section 1886(s)(4)(D)(ii) of the Act states that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. We attempted to find available measures for each of these clinical topics that have been endorsed or adopted by a consensus organization and found no other feasible and practical measures on the topics for the IPF setting.

† We note that we propose to modify the reporting period of this measure in section IV.B. of this proposed rule.

‡ We note that we propose to remove these measures in section IV.C., IV.D., and IV.E of this proposed rule.

G. IPFQR Program Extraordinary Circumstances Exception (ECE) Policy

1. Background

Under the current Extraordinary Circumstances Exception (ECE) policy as set forth in our regulations at 412.433(f), we have granted exceptions with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of an IPF. An exception may be granted for extraordinary circumstances including, but not limited to, natural disasters or systemic problems with data collection systems. We refer readers to 412.433(f) for our current ECE regulations, as well as the FY 2013 IPPS/LTCH PPS final rule (77 FR 53659 through 53660), FY 2014 IPPS/LTCH PPS final rule (78 FR 50903), FY 2015 IPF PPS final rule (79 FR 45978), and FY 2018 IPPS/LTCH PPS final rule (82 FR 38473 through 38474) for further background and details of the ECE policy. We also refer readers to the CMS QualityNet website for the specific requirements for submission of an ECE request in the IPFQR Program.[13]

Our ECE policy provides flexibility for IPFQR Program participants to ensure continuity of quality care delivery and measure reporting in the event of an extraordinary circumstance. For instance, we recognize that, in circumstances where a full exception is not applicable, it is beneficial for an IPF to report data later than the reporting deadline. Delayed reporting authorized under our ECE policy allows temporary relief for an IPF experiencing an extraordinary circumstance while preserving the benefits of data reporting, such as transparency and informed decision-making for beneficiaries and providers alike. Accordingly, we propose to update our regulations to specify that an ECE could take the form of an extension of time for an IPF to comply with a data reporting requirement if CMS determines that this type of relief would be appropriate under the circumstances.

2. Proposal To Update the Extraordinary Circumstance Exception (ECE) Policy for the IPFQR Program

We propose to update the current ECE policy codified at 42 CFR 412.433(f) to include extensions of time as a form of relief and to further clarify the policy. Specifically, in the introductory text at proposed 42 CFR 412.433(f)(1), we propose that CMS may grant an ECE with respect to reporting requirements in the event of an extraordinary circumstance—defined as an event beyond the control of an IPF (for example a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing)—that affected the ability of the hospital to comply with one or more applicable reporting requirements with respect to a fiscal year.

We propose that the steps required for requesting or granting an ECE would remain the same as the current ECE process, detailed by CMS at the QualityNet website or a successor website.[14] At proposed 42 CFR 412.433(f)(2)(i), we propose that an IPF may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred. Our current policy allows a request within 90 days; however, this proposed change would align the IPFQR Program policy with CMS systems implementation requirements across all quality reporting

[13] *https://qualitynet.cms.gov/ipf/ipfqr/participation.*

[14] *https://qualitynet.cms.gov/inpatient/iqr/participation#tab3.*

programs. Under this proposed codified policy, we clarify that CMS retains the authority to grant an ECE as a form of relief at any time after the extraordinary circumstance has occurred. At proposed 42 CFR 412.433(f)(2)(ii), we propose that CMS notify the requestor with a decision in writing, via email. In the event that CMS grants an ECE to the IPF, the written decision will specify whether the IPF is exempted from one or more reporting requirements or whether CMS has granted the IPF an extension of time to comply with one or more reporting requirements.

Additionally, at 42 CFR 412.433(f)(3), we propose that CMS may grant an ECE to one or more IPFs that have not requested an ECE if CMS determines that: a systemic problem with a CMS data collection system directly impacted the ability of the IPF to comply with a quality data reporting requirement, or that an extraordinary circumstance has affected an entire region or locale. As is the case under our current policy, any ECE granted will specify whether the affected IPFs are exempted from one or more reporting requirements or whether CMS has granted the IPFs an extension of time to comply with one or more reporting requirements.

At 42 CFR 412.433(f)(4), we state that CMS' evaluation of an extraordinary circumstance will include, but is not limited to whether the extraordinary circumstance was beyond the control of the IPF, and affected the ability of the IPF to provide high-quality healthcare and report required measure data by specified deadlines. At 42 CFR 412.433(f)(5) we state that CMS will notify the IPF of a denial of an ECE in writing, via email.

This proposed ECE policy would provide further reporting flexibility for IPFs and clarify the ECE process.

We invite public comment on our proposals to modify the IPFQR Program's policy.

H. Requests for Information on Future Changes to the IPFQR Program

In this section we are soliciting public comment on three topics that may have future impacts on the IPFQR Program. Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA. Respondents are encouraged to provide complete but concise responses. This RFI is issued solely for information and planning purposes; it does not constitute a Request for Proposal (RFP), applications, proposal abstracts, or quotations. This RFI does not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through this RFI and will not accept unsolicited proposals. Responders are advised that the U.S. Government will not pay for any information or administrative costs incurred in response to this RFI; all costs associated with responding to this RFI will be solely at the interested party's expense. Not responding to this RFI does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor this RFI announcement for additional information pertaining to this request. Please note that CMS will not respond to questions about the policy issues raised in this RFI. CMS may or may not choose to contact individual responders. Such communications would only serve to further clarify written responses. Contractor support personnel may be used to review RFI responses. Responses to this notice are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of this RFI may be used by the U.S. Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. This RFI should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publicly post the comments received, or a summary thereof.

1. Request for Information on Future Star Ratings for IPFs

Section 1886(s)(4)(F) of the Act requires that the Secretary establish procedures for making data submitted under the IPFQR Program available to the public. Such procedures must ensure the IPFs participating in the IPFQR Program have the opportunity to review the data prior to such data being made public. The Secretary must publicly report quality measures that relate to services furnished in IPFs on the CMS website. Currently, we publicly report data on measures under the IPFQR Program on the Compare tool on *Medicare.gov*.[15]

Star ratings summarize facility or provider performance using symbols to help patients and caregivers quickly and easily understand quality of care information. Star ratings serve an important function for patients, caregivers, and families, helping them to more quickly comprehend complex information about a health care providers' care quality and to easily assess differences among providers. Star ratings also spotlight differences in health care quality and identify areas for improvement and may motivate providers to perform well on measures in CMS quality reporting programs. This transparency serves an important educational function for consumers, while also helping to promote competition in health care markets. Informed patients and consumers are more empowered to select among health care providers, fostering continued quality improvement.

The Compare tool currently displays star ratings for many provider types, including doctors and clinicians, some types of hospitals not including inpatient psychiatric hospitals, nursing homes, home health, hospice, and dialysis facilities. The method to calculate star ratings differs by provider type. Differences include data sources, which measures are included, and how the components of the star ratings are combined. Some providers receive ''patient survey'' star ratings, a composite score derived from patient experience of care surveys, in addition to ''overall star ratings,'' which are a composite score calculated using different data sources, such as quality measures or survey results.

Although we publicly report data on measures under the IPFQR Program on the Compare tool, there are currently no star ratings displayed for IPFs, and IPFs are not included in hospital star ratings. We are seeking feedback on the development of a five-star methodology for IPFs that can meaningfully describe the quality of care offered by IPFs. Star ratings for IPFs would be designed to help consumers quickly identify differences in quality when selecting an IPF. We are committed to developing a well-tested, data-driven methodology that encourages continuous quality improvement. We plan to engage with the IPF community and provide multiple opportunities for IPFs and

[15] *https://www.medicare.gov/care-compare.*

other interested parties to give input on the development of a star rating system for IPFs. We note that IPFs would have the ability to preview their own facility's quality data before public posting of the IPF's star rating on the Compare tool in accordance with section 1886(s)(4)(F) of the Act.[16]

Specifically, we invite public comment on the following topics. Please note that we have numbered the questions continuously across the topic areas to aid readers in providing feedback.

Criteria for Measure Selection

1. Are there specific criteria CMS should use to select measures for an IPF star rating system, such as a measure's generalizability (degree to which a measure is applicable to a broad segment of patients)?

2. Should an IPF star rating system be limited to or more heavily weight certain types of measures (for example, outcome measures, process measures, structural measures; measures that address certain topics, such as safety, psychiatric treatment, substance use treatment, whole-person care, or patient experience)?

Suitability of Measures Currently in the IPFQR Program

3. From the perspective of patients and families or other caregivers, which measures currently adopted for the IPFQR Program are most important when attempting to summarize quality of care in IPFs? Which are least important? Are there any measures in the program that should be specifically excluded or included in IPF Star Ratings? For the list of IPFQR Program measures, we refer the reader to Table 5 in section IV.F. in this proposed rule.

4. From the perspective of referring providers, payers, or other interested parties, which measures currently adopted for the IPFQR Program are most important when attempting to summarize quality of care in IPFs? Which are least important? Are there any measures in the program that should be specifically excluded or included in an IPF star ratings system?

5. Two measures currently in the IPFQR Program—Hours of Physical Restraint Use (HBIPS–2) and Hours of Seclusion (HBIPS–3)—are calculated and publicly reported as a rate per 1000 hours of patient care. Does the way these measures are currently specified and displayed create challenges for including these measures in a star rating calculation? If these measures were selected to be included in a star rating calculation, are there recommendations about how these measures should be included in a larger star rating methodology? For example, should the rate be made into a categorical variable (for example, quartiles)?

Future Use of Additional Data for an IPF Star Rating System

6. In the FY 2024 IPF PPS final rule (88 FR 51128), we finalized the Psychiatric Inpatient Experience (PIX) survey as a measure of patient experience in IPFs. The PIX survey will become mandatory for the FY 2028 payment determination—that is, data collection occurring in CY 2026. Although PIX data may not be available for an initial version of an IPF star rating system, what considerations should CMS give these data, when they become available? For example, should they be included as part of an overall star rating, or used to derive a stand-alone patient experience star rating? See for example the Hospital patient experience star rating,[17] which is derived from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS©) survey and displayed as ''Patient survey rating'' on the Compare tool.

7. Are there other measurement topics that are currently not addressed by an IPFQR Program measure, but would be valuable in an IPF star rating?

We intend to use this input to inform our future star rating development efforts. We intend to consider how a rating system would determine an IPF's star rating, the methods used for such calculations, and an anticipated timeline for implementation. We will consider comments in response to this RFI for future rulemaking.

2. Request for Information on Future Measures for the IPFQR Program

We are seeking input on the importance, relevance, appropriateness, and applicability of two concepts under consideration for future years in the IPFQR Program.

We are seeking input on a quality measure concept of well-being for future quality measures. Well-being is a comprehensive approach to disease prevention and health promotion, as it integrates mental, social, and physical health [18] [19] while emphasizing preventive care to proactively address potential health issues. This comprehensive approach emphasizes person-centered care by promoting well-being of patients and their family members. We request input and comment on tools and measures that assess for overall health, happiness, and satisfaction in life that could include aspects of emotional well-being, social connections, purpose, fulfillment, and self-care work. Please provide input on the relevant aspects of well-being for the IPF setting.

We are also seeking input on a quality measure concept of nutrition for future quality measures. Assessment of an individual's nutritional status may include various strategies, guidelines, and practices designed to promote healthy eating habits and ensure individuals receive the necessary nutrients for maintaining health, growth, and overall well-being. This also includes aspects of health that support or mediate nutritional status, such as physical activity and sleep. In this context, preventable care plays a vital role by proactively addressing factors that may lead to poor nutritional status or related health issues. These efforts not only support optimal nutrition but also work to prevent conditions that could otherwise hinder an individual's health and nutritional needs. We request input and comment on tools and frameworks that promote healthy eating habits, exercise, nutrition, or physical activity for optimal health, well-being, and best care for all. Please provide input on the relevant aspects of nutrition for the IPF setting.

We intend to use this input to inform our future measure development efforts.

3. Request for Information on Digital Quality Measurement Strategy: Approach to FHIR® Patient Assessment Reporting in the IPFQR Program

Section 4125(b) of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117–328, Dec. 29, 2022) [20] amended section 1886(s)(4) of the Act by adding a new subparagraph (E), which requires an IPF participating in the IPFQR Program to collect and submit specified standardized patient assessment data using a new standardized patient assessment instrument, for rate year 2028 and each subsequent year.

[16] Currently IPFs preview their data via the ''IPF-specific report (ISR)'' distributed to providers through CMS' Hospital Quality Reporting system.

As noted in the RFI [21] in the FY 2025 IPF PPS proposed rule (''Patient Assessment Instrument Under IPFQR Program (IPF PAI) to Improve the Accuracy of PPS''), achieving interoperability is important and it is our goal to facilitate safe and secure data sharing, access, and utilization of electronic health information to enhance decision-making and create a more efficient healthcare system (89 FR 23201 through 23204). We also stated that we are considering ways to ensure that the Inpatient Psychiatric Facility Patient Assessment Instrument (IPF–PAI) can be represented using Fast Healthcare Interoperability Resources® (FHIR®) standards (89 FR 23201). As part of that RFI, we requested and received input on topics including: Whether Standardized Patient Assessment Data Elements already in use in the CMS Data Element Library (DEL) [22] are appropriate and clinically relevant for the IPF setting, use of CMS reporting systems, and other interoperability-related considerations (89 FR 23201). In the FY 2025 IPF PPS final rule, we acknowledged a recommendation to align the IPF–PAI with United States Core Data for Interoperability (USCDI) [23] and several commenters noted IPFs did not receive funding to adopt CEHRT, suggesting we consider how the implementation of the IPF–PAI would affect providers without EHRs (89 FR 64646).

We are considering opportunities to advance FHIR-based reporting of patient assessment data for the IPF–PAI mandated by the CAA, 2023. The questions in this section seek to gain an understanding of the current adoption and use of EHRs, other health IT, and data standards supporting interoperability (such as FHIR and USCDI) within IPFs. We also aim to identify the extent of technology adoption beyond certified health IT and EHRs and seek a better understanding of how FHIR-standardized data can be generated, used, and shared through other technologies, without use of EHRs. Our objective is to explore how IPFs typically integrate technologies with varying complexity into existing systems and how this affects IPF workflows. We seek to identify the challenges or opportunities that may arise during this integration, and determine the support needed to complete and submit the IPF–PAIs in ways that protect and enhance care delivery. This insight will help inform the technologies we may consider for use with the IPF–PAI and quality data reporting. We note that we intend for this same RFI to also appear in the FY 26 IPPS proposed rule, as a majority of IPFs are hospital-based,[24] to increase the number of interested parties who learn about this opportunity to provide feedback.

We seek feedback on the current state of health IT use, including EHRs, in IPFs:

- To what extent does your facility use health IT systems to maintain and exchange patient records?
- If your facility has transitioned to using electronic records in whole or in part, what types of health IT does your IPF use to maintain patient records? Are these health IT systems certified under the Office of the National Coordinator for Health Information Technology (ONC) Health IT Certification program? [25] Does your facility use EHRs or other health IT products or systems that are not certified under the ONC Health IT Certification Program? If so, do these systems exchange data using standards and implementation specifications adopted by HHS? [26] Please specify.
- Does your IPF submit patient data to CMS directly from your health IT system, without the assistance of a third-party intermediary? If a third-party intermediary is used to report data, what type of intermediary service is used? How does your facility currently exchange health information with other healthcare providers or systems, specifically between IPFs and other provider types, or with public health agencies? What challenges do you face with the electronic exchange of health information?
- Are there any challenges with your current electronic devices (for example, tablets, smartphones, computers) that hinder your ability to easily exchange information across health IT systems? Please describe any specific issues you encounter.
- Does limited internet or lack of internet connectivity impact your ability to exchange data with other healthcare providers, including community-based care services, or your ability to submit patient data to CMS?
- What steps does your IPF take to ensure compliance in using health IT with security and patient privacy requirements such as the requirements of the regulations promulgated under the Health Insurance Portability and accountability Act (HIPAA) and related regulations?
- Does your IPF refer to the SAFER Guides (see newly revised versions published in January 2025 at *https://www.healthit.gov/topic/safety/safer-guides*) to self-assess EHR safety practices? [27]
- What challenges or barriers does your IPF encounter when submitting quality measure data to CMS as part of the IPFQR Program? Please identify any factors that hinder successful data submission. What opportunities or factors could improve your facility's successful data submission to CMS?
- What types of technical assistance, guidance, workforce training resources, and other resources would help IPFs to successfully implement FHIR-based technologies for submitting the IPF–PAI to CMS? What strategies can CMS, HHS or other Federal partners take to ensure that technical assistance is both comprehensive and user-friendly? How could Quality Improvement Organizations (QIOs) or other entities enhance this support?
- Is your facility using technology that utilizes APIs based on the FHIR standard to enable electronic data sharing? If so, with whom are you sharing data using the FHIR standard and for what purpose(s)? For example, have you used FHIR APIs to share data with public health agencies? Does your facility use any Substitutable Medical Applications and Reusable Technologies (SMART) on FHIR [28] applications? If so, are the SMART on FHIR applications integrated with your EHR or other health IT?
- What benefits or challenges have you experienced with implementing technology that uses FHIR-based APIs? How can adopting technology that uses FHIR-based APIs to facilitate the reporting of patient assessment data impact provider workflows? What impact, if any, does adopting this technology have on quality of care?
- Does your facility have any experience using technology that shares electronic health information using one

or more versions of the USCDI standard? [29]

- Would your IPF and/or vendors be interested in participating in testing to explore options for transmission of assessments, for example, testing methods to transmit assessments that incorporate FHIR-enabled data to CMS?
- What other information should we consider, to facilitate successful adoption and integration of FHIR-based technologies and standardized data for patient assessment instruments like the IPF–PAI? We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies.

V. Collection of Information Requirements

This rule proposes updates to the prospective payment rates, outlier threshold, and wage index for Medicare inpatient hospital services provided by IPFs. In addition, we propose the removal of one measure in the IPFQR Program that would affect the information collection burden under OMB control number 0938–0050.

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a ''collection of information'' requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of the PRA's implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment (see section V.E. of this proposed rule) on each of these issues for the following sections of this document that contain information collection requirements. Comments, if received, will be responded to within the subsequent final rule.

The following changes will be submitted to OMB for review under control number 0938–1171 (CMS–10432). We are not proposing any changes that would change any of the data collection instruments that are currently approved under that control number.

In section V.B. of this proposed rule, we restate our currently approved burden estimates. In section V.C. of this proposed rule, we estimate the changes in burden associated with the update to more recent wage rates. Then in section V.D. of this proposed rule, we discuss the policies proposed in this proposed rule.

A. Wage Estimates

In the FY 2025 IPF PPS final rule, we utilized the median hourly wage rate for Medical Records Specialists, in accordance with the Bureau of Labor Statistics (BLS), to calculate our burden estimates for the IPFQR Program (89 FR 64664). While the most recent data from the BLS reflects a mean hourly wage of $25.81 per hour for all medical records specialists, $27.69 is the mean hourly wage for ''general medical and surgical hospitals,'' which is an industry within medical records specialists.[30] We believe the industry of ''general medical and surgical hospitals'' is more specific to the IPF setting for use in our calculations than other industries that fall under medical records specialists, such as ''office of physicians'' or ''nursing care facilities (skilled nursing facilities).'' We calculated the cost of indirect costs, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and other indirect costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.69 × 2 = $55.38) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we would calculate cost burden to IPFs using a wage plus benefits estimate of $55.38 per hour throughout the discussion in this section of this rule for the IPFQR Program.

Some of the activities previously finalized for the IPFQR Program require beneficiaries to undertake tasks such as responding to survey questions on their own time. In the FY 2025 IPF PPS final rule, we estimated the hourly wage rate for these activities to be $24.04/hr (89 FR 64664). We are updating that estimate to a post-tax wage of $24.04/hr. The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices identifies the approach for valuing time when individuals undertake activities on their own time.[31] For FY 2026 we propose to derive the costs for beneficiaries using the usual weekly earnings of wage and salary workers of $1,192, divided by 40 hours to calculate an hourly pre-tax wage rate of $29.80/hr.[32] We propose to adjust this rate downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[33] resulting in the post-tax hourly wage rate of $25.63/hr. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

B. Information Collection Requirements for the Inpatient Psychiatric Facilities Quality Reporting (IPFQR) Program

1. Previously Finalized IPFQR Program Estimates

For the purposes of calculating burden, we attribute the costs to the year in which the costs begin. Under our previously finalized policies, data submission for the measures that affect the FY 2028 payment determination occurs during CY 2027 and generally reflects care provided during CY 2026. Our currently approved burden for CY 2026 is set forth in Table 6.

*We note that we propose to remove these measures in this proposed rule.

2. Updates Due to More Recent Information

In section V.A. of this proposed rule, we described our updated wage rates which increase from $52.12/hr to $55.38/hr (an increase of $3.26/hr) for activities performed by Medical Records Specialists and from $24.04/hr to $25.63/hr (an increase of $1.59/hr) for activities performed by individuals. The effects of these updates are set forth in Table 7.

TABLE 7—EFFECTS OF WAGE RATE UPDATES

Measure/response description	Total annual responses	Time per response (hrs)	Time per facility (hrs)	Total annual time (hrs)	Change in applicable wage rate ($/hr)	Change in cost per facility ($)	Change in total annual cost ($)
Subtotal for Medical Records Specialists.	9,866,472	Varies	1,547	2,467,949	3.26	5,042	8,045,514
Subtotal for Individuals	2,251,956	Varies	78	95,382	1.59	124	151,657
Totals	12,118,428	Varies	1,624	2,563,331	Varies	5,165	8,197,171

3. Updates Due to Proposals in This Proposed Rule

In section IV.B. of this proposed rule, we propose to begin use of the 30-Day Risk-Standardized All-Cause Emergency Department (ED) Visit Following an IPF Discharge measure (IPF ED Visit measure) in the IPFQR Program with the FY 2029 payment determination instead of the FY 2027 payment determination, and to modify the reporting period for the IPF ED Visit measure to a two-year reporting period that runs from July 1st four years prior to the applicable fiscal year payment determination to June 30th two years prior to the applicable fiscal year payment determination. As discussed in the FY 2025 IPF PPS final rule, the IPF ED Visit measure is a claims-based measure and there is no additional burden outside of submitting a claim, the submission of which is approved under OMB control number 0938–0050 (89 FR 64667). This proposal does not warrant any changes under that control number.

In section IV.C. of this proposed rule, we propose to remove the Facility Commitment to Health Equity measure from the IPFQR Program beginning with the FY 2026 payment determination. This measure and the associated information collection burden was previously finalized in the FY 2024 IPF PPS final rule and is approved under OMB control number 0938–1171 (88 FR 51151). We estimate that this proposal would result in a total annual burden decrease of 267 hours (0.167 hours × 1,596 IPFs) at a savings of $14,761 (267 hours × $55.38/hour). This estimate is summarized in Table 8.

In section IV.D. of this proposed rule, we propose to remove the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure from the IPFQR Program beginning with the FY 2026 payment determination. This measure and the associated information collection burden was previously finalized in the FY 2022 IPF PPS final rule and is approved under OMB control number 0920–1317 (86 FR 42668 and 42669). IPFs have the option to manually enter data directly into the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN) web-based application or by uploading a CSV file. CDC estimates that each IPF requires between 40 minutes (0.67 hours) to upload a CSV file and 45 minutes (0.75 hours) monthly to enter the data manually. Therefore, we estimate that this proposal would result in a decrease in burden of between 12,768 hours (0.67 hours × 12 months × 1,596 IPFs) and 14,364 hours (0.75 hours × 12 months × 1,596 IPFs) annually across all 1,596 IPFs. While there is no information collection burden associated with this measure under OMB control number 0938–0050, we have included the removal of this measure in Table 8 to be consistent with the measure's inclusion in Table 6.

In section IV.E. of this proposed rule, we propose to remove the Screening for Social Drivers of Health and Screen Positive Rate for Social Drivers of Health measures from the IPFQR Program beginning with the FY 2026 payment determination. These measures and the associated information collection burden were previously finalized in the FY 2023 IPF PPS final rule and are approved under OMB control number 0938–1171 (88 FR 51150 through 51153). With regard to the Screening for Social Drivers of Health measure, there are two components: patient screening for five health related social needs domains and IPF submission of aggregated IPF-level measure data. For the Screen Positive Rate for Social Drivers of Health measure, IPFs are required to report on an annual basis the number of patients who screen positive for one or more of the five Social Drivers of Health domains divided by the total number of patients screened (reported as five separate rates). With regard to patient screening, the currently approved burden estimate under OMB control number 0938–1171 for the FY 2026 payment determination and subsequent years is 66,414 hours annually for 2,012,556 patients (0.033 hours × 2,012,556 patients). With regard to measure reporting, due to data submission being voluntary for the FY 2026 payment determination, the currently approved burden estimate is 133 hours annually across 798 IPFs (0.167 hours × 798 IPFs) per measure. For mandatory data submission in the FY 2027 payment determination and subsequent years, the currently approved burden estimate is 267 hours annually across 1,596 IPFs (0.167 hours × 1,596 IPFs) per measure. Therefore, we estimate that this proposal would result in a decrease in burden of 66,680 hours (66,414 + 133 + 133) annually across all 1,596 IPFs for the FY 2026 payment determination and 66,948 hours (66,414 + 267 + 267) annually across all 1,596 IPFs for the FY 2027 payment determination and subsequent years. These estimates are summarized in Tables 8 through 10.

In section IV.F. of this proposed rule, we propose updates to our codified ECE policy. Because the process for requesting or granting an ECE would remain the same as the current ECE process, these updates would not affect burden associated with the submission of the ECE form, which is accounted for under OMB control number 0938–1022 (expiration date April 30, 2027).

In total, for CY 2026 we estimate a decrease in burden of 66,947 hours (267 + 66,414 + 133 + 133) at a savings of $1,731,712 ($14,761 + $1,702,191 + $7,380 + $7,380). We estimate that beginning with CY 2027 the savings will increase to a total reduction in burden of 67,215 (267 + 66,414 + 267 + 267) hours at a savings of $1,746,474 ($14,761 + $1,702,191 + $14,761 + $14,761) associated with these proposals.

TABLE 8—TOTAL CY 2026 FACILITY INFORMATION COLLECTION BURDEN CHANGES

Measure/response description	Number respondents	Number of responses/ respondent	Total annual responses	Time per response (hrs)	Time per facility (hrs)	Total annual time (hrs)	Total annual cost ($)

Total	1,596	1,261	(2,012,556)	0.033	(41.6)	(66,414)	(1,702,191)

TABLE 10—TOTAL CY 2027 FACILITY INFORMATION COLLECTION BURDEN CHANGES

Measure/response description	Number respondents	Number of responses/ respondent	Total annual responses	Time per response (hrs)	Time per facility (hrs)	Total annual time (hrs)	Total annual cost ($)
Screening for Social Drivers of Health (Data Submission)	798	1	(798)	0.167	(0.167)	(133)	(7,380)
Screen Positive Rate for Social Drivers of Health	798	1	(798)	0.167	(0.167)	(133)	(7,380)
Total	798	1	(1,596)	0.167	(0.33)	(267)	(14,761)

We invite public comments on the proposed removal of the SDOH information collection requirements and whether our estimated burden reduction of 0.033 hours per patient and an annual decrease of 0.167 hours in burden per IPF for each measure is an accurate estimate.

C. Submission of PRA-Related Comments

We have submitted a copy of this proposed rule's information collection requirements to OMB for their review. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed above, please visit the CMS website at *https://www.cms.gov/regulationsand-guidance/legislation/paperworkreductionactof1995/pralisting,* or call the Reports Clearance Office at 410–786–1326.

We invite public comments on the modifications to previously finalized information collection requirements. If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** sections of this proposed rule and identify the rule (CMS–1831–P), the ICR's CFR citation, and OMB control number.

VI. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

This rule proposes updates to the prospective payment rates for Medicare inpatient hospital services provided by IPFs for discharges occurring during FY 2026 (October 1, 2025 through September 30, 2026). We are proposing to apply the proposed 2021-based IPF market basket increase for FY 2026 of 3.2 percent, reduced by the proposed productivity adjustment of 0.8 percentage point as required by section 1886(s)(2)(A)(i) of the Act for a proposed total FY 2026 payment rate update of 2.4 percent. In this proposed rule, we are proposing to update the outlier fixed dollar loss threshold amount, update the IPF labor-related share and update the IPF wage index to reflect the FY 2026 hospital inpatient wage index. Section 1886(s)(4) of the Act requires IPFs to report data in accordance with the requirements of the IPFQR Program for purposes of measuring and making publicly available information on health care quality; and links the quality data submission to the annual applicable percentage increase.

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866, ''Regulatory Planning and Review''; Executive Order 13132, ''Federalism''; Executive Order 13563, ''Improving Regulation and Regulatory Review''; Executive Order 14192, ''Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (Pub. L. 96–354); section 1102(b) of the Social Security Act; and section 202 of the Unfunded

Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select those regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, or the President's priorities.

A regulatory impact analysis (RIA) must be prepared for a regulatory action that is significant under section 3(f)(1) of E.O. 12866. We estimate that the total impact of these changes for FY 2026 payments compared to FY 2025 payments will be an increase of approximately $70 million. This reflects a $70 million increase from the proposed update to the payment rates (+$90 million from the proposed 2021-based IPF market basket increase of 3.2 percent, and −$20 million for the proposed productivity adjustment of 0.8 percentage point). Outlier payments are estimated to be approximately 2.0 percent in FY 2025 and to remain at 2.0 percent of total estimated IPF payments in FY 2026.

Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined that this rulemaking is ''significant,'' though not significant under section 3(f)(1) of Executive Order 12866. Nevertheless, because of the potentially substantial impact to IPF providers, we have prepared an RIA that to the best of our ability presents the costs and benefits of the rulemaking. OMB has reviewed these proposed regulations, and the Departments have provided the following assessment of their impact.

C. Detailed Economic Analysis

In this section, we discussed the historical background of the IPF PPS and the impact of the final rule on the Federal Medicare budget and on IPFs.

1. Budgetary Impact

As discussed in the RY 2005 and RY 2007 IPF PPS final rules, we applied a budget neutrality factor to the Federal per diem base rate and ECT payment per treatment to ensure that total estimated payments under the IPF PPS in the implementation period would equal the amount that would have been paid if the IPF PPS had not been implemented. This budget neutrality factor included the following components: outlier adjustment, stop loss adjustment, and the behavioral offset. As discussed in the RY 2009 IPF PPS notice (73 FR 25711), the stop-loss adjustment is no longer applicable under the IPF PPS.

As discussed in section III.D.4.c of this proposed rule, we propose to update the wage index and labor-related share in a budget neutral manner by applying a wage index budget neutrality factor to the Federal per diem base rate and ECT payment per treatment. In addition, as discussed in section III.D.9 of this proposed rule, we propose to apply a refinement standardization factor to the Federal per diem base rate and ECT payment per treatment to account for the proposed revisions to the adjustment factors for teaching status and for IPFs located in rural areas (as previously discussed in sections III.D.5 and III.D.6 of this proposed rule, and summarized in Addendum A), which must be made budget-neutrally. Therefore, the budgetary impact to the Medicare program of the proposed rule will be due to the proposed market basket increase for FY 2026 of 3.2 percent (see section III.A.2 of this proposed rule) reduced by the proposed productivity adjustment of 0.8 percentage point required by section 1886(s)(2)(A)(i) of the Act and the update to the outlier fixed dollar loss threshold amount.

We estimate that the FY 2026 impact will be a net increase of $70 million in payments to IPF providers. This reflects an estimated $70 million increase from the update to the payment rates. This estimate does not include the implementation of the required 2.0 percentage point reduction of the proposed market basket update factor for any IPF that fails to meet the IPF quality reporting requirements (as discussed in section III.B.3 of this proposed rule).

2. Impact on Providers

To show the impact on providers of the changes to the IPF PPS discussed in this proposed rule, we compared estimated payments under the IPF PPS rates and factors for FY 2026 versus those under FY 2025. We determined the percent change in the estimated FY 2026 IPF PPS payments compared to the estimated FY 2025 IPF PPS payments for each category of IPFs. In addition, for each category of IPFs, we have included the estimated percent change in payments resulting from the update to the outlier fixed dollar loss threshold amount; the revisions to the facility-level adjustment factors; the updated wage index data and labor-related share; and the market basket increase for FY 2026, as reduced by the productivity adjustment according to section 1886(s)(2)(A)(i) of the Act.

To illustrate the impacts of the proposed FY 2026 changes in this rule, our analysis begins with FY 2024 IPF PPS claims (based on the 2024 MedPAR claims, December 2024 update). We estimated FY 2025 IPF PPS payments using these 2024 claims, the finalized FY 2025 IPF PPS Federal per diem base rate and ECT per treatment amount, and the finalized FY 2025 IPF PPS patient and facility level adjustment factors (as published in the FY 2025 IPF PPS final rule (89 FR 64582)). We then estimated the FY 2025 outlier payments based on these simulated FY 2025 IPF PPS payments using the same methodology as finalized in the FY 2025 IPF PPS final rule (89 FR 64636 and 64637) where total outlier payments are maintained at 2 percent of total estimated FY 2025 IPF PPS payments.

Each of the following changes is added incrementally to this baseline model in order to isolate the effects of each change:

- The update to the outlier fixed dollar loss threshold amount.
- The revisions to facility-level adjustment factors for teaching status and for IPFs located in rural areas.
- The FY 2026 IPF wage index and the FY 2026 labor-related share.
- The proposed market basket increase for FY 2026 of 3.2 percent reduced by the proposed productivity adjustment of 0.8 percentage point in accordance with section 1886(s)(2)(A)(i) of the Act for a proposed payment rate update of 2.4 percent.

Our column comparison in Table 11 illustrates the percent change in payments from FY 2025 (that is, October 1, 2024, to September 30, 2025) to FY 2026 (that is, October 1, 2025, to September 30, 2026) including all the proposed payment policy changes.

TABLE 11—FY 2026 IPF PPS PAYMENT IMPACTS

Facility by type	Number of facilities	Outlier	Refinement of facility-level adjustments	Wage index FY26, labor-related share, and 5% cap	Total percent change [1]

Beds: 76+	70	−0.1	0.6	0.0	2.9

[1] This column includes the impact of the updates in columns (3) through (5) above, and of the proposed IPF market basket update factor for FY 2026 (3.2 percent), reduced by 0.8 percentage point for the productivity adjustment as required by section 1886(s)(2)(A)(i) of the Act.

3. Impact Results

Table 11 displays the results of our analysis. The table groups IPFs into the categories listed here based on characteristics provided in the Provider of Services file, the IPF PSF, and cost report data from the Healthcare Cost Report Information System:

- Facility Type.
- Location.
- Teaching Status Adjustment.
- Census Region.
- Size.

The top row of the table shows the overall impact on the 1,393 IPFs included in the analysis. In column 2, we present the number of facilities of each type that had information available in the PSF and had claims in the MedPAR dataset for FY 2024.

In column 3, we present the effects of the update to the outlier fixed dollar loss threshold amount. We estimate that IPF outlier payments as a percentage of total IPF payments are 2.0 percent in FY 2025. Therefore, we propose to adjust the outlier threshold amount to

maintain total estimated outlier payments equal to 2.0 percent of total payments in FY 2026. We note that there is no projected change in aggregate payments to IPFs, as indicated in the first row of column 3. The largest decrease in payments due to this change is estimated to be 0.1 percent for urban IPF units.

In column 4, we present the effects of the proposed revisions to the facility-level adjustment factors and the application of the refinement standardization factor that is discussed in section III.D.9 of this proposed rule. We estimate the largest payment increases would be for teaching IPFs with more than 30 percent interns and residents to beds. Conversely, we estimate that for-profit IPF hospitals in urban areas and IPFs with 25 to 49 beds would experience the largest payment decrease of 0.7 percent. Payments to IPF units in urban areas would increase by 0.4 percent, and payments to IPF units in rural areas would increase by 0.2 percent.

In column 5, we present the effects of the proposed budget-neutral update to the IPF wage index and the proposed labor-related share. In addition, this column includes the application of the 5-percent cap on any decrease to a provider's wage index from its wage index in the prior year as finalized in the FY 2023 IPF PPS final rule (87 FR 46856 through 46859). The change in this column represents the effect of using the concurrent hospital wage data as discussed in section III.D.4.c of this proposed rule. That is, the impact represented in this column reflects the proposed update from the FY 2025 IPF wage index to the proposed FY 2026 IPF wage index, which includes basing the FY 2026 IPF wage index on the FY 2026 pre-floor, pre-reclassified IPPS hospital wage index data, applying a 5-percent cap on any decrease to a provider's wage index from its wage index in the prior year, and updating the labor-related share from 78.8 percent in FY 2025 to 78.9 percent in FY 2026. We note that there is no projected change in aggregate payments to IPFs, as indicated in the first row of column 5; however, there would be distributional effects among different categories of IPFs. For example, we estimate the largest increase in payments to be 1.2 percent for IPFs located in the West North Central region, and the largest decrease in payments to be 0.9 percent for freestanding rural non-profit IPFs.

Overall, IPFs are estimated to experience a net increase in payments of 2.4 percent as a result of the updates in this proposed rule. IPF payments are therefore estimated to increase by 2.4 percent in urban areas and 2.2 percent in rural areas. The largest payment increase is estimated at 12.3 percent for teaching IPFs with more than 30 percent interns and residents to beds.

4. Effect on Beneficiaries

Under the FY 2026 IPF PPS, IPFs would continue to receive payment based on the average resources consumed by patients for each day. Our longstanding payment methodology reflects the differences in patient resource use and costs among IPFs, as required under section 124 of the BBRA. We expect that updating IPF PPS rates in this rule would improve or maintain beneficiary access to high quality care by ensuring that payment rates reflect the best available data on the resources involved in inpatient psychiatric care and the costs of these resources. We continue to expect that paying prospectively for IPF services under the FY 2026 IPF PPS will enhance the efficiency of the Medicare program.

5. Effects of the Proposed Updates to the IPFQR Program

In section IV.B. of this rule, we propose to begin use of the IPF ED Visit measure in the IPFQR Program with the FY 2029 payment determination instead of the FY 2027 payment determination, and to modify the reporting period for the IPF ED Visit measure to a 2-year reporting period that runs from July 1st 4 years prior to the applicable fiscal year payment determination to June 30th 2 years prior to the applicable fiscal year payment determination. While this proposed modification may allow providers additional time to incorporate changes to IPF workflows and clinical processes to improve care coordination and discharge planning, we do not expect any additional effects beyond those discussed in the FY 2025 IPF PPS final rule (89 FR 64672).

In section IV.C. of this rule, we propose to remove the Facility Commitment to Health Equity measure beginning with the FY 2026 payment determination. Because this measure requires IPFs to attest yes or no if they have in place certain structures or processes of care, we do not expect the removal of this measure to impact providers beyond reduction in information collection costs.

In section IV.D. of this rule, we propose to remove the COVID–19 Vaccination Coverage Among HCP measure beginning with the FY 2026 payment determination. Because this measure requires IPFs to track current vaccination status for all employees, licensed independent practitioners, adult students/trainers and volunteers, and other contract personnel and report the data monthly to NHSN, we expect the removal of this measure to reduce information collection burden on providers.

In section IV.E. of this rule, we propose to remove the Screening for Social Drivers of Health and Screen Positive Rate for Social Drivers of Health measures from the IPFQR Program beginning with the FY 2026 payment determination. Because this measure requires IPFs to screen patients for five health related social needs domains and submit aggregated IPF-level measure data, we expect the removal of this measure to reduce information collection burden on providers and patients.

In section IV.G. of this rule, we propose updates to our ECE policy. Because the process for requesting or granting an ECE would remain the same as the current ECE process, we do not expect these updates to impact providers.

In accordance with section 1886(s)(4)(A) of the Act, we would apply a 2-percentage point reduction to the FY 2026 market basket update for IPFs that have failed to comply with the IPFQR Program requirements for the FY 2026 payment determination, including reporting on the mandatory measures. For the FY 2025 payment determination, of the 1,514 IPFs eligible for the IPFQR Program, 126 IPFs did not receive the full IPF market basket update because of the IPFQR Program; 40 of these IPFs chose not to participate and 86 did not meet the requirements of the program. We intend to closely monitor the effects of the IPFQR Program on IPFs and help facilitate successful reporting outcomes through ongoing education, national trainings, and a technical help desk.

6. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret the proposed rule, we should estimate the cost associated with the regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on last year's proposed rule (that is, 69 commenters) will be the number of reviewers of this proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons we thought that

the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcome any comments on the approach in estimating the number of entities which will review this proposed rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this proposed rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We seek comments on this assumption.

Using the May, 2023 mean (average) wage information from the Bureau of Labor Statistics (BLS) for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $129.28 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/2023/may/oes119111.htm*). (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed of 250 words per minute, we estimate that it would take approximately 1.23 hours for the staff to review half of this proposed rule which contains a total of approximately 37,000 words. For each entity that reviews the rule, the estimated cost is $159.01 (1.23 hours × $129.28). Therefore, we estimate that the total cost of reviewing this regulation is $10,971.69 ($159.01 × 69).

D. Alternatives Considered

The statute gives the Secretary discretion in establishing an update methodology to the IPF PPS. We continued to believe it is appropriate to routinely update the IPF PPS so that it reflects the best available data about differences in patient resource use and costs among IPFs, as required by the statute. Therefore, we are proposing updates to the IPF PPS using the methodology published in the RY 2005 IPF PPS final rule (our ''standard methodology''), pre-floor, pre-reclassified IPPS hospital wage index as its basis. Additionally, we apply a 5-percent cap on any decrease to a provider's wage index from its wage index in the prior year. In addition, we are proposing to revise the facility-level adjustment factors for teaching status and for IPFs located in rural areas. We also considered, but did not propose, maintaining the existing adjustment factors for teaching status and for IPFs located in rural areas. However, for the reasons discussed earlier in this proposed rule, we believe it would be more appropriate to propose updating these adjustment factors based on the results of our latest available analysis.

Lastly, as discussed in section III.D.7 of this proposed rule, we are proposing to maintain the existing COLA factors for IPFs located in Alaska and Hawaii. We considered, but did not propose, updating the COLA factors for IPFs based on the results of our existing methodology. However, as discussed earlier in this proposed rule; in order to maintain consistency in payments for IPFs and other hospitals located in Alaska and Hawaii, we are proposing for FY 2026 to maintain the existing COLA factors that are applicable for FY 2025.

E. Accounting Statement

Consistent with OMB Circular A–4 (available at *https://trumpwhitehouse.archives.gov/sites/whitehouse.gov/files/omb/circulars/A4/a-4.pdf*), in Table 12, we have prepared an accounting statement showing the classification of the expenditures associated with the updates to the IPF wage index and payment rates in this proposed rule. Table 12 provides our best estimate of the increase in Medicare payments under the IPF PPS as a result of the changes presented in this proposed rule and is based on 1,393 IPFs that had data available in the PSF and claims in our FY 2024 MedPAR claims dataset. Lastly, Table 12 also includes our best estimate of the costs of reviewing and understanding this proposed rule.

TABLE 12—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, SAVINGS, AND TRANSFERS

Category	Primary estimate ($million/year)	Year dollars	Period covered
Regulatory Review Costs	0.01	2025	FY 2026.
IPFQR Information Collection Burden	−1.72	2025	FY 2026.
Annualized Monetized Transfers from Federal Government to IPF Medicare Providers	70	2025	FY 2026.

F. Regulatory Flexibility Act (RFA)

The RFA requires agencies to analyze options for regulatory relief of small entities if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the Small Business Administration (SBA) definition of a small business (having revenues of less than $47 million in any 1 year).

According to the SBA's website at *http://www.sba.gov/content/small-business-size-standards,* IPFs fall into the North American Industrial Classification System (NAICS) code 622210, Psychiatric and Substance Abuse hospitals. The SBA defines small Psychiatric and Substance Abuse hospitals as businesses having less than $47 million in total annual revenue.

As discussed earlier in this proposed rule, the only costs imposed by this proposed rule are the regulatory review costs, which we estimate at $159.01 per IPF. However, as discussed in section V.B.3 of this proposed rule, our proposals to remove the Facility Commitment to Health Equity, Screening for Social Drivers of Health, and Screen Positive Rate for Social Drivers of Health measures from the IPFQR Program result in an estimated decrease in cost of $1,794 per IPF. As a result, there are negative costs (that is, savings) of $935 per IPF imposed as a result of this proposed rule.

Source: U.S. Census 2017 SUSB.

According to Table 14, 213 psychiatric and substance abuse hospitals can be considered small according to the SBA. As we stated earlier, the SBA defines small Psychiatric and Substance Abuse hospitals as businesses having less than $47 million in total annual revenue. We note that Tables 14 and 15 show revenue up to $49.9 million since the data does not provide the exact estimate for $47 million. Table 14 shows that there are 181 Psychiatric and Substance Abuse hospitals that earn revenue in excess of $49 million.

As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. For the purposes of the RFA, as can be seen in Table 14, we estimate that average revenue for the small Psychiatric and Substance Abuse hospitals is only 0.2 percent ($20,634,779.34/$125,433,331.83) of the average revenue earned in the industry. Furthermore, according to the IPF database with 1,392 small Psychiatric and Substance Abuse hospitals, and for the purposes of the RFA, we estimate that approximately 0.2 percent (213/1,392) of small Psychiatric and Substance Abuse hospitals are small entities as that term is used in the RFA. As shown in Table 15, 100 percent of these small Psychiatric and Substance Abuse hospitals would reduce costs as opposed to incurring any costs that would have an impact on their revenue. That is, there would be no revenue impact on this industry.

According to Table 15, this proposed rule would have a 0.00 percent impact on small Psychiatric and Substance Abuse hospitals. As such, we believe that the threshold for significant economic impact on a substantial number of small entities will not be reached by the requirements in this proposed rule. Therefore, the Secretary has certified that this proposed rule will *not have a significant* economic impact on the small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds.

As discussed in section VII.C.2 of this proposed rule, the rates and policies set forth in this proposed rule will not have an adverse impact on the rural hospitals

based on the data of the 184 rural excluded psychiatric units and 61 rural psychiatric hospitals in our database of 1,393 IPFs for which data were available. Therefore, the Secretary has determined that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

G. Unfunded Mandate Reform Act (UMRA)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately $187 million. This proposed rule does not mandate any requirements for State, local, or tribal governments, or for the private sector. This proposed rule will not impose a mandate that will result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of more than $187 million in any 1 year.

H. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This proposed rule does not impose substantial direct costs on state or local governments or preempt State law.

I. E.O. 14192, ''Unleashing Prosperity Through Deregulation''

Executive Order 14192, entitled ''Unleashing Prosperity Through Deregulation'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations.'' This proposed rule, if finalized as proposed, is expected to be considered an E.O. 14192 deregulatory action. We estimate that this rule would generate $1.7 million in annualized cost savings at a 7 percent discount rate, discounted relative to year 2024, over a perpetual time horizon.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Stephanie Carlton, Acting Administrator of the Centers for Medicare & Medicaid Services, approved this document on April 8, 2025.

List of Subjects in 42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR part 412 as set forth below:

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 1. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 2. Section 412.433 is amended by revising paragraph (f) to read as follows:

§ 412.433 Procedural requirements under the IPFQR Program.

* * * * *

(f) *Extraordinary Circumstance Exception (ECE)*—(1) *General rule.* CMS may grant an extraordinary circumstance exception (ECE) with respect to the reporting requirements under this section in the event of extraordinary circumstances beyond the control of the IPF. For purposes of this paragraph (f), an extraordinary circumstance is an event beyond the control of an IPF (for example, a natural or man-made disaster such as a hurricane, tornado, earthquake, terrorist attack, or bombing) that affected the ability of the IPF to comply with one or more applicable reporting requirements with respect to a fiscal year.

(2) *Process for requesting an ECE.* (i) An IPF may request an ECE within 30 calendar days of the date that the extraordinary circumstance occurred by submitting the information specified by CMS at QualityNet or a successor website.

(ii) CMS notifies the IPF of its decision on the request, in writing, via email. In the event that CMS grants an ECE to the IPF, the written decision will specify whether the IPF is exempted from one or more reporting requirements or whether CMS has granted the IPF an extension of time to comply with one or more reporting requirements.

(3) *Authority to grant an ECE.* CMS may grant an ECE to one or more IPFs that have not requested an ECE if CMS determines that—

(i) A systemic problem with a CMS data collection system directly impacted the ability of the IPF to comply with a quality data reporting requirement; or

(ii) An extraordinary circumstance has affected an entire region or locale. Any ECE granted under this paragraph (f)(3) will specify whether the affected IPFs are exempted from one or more reporting requirements or whether CMS has granted the IPF an extension of time to comply with one or more reporting requirements.

42 CFR Part 412

[CMS–1829–P]

RIN 0938–AV48

Medicare Program; Inpatient Rehabilitation Facility Prospective Payment System for Federal Fiscal Year 2026 and Updates to the IRF Quality Reporting Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would update the prospective payment rates for inpatient rehabilitation facilities (IRFs) for Federal fiscal year (FY) 2026. As required by statute, this proposed rule includes the proposed classification and weighting factors for the IRF prospective payment system's case-mix groups and a description of the methodologies and data used in computing the prospective payment rates for FY 2026. It also continues the second year of the 3-year phaseout of the rural adjustment, which began in FY 2025. Additionally, the proposed rule includes updates to the IRF Quality Reporting Program (QRP).

DATES: To be assured consideration, comments must be received at one of the addresses provided below by June 10, 2025.

ADDRESSES: In commenting, please refer to file code CMS–1829–P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *https://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1829–P, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1829–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:

Patricia Taft, (410) 786–4561, for general information.

Kimberly Schwartz, (410) 786–2571, for information about the IRF payment policies, payment rates and coverage policies.

Ariel Cress, (410) 786–8571, for information about the IRF quality reporting program.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *https://www.regulations.gov.* Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Plain Language Summary: In accordance with 5 U.S.C. 553(b)(4), a plain language summary of this rule may be found at *https://www.regulations.gov/.*

Deregulation Request for Information (RFI): On January 31, 2025, President Trump issued Executive Order (E.O.) 14192 ''Unleashing Prosperity Through Deregulation,'' which states the Administration policy to significantly reduce the private expenditures required to comply with Federal regulations to secure America's economic prosperity and national security and the highest possible quality of life for each citizen. We would like public input on approaches and opportunities to streamline regulations and reduce administrative burdens on providers, suppliers, beneficiaries, and other stakeholders participating in the Medicare program. CMS has made available a Request for Information (RFI) at: *https://www.cms.gov/medicare-regulatory-relief-rfi.* Please submit all comments in response to this request for information through the provided weblink.

Availability of Certain Information Through the Internet on the CMS Website

The IRF prospective payment system (IRF PPS) Addenda along with other supporting documents and tables referenced in this proposed rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientRehabFacPPS.*

We note that prior to 2020, each rule or notice issued under the IRF PPS included a detailed reiteration of the various regulatory provisions that have affected the IRF PPS over the years. That discussion, which has been updated to reflect subsequent years, along with detailed background information for various other aspects of the IRF PPS, is now available on the CMS website at *https://www.cms.gov/files/document/irf-regulatory-and-legislative-history.pdf.*

Readers who experience any problems accessing any of these online IRF PPS documents should contact Kia Burwell at (410) 786–7816.

I. Executive Summary

A. Purpose

This proposed rule proposes to update the prospective payment rates for IRFs for FY 2026 (that is, for discharges occurring on or after October 1, 2025, and on or before September 30, 2026) under section 1886(j)(3)(C) of the Social Security Act (the Act). As required by section 1886(j)(5) of the Act, this proposed rule includes the classification and weighting factors for the IRF PPS's case-mix groups (CMGs), a description of the methodologies and data used in computing the prospective payment rates for FY 2026.

For the IRF QRP, this rule proposes to remove two quality measures: (1) the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure, beginning with the FY 2026 IRF QRP, and (2) the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure, beginning with the FY 2028 IRF QRP. Next, we propose to remove four Standardized Patient Assessment Data Elements under the Social Determinant of Health (SDOH) category with the FY2028 IRF QRP. We also propose to amend our reconsideration policy as described in section VII.D of this proposed rule. Finally, we include Requests for Information (RFIs) on four separate considerations: (1) future measure concepts for the IRF QRP in section

VII.E of this proposed rule; (2) potential revisions to the IRF-Patient Assessment Instrument (PAI) as described in section VII.F of this proposed rule; (3) potential revisions to the data submission deadlines for assessment data collected for the IRF QRP as described in section VII.G of this proposed rule; and (4) advancing digital quality measurement in IRFs as described in section V11.H of this proposed rule.

B. Summary of Major Provisions

In this proposed rule, we use the methods described in the FY 2025 IRF PPS final rule (89 FR 64276) to update the prospective payment rates for FY 2026 using the most current and complete data available at this time, which is FY 2024 IRF claims and FY 2023 IRF cost report data, as discussed in section IV.

For the IRF QRP, this rule proposes to remove two quality measures, remove four SDOH items and amend our reconsideration policy. We also include Requests for Information (RFIs) on four separate considerations.

C. Summary of Impact

TABLE 1—COST AND TRANSFERS

Provision description	Transfers/costs
FY 2026 IRF PPS payment rate update	The overall economic impact of this proposed rule is an estimated $295 million increase in payments from the Federal Government to IRFs during FY 2026.
FY 2026 IRF QRP changes	The overall economic impact of this proposed rule is an estimated decrease in costs of $504,929.84 for IRFs for proposed measure removal in VII.C.1. and revisions to reconsiderations policy in VII.E. beginning with the FY 2026 IRF QRP.
FY 2028 IRF QRP changes	The overall economic impact of this proposed rule is an estimated decrease in costs of $1,090,580.75 to IRFs for proposed measure and item removals in VII.C.2 and VII.D. beginning with the FY 2028 IRF QRP.

II. Background

A. Statutory Basis and Scope for IRF PPS Provisions

Section 1886(j) of the Act provides for the implementation of a per-discharge PPS for inpatient rehabilitation hospitals and inpatient rehabilitation units of a hospital (collectively, hereinafter referred to as IRFs). Payments under the IRF PPS encompass inpatient operating and capital costs of furnishing covered rehabilitation services (that is, routine, ancillary, and capital costs), but not direct graduate medical education costs, costs of approved nursing and allied health education activities, bad debts, and other services or items outside the scope of the IRF PPS. A complete discussion of the IRF PPS provisions appears in the original FY 2002 IRF PPS final rule (66 FR 41316) and the FY 2006 IRF PPS final rule (70 FR 47880) and we provided a general description of the IRF PPS for FYs 2007 through 2019 in the FY 2020 IRF PPS final rule (84 FR 39055 through 39057). A general description of the IRF PPS for FYs 2020 through 2025, along with detailed background information for various other aspects of the IRF PPS, is now available on the CMS website at *https://www.cms.gov/files/document/irf-regulatory-and-legislative-history.pdf.*

Under the IRF PPS from FY 2002 through FY 2005, the prospective payment rates were computed across 100 distinct CMGs, as described in the FY 2002 IRF PPS final rule (66 FR 41316). We constructed 95 CMGs using rehabilitation impairment categories (RICs), functional status (both motor and cognitive), and age (in some cases, cognitive status and age may not be a factor in defining a CMG). In addition, we constructed five special CMGs to account for very short stays and for patients who expire in the IRF.

For each of the CMGs, we developed relative weighting factors to account for a patient's clinical characteristics and expected resource needs. Thus, the weighting factors accounted for the relative difference in resource use across all CMGs. Within each CMG, we created tiers based on the estimated effects that certain comorbidities would have on resource use.

We established the Federal PPS rates using a standardized payment conversion factor (formerly referred to as the budget-neutral conversion factor). For a detailed discussion of the budget-neutral conversion factor, please refer to our FY 2004 IRF PPS final rule (68 FR 45684 through 45685). In the FY 2006 IRF PPS final rule (70 FR 47880), we discussed in detail the methodology for determining the standard payment conversion factor.

We applied the relative weighting factors to the standard payment conversion factor to compute the unadjusted prospective payment rates under the IRF PPS from FYs 2002 through 2005. Within the structure of the payment system, we then made adjustments to account for interrupted stays, transfers, short stays, and deaths. Finally, we applied the applicable adjustments to account for geographic variations in wages (wage index), the percentage of low-income patients, location in a rural area (if applicable), and outlier payments (if applicable) to the IRFs' unadjusted prospective payment rates.

For cost reporting periods that began on or after January 1, 2002, and before October 1, 2002, we determined the final prospective payment amounts using the transition methodology prescribed in section 1886(j)(1) of the Act. Under this provision, IRFs transitioning into the PPS were paid a blend of the Federal IRF PPS rate and the payment that the IRFs would have received had the IRF PPS not been implemented. This provision also allowed IRFs to elect to bypass this blended payment and immediately be paid 100 percent of the Federal IRF PPS rate. The transition methodology expired as of cost reporting periods beginning on or after October 1, 2002 (FY 2003), and payments for all IRFs now consist of 100 percent of the Federal IRF PPS rate.

Section 1886(j) of the Act confers broad statutory authority upon the Secretary to propose refinements to the IRF PPS. In the FY 2006 IRF PPS final rule (70 FR 47880) and in correcting amendments to the FY 2006 IRF PPS final rule (70 FR 57166), we finalized a number of refinements to the IRF PPS case-mix classification system (the CMGs and the corresponding relative weights) and the case-level and facility-level adjustments. These refinements included the adoption of the Office of Management and Budget's (OMB's) Core-Based Statistical Area market definitions; modifications to the CMGs, tier comorbidities; and CMG relative weights, implementation of a new teaching status adjustment for IRFs; rebasing and revising the market basket used to update IRF payments, and updates to the rural, low-income percentage (LIP), and high-cost outlier

adjustments. Beginning with the FY 2006 IRF PPS final rule (70 FR 47908 through 47917), the market basket used to update IRF payments was a market basket reflecting the operating and capital cost structures for freestanding IRFs, freestanding inpatient psychiatric facilities (IPFs), and long-term care hospitals (LTCHs). Any reference to the FY 2006 IRF PPS final rule in this proposed rule also includes the provisions effective in the correcting amendments. For a detailed discussion of the final key policy changes for FY 2006, please refer to the FY 2006 IRF PPS final rule.

In response to COVID–19 Public Health Emergency (PHE), we published two interim final rules with comment period affecting IRF payment and conditions for participation. The interim final rule with comment period (IFC) entitled ''Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency,'' published on April 6, 2020 (85 FR 19230) (hereinafter referred to as the April 6, 2020 IFC), included certain changes to the IRF PPS medical supervision requirements at 42 CFR 412.622(a)(3)(iv) and 412.29(e) during the PHE for COVID–19. In addition, in the April 6, 2020 IFC, we removed the post-admission physician evaluation requirement at § 412.622(a)(4)(ii) for all IRFs during the PHE for COVID–19. In the FY 2021 IRF PPS final rule, to ease documentation and administrative burden, we permanently removed the post-admission physician evaluation documentation requirement at § 412.622(a)(4)(ii) beginning in FY 2021.

A second IFC, entitled ''Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program,'' was published on May 8, 2020 (85 FR 27550) (hereinafter referred to as the May 8, 2020 IFC). Among other changes, the May 8, 2020 IFC included a waiver of the ''3-hour rule'' at § 412.622(a)(3)(ii) to reflect the waiver required by section 3711(a) of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116–136, enacted on March 27, 2020). In the May 8, 2020 IFC, we also modified certain IRF coverage and classification requirements for freestanding IRF hospitals to relieve acute care hospital capacity concerns in States (or regions, as applicable) experiencing a surge during the PHE for COVID–19. In addition to the policies adopted in our IFCs, we responded to the PHE with numerous blanket waivers [1] and other flexibilities,[2] some of which are applicable to the IRF PPS. CMS finalized these policies in the Calendar Year 2023 Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems final rule with comment period (87 FR 71748). Subsequently, on May 11, 2023, the U.S. Department of Health and Human Services (''HHS'') declared the expiration of the COVID–19 public health emergency. (See *https://www.hhs.gov/about/news/2023/02/09/fact-sheet-covid-19-public-health-emergency-transition-roadmap.html.*) As a result, the ''3-hour rule'' waiver at § 412.622(a)(3)(ii), and other IRF flexibilities were terminated.

The regulatory history previously included in each rule or notice issued under the IRF PPS, including a general description of the IRF PPS for FYs 2007 through 2025, is available on the CMS website at *https://www.cms.gov/files/document/irf-regulatory-and-legislative-history.pdf.*

B. Provisions of the Affordable Care Act and the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) Affecting the IRF PPS in FY 2012 and Beyond

The Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted on March 23, 2010. The Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), which amended and revised several provisions of the Patient Protection and Affordable Care Act, was enacted on March 30, 2010. In this proposed rule, we refer to the two statutes collectively as the ''Affordable Care Act'' or ''ACA''.

The ACA included several provisions that affect the IRF PPS in FYs 2012 and beyond. In addition to what was previously discussed, section 3401(d) of the ACA also added section 1886(j)(3)(C)(ii)(I) of the Act (providing for a ''productivity adjustment'' for FY 2012 and each subsequent FY). The productivity adjustment for FY 2026 is discussed in section V.B. of this proposed rule. Section 1886(j)(3)(C)(ii)(II) of the Act provides that the application of the productivity adjustment to the market basket percentage increase may result in an update that is less than 0.0 for a FY and in payment rates for a FY being less than such payment rates for the preceding FY.

Section 3004(b) of the ACA and section 411(b) of the MACRA (Pub. L. 114–10, enacted on April 16, 2015) also addressed the IRF PPS. Section 3004(b) of ACA reassigned the previously designated section 1886(j)(7) of the Act to section 1886(j)(8) of the Act and inserted a new section 1886(j)(7) of the Act, which contains requirements for the Secretary to establish a QRP for IRFs. Under that program, data must be submitted in a form and manner and at a time specified by the Secretary. Beginning in FY 2014, section 1886(j)(7)(A)(i) of the Act requires the application of a 2-percentage point reduction to the IRF market basket percentage increase otherwise applicable to an IRF (after application of paragraphs (C)(iii) and (D) of section 1886(j)(3) of the Act) for a FY if the IRF does not comply with the requirements of the IRF QRP for that FY. Application of the 2-percentage point reduction may result in an update that is less than 0.0 for a FY and in payment rates for a FY being lower than payment rates for the preceding FY. Reporting-based reductions to the IRF market basket percentage increase are not cumulative; they only apply for the FY involved. Section 411(b) of the MACRA amended section 1886(j)(3)(C) of the Act by adding paragraph (iii), which required us to apply for FY 2018, after the application of section 1886(j)(3)(C)(ii) of the Act, an increase factor of 1.0 percent to update the IRF prospective payment rates.

C. Operational Overview of the Current IRF PPS

As described in the FY 2002 IRF PPS final rule (66 FR 41316), upon the admission and discharge of a Medicare Part A fee-for-service (FFS) patient, the IRF is required to complete the appropriate sections of a Patient Assessment Instrument (PAI), designated as the IRF–PAI. In addition, beginning with IRF discharges occurring on or after October 1, 2009, the IRF is also required to complete the appropriate sections of the IRF–PAI upon the admission and discharge of each Medicare Advantage (MA) patient, as described in the FY 2010 IRF PPS final rule (74 FR 39762) and the FY 2010 IRF PPS correction notice (74 FR 50712). All required data must be electronically encoded into the IRF–PAI software product. Generally, the software product includes patient classification programming called the Grouper software. The Grouper software

[1] CMS, ''COVID–19 Emergency Declaration Blanket Waivers for Health Care Providers,'' (updated Feb. 19, 2021) (available at *https://www.cms.gov/files/document/summary-covid-19-emergency-declaration-waivers.pdf*).

[2] CMS, ''COVID–19 Frequently Asked Questions (FAQs) on Medicare Fee-for-Service (FFS) Billing,'' (updated March 5, 2021) (available at *https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf*).

uses specific IRF–PAI data elements to classify (or group) patients into distinct CMGs and account for the existence of any relevant comorbidities.

The Grouper software produces a five-character CMG number. The first character is an alphabetic character that indicates the comorbidity tier. The last four characters are numeric characters that represent the distinct CMG number. A free download of the Grouper software is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientRehabFacPPS/Software.html.* The Grouper software is also embedded in the internet Quality Improvement and Evaluation System (iQIES) User tool available in iQIES at *https://www.cms.gov/medicare/quality-safety-oversight-general-information/iqies.*

Once a Medicare Part A FFS patient is discharged, the IRF submits a Medicare claim as a Health Insurance Portability and Accountability Act of 1996 (HIPAA) (Pub. L. 104–191, enacted on August 21, 1996) compliant electronic claim or, if the Administrative Simplification Compliance Act of 2002 (ASCA) (Pub. L. 107–105, enacted on December 27, 2002) permits, a paper claim (a UB–04 or a CMS–1450 as appropriate) using the five-character CMG number and sends it to the appropriate Medicare Administrative Contractor (MAC). In addition, once a MA patient is discharged, in accordance with the Medicare Claims Processing Manual, chapter 3, section 20.3 (Pub. 100–04), hospitals (including IRFs) must submit to their MAC an informational-only bill (type of bill (TOB) 111) that includes Condition Code 04. This will ensure that the MA days are included in the hospital's Supplemental Security Income (SSI) ratio (used in calculating the IRF LIP adjustment) for FY 2007 and beyond. Claims submitted to Medicare must comply with- both ASCA and HIPAA.

Section 3 of the ASCA amended section 1862(a) of the Act by adding paragraph (22), which requires the Medicare program, subject to section 1862(h) of the Act, to deny payment under Part A or Part B for any expenses for items or services for which a claim is submitted other than in an electronic form specified by the Secretary. Section 1862(h) of the Act, in turn, provides that the Secretary shall waive such denial in situations in which there is no method available for the submission of claims in an electronic form or the entity submitting the claim is a small provider. In addition, the Secretary also has the authority to waive such denial in such unusual cases as the Secretary finds appropriate. For more information, see the ''Medicare Program; Electronic Submission of Medicare Claims'' final rule (70 FR 71008). Our instructions for the limited number of Medicare claims submitted on paper are available at *https://www.cms.gov/manuals/downloads/clm104c25.pdf.*

Section 3 of the ASCA operates in the context of the administrative simplification provisions of HIPAA, which include, among others, the requirements for transaction standards and code sets codified in 45 CFR part 160 and part 162, subparts A and I through R (generally known as the Transactions Rule). The Transactions Rule requires covered entities, including covered healthcare providers, to conduct covered electronic transactions according to the applicable transaction standards. (See the CMS program claim memoranda at *https://www.cms.gov/ElectronicBillingEDITrans/* and listed in the addenda to the Medicare Intermediary Manual, Part 3, section 3600.)

The MAC processes the claim through its software system. This software system includes pricing programming called the ''Pricer'' software. The Pricer software uses the CMG number, along with other specific claim data elements and provider-specific data, to adjust the IRF's prospective payment for interrupted stays, transfers, short stays, and deaths, and then applies the applicable adjustments to account for the IRF's wage index, percentage of low-income patients, rural location, and outlier payments. For discharges occurring on or after October 1, 2005, the IRF PPS payment also reflects the teaching status adjustment that became effective as of FY 2006, as discussed in the FY 2006 IRF PPS final rule (70 FR 47880).

III. Summary of Provisions of the Proposed Rule

The proposed updates to the IRF prospective payment rates for FY 2026 are as follows:

- Update the CMG relative weights and average length of stay values for FY 2026 in a budget neutral manner, as discussed in section IV.
- Update the IRF PPS payment rates for FY 2026 by the IRF market basket percentage increase, based upon the most current data available, with a productivity adjustment required by section 1886(j)(3)(C)(ii)(I) of the Act, as described in section V.
- Update the FY 2026 IRF PPS payment rates by the FY 2026 wage index, applying the second year of the phase-out of the rural adjustment for IRFs transitioning from rural to urban, and the labor-related share in a budget-neutral manner, as discussed in section V.
- Describe the calculation of the IRF standard payment conversion factor for FY 2026, as discussed in section V.
- Update the outlier threshold amount for FY 2026, as discussed in section VI.
- Update the cost-to-charge ratio (CCR) ceiling and urban/rural average CCRs for FY 2026, as discussed in section VI.

The proposed policy changes and updates to the IRF QRP for FY 2026 will be as follows:

- Remove the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure.
- Amend the Reconsideration Policy.

The proposed policy changes and updates to the IRF QRP for FY 2028 will be as follows:

- Remove the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure.
- Remove four SDOH standardized patient assessment data elements items from the IRF–PAI.
- Request for information on future measure concepts for the IRF QRP.
- Request for information on potential revisions to the IRF–PAI.
- Request for information on potential revisions to the data submission deadlines for assessment data collected for the IRF QRP.
- Request for information on advancing digital quality measurement in IRFs.

IV. Proposed Updates to the Case-Mix Group (CMG) Relative Weights and Average Length of Stay (ALOS) Values for FY 2026

As specified in § 412.620(b)(1), we calculate a relative weight for each CMG that is proportional to the resources needed for an average inpatient rehabilitation case in that CMG. For example, cases in a CMG with a relative weight of 2, on average, will cost twice as much as cases in a CMG with a relative weight of 1. Relative weights account for the variance in cost per discharge due to the variance in resource utilization among the payment groups, and their use helps to ensure that IRF PPS payments support beneficiary access to care, as well as provider efficiency.

In this proposed rule, we propose to update the CMG relative weights and ALOS values for FY 2026. Typically, we use the most recent available data to update the CMG relative weights and ALOS values. For FY 2026, we are proposing to use the FY 2024 IRF claims

and FY 2023 IRF cost report data (CMS Form 2552–10, OMB No 0938–0050). These are the most current and complete data available at this time. Currently, only a small portion of the FY 2024 IRF cost report data is available for analysis, but the majority of the FY 2024 IRF claims data are available for analysis. We are also proposing that if more recent data become available after the publication of the proposed rule and before the publication of the final rule, we will use such data to determine the FY 2026 CMG relative weights and ALOS values in the final rule.

We are proposing to apply these data using the same methodologies that we have used to update the CMG relative weights and ALOS values each FY since we implemented an update to the methodology. The detailed cost-to-charge ratio (CCR) data from the cost reports of IRF provider units of primary acute care hospitals is used for this methodology, instead of CCR data from the associated primary care hospitals, to calculate IRFs' average costs per case, as discussed in the FY 2009 IRF PPS final rule (73 FR 46372). In calculating the CMG relative weights, we use a hospital-specific relative value method to estimate the operating (routine and ancillary services) and capital costs of IRFs. The process to calculate the CMG relative weights for this proposed rule is as follows:

Step 1. We estimate the effects that comorbidities have on costs.

Step 2. We adjust the cost of each Medicare discharge (case) to reflect the effects found in Step 1.

Step 3. We use the adjusted costs from Step 2 to calculate CMG relative weights, using the hospital-specific relative value method.

Step 4. We normalize the FY 2026 CMG relative weights using a normalization factor that results in the average CMG relative weights in FY 2026 being the same as the average CMG relative weights in the FY 2025 IRF PPS final rule (89 FR 64276).

Consistent with the methodology that we have used to update the IRF classification system in each instance in the past, we are proposing to update the CMG relative weights for FY 2026 in such a way that total estimated aggregate payments to IRFs for FY 2026 are the same with or without the changes (that is, in a budget-neutral manner) by applying a budget neutrality factor to the standard payment amount. To calculate the appropriate budget neutrality factor for use in updating the FY 2026 CMG relative weights, we use the following steps:

Step 1. Calculate the estimated total amount of IRF PPS payments for FY 2026 (with no changes to the CMG relative weights).

Step 2. Calculate the estimated total amount of IRF PPS payments for FY 2026 by applying the proposed changes to the CMG relative weights (as discussed in this proposed rule).

Step 3. Divide the amount calculated in Step 1 by the amount calculated in Step 2 to determine the budget neutrality factor of 0.9985 that would maintain the same total estimated aggregate payments in FY 2026 with and without the proposed changes to the final CMG relative weights.

Step 4. Apply the budget neutrality factor from Step 3 to the FY 2026 IRF PPS standard payment amount after the application of the budget-neutral wage adjustment factor.

In section V of this proposed rule, we discuss the proposed use of the existing methodology to calculate the proposed standard payment conversion factor for FY 2026.

In Table 2, ''Proposed Relative Weights and Average Length of Stay Values for Case-Mix Groups,'' we present the proposed CMGs, the comorbidity tiers, the corresponding relative weights, and the ALOS values for each CMG and tier for FY 2026. The ALOS for each CMG is used to determine when an IRF discharge meets the definition of a short stay transfer, which results in a per diem case level adjustment.

TABLE 2—PROPOSED RELATIVE WEIGHTS AND AVERAGE LENGTH OF STAY VALUES FOR THE CASE-MIX-GROUPS

Generally, updates to the CMG relative weights result in some increases and some decreases to the CMG relative weight values. Table 3 shows how we estimate that the application of the proposed revisions for FY 2026 would affect particular CMG relative weight values, which would affect the overall distribution of payments within CMGs and tiers. We note that, because we propose to implement the CMG relative weight revisions in a budget-neutral manner (as previously described), total estimated aggregate payments to IRFs for FY 2026 would not be affected as a result of the proposed CMG relative weight revisions. However, the proposed revisions would affect the distribution of payments within CMGs and tiers.

TABLE 3—DISTRIBUTIONAL EFFECTS OF THE CHANGES TO THE CMG RELATIVE WEIGHTS

Percentage change in CMG relative weights	Number of cases affected	Percentage of cases affected
Increased by 15% or more	85	0.0
Increased by between 5% and 15%	2,490	0.6
Changed by less than 5%	434,616	99.2
Decreased by between 5% and 15%	791	0.2
Decreased by 15% or more	9	0.0

As shown in Table 3, 99.2 percent of all IRF cases are in CMGs and tiers that would experience less than a 5 percent change (either increase or decrease) in the CMG relative weight value as a result of the proposed revisions for FY 2026. The proposed changes in the ALOS values for FY 2026, compared with the FY 2025 ALOS values, are small and do not show any particular trends in IRF length of stay patterns.

We invite public comment on our proposed updates to the CMG relative weights and ALOS values for FY 2026.

V. Proposed FY 2026 IRF PPS Payment Update

A. Background

Section 1886(j)(3)(C) of the Act requires the Secretary to establish an increase factor that reflects changes over time in the prices of an appropriate mix of goods and services for which payment is made under the IRF PPS. According to section 1886(j)(3)(A)(i) of the Act, the increase factor shall be used to update the IRF prospective payment rates for each FY. Section 1886(j)(3)(C)(ii)(I) of the Act requires the application of the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Thus, in this proposed rule, we are updating the IRF PPS payments for FY 2026 by a market basket percentage increase as required by section 1886(j)(3)(C) of the Act based upon the most current data available, with a productivity adjustment as required by section 1886(j)(3)(C)(ii)(I) of the Act.

We have utilized various market baskets through the years in the IRF PPS. For a discussion of these market baskets, we refer readers to the FY 2016 IRF PPS final rule (80 FR 47046).

In FY 2016, we finalized the use of a 2012-based IRF market basket, using Medicare cost report data for both freestanding and hospital-based IRFs (80 FR 47049 through 47068). In FY 2020, we finalized a rebased and revised IRF market basket to reflect a 2016 base year. The FY 2020 IRF PPS final rule (84 FR 39071 through 39086) contains a complete discussion of the development of the 2016-based IRF market basket. Beginning with FY 2024, we finalized a rebased and revised IRF market basket to reflect a 2021 base year. The FY 2024 IRF PPS final rule (88 FR 50966 through 50988) contains a complete discussion of the development of the 2021-based IRF market basket.

B. Proposed FY 2026 Market Basket Update and Productivity Adjustment

1. Proposed FY 2026 Market Basket Update

For FY 2026 (that is, beginning October 1, 2025, and ending September 30, 2026), we are proposing to update the IRF PPS payments by a market basket percentage increase as required by section 1886(j)(3)(C) of the Act, with a productivity adjustment as required by section 1886(j)(3)(C)(ii)(I) of the Act. For FY 2026, we are proposing to use the same methodology described in the FY 2025 IRF PPS final rule (89 FR 64285 through 64286).

Consistent with historical practice, we are proposing to estimate the market basket update for the IRF PPS for FY 2026 based on IHS Global Inc.'s (IGI's) forecast using the most recent available data at the time of rulemaking. IGI is a nationally recognized economic and financial forecasting firm with which CMS contracts to forecast the components of the market baskets. Based on IGI's fourth quarter 2024 forecast with historical data through the third quarter of 2024, the proposed 2021-based IRF market basket percentage increase for FY 2026 is projected to be 3.4 percent. We are also proposing that if more recent data become available after the publication of the proposed rule and before the publication of the final rule (for example, a more recent estimate of the market basket percentage increase or productivity adjustment), we will use such data, if appropriate, to determine the FY 2026 IRF market basket update in the final rule.

2. Proposed FY 2026 Productivity Adjustment

According to section 1886(j)(3)(C)(i) of the Act, the Secretary shall establish an increase factor based on an appropriate percentage increase in a market basket of goods and services. Section 1886(j)(3)(C)(ii) of the Act requires that, after establishing the increase factor for a FY, the Secretary shall reduce such increase factor for FY 2012 and each subsequent FY, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi)(II) of the Act sets forth the definition of this productivity adjustment. The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business multifactor productivity (as projected by the Secretary for the 10-year period ending with the applicable FY, year, cost reporting period, or other annual period) (the ''productivity adjustment''). The U.S. Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measures of productivity for the U.S. economy. We note that previously the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act, was referred to by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021 release of productivity data, BLS replaced the term multifactor productivity (MFP) with total factor productivity (TFP). BLS noted that this is a change in terminology only and will not affect the data or methodology. As a result of this change, the productivity measure

referenced in section 1886(b)(3)(B)(xi)(II) is now published by BLS as private nonfarm business total factor productivity. However, as mentioned above, the data and methods are unchanged. Please see *www.bls.gov* for the BLS historical published TFP data. A complete description of IGI's TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information.* In addition, in the FY 2022 IRF final rule (86 FR 42374), we noted that effective with FY 2022 and forward, CMS changed the name of this adjustment to refer to it as the productivity adjustment rather than the MFP adjustment.

Using IGI's fourth quarter 2024 forecast, the 10-year moving average growth of TFP for FY 2026 is projected to be 0.8 percent. In accordance with section 1886(j)(3)(C) of the Act, we are proposing to base the FY 2026 IRF market basket percentage increase, on IGI's fourth quarter 2024 forecast of the 2021-based IRF market basket. We are proposing to then reduce the market basket percentage increase by the proposed productivity adjustment for FY 2026 of 0.8 percentage point (the 10-year moving average growth of TFP for the period ending FY 2026 based on IGI's fourth quarter 2024 forecast). Therefore, the proposed FY 2026 IRF market basket update is 2.6 percent (3.4 percent market basket percentage increase reduced by the 0.8 percentage point productivity adjustment). Furthermore, we are proposing that if more recent data subsequently become available after the publication of the proposed rule and before the publication of the final rule (for example, a more recent estimate of the market basket percentage increase and productivity adjustment), we would use such data, if appropriate, to determine the FY 2026 IRF market basket percentage increase and productivity adjustment in the final rule.

For FY 2026, the Medicare Payment Advisory Commission (MedPAC) recommends that we reduce IRF PPS payment rates by 7 percent.[3] As discussed, and in accordance with sections 1886(j)(3)(C) and 1886(j)(3)(D) of the Act, the Secretary is proposing to update the IRF PPS payment rates for FY 2026 by the proposed IRF market basket update of 2.6 percent. Section 1886(j)(3)(C) of the Act does not provide the Secretary with the authority to apply a different update factor to IRF PPS payment rates for FY 2026.

We invite public comment on our proposals for the FY 2026 market basket percentage increase and productivity adjustment.

C. Proposed Labor-Related Share for FY 2026

Section 1886(j)(6) of the Act specifies that the Secretary is to adjust the proportion (as estimated by the Secretary from time to time) of IRFs' costs that are attributable to wages and wage-related costs, of the prospective payment rates computed under section 1886(j)(3) of the Act, for area differences in wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the rehabilitation facility compared to the national average wage level for such facilities. The labor-related share is determined by identifying the national average proportion of total costs that are related to, influenced by, or vary with the local labor market. We are proposing to continue to classify a cost category as labor-related if the costs are labor-intensive and vary with the local labor market.

Based on our definition of the labor-related share and the cost categories in the 2021-based IRF market basket, we are proposing to calculate the labor-related share for FY 2026 as the sum of the FY 2026 relative importance of Wages and Salaries, Employee Benefits, Professional Fees: Labor-Related, Administrative and Facilities Support Services, Installation, Maintenance, and Repair Services, All Other: Labor-Related Services, and a portion of the Capital-Related relative importance from the 2021-based IRF market basket. For more details regarding the methodology for determining specific cost categories for inclusion in the 2021-based IRF labor-related share, see the FY 2024 IRF PPS final rule (88 FR 50985 through 50988).

The relative importance reflects the different rates of price change for these cost categories between the base year (2021) and FY 2026. We calculate the labor-related relative importance from the IRF market basket, and it approximates the labor-related portion of the total costs after taking into account historical and projected price changes between the base year and FY 2026. The price proxies that move the different cost categories in the market basket do not necessarily change at the same rate, and the relative importance captures these changes. Based on IGI's fourth quarter 2024 forecast of the 2021-based IRF market basket, the sum of the FY 2026 relative importance for Wages and Salaries, Employee Benefits, Professional Fees: Labor-Related, Administrative and Facilities Support Services, Installation Maintenance & Repair Services, and All Other: Labor-Related Services is 70.8 percent. We are proposing that the portion of Capital-Related costs that are influenced by the local labor market is 46 percent. Since the relative importance for Capital-Related costs was 8.1 percent of the 2021-based IRF market basket for FY 2026, we are proposing to take 46 percent of 8.1 percent to determine the labor-related share of Capital-Related costs for FY 2026 of 3.7 percent. Therefore, we are proposing a total labor-related share for FY 2026 of 74.5 percent (the sum of 70.8 percent for the proposed labor-related share of operating costs and 3.7 percent for the proposed labor-related share of Capital-Related costs). We are proposing that if more recent data subsequently become available after publication of the proposed rule and before the publication of the final rule (for example, a more recent estimate of the labor-related share), we will use such data, if appropriate, to determine the FY 2026 IRF labor-related share in the final rule.

Table 4 shows the current estimate of the proposed FY 2026 labor-related share and the FY 2025 final labor-related share using the 2021-based IRF market basket relative importance.

[3] *https://www.medpac.gov/wp-content/uploads/2025/03/Mar25_MedPAC_ReportToCongress_SEC.pdf.*

TABLE 4—FY 2026 PROPOSED IRF LABOR-RELATED SHARE AND FY 2025 IRF LABOR-RELATED SHARE

	FY 2026 proposed labor-related share [1]	FY 2025 final labor-related share [2]
Wages and Salaries	49.5	49.4
Employee Benefits	11.8	11.8
Professional Fees: Labor-Related [3]	5.5	5.5
Administrative and Facilities Support Services	0.7	0.7
Installation, Maintenance, and Repair Services	1.5	1.5
All Other: Labor-Related Services	1.8	1.8
Subtotal	70.8	70.7
Labor-related portion of Capital-Related (46%)	3.7	3.7
Total Labor-Related Share	74.5	74.4

[1] Based on the 2021-based IRF market basket relative importance, IGI's 4th quarter 2024 forecast.
[2] Based on the 2021-based IRF market basket relative importance as published in the **Federal Register** (89 FR 64276).
[3] Includes all contract advertising and marketing costs and a portion of accounting, architectural, engineering, legal, management consulting, and home office contract labor costs.

We invite public comment on the proposed labor-related share for FY 2026.

D. Proposed Wage Adjustment for FY 2026

1. Background

Section 1886(j)(6) of the Act requires the Secretary to adjust the proportion of rehabilitation facilities' costs attributable to wages and wage-related costs (as estimated by the Secretary from time to time) by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the rehabilitation facility compared to the national average wage level for those facilities. The Secretary is required to update the IRF PPS wage index on the basis of information available to the Secretary on the wages and wage-related costs to furnish rehabilitation services. Any adjustments or updates made under section 1886(j)(6) of the Act for a FY are made in a budget-neutral manner.

In the FY 2023 IRF PPS final rule (87 FR 47054 through 47056) we finalized a policy to apply a 5-percent cap on any decrease to a provider's wage index from its wage index in the prior year, regardless of the circumstances causing the decline. We amended IRF PPS regulations at § 412.624(e)(1)(ii) to reflect this permanent cap on wage index decreases. Additionally, we finalized a policy that a new IRF would be paid the wage index for the area in which it is geographically located for its first full or partial FY with no cap applied because a new IRF would not have a wage index in the prior FY. A full discussion of the adoption of this policy is found in the FY 2023 IRF PPS final rule.

For FY 2026, we propose to maintain the policies and methodologies described in the FY 2025 IRF PPS final rule (89 FR 64276) related to the labor market area definitions and the wage index methodology for areas with wage data. Thus, we propose to use the core based statistical areas (CBSAs) labor market area definitions and the FY 2026 pre-reclassification and pre-floor hospital wage index data. In accordance with section 1886(d)(3)(E) of the Act, the FY 2026 pre-reclassification and pre-floor hospital wage index is based on data submitted for hospital cost reporting periods beginning on or after October 1, 2021, and before October 1, 2022 (that is, FY 2022 cost report data).

In addition, we will continue to use the same methodology discussed in the FY 2008 IRF PPS final rule (72 FR 44299) to address those geographic areas in which there are no hospitals and, thus, no hospital wage index data on which to base the calculation for the FY 2026 IRF PPS wage index. For FY 2026, the only rural area without wage index data available is in North Dakota. For urban areas without specific hospital wage index data, we will continue using the average wage indexes of all urban areas within the State to serve as a reasonable proxy for the wage index of that urban CBSA as proposed and finalized in FY 2006 (70 FR 47927). For FY 2026, the only urban area without wage index data available is CBSA 25980, Hinesville Fort Stewart, GA.

We invite public comment on our proposals regarding the Wage Adjustment for FY 2026.

2. Core-Based Statistical Areas (CBSAs) for the FY 2026 IRF Wage Index

The wage index used for the IRF PPS is calculated using the pre-reclassification and pre-floor inpatient PPS (IPPS) wage index data and is assigned to the IRF on the basis of the labor market area in which the IRF is geographically located. IRF labor market areas are delineated based on the CBSAs established by the OMB. The CBSA delineations (which were implemented for the IRF PPS beginning with FY 2016) are based on revised OMB delineations issued on February 28, 2013, in OMB Bulletin No. 13–01. OMB Bulletin No. 1301 established-revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas in the United States and Puerto Rico based on the 2010 Census and provided guidance on the use of the delineations of these statistical areas using standards published in the June 28, 2010, **Federal Register** (75 FR 37246 through 37252). We refer readers to the FY 2016 IRF PPS final rule (80 FR 47068 through 47076) for a full discussion of our implementation of the OMB labor market area delineations beginning with the FY 2016 wage index.

Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. Additionally, OMB occasionally issues updates and revisions to the statistical areas in between decennial censuses to reflect the recognition of new areas or the addition of counties to existing areas. In some instances, these updates merge formerly separate areas, transfer components of an area from one area to another or drop components from an area. On July 15, 2015, OMB issued OMB Bulletin No. 15–01, which provides minor updates to and supersedes OMB Bulletin No. 13–01 that was issued on February 28, 2013. The attachment to OMB Bulletin No. 15–01 provides detailed information on the update to statistical areas since February 28, 2013. The updates provided in OMB Bulletin No. 15–01 are based on the application of the 2010 Standards for Delineating Metropolitan

and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2012, and July 1, 2013.

In the FY 2018 IRF PPS final rule (82 FR 36250 through 36251), we adopted the updates set forth in OMB Bulletin No. 15–01 effective October 1, 2017, beginning with the FY 2018 IRF wage index. For a complete discussion of the adoption of the updates set forth in OMB Bulletin No. 15–01, we refer readers to the FY 2018 IRF PPS final rule. In the FY 2019 IRF PPS final rule (83 FR 38527), we continued to use the OMB delineations that were adopted beginning with FY 2016 to calculate the area wage indexes, with updates set forth in OMB Bulletin No. 15–01 that we adopted beginning with the FY 2018 wage index.

On August 15, 2017, OMB issued OMB Bulletin No. 17–01, which provided updates to and superseded OMB Bulletin No. 15–01 that was issued on July 15, 2015. The attachments to OMB Bulletin No. 17–01 provide detailed information on the update to statistical areas since July 15, 2015, and are based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2014, and July 1, 2015. In the FY 2020 IRF PPS final rule (84 FR 39090 through 39091), we adopted the updates set forth in OMB Bulletin No. 17–01 effective October 1, 2019, beginning with the FY 2020 IRF wage index.

On April 10, 2018, OMB issued OMB Bulletin No. 18–03, which superseded the August 15, 2017, OMB Bulletin No. 17–01, and on September 14, 2018, OMB issued OMB Bulletin No. 18–04, which superseded the April 10, 2018 OMB Bulletin No. 18–03. These bulletins established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. A copy of this bulletin may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf.*

To this end, as discussed in the FY 2021 IRF PPS proposed (85 FR 22075 through 22079) and final (85 FR 48434 through 48440) rules, we adopted the revised OMB delineations identified in OMB Bulletin No. 1804 (available at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf*) beginning October 1, 2020, including a 1-year transition for FY 2021 under which we applied a 5-percent cap on any decrease in an IRF's wage index compared to its wage index for the prior fiscal year (FY 2020). The updated OMB delineations more accurately reflect the contemporary urban and rural nature of areas across the country, and the use of such delineations allows us to determine more accurately the appropriate wage index and rate tables to apply under the IRF PPS. OMB issued further revised CBSA delineations in OMB Bulletin No. 20–01, on March 6, 2020 (available on the web at *https://www.whitehouse.gov/wp-content/uploads/2020/03/Bulletin-20-01.pdf*). However, we determined that the changes in OMB Bulletin No. 20–01 do not impact the CBSA-based labor market area delineations adopted in FY 2021. Therefore, we did not propose to adopt the revised OMB delineations identified in OMB Bulletin No. 2001 for FY 2022 through FY 2024.

On July 21, 2023, OMB issued OMB Bulletin No. 23–01 (available at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf*) which updates and supersedes OMB Bulletin No. 20–01 based upon the 2020 Standards for Delineating Core Based Statistical Areas (''the 2020 Standards'') published by OMB on July 16, 2021 (86 FR 37770). OMB Bulletin No. 23–01 revised CBSA delineations which are comprised of counties and equivalent entities (for example, boroughs, a city and borough, and a municipality in Alaska, planning regions in Connecticut, parishes in Louisiana, municipios in Puerto Rico, and independent cities in Maryland, Missouri, Nevada, and Virginia). As discussed in the FY 2025 IRF PPS final rule (89 FR 64291 through 64304), we adopted the revised OMB delineations identified in OMB Bulletin No. 23–01.

3. Second Year of the Three-Year Phase Out of the Rural Adjustment

For FY 2026, CMS is continuing the three-year budget-neutral phase-out of the rural adjustment for FY 2024 IRFs transitioning from rural to urban status in FY 2025 under the revised CBSA delineations. As stated in the FY 2025 IRF PPS final rule (89 FR 64276), the purpose of this gradual phase-out of the rural adjustment for these facilities is to reduce the potential negative financial impacts associated with this reclassification. In FY 2026, the second year of this phase-out, affected IRFs will receive the full FY 2026 wage index along with one-third of the FY 2024 rural adjustment. This step is part of a gradual reduction of the 14.9 percent rural adjustment over three fiscal years FYs 2025, 2026, and 2027. Furthermore, this policy does not apply to urban IRFs transitioning to rural status, as they will receive the full rural adjustment.

4. IRF Budget-Neutral Wage Adjustment Factor Methodology

To calculate the wage-adjusted facility payment for the proposed payment rates set forth in this proposed rule, we multiply the unadjusted Federal payment rate for IRFs by the proposed FY 2026 labor-related share based on the 2021-based IRF market basket relative importance (74.5 percent) to determine the labor-related portion of the standard payment amount. (A full discussion of the calculation of the labor-related share appears in section V.C. of this proposed rule.) We then multiply the labor-related portion by the applicable IRF wage index. The wage index tables are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientRehabFacPPS/IRF-Rules-and-Related-Files.html.*

Adjustments or updates to the IRF wage index made under section 1886(j)(6) of the Act must be made in a budget-neutral manner. We calculate a budget-neutral wage adjustment factor as established in the FY 2004 IRF PPS final rule (68 FR 45689) and codified at § 412.624(e)(1), as described in the steps below. We use the listed steps to ensure that the FY 2026 IRF standard payment conversion factor reflects the update to the wage indexes (based on the FY 2022 hospital cost report data) and the update to the labor-related share, in a budget-neutral manner:

Step 1. Calculate the total amount of estimated IRF PPS payments using the labor-related share and the wage indexes from FY 2025 (as published in the FY 2025 IRF PPS final rule (89 FR 64276)).

Step 2. Calculate the total amount of estimated IRF PPS payments using the FY 2026 wage index values (based on updated hospital wage data and taking into account the permanent 5-percent cap on wage index decreases when applicable) and the FY 2026 proposed labor-related share of 74.5 percent.

Step 3. Divide the amount calculated in Step 1 by the amount calculated in Step 2. The resulting quotient is the proposed FY 2026 budget-neutral wage adjustment factor of 0.9997.

Step 4. Apply the budget neutrality factor from Step 3 to the FY 2026 IRF PPS standard payment amount after the application of the market basket percentage increase to determine the proposed FY 2026 standard payment conversion factor.

We discuss the calculation of the standard payment conversion factor for FY 2026 in section V.E. of this proposed rule.

We invite public comments on our proposals regarding the Wage Adjustment for FY 2026.

E. Description of the IRF Standard Payment Conversion Factor and Payment Rates for FY 2026

To calculate the proposed IRF standard payment conversion factor for FY 2026, as illustrated in Table 5, we begin by applying the proposed IRF market basket update for FY 2026, as adjusted in accordance with sections 1886(j)(3)(C) of the Act, to the standard payment conversion factor for FY 2025 ($18,907). Applying the proposed 2.6 percent IRF market basket update for FY 2026 to the standard payment conversion factor for FY 2025 of $18,907 yields a proposed FY 2026 standard payment amount of $19,399. Then, we apply the proposed budget neutrality factor for the FY 2026 wage index (taking into account the policy placing a permanent 5-percent cap on decreases to a provider's wage index), and labor-related share of 0.9997, which results in a proposed IRF standard payment amount of $19,393. We next apply the proposed budget neutrality factor for the CMG relative weights of 0.9985, which results in the proposed IRF standard payment conversion factor of $19,364 for FY 2026.

We invite public comment on the proposed FY 2026 IRF standard payment conversion factor.

TABLE 5—CALCULATIONS TO DETERMINE THE PROPOSED FY 2026 IRF STANDARD PAYMENT CONVERSION FACTOR

Explanation for adjustment	Calculations
FY 2025 IRF Standard Payment Conversion Factor	$18,907
Proposed Market Basket Update for FY 2026 of 2.6 percent*	× 1.026
Proposed Budget Neutrality Factor for the Updates to the Wage Index and Labor-Related Share	× 0.9997
Proposed Budget Neutrality Factor for the Revisions to the CMG Relative Weights	× 0.9985
Proposed FY 2026 Standard Payment Conversion Factor	= $19,364

*Reflects a FY 2026 3.4 percent IRF market basket percentage increase reduced by 0.8 percentage point for the proposed productivity adjustment as required by section 1886(j)(3)(C)(ii)(I) of the Act.

We then apply the proposed CMG relative weights described in section V.E of this proposed rule to the FY 2026 proposed standard payment conversion factor ($19,364), to determine the proposed unadjusted IRF prospective payment rates for FY 2026. The proposed unadjusted IRF prospective payment rates for FY 2026 are shown in Table 6.

TABLE 6—FY 2026 IRF PPS PROPOSED PAYMENT RATES

CMG	Payment rate tier 1	Payment rate tier 2	Payment rate tier 3	Payment rate no comorbidity
0101	$18,777.27	$16,627.87	$15,080.68	$14,300.31
0102	23,900.99	21,164.85	19,195.53	18,202.16

F. Example of the Methodology for Adjusting the Proposed Prospective Payment Rates

Table 7 illustrates the methodology for adjusting the proposed prospective payments (as described in section V of this proposed rule). The following examples are based on two hypothetical Medicare beneficiaries, both classified as CMG 0104 (without comorbidities). The proposed unadjusted prospective payment rate for CMG 0104 (without comorbidities) appears in Table 6.

Example: One beneficiary is in Facility A, an IRF located in rural Spencer County, Indiana, and another beneficiary is in Facility B, an IRF located in urban Harrison County, Indiana. Facility A, a rural non-teaching hospital has a Disproportionate Share Hospital (DSH) percentage of 5 percent (which would result in a LIP adjustment of 1.0156), a wage index of 0.8568 and a rural adjustment of 14.9 percent. Facility B, an urban teaching hospital, has a DSH percentage of 15 percent (which would result in a LIP adjustment of 1.0454), a wage index of 0.9, and a teaching status adjustment of 0.0784.

To calculate each IRF's labor and non-labor portion of the proposed prospective payment, we begin by taking the proposed FY 2026 unadjusted prospective payment rate for CMG 0104 (without comorbidities) from Table 6. Then, we multiply the proposed labor-related share for FY 2026 (74.5 percent) described in section V of this proposed rule by the unadjusted prospective payment rate. To determine the non-labor portion of the proposed prospective payment rate, we subtract the labor portion of the Federal payment from the proposed unadjusted prospective payment.

To compute the proposed wage-adjusted prospective payment, we multiply the labor portion of the proposed Federal payment by the appropriate wage index located in the applicable wage index table. This table is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/InpatientRehabFacPPS/IRF-Rules-and-Related-Files.html.*

The resulting figure is the wage-adjusted labor amount. Next, we compute the proposed wage-adjusted Federal payment by adding the wage-adjusted labor amount to the non-labor portion of the proposed Federal payment.

Adjusting the proposed wage-adjusted Federal payment by the facility-level adjustments involves several steps. First, we take the wage-adjusted prospective payment and multiply it by the appropriate rural and LIP adjustments (if applicable). Second, to determine the appropriate amount of additional payment for the teaching status adjustment (if applicable), we multiply the teaching status adjustment (0.0784, in this example) by the wage-adjusted and rural-adjusted amount (if applicable). Finally, we add the additional teaching status payments (if applicable) to the wage, rural, and LIP-adjusted prospective payment rates. Table 7 illustrates the components of the adjusted payment calculation.

TABLE 7—EXAMPLE OF COMPUTING THE PROPOSED FY 2026 IRF PROSPECTIVE PAYMENT

Steps		Rural Facility A (Spencer Co., IN)		Urban Facility B (Harrison Co., IN)	
1	Unadjusted Payment		$29,839.92		$29,839.92
2	Labor-Related Share	×	0.745	×	0.745
3	Labor Portion of Payment	=	$22,230.74	=	$22,230.74
4	CBSA-Based Wage Index	×	0.8568	×	0.9000
5	Wage-Adjusted Amount	=	$19,047.30	=	$20,007.666
6	Non-Labor Amount	+	$7,609.18	+	$7,609.18
7	Wage-Adjusted Payment	=	$26,656.48	=	$27,616.85
8	Rural Adjustment	×	1.149	×	1.000
9	Wage- and Rural-Adjusted Payment	=	$30,628.29	=	$27,616.85
10	LIP Adjustment	×	1.0156	×	1.0454
11	Wage-, Rural- and LIP-Adjusted Payment	=	$31,106.09	=	$28,870.65
12	Wage- and Rural-Adjusted Payment		$30,628.29		$27,616.85
13	Teaching Status Adjustment	×	0	×	0.0784
14	Teaching Status Adjustment Amount	=	$0.00	=	$2,165.16
15	Wage-, Rural-, and LIP-Adjusted Payment	+	$31,106.09	+	$28,870.65
16	Total Adjusted Payment	=	$31,106.09	=	$31,035.81

Thus, the proposed adjusted payment for Facility A would be $31,106.09 and the proposed adjusted payment for Facility B would be $31,035.81.

VI. Proposed Update to Payments for High-Cost Outliers Under the IRF PPS for FY 2026

A. Proposed Update to the Outlier Threshold Amount for FY 2026

Section 1886(j)(4) of the Act provides the Secretary with the authority to make payments in addition to the basic IRF prospective payments for cases incurring extraordinarily high costs. A case qualifies for an outlier payment if the estimated cost of the case exceeds the adjusted outlier threshold. We calculate the adjusted outlier threshold by adding the IRF PPS payment for the case (that is, the CMG payment adjusted by all of the relevant facility-level adjustments) and the adjusted threshold amount (also adjusted by all of the relevant facility-level adjustments). Then, we calculate the estimated cost of a case by multiplying the IRF's overall Cost-to-Charge Ratio (CCR) by the Medicare allowable covered charge. If the estimated cost of the case is higher than the adjusted outlier threshold, we make an outlier payment for the case equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold.

In the FY 2002 IRF PPS final rule (66 FR 41362 through 41363), we discussed our rationale for setting the outlier threshold amount for the IRF PPS so that estimated outlier payments would equal 3 percent of total estimated payments. For the FY 2002 IRF PPS final rule, we analyzed various outlier policies using 3, 4, and 5 percent of the total estimated payments, and we concluded that an outlier policy set at 3 percent of total estimated payments would optimize the extent to which we could reduce the financial risk to IRFs of caring for high- cost patients, while still providing for adequate payments for all other (non-high cost outlier) cases.

Subsequently, we updated the IRF outlier threshold amount in the FYs 2006 through 2025 IRF PPS final rules and the FY 2011 and FY 2013 notices (70 FR 47880, 71 FR 48354, 72 FR 44284, 73 FR 46370, 74 FR 39762, 75 FR 42836, 76 FR 47836, 76 FR 59256, 77 FR 44618, 78 FR 47860, 79 FR 45872, 80 FR 47036, 81 FR 52056, 82 FR 36238, 83 FR 38514, 84 FR 39054, 85 FR 48444, 86 FR 42362, 87 FR 47038, 88 FR 50956, and 89 FR 64276 respectively) to maintain estimated outlier payments at 3 percent of total estimated payments. We also stated in the FY 2009 final rule (73 FR 46370 at 46385) that we would continue to analyze the estimated outlier payments for subsequent years and adjust the outlier threshold amount as appropriate to maintain the 3 percent target.

To update the IRF outlier threshold amount for FY 2026, we propose to use FY 2024 claims data and the same methodology that we used to set the initial outlier threshold amount in the FY 2002 IRF PPS final rule (66 FR 41362 through 41363), which is also the same methodology that we used to update the outlier threshold amounts for FYs 2006 through 2025. The outlier threshold is calculated by simulating aggregate payments and using an iterative process to determine a threshold that results in outlier payments being equal to 3 percent of total payments under the simulation. To determine the outlier threshold for FY 2026, we estimated the amount of FY 2026 IRF PPS aggregate and outlier payments using the most recent claims available (FY 2024) and the proposed FY 2026 standard payment conversion factor, labor-related share, and wage indexes, incorporating any applicable budget-neutrality adjustment factors. The outlier threshold is adjusted either up or down in this simulation until the estimated outlier payments equal 3 percent of the estimated aggregate payments. Based on an analysis of the preliminary data used for the proposed rule, we estimated that IRF outlier payments as a percentage of total estimated payments would be approximately 2.8 percent in FY 2025. Therefore, we propose to update the outlier threshold amount from $12,043 for FY 2025 to $11,971 for FY 2026 to maintain estimated outlier payments at approximately 3 percent of total estimated aggregate IRF payments for FY 2026.

We note that, as we typically do, we will update our data between the FY 2026 IRF PPS proposed and final rules to ensure that we use the most recent available data in calculating IRF PPS payments.

We invite public comment on the proposed update to the IRF outlier threshold for FY 2026.

B. Proposed Update to the IRF Cost-to-Charge Ratio (CCR) Ceiling and Urban/Rural Averages for FY 2026

CCRs are used to adjust charges from Medicare claims to costs and are computed annually from facility-specific data obtained from Medicare Cost Reports (MCRs). IRF-specific CCRs are used in the development of the CMG relative weights and the calculation of outlier payments under the IRF PPS. In accordance with the methodology described in the FY 2004 IRF PPS final rule (68 FR 45692 through 45694), we propose to apply a ceiling to IRFs' CCRs. Using that methodology, we propose to update the national urban and rural CCRs for IRFs, as well as the national CCR ceiling for FY 2026, based on analysis of the most recent data available. We apply the national urban and rural CCRs to:

- New IRFs that have not yet submitted their first MCR.
- IRFs with an overall CCR that exceeds the national CCR ceiling for FY 2026, as discussed below in this section.
- Other IRFs for which accurate data to calculate an overall CCR are not available.

Specifically, for FY 2026, we propose to estimate a national average CCR of 0.467 for rural IRFs, which we calculated by taking an average of the CCRs for all rural IRFs using their most recently submitted cost report data. Similarly, we propose to estimate a national average CCR of 0.398 for urban IRFs, which we calculated by taking an average of the CCRs for all urban IRFs using their most recently submitted cost report data. We apply weights to both of these averages using the IRFs' estimated costs, meaning that the CCRs of IRFs with higher total costs factor more heavily into the averages than the CCRs of IRFs with lower total costs. For this proposed rule, we have used the most recent available cost report data (FY 2023). This includes all IRFs whose cost reporting periods begin on or after October 1, 2022, and before October 1, 2023. If, for any IRF, the FY 2023 cost report was missing or had an ''as submitted'' status, we used data from a previous FY's (that is, FY 2004 through FY 2022) settled cost report for that IRF. We do not use cost report data from before FY 2004 for any IRF because changes in IRF utilization since FY 2004 resulting from the 60 percent rule and IRF medical review activities suggest that these older data do not adequately reflect the current cost of care. Using updated FY 2023 cost report data for this proposed rule, we estimate a national average CCR of 0.467 for rural IRFs, and a national average CCR of 0.398 for urban IRFs.

In accordance with past practice, we propose to set the national CCR ceiling at 3 standard deviations above the mean CCR. Using this method, we propose a national CCR ceiling of 1.54 for FY 2026. This means that, if an individual IRF's CCR were to exceed this ceiling of 1.54 for FY 2026, we will replace the IRF's CCR with the appropriate proposed national average CCR (either rural or urban, depending on the geographic location of the IRF). We calculated the proposed national CCR ceiling by:

Step 1. Taking the national average CCR (weighted by each IRF's total costs, as previously discussed) of all IRFs for which we have sufficient cost report data (both rural and urban IRFs combined).

Step 2. Estimating the standard deviation of the national average CCR computed in Step 1.

Step 3. Multiplying the standard deviation of the national average CCR computed in Step 2 by a factor of 3 to compute a statistically significant reliable ceiling.

Step 4. Adding the result from Step 3 to the national average CCR of all IRFs for which we have sufficient cost report data, from Step 1.

We also propose that if more recent data become available after the publication of this proposed rule and before the publication of the final rule, we would use such data to determine the FY 2026 national average rural and urban CCRs and the national CCR ceiling in the proposed rule. Using the FY 2023 cost report data for this proposed rule, we estimate a national average CCR ceiling of 1.54, using the same methodology.

We invite public comment on the proposed update to the IRF CCR ceiling and the urban/rural averages for FY 2026.

II. Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP)

A. Background and Statutory Authority

The Inpatient Rehabilitation Facility Quality Reporting Program (IRF QRP) is authorized by section 1886(j)(7) of the Act, and it applies to freestanding IRFs, as well as inpatient rehabilitation units of hospitals or Critical Access Hospitals (CAHs) paid by Medicare under the IRF PPS. Section 1886(j)(7)(A)(i) of the Act requires the Secretary to reduce by 2 percentage points the annual increase factor for discharges occurring during a FY for any IRF that does not submit data

in accordance with the IRF QRP requirements set forth in subparagraphs (C) and (F) of section 1886(j)(7) of the Act. We have codified our program requirements in our regulations at § 412.634.

In this proposed rule, we are proposing to remove two quality measures: (1) the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure, beginning with the FY 2026 IRF QRP, and (2) the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure, beginning with the FY 2028 IRF QRP. We are also proposing to remove four items previously adopted as standardized patient assessment data elements under the social determinants of health (SDOH) category beginning with the FY 2028 IRF QRP: one item for Living Situation, two items for Food, and one item for Utilities. We also propose to amend our reconsideration policy and process.

We are also seeking public comment on several Requests for Information (RFIs), specifically on: (1) future measure concepts for the IRF QRP in section VII.E of this proposed rule; (2) potential revisions to the IRF–PAI as described in section VII.F of this proposed rule; (3) potential revisions to the data submission deadlines for assessment data collected for the IRF QRP as described in section VII.G of this proposed rule; (4) advancing digital quality measurement in IRFs as described in section VII.H of this proposed rule.

B. General Considerations Used for the Selection of Measures for the IRF QRP

For a detailed discussion of the considerations we use for the selection of IRF QRP quality, resource use, or other measures, we refer readers to the FY 2016 IRF PPS final rule (80 FR 47083 through 47084).

1. Quality Measures Currently Adopted for the IRF QRP

The IRF QRP currently has 17 adopted measures, which are listed in Table 8.

For a discussion of the factors, we use to evaluate whether a measure should be removed from the IRF QRP, we refer readers to our regulations at § 412.634(b)(2). We refer readers to the CY 2013 OPPS/ASC PPS final rule (77 FR 45194 and 45195) for discussion of our policy that allows any quality measure adopted for use in the IRF QRP to remain in effect until the measure is removed, suspended, or replaced, the FY 2018 IRF PPS final rule (82 FR 36276) which applied this policy to standardized patient assessment data we adopt for the IRF QRP, and the FY 2019 IRF PPS final rule (83 FR 38556 and 38557) for more information on the factors we consider for removing measures and standardized patient assessment data.

TABLE 8—QUALITY MEASURES CURRENTLY ADOPTED FOR THE IRF QRP

Short name	Measure name & data source
Inpatient Rehabilitation Facility—Patient Assessment Instrument (IRF–PAI) Assessment-Based Measures	
Pressure Ulcer/Injury	Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury.
Application of Falls	Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay).
Discharge Mobility Score	IRF Functional Outcome Measure: Discharge Mobility Score for Medical Rehabilitation Patients.
Discharge Self-Care Score	IRF Functional Outcome Measure: Discharge Self-Care Score for Medical Rehabilitation Patients.
DRR	Drug Regimen Review Conducted with Follow-Up for Identified Issues—Post Acute Care (PAC) Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP).
TOH-Provider	Transfer of Health Information to the Provider—Post-Acute Care (PAC).
TOH-Patient	Transfer of Health Information to the Patient—Post-Acute Care (PAC).
DC Function	Discharge Function Score.
Patient/Resident COVID–19 Vaccine.	COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date.
National Healthcare Safety Network	
CAUTI	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection Outcome Measure.
CDI	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure.
HCP Influenza Vaccine	Influenza Vaccination Coverage among Healthcare Personnel.
HCP COVID–19 Vaccine	COVID–19 Vaccination Coverage among Healthcare Personnel (HCP).
Claims-Based	
MSPB IRF	Medicare Spending Per Beneficiary (MSPB)—Post Acute Care (PAC) IRF QRP.
DTC	Discharge to Community—PAC IRF QRP.
PPR 30 day	Potentially Preventable 30-Day Post-Discharge Readmission Measure for IRF QRP.
PPR Within Stay	Potentially Preventable Within Stay Readmission Measure for IRFs.

C. Overview of Quality Measure Proposals

In this proposed rule, we propose to remove two measures: (1) the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure, beginning with the FY 2026 IRF QRP and (2) the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure, beginning with the FY 2028 IRF QRP.

1. Proposed Removal of the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure Beginning With the FY 2026 IRF QRP

We refer readers to the FY 2022 IRF PPS final rule where we adopted the COVID–19 Vaccination Coverage among HCP measure (HCP COVID–19 measure) into the IRF QRP (86 FR 42385 through 42396) and the FY 2024 IRF PPS final rule where we modified the HCP COVID–19 measure to account for updated vaccine guidance (88 FR 50999 through 51009). To report this measure, an IRF must report data on COVID–19 vaccination coverage among HCP for at least one week each month. This requires IRFs to track current vaccination status for all employees, licensed independent practitioners, adult students/trainers and volunteers

and other contract personnel and log in to the National Healthcare Safety Network (NHSN) to report the data monthly either manually in the NHSN or by uploading a CSV file (86 FR 42388). The estimated burden of collecting this information annually across all 1,166 IRFs is 13,992 hours at a cost of $503,991.84. We refer readers to section VIII.A.1. of this proposed rule for more details on this estimated burden calculation.

We propose to remove the HCP COVID–19 measure beginning with the FY 2026 IRF QRP under removal Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program (§ 412.634(b)(2)(viii)). When we first adopted the HCP COVID–19 measure, the United States was in the midst of a Public Health Emergency (PHE) with millions of cases and over 550,000 COVID–19 deaths (86 FR 42385 and 42386). While preventing the spread of COVID–19 remains a public health goal, the PHE ended on May 11, 2023.[4] In March 2021, when this measure was being proposed, the United States was averaging over 5,000 deaths per week. In April 2023, the last full month of the PHE, weekly number of deaths due to COVID–19 averaged around 1,300.[5] With the end of the PHE and the decrease in COVID–19 deaths, we expect the continued costs and burden to providers of tracking and monthly reporting on this measure to outweigh the benefit of continued information collection on COVID–19 vaccination coverage among HCP in IRFs.

If finalized, IRFs that did not report their CY 2024 reporting period data for the HCP COVID–19 measure would still be considered compliant with the IRF QRP for purposes of their FY 2026 payment determination (that is, IRFs that do not report CY 2024 HCP COVID–19 vaccination data would not be penalized for FY 2026 payments). Any HCP COVID–19 Vaccination measure data received by CMS would not be used for payment determination.

We invite public comment on our proposal to remove the COVID–19 Vaccination Coverage among HCP measure from the IRF QRP beginning with the FY 2026 IRF QRP.

2. Proposed Removal of the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date Measure Beginning With the FY 2028 IRF QRP

We refer readers to the FY 2024 IRF PPS final rule where we adopted the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date (Patient/Resident COVID–19 Vaccine) measure into the IRF QRP (88 FR 51026 through 51035). In this proposed rule, we propose to remove the Patient/Resident COVID–19 Vaccine measure beginning with the FY 2028 IRF QRP under removal Factor 8, the costs associated with a measure outweigh the benefit of its continued use in the program (§ 412.634(b)(2)(viii)). The estimated burden of collecting this information annually across all 1,166 IRFs is 3,111.5 hours at a cost of $218,116.15. We refer readers to section VII.A.2. of this proposed rule for more details on this estimated burden reduction.

When we adopted the Patient/Resident COVID–19 Vaccine measure, COVID–19 continued to be a major challenge for IRFs, with older adults at a significantly higher risk of mortality, severe disease, and death following infection (88 FR 51026).

IRFs have expressed concerns about data collection challenges and increased provider burden in collecting patient immunization data.[6] This is especially true considering the shorter length of stay for IRF patients compared to other post-acute settings. While preventing the spread of COVID–19 remains a public health goal, the number of COVID–19 cases and deaths[7] is declining, and we believe the continued costs and burden to providers of reporting this measure outweigh the benefit of continued information collection on COVID–19 vaccination coverage among patients in IRFs.

We propose that, beginning with patients discharged on or after October 1, 2025, IRFs would not be required to collect and submit the Patient/Resident COVID–19 Vaccine measure data to CMS. We propose to remove the Patient/Resident COVID–19 Vaccine data item (O0350) from the IRF–PAI effective October 1, 2026, since it is not technically feasible to remove this item earlier. However, under our proposal, this item will become voluntary and IRFs would not be required to collect and submit Patient/Resident COVID–19 Vaccine data beginning with patients discharged on or after October 1, 2025.

We invite public comment on our proposal to remove the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure from the IRF QRP beginning with the FY 2028 IRF QRP.

D. Proposal To Remove Four Standardized Patient Assessment Data Elements Beginning With the FY 2028 IRF QRP

We refer readers to the FY 2025 IRF PPS final rule (89 FR 64310 through 64322) where we finalized the adoption of four items as standardized patient assessment data elements under the social determinants of health (SDOH) category: one item for Living Situation (R0310); two items for Food (R0320A and R0320B); and one item for Utilities (R0330). As finalized in the FY 2025 IRF PPS final rule, IRFs would be required to report these data elements using the IRF–PAI beginning with patients discharged on or after October 1, 2026 through December 31, 2026 for purposes of the FY 2028 IRF QRP and each program year after (89 FR 64326 through 64327).

In this proposed rule, we are proposing to remove these four standardized patient assessment data elements under the SDOH category as we acknowledge the burden associated with these items at this time. We continuously look for ways to balance the need for data collections regarding quality care and the burden of data collection on health care providers. CMS has a goal to facilitate improved health care delivery by requiring different systems and software applications to communicate and exchange data. Therefore, we would like to work towards the workflow for these specific data elements being part of a low burden interoperable electronic system. The focus will turn towards how these data and associated recommendations exchanged can improve care coordination, efficiency, reduction in errors and patient experience. As health information technology (HIT) advances and interoperability of data becomes more standardized, the burden to collect and share clinical data on these and other relevant patient information will become less burdensome allowing for better outcomes for IRF patients and their families. The objectives of the IRF QRP continue to be the improvement of care, quality and health outcomes for all patients through transparency and

[6] Standing Technical Expert Panel for the Development, Evaluation, and Maintenance of Post-Acute Care (PAC) and Hospice Quality Reporting Program (QRP) Measurement Sets Summary Report December 15, 2023. *https://www.cms.gov/files/document/december-2023-pac-and-hospice-cross-setting-tep-summary-report.pdf-1.*

[7] Provisional COVID–19 Deaths, by Week, in The United States, Reported to CDC. Accessed on March 18, 2025, via *https://covid.cdc.gov/covid-data-tracker/#trends_weeklydeaths_select_00.*

quality measurement, while not imposing undue burden on essential health providers. Under our proposal, IRFs would not be required to collect and submit Living Situation (R0310), Food (R0320A and R0320B), and Utilities (R0330) beginning with the patients discharged on or after October 1, 2026, as previously finalized. Under our proposal, these items would not be required to meet the IRF QRP requirements beginning with the FY 2028 IRF QRP. Removing these items from the data collection for the FY 2028 IRF QRP would keep the 1,166 IRFs from incurring 12,446 hours of administrative burden at a cost of $872,464.60 (or $748.25 per IRF) at this time. We refer readers to section VIII.A.3. of this proposed rule for more details on this estimated burden reduction.

We invite public comment on our proposal to remove four standardized patient assessment data elements collected under the SDOH category from the IRF QRP beginning with the FY 2028 IRF QRP.

E. Proposals To Amend the Reconsideration Request Policy and Process

1. Background

In the FY 2014 IRF PPS final rule (78 FR 47919), we finalized the IRF QRP Reconsideration policy and process whereby an IRF may request reconsideration of an initial determination that the IRF did not comply with the IRF QRP reporting requirements, warranting CMS reducing the IRF's annual payment update by 2 percent for the applicable fiscal year as required by section 1886(j)(7)(A)(i)of the Act. In that rule, we stated that the IRF may file a request for reconsideration if they believe that the finding of non-compliance is erroneous, or if they were non-compliant, they have a valid and justifiable excuse for this non-compliance (78 FR 47919). We further stated that, after we review the request for reconsideration, we may reverse our initial finding of non-compliance if: (1) the IRF provides proof of compliance with all requirements during the reporting period; or (2) the IRF provides adequate proof of a valid or justifiable excuse for non-compliance if the IRF was not able to comply with requirements during the reporting period (78 FR 47919). Finally, we stated that we will uphold an initial finding of non-compliance if the IRF cannot show any justification for non-compliance (78 FR 47919).

In the FY 2015 IRF PPS final rule (79 FR 45918 and 45919), we finalized amendments to the IRF QRP reconsideration policy and process. Specifically, we stated that each IRF would receive a notification of noncompliance with IRF QRP requirements if we determine it had not correctly submitted data with respect to the applicable fiscal year (79 FR 45919). Then, the IRF would have 30 days from the date of our initial notification of noncompliance to submit a request for reconsideration via email. We also provided that, in very limited circumstances, we may grant a request by an IRF to extend the deadline to submit its reconsideration request, so long as the IRF requested the extension and demonstrated that extenuating circumstances existed that prevented it filing a reconsideration request by the 30-day deadline (79 FR 45919). Finally, we provided that, as part of its reconsideration request, the IRF must submit all supporting documentation and evidence demonstrating: (1) full compliance with all IRF QRP reporting requirements during the reporting period; or (2) extenuating circumstances that affected noncompliance if the IRF was not able to comply with the requirements during the reporting period (79 FR 45919). We stated that we would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request (79 FR 45919).

In the FY 2016 IRF PPS final rule (80 FR 47138), we codified the reconsideration policy and process for the IRF QRP at § 412.634(d). In subsequent rulemakings, we have amended our reconsideration policy and process at § 412.634(d) for minor clarifications and technical updates (FY 2019 IRF PPS final rule (83 FR 38561 and 62 and 83 FR 38573) and FY 2020 IRF PPS final rule (84 FR 39161 and 39172 through 73)). As codified, our regulation at § 412.634(d) addresses how we send our written notification of noncompliance to an IRF, the process for an IRF to request reconsideration, what information an IRF must include with its reconsideration request (for example, documentation that demonstrates the IRF's compliance with IRF QRP requirements), and how we notify the IRF of our final decision regarding its reconsideration request.

We have become aware that there are inconsistencies in our preamble and regulation text regarding IRF requests for reconsideration. On this basis, in this proposed rule, we seek to clarify these areas.

2. Proposal To Allow IRFs To Request an Extension To File a Request for Reconsideration

As noted previously, in the FY 2015 IRF PPS final rule (79 FR 45918 and 45919), we provided that, in very limited circumstances, we may grant a request by an IRF to extend the deadline to submit its reconsideration request, so long as the IRF requested the extension and demonstrated that extenuating circumstances existed that prevented it filing a reconsideration request by the 30-day deadline (79 FR 45919). We did not codify this policy—permitting IRFs to request an extension to file their reconsideration request—in our regulation text at § 412.634(d). In implementing this finalized policy, we have noted two areas where further clarity would be beneficial to IRFs.

First, we have not clearly defined or explained the term ''extenuating circumstances'' as used in our reconsideration policy. In contrast, we use the term ''extraordinary circumstances'' in our Extraordinary Circumstances Exception and Extension (ECE) policy, as codified at § 412.634(c). We did explain ''extraordinary circumstances'' in detail when we originally finalized this ECE policy in the FY 2014 IRF PPS final rule (78 FR 47920).

On this basis, we are proposing to remove the term ''extenuating circumstances'' as used currently in our reconsideration policy and replace it with ''extraordinary circumstances.'' Specifically, we propose that an IRF may request, and CMS may grant, an extension to file a reconsideration request if the IRF was affected by an extraordinary circumstance beyond the control of the IRF (for example, a natural or man-made disaster). By modifying the basis by which an IRF may request an extension to file a reconsideration request in this manner, we also propose to incorporate our prior explanation regarding the meaning of extraordinary circumstances, as set forth in the FY 2014 IRF PPS final rule (78 FR 47920) as part of our Extraordinary Circumstance Exception and Extension (ECE) policy. Second, we have noted some areas in our policy where IRFs may benefit from clearly demarcated deadlines. Although we believe an IRF would have an interest in asking for an extension to file a reconsideration request prior to the deadline, our policy currently does not specify a deadline for an IRF to submit its request for such an extension (78 FR 47919). Our policy also provides that, to support such request, the IRF must demonstrate that extenuating circumstances existed that

prevented filing the reconsideration request by the 30-day deadline (78 FR 47919). However, we have not specified a temporal relationship between when the extenuating circumstances occurred and the reconsideration request deadline. We believe IRFs may benefit from further specificity regarding these requirements for submitting a request to extend the deadline to file a reconsideration request.

On this basis, we propose to amend our reconsideration policy as codified at § 412.634(d) to permit a IRF to request, and CMS to grant, an extension to file a request for reconsideration of a noncompliance determination if, during the period to request a reconsideration as set forth in § 412.634(d), the IRF was affected by an extraordinary circumstance beyond the control of the IRF (for example, a natural or man-made disaster). We propose that the IRF must submit its request for an extension to file a reconsideration request to CMS via email no later than 30 calendar days from the date of the written notification of noncompliance. We propose that the IRF's extension request, submitted to CMS, must contain all of the following information: (1) the CCN for the IRF; (2) the business name of the IRF; (3) the business address of the IRF; (4) certain contact information for the IRF's chief executive officer or designated personnel; (5) a statement of the reason for the request for the extension; and (6) evidence of the impact of the extraordinary circumstances, including, for example, photographs, newspaper articles, and other media. We propose to codify this process at § 412.634(d)(6).

We further propose that CMS will notify the IRF in writing of its final decision regarding its request for an extension to file a reconsideration of noncompliance request via an email from CMS. We propose to notify the IRF in writing via email because this will allow for more expedient correspondence with the IRF, given the 30-day reconsideration timeframe. We propose to codify this process at § 412.634(d)(7).

We note that we are considering proposing similar modifications across all post-acute care setting quality reporting programs to more closely align the reconsideration processes.

We invite comment on these proposals to amend the IRF QRP Reconsideration policy to permit IRFs to request an extension to file a reconsideration request and to codify this proposed policy and process at § 412.634(d)(6) and (d)(7).

3. Proposal To Update the Bases on Which CMS Can Grant a Reconsideration Request

As discussed previously, in the FY 2014 IRF PPS final rule, we stated that, after we review an IRF request for reconsideration, we may reverse our initial finding of non-compliance if: (1) the IRF provides proof of compliance with all requirements during the reporting period; or (2) the IRF provides adequate proof of a valid or justifiable excuse for non-compliance if the IRF was not able to comply with requirements during the reporting period (78 FR 47919). We also stated that we will uphold an initial finding of non-compliance if the IRF cannot show any justification for non-compliance (78 FR 47919).

In the FY 2015 IRF PPS final rule (79 FR 45918 and 45919), we reiterated this position, and provided that, as part of its reconsideration request, the IRF must submit all supporting documentation and evidence demonstrating: (1) full compliance with all IRF QRP reporting requirements during the reporting period; or (2) extenuating circumstances that affected noncompliance if the IRF was not able to comply with the requirements during the reporting period (79 FR 45919). We stated that we would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request (79 FR 45919).

As previously discussed, we codified our reconsideration policy at § 412.634(d) in the FY 2014 IRF PPS final rule (78 FR 47919). Our regulation at § 412.634(d)(3) requires that an IRF's request for reconsideration include accompanying documentation that demonstrates the IRF's compliance with the IRF QRP requirements. Then, we will notify the IRF in writing regarding our final decision on its reconsideration request (§ 412.634(d)(5)).

We believe it would be beneficial for IRFs if we codify our specific bases for granting a reconsideration request in our regulation at § 412.634(d).

On these bases, we propose to modify our reconsideration policy to provide that we will grant a timely request for reconsideration, and reverse an initial finding of non-compliance, only if CMS determines that the IRF was in full compliance with the IRF QRP requirements for the applicable program year. We would consider full compliance with the IRF QRP requirements to include CMS granting an exception or extension to IRF QRP reporting requirements under our ECE policy at § 412.634(c). However, to demonstrate full compliance with our ECE policy, the IRF would need to comply with our ECE policy's requirements, including the specific scope of the exception or extension as granted by CMS.

We propose to revise § 412.634(d)(5) to codify this modified policy in our regulation. The remainder of the text at § 412.634(d)(5) would remain the same. We note that we are considering proposing similar modifications across all post-acute care setting quality reporting programs to more closely align the reconsideration processes.

We invite comment on these proposals to amend the bases by which we grant a reconsideration request under the IRF QRP Reconsideration policy and to codify this proposed policy at § 412.634(d)(5).

F. IRF QRP Measure Concepts Under Consideration for Future Years—Request for Information (RFI): Interoperability, Well-Being, Nutrition & Delirium

We are seeking input on the importance, relevance, appropriateness, and applicability of each of the quality measure concepts under consideration listed in Table 9 for future years in the IRF QRP. In the FY 2024 IRF PPS proposed rule (88 FR 21000 through 21003), we included a request for information (RFI) on a set of principles for selecting and prioritizing IRF QRP measures, identifying measurement gaps and suitable measures for filling these gaps. We refer readers to the FY 2024 IRF PPS final rule (88 FR 51036 and 51037) for a summary of the public comments we received in response to the RFI.

We are seeking input on four concepts for future measures for the IRF QRP.

TABLE 9—FUTURE MEASURE CONCEPTS UNDER CONSIDERATION FOR THE IRF QRP

Quality measure concepts
Interoperability.
Well-being.
Nutrition.
Delirium.

1. Interoperability

We are seeking input on the quality measure concept of interoperability, focusing on information technology systems' readiness and capabilities in the IRF setting. Title XXX of the Public Health Service Act defines ''interoperability'' in part, and with respect to health information technology (IT), as health IT that enables the secure exchange of electronic health information with, and use of electronic

health information from, other health IT without requiring special efforts by the user.[8] The definition further states that interoperability of health IT allows for complete, including by providers and patients, access, exchange, and use of electronically accessible health information for authorized uses under applicable State or Federal Law.[9] We request input and comment on approaches to assessing interoperability in the IRF setting, for instance, measures that address or evaluate the level of readiness for interoperable data exchange, or measures that evaluate the ability of data systems to securely share information across the spectrum of care. Please provide input on the relevant aspects of interoperability for the IRF setting.

2. Well-Being

We are seeking input on a quality measure concept of well-being for future quality measures. Well-being is a comprehensive approach to disease prevention and health promotion as it integrates mental, and physical health [10] [11] while emphasizing preventative care to proactively address potential health issues. This comprehensive approach emphasizes person-centered care by promoting well-being of patients and their family members. We request input and comment on tools and measures that assess for overall health, happiness, and satisfaction in life that could include aspects of emotional well-being, social connections, purpose, fulfillment, and self-care work. Please provide input on the relevant aspects of well-being for the IRF setting.

3. Nutrition

We are seeking input on a quality measure concept of nutrition for future quality measures. Assessment of an individual's nutritional status may include various strategies, guidelines, and practices designed to promote healthy eating habits and ensure individuals receive the necessary nutrients for maintaining health, growth, and overall well-being. This also includes aspects of health that support or mediate nutritional status, such as physical activity and sleep. In this context, preventable care plays a vital role by proactively addressing factors that may lead to poor nutritional status or related health issues. These efforts not only support optimal nutrition but also work to prevent conditions that could otherwise hinder an individual's health and nutritional needs. We request input and comment on tools and frameworks that promote healthy eating habits, exercise, nutrition, or physical activity for optimal health, well-being, and best care for all. Please provide input on the relevant aspects of nutrition for the IRF setting.

4. Delirium

Finally, we are seeking input on a quality measure concept of delirium for future quality measures. Delirium, often under-detected, is a common complication of illness or injury that leads to negative health outcomes like frailty, cognitive impairment, and functional decline. Post-acute care patients experiencing delirium symptoms are more likely to undergo rehospitalization, experience poor functional recovery outcomes, and have a higher 6-month mortality rate compared to patients without delirium.[12] We request input and comment on the applicability of measures that evaluate for the sudden, serious change in a person's mental state or altered state of consciousness that may be associated with underlying symptoms or conditions. Please provide input on the relevant aspects of delirium for the IRF setting.

As we review new measure concepts, CMS will prioritize outcome measures that are evidenced-based.

G. Potential Future Revisions Under Consideration for the Inpatient Rehabilitation Facility Patient Assessment Instrument (IRF–PAI)—Request for Information (RFI)

1. Background

In the Fiscal Year (FY) 2002 IRF PPS final rule (66 FR 41324 through 41328), we finalized the use of the Inpatient Rehabilitation Facility Patient Assessment Instrument (IRF–PAI), which IRFs must use to assess Medicare Part A Fee-for-Service (FFS) patients admitted to or discharged from an IRF. The FY 2010 IRF PPS final rule (74 FR 39762 and 39799) established the requirement to submit an IRF–PAI for each Part C (Medicare Advantage) patient admitted to or discharged from an IRF on or after October 1, 2009. In the FY 2023 IRF PPS final rule (87 FR 47074 through 47082), CMS finalized that IRFs are required to report these data with respect to admission and discharge for all patients, regardless of payer, discharged on and after October 1, 2024. For each patient, an IRF must complete an IRF–PAI, as specified at §§ 412.606 and 412.610(c), and must transmit both the admission patient assessment and the discharge patient assessment at the same time to the CMS patient data system as described at § 412.614.

Unlike other Post Acute Care (PAC) settings, such as Skilled Nursing Facilities (SNFs) and Long-Term Care Hospitals (LTCHs), the IRF–PAI does not distinguish discharge types into unplanned, expired, and planned. SNFs and LTCHs do not need to submit certain assessment items depending on the type of discharge a patient has, decreasing the overall assessment submission burden.

Additionally, the IRF–PAI is now collected on all IRF patients, including pediatric patients. This RFI would seek feedback on the potential development of a pediatric assessment that would better measure the quality of care for that patient population.

2. Potential Future Revisions Under Consideration for the IRF–PAI To Reduce Burden and Streamline Data Collection for IRFs

We are seeking feedback on potential revisions to the IRF–PAI to reduce burden and streamline data collection for IRFs. Specifically, we are seeking input on the following questions:

- How can CMS increase clarity around the definition of an unplanned discharge and which items would be required for unplanned discharges? How would IRFs recommend CMS implement skip patterns for certain items depending on how an IRF patient is discharged?
- Should CMS consider a pediatric IRF–PAI assessment to reduce burden, streamline the assessment process, and focus on age-appropriate assessment items for the pediatric population?
- Are there other ways to revise the IRF–PAI to reduce burden and streamline data collection in IRFs?

We intend to use this input to inform our future IRF–PAI development efforts.

H. Potential Revision of the Final Data Submission Deadline Period From 4.5 Months to 45 Days—Request for Information (RFI)

Sections 1886(j)(7)(E), and 1899B(f) and (g) of the Act require CMS to provide feedback to IRFs and to publicly report their performance on IRF quality measures specified under section 1899B(c)(1) of the Act and resource use and other measures specified under 1899B(d)(1) of the Act. More specifically, section 1899B(f)(1) of the Act requires the Secretary to provide confidential feedback reports to IRFs on their performance on the quality, resource use, and other measures specified under sections 1899B(c)(1) and (d)(1). Section 1899B(f)(2) provides that, to the extent feasible, the Secretary must make these confidential feedback reports available, not less frequently than on a quarterly basis, except in the case of measures reported on an annual basis, in which case confidential feedback reports may be made available annually. Additionally, sections 1886(j)(7)(E) and 1899B(g)(1) of the Act requires the Secretary to provide for the public reporting of each IRF's performance on the quality, resource use, and other measures specified under section 1899B(c)(1) and (d)(1) of the Act by establishing procedures for making the performance data available to the public. Section 1899B(g)(2) of the Act specifically requires that such procedures must ensure, through a process consistent with the process applied under section 1886(b)(3)(B)(viii)(VII) of the Act, that IRFs can review and submit corrections to the data and other information before it is made public.

Although sections 1899B(f) and (g) of the Act require the provision of confidential feedback reports and public reporting of IRF performance on measures, section 1886(j)(7)(C) of the Act provides the Secretary with discretion to prescribe the form and manner and the timeframes for IRFs to submit data as specified for reporting for the IRF QRP. Thus, in the FY 2016 IRF PPS final rule (80 FR 47122), we finalized that IRFs will have approximately 4.5 months (135 days) after each quarterly data collection period to complete their data submissions and make corrections to such data where necessary. We did not receive any comments on the 4.5-month data submission timeframe.

Public reporting of data collected under quality programs, such as the IRF QRP, is designed to provide consumers and their families with the most current information, so they can make quality-informed decisions about where to receive their care. In the process of implementing the public reporting for the quality reporting programs, we have identified that the time between when data on measures is collected and submitted to us and when that data are publicly reported (that is, approximately 9 months) may be too long to provide the most accurate and up to date information for the public. For example, we have heard from interested parties that the IRF QRP measure results are not useful for their quality improvement efforts due to the aged data and the delay in when they receive these reports.[13]

Currently, the largest contributing factor to the nine-month lag between the end of the data collection period and when measures are publicly reported is the 4.5-month timeframe for data submission. If the data submission timeframe was reduced from 4.5 months to 45 days, then the lag time between the end of the data collection period and public reporting of that data could be reduced by up to three months. This revised timeframe would result in more timely public reporting of data that may provide more value for consumers and families as they make decisions about where they may want to receive their care. Additionally, this timeframe provides IRFs with more recent data to use in their quality improvement activities.

An important consideration in reducing the data submission timeframe is the potential burden it may place on IRFs, which could lead to fewer assessments submitted within the shorter 45-day data submission timeframe. We conducted an analysis to evaluate the potential impact of reducing the timeframe by determining how many assessments are currently being submitted within 45 days. Using 2023 data, we identified that only 2.4 percent of all IRF–PAI assessments were submitted after the 45-day timeframe. Of those submissions, only two-thirds (or 1.6 percent of the total) were submitted between 45 days and 4.5 months and hence have potential to be impacted.[14] Because assessments are tied to payment, providers are likely to submit assessments close to the date of service and to close out medical records once the patient is discharged from service. On these bases, we believe reducing the IRF QRP data submission deadline from 4.5 months to 45 days would improve the timeliness of public reporting by one quarter, which could be beneficial to both consumers and IRFs with limited change in burden to IRFs.

We are requesting feedback on this potential future reduction of the IRF QRP data submission deadline from 4.5 months to 45 days that is under consideration. Specifically, we are requesting comment on:

- How this potential change could improve the timeliness and actionability of IRF QRP quality measures;
- How this potential change could improve public display of quality information; and
- How this potential change could impact IRF workflows or require updates to systems.

We intend to use this input to inform our program improvement efforts.

I. Advancing Digital Quality Measurement in the IRF QRP—Request for Information

As part of our effort to advance the digital quality measurement (dQM) transition, we are issuing this request for information (RFI) to gather broad public input on the dQM transition in IRFs.

1. Background

We are committed to improving healthcare quality through measurement, transparency, and public reporting of quality data, and to enhancing healthcare data exchange by promoting the adoption of interoperable health information technology (IT) that enables information exchange using Fast Healthcare Interoperability Resources® (FHIR ®) standards. Proposing to require the use of such technology within the IRF QRP in the future could potentially enable greater care coordination and information sharing, which is essential for delivering high-quality, efficient care and better outcomes at a lower cost (86 FR 25615). In the fiscal years 2020, 2021, 2022, and 2023 IRF PPS proposed rules,[15] we outlined several Department of Health and Human Services (HHS) initiatives aimed at promoting the adoption of interoperable health IT and facilitating nationwide health information exchange. Further, to inform our digital strategy, in the FY 2022 IRF PPS proposed rule (86 FR 25615), we shared and sought feedback on the following:

[13] IRF Listening Session: Revising the Transmission Schedule for the IRF–PAI. Available in the Downloads section on the IRF QRP Measures Information web page: *https://www.cms.gov/medicare/quality/inpatient-rehabilitation-facility/irf-quality-reporting-measures-information.*

[14] Internal CMS analysis of FY 2023 IRF–PAI assessment data.

[15] ''Advancing Health Information Exchange'' in: FY 2020 IRF PPS proposed rule (84 FR 19170), FY 2021 IRF PPS proposed rule (85 FR 32470), FY 2022 IRF PPS proposed rule (86 FR 25085), and FY 2023 IRF PPS proposed rule (87 FR 28122).

- Our intent to explore the use of FHIR®-based standards to exchange clinical information through application programming interfaces (APIs).
- Enabling quality data submission to CMS through our internet Quality Improvement and Evaluation System (iQIES).
- To work with healthcare standards organizations to ensure their standards support our assessment tools.

We are considering opportunities to advance FHIR®-based reporting of patient assessment data for the submission of the IRF–PAI and other existing systems such as the Centers for Disease Control and Prevention's (CDC) National Healthcare Safety Network (NHSN) for which IRFs have current CMS reporting requirements. Our objective is to explore how IRFs typically integrate technologies with varying complexity into existing systems and how this affects IRF workflows. In this RFI, we seek to identify the challenges and/or opportunities that may arise during this integration, and determine the support needed to complete and submit quality data in ways that protect and enhance care delivery.

We are also seeking input on future measures under consideration including applicability of interoperability as a future measure concept in post-acute care settings, including the IRF QRP. Refer to section VII.E. of this proposed rule for more information.

Any updates specific to the IRF QRP program requirements related to quality measurement and reporting provisions would be addressed through separate and future notice-and-comment rulemaking, as necessary.

2. Solicitation for Comment

We seek feedback on the current state of health IT use, including electronic health records (EHRs), in IRF facilities:

- To what extent does your IRF use health IT systems to maintain and exchange patient records? If your facility has transitioned to using electronic records, in part or in whole, what types of health IT does your IRF use to maintain patient records? Are these health IT systems certified under the Office of the National Coordinator for Health Information Technology (ONC Health IT) Certification Program? If your facility uses health IT products or systems that are not certified under the ONC Health IT Certification Program, please specify. Does your facility use EHRs or other health IT products or systems that are not certified under the ONC Health IT Certification Program? If no, what is the reason for not doing so? Do these other systems exchange data using standards and implementation specifications adopted by HHS? Does your facility maintain any patient records outside of these electronic systems? If so, are the data organized in a structured format, using codes and recognized standards, that can be exchanged with other systems and providers?
- Does your IRF submit patient assessment data to CMS directly from your health IT system without the assistance of a third-party intermediary? If a third-party intermediary is used to report data, what type of intermediary service is used? How does your facility currently exchange health information with other healthcare providers or systems, specifically between IRFs and other provider types? What about health information exchange with other entities, such as public health agencies? What challenges do you face with electronic exchange of health information?
- Are there any challenges with your current electronic devices (for example, tablets, smartphones, computers) that hinder ability to easily exchange information across systems? Please describe any specific issues you encounter. Does limited internet or lack of internet connectivity impact your ability to exchange data with other healthcare providers, including community-based care services, or your ability to submit patient assessment data to CMS? Please specify.
- What steps does your IRF take with respect to the implementation of health IT systems to ensure compliance with security and patient privacy requirements such as HIPAA?
- Does your IRF refer to the Safety Assurance Factors for EHR Resilience (SAFER) Guides (see newly revised versions published in January 2025 at *https://www.healthit.gov/topic/safety/safer-guides*) to self-assess EHR safety practices?
- What challenges or barriers does your facility encounter when submitting quality measure data to CMS as part of the IRF QRP? What opportunities or factors could improve your facility's successful data submission to CMS?
- What types of technical assistance guidance, workforce trainings, and/or other resources would be most beneficial for the implementation of FHIR®-based technology in your facility for the submission of the IRF–PAI to CMS and other existing systems such as CDC's National Healthcare Safety Network (NHSN) for which IRFs have current CMS reporting requirements? What strategies can CMS, HHS, or other Federal partners take to ensure that technical assistance is both comprehensive and user-friendly? How could Quality Improvement Organizations (QIOs) or other entities enhance this support?
- Is your facility using technology that utilizes APIs based on the FHIR® standard to enable electronic data sharing? If so, with whom are you sharing data using the FHIR® standard and for what purpose(s)? For example, have you used FHIR® APIs to share data with public health agencies? Does your facility use any Substitutable Medical Applications and Reusable Technologies (SMART) on FHIR® applications? If so, are the SMART on FHIR® applications integrated with your EHR or other health IT?
- How do you anticipate the adoption of technology using FHIR®-based APIs to facilitate the reporting of patient assessment data could impact provider workflows? What impact, if any, do you anticipate it will have on quality of care?
- What benefits or challenges have you experienced with implementing technology that uses FHIR®-based APIs? How can adopting technology that uses FHIR®-based APIs to facilitate the reporting of patient assessment data impact provider workflows? What impact, if any, does adopting this technology have on quality of care?
- Does your facility have any experience using technology that shares electronic health information using one or more versions of the United States Core Data for Interoperability (USCDI) standard? [16]
- Would your IRF and/or vendors be interested in participating in testing to explore options for transmission of assessments, for example testing the transmission of a FHIR®-based assessment to CMS?
- How could the Trusted Exchange Framework and Common Agreement™ (TEFCA™) support CMS quality programs' adoption of FHIR®-based assessment submissions consistent with the FHIR® Roadmap (available here: *https://rce.sequoiaproject.org/three-year-fhir-roadmap-for-tefca/*)? How might patient assessment data hold secondary uses for treatment or other TEFCA exchange purposes?
- What other information should we consider to facilitate successful adoption and integration of FHIR®-based technologies and standardized data for patient assessment instruments like the IRF–PAI? We invite any feedback, suggestions, best practices, or

[16] For more information about USCDI see *https://www.healthit.gov/isp/united-states-core-data-interoperability-uscdi.*

success stories related to the implementation of these technologies.

We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies and will use this input to inform our future dQM transition efforts.

J. Form, Manner, and Timing of Data Submission Under the IRF QRP

We are not proposing any new policies regarding Form, Manner, and Timing of Data Submission Under the IRF QRP in this proposed rule.

K. Policies Regarding Public Display of Measure Data for the IRF QRP

1. Background

For a more detailed discussion about our policies regarding public display of IRF QRP measure data and procedures for the opportunity to review and correct data and information, we refer readers to the FY 2017 IRF PPS final rule (81 FR 52125 through 52131).

2. Proposal To End the Public Display of COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure

In the FY 2022 IRF PPS final rule (86 FR 42401), we finalized our proposal to publicly report the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure beginning with the September 2022 Care Compare refresh on *Medicare.gov.* In section VII.C.1 of this proposed rule, we are proposing to remove the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure beginning with the FY 2026 IRF QRP. If finalized as proposed, an IRFs HCP COVID–19 rates will be publicly reported for the last time with the September 2025 Care Compare refresh on *Medicare.gov,* based on data from Q4 of 2024. Thereafter, we will no longer display IRFs' HCP COVID–19 rates on the Care Compare tool at *Medicare.gov.*

We invite comment on our proposal to end public display of the HCP COVID–19 vaccination coverage rates after the September 2025 Care Compare refresh on the Care Compare tool at *Medicare.gov.*

3. Proposal To End the Public Display of Patient/Resident COVID–19 Measure

In the FY 2024 IRF PPS final rule (88 FR 51042 and 51042), we finalized our proposal to begin publicly displaying data for the Patient/Resident COVID–19 measure beginning with the September 2025 Care Compare refresh. In section VII.C.2, we are proposing to remove the Patient/Resident COVID–19 Measure beginning with the FY 2028 IRF QRP. However, the reporting of data for the Patient/Resident COVID–19 Vaccine data item will be voluntary effective October 1, 2025. If finalized as proposed, we propose that the Patient/Resident COVID–19 measure rates would be publicly reported for the last time with the September 2025 Care Compare refresh on *Medicare.gov,* based on data from Q4 of 2024.

We invite public comment on our proposal to end the public display of Patient/Resident COVID–19 Measure data after the September 2025 Care Compare refresh on *Medicare.gov.*

VIII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (PRA) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

A. ICRs for Proposed Updates Related to the IRF QRP

An IRF that does not meet the requirements of the IRF QRP for a fiscal year will receive a 2-percentage point reduction to its otherwise applicable annual increase factor for that fiscal year. We estimate that the burden associated with the IRF QRP is the time and effort associated with complying with the requirements of the IRF QRP. In section VII.E of this proposed rule, we are proposing to amend the IRF QRP reconsideration request policy and process. As we noted in the FY2016 IRF PPS Final rule (80 FR 47131), we believe the reconsideration requirements, and the associated burden would be incurred subsequent to an administrative action. In accordance with the implementing regulations for the PRA (5 CFR 1320.4(a)(2) and (c)), the burden associated with any information collected subsequent to the administrative action is exempt from the requirements of the PRA. We have, however, provided detailed cost burden estimates in section IX.6b of this proposed rule. We welcome public comments on the accuracy of the cost estimate assigned to this administrative burden.

1. Requirements for Proposed Updates Related to the IRF QRP Beginning With the FY 2026 IRF QRP

In section VII.C.I of the proposed rule, we propose to remove the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) (HCP COVID–19) measure, beginning with the FY 2026 IRF QRP.

We note that the CDC would account for the burden associated with the HCP COVID–19 measure collection under OMB control number 0920–1317 (expiration 03/31/26). Currently, the CDC does not estimate burden for COVID–19 vaccination reporting under the CDC PRA package currently approved under OMB control number 0920–1317 because the agency has been granted a waiver under section 321 of the National Childhood Vaccine Injury Act of 1986 (Pub. L. 99–660, enacted on November 14, 1986 (NCVIA)).[17] However, CMS is providing an estimate of reduction in burden and cost for IRFs here. Consistent with the CDC's experience of collecting data using the NHSN, we estimate the removal of this measure will result in a reduction of 1 hour per month to collect data for the HCP COVID–19 measure and enter it into NHSN. We believe that this data would be entered by an administrative assistant. However, IRFs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[18] To account for overhead and fringe

[17] Section 321 of the NCVIA provides the PRA waiver for activities that come under the NCVIA, including those in the NCVIA at section 2102 of the Public Health Service Act (*https://www.govinfo.gov/content/pkg/USCODE-2023-title42/pdf/USCODE-2023-title42-chap6A-subchapXIX-part1-sec300aa-2.pdf*). Section 321 is not codified in the U.S. Code but can be found in a note *(https://www.govinfo.gov/content/pkg/USCODE-2023-title42/pdf/USCODE-2023-title42-chap6A-subchapXIX-part1-sec300aa-1.pdf*).

[18] U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/current/oes_nat.htm.*

benefits, we have doubled the hourly wage. These amounts are detailed in Table 10.

TABLE 10—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Administrative Assistants	43–6013	$18.01	$18.01	$36.02

We estimate that the removal of this measure from the IRF QRP will result in a reduction of 12 hours per IRF per year. Using FY 2024 data, we estimate a total of 1,166 IRFs annually for a decrease of 13,992 hours (12 hours × 1,166 IRFs) for all IRFs. Given an estimated $36.02 hourly wage, we estimate a decrease of $432.24 per IRF (12 hours × $36.02), or a decrease of $503,991.84 for all IRFs annually.

2. ICRs for Proposed Removal of the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date Measure Beginning With the FY 2028 IRF QRP

In section VII.C.2 of this proposed rule, we propose to remove the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date (Patient/Resident COVID–19 Vaccine) measure, beginning with the FY 2028 IRF QRP. We identified the staff type based on past IRF burden calculations. We believe that the items would be completed equally by a Registered Nurse (RN) and a Licensed Practical and Licensed Vocational Nurse (LPN/LVN). However, IRFs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages for these staff from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[19] To account for other indirect costs and fringe benefits, we doubled the hourly wage. These amounts are detailed in Table 11. We established a composite cost estimate using our adjusted wage estimates. The composite estimate of $70.10/hr was calculated by weighting each adjusted hourly wage equally (that is, 50 percent) [($82.76/hr × 0.5) + ($57.44/hr × 0.5) = $70.10].

TABLE 11—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Registered Nurse (RN)	29–1141	$41.38	$41.38	$82.76
Licensed Practical and Licensed Vocational Nurse (LPN/LVN)	29–2061	28.72	28.72	57.44

The net result of removing the related Patient/Resident COVID–19 Vaccine Status item (O0350) beginning with the FY 2028 IRF QRP is a decrease of 0.3 minutes or 0.005 hour of clinical staff time at discharge. We estimate that the burden and cost for IRFs for complying with requirements of the FY 2028 IRF QRP would decrease under this proposal. Using FY 2024 data, we estimate a total of 622,300 discharges annually from 1,166 IRFs for a decrease of 3,111.5 hours (622,300 × 0.005 hour) for all IRFs, or 2.67 hours per IRF (3,111.5 hours/1,116 IRFs). Given 0.005 hours at $70.10 per hour to complete an average of 533.7 IRF–PAIs per IRF per year, we estimate the total cost will be decreased by $187.06 per IRF annually, or $218,116.15 for all IRFs annually.

3. ICRs for Proposed Removal of Four Standardized Patient Assessment Data Elements Beginning With the FY 2028 IRF QRP

In section VII.D of this proposed rule, we propose to remove four standardized patient assessment data elements under the SDOH category previously adopted for collection and submission on admission beginning October 1, 2026.

We identified the staff type based on past IRF burden calculations. We believe that the items would be completed equally by a Registered Nurse (RN) and a Licensed Practical and Licensed Vocational Nurse (LPN/LVN). However, IRFs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages for these staff from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[20] To account for other indirect costs and fringe benefits, we doubled the hourly wage. These amounts are detailed in Table 12. We established a composite cost estimate using our adjusted wage estimates. The composite estimate of $70.10/hr was calculated by weighting each adjusted hourly wage equally (that is, 50 percent) [($82.76/hr × 0.5) + ($57.44/hr × 0.5) = $70.10].

[19] U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/current/oes_nat.htm.*

[20] U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/current/oes_nat.htm.*

TABLE 12—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Registered Nurse (RN)	29–1141	$41.38	$41.38	$82.76
Licensed Practical and Licensed Vocational Nurse (LPN/LVN)	29–2061	28.72	28.72	57.44

We estimate that the burden and cost for IRFs for complying with requirements of the FY 2028 IRF QRP would decrease under this proposal. We estimate that removing four SDOH items with respect to admission will result in a reduction of 1.2 minutes, or 0.02 hour. Using FY 2024 data, we estimate a total of 622,300 assessments from 1,166 IRFs annually for a decrease of 12,446 hours in burden for all IRFs (622,300 × 0.02 hour), or a decrease of 10.67 hours per IRF. Given 10.67 hours at $70.10 per hour, to complete an average of 534 IRF–PAI assessments per IRF per year, we estimate the total cost will be decreased by $748.25 per IRF annually, or $872,464.60 for all IRFs annually, as detailed in Table 13.

We invite public comments on the proposed information collection requirements and whether our estimated burden reduction of 0.02 hours per patient and an annual decrease of 10.67 hours in burden per IRF at admission is an accurate estimate.

TABLE 13—ESTIMATED CHANGE IN BURDEN BEGINNING WITH THE FY 2028 IRF QRP

Requirement	Estimated change in annual burden hours	Estimated change in annual cost	Estimated change in annual burden hours	Estimated change in annual cost
Proposed removal of the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date item beginning with the FY 2028 IRF QRP	−2.67	−$187.06	−3,111.5	−$218,116.15
Proposed removal of four standardized patient assessment data elements beginning with the FY 2028 IRF QRP	−10.67	−748.25	−12,446	−872,464.60
Total change in burden for FY 2028 IRF QRP	−13.34	−935.32	−15,557.5	−1,090,580.75

4. Summary of Requirements for Proposed Updates Related to the IRF QRP Beginning With the FY 2028 IRF QRP

The IRF–PAI, in its current form, has been approved under OMB control number 0938–0842 (expiration 10/31/2027). The net result of removing five items beginning with the FY 2028 IRF QRP, as described in sections VII.A.2 and VII.A.3 of this proposed rule, is a decrease of 1.5 minutes or 0.025 hour of clinical staff time. We estimate that the burden and cost for IRFs for complying with requirements of the FY 2028 IRF QRP would decrease under these proposals. In summary, we estimate the total cost for the proposed requirements of the FY 2028 IRF QRP will be decreased by $935.32 per IRF annually, or $1,089,642.75 for all IRFs annually. These amounts are detailed in Table 14.

TABLE 14—ESTIMATED CHANGE IN BURDEN ASSOCIATED WITH OMB CONTROL NUMBER 0938–0842

Requirement	Per IRF		All IRFs	
	Estimated change in annual burden hours	Estimated change in annual cost	Estimated change in annual burden hours	Estimated change in annual cost
Proposed removal of the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date item beginning with the FY 2028 IRF QRP	−2.67	−$187.06	−3,111.5	−$218,116.15
Proposed removal of four standardized patient assessment data elements beginning with the FY 2028 IRF QRP	−10.67	−748.25	−12,446.00	−872,464.60

We invite public comments on the proposed information collection requirements.

IX. Regulatory Impact Analysis

A. Statement of Need

This proposed rule would update the IRF prospective payment rates for FY 2026 as required under section 1886(j)(3)(C) of the Act and in accordance with section 1886(j)(5) of the Act, which requires the Secretary to publish in the **Federal Register** on or before August 1 before each FY, the classification and weighting factors for CMGs used under the IRF PPS for such FY and a description of the methodology and data used in computing the prospective payment rates under the IRF PPS for that FY. This proposed rule would also implement section 1886(j)(3)(C) of the Act, which requires the Secretary to apply a productivity adjustment to the market basket percentage increase for FY 2012 and subsequent years.

Furthermore, this proposed rule proposes to adopt policy changes to the IRF QRP under the statutory discretion afforded to the Secretary under section 1886(j)(7) of the Act.

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866, ''Regulatory Planning and Review''; Executive Order 13132, ''Federalism''; Executive Order 13563, ''Improving Regulation and Regulatory Review''; Executive Order 14192, ''Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (Pub. L. 96–354); section 1102(b) of the Social Security Act; section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select those regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; and distributive impacts). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, or the President's priorities.

A regulatory impact analysis (RIA) must be prepared for rules that are significant as per section 3(f)(1) of E.O. 12866 (having an effect on the economy $100 million or more in any 1 year). We estimate the total impact of the policy updates described in this proposed rule by comparing the estimated payments in FY 2026 with those in FY 2025. This analysis results in an estimated $295 million increase for FY 2026 IRF PPS payments. Additionally, we estimated that costs associated with updating the reporting requirements under the IRF QRP result in an estimated reduction of $504,929.84 in costs for IRFs for purposes of meeting the FY 2026 IRF QRP, and an estimated reduction of $1,090,580.75 in costs for IRFs for purposes of meeting the FY 2028 IRF QRP. Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1) because it will have an effect on the economy $100 million or more in any 1 year. Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking.

This proposed rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action. We estimate that this rule would generate approximately $1 million in annualized cost savings at a 7 percent discount rate, discounted relative to year 2024, over a perpetual time horizon.

Anticipated Effects on IRFs

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most IRFs and most other providers and suppliers are small entities, either by having revenues of $9.0 million to $47.0 million or less in any 1 year depending on industry classification, or by being nonprofit organizations that are not dominant in their markets. (For details, see the Small Business Administration's final rule that set forth size standards for health care industries, at 65 FR 69432, and see *https://www.sba.gov/sites/default/files/2023-06/Table%20of%20Size%20Standards_Effective%20March%2017%2C%202023%20%282%29.pdf,* effective January 1, 2022, and updated on March 17, 2023.) Because we lack data on individual hospital receipts, we cannot determine the number of small proprietary IRFs or the proportion of IRFs' revenue that is derived from Medicare payments. Therefore, we assume that all IRFs (an approximate total of 1,166 IRFs, of which approximately 47 percent are nonprofit facilities) are considered small entities and that Medicare payment constitutes the majority of their revenues. As shown in Table 15, we estimate that the net revenue impact of the proposed rule on all IRFs is to increase estimated payments by approximately 2.8 percent. As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. We do not believe that this threshold will be reached by the requirements in this proposed rule. Therefore, the Secretary has certified that this proposed rule would not have a significant economic impact on a substantial number of small entities. The estimated impact on small entities is shown in Table 15. MACs are not considered to be small entities. Individuals and States are not included in the definition of a small entity.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For the purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds. As shown in Table 15, we estimate that the net revenue impact of this proposed rule on rural IRFs is to increase estimated payments by approximately 2.7 percent based on the data of the 131 rural units and 14 rural hospitals in our database of 1,166 IRFs for which data were available. We estimate an overall impact for rural IRFs in all areas between 1.6 percent and 5.7 percent. As a result, we anticipate that this proposed rule will not have a significant positive impact on a substantial number of small entities.

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–04, enacted March 22, 1995) (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately $187 million. This proposed rule does not mandate any requirements for State, local, or Tribal governments, or for the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. As stated, this proposed rule will not have a substantial effect on State and local governments, preempt State law, or otherwise have a federalism implication.

C. Detailed Economic Analysis

We have estimated the impact of the proposed rule. This proposed rule updates the IRF PPS rates contained in the FY 2025 IRF PPS final rule (88 FR 50956). Specifically, this proposed rule proposes updates to the CMG relative weights and ALOS values, the wage index, and the outlier threshold for high-cost cases. This proposed rule would apply a productivity adjustment to the FY 2026 IRF market basket percentage increase in accordance with section 1886(j)(3)(C)(ii)(I) of the Act.

1. Impact on IRFs

We estimate that the impact of the changes and updates described in this proposed rule would be a net estimated increase of $295 million in payments to IRFs for FY 2026. The impact analysis in Table 15 of this proposed rule represents the projected effects of the proposed updates to IRF PPS payments for FY 2026 compared with the estimated IRF PPS payments in FY 2025. We determine the effects by estimating payments while holding all other payment variables constant. We use the best data available, but we do not attempt to predict behavioral responses to these changes, and we do not make adjustments for future changes in such variables as number of discharges or case-mix.

We note that certain events may combine to limit the scope or accuracy of our impact analysis, because such an analysis is future-oriented and, thus, susceptible to forecasting errors because of other changes in the forecasted impact time period. Some examples could be legislative changes made by the Congress to the Medicare program that would impact program funding, or changes specifically related to IRFs. Although some of these changes may not necessarily be specific to the IRF PPS, the nature of the Medicare program is such that the changes may interact, and the complexity of the interaction of these changes could make it difficult to predict accurately the full scope of the impact upon IRFs.

In updating the rates for FY 2026, we are proposing to implement the standard annual revisions described in this proposed rule (for example, the update to the wage index and market basket percentage increase used to adjust the Federal rates). We are also reducing the FY 2026 IRF market basket percentage increase by a productivity adjustment in accordance with section 1886(j)(3)(C)(ii)(I) of the Act. We estimate that the total increase in payments to IRFs in FY 2026, relative to FY 2025, will be approximately $295 million.

This estimate is derived from the application of the proposed FY 2026 IRF market basket percentage increase, reduced by a productivity adjustment in accordance with section 1886(j)(3)(C)(ii)(I) of the Act, which yields an estimated increase in aggregate payments to IRFs of $275 million. In addition, there is an estimated $20 million increase in aggregate payments to IRFs due to the proposed update to the outlier threshold amount. We estimate that these proposed updates would result in a net increase in estimated payments of $295 million from FY 2025 to FY 2026.

The effects of the proposed updates that impact IRF PPS payment rates are shown in Table 15. The following updates that affect the IRF PPS payment rates are discussed separately below:

- The effects of the proposed update to the outlier threshold amount, from approximately 2.8 percent to 3.0 percent of total estimated payments for FY 2026, consistent with section 1886(j)(4) of the Act.
- The effects of the proposed annual market basket update (using the 2021-based IRF market basket) to IRF PPS payment rates, as required by sections 1886(j)(3)(A)(i) and (j)(3)(C) of the Act, including a productivity adjustment in accordance with section 1886(j)(3)(C)(ii)(I) of the Act.
- The effects of applying the proposed budget-neutral labor-related share and wage index adjustment, as required under section 1886(j)(6) of the Act, accounting for the permanent cap on wage index decreases when applicable.
- The effects of the proposed budget-neutral changes to the CMG relative weights and ALOS values under the authority of section 1886(j)(2)(C)(i) of the Act.
- The total change in proposed estimated payments based on the FY 2026 payment changes relative to the estimated FY 2025 payments.

2. Description of Table 15

Table 15 shows the overall impact on the 1,166 IRFs included in the analysis.

The next 12 rows of Table 15 contain IRFs categorized according to their geographic location, designation as either a freestanding hospital or a unit of a hospital, and by type of ownership; all urban, which is further divided into urban units of a hospital, urban freestanding hospitals, and by type of ownership; and all rural, which is further divided into rural units of a hospital, rural freestanding hospitals, and by type of ownership. There are 1,021 IRFs located in urban areas included in our analysis. Among these, there are 645 IRF units of hospitals located in urban areas and 376 freestanding IRF hospitals located in urban areas. There are 145 IRFs located in rural areas included in our analysis. Among these, there are 131 IRF units of hospitals located in rural areas and 14 freestanding IRF hospitals located in rural areas. There are 518 for-profit IRFs. Among these, there are 479 IRFs in urban areas and 39 IRFs in rural areas. There are 553 non-profit IRFs. Among these, there are 466 urban IRFs and 87 rural IRFs. There are 95 government-owned IRFs. Among these, there are 76 urban IRFs and 19 rural IRFs.

The remaining four parts of Table 15 show IRFs grouped by geographic location within a region, by teaching status, and by DSH patient percentage (PP). First, IRFs located in urban areas are categorized for their location within a particular one of the nine Census geographic regions. Second, IRFs located in rural areas are categorized for their location within a particular one of the nine Census geographic regions. In some cases, especially for rural IRFs located in the New England, Mountain, and Pacific regions, the number of IRFs represented is small. IRFs are then grouped by teaching status, including non-teaching IRFs, IRFs with an intern and resident to average daily census (ADC) ratio less than 10 percent, IRFs with an intern and resident to ADC ratio greater than or equal to 10 percent and less than or equal to 19 percent, and IRFs with an intern and resident to ADC ratio greater than 19 percent. Finally, IRFs are grouped by DSH PP, including IRFs with zero DSH PP, IRFs with a DSH PP less than 5 percent, IRFs with a DSH PP between 5 and less than 10 percent, IRFs with a DSH PP between 10 and 20 percent, and IRFs with a DSH PP greater than 20 percent.

The estimated impacts of each policy described in this proposed rule to the facility categories listed are shown in the columns of Table 15. The description of each column is as follows:

- Column (1) shows the facility classification categories.
- Column (2) shows the number of IRFs in each category in our FY 2026 analysis file.
- Column (3) shows the number of cases in each category in our FY 2026 analysis file.
- Column (4) shows the estimated effect of the adjustment to the outlier threshold amount.
- Column (5) shows the estimated effect of the FY 2026 update to the IRF labor-related share, wage index with the 5-percent cap on wage index decreases when applicable, and second year of the three-year phase-out of the rural adjustment finalized in the FY 2025 IRF PPS final rule, in a budget-neutral manner.
- Column (6) shows the estimated effect of the update to the CMG relative weights and ALOS values, in a budget-neutral manner.
- Column (7) compares our estimates of the payments per discharge, incorporating all of the proposed policies reflected in this proposed rule for FY 2026 to our estimated payments

per discharge in FY 2025 without the proposed policies.

The average estimated increase in payments for all IRFs is approximately 2.8 percent. This estimated net increase includes the effects of the proposed IRF market basket update for FY 2026 of 2.6 percent, which is based on a proposed IRF market basket percentage increase of 3.4 percent, less a proposed 0.8 percentage point productivity adjustment, as required by section 1886(j)(3)(C)(ii)(I) of the Act. It also includes the approximate 0.2 percent overall increase in estimated IRF outlier payments from the proposed update to the outlier threshold amount. Since we are making the proposed updates to the IRF wage index, labor-related share and the CMG relative weights in a budget-neutral manner, we estimate there is no expected impact to total estimated IRF payments in aggregate from these proposed changes. However, as described in more detail in each section, we estimate there will be expected impacts to the estimated distribution of payments among providers.

TABLE 15—PROPOSED IRF IMPACT FOR FY 2026

[Columns 4 through 7 in percentages]

Facility classification	Number of IRFs	Number of cases	Outlier	FY 2026 wage index (5% cap) and labor-related share	CMG relative weights	Total percent change [1]
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Total	1,166	444,412	0.2	0.0	0.0	2.8
Urban unit	645	142,940	0.4	−0.2	0.0	2.8
Rural unit	131	17,940	0.3	−0.1	0.1	2.9
Urban hospital	376	276,551	0.1	0.1	0.0	2.8
Rural hospital	14	6,981	0.0	−0.4	0.0	2.2
Urban For-Profit	479	274,477	0.1	0.1	0.0	2.7
Rural For-Profit	39	10,654	0.1	−0.2	0.0	2.5
Urban Non-Profit	466	127,101	0.3	−0.1	0.0	2.9
Rural Non-Profit	87	12,421	0.3	−0.1	0.1	2.9
Urban Government	76	17,913	0.4	−0.2	0.1	2.8
Rural Government	19	1,846	0.2	−0.6	0.1	2.3
Urban	1,021	419,491	0.2	0.0	0.0	2.8
Rural	145	24,921	0.2	−0.2	0.1	2.7
Urban by region:						
Urban New England	30	15,406	0.1	1.7	0.1	4.6
Urban Middle Atlantic	113	42,457	0.2	0.4	0.0	3.2
Urban South Atlantic	188	99,882	0.2	0.2	0.0	2.9
Urban East North Central	165	50,096	0.2	0.4	0.0	3.3
Urban East South Central	56	28,860	0.1	0.6	0.0	3.3
Urban West North Central	79	25,162	0.2	0.5	0.0	3.3
Urban West South Central	210	95,229	0.1	−0.6	0.0	2.1
Urban Mountain	81	35,821	0.1	−0.6	0.0	2.2
Urban Pacific	99	26,578	0.5	−1.0	0.0	2.1
Rural by region:						
Rural New England	5	1,102	0.3	1.1	0.1	4.2
Rural Middle Atlantic	11	1,390	0.2	−1.2	0.1	1.7
Rural South Atlantic	17	6,370	0.1	−0.9	0.0	1.8
Rural East North Central	23	3,002	0.4	0.2	0.0	3.2
Rural East South Central	19	3,236	0.2	−1.2	0.1	1.6
Rural West North Central	19	2,273	0.3	0.2	0.1	3.3
Rural West South Central	44	6,953	0.2	0.5	0.1	3.4
Rural Mountain	5	321	0.2	2.6	0.2	5.7
Rural Pacific	2	274	1.0	0.5	0.3	4.4
Teaching status:						
Non-teaching	1,060	393,903	0.2	0.0	0.0	2.8
Resident to ADC less than 10%	58	35,281	0.2	−0.1	0.0	2.7
Resident to ADC 10%–19%	37	13,852	0.4	−0.4	0.0	2.7
Resident to ADC greater than 19%	11	1,376	0.5	1.3	0.0	4.4
Disproportionate share patient percentage (DSH PP):						
DSH PP = 0%	62	15,745	0.4	−0.4	0.0	2.5
DSH PP <5%	183	93,425	0.1	0.2	0.0	3.0
DSH PP 5%–10%	241	103,512	0.1	−0.1	0.0	2.6
DSH PP 10%–20%	402	152,880	0.2	0.0	0.0	2.8
DSH PP greater than 20%	278	78,850	0.3	−0.1	0.0	2.8

[1] This column includes the impact of the updates in columns (4), (5), and (6) above, and of the IRF market basket update for FY 2025 of 3.4 percent, reduced by 0.8 percentage point for the productivity adjustment as required by section 1886(j)(3)(C)(ii)(I) of the Act. Note, the products of these impacts may be different from the percentage changes shown here due to rounding effects.

3. Impact of the Proposed Update to the Outlier Threshold Amount

The estimated effects of the update to the outlier threshold adjustment from FY 2025 to FY 2026 are presented in column 4 of Table 15.

For the FY 2026 proposed rule, we used preliminary FY 2024 IRF claims data and based on that preliminary analysis, we estimated that IRF outlier payments as a percentage of total estimated IRF payments would be 2.8 percent in FY 2025. Thus, we are adjusting the outlier threshold amount in this proposed rule from $12,043 in FY 2025 to $11,971 in FY 2026 to maintain total estimated outlier payments equal to 3 percent of total estimated payments in FY 2026. The estimated change in total IRF payments for FY 2026, therefore, includes an approximate 0.2 percentage point increase in payments because the estimated outlier portion of total payments is estimated to increase from approximately 2.8 percent to 3.0 percent. The impact of this update to the outlier threshold amount (as shown in column 4 of Table 15) is to increase estimated overall payments to IRFs by 0.2 percentage point.

4. Impact of the Proposed Wage Index, Labor-Related Share, and Wage Index Cap

In column 5 of Table 15, we present the effects of the proposed budget-neutral update of the wage index and labor-related share, taking into account the permanent 5-percent cap on wage index decreases when applicable. The proposed changes to the wage index and the labor-related share are discussed together because the wage index is applied to the labor-related portion of payments, so the proposed changes in the two have a combined effect on payments to providers. As discussed in section V.C. of this proposed rule, we are proposing to update the FY 2026 labor-related share from 74.4 percent in FY 2025 to 74.5 percent in FY 2026.

In the aggregate, since these updates to the wage index and the labor-related share are applied in a budget-neutral manner as required under section 1886(j)(6) of the Act, we do not estimate that these updates will affect overall estimated payments to IRFs. However, we estimate that these proposed changes would have small distributional effects. For example, we estimate the largest increase in payments of 2.6 percent for rural IRFs in the Mountain region. We estimate the largest decrease in payments from the proposed update to the wage index and labor-related share to be a 1.2 percent decrease for rural IRFs in the Middle Atlantic and East South Central regions.

5. Impact of the Proposed Update to the CMG Relative Weights and ALOS Values

In column 6 of Table 15, we present the effects of the proposed budget-neutral update of the CMG relative weights and ALOS values. In the aggregate, we do not estimate that these proposed updates will affect overall estimated payments of IRFs. However, we do expect these updates to have small distributional effects between 0.0 percent to 0.3 percent.

6. Effects of Requirements for the IRF QRP

In accordance with section 1886(j)(7)(A) of the Act, the Secretary must reduce by 2 percentage points the annual market basket increase factor otherwise applicable to an IRF for a fiscal year if the IRF does not comply with the requirements of the IRF QRP for that fiscal year. In section IX.A. of the proposed rule, we discussed the method for applying the 2-percentage points reduction to IRFs that fail to meet the IRF QRP requirements.

a. Effects of Requirements for the IRF QRP Beginning With the FY 2026 IRF QRP

As discussed in section VII.C.I of the proposed rule, we propose to remove the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure, beginning with the FY 2026 IRF QRP.

Currently, the CDC does not estimate burden for COVID–19 vaccination reporting under the CDC PRA package currently approved under OMB control number 0920–1317 because the agency has been granted a waiver under section 321 of the NCVIA. However, CMS has provided an estimate of reduction in burden and cost for IRFs here. Consistent with the CDC's experience of collecting data using the NHSN, we estimate the removal of this measure will result in a reduction of 1 hour per month to collect data for the COVID–19 Vaccination Coverage among HCP measure and enter it into NHSN. We believe that this data would be entered by an administrative assistant. However, IRFs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[21] To account for overhead and fringe benefits, we have doubled the hourly wage. These amounts are detailed in Table 16.

TABLE 16—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Administrative Assistants	43–6013	$18.01	$18.01	$36.02

We estimate that the removal of this measure from the IRF QRP will results in a reduction of 12 hours per IRF per year. Using FY 2024 data, we estimate a total of 1,166 IRFs annually for a decrease of 13,992 hours (12 hours × 1,166 IRFs) for all IRFs. Given an estimated $36.02 hourly wage, we estimate a decrease of $432.24 per IRF (12 hours × $36.02), or a decrease of $503,991.84 for all IRFs annually.

In section VII.E of this proposed rule, we propose to amend the reconsideration request policy and process. For IRFs that seek to file an extension to file a request for reconsideration of a noncompliance

[21] U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/current/oes_nat.htm.*

determination, we estimate that this request will take IRFs approximately 15 minutes to complete. We believe that this data would be entered by medical records specialists. However, IRFs determine the staffing resources necessary.

For the purposes of calculating the costs we obtained median hourly wages from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[22] To account for overhead and fringe benefits, we have doubled the hourly wage. These amounts are detailed in Table 17.

TABLE 17—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Medical Records Specialists	29–2072	$23.45	$23.45	$46.90

We estimate that the collection of this request will result in an additional 15 minutes, or 0.25 hours, per request. Based on the number of reconsiderations requests we have received in the previous 3 years, we estimate an average of 81 requests per year, for an additional 20 hours per year (0.25 hours × 81 forms per year) for all IRFs. Given an estimated $46.90 hourly wage, we estimate an increase of $938.00 (20 hours × $46.90) for all IRFs annually or $11.58 per IRF that request reconsiderations.

b. Effects of Requirements for the IRF QRP Beginning With the FY 2028 IRF QRP

In section VII.C.2 of the proposed rule, we propose to remove the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure and the associated assessment item (O0350), beginning with the FY 2028 IRF QRP. In section VII.D of this proposed rule, we propose to remove four standardized patient assessment data elements from the IRF–PAI, beginning with the FY 2028 IRF QRP. The net result of removing five items is a decrease of 1.5 minutes or 0.025 hour of clinical staff time at admission. We believe that the items would be completed equally by a Registered Nurse (RN) (50 percent of the time) and a Licensed Practical and Licensed Vocational Nurse (LPN/LVN) (50 percent of the time). However, IRFs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages for these staff from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[23] To account for other indirect costs and fringe benefits, we doubled the hourly wage. These amounts are detailed in Table 18.

TABLE 18—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Registered Nurse (RN)	29–1141	$41.38	$41.38	$82.76
Licensed Practical and Licensed Vocational Nurse (LPN/LVN)	29–2061	28.72	28.72	57.44

Using FY 2024 data, we estimate a total of 622,300 assessments from 1,166 IRFs annually for a decrease of 15,557.5 hours in burden for all IRFs (622,300 × 0.025 hour), or a decrease of 13.34 hours per IRF. Given 0.025 hour at $70.10 per hour to complete an average of 534 IRF–PAI assessments per IRF per year, we estimate the total cost will be decreased by $935.32 per IRF annually, or $1,090,580.75 for all IRFs annually.

c. Summary of Effects of Requirements for the IRF QRP

In summary, we estimate that the burden and cost for IRFs for complying with requirements of the FY 2026 IRF QRP would decrease under these proposals, by 13,972 hours and $504,929.84 for all IRFs annually. We also estimate that the burden and cost for IRFs for complying with the requirements of the FY 2028 IRF QRP would decrease under these proposals, by 15,557.5 hours and $1,090,580.75 for all IRFs annually. These amounts are detailed in Table 19.

[22] U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/current/oes_nat.htm.*

[23] U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/current/oes_nat.htm.*

TABLE 19—ESTIMATED IRF QRP PROGRAM IMPACTS

Requirement	All IRFs	
Estimated change in annual burden hours	Estimated change in annual cost	
Proposed Effects of Requirements for the FY 2026 IRF QRP (measure removal and reconsideration policy update)	−13,972	−$504,929.84
Proposed Effects of Requirements for the FY 2028 IRF QRP (measure and item removals)	−15,557.5	−1,090,580.75

We invite public comments on the proposed effects on requirements.

D. Alternatives Considered

IRF PPS Updates

As noted previously in this proposed rule, section 1886(j)(3)(C) of the Act requires the Secretary to update the IRF PPS payment rates by an increase factor that reflects changes over time in the prices of an appropriate mix of goods and services included in the covered IRF services and section 1886(j)(3)(C)(ii)(I) of the Act requires the Secretary to apply a productivity adjustment to the market basket percentage increase for FY 2026. Thus, in accordance with section 1886(j)(3)(C) of the Act, we propose to update the IRF prospective payments in this proposed rule by 2.6 percent (which equals the 3.4 percent IRF market basket percentage increase for FY 2026 reduced by a 0.8 percentage point productivity adjustment as determined under section 1886(b)(3)(B)(xi)(II) of the Act (as required by section 1886(j)(3)(C)(ii)(I) of the Act).

We considered maintaining the existing CMG relative weights and average length of stay values for FY 2026. However, in light of recently available data, short stay transfers to home health, and our desire to ensure that the CMG relative weights and average length of stay values are as reflective as possible of recent changes in IRF utilization and case mix, we believe that it is appropriate to propose to update the CMG relative weights and average length of stay values at this time to ensure that IRF PPS payments continue to reflect as accurately as possible the current costs of care in IRFs.

We considered maintaining the existing outlier threshold amount for FY 2026. However, analysis of FY 2024 data indicates that estimated outlier payments would be less than 3 percent of total estimated payments for FY 2026, unless we updated the outlier threshold amount. Consequently, we propose adjusting the outlier threshold amount to maintain estimated outlier payments at 3 percent of estimated aggregate payments in FY 2026.

Regarding our proposals to remove both the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) and COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure, we considered keeping both measures, but determined the cost and burden associated with maintaining these measures outweigh the benefit of their continued collection and are proposing to remove them.

Regarding our proposal to remove four SDO standardized patient assessment data elements we are removing these in an effort to reduce burden. We considered keeping these but believe that removing would help reduce burden.

Finally, regarding proposals to amend the reconsideration request policy and process, we considered the alternative of leaving the policy language unchanged. However, we have noted some areas in our policy where IRFs may benefit from clearly demarcated deadlines regarding requests for reconsideration.

E. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this proposed rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume at least one staff in IRFs would read the rule. The total number of IRFs would be the proxy of number of reviewers for this rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this proposed rule. We also assume that each reviewer reads 100 percent of the rule.

Using the national mean hourly wage data from the May 2023 BLS for Occupational Employment Statistics (OES) for medical and health service managers (SOC 11–9111), we estimate that the cost of reviewing this rule is $129.28 per hour, including other indirect costs and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed, we estimate that it will take approximately 3 hours for the staff to review this proposed rule. For each reviewer of the rule, the estimated cost is $387.84 (3 hours × $129.28). Therefore, we estimate that the total cost of reviewing this regulation is $452,221.44 ($387.84 × 1,166 reviewers).

F. Accounting Statement and Table

Consistent with OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf*), in Table 20 we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this proposed rule. Table 20 provides our best estimate of the increase in Medicare payments under the IRF PPS as a result of the proposed updates presented in this proposed rule based on the data for IRFs in our database.

TABLE 20—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURE

	Category	Transfers
Change in Estimated Transfers from FY 2025 IRF PPS to FY 2026 IRF PPS.	Annualized Monetized Transfers	$295 million increase.
	From Whom to Whom?	Federal Government to IRF Medicare Providers.
Estimated Savings Associated with the FY 2026 IRF QRP.	Annualized monetized savings in FY 2026 due to proposed data collection requirements.	$504,929.84.

TABLE 20—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURE—Continued

	Category	Transfers
Estimated Savings Associated with the FY 2028 IRF QRP.	Annualized monetized savings in FY 2028 due to proposed data collection requirements.	$1,090,580.75.
Estimated Costs Associated with Review Cost for FY 2026 IRF PPS.	Cost associated with regulatory review cost ...	$452,221.

G. Conclusion

Overall, the estimated payments per discharge for IRFs in FY 2026 are projected to increase by 2.8 percent, compared with the estimated payments in FY 2025, as reflected in column 7 of Table 15.

IRF payments per discharge are estimated to increase by 2.8 percent in urban areas and 2.7 percent in rural areas, compared with estimated FY 2025 payments. Payments per discharge to rehabilitation units are estimated to increase 2.8 percent in urban areas and 2.9 percent in rural areas. Payments per discharge to freestanding rehabilitation hospitals are estimated to increase 2.8 percent in urban areas and 2.2 percent in rural areas.

Overall, IRFs are estimated to experience a net increase in payments as a result of the policies in this proposed rule. The largest payment increase is estimated to be 5.7 percent for IRFs in the Rural Mountain region. The analysis above, together with the remainder of this preamble, provides an RIA.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by OMB.

Steph Carlton, Acting Administrator of the Centers for Medicare & Medicaid Services, approved this document on April 8, 2025.

List of Subjects in 42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below.

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 1. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 2. Amend § 412.634 by revising paragraph (d)(5) and adding paragraphs (d)(6) and (7) to read as follows:

§ 412.634 Requirements under the Inpatient Rehabilitation Facility (IRF) Quality Reporting Program (QRP).

* * * * *

(d) * * *

(5) CMS will notify the IRF, in writing, of its final decision regarding any reconsideration request through at least one of the following methods: CMS designated data submission system, the United States Postal Service, or via email from the CMS Medicare Administrative Contractor (MAC). CMS will grant a timely request for reconsideration, and reverse an initial finding of non-compliance, only if CMS determines that the IRF was in full compliance with the IRF QRP requirements for the applicable program year.

(6) An IRF may request, and CMS may grant, an extension to file a reconsideration request if, during the period to request a reconsideration as set forth in paragraph (d)(2) of this section, the IRF was affected by an extraordinary circumstance beyond the control of the IRF (for example, a natural or man-made disaster). IRFs must submit the reconsideration extension request no later than 30 calendar days from the date of the written notification of noncompliance. The reconsideration extension request must be submitted to CMS via email to *IRFQRPReconsiderations@cms.hhs.gov,* and must contain the following information:

(i) The CCN for the IRF;

(ii) The business name of the IRF;

(iii) The business address of the IRF;

(iv) Contact information for the IRF's chief executive officer or designated personnel, including the name, telephone number, title, email address, and physical mailing address, which may not be a post office box;

(v) A statement of the reason for the request for the extension; and

(vi) Evidence of the impact of the extraordinary circumstances, including, for example, photographs, newspaper articles, and other media.

(7) CMS will notify the IRF in writing of its final decision regarding its request for an extension to file a reconsideration of noncompliance request via an email from CMS.

42 CFR Part 418

[CMS–1835–P]

RIN 0938–AV49

Medicare Program; FY 2026 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Program Requirements

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would update the hospice wage index, payment rates, and aggregate cap amount for Fiscal Year (FY) 2026. This rule also proposes changes to the admission to hospice regulations and the hospice face-to-face attestation requirements under the certification of terminal illness regulations. This proposed rule also includes a technical correction to the regulatory text and provides updates to the Hospice Quality Reporting Program requirements. Finally, this proposed rule solicits comments regarding requests for information surrounding future measure concepts for Hospice Quality Reporting Program.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, June 30, 2025.

ADDRESSES: In commenting, refer to file code CMS–1835–P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (choose *only one* of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *https://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1835–P, P.O. Box 8010, Baltimore, MD 21244–1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1835–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:

For general questions about hospice payment policy, send your inquiry via email to: *hospicepolicy@cms.hhs.gov.*

For questions regarding the CAHPS® Hospice Survey, contact Lauren Fuentes at (410) 786–2290.

For questions regarding the hospice quality reporting program, contact Jermama Keys at (410) 786–7778.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *https://www.regulations.gov.* Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Plain Language Summary: In accordance with 5 U.S.C. 553(b)(4), a plain language summary of this proposed rule may be found at *https://www.regulations.gov/.*

Deregulation Request for Information (RFI): On January 31, 2025, President Trump issued Executive Order (E.O.) 14192 ''Unleashing Prosperity Through Deregulation,'' which states the Administration policy to significantly reduce the private expenditures required to comply with Federal regulations to secure America's economic prosperity and national security and the highest possible quality of life for each citizen. We would like public input on approaches and opportunities to streamline regulations and reduce administrative burdens on providers, suppliers, beneficiaries, and other interested parties participating in the Medicare program. CMS has made available an RFI at *https://www.cms.gov/medicare-regulatory-relief-rfi.* Please submit all comments in response to this RFI through the provided weblink.

I. Executive Summary

A. Purpose

This proposed rule would update the hospice wage index, payment rates, and cap amount for FY 2026 as required under section 1814(i) of the Social Security Act (the Act). In addition, this proposed rule would clarify in the payment regulations that the physician member of the hospice interdisciplinary group (IDG) may recommend admission to hospice. This proposed rule would also re-align the attestation requirements in the regulatory text at 42 CFR 418.22(b)(4) with the original intent of the CY 2011 Home Health Prospective Payment System (HH PPS) final rule and statutory requirements under section 1814(a)(7) of the Act for the certification of terminal illness. That rule stated that the attestation of the physician or nurse practitioner who conducts the face-to-face encounter must include the physician's or nurse practitioner's, as applicable, signature and the date of the signature.

This proposed rule proposes to correct an error in the regulations text at § 418.312(j). This rule also reinforces updates on the Hospice Quality Reporting Program (HQRP) and the Hospice Outcomes and Patient Evaluation (HOPE) instrument and public reporting, future quality measures (QMs), and the transition of hospice providers from the Quality Improvement and Evaluation System (QIES) to the internet Quality Improvement and Evaluation System (iQIES). Finally, this proposed rule includes requests for information (RFI) regarding future QM concepts for the HQRP.

B. Summary of the Major Provisions

Section III.A.1. of this proposed rule includes the proposed updates to the hospice wage index and makes the application of the updated wage data budget neutral for all four levels of hospice care.

Section III.A.2. of this proposed rule includes the proposed FY 2026 hospice payment update percentage of 2.4 percent.

Section III.A.3. of this proposed rule includes the proposed FY 2026 hospice payment rates.

Section III.A.4. of this proposed rule includes the proposed update to the hospice cap amount for FY 2026 by the hospice payment update percentage of 2.4 percent.

Section III.B. of this proposed rule proposes to clarify that the physician member of the interdisciplinary group is among the types of physicians who can recommend a patient's admission to

hospice care and proposes to add the physician member of the interdisciplinary group to the regulatory text at § 418.25.

Section III.C. of this proposed rule proposes to re-align the attestation requirements in the regulatory text at § 418.22(b)(4) with the original intent of the statutory requirements under section 1814(a)(7) of the Act and CY 2011 HH PPS final rule for the certification of terminal illness regulations to include the physician's or nurse practitioner's signature and the date of the signature on each face-to-face encounter attestation. This section provides clarification that the attestation, its accompanying signature, and the date signed, must be a separate and distinct section of, or an addendum to, the recertification form, and must be clearly titled.

Section III.D. of this proposed rule proposes a technical correction to a typo in the FY 2024 Hospice final rule at § 418.312(j). This section provides updates on the HOPE instrument, HQRP measures, and the transition to iQIES. This section also provides RFIs related to the transition to digital measures, nutrition, and well-being concepts.

C. Summary of Impacts

The overall economic impact of this proposed rule is estimated to be $695 million in increased payments to hospices in FY 2026.

II. Background

A. Hospice Care

Hospice care is a comprehensive, holistic approach to treatment that recognizes the impending death of a terminally ill individual and warrants a change in the focus from curative care to palliative care for relief of pain and for symptom management. Medicare regulations define ''palliative care'' as patient and family-centered care that optimizes quality of life by anticipating, preventing, and treating suffering. Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social, and spiritual needs and to facilitate patient autonomy, access to information, and choice (42 CFR 418.3). Palliative care is at the core of hospice philosophy and care practices and is a critical component of the Medicare hospice benefit.

The goal of hospice care is to help terminally ill individuals continue life with minimal disruption to normal activities while remaining primarily in the home environment. A hospice uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through a collaboration of professionals and other caregivers, with the goal of making the beneficiary as physically and emotionally comfortable as possible. Hospice is compassionate beneficiary- and family/caregiver-centered care for those who are terminally ill. As referenced in our regulations at § 418.22(c)(1), to be certified for Medicare hospice services, the patient's attending physician (if any) and the hospice medical director (or designee) or physician member of the interdisciplinary group must certify that the individual is ''terminally ill,'' as defined in section 1861(dd)(3)(A) of the Act and our regulations at § 418.3; that is, the individual has a medical prognosis that the individual's life expectancy is 6 months or less if the illness runs its normal course. The regulations at § 418.22(b)(2) require that clinical information and other documentation that support the medical prognosis accompany the certification and be filed in the medical record with the written certification. The regulations at § 418.22(b)(3) require that the certification and recertification forms, or an addendum to the certification and recertification forms, include a brief narrative explanation of the clinical findings that supports a life expectancy of 6 months or less.

Under the Medicare hospice benefit, the election of hospice care is a patient choice, and once a terminally ill patient elects to receive hospice care, a hospice interdisciplinary group is essential in the seamless provision of primarily home-based services. The hospice interdisciplinary group works with the beneficiary, family, and caregivers to develop a coordinated, comprehensive care plan; reduce unnecessary diagnostics or ineffective therapies; and maintain ongoing communication with individuals and their families about changes in their condition. The beneficiary's care plan will shift over time to meet the changing needs of the individual, family, and caregiver(s) as the individual approaches the end of life.

If, in the judgment of the hospice interdisciplinary group (as specified at § 418.56(a)(1)), which includes the hospice physician, the patient's symptoms cannot be effectively managed at home, then the patient is eligible for general inpatient care (GIP), a more medically intense level of care. GIP must be provided in a Medicare-certified hospice freestanding facility, skilled nursing facility, or hospital. GIP is provided to ensure that any new or worsening symptoms are intensively addressed so that the beneficiary can return home for hospice care (routine home care) (RHC). Limited, short-term, intermittent, inpatient respite care (IRC) is also available because of the absence or need for relief of the family or other caregivers. Additionally, an individual can receive continuous home care (CHC) during a period of crisis in which an individual requires continuous care to achieve palliation or management of acute medical symptoms so that the individual can remain at home. CHC may be covered for as much as 24 hours a day, and these periods must be predominantly nursing care, in accordance with the regulations at § 418.204. A minimum of 8 hours of nursing care or nursing and aide care must be furnished on a particular day to qualify for the CHC rate (§ 418.302(e)(4)).

Hospices covered by this proposed rule must comply with applicable civil rights laws, including section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act, which require covered entities to take appropriate steps to ensure that communications with individuals with disabilities, including companions with disabilities, are as effective as communications with others, including the provisions of auxiliary aids and services when necessary to afford qualified individuals with disabilities, including applicants, participants, beneficiaries, companions and members of the public, an equal opportunity to participate in, and enjoy the benefits of, a service, program or activity of a covered entity.[1]

Title VI of the Civil Rights Act of 1964 prohibits discrimination on the basis of race, color or national origin in federally assisted programs or activities. The Office for Civil Rights (OCR) interprets this to require that recipients of Federal financial assistance take reasonable steps to provide meaningful access to their programs or activities to individuals with limited English proficiency (LEP).[2] Similarly, section 1557 of the Affordable Care Act's implementing regulation requires covered entities to take reasonable steps to provide meaningful access to LEP individuals in federally funded health programs and activities (45 CFR 92.201(a)). Meaningful access may

[1] Hospices receiving Medicare Part A funds or other Federal financial assistance from the Department are also subject to additional Federal civil rights laws, including the Age Discrimination Act, and are subject to conscience and religious freedom laws where applicable.

[2] HHS OCR, *Guidance to Federal Financial Assistance Recipients Regarding Title VI Prohibition Against National Origin Discrimination Affecting Limited English Proficient Persons,* 68 FR 47311 (Aug. 8, 2003).

require the provision of interpreter services and translated materials (45 CFR 92.201(c)).

B. Services Covered by the Medicare Hospice Benefit

Coverage under the Medicare hospice benefit requires that hospice services must be reasonable and necessary for the palliation and management of the terminal illness and related conditions. Section 1861(dd)(1) of the Act establishes the services that are to be rendered by a Medicare-certified hospice program. These covered services include: nursing care; physical therapy; occupational therapy; speech-language pathology services; medical social services; home health aide services (called hospice aide services); physician's services; homemaker services; medical supplies (including drugs and biologicals); medical appliances; counseling services (including dietary counseling); short-term inpatient care in a hospital, nursing facility, or hospice inpatient facility (including both respite care and procedures necessary for pain control and acute and chronic symptom management); continuous home care during periods of crisis, and only as necessary to maintain the terminally ill individual at home; and any other item or service which is specified in the plan of care and for which payment may otherwise be made under Medicare, in accordance with Title XVIII of the Act.

Section 1814(a)(7)(B) of the Act requires that a written plan for providing hospice care to a beneficiary who is a hospice patient be established before such care is provided by, or under arrangements made by, the hospice program; and that the written plan be periodically reviewed by the beneficiary's attending physician (if any), the hospice medical director, and an interdisciplinary group (section 1861(dd)(2)(B) of the Act). The services offered under the Medicare hospice benefit must be available to beneficiaries as needed, 24 hours a day, 7 days a week (section 1861(dd)(2)(A)(i) of the Act).

Upon the implementation of the hospice benefit, Congress also expected hospices to continue to use volunteer services, although Medicare does not pay for these volunteer services (section 1861(dd)(2)(E) of the Act). As stated in the Health Care Financing Administration's (now Centers for Medicare & Medicaid Services (CMS)) proposed rule: Medicare Program; Hospice Care (48 FR 38149), the hospice must have an interdisciplinary group composed of paid hospice employees as well as hospice volunteers, and that ''the hospice benefit with the resulting Medicare reimbursement is not intended to diminish the voluntary spirit of hospices.'' This expectation supports the hospice philosophy of community based, holistic, comprehensive, and compassionate end of life care.

C. Medicare Payment for Hospice Care

Sections 1812(d), 1813(a)(4), 1814(a)(7), 1814(i), and 1861(dd) of the Act, and the regulations in 42 CFR part 418, establish eligibility requirements, payment standards and procedures; define covered services; and delineate the conditions a hospice must meet to be approved for participation in the Medicare program. Part 418, subpart G, provides for a per diem payment based on one of four prospectively determined rate categories of hospice care (RHC, CHC, IRC, and GIP), based on each day a qualified Medicare beneficiary is under hospice care (once the individual has elected the benefit). This per diem payment is meant to cover all hospice services and items needed to manage the beneficiary's care, as required by section 1861(dd)(1) of the Act.

While payment made to hospices is to cover all items, services, and drugs for the palliation and management of the terminal illness and related conditions, federal funds cannot be used for prohibited activities, even in the context of a per diem payment. For example, hospices are prohibited from playing a role in medical aid in dying (MAID) where such practices have been legalized in certain States. The Assisted Suicide Funding Restriction Act of 1997 (Pub. L. 105–12, April 30, 1997) prohibits the use of federal funds to provide or pay for any health care item or service or health benefit coverage for the purpose of causing, or assisting to cause, the death of any individual including ''mercy killing, euthanasia, or assisted suicide.'' However, the prohibition does not pertain to the provision of an item or service for the purpose of alleviating pain or discomfort, even if such use may increase the risk of death, so long as the item or service is not furnished for the specific purpose of causing or accelerating death.

The Medicare hospice benefit has been revised and refined since its implementation after various Acts of Congress and Medicare rules. For a historical list of changes and regulatory actions, we refer readers to the background section of previous Hospice Wage Index and Payment Rate Update rules.[3]

III. Provisions of the Proposed Rule

A. Proposed FY 2026 Hospice Wage Index and Rate Update

1. Proposed FY 2026 Hospice Wage Index

a. Background

The hospice wage index is used to adjust payment rates for hospices under the Medicare program to reflect local differences in area wage levels, based on the location where services are furnished. The hospice wage index utilizes the wage adjustment factors used by the Secretary for purposes of section 1886(d)(3)(E) of the Act for hospital wage adjustments. Our regulations at § 418.306(c) require each labor market to be established using the most current hospital wage data available, including any changes made by the Office of Management and Budget (OMB) to Metropolitan Statistical Area (MSA) definitions.

In general, OMB issues major revisions to statistical areas every 10 years based on the results of the decennial census. On July 21, 2023, OMB issued Bulletin No. 23–01, which updated and superseded OMB Bulletin No. 20–01, issued on March 6, 2020. OMB Bulletin No. 23–01 established revised delineations for the MSAs, Micropolitan Statistical Areas, Combined Statistical Areas (CSAs), and Metropolitan Divisions, collectively referred to as Core Based Statistical Areas (CBSAs). According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (the ''2020 Standards''), which appeared in the **Federal Register** (86 FR 37770 through 37778) on July 16, 2021, and application of those standards to Census Bureau population and journey-to-work data (for example, 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). A copy of OMB Bulletin No. 23–01 is available online at *https://www.bls.gov/bls/omb-bulletin-23-01-revised-delineations-of-metropolitan-statistical-areas.pdf.*

The July 21, 2023 OMB Bulletin No. 23–01 contained a number of significant changes. For example, it designated new CBSAs, split some existing CBSAs, and changed some urban counties to rural and some rural counties to urban. We believe it is important for the hospice

[3] Hospice Regulations and Notices. *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Hospice-Regulations-and-Notices.*

wage index to use the latest OMB delineations available in order to maintain the most accurate and up-to-date payment system, reflecting the reality of population shifts and labor market conditions. We further believe that using the most current OMB delineations increases the integrity of the hospice wage index by creating a more accurate representation of geographic variation in wage levels. Therefore, in the FY 2025 Hospice final rule (89 FR 64208 through 64224), we finalized the implementation of new labor market areas based on the revisions in OMB Bulletin No. 23–01 beginning in FY 2025.

b. Finalized Hospice Floor and 5 Percent Cap Policies

As described in the August 8, 1997 Hospice Wage Index final rule (62 FR 42860), the pre-floor and pre-reclassified hospital wage index is used as the raw wage index for the hospice benefit. These raw wage index values are subject to application of the hospice floor to compute the hospice wage index used to determine payments to hospices. The pre-floor, pre-reclassified hospital wage index values below 0.8000 are adjusted by a 15 percent increase subject to a maximum wage index value of 0.8000. For example, if CBSA A has a pre-floor, pre-reclassified hospital wage index value of 0.3994, we would multiply 0.3994 by 1.15, which equals 0.4593. Since 0.4593 is not greater than 0.8000, the CBSA A's hospice wage index would be 0.4593. In another example, if CBSA B has a pre-floor, pre-reclassified hospital wage index value of 0.7440, we would multiply 0.7440 by 1.15, which equals 0.8556. Because 0.8556 is greater than 0.8000, CBSA B's hospice wage index would be 0.8000.

In the FY 2023 Hospice Wage Index and Rate Update final rule (87 FR 45673), we finalized for FY 2023 and subsequent years the application of a permanent 5 percent cap on any decrease to a geographic area's wage index from its wage index in the prior year, regardless of the circumstances causing the decline, so that a geographic area's wage index would not be less than 95 percent of its wage index calculated in the prior FY. When calculating the 5 percent cap on wage index decreases, we start with the current FY's pre-floor, pre-reclassification hospital wage index value for a CBSA or statewide rural area, and if that wage index value is below 0.8000, we apply the hospice floor as discussed previously in this section of the proposed rule. Next, we compare the current FY's wage index value after the application of the hospice floor to the final wage index value from the previous FY. If the current FY's wage index value is less than 95 percent of the previous year's wage index value, the 5 percent cap on wage index decreases would be applied and the final wage index value would be set equal to 95 percent of the previous FY's wage index value. If the 5 percent cap is applied in one FY, then in the subsequent FY, that year's pre-floor, pre-reclassification hospital wage index would be used as the starting wage index value and adjusted by the hospice floor. The hospice floor adjusted wage index value would be compared to the previous FY's wage index which had the 5 percent cap applied. If the hospice floor adjusted wage index value for that FY is less than 95 percent of the capped wage index from the previous year, then the 5 percent cap would be applied again, and the final wage index value would be 95 percent of the capped wage index from the previous FY. Using the example previously stated, if CBSA A has a pre-floor, pre-reclassified hospital wage index value of 0.3994, we would multiply 0.3994 by 1.15, which equals 0.4593. If CBSA A had a wage index value of 0.6200 in the previous FY, then we would compare 0.4593 to the previous FY's wage index value. Since 0.4593 is less than 95 percent of 0.6200, then CBSA A's hospice wage index would be 0.5890, which is equal to 95 percent of the previous FY's wage index value of 0.6200. In the next FY, the updated wage index value would be compared to the wage index value of 0.5890.

Previously, this 5 percent cap methodology was applied to all the counties that make up a CBSA or rural area. However, beginning in FY 2025, we finalized a policy that the 5 percent cap methodology would also be applied to individual counties. In the FY 2025 Hospice Wage Index and Rate Update final rule (89 FR 64202), as a transition to the adoption of the revised delineations from OMB No. 23–01, we finalized a policy applying the permanent 5 percent cap on wage index decreases at the county level. Specifically, counties that were impacted by the revised designations beginning in FY 2025 would receive a 5 percent cap on any decrease in a geographic area's wage index value from the wage index value from the prior FY. Also, beginning in FY 2025, counties that have a different wage index value than the CBSA or rural area into which they are designated due to the application of the 5 percent cap (including redesignated counties that will receive the 5 percent cap and redesignated counties that move into a CBSA or rural area where all other constituent counties receive the 5 percent cap) would use a wage index transition code. These special codes are five digits in length and begin with ''50''. The 50XXX wage index transition codes are used only in specific counties. Counties located in CBSAs and rural areas that do not correspond to a different transition wage index value will still use the CBSA number.

Finally, we finalized a policy to apply the 5 percent cap to a county that corresponds to a different wage index value than the wage index value assigned to the CBSA or rural area in which they are designated due to a delineation change until the county's new wage index is more than 95 percent of the wage index from the previous FY. In order to capture the correct wage index value, the county will continue to use the assigned 50XXX transition code until the county's wage index value calculated for that FY using the new OMB delineations is not less than 95 percent of the county's capped wage index from the previous FY.

The FY 2026 hospice wage index will continue to include the hospice floor as well as the 5 percent cap on wage index decreases. For FY 2026, the 5 percent cap on wage index decreases will continue to be calculated at the county level as well. While some counties that required a transition code for FY 2025 will continue to use the same transition code for FY 2026, other counties that required a transition code in FY 2025 will no longer require a transition code in FY 2026. For these counties, the FY 2026 wage index of the CBSA or rural area that they are designated into has a wage index higher than 95 percent of their previous FY's wage index. Therefore, these counties will use the CBSA or rural county code of the area they were redesignated into based on OMB Bulletin No. 23–01.

More information regarding these special codes can be found in the FY 2025 Hospice Wage Index and Rate Update final rule (89 FR 64220 through 64224). Additionally, the list of counties that must use a 50XXX transition code for a given FY can be found as a separate tab in the hospice wage index file for that FY available on the CMS website at *https://www.cms.gov/medicare/payment/fee-for-service-providers/hospice/hospice-wage-index.*

c. Proposed FY 2026 Hospice Wage Index

In the FY 2020 Hospice Wage Index and Rate Update final rule (84 FR 38484), we finalized a policy to use the

current FY's hospital wage index data to calculate the hospice wage index values. For FY 2026, we are proposing that the hospice wage index be based on the FY 2026 hospital pre-floor, pre-reclassified wage index for hospital cost reporting periods beginning on or after October 1, 2021 and before October 1, 2022 (FY 2022 cost report data). The FY 2026 hospice wage index would not consider any geographic reclassification of hospitals, including those in accordance with sections 1886(d)(8)(B) or 1886(d)(10) of the Act. The regulations that govern hospice payment do not provide a mechanism for allowing hospices to seek geographic reclassification or to utilize the rural floor provisions that exist for Inpatient Prospective Payment System (IPPS) hospitals. The reclassification provision found in section 1886(d)(10) of the Act is specific to hospitals. Section 4410(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33) provides that the area wage index applicable to any hospital located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State. This rural floor provision is also specific to hospitals. Because the reclassification and the hospital rural floor policies apply to hospitals only, and not to hospices, we continue to believe the use of the pre-floor and pre-reclassified hospital wage index is the most appropriate adjustment to the labor portion of the hospice payment rates. This position is longstanding and consistent with other Medicare payment systems, for example, the skilled nursing facility prospective payment system (SNF PPS), the inpatient rehabilitation facility prospective payment system (IRF PPS), and the home health prospective payment system (HH PPS). However, the hospice wage index does include the hospice floor, which is applicable to all CBSAs, both rural and urban. The hospice floor adjusts pre-floor, pre-reclassified hospital wage index values below 0.8000 by a 15 percent increase subject to a maximum wage index value of 0.8000.

The appropriate FY 2026 wage index value would be applied to the labor portion of the hospice payment rate based on the geographic area in which the beneficiary resides when receiving RHC or CHC. The appropriate FY 2026 wage index value would be applied to the labor portion of the payment rate based on the geographic location of the facility for beneficiaries receiving GIP or IRC.

There exist some geographic areas where there are no hospitals, and thus, no hospital wage data on which to base the calculation of the hospice wage index. In the FY 2006 Hospice Wage Index and Rate Update final rule (70 FR 45135), we adopted the policy that, for urban labor markets without a hospital from which hospital wage index data could be derived, all the CBSAs within the State would be used to calculate a statewide urban average pre-floor, pre-reclassified hospital wage index value to use as a reasonable proxy for these areas. For FY 2026, the only CBSA without a hospital from which hospital wage data can be derived is 25980, Hinesville, Georgia. As such, the proposed FY 2026 hospice wage index for Hinesville, Georgia is 0.8892.

In the FY 2008 Hospice Wage Index and Rate Update final rule (72 FR 50217 through 50218), we implemented a methodology to update the hospice wage index for rural areas without hospital wage data. In cases where there is a rural area without rural hospital wage data, we use the average pre-floor, pre-reclassified hospital wage index data from all contiguous CBSAs, to represent a reasonable proxy for the rural area. The term ''contiguous'' means sharing a border (72 FR 50217). In the FY 2025 Hospice Wage Index and Rate Update final rule (89 FR 64207), as part of our adoption of the revised OMB delineations, rural North Dakota became a rural area without a hospital from which hospital wage data can be derived. Therefore, to calculate the proposed FY 2026 wage index for rural area 99935, North Dakota, we use as a proxy the average pre-floor, pre-reclassified hospital wage data (updated by the hospice floor and 5 percent cap) from the contiguous CBSAs: CBSA 13900-Bismark, ND, CBSA 22020-Fargo, ND–MN, CBSA 24220-Grand Forks, ND–MN and CBSA 33500, Minot, ND, which results in a proposed FY 2026 hospice wage index of 0.8486 for rural North Dakota.

Previously, the only rural area without a hospital from which hospital wage data could be derived was in Puerto Rico. However, for rural Puerto Rico, we did not apply this methodology due to the distinct economic circumstances that exist there (for example, due to the close proximity of almost all of Puerto Rico's various urban areas to non-urban areas, this methodology would produce a wage index for rural Puerto Rico that is higher than that of half of its urban areas). Instead, we used the most recent wage index previously available for that area, which was 0.4047, subsequently adjusted by the hospice floor for an adjusted wage index of 0.4654. For FY 2025, we noted that as part of our adoption of the revised OMB delineations, there is now a hospital in rural Puerto Rico from which hospital wage data can be derived. Therefore, we finalized a wage index for rural Puerto Rico based on the hospital wage data for the area instead of the previously available pre-hospice floor wage index of 0.4047, which equaled an adjusted wage index value of 0.4654. The proposed FY 2026 pre-hospice floor unadjusted wage index for rural Puerto Rico would be 0.2452 and is subsequently adjusted by the hospice floor to equal 0.2820. Because 0.2820 is more than a 5 percent decline in the FY 2025 wage index, the adjusted FY 2026 wage index with the 5 percent cap applied would equal 0.95 multiplied by 0.4421 (that is, the FY 2025 wage index with 5 percent cap), which would result in a proposed FY 2026 wage index value of 0.4200.

The proposed hospice wage index applicable for FY 2026 (October 1, 2025 through September 30, 2026) is available on the CMS website for the FY 2026 Hospice Wage Index proposed rule at *https://www.cms.gov/medicare/payment/fee-for-service-providers/hospice/hospice-regulations-and-notices.*

2. Proposed FY 2026 Hospice Payment Update Percentage

Section 4441(a) of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33) amended section 1814(i)(1)(C)(ii)(VI) of the Act to establish updates to hospice rates for FYs 1998 through 2002. Hospice rates were to be updated by a factor equal to the inpatient hospital market basket percentage increase set out under section 1886(b)(3)(B)(iii) of the Act, minus one percentage point. Payment rates for FYs since 2002 have been updated as required by section 1814(i)(1)(C)(ii)(VII) of the Act, which states that the update to the payment rates for subsequent FYs must be the inpatient hospital market basket percentage increase for that FY. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45204), we finalized the rebased and revised IPPS market basket to reflect a 2018 base year. For FY 2026, we are proposing to rebase and revise the IPPS market basket to reflect a 2023 base year. For more information on this proposal, we refer readers to the FY 2026 IPPS/LTCH PPS proposed rule.

Section 3401(g) of the Affordable Care Act mandated that, starting with FY 2013 (and in subsequent FYs), the hospice payment update percentage be annually reduced by changes in economy-wide productivity as specified in section 1886(b)(3)(B)(xi)(II) of the Act. The statute defines the productivity

adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP) as projected by the Secretary for the 10-year period ending with the applicable FY, year, cost reporting period, or other annual period (the ''productivity adjustment''). The United States Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measures of productivity for the United States economy. We note that, previously, the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act was published by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021 release of productivity data, BLS replaced the term ''multifactor productivity'' with ''total factor productivity'' (TFP). BLS noted that this is a change in terminology only and would not affect the data or methodology. As a result of the BLS name change, the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act is now published by BLS as ''private nonfarm business total factor productivity.'' However, as mentioned, the data and methods are unchanged. We refer readers to *http://www.bls.gov* for the BLS historical published TFP data. A complete description of IHS Global Inc.'s (IGIs) TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information*. In addition, in the FY 2022 IPPS final rule (86 FR 45214), we noted that beginning with FY 2022, CMS changed the name of this adjustment to refer to it as the ''productivity adjustment'' rather than the ''MFP adjustment''.

Consistent with our historical practice, we estimate the market basket percentage increase, and the productivity adjustment based on IGI's forecast, using the most recent available data. The proposed hospice payment update percentage for FY 2026 is based on the most recent estimate of the inpatient hospital market basket (based on IGI's fourth quarter 2024 forecast). Due to the requirements at sections 1886(b)(3)(B)(xi)(II) and 1814(i)(1)(C)(v) of the Act, the proposed inpatient hospital market basket percentage increase for FY 2026 of 3.2 percent is required to be reduced by a productivity adjustment as mandated by section 3401(g) of the Affordable Care Act. The proposed productivity adjustment for FY 2026 is 0.8 percentage point (based on IGI's fourth quarter 2024 forecast). Therefore, the proposed hospice payment update percentage for FY 2026 is 2.4 percent. We are also proposing that if more recent data become available after the publication of this proposed rule and before the publication of the final rule (for example, a more recent estimate of the inpatient hospital market basket percentage increase or productivity adjustment), we would use such data, if appropriate, to determine the hospice payment update percentage in the FY 2026 final rule. We continue to believe it is appropriate to routinely update the hospice payment system so that it reflects the best available data regarding differences in patient resource use and costs among hospices as required by the statute.

In the FY 2022 Hospice Wage Index and Rate Update final rule (86 FR 42532), we rebased and revised the labor shares for RHC, CHC, GIP, and IRC using Medicare cost report data for freestanding hospices (CMS Form 1984–14, OMB Control Number 0938–0758) from 2018. The current labor portion of the payment rates are: RHC, 66.0 percent; CHC, 75.2 percent; GIP, 63.5 percent; and IRC, 61.0 percent. The non-labor portion is equal to 100 percent minus the labor portion for each level of care. The non-labor portion of the payment rates are as follows: RHC, 34.0 percent; CHC, 24.8 percent; GIP, 36.5 percent; and IRC, 39.0 percent.

3. Proposed FY 2026 Hospice Payment Rates

There are four payment categories that are distinguished by the location and intensity of the hospice services provided. The base payments are adjusted for geographic differences in wages by multiplying the labor share, which varies by category, of each base rate by the applicable hospice wage index. A hospice is paid the RHC rate for each day the beneficiary is enrolled in hospice, unless the hospice provides CHC, IRC, or GIP. CHC is provided during a period of patient crisis to maintain the patient at home; IRC is short-term care to allow the usual caregiver to rest and be relieved from caregiving; and GIP care is intended to treat symptoms that cannot be managed in another setting.

As discussed in the FY 2016 Hospice Wage Index and Rate Update final rule (80 FR 47172), we implemented two different RHC payment rates, one RHC rate for the first 60 days and a second RHC rate for days 61 and beyond. In addition, in that final rule, we implemented a Service Intensity Add-On (SIA) payment for RHC when direct patient care is provided by a registered nurse (RN) or social worker during the last seven days of the beneficiary's life. The SIA payment is equal to the CHC hourly rate multiplied by the hours of nursing or social work provided (up to four hours total) that occurred on the day of service if certain criteria are met. To maintain budget neutrality, as required under section 1814(i)(6)(D)(ii) of the Act, the new RHC rates were adjusted by an SIA budget neutrality factor (SBNF). The SBNF is used to reduce the overall RHC rate in order to ensure that SIA payments are budget neutral. At the beginning of every FY, SIA utilization is compared to the prior year in order calculate a budget neutrality adjustment. For FY 2026, the proposed SIA budget neutrality factor is 1.0005 for RHC days 1–60 and 1.0001 for RHC days 61+.

In the FY 2017 Hospice Wage Index and Rate Update final rule (81 FR 52156), we initiated a policy of applying a wage index standardization factor to hospice payments in order to eliminate the aggregate effect of annual variations in hospital wage data. For FY 2026 hospice rate setting, we are continuing our longstanding policy of using the most recent data available. Specifically, we are proposing to use FY 2024 claims data as of January 13, 2025 for the FY 2026 payment rate updates. We note that the budget neutrality factors and payment rates will be updated with more complete FY 2024 claims data for the final rule. In order to calculate the wage index standardization factor, we simulate total payments using FY 2024 hospice utilization claims data with the FY 2025 wage index (pre-floor, pre-reclassified hospital wage index with the hospice floor and the 5 percent cap on wage index decreases) and FY 2025 payment rates and compare it to our simulation of total payments using FY 2024 utilization claims data, the proposed FY 2026 hospice wage index (pre-floor, pre-reclassified hospital wage index with hospice floor, and the 5 percent cap on wage index decreases) and FY 2025 payment rates. By dividing payments for each level of care (RHC days 1 through 60, RHC days 61+, CHC, IRC, and GIP) using the FY 2025 wage index and FY 2025 payment rates for each level of care by the FY 2026 wage index and FY 2025 payment rates, we obtain a wage index standardization factor for each level of care. The proposed wage index standardization factors for each level of care are shown in Tables 1 and 2.

The proposed FY 2026 RHC rates are shown in Table 1. The proposed FY 2026 payment rates for CHC, IRC, and GIP are shown in Table 2.

TABLE 1—PROPOSED FY 2026 HOSPICE RHC PAYMENT RATES

Code	Description	FY 2025 payment rates	SIA budget neutrality factor	Wage index standardization factor	FY 2026 hospice payment update	Proposed FY 2026 payment rates
651	Routine Home Care (days 1–60)	$224.62	1.0005	1.0009	1.024	$230.33
651	Routine Home Care (days 61+)	176.92	1.0001	1.0018	1.024	181.51

TABLE 2—PROPOSED FY 2026 HOSPICE CHC, IRC, AND GIP PAYMENT RATES

Code	Description	FY 2025 payment rates	Wage index standardization factor	FY 2026 hospice payment update	Proposed FY 2026 payment rates
652	Continuous Home Care Full Rate = 24 hours of care.	$1,618.59	1.0047	1.024	$1,665.23, $69.38 per hour.
655	Inpatient Respite Care	518.78	1.0007	1.024	$531.60.
656	General Inpatient Care	1,170.04	0.9994	1.024	$1,197.40.

Sections 1814(i)(5)(A) through (C) of the Act require that hospices submit quality data on measures to be specified by the Secretary. In the FY 2012 Hospice Wage Index and Rate Update final rule (76 FR 47320 through 47324), we implemented a Hospice Quality Reporting Program (HQRP) as required by those sections. Hospices were required to begin collecting quality data in October 2012 and submit those quality data in 2013. Section 1814(i)(5)(A)(i) of the Act requires that beginning with FY 2014 through FY 2023, the Secretary shall reduce the market basket percentage increase by two percentage points for any hospice that does not comply with the quality data submission requirements with respect to that FY. Section 1814(i)(5)(A)(i) of the Act was amended by section 407(b) of Division CC, Title IV of the Consolidated Appropriations Act (CAA), 2021 (Pub. L. 116–260) to change the payment reduction for failing to meet hospice quality reporting requirements from two to four percentage points. Depending on the amount of the annual update for a particular year, a reduction of four percentage points beginning in FY 2024 makes a negative payment update more likely than the previous 2 percent reduction. This could result in the annual market basket update being less than zero percent for a FY and may result in payment rates that are less than payment rates for the preceding FY. We applied this policy beginning with the FY 2024 Annual Payment Update (APU), which we based on CY 2022 quality data. Therefore, the proposed FY 2026 rates for hospices that do not submit the required quality data would be updated by −1.6 percent, which is the proposed FY 2026 hospice payment update percentage of 2.4 percent minus four percentage points. The proposed payment rates for hospices that do not submit the required quality data are shown in Tables 3 and 4.

TABLE 3—PROPOSED FY 2026 HOSPICE RHC PAYMENT RATES FOR HOSPICES THAT *DO NOT* SUBMIT THE REQUIRED QUALITY DATA

Code	Description	FY 2025 payment rates	SIA budget neutrality factor	Wage index standardization factor	FY 2026 hospice payment update of 2.4% minus 4 percentage points = −1.6%	Proposed FY 2026 payment rates
651	Routine Home Care (days 1–60)	$224.62	1.0005	1.0009	0.984	$221.34
651	Routine Home Care (days 61+)	176.92	1.0001	1.0018	0.984	174.42

TABLE 4—PROPOSED FY 2026 HOSPICE CHC, IRC, AND GIP PAYMENT RATES FOR HOSPICES THAT *DO NOT* SUBMIT THE REQUIRED QUALITY DATA

Code	Description	FY 2025 payment rates	Wage index standardization factor	FY 2026 hospice payment update of 2.4% minus 4 percentage points = −1.6%	Proposed FY 2026 payment rates
652	Continuous Home Care Full Rate = 24 hours of care.	$1,618.59	1.0047	0.984	$1,600.18, $66.67 per hour.
655	Inpatient Respite Care	518.78	1.0007	0.984	$510.84.
656	General Inpatient Care	1,170.04	0.9994	0.984	$1,150.63.

4. Proposed Hospice Cap Amount for FY 2026

As discussed in the FY 2016 Hospice Wage Index and Rate Update final rule (80 FR 47183), we implemented changes mandated by the IMPACT Act of 2014 (Pub. L. 113–185, Oct. 6, 2014). Specifically, we stated that for accounting years that end after September 30, 2016, and before October 1, 2025, the hospice cap is updated by the hospice payment update percentage rather than using the consumer price index for all urban consumers (CPI–U). Division CC, section 404 of the CAA, 2021 extended the accounting years impacted by the adjustment made to the hospice cap calculation until 2030. In the FY 2022 Hospice Wage Index and Rate Update final rule (86 FR 42539), we finalized conforming regulation text changes at § 418.309 to reflect the provisions of the CAA, 2021. Division P, section 312 of the CAA, 2022 (Pub. L. 117–103) amended section 1814(i)(2)(B) of the Act and extended the provision that mandates the hospice cap be updated by the hospice payment update percentage (the inpatient hospital market basket percentage increase reduced by the productivity adjustment) rather than the CPI–U for accounting years that end after September 30, 2016 and before October 1, 2031. Division FF, section 4162 of the CAA, 2023 (Pub. L. 118–328) amended section 1814(i)(2)(B) of the Act and extended the provision that currently mandates the hospice cap be updated by the hospice payment update percentage (the inpatient hospital market basket percentage increase reduced by the productivity adjustment) rather than the CPI–U for accounting years that end after September 30, 2016 and before October 1, 2032. Division G, Section 308 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42) extends this provision to October 1, 2033. Before the enactment of this provision, the hospice cap update was set to revert to the original methodology of updating the annual cap amount by the CPI–U beginning on October 1, 2032. Therefore, for accounting years that end after September 30, 2016, and before October 1, 2033, the hospice cap amount is updated by the hospice payment update percentage rather than the CPI–U. In the FY 2025 Hospice Wage Index and Rate Update final rule (89 FR 64202), as a result of the changes mandated by the CAA, 2024, we finalized conforming regulation text changes at § 418.309 to reflect the revisions at section 1814(i)(2)(B) of the Act.

The proposed hospice cap amount for the FY 2026 cap year is $35,292.51, which is equal to the FY 2025 cap amount ($34,465.34) updated by the proposed FY 2026 hospice payment update percentage of 2.4 percent. We are also proposing that if more recent data become available after the publication of this proposed rule and before the publication of the final rule (for example, a more recent estimate of the hospice payment update percentage), we would use such data, if appropriate, to determine the hospice cap amount in the FY 2026 final rule.

B. Proposed Regulation Change to Admission to Hospice Care

The Medicare hospice benefit provides coverage for a comprehensive set of services described in section 1861(dd)(1) of the Act for individuals who are deemed ''terminally ill'' based on a medical prognosis that the individual's life expectancy is 6 months or less, as described in section 1861(dd)(3)(A) of the Act. As such, section 1814(a)(7)(A) of the Act requires the individual's attending physician (if the patient designates an attending physician) and hospice medical director (or physician member of the interdisciplinary group (IDG)) to certify in writing at the beginning of the first 90-day period of hospice care that the individual is ''terminally ill'' based on the physician's or medical director's clinical judgment regarding the normal course of the individual's illness. In a subsequent 90- or 60-day period of hospice care, only the hospice medical director or the physician member of the IDG recertifies at the beginning of the period that the patient is terminally ill based on such clinical judgment.

Operation Restore Trust (ORT), a government initiative that began in 1995, coordinated with the Centers for Medicare & Medicaid Services (CMS), the Office of the Inspector General (OIG), and the Administration on Aging (AoA) to identify vulnerabilities in the Medicare program and to pursue ways to reduce Medicare's exposure to fraud and abuse. Through audits, ORT identified several areas of weakness in the hospice benefit, primarily in the area of hospice eligibility. In response to concerns raised by ORT regarding beneficiaries who had been receiving hospice care for more than 210 days but who were later determined to have not been eligible [4] and to reduce Medicare exposure to abusive practices, the FY 2006 Medicare Program; Hospice Care Amendments final rule (70 FR 70532, 70535, 70547) added a new § 418.25, ''Admission to hospice care,'' which established specific requirements that must be met before a hospice provider admits a patient to its care.

In particular, § 418.25(a) requires that the hospice admit a patient only on the recommendation of the medical director (or the physician designee, as defined in § 418.3) in consultation with, or with input from, the patient's attending physician (if any). Section 418.25(b) sets out the information that the hospice medical director (or the physician designee, as defined in § 418.3) must consider in reaching a decision to certify that the patient is terminally ill. Section 418.25(b) is not the only regulation that discusses the certification of terminal illness. Section 418.22(c)(1) sets forth the sources of the certification of terminal illness and § 418.102(b) provides the standard for the initial certification of terminal illness in the condition of participation (CoP) for hospice medical directors. However, while each of these regulations pertain to the determination that a patient is terminally ill, they do not align regarding the physicians who can make these determinations.

In particular, § 418.25 only describes any of two physicians on the recommendation of whom the hospice may admit a patient: the medical director or the physician designee (in addition to the patient's attending physician, if any). However, the payment certification of terminal illness and medical director CoP regulations at §§ 418.22(c)(1)(i) and 418.102(b), respectively, list any of three physicians who provide the written certification of terminal illness: the medical director of the hospice, the physician designee, or physician member of the hospice IDG.

In the FY 2025 Hospice Wage Index and Rate Update final rule (89 FR 64231), we received several comments requesting that the physician member of the IDG be added to the hospice admission regulation at § 418.25. Specifically, commenters requested that the language regarding which physicians can make determinations for hospice admission align with current certification requirements and CoPs. We did not make a change to § 418.25 in the FY 2025 hospice final rule as we did not propose this change.

We agree with the commenters that our regulations should consistently describe the physicians who can certify terminal illness and determine patient admission to hospice care. Accordingly, to align with the current payment and CoP regulations at §§ 418.22(c)(1)(i) and

[4] Operation Restore Trust: Review of Medicare Hospice Eligibility at the San Diego Hospice Corporation *https://oig.hhs.gov/reports/all/1997/operation-restore-trust-review-of-medicare-hospice-eligibility-at-the-san-diego-hospice-corporation/.*

418.102(b), respectively, we propose to add the text ''or the physician member of the hospice interdisciplinary group'' at § 418.25(a) and (b) to indicate that, in addition to the medical director or physician designee, the physician member of the hospice IDG may also determine admission to hospice care. We believe aligning the language at § 418.25(a) and (b) with the language at §§ 418.102(b) and 418.22(c)(1)(i) would allow for greater consistency between key components of hospice regulations and policies.

C. Proposed Clarifying Regulation Change Regarding Face-to-Face Attestation

The Medicare Program; Home Health Prospective Payment System Rate Update for Calendar Year 2011; Changes in Certification Requirements for Home Health Agencies and Hospices final rule (CY 2011 HH PPS final rule) implemented the requirements in section 1814(a)(7)(D) of the Act, as added by section 3132(b) of the Affordable Care Act (75 FR 70435). Subclause (i) of section 1814(a)(7)(D) requires that on and after January 1, 2011, a hospice physician or nurse practitioner (NP) must have a face-to-face encounter with a hospice patient to determine the patient's continued eligibility for hospice care prior to the 180-day recertification, and prior to each subsequent recertification. Section 1814(a)(7)(D)(i) also requires that the hospice physician or NP attest that such a visit took place, in accordance with procedures established by the Secretary. Additionally, as existing regulatory text at § 418.22 requires, if the face-to-face encounter was not performed by the certifying physician, the attestation of the physician or nurse practitioner who performed the face-to-face encounter shall state that the clinical findings of that visit were provided to the certifying physician for use in determining continued eligibility for hospice care. These requirements were codified at § 418.22 to ensure that a hospice patients' continued eligibility is appropriately assessed through a face-to-face encounter conducted by either a hospice physician or NP.

As explained in the CY 2011 HH PPS final rule, the regulation at § 418.22(b)(4) set forth that the physician or NP who performs the face-to-face encounter with the patient must attest in writing that he or she had a face-to-face encounter with the patient and, at that time, set forth that the attestation of the *nurse practitioner* shall state that the clinical findings of that visit were provided to the certifying physician, for use in determining whether the patient continues to have a life expectancy of 6 months or less, should the illness run its normal course. Further, the regulation set forth that the attestation, its accompanying signature, and the date signed, must be a separate and distinct section of, or an addendum to, the recertification form, and must be clearly titled (75 FR 70463).

In the FY 2012 Hospice Wage Index final rule (76 FR 47314), as a result of interested parties' concerns regarding access risks resulting from the policy implemented in the CY 2011 HH PPS final rule, we finalized that any hospice physician can perform the face-to-face encounter regardless of whether that physician recertifies the patient's terminal illness and composes the recertification narrative. Additionally, we amended the regulatory text at § 418.22(b)(4) to provide that the attestation of the NP *or a non-certifying hospice physician* shall state that the clinical findings of that encounter were provided to the certifying physician, for use in determining continued eligibility for hospice.

In that final rule, however, we inadvertently omitted from the regulatory text at § 418.22(b)(4) the explicit requirements that the attestation include the accompanying signature of the practitioner who performed the face-to-face encounter, and the date signed. While the CY 2011 HH PPS final rule regulatory text required the practitioner conducting the encounter to attest to its occurrence, including the date and their signature, the unintentional omission of this explicit requirement in the FY 2012 Hospice Wage Index final rule led to discrepancies in documentation practices and introduced potential ambiguity into compliance requirements along with inconsistencies in implementation among hospice providers. Specifically, the lack of clarity regarding the full attestation requirements complicated documentation standards and audit processes, led to confusion about the expectations for what elements the attestation should minimally include, and thereby undermining of the intent of the original statute and rule to require verifiable documentation of appropriately assessed continued eligibility.

As such, we propose to amend § 418.22(b)(4) to set forth that the physician, or NP who performs the face-to-face encounter attest that the face-to-face encounter occurred, and the attestation must include the signature of the physician or NP who conducted the face-to-face encounter and the date it was signed. Further, we propose that the attestation, its accompanying signature, and the date signed, must be a separate and distinct section of, or an addendum to, the recertification form, and must be clearly titled. With these measures, we seek to realign the regulatory text at § 418.22(b)(4) with the original intent of the CY 2011 HH PPS final rule and the statutory requirement in section 1814(a)(7)(D)(i)(I) of the Act.

Accordingly, we propose to clarify the current regulation at § 418.22(b)(4) as follows: The physician or nurse practitioner who performs the face-to-face encounter with the patient described in paragraph (a)(4) of this section must attest in writing that he or she had a face-to-face encounter with the patient, including the date of that visit. The attestation must include the physician's or nurse practitioner's signature and the date it was signed. The attestation, its accompanying signature, and the date signed, must be a separate and distinct section of, or an addendum to, the recertification form, and must be clearly titled. If the face-to-face encounter was not performed by the certifying physician, the attestation of the physician or nurse practitioner who performed the face-to-face encounter shall state that the clinical findings of that visit were provided to the certifying physician for use in determining continued eligibility for hospice care.

These additions will help to resolve current ambiguities, improve documentation standards, and promote consistent implementation across providers.

D. Updates for the Hospice Quality Reporting Program (HQRP)

1. Background and Statutory Authority

Section 1814(i)(5) of the Act requires the Secretary to establish and maintain a quality reporting program for hospices. The Hospice Quality Reporting Program (HQRP), consisting of Hospice Item Set (HIS), administrative data, and Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Hospice Survey, specifies reporting requirements that hospices complete and submit a standardized set of items for each patient to capture patient-level data, regardless of payer or patient age (§ 418.312(b)). Beginning with FY 2014, section 1814(i)(5) of the Act requires the Secretary to reduce the market basket update by 2 percentage points for those hospices failing to meet quality reporting requirements. Section 407(b) of Division CC, Title IV of the Consolidated Appropriations Act (CAA), 2021 amended section 1814(i)(5)(A)(i) of the Act to change the

payment reduction for failing to meet hospice quality reporting requirements from 2 to 4 percentage points beginning in FY 2024 for any hospice that does not comply with the submission requirements above for that FY. In the FY 2024 Hospice final rule, we codified the application of the 4-percentage point payment reduction for failing to meet hospice quality reporting requirements and set completeness thresholds at § 418.312(j).

Depending on the amount of the annual update for a particular year, a reduction of 4 percentage points beginning in FY 2024 could result in the annual market basket update being less than zero percent for a FY and may result in payment rates that are less than payment rates for the preceding FY. Any reduction based on failure to comply with the reporting requirements, as required by section 1814(i)(5)(B) of the Act, would apply only for the specified year.

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48234, 48257 through 48262), and in compliance with section 1814(i)(5)(C) of the Act, we finalized a new standardized patient-level data collection vehicle called the Hospice Item Set (HIS). We also finalized the specific collection of data items that support eight consensus-based entity (CBE)-endorsed measures for hospice.

In the FY 2015 Hospice Wage Index and Payment Rate Update final rule (79 FR 50452), we finalized national implementation of the CAHPS® Hospice Survey, a component of the CMS HQRP which is used to collect data on the experiences of hospice patients and the primary caregivers listed in their hospice records. Readers who want more information about the development of the survey, originally called the Hospice Experience of Care Survey, may refer to the FY 2014 and FY 2015 Hospice Wage Index and Payment Update final rules (78 FR 48234 and 79 FR 50452, respectively) or to *https://www.hospicecahpssurvey.org/*. National implementation commenced January 1, 2015. We adopted eight CAHPS® survey-based measures for the CY 2018 data collection period and for subsequent years. These eight measures are publicly reported on the Care Compare website.

In the FY 2016 Hospice Wage Index and Rate Update final rule (80 FR 47142, 47186 through 47188), we finalized the policy for retention of HQRP measures adopted for previous payment determinations and seven factors for removal. In that same final rule, we discussed how we would provide public notice through rulemaking of measures under consideration for removal, suspension, or replacement. We also stated that if we had reason to believe continued collection of a measure raised potential safety concerns, we would take immediate action to remove the measure from the HQRP and not wait for the annual rulemaking cycle. The measures would be promptly removed and we would immediately notify hospices and the public of such a decision through the usual HQRP communication channels, including but not limited to listening sessions, email notifications, Open Door Forums, and Web postings. In such instances, the removal of a measure would be formally announced in the next annual rulemaking cycle.

On August 31, 2020, we added correcting language to the FY 2016 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements; Correcting Amendment (85 FR 53679) hereafter referred to as the FY 2021 HQRP Correcting Amendment. In the correcting amendment, we made updates to 42 CFR 418.312 to correct technical errors identified in the FY 2016 Hospice Wage Index and Payment Rate Update final rule. Specifically, the FY 2021 HQRP Correcting Amendment (85 FR 53679) added paragraph (i) to § 418.312 to reflect our exemptions and extensions requirements for reporting, which were referenced in the preamble but inadvertently omitted from the regulations text. Thus, these exemptions or extensions can occur when a hospice encounters certain extraordinary circumstances.

In the FY 2017 Hospice Wage Index and Payment Rate Update final rule, we finalized the ''Hospice Visits When Death is Imminent'' measure pair (HVWDII, Measure 1 and Measure 2), effective April 1, 2017. We refer the public to the FY 2017 Hospice Wage Index and Payment Rate Update final rule (81 FR 52144, 52163 through 52169) for a detailed discussion.

As stated in the FY 2019 Hospice Wage Index and Rate Update final rule (83 FR 38622, 38635 through 38648), we launched the ''Meaningful Measures Initiative'' (which identifies high priority areas for quality measurement and improvement) to improve outcomes for patients, their families, and providers while also reducing burden on clinicians and providers. The Meaningful Measures Initiative is not intended to replace any existing CMS quality reporting programs but will help such programs identify and select individual measures. The Meaningful Measures Initiative priority areas are intended to increase measure alignment across our quality programs and other public and private initiatives. Additionally, it will point to high priority areas where there may be gaps in available quality measures while helping to guide our efforts to develop and implement quality measures to fill those gaps. More information about the Meaningful Measures Initiative can be found at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html.*

In the FY 2022 Hospice Wage Index and Payment Rate Update final rule (86 FR 42552), we finalized two new measures using claims data: (1) Hospice Visits in the Last Days of Life (HVLDL); and (2) Hospice Care Index (HCI). We also removed the HVWDII measure, as it was replaced by HVLDL. We also finalized a policy that claims-based measures would use 8 quarters of data, which would allow CMS to publicly report on more hospices. Additionally, the rule indicated that public data reflecting hospices' reporting of the two new claims-based quality measures (QMs), the HVLDL and the HCI measures, would be available on the Care Compare/Provider Data Catalogue (PDC) web pages as of the August 2022 refresh.

In addition, we removed the seven HIS Process Measures from the program as individual measures, and ceased their public reporting because, in our view, the HIS Comprehensive Assessment Measure is sufficient for measuring care at admission without the seven individual process measures. In the FY 2022 Hospice Wage Index and Rate Update final rule (86 FR 42553), we finalized § 418.312(b)(2), which requires hospices to provide administrative data, including claims-based measures, as part of the HQRP requirements for § 418.306(b). In that same final rule, we provided CAHPS Hospice Survey updates.

In the FY 2023 and FY 2024 Hospice Wage Index final rules, we did not propose any new quality measures. However, we provided updates on already-adopted measures.

In the FY 2025 Hospice Wage Index final rule, the HQRP finalized two measures, including new data collection through the Hospice Outcomes and Patient Evaluation (HOPE) tool and plans for further development.

Table 5 shows the current quality measures in effect for the FY 2026 HQRP, which were updated and finalized in the FY 2025 Hospice Wage Index and Payment Rate Update final rule.

TABLE 5—QUALITY MEASURES IN EFFECT FOR THE HOSPICE QUALITY REPORTING PROGRAM

Hospice Quality Reporting Program
Hospice Items Set (HIS) and Hospice Outcomes and Patient Evaluation (HOPE)
Hospice and Palliative Care Composite Process Measure—Comprehensive Assessment Measure at Admission includes: 1. Patients Treated with an Opioid who are Given a Bowel Regimen. 2. Pain Screening. 3. Pain Assessment. 4. Dyspnea Treatment. 5. Dyspnea Screening. 6. Treatment Preferences. 7. Beliefs/Values Addressed (if desired by the patient).
Administrative Data, Including Claims-Based Measures
Hospice Visits in Last Days of Life (HVLDL). Hospice Care Index (HCI): 1. Continuous Home Care (CHC) or General Inpatient (GIP) Provided. 2. Gaps in Skilled Nursing Visits. 3. Early Live Discharges. 4. Late Live Discharges. 5. Burdensome Transitions (Type 1)—Live Discharges from Hospice Followed by Hospitalization and Subsequent Hospice Readmission. 6. Burdensome Transitions (Type 2)—Live Discharges from Hospice Followed by Hospitalization with the Patient Dying in the Hospital. 7. Per-beneficiary Medicare Spending. 8. Skilled Nursing Care Minutes per Routine Home Care (RHC) Day. 9. Skilled Nursing Minutes on Weekends. 10. Visits Near Death.
CAHPS Hospice Survey
CAHPS Hospice Survey: 1. Communication with Family. 2. Getting Timely Help. 3. Treating Patient with Respect. 4. Emotional and Spiritual Support. 5. Help for Pain and Symptoms. 6. Training Family to Care for Patient. 7. Care Preferences. 8. Rating of this Hospice. 9. Willing to Recommend this Hospice.

2. Update on the Comprehensive Assessment at Admission Measure

We retained key items from the HIS in HOPE v1.0 and continue to collect data to inform the Comprehensive Assessment at Admission (CBE #3235) while gathering additional data to support new quality measures. The Comprehensive Assessment Measure assesses the proportion of patients for whom the hospice performed all seven care processes, as applicable, at admission.

First endorsed by the National Quality Forum (NQF) in July 2017, the measure was endorsed again by NQF in July 2021 and this measure endorsement has been extended through Fall 2026 under the new CBE, Battelle.

3. Update on Hospice Claims-Based Measures

In the FY 2022 Hospice Wage Index and Payment Rate Update final rule (86 FR 42552), we finalized two new measures using claims data: (1) Hospice Visits in the Last Days of Life (HVLDL); and (2) Hospice Care Index (HCI).

Our measure selection activities for the HQRP take into consideration input we receive from the CBE, as part of a pre-rulemaking process that we have established and are required to follow under section 1890A of the Act. The CBE convenes interested parties from multiple groups to provide CMS with recommendations on the Measures Under Consideration (MUC) list. This input informs how CMS selects certain categories of quality and efficiency measures as required by section 1890A(a)(3) of the Act. By February 1st of each year, the CBE must provide that input to CMS. On July 26, 2022, the CBE endorsed the claims-based HVLDL measure. More information can be found on the HQRP Quality Measure Development web page at *https://www.cms.gov/medicare/hospiceequality-reporting-program/quality-measure-development* and the HQRP Current Measures web page at *https://www.cms.gov/medicare/quality/hospice/current-measures*. In November 2024, HVLDL was sent to the CBE advisory group for endorsement extension. HVLDL was re-endorsed with conditions in February 2025 and is endorsed through 2027. We are considering respecifying HCI, see the Hospice Technical Expert Panel (TEP) and Caregiver Report on this web page at *https://www.cms.gov/medicare/quality/hospice/provider-and-stakeholder-engagement*.

4. Update on the HOPE Instrument and Public Reporting and Future Quality Measure (QM) Development

The HOPE assessment was developed as the new patient assessment tool to replace the HIS as part of the HQRP. HOPE was finalized in the in the FY 2025 Hospice Wage Index final rule (89 FR 64202) and once implemented in FY 2026 (October 1, 2025), will provide value to hospice providers, patients, and families. Additional information regarding HOPE and its associated costs and burden can be found in the FY 2025 PRA submission (CMS–10390; OMB Control Number: 0938–1153).

HOPE will provide assessment-based quality data to enhance the HQRP

through standardized data collection, provide a better understanding of patient care needs, contribute to the patient's plan of care, and provide additional clinical data that could inform future payment refinements.

We encourage providers and vendors to visit the HOPE Technical Information web page at *https://www.cms.gov/medicare/quality/hospice-quality-reporting-program/hospice-outcomes-and-patient-evaluation-hope-technical-information* for the latest updates and resources related to HOPE data submission specifications and other technical information. The Web-Based Training, entitled Introducing the HOPE Tool, released October 1, 2024, is available on the HQRP Training and Education Library web page at *https://www.cms.gov/medicare/quality/hospice/hqrp-training-and-education-library*. We encourage providers to complete the course, which contains five sections and includes interactive exercises to help providers understand and apply the content presented. More detailed comprehensive training will follow and be available on the HQRP Training and Education Library web page linked above.

As finalized in the FY 2025 Hospice Wage Index final rule (89 FR 64202), public reporting of the HOPE quality measures will be implemented no earlier than FY 2028. Data collected by hospices during the four quarters of CY 2026 (for example, Q 1, 2, 3 and 4 CY 2026) will be analyzed starting in CY 2027. We will inform the public of the decisions about whether CMS will report some or all of the quality measures publicly based on the findings of analysis of the CY 2026 data through future rulemaking. Providers will have the opportunity to preview HOPE data before it is publicly reported, with the first HOPE-based QM public reporting anticipated to be no earlier than November 2027 (FY 2028). Table 6 walks through the anticipated schedule for HOPE public reporting, should CMS decide that this information will be publicly reported.

TABLE 6—ANTICIPATED HOPE PUBLIC EDUCATION, DATA COLLECTION, AND REPORTING

Key event	Time period
Provider Trainings for HOPE Implementation	Spring/Summer 2025.
Data Collection Begins	October 1, 2025.
CY 2026 Data Analyzed to Assess Quality and Completeness	Winter/Spring 2027.
Provider Preview Reports for HOPE Measure(s) Provided to Hospices *	Summer 2027.
Public Reporting of HOPE Measure(s) Begins *	Fall 2027.

* These dates are subject to change based on the quality and reportability of the data as determined based on CMS analyses; updates will be provided in the FY 2027 Hospice Rule.

Lastly, as stated in the FY 2022 Hospice Wage Index final rule (86 FR 42528), we continue to consider developing hybrid quality measures that could be calculated from multiple data sources, such as claims, HOPE data, or other data sources (for example, CAHPS Hospice Survey). We also intend to develop several quality measures based on information collected by HOPE after HOPE is implemented. More information on measure development can be found on the HQRP Quality Measure Development web page at *https://www.cms.gov/medicare/hospice-quality-reporting-program/quality-measure-development*.

5. Update on the Transition to iQIES

In the FY 2020 Hospice Wage Index and Payment Rate Update final rule (84 FR 38484), we finalized migrating our systems for submitting and processing assessment data and the reporting system. Hospices are currently required to submit HIS data to CMS using the Quality Improvement and Evaluation System (QIES) Assessment and the Submission Processing (ASAP) system and obtain reports in the Certification and Survey Provider Enhanced Reports (CASPER) system. The FY 2020 Hospice Wage Index and Payment Rate Update final rule (84 FR 38484) finalized the proposal to migrate to a new single CMS submission and reporting system.

In the FY 2025 Hospice Wage Index and Payment Rate Update final rule (86 FR 64202), we finalized the HOPE tool to replace the HIS as part of the HQRP. Beginning on October 1, 2025, the new CMS submission and reporting system will begin accepting the data from HOPE, in line with the start of HOPE data collection. Provider reports will also be available in this system beginning October 1, 2025. The QIES system will stop accepting HIS records for hospice admissions and discharges that occurred prior to October 1, 2025, including any corrections, on February 15, 2026.

6. Form, Manner, and Timing of Quality Measure Data Submission

a. Statutory Penalty for Failure To Report

Section 1814(i)(5)(C) of the Act requires that each hospice submit data to the Secretary on quality measures specified by the Secretary. The data must be submitted in a form and manner, and at a time specified by the Secretary. Section 1814(i)(5)(A)(i) of the Act was amended by the CAA, 2021 and the payment reduction for failing to meet hospice quality reporting requirements was increased from 2 percent to 4 percent beginning with FY 2024. During FYs 2014 through 2023, the Secretary reduced the market basket update by 2 percentage points for non-compliance. Beginning in FY 2024 and for each subsequent year, the Secretary will reduce the market basket update by 4 percentage points for any hospice that does not comply with the quality measure data submission requirements for that FY. In the FY 2023 Hospice Wage Index final rule (87 FR 45669), we revised our regulations at § 418.306(b)(2) in accordance with this statutory change.

b. Compliance

HQRP Compliance requires understanding the different timeframes for both HIS (or HOPE, once implemented) and CAHPS: The relevant Reporting Year, the payment FY, and the Reference Year.

- The ''Reporting Year''' (HIS or HOPE) or ''Data Collection Year''' (CAHPS) is based on the calendar year (CY). It is the same CY for both HIS (or HOPE, once it is implemented) and CAHPS. If the CAHPS Data Collection year is CY 2025, then the HIS (or HOPE) reporting year is also CY 2025.
- In the ''Payment FY'', the APU is subsequently applied to FY payments based on compliance in the corresponding Reporting Year/Data Collection Year.
- For the CAHPS Hospice Survey, the Reference Year is the CY before the Data Collection Year. The Reference Year applies to hospices submitting a size exemption from the CAHPS survey (there is no similar exemption for HIS

or HOPE).[5] For example, for the CY 2025 data collection year, the Reference Year is CY 2024. This means providers seeking a size exemption for CAHPS in CY 2025 will base it on their hospice size in CY 2024.

Submission requirements are codified at 42 CFR 418.312. Table 7 summarizes the three timeframes. It illustrates how the CY interacts with the FY payments, covering the CY 2023 through CY 2026 data collection periods and the corresponding APU application from FY 2025 through FY 2028. Please note that during the first reporting year that implements HOPE, APUs may be based on fewer than four quarters of data. We will provide additional subregulatory guidance regarding APUs for the HOPE implementation year.

TABLE 7—HQRP REPORTING REQUIREMENTS AND CORRESPONDING ANNUAL PAYMENTS UPDATES

Reporting year for HIS/HOPE and data collection year for CAHPS data (calendar year)	Annual payment update impacts payments for the FY	Reference year for CAHPS size exemption (CAHPS only)
CY 2024	FY 2026 APU	CY 2023.
CY 2025	FY 2027 APU	CY 2024.
CY 2026	FY 2028 APU	CY 2025.
CY 2027	FY 2029 APU	CY 2026.

As illustrated in Table 7, CY 2024 data submissions compliance impacts the FY 2026 APU. CY 2025 data submissions compliance impacts the FY 2027 APU. CY 2026 data submissions compliance impacts FY 2028 APU. This CY data submission impacting FY APU pattern follows for subsequent years.

c. Submission of Data Requirements

As finalized in the FY 2016 Hospice Wage Index final rule (80 FR 47142, 47192), hospices' compliance with HIS requirements beginning with the FY 2020 APU determination (that is, based on HIS Admission and Discharge records submitted in CY 2018) are based on a timeliness threshold of 90 percent. This means CMS requires that hospices submit 90 percent of all required HIS records within 30 days of the event (that is, patient's admission or discharge). The 90-percent threshold is hereafter referred to as the timeliness compliance threshold. Ninety percent of all required HIS records must be submitted and accepted within the 30-day submission deadline to avoid the statutorily mandated payment penalty.

We will apply the same submission requirements for HOPE admission, discharge, and up to two hospice update visit (HUV) records. After HIS is phased out, hospices will continue to be required to submit 90 percent of all required HOPE records to support the quality measures within 30 days of the event or completion date (patient's admission, discharge, and based on the patient's length of stay up to two HUV timepoints).

Hospice compliance with claims data requirements is based on administrative data collection. Since Medicare claims data are already collected from claims, hospices are considered 100 percent compliant with the submission of these data for the HQRP. There is no additional submission requirement for administrative data.

To comply with CMS' quality reporting requirements for CAHPS, hospices are required to collect data monthly using the CAHPS Hospice Survey. Hospices comply by utilizing a CMS-approved third-party vendor. Approved Hospice CAHPS vendors must successfully submit data on the hospice's behalf to the CAHPS Hospice Survey Data Center. A list of the approved vendors can be found on the CAHPS Hospice Survey website at *https://www.hospicecahpssurvey.org*.

Table 8 HQRP Compliance Checklist illustrates the APU and timeliness threshold requirements.

TABLE 8—HQRP COMPLIANCE CHECKLIST

Annual payment update	HIS/HOPE	CAHPS
FY 2026	Submit at least 90 percent of all HIS records within 30 days of the event date (for example, patient's admission or discharge) for patient admissions/discharges occurring 1/1/24–12/31/24.	Ongoing monthly participation in the Hospice CAHPS survey 1/1/2024–12/31/2024.
FY 2027	Submit at least 90 percent of all HIS/HOPE records within 30 days of the event date (for example, patient's admission or discharge) for patient admissions/discharges occurring 1/1/25–12/31/25.	Ongoing monthly participation in the Hospice CAHPS survey 1/1/2025–12/31/2025.
FY 2028	Submit at least 90 percent of all HOPE records within 30 days of the event or completion date (for example, patient's admission date, HUV completion date or discharge date) for patient admissions/discharges occurring 1/1/26–12/31/26.	Ongoing monthly participation in the Hospice CAHPS survey 1/1/2026–12/31/2026.
FY 2029	Submit at least 90 percent of all HOPE records within 30 days of the event date (for example, patient's admission or discharge) for patient admissions/discharges occurring 1/1/27–12/31–2027.	Ongoing monthly participation in the Hospice CAHPS survey 1/1/2028–12/31/2027.

Note: The data source for the claims-based measures will be Medicare claims data that are already collected and submitted to CMS. There is no additional submission requirement for administrative data (Medicare claims), and hospices with claims data are 100-percent compliant with this requirement.

Most hospices that fail to meet HQRP requirements do so because they miss the 90 percent threshold. We offer many training and education opportunities through our websites, which are available 24/7, 365 days per year, to enable hospice staff to learn at the pace and time of their choice. We want hospices to be successful with meeting

[5] CAHPS Hospice Survey, Participation Exemption for Size. *https://www.hospicecahpssurvey.org/en/participation-exemption-for-size/*.

the HQRP requirements. We encourage hospices to visit the frequently-updated HQRP website at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting.* Available trainings can be found on the HQRP Training and Education Library web page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Hospice-Quality-Reporting-Training-Training-and-Education-Library* and additional resources are located on the Requirements and Best Practices web page at *https://www.cms.gov/medicare/quality/hospice/hqrp-requirements-and-best-practices.* We also encourage readers to stay informed about HQRP by visiting the HQRP Provider and Stakeholder Engagement web page at *https://www.cms.gov/medicare/quality/hospice/provider-and-stakeholder-engagement* to sign-up for the Hospice Quality Listserv.

7. Request for Information (RFI) To Advance Digital Quality Measurement (dQM) in the HQRP

As part of our quality measurement enterprise modernization, we are issuing this RFI to gather broad public input on the digital quality measurement.

a. Background

We are committed to improving healthcare quality through measurement, transparency, and public reporting of quality data, and to enhancing healthcare data exchange by promoting the adoption of interoperable health information technology (IT) through Health Level Seven® (HL7®) Fast Healthcare Interoperability Resources® (FHIR®) standards. Proposing requirements around the use of technology utilizing such standards within the HQRP in the future could potentially enable greater care coordination and information sharing, which is essential for delivering high-quality, efficient care and better outcomes at a lower cost (86 FR 25615). In the FY 2022 IRF/LTCH PPS proposed rule and the FY 2023 Hospice proposed rule,[6] we outlined several HHS initiatives aimed at promoting the adoption of interoperable health IT and facilitating nationwide health information exchange. Further, to inform our digital strategy, in the FY 2022 Hospice proposed rule we shared and sought feedback on our intent to explore the use of FHIR-based standards to exchange clinical information through application programming interfaces (APIs), enabling quality data submission to CMS through our internet Quality Improvement and Evaluation System (iQIES), and to work with healthcare standards organizations to ensure their standards support our assessment tools (86 FR 19700).

We now are continuing to consider opportunities to advance FHIR-based reporting of patient assessment data in settings that were not eligible to participate in the Medicare Electronic Health Record (EHR) Incentive Program (now known as the Medicare Promoting Interoperability Program), while acknowledging that such providers may be at different levels of health IT adoption and readiness. Specifically, we are interested in assessing the feasibility of using the FHIR standard for the submission of HOPE data. Our objective is to explore how hospices typically integrate technologies with varying complexity into existing systems and how this affects hospice workflows. We seek to identify the challenges or opportunities that may arise during this integration, and determine the support needed to complete and submit HOPE in ways that protect and enhance care delivery.

Any updates to specific program requirements related to quality measurement and reporting provisions would be addressed through separate and future notice-and-comment rulemaking, as necessary.

b. Solicitation for Comment

We seek feedback on the following questions regarding the current state of health IT use, including EHRs, in your facilities:

- To what extent does your hospice use health IT to maintain patient records? If your facility has transitioned to using electronic records, in part or in whole, what types of health IT does your hospice use to maintain patient records, and are these technology systems certified under the Office of the National Coordinator (ONC) Health IT Certification Program? [7] If your facility uses health IT systems that are not certified under the ONC Health IT Certification Program, please specify and include the reason(s) for not using a certified health IT system (for example, resources, lack of certified health IT products that meet your needs, etc.). Does your facility maintain any patient records outside of these electronic systems? If so, are the data organized in a structured format, using codes and recognized standards, that can be exchanged with other systems?
- Does your hospice submit data to CMS through your current health IT system? If a third-party intermediary (for example, an EHR vendor) is used to report data, what type of intermediary service is used? How does your facility currently exchange health information with other healthcare providers or systems, specifically between hospices and other provider types? What about health information exchange with other entities, such as public health agencies—what does that look like? What are the challenges to electronic exchange of health information?
- Are there any challenges with your current electronic devices (for example, tablets, smartphones, computers) that hinder your ability to easily exchange information across systems? Does limited or lack of internet connectivity impact your ability to exchange data with other healthcare providers, including community-based care services, or your ability to submit patient assessment data to CMS? Please specify.
- What steps does your hospice take to ensure compliance in using health IT security and patient privacy requirements such as the Health Insurance Portability and Accountability Act and related regulations?
- Does your hospice refer to Safety Assurance Factors for HER Resilience (SAFER) Guides (see newly revised versions published in January 2025 at *https://www.healthit.gov/topic/safety/safer-guides*) to self-assess EHR safety practices?
- What challenges or barriers does your hospice encounter when submitting quality measure data to CMS as part of the Hospice QRP? What opportunities or factors could improve your facility's successful data submission to CMS?
- How do you anticipate the adoption of technology using FHIR-based APIs to facilitate the reporting of patient assessment data could impact provider workflows? What impact, if any, do you anticipate it will have on quality of care?
- Does your hospice have any experience using one or more versions of the United States Core Data for Interoperability (USCDI) standard? [8] Is your facility using technology that utilizes APIs based on the FHIR

[6] ''Advancing Health Information Exchange'' in: FY 2022 IPPS/LTCH PPS proposed rule (87 FR 28108) and FY 2023 Hospice proposed rule (87 FR 19442).

[7] Certified Health IT Product List (CHPL). *https://chpl.healthit.gov/#/search.*

[8] The USCDI is a standardized set of health data classes and constituent data elements for nationwide, interoperable health information exchange. Learn more at *https://www.healthit.gov/isp/united-states-core-data-interoperability-uscdi.*

standard for electronic data exchange using APIs? If so, with whom are you exchanging data using the FHIR standard and for what purpose(s)? For example, have you used FHIR APIs to exchange data with public health agencies? Does your facility use any Substitutable Medical Applications and Reusable Technologies (SMART) on FHIR [9] applications? If so, are the SMART on FHIR applications integrated with your EHR? Additionally, what benefits or challenges have you experienced with the implementation of technology using FHIR-based APIs?

- What might encourage your facility or agency and/or vendors to participate in a pilot test that would explore assessment submission process options, for example, testing a FHIR-based assessment submission to CMS?
- How could the Trusted Exchange Framework and Common Agreement™ (TEFCA™) [10] support CMS quality programs' adoption of FHIR-based assessment submissions consistent with the FHIR Roadmap (available at *https://rce.sequoiaproject.org/three-year-fhir-roadmap-for-tefca/*)? How might patient assessment data hold secondary uses for treatment or other TEFCA exchange purposes?
- What other information should we consider that could facilitate successful adoption and integration of FHIR-based technologies and standardized data for patient assessment instruments like HOPE? We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies.

We plan to continue working with other agencies and interested parties to coordinate and to inform our dQM transition, nutrition and well-being efforts. While we will not be responding to specific comments submitted in response to this RFI in the FY 2026 Hospice final rule, we will actively consider all input as we develop future regulatory proposals or future sub-regulatory policy guidance. Any updates to specific program requirements related to quality measurement and reporting provisions would be addressed through separate and future notice-and-comment rulemaking, as necessary.

8. RFIs on Future Quality Measure Concepts for the Hospice QRP

We are seeking input on the importance, relevance, appropriateness, and applicability of several concepts under consideration for future years in the Hospice QRP. We published a request for information (RFI) in previous proposed rules on meaningful measures suitable for the hospice setting.

We are seeking input on three concepts for the Hospice QRP:

1. Interoperability

We are seeking comments on a measure of interoperability, focusing on systems readiness and capabilities in the Hospice setting. Title XXX of the Public Health Service Act defines ''interoperability'' in part, and with respect to health information technology, as health information technology that enables the secure exchange of electronic health information with, and use of electronic health information from, other health information technology without requiring special efforts by the user.[11] The definition further states that interoperability of health information technology allows for complete, including by providers, patients, and caregivers, access, exchange, and use of electronically accessible health information for authorized uses under applicable State or Federal law.[12] Adoption and optimization of electronic health records (EHRs) and health information exchange services that use common standards to share data can enable interoperability across systems. We would like to receive input and comment on approaches to assessing interoperability in the hospice care setting, for instance, measures that address or evaluate the level of readiness for interoperable data exchange, or measures that evaluate the ability of data systems to securely share information across the spectrum of care.

2. Well-Being

We are seeking feedback on a measure of well-being. Well-being is a comprehensive approach to disease prevention and health promotion, as it integrates mental, social, and physical health while emphasizing preventative care to proactively address potential health issues.[13] This comprehensive approach emphasizes person-centered care by promoting the well-being of hospice patients. We are seeking comments on tools and measures that assess overall health, happiness, and satisfaction at the end of life, which could include aspects of emotional well-being, social connections, purpose, fulfillment, and self-care work.

3. Nutrition

We are seeking feedback on a measure of nutrition. Assessment for nutritional status may include various strategies, guidelines, and practices designed to promote nutrition at every stage of hospice care and ensure patients receive the necessary nutrients for maintaining their individual health needs and overall well-being. This also includes aspects of health that support or mediate nutritional status, such as activity and sleep. These efforts not only support nutrition but could also work to include the cultural, social, and spiritual needs and wishes of the patients. We are seeking feedback on tools and frameworks that promote healthy, safe eating habits, exercise, nutrition, and activity appropriate for optimal end-of-life care.

9. Proposed Revision to § 418.312(j)(2) To Correct Regulatory Text

In accordance with the Administrative Procedure Act, 5 U.S.C. 553, it is the Secretary's practice to offer interested parties the opportunity to comment on proposed regulations. However, the regulatory changes in this proposal are necessary to correct an error and do not establish any new substantive rules.

We are proposing to revise the regulatory text at § 418.312(j)(2) to correct a reference to another part of the regulations. Specifically, we are replacing a reference to § 412.306(b)(2) with the correct reference to § 418.306(b)(2).

IV. Collection of Information Requirements

This proposed rule would revise the attestation requirements at § 418.22(b)(4) to better align with the original intent of the statutory requirements under section 1814(a)(7) of the Act and CY 2011 HH PPS final rule for the certification of terminal illness regulations to include the physician's or nurse practitioner's signature and the date of the signature on each face-to-face encounter attestation. These underlying attestation requirements are collections of information that require approval under the Paperwork Reduction Act and were previously approved in the ICR for the Hospice Conditions of Participation (OMB Control Number 0938–1067). However, the revisions proposed in this rule are minor and would not substantively change the scope of the attestation requirement or the burden that it would entail, and thus they do not require any additional approval that

[9] *https://smarthealthit.org/*.

[10] TEFCA™, outlines a common set of principles, terms, and conditions to support the development of a Common Agreement that helps enable the nationwide exchange of electronic health information (EHI) across disparate health information networks (HINs).

[12] 42 U.S.C. 300jj(9).

[13] Well-Being Concepts. CDC Archives. *WHPL_Canon_WB_Well-Being_Concepts__HRQOL__CDC_2017.pdf*.

would go beyond the coverage provided by 0938–1067.

We are planning to seek approval from OMB to reinstate Control Number 0938–1067 separately from this rulemaking via the standard PRA process.

V. Response to Comments

Because of the large number of public comments, we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VI. Regulatory Impact Analysis

A. Statement of Need

1. Hospice Payment

This proposed rule meets the requirements of our regulations at § 418.306(c) and (d), which require annual issuance, in the **Federal Register**, of the Hospice Wage Index based on the most current available CMS hospital wage data, including any changes to the definitions of CBSAs or previously used Metropolitan Statistical Areas (MSAs), as well as any changes to the methodology for determining the per diem payment rates. This proposed rule would update the payment rates for each of the categories of hospice care, described in § 418.302(b), for FY 2026 as required under section 1814(i)(1)(C)(ii)(VII) of the Act. The payment rate updates are subject to changes in economy-wide productivity as specified in section 1886(b)(3)(B)(xi)(II) of the Act.

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866, ''Regulatory Planning and Review''; Executive Order 13132, ''Federalism''; Executive Order 13563, ''Improving Regulation and Regulatory Review''; Executive Order 14192, ''Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (Pub. L. 96–354); section 1102(b) of the Social Security Act; and section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select those regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; and distributive impacts). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, or the President's priorities.

A regulatory impact analysis (RIA) must be prepared for a regulatory action that is significant under section 3(f)(1) of E.O. 12866. Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1) of E.O. 12866. Accordingly, we have prepared a regulatory impact analysis that presents the costs and benefits of the rulemaking to the best of our ability.

1. Hospice Payment

We estimate that the aggregate impact of the payment provisions in this proposed rule would result in an estimated increase of $695 million in payments to hospices, resulting from the proposed hospice payment update percentage of 2.4 percent for FY 2026. The impact analysis of this proposed rule represents the projected effects of the changes in hospice payments from FY 2025 to FY 2026. Using the most recent complete data available at the time of rulemaking, in this case FY 2024 hospice claims data as of January 13, 2025, we simulate total payments using the FY 2025 wage index (pre-floor, pre-reclassified hospital wage index with the hospice floor, and the 5 percent cap on wage index decreases) and FY 2025 payment rates and compare it to our simulation of total payments using FY 2024 utilization claims data, the final FY 2026 Hospice Wage Index (pre-floor, pre-reclassified hospital wage index with hospice floor, and the 5 percent cap on wage index decreases) and FY 2025 payment rates. By dividing payments for each level of care (RHC days 1 through 60, RHC days 61+, CHC, IRC, and GIP) using the FY 2025 wage index and payment rates for each level of care by the proposed FY 2026 wage index and FY 2025 payment rates, we obtain a wage index standardization factor for each level of care. We apply the wage index standardization factors so that the aggregate simulated payments do not increase or decrease due to changes in the wage index.

Certain events may limit the scope or accuracy of our impact analysis, because such an analysis is susceptible to forecasting errors due to other changes in the forecasted impact time- period. The nature of the Medicare program is such that the changes may interact, and the complexity of the interaction of these changes could make it difficult to predict accurately the full scope of the impact upon hospices.

2. Hospice Quality Reporting Program

There are no new proposals related to the Hospice Quality Reporting Program for FY 2026; accordingly, there are no impacts.

C. Detailed Economic Analysis

1. Proposed Hospice Payment Update for FY 2026

The FY 2026 hospice payment impacts appear in Table 9. We tabulate the resulting payments according to the classifications (for example, provider type, geographic region, facility size), and compare the difference between current and future payments to determine the overall impact. The first column shows the breakdown of all hospices by provider type and control (non-profit, for-profit, government, other), facility location, and facility size. The second column shows the number of hospices in each of the categories in the first column. The third column shows the effect of using the FY 2026 updated wage index data with a 5 percent cap on wage index decreases. The aggregate impact of the change in column three is zero percent, due to the hospice wage index standardization factors. However, there are distributional effects of using the FY 2026 hospice wage index. The fourth column shows the effect of the hospice payment update percentage as mandated by section 1814(i)(1)(C) of the Act and is consistent for all providers. The hospice payment update percentage of 2.4 percent is based on the proposed 3.2 percent inpatient hospital market basket percentage increase reduced by a proposed 0.8 percentage point productivity adjustment. The fifth column shows the total effect of the updated wage data and the hospice payment update percentage on FY 2026 hospice payments. As illustrated in Table 9, the combined effects vary by specific types of providers and by location. We note that simulated

payments are based on utilization in FY 2024 as seen on Medicare hospice claims (accessed from the CCW on January 13, 2025) and only include payments related to the level of care and do not include payments related to the service intensity add-on.

As illustrated in Table 9, the combined effects vary by specific types of providers and by location.

TABLE 9—IMPACT TO HOSPICES FOR FY 2026

Hospice subgroup	Hospices	FY 2026 updated wage data (%)	FY 2026 proposed hospice payment update (2.4%)	Overall total impact for FY 2026 (%)

0–3,499 RHC Days (Small)	1,727	−0.7	2.4	1.7
3,500–19,999 RHC Days (Medium)	3,006	−0.4	2.4	2.0
20,000+ RHC Days (Large)	1,962	0.1	2.4	2.5

Source: FY 2024 hospice claims data from CCW accessed on January 13, 2025.

Note: The overall total impact reflects the addition of the individual impacts, which includes the wage index impact as well as the proposed hospice payment update of 2.4 percent.

Due to missing Provider of Services file and Cost Report information (from which hospice characteristics are obtained), some subcategories in the impact tables have fewer agencies represented than the overall total (of 6,695). Subtypes involving ownership only add up to 6,305 while subtypes involving facility type only add up to 5,788.

Region Key:

New England = Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont.

Middle Atlantic = Pennsylvania, New Jersey, New York.

South Atlantic = Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia.

East North Central = Illinois, Indiana, Michigan, Ohio, Wisconsin.

D. Regulatory Review Cost Estimation

Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on last year's proposed rule will be the number of reviewers of this proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons we believe that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcome any comments on the approach in estimating the number of entities which will review this proposed rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this proposed rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We seek comments on this assumption.

Using the May 2023 National median hourly wage rate (doubled for benefits and overhead) for medical and health service managers (Code 11–9111); we estimate that the cost of reviewing this rule is $106.42 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed we estimate that it would take approximately 1.76 hours for staff to review half of this proposed rule. For each hospice that reviews the rule, the estimated cost is $187.30 (1.76 hours × $106.42). Therefore, we estimate that the total cost of reviewing this regulation is $18,355.40 ($187.30 × 98 reviewers (based on last year's comments received).

E. Alternatives Considered

1. Hospice Payment

Since the hospice payment update percentage is determined based on statutory requirements, we did not consider alternatives to updating the hospice payment rates by the hospice payment update percentage. The proposed 2.4 percent hospice payment update percentage for FY 2026 is based on a proposed 3.2 percent inpatient hospital market basket percentage increase for FY 2026, reduced by a proposed 0.8 percentage point productivity adjustment. Payment rates since FY 2002 have been updated according to section 1814(i)(1)(C)(ii)(VII) of the Act, which states that the update to the payment rates for subsequent years must be the market basket percentage increase for that fiscal year. Section 3401(g) of the Affordable Care Act also mandates that, starting with FY 2013 (and in subsequent years), the hospice payment update percentage will be annually reduced by changes in economy-wide productivity as specified in section 1886(b)(3)(B)(xi)(II) of the Act. For FY 2026, since the hospice payment update percentage is determined based on statutory requirements at section 1814(i)(1)(C) of the Act, we did not consider alternatives for the hospice payment update percentage.

F. Accounting Statement and Table

Consistent with OMB Circular A–4 (available at *https://trumpwhitehouse.archives.gov/sites/whitehouse.gov/files/omb/circulars/A4/a-4.pdf*), we have prepared an accounting statement in Table 10 showing the classification of the expenditures associated with the provisions of this proposed rule. Table 10 provides our best estimate of the possible changes in Medicare payments under the hospice benefit as a result of the policies in this proposed rule. This estimate is based on the data for 6,695 hospices in our impact analysis file, which was constructed using FY 2024 claims (accessed from the CCW on January 13, 2025). All expenditures are classified as transfers to hospices.

Table 10 also provides the impact costs associated with the Hospice Quality Reporting Program starting FY 2026.

TABLE 10—ACCOUNTING STATEMENT CLASSIFICATION OF ESTIMATED TRANSFERS AND COSTS

Hospice payment update category	FY 2025 to FY 2026 transfers
Annualized Monetized Transfers	$695 million.*
From Whom to Whom?	Federal Government to Medicare Hospices.

*The increase of $695 million in transfer payments is a result of the proposed 2.4 percent hospice payment update compared to payments in FY 2025.

G. Regulatory Flexibility Act (RFA)

The RFA requires agencies to analyze options for regulatory relief of small entities if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small jurisdictions. We consider all hospices as small entities as that term is used in the RFA. The North American Industry Classification System (NAICS) was adopted in 1997 and is the current standard used by the Federal statistical agencies related to the U.S. business economy. There is no NAICS code specific to hospice services. Therefore, we utilized the NAICS U.S. industry title ''Home Health Care Services'' and corresponding NAICS code 621610 in determining impacts for small entities. The NAICS code 621610 has a size standard of $19 million.[14] Table 11 shows the number of firms, revenue, and estimated impact per home health care service category.

[14] *https://www.sba.gov/sites/sbagov/files/2023-03/Table%20of%20Size%20Standards_Effective%20March%2017%2C%202023%20%281%29%20%281%29_0.pdf.*

TABLE 11—NUMBER OF FIRMS, REVENUE, AND ESTIMATED IMPACT OF HOME HEALTH CARE SERVICES BY NAICS CODE 621610

NAICS code	NAICS description	Enterprise size	Number of firms	Receipts ($1,000)	Estimated impact ($1,000) per enterprise size
621610	Home Health Care Services	<100	5,861	210,697	$35.95
621610	Home Health Care Services	100–499	5,687	1,504,668	264.58
621610	Home Health Care Services	500–999	3,342	2,430,807	727.35
621610	Home Health Care Services	1,000–2,499	4,434	7,040,174	1,587.77
621610	Home Health Care Services	2,500–4,999	1,951	6,657,387	3,412.29
621610	Home Health Care Services	5,000–7,499	672	3,912,082	5,821.55
621610	Home Health Care Services	7,500–9,999	356	2,910,943	8,176.81
621610	Home Health Care Services	10,000–14,999	346	3,767,710	10,889.34
621610	Home Health Care Services	15,000–19,999	191	2,750,180	14,398.85
621610	Home Health Care Services	≥20,000	961	51,776,636	53,877.87
621610	Home Health Care Services	Total	23,801	82,961,284	3,485.62

Source: Data obtained from United States Census Bureau table ''us_6digitnaics_rcptsize_2017'' (SOURCE: 2017 County Business Patterns and Economic Census) Release Date: 5/28/2021: *https://www2.census.gov/programs-surveys/susb/tables/2017/.*

Notes: Estimated impact is calculated as Receipts ($1,000)/Number of firms.

The Department of Health and Human Services' practice in interpreting the RFA is to consider effects economically ''significant'' only if greater than 5 percent of providers reach a threshold of 3 to 5 percent or more of total revenue or total costs. The majority of hospice visits are Medicare paid visits, and therefore the majority of hospice's revenue consists of Medicare payments. Based on our analysis, we conclude that the policies proposed in this rule would result in an estimated total impact of 3 to 5 percent or more on Medicare revenue for greater than 5 percent of hospices. Therefore, the Secretary has certified that this hospice proposed rule would have significant economic impact resulting in a net increase in positive revenue on a substantial number of small entities. We estimate that the net impact of the policies in this rule is 2.4 percent or approximately $695 million in increased revenue to hospices in FY 2026. The 2.4 percent increase in expenditures when comparing FY 2025 payments to estimated FY 2026 payments is reflected in the last column of the first row in Table 9 and is driven solely by the impact of the hospice payment update percentage reflected in the fourth column of the impact table. In addition, small hospices will experience a lower estimated increase (1.7 percent), compared to large hospices (2.5 percent) due to the final updated wage index. Further detail is presented in Table 9 by hospice type and location. The analysis in this section along with the rest of the regulatory impact analysis in this proposed rule constitutes our initial regulatory flexibility analysis.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a MSA and has fewer than 100 beds. This rule will only affect hospices. Therefore, the Secretary has determined that this rule will not have a significant impact on the operations of a substantial number of small rural hospitals (see Table 9).

H. Unfunded Mandates Reform Act (UMRA)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately $187 million. This rule will not have an unfunded effect on state, local, or tribal governments, in the aggregate, or on the private sector that exceeds this threshold in any 1 year.

I. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have reviewed this rule under these criteria of Executive Order 13132 and have determined that it will not impose substantial direct costs on State or local governments.

J. E.O. 14192, ''Unleashing Prosperity Through Deregulation''

Executive Order 14192, entitled ''Unleashing Prosperity Through Deregulation'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations.'' This proposed rule, if finalized as proposed, is not expected to be an E.O. 14192 regulatory action because it would not impose any more than *de minimis* regulatory costs.

K. Conclusion

We estimate that aggregate payments to hospices in FY 2026 will increase by $695 million as a result of the hospice payment update, compared to payments in FY 2025. We estimate that in FY 2026, hospices in urban areas would experience, on average, a 2.4 percent increase in estimated payments compared to FY 2025; while hospices in rural areas would experience, on average, a 2.7 percent increase in estimated payments compared to FY 2025. Hospices providing services in the New England region would experience the largest estimated increases in payments of 3.8 percent. Hospices serving patients in the Pacific region will experience, on average, the lowest estimated increase of 1.4 percent in FY 2026 payments.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Stephanie Carlton, Acting Administrator of the Centers for Medicare & Medicaid Services, approved this document on March 31, 2025.

List of Subjects in 42 CFR Part 418

Health facilities, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV, part 418 as set forth below:

PART 418—HOSPICE CARE

■ 1. The authority citation for part 418 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 2. Section 418.22 is amended by revising paragraph (b)(4) to read as follows:

§ 418.22 Certification of terminal illness.

* * * * *

(b) * * *

(4) The physician or nurse practitioner who performs the face-to-face encounter with the patient described in paragraph (a)(4) of this section must attest in writing that he or she had a face-to-face encounter with the patient, including the date of that visit. The attestation must include the physician's or nurse practitioner's signature and the date it was signed. The attestation, its accompanying signature, and the date signed, must be a separate and distinct section of, or an addendum to, the recertification form, and must be clearly titled. If the face-to-face encounter was not performed by the certifying physician, the attestation of the physician or nurse practitioner who performed the face-to-face encounter shall state that the clinical findings of that visit were provided to the certifying physician for use in determining continued eligibility for hospice care.

* * * * *

■ 3. Section 418.25 is amended by revising paragraph (a) and paragraph (b) introductory text to read as follows:

§ 418.25 Admission to hospice care.

(a) The hospice admits a patient only on the recommendation of the medical director (or the physician designee, as defined in § 418.3) or the physician member of the hospice interdisciplinary group, in consultation with, or with input from, the patient's attending physician (if any).

(b) In reaching a decision to certify that the patient is terminally ill, the hospice medical director (or the physician designee, as defined in § 418.3) or the physician member of the hospice interdisciplinary group, must consider at least the following information:

* * * * *

■ 4. Section 418.312 is amended by revising paragraph (j)(2) to read as follows:

§ 418.312 Data submission requirements under the hospice quality reporting program.

* * * * *

(j) * * *

(2) A hospice must meet or exceed the data submission compliance threshold in paragraph (j)(1) of this section to avoid receiving a 4-percentage point reduction to its annual payment update for a given FY as described under § 418.306(b)(2).

Robert F. Kennedy, Jr.,

Secretary, Department of Health and Human Services.

[FR Doc. 2025–06317 Filed 4–11–25; 4:15 pm]

42 CFR Part 413

Medicare Program; Prospective Payment System and Consolidated Billing for Skilled Nursing Facilities; Updates to the Quality Reporting Program for Federal Fiscal Year 2026; Proposed Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

42 CFR Part 413

[CMS–1827–P]

RIN 0938–AV47

Medicare Program; Prospective Payment System and Consolidated Billing for Skilled Nursing Facilities; Updates to the Quality Reporting Program for Federal Fiscal Year 2026

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would change and update policies and payment rates used under the Skilled Nursing Facility (SNF) Prospective Payment System (PPS) for FY 2026. This rulemaking also proposes to update the requirements for the SNF Quality Reporting Program and the SNF Value-Based Purchasing Program.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, by June 30, 2025.

ADDRESSES: In commenting, please refer to file code CMS–1827–P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1827–P, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1827–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:

Patricia Taft, (410) 786–4561, for issues related to the SNF PPS.

Heidi Magladry, (410) 786–6034, for information related to the skilled nursing facility quality reporting program.

Christopher Palmer, (410) 786–8025, for information related to the skilled nursing facility value-based purchasing program.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *http://www.regulations.gov.* Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Plain Language Summary: In accordance with 5 U.S.C. 553(b)(4), a plain language summary of this rule may be found at *https://www.regulations.gov/.*

Unleashing Prosperity Through Deregulation of the Medicare Program—Request for Information: On January 31, 2025, President Trump issued Executive Order (E.O.) 14192 ''Unleashing Prosperity Through Deregulation,'' which states the Administration policy to significantly reduce the private expenditures required to comply with Federal regulations to secure America's economic prosperity and national security and the highest possible quality of life for each citizen. We would like public input on approaches and opportunities to streamline regulations and reduce administrative burdens on providers, suppliers, beneficiaries, and other stakeholders participating in the Medicare program. CMS has made available a Request for Information (RFI) at: *https://www.cms.gov/medicare-regulatory-relief-rfi.* Please submit all comments in response to this request for information through the provided weblink.

Availability of Certain Tables Exclusively Through the Internet on the CMS Website

As discussed in the FY 2014 SNF PPS final rule (78 FR 47936), tables setting forth the Wage Index for Urban Areas Based on CBSA Labor Market Areas and the Wage Index Based on CBSA Labor Market Areas for Rural Areas are no longer published in the **Federal Register**. Instead, these tables are available exclusively through the internet on the CMS website. The wage index tables for this proposed rule can be accessed on the SNF PPS Wage Index home page, at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/WageIndex.html.*

Readers who experience any problems accessing any of these online SNF PPS wage index tables should contact Patricia Taft at (410) 786–4561.

F. E.O. 14192, ''Unleashing Prosperity Through Deregulation''

I. Executive Summary

A. Purpose

This proposed rule would update the SNF prospective payment rates for fiscal year (FY) 2026, as required under section 1888(e)(4)(E) of the Social Security Act (the Act). It also responds to section 1888(e)(4)(H) of the Act, which requires the Secretary to provide for publication of certain specified information relating to the payment update (see section II.C. of this proposed rule) in the **Federal Register** before the August 1 that precedes the start of each FY. We are also proposing several technical revisions to the code mappings used to classify patients under the Patient Driven Payment Model (PDPM) to improve payment and coding accuracy. We are proposing updates to the requirements for the SNF QRP by removing four standardized patient assessment data elements under the SDOH category and proposing to amend our reconsideration policy and process. We are also including three Requests for Information (RFIs) for the SNF QRP, specifically on future measure concepts for the SNF QRP, potential revisions to the data submission deadlines for assessment data collected for the SNF QRP, and advancing digital quality measurement in SNFs. This proposed rule also proposes updates to the Skilled Nursing Facility Value-Based Purchasing (SNF VBP) Program, including removing the Health Equity Adjustment, estimating performance standards, applying the Program's scoring methodology to the Skilled Nursing Facility Within-Stay Potentially Preventable Readmission (SNF WS PPR) measure, adopting a new reconsideration process that will allow SNFs to appeal CMS's decisions on review and correction requests, and technical updates to the SNF VBP Program's regulation text.

B. Summary of Major Provisions

In accordance with sections 1888(e)(4)(E)(ii)(IV) and (e)(5) of the Act, this proposed rule would update the annual rates that we published in the SNF PPS final rule for FY 2025 (89 FR 64048). In addition, this proposed rule includes a proposed forecast error adjustment for FY 2026. We are also proposing several technical revisions to the code mappings used to classify patients under the PDPM to improve payment and coding accuracy.

For the SNF VBP Program, we are providing estimated performance standards for the FY 2028 and FY 2029 program years to comply with the program's statutory notice deadline. Second, we are proposing to apply the previously finalized scoring methodology codified at § 413.338(e)(1) and § 413.338(e)(3) of our regulations to the Skilled Nursing Facility Within-Stay Potentially Preventable Readmission (SNF WS PPR) measure beginning with the FY 2028 program year, which is the first year that measure will be used in the SNF VBP Program's measure set (88 FR 53280). Third, we are proposing to adopt a reconsideration process that will allow SNFs to seek reconsideration of a review and correction request if they are not satisfied with CMS's decision on that request, beginning with the FY 2027 program year. Lastly, we are proposing to remove the Health Equity Adjustment to simplify the methodology and provide clearer incentives for SNFs as they seek to improve their quality of care for all residents.

Finally, we are proposing two updates for the SNF QRP. Beginning with residents admitted on October 1, 2025, for the FY 2027 SNF QRP, we are proposing to remove four standardized patient assessment data elements under the social determinants of health (SDOH) category. We are also proposing to amend and codify our reconsideration request policy and process. We are also including three Requests for Information (RFIs) for the SNF QRP on future measure concepts for the SNF QRP, potential revisions to the data submission deadlines for assessment data collected for the SNF QRP from 4.5 months after the end of each quarter to 45 days after the end of each quarter, and advancing digital quality measurement in SNFs.

C. Summary of Cost and Benefits

TABLE 1—ESTIMATED COST AND BENEFITS

Proposals	Estimated total transfers/costs
FY 2026 SNF PPS payment rate update	The overall economic impact of this proposed rule is an estimated increase of $997 million in aggregate payments to SNFs during FY 2026.
FY 2027 SNF QRP changes due to the proposed Removal of Four Standardized Patient Assessment Data Elements.	The overall economic impact of this proposal to SNFs is an estimated decrease of $2,228,563.12 annually to SNFs beginning with the FY 2027 SNF QRP.
FY 2027 SNF QRP changes due to the proposed Amendment of the Reconsideration Request Policy and Process for those SNF's requesting an extension to file a request for reconsideration.	The overall economic impact of this proposal to those SNFs requesting an extension to file a request for reconsideration is an estimated increase of $2,391.90 annually.
FY 2026 SNF VBP changes	The overall economic impact of the SNF VBP Program is an estimated reduction of $208.36 million in aggregate payments to SNFs during FY 2026.
FY 2027 SNF VBP changes	The overall economic impact of the SNF VBP Program is an estimated reduction of $207.99 million in aggregate payments to SNFs during FY 2027.

II. Background on SNF PPS

A. Statutory Basis and Scope

As amended by section 4432 of the Balanced Budget Act of 1997 (BBA 1997) (Pub. L. 105–33, enacted August 5, 1997), section 1888(e) of the Act provides for the implementation of a PPS for SNFs. This methodology uses prospective, case-mix adjusted per diem payment rates applicable to all covered SNF services defined in section 1888(e)(2)(A) of the Act. The SNF PPS is effective for cost reporting periods beginning on or after July 1, 1998, and covers virtually all costs of furnishing covered SNF services (routine, ancillary, and capital-related costs) other than costs associated with approved educational activities and bad debts. Under section 1888(e)(2)(A)(i) of the Act, covered SNF services include post-hospital extended care services for which benefits are provided under Part A, as well as those items and services (other than a small number of excluded services, such as physicians' services) for which payment may otherwise be made under Part B and which are furnished to Medicare beneficiaries who are residents in a SNF during a covered Part A stay. A comprehensive discussion of these provisions appears in the May 12, 1998, interim final rule (63 FR 26252). In addition, a detailed discussion of the legislative history of the SNF PPS is available online at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/Downloads/Legislative_History_2018-10-01.pdf.*

Section 215(a) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 11393, enacted April 1, 2014) added section 1888(g) to the Act, requiring the Secretary to specify an all cause all condition hospital readmission measure and an all condition risk adjusted potentially preventable hospital readmission measure for the SNF setting. Additionally, section 215(b) of PAMA added section 1888(h) to the Act requiring the Secretary to implement a VBP program for SNFs. In 2014, section 2(c)(4) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014 (Pub. L. 113–185, enacted October 6, 2014) amended section 1888(e)(6) of the Act, which requires the Secretary to implement a QRP for SNFs under which SNFs report data on measures and resident assessment data. Finally, section 111 of the Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116–260, enacted December 27, 2020) amended section 1888(h) of the Act, authorizing the Secretary to apply up to nine additional measures to the VBP program for SNFs.

B. Initial Transition for the SNF PPS

Under sections 1888(e)(1)(A) and (e)(11) of the Act, the SNF PPS included an initial, three phase transition that blended a facility-specific rate (reflecting the individual facility's historical cost experience) with the Federal case mix adjusted rate. The transition extended through the facility's first 3 cost reporting periods under the PPS, up to and including the one that began in FY 2001. Thus, the SNF PPS is no longer operating under the transition, as all facilities have been paid at the full Federal rate effective with cost reporting periods beginning in FY 2002. As we now base payments for SNFs entirely on the adjusted Federal per diem rates, we no longer include adjustment factors under the transition related to facility-specific rates for the upcoming FY.

C. Required Annual Rate Updates

Section 1888(e)(4)(E) of the Act requires the SNF PPS payment rates to be updated annually. The most recent annual update occurred in a final rule that set forth updates to the SNF PPS payment rates for FY 2025 (89 FR 64048,), as amended by the subsequent correction notice (89 FR 80132).

Section 1888(e)(4)(H) of the Act specifies that we provide for publication annually in the **Federal Register** the following:

- The unadjusted Federal per diem rates to be applied to days of covered SNF services furnished during the upcoming FY.
- The case mix classification system to be applied for these services during the upcoming FY.
- The factors to be applied in making the area wage adjustment for these services.

Along with other revisions discussed later in this preamble, this proposed rule will set out the required annual updates to the per diem payment rates for SNFs for FY 2026.

III. Proposed SNF PPS Rate Setting Methodology and FY 2026 Payment Update

A. Federal Base Rates

Under section 1888(e)(4) of the Act, the SNF PPS uses per diem Federal payment rates based on mean SNF costs in a base year (FY 1995) updated for inflation to the first effective period of the PPS. We developed the Federal payment rates using allowable costs from hospital-based and freestanding SNF cost reports for reporting periods beginning in FY 1995. The data used in developing the Federal rates also incorporated a Part B add-on, which is an estimate of the amounts that, prior to the SNF PPS, would be payable under Part B for covered SNF services furnished to individuals during the course of a covered Part A stay in a SNF.

In developing the rates for the initial period, we updated costs to the first effective year of the PPS (the 15-month period beginning July 1, 1998) using the SNF market basket, and then standardized for geographic variations in wages and for the costs of facility differences in case mix. In compiling the database used to compute the Federal payment rates, we excluded those providers that received new provider exemptions from the routine cost limits, as well as costs related to payments for exceptions to the routine cost limits. Using the formula that the BBA 1997 prescribed, we set the Federal rates at a level equal to the weighted mean of freestanding costs plus 50 percent of the difference between the freestanding mean and weighted mean of all SNF costs (hospital-based and freestanding) combined. We computed and applied separately the payment rates for facilities located in urban and rural areas and adjusted the portion of the Federal rate attributable to wage-related costs by a wage index to reflect geographic variations in wages.

B. SNF Market Basket Update

1. SNF Market Basket

Section 1888(e)(5)(A) of the Act requires us to establish a SNF market basket that reflects changes over time in the prices of an appropriate mix of goods and services included in covered SNF services. Accordingly, we have developed a SNF market basket that encompasses the most commonly used cost categories for SNF routine services, ancillary services, and capital-related expenses. In the SNF PPS final rule for FY 2025 (89 FR 64065 through 64082), we rebased and revised the SNF market basket, which included updating the base year from 2018 to 2022.

The SNF market basket is used to compute the market basket percentage increase that is used to update the SNF Federal rates on an annual basis, as required by section 1888(e)(4)(E)(ii)(IV) of the Act. This market basket percentage increase is adjusted by a forecast error adjustment, if applicable, and then further adjusted by the application of a productivity adjustment as required by section 1888(e)(5)(B)(ii) of the Act and described in section III.B.4. of this proposed rule.

As outlined in this proposed rule, we propose a FY 2026 SNF market basket percentage increase of 3.0 percent based on IHS Global Inc.'s (IGI's) fourth-quarter 2024 forecast of the 2022-based SNF market basket (before application of the forecast error adjustment and productivity adjustment). We also propose that if more recent data subsequently become available (for example, a more recent estimate of the market basket, the productivity adjustment, and/or the forecast error adjustment), we would use such data, if appropriate, to determine the FY 2026 SNF market basket percentage increase, labor-related share relative importance, forecast error adjustment, or productivity adjustment in the SNF PPS final rule.

2. Market Basket Update for FY 2026

Section 1888(e)(5)(B) of the Act defines the SNF market basket percentage increase as the percentage change in the SNF market basket from the midpoint of the previous FY to the midpoint of the current FY. For the Federal rates outlined in this proposed rule, we use the percentage change in the SNF market basket to compute the update factor for FY 2026. This factor is based on the FY 2026 percentage increase in the 2022-based SNF market basket reflecting routine, ancillary, and capital-related expenses. Sections 1888(e)(4)(E)(ii)(IV) and (e)(5)(B)(i) of the Act require that the update factor used to establish the FY 2026 unadjusted Federal rates be at a level equal to the SNF market basket percentage increase. Accordingly, we determined the total growth from the average market basket level for the period of October 1, 2024 through September 30, 2025 to the average market basket level for the period of October 1, 2025 through September 30, 2026. This process yields a percentage increase in the 2022-based SNF market basket of 3.0 percent.

As further explained in section III.B.3. of this proposed rule, as applicable, we adjust the percentage increase by the forecast error adjustment from the most recently available FY for which there is final data and apply this adjustment whenever the difference between the forecasted and actual percentage increase in the market basket exceeds a 0.5 percentage point threshold in absolute terms. Additionally, section 1888(e)(5)(B)(ii) of the Act requires us to reduce the market basket percentage increase by the productivity adjustment (the 10-year moving average of changes in annual economy-wide private nonfarm business total factor productivity (TFP) for the period ending September 30, 2026), which is estimated to be 0.8 percentage point, as described in section III.B.4. of this proposed rule.

We also note that section 1888(e)(6)(A)(i) of the Act provides that, beginning with FY 2018, SNFs that fail to submit data, as applicable, in accordance with sections 1888(e)(6)(B)(i)(II) and (III) of the Act for a fiscal year will receive a 2.0 percentage point reduction to their market basket update for the fiscal year involved, after application of section 1888(e)(5)(B)(ii) of the Act (the productivity adjustment) and section 1888(e)(5)(B)(iii) of the Act (the market basket increase). In addition, section 1888(e)(6)(A)(ii) of the Act states that application of the 2.0 percentage point reduction (after application of section 1888(e)(5)(B)(ii) and (iii) of the Act) may result in the market basket percentage change being less than zero for a fiscal year and may result in payment rates for a fiscal year being less than such payment rates for the preceding fiscal year. Section 1888(e)(6)(A)(iii) of the Act further specifies that the 2.0 percentage point reduction is applied in a noncumulative manner, so that any reduction made under section 1888(e)(6)(A)(i) of the Act applies only to the fiscal year involved, and that the reduction cannot be taken into account in computing the payment amount for a subsequent fiscal year.

3. Forecast Error Adjustment

As discussed in the June 10, 2003 supplemental proposed rule (68 FR 34768) and finalized in the August 4, 2003 final rule (68 FR 46057 through 46059), § 413.337(d)(2) provides for an adjustment to account for SNF market basket forecast error. The initial adjustment for SNF market basket forecast error applied to the update of the FY 2003 rate for FY 2004 and took into account the cumulative forecast error for the period from FY 2000 through FY 2002, resulting in an increase of 3.26 percent to the FY 2004 update. Subsequent adjustments in succeeding FYs take into account the forecast error from the most recently available FY for which there is final data and apply the difference between the forecasted and actual change in the market basket when the difference exceeds a specified threshold. We originally used a 0.25 percentage point threshold for this purpose; however, for the reasons specified in the FY 2008 SNF PPS final rule (72 FR 43425), we adopted a 0.5 percentage point threshold effective for FY 2008 and subsequent FYs. As we stated in the final rule for FY 2004 that first issued the market basket forecast error adjustment (68 FR 46058), the adjustment will reflect both upward and downward adjustments, as appropriate.

For FY 2024 (the most recently available FY for which there is final data), the forecasted or estimated increase in the SNF market basket was 3.0 percent, and the actual increase for FY 2024 was 3.6 percent, resulting in the actual increase being 0.6 percentage point higher than the estimated increase. Accordingly, as the difference between the estimated and actual percentage increase in the market basket exceeds the 0.5 percentage point threshold, under the policy previously described (comparing the forecasted and actual market basket percentage increase), the FY 2026 market basket percentage increase of 3.0 percent is adjusted upward to account for the forecast error adjustment of 0.6 percentage point, resulting in a proposed FY 2026 SNF market basket percentage increase of 3.6 percent, which is then reduced by the proposed productivity adjustment of 0.8 percentage point, discussed in section III.B.4. of this proposed rule. This results in a proposed SNF market basket update for FY 2026 of 2.8 percent.

Table 2 shows the forecasted and actual market basket percentage increases for FY 2024.

TABLE 2—DIFFERENCE BETWEEN THE ACTUAL AND FORECASTED SNF MARKET BASKET PERCENTAGE INCREASES FOR FY 2024

Index	Forecasted FY 2024 percentage increase *	Actual FY 2024 percentage increase **	FY 2024 difference
SNF	3.0	3.6	0.6

* Published in **Federal Register**; based on second quarter 2023 IHS Global Inc. forecast (2018-based SNF market basket).
** Based on the fourth quarter 2024 IHS Global Inc. forecast (2018-based SNF market basket), with historical data through third quarter 2024.

4. Productivity Adjustment

Section 1888(e)(5)(B)(ii) of the Act, as added by section 3401(b) of the Patient Protection and Affordable Care Act (Affordable Care Act) (Pub. L. 111–148, enacted March 23, 2010), requires that, in FY 2012 and in subsequent FYs, the market basket percentage under the SNF payment system (as described in section 1888(e)(5)(B)(i) of the Act) is to be reduced annually by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi)(II) of the Act, in turn, defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable FY, year, cost-reporting period, or other annual period).

The U.S. Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measure of productivity for the U.S. We note that previously the productivity measure referenced at section 1886(b)(3)(B)(xi)(II) of the Act was published by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021 release of productivity data, BLS replaced the term MFP with TFP. BLS noted that this is a change in terminology only and will not affect the data or methodology. As a result of the BLS name change, the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act is now published by BLS as private nonfarm business total factor productivity. We refer readers to the BLS website at *www.bls.gov* for the BLS historical published TFP data. A complete description of the TFP projection methodology is available on our website at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/MedicareProgramRatesStats/MarketBasketResearch.* In addition, in the FY 2022 SNF final rule (86 FR 42429) we noted that, effective with FY 2022 and forward, we changed the name of this adjustment to refer to it as the ''productivity adjustment,'' rather than the ''MFP adjustment.''

Per section 1888(e)(5)(A) of the Act, the Secretary shall establish a SNF market basket that reflects changes over time in the prices of an appropriate mix of goods and services included in covered SNF services. Section 1888(e)(5)(B)(ii) of the Act, added by section 3401(b) of the Affordable Care Act, requires that for FY 2012 and each subsequent FY, after determining the market basket percentage described in section 1888(e)(5)(B)(i) of the Act, the Secretary shall reduce such percentage increase by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1888(e)(5)(B)(ii) of the Act further states that the reduction of the market basket percentage by the productivity adjustment may result in the market basket percentage being less than zero for a FY and may result in payment rates under section 1888(e) of the Act being less than such payment rates for the preceding fiscal year. Thus, if the application of the productivity adjustment to the market basket percentage calculated under section 1888(e)(5)(B)(i) of the Act results in a productivity-adjusted market basket percentage that is less than zero, then the annual update to the unadjusted Federal per diem rates under section 1888(e)(4)(E)(ii) of the Act would be negative, and such rates would decrease relative to the prior FY.

Based on the data available for this FY 2026 SNF PPS proposed rule, the productivity adjustment (the 10-year moving average of changes in annual economy-wide private nonfarm business TFP for the period ending September 30, 2026) is projected to be 0.8 percentage point.

Consistent with section 1888(e)(5)(B)(i) of the Act and § 413.337(d)(2), and as outlined previously in section III.B.1. of this proposed rule, the market basket percentage increase for FY 2026 for the SNF PPS is based on IHS Global Inc.'s fourth quarter 2024 forecast of the SNF market basket percentage increase, which is estimated to be 3.0 percent. This market basket percentage increase is then increased by 0.6 percentage point, due to application of the forecast error adjustment outlined earlier in section III.B.3. of this proposed rule. Finally, as outlined earlier in this section, we are applying a proposed 0.8 percentage point productivity adjustment to the FY 2026 SNF market basket percentage increase. Therefore, the resulting proposed FY 2026 SNF market basket update is equal to 2.8 percent, which reflects a proposed market basket percentage increase of 3.0 percent, plus the proposed 0.6 percentage point forecast error adjustment, reduced by the proposed 0.8 percentage point productivity adjustment. Thus, we apply a net proposed SNF market basket update factor of 2.8 percent in our determination of the proposed FY 2026 SNF PPS unadjusted Federal per diem rates.

5. Unadjusted Federal Per Diem Rates for FY 2026

As discussed in the FY 2019 SNF PPS final rule (83 FR 39162), in FY 2020 we implemented a new case-mix classification system to classify SNF patients under the SNF PPS, the PDPM. As discussed in section V.B.1. of that final rule (83 FR 39189), under PDPM, the unadjusted Federal per diem rates are divided into six components, five of which are case-mix adjusted components (Physical Therapy (PT), Occupational Therapy (OT), Speech-Language Pathology (SLP), Nursing, and Non-Therapy Ancillaries (NTA)), and one of which is a non-case-mix component, as existed under the previous Resource Utilization Groups, Version IV (RUG–IV) model. We propose to use the SNF market basket update, adjusted as outlined previously in sections III.B.1. through III.B.4. of this proposed rule, to adjust each per diem component of the Federal rates forward to reflect the change in the average prices for FY 2026 from the average prices for FY 2025. We also proposed to further adjust the rates by a wage index budget neutrality factor, outlined in section III.D. of this proposed rule.

Further, in the past, we used the revised Office of Management and Budget (OMB) delineations adopted in the FY 2015 SNF PPS final rule (79 FR 45632, 45634), with updates as reflected in OMB Bulletin Nos. 15–01 and 17–01 to identify a facility's urban or rural status for the purpose of determining which set of rate tables apply to the facility. As discussed in the FY 2021 SNF PPS proposed and final rules, we adopted the revised OMB delineations identified in OMB Bulletin No. 18–04 (available at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf*) to identify a facility's urban or rural status effective beginning with FY 2021. As discussed in the FY 2025 SNF PPS proposed and final rules, we adopted the revised OMB delineations identified in OMB Bulletin No. 23–01 (available at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf*) to identify a facility's urban or rural status effective beginning with FY 2025.

Tables 3 and 4 reflect the proposed unadjusted Federal rates for FY 2026, prior to adjustment for case-mix.

TABLE 3—PROPOSED FY 2026 UNADJUSTED FEDERAL RATE PER DIEM—URBAN

Rate component	PT	OT	SLP	Nursing	NTA	Non-case-mix
Per Diem Amount	$75.42	$70.20	$28.16	$131.47	$99.19	$117.73

TABLE 4—PROPOSED FY 2026 UNADJUSTED FEDERAL RATE PER DIEM—RURAL

Rate component	PT	OT	SLP	Nursing	NTA	Non-case-mix
Per Diem Amount	$85.98	$78.96	$35.48	$125.61	94.76	$119.91

C. Case-Mix Adjustment

Under section 1888(e)(4)(G)(i) of the Act, the Federal rate also incorporates an adjustment to account for facility case-mix, using a classification system that accounts for the relative resource utilization of different patient types. The statute specifies that the adjustment is to reflect both a resident classification system that the Secretary establishes to account for the relative resource use of different patient types, as well as resident assessment data and other data that the Secretary considers appropriate. In the FY 2019 final rule (83 FR 39162, August 8, 2018), we finalized a new case-mix classification model, the PDPM, which took effect beginning October 1, 2019. The previous RUG–IV model classified most patients into a therapy payment group and primarily used the volume of therapy services provided to the patient as the basis for payment classification, thus creating an incentive for SNFs to furnish therapy regardless of the individual patient's unique characteristics, goals, or needs. PDPM eliminates this incentive and improves the overall accuracy and appropriateness of SNF payments by classifying patients into payment groups based on specific, data-driven patient characteristics, while simultaneously reducing the administrative burden on SNFs.

The PDPM uses clinical data from the MDS to assign case-mix classifiers to each patient that are then used to calculate a per diem payment under the SNF PPS, consistent with the provisions of section 1888(e)(4)(G)(i) of the Act. As outlined in section IV.A. of the proposed rule, the clinical orientation of the case-mix classification system supports the SNF PPS's use of an administrative presumption that considers a beneficiary's initial case-mix classification to assist in making certain SNF level of care determinations. Further, because the MDS is used as a basis for payment, as well as a clinical assessment, we have provided extensive training on proper coding and the timeframes for MDS completion in our Resident Assessment Instrument (RAI) Manual. As we have stated in prior rules, for an MDS to be considered valid for use in determining payment, the MDS assessment should be completed in compliance with the instructions in the RAI Manual in effect at the time the assessment is completed. For payment and quality monitoring purposes, the RAI Manual consists of both the Manual instructions and the interpretive guidance and policy clarifications posted on the appropriate MDS website at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/NursingHomeQualityInits/MDS30RAIManual.html.*

Under section 1888(e)(4)(H) of the Act, each update of the payment rates must include the case-mix classification methodology applicable for the upcoming FY. The FY 2026 payment rates set forth in this proposed rule reflect the use of the PDPM case-mix classification system from October 1, 2025, through September 30, 2026. The case-mix adjusted PDPM payment rates for FY 2026 are listed separately for urban and rural SNFs, in Tables 5 and 6 with corresponding case-mix values.

Given the differences between the previous RUG–IV model and PDPM in terms of patient classification and billing, it was important that the format of Tables 5 and 6 reflect these differences. More specifically, under both RUG–IV and PDPM, providers use a Health Insurance Prospective Payment System (HIPPS) code on a claim to bill for covered SNF services. Under RUG–IV, the HIPPS code included the three-character RUG–IV group into which the patient classified, as well as a two-character assessment indicator code that represented the assessment used to generate this code. Under PDPM, while providers still use a HIPPS code, the characters in that code represent different things. For example, the first character represents the PT and OT group into which the patient classifies. If the patient is classified into the PT and OT group ''TA'', then the first character in the patient's HIPPS code would be an A. Similarly, if the patient is classified into the SLP group ''SB'', then the second character in the patient's HIPPS code would be a B. The third character represents the Nursing group into which the patient classifies. The fourth character represents the NTA group into which the patient classifies. Finally, the fifth character represents the assessment used to generate the HIPPS code.

Tables A5 and A6 reflect the PDPM's structure. Accordingly, Column 1 of Tables A5 and A6 represents the character in the HIPPS code associated with a given PDPM component. Columns 2 and 3 provide the case-mix index and associated case-mix adjusted component rate, respectively, for the relevant PT group. Columns 4 and 5 provide the case-mix index and associated case-mix adjusted component rate, respectively, for the relevant OT group. Columns 6 and 7 provide the case-mix index and associated case-mix adjusted component rate, respectively, for the relevant SLP group. Column 8 provides the nursing case-mix group (CMG) that is connected with a given PDPM HIPPS character. For example, if the patient qualified for the nursing group CBC1, then the third character in the patient's HIPPS code would be a ''P.'' Columns 9 and 10 provide the case-mix index and associated case-mix adjusted component rate, respectively, for the relevant nursing group. Finally, columns 11 and 12 provide the case-mix index and associated case-mix adjusted component rate, respectively, for the relevant NTA group.

Tables 5 and 6 do not reflect adjustments which may be made to the SNF PPS rates as a result of the SNF VBP Program, outlined in section VII. of this proposed rule, or other adjustments, such as the variable per diem adjustment.

D. Wage Index Adjustment

Section 1888(e)(4)(G)(ii) of the Act requires that we adjust the Federal rates to account for differences in area wage levels, using a wage index that the Secretary determines appropriate. Since the inception of the SNF PPS, we have used hospital inpatient wage data in developing a wage index to be applied to SNFs. We propose to continue this practice for FY 2026, as we continue to believe that in the absence of SNF-specific wage data, using the hospital inpatient wage index data is appropriate and reasonable for the SNF PPS. As explained in the update notice for FY 2005 (69 FR 45786), the SNF PPS does not use the hospital area wage index's occupational mix adjustment, as this adjustment serves specifically to define the occupational categories more clearly in a hospital setting; moreover, the collection of the occupational wage data under the inpatient prospective payment system (IPPS) also excludes any wage data related to SNFs. Therefore, we believe that using the updated wage data exclusive of the occupational mix adjustment continues to be appropriate for SNF payments. As in previous years, we propose to continue to use the pre-reclassified IPPS hospital wage data, without applying the occupational mix, rural floor, or outmigration adjustment, as the basis for the SNF PPS wage index. For FY 2026, the updated wage data are for hospital cost reporting periods beginning on or after October 1, 2021 and before October 1, 2022 (FY 2022 cost report data).

We note that section 315 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554, enacted December 21, 2000) gave the Secretary the discretion to establish a geographic reclassification procedure

specific to SNFs, but only after collecting the data necessary to establish a SNF PPS wage index that is based on wage data from nursing homes. To date, this has proven to be unfeasible due to the volatility of existing SNF wage data and the significant amount of resources that would be required to improve the quality of the data. More specifically, auditing all SNF cost reports, similar to the process used to audit inpatient hospital cost reports for purposes of the IPPS wage index, would place a burden on providers in terms of recordkeeping and completion of the cost report worksheet. Adopting such an approach would require a significant commitment of resources by CMS and the Medicare Administrative Contractors (MACs), potentially far in excess of those required under the IPPS, given that there are nearly five times as many SNFs as there are inpatient hospitals. While we do not believe this undertaking is feasible at this time, we will continue to explore implementation of a spot audit process to improve SNF cost reports to ensure they are adequately accurate for cost development purposes, in such a manner as to permit us to establish a SNF-specific wage index in the future.

In addition, we propose to continue to use the same methodology discussed in the SNF PPS final rule for FY 2008 (72 FR 43423) to address those geographic areas in which there are no hospitals, and thus, no hospital wage index data on which to base the calculation of the FY 2026 SNF PPS wage index. For rural geographic areas that do not have hospitals and therefore lack hospital wage data on which to base an area wage adjustment, we will continue using the average wage index from all contiguous Core-Based Statistical Areas (CBSAs) as a reasonable proxy. For FY 2026, the only rural area without wage index data available is North Dakota. For urban areas without specific hospital wage index data, we will continue using the average wage indexes of all urban areas within the State to serve as a reasonable proxy for the wage index of that urban CBSA. For FY 2026, the only urban area without wage index data available is CBSA 25980, Hinesville-Fort Stewart, GA.

In the SNF PPS final rule for FY 2006 (70 FR 45026, August 4, 2005), we adopted the changes discussed in OMB Bulletin No. 03–04 (June 6, 2003), which announced revised definitions for MSAs and the creation of micropolitan statistical areas and combined statistical areas. In adopting the CBSA geographic designations, we provided for a 1-year transition in FY 2006 with a blended wage index for all providers. For FY 2006, the wage index for each provider consisted of a blend of 50 percent of the FY 2006 MSA-based wage index and 50 percent of the FY 2006 CBSA-based wage index (both using FY 2002 hospital data). We referred to the blended wage index as the FY 2006 SNF PPS transition wage index. As discussed in the SNF PPS final rule for FY 2006 (70 FR 45041), after the expiration of this 1-year transition on September 30, 2006, we used the full CBSA-based wage index values.

In the FY 2015 SNF PPS final rule (79 FR 45644 through 45646), we finalized changes to the SNF PPS wage index based on the newest OMB delineations, as described in OMB Bulletin No. 13–01, beginning in FY 2015, including a 1-year transition with a blended wage index for FY 2015. OMB Bulletin No. 13–01 established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas in the United States and Puerto Rico based on the 2010 Census and provided guidance on the use of the delineations of these statistical areas using standards published in the June 28, 2010 **Federal Register** (75 FR 37246 through 37252). Subsequently, on July 15, 2015, OMB issued OMB Bulletin No. 15–01, which provided minor updates to and superseded OMB Bulletin No. 13–01 that was issued on February 28, 2013. The attachment to OMB Bulletin No. 15–01 provided detailed information on the update to statistical areas since February 28, 2013. The updates provided in OMB Bulletin No. 15–01 were based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2012 and July 1, 2013 and were adopted under the SNF PPS in the FY 2017 SNF PPS final rule (81 FR 51983, August 5, 2016). In addition, on August 15, 2017, OMB issued Bulletin No. 17–01 which announced a new urban CBSA, Twin Falls, Idaho (CBSA 46300) which was adopted in the SNF PPS final rule for FY 2019 (83 FR 39173, August 8, 2018).

As discussed in the FY 2021 SNF PPS final rule (85 FR 47594), we adopted the revised OMB delineations identified in OMB Bulletin No. 18–04 (available at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf*) beginning October 1, 2020, including a 1-year transition for FY 2021 under which we applied a 5 percent cap on any decrease in a hospital's wage index compared to its wage index for the prior fiscal year (FY 2020). The updated OMB delineations more accurately reflect the contemporary urban and rural nature of areas across the country, and the use of such delineations allows us to determine more accurately the appropriate wage index and rate tables to apply under the SNF PPS.

In the FY 2023 SNF PPS final rule (87 FR 47521 through 47525), we finalized a policy to apply a permanent 5 percent cap on any decreases to a provider's wage index from its wage index in the prior year, regardless of the circumstances causing the decline. We amended the SNF PPS regulations at 42 CFR 413.337(b)(4)(ii) to reflect this permanent cap on wage index decreases. Additionally, we finalized a policy that a new SNF would be paid the wage index for the area in which it is geographically located for its first full or partial FY with no cap applied because a new SNF would not have a wage index in the prior FY. A full discussion of the adoption of this policy is found in the FY 2023 SNF PPS final rule.

As we previously stated in the FY 2008 SNF PPS proposed and final rules (72 FR 25538 through 25539, and 72 FR 43423), this and all subsequent SNF PPS rules and notices are considered to incorporate any updates and revisions set forth in the most recent OMB bulletin that applies to the hospital wage data used to determine the current SNF PPS wage index. OMB issued further revised CBSA delineations in OMB Bulletin No. 20–01, on March 6, 2020 (available on the web at *https://www.whitehouse.gov/wp-content/uploads/2020/03/Bulletin-20-01.pdf*). However, we determined that the changes in OMB Bulletin No. 20–01 do not impact the CBSA-based labor market area delineations adopted in FY 2021. Therefore, we did not propose to adopt the revised OMB delineations identified in OMB Bulletin No. 20–01 for FY 2022 through FY 2024.

On July 21, 2023, OMB issued OMB Bulletin No. 23–01 which updates and supersedes OMB Bulletin No. 20–01 based on the decennial census. OMB Bulletin No. 23–01 revised delineations for CBSAs which are made up of counties and equivalent entities (for example, boroughs, a city and borough, and a municipality in Alaska, planning regions in Connecticut, parishes in Louisiana, municipios in Puerto Rico, and independent cities in Maryland, Missouri, Nevada, and Virginia). As discussed in the FY 2025 SNF PPS final rule (89 FR 64059), we adopted the revised OMB delineations identified in OMB Bulletin No. 23–01 (available at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-*

23-01.pdf). OMB has not published further delineation revisions since OMB Bulletin No. 23–01. Therefore, for FY 2026, we propose to maintain the current CBSA delineations. The wage index applicable to FY 2026 is set forth in Table A and B, available on the CMS website at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/WageIndex.html.*

Once calculated, we will apply the wage index adjustment to the labor-related share of the Federal rate. Each year, we calculate a labor-related share, based on the relative importance of labor-related cost categories (that is, those cost categories that are labor-intensive and vary with the local labor market) in the input price index. In the SNF PPS final rule for FY 2025 (89 FR 64060), we finalized a proposal to revise the labor-related share to reflect the relative importance of the 2022-based SNF market basket cost weights for the following cost categories: Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services; and a proportion of Capital-Related expenses. The methodology for calculating the labor-related share beginning in FY 2025 is discussed in detail in the FY 2025 SNF PPS final rule (89 FR 64080 through 64081).

We calculate the labor-related relative importance from the SNF market basket, and it approximates the labor-related share of the total costs after taking into account historical and projected price changes between the base year and FY 2026. The price proxies that move the different cost categories in the market basket do not necessarily change at the same rate, and the relative importance captures these changes. Accordingly, the relative importance figure more closely reflects the cost share weights for FY 2026 than the base year weights from the SNF market basket. We calculate the labor-related relative importance for FY 2026 in four steps. First, we compute the FY 2026 price index level for the total market basket and each cost category of the market basket. Second, we calculate a ratio for each cost category by dividing the FY 2026 price index level for that cost category by the total market basket price index level. Third, we determine the FY 2026 relative importance for each cost category by multiplying this ratio by the base year (2022) weight. Finally, we add the FY 2026 relative importance for each of the labor-related cost categories (Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services; and a portion of Capital-Related expenses) to produce the proposed FY 2026 labor-related relative importance.

TABLE 7—LABOR-RELATED SHARE, FY 2025 AND FY 2026

	Relative importance, labor-related share, FY 2025 24:2 forecast [1]	Proposed relative importance, labor-related share, FY 2026 24:4 forecast [2]
Wages and Salaries	53.2	53.3
Employee Benefits	9.2	9.0
Professional Fees: Labor-Related	3.5	3.6
Administrative & Facilities Support Services	0.4	0.4
Installation, Maintenance & Repair Services	0.5	0.5
All Other: Labor-Related Services	2.0	2.0
Capital-Related (.391* Capital RI)	3.2	3.1
Total	72.0	71.9

[1] Published in the **Federal Register**; Based on the second quarter 2024 IHS Global Inc. forecast of the 2022-based SNF market basket.
[2] Based on the fourth quarter 2024 IHS Global Inc. forecast of the 2022-based SNF market basket. The relative importance of capital for FY 2026 is forecasted to be 8.0 percent.

To calculate the labor portion of the case-mix adjusted per diem rate, we will multiply the total case-mix adjusted per diem rate, which is the sum of all five case-mix adjusted components into which a patient classifies, and the non-case-mix component rate, by the FY 2026 labor-related share percentage provided in Table 7. The remaining portion of the rate will be the non-labor portion. Under the previous RUG–IV model, we included tables which provided the case-mix adjusted RUG–IV rates, by RUG–IV group, broken out by total rate, labor portion and non-labor portion, such as Table 9 of the FY 2019 SNF PPS final rule (83 FR 39175). However, as we discussed in the FY 2020 final rule (84 FR 38738), under PDPM, as the total rate is calculated as a combination of six different component rates, five of which are case-mix adjusted, and given the sheer volume of possible combinations of these five case-mix adjusted components, it is not feasible to provide tables similar to those that existed in the prior rulemaking.

Therefore, to aid interested parties in understanding the effect of the wage index on the calculation of the SNF per diem rate, we have included a hypothetical rate calculation in Table 9.

Section 1888(e)(4)(G)(ii) of the Act also requires that we apply this wage index in a manner that does not result in aggregate payments under the SNF PPS that are greater or less than would otherwise be made if the wage adjustment had not been made. For FY 2026 (Federal rates effective October 1, 2025), we apply an adjustment to fulfill the budget neutrality requirement. We meet this requirement by multiplying each of the components of the unadjusted Federal rates by a budget neutrality factor, equal to the ratio of the weighted average wage adjustment factor for FY 2025 to the weighted average wage adjustment factor for FY 2026. For this calculation, we will use the same FY 2024 claims utilization data for both the numerator and denominator of this ratio. We define the wage adjustment factor used in this calculation as the labor portion of the rate component multiplied by the wage index plus the non-labor portion of the rate component. The proposed budget neutrality factor for FY 2026 is 1.0016.

We are also proposing that if more recent data become available (for example, revised wage data and/or

updated claims data), we would use such data, if appropriate, to determine the wage index budget neutrality factor in the SNF PPS final rule.

E. SNF Value-Based Purchasing Program

Beginning with payment for services furnished on October 1, 2018, section 1888(h) of the Act requires the Secretary to reduce the adjusted Federal per diem rate determined under section 1888(e)(4)(G) of the Act otherwise applicable to a SNF for services furnished during a fiscal year by 2 percent, and to adjust the resulting rate for a SNF by the value-based incentive payment amount earned by the SNF based on the SNF's performance score for that fiscal year under the SNF VBP Program. To implement these requirements, we finalized in the FY 2019 SNF PPS final rule the addition of § 413.337(f) to our regulations (83 FR 39178).

Please see section VII. of this proposed rule for further discussion of the updates we are proposing for the SNF VBP Program.

F. Adjusted Rate Computation Example

Tables 8 through 10 provide examples generally illustrating payment calculations during FY 2026 under PDPM for a hypothetical 30-day SNF stay, involving the hypothetical SNF XYZ, located in Frederick, MD (Urban CBSA 23224), for a hypothetical patient who is classified into such groups that the patient's HIPPS code is NHNC1. Table 8 shows the adjustments made to the Federal per diem rates (prior to application of any adjustments under the SNF VBP Program as discussed) to compute the provider's case-mix adjusted per diem rate for FY 2026, based on the patient's PDPM classification, as well as how the variable per diem (VPD) adjustment factor affects calculation of the per diem rate for a given day of the stay. Table 9 shows the adjustments made to the case-mix adjusted per diem rate from Table 8 to account for the provider's wage index. The wage index used in this example is based on the FY 2026 SNF PPS wage index that appears in Table A available on the CMS website at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/WageIndex.html.* Finally, Table 10 provides the case-mix and wage index adjusted per-diem rate for this patient for each day of the 30-day stay, as well as the total payment for this stay. Table 10 also includes the VPD adjustment factors for each day of the patient's stay, to clarify why the patient's per diem rate changes for certain days of the stay. As illustrated in Table 10, SNF XYZ's total PPS payment for this particular patient's stay would equal $23,529.37.

TABLE 8—PDPM CASE-MIX ADJUSTED RATE COMPUTATION EXAMPLE

Per diem rate calculation				
Component	Component group	Component rate	VPD adjustment factor	VPD adj. rate

IV. Additional Aspects of the SNF PPS

A. SNF Level of Care—Administrative Presumption

The establishment of the SNF PPS did not change Medicare's fundamental requirements for SNF coverage. However, because the case-mix classification is based, in part, on the beneficiary's need for skilled nursing care and therapy, we have attempted, where possible, to coordinate claims review procedures with the existing resident assessment process and case-mix classification system outlined in section III.C. of the proposed rule. This approach includes an administrative presumption that utilizes a beneficiary's correct assignment, at the outset of the SNF stay, of one of the case-mix classifiers designated for this purpose to assist in making certain SNF level of care determinations.

In accordance with § 413.345, we include in each update of the Federal payment rates in the **Federal Register** a discussion of the resident classification system that provides the basis for case-mix adjustment. We also designate those specific classifiers under the case-mix classification system that represent the required SNF level of care, as provided in 42 CFR 409.30. This designation reflects an administrative presumption that those beneficiaries who are correctly assigned one of the designated case-mix classifiers on the initial Medicare assessment are automatically classified as meeting the SNF level of care definition up to and including the assessment reference date (ARD) for that assessment.

A beneficiary who does not qualify for the presumption is not automatically classified as either meeting or not meeting the level of care definition, but instead receives an individual determination on this point using the existing administrative criteria. This presumption recognizes the strong likelihood that those beneficiaries who are correctly assigned one of the designated case-mix classifiers during the immediate post-hospital period would require a covered level of care, which would be less likely for other beneficiaries.

In the July 30, 1999 final rule (64 FR 41670), we indicated that we would announce any changes to the guidelines for Medicare level of care determinations related to modifications in the case-mix classification structure. The FY 2018 final rule (82 FR 36544) further specified that we would henceforth disseminate the standard description of the administrative presumption's designated groups via the SNF PPS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/index.html* (where such designations appear in the paragraph entitled ''Case Mix Adjustment'') and would publish such designations in rulemaking only to the extent that we actually intend to propose changes in them. Under that approach, the set of case-mix classifiers designated for this purpose under PDPM was finalized in the FY 2019 SNF PPS final rule (83 FR 39253) and is posted on the SNF PPS website (*https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/index.html*), in the paragraph entitled ''Case Mix Adjustment.''

However, we note that this administrative presumption policy does not supersede the SNF's responsibility to ensure that its decisions relating to level of care are appropriate and timely, including a review to confirm that any services prompting the assignment of one of the designated case-mix classifiers (which, in turn, serves to trigger the administrative presumption) are themselves medically necessary. As we explained in the FY 2000 SNF PPS final rule (64 FR 41667), the administrative presumption is itself rebuttable in those individual cases in which the services actually received by the resident do not meet the basic statutory criterion of being reasonable and necessary to diagnose or treat a beneficiary's condition (according to section 1862(a)(1) of the Act). Accordingly, the presumption would not apply, for example, in those situations where the sole classifier that triggers the presumption is itself assigned through the receipt of services that are subsequently determined to be not reasonable and necessary. Moreover, we want to stress the importance of careful monitoring for changes in each patient's condition to determine the continuing need for Part A SNF benefits after the ARD of the initial Medicare assessment.

B. Consolidated Billing

Sections 1842(b)(6)(E) and 1862(a)(18) of the Act (as added by section 4432(b) of the BBA 1997) require a SNF to submit consolidated Medicare bills to its Medicare Administrative Contractor

(MAC) for almost all of the services that its residents receive during the course of a covered Part A stay. In addition, section 1862(a)(18) of the Act places the responsibility with the SNF for billing Medicare for physical therapy, occupational therapy, and speech-language pathology services that the resident receives during a noncovered stay. Section 1888(e)(2)(A) of the Act excludes a small list of services from the consolidated billing provision (primarily those services furnished by physicians and certain other types of practitioners), which remain separately billable under Part B when furnished to a SNF's Part A resident. These excluded service categories are discussed in greater detail in section V.B.2. of the May 12, 1998 interim final rule (63 FR 26295 through 26297). Effective with services furnished on or after January 1, 2024, section 4121(a)(4) of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117–328, enacted December 29, 2022) added marriage and family therapists and mental health counselors to the list of practitioners at section 1888(e)(2)(A)(ii) of the Act whose services are excluded from the consolidated billing provision.

Section 103 of the Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA 1999) (Pub. L. 106–113, enacted November 29, 1999) amended section 1888(e)(2)(A)(iii) of the Act by further excluding a number of individual high-cost, low probability services, identified by HCPCS codes, within several broader categories (chemotherapy items, chemotherapy administration services, radioisotope services, and customized prosthetic devices) that otherwise remained subject to the provision. We discuss this BBRA 1999 amendment in greater detail in the SNF PPS proposed and final rules for FY 2001 (65 FR 19231 through 19232, April 10, 2000, and 65 FR 46790 through 46795, July 31, 2000), as well as in Program Memorandum AB–00–18 (Change Request #1070), issued March 2000, which is available online at *www.cms.gov/transmittals/downloads/ab001860.pdf.*

As explained in the FY 2001 proposed rule (65 FR 19232), the amendments enacted in section 103 of the BBRA 1999 not only identified for exclusion from this provision a number of particular service codes within four specified categories (that is, chemotherapy items, chemotherapy administration services, radioisotope services, and customized prosthetic devices), but also gave the Secretary the authority to designate additional, individual services for exclusion within each of these four specified service categories. In the proposed rule for FY 2001, we also noted that the BBRA 1999 Conference report (H.R. Conf. Rep. No. 106–479 at 854 (1999)) characterizes the individual services that this legislation targets for exclusion as high-cost, low probability events that could have devastating financial impacts because their costs far exceed the payment SNFs receive under the PPS. According to the conferees, section 103(a) of the BBRA 1999 is an attempt to exclude from the PPS certain services and costly items that are provided infrequently in SNFs. By contrast, the amendments enacted in section 103 of the BBRA 1999 do not designate for exclusion any of the remaining services within those four categories (thus, leaving all of those services subject to SNF consolidated billing), because they are relatively inexpensive and are furnished routinely in SNFs.

Effective with items and services furnished on or after October 1, 2021, section 134 in Division CC of the CAA, 2021 established an additional fifth category of excluded codes in section 1888(e)(2)(A)(iii)(VI) of the Act, for certain blood clotting factors for the treatment of patients with hemophilia and other bleeding disorders along with items and services related to the furnishing of such factors under section 1842(o)(5)(C) of the Act. Like the provisions enacted in the BBRA 1999, section 1888(e)(2)(A)(iii)(VI) of the Act gives the Secretary the authority to designate additional items and services for exclusion within the category of items and services related to blood clotting factors, as described in that section.

A detailed discussion of the legislative history of the consolidated billing provision is available on the SNF PPS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/Downloads/Legislative_History_2018-10-01.pdf.*

As we further explained in the final rule for FY 2001 (65 FR 46790), and as is consistent with our longstanding policy, any additional service codes that we might designate for exclusion under our discretionary authority must meet the same statutory criteria used in identifying the original codes excluded from consolidated billing under section 103(a) of the BBRA 1999: they must fall within one of the five service categories specified in the BBRA 1999 and CAA, 2021; and they also must meet the same standards of high cost and low probability in the SNF setting, as discussed in the BBRA 1999 Conference report. Accordingly, we characterized this statutory authority to identify additional service codes for exclusion as essentially affording the flexibility to revise the list of excluded codes in response to changes of major significance that may occur over time (for example, the development of new medical technologies or other advances in the state of medical practice) (65 FR 46791).

In this proposed rule, we specifically solicit public comments identifying HCPCS codes in any of these five service categories (chemotherapy items, chemotherapy administration services, radioisotope services, customized prosthetic devices, and blood clotting factors) representing recent medical advances that might meet our criteria for exclusion from SNF consolidated billing. We may consider excluding a particular service if it meets our criteria for exclusion as specified previously in this section of the preamble. We request that commenters identify in their comments the specific HCPCS code that is associated with the service in question, as well as their rationale for requesting that the identified HCPCS code(s) be excluded.

We note that the original BBRA amendment and the CAA, 2021 identified a set of excluded items and services by means of specifying individual HCPCS codes within the designated categories that were in effect as of a particular date (in the case of the BBRA 1999, July 1, 1999, and in the case of the CAA, 2021, July 1, 2020), as subsequently modified by the Secretary. In addition, as noted in this section of the preamble, the statute (sections 1888(e)(2)(A)(iii)(II) through (VI) of the Act) gives the Secretary authority to identify additional items and services for exclusion within the five specified categories of items and services described in the statute, which are also designated by HCPCS code. Designating the excluded services in this manner makes it possible for us to utilize program issuances as the vehicle for accomplishing routine updates to the excluded codes to reflect any minor revisions that might subsequently occur in the coding system itself, such as the assignment of a different code number to a service already designated as excluded, or the creation of a new code for a type of service that falls within one of the established exclusion categories and meets our criteria for exclusion.

Accordingly, if we identify through the current rulemaking cycle any new services that meet the criteria for exclusion from SNF consolidated billing, we will identify these additional excluded services by means of the HCPCS codes that are in effect as of a specific date (in this case, October 1, 2024). By making any new exclusions in

this manner, we can similarly accomplish routine future updates of these additional codes through the issuance of program instructions. The latest list of excluded codes can be found on the SNF Consolidated Billing website at *https://www.cms.gov/Medicare/Billing/SNFConsolidatedBilling.*

C. Payment for SNF-Level Swing-Bed Services

Section 1883 of the Act permits certain small, rural hospitals to enter into a Medicare swing-bed agreement, under which the hospital can use its beds to provide either acute- or SNF-level care, as needed. For critical access hospitals (CAHs), Part A pays on a reasonable cost basis for SNF-level services furnished under a swing-bed agreement. However, in accordance with section 1888(e)(7) of the Act, SNF-level services furnished by non-CAH rural hospitals are paid under the SNF PPS, effective with cost reporting periods beginning on or after July 1, 2002. As explained in the FY 2002 final rule (66 FR 39562), this effective date is consistent with the statutory provision to integrate swing-bed rural hospitals into the SNF PPS by the end of the transition period, June 30, 2002.

Accordingly, all non-CAH swing-bed rural hospitals have now come under the SNF PPS. Therefore, all rates and wage indexes outlined in earlier sections of this proposed rule for the SNF PPS also apply to all non-CAH swing-bed rural hospitals. As finalized in the FY 2010 SNF PPS final rule (74 FR 40356 through 40357), effective October 1, 2010, non-CAH swing-bed rural hospitals are required to complete an MDS 3.0 swing-bed assessment which is limited to the required demographic, payment, and quality items. As discussed in the FY 2019 SNF PPS final rule (83 FR 39235), revisions were made to the swing bed assessment to support implementation of PDPM, effective October 1, 2019. A discussion of the assessment schedule and the MDS effective beginning FY 2020 appears in the FY 2019 SNF PPS final rule (83 FR 39229 through 39237). The latest changes in the MDS for swing-bed rural hospitals appear on the SNF PPS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/index.html.*

V. Other SNF PPS Issues

Technical Updates to the PDPM ICD–10 Mappings

1. Background

In the FY 2019 SNF PPS final rule (83 FR 39162), we finalized the implementation of the Patient Driven Payment Model (PDPM), effective October 1, 2019. The PDPM utilizes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM, hereafter referred to as ICD–10) codes in several ways, including using the patient's primary diagnosis to assign patients to clinical categories under several PDPM components, specifically the PT, OT, SLP, and NTA components. While other ICD–10 codes may be reported as secondary diagnoses and designated as additional comorbidities, the PDPM does not use secondary diagnoses to assign patients to clinical categories. The PDPM ICD–10 code to clinical category mapping, ICD–10 code to SLP comorbidity mapping, and ICD–10 code to NTA comorbidity mapping (hereafter collectively referred to as the PDPM ICD–10 code mappings) are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/PDPM.*

In the FY 2020 SNF PPS final rule (84 FR 38750), we outlined the process by which we maintain and update the PDPM ICD–10 code mappings, as well as the SNF Grouper software and other such products related to patient classification and billing, to ensure that they reflect the most up to date codes. Beginning with the updates for FY 2020, we apply non-substantive changes to the PDPM ICD–10 code mappings through a sub-regulatory process consisting of posting the updated PDPM ICD–10 code mappings on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/SNFPPS/PDPM.* Such non-substantive changes are limited to those specific changes that are necessary to maintain consistency with the most current PDPM ICD–10 code mappings.

On the other hand, substantive changes that go beyond the intention of maintaining consistency with the most current PDPM ICD–10 code mappings, such as changes to the assignment of a code to a clinical category or comorbidity list, are made via notice and comment rulemaking, because they are changes that affect policy. We noted in the proposed rule that in the case of any diagnoses that are either currently mapped to ''Return to Provider'' clinical category or that we are finalizing to classify into this category, this is not intended to reflect any judgment on the importance of recognizing and treating these conditions. Rather, we believe that there are more specific or appropriate diagnoses that would better serve as the primary diagnosis for a Part-A covered SNF stay.

2. Proposed Clinical Category Changes for New ICD–10 Codes for FY 2026

Each year, we review the clinical categories assigned to new ICD–10 diagnosis codes and propose adding, removing, or changing the assignment to another clinical category if warranted. This year, we are proposing to change the clinical category assignment for the following thirty-four new ICD–10 codes that were effective October 1, 2024.

a. Type 1 Diabetes Mellitus

Type 1 diabetes mellitus is an autoimmune condition characterized by insulin deficiency, leading to chronic hyperglycemia. Codes E10.A0 (*Type 1 diabetes mellitus, presymptomatic, unspecified*), E10.A1 (*Type 1 diabetes mellitus, presymptomatic, Stage 1*), E10.A2 (*Type 1 diabetes mellitus, presymptomatic, Stage 2*), and E10.9 (*Type 1 diabetes mellitus without complications*) were initially assigned to the ''Medical Management'' clinical category. However, these codes refer to diagnoses in which a patient's Type 1 diabetes is considered presymptomatic, which means a patient has not developed symptoms, or a patient that is not experiencing any complications associated with having diabetes. In both cases, given the patient has not exhibited symptoms or experienced complications from the condition, testing and treatments for these diagnoses would typically occur on an outpatient basis and not require an inpatient SNF stay in and of themselves. Therefore, we do not believe these codes would serve appropriately as the primary diagnoses for a Part A-covered SNF stay. As a result, we propose to change the mapping of these codes from ''Medical Management'' to the clinical category of ''Return to Provider''.

b. Hypoglycemia

Hypoglycemia, defined as blood glucose levels below 70 mg/dL, is a common complication in individuals with diabetes mellitus or other metabolic disorders. Codes E16.A1 (*Hypoglycemia level 1*), E16.A2 (*Hypoglycemia level 2*), E16.A3 (*Hypoglycemia level 3*), E16.0 (*Drug-induced hypoglycemia without coma*), E16.1 (*Other hypoglycemia*), E16.2 (*Hypoglycemia, unspecified*), E16.3 (*Increased secretion of glucagon*), E16.4 (*Increased secretion of gastrin*), E16.8 (*Other specified disorders of pancreatic internal secretion*), and E16.9 (*Disorder of pancreatic internal secretion, unspecified*) were initially assigned to the ''Medical Management'' clinical category. However, these diagnoses are typically treated using interventions

such as, but not limited to, blood sugar monitoring education, dietary counseling, physical exercise education and training, pharmacological interventions, etc. Given these interventions, treatment for these diagnoses would typically occur on an outpatient basis and not require an inpatient SNF stay in and of themselves. Therefore, we do not believe these codes would serve appropriately as the primary diagnoses for a Part A-covered SNF stay. As a result, we propose to change the mapping of these codes from ''Medical Management'' to the clinical category of ''Return to Provider''.

c. Obesity

Obesity is a chronic, relapsing, multifactorial disease characterized by excessive adipose tissue accumulation that increases the risk of metabolic, cardiovascular, and musculoskeletal disorders. Codes E66.811 (*Obesity, class 1*), E66.812 (*Obesity, class 2*), E66.89 (*Other obesity not elsewhere classified*), E66.01 (*Morbid (severe) obesity due to excess calories*), E66.09 (*Other obesity due to excess calories*), E66.1 (*Drug-induced obesity*), E66.3 (*Overweight*), and E66.9 (*Obesity, unspecified*) were initially assigned to the ''Medical Management'' clinical category. However, these diagnoses are typically treated using interventions such as, but not limited to, lifestyle interventions, psychosocial therapy and support, weight management programs, pharmacological interventions, etc. Given these interventions, treatment for these diagnoses would typically occur on an outpatient basis and not require an inpatient SNF stay in and of themselves. Therefore, we do not believe these codes would serve appropriately as the primary diagnoses for a Part A-covered SNF stay. As a result, we propose to change the mapping of these codes from ''Medical Management'' to the clinical category of ''Return to Provider''.

d. Anorexia Nervosa, Restricting Type

Anorexia Nervosa (AN) is a psychiatric disorder characterized by severe food restriction, intense fear of weight gain, and distorted body image. Patients with AN, restricting type may present with significant weight loss, malnutrition, and/or medical complications such as bradycardia, osteoporosis, electrolyte imbalances, and/or organ dysfunction. Code F50.010 (*Anorexia nervosa, restricting type, mild*) was initially assigned to the ''Medical Management'' clinical category. However, this diagnosis is typically treated using interventions such as, but not limited to, psychosocial therapy and support, nutritional counseling, pharmacological interventions, etc. Given these interventions, treatment for this diagnosis would typically occur on an outpatient basis and not require an inpatient SNF stay in and of itself. Therefore, we do not believe this code would serve appropriately as the primary diagnosis for a Part A-covered SNF stay. As a result, we propose to change the mapping of this code from ''Medical Management'' to the clinical category of ''Return to Provider''.

e. Anorexia Nervosa, Binge Eating/Purging Type

AN is a psychiatric disorder characterized by severe food restriction, intense fear of weight gain, and distorted body image. Individuals with AN binge eating/purging type engage in recurrent binge eating and/or purging behaviors. Codes F50.020 (*Anorexia nervosa, binge eating/purging type, mild*) and F50.021 (*Anorexia nervosa, binge eating/purging type, moderate*) were initially assigned to the ''Medical Management'' clinical category. However, these diagnoses are typically treated using interventions such as, but not limited to, psychosocial therapy and support, nutritional counseling, pharmacological interventions, etc. Given these interventions, treatment for these diagnoses would typically occur on an outpatient basis and not require an inpatient SNF stay in and of themselves. Therefore, we do not believe these codes would serve appropriately as the primary diagnoses for a Part A-covered SNF stay. As a result, we propose to change the mapping of these codes from ''Medical Management'' to the clinical category of ''Return to Provider''.

f. Bulimia Nervosa

Bulimia nervosa is an eating disorder characterized by recurrent episodes of binge eating, consuming large amounts of food within a short period, followed by self-induced vomiting, laxative misuse, fasting, or excessive exercise. Codes F50.21 (*Bulimia nervosa, mild*) and F50.22 (*Bulimia nervosa, moderate*) were initially assigned to the ''Medical Management'' clinical category. However, these diagnoses are typically treated using interventions such as, but not limited to, Cognitive-Behavioral Therapy (CBT), psychotherapy, nutritional counseling, pharmacological interventions, etc. Given these interventions, treatment for these diagnoses would typically occur on an outpatient basis and not require an inpatient SNF stay in and of themselves. Therefore, we do not believe these codes would serve appropriately as the primary diagnoses for a Part A-covered SNF stay. As a result, we propose to change the mapping of these codes from ''Medical Management'' to the clinical category of ''Return to Provider''.

g. Binge Eating Disorder

Binge eating disorder is characterized by recurrent episodes of binge eating without compensatory behaviors such as purging, fasting, excessive exercise, etc. Codes F50.810 (*Binge eating disorder, mild*) and F50.81 (*Binge eating disorder, moderate*) were initially assigned to the ''Medical Management'' clinical category. However, these diagnoses are typically treated using interventions such as, but not limited to, CBT, psychotherapy, nutritional counseling, pharmacological interventions, etc. Given these interventions, treatment for these diagnoses would typically occur on an outpatient basis and not require an inpatient SNF stay in and of themselves. Therefore, we do not believe these codes would serve appropriately as the primary diagnoses for a Part A-covered SNF stay. As a result, we propose to change the mapping of these codes from ''Medical Management'' to the clinical category of ''Return to Provider''.

h. Pica and Rumination Disorder

Pica is an eating disorder characterized by the persistent consumption of non-nutritive, non-food substances for at least one month. Rumination is an eating disorder where individuals repeatedly regurgitate food, rechew, re-swallow, or spit out, for at least one month. Codes F50.83 (*Pica in adults*), F50.84 (*Rumination disorder in adults*), F98.21 (*Rumination disorder of infancy and childhood*), and F98.3 (*Pica of infancy and childhood*) were initially assigned to the ''Medical Management'' clinical category. However, these diagnoses are typically treated using interventions such as, but not limited to, behavioral therapy, nutritional counseling, environmental modifications, pharmacological interventions, etc. Given these interventions, treatment for these diagnoses would typically occur on an outpatient basis and not require an inpatient SNF stay in and of themselves. Therefore, we do not believe these codes would serve appropriately as the primary diagnoses for a Part A-covered SNF stay. As a result, we propose to change the mapping of these codes from ''Medical Management'' to the clinical category of ''Return to Provider''.

i. Serotonin Syndrome

Serotonin syndrome is a potentially life-threatening condition caused by excess serotonin in the central nervous system, typically due to drug interactions or the overdose of serotonergic medications. Code G90.81 (*Serotonin syndrome*) was initially assigned to the ''Acute Neurologic'' clinical category. However, this diagnosis may require testing and interventions, such as, but not limited to, identifying and discontinuing causative agents, symptom management and support, pharmacological management, education, and up to and including emergency care and/or ICU-admission depending on the severity. Given these interventions, treatment for this diagnosis, depending on severity, would typically occur on an outpatient basis or in an acute care hospital and not require an inpatient SNF stay in and of itself. Therefore, we do not believe this code would serve appropriately as the primary diagnosis for a Part A-covered SNF stay. As a result, we propose to change the mapping of this code from ''Acute Neurologic'' to the clinical category of ''Medical Management'.

We invite comments on the proposed changes to the PDPM ICD–10 mappings discussed earlier in this section.

VI. Skilled Nursing Facility Quality Reporting Program (SNF QRP)

A. Background and Statutory Authority

The Skilled Nursing Facility Quality Reporting Program (SNF QRP) is authorized by section 1888(e)(6) of the Act. The SNF QRP applies to freestanding SNFs, SNFs affiliated with acute care facilities, and all non-critical access hospital (CAH) swing-bed rural hospitals. Section 1888(e)(6)(A)(i) of the Act requires the Secretary to reduce by 2 percentage points the annual market basket percentage increase described in section 1888(e)(5)(B)(i) of the Act applicable to a SNF for a fiscal year (FY), after application of section 1888(e)(5)(B)(ii) of the Act (the productivity adjustment) and section 1888(e)(5)(B)(iii) of the Act, in the case of a SNF that does not submit data in accordance with sections 1888(e)(6)(B)(i)(II) and (III) of the Act for that FY. Section 1890A of the Act requires that the Secretary establish and follow a pre-rulemaking process, in coordination with the consensus-based entity (CBE) with a contract under section 1890(a) of the Act, to solicit input from certain groups regarding the selection of quality and efficiency measures for the SNF QRP. We have codified our program requirements in our regulations at § 413.360.

In this proposed rule, we are proposing to remove four items previously adopted as standardized patient assessment data elements under the social determinants of health (SDOH) category beginning with the FY 2027 SNF QRP: one item for Living Situation, two items for Food, and one item for Utilities. We are also proposing to amend our reconsideration policy and process. We are also seeking public comment on several Requests for Information (RFIs), specifically on: (1) future measure concepts for the SNF QRP; (2) potential revisions to the data submission deadlines for assessment data collected for the SNF QRP; and (3) advancing digital quality measurement in SNFs.

B. General Considerations Used for the Selection of Measures for the SNF QRP

For a detailed discussion of the considerations we historically used for the selection of SNF QRP quality, resource use, or other measures, we refer readers to the FY 2016 SNF PPS final rule (80 FR 46429 through 46431).

1. Quality Measures Currently Adopted for the SNF QRP

The SNF QRP currently has 15 adopted measures, which are set forth in Table 11. We are not proposing to adopt any new measures for the SNF QRP.

For a discussion of the factors we use to evaluate whether a measure should be removed from the SNF QRP, we refer readers to our regulations at § 413.360(b)(2) and to the FY 2019 SNF PPS final rule (83 FR 39267 through 39269).

TABLE 11—QUALITY MEASURES CURRENTLY ADOPTED FOR THE SNF QRP

Short name	Measure name & data source
Resident Assessment Instrument Minimum Data Set (Assessment-Based)	
Pressure Ulcer/Injury	Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury.
Application of Falls	Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay).
Discharge Mobility Score	Application of IRF Functional Outcome Measure: Discharge Mobility Score for Medical Rehabilitation Patients.
Discharge Self-Care Score	Application of IRF Functional Outcome Measure: Discharge Self-Care Score for Medical Rehabilitation Patients.
DRR	Drug Regimen Review Conducted With Follow-Up for Identified Issues–Post Acute Care (PAC) Skilled Nursing Facility (SNF) Quality Reporting Program (QRP).
TOH-Provider	Transfer of Health (TOH) Information to the Provider Post Acute Care (PAC).
TOH-Patient	Transfer of Health (TOH) Information to the Patient Post Acute Care (PAC).
DC Function	Discharge Function Score.
Patient/Resident COVID–19 Vaccine	COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date.
Claims-Based	
MSPB SNF	Medicare Spending Per Beneficiary (MSPB)–Post Acute Care (PAC) Skilled Nursing Facility (SNF) Quality Reporting Program (QRP).
DTC	Discharge to Community (DTC)–Post Acute Care (PAC) Skilled Nursing Facility (SNF) Quality Reporting Program (QRP).
PPR	Potentially Preventable 30-Day Post-Discharge Readmission Measure for Skilled Nursing Facility (SNF) Quality Reporting Program (QRP).
SNF HAI	SNF Healthcare-Associated Infections (HAI) Requiring Hospitalization.
National Healthcare Safety Network	
HCP COVID19 Vaccine	COVID19 Vaccination Coverage among Healthcare Personnel (HCP).

TABLE 11—QUALITY MEASURES CURRENTLY ADOPTED FOR THE SNF QRP—Continued

Short name	Measure name & data source
HCP Influenza Vaccine	Influenza Vaccination Coverage among Healthcare Personnel (HCP).

C. Proposal To Remove Four Standardized Patient Assessment Data Elements Beginning With the FY 2027 SNF QRP

We refer readers to the FY 2025 SNF PPS final rule (89 FR 64100 through 64111) where we finalized the adoption of four new items as standardized patient assessment data elements under the social determinants of health (SDOH) category: one item for Living Situation (R0310); two items for Food (R0320A and R0320B); and one item for Utilities (R0330). As finalized in the FY 2025 SNF PPS final rule, SNFs would be required to report these data elements using the MDS beginning with residents admitted on October 1, 2025 through December 31, 2025 for purposes of the FY 2027 SNF QRP and each program year after (89 FR 64115 through 64118).

In this proposed rule, we are proposing to remove these four standardized patient assessment data elements under the SDOH category as we acknowledge the burden associated with these items at this time. We continuously look for ways to balance the need for data collections regarding quality care and burden of these data collections on health care providers. CMS has a goal to facilitate improved health care delivery by requiring different systems and software applications to communicate and exchange data. Therefore, we would like to work towards the workflow for these data elements being part of a low burden interoperable electronic system. The focus will turn towards how the data and associated recommendations exchanged can improve care coordination, efficiency, reduction in errors, and resident experience. As health information technology (HIT) advances and interoperability of data becomes more standardized, the burden to collect and share clinical data on these and other relevant resident information will become less burdensome allowing for better outcomes for SNF residents and their families. The objectives of the SNF QRP continue to be the improvement of care, quality, and health outcomes for all residents through transparency and quality measurement, while not imposing undue burden on essential health providers. Under our proposal, SNFs would not be required to collect and submit Living Situation (R0310), Food (R0320A and R0320B), and Utilities (R0330) beginning with residents admitted on or after October 1, 2025 as previously finalized. Under our proposal, these items would not be required to meet the SNF QRP requirements beginning with the FY 2027 SNF QRP.

Removing these items from the data collection for the FY 2027 SNF QRP would keep the 15,253 SNFs from incurring 31,791.20 hours of administrative burden at a cost of $2,228,563.12 (or $146.11 per SNF) at this time. We refer readers to section VIII.B.1. of this proposed rule for details on this estimated burden reduction.

We invite public comment on our proposal to remove four standardized patient assessment data elements collected under the SDOH category from the SNF QRP beginning with the FY 2027 SNF QRP.

D. Proposals To Amend the Reconsideration Request Policy and Process

1. Background

In the FY 2016 SNF PPS final rule (80 FR 46460 and 46461), we finalized the SNF QRP Reconsideration policy and process whereby a SNF may request reconsideration of an initial determination that the SNF did not comply with the SNF QRP reporting requirements, warranting CMS reducing the SNF's annual market basket percentage by 2 percent for the applicable fiscal year as required by section 1888(e)(6)(A) of the Act. In that rule, we stated that the SNF may file a request for reconsideration if they believe that the finding of noncompliance is erroneous, have submitted a request for extension or exception that has not yet been decided, or have been granted an extension or exception (80 FR 46460). We further finalized that, as part of the SNF's request for reconsideration, the SNF must submit all supporting documentation and evidence demonstrating full compliance with all SNF QRP reporting requirements for the applicable FY, that the SNF requested an extension or exception for which a decision has not yet been made, that the SNF has been granted an extension or exception, or the SNF has experienced an extenuating circumstance as defined in the FY 2016 SNF PPS final rule for the ECE policy (80 FR 46459) but failed to file a timely request of exception (80 FR 46460). We finalized that we would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request (80 FR 46460).

In the FY 2016 SNF PPS final rule, we provided that a SNF generally must submit its request for reconsideration within 30 days from the date of initial notification of noncompliance (80 FR 46460). However, we finalized that, in very limited circumstances, we may grant a request by a SNF to extend the 30-day deadline for their reconsideration requests (80 FR 46460). We stated that, to extend the deadline, SNFs would have to request an extension and demonstrate that ''extenuating circumstances'' existed which prevented the filing of the reconsideration request by the 30-day deadline (80 FR 46460).

We finalized other procedural requirements for SNFs to request a reconsideration in the FY 2016 SNF PPS final rule, including submission of their request via electronic mail to CMS (80 FR 46460 and 46461). We also provided that, if a SNF is dissatisfied with our decision regarding their reconsideration request, the SNF may file an appeal with the Provider Reimbursement Review Board (80 FR 46461).

In the FY 2018 SNF PPS final rule (82 FR 36606; 82 FR 36634 and 36635), we codified the SNF QRP's reconsideration policy, as previously finalized, at § 413.360(d). Subsequently, we have finalized minor amendments to § 413.360(d)(1) and (d)(4) to reflect updates to our methods for communicating our notifications of noncompliance and reconsideration request decisions (83 FR 39270 and 39271; 83 FR 39290; 84 FR 38817; 84 FR 38832 and 38833).

As codified, our regulation at § 413.360(d) addresses how we send our written notification of noncompliance to a SNF, the process for a SNF to request reconsideration, what information a SNF must include with its reconsideration request (for example, reason(s) for requesting reconsideration, including all supporting documentation), that we will not consider a reconsideration request unless the SNF has complied fully with the procedural requirements, and how

we notify the SNF of our final decision regarding its reconsideration request.

We have become aware there are inconsistencies in our preamble and regulation text regarding SNF requests for reconsideration. On this basis, in this proposed rule, we seek to clarify these areas.

2. Proposal To Allow SNFs To Request an Extension To File a Request for Reconsideration

As noted previously, in the FY 2016 SNF PPS final rule, we stated that, in very limited circumstances, we may grant a request by a SNF to extend the deadline to submit its reconsideration request, so long as the SNF requested the extension and demonstrated that extenuating circumstances existed that prevented it filing a reconsideration request by the 30-day deadline (80 FR 46460). We did not codify this policy—permitting SNFs to request an extension to file their reconsideration request, in our regulation text at § 413.360(d). In implementing this finalized policy, we have noted two areas where further clarity would be beneficial to SNFs.

First, we have not clearly defined or explained the term ''extenuating circumstances'' as used in our reconsideration policy. In contrast, we use the term ''extraordinary circumstances'' in our Extraordinary Circumstances Exception and Extension (ECE) policy, as codified at § 413.360(c). We did explain ''extraordinary circumstances'' in detail when we originally finalized this ECE policy in the FY 2016 SNF PPS final rule (80 FR 46459).

On this basis, we are proposing to remove the term ''extenuating circumstances'' as used currently in our reconsideration policy and replace it with ''extraordinary circumstances.'' Specifically, we propose that a SNF may request, and CMS may grant, an extension to file a reconsideration request if the SNF was affected by an extraordinary circumstance beyond the control of the SNF (for example, a natural or man-made disaster). By modifying the basis by which a SNF may request an extension to file a reconsideration request in this manner, we also propose to incorporate our prior explanation regarding the meaning of extraordinary circumstances, as set forth in the FY 2016 SNF PPS final rule (80 FR 46459) as part of our Extraordinary Circumstance Exception and Extension (ECE) policy.

Second, we have noted some areas in our policy where SNFs may benefit from clearly demarcated deadlines. Although we believe a SNF would have an interest in asking for an extension to file a reconsideration request prior to the deadline, our policy currently does not specify a deadline for a SNF to submit its request for such an extension (80 FR 46460). Our policy also provides that, to support such request, the SNF must demonstrate that extenuating circumstances existed that prevented filing the reconsideration request by the 30-day deadline (80 FR 46460). However, we have not specified a temporal relationship between when the extenuating circumstances occurred and the reconsideration request deadline. We believe SNFs may benefit from further specificity regarding these requirements for submitting a request to extend the deadline to file a reconsideration request.

On this basis, we propose to amend our reconsideration policy as codified at § 413.360(d) to permit a SNF to request, and CMS to grant, an extension to file a request for reconsideration of a noncompliance determination if, during the period to request a reconsideration as set forth in § 413.360(d)(1), the SNF was affected by an extraordinary circumstance beyond the control of the SNF (for example, a natural or man-made disaster). We propose that the SNF must submit its request for an extension to file a reconsideration request to CMS via email to *SNFQRPReconsiderations@cms.hhs.gov* no later than 30 calendar days from the date of the written notification of noncompliance. We propose that the SNF's extension request, submitted to CMS, must contain all of the following information: (1) the SNF's CCN; (2) the SNF's business name; (3) the SNF's business address; (4) certain contact information for the SNF's chief executive officer or designated personnel; (5) a statement of the reason for the request for the extension; and (6) evidence of the impact of the extraordinary circumstances, including, for example, photographs, newspaper articles, and other media. We propose to codify this process at § 413.360(d)(5).

We further propose that CMS will notify the SNF in writing of its final decision regarding its request for an extension to file a reconsideration of noncompliance request via an email from CMS. We propose to notify the SNF in writing via email because this will allow for more expedient correspondence with the SNF, given the 30-day reconsideration timeframe. We propose to codify this process at § 413.360(d)(6).

We note that we are considering similar proposals across all post-acute care setting quality reporting programs to more closely align the reconsideration processes. On average, over the last 3 years, CMS has received 202 reconsideration requests annually from SNFs. If all these SNFs submitted an extension to file a reconsideration request to CMS, we estimate 51 hours total of administrative burden at an increased cost of $2,391.90 for these SNFs. We refer readers to section X.A.6.b. of this proposed rule for details on this estimated increase in burden.

We invite comment on these proposals to amend the SNF QRP reconsideration policy to permit SNFs to request an extension to file a reconsideration request and to codify this proposed policy and process at § 413.360(d)(5) and (d)(6).

3. Proposal To Update the Bases on Which CMS Can Grant a Reconsideration Request

As discussed previously, in FY 2016 SNF PPS final rule (80 FR 46460), we stated that the SNF may file a request for reconsideration if they believe that the finding of noncompliance is erroneous, have submitted a request for extension or exception that has not yet been decided, or have been granted an extension or exception (80 FR 46460). We further finalized that, as part of the SNF's request for reconsideration, the SNF must submit all supporting documentation and evidence demonstrating full compliance with all SNF QRP reporting requirements for the applicable FY, that the SNF requested an extension or exception for which a decision has not yet been made, that the SNF has been granted an extension or exception, or the SNF has experienced an extenuating circumstance as defined in the FY 2016 SNF PPS final rule for the ECE policy (80 FR 46459) but failed to file a timely request of exception (80 FR 46460). We finalized that we would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request (80 FR 46460).

As previously discussed, we codified our reconsideration policy at § 413.360(d) in the FY 2018 SNF PPS final rule (82 FR 36606; 82 FR 36634 and 36635). Our regulation at § 413.360(d)(2)(vi) requires that a SNF's request for reconsideration include the reason(s) for requesting reconsideration including all supporting documentation. As provided in § 413.360(d)(3), we will not consider a reconsideration request unless the SNF has complied fully with the requirements of § 413.360(d)(2), governing submission of its reconsideration request. We will notify the SNF in writing regarding our final decision on its reconsideration request in accordance with § 413.360(d)(4). We believe it would be beneficial for SNFs

if we codify our specific bases for granting a reconsideration request in our regulation at § 413.360(d).

On these bases, we propose to modify our reconsideration policy to provide that we will grant a timely request for reconsideration, and reverse an initial finding of non-compliance, only if CMS determines that the SNF was in full compliance with the SNF QRP requirements for the applicable program year. We would consider full compliance with the SNF QRP requirements to include CMS granting an exception or extension to SNF QRP reporting requirements under our ECE policy at § 413.360(c). However, to demonstrate full compliance with our ECE policy, the SNF would need to comply with our ECE policy's requirements, including the specific scope of the exception or extension as granted by CMS.

We propose to revise § 413.360(d)(4) to codify this modified policy in our regulation.

The remainder of the text at § 413.360(d)(4) would remain the same. We note that we are considering similar proposals across all post-acute care quality reporting programs to more closely align the reconsideration policies and processes.

We invite comment on these proposals to amend, and codify at § 413.360(d)(4), the bases by which we grant a reconsideration request under the SNF QRP Reconsideration policy.

E. SNF QRP Measure Concepts Under Consideration for Future Years—Request for Information (RFI): Interoperability, Well-Being, Nutrition & Delirium

We are seeking input on the importance, relevance, appropriateness, and applicability of each of the quality measure concepts under consideration listed in Table 12 for future years in the SNF QRP. As we review new measure concepts, CMS will prioritize outcome measures that are evidence-based. In the FY 2024 SNF PPS proposed rule (88 FR 21353 through 21355), we included a request for information (RFI) on a set of principles for selecting and prioritizing SNF QRP measures, identifying measurement gaps, and suitable measures for filling these gaps. We refer readers to the FY 2024 SNF PPS final rule (88 FR 53265 through 53267) for a summary of the public comments received in response to the RFI.

We are seeking input on four concepts for future measures for the SNF QRP.

TABLE 12—FUTURE MEASURE CONCEPTS UNDER CONSIDERATION FOR THE SNF QRP

Quality measure concepts
Interoperability.
Well-being.
Nutrition.
Delirium.

1. Interoperability

We are seeking input on the quality measure concept of interoperability, focusing on information technology systems' readiness and capabilities in the SNF setting. Title XXX of the Public Health Service Act defines ''interoperability'' in part, and with respect to health information technology (IT), as health IT that enables the secure exchange of electronic health information with, and use of electronic health information from, other health IT without requiring special efforts by the user.[1] The definition further states that interoperability of health IT allows for complete, including by providers and residents, access, exchange, and use of electronically accessible health information for authorized uses under applicable State or Federal Law.[2] We request input and comment on approaches to assessing interoperability in the SNF setting, for instance, measures that address or evaluate the level of readiness for interoperable data exchange, or measures that evaluate the ability of data systems to securely share information across the spectrum of care. Please provide input on the relevant aspects of interoperability for the SNF setting.

2. Well-Being

We are seeking input on a quality measure concept of well-being for future quality measures. We are seeking input on this concept for use in the SNF QRP with potential use in the SNF VBP. Well-being is a comprehensive approach to disease prevention and health promotion, as it integrates mental and physical health[3][4] while emphasizing preventative care to proactively address potential health issues. This comprehensive approach emphasizes person-centered care by promoting well-being of residents. We request input and comment on tools and measures that assess for overall health, happiness, and satisfaction in life that could include aspects of emotional well-being, social connections, purpose, fulfillment, and self-care work. Please provide input on the relevant aspects of well-being for the SNF setting.

3. Nutrition

We are seeking input on a quality measure concept of nutrition for future quality measures. We are seeking input on this concept for use in the SNF QRP with potential use in the SNF VBP. Assessment of an individual's nutritional status may include various strategies, guidelines, and practices designed to promote healthy eating habits and ensure individuals receive the necessary nutrients for maintaining health, growth, and overall well-being. This also includes aspects of health that support or mediate nutritional status, such as physical activity and sleep. In this context, preventable care plays a vital role by proactively addressing factors that may lead to poor nutritional status or related health issues. These efforts not only support optimal nutrition but also work to prevent conditions that could otherwise hinder an individual's health and nutritional needs. We request input and comment on tools and frameworks that promote healthy eating habits, appropriate exercise, nutrition, or physical activity for optimal health, well-being, and best care for all. Please provide input on the relevant aspects of nutrition for the SNF setting.

4. Delirium

Finally, we are seeking input on a quality measure concept of delirium for future quality measures. Delirium, often under-detected, is a common complication of illness or injury that leads to negative health outcomes like frailty, cognitive impairment, and functional decline. Post-acute care residents experiencing delirium symptoms are more likely to undergo rehospitalization, experience poor functional recovery outcomes, and have a higher 6-month mortality rate compared to residents without delirium.[5] We request input and comment on the applicability of measures that evaluate for the sudden, serious change in a person's mental state or altered state of consciousness

that may be associated with underlying symptoms or conditions. Please provide input on the relevant aspects of delirium for the SNF setting.

F. Potential Revision of the Final Data Submission Deadline From 4.5 Months to 45 Days—Request for Information (RFI)

Sections 1899B(f) and (g) of the Act require CMS to provide feedback to SNFs and to publicly report their performance on SNF quality measures specified under section 1899B(c)(1) of the Act and resource use and other measures specified under 1899B(d)(1) of the Act. More specifically, section 1899B(f)(1) of the Act requires the Secretary to provide confidential feedback reports to SNFs on their performance on the quality, resource use, and other measures specified under section 1899B(c)(1) and (d)(1) of the Act. Section 1899B(f)(2) of the Act provides that, to the extent feasible, the Secretary must make these confidential feedback reports available, no less than on a quarterly basis except in the case of measures reported on an annual basis, in which case confidential feedback reports may be made available annually. Additionally, section 1899B(g)(1) of the Act requires the Secretary to provide for the public reporting of each SNFs' performance on the quality measures, resource use, and other measures specified under sections 1899B(c)(1) and (d)(1) of the Act by establishing procedures for making the performance data available to the public. Section 1899B(g)(2) of the Act specifically requires that such procedures must ensure, including through a process consistent with the process applied under section 1886(b)(3)(B)(viii)(VII) of the Act, that SNFs can review and submit corrections to the data and other information before it is made public.

Although sections 1899B(f) and (g) of the Act require the provision of confidential feedback reports and public reporting of SNF performance on measures, section 1888(e)(6)(B)(i) of the Act provides the Secretary with discretion to prescribe the manner and the timeframes for SNFs to submit data as specified for reporting for the SNF QRP. In the FY 2017 SNF PPS final rule (81 FR 52042 and 52043), we finalized that SNFs will have approximately 4.5 months after each quarterly data collection period to complete their data submissions and make corrections to such data where necessary. At that time, we received several comments supporting the alignment of the data submission and correction timeframes with other quality reporting programs, but we did not receive any comments on the 4.5-month data submission timeframe. We refer readers to the FY 2017 SNF PPS final rule (81 FR 52041 through 52043) for a detailed discussion of our proposal and summary of comments received and responses thereto.

Public reporting of data collected under quality programs, such as the SNF QRP, is designed to provide consumers and their families with the most current information so they can make quality-informed decisions about where to receive their care. In the process of implementing the public reporting for the quality reporting programs, we have identified that the time between when data on measures is collected and submitted to us and when that data are publicly reported (that is, approximately nine months) may be too long to provide the most accurate and up to date information for the public. For example, through technical expert panels, we have received feedback from patient caregiver advocates that the aged data used in publicly reported quality measures diminishes their value to consumers. Furthermore, we have heard from SNFs that the SNF QRP measure results they receive prior to public reporting are not useful for their quality improvement efforts due to the aged data and the delay in when they receive these reports.[6]

Currently, the largest contributing factor to the nine-month lag between the end of the data collection period and when measures are publicly reported is the 4.5-month timeframe for data submission. If the data submission timeframe was reduced from 4.5 months to 45 days, then the lag time between the end of the data collection period and public reporting of that data could be reduced by up to three months. This revised timeframe would result in more timely public reporting of data that may provide more value for consumers and families as they make decisions about where they may want to receive their care. Additionally, this timeframe provides SNFs with more recent data to use in their quality improvement activities.

An important consideration in reducing the data submission timeframe is the potential burden it may place on SNFs, which could lead to fewer assessments submitted within the shorter 45-day data submission timeframe. We conducted an analysis to evaluate the potential impact of reducing the timeframe by determining how many assessments are currently being submitted within 45 days. Using 2023 data, we identified that only 4.2 percent of all MDS assessments were submitted after the 45-day timeframe. Of those submissions, about two-thirds (or 2.8 percent of the total MDS assessments submitted) were submitted between 45 days and 4.5 months and hence have potential to be impacted.[7] On these bases, we believe reducing the SNF QRP data submission deadline from 4.5 months to 45 days would improve the timeliness of public reporting by one quarter, which could be beneficial to both consumers and SNFs, with limited change in burden to SNFs.

We are requesting feedback on this potential future reduction of the SNF QRP data submission deadline from 4.5 months to 45 days that is under consideration. Specifically, we are requesting comment on:

- How this potential change could improve the timeliness and actionability of SNF QRP quality measures;
- How this potential change could improve public display of quality information; and
- How this potential change could impact SNF workflows or require updates to systems.

We intend to use this input to inform our program improvement efforts.

G. Advancing Digital Quality Measurement in the SNF QRP—Request for Information (RFI)

As part of our effort to advance the digital quality measurement (dQM) transition, we are issuing this request for information (RFI) to gather broad public input on the dQM transition in SNFs.

1. Background

We are committed to improving healthcare quality through measurement, transparency, and public reporting of quality data, and to enhancing healthcare data exchange by promoting the adoption of interoperable health information technology (IT) that enables information exchange using Fast Healthcare Interoperability Resources® (FHIR®) standards. Proposing to require the use of such technology within the SNF QRP in the future could potentially enable greater care coordination and information sharing, which is essential for delivering high-quality, efficient care and better outcomes at a lower cost. In

[6] SNF QRP Listening Session Summary: Possible Expansion of MDS Data Submission to All SNF Residents Regardless of Payer. Available in the Downloads section of the SNF QRP Measures and Technical Information web page: *https://www.cms.gov/medicare/quality/snf-quality-reporting-program/measures-and-technical-information.*

[7] Internal CMS analysis of FY 2023 MDS assessment data.

the FYs 2021, 2022, 2023 and 2024 SNF PPS proposed rules,[8] we outlined several Department of Health and Human Services (HHS) initiatives aimed at promoting the adoption of interoperable health IT and facilitating nationwide health information exchange. Further, to inform our digital strategy, in the FY 2022 SNF PPS proposed rule (86 FR 19998) we shared and sought feedback on the following:

- Our intent to explore the use of FHIR®-based standards to exchange clinical information through application programming interfaces (APIs).
- Enabling quality data submission to CMS through our internet Quality Improvement and Evaluation System (iQIES).
- To work with healthcare standards organizations to ensure their standards support our assessment tools.

We are considering opportunities to advance FHIR®-based reporting of resident assessment data for the submission of the MDS and other existing systems such as CDC's National Healthcare Safety Network (NHSN) for which SNFs have current CMS reporting requirements. Our objective is to explore how SNFs typically integrate technologies with varying complexity into existing systems and how this affects SNF workflows. In this RFI, we seek to identify the challenges and/or opportunities that may arise during this integration, and determine the support needed to complete and submit quality data in ways that protect and enhance care delivery.

We are also seeking input on future measures under consideration including applicability of interoperability as a future measure concept in post-acute care settings, including the SNF QRP. Refer to section VI.E. of this proposed rule for more information.

Any updates specific to the SNF QRP program requirements related to quality measurement and reporting provisions would be addressed through separate and future notice-and-comment rulemaking, as necessary.

2. Solicitation for Comment

We seek feedback on the current state of health IT use, including electronic health records (EHRs), in SNF facilities:

- To what extent does your SNF use health IT systems to maintain and exchange resident records? If your facility has transitioned to using electronic records in part or in whole, what types of health IT does your SNF use to maintain resident records? Are these health IT systems certified under the Office of the National Coordinator for Health Information Technology Health Information Technology (ONC Health IT) Certification Program? If your facility uses health IT products or systems that are not certified under the ONC Health IT Certification Program, please specify. Does your facility use EHRs or other health IT products or systems that are not certified under the ONC Health IT Certification Program? If no, what is the reason for not doing so? Do these other systems exchange data using standards and implementation specifications adopted by HHS? Does your facility maintain any resident records outside of these electronic systems? If so, are the data organized in a structured format, using codes and recognized standards, that can be exchanged with other systems and providers?
- Does your SNF submit resident assessment data to CMS directly from your health IT system without the assistance of a third-party intermediary? If a third-party intermediary is used to report data, what type of intermediary service is used? How does your facility currently exchange health information with other healthcare providers or systems, specifically between SNFs and other provider types? What about health information exchange with other entities, such as public health agencies? What challenges do you face with electronic exchange of health information?
- Are there any challenges with your current electronic devices (for example, tablets, smartphones, computers) that hinder your ability to easily exchange information across systems? Please describe any specific issues you encounter. Does limited internet or lack of internet connectivity impact your ability to exchange data with other healthcare providers, including community-based care services, or your ability to submit resident assessment data to CMS? Please specify.
- What steps does your SNF take with respect to the implementation of health IT systems to ensure compliance with security and patient privacy requirements such as the Health Insurance Portability and Accountability Act (HIPAA)?
- Does your SNF refer to the Safety Assurance Factors for EHR Resilience (SAFER) Guides (see newly revised versions published in January 2025 at *https://www.healthit.gov/topic/safety/safer-guides*) to self-assess EHR safety practices?
- What challenges or barriers does your facility encounter when submitting quality measure data to CMS as part of the SNF QRP? What opportunities or factors could improve your facility's successful data submission to CMS?
- What types of technical assistance guidance, workforce trainings, and/or other resources would be most beneficial for the implementation of FHIR®-based technology in your facility for the submission of the MDS to CMS and other existing systems such as CDC's National Healthcare Safety Network (NHSN) for which SNFs have current CMS reporting requirements? What strategies can CMS, HHS, or other federal partners take to ensure that technical assistance is both comprehensive and user-friendly? How could Quality Improvement Organizations (QIOs) or other entities enhance this support?
- Is your facility using technology that utilizes APIs based on the FHIR® standard to enable electronic data sharing? If so, with whom are you sharing data using the FHIR® standard and for what purpose(s)? For example, have you used FHIR® APIs to share data with public health agencies? Does your facility use any Substitutable Medical Applications and Reusable Technologies (SMART) on FHIR® applications? If so, are the SMART on FHIR® applications integrated with your EHR or other health IT?
- How do you anticipate the adoption of technology using FHIR®-based APIs to facilitate the reporting of resident assessment data could impact provider workflows? What impact, if any, do you anticipate it will have on quality of care?
- What benefits or challenges have you experienced with implementing technology that uses FHIR®-based APIs? How can adopting technology that uses FHIR®-based APIs to facilitate the reporting of resident assessment data impact provider workflows? What impact, if any, does adopting this technology have on quality of care?
- Does your facility have any experience using technology that shares electronic health information using one or more versions of the United States Core Data for Interoperability (USCDI) standard? [9]
- Would your SNF and/or vendors be interested in participating in testing to

[8] ''Advancing Health Information Exchange'' in: FY 2021 SNF PPS proposed rule (85 FR 20915) *https://www.federalregister.gov/documents/2020/04/15/2020-07875/medicare-program-prospective-payment-system-and-consolidated-billing-for-skilled-nursing-facilities#p-60,* FY 2022 SNF PPS proposed rule (86 FR 19956) *https://www.federalregister.gov/d/2021-07556/p-64,* FY 2023 SNF PPS proposed rule (87 FR 22721) *https://www.federalregister.gov/d/2022-07906/p-78,* and FY 2024 SNF PPS proposed rule (88 FR 21318) *https://www.federalregister.gov/d/2023-07137/p-76.*

[9] For more information about USCDI see *https://www.healthit.gov/isp/united-states-core-data-interoperability-uscdi.*

explore options for transmission of assessments, for example testing the transmission of a FHIR®-based assessment to CMS?

• How could the Trusted Exchange Framework and Common Agreement™ (TEFCA™) support CMS quality programs' adoption of FHIR®-based assessment submissions consistent with the FHIR® Roadmap (available at *https://rce.sequoiaproject.org/three-year-fhir-roadmap-for-tefca/*)? How might resident assessment data hold secondary uses for treatment or other TEFCA exchange purposes?

• What other information should we consider to facilitate successful adoption and integration of FHIR®-based technologies and standardized data for patient/resident assessment instruments like the MDS? We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies.

We invite any feedback, suggestions, best practices, or success stories related to the implementation of these technologies and will use this input to inform our future dQM transition efforts.

H. Form, Manner, and Timing of Data Submission Under the SNF QRP

We are not currently proposing any new policies regarding the form, manner, and timing of data submitted *under the SNF QRP.* We refer readers to the current regulatory text at § 413.360(b) for information regarding the policies for reporting specified data for the SNF QRP.

I. Policies Regarding Public Display of Measure Data for the SNF QRP

We are not currently proposing any new policies regarding the public display of measure data. For a discussion of our policies regarding public display of SNF QRP measure data and procedures for the SNFs to review and correct data and information prior to their publication, we refer readers to the FY 2017 SNF PPS final rule (81 FR 52045 through 52048).

VII. Updates to the Skilled Nursing Facility Value-Based Purchasing (SNF VBP) Program

A. Statutory Background

Through the Skilled Nursing Facility Value-Based Purchasing (SNF VBP) Program, we award incentive payments to SNFs to encourage improvements in the quality of care provided to Medicare beneficiaries. The SNF VBP Program is authorized by section 1888(h) of the Act, and it applies to freestanding SNFs, SNFs affiliated with acute care facilities, and all non-Critical Access Hospitals (CAH) swing-bed rural hospitals. The SNF VBP Program has helped to transform how Medicare payment is made for SNF care, moving toward rewarding better value and outcomes instead of merely rewarding volume. Our codified policies for the SNF VBP Program can be found in our regulations at 42 CFR 413.337(f) and 413.338.

B. Proposed Removal of the Health Equity Adjustment From the SNF VBP Program Scoring Methodology

1. Background

In the FY 2024 SNF PPS final rule (88 FR 53304 through 53318), we adopted a Health Equity Adjustment (HEA) that, beginning with the FY 2027 program year, rewards top tier performing SNFs that serve higher proportions of SNF residents with dual eligibility status. We codified the HEA at § 413.338(k) of our regulations. Section 1888(h)(4)(A) of the Act requires the Secretary to develop a methodology for assessing the total performance of each SNF based on performance standards established under section 1888(h)(3) of the Act with respect to the measures applied under section 1888(h)(2) of the Act.

As we discussed in the FY 2024 SNF PPS final rule, by providing the HEA to SNFs that serve higher proportions of SNF residents with dual eligibility status and that perform well on quality measures, we believed the HEA would appropriately recognize the resource intensity expended to achieve high performance on quality measures by SNFs that serve a high proportion of SNF residents with dual eligibility status, while also mitigating the worse health outcomes experienced by dually eligible residents through incentivizing better care across all SNFs.

In the FY 2024 SNF PPS final rule (88 FR 53304 through 53318), we also finalized a variable payback percentage, increasing the total amount available for value-based incentive payments for a fiscal year, beginning with the FY 2027 program year. We codified the increase in the total amount available for value-based incentive payments as appropriate for each fiscal year to account for the application of the HEA at § 413.338(c)(2)(i) of our regulations. The variable payback percentage would vary by program year to account for the application of the HEA such that SNFs that receive the HEA would receive increased value-based incentive payment amounts, and SNFs that do not receive the HEA would not experience a decrease in their value-based incentive payment amount, to the greatest extent possible, relative to no HEA in the SNF VBP Program and maintaining a payback percentage of 60 percent. That is, the variable payback percentage confirms that a very limited number of SNFs (if any) that do not receive HEA bonus points will experience a downward payment adjustment.

2. Proposal To Remove the Health Equity Adjustment Beginning With the FY 2027 Program Year

In this proposed rule, we are proposing to remove the HEA because we believe simplifying the SNF VBP Program's scoring methodology by removing the HEA will improve SNFs' understanding of the program and provide clearer incentives for SNFs as they seek to improve their quality of care for all residents. In addition, the estimated impact of removing the HEA on overall incentive payment adjustments is small. We conducted an analysis utilizing FY 2018 through FY 2021 measure data for all 8 measures in the FY 2028 Program year's measure set, estimating that the average incentive payment multiplier with the HEA would be 0.9924613988 and without the HEA would be 0.9915553875. Given this relatively small, estimated impact, and in light of the Administration's priority to streamline regulations and reduce burdens on those participating in the Medicare program, we are proposing to remove the HEA at this time. We refer readers to the Supplementary Information at the start of this proposed rule for the Unleashing Prosperity Through Deregulation of the Medicare Program—Request for Information for more information.

We considered altering the structure of the adjustment methodology to simplify it, but that process will require time to develop and test a new adjustment and, if pursued, would be addressed in future rulemaking.

We also do not anticipate that any serious reliance interests would be impacted by this proposed rule.

We propose to codify this removal of the HEA by removing § 413.338 (k) and (e)(3)(iii) from our regulations, by removing terms related to the HEA in § 413.338 (a) of our regulations, and to revise § 413.338(c)(2)(i) of our regulations to remove the variable payback percentage adopted beginning in the FY 2027 program year and instead maintain the 60 percent payback percentage adopted beginning in the FY 2023 program year.

We welcome public comment on these proposals.

C. SNF VBP Program Measures

1. Background

Our current measure selection, retention, and removal policy is codified at § 413.338(l) of our regulations. We also refer readers to the FY 2024 SNF PPS final rule for background on the measures we have adopted for the SNF VBP Program (88 FR 53276 through 53297). Table 13 lists the measures that have been adopted for the SNF VBP Program, along with their status in the program for the FY 2026 program year through the FY 2029 program year.

TABLE 13—SNF VBP PROGRAM MEASURES AND STATUS IN THE SNF VBP PROGRAM FOR THE FY 2026 PROGRAM YEAR THROUGH THE FY 2029 PROGRAM YEAR

Measure	FY 2026 program year	FY 2027 program year	FY 2028 program year	FY 2029 program year
Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM)	Included	Included		
Skilled Nursing Facility Healthcare-Associated Infections Requiring Hospitalization (SNF HAI) measure.	Included	Included	Included	Included.
Total Nurse Staffing Hours per Resident Day (Total Nurse Staffing) measure	Included	Included	Included	Included.
Total Nursing Staff Turnover (Nursing Staff Turnover) measure	Included	Included	Included	Included.
Discharge to Community—Post-Acute Care Measure for Skilled Nursing Facilities (DTC PAC SNF).		Included	Included	Included.
Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (Falls with Major Injury (Long-Stay)) measure.		Included	Included	Included.
Discharge Function Score for SNFs (DC Function) measure		Included	Included	Included.
Number of Hospitalizations per 1,000 Long Stay Resident Days (Long Stay Hospitalization) measure.		Included	Included	Included.
Skilled Nursing Facility Within-Stay Potentially Preventable Readmissions (SNF WS PPR) measure.			Included	Included.

D. SNF VBP Performance Standards

1. Background

Our current definitions for the performance standards are codified at § 413.338(a) of our regulations, and our current performance standards notification and updates policies are codified at § 413.338(n) of our regulations. We also refer readers to the FY 2024 SNF PPS final rule (88 FR 53299 through 53300) for a detailed history of our performance standards policies. In the FY 2025 SNF PPS final rule (89 FR 64128 through 64129), we adopted the final numerical values for the FY 2027 performance standards and the final numerical values for the FY 2028 performance standards for the Discharge to Community—Post-Acute Care Measure for Skilled Nursing Facilities (DTC PAC SNF) and Skilled Nursing Facility Within-Stay Potentially Preventable Readmissions (SNF WS PPR) measures.

2. Estimated Performance Standards for the FY 2028 Program Year

To meet the requirements at section 1888(h)(3)(C) of the Act, we are providing estimated numerical performance standards for the remaining measures applicable for the FY 2028 program year: the SNF Healthcare-Associated Infections Requiring Hospitalization (SNF HAI) measure, Total Nurse Staffing Hours per Resident Day (Total Nurse Staffing) measure, Total Nursing Staff Turnover (Nursing Staff Turnover) measure, Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (Falls with Major Injury (Long-Stay)) measure, Number of Hospitalizations per 1,000 Long Stay Resident Days (Long Stay Hospitalization) measure, and Discharge Function Score for SNFs (DC Function) measure. In accordance with our previously finalized methodology for calculating performance standards (81 FR 51996 through 51998), the estimated numerical values for the FY 2028 program year performance standards are shown in Table 14. We will provide the final numerical performance standards for the remaining measures applicable for the FY 2028 program year in the FY 2026 SNF PPS final rule.

TABLE 14—ESTIMATED FY 2028 SNF VBP PROGRAM PERFORMANCE STANDARDS

Measure short name	Achievement threshold	Benchmark
SNF HAI Measure	0.92219	0.94693
Total Nurse Staffing Measure	3.21488	5.81159
Nursing Staff Turnover Measure	0.40230	0.75655
Falls with Major Injury (Long-Stay) Measure	0.95349	0.99950
Long Stay Hospitalization Measure	0.99758	0.99959
DC Function Measure	0.40000	0.78800

3. Estimated Performance Standards for the FY 2029 Program Year

To meet the requirements at section 1888(h)(3)(C) of the Act, we are providing estimated numerical performance standards for the FY 2029 program year for the DTC PAC SNF and SNF WS PPR measures. In accordance with our previously finalized methodology for calculating performance standards (81 FR 51996 through 51998), the estimated numerical values for the FY 2029 program year performance standards for the DTC PAC SNF and SNF WS PPR measures are shown in Table 15. We will provide the final numerical performance standards for the DTC PAC SNF and SNF WS PPR measures in the FY 2026 SNF PPS final rule.

We will provide the estimated numerical performance standards values for the remaining measures applicable

to the FY 2029 program year in the FY 2027 SNF PPS proposed rule.

TABLE 15—ESTIMATED FY 2029 SNF VBP PROGRAM PERFORMANCE STANDARDS

Measure short name	Achievement threshold	Benchmark
DTC PAC SNF Measure	0.42612	0.67309
SNF WS PPR Measure	0.86372	0.92363

E. SNF VBP Performance Scoring Methodology

1. Proposed Application of SNF VBP Scoring Methodology to the SNF WS PPR Measure

a. Background

Our scoring methodology beginning in the FY 2027 program year is codified at §§ 413.338(e)(1), 413.338(e)(3), and 413.338(k) of our regulations, and our current case minimum and measure minimum policies are codified at § 413.338(b) of our regulations. We also refer readers to the FY 2024 SNF PPS final rule (88 FR 53300 through 53304) for a detailed history of our performance scoring methodology and the FY 2025 SNF PPS final rule (89 FR 64131 through 64132) for an update to the measure minimum policy for the FY 2028 program year and subsequent program years. Under this methodology, we will calculate the SNF performance score beginning with the FY 2027 program year as follows:

- We will award up to 10 points for each measure based on improvement or achievement, so long as the SNF reports a measure's applicable minimum number of cases during the performance period applicable to that fiscal year;
- We will sum all points awarded to a SNF based on their performance on each measure; we will normalize the SNF's point total such that the resulting point total is expressed as a number of points earned out of a total of 100; and
- We will add to the SNF's normalized point total any applicable bonus points calculated such that the resulting point total is the overall SNF performance score for the fiscal year, except that no SNF performance score may exceed 100 points.

In the FY 2023 SNF PPS final rule (87 FR 47588 through 47590), we finalized an application of the scoring methodology to the SNF HAI, DTC PAC SNF, and Total Nurse Staffing measures. In the FY 2024 SNF PPS final rule (88 FR 53303 through 53304), we finalized an application of the scoring methodology to the Nursing Staff Turnover, Falls with Major Injury (Long-Stay), Long Stay Hospitalization, and DC Function measures. Lastly, in the FY 2024 SNF PPS final rule (88 FR 53303), we stated that we intended to address the FY 2028 performance scoring methodology in future rulemaking, as we had also proposed to replace the SNFRM with the SNF WS PPR measure beginning with the FY 2028 program year.

b. Proposed Application of the SNF VBP Scoring Methodology to the SNF WS PPR Measure Beginning With the FY 2028 Program Year

In the FY 2024 SNF PPS final rule (88 FR 53280), we finalized that the SNF WS PPR measure will replace the SNFRM beginning with the FY 2028 SNF VBP program year. We are proposing to apply the previously finalized scoring methodology codified at § 413.338(e)(1) and § 413.338(e)(3) of our regulations to the SNF WS PPR measure beginning with the FY 2028 program year to align the scoring methodology applied to the SNF WS PPR measure with the scoring methodology previously finalized and applied to all other measures in the SNF VBP Program's measure set.

We invite public comment on our proposal to apply the previously finalized scoring methodology to the SNF WS PPR measure beginning with the FY 2028 SNF VBP program year.

F. Proposal To Adopt a SNF VBP Program Reconsideration Process

1. Background

We refer readers to the FY 2025 SNF PPS final rule (89 FR 64133 through 64136) and to § 413.338(f) of our regulations for details on the SNF VBP Program's confidential feedback reports policies, the two-phase review and correction process, and public reporting policies that we have adopted for the Program. We also refer readers to the SNF VBP Program website (*https://www.cms.gov/medicare/quality/nursing-home-improvement/value-based-purchasing/confidential-feedback-reporting-review-and-corrections*) for technical details on our review and correction process.

In Phase One of the review and correction process, codified at § 413.338(f)(2) of our regulations, we accept correction requests for 30 days after distributing the baseline period and performance period quality measure quarterly reports, which contain the baseline period and performance period measure results, respectively. SNFs may submit corrections to the measure results contained in those reports. The underlying data used to calculate the measure results are not subject to review and correction during this process. And as codified at § 413.338(f)(1) of our regulations, measure results included in those reports are calculated using data current as of specified dates for each measure.

In Phase Two of the review and correction process, codified at § 413.338(f)(3) of our regulations, we accept correction requests for 30 days after distributing the Performance Score Report which contains the SNF performance score and ranking. SNFs may submit corrections to the SNF performance score and ranking contained in this report.

Under our current review and correction policy, the SNF must identify the error for which it is requesting correction, explain its reason for requesting the correction, and submit documentation or other evidence, if available, supporting the request. Correction requests must contain all of the following:

- The SNF's CMS Certification Number (CCN).
- The SNF's name.
- The correction requested.
- The reason for requesting the correction, including any available evidence to support the request.

We review all review and correction requests and notify the requesting SNF of our decision. We also implement any approved corrections before the affected data becomes publicly available on the website CMS uses to make quality data available to the public, currently the Provider Data Catalog website (*https://data.cms.gov/provider-data/*).

In this proposed rule, we are proposing to adopt a reconsideration process that will allow SNFs to seek reconsideration of a review and correction request if they are not satisfied with our decision on a review and correction request submitted under section 413.338(f)(2) or (f)(3). We are also proposing technical updates to our

regulation text to align the submission requirements for the proposed reconsideration process with the submission requirements under the review and correction process.

2. Proposed SNF VBP Program Reconsideration Process

Beginning with the FY 2027 SNF VBP program year, we are proposing to implement a reconsideration request process that would be an additional appeal process available to SNFs beyond the existing Phase One and Phase Two review and correction process. The proposed reconsideration request process would align the SNF VBP Program with other CMS quality programs, including the Expanded Home Health Value-Based Purchasing (HHVBP) Model (42 CFR 484.375(b)), to create a familiar policy experience for providers across CMS quality programs.

We are proposing that SNFs would be able to request this additional reconsideration only if they first submit a valid review and correction request described at §§ 413.338(f)(2) or (3) of our regulations and are dissatisfied with the decision.

Under this proposed reconsideration process, SNFs would have 15 calendar days starting the day after the date we issue a decision via email on a review and correction request (as noted on that decision) submitted under section § 413.338(f)(2) or (3). SNFs that seek reconsideration of a review and correction request decision must submit their reconsideration requests via email in the form and manner specified by CMS in the review and correction decision. The reconsideration request must contain all of the following:

- The SNF's CMS Certification Number (CCN).
- The SNF's name.
- The issue for which the SNF submitted a review and correction request, received a review and correction request decision, and are requesting reconsideration of.
- The reason why the SNF is requesting reconsideration, which can be supported by any applicable documentation or other evidence.

We would review the reconsideration request and provide a written decision to the SNF in a timely manner before any affected data becomes publicly available on the website CMS uses to make quality data available to the public, currently the Provider Data Catalog website (*https://data.cms.gov/provider-data/*).

We are also proposing to codify the proposed SNF VBP Program's reconsideration process at § 413.338(f)(6) of our regulations.

We welcome public comment on this proposal.

3. Proposed Regulation Text Technical Updates

We are proposing to codify certain provisions of our existing review and correction process that we finalized in the FY 2017 SNF PPS final rule (81 FR 52006 through 52009) and FY 2018 SNF PPS final rule (82 FR 36621 through 36623) but did not codify at that time. Specifically, we are proposing to update § 413.338(f)(2) and (3) to specify that SNFs must submit their review and correction requests by sending an email to the SNF VBP Program Help Desk, which is currently available at *SNFVBPquestions@cms.hhs.gov.*

We welcome public comment on these proposed technical updates to our regulation text.

VIII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

A. ICRs Regarding the Skilled Nursing Facility Value-Based Purchasing Program

With regard to the SNF VBP Program, in section VII.F of this proposed rule, we are proposing to adopt a reconsideration process that will allow SNFs to seek reconsideration of a review and correction request if they are not satisfied with our decision on a review and correction request submitted under section 413.338(f)(2) or (f)(3) of our regulations. We are also proposing to codify certain provisions of our existing review and correction process that we finalized in the FY 2017 SNF PPS final rule (81 FR 52006 through 52009) and FY 2018 SNF PPS final rule (82 FR 36621 through 36623) but did not codify at that time. The review and correction and reconsideration process would provide SNFs an opportunity to review information that is to be made public with respect to the facility prior to such information being made public, as required by section 1888(g)(6)(B) of the Act. This opportunity to review is exempt from the Paperwork Reduction Act, as specified by section 1888(g)(7) of the Act. This opportunity to review is also voluntary, and will not create any new, required reporting burdens for SNFs.

In addition, in section VII.B of this proposed rule, we are proposing to remove the Health Equity Adjustment previously adopted in the FY 2024 SNF PPS final rule (88 FR 53304 through 53318). The source of data we would have used to calculate this adjustment was the State Medicare Modernization Act (MMA) file of dual eligibility, therefore our calculation of this adjustment would not have created any additional reporting burden for SNFs, and thus removing the adjustment will also not create any new or revised reporting burdens for SNFs. Because this rule does not propose removing or adding any new or revised collection of information requirements or burden related to the SNF VBP Program, this section of the rule is not subject to OMB approval under the authority of the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*). For the purpose of this section, collection of information is defined under 5 CFR 1320.3(c) of the PRA's implementing regulations.

If you comment on these information collections, that is, reporting, recordkeeping or third-party disclosure requirements, please submit your comments electronically as specified in the **ADDRESSES** section of this proposed rule.

B. ICRs Regarding the Skilled Nursing Facility Quality Reporting Program (SNF QRP)

In accordance with section 1888(e)(6)(A)(i) of the Act, the Secretary must reduce by 2-percentage points the otherwise applicable annual payment update to a SNF for a fiscal year if the SNF does not comply with the requirements of the SNF QRP for that fiscal year.

In section VI.C. of the proposed rule, we are proposing to remove four standardized patient assessment data elements under the SDOH category beginning with the FY 2027 SNF QRP.

In Section VI.D. of the proposed rule, we are also proposing to amend our reconsideration policy and process. As we noted in the FY 2016 SNF PPS Proposed rule (80 FR 22082), because the reconsideration requirements are associated with an administrative action (5 CFR 1320.4(a)(2) and (c)), they are exempt from the requirements of the PRA. We have, however, provided detailed burden estimates in section X.A.6.b. of this proposed rule.

1. ICRs Regarding the Removal of Four Standardized Patient Assessment Data Elements Beginning With the FY 2027 SNF QRP

As stated in section VI.C. of the proposed rule, we are proposing to remove four standardized patient assessment data elements under the SDOH category previously adopted for collection and submission on admission beginning October 1, 2025. The MDS, in its current form, has been approved under OMB control number 0938–1140. On November 25, 2024, under the Paperwork Reduction Act of 1995 (PRA), we placed a notice in the **Federal Register** (89 FR 92939, November 25, 2024) on the revised collection and implementation of the MDS 3.0 v1.20.1 beginning October 1, 2025. Although we did not receive any comments in response to this notice, the revised collection and implementation package was not finalized. We are now revising the package to support the proposed removal of four standardized patient assessment data elements under the SDOH category previously adopted and seeking comment on the updated package.

The net result of removing four data elements at admission would be an estimated decrease of 1.2 minutes or 0.02 hour of clinical staff time at admission (4 data elements × 0.005 hour). We identified the staff type based on past SNF burden calculations, and our assumptions were based on the categories generally necessary to perform an assessment. We believe these items would be completed equally by a Registered Nurse (RN) and Licensed Practical and Licensed Vocational Nurse (LPN/LVN). However, individual SNFs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wage estimates for these staff from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates.[10] To account for other indirect costs and fringe benefits, we doubled the median hourly wage. These amounts are detailed in Table 16. We established a composite cost estimate using our adjusted hourly wage estimates. The composite estimate of $70.10/hr was calculated by weighting the adjusted hourly wage of the Registered Nurse (RN) and Licensed Practical and Licensed Vocational Nurse (LPN/LVN) equally [($82.76/hr × 0.5) plus ($57.44/hr × 0.5) = $70.10].

TABLE 16—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Licensed Practical and Licensed Vocational Nurse (LPN/LVN)	29–2061	$28.72	$28.72	$57.44
Registered Nurse (RN)	29–1141	41.38	41.38	82.76

We estimate that the burden and cost for SNFs for complying with the requirements of the FY 2027 SNF QRP would decrease under this proposal. Using FY 2024 data, we estimate a total of 1,589,560 5-day PPS assessments by 15,253 SNFs for an annual decrease of 31,791.20 hours in burden for all SNFs at admission (1,589,560 5-day PPS assessments × 0.02 hour) and an annual decrease of 2.08 hours in burden per SNF at admission (31,791.20 hours/15,253 SNFs). Given 0.02 hour at $70.10 per hour to complete an average of 104 5-day PPS assessments per SNF per year, we estimate the total annual cost at admission would be decreased by $2,228,563.12 for all SNFs (31,791.20 hours × $70.10/hr) or $146.11 per SNF ($2,228,563.12/15,253 SNFs).

The total estimated burden associated with the proposed removal of four standardized patient assessment data elements at admission (as described in this section) is summarized in Table 17.

TABLE 17—ESTIMATED REDUCTION IN BURDEN ASSOCIATED WITH REMOVAL OF FOUR STANDARDIZED PATIENT ASSESSMENT DATA ELEMENTS UNDER THE SDOH CATEGORY BEGINNING WITH THE FY 2027 SNF QRP

Requirement	Per SNF		All SNFs	
	Change in annual burden hours	Change in annual cost	Change in annual burden hours	Change in annual cost
Proposal to Remove of Four Standardized Patient Assessment Data Elements	−2.08	−$146.11	−31,791.20	$2,228,563.12

We invite public comments on the proposed information collection requirements and whether our estimated burden reduction of 0.02 hours per patient and an annual decrease of 2.08

[10] U.S. Bureau of Labor Statistics. Occupational Employment and Wage Statistics. May 2023. *https://www.bls.gov/oes/current/oes_stru.htm.*

hours in burden per SNF at admission is an accurate estimate.

IX. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

X. Regulatory Impact Analysis

A. Statement of Need

1. Statutory Provisions

If finalized, this rule would update the FY 2026 SNF prospective payment rates as required under section 1888(e)(4)(E) of the Act. It also would respond to section 1888(e)(4)(H) of the Act, which requires the Secretary to provide for publication in the **Federal Register** before the August 1 that precedes the start of each FY, the unadjusted Federal per diem rates, the case-mix classification system, and the factors to be applied in making the area wage adjustment. These are statutory provisions that prescribe a detailed methodology for calculating and disseminating payment rates under the SNF PPS, and we do not have the discretion to adopt an alternative approach on these issues.

With respect to the SNF QRP, as described in section VI.C of this proposed rule, we are proposing to remove four standardized patient assessment data elements beginning with the FY 2027 SNF. As described in VI.D of this proposed rule, we are also proposing updates to our reconsideration policy and process under the statutory discretion afforded to the Secretary under section 1888(e)(6) of the Act.

With respect to the SNF VBP Program, this rule proposes updates to the SNF VBP Program requirements for FY 2026 and subsequent years. Section 1888(h)(3) of the Act requires the Secretary to establish and announce performance standards for SNF VBP Program measures no later than 60 days before the beginning of the performance period, and this proposed rule estimates numerical values of the performance standards for the FY 2028 program year for the SNF HAI, Total Nurse Staffing, Nursing Staff Turnover, Falls with Major Injury (Long-Stay), DC Function, and Long Stay Hospitalization measures; and numerical values of the performance standards for the FY 2029 program year for the DTC PAC SNF and SNF WS PPR measures.

2. Discretionary Provisions

In addition, this proposed rule includes the following discretionary provisions:

a. SNF Forecast Error Adjustment

Each year, we evaluate the SNF market basket forecast error for the most recent year for which historical data is available. The forecast error is determined by comparing the projected SNF market basket increase each year with the actual SNF market basket increase in that year. In evaluating the data for FY 2024, we found that the forecast error for that year was 0.6 percentage point, exceeding the 0.5 percentage point threshold we established in regulation to trigger a forecast error adjustment. Given that the forecast error exceeds the 0.5 percentage point threshold for FY 2024, current regulations require that the SNF market basket percentage increase for FY 2026 be adjusted upward by 0.6 percentage point to account for forecasting error in the FY 2024 SNF market basket update.

b. Technical Updates to ICD–10 Mappings

In the FY 2019 SNF PPS final rule (83 FR 39162), we finalized the implementation of the PDPM, effective October 1, 2019. The PDPM utilizes ICD–10 codes in several ways, including using the patient's primary diagnosis to assign patients to clinical categories under several PDPM components, specifically the PT, OT, SLP and NTA components. In this rule, we are proposing several substantive changes to the PDPM ICD–10 code mapping.

3. Introduction

We have examined the impacts of this proposed rule as required by Executive Order 12866, ''Regulatory Planning and Review''; Executive Order 13132, ''Federalism''; Executive Order 13563, ''Improving Regulation and Regulatory Review''; Executive Order 14192, ''Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (Pub. L. 96–354); section 1102(b) of the Social Security Act; section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select those regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, or the President's priorities. A regulatory impact analysis (RIA) must be prepared for a regulatory action that is significant under section 3(f)(1) of E.O. 12866. Based on our estimates, the Office of Management and Budget's (OMB) Office of Information and Regulatory Affairs (OIRA) has determined this rulemaking is significant per section 3(f)(1). Accordingly, we have prepared an RIA that to the best of our ability presents the costs and benefits of the rulemaking.

4. Overall Impacts

This rule would update the SNF PPS rates contained in the FY 2025 SNF PPS final rule (89 FR 64048). We estimate that the aggregate impact would be an increase of approximately $997 million (2.8 percent) in Part A payments to SNFs in FY 2026. We note in this proposed rule that these impact numbers do not incorporate the SNF VBP Program reductions that we estimate would total $208.36 million in FY 2026. We note that events may occur to limit the scope or accuracy of our impact analysis, as this analysis is future-oriented, and thus, very susceptible to forecasting errors due to events that may occur within the assessed impact time period.

In accordance with sections 1888(e)(4)(E) and (e)(5) of the Act and implementing regulations at § 413.337(d), we are proposing to update the FY 2025 payment rates by a factor equal to the market basket percentage increase adjusted for the forecast error adjustment and reduced by the productivity adjustment to determine the payment rates for FY 2026. The impact to Medicare is included in the total column of Table F18. The annual update in this rule applies to SNF PPS payments in FY 2026. Accordingly, the analysis of the impact of the annual update that follows only describes the

impact of this single year. Furthermore, in accordance with the requirements of the Act, we will publish a rule or notice for each subsequent FY that will provide for an update to the payment rates and include an associated impact analysis.

5. Detailed Economic Analysis

The FY 2026 SNF PPS payment impacts appear in Table F18. Using the most recently available claims data, in this case FY 2024, we apply the current FY 2025 case-mix indices (CMIs), wage index and labor-related share value to the number of payment days to simulate FY 2025 payments. Then, using the same FY 2024 claims data, we apply the FY 2026 CMIs, wage index and labor-related share value to simulate FY 2026 payments. We tabulate the resulting payments according to the classifications in Table 18 (for example, facility type, geographic region, facility ownership), and compare the simulated FY 2025 payments to the simulated FY 2026 payments to determine the overall impact. The breakdown of the various categories of data in Table F18 is as follows:

- The first column shows the breakdown of all SNFs by urban or rural status, hospital-based or freestanding status, census region, and ownership.
- The first row of figures describes the estimated effects of the various changes contained in this proposed rule on all facilities. The next six rows show the effects on facilities split by hospital-based, freestanding, urban, and rural categories. The next nineteen rows show the effects on facilities by urban versus rural status by census region. The last three rows show the effects on facilities by ownership (that is, government, profit, and non-profit status).
- The second column shows the number of facilities in the impact database.
- The third column shows the effect of the annual update to the wage index, including the updates to the labor related-share discussed in section III.D of this proposed rule. This represents the effect of using the most recent wage data available as well as accounts for the 5 percent cap on wage index decreases. The total impact of this change is 0.0 percent; however, there are distributional effects of the change.
- The fourth column shows the effect of all of the changes on the FY 2026 payments. The proposed update of 2.8 percent is constant for all providers and, though not shown individually, is included in the total column. It is projected that aggregate payments will increase by 2.8 percent, assuming facilities do not change their care delivery and billing practices in response.

As illustrated in Table 18, the combined effects of all of the changes vary by specific types of providers and by location. For example, due to changes in this rule, rural providers will experience a 3.2 percent increase in FY 2026 total payments.

TABLE 18—IMPACT TO THE SNF PPS FOR FY 2026

Impact categories	Number of facilities	Update wage data (%)	Total change (%)
Group			
Total	15,253	0.0	2.8
Urban	11,054	−0.1	2.7
Rural	4,199	0.4	3.2

For profit	10,920	−0.1	2.7
Non-profit	3,304	0.3	3.1

TABLE 18—IMPACT TO THE SNF PPS FOR FY 2026—Continued

Impact categories	Number of facilities	Update wage data (%)	Total change (%)
Government	1,029	0.3	3.1

Note: The Total column includes the FY 2026 proposed SNF market basket update of 2.8 percent. The values presented in Table 18 may not sum due to rounding.

6. Impacts for the Skilled Nursing Facility Quality Reporting Program (SNF QRP) for FY 2027

Estimated impacts for the SNF QRP are based on analysis discussed in section VI. of the proposed rule. In accordance with section 1888(e)(6)(A)(i) of the Act, the Secretary must reduce by 2 percentage points the annual payment update applicable to a SNF for a fiscal year if the SNF does not comply with the requirements of the SNF QRP for that fiscal year.

a. Impacts for Removing the Collection and Submission Requirements of Four Standardized Patient Assessment Data Elements Beginning With the FY 2027 SNF QRP

As discussed in section VI.C of the proposed rule, we are proposing to remove four standardized patient assessment data elements under the SDOH category beginning with residents admitted on October 1, 2025, for the FY 2027 SNF QRP. We are providing estimated impact information as reflected in Table 21.

As discussed in section VIII.B.1. of this proposed rule, we estimate the net result of this proposal will decrease burden. If the proposal is finalized, SNFs would not be required to collect and submit four standardized patient assessment data elements beginning with residents admitted on or after October 1, 2025 as previously finalized. Using FY 2024 data, we estimate an annual total of 1,589,560 5-day PPS assessments by 15,253 SNFs for an annual decrease of 31,791.20 hours (1,589,560 5-day PPS assessments × 0.02 hour) and an annual decrease in cost of $2,228,563.12 (31,791.20 hours × $70.10/hr) for all SNFs at admission. For each SNF, we estimate an annual burden decrease of 2.08 hours (31,791.20 hours/15,253 SNFs) and an annual decreased in cost of $146.11 ($2,228,563.12/15,253 SNFs) at admission.

b. Impacts for Amending the Reconsiderations Request Policy and Process

As discussed in section VI.D of the proposed rule, we are proposing to amend the SNF QRP reconsiderations request policy and process. As we noted in the FY 2016 SNF PPS Proposed rule (80 FR 22082) and in section VIII.B of this proposed rule, because the reconsideration requirements are associated with an administrative action (5 CFR 1320.4(a)(2) and (c)), they are exempt from the requirements of the PRA however, we are providing full estimated impact information below.

If finalized, the proposed updates to this policy and process would result in a collection of information intended to be submitted only by SNFs if they seek to file an extension to file a request for reconsideration of a noncompliance determination. We estimate that this information would take SNFs approximately 15 minutes to complete. We believe this data would be entered by a Medical Records Specialist. However, individual SNFs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages from the U.S. Bureau of Labor Statistics' (BLS) May 2023 National Occupational Employment and Wage Estimates. To account for overhead and fringe benefits, we have doubled the median hourly wage as detailed in Table 19.

TABLE 19—U.S. BUREAU OF LABOR AND STATISTICS' MAY 2023 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Median hourly wage ($/hr)	Other indirect costs and fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Medical Records Specialists	29–2072	$23.45	$23.45	$46.90

Historically, less than 2 percent of SNFs submit a reconsideration request annually. Based on the number of reconsiderations requests received over the previous 3 years, we estimate an average of 202 SNFs submit a reconsideration request annually. We estimate that, if all 202 SNFs sought to file an extension to file a request for reconsideration, the burden and cost for these SNFs would increase under this proposal. We estimate that it would take 15 minutes (0.25 hour) to complete and submit the data for an annual increase of 51 hours in burden for all 202 estimated SNFs submitting these requests (15 minutes × 202 SNFs). Given 51 hours at $46.90 per hour to complete an average of 202 entries among these SNFs annually, we estimate the total annual cost would be an increase by $2,391.90 for all SNFs (51 hours × $46.90/hr) and $11.84 per SNF (0.25 hours × $46.90/hr).

The total estimated burden associated with amending the reconsiderations request policy and process (as described in this section) is summarized in Table 20.

TABLE 20—ESTIMATED INCREASE IN BURDEN ASSOCIATED WITH AMENDING THE RECONSIDERATIONS REQUEST POLICY AND PROCESS

Requirement	Per SNF		All SNFs (n=202)	
	Change in annual burden hours	Change in annual cost	Change in annual burden hours	Change in annual cost
Proposal to Amend the Reconsiderations Request Policy and Process	+0.25	+$11.84	+51	+$2,391.90

We invite public comments on the overall impact of the SNF QRP proposals for FY 2027 displayed in Table 21.

TABLE 21—ESTIMATED IMPACTS FOR THE FY 2027 SNF QRP

Estimated impacts for the FY2027 SNF QRP	Per SNF		All SNFs	
	Estimated change in annual burden hours	Estimated change in annual cost	Estimated change in annual burden hours	Estimated change in annual cost
Estimated Change in Burden Associated with Removal of Four Standardized Patient Assessment Data Elements at Admission Beginning with the FY 2027 SNF QRP	−2.08	−$146.11	−31,791.20	−$2,228,563.12
Estimated Change in Burden Associated with Amending the Reconsiderations Request Policy and Process for those SNF's requesting an extension to file a request for reconsideration	+0.25	+11.84	+51	+2,391.90

7. Impacts for the SNF VBP Program

The estimated impacts of the FY 2026 SNF VBP Program are based on historical data and appear in Table 20 and Table 21. We modeled SNF performance in the Program using SNFRM, SNF HAI, Total Nurse Staffing, and Nursing Staff Turnover measure results from FY 2022 as the baseline period and FY 2023 as the performance period. Additionally, we modeled a logistic exchange function with a payback percentage of 60 percent, as we finalized in the FY 2018 SNF PPS final rule (82 FR 36619 through 36621).

For the FY 2026 program year, we will reduce each SNF's adjusted Federal per diem rate by 2 percent. We will then redistribute 60 percent of that 2 percent withhold to SNFs based on their measure performance. Additionally, in the FY 2023 SNF PPS final rule (87 FR 47585 through 47587), we finalized a case minimum requirement for the SNFRM, Total Nurse Staffing, and SNF HAI measures, and in the FY 2024 SNF PPS final rule (88 FR 53301 through 53302) we finalized a case minimum requirement for the Nursing Staff Turnover measure, as required by section 1888(h)(1)(C)(i) of the Act. Furthermore, in the FY 2023 SNF PPS final rule (87 FR 47587), we finalized the measure minimum requirement for the FY 2026 SNF VBP program year, as required by section 1888(h)(1)(C)(ii) of the Act. As a result of these provisions, SNFs must meet the case minimum for at least two of the four measures during the applicable performance period to receive a SNF performance score and value-based incentive payment for FY 2026; SNFs that do not meet the measure minimum requirement finalized for the FY 2026 program year will be excluded from the Program and will receive their adjusted Federal per diem rate for that fiscal year. As previously finalized, this policy will maintain the overall payback percentage at 60percent for the FY 2026 program year. Based on the 60 percent payback percentage, we estimated that we will redistribute approximately $312.53 million (of the estimated $520.89 million in withheld funds) in value-based incentive payments to SNFs in FY 2026, which means that the SNF VBP Program is estimated to result in approximately $208.36 million in savings to the Medicare Program in FY 2026.

Our detailed analysis of the impacts of the FY 2026 SNF VBP Program is shown in Table 22 and Table 23.

* The total group category excludes 965 SNFs that failed to meet the finalized measure minimum requirement. The total group category includes 95 SNFs that did not have historical payment data used for this analysis.

** The group category that includes hospital-based/freestanding by urban/rural excludes 57 swing bed SNFs that satisfied the measure minimum requirement.

N/A = Not available because no facilities in this group met the finalized measure minimum requirement.

In Section VII.B of this proposed rule, we are proposing to remove the Health Equity Adjustment (HEA) and the variable payback percentage that would account for the application of the HEA. Therefore, we are providing estimated impacts of the FY 2027 SNF VBP Program, which are based on historical data and appear in Tables 24, 25, and 26. We modeled SNF performance in the Program using SNFRM, SNF HAI, Total Nurse Staffing, Nursing Staff Turnover, and DC Function measure results from FY 2022 as the baseline period and FY 2023 as the performance period, using Falls with Major Injury (Long-Stay) and Long Stay Hospitalization measure results from CY 2022 as the baseline period and FY 2023 as the performance period, and using DTC PAC SNF measure results from FY 2020–2021 as the baseline period and FY 2022–2023 as the performance period. Additionally, we modeled a logistic exchange function with a payback percentage of 60 percent, as we finalized in the FY 2018 SNF PPS final rule (82 FR 36619 through 36621).

For the FY 2027 program year, we would reduce each SNF's adjusted Federal per diem rate by 2 percent. We would then redistribute 60 percent of that 2 percent withhold to SNFs based on their measure performance. Additionally, in the FY 2023 SNF PPS final rule (87 FR 47585 through 47587), we finalized a case minimum requirement for the SNFRM, Total Nurse Staffing, SNF HAI, and DTC PAC SNF measures, and in the FY 2024 SNF PPS final rule (88 FR 53301 through 53302) we finalized a case minimum requirement for the Nursing Staff Turnover, Falls with Major Injury (Long-Stay), Long Stay Hospitalization, and DC Function measures, as required by section 1888(h)(1)(C)(i) of the Act. Furthermore, in the FY 2024 SNF PPS final rule (88 FR 53302 through 53303), we finalized the measure minimum requirement for the FY 2027 SNF VBP program year, as required by section 1888(h)(1)(C)(ii) of the Act. As a result of these provisions, SNFs must meet the case minimum for at least four of the eight measures during the applicable performance period to receive a SNF performance score and value-based incentive payment for FY 2027; SNFs that do not meet the measure minimum requirement finalized for the FY 2027 program year will be excluded from the Program and will receive their adjusted Federal per diem rate for that fiscal year. This policy will maintain the overall payback percentage at 60 percent for the FY 2027 program year. Based on the 60 percent payback percentage, we estimated that we will redistribute approximately $311.98 million (of the estimated $519.97 million in withheld funds) in value-based incentive payments to SNFs in FY 2027, which means that the SNF VBP Program is estimated to result in approximately $207.99 million in savings to the Medicare Program in FY 2027.

Our detailed analysis of the impacts of the FY 2027 SNF VBP Program is shown in Tables 24, 25, and 26.

TABLE 26—ESTIMATED SNF VBP PROGRAM IMPACTS FOR FY 2027—Continued

Characteristic	Number of facilities	Mean performance score	Mean incentive payment multiplier	Percent of total payment
Pacific	81	47.4383	1.00148	0.70
Outlying	N/A	N/A	N/A	N/A
Ownership				
Government	769	38.3377	0.99425	3.20
Profit	9,943	32.2324	0.98948	80.89
Non-Profit	2,777	41.7132	0.99673	15.91

* The total group category excludes 1,398 SNFs that failed to meet the finalized measure minimum requirement. The total group category includes 61 SNFs that did not have historical payment data used for this analysis.

** The group category that includes hospital-based/freestanding by urban/rural excludes 43 swing bed SNFs that satisfied the measure minimum requirement.

N/A = Not available because no facilities in this group met the finalized measure minimum requirement.

8. Alternatives Considered

As described in this section, we estimate that the aggregate impact of the provisions in this proposed rule will result in an increase of approximately $997 million (2.8 percent) in Part A payments to SNFs in FY 2026. This reflects a $997 million (2.8 percent) increase from the update to the payment rates.

Section 1888(e) of the Act establishes the SNF PPS for the payment of Medicare SNF services for cost reporting periods beginning on or after July 1, 1998. This section of the statute prescribes a detailed formula for calculating base payment rates under the SNF PPS, and does not provide for the use of any alternative methodology. It specifies that the base year cost data to be used for computing the SNF PPS payment rates must be from FY 1995 (October 1, 1994, through September 30, 1995). In accordance with the statute, we also incorporated a number of elements into the SNF PPS (for example, case-mix classification methodology, a market basket update, a wage index, and the urban and rural distinction used in the development or adjustment of the Federal rates). Further, section 1888(e)(4)(H) of the Act specifically requires us to disseminate the payment rates for each new FY through the **Federal Register**, and to do so before the August 1 that precedes the start of the new FY; accordingly, we are not pursuing alternatives for this process.

With regard to the proposals for the SNF QRP, we are proposing to remove four standardized patient assessment data elements. We considered keeping these items but believe that removing them would help reduce burden. With regard to the proposal to amend and codify our reconsideration policy and process, we considered the alternative of leaving the regulatory language unchanged. However, we believe it would be beneficial for SNFs to codify our specific bases for granting a reconsideration request and to clarify the process for requesting an extension to the reconsideration request deadline.

With regard to the proposals for the SNF VBP Program, we discussed alternatives considered within those sections.

9. Accounting Statement

Consistent with OMB Circular A–4 (available online at *https://trumpwhitehouse.archives.gov/sites/whitehouse.gov/files/omb/circulars/A4/a-4.pdf*), in Tables 27 and 30, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of the proposed rule for FY 2026. Tables 18 and 27 provide our best estimate of the possible changes in Medicare payments under the SNF PPS as a result of the policies outlined in this final rule, based on the data for 15,253 SNFs in our database.

TABLE 27—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES, FROM THE 2025 SNF PPS FISCAL YEAR TO THE 2026 SNF PPS FISCAL YEAR

Category	Transfers
Annualized Monetized Transfers	$997 million.
From Whom To Whom?	Federal Government to SNF Medicare Providers.

TABLE 28—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FOR THE CHANGES TO THE SNF QRP PROGRAM

Estimated Costs to all SNFs for Proposed Changes to the SNF QRP Program	−$2,228,563.12
Estimated Costs to those SNFs requesting an extension to file a request for reconsideration	+2,391.90

TABLE 29—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FOR THE FY 2026 SNF VBP PROGRAM

Category	Transfers
Annualized Monetized Transfers	$312.53 million.*

TABLE 29—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FOR THE FY 2026 SNF VBP PROGRAM—Continued

Category	Transfers
From Whom To Whom?	Federal Government to SNF Medicare Providers.

* This estimate does not include the 2 percent reduction to SNFs' Medicare payments (estimated to be $520.89 million) required by statute.

TABLE 30—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FOR THE FY 2027 SNF VBP PROGRAM

Category	Transfers
Annualized Monetized Transfers	$311.98 million.*
From Whom To Whom?	Federal Government to SNF Medicare Providers.

* This estimate does not include the 2 percent reduction to SNFs' Medicare payments (estimated to be $519.17 million) required by statute.

10. Conclusion

This rule updates the SNF PPS rates contained in the FY 2025 SNF PPS final rule (89 FR 64048). Based on the above, we estimate that the overall payments for SNFs under the SNF PPS in FY 2026 are projected to increase by approximately $997 million, or 2.8 percent, compared with those in FY 2025. We estimate that in FY 2026, SNFs in urban and rural areas will experience, on average, a 2.7 percent increase and 3.2 percent increase, respectively, in estimated payments compared with FY 2025. Providers in the rural Mountain region will experience the largest estimated increase in payments of approximately 5.0 percent. Providers in the urban Pacific region will experience the smallest estimated increase in payments of 1.7 percent.

B. Regulatory Flexibility Act Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, non-profit organizations, and small governmental jurisdictions. Most SNFs and most other providers and suppliers are small entities, either by reason of their non-profit status or by having revenues of $30 million or less in any 1 year. We utilized the revenues of individual SNF providers (from recent Medicare Cost Reports) to classify a small business, and not the revenue of a larger firm with which they may be affiliated. As a result, for the purposes of the RFA, we estimate that almost all SNFs are small entities as that term is used in the RFA, according to the Small Business Administration's latest size standards (NAICS 623110), with total revenues of $34 million or less in any 1 year. (For details, see the Small Business Administration's website at *https://www.sba.gov/document/support-table-size-standards*). In addition, approximately 20 percent of SNFs classified as small entities are non-profit organizations. Finally, individuals and States are not included in the definition of a small entity.

This rule proposes updates to the SNF PPS rates contained in the SNF PPS final rule for FY 2025 (89 FR 64048). Based on the above, we estimate that the aggregate impact for FY 2026 will be an increase of $997 million in payments to SNFs, resulting from the SNF market basket update to the payment rates. While it is projected in Table 18 that all providers will experience a net increase in payments, we note that some individual providers within the same region or group may experience different impacts on payments than others due to the distributional impact of the FY 2026 wage indexes and the degree of Medicare utilization.

Guidance issued by the Department of Health and Human Services on the proper assessment of the impact on small entities in rulemakings, utilizes a cost or revenue impact of 3 to 5 percent as a significance threshold under the RFA. In their March 2024 Report to Congress (available at *https://www.medpac.gov/wp-content/uploads/2024/03/Mar24_Ch6_MedPAC_Report_To_Congress_SEC.pdf*), MedPAC states that Fee-for-Service Medicare accounted for approximately 10 percent of total patient days in freestanding facilities and 17 percent of facility revenue (March 2024 MedPAC Report to Congress, 168) in 2022. As indicated in Table 18, the effect on facilities is projected to be an aggregate positive impact of 2.8 percent for FY 2026. As the overall impact on the industry as a whole, and thus on small entities specifically, does not meet the 3 to 5 percent threshold discussed previously, the Secretary has determined that this proposed rule will not have a significant impact on a substantial number of small entities for FY 2026.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an MSA and has fewer than 100 beds. This proposed rule will affect small rural hospitals that: (1) furnish SNF services under a swing-bed agreement or (2) have a hospital-based SNF. We anticipate that the impact on small rural hospitals will be similar to the impact on SNF providers overall. Moreover, as noted in previous SNF PPS final rules (most recently, the one for FY 2025 (89 FR 64048)), the category of small rural hospitals is included within the analysis of the impact of the proposed rule on small entities in general. As indicated in Table 18, the effect on facilities for FY 2026 is projected to be an aggregate positive impact of 2.8 percent. As the overall impact on the industry as a whole does not meet the 3 to 5 percent threshold discussed previously, the Secretary has determined that this proposed rule will not have a significant impact on a substantial number of small rural hospitals for FY 2026.

C. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately $187 million. This proposed rule will impose no mandates on State, local, or

Tribal governments or on the private sector.

D. Federalism Analysis

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. This proposed rule will have no substantial direct effect on State and local governments, preempt State law, or otherwise have federalism implications.

E. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this final rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this year's final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed this year's proposed rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons, we believe that the number of commenters on this year's proposed rule is a fair estimate of the number of reviewers of this final rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this final rule, and therefore, for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule.

The mean wage rate for medical and health service managers (SOC 11–9111) in BLS Occupational Employment Wage Statistics is $64.64, assuming benefits plus other overhead costs equal 100 percent of wage rate, we estimate that the cost of reviewing this rule is $129.28 per hour, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm.* Assuming an average reading speed, we estimate that it will take approximately 4 hours for the staff to review half of this final rule. For each SNF that reviews the rule, the estimated cost is $517.12 (4 hours × $129.28). Therefore, we estimate that the total cost of reviewing this regulation is $227,015.68 ($517.12 × 439 reviewers).

F. E.O. 14192, ''Unleashing Prosperity Through Deregulation''

Executive Order 14192, entitled ''Unleashing Prosperity Through Deregulation'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations.'' This rule, if finalized as proposed, is expected to be an E.O. 14192 deregulatory action. We estimate that this rule it would generate $1.93 million in annualized cost savings at a 7 percent discount rate, discounted relative to year 2024, over a perpetual time horizon. approximately $2 million in annualized cost savings at a 7 percent discount rate, discounted relative to year 2024, over a perpetual time horizon.

In accordance with the provisions of Executive Order 12866, this proposed rule has been reviewed by the Office of Management and Budget.

Stephanie Carlton, Acting Administrator of the Centers for Medicare & Medicaid Services, approved this document on April 8, 2025.

List of Subjects

42 CFR Part 413

Diseases, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES; PAYMENT FOR ACUTE KIDNEY INJURY DIALYSIS

■ 1. The authority citation for part 413 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395m, 1395x(v), 1395x(kkk), 1395hh, 1395rr, 1395tt, and 1395ww.

■ 2. Section 413.338 is amended—
■ a. In paragraph (a) by removing the terms ''Health equity adjustment (HEA) bonus points'', ''Measure performance scaler'', ''Top tier performing SNF'', ''Underserved multiplier'', and ''Underserved population'';
■ b. By revising (c)(2)(i);
■ c. By removing paragraph (e)(3)(iii);
■ d. By revising paragraphs (f)(2) and (3);
■ e. By adding paragraph (f)(6);
■ f. By removing paragraph (k); and
■ g. By redesignating paragraphs (l) through (n) as paragraphs (k) through (m).

The revisions and addition read as follows:

§ 413.338 Skilled nursing facility value-based purchasing program.

* * * * *

(c) * * *

(2) * * *

(i) *Total amount available for a fiscal year.* The total amount available for value-based incentive payments for a fiscal year is at least 60 percent of the total amount of the reduction to the adjusted SNF PPS payments for that fiscal year, as estimated by CMS, and will be increased as appropriate for each fiscal year to account for the assignment of a performance score to low-volume SNFs under paragraph (d)(3) of this section. Beginning with the FY 2023 SNF VBP, the total amount available for value-based incentive payments for a fiscal year is 60 percent of the total amount of the reduction to the adjusted SNF PPS payments for that fiscal year, as estimated by CMS.

* * * * *

(f) * * *

(2) Beginning with the baseline period and performance period quality measure quarterly reports issued on or after October 1, 2021, which contain the baseline period and performance period measure rates, respectively, SNFs will have 30 days following the date CMS provides in each of these reports to review and submit corrections to the measure rate calculations contained in that report. The underlying data used to calculate the measure rates are not subject to review and correction under this paragraph (f)(2). Any correction requests submitted under this paragraph (f)(2) must include all of the following and be submitted by email to the SNF VBP Program Help Desk:

(i) The SNF's CMS Certification Number (CCN);

(ii) The SNF's name;

(iii) The correction requested; and

(iv) The reason for requesting the correction, including any available evidence to support the request.

(3) Beginning not later than 60 days prior to each fiscal year, CMS will provide reports to SNFs on their performance under the SNF VBP Program for a fiscal year. SNFs will have the opportunity to review and submit corrections to their SNF performance scores and ranking contained in these reports for 30 days following the date

that CMS provides the reports. Any correction requests submitted under this paragraph (f)(3) must include all of the following and be submitted by email to the SNF VBP Program Help Desk:

(i) The SNF's CMS Certification Number (CCN);

(ii) The SNF's name;

(iii) The correction requested; and

(iv) The reason for requesting the correction, including any available evidence to support the request.

* * * * *

(6) Beginning with quarterly confidential feedback reports issued on or after October 1, 2025, a SNF that is not satisfied with the decision by CMS on a review and correction request submitted under paragraph (f)(2) or (3) of this section may seek reconsideration of that decision by submitting a reconsideration request no later than 15 calendar days from the day after the date noted in the decision. SNFs must submit their reconsideration requests via email in the form and manner specified by CMS in the review and correction decision. The reconsideration request must contain all of the following:

(i) The SNF's CMS Certification Number (CCN).

(ii) The SNF's name.

(iii) The issue for which the SNF submitted a review and correction request, received a review and correction decision, and are requesting reconsideration.

(iv) The reason why the SNF is requesting reconsideration, which can be supported by any applicable documentation or other evidence.

* * * * *

■ 3. Section 413.360 is amended by revising paragraph (d)(4) and adding paragraphs (d)(5) and (6) to read as follows:

§ 413.360 Requirements under the Skilled Nursing Facility (SNF) Quality Reporting Program (QRP).

* * * * *

(d) * * *

(4) CMS will notify the SNF, in writing, of its final decision regarding any reconsideration request through at least one of the following methods: CMS designated data submission system, the United States Postal Service, or via email from the CMS Medicare Administrative Contractor (MAC). CMS will grant a timely request for reconsideration, and reverse an initial finding of non-compliance, only if CMS determines that the SNF was in full compliance with the SNF QRP requirements for the applicable program year.

(5) A SNF may request, and CMS may grant, an extension to file a reconsideration request if, during the period to request a reconsideration as set forth in paragraph (d)(1) of this section, the SNF was affected by an extraordinary circumstance beyond the control of the SNF (for example, a natural or man-made disaster). A SNF must submit its request for an extension to file a reconsideration request no later than 30 calendar days from the date of the written notification of noncompliance. The SNF must submit its request for an extension to CMS via email to *SNFQRPReconsiderations@cms.hhs.gov,* and must contain all of the following information:

(i) SNF CCN.

(ii) SNF Business Name.

(iii) SNF Business Address.

(iv) CEO or CEO-designated personnel contact information including name, telephone number, title, email address, and mailing address. (The address must be a physical address, not a post office box.)

(v) A statement of the reason for the request for the extension.

(vi) Evidence of the impact of the extraordinary circumstances, including, for example, photographs, newspaper articles, and other media.

(6) CMS will notify the SNF, in writing, of its final decision regarding its request for an extension to file a reconsideration of noncompliance request via an email from CMS.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List April 14, 2025

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__*layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
